The Fresh-Water Fisheries.-The fresh-water fisheries of Canada in terms of volume are small compared with the operations on the coasts. They are little known to the public and the world at large, except perhaps in the sport-fishing sense. It is a fact, nevertheless, that Canada has the greatest fresh-water commercial fisheries in the world. The St. Lawrence waterway system with its chain-like series of inland seas and the Prairie Provinces' network of lakes and streams form a great cornucopia, overflowing with whitefish, yellow pickerel, blue pickerel, tullibee, trout, pike, saugers, eels and other varieties. Though there are fluctuations in the catch from year to year, the total yield has risen steadily in volume and now averages around $100,000,000 \mathrm{lb}$.-about one-sixth the size of the British Columbia catch.: Two-thirds of the total comes from Ontario and Manitoba, each province producing annually between $30,000,000 \mathrm{lb}$. and $35,000,000 \mathrm{lb}$. of fish. Saskatchewan and Alberta rank next in production, followed by Great Slave Lake in the Northwest Territories, Quebec and New Brunswick.

In Ontario the fisheries are centred in two regions-the Great Lakes which are fished almost exclusively in the summer, and northwestern Ontario which is mainly a winter fishing operation and resembles those of the Prairie Provinces. On the Great Lakes, fish are taken inshore and on off-shore banks similar in nature to those of the Atlantic "banks". In a shallow lake like Erie the commercial varieties may be caught out in the middle of the lake. But in the deeper lakes the fish are mainly in the inshore areas. The inshore fishery is done largely with pound nets, hoop nets, seines and hooks and the fishermen use gasoline launches, skiffs and rowboats. The off-shore fishery is largely a gill-netting operation performed by a fleet of unique vessels called tugs which are designed to set and haul gill nets by mechanical means.

The Great Lakes fish populations, particularly the lake trout, have declined in recent years. Fishermen blame the parasitic sea lamprey, an eel-like creature which feeds on the blood and body juices of fish. The lamprey attaches itself to its victim by means of its sucker-like mouth and rasps a hole in the body with its sharp teeth. Because the fishermen of both Canada and the United States share in the Great Lakes fishery, an international agreement, providing for joint action in these waters in fishery research and in the elimination of the predator sea lamprey was signed at Washington in September 1954. In Canada, a Great Lakes Fisheries Research Committee was formed in 1953 by the Federal Government and the Ontario Provincial Government to co-ordinate and expand fishery research in Canadian waters and it is this agency which will provide the working nucleus of

Canada's share in this new program. The Committee is giving equal emphasis to general fisheries research and lamprey control. In the general program, research is being conducted into stocks of whitefish and lake trout and the possible utilization of the less popular species that enter the nets of the commercial fishermen. Hydrographic surveys are an important aspect of this work. In the lamprey control program, devices are being installed at the mouths of rivers frequented by lampreys at spawning time. The installations are electrified weirs which paralyse the lamprey and prevent it from reaching suitable spawning areas.

Manitoba's commercial fishing industry is based on a rich heritage of lakes and streams. Lake Winnipeg, the seventh largest fresh-water lake in North America, provides almost one-half of the Province's total catch. From this lake comes the Selkirk whitefish which is in great demand in the United States. The famous Winnipeg goldeye also first made its appearance from Lake Winnipeg catches. Of the three-score fish-producing lakes, most important are Lake Manitoba, Lake Winnipegosis, Lake St. Martin, Lake Dauphin, South Indian Lake, Gods Lake, Island Lake and the Manitoba portion of Reindeer Lake. In Alberta and Saskatchewan where the number of full-time fishermen in past years has been few, the commercial fishing industry is growing steadily. The total catch in Saskatchewan is now around $10,500,000 \mathrm{lb}$. and in Alberta about $10,000,000 \mathrm{lb}$.

Lake Athabasca, straddling the Alberta-Saskatchewan border, yields about $500,000 \mathrm{lb}$. of whitefish, lake trout and other fish each year to the Chipewyan and Cree Indians. Since 1926 its commercial putput has totalled $20,000,000 \mathrm{lb}$. of fish. Lac La Ronge in Saskatchewan has been fished since 1922 and its current commercial production is nearly $1,000,000 \mathrm{lb}$. a year. Reindeer Lake, located across the Saskatchewan-Manitoba border, is another rich provider and in one year when fishing was intense, fishermen hauled out $2,500,000 \mathrm{lb}$. It is not known what the lake could stand on a sustained basis but its record over the past 14 years shows that its catch of whitefish and lake trout represents 10 p.c. of the entire production of the Province. Lesser Slave Lake in Alberta has yielded up to $5,000,000 \mathrm{lb}$. of fish a year while other northern lakes such as Wollaston, Big Peter Pond and Ile à la Crosse each produce annually about $500,000 \mathrm{lb}$.

The gill net is the chief fishing gear used in the Prairie Provinces. In the summer operation, fishermen operate motor-driven boats and skiffs. In the winter the nets are set through holes cut in the ice and the fishermen establish camps on the ice right at the fishing grounds; usually staying out a week at a time under semi-Eskimo conditions. Living accommodation is a caboose which is hauled to the camp-site.

Quebec's fresh-water commercial fisheries are based on the streams and rivers which flow into the St. Lawrence River, although some of the northern waters are also fished. In addition to the fresh-water species found in other provinces, Quebec fishermen catch a number of salt-water fish which frequent the rivers at certain periods. Eels and sturgeon rank as the most valuable of Quebec's inland fisheries. Most of the catch of eels is caught around the Isle of Orleans, near Quebec, and in the Richelieu River at Iberville. About $500,000 \mathrm{lb}$. are taken annually and shipped frozen in boxes or in trucks equipped with special fresh-water tanks to brisk markets in the United States. Shipments are also made to European countries. In New Brunswick, the fresh-water fishing industry is a small enterprise compared to the tidal fisheries and the total production of alewives, shad, eels, salmon and suckers amounts to $500,000 \mathrm{lb}$. annually.

92428-38 $\frac{1}{2}$

The Northern Fisheries.-Perhaps the greatest opportunity for expansion of the fresh-water fisheries lies in Canada's northern areas. The Yukon and Northwest Territories contain two of the earth's largest lakes and two mighty rivers, besides literally thousands of lesser waters, many of which have not been explored. On the northern edge of the Continent is the Arctic Coast which extends roughly 10,000 miles from the Bering Sea to Hudson Strait.

In the northland lakes and rivers, a few species, like the inconnu, the Arctic grayling or "bluefish" and the Arctic char, have not been found anywhere else in Canada. Others like whitefish, trout, salmon, pike and pickerel are familiar to most Canadians. The sports fish have gained fame among the anglers for their huge size and fighting characteristics. The food fish have achieved similar recognition from the commercial operators for their abundance and table qualities. As the line of civilization pushes northward, it is expected that greater use will be made of these resources. The business of exporting fish is now well established in the northern areas of the three Prairie Provinces and at Great Slave Lake. Great Slave is one of the greatest single producers of whitefish and lake trout and has yielded more than $40,000,000 \mathrm{lb}$. of fish since commercial fishing began in 1945. In view of the importance of the fish of this and other lakes as a food supply to the native Indians, the Federal Government permits commercial fishing in the Northwest Territories only when it is evident that the commercial "take" will not affect the continuity of supply of fish to the natives. Landings of whitefish and lake trout from Great Slave are thus limited to an annual quota of $9,000,000 \mathrm{lb}$.

The scattered communities of Indians, Eskimos and white residents in the north have long depended on fish for food both for themselves and their sled dogs. Along the Arctic Coast, the Eskimos depend on the beluga, the seal and various kinds of fish for practically all their daily requirements. The beluga, commonly called a "white whale" is actually a mammal of the dolphin or porpoise family. A successful summer whaling season means prosperity for all Eskimos in the community.

Moreover, the migrations of beluga to the mouth of the Churchill River from Hudson Bay give Manitoba the distinction of being an inland province with a whale fishery. Operating under a permit granted by the Minister of Fisheries and with a quota set each season by the federal authorities, an establishment at Churchill renders the animals into oil and meal. Local Indians are employed to hunt the belugas.

The Eskimos make great use of the seals found in the Arctic waters, the oil making good dog food, the meat providing substantial dinner fare and the skin making waterproof boots and parkas. Large amounts of Arctic char, herring, whitefish and inconnu are eaten and an Eskimo who starts the winter with less than eight to ten thousand fish can look to lean days ahead.

The Fisheries Research Board is attempting to find out more about the fisheries resources along the Arctic Coast and around the Islands of the District of Franklin. The Board operates a specially constructed research boat, the Calanus, which has been making regular trips to Eastern Arctic waters each summer since 1949. These studies are now being extended to Hudson Bay and the Beaufort Sea. In Ungava Bay, the Board has found that both the Atlantic cod and the Greenland shark provide possibilities of exploitation by the Eskimo populations there and the federal authorities have tried to educate the inhabitants to take greater advantage of the supply.

The Yukon Territory has its share of the better-known food and game fish but, while they are important as a local food supply and as a tourist attraction, they are not significant enough to support a commercial enterprise for export purposes. In the Yukon, king salmon are caught by the white residents who use an ingenious device known as a fish-wheel, unique in Canada's commercial fisheries. The Indians use gill nets set in eddies and the majority of the fish are filleted, smoked and dried for winter use. Both fish-wheels and nets bring in small quantities of other fish such as the whitefish, inconnu and Arctic grayling.

In the southwest Yukon, the Alsek River and its tributaries contain rainbow trout, actually a landlocked steelhead, and a few land-locked sockeye salmon. The larger Yukon lakes produce whitefish, lake trout and "least herring" or cisco. For the sportsmen, there are "bluefish", Dolly Varden trout, rainbow trout and pike.

Great Bear Lake and Great Slave Lake are linked by the mighty Mackenzie River which drains a quarter of Canada and is comparable in size to the St. Lawrence. This river system and the thousands of lakes in the Territories constitute a great food reservoir for the local residents. Fishing is a staple summer industry of the Indians and of all those white residents who have to travel by dog-team during the winter. In the Mackenzie Valley the sled dogs alone consume each year several million pounds of fish-whitefish, herring and inconnu-and most of it comes from the Mackenzie River in the summer and autumn when the Indians gather around the trading posts where fishing is good. Great Bear Lake provides fish for the Indians in sufficient quantity but it holds little prospect for commercial fishing because the fish populations form merely a fringe inhabiting the near-shore zone and could not survive a large-scale operation.

The commercial development of the fisheries for export purposes in the Northwest Territories has special possibilities. The lower Mackenzie River could be commercially fished, particularly from the Sans Sault rapids north to the delta but such a venture is not yet practicable because the catch would have to be shipped a thousand miles by refrigerator barges to Great Slave during a very short navigable season.

The area is a fisherman's paradise, of course, but access is difficult and only Great Slave Lake has been developed to any extent for the accommodation of sports fishermen.

The first half of the twentieth century with its two world wars and great depression brought fluctuations of fortune to the fisheries industry but it has been, on the whole, an era of increasing development and prosperity in this field. The increased use of trawlers, the development of quick-freezing and filleting equipment and cold-storage facilities have all helped to make the industry much more diversified than formerly. Modern methods of packaging and canning have been adapted to fishery products. Certain varieties of fish such as British Columbia salmon, Atlantic lobster, halibut and whitefish command premium prices on the world market so that, although not the greatest fish exporting nation (Norway exports larger quantities), Canada's exports lead the world in terms of dollar value. The marketed value of the nation's fisheries topped the $\$ 200,000,000$ mark in 1951, three-quarters of the amount being obtained from outside markets. This is not a high figure when compared with the production of some other Canadian industries but for the people of the coastal provinces and the northern territories it is a dominating factor in their economic life.

Canada, by wise management policies and by full utilization of all available resources, is in a position to play an increasingly important part in producing fish to meet the food needs of the world's populations.

## Section 1.-Governments and the Fisheries

## Subsection 1.-The Federal Government*

The British North America Act gave the Federal Government full legislative responsibility for the regulation of the coastal and the inland fisheries of Canada. Under the Act, laws are made for the protection, conservation and development of the fisheries throughout the country. The provinces, however, have property rights in the non-tidal fisheries and have been delegated certain administrative responsibilities in varying degree. Consequently, though all the regulations governing fishing are made by the Federal Government, the work of administering the fisheries (enforcing the different laws and regulations, inspecting fish products, issuing licences, etc.) is done in some cases by federal officers and in others by provincial officers, according to arrangements made with the different provinces and without duplication of staff.

Specifically, all tidal or sea fisheries, except those of Quebec, are administered by the Federal Department of Fisheries while the fresh-water or non-tidal fisheries, with some exceptions, are administered by the provincial departments. The exceptions are the Yukon and Northwest Territories, Nova Scotia, New Brunswick and Prince Edward Island where the fresh-water fisheries are federally administered.

The work required in the conservation, development and general regulation of the nation's coastal and fresh-water fisheries is performed by three agencies under the Minister of Fisheries:-
(1) The Department of Fisheries proper, with headquarters at Ottawa and area offices under Chief Supervisors at Vancouver, Winnipeg, Halifax and St. John's.
(2) The Fisheries Research Board of Canada, with headquarters at Ottawa and seven stations across Canada.
(3) The Fisheries Prices Support Board, with headquarters at Ottawa.

The Department of Fisheries.-The chief responsibilities of the Department of Fisheries throughout Canada are, in brief, to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the optimum utilization of the resource; and to develop a proper public understanding of the resource and the industry.

The larger part of the Department's staff is stationed in the field, working in the four above-mentioned spheres, and is comprised mainly of a protection staff and an inspection staff. The protection officers, including those on the Department's 74 patrol and protection vessels, are concerned with the enforcement of the conservation regulations under the Fisheries Act and other Acts designed to ensure a continuing maximum yield of fish. The inspection officers are responsible for the inspection of fish products and processing plants under the Fish Inspection Act and relevant sections of the Meat and Canned Foods Act.

[^192]The conservation program of the Department is carried out by the Conservation and Development Service. Protection officers not only enforce regulations pertaining to restricted areas, close seasons, limitations in location and types of gear, but they inspect spawning streams and keep them clear of obstructions. Engineers of this Service construct fishways to enable fish to by-pass dams. Hatcheries are maintained to restock waters where the fisheries are under federal administration.

To ensure a high standard of quality, inspection of fish and fish products is carried out by the Inspection and Consumer Service. Fish inspection laboratories are maintained on the Atlantic and the Pacific Coasts. The Service also has a staff of home economists at Ottawa who operate a test kitchen and carry out demonstrations and lectures on methods of preparing and cooking fish and fish products.

Through the mediums of printed material, films, radio and exhibitions, the Information and Educational Service informs the public on the various aspects of the industry and the work of the fisheries service with the object of developing a better understanding of the resource and those engaged in its exploitation. The Service works closely with the Conservation and Development Service in matters concerning conservation of fisheries, and with the Inspection and Consumer Service toward encouraging increased consumption of Canadian fish products in both North American and export markets.

The Markets and Economics Service, which has a staff of economists and market analysts, is responsible for bringing together a fund of factual information, through surveys and other means, on the primary fisheries and on the processing, transportation and distribution of fishery products. Such facts and their interpretation form the basis for development and for other programs of the Department. In the marketing field continual study and interpretation is carried out on market trends in the foreign and the domestic fields. In co-operation with the Department of Trade and Commerce and its Trade Commissioner Service, work is being done on the development and extension of export markets for Canadian fish.

In addition to providing these regular services, the Department assists the commercial fishing industry in several special ways. For the purpose of promoting efficient primary fishing operations and improving the marketing of fishery products, assistance is provided for the construction of draggers and long-liners and for baitfreezing and storage facilities on the Atlantic Coast. For each new trawler built in Canada, the owner is eligible for a licence to operate a used trawler imported from either the United Kingdom or the United States and registered in Canada after payment of duty. An applicant wanting only one trawler may import a used one from the United Kingdom without having to lay down a new keel in Canada. This policy applies to ships purchased from any country entitled to most-favourednation treatment in accordance with Canada's obligations as a signatory of the General Agreement on Tariffs and Trade.

In 1953 an additional service to fishermen was provided through the establishment by the Government of the Fishermen's Indemnity Fund which affords lowcost protection from losses of boats and lobster traps through storms and other causes. The Fund, which is administered as a regular service within the Department, meets a long-standing need on the part of the small-scale individual fishermen. Vessels valued at from $\$ 250$ to $\$ 7,500$ may be insured with payment of a premium of 1 p.c. of the appraised value. By Mar. 31, 1954, a total of 1,515 fishing vessels with an appraised value of $\$ 2,109,637$ were covered under the Fund.

The lobster trap protection plan provides that, generally speaking, any lobster fisherman having 32 or more traps may obtain protection up to approximately 50 p.c. of the value of his traps for premiums ranging from five cents to 25 cents per trap depending on the length of the season and on the value of the traps. Although the plan did not come into effect in some areas until the spring of 1954, 234 fishermen with 44,927 traps were insured as at Mar. 31, 1954.

A study is being made of the possibility of extending the program to include other types of fishing equipment that are subject to periodic loss or damage and for which no commercial insurance is available.

The Department also provides assistance in the education of fishermen by making payments to educational institutions that have agreed to carry out educational work among them.

The Fisheries Research Board.-The functions of the Fisheries Research Board of Canada, which was established in 1937, cover a wide field in the interests of conservation, development and management of the fishery resources of the country. In 1953 the membership of the Board was increased from 15 to 19 to allow for wider regional representation and a permanent chairman was appointed.

The work of the Board is, generally, biological and technological in character and is carried out at seven stations: the Biological Station at St. Andrews, N.B., with its substation at Ellerslie, P.E.I.; the Pacific Biological Station, Nanaimo, B.C.; the Central Fisheries Research Station, Winnipeg, Man.; the Newfoundland Fisheries Research Station, St. John's, N'f'ld.; the Atlantic Fisheries Experimental Station, Halifax, N.S.; the Pacific Fisheries Experimental Station, Vancouver, B.C.; and the Gaspe Fisheries Experimental Station at Grande Rivière, Que.

Scientific investigations are an important part of the development of the commercial fishing industry and provide the basis for conservation measures put into effect by the Department. Almost all the principal stocks of commercial fish are under observation by the Board's biologists. Many species, such as Pacific salmon, Atlantic salmon, Atlantic groundfish, lobster, herring, albacore, whitefish, whales, oysters and clams, are being studied intensively. The studies provide knowledge of the life history, growth rate, reproduction, distribution, enemies, diseases, etc., of the fishes, shellish and sea mammals. Special investigations are undertaken as problems arise. The Board has completed a survey of the fisheries resources of the Northwest Territories and is exploring the fisheries resources of Canada's Eastern Arctic.

Fundamentally, the objective of the Board's technological investigations is to eliminate waste through the utilization of all fishery products that come out of the waters and the putting of those products to the best possible use in the light of current knowledge. The Board's knowledge is continually expanding through basic and applied research and this is helping to bring about a wider distribution of fishery products, a higher level of quality in the products marketed, a better understanding of the use of fish in general nutrition and of fish by-products for food, medicinal and industrial purposes.

The Fisheries Prices Support Board.-Under the Fisheries Prices Support Act, passed in 1944, this Board was set up in July 1947 to recommend to the Government price-support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is
a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry, representative of the various fishproducing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices nor has it any jurisdiction over operations in the fishing industry or the fish trade.

Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum aggregate amount of $\$ 25,000,000$ but only on recommendation of the Federal Treasury Board and authorization of the Governor in Council.

The Board maintains a small staff for administrative and research activities. The work is closely integrated with that of the Department's Markets and Economics Service and, where possible, services required by the Board are carried out by Department personnel. The Board has carried out field surveys on market conditions and possibilities, and on factors affecting the income of fishermen in the various producing areas. It keeps the financial position of fishermen under continuous review and makes recommendations to the Government on the basis of the facts as it finds them. Special investigations are made when serious problems arise in particular areas.

International Fisheries Conservation.-Fisheries regulation is sometimes needed on the high seas in international waters and international treaties have had to be made. Canada's obligations under such treaties with the United States and other countries are administered by the Department of Fisheries.

Canada and the United States have led the world for years in joint fisheries conservation development. Major examples of this joint effort are the International Fisheries Commission, concerned with the preservation of the halibut stocks of the North Pacific and the Bering Sea, and the International Pacific Salmon Fisheries Commission, concerned with the conservation and development of the sockeye salmon of the Fraser River. Investigations carried out under the Commission's auspices, subsequent regulation and limitation of catches and, in the case of salmon, the construction of fishways appear to have been successful in arresting and reversing an earlier trend towards depletion of these fisheries. Another example of restoring a depleted marine resource by international agreement and action is that of the fur seals of the Pribilof Islands in the Bering Sea. Under the Provisional Fur Seal Agreement, Canada receives 20 p.c. of the fur-seal skins taken annually by the United States Government from the Pribilofs. Only surplus animals are killed.

In 1949, the Government of Canada became a signatory, along with nine other countries, to the International Northwest Atlantic Fisheries Convention which came into force in 1950. The work of the Commission, established under this Convention, concerns the scientific investigations of the fishery resources of the northwest Atlantic. The Commission has no regulatory powers but can make recommendations to the respective governments regarding measures that may be necessary for maintaining the stocks of fish that support the international fisheries in the Convention area. Treaty signatories are: Canada, Denmark, Iceland, the United States, the United Kingdom, France, Italy, Norway, Portugal and Spain. Headquarters of the Commission is at Halifax, N.S.

A step towards international action in regulating the high seas fisheries of the northern Pacific Ocean was achieved in December 1951, when Canada, the United States and Japan conferred at Tokyo and reached an agreement on fisheries problems. The resulting convention was ratified by the three contracting governments and instruments of ratification were deposited at Tokyo in June 1953. The treaty is known as the International Convention for the High Seas Fisheries of the North Pacific Ocean and aims at providing the maximum sustained yield of the fishery resources of the northern Pacific non-territorial waters with each of the parties assuming obligations to encourage conservation measures. The Commission established under this Convention will study the northern Pacific fisheries, determine the application of the treaty principles and will promote and co-ordinate the scientific studies necessary for ascertaining conservation programs. Temporary headquarters of the Commission is at Vancouver, B.C.

Canada is a member of the International Whaling Commission and is obligated to collect biological data on whales caught by Canadian vessels. Whaling operations are conducted off the Newfoundland and British Columbia coasts.

## Subsection 2.-The Provincial Governments*

An outline of the work undertaken by each of the provincial governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

Newfoundland.-The union of Newfoundland with Canada on Mar. 31, 1949, brought about a transfer of some responsibilities in fisheries administration. The Newfoundland Fisheries Board remained the agency of government in the supervision of salt-codfish marketing, but fish and plant inspection, operation of bait depots, etc., became the concern of the Federal Department of Fisheries. The Board, formerly responsible to the Government of Newfoundland through the Commissioner for Natural Resources, became responsible to the Minister of Fisheries for Canada.

The Provincial Government is concerned mainly with improvement and development in fishing and production methods and has conducted experiments in long-lining and deep-water trawling, in the construction of multi-purpose fishing craft and in the exploration of potential fishing grounds. Steps are being taken to secure more efficient use of fisheries salt. Loans have been made available to processors for the establishment or development of fishing fleets and processing plants, and to fishermen for the construction and purchase of modern vessels capable of a greater variety of fishing operations and larger production.

In 1951, the Governments of Canada and Newfoundland established the Newfoundland Fisheries Development Committee, consisting of representatives of fishermen, processors and exporters, and of both Governments. The objective of this Committee is to establish the role of each sector of the industry and each government, jointly or severally, in the organization and development of the fisheries. Action has been taken by both Governments in certain matters considered as necessary preliminaries to an over-all program, such as an economic and sociological survey of fishing settlements and the encouragement of the use of community rather than individual stages and rooms by shore fishermen.

[^193]The inland waters of Newfoundland, which provide excellent sport fishing, are not commercially exploited to any significant degree. The lakes and ponds remain under the authority of the Natural Resources Branch of the Provincial Department of Mines and Resources, but the rivers and streams-the resort of migratory fish such as salmon and sea trout-passed under federal jurisdiction as a consequence of the union. Matters of conservation and guardianship are, therefore, mainly or wholly the concern of the Federal Department of Fisheries, although to the extent to which they affect the ponds and lakes, they are subject to provincial or joint action.

Prince Edward Island.-The major responsibility for aid to the fisheries of this Province is undertaken by the Federal Government. Prince Edward Island, however, has established a Department of Industry and Natural Resources which administers the commercial and game fisheries.

Consultations were held in 1950 when marine architects and fishing ports were visited along the Atlantic seaboard with a view to obtaining the best information on boats and gear most adaptable to the Province's coastal waters. These studies resulted in the adoption of the $60-\mathrm{ft}$. Island Dragger. During the search for information on boats, much was learned of the possibility of adapting the drag-net principle to smaller boats and experiments were conducted to ascertain power requirements and general feasibility. The major part of the revenue of the commercial fishermen of the Province is provided by lobster, smelt and oyster catches.

The streams of the Province are mostly spring-fed and fairly constant in flow, thus providing excellent spawning grounds and nurseries for game fish, of which speckled trout are by far the most important. The problem is to increase the production of trout of a size attractive to anglers and comprehensive biological investigations are being carried on by the Fisheries Research Board to attain this objective by determining the most efficient procedure in stocking, managing and cropping. The Province provides the sites for these investigations and the Conservation and Development Branch of the Federal Department of Fisheries builds the necessary dams and supplies the fish required for experimental purposes.

Nova Scotia.-The basic responsibility for the administration of tidal and inland fisheries in Nova Scotia is undertaken by the Federal Government. The Province, however, supplements the activities of this authority through its Department of Trade and Industry. In practice, a system of co-operative effort has been worked out between the two authorities with each free to carry out individual responsibilities and specific programs. Provincial activities fall into three sectionsdevelopment, administration and research.

Development.-Development activities include engineering services, financial assistance to the fisheries industry generally, and educational services to the fishermen.

Engineering services are related to the design, construction and equipment of boats, vessels and fish-processing plants. A marine engineer is employed for these services and for the extension of consultant services to all persons interested in the industry. Financial assistance is extended, by way of loans, for the construction and modernization of fish-processing plants and to fishermen for the acquisition of boats and engines. Where the requirements of large new plants have exceeded the capacity of local authorities, the Province has provided such utilities as water lines and rail sidings; the Province also operates a bait freezer at Cheticamp.

Educational services extended to fishermen comprise instruction in basic navigation, rules of the road, and care and maintenance of marine engines by means of short courses at selected outports and a permanent school maintained at Lunenburg. This educational program is assisted by grants under the Canadian vocational training program of the Federal Department of Labour.

Administration.-The Nova Scotia Fisheries Act serves to supplement federal jurisdiction and is administered jointly by the Department of Trade and Industry and the Federal Department of Fisheries. The Act requires fish-processing plants and fish buyers to obtain annual licences, which are issued by the Department of Trade and Industry only on the recommendation of inspectors of the Federal Department of Fisheries and the certification of the Department of National Health and Welfare as to compliance with standards of construction, operation and sanitation contained in federal regulations.

Information obtained from the licensing activities and other statistics supplied by the Federal Department of Fisheries enables the Provincial Department of Trade and Industry to handle inquiries in respect of the fisheries industry.

Research.-Provincial fisheries research activities have been confined largely to the inland trout and salmon fisheries. The Department of Trade and Industry has carried out a five-year program of water control on the LaHave River in the interests of salmon preservation and development; has undertaken experiments in fertilization of lakes and in partial poisoning of lakes to reduce the numbers of coarse fish in competition with trout for the available food supply; and has conducted some special studies of trout populations and salmon migrations. Research activities of this nature have been continued under the direction of the Nova Scotia Research Foundation.

New Brunswick.-The commercial fisheries of New Brunswick are under the jurisdiction of the Federal Department of Fisheries. Since 1945, a Fisheries Division has been in operation under the provincial Department of Industry and Development. In 1946, a Fishermen's Loan Board was established to provide financial assistance to bona fide fishermen for the purchase of new boats and engines. Since its formation the Board has lent over $\$ 2,016,747$ of which $\$ 992,108$ has been repaid. It has modernized the deep-sea fishing fleet by the introduction of a most effective small dragger, 51 units of which are operating in the area of the Gulf of St. Lawrence and three in the Bay of Fundy. Seven additional modern units are under construction. The Fisheries Division is promoting experiments on flounder dragging as well as on the seining of herring in the Gulf of St. Lawrence area.

Quebec.-The Minister of Game and Fisheries administers both the sea and the inland fisheries of Quebec. The Department is composed of two divisions-the Division of Maritime Fisheries and the Division of Fish and Game, the latter being charged with the administration of the inland fisheries.

Sea Fisheries.-Quebec is the only province administering its own sea fisheries. For the benefit of producers and fishermen, it provides a system of cold-storage plants for the freezing and preservation of fish. Since the erection of the first plant in 1932, the network has grown to 50 plants with a daily freezing capacity of 250 tons of fish and a storage capacity of $16,000,000 \mathrm{lb}$. These cold-storage plants also perform a valuable service to fishermen by providing them with frozen bait. In addition, the Department owns and maintains 115 snow houses where fish may be chilled before being sent to storage or filleting plants, 40 culling sheds, and three artificial drying plants where $6,000,000 \mathrm{lb}$. of fish may be processed annually.

The Department maintains a staff of inspectors, fish wardens, technicians and technologists to administer fishery legislation and to assist in the application of new techniques for the expansion of the industry. The central administration is located at Quebec City, with an office at Gaspe for the administration of coldstorage plants. Statistics are compiled by the Department of Trade and Commerce in co-operation with the inspectors of the Maritime Fisheries Division.

Fish inspection is carried out under federal and provincial legislation by provincial inspectors, who are vested with additional powers for export purposes by the Federal Government.

Educational work among the fishermen and producers is also conducted by the Department in order to teach the latest methods of fish preparation and obtain high-quality products. The new Fisheries Training School at Grande Rivière gives to fishermen of all ages the opportunity of taking free theoretical and practical courses in fishery, and the Superior School of Fisheries at Ste. Anne-de-la-Pocatière trains technologists in a four-year course. Encouragement is given to the cooperative associations of fishermen through the Social Economic Service of the latter institution. Under a maritime credit system, fishermen are able to obtain loans from credit unions for the purchase of boats and gear. The Department adheres to the federal-provincial agreement on the building of draggers and longliners and assumes the building costs on a five-year capital refunding plan.

The fish trade is being promoted by advertising campaigns in newspapers and magazines, cooking demonstrations, educational films and free distribution of fish recipes and publicity leaflets, as well as by exhibits at fairs.

Hydrographical research in the Gulf of St. Lawrence, studies on the location of new fishing grounds as well as experiments on sea-fish biology are conducted by a Marine Biological Station at Grande Rivière and two substations on the North Shore and Magdalen Islands. This research has brought into use new types of modern fishing vessels recommended to fishermen. The Department also operates a Limnological Laboratory at Quebec City for studying the biology of the freshwater fish of the St. Lawrence River and tributaries.

Inland Fisheries.-The Division of Fish and Game exercises jurisdiction over the inland waters. Three hundred full-time wardens are employed and licences are required for sport-fishing and hunting, the revenue from which is applied to the improvement of fishing and hunting conditions. Five hatcheries are maintained at strategic points throughout the Province: St. Faustin, Lachine, Baldwin's Mills, Tadoussac and Gaspe. These establishments distribute speckled trout, Atlantic salmon and grey trout fry, fingerlings and older fish.

The Department administers five parks or reserves in all of which, except for Mount Orford Park, excellent fishing may be found. The Gaspesian and Laurentides Parks are renowned for their trout fishing. The Chibougamau Reserve and the La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips in search of pickerel, pike and grey or speckled trout. Four salmon streams, all under the jurisdiction of the Fish and Game Division, are open to anglers: the Romaine River, the St. Jean River, the Petite Cascapédia River and the Matane River. The Department co-operates with sportsmen through a joint committee composed of departmental officials and the directors of the larger fish and game associations. The committee studies the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the Province.

The Biological Bureau of the Province, located at the University of Montreal, and the big piscicultural laboratory at Quebec City, with its two stations for practical work located in the Mont Tremblant and Laurentides Parks, study problems connected with marine life.

Ontario.-The fishery resources of Ontario are administered by the Division of Fish and Wildlife, Department of Lands and Forests. The Division operates under the authority of the Fisheries Act (Canada), the Special Fishery Regulations for the Province of Ontario, the Ontario Game and Fisheries Act and the Regulations connected therewith.

Commercial Fishing.-The commercial fishing industry in Ontario provides employment for about 4,000 persons directly and for many more indirectly, and produces an annual harvest of from $30,000,000 \mathrm{lb}$. to $37,000,000 \mathrm{lb}$. of fish. The industry, although widely scattered throughout the Province, is centred chiefly on the Great Lakes, particularly Lake Erie which is noted for its whitefish, herring and blue pickerel. Lake Superior continues to be the leading producer of lake trout. Other principal species of fish taken commercially are: yellow pickerel, herring or ciscoes, sturgeon, pike, catfish (including bullheads), carp and suckers. Many of the smaller inland lakes are commercially fished, especially those in the northwestern portion of the Province, and careful management of these lakes is essential to ensure continued production.

The types of fishing boats in use vary from small craft to $60-\mathrm{ft}$. tugs, and types of gear also vary from the most common gill net, pound and trap nets, seines and baited hooks to small hand-operated seines and dip nets. Fishing methods and equipment have been rapidly modernized during the past few years. Diesel-driven steel-hull tugs have replaced steam-driven wooden tugs. Such aids as depthsounding devices, radar, ship-to-shore and ship-to-ship communications have been developed and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods are in use, as well as new types of fishing gear. Nylon gill nets are replacing cotton and linen nets and a very efficient and economical trap-net is gradually replacing the pound-net in Lake Erie and other waters.

Excellent co-operation and understanding of the complex problems involved in the administration and management of Ontario's fresh-water fishing industry by the Government and the fishermen, through their local associations and the Ontario Council of Commercial Fisheries, is working to the advantage of the industry as a whole.

Angling.-In Ontario, with its estimated water area of 64,441 sq. miles, angling constitutes one of the most widely distributed recreations. There are 144 different kinds of fish in the Province, including such species as lake and speckled trout, yellow pickerel, black bass, pike and maskinonge. Though it is difficult to measure the value of sport fishing to the Province, the annual revenue from the sale of angling licences (mainly to non-residents as residents require a licence for Provincial Parks only) is in the neighbourhood of $\$ 2,000,000$.

In order to maintain Ontario's reputation for excellent game-fishing, the wise management of this renewable resource is a prime factor, and a well-trained field staff of conservation officers and biologists is located in the 22 forestry districts of the Province.

Provincial Hatcheries.-Ontario operates 28 hatcheries and rearing stations. Excellent results have been produced in the culture and distribution of the various species of both commercial and game fish. Hundreds of millions of fry and fingerlings, comprising whitefish, herring, pickerel, trout (lake, speckled, brown and Kamloops), maskinonge, bass and ouananiche are distributed annually. Two of the finest trout-rearing stations on this continent are located in Ontario at Dorion near Port Arthur and at Hill Lake near Englehart.

Fisheries Research.-Research in Ontario is carried on in the Great Lakes where commercial fisheries problems are being investigated, and in inland waters where game-fish populations are being studied. The Manitoulin Island station conducts studies relating to the removal and utilization of the less valuable species and the effects of this removal on stocks of the more valuable commercial and game species. In Algonquin Park, a careful record of angling quality is kept in a number of test lakes to allow evaluation of management techniques. Certain of the more barren lakes are being treated with inorganic fertilizer and its effect on the microscopic organisms and fish is recorded.

The habits of lake trout and eastern brook or speckled trout are being studied in order to provide additional information on the proper management of these species. The increase in the sea lamprey and the drastic drop in production of lake trout in recent years in Lake Huron (including Georgian Bay and North Channel) are believed by many authorities to be directly related and have led to considerable joint research by the Ontario Government and by Federal and State Governments in the United States. Co-operation is maintained in the exchange of biological findings and, where practicable and feasible, the results are applied in an attempt to control this menace.

Established fish-management principles are applied by biologists in the various forestry districts. Their program includes such projects as biological surveys and investigations, bass harvesting, coarse fish removal, sea lamprey control, creel census studies, fish tagging and other related subjects.

Manitoba.-The fisheries of Manitoba are administered by the Provincial Department of Mines and Natural Resources. Supervision of the various commercial operations are carried out by officers using patrol boats in summer and bombardier snowmobiles in winter; in addition trucks and cars are used for routine patrols throughout the year. Departmental officers, working in co-operation with federal authorities, give special attention to the quality of the fish, a program that has been found to be beneficial to the industry as a whole.

During 1953, production from commercial fishing amounted to $16,036,300 \mathrm{lb}$. from summer operations and $15,301,800 \mathrm{lb}$. from winter operations, a total of $31,338,100 \mathrm{lb}$. Estimated value as marketed was $\$ 5,960,000$. Pickerel, whitefish and saugers were the most important species caught.

The filleting trade each year assumes more importance and plants are being expanded and improved. High-quality fillets in attractive packages are becoming "best sellers" in the retail trade. Winnipeg is the principal domestic market but approximately 90 p.c. of the catch is exported to the United States.

The fish cultural program in Manitoba for 1952-53 included the operation of five fish hatcheries, two egg collecting camps, a temporary trout hatchery and a trout rearing station. Four of the five hatcheries are situated on the commercially fished lakes, and one, a sport fish hatchery, in the Whiteshell Forest Reserve.

During the year, $170,010,000$ pickerel fry and eyed eggs, $73,450,000$ whitefish eggs and fry, $2,091,158$ trout fingerlings, and 43,786 adult perch and northern pike were distributed in the fishing waters of the Province.

Biological survey parties conducted investigations regarding speckled trout in northern Manitoba, lake and stream surveys in the Porcupine and Duck Mountains, the fishes of South Indian Lake and the sauger-pickerel relationship in the southern part of Lake Winnipeg. The fish in one small lake were poisoned with derrisroot powder and rainbow trout were introduced.

Saskatchewan.-The administration of fisheries in the Province of Saskatchewan comes under the Fisheries Branch of the Provincial Department of Natural Resources with head office at Prince Albert. Most of the fisheries resources are concentrated in the northern half of the Province, where the lakes have always been a source of food to the fur traders, trappers, prospectors and the Cree and Chipewyan Indians who inhabit the area, and also provide food and supplementary income to the settlers and homesteaders on the agricultural fringe.

There are approximately 129 commercially fished lakes in the Province and the principal species of fish include lake trout, whitefish, pickerel, northern pike, sturgeon, cisco, Aretic grayling, goldeye, mullet, perch and burbot. The growth of the filleting industry has been of particular significance, 15 filleting plants having been established since 1945. That the fishery resources are important to mink ranchers in the Province is shown by the fact that in the year ended Mar. 31, 1953, 68 fur-farm fishing licences were issued and 20,280 mink were fed under these licences; 702 domestic licences and 1,502 free licences to Indians were also issued.

There has been marked development recently in sport fishing. For the fiscal year 1952-53 there were 50,113 resident and 6,615 non-resident angling licences sold, compared with 6,000 resident and 1,500 non-resident licences sold in 1945.

The main endeavour in the fish cultural activities in the Province during the past few years has been to extend the range of the Arctic grayling species from the Far North into the Churchill River area, and to introduce eastern brook trout and certain warm-water species into areas where preliminary study seems to indicate suitable environment. To a large extent the indiscriminate planting of fish has been discontinued. A fish hatchery is operated at Fort Qu'Appelle for the hatching of pickerel, rainbow, brown and lake trout, and two experimental ponds have been built to facilitate the study, under controlled conditions, of the introduction of warm-water species from the United States. An experimental hatchery has been established at Lac la Ronge, where Arctic grayling and lake trout eggs have been hatched. An Arctic grayling spawn camp has also been established in the Fond-du-lac River, near Black Lake and a pickerel spawn camp is located on the Montreal River, near Lac la Ronge.

The management of the provincial water areas is conducted on a scientific basis. In 1947, a large-scale biological program was undertaken and more than 100 water areas have since been studied. The main emphasis has been on the study of productivity of the various water areas as well as the inter-relationship of the species and life histories. In so far as known facts will permit, the management of the various lakes has been placed on a sustained-yield basis. Experiments are in progress on the introduction of non-native species into suitable water areas. Where sport-fishing pressure has increased, such as on Lac la Ronge, Last Mountain Lake and Qu'Appelle Lakes, a creel census has been established and the annual harvest is
recorded. The Fisheries Laboratory, established in 1949 at the University of Saskatchewan, has three permanent biologists on its staff; usually about 12 students of the University are employed each summer on biological surveys.

The Fisheries Branch has conducted a program of education designed to acquaint people of the Province with the importance of scientific research and the necessity of certain regulations governing the administration of fisheries. Three colour and sound films have recently been made on sport fishing.

Alberta.-Commercial and game fishing are administered by the Fisheries Branch of the Department of Lands and Forests.

Regulations under the Alberta Fishery Act, designed to improve the packing, handling, processing, storage and quality of commercial fish, have been well received and supported by the Alberta industry. In line with a policy for producing goodquality fish, lakes in which whitefish are infected with pike tapeworm and that do not meet the quality standard have been closed to commercial fishing.

Biological surveys of many lakes and streams taken over the last ten years have provided an opportunity to observe the result of former management policies. It was found that the classical tenets of trout-stream management, including close seasons, legal minimum, feeder stream closure and hatchery plants, were inadequate or incorrect. A new management plan is being conducted featuring the 'fallowing' of smaller tributary streams, abolition of the legal size minimum, except in the case of lake trout, a continuous open season on large streams and rivers and the removal of close seasons for pike, pickerel and perch. Trout-rearing stations and a provincial trout hatchery support trout-stream populations whenever required in cases of natural disaster, severe winter kill, introduction of new species or areas that have no spawning grounds.

British Columbia.-The Provincial Department of Fisheries was organized in 1901-02 and soon became very active in fish-cultural work, building and operating fish hatcheries and instituting scientific research into various fishery problems.

Broadly speaking, the administrative and regulative jurisdiction over the fisheries in British Columbia rests with the federal authority. When British Columbia entered Confederation in 1871, the Government of Canada undertook to protect, conserve and promote the fisheries of the Province, and one of the important functions of the Provincial Department of Fisheries is to observe these aspects and to keep the Provincial Government informed through the appropriate Minister.

The ownership of the fisheries in the non-tidal waters is vested in the Crown, in the right of the Province, as are the shell-fisheries, such as oyster-fishing and clam-fishing in the tidal waters. The authority to administer and regulate these fisheries is vested in the Province, although the regulations covering them are made under federal Order in Council on the advice and recommendation of the Province.

The provincial Fisheries Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fishprocessing plants under a system of licensing. Provision is also made for the settlement by arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations.

Net-fishing in the non-tidal waters of the Province, including commercial fishing, is regulated and administered by the Provincial Department of Fisheries, while authority for regulation of the game fisheries in the non-tidal waters is vested
in the Game Commission, a branch of the Provincial Government administration. The Game Commission operates a number of trout hatcheries and egg-taking stations for re-stocking purposes.

The harvesting of marine plants of commercial importance in British Columbia, including the kelps, has recently been placed under the Provincial Department of Fisheries for regulation and control. Some research has already been done on a few of the more important species and more will be undertaken as required.

The Provincial Department of Fisheries has established a marine laboratory at Ladysmith on Vancouver Island for the purpose of conducting biological research into those species over which the Province has control, principally oysters, clams and other forms of shell-fish as well as marine plants. This research is conducted with the object of encouraging the industry to produce better products more economically and of enabling the Department to regulate the various species so that maximum exploitation may be obtained on a sustained-yield basis. The Department co-operates closely with the research work done by the Fisheries Research Board of Canada, particularly on the Pacific Coast.

## Section 2.-Fishery Statistics*

## Subsection 1.-Primary Production

The total marketed value of all fishery products in Canada (exclusive of Newfoundland) was $\$ 149,821,000$ in 1952, representing a decline of almost 15 p.c. from the record peak of $\$ 175,718,000$ in 1951. The landings of fish also dropped by about 10 p.c., from $1,448,000,000 \mathrm{lb}$. to $1,315,000,000 \mathrm{lb}$. The lower production of the West Coast fisheries accounted for these declines.

The data for Newfoundland are not included in the following tables because comparable statistics are not available. In 1952, the landings of fish in Newfoundland were estimated at $575,000,000 \mathrm{lb}$., with a value to the fishermen of about $\$ 13,000,000$; the total value of all fishery products was approximately $\$ 27,500,000$.

[^194]
## 1.-Marketed Values of All Products of the Fisheries, 1870-1952

(Exclusive of Newfoundland)

| Year | Value | Year | Value | Year | Value |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$'000 |  | \$'000 |  | \$'000 |
| 1870. | 6,577 | 1915............... | 35,861 | 1944. | 89,440 |
| 1875.... | 10,350 | 1920................. | 49,241 | 1945. | 113,871 |
| 1880. | 14,500 | 1925 | 47,942 | 1946. | 121,125 |
| 1885. | 17,723 | 1930 ............... | 47,804 | 1947. | 123,900 |
| 1890 | 17,715 | 1935 | 34,428 | 1948 | 139,749 |
| 1895. | 20,199 | 1940................ | 45,119 | 1949. | 131,138 |
| 1900 | 21,558 | 1941. | 62,259 | 1950. | 151,982 |
| 1905 | 29,480 | 1942. | 75,117 | 1951. | 175,718 |
| 1910. | 29,965 | 1943 ................ | 85,595 | 1952. | 149,821 |

Three provinces accounted for 81 p.c. of the total marketed value of fisheries products in 1952; British Columbia's share was 39 p.c., a substantial decrease from the previous year, followed by Nova Scotia with 28 p.c. and New Brunswick with 14 p.c.

## 2.-Marketed Value of All Products of the Fisheries, by Province, 1948-52

Nore.-Figures for the years 1917-47 are given in the corresponding table of previous Year Books beginning with the 1922-23 edition.

| Province or Territory | 1948 |  | 1949 |  | 1950 |  | 1951 |  | 1952 - |  |

In 1952, salmon was still the most valuable of all the leading species of fish, even though both the quantity landed and the marketed value were lower than in the previous year. Lobsters, cod and herring followed in that order. The most notable decline occurred in the quantity and value of herring.

Table 4 shows the quantities of the main species of the commercial fisheries landed (primary products only) and values marketed (primary and secondary products). Minor items, and secondary products not specifically derived from one particular kind of fish, are grouped in the item "Other".

## 4.-Quantities Landed and Values of All Marketed Products of the Chief Commercial Fisheries, 1948-52

(Exclusive of Newfoundland)
Nors.- The quantity landed excludes the weight of livers, but the value of liver products is included in the value for the species concerned.

## Subsection 2.-The Fish-Processing Industry

In 1952, a total of 635 firms were engaged in the fish-processing industry in Canada (including Newfoundland). The marketed value of their products was $\$ 134,725,000$, about 17 p.c. lower than in 1951; this decrease was mainly accounted for by a drop in the value of British Columbia fisheries.

## Section 1.-The Fur Industry

The fur industry was at one time the most vigorous and remunerative industry in Canada and it still contributes many millions of dollars annually to the national income. Until the end of the 19th century practically all Canadian furs were wildcaught and, although fur-farming has developed rapidly during the present century, trapping continues to provide nearly 57 p.c. of the income from raw furs produced in Canada.

Wild fur-bearers are still taken, even in settled areas of this country, but the populations of such animals have, in general, been so reduced by the advance of settlement that the principal trapping areas now lie in the Northwest Territories and the northern parts of the provinces. Many wild animals, including some important fur-bearers, are subject to marked fluctuations in numbers from year to year, and these fluctuations are often greatest and most nearly regular in northern regions. The number of pelts of certain wild species taken annually is notably affected by these fluctuations.

Another and perhaps more important factor governing the 'take' of wild-animal furs is the fluctuation in demand and in price consequent on changes in fashion. Thus, the vogue of recent years for short-haired furs, resulting from the desire of women to present as slender a silhouette as possible while wearing a fur coat, has caused a decrease in demand for fox and other long-haired pelts and a corresponding decrease in the number of such pelts taken by trappers. In areas, such as parts of the Northwest Territories, where these furs were formerly a staple source of income, this style change has resulted in serious hardship. It is obvious that the problems thus created cannot be solved by wildlife-management practices.

The most important aspects of management of the fur-trapping industry are: constant practical scientific research, maintenance of suitable habitat and its improvement where possible, sound and balanced regulation of the harvest of furbearers, provision of competent and adequate field staffs, and free education of trappers with respect to the principles of wildlife management. By these means many areas depleted of fur-bearers have once again become productive. Such means will become increasingly important in maintaining Canada's position as a major producer of raw furs.

Most of the fur resources of the provinces of Canada are under the administration of the respective provincial governments. Exceptions include those resources within the boundaries of the National Parks and the Indian reserves, which are the concern of the Federal Government. Also of Federal concern are the fur resources of Yukon Territory and the Northwest Territories. The Canadian Wildlife Service of the Department of Northern Affairs and National Resources (see pp. 40-41) is responsible for all Federal Government interests in wildlife resources except for those activities closely related to Indian affairs. The Service co-operates with interested provincial government and other agencies and handles federal interests in relevant national and international problems.

## Section 2.-Provincial and Territorial Fur Resources and Management*

Newfoundland.-The Province of Newfoundland, stretching 900 miles northward from a latitude of $47^{\circ} \mathrm{N}$. has climatic and habitat conditions suited to the raising of wild fur-bearing animals. The Island supports beaver, muskrat, marten, otter, lynx, fox, ermine and mink; mink were not indigenous to the Island but were introduced since 1935 through animals escaping from mink ranches. The Labrador

[^195]area, also, is noted for its fine furs, particularly Labrador mink, and muskrat, marten, otter, beaver, fox, lynx, ermine and red squirrel are numerous enough to warrant trapping.

Wild fur trapping was a basic autumn and winter employment in the Province before World War II but defence construction and maintenance and industrial expansion so changed the economy of the people that trapping is now purely a parttime occupation engaged in only when other employment is not available. In fact the future of the industry may be impaired because few members of the younger generation are receiving the training necessary to the successful trapper.

Throughout the Province, the long-haired fur-bearers were once the basis of the fur industry and the decline in the prices of their fur was mainly responsible for the decline in trapping. As a result, the fox and lynx populations have built up so that they have assumed predator status and are not now protected by regulations.

Beaver management was started in 1935 and the Island of Newfoundland was repopulated by the transfer of live animals. This program proved so successful that during four open seasons in the years 1946-53 the catch numbered 30,000 beaver valued at $\$ 550,000$. The success of this venture has led to the institution of a similar program in northern Labrador. The Labrador area, north of the Hamilton River drainage, has been without beaver for a hundred years.

Other fur bearers have not been managed except through the usual close seasons provided by regulations; for open seasons, regulations on fur-bearing animals differ according to climatic zone and provide for the taking of animals only during that season when the fur quality of the pelt is at its highest.

Prince Edward Island.-Wild fur-bearing animals are very plentiful on Prince Edward Island. Red fox, skunk and raccoon have become so numerous and their depredations among Island poultry flocks so alarming that all protection has been removed and bounties are paid on all three species. Beaver, too, have increased to the point where they have become a nuisance in this highly agricultural province: they have plugged road and railway culverts and their dams have flooded pulpwood stands and extensive tracts of farmlands. There is now an annual open season on beaver (Nov. 10-Dec. 31) and some trapping permits are issued in the out-of-season period.

Ten years ago muskrats had become quite scarce but their population has increased. They are now the best revenue producers because they are easily trapped, and more than 3,000 of them are taken annually. Their increase is attributed largely to the shortening of the trapping season from Nov. 1-Mar. 31 to Nov. 10Dec. 31 and the strict enforcement of trapping regulations, which prohibit the setting of traps within ten feet of a muskrat house or den or the damaging of that house or den. Mink are also increasing in number, and are protected by the same shortened trapping season as are muskrat. Mink, moreover, is the only fur-bearing animal ranched to any extent in the Province.

Nova Scotia.-Nova Scotia is not a large producer of wild fur pelts. There is usually a six-week open season (Nov. 1-Dec. 31) for mink, otter, weasel and muskrat. The present low market prices for long-haired fur has discouraged the trapping of wildcat, fox and raccoon and these animals have been removed from the protected list. For the trapping of fur-bearers, other than beaver, no licence is required.

Since 1931, the Department of Lands and Forests has been redistributing live beaver, which had been almost completely trapped out before that time. To-day beaver is an important part of the trappers' catch in all the counties of the mainland, where a ten-day autumn season has been instituted. A few live beaver have also been introduced into Cape Breton Island over the years and a further release of 50 animals in 1953 completed this project but no open seasons have yet been proclaimed for the Island. The Department of Lands and Forests collects, packs and ships all beaver pelts and these are marketed in graded lots.

The red squirrel has become increasingly important as a fur-bearer and in 1954 the laws were changed to permit trapping during the regular season and shooting of these animals through the rabbit season which lasts until the end of February.

In Nova Scotia, trapping is not a full-time occupation but is a source of additional income to guides, woods workers and farmers who live near fur-producing areas.

Export figures are compiled as a by-product of the collection of royalties on furs exported. Exports of wild-animal furs in 1953-54 included: 29,498 deer hides, 553 red fox, 12 cross fox, 202 silver fox, 2,252 mink, 57,185 muskrat, 174 otter, 1,852 raccoon, 5,509 weasel, 248 wildcat, 82,743 red squirrel, 31 rabbit (snowshoe hare), 10 lynx, 3,165 beaver and a few pelts of skunk, seal, housecat, etc.

Quebec.-Wild fur is still a very important asset to the Province of Quebec, despite the invasion of the forest for industrial purposes. The total number of pelts taken in 1952-53 was 327,180 valued at $\$ 1,287,733$. In the following season the number increased to 336,967 but the value dropped to $\$ 1,139,117$. The average value of each of the basic furs-beaver, mink, muskrat, weasel and squirrel-was lower in the 1953-54 season, while prices of red and white fox remained the same. A few types, such as otter, fisher and raccoon, showed an increase in this respect. Pelts produced in 1953-54 included: muskrat, 190,457 ; squirrel, 45,929 ; weasel, 35,008 ; beaver, 19,079 ; mink, 12,896 ; seal, 8,073 ; white fox, 7,893 ; red fox, 4,841 ; raccoon, 3,370 ; deer, 3,115 ; otter, 2,269 ; lynx, 1,068 ; fisher, 1,032 ; skunk, 746 ; marten, 492; black, blue, cross and silver fox, 381 ; bear, 196; wolf, 88 ; and lynx cat, 34. On this take, the tax rate per pelt, which varies from one cent on squirrel to $\$ 2$ on fisher, resulted in a royalty revenue to the Province of $\$ 70,660$.

The administration of the fur resources of Quebec is under the jurisdiction of the Department of Game and Fisheries. Under the game laws and regulations, it is unlawful to hunt, catch or trap fur-bearing animals out of season, or in season without a licence; to use poison to hunt or kill any animals; to destroy or damage lairs or burrows of fur-bearing animals; or to keep in captivity, without special permit, any game protected by law. Regulations also cover the marketing of furs. It is not permissible to buy or sell any fur or pelt for commercial purposes without a licence; neither is it permissible to ship any fur outside the Province, or from one place to another within the Province, or to a tanner, without a permit attached to the bill of lading or without royalty having been paid and each pelt having been stamped or sealed.

By Order in Council of Aug. 17, 1945, the first registered game territory for trappers was set up by the Provincial Government in the Counties of East Abitibi and West Abitibi; in 1946 the County of Pontiac was organized, in 1947 Temiskaming and in 1952 the northern part of the County of Laviolette.

Regulations provide mainly that the land under lease must not exceed 50 sq. miles. The lessee, who pays an annual rental of $\$ 10$, is rèsponsible for his own land which he must occupy 15 days before the opening of the trapping season and evacuate 15 days after its close. Each year he must make an inventory of his land and report on the location of the beaver huts thereon. He must hold a special permit to hunt beaver and must prove that there are at least five huts on his land. The quota allowed at the outset is one beaver per hut; as the population increases, the quota is raised to $1 \frac{1}{2}$ beavers per hut. Beaver pelts must be specially labelled before marketing.

The present registered game territory extends over 30,000 sq. miles. More than 400 trappers hold permits and the quota allowed for the capture of beaver, negligible at the outset, was 5,227 in 1953-54. Three additional areas will be under production by 1956 and two areas 'are now (1954) under initial organization. Steps are being taken also to assist in the re-establishment of marten, the population of which has been steadily decreasing.

Ontario.-Ontario's fur and big game wealth is administered by the Division of Fish and Wildlife, Ontario Department of Lands and Forests, under the authority of the Ontario Game and Fisheries Act, the Wolf and Bear Bounty Act, and regulations thereunder.

In the production of wild-caught fur, Ontario leads all other Canadian provinces In the season of 1952-53 wild fur taken in Ontario was valued at almost $\$ 4,000,000$. Included in this were the pelts of 122,600 beaver, valued at $\$ 1,612,000$. Other important species, in order of decreasing total value, were muskrat, mink, otter, raccoon, fisher, weasel, marten, skunk, red fox and lynx.

Much credit for the high production of wild fur in Ontario is attributed to the efficient system of fur management now in effect. Throughout most of the chief fur-producing areas all trappers-the great majority of whom are Indians-are holders of Registered Trapline Licences. Under this system each trapper is registered with the Province as the sole permittee on a defined trapping area. Thus, competitive trapping has been almost entirely eliminated in all but the primarily agricultural areas of the Province, and the Department is in a position to set quotas to restrict the annual take of the less abundant species during times of scarcity. Such species as beaver, marten, fisher and lynx, comparatively rare in the Province a few years ago, have now attained populations which permit larger annual harvests to be taken than have been possible for many years.

Manitoba.-The fur resources of Manitoba represent one of the major phases of development by the government. Wild fur taken in 1952-53 totalled $\$ 2,116,157$ and royalties to the Province amounted to $\$ 149,689$. Value of the take was 16 p.c. below the 1951-52 figure.

Two major conservation projects have been responsible for the rehabilitation of wild fur. The Province has reclaimed old marshlands as Fur Rehabilitation Blocks where muskrat trapping is carried out under special permits. Since 1940 a total of $2,378,684$ muskrats with a gross value of $\$ 5,002,166$ has been taken from five such Fur Rehabilitation Blocks having a total area of 2,013,440 acres.

The second great stride in fur conservation has been the institution of Registered Traplines throughout the northern part of the Province. Beaver production in this area has risen from a forced close season until 1944 to a record crop of 22,850 beaver
in 1951-52 with an estimated value of $\$ 359,560$. Registration of traplines and areas is being steadily continued and this work is now reaching into the southern areas of the Province.

Total wild fur production decreased slightly in the 1952-53 season, reflecting lowering prices and a slackening of market demand. Manitoba, however, produced 24,197 beaver, $27,611 \mathrm{mink}$ and 578,885 muskrats during the year, and other pelts taken included: squirrel, 241,067 ; weasel, 105,831; jack rabbit, 5,318 ; silver, blue, cross, white and red fox, 3,282 ; otter, 1,571 , and lesser numbers of coyote, timber wolves, skunk, badger, fisher, marten, bear and lynx.

Fur ranching is also a major industry in the Province, with a harvest of $\$ 2,099,470$ for the year ending Dec. 31, 1952. A total of 496 fur farms are licensed at present.

Saskatchewan.-The wild fur industry in Saskatchewan has undergone a period of rapid reorganization in the past ten years. A policy of one trapper for any one area has been inaugurated throughout the Province, a system providing security for trappers on their trap lines.

As a result of unethical practices and lack of management, beaver were almost extinct in Saskatchewan in 1944, and the trapping industry, in general, was at a very low ebb. A committee was appointed by the Government in 1945 to consider this unfortunate condition and to recommend steps necessary to encourage and assist trappers dependent on fish and game for their livelihood, particularly in isolated northern areas.

A Fur Marketing Service was established in Regina to give fur producers a local auction where their fur could be graded, displayed and sold to the highest bidder. In 1946, a Fur Conservation Agreement was concluded with the Federal Government by the Province in which the two Administrations agreed to spend certain moneys annually for the purpose of managing fur and game and improving wildlife habitat in the northern isolated areas for the benefit of the residents of those areas. The particular interest of the Federal Government in this region lay in the welfare of Treaty Indians who are their wards. Regulations under the Agreement gave Indians, métis and whites equal rights and security on their community, family or individual traplines. Local trappers' councils were elected by the trappers to act as spokesmen on their behalf when dealing with the Provincial Department of Natural Resources. During the subsequent five years 3,600 live beaver were moved from settled areas to new homes in the northern frontier where they were required for propagation purposes and for the improvement and maintenance of water levels. The result of this action has been a steady increase in the population of beaver, while the take has increased from approximately 400 pelts in 1943-44 to 23,000 in 1952-53.

In 1946, the south Saskatchewan muskrat trapping program was inaugurated. Each trapper in settled areas obtains a permit which describes the area on which he is authorized to trap muskrats and the quota he may take from it-based on the number of houses and bank runs located therein. It is estimated that five muskrats per house will survive a winter and that three may be trapped, leaving the others for propagation. Thus, general close seasons are a thing of the past and muskrats existing in any section can be trapped on the basis of the program. As a result, average yearly production since that date has been almost tripled in relation to the average yearly production for a similar period prior to 1946. The 1953 crop numbered almost $1,000,000$ muskrats, the fourth highest ever recorded in the Province.

Other fur animals of economic importance are fisher, fox, lynx, marten, mink, otter, squirrel and rabbit. These animals have fluctuated in population as well as in pelt value in past years but the increased production of beaver and muskrats has helped stabilize the income of the trapper. Even though most fur prices have declined in recent years, the income received from Saskatchewan wild fur pelts has been maintained.

Badger, raccoon and wolverine are at present of little economic importance. Wolves and coyotes are on the predator list as well as foxes in settled areas and very comprehensive programs of control have been carried on to reduce the population of these animals.

By 1948, it was quite apparent that bounties did not have the desired effect of reducing the coyote population. A paid-hunter program was, therefore, introduced, in co-operation with the rural municipalities, in which all field personnel were directly responsible to the Department of Natural Resources. Under strict supervision these men used guns, traps, cyanide guns or coyote-getters and poison. The program has been extremely successful and coyotes are no longer a problem in settled areas. A $\$ 10$ bounty has been continued on wolves, but bait treated with poison placed out on large lakes in isolated areas has been the most direct line of control. Here again, only employees of the Department are allowed to handle the poison. This work is becoming increasingly important not only to protect game that is necessary to the welfare of people living in the north country but also to reduce the chances of spreading the rabies epidemic which has been apparent in the West during the past two years as well as hydatid disease which has been found in some species of big game.

The weasel is a valuable fur bearer as well as a controller of rodents and, to increase its population, there has been a demand to have the close season extended throughout the greater part of the settled areas. However, closure in large areas does not seem to increase the weasel population, and the Department is carrying on biological studies to ascertain the effect of trapping on these valuable fur bearers at various degrees of intensity over a period of years.

Alberta.-The current wild fur trade of Alberta depends mainly on the fine fur group consisting of muskrat, ermine, beaver, mink and squirrel. This group accounted for 97 p.c. of the total value of the 1952-53 catch. The depressed condition of the market for long-haired coarse-furred pelts, including fox, skunk, lynx and rabbit, has kept the trapping of these animals at a low level for some years. During the 1952-53 season, the prices of furs generally remained low, except for a few species. Statistics show that more pelts were taken but the financial return to the trappers decreased.

Wild fur production in Alberta is controlled through the registered trapline system. During the past few years, except for very slight fluctuations, the number of registered traplines has remained fairly constant in the neighbourhood of 3,000 , of which approximately 800 have been registered by Treaty Indians. The registration fee of $\$ 10$ per line is paid by the Federal Government on behalf of the Indians. The stabilized trapline situation is accounted for by the prevalence of both muskrat and beaver. Before the institution of the system, the beaver was almost extinct in the Province, but in the ten years of beaver management the population has increased until it is now necessary to trap and remove beaver from areas where they are not wanted and where they cause considerable damage. Muskrat presents the same
problem and if complaints, after investigation, are found to be justified special permits are issued for the removal of the animals. In 1952-53, 290 special muskrat permits and 719 beaver permits were issued.

Timber wolves, cougars and coyotes are considered predators and bounties were paid on all wolves and cougars killed between Apr. 1, 1952, and Mar. 31, 1953. Grizzly, black and brown bear are also classed as predatory and are unprotected throughout the Province.

Late in 1952 a special problem arose when a rabies epidemic broke out in the northern part of the Province. Trappers were employed to reduce the number of animals that might spread the disease and $a$ double trapline was set on the edge of the forested area completely surrounding the settled area of the Province.

The wildlife resources of Alberta are administered by the Department of Lands and Forests under the Game Act and the Game Regulations.

British Columbia.-Effective control of fur-bearing animals in British Columbia commenced in 1926 when the registered trapline system went into effect. Under this system registered trappers are granted exclusive rights over a designated area. They are given a sketch map and legal description of the territory and are required to submit an annual 'return of catch' outlining the amount and kind of fur obtained. Through these returns an accurate check is made of the fur taken from each district. The system of registered traplines has worked remarkably well and is practically trouble-free.

Registered traplines cover all lands except private property, National Parks, Indian reserves, municipalities and certain other reserved areas. Trapping on private property may be pursued by the property owner himself or by someone to whom the owner has given permission, provided the trapper obtains a Special Firearms Licence which costs $\$ 10$ and which must be held by all trappers; this licence entitles the legal holder to hunt all types of large and small game. In 1953, 2,933 such licences were granted, several hundred fewer than the usual yearly average. In addition, about 1,500 Indians were also engaged in trapping: because they are not required to be licensed at the present time, their take is not recorded and the fur records for the Province are incomplete to that extent.

Fur-bearers in the Province include bear, badger, beaver, fisher, fox, lynx, marten, mink, muskrat, otter, raccoon, skunk, squirrel, weasel and wolverine. Wolf, coyote, cougar and wildcat are classed as predators, although the pelts of these animals are sometimes marketable. There is no close season on the predators or on raccoon, skunk, wolverine and black and brown bear. Raccoons and foxes have become so numerous in certain parts of the Province that they also may be considered as predators.

Trapping seasons are confined to the winter months, usually commencing Nov. 1, but beaver may be taken in some areas as late as May 24. Beaver are covered by tagging regulations, under which the trapper is required to submit a yearly estimate of the number of beaver left on his trapline. Before setting out to trap, he makes known to the game warden of his area the number of animals he wishes to take. If it is not excessive he receives a tag which must be attached to each pelt. Trappers are not allowed to take more than 25 p.c. of the total population of beaver in their areas and this has played an important part in saving the beaver from extinction. In fact, the animals are now so numerous in some areas
that it has become necessary to move them to districts where their activity will not cause damage. Nuisance animals are usually liberated on Indian traplines that need re-stocking.

Muskrat and squirrel are consistently the most important source of revenue among British Columbia furs. At one time marten was most in demand, but now mink appears to be taking precedence.

It is unlawful to ship fur out of or into the Province without permission and also to ship fur within the Province without plainly labelling the parcel with the sender's name, address and the number of his Special Firearms Licence. These regulations enable the game authorities to keep close control over fur shipments. Almost all of the raw fur business is centred in Vancouver and a game warden is posted there to supervise fur sales and fur traders. His regular visits to the traders keep infractions of the regulations at a minimum.

Low prices caused by changes in fashion and other factors such as the relatively high wages in construction and other industries, have made trapping fur for a livelihood unattractive in recent years. Little trapping is carried on to-day as compared with earlier years and, in consequence, fur bearers have become quite prevalent in all parts of the Province. The number of pelts upon which royalty was paid during 1953 was 450,117 , of which 77 p.c. were squirrel; 11 p.c. muskrat; 4 p.c. mink; 3 p.c. weasel; and 2 p.c. beaver. The remainder included badger, bear, fisher, silver, red and cross fox, lynx, marten, otter, raccoon, skunk and wolverine.

Yukon Territory.-Registered trapline legislation, introduced in 1950, has been completed throughout Yukon Territory and 390 individual trapline registrations have been approved for the area extending from the southern border to the 65 th parallel of latitude. North of the 65th parallel the trappers, who are nomadic bands of Indians, have registered on two group-trapping areas: one, for the Loucheaux Band No. 10 of Old Crow, has 32 registrations approved for heads of families, and the other, for the Loucheaux Band No. 7 of Fort McPherson, N.W.T., has 28 registrations. The initial registration fee for a trapline, either group or individual, is $\$ 10$ and the annual renewal fee is $\$ 5$.

During the past few years, trapline activities have been discouraged by low fur prices and trappers have been forced to find other occupations. As a consequence, the over-all picture of the fur population is good. Beaver, fox, lynx and squirrel are more prevalent and marten, mink and muskrat are more than holding their own in number; on the other hand, fisher, wolverine, otter and weasel are scarce. The predators, wolves and coyotes, appear to be increasing. Pelts taken in the 1952-53 season included: squirrel, 186,345 ; muskrat, 52,604 ; beaver, 2,202 ; marten, 1,923; weasel, 1,827 ; mink, 747 ; lynx, 408; red, white, cross and silver fox, 105; otter, 50 ; fisher, 42 ; and bear, 22.

The only fur-bearing animal on a quota is beaver: trappers are permitted to shoot or trap one beaver from each beaver house, including bank beaver. Trapping may be prohibited over an area covered by a trapline permit if this is considered necessary for the conservation of breeding stock. During the months of March and April in 1953 and again in 1954, a lethal control program was conducted against predators, particularly wolves. Poisoned bait was distributed by aircraft over a large number of lakes where wolf concentrations were observed.

Game-law enforcement is in the hands of the Royal Canadian Mounted Police; in addition, six Federal Park Wardens and 10 Class A Guides act as game guardians.

Northwest Territories.-Utilization of fur and game resources in the Northwest Territories is governed by the Northwest Territories Game Ordinance. Trapping privileges are available only to resident Indians and Eskimos and those white persons who were licensed to hunt and trap in the Territories prior to 1938 and who have continued to reside therein. Provision is also made for the issue of General Hunting Licences to the descendants of these white persons.

Because of the nomadic nature of the Eskimo and the large areas over which he must hunt and trap, there is no provision for trapline registration in the Franklin and Keewatin Districts, though a number of game preserves have been established in the Territories to preserve the fur and game therein for the natives. Largest of these is the Arctic Islands Game Preserve comprising all the Arctic Islands north of the mainland plus a large area on the mainland.

Provision under the Game Ordinance for the establishment of registered traplines became effective in the Mackenzie District on July 1, 1949. Under this legislation exclusive trapping rights in limited areas are granted to the trappers to encourage them to manage carefully the fur-bearers found there and to effect improvements leading to increased fur production. The Mackenzie District is divided into 12 Warden Districts (including Wood Buffalo Park) covering 386,615 sq. miles -over half under registration. There are 319 individual registered areas and 118 group registered areas.

The downward trend of the fur market during the past few years has caused trappers to lose interest in trapline activities: many have obtained employment elsewhere and others have refused to trap very far away from the settlements. The fur take reflects this lack of interest: though lynx, marten, otter and weasel have remained steady and slight increases are noted for fisher, wolf and wolverine, the take of beaver, fox, mink, muskrat and squirrel has shown a decided decrease. Pelts taken in the 1952-53 season were: muskrat, 250,367; squirrel, 68,611; white fox, 36,474 ; weasel, 12,418 ; beaver, 6,339 ; mink, 5,395 ; marten, 5,002 ; lynx, 1,575; black, blue, cross, red and silver fox, 1,227; wolf, 531 ; otter, 143 ; wolverine, 102; and fisher, 30.

Beaver and marten are taken on a quota basis: trappers are permitted to shoot or trap one beaver for each occupied beaver lodge. In areas where beaver are scarce and where conditions are suitable, transplant operations are carried out. Close seasons are established when it becomes apparent that a particular species of furbearing animal is being over-trapped. A wolf-poisoning program is carried out in areas where these animals have become detrimental to desirable wildlife.

Game-law enforcement is in the hands of wardens stationed at the principal settlements in the Mackenzie District; elsewhere in the Territories it is handled by the Royal Canadian Mounted Police.

## Section 3.-Fur Farming

Fur-bearing animals were first raised on farms in Prince Edward Island around 1887 and in Quebec in 1898; to-day fur farming is carried on in all provinces of Canada. Foxes were the first fur-bearers to be raised in captivity on a commercial scale but mink, chinchilla, raccoon, marten, fisher, fitch, nutria and others are now being reared. Mink are the most numerous, followed by the various types of foxes and these two far outnumber all other kinds of fur-bearing animals.

There was a slow and steady increase in the number of fur farms until 1920 when 587 were reported, followed by a period of more rapid growth from 1920 to 1938 when the number reached 10,454. After the outbreak of hostilities in 1939 and the loss of the London and other European markets, prices declined; many fur farms went out of production. Though prices rose considerably after the War, operating costs also increased and the number of fur farms, particularly those conducted in conjunction with other farming operations, continued to decrease. By 1952 , only 2,518 reported but, despite this decrease in number, volume of production has been maintained.

Though the earliest and most intensive fur-farming operations were concerned with fox-raising in the Maritime Provinces and Quebec, the sharp decline in the popularity of fox furs and the steady rise in mink resulted in Ontario and Western Canada taking predominant positions in the raising of fur animals. A distribution of the 306,523 animals on fur farms at Dec. 31, 1952, showed 14 p.c. in British Columbia, 48 p.c. in the Prairie Provinces, 25 p.c. in Ontario, 8 p.c. in Quebec and 5 p.c. in the Maritime Provinces.

Furs have for centuries been used for clothing and adornment and the demands of fashion, encouraging the development of new colour phases in fox and mink, have been an important incentive to the fur-farming industry. There have always been mink mutations in the wild state but these unusual animals stood little chance of survival and such pelts were exceedingly rare. Starting with wild-caught mink, breeders have, by cross-breeding, produced mink furs in a variety of colours. Among 92428-40
the earliest mutations to appear was an attractive bluish-gray mink which became known as 'Platinum' mink. Then mutations were cross-bred and a still greater profusion of colour combinations appeared, notably the 'Sapphire' mink, a cross of the steel-blue 'Aleutian' with the blue-gray 'Platinum'. Other unusual colour patterns are the 'Royal Pastel', a beautiful brown mink with a bluish cast, and an exquisite snow-white mink.

In 1937, some chinchillas were imported into Saskatchewan and later into other provinces. These valuable little animals have a rich, soft fur. Although the original cost of chinchillas is high the outlay for raising them is small. A steady increase in the number on farms has resulted and 11,571 were reported in Canada in 1952 valued at $\$ 2,122,889$.

## Section 4.-Statistics of Fur Production*

Total Fur Production Statistics.--Early records of raw-fur production were confined to the decennial censuses, when account was taken of the number and value of pelts obtained by trappers. In 1920, the Dominion Bureau of Statistics commenced an annual survey of raw-fur production, basing the statistics on information supplied by the licensed fur traders, and continued this for some years. More recently, annual statements based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are now used in the preparation of the statistics issued annually by the Bureau. Figures for Prince Edward Island are based on returns supplied to the Dominion Bureau of Statistics by fur traders in that Province.

${ }^{1}$ Approximate.
${ }^{2}$ Figures prior to 1952 do not include Newfoundland.
Ontario leads the provinces in value of fur production, accounting for 26 p.c. of the total in the 1952-53 season. The numbers of pelts taken in Alberta and in Saskatchewan were greater than in Ontario but, in these provinces, squirrel pelts, which are lower-priced furs, made up a large part of the total. In Ontario the more valuable mink and beaver pelts brought the total value to a higher level.

| Northwest Territories. | 696,245 | 1,448,173 | 6.0 | 388,653 | 877,345 | 3.8 |
| Canada | 7,931,742 | 24,215,061 ${ }^{\text {r }}$ | $100 \cdot 0$ | 7,568,865 | 23,349,680 | $100 \cdot 0$ |

The average prices of the main kinds of pelts taken in 1952-53 were generally lower than in 1951-52. Mutation mink pelts dropped from $\$ 21.99$ to $\$ 20.55$ and standard mink from $\$ 16.89$ to $\$ 15.18$. Most types of fox pelt decreased in price, silver fox falling from $\$ 11.48$ per pelt to $\$ 7.43$, but white fox advanced from $\$ 8.16$ to $\$ 8.86$. The average value of beaver pelts was $\$ 13.90$ in 1952-53 compared with $\$ 14.91$ in the previous year, muskrat was $\$ 1.26$ compared with $\$ 1.42$, squirrel increased slightly from 43 cents to 45 cents, and otter advanced from $\$ 21.10$ to \$22.62.

## 3.-Pelts of Fur-Bearing Animals Taken, by Kind, Years Ended June 30, 1952 and 1953

Fur-Farm Statistics.-The post-war downward trend in number of fur farms continued through 1952 when there were 2,518 farms compared with 3,072 in 1951. From 1951 to 1952 the value of fur animals on these farms dropped from $\$ 10,195,561$ to $\$ 9.560,702$ and the operating revenues from $\$ 12,400,000$ to $\$ 11,100,000$.

The number of farms reporting foxes in 1952 decreased by 38 p.c. from 1951 to 380 , and the number of foxes on these farms was lower by 49 p.c., totalling 7,366 and valued at \$140,261. Mink farms also declined from 2,324 in 1951 to 2,089 in 1952 and the number of mink on farms dropped to 287,213 valued at $\$ 7,284,860$ in 1952, which was 4,912 fewer in number and $\$ 737,548$ less in value than in 1951. Production of fox pelts in 1952 was 42 p.c. lower than in 1951 and that of mink pelts increased 7.5 p.c.
4.-Fur Farms and Value of Fur-Bearing Animals, by Province, 1949-52

## Section 5.-Marketing of Furs

Montreal, Que., is the leading Canadian fur mart, although auction sales are also held at Vancouver, B.C., Edmonton, Alta., Regina, Sask., and Winnipeg, Man. The Saskatchewan Government maintains a Fur Marketing Service at Regina to assist producers in that Province.

Grading.-The grading of furs to secure uniformity was introduced in 1939 by the Federal Department of Agriculture so that furs may be purchased by grade without the necessity of buyers from other countries personally examining the pelts. Grading offers many advantages to the producer as well as to the trade in general. It educates the rancher as to the proper value of his pelts and creates an incentive to improve the quality of the product; it furnishes guidance in the planning of future matings, aids in raising the standard of quality of the entire crop of pelts and helps in advancing the level of prices for high-quality pelts.

Exports and Imports.-Before World War II, Canada marketed fur pelts mainly in the United Kingdom but that market was practically dormant during the war years and the fur trade was carried on mainly with the United States. A definite revival of trade with the United Kingdom took place after the War but almost 80 p.c. of Canadian fur exports still go to the United States.

The Canadian fur trade, both export and import, is chiefly in undressed furs, the value of dressed and manufactured furs going out of or coming into Canada being a comparatively small proportion of the total. Exports consist largely of furs which Canada produces in greatest abundance, mink being the most valuable followed by beaver, muskrat and fox. On the other hand, furs such as Persian lamb, certain types of muskrat, rabbit, squirrel, sheep and lamb, which are not produced to any extent in Canada, make up the major portion of the imports.

Exports and imports of all furs to and from the United States, the United Kingdom and all countries are given for the years 1952 and 1953 in Table 7.

## Section 6.-The Fur-Processing Industry*

The rather general term "fur processing" includes the fur-dressing and -dyeing industry and the fur-goods industry. The former is concerned with the dressing or dyeing of pelts on a custom basis, and the latter is a manufacturing industry that makes up fur goods such as coats, scarves and gloves.

Fur-dressing and -dyeing industry statistics were first recorded in 1917, when 12 establishments with 512 employees reported receipts of $\$ 1,071,805$. Eight establishments in 1924 reported a revenue of $\$ 1,120,895$, expenditures of $\$ 162,013$ on dyes, chemicals and other materials used, and expenditures of $\$ 561,233$ on salaries and wages to 539 employees. Of the $3,473,909$ skins treated in that year, muskrat pelts made up 47 p.c., rabbit 19 p.c. and squirrel 10 p.c.

The greatest number of skins treated was reported in 1941, when 14,592,079 were handled, but almost 53 p.c. of those were rabbit skins so that the revenue for that year was only $\$ 2,476,289$. The record revenue reported was that for 1949 , when $\$ 6,691,418$ was received and rabbit skins constituted 38 p.c. of the total processed.

In 1953, the number of skins treated was $11,001,366$, of which muskrat comprised 44 p.c., squirrel 15 p.c., Persian and other types of lamb 14 p.c. and rabbit 13 p.c.

## 8.-Principal Statistics of the Fur-Dressing Industry, 1950-53

| Item | 1950 | 1951 | 1952 | 1953 |

| Cost of materials used (dyes, chemicals, etc.)... | 1,294, 259 | 1,076,825 | 1,177,345 | 1,026,173 |
| Pelts treated................................ No. | 13,639,110 | $9,768,616$ | 12,085,066 | 11,001,366 |
| Amount received for treatment of furs.......... \% | 6,514,772 | 5,302,761 | .6,061,850 | 5,920,014 |

Statistics for the fur-goods industry, on a comparable basis, are available from 1921, when 219 establishments reported a gross value of production of $\$ 13,639,609$, employees numbered 2,621 and salaries and wages amounted to $\$ 3,013,706$. Cost of materials used in the manufacturing process totalled $\$ 8,118,833$. Principal statistics for the industry for the years 1950 to 1953 are given in Table 9.

[^198]9.-Principal Statistics of the Fur-Goods Industry, 1950-53

${ }^{1}$ Value of factory shipments. See text p. 633.
Changes in living habits and standards in the past quarter-century are reflected in the type of goods produced by the fur-goods industry. For example, in 1921 there were 31,604 ladies' fur coats and jackets produced whereas, in 1953, the number was 220,717 . The manufacture of men's fur coats showed a decided reversal in the market; there were 5,692 men's fur or fur-lined coats manufactured in 1921 but only 352 in 1953.

Nore.-The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter deals with manufacturing in Canada in three Parts. Part I briefly considers post-war growth of manufacturing within the historical framework of Canadian development with major emphasis on the year 1952 and the fifteen leading industries. Part II provides general statistical analyses including: manufacturing statistics from 1917; detailed treatment of current production under various groupings and individual industries; and principal factors in manufacturing production such as capital, employment, salaries and wages and size of establishment. Part III deals with the provincial and local distribution of manufacturing production.

## PART I.-REVIEW OF CANADIAN MANUFACTURING

Canada is to-day an industrialized society, obtaining its major source of income and finding its major source of employment in manufacturing operations. This process, beginning in the 1860 's, gathered momentum in World War I but was not an economic force until the early years of World War II. Nevertheless, some Canadian industries became competitive with those of other countries in both quality and price long before World War II. One of the earliest examples was the farm
implements industry; another was the pulp and paper industry, which was able to compete successfully in important foreign markets in the 1920's and still remains the leading manufacturing industry.

The first phase of development took place between 1867 and 1900. Rising prosperity until 1873 brought about continuing expansion of manufacturing capacity particularly in such fields as flour and grist-mill products, leather boots and shoes, and $\log$ products such as lumber, lath and shingles. Manufacturing weathered the depressed economic conditions of the latter part of the 1870 's and a good part of the 1880's, aided particularly by the high quality of Canadian natural resources and the fact that they could be developed at low cost, partly because of their growing accessibility as the railway network expanded in Canada and partly because cheap ocean transport became available.

The period 1900 to 1920 was characterized by rapid population increase and the opening up of the West. The program of railway construction, the growth of cities and towns, the equipping of western farms and the extension of community facilities in both Eastern and Western Canada gave great impetus to the production of capital goods. World War I brought about a notable acceleration of industrial diversification with particularly striking effects on the refining of non-ferrous metals, the expansion of the steel industry and the shipbuilding and aircraft industries. Following the War, international competition became very keen and Canadian industries experienced some adjustment, particularly in the short though severe recession of 1921 . This check was temporary and expansion was resumed up to the crest of 1929 with particular emphasis on pulp and paper, transportation equipment, non-metallic mineral products and chemicals. As a result of the depression of the 1930 's when economic activity was at a low ebb, Canadian industries were unprepared for the avalanche of military orders following 1939; nevertheless, conversion to war production was accomplished in two years. Expansion of productive capacity in manufacturing during the war years was particularly striking in such fields as tool making, electrical apparatus, chemicals and aluminum.

About two-thirds of the industrial structure created during that period was found to be adaptable to peacetime uses after the War. Although reconversion, modernization and expansion necessitated large capital outlays and although supply shortages slowed down the implementation of the program, most of the work was completed by the end of 1947 . From 1950 onward, two developments contributed particularly to manufacturing expansion in Canada. First, the intensive search for new minerals and other natural resources brought about a number of important discoveries and rapid development followed in such fields as crude oil, natural gas, iron ore, non-ferrous metals and a number of less important metals. This new development and the resulting need for equipment for exploration and processing gave great impetus to Canadian industries producing capital goods. Further, the availability of a greater quantity and variety of indigenous raw materials led to the creation of more processing capacity and to the establishment of advanced rawmaterial and power-using industries. Foremost among these was the chemical industry, which became increasingly diversified. In particular, major discoveries of oil and gas made feasible the establishment of such industries in central Alberta notwithstanding the great distance to the principal markets of the North American Continent.

The second development was the outbreak of the war in Korea, leading to the establishment of a three-year $\$ 5,000,000,000$ defence program. Three industries in particular received great stimulus from the rearmament program: the aircraft industry, which, for the first time, began production of jet aircraft and jet aircraft engines; the electronics industry, which produced a great variety of new items, from equipment for Canada's northern radar screen to infantry pack radio sets; and the shipbuilding industry, which not only revived after several years of decline following the end of World War II but which drew increasingly on Canadian equipmentproducing industries to fit out, power and arm the newly built naval vessels. A major characteristic of the expansion of Canadian manufacturing industries encouraged by the rearmament program was the adaptability of many of the new developments to civilian use. An outstanding example was the comparative ease with which a television industry was established in Canada.

Developments in 1952.-The manufacturing industry continued to advance during 1952 under the impetus of a strong consumer goods market, increased private investment spending for construction, machinery and equipment as well as higher governmental expenditures for goods and services. At the beginning of the year, over-all production and employment levels were about the same as in 1951 but the changing pattern of demand was bringing about a shift in emphasis away from the consumer and toward an improvement in Canada's industrial and defence potential. However, by mid-1952 a considerable strengthening in consumer demand had taken place. The removal, early in the year, of the special excise taxes on durables and the suspension of consumer credit regulations stimulated hard-goods purchasing. In addition, average personal income in real terms was rising significantly. Consumers appeared to be showing less resistance to prevailing prices, which had roughly stabilized, and many buyers, who in the post-Korean buying boom had bought ahead of their current needs, seemed to be returning gradually to the market for replacement needs. This increase in consumer demand continued throughout the second half of 1952 but was not enough to cause a resurgence of inflationary pressures. However, it did help to eliminate some of the soft spots that had existed previously and it also contributed toward some firming in over-all activity.

The gross value of production of the manufacturing industries continued its upward trend in 1952 reaching $\$ 16,982,687,035$, a $3 \cdot 6-\mathrm{p}$ c. increase over 1951. Part of the 1952 advance in value was accounted for by an increase of $2 \cdot 2$ p.c. in the physical volume of production and the balance by price increases. The index of physical volume of production stood at $246 \cdot 3(1935-39=100)$, being four points above the record wartime level attained in 1944. Accompanying the rise in output was an increase of 2.4 p.c. in the number of persons employed and of 11.0 p.c. in the amount of salaries and wages paid. Salary and wage payments at $\$ 3,637,620,160$ were the highest on record, and exceeded the previous high reported in 1951 by $\$ 361,339,243$.

No definite trend was established in 1952. Although the durable goods industries as a unit operated at a higher level of production than the consumer industries, both divisions reported advances and declines. In the durable goods sector the transportation equipment group reported the greatest advance in production with
an increase of 18.4 p.c. followed by non-metallic mineral products with an increase of 1.2 p.c. and electrical apparatus and supplies with 0.2 p.c. The iron and steel products group was practically unchanged, while the wood group reported a decline of 3.0 p.c. and non-ferrous metal products a decline of $1 \cdot 1$ p.c. In the non-durable goods sector the greatest increase in the volume of production was reported by the tobacco group with an increase of 14.2 p.c., followed by leather products with 9.4 p.c., products of petroleum and coal $7 \cdot 3$ p.c., foods and beverages $5 \cdot 2$ p.c., clothing $3 \cdot 1$ p.c. and chemicals and allied products 1.7 p.c. A decline in volume amounting to 11.7 p.c. was reported by the textiles (except clothing) group, of 6.8 p.c. by rubber products, of $5 \cdot 0$ p.c. by paper products, and of 1.2 p.c. by printing, publishing and allied industries.

Manufacturing establishments reporting in 1952 numbered 37,929. Of these, 948 were located in Newfoundland, 224 in Prince Edward Island, 1,533 in Nova Scotia, 1,077 in New Brunswick, 12,024 in Quebec, 13,172 in Ontario, 1,531 in Manitoba, 1,022 in Saskatchewan, 2,150 in Alberta, 4,225 in British Columbia and 23 in the Yukon and Northwest Territories. These plants furnished employment to $1,288,382$ persons who received $\$ 3,637,620,160$ in salaries and wages. They also produced goods with a selling value at the factory of $\$ 16,982,687,035$ and spent $\$ 9,146,072,494$ for materials, while the value added by manufacture totalled $\$ 7,443,533,199$. It should be remembered that the value added by manufacture does not represent the manufacturers' profits. The value added is obtained by subtracting the cost of materials, including fuel and electricity, from the value of products. The difference represents the value added to the materials by labour. It is this difference which the employer of labour uses to pay for the abour itself, the overhead expenses, interest and profits. Compared with the previous year, there was an increase of $\$ 502,586,416$ in the value added by manufacture.

Development in Canada's Leading Industries.-In Canada fifteen leading industries account for approximately half the value of manufacturing production. The largest industry, pulp and paper, had a gross value of output of $\$ 1,158,000,000$ in 1952. In little over half a century the Canadian industry has become one of the major enterprises of the world. Several factors were responsible for this growth: Canada possesses over half of the pulpwood resources of North America, cheap and abundant water power is found close to pulpwood stands, and extensive river systems can be used to transport pulpwood to the mills. Other important factors include the steady growth of population on the North American Continent, the increase in literacy, the rise of voluminous metropolitan dailies, the adoption of technical improvements in the printing and building trades and the growth of modern merchandising techniques. In recent years, extensive development in the field of nonpaper uses for dissolving pulp, such as rayon and plastics, has contributed to the growth of the industry.

In the period 1946-52, the industry, with a capital investment of $\$ 600,000,000$, tripled its value of production and increased its volume of output by 50 p.c. Newsprint output advanced 37 p.c., mechanical pulp 29 p.c., chemical pulp 45 p.c., paperboard 27 p.c., and wrapping paper 27 p.c. The significance of the industry in the post-war period is indicated by the fact that it ranked first in wages paid, first in
new investment, first in exports as well as first in value of output. It produced one-quarter of the world's output of wood-pulp and supplied 30 p.c. of the world's total pulp exports. It provided more than one-half the world's newsprint and a significant amount of other grades of paper and paperboard.

In 1952 the output of newsprint continued to expand, registering a 3-p.c. increase over 1951. However, easing demand conditions for market pulp and paper products resulted in rather substantial cutbacks as compared with the previous year. Even in the newsprint sector some levelling in demand occurred in North America in 1952 with shipments to domestic and United States consumers being only slightly above 1951. On the other hand, shipments to overseas markets expanded by over 28 p.c.

Five of Canada's fifteen largest manufacturing industries are included in the foods and beverages group. The slaughtering and meat-packing industry ranked second in 1952 with a gross value of production of $\$ 864,000,000$, butter and cheese eighth with production of $\$ 379,000,000$, flour mills thirteenth with $\$ 274,000,000$, miscellaneous food preparations fourteenth with $\$ 266,000,000$ and bread and other bakery products fifteenth with $\$ 260,000,000$. The level of activity in Canada's food-processing establishments exerts a major influence on over-all employment and income. The food industries have experienced a wide shift in the importance of various markets. Production for overseas trade received considerable impetus during World War I and continued active in the following period. By 1939, Canadian salmon, bacon, flour and canned fruits and vegetables were being shipped to Europe in large quantities and the United States also provided an attractive market for r great variety of processed foods. During World War II producers turned out bacon, canned meats, cheese and dried milk. and ${ }^{*}$.eggs in record quantities to meet Allied requirements. However, in the post-war period United Kingdom contracts have been continued at progressively lower levels and fewer commodities have been involved with each succeeding year and surplus products have been absorbed by Canada's growing population and increased per capita consumption.

The non-ferrous metal smelting and refining industry, the third largest manufacturing industry in Canada, had a gross value of production of $\$ 837,000,000$ in 1952. Canada is one of the world's leading producers of non-ferrous metals, standing first in the production of nickel, second in aluminum and zinc, and fourth in copper and lead. Canada has been the world's leading exporter of non-ferrous metals for over a decade. The most important of this country's base-metal orebodies were discovered before the turn of the century but their complexity prevented early exploitation. Unlike many important deposits elsewhere, which consist largely of oxides or of sulphides of a single metal, they were found to contain ores of two or more base metals intimately associated and frequently containing appreciable quantities of precious metals, such as gold, silver and platinum. Their development has been one of the most notable triumphs of Canadian skill and enterprise. During World War I and throughout the 1920's, large sums of money were spent on the discovery and improvement of smelting and refining techniques. Later, as the success of these processes was assured, plants were built that ranked among the greatest and most highly integrated of their kind in the world. Once in operation,
these establishments were in a position to reap the economies of large-scale production. Cheap water power, numerous by-products and locations near the ore-bodies were other advantages which enabled Canadian firms to sell large tonnages of refined metal in the world's markets at competitive prices. Unfortunately, they were soon to be faced with the general decline in industrial demand for metals which characterized the early 1930's. High United States tariffs also restricted sales in that country. It was not until about 1935 that industrial recovery and the first stages of rearmament in Europe led to production again approaching capacity. During World War II many ore-bodies were "high graded", removing the best ore and losing the lower-grade deposits. After the War, production declined owing not only to a fall in demand but also because of a return to better conservational practices. Improved technology has permitted the treatment of rock which formerly would have been classified as waste. However, the past few years have witnessed a renewed defence demand and the output of base metals in Canada during 1952 reached a post-war peak. Although production of copper was down 4 p.c. as the result of a strike, output of all other major base metals was up from the previous year. Nickel production increased by 2 p.c., lead production by 7 p.c., zinc by 9 p.c. and aluminum by 12 p.c.

The transportation equipment group includes three of Canada's largest industries: motor-vehicles ranked fourth with a production of $\$ 767,000,000$, railway rolling-stock ninth with $\$ 332,000,000$ and motor-vehicle parts twelfth with $\$ 277,000,000$. The establishment and rapid growth of the motor-vehicle industry in Canada was particularly influenced by early tariff policies and by the strong demand for North American type vehicles in many Commonwealth countries and the existence of trade preferences granted by some of these territories to Canada. Another characteristic of the industry has been American ability to supply relatively low-cost components and sub-assemblies, patent rights, technical and managerial skill, research facilities and large amounts of investment capital. During the post-war period, the Canadian motor-vehicle industry has tripled its capacity. In 1939 there was one passenger car for every $9 \cdot 5$ persons in the country; in 1952 there was one for every 6.3 persons. In the latter year the industry was particularly stimulated by the reduction, in April and May, of excise taxes and suspension of consumer credit regulations. Domestic sales expanded rapidly and, along with sizable export orders and defence contracts, kept the industry at peak levels of activity for the remainder of the year.

Canada's railway rolling-stock industry experienced periods of extraordinary activity during and immediately after the two World Wars. It also encountered several years of moderate prosperity in the 1920's and became one of the nation's most depressed industries a few years later. Generally speaking, the level of activity in this industry has been closely linked with the financial position of the Canadian railways. The facilities of locomotive and car-building companies, dependent almost entirely upon the railways' program of new investment in rolling stock, have been used in an intermittent fashion and prolonged plant shut-downs have not been uncommon. On the ether hand, outlay on repair and maintenance has usually been necessary on a continuing basis and railway shops and parts suppliers have been
less exposed to extreme fluctuations in production and employment. Exports of railway rolling-stock were relatively insignificant before 1944 . In that year a program for the rehabilitation of European railways was undertaken and, since that time, contracts for France, Belgium, India, South Africa and Rhodesia, as well as countries in the Middle East and South America, have been completed.

The fifth largest manufacturing industry, petroleum products, had a gross value of output of $\$ 660,000,000$ in 1952 , and is of tremendous significance in terms of Canada's balance of payments and strategic importance to the defence of North America. Measured in either bulk or value terms, world production of crude oil is the most important commodity entering international trade. Canada's growing industrialization is reflected in the rising rate at which crude oil is used and per capita consumption is now the second highest in the world. There have been three definite phases in the use of oil. The first, which began soon after 1860, was based on kerosene but light petroleum fractions were soon accepted as a cheap and efficient substitute. Other fractions, which make up the rich and complex mixture of hydrocarbons in crude petroleum, ranging from explosively volatile wet gases to heavy oils, waxes and asphalts, were beyond the technology of the day to unravel and the capacity of the economy to absorb. World War I and the maturity of the internal-combustion engine marked the second phase. The price of gasoline rose sharply and drilling activity increased all over the world. By 1930, surplus oil production had become general once more and from then until World War II there was from 20 to 25 p.c. surplus capacity in all branches of the industry. With kerosene consumption declining and the gasoline phase becoming general, middle distillates and the heavier ends overhung the market and frequently were sold at distress prices. Phase three, which developed out of the Second World War, is now asserting itself. For the first time, most refineries have few surplus products. Nearly everything from a barrel of crude is being marketed, it now being possible to gear production closely to fluctuations in demand. Behind all this lies modern refinery equipment and techniques, which are being used to 'crack' heavy fractions down to lighter ones and, more important still, the domestic oil heater and the diesel engine. Middle distillate consumption has been increasing much more rapidly than that of gasoline in recent years and now serves to underwrite much of the growing demand for crude oil. Although the history of the Canadian crude oil industry dates back almost 100 years, production did not begin to reflect the amount of exploratory drilling done in the Western Provinces until 1936 when Turner Valley was definitely established as a major oil field. Scattered discoveries of little commercial importance had been made before that time and natural gas had been found in abundance. With the exception of the discovery of the heavy crude area at Lloydminster in 1944, no other outstanding developments took place until early 1947 when the Leduc field was discovered. Output had been falling off but in the few years since the Leduc field came into production the Canadian oil outlook has been transformed. In 1947, domestic sources supplied less than 10 p.c. of the nation's needs. Since then, production has greatly increased and existing wells are now capable of producing nearly 50 p.c. of domestic petroleum requirements.

In 1952 the sawmill-products industry produced almost $\$ 568,000,000$ worth of planks and boards, shingles, railway ties and other sawmill products and thus ranked sixth among Canada's manufacturing industries. Since the early days of Canada, the growth of the lumber industry has reflected the expansion of the Canadian economy. During World War II, output was limited only by production facilities and the availability of manpower. Large quantities of lumber were used domestically for the construction of defence establishments and for new munitions factories in the first two years of the War. Later on, demand gradually increased for lumber to make boxes, barrels and crates required for the overseas shipment of munitions, food and supplies. Large volumes of lumber were also used in connection with shipbuilding and aircraft construction and for such essential purposes as mining, manufacture of railway rolling-stock and wartime housing. Besides fulfilling the domestic requirements, which took an increasing percentage of total production as the War proceeded, Canada maintained at high level its exports to the United Kingdom, to other Commonwealth countries and to the United States. By 1945, out of a total production of $4,500,000,000$ board feet, 56 p.c. was used at home, 19 p.c. was exported to the United Kingdom and 21 p.c. to the United States. For most of the period since the end of the War, demand for sawmill products has continued to exceed the supply and lumber prices have more than doubled in the past few years.

With production at $\$ 504,000,000$ in 1952 , the primary iron and steel industry ranked seventh in Canadian manufacturing. After World War II the industry added greatly to its steel-making plant and by 1942 domestic output had reached $2,900,000$ ingot tons annually. In recent years greater emphasis has been placed upon modernization and on adding rolling mill and other fabricating facilities in order to permit greater integration and more efficient operation of existing plants. As a result of recent outlays, Canada is now virtually self-sufficient in tin plate. Large-scale production of cold rolled strip, large-diameter oil and gas line pipe, special alloys and stainless steel is also being carried out in this country. Other items, such as rails, bars, rods, wire products and hot rolled plate and sheet in certain widths, are relatively important products of Canadian mills. Current imports tend to be confined to products not made in quantity in Canada, such as large items beyond the capacity of Canadian mills, Bessemer skelp for the production of pipe, special steel sheet material for large transmission towers and certain wire products, forgings and castings. The future development of the industry is linked with the tremendous progress being made in iron-ore production.

The rubber industry ranked tenth in 1952 with a gross output of $\$ 287,000,000$. This industry forms an adjunct of considerable importance to the cotton yarn and cloth and synthetic textiles industries which supply it with fabrics, yarns, etc., used in manufacturing such items as tires, hose and belting. The importance of the industry lies in the fact that Canada ranks among the leading countries of the world as a manufacturer of rubber goods and also that the industry makes a significant contribution to Canada's export trade. Tire sales in 1952 were 9 p.c. higher than in 1951 but sales of waterproof and canvas footwear were down 2 p.c. and there
was a drop in other principal standard production items such as belting, hose and packing. Consumption of rubber in 1952 involved $41 \cdot 6$ p.c. synthetic rubber, 41.5 p.c. natural rubber and 16.9 p.c. reclaim.

The men's factory clothing industry ranked eleventh with output at $\$ 277,000,000$ in 1952. This was the only textile industry to rank currently within the major fifteen compared with three in 1949. Recovery in the clothing and leather-products industries from the slack conditions prevailing during the latter part of 1951 began early in 1952. The initial cause for the upturn in activity was caused by depleted inventories at both the retail and factory levels but, once under way, recovery was given added impetus by increased retail sales from April onwards. At the same time there were a number of underlying negative factors qualifying the industry's recovery. Credit played a growing role in the increase of retail sales. Despite this increase, clothing prices fell slightly as compared with 1951 and the volume of imports assumed a larger percentage of domestic disappearance at the end of the year.

## Part II.-ANALYSES OF MANUFAGTURING STATISTICS

## Section 1.-Growth of Manufacturing

This Section gives a summary of the growth of manufacturing in general, as shown by comparable principal statistics, i.e., establishments, employees, salaries and wages paid, cost of materials and value of products. Also, it includes information on the consumption of manufactured products as well as a treatment of value and volume data.

## Subsection 1.-Historical Statistics of Manufacturing

It is impossible to give absolutely comparable statistics of manufacturing over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, as far as possible, back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

Beginning in 1952, the Bureau of Statistics changed its policy with regard to the collection of statistics on the production of manufactured goods. Firms in several industries where year-end inventory changes were known to be insignificant were requested to report value of shipments f.o.b. plant instead of gross value of products. Under the "value of products" concept, establishments were asked to report the factory selling value of the products made whether sold or not, the unsold portion being assigned the average selling value of similar articles sold during the year. Under the "value of shipments" concept, establishments are required to report their sales during the year regardless of when the products were made, an
item usually readily available from the firms' records. The changeover was made to provide increased ease in reporting for the majority of plants and at the same time to produce more reliable and useful statistics.

## 1.-Summary Statistics of Manufactures, 1917-52

Note.-Statistics of manufacturing from 1870 have been published, but between that year and 1917 figures are not on a comparable basis to the series given below. Statistics for significant years will be found in the 1943-44 Year Book, p. 363. Statistics of the non-ferrous metal-smelting industries were included in manufactures in 1925 for the first time.

| Year | Estab-lishments | Employees | Salaries and Wages | Cost of Materials | Net <br> Value of Products ${ }^{1}$ | Gross <br> Value of <br> Products |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1952. | 37,929 | 1,288,382 | 3,637, 620,160 | $9,146,172,494$ | 7,443,533,199 | 16,982,687,0354 |

${ }^{1}$ For 1924 and subsequent years the net value of production is computed by subtracting the cost of fuel and electricity and the cost of materials from the gross value. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available. $\quad{ }^{2}$ A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. ${ }^{3}$ Newfoundland included from $1949 . \quad$ In 1952, gross value of products was replaced by value of factory shipments, see text immediately preceding this table.

${ }^{1}$ See footnote 1, Table 1. shipments; see text on pp. 633-634.
${ }^{2}$ In 1952, gross value of products was replaced by value of factory ${ }^{3}$ See footnote 2, Table 1. 4 Includes Yukon Territory.

In order to retain some continuity with the past, Table 3 continues the historical series on the chief component material classification basis. Similar statistics under the Standard Classification groups (see pp. 644-655), worked back to 1945, are given in Table 10, pp. 636-637.

${ }^{1}$ The method of computing the number of wage-earners in 1925-30, inclusive, increased the number somewhat over that which otherwise would have been given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner. In 1931, the method in force prior to 1925 was re-adopted. $\quad{ }^{2}$ Net values of products; see footnote 1, Table 1, p. 634.
gross value of products was replaced by value of factory shipments; see text on pp. 633-634.
Consumption of Manufactured Products.-The value of all manufactured products made available for consumption in 1952 was $\$ 17,215,524,423$, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of exports. More accurate statistics could be presented were it possible to exclude the duplications involved when the products of one manufacturing establishment become the material worked upon in another. Iron, vegetable, wood and paper, animal and textile products were, in that order, the leading groups in the value of finished
products made available for consumption in 1952. Animal, wood and paper, and nonferrous metal products were also manufactured in greater quantities than required for home consumption, providing export balances in these groups. Canada imports large quantities of iron and steel, textiles, chemicals and non-metallic mineral products despite large home production. Recent expansion of the iron and steel, chemical and non-ferrous metal industries will enable Canada to meet more requirements for home consumption and to export greater quantities in the future.

## 5.-Consumption of Manufactured Products, Significant Years, 1929-52, and by Industrial Groups, 1951 and 1952

| Miscellaneous industries... | 223,865,142 | 420,396,731 | 94,265,670 | 549,996,203 |
| Totals, 1952. | 16,982,687, $035{ }^{2}$ | 3,125,381,333 | 2,892,543,945 | 17,215,524,423 |

${ }^{1}$ Figures for the years 1929 and 1933 are for the fiscal years ended Mar. 31 of the following years; for 1939-52 they are for the calendar year. Net imports are total imports less foreign products $1 e$-exported. ${ }^{2}$ In 1952, gross value of products was replaced by value of factory shipments; see text on p. 633 f . ${ }^{3}$ Consumption figures for the major standard industrial classification groups (see p. 644) cannot be calculated as statistics of imports and exports are still compiled on the component material classification basis.

## Subsection 2.-Value and Volume of Manufacturing Production

Value of Manufacturing Production.-In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind. In recent years, owing to violent changes in prices, unadjusted value series, used in isolation, have become increasingly inadequate as indicators
of economic trends. Of necessity, interest has shifted to measures of volume. The index number of wholesale prices (based on $1935-39=100$ ) stood at $148 \cdot 9$ in 1917, $203 \cdot 2$ in 1920, $124 \cdot 6$ in 1929, $87 \cdot 4$ in 1933, $99 \cdot 2$ in 1939, $138 \cdot 9$ in 1946 and $226 \cdot 0$ in 1952. Index numbers of the prices of fully or chiefly manufactured goods on the same base were: $150 \cdot 9$ in 1917, $208 \cdot 2$ in $1920,123 \cdot 7$ in 1929, $93 \cdot 3$ in 1933 , $101 \cdot 9$ in 1939, $138 \cdot 0$ in 1946 and $230 \cdot 7$ in 1952.

Volume of Manufacturing Production.-Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services and not whether they are expending more dollars and cents. The field of industrial production, because of its dominating position in the national economy, has attracted increasing attention. This, in turn, has resulted in the need for more accurate measurements of physical output.

During the past few years, the Dominion Bureau of Statistics has been engaged in the reconstruction of the index of industrial production* which was first published in 1926 and later subjected to several major revisions. The latest reconstruction was made possible by the availability of a great deal of basic data. Annual statistics valuable for this project have been collected by the Bureau from the end of World War I to the present and the scope of the monthly information has been greatly expanded. Applying methods developed through the experience of the past quartercentury, it has been possible to compute an index with a fair measure of accuracy from 1935 to the present.

The manufacturing sector is divided, at the major group level, into durable manufactures and non-durable manufactures, for the reason that the movement of durable goods normally varies from that of non-durables. There tends to be greater fluctuation in durables from prosperity to depression, the demand for non-durables being more constant.

[^202]
## 6.-Index of the Total Volume of Manufacturing Production, classified on the Basis of Durable and Non-durable Goods, 1935-52

$(1935-39=100)$

| Year |  | Durable <br> Manu- <br> factures | All Manufactures | Year | Nondurable factures | Durable Manufactures | All Manufactures |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

The period 1935-52 was characterized by unprecedented industrial expansion. Emerging from a depression practically world-wide in scope, industrial operations in Canada entered a period of rapid growth which was maintained throughout the war and post-war years without important interruption.

The volume of output of manufactures rose steeply after the outbreak of hostilities in 1939. Productive facilities responded quickly to the urgent requirements of the Armed Forces. In the early days of the War, production assignments allotted were comparatively simple but, as pre-war weapons became obsolete and as Canada proved capable of turning out larger and more complex equipment, the assignments constantly shifted, changed and grew more difficult. The production figures merely suggest the magnitude of the achievement. They cannot describe the tremendous effort needed to convert a semi-agricultural country into a wartime arsenal nor the complications that arose because of shortages of manpower, tools and materials.

The productive peak was reached in 1944, when weapons, supplies and equipment were rolling off the assembly lines at a record-breaking pace. The end of hostilities and the subsequent reconversion to peace-time production were attended by declines in output in 1945 and 1946. The upward trend was resumed, however, in 1947. The rate of advance slackened moderately in 1948 and 1949 but regained most of its 1947 impetus in 1950 when the renewal of hostilities in Korea resulted in heavy anticipatory buying on the part of consumers and in growing expenditures for national defence. In 1951, the index of the volume of manufacturing production had practically equalled the record wartime level of $242 \cdot 3$ established in 1944, and a new record of $246 \cdot 3$ was reached in 1952.

A problem confronting business economists is to determine how much of the post-war industrial 'drive' was caused by normal growth factors and how much of it was caused by the backlog of war-accumulated demand. Though it is true that the greatest demand accumulation took place in housing and consumer durables, nondurables such as textiles and clothing also started the post-war period with a sizable backlog of unfilled demand. It is now becoming apparent, after the vigorous pace of business following the outbreak of hostilities in Korea, that a considerable portion of this demand has been satisfied and some industries, notably textiles, clothing and some major appliances, are experiencing difficulties. However, general prospects appear bright. The increased productive activity which will result from the present very high level of capital investment is not as yet fully reflected in current production statistics. Huge expansion and development programs are well under way in iron ore, steel, aluminum and other metals, oil, chemicals, motor-vehicles, electric power, and in a number of other industries.

Non-durable Manufactures.-The trend of output during 1935-52 in the nondurable sector of manufacturing was visibly smoother than in the durable sector. Except in two years, 1938 and 1945, there was no interruption in the upward movement of production during the period under review. Despite the fact that war contracts quickened the pace of output in some of the industries, production continued
to expand after the War, although at a slower rate. Unlike durable goods, nondurable commodities are mostly consumer goods and are less influenced by sudden changes in the international situation or the capital investment programs of producers and governments. By 1951, the non-durables index of output had reached $214 \cdot 0$ and, by $1952,215 \cdot 2$, the highest on record.

## 7.-Indexes of the Volume of Manufacturing Production of the Groups Comprised within the Non-durable Manufactures Classification, 1943-52

$(1935-39=100)$
Nots.-Indexes for the years 1935-42 are given in the 1954 Year Book, p. 629.

Durable Manufactures.-The tremendous increase in physical output during the war years was mostly concentrated in the durable goods sector. When war was declared in September 1939, there were virtually no armament works, no production of large ships and large aircraft, no guns and no tanks. Within a few years Canadian plants were turning out naval and merchant ships, war aircraft, military vehicles, ammunition and hundreds of other war items. The new volume index of durable manufactures reached a peak of $340 \cdot 1$ in 1944, declined sharply to $205 \cdot 1$ in 1946 and increased again to. $294 \cdot 8$ in 1952.

## Section 2.-Production by Industrial Groups and Individual Industries

In 1949 two major changes were adopted in the compilation of manufacturing statistics-statistics for Newfoundland were included and the system of classification was changed. By the Standard Classification the industries are grouped under the 17 major headings listed in Table 9 instead of the nine groups listed in Table 3 which were formerly used as the main basis of classification. Summary statistics for the main groups on the new basis are given for 1945-52 in Table 10, while 1951 and 1952 statistics for individual industries are presented in detail in Tables 11 and 12. Table 14 gives the industries on the basis of the origin of the materials used.

## Subsection 1.-Manufactures Classified on the Standard Classification Basis

Table 9 shows the changes in the nature of manufacturing production since the end of World War II with regard to numbers employed, salaries and wages paid, and gross value of products. The values of both wages and products are naturally more affected by price changes than the numbers of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output. Thus, variation in number of employees would normally be less pronounced than that in money values.

The most notable change took place in the transportation equipment group which, in the first four years after the War, showed a decline of $31 \cdot 2$ p.c. in employees and of $17 \cdot 1$ p.c. in salaries and wages and only a small increase in value of products. However, in the following three years the picture changed, this group showing higher increases than any other group in all three categories.
9.-Percentage Variations in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups, 1949 Compared with 1945, and 1952 with 1949.

${ }^{1}$ In 1952, gross value of products was replaced by value of factory shipments; see text on p. 633.
Table 11 presents, for the years 1951 and 1952, detailed statistics of the individual industries under which all industrial plants in Canada are classified. In interpreting these figures it should be remembered that they do not refer to individual products but to all the products made in an industry. For example, the value of shipments of the confectionery industry amounting to $\$ 98,356,141$ in 1952 does not imply that this was the value of confectionery shipped. What it means is that the firms whose principal product is confectionery had a value of shipments amounting to $\$ 98,356,141$. This figure, in addition to confectionery, includes the shipments of all the subsidiary products made by these firms, such as ice cream, which was valued at $\$ 2,754,789$, and bread and other bakery products valued at $\$ 2,632,228$. Confectionery is also produced as a subsidiary product by firms credited to other industrial classifications. The quantities and values of the principal individual commodities produced are given in Table 12. Commodities produced in small quantities are not included but the list covers approximately 75 p.c. of total production.

## Subsection 2.-Manufactures Classified by Origin of Materials

The distinction made between farm materials of Canadian and of foreign origin is based on whether materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

The mineral origin group includes, in addition to non-ferrous metals so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are very largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods. A high standard of living and advanced industrial organization is usually indicated by a relatively large production and consumption of mineral products. During periods of depression when the production of capital goods is curtailed, employment in the industries of the farm group, which produce mainly consumer goods, exceeds that of the mineral group. The industries of the mineral group in 1952 employed the largest number of persons and paid out by far the highest amount in salaries and wages. The average salary and wage was $\$ 3,233$ for the mineral group, $\$ 2,788$ for the forest group and $\$ 2,422$ for the farm group.

${ }^{1}$ In 1952, gross value of products was replaced by value of factory shipments; see text on p. 633.

## Subsection 3.-Manufactures Classified by Type of Ownership

Figures showing the classification of manufacturing establishments by type of ownership are available from 1946, although the figures for that year are not strictly comparable with those for succeeding years owing to the later inclusion of the fish curing and packing industry.

Of the 37,929 establishments operating in 1952, 1,405 in the periodical publishing industry were unclassifiable, leaving 36,524 establishments in the four categories of ownership shown in Table 14. Individual ownership numbered 16,388 establishments, partnerships 5,633 , incorporated companies 13,491 and co-operatives 1,012 . These figures compare with $15,925,5,531,13,166$ and 1,045 establishments, respectively, in 1951, with 1,354 in the periodical publishing industry being unclassifiable. Table 14 gives the percentage distribution of the four categories of ownership for the years 1946-52.

As is to be expected, the smaller establishments, regardless of type of products manufactured, are usually carried on under individual ownership. In that category, industries conducted on a small scale contain a large number of establishments, the percentage decreasing as the scale of operation increases, as the following figures for 1951 and 1952 show:-

| Group | 1951 |  | 1952 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Average <br> Number of <br> Employees per Establishment | Percentage of Individual Ownership Establishments to the Total | Average Number of Employees per Establishment | Percentage of Individual Ownership Establishments to the Total |

${ }^{1}$ Four main categories of ownership only; the non-classifiable group is not included.

On the basis of employment provided, incorporated companies are by a very wide margin the most important factor in the employment field and establishments operating under individual ownership are not as important as their large numbers would seem to indicate.
15.-Percentage Distribution of Employment in the Manufacturing Industries, ${ }^{1}$ classifted by Type of Ownership, by Province and Industrial Group, 1951 and 1952, with Totals for 1946-52.

## Subsection 4.-Leading Manufacturing Industries

The rank of the ten leading industries in 1952, from the standpoint of gross value of production, is compared with their respective ranks in significant years since 1922 in the following statement:-

|  | Rank in- |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Industry | 1988 | 1989 | 1983 | 1989 | 1944 | 1949 | 1950 | 1951 | 1952 |
| Pulp and paper | 2 | 1 | 1 | 2 | 5 | 1 | 1 | 1 | 1 |
| Slaughtering and meat packing. | 3 | 2 | 3 | 3 | 1 | 2 | 2 | 2 | 2 |
| Non-ferrous metal smelting and refining. |  | 9 | 2 | 1 | 2 | 3 | 4 | 3 | 3 |
| Motor-vehicles. . | 6 | 4 | 11 | 5 | 7 | 4 | 3 | 4 | 4 |
| Petroleum products. | 9 | 10 | 6 | 6 | 14 | 5 | 5 | 5 | 5 |

[^210]The depression of the 1930's resulted in a rearrangement in the ranking of many industries which for some proved to be temporary. Also, during World War II the industries engaged in producing war equipment, such as shipbuilding, aircraft, automobiles and miscellaneous chemical products, advanced to higher positions but when the War ended industries engaged in the production of consumer goods again advanced their positions. Pulp and paper, after a lapse of a number of years, resumed its premier place in 1948. In 1952, the first eight industries retained their 1951 ranking, but railway rolling-stock and rubber goods, including footwear, exchanged positions to become ninth and tenth respectively.

## 17.-Principal Statistics of the Forty Leading Industries, ranked according to Value of Factory Shipments, 1952

## Section 3.-Principal Factors in Manufacturing Production

## Subsection 1.-Salaries and Wages in Manufacturing Industries

Statistics of earnings and hours of work of wage-earners and salaried employees in manufacturing will be found in Chapter XVIII on Labour.

In 1952, the 37,929 manufacturing establishments employed 263,027 salaried employees and $1,025,355$ wage-earners, a total of $1,288,382$ persons. Out of every 1,000 persons employed in these industries, 204 were classed as salary-earners and 796 as wage-earners; the former earned 25 p.c. and the latter 75 p.c. of the total amount paid out as remuneration for services. It is interesting to note the reduction in the disparity between average annual salaries and wages that has taken place in recent years. Whereas, in 1939, average annual wages were only 56 p.c. of average annual salaries, in 1943 the percentage rose to 76 , declined to 69 in 1947 and increased to 75 in 1952. The average salary in 1952 amounted to $\$ 3,513$, which was 101 p.c. higher than in 1939 , and the average wage was $\$ 2,647,171$ p.c. higher than in 1939.

## 18.-Total and Average Annual Salaries and Wages Paid in Manufacturing Industries, Significant Years, 1917-52

#### Abstract

Norg. -The averages of wage-earners and earnings for the years $1933-45$ are strictly comparable with thoee for the years up to 1924 but not with those for the intervening years. The figures for the latest years -as for the earlier-represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries.

Ontario has a larger proportion of females among its salaried employees than any of the other provinces. This situation prevails in Quebec with regard to wageearners owing, no doubt, to the textile industries of the Province. The importance of the textile industries in providing employment for females is strikingly illustrated by the fact that, of all female wage-earners engaged in the manufacturing industries of Canada in 1952, 43 p.c. were classed in the textile and clothing groups.

The average salary in 1952 was $\$ 3,513$, more than double the average in 1939. Salaried employees in Ontario were the highest paid, those in Quebec second, followed by British Columbia and Manitoba. The location of head offices of many large corporations at Toronto, Montreal, Vancouver and Winnipeg tends to raise the average salaries in the provinces in which these cities are located.

The average wage in 1952 was $\$ 2,647$ as compared with $\$ 975$ in 1939. The manufacturing industries of British Columbia paid the highest average wage among the provinces. Ontario was second, followed by Saskatchewan, Alberta and Newfoundland. The high figures shown for the Yukon and Northwest Territories in this respect reflect the unusual conditions under which industry is carried on in those regions and are not representative. Statistics of the distribution of employees by province and by industrial group, together with average annual earnings, are given for 1951 and 1952 in Table 19.

Average Annual Earnings in the Forty Leading Industries.-In 1952 there were 30 industries with average salaries of $\$ 3,500$ or over, as compared with 22 industries in this range in 1951. Indicative of the rapidly changing pattern of remuneration in manufacturing is the fact that, in 1945, the last year of the War, no industry paid an average annual salary of over $\$ 3,000$, the highest being $\$ 2,935$ reported by the brewing industry. The highest average salary in 1952, amounting to $\$ 5,069$, was received by office and supervisory employees in the pulp and paper industry. This industry also occupied the premier position in 1951 with $\$ 4,688$. Other industries paying $\$ 4,000$ or more were as follows: breweries, $\$ 4,891$; motorvehicles, $\$ 4,645$; bridge building and structural steel, $\$ 4,386$; primary iron and steel, $\$ 4,385$; miscellaneous iron and steel products, $\$ 4,323$; petroleum products, $\$ 4,276$; boxes and bags, paper, $\$ 4,121$; boilers, tanks and platework, $\$ 4,060$; motorvehicle parts, $\$ 4,059$; iron castings, $\$ 4,023$; non-ferrous metal smelting and refining,
$\$ 4,007$; and brass and copper products, $\$ 4,001$. In 17 others, salaries were between $\$ 3,500$ and $\$ 4,000$, and in the remaining ten they were under $\$ 3,000$. The sawmill and butter and cheese industries with $\$ 1,688$ and $\$ 2,292$, respectively, paid the lowest salaries.

The increase in average wages since 1945 paralleled that of salaries. In 1945 there were only four industries averaging over $\$ 2,000$ whilst in 1952 there were 36. In 1945 the highest average annual wage was $\$ 2,365$ paid by the motorvehicle industry, and in 1952 it was $\$ 3,774$ paid by the petroleum products industry, which displaced pulp and paper as the leading industry having the highest wage of $\$ 3,531$ in 1951. The highest wages are usually paid by industries in which the proportion of skilled workers is high and that of female workers is low. There were seven industries in 1952 with average annual wages of $\$ 3,300$ or over. These were: petroleum products, $\$ 3,774$; pulp and paper, $\$ 3,669$; non-ferrous metal smelting and refining, $\$ 3,489$; primary iron and steel, $\$ 3,437$; motor-vehicles, $\$ 3,419$; breweries, $\$ 3,388$ and agricultural implements, $\$ 3,369$. In eight industries, average wages ranged between $\$ 3,000$ and $\$ 3,500$; in twelve, between $\$ 2,500$ and $\$ 3,000$; in nine others, between $\$ 2,000$ and $\$ 2,500$, and in the remaining four they were below $\$ 2,000$. This latter group, which includes fruit and vegetable preparations, leather footwear, men's factory clothing and women's factory clothing, is composed of industries made up of a large number of small establishments and is one in which the proportion of female workers is high. Employment by sex, and average annual earnings in the forty leading industries are given in Table 20.

## 20.-Employees and Annual Salaries and Wages Paid in the Forty Leading Industries, 1951 and 1952

Note.-Industries ranked according to the aggregate salaries and wages paid.

|  | Year and <br> Industry | Annual Salaries |  |  |  | Annual Wages |  |  |  |

Average Earnings of Wage-Earners.-In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has a very definite regional significance. In some industries a labour force possessing deftness and speed or the ability to exercise muscular strength is necessary, in others the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in the latter industries naturally command relatively higher wages than those in industries where employees are routine workers.

The ranking of provinces and industries as regards annual earnings is, in many cases, different from that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week enter into the picture.

The figures for the years 1943 to 1945 given in Table 21 are based on an analysis of a pay-list covering one week in the month of highest employment. For this reason the figures do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all
the firms. For a particular industry, however, the month of highest employment is more significant because then it coincides for a great number of firms engaged in the same industry. The figures since 1946 are based on returns received from establishments employing 15 or more persons; figures for 1946 and 1947 refer to the last week in November, whereas those for later years refer to the last week in October.

## 21.-Average Annual, Weekly and Hourly Earnings of Male and Female Wage-Earners Employed in Manufacturing Industries, 1943-52

Nore.-Butter and cheese factories and fish-curing and -packing plants are excluded in the years 1943
to 1945, and $s$ awmills are also excluded in 1945. By including sawmills, weekly earnings in 1945 would
have been about $\$ 34.35$ for male wage-earners.

Average Earnings of Salaried Employees.-Beginning with 1946, the survey of weekly earnings and hours worked by wage-earners was expanded to include salaried employees. The survey covers establishments employing 15 persons or over and refers to the last week in November for 1946 and 1947 and to the last week in October for 1948-52. Earnings and hours worked are reported for male and female wage and salary earners in 13 groups of hours, ranging from 30 or less to 65 or more. The earnings reported for the week constitute the gross amount paid before deductions for income tax, unemployment insurance, etc. Weekly and hourly earnings as well as hours worked are thus obtained directly from the tabulated results of the reports. Annual earnings are calculated on the basis of weekly earnings correlated with the results of the annual Census of Industry.

A survey of weekly earnings of salaried employees, classified by (1) managerial and professional employees and (2) office workers, was made for the first time in 1951; it will be repeated every third year. Results of the 1951 survey show that weekly earnings for both sexes in 1951 averaged $\$ 98.38$ for managerial and professional employees and $\$ 51.14$ for office workers. Newfoundland with $\$ 116.20$ for both sexes was the highest paying province as regards managerial and professional employees, while British Columbia with $\$ 55.75$ was the highest paying province for office workers.

In the managerial classification, male employees in the paper products group were the highest paid, followed by textile products (except clothing), transportation equipment and iron and steel products. Managerial employees in the tobacco products group were the lowest paid. In the same category, female employees in the transportation equipment group were the highest paid and those in the miscellaneous group were the lowest paid.

As for office workers, the tobacco products group paid the highest salaries to both men and women and printing, publishing and allied industries paid the lowest salaries to men and leather products industries the lowest to women.
27.-Average Weekly Earnings of Salaried Employees in the Manufacturing Industries, classified by Managerial and Professional Employees and Office Workers, by Province and Industrial Group, 1951.

'Real' Earnings of Employees.-When the index number representing the average yearly earnings is divided by the Consumer Price Index, on the same base, a measure of 'real' wages is obtained. Index numbers for 1943-52 are given in Table 28.

## 28.-Average Yearly Earnings, and Index Numbers of Earnings, Consumer Price Index and Real Wages of Wage-Earners in Manufacturing Industries, 1943-52

Nore.-Figures for 1931-42 are given in the 1947 Year Book, p. 560.

| Year | Wages Paid | Average WageEarners | Average Yearly Earnings | Index Numbers ( $1949=100$ ) |  |  |

Percentages of Salaries and Wages to Net Value of Products.-Table 29 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent, taxes, repairs and al! other overhead charges that ordinarily must be met. The percentage of salaries declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, the percentage of salaries to value added was above normal owing to decreased industrial activity. It should be borne in mind, however, that salaried employees increased 276 p.c. during the period 1924-52 while wage-earners increased 146 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be adjusted more rapidly to the activity of the industry and wage levels likewise may be adjusted more readily to the price levels of the products. Of the increase in the net value of production since 1939,49 p.c. was passed along in increased salaries and wages.
29.-Percentage of Salaries and Wages Paid to the Total Net Value of Manufacturing Production, 1943-52

${ }^{1}$ Equivalent to "net value of products"; see footnote 1, Table 1, p. 634.

## Subsection 2.-Capital, Repair and Maintenance Expenditures

Prior to 1944 the following information on capital investment was collected: (1) fixed capital-land, buildings, fixtures, machinery, tools and other equipment; and (2) working capital-inventory value of raw materials, stocks in process, fuel and miscellaneous supplies on hand; inventory value of finished products; cash, bills and accounts receivable, prepaid expenses, etc. This information was replaced in 1944 by the collection of expenditure statistics on fixed capital, repairs and maintenance. Although it is now impossible to calculate the total investment in the fixed and current assets in manufacturing, it is still possible to calculate the investment in fixed assets. Total investment in fixed assets can be obtained with an approximate degree of accuracy by starting with the total investment in 1943, which amounted to $\$ 3,002,900,000$, and adding the expenditures to date and then deducting on a
straight-line basis the normal rates of depreciation allowed by the Income Tax Department. Comparative figures of the investment in fixed assets since 1939 are as follows:-

| W | Year | Amount | Average per Employee |
| :---: | :---: | :---: | :---: |
|  |  | 8 | \% |
| 1939. |  | 2,168,900,000 | 3,296 |
| 1943. |  | 3,002,900,000 | 2,420 |
| 1948. |  | 4,055,500,000 | 3,509 |
| 1949. |  | 4,262,800,000 | 3,640 |
| 1950. |  | 4,394,700,000 | 3,714 |
| 1951. |  | 4,760,800,000 | 3,783 |
| 1952... |  | 5,253,400,000 | 4,078 |

Between 1939 and 1943 there was a decrease of $\$ 876$ in the value of fixed assets per employee, owing to a decline in the replacement of and additions to buildings and equipment during the war years and also to an increase in the number of shifts worked and a resulting increase in number of employees. After the War, investment in fixed assets increased rapidly. Old plants were modernized and new plants were built to take care of expanded home markets resulting from higher purchasing power and increased population. The net result in this development was an increase of $\$ 782$ in the value of buildings and equipment per employee between 1939 and 1952.

## Subsection 3.-Size of Manufacturing Establishments

The size of a manufacturing establishment is generally measured either by the value of product or by the number of employees but each of these methods has its limitations. The former measure has to be adjusted for changes in the price level and, as between industries, it makes those in which the cost of raw materials is relatively high appear to operate on a larger scale. The latter takes no account
of the differences in capital equipment at different times or in various industries and, obviously, the increased use of machinery may lead to an increase in production concurrently with a decrease in number of employees.

Size as Measured by Gross Value of Products.-In 1929, the 719 establishments producing over $\$ 1,000,000$ each had an aggregate value of products of $\$ 2,516,064,954$, or 62 p.c. of the total for all manufacturing establishments. In 1931 the number of plants in that category was 482, their output being valued at $\$ 1,451,658,954$, or 53 p.c. of the total. However, by 1944 , war demands resulted in manufacturing establishments with a production of $\$ 1,000,000$ increasing in number to 1,376 with an output of about 75 p.c. of the total value of manufactures. In 1946, with the decline in production of the large war plants, the manufactures of establishments with an output of $\$ 1,000,000$ or over declined to 67 p.c. of the total manufactures although the number of plants increased to 1,442 . In 1947, the number of plants increased to 1,716 and the proportion of their production to the total for all plants was 72 p.c. As a result of increased prices and expansion in the physical volume of production in the years 1947-52, establishments with a production of $\$ 1,000,000$ or over increased to 2,397 in 1952 and their contribution to the total output rose to 78 p.c.
31.-Manufacturing Establishments and Total and Average Production, classified by Value of Product Group, 1929, 1939, 1944 and 1950-52

Size as Measured by Number of Employees.-In 1929, establishments employing 501 or more persons accounted for 27 p.c. of the total number of employees engaged in manufacturing. The tendency then in evidence of increasing concentration of production into larger units was checked by the depression, the proportion decreasing in 1933 to 21 p.c. (central electric stations included) but rising again to 26 p.c. in 1939. The same also held true for establishments employing 101 or more persons. In 1929 they employed 62 p.c. of the total, in 1933, 56 p.c., and in 1939,62 p.c.

The effect of World War II on the concentration of industries into large units is illustrated by the increase in the number of establishments employing 501 or more hands. In 1939 such establishments numbered 172 and employed 26 p.c. of the employees engaged in manufacturing; by 1944 the number had increased to 383 and the percentage of total employees to 47 . In a further subdivision of this group in 1944 it was found that 226 establishments employed between 500 and 999 persons, 56 between 1,000 and 1,499 , and 101 employed over 1,500 . There were 12 plants employing over 7,000 persons, the largest having an employment of slightly over 13,000 .

As a result of the resumption of peace-time production, the larger establishments declined in size so that, by 1952, only 76 establishments employed over 1,500 persons. The two largest plants employed over 12,000 persons, the next employed over 11,000 , followed by three employing over 9,000 and six between 5,000 and 9,000 persons.

33.-Establishments and Employees in Manufactures, classified by Number of Employees per Establishment, 1929, 1939, 1944, and 1950-52

[^216]Size of Establishment in Leading Industries.-Table 34 summarizes the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of motor-vehicles, non-ferrous metal smelting and refining, railway rolling stock, cotton yarn and cloth, primary iron and steel, pulp and paper and heavy electrical machinery. On the other hand, the degree of concentration is low in such industries as women's factory clothing, miscellaneous food preparations, furniture, butter and cheese, bread and other bakery products, fruit and vegetable preparations, sawmills and men's factory clothing.
34.-Percentage Importance of Establishments, each Employing $\mathbf{2 0 0}$ or more Persons, in the 25 Leading Industries, 1951 and 1952

# PART III.-PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFAGTURING PRODUCTION 

## Section 1.-Provincial Distribution of Manufacturing Production

Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1952 amounted to $\$ 13,548,408,451$ or 80 p.c. of the total gross value of manufactured products as determined by factory shipments.

Table 1 shows the predominance of these two Provinces in most of the industrial groups. In 1952, Quebec led in the manufacture of tobacco and tobacco products, textiles (except clothing), clothing (textile and fur), leather products, paper products and products of petroleum and coal. In the production of wood products, British Columbia with 38 p.c. held the dominant position, outranking both Ontario and Quebec which accounted for 26 and 21 p.c., respectively, of total production. In each of the other industrial groups, Ontario led by a wide margin.

## Subsection 1.-The Manufactures of the Atlantic Provinces

In the Atlantic region the program of industrial development has been more selective than in some of the other provinces. Fish processing, new sawmills, increased pulp-making capacity and the manufacture of non-metallic building materials like cement and gypsum products have accounted for well over half of the industrial growth. There are, however, a few outstanding exceptions. Two
sizable defence plants have been established in Nova Scotia, one to repair and overhaul naval aircraft and the other to build and repair radar and related electronic equipment. Considerable development has taken place in Newfoundland. Besides plants for the manufacture of cement and gypsum wallboard and plaster, factories for producing boots and shoes, birch veneer, cotton textiles, leather and optical goods, and industrial machinery, and a leather tannery were established, thus broadening the industrial base of the Province. With these exceptions, most of the developments in the Atlantic Provinces have been either small and scattered or confined to the modernization and expansion of manufacturing facilities that were already established at the close of World War II.

Considering the Atlantic Provinces as an economic unit, pulp and paper, fish processing, sawmills, and primary iron and steel accounted for about 44 p.c. of the total production.

In Newfoundland, manufacturing production is dominated by the pulp and paper and fish processing industries which in 1952 accounted for 70 p.c. of the total production of the Province. In Prince Edward Island, agricultural and fishery resources make butter and cheese, fish processing, and prepared stock and poultry feeds the leading industries.

Nova Scotia is renowned for its coal mines and its fisherjes as well as extensive forests and agricultural lands and is favoured with easy access by sea to the highgrade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of fish processing, primary iron and steel, railway rolling-stock, sawmills, pulp and paper, shipbuilding and repairs, and butter and cheese. In addition, important petroleum refineries, cotton yarn and cloth, and coke and gas plants add to the diversification of manufacturing in the Province. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries. Other important manufacturing and processing is based on fishery and agricultural resources.

## Subsection 2.-The Manufactures of Quebec

Quebec enjoys a wide variety of rich natural resources including most of the world's known reserves of asbestos, vast iron deposits, great reserves of copper, lead and zinc, the largest known supply of titanium, gold in abundance and new finds of oil underlying the rocks of Gaspe Peninsula. The geographic situation of the Province is extremely favourable to industrial development, one of its greatest assets being the St. Lawrence waterway and an inland harbour a thousand miles from the Atlantic Ocean where the largest sea-going vessels may dock. There is also an extensive highway system linking the small rural communities to the large cities.

Quebec, with 30 p.c. of Canada's total value of manufactured goods, is the second largest industrial province, having developed a $\$ 5,000,000,000$ manufacturing output with such leading industries as pulp and paper, non-ferrous metal smelting and refining, petroleum products, slaughtering and meat packing, textiles and clothing, tobacco products, and railway rolling-stock. The leading industry is pulp and paper, which had an output of more than $\$ 500,000,000$ in 1952. Quebec is a principal world centre for the production of newsprint; 55 major pulp and paper plants are concentrated in the Three Rivers and Shawinigan Falls districts and along the Saguenay, Ottawa and St. Lawrence Rivers. The Province accounts for 44 p.c. of the Canadian total for this industry. Other large industries in which Quebec predominates are: tobacco, cigars and cigarettes, with 93.5 p.c. of the

Canadian total; women's factory clothing, 68.2 p.c.; synthetic textiles and silk, $62 \cdot 9$ p.c.; cotton yarn and cloth, 62.4 p.c.; leather footwear, 60 p.c.; men's factory clothing, 56.5 p.c.; miscellaneous electrical apparatus and supplies, $48 \cdot 3$ p.c.; railway rolling-stock, 47.8 p.c.

The Province of Quebec, in common with the rest of Canada, experienced great industrial expansion following World War II. Two of the most important developments are the Ungava iron ore projects and the titanium industry. Production of non-ferrous metals expanded considerably; aluminum particularly made impressive strides, reaching a record output of 500,000 tons in 1952. The great asbestos industry was modernized and expanded. Additions to refining and storage facilities greatly increased the output of petroleum products. Noteworthy also is the establishment of many new furniture factories.

## Subsection 3.-The Manufactures of Ontario

The Province of Ontario is recognized as one of the world's major industrial areas. In the past ten years, its industrial production more than doubled in value and has advanced in diversity as well as in volume. Three factors have been decisive in the development of Ontario to its present industrial position: the proximity of raw materials; cheap hydro-electric power; and a strategic location in relation
to export markets not only on the North American Continent but overseas. Despite the great industrial progress made by other provinces, Ontario in 1952 produced over 49 p.c. of the nation's manufactured goods. Many new industrial areas are being created as new industries and branches of established industries are increasingly being located in the smaller centres.

A great increase in steel ingot capacity is being made possible by developments at Steep Rock Iron Mines. At Sarnia, huge investments have gone into the construction of plant for a whole group of new products based on Alberta oil flowing through the Edmonton-Sarnia pipeline. Significant developments are also taking place in synthetic rubber and industrial and consumer chemicals. Ontario has continued to gain in such traditional lines as motor-vehicles, industrial and farm machinery, household equipment, business and office machinery and electrical apparatus and supplies. Numerous plants making aircraft components and building materials have been established in the Toronto area, and plants for the manufacture of chemical products have been built in the Sarnia area and along the lower St. Lawrence River between Cornwall and Kingston.

Ontario has the greatest diversification of manufacturing production of any province. Certain industries, such as the manufacture of motor-vehicles and parts, heavy electrical machinery, agricultural implements, machine tools, starch and glucose, bicycles and the processing of raw tobacco are carried on practically in this province alone. Ontario predominated in the production of many of the forty leading industries in Canada, as shown by the following percentages for 1952: motor-vehicles, $97 \cdot 9$ p.c., motor-vehicle parts, $96 \cdot 2$ p.c.; heavy electrical machinery, 94.5 p.c.; agricultural implements, $93 \cdot 7$ p.c.; rubber goods, 81.5 p.c.; primary iron and steel, 76.8 p.c.; iron castings, 71.3 p.c.; fruit and vegetable preparations, $65 \cdot 9$ p.c.; miscellaneous paper products, $62 \cdot 3$ p.c.; sheet metal products, 59.7 p.c., printing and bookbinding, 58.8 p.c.; brass and copper products, 55.9 p.c.; paper boxes and bags, $54 \cdot 3$ p.c.; industrial machinery, $54 \cdot 0$ p.c.; aircraft and parts, $52 \cdot 3$ p.c.; furniture, $50 \cdot 1$ p.c. and miscellaneous electrical apparatus, $49 \cdot 8$ p.c. Ontario also dominated many of the smaller industries.

${ }^{\text {1 }}$ In 1952, gross value of products was replaced by value of factory shipments; see text. p. 633.

## Subsection 4.-The Manufactures of the Prairie Provinces

The leading industries of the Prairie Provinces are those based on agricultural resources-the grain-growing, cattle-raising and dairying areas. Next in importance, generally, are industries providing the necessities of the resident population, such as bread baking, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area, and the widespread use of motor-vehicles and power machinery on farms has given rise to the establishment of petroleum refineries in each province.

Considering the Prairie Provinces as an economic unit, slaughtering and meat packing had the largest value of shipments in 1952 , amounting to $\$ 258,536,646$, followed by petroleum products with $\$ 156,595,759$, flour mills with $\$ 112,508,829$, butter and cheese, $\$ 87,136,621$ and railway rolling-stock $\$ 53,515,894$. These five industries accounted for about 50 p.c. of the total production of the Prairie Provinces. Other leading industries, in order of value of factory shipments, were: bread and bakery products, breweries, sawmills, miscellaneous food preparations, printing and publishing, sash, door and planing mills, men's factory clothing, furniture, prepared stock and poultry feeds, sugar refining, sheet metal products, etc.

The nature of developments vary from one province to another. Alberta has moved to the forefront, especially since 1950. There the emphasis has been more on the manufacture of machinery and equipment, including such products as drill bits and tanks, heat exchangers and other bulky equipment for the burgeoning oil and gas industries. Chemicals, especially petrochemicals, have made striking gains; second in terms of new growth, they now embrace various rayon intermediates and polythene plastics as well as fertilizers and the manufacture of other new inorganic products such as caustic soda and chlorine. Sizable gains have been made by the food processing and building materials industries.

Developments in Saskatchewan have continued along more or less traditional lines, the largest gains having been recorded in food processing. The manufacture of building materials, including non-metallic mineral products and lumber, has also increased. The largest gain in employment was recorded by the oil-refining industry.

In Manitoba a surprisingly large number of small and medium-sized firms have located in the Winnipeg area since 1945. The clothing industry has outstripped electrical apparatus in employment gains; food processing, building materials and machinery manufacture following in that order. In plant development, the largest single increase has been in the meat-packing industry, although three large electrical apparatus plants and a sizable new oil refinery have also been established.

' Excludes non-ferrous metal smelting and refining, a leading industry but figures for which are confidential and cannot be published. ${ }^{8}$ Includes: sugar refining; fertilizers; cement; aircraft and parts; boxes and bags, paper; concentrated milk products; distilled liquors; vegetable oils; and macaroni and kindred products.

## Subsection 5.-The Manufactures of British Columbia

British Columbia, with factory shipments totalling $\$ 1,332,481,862$ in 1951, ranked third among the provinces in manufacturing production. Forest resources, fisheries, minerals and electric power have given a broad base and wide diversification to the industrial development of the Province. The sawmilling industry was the leading industry with a gross value of shipments of $\$ 316,723,587$, and pulp and paper was second with $\$ 125,290,032$. Third in importance was fish processing, based principally on the estuarial salmon fisheries. British Columbia accounted for approximately 43 p.c. of the output of the Canadian fish-processing industry in 1952 and plays an important part in making Canada the largest fish exporting nation in the world. The other leading industries of the Province are shown in Table 7.

A feature of recent progress in the Province is that new developments are taking place in areas far removed from established industrial centres. Growing lines of communication and transportation are fanning out from and leading into formerly locked interior areas to tap a vast new potential and offer new sources of provincial economic unity and strength. The growth of the Province industrially is indicated by the increase in employment which, in 1952, was more than double the 1939 figure. Gross value of manufacturing in 1952 was more than double that of the immediate post-war year and increased more than five-fold since 1939. The most spectacular post-war development is the multi-million-dollar hydro-electric and aluminum smelter project at Kitimat, production from which started in August 1954. In addition, large capital investments have been made in sawmills and new plants for the manufacture of plywood and furniture. British Columbia dominates the wood products industry, accounting for 38 p.c. of the Canadian production of this group of industries. Four new pulp and paper mills have been built and others expanded to increase British Columbia's output of newsprint, kraft and dissolving pulps. New plants making chemicals, principally fertilizers and plywood adhesives, have been established as well as factories making machinery and equipment. Foodprocessing plants and oil refineries have also made considerable headway.

## Section 2.-Manufacturing Industries in Urban Centres

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of the labour forces. In the west the cities are more largely distributing centres, though manufactures are increasing rapidly there also.

Table 8 indicates the extent to which the manufacturing industries of Canada are concentrated in urban centres and shows, by provinces, the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over $\$ 1,000,000$ each. In the more highly industrialized Provinces of Ontario and Quebec such cities and towns accounted for 91 p.c. and 94 p.c. in 1951, and 90 p.c. and 94 p.c. in 1952, respectively, of the total manufactures for those Provinces, while in the Atlantic Provinces and British Columbia, where sawmilling, fish packing, and dairying are leading industries, the proportions were 72 p.c. and 57 p.c. in 1951 , and 72 p.c. and 59 p.c. in 1952, respectively. In the Prairie Provinces manufacturing is confined Jargely to a few urban centres.
8.-Urban Centres, each with a Gross Manufacturing Production ${ }^{1}$ of over $\mathbf{\$ 1 , 0 0 0 , 0 0 0 ,}$ Number of Establishments and Production in these Centres as a Percentage of the Provincial Total, by Province, 1951 and 1952.
Nore.-Statistics published in this table are in some cases higher than the figures published in Table 11, pp. 713-717, since the table below includes statistics of towns with fewer than three establishments and production of over $\$ 1,000,000$ each. It is not possible to publish this information in Table 11 without disclosing the operations of individual establishments.

${ }^{1}$ In 1952, gross value of products was replaced by value of factory shipments; see text, p. 633.

## 9.-Principal Statistics of the Manufacturing Industries of the Six Leading Manufacturing Cities, 1939, 1944, 1946 and 1949-52

Note.-The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p$. 1 of this volume.

This Chapter provides data on the capital expenditures made by all sectors of the Canadian economy on construction and on machinery and equipment together with summaries of other available statistics for the construction industry. Section 1 describes the purpose of capital expenditures and shows the amounts spent by each of the various industrial or economic sectors.* Section 2 brings together a number of summaries of related series on construction activity: value of work performed by type of structure, value of materials used, salaries and wages paid and numbers employed; contracts awarded and building permits issued; construction of dwelling units, and Government aid to house building.

## Section 1.-Capital Expenditures on Construction and on Machinery and Equipment

One of the most important determinants of the level of economic activity within the nation at any time is the volume of investment spending being undertaken by business and by governments. Past experience shows that, for the nation as a whole, extensive changes can take place from year to year in the level of investment and it is because of this variability that capital expenditures form one of the most dynamic factors affecting the level of employment and income in a country.

Capital expenditures are those outlays made to replace, modernize or expand the nation's stock of physical capital, represented by such things as factory buildings, mines, stores, theatres, hospitals, railways, telephone lines and power installations, together with the machinery and equipment used to enable workers to produce with greater efficiency an increasing volume of goods and services. Also included in the stock of capital are government-owned assets of a physical nature, such as roads, canals and office buildings, and all housing, whether rented or owner-occupied.

[^224]Defence construction is included but all other defence expenditures are excluded. Excluded also from capital expenditures are outlays for the accumulation of inventories and the acquisition cost of land.

Designed to last, capital assets assist in providing goods and services over a period of years; some types of assets, such as motors, may have a useful life of a very few years while others, such as buildings or power installations, may continue in profitable use for fifty years or more. The creation of these capital assets requires the diversion of resources from production for current consumption to the production of capital goods which will be used in production for future consumption. Thus, the rate of investment spending reflects the extent to which a growing nation is providing for the future, or is becoming industrialized; it also reflects the opinion of businessmen as to future prospects and of governments as to future demands for their services. It will be noted from Table 1 that since 1927 there have been two periods when capital spending accounted for a substantial portion of the gross national product.

## 1.-Capital Expenditures in Canada, 1927-54

Nore.-Actual expenditures 1927-52, preliminary actual 1953, intentions as of May 1, 1954.

| Year | Capital Expenditures | P.C. of Gross National Product | Year | Capital <br> Expenditures | P.C. of Gross National Product |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$'000,000 |  |  | 8'000,000 |  |
| 1927. | 1,087 | 19.2 | 1941. | 1,463 | $17 \cdot 2$ |
| 1928. | 1,296 | 21.2 | 1942. | 1,542 | $14 \cdot 6$ |
| 1929. | 1,518 | $24 \cdot 6$ | 1943. | 1,485 | $13 \cdot 3$ |
| 1930. | 1,287 | 23.2 | 1944. | 1,309 | $11 \cdot 0$ |
| 1931. | 881 | $19 \cdot 3$ |  | 1,284 | $10 \cdot 8$ |
| 1932. | 491 | 13.0 | 1946. | 1,703 | 14.2 |
| 1933. | 327 | 9.2 | 1947. | 2,489 | 18.1 |
| 1934. | 416 | $10 \cdot 3$ | 1948. | 3,175 | $20 \cdot 3$ |
| 1935. | 505 | 11.6 |  | 3,502 | $21 \cdot 3$ |
| 1936. | 590 | $12 \cdot 6$ | 1950. | 3,815 | 21.2 |
| 1937. | 828 | $15 \cdot 5$ | 1951. | 4,577 | 21.3 |
| 1938. | 773 | 14.8 | 1952. | 5,285 | 22.9 |
| 1939. | 765 | 13.4 | 1953. | 5,679 | 23.4 |
| 1940. | 1,048 | $15 \cdot 3$ | 1954. | 5,826 | .. |

As indicated in Table 1 above, for the seventh successive year, total capital expenditures in 1954 will likely absorb more than one-fifth of the gross national product. This high rate of growth was paralleled in only one other period over the span for which data have been recorded. However, the capital expansion that took place during 1927-1931 was not sustained over such a long period as it has been during the post-war period, 1948-1954, and capital outlays exceed 30 p.c. of gross national product for only three years. Investment spending at this level is indicative of the long-run development of the country, as well as being important in the year in which it is made in giving employment and income to those engaged in the provision of capital facilities. One of the most important recipients of benefit from the investment program, the construction industry, is dealt with in Section 2 of this Chapter.

The following tables give statistics of capital, repair and maintenance expenditures for the years 1952-1954. Of immediate interest are the estimates for 1954, indicating increased outlays for house building, retail outlets, office buildings, mining development, utilities and institutional facilities-mainly a continuation of the 1953 spending pattern.

## 2.-Summary of Capital Expenditures and Repair and Maintenance Expenditures by Economic Sector, 1952-54

Nors.-Actual expenditures 1952, preliminary actual 1953, intentions as of May 1, 1954.
(Millions of Dollars)

[^229]The expenditures shown for each province represent the estimated value of construction work put in place in the province and the value of machinery and equipment acquired for use within the province. Such expenditures represent gross additions to the capital stock of the province, and are a reflection of economic activity in that area. However, part of the initial impact of these expenditures on employment and income may be felt in other regions. For example, heavy investment in western oil refineries and pipelines may mean increased activity in the steel industry of Ontario as well as construction activity in the Prairies.

The totals for 1954 shown in Table 7 are not the same as those shown in Tables 1 to 6 inclusive. In Tables 1 to 6 the estimates are based on the result of a midyear survey taken in June 1954, whereas in Table 7, the estimates are based on a survey taken at the end of 1953.

## Section 2.-The Construction Industry

## Subsection 1.-Value of Construction Work Performed

The statistics given in this Subsection are comparable with those shown in the 1954 Year Book but not with the data of earlier Year Books. Previously, statistics of construction activity were obtained from questionnaires received from organizations putting the work in place, mainly construction contractors. The statistics are now based largely on information received from organizations and individuals paying for the work done by contractors and by the organizations' own labour forces; they are collected at the same time and from the same sources as the capital expenditures data given in the previous Section. This fundamental change in the source of basic data introduced a new construction series.

The change in sources enables more realistic estimates to be made of the total cost of construction and ensures that construction data are based on the same definitions and coverage as the capital expenditures series. The present source provides data on the total cost of a structure including all indirect costs such as legal, architectural and engineering fees in addition to payments made to contractors. When information was collected from construction contractors it was necessary to provide respondents with an arbitrary definition of what was to be considered as new construction. Then, all work exceeding $\$ 2,000$ in value was classified as new. The present definition classifies as new only those projects which are charged to the capital or fixed assets account of a firm. Also, in the new series, oil-well drilling and certain below-surface mine workings are treated as part of construction. Further, in previous construction surveys only the larger projects undertaken by the labour forces of organizations whose primary activity was other than construction, were covered. The present method of obtaining construction expenditures from all industries results in more complete coverage in terms of the total value of work performed.*

The data shown in the tables of this Subsection represent the estimated total value of all new and repair construction. The slight differences between these figures and corresponding statistics of the previous Section are owing to rounding and minor revisions.

[^230]Total value of the intended construction program in Canada for 1954, both new and repair, is estimated at $\$ 4,830,000,000$ as compared with $\$ 4,595,000,000$ in 1953 and $\$ 4,199,000,000$ in 1952. This estimate covers all sectors of the Canadian economy-business, institutions, governments and housing. The estimate for 1954 is larger than the estimated amount spent in 1953-making the eighth successive year since 1946 to show an increase over the previous year. Expressed as a percentage, it is the smallest increase amounting to only 5 p.c. over the previous year. The program for 1954 is not expected to have the same impact on the expanded construction industry as the programs of some of the earlier post-war years when the supply situation, for both labour and materials, was much more restricted.

The trend of construction volume is indicated in Table 8 which shows construction, both new and repair, in constant as well as in current dollars. Total construction is also shown in this table as a percentage of gross national product in terms of both current and constant dollars. Though the total value of construction rose by 128 p.c. between 1947 and 1953 the volume of construction as indicated by the constant dollar data, recorded an increase of only 50 p.c. (This shows that price changes must be taken into account in any comparison of value.) It is also apparent from the constant dollar figures in Table 8 that practically all of the increased activity since the end of World War II has been in new construction, and that repair has remained at about the same level. Repair work is a much smaller proportion of the total construction now than in the earlier years. In 1947, repair and maintenance construction accounted for 29 p.c. of total volume as compared with 20 p.c. in 1954.

${ }^{1}$ Exclusive of Newfoundland.
Estimates of the value of work performed by construction contractors and by others in various branches of industry, business and government who use their own labour force to perform construction work are given in Table 9. There is little indication of any change from year to year in the proportionate division of total construction work between these two categories. The construction industry proper accounted for about 72 p.c. of the total value of all work performed in each of the three years and the remaining 28 p.c. was undertaken by other business and government bodies. A further elaboration of these data and their relationship to numbers employed, salaries and wages paid, and value of materials used is given in Table 13, p. 734 .
9.-Value of Construction Work Performed by Contractors and by Others, ${ }^{1}$ 1952-54

Note.-Actual expenditures 1952, preliminary actual 1953, intentions as of January 1954.
(Millions of Dollars)

[^231] construction industry.

Of the total new and repair construction program of $\$ 4,830,000,000$ estimated for 1954 , building construction accounts for $\$ 2,914,000,000$ or 60 p.c., and engineering work for $\$ 1,916,000,000$ or 40 p.c. The estimate for each of these categories is above 1953 and 1952, but the proportion that each constitutes of the total program varies somewhat from year to year. Of the total, building construction accounted for 57.4 p.c. in $1952,59 \cdot 5$ p.c. in 1953 and an estimated $60 \cdot 3$ p.c. in 1954 , and engineering construction accounted for $42 \cdot 6$ p.c, $40 \cdot 5$ p.c., and $39 \cdot 7$ p.c. in 1952 , 1953 and 1954, respectively.
10.-Value of Construction Work Performed, by Principal Type, 1952-54

Nors.-Actual expenditures 1952, preliminary actual 1953, intentions as of January 1954.
(Millions of Dollars)

| Type of Construction | 1952 |  | 1953 |  | 1954 |  |

| Waterworks and sewage systems | 136 | $3 \cdot 2$ | 119 | $2 \cdot 6$ | 139 | 2.9 |
| Dams and irrigation............. .... | 66 | $1 \cdot 6$ | 61 | 1.3 | 35 | 0.7 |
| Electric power................ | 386 | $9 \cdot 2$ | 414 | $9 \cdot 0$ | 415 | $8 \cdot 6$ |
| Railway, telephone and telegraph..... | 296 | $7 \cdot 0$ | 314 | 6.8 | 308 | 6.4 |
| Gas and oil facilities. | 215 | $5 \cdot 1$ | 281 | $6 \cdot 1$ | 349 | $7 \cdot 2$ |
| Marine. | 70 | 1.7 | 59 | $1 \cdot 3$ | 68 | 1.4 |
| Other engineering | 45 | $1 \cdot 1$ | 43 | 0.9 | 39 | 0.8 |
| Totals, Engineering Construction. | 1,788 | 42.6 | 1,863 | $40 \cdot 5$ | 1,916 | 39.7 |
| Totals, Construction | 4,199 | $100 \cdot 0$ | 4,595 | $100 \cdot 0$ | 4,830 | 100.0 |

Changes in the pattern of the construction program illustrating where shifts within the program are occurring from year to year are given in Table 11. For example, of the $\$ 182,000,000$ increase in building construction indicated for 1954, $\$ 48,000,000$ is accounted for by housing, $\$ 29,000,000$ by stores and $\$ 59,000,000$ by hospitals. These increases are offset by a $\$ 30,000,000$ decline in construction for factories, plants and workshops.

${ }^{1}$ No change is shown here since data were not collected separately for this type of structure. Inasmuch as the over-all change for gas and oil facilities was calculated without regard to this fact, the sum of the value changes shown for the items in this group does not agree with the total change shown for the group.

Table 12 provides estimates of total expenditure in Canada on each type-of-structure classification for which the data are available. It contains detailed data from which Tables 10 and 11 were derived.

## 12.-Detailed Estimates of Value of Construction Work Performed, by Type of Structure, 1952-54

${ }^{1}$ Not collected separately.
Principal statistics of the construction industry are shown by province and for contractors, utilities, governments and others in Table 13. Though the statistics given for Canada as a whole may be considered as relatively accurate, those given for individual provinces and by class of builder are approximations. All of the estimates given for average numbers employed, salaries and wages paid, and cost of materials used are based on ratios of these items to total value of work performed derived from survey work done in 1952 and applied to the total value of work figures. Although these ratios were calculated in some detail by type of industry, still further refinements are required. There are also some difficulties in obtaining the precise geographical location of projects undertaken or to be undertaken by large companies operating in a number of provinces. However, if used with these qualifications in mind the table provides useful estimates.

In using the employment data it is also of value to have a knowledge of the methods used in collecting the basic data on which the employment estimates are based. Respondents are requested to report the average number of employees engaged in construction each month. They are advised on the questionnaire that one method of computing the average number of employees is to divide the number of working days in the month into the total number of man-days worked by all employees in the month. The monthly averages are added and divided by twelve to compute the annual average. Thus, the resulting figures are representative
of the total number of employees working full time throughout the year. The total number on the payroll at any given time may, of course, be above or below this average.

## 13.-Value of Construction Work Performed, Average Numbers Employed, Value of Materials Used and Salaries and Wages Paid, by Province and Contractor, 195\%-54

Note.-Actual expenditures 1952, actual 1953, intentions as of January 1954.

## Subsection 2.-Contracts Awarded and Building Permits Issued

In this Subsection statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the capital expenditure surveys. Further, values of contracts awarded, and especially of building permits, are estimates (more often underestimates) of work to be done.

Contracts Awarded.-According to figures published by MacLean Building Reports Limited, the value of contracts awarded in 1953 increased by $\$ 204,883,000$ or $11 \cdot 3$ p.c. over 1952. Substantial increases in residential and business construction more than compensated for the decreases in industrial and engineering construction. Increases in the value of construction contracts awarded in 1953 over the previous year, in the Provinces of New Brunswick, Quebec, Ontario and Saskatchewan more than offset decreases reported in the other provinces.

## 14.-Value of Construction Contracts Awarded, 1918-53

Building Permits.-Statistics of building permits were first collected in 1910, when the series covered 35 urban centres; in 1920 they were extended to cover 58 municipalities, including unincorporated suburban areas, which were becoming increasingly important as residential areas for persons working within the municipal boundaries of urban centres. In 1940, the series was again extended to cover 204 municipalities and in 1948 the coverage was expanded further to include 507 municipalities. However, until plans are advanced, it is felt desirable to maintain comparability with earlier issues of the Year Book by retaining the ' 204 ' list.

The estimated value of proposed construction as indicated by building permits in 204 municipalities issued in 1953 amounted to $\$ 1,088,879,902$, an increase of 36 p.c. over the 1952 value of $\$ 802,737,975$.

## 16.--Estimated Value of Proposed Construction as Indicated by Building Permits Issued in 204 Municipalities, 1952 and 1953

Note.-Statistics for these series covering years previous to 1952 will be found in the corresponding tables of earlier editions of the Year Book. For the 35 cities marked ( ) the record goes back to 1910; the 23 places marked (O) were added in 1920.

${ }^{1}$ No reports received for September, October and November 1952.
The indexes given in Table 17 show, as far as possible, the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied. Pre-war experience, as indicated by a special study made for 15 cities, shows that the proportions of cost of materials to cost of labour in all construction average two-thirds for the former to one-third for the latter. The increase in the cost of recent building operations has probably been much more than is indicated by the increase in the indexes of wholesale prices and wages shown and the proportions of these items to total costs have, no doubt, undergone some variation owing to changes in types and methods of construction and to the greater use of machinery.

Four of the largest cities-Montreal, Toronto, Winnipeg and Vancouveraccounted for $\$ 278,231,403$ or 26 p.c. of the value of building permits issued in 204 municipalities in 1953. In 1952, the same cities showed a value of $\$ 195,233,769$, or 24 p.c. of the total for that year.

## Subsection 3.-Government Aid to House Building*

Federal Government Assistance.-Type of Federal Government assistance to house building in Canada is primarily assistance to private builders including prospective home owners, merchant builders and investors in rental housing. In the nine-year period 1945-53, 10 p.c. of the new permanent dwellings completed were built directly on Government account and 27 p.c. represented private-enterprise dwellings for which some public assistance was provided.

The Federal Government carries on house-building operations under programs for the provision of Armed Services married quarters and, until 1953, veterans rental units. The Federal Government also undertakes joint rental housing projects in co-operation with the provincial governments. (See p. 746.)

Public assistance to private builders is provided under the terms of the National Housing Act, 1954, together with the Canadian Farm Loan Act, 1927, the Veterans' Land Act, 1942, and the Farm Improvement Loans Act, 1944. The National Housing Act, 1954, represents the Government's main legislation in the housing field. The chief form of public assistance to private builders under the previous National Housing Act, 1944, was the provision of funds for mortgage loans made jointly with private lenders, but under the new legislation, public assistance to private house building is mainly through a system of mortgage-loan insurance.

The Central Mortgage and Housing Corporation, the Federal Government agency responsible for the provision of most of the public assistance to housing, was incorporated by Act of Parliament passed in December 1945. It administers the present National Housing Act and earlier housing Acts and co-ordinates government activities in the housing field. The Corporation supervises the program for the construction of the Armed Services married quarters for the Department of National Defence.

[^234]The National Housing Act, 1954.-The National Housing Act, 1954, came into force on Mar. 22, replacing the National Housing Act, 1944. It replaces the former joint loan provisions by a system of insured mortgages, provides for the participation of the chartered banks and Quebec savings banks in mortgage lending under the Act, and establishes the basis for a secondary market in insured mortgages by provisions which permit lenders approved under the Act to sell insured mortgages to individuals and other investors who are not approved lenders. Provision was also made for mortgage loans for home conversion. These loans are insured in the same way as are mortgage loans for the building of new structures.

A number of changes in the terms of loans made under the National Housing Act are introduced in the new legislation but many of the provisions of the National Housing Act are re-enacted either without change or with only minor modifications. Among these are provisions for federal-provincial co-operation in land assembly and development and in the construction and ownership of low-rental housing, and for federal assistance in housing redevelopment and the clearance of blighted areas.

Loans to limited dividend housing corporations and to primary producers, together with guarantees under the rental guarantee plan and guarantees of home improvement and extension loans are re-enacted. Loans for home improvement and extension, however, require an insurance charge of 1 p.c. of the amount of the loan. The powers of the Central Mortgage and Housing Corporation to make direct loans remain unchanged.

The insurance of a mortgage loan made under the Act requires that a single fee for the insurance be paid by the borrower at the time the loan is made. This fee is added to the amount of the approved loan and varies between $1 \frac{3}{4}$ and $2 \frac{1}{2}$ p.c. of the loan amount, according to the type of loan and whether progress advances are made or not. Insurance fees are deposited in, and claims are paid from, a Mortgage Insurance Reserve Fund administered by the Central Mortgage and Housing Corporation.

In an insurance claim the approved lender is required to complete such legal proceedings as are necessary to transfer the property, with clear title, to the Central Mortgage and Housing Corporation. The regulations under the Act require that the insurance claim be made within 30 days of the time the claimant acquires clear title. The settlement includes an allowance for principal, an allowance for interest, and an allowance for settlement costs. The claimant receives 98 p.c. of the amount owing on the principal of the loan at the time foreclosure proceedings were instituted or, where no such proceedings were involved, at the time the property was acquired. The payment also includes the full amount of such approved charges as were advanced to the borrower in order to maintain the security of the mortgage, e.g., fire insurance premiums. The allowance for interest payments in default at the time the property is conveyed to the Corporation is 98 p.c. of the amount of such payments due or accrued for the default period up to a maximum of six months. An additional amount is paid when the default period is more than six months. For settlement costs the claimant receives $\$ 125$ as compensation for the acquisition fee and other approved legal disbursements.

The entry of the chartered banks and the Quebec savings banks to the field of mortgage lending, under the National Housing Act, means that the potential supply 'of mortgage funds is substantially broader. Previously, the chartered banks were not permitted to engage in mortgage lending. In addition to providing another channel by which savings can be used for investment in National Housing Act mortgages, the chartered banks, through their 4,000 branches, can provide an improved coverage of potential borrowers under the National Housing Act, particularly in the smaller centres of population.

To facilitate the development of a secondary market in insured mortgage loans, the 1954 Act provides that the insurance policy new legislation may be assigned to the purchaser should the loan be sold, provided that the loan continues to be serviced by an approved lender. It will be possible, therefore, for individuals and other investors who are not approved lenders to invest in insured mortgages by arranging with an approved lender to service the loan. The new Act also authorizes the Central Mortgage and Housing Corporation to buy and sell insured mortgage loans as well as to make loans to approved lenders upon the security of insured mortgage loans. These provisions endow the insured mortgage loan with a degree of liquidity and transferability that greatly broadens the potential supply of mortgage funds.

The terms of loans insurable under the new Act differ from the terms on which joint loans were made previously, especially as regards the loan period and the level of loans. For dwellings for home-ownership, other than for certified defence workers, the loan-to-value ratio is now set at 90 p.c. of the first $\$ 8,000$ of the lending value and 70 p.c. of the remainder, subject to a maximum loan of $\$ 12,800$ set by regulation. Under the joint loan arrangements, loans were made at 80 p.c. of the lending value up to a maximum of $\$ 10,000$. For a duplex, the loan is now calculated on the same 90 p.c. and 70 p.c. basis for the first half of the lending value with 80 p.c. allowed on the second half of the lending value subject to a maximum set by regulation at $\$ 15,300$; previously, loans were made at 80 p.c. of the lending value of the property subject to a maximum loan of $\$ 11,600$. For dwellings for certified defence workers the ratio of loan amount to lending value is 90 p.c., as under the earlier legislation. For farm dwellings loans may be made for $\$ 10,000$ or two-thirds of the appraised value of the farm whichever is the lesser amount.

For rental housing projects, insured loans may be made up to 80 p.c. of the lending value of the project and up to a maximum amount of $\$ 7,000$ per dwelling for multiple family dwellings; under the joint loan arrangement the maximum was \$6,200.

The new Act provides for insured mortgage loans for home conversion: such loans must not exceed the lesser of 70 p.c. of the lending value of the structure, including land, when the alteration is completed, or the cost of the alterations together with the amount necessary to discharge all encumbrances on the title to the land.

The usual term of an insured loan for a dwelling for home ownership is now 25 years, compared to 20 years under the old Act. Loans for shorter periods may be approved at the borrower's request. For rental housing projects the term of the loan may not exceed 25 years, and for home conversion the maximum is 15 years.

The maximum rates of interest on loans made under the new Act continue to be set by the Governor General in Council: at the time rates are promulgated they are not to exceed the yields on long-term Government of Canada bonds by more than certain margins. On insured loans, the maximum margin by which the mortgage rate may exceed the bond rate is $2 \frac{1}{2}$ p.c. On Mar. 19, 1954, the rate on insured loans for home ownership, home conversion, rental housing projects, and farm housing was set at $5 \frac{1}{2}$ p.c.; previously the rate paid by borrowers on these loans, other than those for home conversion, was $5 \frac{1}{4}$ p.c.

For all insured loans, Central Mortgage and Housing Corporation passes the plans and specifications, makes appraisals and undertakes the construction inspections to ensure compliance with approved standards.

Under the new Act, as under the earlier legislation, the Central Mortgage and Housing Corporation may make direct loans for house building in areas where mortgage loans, under the Act, are not available from private lenders. These loans are made on the same basis as are those made by approved lenders under the Act.

The provisions of the earlier legislation for direct loans to limited dividend housing corporations and to companies engaged in the primary industries of logging, lumbering, fishing and mining are retained in the new Act. Loans to limited dividend housing corporations are made at low rates of interest for the construction of low and medium rental housing units. By March 1954, 33 companies had been formed under the sponsorship of business companies or local groups; the financing of some of these was supplemented by municipal grants or contributions from service clubs. Many of the dwelling units constructed by these companies are occupied by widows and old-age pensioners.

Section 36 of the National Housing Act, 1954, provides that, following agreements between a provincial government and the Government of Canada, the Central Mortgage and Housing Corporation may undertake, jointly with the province, the development of a housing or land-assembly project. Capital costs. profits and losses of such projects are shared 75 p.c. by the Federal Government and 25 p.c. by the province. The provincial government, in turn, may require the municipality concerned to participate in the provincial share. By March 1954, all provinces, except Prince Edward Island, had passed complementary legislation and projects were under way, or completed, in seven of the nine provinces with enabling legislation.

Under the legislation, three main types of housing agreement have been evolved:-
(1) the construction of houses for rental on an economic or sub-economic basis;
(2) the assembly and servicing of residential lots for sale to builders and prospective home-owners;
(3) combined rental-housing and land-assembly projects where a portion of the land developed is used for housing and the remainder sold.

Completed rental-housing projects are administered by local housing authorities whose members are appointed by provincial Order in Council. Local authorities have been established in 20 municipalities.

By March 1954, 62 projects had been approved, 25 for land assembly only, 10 for combined land assembly and rental housing, and 27 for the erection of rental housing over the whole site. The 37 rental projects relate to 3,036 rental units of which 2,324 had been completed. The land assembly projects involve the servicing of 11,600 lots, of which 1,600 had been completed and sold to builders and prospective home owners.

The Rental Guarantee Plan, instituted in 1948 and re-enacted in the new National Housing Act, is designed to encourage the construction of rental housing accommodation by private builders. Owners of projects built under the Plan are guaranteed a return of rent sufficient to pay taxes, operating expenses, debt service and a minimum return of 2 p.c. on the equity of the owner. From 1948 to March 1954, projects were approved involving 21,550 units having an estimated cost of $\$ 167,344,000$.

Under the land assembly provisions of the Act, unchanged from the earlier legislation, lending institutions are guaranteed the recovery of their investment and a return of 2 p.c. on land development projects. These projects involve the development of raw land into serviced lots for residential purposes and their sale at prices considerably below the market price for comparable lots. Little activity has taken place under these provisions in recent years. At March 1954, however, seven projects had been started involving 1,950 lots.

The Canadian Farm Loan Act, 1927 (R.S.C. 1952, c. 36, amended by c. 309).This legislation provides for federal long-term loan assistance for housing, as well as for other farm purposes. (See pp. 374-375.)

The Veterans' Land Act, 1942 (R.S.C. 1952, c. 280).-This Act is administered by the Department of Veterans Affairs and provides a form of loan and grant assistance to veterans for housing and other purposes. (See pp. 289-291.)

The Farm Improvement Loans Act, 1944 (R.S.C. 1952, c. 110).-This Act provides for guarantees for intermediate and short-term loans made by approved lending agencies to farmers for housing and other purposes. (See pp. 375-376.)

Statistics of Federal Assistance in the Housing Program.-The extent of Federal Government assistance to house building in Canada is shown in Table 18. The year 1935 marked the passage of the Dominion Housing Act and the entry of the Federal Government into the housing field on a continuing basis. This Act was succeeded by the National Housing Acts of 1938, 1944 and 1954.

A total of 100,663 dwellings were completed in Canada in 1953. Of these, 4,882 were built directly by the Federal Government; 37,517 were built with the aid of federal loans, including joint loans under the National Housing Act; and 806 were built with guarantee assistance by the Federal Government.

Provincial Government Assistance.-As stated previously (see p. 742), all provinces except Prince Edward Island had, by March 1954, passed complementary legislation respecting Sect. 36 of the National Housing Act, 1954, which provides for joint federal-provincial housing and land-assembly projects. In addition, separate legislation with respect to housing has been enacted in the Provinces of Quebec and Ontario.

Quebec.-An amendment (S.Q. 1952-53, c. 7) to the "Act to improve housing conditions" (S.Q. 1948, c. 6), assented to Dec. 10, 1952, empowers the Government to pay a subsidy on interest charges in excess of 3 p.c. on new dwellings built between Jan. 15, 1948, and June 1, 1955. Formerly, the Act applied to dwellings completed before Jan. 15, 1953. The amendment also authorizes the expenditure of $\$ 40,000,000$ for purposes of the Act.

Ontario.-The Housing Development Amendment Act, 1952, empowers the Province and a municipality to enter into joint housing projects and empowers a municipality to contribute to the cost of a housing project or to issue debentures for the purpose of a housing project without reference to its municipal board or the assent of its electors. For industries locating in rural areas and in small communities, the Province and municipality may participate with the Central Mortgage and Housing Corporation in the development of joint housing projects, part of the cost of which will be borne by the Corporation. Under certain conditions, the Province may expropriate land in municipalities for the purpose of housing projects. The Act came into force Apr. 10, 1952, and amended the Housing Development Act (R.S.O. 1950, c. 174).

Under the Planning Amendment Act, 1952, municipalities with an approved official plan may designate an area within the municipality as a redevelopment area and, upon the passage of a by-law, may acquire land within that area and clear and prepare it for residential, commercial, industrial or other designated purpose. The Act came into force May 1, 1952, and amended the Planning Act (R.S.O. 1950, c. 227).

The Rural Housing Assistance Act, 1952, authorizes the establishment of a Crown company-the Rural Housing Finance Corporation-which is empowered to lend and invest mortgage money in order to provide financial assistance in the building of new houses in villages and rural areas. Moreover, the Corporation may lend money independently or in co-operation with the Central Mortgage and Housing Corporation or with any approved lending institution. The Act came into force on Apr. 10, 1952.

The Junior Farmer Establishment Act, 1952, provides for the establishment of a corporation for the purpose of making loans to assist young qualified farmers in the purchase, development and operation of their farms. The corporation may make loans for the erection and improvement of farm houses. A loan may be secured as first-mortgage on farm property and shall not exceed $\$ 15,000$, repayable in 25 years. The Act came into force on Apr. 10, 1952.

The Elderly Persons Housing Aid Act, 1952, authorizes the Province to make grants to any limited dividend housing corporation approved by a municipality and to which a loan has been made under the National Housing Act. These grants are to assist in the construction and equipment of low-rental housing units for elderly persons. The amount of any grant will be based on the lower of $\$ 500$ for each dwelling or 50 p.c. of the capital cost of the project to the corporation other than the amount covered by the mortgage loan.

## Subsection 4.-Construction of Dwelling Units

The volume of new house building was greater in 1953 than in any previous year. Total housing starts, excluding conversions, numbered 102,409 , an increase of 25 p.c. over the 1952 total and 11 p.c. higher than in the earlier peak year of 1950. All regions of the country shared in the increase: in the Atlantic Provinces, housing starts rose 26 p.c. to 5,921 units; in Quebec, 15 p.c. to 30,249 units; in Ontario, 30 p.c. to 38,873 units; in the Prairies, 25 p.c. to 18,776 units; and in British Columbia, 21 p.c. to 8,590 units. The higher number of starts in 1953 was accompanied by an increase in completions, excluding conversions, from 73,087 in 1952 to 96,839 in 1953. At 59,923 , the number of dwellings under construction at the end of 1953 was $7 \cdot 6$ p.c. higher than the year before.

Of the dwellings completed in 1953, 82 p.c. were built in urban areas-almost unchanged from the 81 p.c. of 1952 . Though there was little change between 1952 and 1953 in the distribution of dwellings by area, there were changes in the distribution by type of dwelling: 20 p.c. of the dwellings completed in 1953 were apartments, compared to 15 p.c. in 1952; single-family dwellings represented 68 p.c. of the total in 1953 compared to 73 p.c. in 1952.

Tables 21, 22 and 23 summarize the results of surveys conducted by the Dominion Bureau of Statistics and the Central Mortgage and Housing Corporation.

## CHAPTER XVII.-SÚRVEY OF PRODUCTION*

## CONSPECTUS

Nort.-The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

The scope of the Survey of Production is limited to the actual production of commodities. The activities of such industries as transportation, communication, trade, finance and service are excluded except as they are indirectly reflected in the value of output of the commodity-producing industries. This is in contrast to the scope of the widely used Gross National Product series (see Chapter XXV), which encompasses all industries. Net production, or "value added" is generally considered more significant as a measure of output than gross value of production, and is, consequently, stressed in the following analyses and tables. It is obtained by deducting from the total or "gross" value of output, the cost of materials, fuel, purchased electricity and supplies consumed in the production process.

The measurement of value added is similar, although not strictly comparable, to the concept involved in the contribution of each industry to gross national product at factor cost (net income originating plus depreciation). Apart from variations in the statistical structure, the main difference is that value added, as computed for each commodity-producing industry, includes the cost of such services as insurance, advertising, transportation, communications, etc. In national income accounting, the contribution of these services to gross national product at factor cost is classified to the non-commodity industries from which they originate.

The value series shown in the tables on p. 752 reflect a major revision in the net value of the construction industry and are thus not comparable with the figures shown in earlier Year Books. A description of this revision together with revised data for previous years is given in the DBS Bulletin Survey of Production 1948-1952.

## Section 1.- Current Trends of Commodity Production

The net value of Canadian commodity production in 1952 was $\$ 13,708,000,000$. This represented an increase of nearly 5 p.c. over the revised 1951 figure of $\$ 13,075,000,000$ and was the highest on record. During 1952 , there was an improved

[^237]relationship between supply and demand and an abatement of inflationary pressures, permitting the lifting of consumer credit regulations and the relaxation of controls over the supply of essential materials, though the outbreak of foot-and-mouth disease and the temporary loss of the United States market set back production values in the farm sector of the economy. Most major price indexes showed declines throughout the year, although the average level of the consumer price index was about 2 p.c. above the average for 1951. Labour income, moreover, rose steadily throughout the year and, on average, was 11 p.c. above 1951. Hence, a notable advance in 'real' wages and salaries was indicated for the year.

A further increase in net value of commodity production is estimated for 1953. The most important expansionary influence in the economy in 1953 was the continued growth of consumer expenditures, reflecting the large continued rise in 'real' incomes. Important gains over 1952 were shown in the construction sector where the housing component recorded the greatest advance. Value of manufacturing output also showed a considerable gain. By contrast, the agricultural sector recorded a decline in its value of production, largely as a result of reduced grain production and lower prices for a number of agricultural products. Although the 1953 grain crop was one of the largest on record, it was considerably below the record 1952 level. Prices, in general, were also a little lower in 1953 than in the preceding year.

## Section 2.-Industrial Distribution of Production

The net value of agricultural production in 1952 was $\$ 2,467,000,000$, representing a decline of 7 p.c. from the record level of $\$ 2,654,000,000$ established in 1951. The outbreak of foot-and-mouth disease in Saskatchewan and the decline in livestock prices prior to and following the United States embargo resulted in greatly reduced value of live-stock production. This decline was only partially offset by the higher value of grain from the record wheat crop of $688,000,000$ bushels.

An advance of nearly 10 p.c. in the net value of forestry production was indicated for 1952. The output values of pulpwood, mining timber, firewood and poles showed increases over the preceding year while those for logs and bolts were some_ what less. Although the quantity of pulpwood cut declined slightly, price increases more than offset this. In addition, the value of materials and supplies used by forest operators showed a substantial decline.

The quantity and value of production in the fishing and trapping industries dropped considerably in 1952 as compared with 1951, mainly owing to labour disputes in the fisheries sector.

An approximate 1 p.c. advance over 1951 was shown in the net value of the mining industry, largely the result of value increases in the output of petroleum and other non-metallic and structural materials which offset declines in the production of most major metals.

The value of net output in the electric power industry continued to expand and in 1952 was more than 10 p.c. greater than in the preceding year.

The net result of the varying trends outlined above was a decline of more than 2 p.c. in the net value of the primary industries in 1952 as compared with 1951.

The net value of manufacturing activity rose from $\$ 6,941,000,000$ in 1951 to $\$ 7,444,000,000$ in 1952 , a gain of about 7 p.c. The net value of durable manufactures rose by 10 p.c. and that of non-durable manufactures by 4 p.c. In the durables sector, all major industry groups showed increases, with iron and steel products, transportation equipment and electrical apparatus and supplies accounting for the major increases. In non-durable manufactures, all industry groups except textiles (clothing excluded) and paper products recorded gains. The highest relative increases occurred in petroleum and coal products, tobacco products and leather products.

The net value of work performed in the construction industry rose to $\$ 1,977,000,000$ in 1952 , an advance of nearly 14 p.c. over the preceding year. All types of engineering construction showed gains and accounted for most of the over-all increase. The rise in the value of building construction was considerably less, reflecting a moderate decline in residential building.

## 1.-Net Value of Production, by Industry, 1948-52

Nore.-Net production represents total value under a particular heading, less the cost of materials, fuel, purchased electricity and supplies consumed in the production process.

| Industry | $1948{ }^{1}$ | 1949 | 1950 | 1951 | 1952 |

## Section 3.-Per Capita Net Value of Production

The rapid advance since the end of the War in the total net value of commodity production was accompanied- 1946 to 1952 inclusive-by a 17-p.c. increase in population and a 10 p.c. increase in the labour force.

The national per capita net value of commodity production rose from $\$ 535$ in 1946 to $\$ 965$ in 1952 (exclusive of Newfoundland), an increase of 80 p.c. As wholesale prices rose by around 63 p.c. during the same period, a 'real' advance in per capita output is indicated. Compared with 1951, the value of per capita output in 1952 increased by about 2 p.c.

Per capita production in the Maritime Provinces has always been far below the Canadian average, and stood at around one-half the national figure in 1952. Quebec's per capita output has averaged between 10 and 13 p.c. below the Canadian average during the last five years, after having almost reached the national figure during some of the war years. Per capita production in Ontario has consistently been the highest among the provinces, but in 1952 it was very slightly lower than the Saskatchewan figure as the result of the bumper Prairie grain crops in that year. Ontario's per capita figure, at $\$ 1,146$, was still nearly 19 p.c. above the national average.

Manitoba's per capita production in the post-war period has been well below the Canada average and in 1952 stood at $\$ 728$ or 25 p.c. under the average. The figure for Saskatchewan has fluctuated widely according to crop conditions, sometimes dropping far below the national average, sometimes exceeding it, as in 1952 when, at $\$ 1,148$ it was the highest of any province. During the 1948-52 period, per capita output in Alberta has been consistently above the allCanada figure and stood at its highest relative level in 1952, 13 p.c. above the national average. The well-diversified economy of British Columbia usually ranks high in per capita production, being surpassed only by Ontario. During 1951 and 1952, however, owing mainly to the increased value of Prairie farm output, it dropped to fourth place behind Saskatchewan and Alberta.

## 3.-Per Capita Net Value of Production with Percentage Variation from the National Average, by Province, 1948-52

| Province | 1948 |  | 1949 |  | 1950 |  | 1951 |  | 1952 |  |

${ }^{1}$ Includes the Yukon and the Northwest Territories,
2 Excludes Newfoundland.

## Section 4.-Provincial Analysis of Production

Newfoundland.-In 1952, the net value of commodity production in Newfoundland accounted for a little more than 1 p.c. of the Canadian total. The principal industry in the Province is manufacturing, consisting, in the main, of pulp and paper production and fish processing. Construction ranks next in importance, followed by mining and forestry. The principal mineral products are iron ore, lead and zinc. Primary fisheries represented about 8 p.c. of the value of commodity output in 1952. Exclusive of agriculture, the total value of output rose by about 10 p.c. over 1951.

Prince Edward Island.-Table 6 shows that Prince Edward Island's economy is mainly agricultural. In 1952, the industry represented about 60 p.c. of the Province's value of production. Principal farm products are potatoes, livestock and dairy products. Construction and manufactures account for the bulk of non-agricultural output.

Nova Scotia.-The net value of commodity output in Nova Scotia rose by more than 6 p.c. from 1951 to 1952 , and represented a little more than 2 p.c. of total Canadian production. In the latter year, manufacturing accounted for more than 41 p.c. of the Province's value of production. Primary iron and steel, fish processing, pulp and paper, sawmills, railway rolling-stock and shipbuilding are the leading manufacturing industries. Construction in 1952 accounted for 17 p.c. of the provincial output. Mining and agriculture are Nova Scotia's main primary industries with the fishing industry ranking next in importance. In recent years, coal mining has contributed about 80 p.c. of the value of mineral output. Live stock, poultry and dairy products are the principal farm commodities.

New Brunswick.-The net value of production in New Brunswick declined slightly in 1952 as compared with the preceding year, and accounted for about 2 p.c. of the value of output of all provinces. As in Nova Scotia, manufacturing is the principal activity, representing more than 44 p.c. of the Province's value of production in 1952. The main manufacturing industry is pulp and paper, followed by sawmilling and fish processing. Among the primary industries, agriculture and forestry are the most important. The main farm products are potatoes, live stock, poultry and dairy products. The net value of construction work performed accounted for 15 p.c. of provincial output in 1952.

Quebec.-Quebec's value of production at $\$ 3,604,000,000$ accounted for about 26 p.c. of Canadian commodity output in 1952 and showed an advance of 8 p.c. over the preceding year. Manufacturing is by far the most important industry, representing more than 60 p.c. of provincial output. Pulp and paper is the leading manufacturing industry, followed by metal smelting and refining, textiles and clothing. Agriculture accounted for nearly 9 p.c. of the industrial composite, livestock, poultry and dairy products providing the greatest income. The value of construction represented more than 14 p.c. of provincial output, and showed a marked increase over 1951. All industries except agriculture and trapping recorded value gains in 1952.

Ontario.-The value of net commodity production in Ontario in 1952 amounted to $\$ 5,462,000,000$, representing an increase of more than 3 p.c. over the preceding year, and accounting for 40 p.c. of total Canadian commodity output. The economy of the Province, like that of Quebec, is dominated largely by manufacturing which accounted for 70 p.c. of provincial output in 1952. Those manufacturing industries which contributed more than $\$ 100,000,000$ to net output in 1952 are, in order of importance: motor-vehicles, primary iron and steel, pulp and paper, metal smelting and refining, heavy electrical machinery, rubber goods and motor-vehicle
parts. Agriculture represented nearly 10 p.c. of the provincial value composite and consisted mostly of vegetables, live stock, poultry and dairy products. The value of construction work performed accounted for more than 12 p.c. of the Province's production, about the same proportion as in 1951. As in Quebec, only agriculture and trapping showed value declines in 1952 compared with the preceding year.

Manitoba.-In 1952, Manitoba's production rose only about 2 p.c. over the preceding year, largely reflecting a decline of about 9 p.c. in the value of agricultural output. In the year under review, the net value of the Province's production accounted for a little more than 4 p.c. of the Canadian total. Agriculture and manufacturing provided nearly equal shares of around 38 p.c. of the provincial value composite. In the manufacturing sector, slaughtering and meat packing and railway rolling-stock are the leading industries. As in the other Prairie Provinces, grain and live stock are the principal agricultural products. The value of construction in Manitoba in 1952 rose appreciably compared with 1951 and accounted for nearly 17 p.c. of the Province's total output. Principally owing to reduced output of copper and gold, the value of mineral production dropped sharply in 1952 to its lowest level in five years.

Saskatchewan.-The economy of the Province is overwhelmingly dependent on agricultural production which, in 1952, represented 77 p.c. of total net value of commodity output. Total provincial production accounted for 7 p.c. of the national composite in the same year. By contrast to most other provinces, the value of agricultural output showed an advance of more than 6 p.c. over 1951; the increase in value of grains more than offset declines in live-stock production. Manufacturing output, consisting mostly of petroleum products, flour mills, meat packing, breweries and butter and cheese, recorded a sharp gain compared with the preceding year. A similar increase was shown in the value of construction.

Alberta.-In 1952, Alberta's commodity output represented nearly 8 p.c. of the national total and was 6 p.c. greater than in 1951. Owing mainly to the rapid advance in the value of mineral production, agriculture has progressively diminished in importance, and in 1952 accounted for about 46 p.c. of provincial output. The net value of the mining industry increased sharply since 1948 , reflecting the rapid development of Alberta's mineral resources and in 1952 represented 16 p.c. of provincial production as compared with 11 p.c. in 1948. Manufacturing is another important industry, accounting for nearly 17 p.c. of Alberta's value of output. Meat packing, petroleum products, sawmills and breweries are the leading manufacturing industries. The value of construction represented over 18 p.c. of provincial net output in 1952. Only agriculture and trapping failed to show an increase in value in 1952 as compared with the preceding year.

British Columbia.-The value of output in British Columbia in 1952 showed a fractional decrease from 1951 but accounted for 9 p.c. of the total value of Canadian production. It was the third-ranking province in net value of
output after Ontario and Quebec. In 1952, the value of agriculture, fisheries, trapping, mining and manufacturing showed declines from 1951. These were offset by increases in the value of electric power and construction. The forestry industry recorded little change. Manufacturing is the leading industry in the Province, representing 45 p.c. of provincial output. The principal manufacturing industries from the point of view of net value are sawmills, pulp and paper, fish processing, veneers and plywoods, and fertilizers. The construction industry accounted for 22 p.c. of British Columbia's value of output in 1952 after showing a gain of 27 p.c. over 1951. Forestry represented 13 p.c. of the provincial total and mining more than 9 p.c.

## Section 1.-The Government in Relation to Labour <br> Subsection 1.-Federal Labour Legislation

The Federal Department of Labour was established in 1900 under the Conciliation Act which provided machinery to aid in preventing and settling labour disputes and required the Department to collect, compile and publish statistical and other relevant information. The Department assumed, too, the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds.

At present, in addition to the statutory duty of disseminating information concerning labour and industrial matters, the Minister of Labour is responsible for the administration of the following statutes: Conciliation and Labour Act, 1906; Government Annuities Act, 1908; Fair Wages and Hours of Labour Act, 1935; Unemployment Insurance Act, 1940; Vocational Training Co-ordination Act, 1942; Reinstatement in Civil Employment Act, 1946; Merchant Seamen Compensation Act, 1946; Government Employees Compensation Act, 1947; Industrial Relations and Disputes Investigation Act, 1948; and Canada Fair Employment Practices Act, 1953. Except for the Conciliation and Labour Act, and the Canada Fair Employment Practices Act, the above Acts are incorporated in the Revised Statutes of Canada 1952. (Sec also pp. 105-109.)

[^240]Fair Wages Policy.-The Fair Wages Policy applying to all Federal Government contracts was first set forth in a Resolution of the House of Commons (1900) and later incorporated in an Order in Council and amended from time to time. Wages and hours on contracts for construction are now regulated by the Fair Wages and Hours of Labour Act and Order in Council P.C. 5547 of Nov. 3, 1949, as amended. Hours of work on construction contracts are limited to eight per day and 44 per week, except in an emergency or in exceptional circumstances where exemption is granted by Order in Council; wages to be paid are those current for the type of work in the district, or if there are no current rates, fair and reasonable rates as determined by the Minister of Labour.

Wages and hours of work on contracts for equipment and supplies are regulated by Order in Council P.C. 5547. The hours of such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable, but in no event shall they be less than those established by statute or regulation of the Province in which the work is being performed.

On Sept. 24, 1952, the Order in Council referred to above was amended to provide that all types of contract to which the Order applies, entered into on and after Jan. 1, 1953, shall contain a clause prohibiting discrimination against any person in matters of employment because of that person's race, national origin, colour, or religion, or because he has made a complaint or given information with respect to such alleged discrimination.

The Industrial Relations and Disputes Investigation Act.-This legislation came into effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regulations, P.C. 1003, in effect since March 1944, and repealing the Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced, and decisions, orders and certifications made under the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or of two or more provinces. However, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively, that trade unions may be certified as bargaining agents for groups of employees. Trade unions and employers are required, upon notice, to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such provision is lacking application may be made for
its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade-union activity. The conditions which must be observed prior to strike and lockout action are provided for in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards, industrial inquiry commissions, consent to prosecute, and complaints that the Act has been violated or that a party has failed to bargain in good faith.

The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents, the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister that a party has failed to bargain collectively.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Department of Labour. In brief, the Canada Labour Relations Board has received 469 applications for certification since Sept. 1, 1948, 283 of which have been granted, 105 rejected, 69 withdrawn and 12 were pending at Mar. 31, 1954.

Of the 249 industrial disputes dealt with under the conciliation provisions of the Act, 202 were settled by conciliation officers and conciliation boards, 22 were not settled, 9 lapsed and 16 were pending at Mar. 31, 1954.

Canada Fair Employment Practices Act.-This Act, which came into effect on July 1, 1953, prohibits discrimination in employment based on race, colour, religion or national origin, whether practiced by employers or trade unions. It applies only to industries within federal jurisdiction-those covered by the Industrial Relations and Disputes Investigation Act (see p. 759).

This law prohibits acts of discrimination by employers; discrimination by trade unions in regard to membership or employment; the use by employers of employment agencies which practise discrimination, and of advertisements or inquiries in connection with employment which express, directly or indirectly, any limitation, specification or preference as to race, colour, religion or national origin.

## Subsection 2.-Provincial Labour Legislation

Labour legislation in Canada is mainly a matter for the provincial legislatures and usually deals with the contract of service between employer and employee, the contract between members of a trade union which forms the basis of the union, or regulates conditions in local work-places. The right to contract is a civil right and the British North America Act, which distributes legislative powers between the Parliament of Canada and the provincial legislatures, grants to the provinces power to enact laws in relation to "civil rights" and, with certain exceptions, "local works and undertakings."

In each province, except Prince Edward Island, a Department of Labour (in Alberta, the Department of Industries and Labour) is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines.

Factory legislation and shops legislation in several of the provinces prohibit child labour, regulate the hours of women and young persons, and provide for safety and health. Most provinces have minimum-wage legislation and maximumhours laws, and legislation to ensure freedom of association, to promote collective bargaining and to provide for the settlement of industrial disputes, and to provide for apprenticeship and the licensing of certain classes of workmen. The Industrial Standards Act in Nova Scotia, New Brunswick, Ontario and Saskatchewan, the Alberta Labour Act and the Fair Wage Act in Manitoba enable the wages and hours of work agreed upon at a conference of representatives of employers and employees in designated trades to be made the minimum standards throughout the trade concerned. The Quebec Collective Agreement Act permits collective agreements between employers and trade unions to be made binding on all in the industry. Workmen's compensation laws, in all provinces, are administered by independent boards.

Provincial labour legislation enacted in 1953 and 1954 is outlined in the following paragraphs.

Newfoundland.-In 1953, the St. John's Shops Act was amended to require shops to be closed one full day each week besides Sunday, and to limit hours of shop employees to 44 a week.

The Apprenticeship Act was amended in 1954 to ensure that no person between the ages of 16 and 21, eligible for apprenticeship, is employed in a designated trade for more than three months except under a contract of apprenticeship. Exceptions may be allowed by Provincial Apprenticeship Board permit.

Prince Edward Island.-The Trade Union Act was amended in 1953 to include a procedure for certifying a bargaining agent and for a government-supervised strike vote. If the employees of a public utility vote in favour of a strike, the dispute is to be referred to a special commission, composed of the members of the Public Utilities Commission and two other persons appointed for each dispute. The Commission's decision is binding.

Nova Scotia.-In 1953, a provision was added to the Nova Scotia Teachers' Union Act to authorize collective bargaining between the Teachers' Union and school boards. A conciliation board may be established if the parties are unable to reach agreement on salaries or other conditions of employment.

The Workmen's Compensation Act was amended in 1953 to reduce the waiting period from seven to five days. If a workman is disabled for five days or longer, compensation is payable from the date of the accident. In the event of death, the benefits to dependants are increased. The monthly payment for a child under 16 years is raised from $\$ 15$ to $\$ 20$, and of an orphan child from $\$ 25$ to $\$ 30$. The minimum compensation to a workman who suffers total disability is increased from $\$ 12.50$ to $\$ 15$ a week, subject to the provision that if his total weekly earnings are less than $\$ 15$, he will receive the amount of his earnings.

Under a 1954 consolidation of the Act, coverage is extended to the following industries, effective Jan. 1, 1955: hotels, restaurants, catering, dairies, wholesale and retail stores, broadcasting stations, artificial ice production, peat processing, landscaping and operation of bridges.

An amendment to the Coal Mines Regulation Act, in 1954, raises the minimum age for employment underground in coal mines from 17 to 18 years.

New Brunswick.-The Fair Wages and Hours of Labour Act passed in 1953 requires a contractor engaged in construction work for the provincial government to pay his employees "fair wages", that is the current rate paid to other workmen performing the same class of work in the district, and to limit hours of work to eight in a day and 44 in a week unless longer hours are authorized.

A new Vacation Pay Act passed in 1954 applying to mining and the construction industry requires an annual vacation of at least one week with pay after a year's employment. A system of vacation-with-pay credit stamps is provided for employees who do not work a full year for the same employer. The vacation pay to be granted is 2 p.c. of the employee's earnings. The Act will come into force on proclamation.

The Weekly Rest Act, effective from Aug. 1, 1954, requires a weekly rest period of at least 24 hours, and covers practically all employees in the Province except farm workers.

The application of the Stationary Engineers' Act is extended to hot-water boilers and provision made for a fourth-class engineer's certificate.

Quebec.-Further measures were passed by the Quebec Legislature in 1953 to exempt the decisions of the Labour Relations Board and of councils of arbitration under labour Acts from supervision by the courts.

In 1954, the Labour Relations Act was amended, retroactive to the date the Act went into effect in 1944, to require the Labour Relations Board to decertify or refuse to certify a union if any of its organizers or officers belong to the communist party or movement.

A 1954 amendment to the Public Service Employees Disputes Act, also retroactive to 1944, provides that if a union of employees of a school corporation, a hospital or charitable institution or a public utility service goes on strike it will automatically lose its certification as bargaining agent.

Ontario.-In 1953, amendments to the Workmen's Compensation Act provide increased monthly allowances to dependants of a deceased workman; for a widow the allowance is raised from $\$ 50$ to $\$ 75$ and for a child under 16 years of age from $\$ 12$ to $\$ 25$. The monthly allowance for an orphan child is increased from $\$ 20$ to $\$ 35$.

The Elevators and Lifts Act, 195s, proclaimed June 17, 1954, and regulations under it, establish a system of provincial supervision over the licensing and inspection of most elevators in the Province except passenger elevators in the city of Toronto. Plans and specifications for new elevators must be approved, annual inspections are required, and operators must be licensed.

In 1954, amendments to the Labour Relations Act aimed at reducing delays, shorten the periods allowed under the Act for the various steps in collective bargaining and conciliation and give the Minister authority to refuse to appoint a conciliation board where, in his view, it would serve no useful purpose. To facilitate bargaining between employers and groups of trade unions, one amendment provides for the recognition of councils of trade unions as bargaining agents under the Act.

The Trench Excavators Protection Act, 1954, is a new Act designed to protect workers from dangers in trench excavation. An inspector of trench excavation work is to be appointed by each municipal council. The Act requires that before work
is begun on a trench which is more than four feet deep, the owner or contractor must notify the inspector who is required to ensure that the provisions of the Act are complied with.

Manitoba.-The Fair Employment Practices Act, 1953, prohibits discrimination by an employer in regard to employment, or by a trade union in regard to membership, on grounds of race, national origin, colour or religion. The Act applies generally in the Province to employers of five or more persons, but non-profit educational, social, religious or charitable organizations and domestic servants employed in private homes are excluded. An advertisement in connection with employment may not contain any specification as to race, national origin, colour or religion. A complaint of discrimination may be filed by the aggrieved person with a designated officer in the Department of Labour, and the complaint will be investigated; the Minister has authority to appoint an industrial inquiry commission to recommend any action necessary and to make the action effective. A 10-day period is provided for, wherein the Minister's order may be appealed to the Court of Queen's Bench.

Amendments to the Workmen's Compensation Act provide that compensation for disability is to be computed on the basis of 70 p.c. of average earnings instead of $66 \frac{2}{3}$ p.c. The burial allowance is increased from $\$ 150$ to $\$ 200$; the monthly allowance for a dependant child from $\$ 12$ to $\$ 20$ and for an orphan child from $\$ 20$ to $\$ 30$. Widows receiving compensation according to earlier scales of benefit will be brought up to the current level of $\$ 50$ a month. The minimum compensation payable to a dependent widow and one child is raised from $\$ 12.50$ a week to $\$ 70$ a month, and to a widow and two or more children, from $\$ 15$ a week to $\$ 90$ a month.

The Hours and Conditions of Work Act was made to apply to the northern mining communities of Snow Lake and Lynn Lake; hours of work are limited to eight a day and 48 a week for men ( 44 a week for women) unless paid at time and one-half the regular rate.

The Fire Departments Arbitration Act passed in 1954 provides for arbitration of disputes between a municipality and its firefighters. It applies only where the union representing the firefighters does not have the right under its constitution to call a strike. The award of an arbitration board is binding on both parties, and strikes and lockouts are prohibited.

Saskatchewan.-In 1953, amendments to the Workmen's Compensation (Accident Fund) Act increased the funeral allowance from $\$ 175$ to $\$ 250$.

An amendment to the City Act relating to disputes involving members of the police force provides for submission of a dispute to a board of arbitration authorized to make an award binding on both parties-but only where the constitution of the policemen's union contains an undertaking not to go on strike. The Fire Departments Platoon Act was amended to make similar provisions for the settlement by arbitration of disputes involving full-time firefighters.

The Gas Inspection and Licensing Act, effective Jan. 1, 1954, requires a person who installs gas equipment or works as a gasfitter to hold a licence under the Act.

In 1954, locomotive engineers and maintenance-of-way employees of the railroads, formerly covered by an individual liability statute, elected to come under the Workmen's Compensation (Accident Fund) Act.

The Trade Union Act was amended to protect the pension rights of an employee whose service is broken by a lockout or by a legal strike.

An amendment to the Hours of Work Act provides that, for overtime worked in any week in which a paid holiday occurs, time and one-half becomes payable after 36 hours instead of after 44 hours as in an ordinary week.

Under the Factories Act, the limits set for special overtime work by women and young persons under 18 years of age were reduced from $12 \frac{1}{2}$ to 10 hours a day and from $72 \frac{1}{2}$ to 60 hours a week. Normal working hours of women and young persons are limited to 48 in a week.

#### Abstract

Alberta.-New provisions added to the Fire Departments Platoon Act concerning collective bargaining and arbitration of disputes became effective July 1, 1953. When requested in writing by a majority of the full-time firefighters, a municipal council is required to bargain in good faith with a committee representing the firemen to determine wages, pensions and other working conditions. If an agreement cannot be reached, the points at issue are to be referred to an arbitration board whose decision is binding. Provisions of an agreement or award involving expenditures may only become effective at the beginning of the fiscal period in which provision for such expenditures is made in the municipal estimates.

A consolidation of the Police Act effective July 1, 1953, made provision for bargaining and for arbitration of disputes for full-time members of a municipal police force similar to those described above for firemen. Policemen may not belong to a trade union, but may have their own association for bargaining purposes.

In 1954, Part V of the Alberta Labour Act, which deals with collective bargaining and the settlement of disputes in industry generally, was amended in a number of details.

British Columbia.-Effective Dec. 31, 1953, the Equal Pay Act forbids an employer to pay a female employee at a lower rate than a male employee for the same work done in the same establishment. A woman who considers that she is not being paid at the rate required by the Act may file a complaint with the Board of Industrial Relations.

The Labour Relations Act, proclaimed in force on June 16, 1954, replaced the Industrial Conciliation and Arbitration Act.

One of the chief differences between the present and the previous legislation is that the Minister of Labour now has the authority, formerly vested in the Labour Relations Board, to appoint conciliation officers, conciliation boards and mediation committees.

A further new provision permits the conciliation officer's recommendations to be accepted in place of a report of a conciliation board in certain cases. The parties are required, within 18 days, to advise the Minister of their acceptance or rejection of the conciliation officer's recommendation or the conciliation board's report.

The Section giving authority to the Labour Relations Board to decertify a union representing employees who had gone on strike contrary to the Act was replaced by a provision permitting the reference of the strike to a Judge of the Supreme Court. He has the power to revoke the union's certification, check-off arrangement and the collective agreement to which it is a party if he finds the strike
was illegal. Before making his adjudication, the Judge may hold a hearing at which the employer and the employees may be represented and procure the attendance of witnesses.

Amendments to the Workmen's Compensation Act provide that compensation for disability is to be computed on the basis of 75 p.c. of average earnings instead of 70 p.c. The maximum annual earnings on which compensation is based are increased from $\$ 3,600$ to $\$ 4,000$ a year. A number of new groups are brought under the Act including members of municipal fire brigades, domestic servants (on an optional basis), and independent operators and their dependants (on an elective basis).

Amendments made to the Public Works Fair Wages and Conditions of Employment Act, passed in 1951, require that all persons employed in the execution of a contract with the provincial government must be paid "fair wages" and must not work longer than eight hours a day and 44 hours a week. If a contractor fails to pay the proper wages, an employee may make a claim to the Minister of Labour rather than, as formerly, to the Minister of the contracting department.

Regulation of Wages and Hours of Labour under Industrial Standards Legislation and the Quebec Agreement Act.-The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario, and Saskatchewan, and the Alberta Labour Act provide that wages and hours agreed upon at a conference of representatives of employers and employees, called by the Minister of Labour or his representative, may, by Order in Council, be made legally binding on the industry in the area concerned. The Nova Scotia Act applies only to construction work at Halifax, Dartmouth, and Sydney.

In Nova Scotia, 12 schedules of hours and wages for individual building trades were in force in 1953: 11 renewals of previous schedules and one new schedule governing plumbers rates at Sydney. In New Brunswick, five schedules for individual building trades were in force in 1953. One schedule governing painters at Saint John expired in December 1952.

In Quebec, under the Collective Agreement Act, hours and wages and also apprenticeship, vacations with pay and family allowances provisions established by a collective agreement voluntarily entered into by employers and unions or groups of employees may be made legally binding by Order in Council on all employers and employees in the industry in the district covered by the Agreement, if the parties are sufficiently representative of the industry. At Mar. 31, 1953, 102 agreements, covering 220,549 workers and 21,392 employers, had been generalized to apply either throughout the Province or to a certain district. The agreements in force throughout the Province apply to the following industries: building materials, the manufacture of women's cloaks and suits, dresses, millinery, the manufacture of men's and boys' clothing, men's and boys' hats and caps, men's and boys' shirts, ladies handbags, fine gloves and work gloves, shoes, furniture, paint, corrugated and uncorrugated paper boxes, the tanning industry, elevator construction, and the structural-iron erection industry. Other agreements concern industries in particular cities or parts of the Province including all building trades and printing trades in large urban centres and many rural districts.

In Ontario, there were 145 wages and hours schedules in force at Mar. 31, 1953, affecting brewery workers, cloakmakers, the men's and boys' clothing industry, men's and boys' hats and caps, the hard furniture industry, and millinery workers.

In the construction industry, one schedule covered several building trades in one city and 65 schedules, each for a single trade in a single locality, covered one or more trades in 28 localities. In other industries also, schedules of wages and hours were in effect only for certain zones. Bakers, soft furniture manufacturing, coal hoisting, and the coal industry each had schedules in one zone, retail gasoline service in four, taxi drivers in one and barbers had schedules in 64 zones. During 1953, 22 new schedules applying to the construction industry were made binding, three of which were applied for the first time.

In Manitoba, Part II of the Manitoba Fair Wage Act provides similar machinery for fixing wages and hours in any business, trade or undertaking, except agriculture. Orders in Council under this legislation have been passed fixing wages and hours in the barbering and hairdressing trades.

In Saskatchewan, 17 schedules were in effect at Mar. 31, 1953. These included one for barbers covering the whole Province; others applied to bakers and bakery salesmen, carpenters, electrical workers, painters, shoe repairers, and beauty-culture operators in one or more areas.

In Alberta, 29 schedules were in effect during 1953. These included, in one or more areas, schedules governing bakers and bakery salesmen, certain individual building trades, dairy employees, garage and service-station employees, radio service, laundry and dry-cleaning employees and barbers. Two new schedules were made binding during the year.

Regulation of Hours and Annual Holidays.--Five provinces-Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia-have statutes that either place absolute limits on working hours or require time and one-half the regular rate to be paid if work is continued after specified limits. There is, in addition, an Act of limited application in Quebec. In the provinces that have no special hours-ofwork legislation, the only statutory regulation of hours, apart from that described on pp. 759-760, under industrial standards Acts and the Quebec Collective Agreement Act, is that imposed by factories Acts, mines Acts and, in Newfoundland, an Act governing shops. In New Brunswick and Quebec, the limits imposed by the factories Acts apply only to women and boys under 18 years of age. Several minimum wage Acts give authority for the regulation of hours as well as wages.

In Ontario, there is a maximum eight-hour day and 48 -hour week for certain workers. In Alberta, the maximum daily and weekly hours in the cities of Calgary, Edmonton, Lethbridge, and Medicine Hat are eight and 44; in the remainder of the Province they are eight and 48. In British Columbia, hours are limited to eight in a day and 44 in a week. In these three Provinces, the Acts apply to most workers except farm labourers and domestic servants. In Saskatchewan, an Act of 1947 requires time and one-half to be paid for work after eight hours daily and 44 hours weekly. The Act applies to workers in all industries except agriculture and domestic service. A Manitoba Act of 1949, covering most industrial workers in the Province, requires time and one-half to be paid for work done after eight hours in a day and after 48 hours in a week for men and 44 hours for women. In all provinces that have Acts regulating hours, longer hours may be worked in an emergency or by permission of the administrative authority.

Six provinces have legislation in effect providing for annual holidays with pay for workers in most industries. In five of these provinces-Quebec, Ontario, Manitoba, Alberta, and British Columbia-workers are entitled to a week's holiday
with pay after a year of employment. Two weeks' holiday is given in Saskatchewan after a year of employment, in Alberta after two years, and in Manitoba after three. A worker employed for less than a year is entitled, in Quebec, to a half-day for each month of employment and, in Saskatchewan, to one day for each month. Coal miners in Alberta are entitled to one day's holiday with pay for every 20 days worked in a month but not more than two weeks' holiday in a year.

Farm workers are excluded from the holiday provisions in all provinces and domestic servants in all but Manitoba and Saskatchewan. The Manitoba Act excludes independent contractors and railway and express companies under federal jurisdiction. In addition, Quebec exempts forest operations workers, public corporation employees, salesmen, janitors and watchmen, and certain part-time workers. Ontario exempts professional workers, salesmen, and funeral directors and embalmers. Manitoba and Saskatchewan exempt ranch and market-garden employees, and British Columbia, professional workers and horticultural workers.

A New Brunswick Act, requiring an annual vacation of one week with pay in the mining and construction industries, will come into force on proclamation.

Minimum Wage Regulations.-In Nova Scotia, the minimum wage law applies only to women; in Ontario, though the Act applies to both sexes, Orders in Council apply only to women. In New Brunswick, Manitoba, Alberta and British Columbia, there are separate Orders for men and women but in British Columbia many Orders cover both sexes. In Quebec and Saskatchewan all Orders apply to both sexes. Under the Newfoundland Minimum Wage Act, 1950, a general Order for male workers is in effect.

Table 1 shows the minimum rates in effect in July 1954 for several classes of establishments in the principal cities. In Newfoundland, New Brunswick, British Columbia and, with respect to men in Manitoba, the rates set are for the entire Province. Elsewhere rates vary according to zone. The rates given apply to the hours specified or to the normal work-week of the establishment, if less, except at Montreal, Que., and Winnipeg, Man. No work-week is specified in the Newfoundland Order in Council.

## Section 2.-The Labour Force

## Subsection 1.-Labour Force Statistics of the Census of 1951

Details of the labour force, as defined in the 1951 Census, relative to age, sex and occupation groups are given at pp. 692-704 of the 1954 Year Book.

## Subsection 2.-Current Labour Force Statistics

During World War II up-to-date information on the size and characteristics of the labour supply was a necessity and to meet the possibility of disturbed economic conditions in the post-war period a current and periodic analysis of the state of employment in Canada was organized. A labour force survey, on a sample basis, was conducted in the autumn of 1945, and quarterly surveys were carried on until November 1952, when the survey was placed on a monthly basis. A multi-stage area sample was used involving the selection of progressively smaller sample areas and ultimately of households. Random methods of choice were used at every stage of selection so that all members of the population had an equal chance of inclusion. The present sample includes about 30,000 households in over 110 different areas of Canada, which include 34 cities having a population of 30,000 or over in 1951 in addition to some smaller urban, and various rural, areas.

The estimates of the labour force are restricted to the civilian labour force; net strength of the Armed Forces is obtainable directly from official sources. Inmates of institutions and Indians living on reserves are also excluded. Because of inaccessibility and high cost of enumeration, certain remote areas of the country have been excluded from the sample, but estimates for remote areas of Ontario were included in 1954 although they are given no chance of selection for enumeration. This resulted in an increase of about 0.6 p.c. in the estimates for Canada as a whole. This percentage can be applied to figures for previous years to make them comparable.

The labour force surveys provide a classification of persons 14 years of age and over on the basis of their activity, during the week that precedes the beginning of the survey, and who had jobs or were seeking work during the survey week. These divisions of the labour force are defined as follows:-
(1) Persons with jobs-This category comprises:-
(a) persons at work-those who did any work for pay or profit or who did unpaid work which contributed to the running of a farm or business operated by a relative; and
(b) persons with jobs not at work-those who had jobs but did not work because of illness, bad weather, vacation, industrial dispute, or temporary layoff with definite instructions to return to work within 30 days of the time of being laid off.
Persons who worked part of the survey week and also looked for work are classed as "persons with jobs"
(2) Persons without jobs and seeking work.-This classification includes those persons who were looking for work during the survey week and did not work. Persons who were temporarily away from their jobs during the whole of the survey week seeking other work are considered as without jobs and are included in this category. In addition to those who actively looked for work, this classification includes persons who would have looked for work, except that they were temporarily ill, were on indefinite or prolonged layoff, or believed that no work was available.

Information relating to the population 14 years of age or over not in the labour force is also collected. Persons not in the labour force include such groups as those going to school or keeping house in their own homes, persons who are permanently unable to work because of old age or other reason, and persons who are retired or voluntarily idle. Persons, such as housewives, students and others, who worked part-time are classed as "persons with jobs" or, if looking for work, they are classed as "persons without jobs and seeking work"

The estimates derived from the labour force surveys are subject to sampling error. In general, the percentage error tends to decrease as the size of the estimate increases. The chances are about 19 out of 20 that the difference between the estimate and the figure which would have been obtained from a complete count is less than that shown below.

|  | Size of Estimate | Sampling Variability |
| :---: | :---: | :---: |
| 50,000. |  | 8,000 |
| 100,000. |  | 11,000 |
| 500,000. |  | 25,000 |
| 1,000,000. |  | 33,000 |
| 5,000,000. |  | 54,000 |

Data in Table 2 for June 1, 1946 to 1954 are compiled from labour force surveys conducted in late May or early June of those years. The information for years before 1946 is taken from estimates based upon 1931 and 1941 Census material rearranged according to the definitional system used in the labour force surveys, the revised census data being linked with the June 1946 survey on the basis of monthly and annual employment and unemployment figures.

[^242]
## THE CANADIAN LABOUR FORCE

in RELATION TO
THE CIVILIAN POPULATION 14 YEARS AND OVER
PERSONS WITH JOBS

Main Characteristics of the Canadian Labour Force, 1931-54.*-The civilian population 14 years of age or over (exclusive of persons in institutions) increased in the period June 1931 to June 1954 by about 2,954,000 or at a rate of about 128,000 persons a year. The strength of the Armed Services rose very considerably from 5,000 in 1931 and 9,000 in mid-1939 to 779,000 at June 1944 but declined to 114,000 by June 1954. Consequently, the civilian population (exclusive of persons in institutions) which increased very little from June 1939 to June 1940, declined in size until, in mid-1943, there were 238,000 fewer persons than in 1939. From June 1943 to June 1944, there was a small increase in the civilian population $(59,000)$ as the rate of increase of the Armed Forces levelled off. From 1945 to 1947 the civilian population increased markedly as a consequence of the rapid demobilization of the Forces.

In contrast, the civilian labour force maintained its strength notwithstanding large withdrawals to the Forces during the war years. The labour force of June 1942 was 102,000 greater than at June 1941 and that of June 1945 was 66,000 greater owing mainly to replacements from among those who would normally be outside the labour force. The group classed as "not in the labour force" usually represents a fairly constant percentage of the population but during the war years this category reached a low point in 1943 ( 162,000 persons fewer than the total of

[^243]$3,437,000$ in 1939), increased by 74,000 between mid-1943 and mid-1944 and then moved sharply upward with the decline in wartime employment. (The increase was: June 1944 to June 1945, 160,000; and June 1945 to June 1946, $35 \overline{5}, 000$.)

The number of civilian jobs increased considerably during the War as compared with pre-war experience (despite a decline in agricultural employment) and reached a peak of 4,447,000 in June 1943 (372,000 greater than June 1939). After registering a decline to $4,411,000$ during the readjustment period represented by June 1945, the number of jobs continued to increase in post-war years to $5,086,000$ in June 1954, which was a little lower than the all-time high for that month reached in June 1953.

## Section 3.-Employment, Payrolls and Hours*

## Subsection 1.-Employment and Payrolls by Industrial Divisions

For over 30 years, the Dominion Bureau of Statistics has made monthly surveys of employment in the leading non-agricultural industries, excluding education, health, domestic and personal services and government administration, etc. Statistics are published each month $\dagger$ showing geographic and industrial breakdowns for the following broad divisions: forestry (chiefly logging), mining, manufacturing, construction, transportation, storage and communication, public utilities, trade, finance, insurance and real estate, and certain services (chiefly hotels, restaurants, laundries, dry-cleaning plants and recreational and business services). In recent years, the grouping of data has conformed to the Canadian Standard Industrial Classification.

Over the yeare, monthly surveys have been extended from time to time as need for additional related data in the labour field has become apparent. In 1941, the collection of currently distributed payrolls was undertaken to complement the monthly employment series; subsequently, a record of weekly payrolls and average wages and salaries was built up, on an annual basis, for 1939, 1940 and 1941. Late in 1944, a current series on man-hours and hourly earnings was inaugurated. From January 1946, monthly inquiries into the sex distribution of the reported staffs replaced the annual and semi-annual surveys of immediately preceding years. Following the entry of Newfoundland into Confederation in 1949, the surveys were extended to that Province, for which separate data were published from 1950 until 1953. Since then, Dominion-wide statistics have been prepared on the base $1949=100$. In 1953, a special bulletin $\ddagger$ was issued giving historical series recalculated on that base from 1921, inclusive of Newfoundland from 1950.

Considerations of economy in time and money are largely responsible for limitation of the current inquiries to establishments usually employing 15 or more persons. This restriction results in the inclusion of industrial samples of varying size in the monthly survey, the variation depending upon the organization of industries in large or in small units; from the equally important geographic aspect, however, greater uniformity exists in the provincial coverage of total employees in the industries surveyed. In all industries and areas, the coverage is large.

[^244]EMPLOYMENT, PAYROLLS AND AVERAGE WEEKLY WAGES AND SALARIES,1941-54
(COMPOSITES OF NINE NON-AGRICULTURAL INDUSTRIES)
$1949=100$

In the post-war period, employment and payrolls have shown general and marked expansion, resulting in the establishment of successive new high levels, while hours of work generally have tended to diminish, owing in part to reductions in the amount of overtime work necessitated by wartime conditions, and in part to industrial agreements calling for lower standard hours of work. Improvement in employment in 1953 over 1952 was recorded mainly from Jan. 1 to Oct. 1, and the general gain in the year was slight. Moderate though fairly widely distributed increases were reported, although contractions in activity were indicated in a greater number of industries and areas than in recently preceding years. A favourable factor in 1953 was a decided decline, on the whole, in the time lost as a result of labour-management disputes as compared with 1952.

Employment.-For the seventh year in succession, industrial employment generally in 1953 showed expansion. The upward movement, which was on a smaller scale than in either 1952 or 1951, was limited to the first 10 months of the year. Although the index in October reached a new high of $116 \cdot 9(1949=100)$, the annual average at $113 \cdot 4$, was only $1 \cdot 6$ p.c. above that for 1952 . On the whole, the month-to-month movements during the year followed the seasonal pattern. After October, however, the index numbers were slightly lower than in the corresponding period 12 months earlier. The general figure for 1953 was $53 \cdot 3$ points higher than in 1939, also substantially exceeding the wartime peak figure of 93.0 in 1943. At the post-war low in 1946, the index was $88 \cdot 2$.

The number of women employed as reported by the co-operating establishments in the main industrial groups throughout Canada rose by approximately 4 p.c. in 1953, and the number of men increased by 1 p.c. The disparity in the rates of increase reflected changes in the levels of activity in industries employing larger or smaller numbers of women. Manufacturing generally showed advances of 5.4 p.c. in number of women workers and of $3 \cdot 2$ p.c. in number of men as compared with 1952 .
3.-Annual Average Index Numbers of Employment, by Industrial Group, 1941-53, and Monthly Indexes, 1952 and 1953
(Exclusive of Newfoundland prior to 1949)
Norg.-These indexes are calculated as at the first day of each month, on the base $1949=100$.

${ }^{1}$ Exclusive of Newfoundland prior to 1949.
2 The proportion of employees reported in the provinces to the total reported by all employers making returns in Canada. (Average of 12 months 1953.)

Employment in the major industrial divisions covered by the monthly surveys showed greater variation in 1953 than in recently preceding years. Compared with 1952, there was an increase of 3.7 p.c. in manufacturing, resulting in an all-time high index, $1 \cdot 6$ p.c. above the previous peak figure in 1943. The improvement in the 12 -month comparison extended to plants producing durable and non-durable manufactured goods, the former showing a gain of 6 p.c., and the latter of $1 \cdot 6$ p.c. Expansion continued in a number of the components of the durable goods category, notably the transportation equipment, aircraft and parts, and shipbuilding and repair industries, in which the indexes mounted by 12 p.c., 37 p.c., and 15 p.c., respectively. Certain groups which had experienced a recession in 1952, advanced in 1953 to new all-time levels. Among these industries were heating and cooking appliances and glass and glass products, employment in both classes rising by 15 p.c. in the year. Agricultural implements, which had shown greater activity in 1952 than in any other year since 1948, reported a loss of 21 p.c. in 1953. Declines in employment, beginning in 1952, in iron castings and wire and wire products were followed by further moderate losses in 1953.

Slight advances were recorded by some industries in the non-durable goods division of manufacturing, notably printing and rubber products. Employment in textiles, (excluding clothing), rose fractionally, following a 12 p.c. fall in 1952. The composite food index declined in 1953, although several of the component groups continued the expansion characteristic of the post-war period. Employment in the canned and cured fish industry, however, dropped by 15 p.c. in 1953, largely a result of labour-management disputes and unfavourable marketing conditions.

While employment in a majority of industries in the non-manufacturing sector showed little change or a moderately upward movement in 1953, three groupsforestry, mining and construction-reported curtailment. The loss in the lastnamed was minor, resulting from cutbacks in the highways, bridges and streets group; building construction, on the other hand, showed a small advance. Logging continued the unfavourable movement of 1952 , employment decreasing by 19 p.c. in the year, bringing the index to $100 \cdot 0$, or to the 1949 level. The mining division was adversely affected in 1953 by prolonged labour disputes in the Ontario and Quebec gold fields, the Canada index falling by 4.4 p.c. from 1952. Employment in mining as a whole, however, was still slightly above the average for 1951, previously the maximum in the record. Transportation, storage and communication and trade reported advances of 0.4 p.c. and 3.0 p.c., respectively, in 1953 , bringing the index numbers to peak positions. New high records were also established in public utility operation, finance, insurance and real estate, and in the service industries for which monthly data are obtained.

## 5.-Index Numbers of Employment, Industrial Divisions and Groups, by Annual Averages, 1939 and 1949-53

Note.-These indexes are calculated as at the first day of the month, on the base $1949=100$.

Provincially, the most marked gains in employment occurred in Newfoundland and Alberta, expansion in construction being important in both areas. In Alberta, where the movement was at a slower rate than in 1951 and 1952, continued exploitation of oil and natural gas resources, with related industrial development, was also a factor. The general advance in industrial employment in Ontario in 1953 amounted to $2 \cdot 4$ p.c., while staffs reported in manufacturing increased by $5 \cdot 2$ p.c., raising the provincial index to a position slightly above the general level in Canada. Among the non-manufacturing classes, the trend was unfavourable in forestry, mining and construction. Prolonged labour-management disputes in the gold fields contributed materially to the decline in the mining division.

Despite a fractional decline in the industrial composite index in Quebec, factory employment in that Province rose by 3 p.c., to a level exceeded only by the 1943 and 1944 figures. Moderately upward movements were indicated in Manitoba, Saskatchewan and British Columbia. The greatest reduction in the year occurred in New Brunswick,-caused largely by substantial curtailment in logging operations, in construction, transportation, storage and communication. The loss of 7 p.c. in 1953 brought the index for that Province to its lowest level since 1949.

Table 6 gives index numbers of employment in the eight largest metropolitan areas. Small gains in employment were shown in the 1953 annual averages for these centres but industrial activity in December 1953 was lower than in the same month of 1952 in all centres except Toronto, where employment reached a new all-time high for the time of year. Among the 24 remaining centres for which data are segregated in the monthly surveys, there were considerable variations in the movements of employment in 1953, with the changes recorded ranging from a loss of 11 p.c. in Brantford to a gain of 12 p.c. in Oshawa, Ont. and in Edmonton, Alta. Lower levels were reported in approximately a third of the group.
6.-Annual Average Index Numbers of Employment, by Metropolitan Area, 1941-53,
and Monthly Inderes, 1952 and 1953

Nore.-These indexes are calculated as at the first day of the month, on the base $1949=100$.

[^245]Earnings.-Wage and salary disbursements* in the industries included in the monthly surveys continued the upward trend which has been interrupted only once since 1939, the index of payrolls, on the base $1949=100$, rising by 8 p.c. in 1953 as compared with 1952. The gain, though important, was not equal to that in either of the two preceding years, and was also rather below the average rise recorded annually since 1945 . Upward adjustments in wage rates continued an important factor in the generally higher earnings in 1953.

[^246]Payrolls were higher than in 1952 and earlier years in all main industrial divisions except forestry, in which the index fell by 15 p.c. in the 12 -month comparison. Lower wages and salaries were also reported by establishments in a few industries within the major divisions, including gold and coal mining, canned and cured fish, women's clothing and agricultural implements. In most cases, the losses reflected slackness in the industry. A further factor in the gold fields was the existence of long-drawn-out labour-management disputes.

Provincially, the greatest increases in payrolls in 1953 occurred in Newfoundland and Alberta, where the reported disbursements rose 17 p.c. and 13 p.c., respectively, as compared with a year earlier. A new maximum was reached in Quebec, in which payrolls advanced by 6 p.c., and in Ontario, where the gain amounted to 8 p.c. The 1953 level in New Brunswick was fractionally under that of 1952, while increases recorded in the remaining provinces ranged from over 4 p.c. in Nova Scotia to 12 p.c. in Saskatchewan.

Table 7 gives the 1952 and 1953 annual index numbers of employment, payrolls and average earnings for the main industrial divisions, the provinces and the larger industrial centres. Table 8 shows the month-to-month movements of average weekly wages and salaries in the two years, with annual averages from 1941. The per capita earnings reported in the leading non-agricultural industries as a group stood at $\$ 57.30$ in 1953, compared with $\$ 54.13$ in 1952 and $\$ 49.61$ in 1951. In the 15 years since the payroll record was initiated, average earnings generally have mounted by 145 p.c., accompanying an advance of 89 p.c. in industrial employment. Between 1939 and 1953, the consumer price index rose by 83 p.c.

[^248]Man-Hours and Hourly Earnings.-To complement the monthly surveys of employment and payrolls, the Dominion Bureau of Statistics, late in 1944, undertook the collection of current material on man-hours and hourly earnings, and weekly wages. The inquiries relate only to wage-earners for whom"employers keep a record of hours worked, mainly hourly-rated or production workers. As a result, statistics are available for smaller numbers of industries and of wage-earners than in the employment and payroll series, since most establishments in many of the nonmanufacturing industries included in the latter record do not maintain accurate records of hours worked. The coverage of total wage-earners in manufacturing and other industries for which data are given in Table 9, however, is high.
9.-Average Hours and Earnings In Specified Industries and Areas 1951-53

${ }^{1}$ The dursble goods group includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products; the nondurable goods group includes the remaining manufacturing industries.

In the last few years, average hours in manufacturing have shown relatively little change, but there have been general and marked declines as compared with the earlier part of the record. In the division as a whole, the reduction in 1953 from 1945 amounted to three hours per week, or 6.8 p.c. Curtailment of overtime work, prevalent during the war years, and a widespread shortening of the standard hours of work in the post-war period, were the main factors in the falling-off. The average hourly earnings, on the other hand, have shown successive and substantial increases, the general figure in manufacturing having risen by nearly 96 p.c. since the last year of the War. The advance in the weekly wages, though smaller than that in the hourly sverage as a result of shorter hours, was nevertheless impressive, at almost 83 p.c. The trends of hourly earnings and weekly wages in recent years have been upward in all industries and areas.

## Subsection 2.-Earnings and Hours of Work of Male and Female Employees in Manufacturing Establishments*

The Dominion Bureau of Statistics makes an annual survey of earnings and hours of men and women wage-earners and salaried employees in a specified week each autumn to supplement the data collected in the monthly series on employment, payrolls and man-hours. The monthly surveys, like the annual inquiry, cover the manufacturing establishments usually employing a minimum of 15 persons, representing almost 90 p.c. of all employees in the industry as reported in the annual Census of Manufactures. In addition to the general averages of earnings and hours of wage-earners and salaried employees of the two sexes, the annual survey obtains more detailed data in a three-year cycle. In 1953, a segregation of employees by amounts earned in the last week of October was made; in 1952, a distribution of wage-earners in a given range of hours was obtained, and, in 1951, information for office, clerical and related workers was segregated from that for managerial, professional and other salaried employees.

Establishments co-operating in the annual surveys are asked to report for all full-time, casual and part-time employees on staff in the week ending Oct. 31, except home-workers and persons absent without pay throughout the week. No data are given for proprietors, firm members, pensioners, nor for staffs in separatelyorganized sales offices. The gross remuneration of the reported employees is reported before deductions are made for taxes, unemployment insurance, etc., and include such items as regularly-paid bonuses, overtime and vacation pay for the week. Part-time, full-time and overtime hours worked and hours of paid absence are given.

The period from 1946 to 1953, to which the annual series relates, has been characterized by a consistently upward movement in average earnings, weekly wages rising by 75.3 p.c. and weekly salaries by 68.5 p.c. in the seven years. The post-war trend toward reduced working time has resulted in a substantially greater advance ( 83.4 p.c.) in the average of hourly than of weekly earnings of the wageearners. The amounts and proportions of the increases are given in Table $\mathbf{1 0}$.

${ }^{2}$ As at Nov. 30.
Tables 11 and 12 continue the record published in previous editions of the Year Book, showing geographical and industrial averages for wage-earners and salaried employees in the last week of October. Table 13 gives, for each province, the distribution of male and female wage-earners by amounts earned in the last week in October 1953, with a comparison for 1950, when such information was last obtained.

Industrial and geographical variations in working time, as well as year-toyear changes, as shown in these tables, result from a variety of causes. These include: the length of the standard work week; the numbers of casual and part-time workers and their hours in the reported week; amounts of overtime worked, and of time lost through absenteeism, labour turnover, industrial disputes, lay-offs, etc.; differing occupational requirements, and varying proportions of men and women. Women generally average substantially shorter time than men. Their standard work week tends to be lower, relatively small proportions of women are employed in industries where the work week is above average, and they show a higher incidence of part-time work and of absenteeism.

Variations in average earnings are related to the distribution of employees in industries or areas where pay levels are above or below average, because of differences in basic pay rates, in occupational skills, in amounts of bonus or commission payments, in levels of activity in particular establishments, etc. Salary levels are further affected by the prevalence of head offices, the type and size of establishment, and varying requirements for highly-paid professional and executive personnel, most of whom are men. Women's earnings are generally well below
those of men in the same industries, chiefly as a result of pay differentials, occupational differences, the greater incidence of part-time work and absenteeism among women, and their proportions of younger and less experienced workers. The proportions of women reported in the 1952 and 1953 surveys and the relationship of their wages and salaries to men's earnings are given in Table 14.

## 11.-Average Hours and Earnings of Male and Female Wage-Earners for the Last Week of October, 1952 and 1953

(As reported by manufacturers usually employing 15 or more persons)

## Section 4.-Wage Rates, Hours and Working Conditions for Various Classes of Labour

Statistics of rates of wages and hours of labour have been collected for many years by the Federal Department of Labour and are published monthly in the Labour Gazette and in annual reports.* The first report was issued in 1921 but the records begin in the year 1901. The index numbers show the general movement of wage rates for the main industrial groups as well as for individual industries, but these cannot be used to compare wage rates in one industry with those in another. The statistics are average straight-time wage rates or average straight-time piecework earnings and do not include overtime or other premium payments. The figures do include, however, incentive or production bonus payments as well as cost-of-living bonuses where reported.

Tables 15 and 16 show the index numbers of wage rates by main industrial groups and by industries. From 1930 to 1933, the trend in wage rates was downward but increases have been general each year since that time. During the period 1940-53, the general average index rose from $103 \cdot 9$ to $272 \cdot 7$.

[^251]
## 15.-Index Numbers of Wage Rates for certain Main Industrial Groups, 1945-53 $(1939=100)$

Nors.-Figures back to 1911 may be obtained from the Department of Labour publication, Wage Rates, Salaries and Hours of Labour in Canada, 1952. Figures for 1921-44 are given in the 1947 Year Book, p. 650.

| Year | Logging | Coal Mining | Metal Mining | Manu-facturing | Con-struction | Water Trans-portation | Steam Railways | Electric Railways | Telephones | Lamdries | General Average |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## 21.-Summary of Working Conditions of Office Employees in Manufacturing Industries, as at Oct. 1, 1919-51 and Apr. 1, 1953-concluded

|  |  |  |
| :---: | :---: | :---: | :---: | :---: |

[^252]Wages of Farm Labour.-Farm wage rates have been increasing steadily during the past few years. In 1952 they were, almost without exception, up from the level of 1951 and the trend continued in 1953. In the Western Provinces and Ontario the increase was quite evident in the latest year but in the Maritimes and Quebec the rates showed a general levelling-off or a slight decline.

The information on farm wages is provided by volunteer farm correspondents located in all provinces except Newfoundland.

## 22.-Average Daily and Monthly Wages of Male Farm Help, as at Jan. 15, May 15 and Aug. 15, 1950-53

Note.-Figures for 1940-42 are given in the 1943-44 Year Book, pp. 732-733; for 1943-46 in the 1947 edition, pp. 653-654; for 1947 and 1948 in the 1951 edition, pp. 703-704; and for 1949 in the 1952-53 edition, pp. 711-712.

## Section 5.-Unemployment Insurance

The Unemployment Insurance Act, which came into operation on July 1, 1941, applies to all employed persons except the following: workers in specified industries or occupations such as agriculture, fishing, Armed Forces, permanent public service of the Federal Government, provincial governments and municipal authorities, private domestic service, private-duty nursing; certain director-officers of corporations; workers on other than hourly, daily or piece rates if earning more than $\$ 4,800$ per year and (except by consent of the Unemployment Insurance Commission) employees in a hospital or charitable institution not carried on for gain. All employees paid by the hour, day or on piece rate (including a milage rate) are insured regardless of amount of earnings, together with all employees who receive $\$ 4,800$ or less per annum under weekly, monthly or yearly rates.

Unemployment Insurance Fund.-Employers and employees contribute to the Fund, the total paid by each group being equal. The Federal Government contributes an amount equal normally to one-fifth of the combined employeremployee contributions, reimburses the fund for certain types of supplementary benefit payments and assumes the cost of administration. From July 1, 1941, to Mar. 31, 1954, employers and employees contributed $\$ 1,241,276,310$ to the Fund and the Federal Government added $\$ 248,262,044$. Interest and profit on sale of securities amounted to $\$ 145,712,389$, and fines of $\$ 182,460$ made a total revenue of \$1,635,433,203.

Benefits first became payable on Jan. 27. 1942, and from that date to Mar. 31, 1954 , total benefit payments amounted to $\$ 754,159,070$, leaving a balance of $\$ 881,274,133$ in the Fund. Reserves of the Fund are invested in Government of Canada bonds and, as at Mar. 31, 1954, the par value of bonds held amounted to $\$ 880,424,000$.

## WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT

| Earnings | Weekly Contributions ${ }^{1}$ |  | Value of Weekly Stamp ${ }^{2}$ | Weekly Benefits ${ }^{3}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\underset{\text { Employee }}{\mathrm{By}}$ | By <br> Employer |  | Single <br> Person | Person With One Dependant or More |
|  | cts. | ets. | cts. | \$ | \$ |
| Less than $\$ 9.00$. | 18 | 18 | 36 | $4 \cdot 20$ | 4.80 |
| \$ 9.00 to \$14.99. | 24 | 24 | 48 | 6.00 | 7.50 |
| \$15.00 to \$20.99. | 30 | 30 | 60 | 8.70 | 12.00 |
| \$21.00 to \$26.99. | 36 | 36 | 72 | 10.80 | 15.00 |
| \$27.00 to \$33.99. | 42 | 42 | 84 | 12.90 | 18.00 |
| \$34.00 to \$47.99. | 48 | 48 | 96 | 15.00 | 21.00 |
| \$48.00 or more. | 54 | 54 | 108 | 17.10 | 24.00 |

[^253]No benefit is payable during the first five days of unemployment in a benefit year. After that time, the duration of benefit is related to the employment and contribution history of the employee, the number of days' benefit being equal to one-fifth the number of contribution days during the previous five years, less one-third the number of benefit days in the previous three years. Insurance benefit is paid as a right on fulfilment of the following statutory conditions:-

The payment of not less than 30 weekly (or 180 daily) contributions within two years while in insured employment; and the payment of at least 60 daily contributions within the immediately preceding 12 months, or 45 daily contributions within the immediately preceding 6 months. (These periods of two years, 12 months and 6 months may be extended under certain circumstances.)
Disqualifications for benefit include: loss of work owing to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or an institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be made if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.

Supplementary benefits at a slightly lower rate are payable to certain classes whose benefits have been exhausted or who are not entitled to ordinary benefit during the period Jan. 1 to Apr. 15 in each year.

Statistics of Unemployment Insurance.*-Benefits under the Unemployment Insurance Act first became payable late in January 1942, but no applications for benefit were received until early in February. Except for unusual periods, such as the months following the cessation of hostilities in Europe in the spring of 1945, monthly totals of claims received have shown a definite seasonal variation, rising in the late autumn and winter and falling again in the spring. Monthly averages of initial and renewal claims filed have been as follows: $1949,77,821 ; 1950,88,165$; $1951,95,130 ; 1952,115,740$ and $1953,139,655$.

Since September 1943, a record has also been maintained of the number of claimants on the live unemployment register on the last working day in each month. This provides a measure of recorded unemployment among insured persons on one day of each month. Monthly averages of ordinary claimants on the live register at the end of the month have been: 1949, 88,909; 1950, 165,304; 1951, 138,807; $1952,180,775$ and $1953,208,410$.

Monthly statistics on the operation of the Unemployment Insurance Act also provide data on the number of days that claimants on the live unemployment register at the end of each month have been continuously on the register, the number of claimants considered entitled and not entitled to benefit, chief reasons for nonentitlement, number of days and amount of benefit paid.

In addition to the monthly material on the operation of the Act, annual tabulations are published of the persons employed in insurable employment and of benefit years established and benefit years terminated. The data on the insured population shown in Table 23 are obtained from returns from the renewal of insurance books and contribution cards at Apr. 1. Included are those contributing in insured employment at that time and those on claim.

[^254]The number of persons insured under the Unemployment Insurance Act, shown in Table 23, was assumed to be those working in insurable employment as at Apr. 1, as indicated at that time from returns on those receiving insurance books and contribution cards.

Table 24 presents information on the persons who established benefit years and those benefit years terminating during the calendar years 1952 and 1953. A benefit year is established under the Unemployment Insurance Act when an insured person, upon becoming unemployed, submits a claim and fulfils the above-mentioned statutory conditions. Because of other provisions of the Act or because he may regain employment before he actually receives benefit, the setting up of a benefit year does not necessarily result in the receipt of benefit payments. When a benefit year is established it means merely that the claimant's right to receive benefit at a certain rate at any time during the succeeding twelve months is determined. Thus, of the 770,684 benefit years that terminated during 1953, 91,180 were paid no benefit.

The benefit year remains in existence either until the authorized benefit rights are exhausted or until 12 months have passed since the date of its establishment, whichever occurs first.

The amount of benefit paid on benefit years terminated, as presented in Table 24, is secured by multiplying each daily rate of benefit by the number of days paid at that rate on the ledger cards representing benefit years upon which benefit was drawn. Benefit years terminated during 1952 and 1953 and benefit days paid on those benefit years are classified, in Table 25, by duration of benefit paid.

Table 26 classifies benefit years terminated by daily rate of benefit authorized. The daily rate of benefit is determined by the amount of the daily average contribution paid on behalf of the claimant during the most recent 180 contribution days and by whether or not he has a dependant within the meaning of the Act.

Table 27 shows benefit years terminated and benefit days paid on them by age of claimant; and benefit years terminated by cause of termination and age of claimant. Benefit years terminated during 1953 and benefit days paid on them are classified by industry and age in Table 28 and by occupation for 1952 and 1953 in Table 29.

## 23.-Persons Insured under the Unemployment Insurance Act, by Industrial Group and Sex, 1952 and 1953

Note.-These figures include only persons who exchanged an unemployment insurance book or were issued a book for the first time in April. They, therefore, represent an estimate of the number, based on a 10 -p.c. sample, in insurable employment as at Apr. 1.

Employment Service.-The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act, 1940. The public employment offices, which had functioned under a joint federalprovincial arrangement for more than two decades, were taken over by the

Commission on Aug. 1, 1941, and added offices were established in all provinces, except Quebec. The Commission established its own offices in Quebec and the provincial government thereupon reduced the number of its offices.

## 30.-Applications for Employment, Positions Offered and Placements Effected by Employment Offices, 1943-53, and by Province, 1950-53

Note.-Figures by provinces from 1920-49 are given in the corresponding table of previous Year Books, commencing with the 1926 edition. Totals for 1920-37 are given in the 1938 edition, p. 766; for 1938 in the 1939 edition, p. 802; and for 1939-42 in the 1951 edition, p. 686 .

## Section 6.-Vocational Training*

The Federal Department of Labour, in co-operation with the provincial governments, carries on the following types of training: (1) youth training; (2) assistance to students by way of bursaries; (3) apprenticeship; (4) training of unemployed persons; (5) assistance to the provinces for vocational schools; (6) training of military personnel; and (7) training of workers for defence industries.

The Vocational Training Advisory Council, appointed under authority of the Vocational Training Co-ordination Act, 1942, advises the Minister of Labour on the general aspects of training plans. The Council is representative of employers, organized labour, vocational education and of veterans' and women's organizations. In November 1952, an Advisory Committee on Apprenticeship Training was appointed to advise the Minister on special problems of apprenticeship and industrial training.

Youth Training.-The youth training program consists, for the most part, of various general and specialized courses for rural young people in agriculture, home crafts and handicrafts and other related subjects.

Federal Government allotments to the different provinces for this type of training for the year ended Mar. 31, 1953, together with claims paid, including commitments from previous years, to Apr. 30, 1953, were as follows:-

| Province | Allotment | Payment | Province | Allotment | Payment |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ | \$ |  | \$ | \$ |
| Newioundland. | 11,375 | 13,670 | Manitoba. | 20,000 | 12,074 |
| Prince Edward Island. | 7,300 | 8,710 | Saskatchewan. | 45,000 | 43,769 |
| Nova Scotia. | 30,447 | 24,110 | Alberta. | 40,000 | 29,573 |
| New Brunswick...... | 40,225 | 39,925 | British Columbia..... | 52,500 | 50,677 |
| Quebec................ | 177,753 | 182,921 |  |  |  |
| Ontario............... | 100,000 | 100,000 | Totars........... | 524,600 | 505,430 |

Assistance to Students.-Under the Youth Training Division of the Vocational Training Agreement with each province, assistance may be provided for nurses-in-training at hospitals and for university students in courses leading to a degree who have good academic standing but who, without financial assistance, cannot continue training. At the discretion of the provincial authorities, assistance may be given in the form of a grant or loan, or a combination of the two.

The value of Federal Government assistance for such purposes may he assessed from the following approximate amounts paid to the provinces during the year ended Mar. 31, 1953:-

| Province | Amount | Province | Amount |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
|  | \$ |  | \$ |
| Newfoundland. | 11,375 | Manitoba. | 6,170 |
| Prince Edward Island | 7,346 | Saskatchewan. | 29,375 |
| Nova Scotia. | 8,468 | Alberta. | 13,205 |
| New Brunswick. | 14,650 | British Columbia. | 32,530 |
| Quebec.. | 121,493 |  |  |
| Ontario. | 100,000 | Total. | 344,612 |

[^257]Financial help was given to 698 nurses-in-training and to 3,965 students at universities. Included in the total number of university students were 1,056 taking courses in medicine and veterinary medicine, 89 in dentistry, 916 in applied science and engineering, 147 in agriculture and 707 in arts and science. Total federal payments in the past 14 years, amounting to $\$ 2,663,069$, have assisted 31,337 students.

Apprenticeship Training.-Apprenticeship agreements are in effect with all provinces except Newfoundland, Prince Edward Island and Quebec. Of the trades designated under the provincial Acts, emphasis is being given to the building and construction trades. In some provinces, certain categories of apprentices are given full-time training of a practical as well as a technical nature for a period of one to three months each year. For other categories, part-time training is given either in afternoon or evening classes for about seven months of the year. Provision is made with employers for adequate supervision of apprentices working on the job by the appointment of instructor-supervisors who instruct full-time classes for six to eight months and supervise for the remaining part of the year. Use is also made of trade advisory committees. Costs are shared equally by the province concerned and the Federal Government. At Mar. 31, 1953, the total number of apprentices registered was 11,746 in the seven provinces having agreements with the Federal Government.

Federal Government allotments made for the year ended Mar. 31, 1953, and claims paid (including commitments from previous years) to Apr. 30, 1953, to the different provinces, were as follows:-

| Province | Allotment | Payment | Province | Allotment | Payment |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ | \$ |  | 8 | \$ |
| Nova Scotia.. | 39,500 | 24,133 | Saskatchewan. | 64,000 | 58,496 |
| New Brunswick. | 40,000 | 44,064 | Alberta. | 317,600 | 316,077 |
| Ontario. | 290,000 | 248,079 | British Columbia. | 33,500 | 37,515 |
| Manitoba. | 62,500 | 46,338 | Totals... | 847,100 | 774,702 |

Assistance for Vocational Schools.-A ten-year agreement for vocational school assistance was signed in 1945 by nine provinces and, in 1950, an agreement was made with Newfoundland. The following payments are made by the Federal Government:-
(1) An annual grant of $\$ 10,000$ to each province;
(2) an annual allotment of $\$ 1,965,800$ distributed among the ten provinces in accordance with the number of young persons in each province in the age-group 15-19 years;
(3) a special allotment of $\$ 10,292,250$ to be used for capital expenditure for building and equipment and to be distributed among the provinces on the same basis as the annual allotment.

All federal allotments, except the annual grant under item (1), must be matched by an expenditure of equal amount by the provincial government concerned.

The assistance given by this agreement has resulted in marked expansion of vocational training across the country. Federal approval has been given to 120 vocational building projects consisting of new schools or vocational additions to existing schools. Of these, 104 were completed by Mar. 31, 1953. Provision has been made for young people in rural areas of facilities for training in homemaking and related subjects, vocational agriculture, and farm mechanics. Since the beginning of the agreement, total federal payments under the annual allotment have amounted to approximately $\$ 14,910,994$ and capital payments for buildings and equipment to about $\$ 9,224,027$. Federal annual and capital allotments to each province, together with the amount of claims paid during the year ended Mar. 31, 1953, were as follows:-

| Province | Annual Allotment |  | SpecialCapital Allotment(Building and Equipment) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Allotment | Payment | Allotment | Payment |
|  | \$ | \$ | $\$$ | \$ |
| Newfoundland. | 66,600 | 56,737 | 292,250 | - |
| Prince Edward Island. | 25,500 | 25,500 | 82,000 | - |
| Nova Scotia. | 106,000 | 63,901 | 504,300 | 2,294 |
| New Brunswick. | 89,800 | 89,800 | 433,000 | - |
| Quebec. | 638,100 | 728,890 | 3,139,400 | - |
| Ontario. | 597,500 | 597,500 | 3,031,500 | 1,076,538 |
| Manitobs. | 116,500 | 116,680 | 656,000 | 44,053 |
| Saskatchewan. | 137,500 | 152,898 | 858,200 | 11,115 |
| Alberta. | 147,600 | 147,600 | 700,200 | - |
| British Columbia. | 140,700 | 140,700 | 595,400 | - |
| Totals. | 2,065,800 | 2,120, 205 | 10,292, 250 | 1,134,000 |

[^258]Training of Unemployed Persons.-The Canadian Vocational Training and Co-ordination Act provides for the training of unemployed persons in receipt of unemployment insurance benefits. An amendment passed in 1948 extends the provisions to include those not in receipt of unemployment insurance benefits. The schedule covering the training of unemployed persons was accepted by all provinces, but training has not been carried out in Newfoundland or Prince Edward Island, the need for it not having arisen. Approved costs are shared equally by the province concerned and the Federal Government, the province recommending to the Federal Minister of Labour the scale of training allowances that should be paid.

In the year ended Mar. 31, 1953, approximately 130,497 days' training was given to 1,805 individuals. At the end of that year, 689 were under training The largest enrolment was in classes for nurses' aides. No training under this heading was given for the designated apprentice trades.

Federal Government allotments to the different provinces for this type of training for the year ended Mar. 31, 1953, together with claims paid (including commitments from previous years) to Apr. 30, 1953, were as follows:-

| Province | Allotment | Payment | Province | Allotment | Payment |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ | \$ |  | \$ | \$ |
| Newfoundland. | 3,625 | - | Manitoba. | 25,000 | 16.228 |
| Nova Scotia. | 85,000 | 60,473 | Saskatchewan. | 31,000 | 25,923 |
| New Brunswick | 36,700 | 34,941 | Alberta. | 60,000 | 50,879 |
| Quebec. . | 15,000 | 13,940 | British Columbia | 15,000 | 7,528 |
| Ontario.. | 34,000 | 17,841 | Totals. | 303,325 | 227,754 |

Training of Military Personnel.-Provision is made for the training of service tradesmen in such categories as might be requested by the Department of National Defence and for whom the provincial governments have the necessary training facilities. Training during 1952-53 was on a comparatively small scale, with an enrolment of 713 trainees in the Provinces of New Brunswick, Quebec, Ontario, Manitoba and Alberta. Training was given to driver-mechanics, motorvehicle mechanics and electrical mechanics for the Army and in telecommunications for the RCAF. The entire cost of this type of training is paid by the Federal Government. Allotments made for the year ended Mar. 31, 1953, and claims paid (including commitments from previous years) to Apr. 30, 1953, were as follows:-

| Province | Service | Allotment | Payment |
| :---: | :---: | :---: | :---: |
|  |  |  | 8 |
| New Brunswick. | Army | 16,000 | 12,586 |
| Quebec... | Army | 7,542 | 6,800 |
| Ontario.. | Air Force | 30,000 | 12,149 |
| Manitoba. | Army | 30,000 | 11,541 |
| Alberta. | Army | 55,000 | 41,094 |
| Totals. |  | 138,542 | 84,170 |

Training of Workers for Defence Industries.-Agreements have been entered into with the Provinces of British Columbia, Alberta, Manitoba, Ontario, Quebec, New Brunswick and Nova Scotia and special classes for the training of workers in defence industries have been established. Such classes have been organized in aircraft sheet-metal work, machine-shop practice and machine-tool operations, welding and drafting. Industrial establishments are being encouraged to organize and operate plant-training programs and special pre-employment classes may be set up to meet any general need that may develop. Federal Government allotments and payments made for the year ended Mar. 31, 1953, were as follows:-

| Province | Allotment | Payment |
| :---: | :---: | :---: |
|  | $\$$ | \$ |
| Nova Scotia. | 65,250 | 46,303 |
| New Brunswick | 20,231 | 19,521 |
| Quebec... | 35,000 | 14,087 |
| Ontario.. | 75,000 | 6,856 |
| Manitoba. | 3,750 | 1 |
| Alberta... | 10,000 | 3,823 |
| British Columbia | 15,000 | 11,461 |
| Totals. | 224,231 | 102,050 |

[^259]
## Section 7.-Industrial Accidents and Workmen's Compensation

Subsection 1.-Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the Federal Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners and other government authorities, departmental correspondents and from press reports.
31.-Fatal Industrial Accidents, by Industry, 1950-53
(Includes Newfoundland since Apr. 1, 1949)

Causes of Industrial Fatalities.-Preliminary figures indicate that, during 1953, 386 fatal accidents to gainfully employed persons were the result of being "struck by tools, machinery, moving vehicles and other objects". Within this group 63 deaths were caused by falling trees and branches, 50 by automobiles and trucks, 29 by landslides and cave-ins, and 28 by objects falling or flying in mines and quarries. Collisions, derailments, wrecks, etc., were responsible for 311 industrial fatalities. Automobiles and trucks were involved in 140 of these accidents, tractors in 54 , watercraft in 49 , aircraft in 40 , steam railways in 21 , animal-drawn vehicles in four and other agencies in three. Falls and slips were responsible for 230 deaths in industry and of these 212 were falls to different levels, including 80 resulting from falls into rivers, lakes, sea or harbours. Deaths of 27 workers were caused by falls from scaffolds and stagings, 22 by falls from buildings, roofs and towers, and 18 by falls from ladders and stairs. There were 91 deaths caused by workers being caught in, on or between parts of machinery or other agencies. Contact with electric current caused 74 deaths in industry including 65 workers who came in contact with electric wires, etc., and nine who were killed by lightning.

## Subsection 2.-Workmen's Compensation*

In all provinces, legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or by a specified industrial disease, except where the workman is disabled for fewer than a stated number of days. The Acts of all provinces provide for a compulsory system of collective liability on the part of employers. To ensure payment of compensation, each Act provides for an accident fund, administered by the province, to which employers are required to contribute at a rate determined by the Workmen's Compensation Board in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation as determined by the Board, and pay a proportion of the expenses of administration. A federal Act provides for compensation for accidents to Federal Government employees according to the conditions laid down by the Act of the province in which the accident occurs. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the Merchant Seamen Compensation Act, 1946.

In all provinces, free medical aid is given to workmen during disability. Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus, and silicosis is compensated under certain conditions. Other diseases compensated vary according to the industries of the provinces.

Scope of the Workmen's Compensation Acts.-The Acts vary in scope but, in general, they cover construction, mining, manufacturing, lumbering, fishing, transportation and communications and the operation of public utilities. Undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta and British Columbia.

Benefits.-Under each Act, except those of Saskatchewan and Alberta, if a workman is disabled from earning full wages for fewer than a stated number of days, usually called the "waiting period", he cannot recover compensation for the period of his disability or, in Manitoba and British Columbia, for the first three days of his disability. Where the disability continues beyond the required number of days, compensation is payable from the date of the accident. Medical aid is always paid from the date of the accident. In Saskatchewan and Alberta, the waiting period is one day, that is, compensation is not payable when the workman is off work only for the day on which the accident occurs. When he is disabled for any longer time, compensation begins from the day following the accident. Compensation in fatal accidents is paid as follows:-

Burial expenses: $\$ 250$ in Saskatchewan and British Columbia, $\$ 200$ in Newfoundland, Nova Scotia, New Brunswick, Ontario, Manitoba, and Alberta, \$175 in Quebec, and $\$ 150$ in Prince Edward Island. In seven provinces a further sum is allowed for transporting the workman's body.

[^260]To a widow or invalid widower (or to a foster mother as long as the children are under the age limit-a monthly payment of $\$ 75$ in Ontario and British Columbia, $\$ 60$ in Saskatchewan, $\$ 50$ in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, and Alberta and of $\$ 45$ in Quebec. In addition, a lump sum of $\$ 200$ is paid in Ontario and of $\$ 100$ in all other provinces.

For each child in the care of a parent or foster mother receiving compensationa monthly payment of $\$ 25$ in Ontario, Saskatchewan and Alberta, $\$ 20$ in Nova Scotia, Manitoba and British Columbia, $\$ 12.50$ in Prince Edward Island, $\$ 12$ in Newfoundland and New Brunswick, and $\$ 10$ in Quebec.

For each orphan child-a monthly payment of $\$ 35$ in Ontario, $\$ 30$ in Nova Scotia, Manitoba, Saskatchewan and British Columbia, \$25 in Prince Edward Island, New Brunswick and Alberta (in Alberta, a further amount, not exceeding $\$ 10$ a month, may be given at the discretion of the Board), $\$ 20$ in Newfoundland, and $\$ 15$ in Quebec, with a maximum of $\$ 100$ a month to any one family in Prince Edward Island and of $\$ 120$ in Nova Scotia.

Invalids excepted, payments to children are not continued beyond the age of 16 years in seven of the provinces but the Board has discretion to pay compensation to the age of 18 years if it is considered desirable to continue a child's education. In Quebec, the age limit is 18 years and in New Brunswick and British Columbia, compensation is paid to the age of 18 years if a child is regularly attending school. In Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan and British Columbia, payments to invalid children are continued until recovery, and the other provinces make payments only for the length of time the Board considers that the workman would have contributed to their support.

Where the only dependants are persons other than consort or children, all the Acts provide that compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly amount to be paid to all such dependants is limited to $\$ 100$ in Ontario, $\$ 85$ in Alberta, $\$ 75$ in British Columbia, $\$ 60$ in Nova Scotia and Manitoba, and $\$ 45$ in Prince Edward Island. In British Columbia, if a workman leaves dependent parents as well as a widow or orphans, the maximum payable to a parent or parents is $\$ 75$ a month. Compensation to dependants, other than consort or children, is continued only for such time as the Board considers that the workman would have contributed to their support.

Except in Alberta and British Columbia, each Act places a maximum on the total amount of benefits payable to all dependants if the workman dies. In Newfoundland, Nova Scotia and New Brunswick, the maximum is two-thirds of the workman's earnings, in Quebec and Manitoba 70 p.c., and in Prince Edward Island 75 p.c. In Ontario and Saskatchewan, the average earnings are the maximum amount payable.

Irrespective of the workman's earnings, however, compensation may not fall below certain minimum monthly amounts. The minimum payable to a consort and one child in Quebec is $\$ 55$ a month or $\$ 65$ if there is more than one child; in Manitoba, the minimum is $\$ 70$ if there is a consort and one child and $\$ 90$ if there is more than one child; in Saskatchewan, the minimum is $\$ 85$ a month to a consort
and child and $\$ 100$ if there are more children. In Newfoundland, a widow must receive at least $\$ 50$ a month with a further payment of $\$ 12$ for each child under 16 years of age unless the total exceeds $\$ 100$. In Ontario, the minimum payable to a widow is $\$ 75$ a month with a further payment of $\$ 25$ for each child, up to but not exceeding $\$ 150$ a month.

Compensation for total disablement in Newfoundland, Nova Scotia and New Brunswick is a periodical payment for the duration of the disability equal to $66 \frac{2}{3}$ p.c. of average earnings; in Quebec and Manitoba the rate is 70 p.c. of earnings; and 75 p.c. in Prince Edward Island, Ontario, Saskatchewan, Alberta and British Columbia. Except in New Brunswick, the Acts fix minimum sums to be paid for a permanent total disability. The minimum is $\$ 15$ a week in Prince Edward Island, Nova Scotia, Quebec, Manitoba and British Columbia, $\$ 20$ in Saskatchewan, and $\$ 25$ in Alberta. In Newfoundland, the minimum is $\$ 65$ a month and in Ontario, $\$ 100$ a month. If, however, average earnings are less than these minimum amounts, the amount of the earnings is paid in all provinces except Saskatchewan. For partial disablement, compensation in most provinces is a percentage of the difference in earnings before and after the accident, the percentage rate being the same as in total disablement. In New Brunswick and Alberta, the amount is determined by the Board according to the diminution of earning capacity. In all provinces except British Columbia, if the impairment of earning capacity is 10 p.c. or less, a lump sum may be given.

The average earnings on which compensation is based are limited to $\$ 4,000$ a year in Ontario, Saskatchewan and British Columbia, $\$ 3,000$ in Newfoundland, Nova Scotia, New Brunswick, Quebec, Manitoba and Alberta, and \$2,500 in Prince Edward Island. If the workman's earnings at the time of an accident are not considered a proper basis for compensation, the Board may use as a basis the average earnings of another person in the same grade of work. Compensation paid workmen under 21 years of age may be raised later, if it appears that their earning power would have increased had the injury not occurred.

Table 32 gives the number of industrial accidents reported by each of the provinces and the amount of compensation paid by the Workmen's Compensation Boards.

## 32.-Industrial Accidents Reported and Compensation Paid by Workmen's Compensation Boards, ${ }^{1}$ 1950-53

${ }^{1}$ Owing to variations in legislation and administrative methods of the various provincial Workmen's Compensation Boards, the information contained in this table is not exactly comparable as between provinces; it is however comparable from year to year for any one province. ${ }^{2}$ Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for compensation; the period varies in the severa! provinces. operations on Apr. 1, 1951.

## Section 8.-Workers Affected by Collective Agreements

Statistics on the number of workers affected by collective agreements in Canada are compiled by the Department of Labour. Table $\mathbf{3 3}$ gives figures for the principal industrial groups. The second column shows the number of workers affected by agreements extended under the Quebec Collective Agreement Act (see Sect. 1, ss. 2, p. 765). Any duplication of the numbers of workers covered by agreements under this Act and by other agreements is eliminated in the third column. A more detailed table and studies of agreements in certain industries are available from the Department of Labour, Ottawa.
33.-Workers Affected by Collective Agreements, by Industry, 1952

| Industrial Group | Agreements (other than those in Column 2) | Agreements <br> Extended under Collective Agreement Act, Quebec | Total ${ }^{1}$ |

## Section 9.-Organized Labour in Canada*

At the beginning of 1954, there were 1,267,911 labour union members in Canada, an increase of 4 p.c. over the figure for the previous year. The majority of the unions in Canada are affiliated with a central labour congress and their membership is listed in Table 36. In addition, each of the three largest congresses is discussed below.

Trades and Labour Congress of Canada.--The Trades and Labour Congress of Canada is the oldest of the central labour organizations in Canada. After the disbanding of the Canadian Labour Union, which had drawn together local unions

[^262]in Ontario from 1873 to 1877, inclusive, there was no central organization until 1883, when the Trades and Labour Council of Toronto called a conference of local unions and plans were made to establish a national organization which was formally set up in 1886.

Affiliated with the Trades and Labour Congress of Canada at the present time are "international" trade unions, almost all of which are also affiliated with the American Federation of Labour, a number of Canadian or "national" unions and a number of directly chartered labour unions.

Canadian Congress of Labour.-This Congress was organized in September 1940, when the All-Canadian Congress of Labour, formed in 1927, amended its constitution to permit the affiliation with the Congress of the Canadian branches of those international unions which, in the United States, are affiliated with the Congress of Industrial Organizations. The Canadian Congress includes among its members a number of unions to which it has granted charters.

Canadian and Catholic Confederation of Labour.-National Catholic unions in Canada date from 1901. In 1921, these local Catholic syndicates, grouped as far as possible into federations according to industry, formed a central organization, the Canadian and Catholic Confederation of Labour.

## Section 10.-Strikes and Lockouts*

For the last eight years the demand for increased wages has been the central issue in the majority of work stoppages. In 1953, this issue, often linked with questions involving union security and changes in working conditions, was responsible for 56 p.c. of the stoppages, involving 61 p.c. of the workers and causing 95 p.c. of the total time loss as compared with an average for the seven-year period, 1946-52, of 58 p.c. of the stoppages, 71 p.c. of the workers, and 87 p.c. of the time loss. Of the other disputes, those relating to working conditions brought about 12 p.c. of the stoppages; union questions, other than for increased wages, 15 p.c.; and discharge of workers, suspensions and employment of particular persons, other than in connection with union questions, 15 p.c. of the total. Sympathy strikes have been few in number during the last five years and in 1953 there was only one small stoppage from this cause.

Settlement of 75 of the 174 stoppages in 1953 was brought about by direct negotiation; provincial conciliation effected settlement in 17 stoppages, civic mediation in three and federal conciliation in two. Ten disputes were settled by arbitration; three were referred to labour boards; 33 were settled by return of workers and replacement, replacement being a factor in 12 disputes; and 13 were indefinite in result.

[^263]37.-Summary Statistics of Strikes and Lockouts, 1944-53

## Section 11.-Canada and the International Labour Organization

The Department of Labour is the officially designated liaison agency between the Government of Canada and the International Labour Organization. The ILO was established in 1919, in association with the League of Nations under the Treaties of Peace, with the object of improving labour and social conditions throughout the world by international agreement and legislative action. Under an agreement approved by the General Conference of the International Labour Organization at its 29th Session held at Montreal, Que., Oct. 2, 1946, and by the United Nations General Assembly on Dec. 14, 1946, the Organization became a specialized agency of the United Nations although retaining its autonomy.

The ILO is an association of 69 Member States, financed by their governments, and democratically controlled by representatives of those governments and of their organized employers and workers. It is comprised of three main organs: (1) the International Labour Conference; (2) the International Labour Office, and (3) the Governing Body. Since World War II the ILO has extended its field of activities by the establishment of eight tripartite industrial committees to deal with problems of important world industries, by the holding of regional and special technical conferences, and by the expanded program of technical assistance to aid the development of backward countries in such fields as co-operatives, vocational training, and employment services.

The International Labour Conference meets annually and is a world parliament for consideration of labour and social problems and it is attended by four delegates from each Member State (two representing the Government, one representing the
employers and one representing the workers) accompanied by technical advisers. The Conference formulates internationsl standards concerning working and living conditions in the form of Conventions and Recommendations. A Convention, after adoption, must be considered by the competent authorities in each Member State with a view to possible ratification; however, each Member State decides whether or not to ratify any Convention, and only by ratification does it assume the obligation to bring its legislation in that field up to the standard set by the Convention. A Recommendation is less formal: it contains general principles for the guidance of governments in drafting legislation or in issuing administrative orders, and is not subject to ratification by the Member States.

The International Labour Office acts as the permanent secretariat of the ILO, and as a world research and information centre and publishing house on all subjects concerned with industry and labour. In the operational field it assists Member States by furnishing experts on manpower training and technical assistance. The ILO maintains branch offices in all parts of the world, including the Canada Branch, 95 Rideau Street, Ottawa.

The Governing Body of the ILO, by a constitutional amendment adopted in June 1953, consists of 40 members: 20 government representatives, 10 employers' representatives and 10 workers' representatives. Of the government seats, each of the 10 Member States of chief industrial importance (of which Canada is one) holds a permanent place, and the other 10 government representatives are elected triennially by the Conference. The worker and employer members are elected every three years at the Conference, by their groups. The Governing Body meets three times a year, and has general supervision over the work of the International Labour Office and the various Conferences and Committees, in addition to framing the budget and approving the agendas of the various Conferences. Canada's representative on the Governing Body is Mr. Arthur Brown, Deputy Minister of Labour for Canada.

There have been 36 Sessions of the International Labour Conference, at which 103 Conventions and 97 Recommendations have been adopted, covering a wide range of subjects such as industrial relations, freedom of association, hours of work, weekly rest, holidays with pay, minimum wages, night work of women and young persons, industrial health and safety, workmen's compensation, conditions of work for seamen and dockers, unemployment and health insurance, protection of migrant workers, equal remuneration, and many other aspects of industrial and social problems. By March 1954, the ratifications of Conventions by Member States totalled about 1,450.

Canada has ratified 18 ILO Conventions, of which 12 concern maritime and dock labour. In Canada, the provincial legislatures are the competent legislative authorities with jurisdiction over the subject covered by most of the ILO Conventions and Recommendations. The Department of Labour, as the official liaison agency with the International Labour Organization, is responsible for forwarding to the ILO Office annual reports on ratified Conventions as well as periodical reports on many other industrial and social matters. Canada is represented at most of the ILO annual and special meetings, and accounts of the discussions and the decisions are regularly published in the Labour Gazette. The Department also keeps provincial governments and employer and worker organizations informed of ILO activities. Thus, Canada continues to fulfil its obligations as one of the leading industrial Member States of the International Labour Organization.

Canada, which is over 4,000 miles in length from east to west, has its main topographic barriers running in a north-south direction. It has a relatively small population of $15,195,000$ (June 1, 1954 estimate) unevenly distributed along a narrow southern strip of its vast area. These physiographic and population characteristics present unusual difficulties from the standpoint of transportation and communication. Different parts of the country are shut off from each other by water barriers such as Cabot Strait and the Strait of Belle Isle separating the Island of Newfoundland from the mainland; by areas of rough, rocky forest terrain such as the region lying between New Brunswick and Quebec and the areas north of Lakes Huron and Superior dividing the industrial region of Ontario and Quebec from the agricultural areas of the Prairie Provinces; and by the mountain barriers between the prairies and the Pacific Coast. To such a country, with a population so dispersed and producing for export as well as for consumption in distant areas of the country itself, efficient and economical transportation systems are necessities of existence.

The value of each of the principal agencies of transportation is appraised in Parts II, III, IV, V and VI of this Chapter. Government control over all such transportation is covered in Part I.

## PART I.-GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION

The Federal Government's control and regulation of transportation reflects to a considerable extent conditions that date back to the period when the railways possessed a virtual monopoly of transportation within the country. Although federal regulation was a direct outcome of such particular matters as the prevention of unjust discrimination in rates and charges resulting from monopoly conditions in the industry and the safety of transportation facilities and operating practices, yet the railways have been so involved in the public interest that their regulation has been extended to become the most comprehensive of any industry in Canada.

In the meantime, conditions in the transportation industry have been drastically altered by the increasing competition arising from the advance of highway transportation. Unlike the competition that existed between railways in early stages of their development, to-day's competition shows little indication of starting a trend toward consolidation and a return to semi-monopolistic conditions within the industry. Because so many shippers now may provide their own transportation, it is evident that a large part of the present competition between common carriers will become a permanent feature of the transportation industry.

It is not surprising that regulations, which under monopoly conditions were not onerous to the railways or were purely nominal in their effect, should be alleged to have become increasingly restrictive and hampering under highly competitive conditions. Regulatory authorities are, therefore, faced with the problem of piecemeal revision of their regulations-retaining those where railway monopoly or nearmonopoly conditions still make them necessary in the public interest, and relaxing those where competition can be relied on to protect the public in order to enable the railways to meet this competition more effectively. The emphasis has shifted from the regulation of monopoly to the co-ordination of several competing modes of transport.

In 1936, the Federal Department of Railways and Canals became the Department of Transport, unifying in one Department the control and supervision of railways, canals, harbours, marine and shipping, civil aviation, radio and meteorology.

Road and highway development is mainly under provincial or municipal control or supervision. The question of jurisdiction over interprovincial and international highway transport was answered by the Judgment of the Judicial Committee of the Privy Council dated Feb. 22, 1954, which held that this jurisdiction rested with the Federal Government.

A Conference between federal and provincial representatives was held in Ottawa in April 1954 to consider the means of implementing this decision. On June 26, 1954, the Motor Vehicle Transport Act was passed by Parliament giving to all provinces, at their option, the authority to apply to interprovincial and international highway transport the same regulations respecting certificates of public convenience and necessity and rates as they apply to undertakings operating entirely within the province. This Act has since been proclaimed for the provinces of Alberta, British Columbia, Manitoba, Nova Scotia, Ontario, Prince Edward Island and Saskatchewan.

Under the Transport Act, 1938, the Board of Railway Commissioners became the Board of Transport Commissioners and, in addition to its authority over railways, it was given power to regulate certain aspects of water transportation on the Great Lakes, the Mackenzie River and the Yukon River.

The Royal Commission on Transportation, in its Report to Parliament in 1951, recommended a further step in the co-ordination of transport agencies by the creating of a single Board to take over the functions now discharged by the Board of Transport Commissioners, the Air Transport Board and the Canadian Maritime Commission. No action has been taken by Parliament on this recommendation.

The Board of Transport Commissioners for Canada.-An explanation of the situation that led to the introduction of railway regulation by Commission in Canada, as well as other information relating to the organization, procedure, judgments, etc., of the Board of Transport Commissioners is given in the 1940 Year Book, pp. 633-635.

The powers of the Board with regard to rail transport cover almost all aspects of railway activities including corporate organization, location, construction and operation of lines, rates and charges. The railways under the Board's jurisdiction include those operating interprovincially, the Canadian portions of United States lines and those incorporated under federal charter. In addition, the Board assumes jurisdiction over any railway which, by Act of Parliament, has been declared to be for the general advantage of Canada. In practice, this means that apart from provincially owned railways in Ontario and British Columbia, all railways in Canada are under the Board's authority.

Once constituted, the Board became the logical body to be entrusted with the regulation of other transportation and communication agencies. The list has grown steadily and now includes express companies, telegraph companies, telephone companies other than those provincially or municipally controlled, international bridges and tunnels, inland shipping, and the recent addition of pipelines (1949). Regulation of traffic of inland-water carriers on the Great Lakes-St. Lawrence system is limited to package freight and thus excludes the important bulk traffic in grain, coal and ore.

The most recent review of transportation regulation was that undertaken by the Royal Commission on Transportation, under the chairmanship of the Honourable W. F. A. Turgeon, which held extensive hearings in 1949-50 and issued its Report in 1951. (See 1952-53 Year Book, p. 741.) Certain of its recommendations have been incorporated into amendments to the Railway Act and other legislation is either in effect or being put into effect. These include: the equalization of freight rates between all regions of Canada, affecting chiefly the class and commodity milage rates; the requirement that, when transcontinental competitive rates are published, the corresponding rates to intermediate points shall not be more than one-third greater than the former; the payment by the Government of Canada of the cost of maintaining the so-called 'bridge' lines of the transcontinental systems in Ontario between Sudbury, Capreol and Cochrane on the one hand and Port Arthur and Armstrong on the other, up to the amount of $\$ 7,000,000$ annually, the amounts so received by the railways to be offset by certain reductions in rates between Eastern and Western Canada; the requirement of a uniform classification of accounts to be prescribed by the Board of Transport Commissioners for the Canadian Pacific

Railway and the Canadian National Railways; and the simplification of the capital structure of the Canadian National Railways involving the replacement of Govern-ment-held debt by preferred stock.

Certain other recommendations of the Commission have been put into effect or are being studied with a view to putting them into effect at an early date without any legislative amendments. These include the establishment of a uniform carload mixing rule and a general revision of the freight classification.

The Air Transport Board.-A summary of the general functions of the Air Transport Board is given in the 1952-53 Year Book, pp. 740-741, and later developments in the 1954 edition, pp. 783-781. Since its establishment in 1944, the administrative organization of the Board has been changed to meet an increasing variety of problems in the domestic and international aviation fields, but the Board itself continues to consist of three members, including the chairman. The Executive Director's Branch of the staff is divided into Legal, International Relations, and Traffic Divisions and the Secretary's Branch into Administrative, Licensing, and Inspection and Enforcement Divisions.

The Board is currently devoting special attention to problems created by new circumstances and changed conditions. Until recently the same regulations governed operations by both rotating-wing aircraft and fixed-wing aircraft but substantial regulatory amendments have now been made to facilitate commercial use of helicopters in work in which the special characteristics of this type of aircraft may be best employed. Helicopter operations are kept under constant review by an economic and technical committee set up for the purpose.

The Board has also under consideration the publication of a uniform charter tariff and the formulation of basic principles for the guidance of operators in the establishment of their rates and fares. On both proposals, the Board has invited the comments of the air carriers concerned.

In the field of international aviation, the Board has continued to take an active part in the work of the International Civil Aviation Organization (see p. 897) and has participated in discussions and negotiations with several countries concerning proposed new bilateral air-transport agreements and amendments to existing agreements.

Canadian Maritime Commission.-By authority of an Act (R.S.C. 1952, c. 38) passed in the 1947 session of Parliament, the Canadian Maritime Commission was constituted for the purpose of examining into, keeping records of, and advising the Minister of Transport on matters pertaining to Canadian shipping and shipbuilding services.

In addition to these duties, the Act also empowers the Commission to:-
(1) exercise and perform on behalf of the Minister such powers, duties and functions of the Minister under the Canada Shipping Act, 1934, as the Minister may require:
(2) administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament; and
(3) exercise or perform any other powers, duties or functions conferred on or required to be performed by the Commission by or pursuant to any other Act or order of the Governor in Council.

## PART II.-RAILWAYS*

The treatment of rail transportation is divided into three Sections dealing respectively, with steam railways, electric railways and express companies.

## Section 1.-Steam Railways

The steam railway is the most important transportation agency from the standpoint of investment and of traffic handled and the statistics are, therefore, more complete for this form of transportation than for any other.

## Subsection 1.-Milage and Equipment

Construction was begun in 1835 on the first steam railway in Canada-the short link of $14 \frac{1}{2}$ miles between Laprairie and St. Johns, Que.-but only 66 miles of railway were in operation by 1850 . The first great period of construction was in the 1850 's when the Grand Trunk and the Great Western Railways were built as well as numerous smaller lines. The building of the Intercolonial and the Canadian Pacific Railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last period of extensive railway building from 1900 to 1917, the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed. The consolidation and organization of the Canadian National Railway System is covered at pp. 840-847.

[^265]
## 1.-Steam-Railway Milage, 1900-52

Note.-Figures of total milage of single track for 1835-1909 are given in the 1941 Year Book, p. 546, and for 1911-14 in the 1954 edition, p. 786.

|  |  |  |  |  |  | Totals, Single. . | 42,441 | 42,978 | 42,956 | 42,953 |
| 1921 | 39, 191 | 1935.. | 42,916 | 1949... | 42,978 | Second.......... | 2,499 | 2,494 | 2,487 | 2,488 |
| 1922 | 39,358 | 1936... | 42,552 | 1950... | 42,979 | Industrial. . . . . . | 1,551 | 1,925 | 2,068 | 2,130 |
| 1923. | 39,654 | 1937. | 42,727 | 1951 | 42,956 | Yard and sidings | 10,210 | 10,437 | 10,639 | 10,720 |
| 192 |  |  |  |  |  | Grand Totals.. | 56,701 | 57,834 | 58,150 | 58,291 |

[^266][^267]Total milage of single track line showed little increase during the war and postwar years because of the abandonment of certain unprofitable lines. However, three important lines have recently been completed-the 43 -mile Terrace-Kitimat line in British Columbia, the 144 -mile Sherridon-Lynn Lake line in Manitoba, and the 360 -mile Quebec, North Shore and Labrador Railway-two others, one in northern Quebec and the other in northern Ontario, are in the planning stage (see also pp. 846-847). Yard and siding track and extensions serving industrial plants have been added to considerably in recent years. Of the 42,953 miles of single track operated in 1952, over 50 p.c. were Canadian National Railway lines.

Rolling-Stock.-The figures in Table 2 may be supplemented by the statement that, between 1948 and 1952, the average capacity of box cars increased from 43,402 tons to 44.712 tons, of gondola cars from 60,581 tons to 63,324 tons, flat cars from 43,190 tons to 44,081 tons, hopper cars from 56,938 tons to 61,189 tons and of all freight cars from 44,980 tons to 46,822 tons. The average tractive power of the locomotive varied but slightly over the years 1948 to 1952 with $42,051 \mathrm{lb}$. in $1948,42,488 \mathrm{lb}$. in 1951 and $42,283 \mathrm{lb}$. in 1952 . The steady growth in diesel operation is illustrated by the advance from 148 units at the end of 1948 to 763 units at the end of 1952.
2.-Rolling-Stock of Steam Railways, as at Dec. 31, 1948-52

[^268]
## Subsection 2.-Finances

The tables in this Subsection deal with capital liability, capital investment, earnings, operating expenses, employees and their earnings and government aid to steam railways.* Financial statistics of government-owned railways are given in Subsection 4, pp. 847-951. Other statistics of revenue in relation to traffic are included in Table 8.

Capital Liability.-Table 3 shows capital liability of steam railways from 1933. The distinct changes shown in 1937 and 1952 were brought about by readjustments in the capital structure of the Canadian National Railways, described at pp. 844-846.

## 3.-Capital Liability ${ }^{1}$ of Steam Railways, 1933-52

Nore.-Figures for 1876 to 1925 are given in the 1927-28 Year Book, p. 649; those for 1926-32 in the 1947 edition, p. 662.

${ }^{1}$ Does not include Canadian railway capital owned by Canadian railways. ${ }^{2}$ See text above. ${ }^{3}$ Exclusive of approximately $\$ 40,000,000$ railway debt in Newfoundland assumed in 1949.

Capital Investment.-The increase of $\$ 143,514,740$ in capital liability during 1952, as shown in Table 3, compares with an increase in investment in road and equipment of $\$ 182,473,692$, as shown in Table 4, and reflects improvements made during the year. The investment account in recent years has been affected by write-offs for lines abandoned, transfers of property to other government departments, and other factors.

[^269]
## 4.-Capital Invested in Road and Equipment of Steam Railways, 1948-52

Note.-Expenditures for Newfoundland are included from Apr. 1, 1949.

${ }^{1}$ Details of this item are given in DBS annual report, Statistics of Steam Railways of Canada.

Earnings and Expenses.-The operating ratio, or ratio of expenditure to revenue, of Canadian railways increased from about 70 p.c. to over 95 p.c. between 1917 and 1920 and remained high thereafter, owing largely to declining revenue without corresponding reductions in expenses during the depression period. The period from 1938 to 1943 showed a sharp decline in this ratio, caused primarily by increased freight traffic occasioned by World War II and a subsequent acceleration in gross earnings. A steadily rising trend since 1943 has been attributed to higher costs for materials and labour, although a decided reversal was shown for 1950 despite the nine-day strike in late August. Expenses for 1952, accounted for mainly by wage increases, show a considerable increase over the previous year.

## 5.-Earnings and Operating Expenses of Steam Railways, 1943-52

Nots.-Gross earnings and operating expenses for 1875 to 1914 are given in the 1916-17 Year Book. p. 434; those for 1915-25 in the 1941 Year Book, p. 550; for 1926-39 in the 1942 Year Book, p. 585; and for 1940-42 in the 1951 Year Book, p. 722. Figures for Newfoundland are included from Apr. 1, 1949.

[^270]Employment and Salaries and Wages.-The number of railway employees increased in 1952 by 66 p.c. over 1939, and salaries and wages increased by about 234 p.c. Maintenance-of-equipment employees, on hourly rates, worked about 3 p.c. fewer hours and were paid 119 p.c. more wages per hour; average hours worked by transportation employees were 4 p.c. fewer than the 1939 average and their pay was increased by about 105 p.c. These figures reflect salary and wage increases received in 1950 and 1952 and the conversion to the five-day week in 1951.

## 7.-Steam Railway Employees and Salaries and Wages, 1913-52

Note.-Figures for 1912-39 are given in the 1941 Year Book, p. 551; for 1940-42 in the 1951 edition, p. 723. Figures for Newfoundland included from Apr. 1, 1949.

| Year | Employees ${ }^{1}$ | Total Salaries and Wages ${ }^{1}$ | Average Salaries Wages Wab | Ratio of <br> Opersting Salaries and Wages <br> (Chargeable to <br> Operating Expenses) to |  |

| 1952.. | 214,143 | 669,457,962 | 3,126 | 52.1 | ${ }_{57.7}$ |

${ }^{1}$ Figures include employees or wages for "outside operations" amounting to from 3 p.c. to 6 p.c. of total employees and from 2 p.c. to 5 p.c. of total salaries and wages. ${ }^{2}$ Includes approximately $\$ 10,000,000$ in wages earned in 1943.

Government Aid to Railways.- In order that the private railways of Canada might be constructed in advance of settlement as colonization roads or through sparsely settled districts where little traffic was available, it was necessary for federal and provincial governments and even for municipalities to extend some form of assistance. The form of aid was, generally, a bonus of a fixed amount per mile of railway constructed and, in the early days, grants of land were also made other than for right-of-way.

As the country developed, the objections to the land-grant method became more apparent and aid was given more frequently in the form of a cash subsidy per mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling-stock, have been guaranteed by the Federal Government. No new land grants or cash subsidies have been advanced by either the federal or provincial governments since 1939.

During the era of railway expansion before 1918, provincial governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. These bonds as they mature or are called are paid off by the Canadian National Railways, in large measure, through funds raised by the issue of new bonds with Federal Government guarantee. Bonds guaranteed by the Governments of Ontario, Manitoba, Saskatchewan, Alberta and British Columbia have been eliminated in this manner in recent years. The only provincially guaranteed railway bonds outstanding at Dec. 31, 1952, were those of the Government of New Brunswick to the amount of 8465,000 . Federal Government guarantees at the same date amounted to $\$ 511,411,723$ : this amount does not include $\$ 6,984,883$ perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National Railway System, on which interest and dividends are guaranteed by the Federal Government.

## Subsection 3.-Traffic

Table 8 shows the passenger and freight statistics for all steam railways for the years 1943-52. A separate analysis of the operations and traffic of the Canadian National Railways is given at pp. 848-851.

## 8.-Statistics of Passenger and Freight Services and Revenue Receipts, 1943-52

Norg.-Figures for 1910-42 are given in the corresponding table of previous Year Books.

| Year | Passenger |  |  |  |  |

${ }^{1}$ Includes express, baggage, mail and other cars. $\quad{ }^{2}$ Duplications included. ${ }^{3}$ Newfoundland included for this and subsequent years. $\quad$ Includes caboose miles but excludes miles made in passenger and non-revenue trains. $\quad$ Duplications eliminated; see Table 9 for details of freight carried.

Revenue freight carried by the railways in 1952 showed little change over 1951. The decreases registered by the animal, mine, forest products, and manufactures and miscellaneous groups were counterbalanced by a substantial increase in the agricultural group. The principal commodities showing an increase over 1951 were wheat, oats, sand and gravel, stone, and gasoline and petroleum products.

## 9.-Commodities Hauled as Freight on Steam Railways, 1948-52

Norg.-In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

[^271]Accidents tabulated include all those in which railway trains were involved and accidents on railway property. The classification of accidents used for DBS vital statistics treats collisions between motor-vehicles and trains as motor-vehicle accidents; provincial statistics also class them as motor-vehicle accidents and, consequently, adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor-vehicle.
11.-Persons Killed or Injured on Steam. Railways, by Specified Cause, 1950-52

## Subsection 4.-The Canadian National Railway System

In view of the interest in Canada's publicly owned railway, the Canadian National Railway System is given separate treatment in this Subsection. Its history is presented in the following special article.

## THE HISTORY OF THE CANADIAN NATIONAL RAILWAYS

The Chapter on National Transportation Policy of the Report of the Royal Commission on Transportation (1951) includes the following statement:-

Canada, more by accident than by design, became the owner of what is today one of the largest railway systems in the world. This came about because the Federal and Provincial Governments had guaranteed the obligations of the railway companies which were later to become amalgamated into the Canadian National Railways System.

The Canadian National Railways System had its origin in Canada's first railway, the $14 \frac{1}{2}$-mile Champlain and St. Lawrence which began operations in 1836 between Laprairie and St. Johns, Que. The System now embraces this pioneer railway and many other short and long rail lines built in different parts of the country at different times and for different purposes. It is the corporate successor to the Grand Trunk, the Intercolonial, the Canadian Northern, the National Transcontinental and Grand Trunk Pacific Railways.

The Grand Trunk Railway was incorporated by Act of Parliament in 1852 to develop a railway system from Portland, on the United States Atlantic seaboard, through Montreal, Toronto, Stratford and Sarnia to Detroit, with an intended eventual extension to Chicago.

While the Grand Trunk toiled towards its objective, considerable railway activity prevailed in Nova Scotia and New Brunswick, although it embraced more ambition than actual construction. However, the British North America Act of 1867 stipulated that the newly constituted Dominion Government must build a railway connecting Halifax with the St. Lawrence at or near Quebec, and that the line should be started within six months of the date of Confederation. Surveyssome already started-were pressed to conclusion and construction of the Intercolonial Railway began immediately under the supervision of Sir Sandford Fleming.

Controversy developed over the route through New Brunswick. Three possible routes were available: northerly along the Baie de Chaleur; a central route; and a southerly route along the St. John River Valley. The northern route was chosen for military and economic reasons although it was longest and most expensive to build. The Government of Nova Scotia had already built a line from Halifax to Truro and the Grand Trunk had been built as far east as Rivière-du-Loup; the northerly route would therefore connect Truro and Rivière-du-Loup. The Intercolonial Railway was officially opened for traffic between Halifax and Lévis on July 1, 1876.

In 1879, the Intercolonial bought from the Grand Trunk the line from Rivière-du-Loup to Chaudière, the Grand Trunk reserving running rights from Chaudière to Point Lévis, opposite Quebec City. In 1897, Intercolonial secured running rights
over the Grand Trunk to Montreal and thus established a through route from Halifax and Saint John to Montreal. The Prince Edward Island Railway was built by the Provincial Government between 1871 and 1873 and became the property of the Dominion Government when the Island entered Confederation on July 1, 1875. It was thenceforward operated as part of the Intercolonial Railway.

The Intercolonial Railway was not built primarily as a commercial venture but rather to serve the political and economic needs of the country. It was built at high cost for the purpose of handling, speedily and efficiently, the traffic between the Maritimes and Quebec. Though it was never a financial success, its construction did much to strengthen the bonds of Confederation and also served a most useful purpose in developing the country.

The Grand Trunk Railway, meanwhile, had completed the Montreal-Portland section of its line in 1853, and by 1860 was complete from Montreal to Sarnia. In 1860, also, the Chicago, Detroit, and Canada Grand Trunk Junction Railway, extending from Sarnia to Detroit, was acquired by the Grand Trunk on perpetual lease. In 1880, through acquisition of certain lines and construction of connecting sections, the Grand Trunk had succeeded in acquiring its own line to Chicago, giving it, at last, a through route from Portland, Maine.

In the eight years immediately following the completion of the PortlandChicago route, the Grand Trunk, by pursuing a policy of purchasing practically all competing railroads, developed a network of lines covering Ontario. These lines were sufficient to form a compact railway empire and to promise lucrative earnings until early in the twentieth century, when the great stream of migration began to flow into the prairie regions west of the Great Lakes. Traffic, both passenger and freight, began in large volume and the Grand Trunk Railway, by reason of the restricted area in which it was operating, found itself virtually shut out from all this remunerative long-haul traffic. Inevitably, the directors reached the conclusion that a line should be built through Western Canada. The route proposed to the Government extended westward from North Bay, north of Lake Superior to a system of branch lines on the prairies, with an extension to the Pacific Coast. The Government, however, maintained that if such a line were constructed, the Grand Trunk would divert the through traffic to Portland, Maine, instead of to the Canadian ports of Halifax and Saint John.

An agreement was eventually negotiated by which the Grand Trunk undertook to organize the Grand Trunk Pacific Railway Company-capital stock of which would be completely owned by the Grand Trunk Railway Company-which would build and maintain a main line of railway extending from Winnipeg to the Pacific Coast with a system of branch lines throughout the Prairie Provinces. The Dominion Government agreed to build a railway to be called the National Transcontinental Railway to extend from Moncton, N.B., to Winnipeg, Man., which, upon completion, would be leased to the Grand Trunk Pacific Railway for a number of years at an agreed percentage of the cost of construction. It was also agreed that the Grand Trunk Pacific would construct a branch line from Lake Superior, at or near Fort

William, to a junction with the National Transcontinental; this line would be called the Lake Superior Branch. The agreement was ratified by an Act of Parliament -passed in 1903 (S.C. 1903, c. 71).

Construction of both the Grand Trunk Pacific and the National Transcontinental began in 1905. Work on the Grand Trunk Pacific proceeded both from Winnipeg, Man., and Prince Rupert, B.C., the railway's main line being divided into two Sections-the Prairie and the Mountain. The railway from Winnipeg to the Pacific Coast was completed in the autumn of 1914, and the branch line, for the handling of grain traffic via the Great Lakes, was built from Sioux Lookout on the National Transcontinental to Fort William, Ont. The Grand Trunk Pacific was formally opened to traffic on Jan. 1, 1916.

The National Transcontinental began constrúction of its line to Winnipeg from Moncton, in 1905. When the line was completed in 1915 the Government looked to the Grand Trunk Pacific to carry out its contract and take over the National Transcontinental for operation. The Grand Trunk Pacific then claimed that, owing to excessive cost of constructing the new lines and its own poor financial condition, it was not in a position to fulfil its obligations. After lengthy negotiations with the Grand Trunk Railway Company of Canada and the Grand Trunk Pacific, the Dominion Government decided to take over the operation of the National Transcontinental. Thus, the National Transcontinental Railway was operated from June 1, 1915, by the same management as the Canadian Government Railways. On Nov. 20, 1918, its operation was entrusted to the Board of Directors of the Canadian Northern Railway.

The Canadian Northern Railway owed its inception to the joint enterprise of two men, Sir William Mackenzie and Sir Donald Mann, who, in 1896, secured the charter of the Lake Manitoba Railway and Canal Company for a line extending from Gladstone to Winnipegosis, both in the Province of Manitoba. The following year, they started construction of a railway running from Winnipeg southeasterly towards the head of the Great Lakes, under charter of the Manitoba and Southeastern Railway. About the same time, they also began construction of the Ontario and Rainy River Railway, westerly from Port Arthur. After 1899, these various companies became known as the Canadian Northern Railway. The Minnesota and Manitoba Railway was chartered to build a connecting link through the 'North West Angle', the northern tip of the State of Minnesota, U.S.A.

The original intention of the Canadian Northern was to build a line from the head of the Lakes to Winnipeg and to the northern section of Manitoba, and through the then North-West Territories to Prince Albert and Edmonton. In 1901, a branch line was projected from Dauphin west to Gilbert Plains and in 1903 the management revised its original intention of building the line through Prince Albert and decided to continue its Dauphin line-via Grandview-through the more central section of the North-West Territories to Edmonton. Construction work on the main line proceeded vigorously, so that by June 30, 1910, the Canadian Northern system had 3,281 miles in active operation west of Lake Superior.

After completion of its primary objective, the Canadian Northern decided to push eastward from Port Arthur, Ont., and westward from Edmonton, Alta., and to become truly a transcontinental system. Subsidiary companies were formed under whose charters construction of these extensions was commenced and carried forward until early in 1914.

The financing of the Canadian Northern had been accomplished largely through government guarantees; in the early stages by the Provincial Governments and later by the Dominion Government. As the Company grew in importance, it reached the stage where it could use its own credit for financing and thereby raised large sums of money by the issue of perpetual debenture stock and convertible income charge debentures. However, because of the outbreak of World War I and owing to the financial stringency prevailing at that time, the Canadian Northern, Grand Trunk and Grand Trunk Pacific were unable to meet previous commitments. The Dominion Government thereupon appointed a Royal Commission to investigate the general railway situation in Canada.

The Royal Commission was appointed in 1916, under the Chairmanship of A. H. Smith, then President of the New York Central Railroad, and included Sir Henry Drayton, then Chairman of the Board of Railway Commissioners, and A. C. Acworth, an authority on English railways. The Commission was called upon to report on the status of Canada's three transcontinental railways, the reorganization considered necessary, and the best method of procedure should one or more lines be acquired by the Government.

In 1917, Sir Henry Drayton and A. C. Acworth presented to Parliament the Drayton-Acworth majority report, recommending that the Government take over the Grand Trunk, Grand Trunk Pacific, and Canadian Northern Railways and operate them, together with the Intercolonial and National Transcontinental, as one system. The Commission had come to this conclusion-though it pointed out the objections to such a government-operated system-because this appeared to be the only manner in which maintenance of adequate rail transportation could be assured, dislocation of Canadian credit avoided, and Government investment protected. A. H. Smith presented a minority report dissenting from the majority report.

The Commission's majority report was accepted by the Government and, in 1917, a Bill was introduced in Parliament implementing its recommendations and providing for the taking over of the Canadian Northern by the Canadian Government. In September 1918, the Government appointed a new Board of Directors charged with the operation of the Canadian Northern Railways. In November 1918, the management of the Canadian Government Railways was entrusted to the Board of Directors of the Canadian Northern Railway Company and in December of the same year, the use of the collective title "Canadian National Railways" was authorized.

It was recognized that, because of the interrelations of the Grand Trunk with the Grand Trunk Pacific, further study would have to be made before these railways could be absorbed into the newly-founded system, and negotiations were entered into with the Grand Trunk to determine the basis upon which the Government would acquire its properties.

In February 1919, the Grand Trunk notified the Government that it would not continue to operate the Grand Trunk Pacific after Mar. 10, and the Government, in consequence, appointed the Minister of Railways as receiver for it. In 1920, its management was entrusted to the Board of Directors appointed for the Canadian Northern Railway Company which operated it under receivership until the latter was terminated on May 27, 1927, and control was vested in the Canadian National Railways.

The final agreement covering the acquisition of the property of the Grand Trunk by the Government was reached in October 1919, and a Board of Arbitration was appointed to estimate the value of the preferred and common stock of the Company. A Board of Management, under the Chairmanship of Sir Joseph Flavelle, operated the property until Jan. 30, 1923, when formal amalgamation with the Canadian National Railway Company took place with Sir Henry Thornton as Chairman and President.

This then was the Canadian National Railways-a group of insolvent railways having a burden of interest debt that can be described only as fantastic: so much so, that the management of the day was faced with an apparently hopeless prospect financially. The component lines as a group could not even meet their operating expenses. The average annual operating loss for the five years preceding consolidation was over $\$ 9,000,000$ and other income charges brought the figure close to $\$ 12,000,000$. In addition, the new system was expected to carry a staggering burden of interest charges on the debt inherited from the predecessor companies.

Large expenditures were needed to co-ordinate the various lines and bring them to the standard required for efficient operation, yet there was no way of securing the necessary funds other than by borrowing from the public or the Government and this borrowing again increased the annual interest charges. Although the Dominion Government owned all the railways comprising the CNR, the money provided by the Government took the form of a loan on which fixed interest was payable. The Government took on the role of banker-or creditor-as well as that of proprietor; the Canadian National, in turn, was required to carry a crippling load of fixed interest charges on its borrowings, though it had only a low earning capacity to meet them initially. The Government, aware of the financial problems of the Railway, introduced legislation in 1932 whereby deficits would be met through a vote by Parliament instead of money being loaned at interest to the Railway.

In 1937, steps were taken to readjust the capital structure of the Railway. The CNR Capital Revision Act of that year wrote off all loans that had been made to cover deficits and also unpaid interest on those loans. The Act also cancelled the Grand Trunk and Canadian Northern stock that had been declared worthless by the Board of Arbitration in its 1921 report. The only portion of this Act that had any direct bearing on the Railway's fundamental program of abolishing fixed interest on day-to-day operations, was the clause whereby certain moneys, in the form of loans made for the purpose of additions and betterments, were converted to equity capital, relieving the CNR from paying fixed charges on this amount; this was the principal advantage of the legislation. However, contrary to popular belief, none
of the money invested by the Government in the Company itself was written off by the 1937 Act, nor was there any reduction of the interest-bearing debt in the hands of the public.

It was on the basis of this average debt that the Canadian National Railways sought relief from fixed interest charges in its submission to the Royal Commission on Transportation in 1950. The Commission had been appointed in 1948, by Order in Council P.C. 6033, to review the capital structure of the Canadian National Railways and report on the advisability of establishing and maintaining the fixed charges of that Company on a basis comparable to other major railways in North America.

The Canadian National Railways, in its initial brief to the Commission, proposed that the portion of its bonded indebtedness held by the Government should be converted to equity capital and to provide relief in respect to the lines operated in the public interest, the publicly held bonded indebtedness of the Canadian National Railways should be assumed in whole or in part by the Government or, alternatively, relief should be provided by such other action as could best be adapted to the needs of the'situation. Later, Mr. Donald Gordon, Chairman and President of the Company, submitted that the $\$ 760,000,000$ interest-bearing obligations held by the Government should be exchanged for equity capital and reflected in the balance sheet as such. He also asked that the Government acknowledge an indebtedness to the Canadian National Railways in the amount of $\$ 300,000,000$ to bear interest at 3 p.c. until discharged. This would be set up in the accounts of the CNR as a capital fund to be drawn on from time to time to retire interest-bearing obligations in the hands of the public or for capital additions to the property. As a consideration for the acknowledgment of the indebtedness, the CNR would issue a commensurate amount of equity stock to the Government. It was also submitted that development lines be financed by not more than 60 p.c. in the form of interest-bearing securities, the balance to be supplied by the Government against the issue by the CNR of a commensurate amount of equity stock to the Government. The Board of Directors of the Canadian National Railways considered that nothing short of these measures could be deemed adequate treatment of the capital structure of the Railway. The reasons for this stand were that the Railway, burdened with excessive fixed charges, was obliged to operate without due compensation as a matter of national policy and as an instrument of national development; further, that it possessed considerable milage of marginal and nonpaying lines, and that railway tariffs of rates and tolls had not kept pace with increased costs of labour and materials.

The Royal Commission concluded that the Canadian National Railways had established a case for reduction of fixed charges and for the desirability of the Company being able to accumulate a reserve out of earnings. The Commission recommended relief from the present heavy fixed charges so that deficits would not be experienced under efficient management when normal revenues are obtained; the accumulation out of earnings, when available, of some reserve, or what has come to be known as "something to come and go on" to provide additions and betterments; the payment to the Government of the balance, after interest charges on debts to the public and provision for a reasonable reserve had been made.

The Canadian National Railways Capital Revision Act was introduced in the House of Commons on June 4, 1952. The Act changed 50 p.c. of the Company's interest-bearing debt to preferred stock on which, after settling income taxes, a dividend of 4 p.c. would be paid on earnings; furthermore, for a term of 10 years ending Dec. 31, 1961, the Railway is not obliged to pay interest on $\$ 100,000,000$ of its long-term debt. The Act made provision for the Government to buy additional preferred stock annually in amounts related to the Company's gross revenues.

What the Act did not do is also important. It did not write off any of the money invested in the CNR. Nor did it guarantee freedom from deficits: at Dec. 31, 1953, $\$ 28,000,000$ of annual interest charges remained on the Railway's books. The Act has no direct effect on the taxpayer, but goes a long way towards correcting the impression that the CNR has been losing money on its current operations and is a burden to the taxpayer.

In Canada, the geographic location of newly discovered mineral wealth has been a main factor in the close relation between the Canadian National Railways and industry. Mineral discoveries have sparked a new phase of railway building; new, because machinery-bulldozers, steam shovels and power tools-has taken the place of the hand labour employed by the railway pioneers.

The Canadian National Railways first post-war venture into the field of railway building was the 40 -mile extension from Barraute to Beattyville. This was the first step in a move to eventually tap the extensive mineral deposits and forest reserves of the northern Quebec area. Surveying of this line began in 1916 and construction was completed in 1949.

In 1952, Parliament authorized the Canadian National Railways to build a 43 -mile line to Kitimat, B.C., to serve the Aluminum Company of Canada's new smelter. The terrain over which the line was built was rugged and the engineering problems were typical of those which had been encountered in the construction of the mountain section of the transcontinental line. The largest bridge on the line is the seven-span 1,018 -foot steel bridge over the turbulent Skeena River, near Terrace. Within a few years this new line will be carrying the necessities of life to a city of 50,000 to 60,000 people. At the same time it is opening up new fields for loggers and lumbermen in virgin timber stands and, it is expected, will play an important role in the development of the whole area.

An important mineral discovery in a remote area of northern Manitoba necessitated the construction of a 144 -mile rail line from Sherridon to Lynn Lake where Sherritt-Gordon Mines Limited is now working valuable nickel and copper ore deposits. When in the early 1940 's, Sherritt-Gordon found that the copper and zinc mines at Sherridon were running out, prospectors were dispatched to comb the northern hinterlands for new ore bodies. Deposits were discovered in 1941 at Lynn Lake, near the Saskatchewan border, 500 miles northwest of Winnipeg and 120 air-miles due north of Sherridon. However, the multi-million-dollar project of moving the entire town of Sherridon to the Lynn Lake site, constructing a 7,000-h.p. power plant and the new mine buildings, was not started until after World War II.

The CNR surveyed the new line in 1951 and awarded contracts for clearing and grading the right-of-way. Equipment, needed for construction of trestles and track-laying were transported over the frozen wastes during the winter of 1951-52 and actual track laying began on Aug. 7, 1952. The first train, powered by a diesel locomotive and carrying supplies for the town and the mine, reached Lynn Lake on Nov. 7, 1953. The 144 miles of track had been laid in exactly 15 months.

At peak production, more than 77,800 tons of nickel concentrates and 12,300 tons of copper concentrates will be shipped from Lynn Lake annually-the nickel concentrates to Fort Saskatchewan, on the outskirts of Edmonton, Alta., where plentiful resources of natural gas are available for the refining process, and the copper concentrates to Noranda, Que. The line will also handle the fish traffic from Reindeer Lake and other large northern lakes, and supplies of fuel and equipment required to serve the mine and the town of Lynn Lake and the many trading posts in the territory will constitute the inbound traffic.

Plans for two other rail extensions are being put into final form. The potential mineral and forest wealth at Chibougamau in northern Quebec is to be tapped and a new railway constructed from Beattyville, the present terminal of the Barraute line, to Cache Lake, a distance of 149 miles. From Cache Lake, the line will extend six miles due north to Chibougamau. The eastern arm of the line will link the region to St. Felicien in the Lake St. John district.

Another line will open up the Manitouwadge area of northwestern Ontario where rich deposits of copper, zinc and silver have recently been found. The line will run from Hillsport on the CNR main line, 42 miles west of Hornepayne, in a southerly direction to Lake Manitouwadge, a distance of approximately 27 miles. It is expected that the Manitouwadge area will produce ore at the rate of 10,000 tons a day and involve inbound traffic estimated at 60,000 tons annually.

Although aircraft is playing an important role in the discovery of new resources in the outlying areas of Canada and in their initial development, the provision of railway services is absolutely essential to the continuing life of such projects. Only the railway can provide a permanent, dependable and economical link with the markets in the better developed areas of Canada.

Financial Statistics of the Canadian National Railway System.*Capital Structure and Debt.-Major changes resulting from the Canadian Railways Capital Revision Act, 1952, were:-
(1) $\$ 736,385,405$ of interest-bearing debt to the Federal Government, which represented 50 p.c. of the borrowed capital outstanding on Dec. 1, 1951, was exchanged for Canadian National Railway Company 4 p.c. non-cumulative preferred stock. Dividends on the 4 p.c. preferred stock must be paid to the extent that earnings are available after income tax has been paid.
(2) Outstanding loans from the Federal Government to the amount of $\$ 100,000,000$ were converted into a $3 \frac{5}{8}$ p.c. 20 -year debenture which is to mature Jan. 1, 1972. No interest is payable on this debenture for the first 10 years.
(3) Capital stock of the Canadian National Securities Trust in the amount of $\$ 378,518,135$ was transferred to the Canadian National Railway Company in exchange for a like amount of the Company's capital stock.
(4) In each of the years 1952 to 1960, inclusive, the Federal Government will purchase 4 p.c. preferred stock in amounts equal to 3 p.c. of the annual gross revenues, these funds to be used by the Railway for financing capital improvements.
As a consequence of these adjustments, the proportion of total capitalization represented by equity capital in shareholder's account was raised from 34.5 p.c. at Dec. 31,1951 , to $67 \cdot 2$ p.c. at Jan. 1, 1952, and the proportion of borrowed capital was correspondingly reduced. It will be noted that these percentages are calculated exclusive of the $\$ 1,518,890$ of capital stock of subsidiary companies which was held by the public on the above dates.

[^272]The following statement shows the effect of the Act on the capitalization of the Company:

${ }^{1}$ The capital stock of the Securities Trust, previously owned by the Government of Canada, was transferred to the Canadian National Railway Company in consideration for a like amount of capital stock of the National Company. ${ }^{2}$ The 4 p.c. preferred stock is represented by shares having a par value of one dollar each, in respect of which non-cumulative dividends shall, from time to time, be paid to the extent that earnings are available for distribution in any year. The amount issued under the adjustment authorized by the Capital Revision Act, and for which a like amount of Government of Canada loans have been cancelled, is equal to 50 p.c. of the borrowed capital at Dec. 31, $1951 .{ }^{3}$ Excludes shares of subsidiary companies owned by public amounting to $\$ 4,518,890$ for 1951 and $\$ 4,516,490$ for 1952 .

## 12.-Capital Structure of the Canadian National Railway System, as at Dec. 31, 1944-53

${ }^{1}$ Includes the Central Vermont Railway, Inc.
: Includes appropriations for insurance fund.

Milage and Traffic.-At Dec. 31, 1953, main-track milage (exclusive of electric lines) of the Canadian National Railways (including lines in the United States and Newfoundland but exclusive of the Northern Alberta Railways and Toronto Terminals Railway lines, controlled jointly by the Canadian National and the Canadian Pacific Railways) was 24,368 miles. Including the Thousand Islands Railways, 4.51 miles, controlled but operated separately, the total milage was $24,372 \cdot 5$. The grand total, including $72 \cdot 9$ miles of electric lines, was $24,445 \cdot 4$ miles.

## Section 2.-Electric Railways*

Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition Grounds. The first electric railway line in Canada, and probably the first in North America, ran between Windsor and Walkerville, Ont. and was established early in June 1886 (it is recorded that it was in active operation before June 11).

Cheap and reasonably rapid passenger conveyance is a necessity of modern urban life. In some cities of Eastern Canada, electric railways are still operated by private companies under city franchises, but in a number of cities in Ontario and Western Canada the electric railways are owned and operated by the municipalities. The number of electric railways in operation declines each year as motor- and trolley-buses replace electric trams. Of the 22 systems in service in 1952, six operated electric cars, motor-buses and trolley-buses; nine operated trolleybuses and motor-buses; three operated electric cars only; one, electric cars and motor-buses; and one, trolley-buses only. Equipment of electric railways is shown in Table 16.

[^274]16.-Equipment of Electric Railways, 1950-52

Finances.-The financial statistics of electric railways given in Table 17 have been greatly affected by variations in traffic and by changes in mode of local transportation. When electric railways have ceased operation because of decline in traffic or have substituted other types of rolling-stock, their figures have been dropped from the tabulation. Despite changing conditions, however, the gross revenue of electric railways increased each year from a low point reached in 1933; very marked increases were shown from 1940 to 1945 . The ratio of expenses to receipts rose from a low of 68 p.c. in 1943 to 97 p.c. in 1952. Many systems have changed over from private to public ownership in the past few years which accounts for much of the recorded decline in the value of stocks and the increase in funded debt.

## 17.-Financial Statistics of Electric Railways, 1943-52

Norg.-Figures for 1901-42 are given in the corresponding table of previous Year Books beginning with the 1926 edition.

| Year | Capital Liability |  |  | $\left\|\begin{array}{c}\text { Investment } \\ \text { in } \\ \text { Road and } \\ \text { Equip- } \\ \text { ment }\end{array}\right\|$ | Gross Earnings | Operating Expenses | Ratio of Expenses to Receipts | Employees | Salaries and Wages |

| 1952. | 5,535,7951 | 147,980,382 | 53,516, 177 | 260,037,852 | 104,028,691 | 101,110,712 | 97-20 | 20,268 | 67,252,025 |

[^275]Traffic.-In 1952, electric cars travelled 73,165,934 miles in passenger service, trackless trolley-buses operated by electric-railway companies travelled 34,117,476 miles and motor-buses $59,148,827$ miles. Although most of the urban centres in which transit services operate have greatly extended their populated areas in the post-war years, electric cars and buses travelled fewer passenger miles each year since 1948 and the number of fare passengers carried declined each year since 1946.

## 18.-Traffic Statistics of Electric-Railways, 1943-52

Nors.-Figures for 1901-42 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

| Year | Miles of Road |  | Electric Car and Bus Milage |  |  | Fare Passengers Carried ${ }^{1}$ | Freight Carried ${ }^{1}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1951. | - | 3,392 | 2 | 650 | 42 | 1,998 | 44 | 5,040 |
| 1952. | 2 | 3,551 | 1 | 655 | 40 | 1,046 | 43 | 5.252 |

The Toronto Underground Electric Railway.-Construction of Canada's first underground electric railway or subway commenced at Toronto in 1949 and the line was put into operation in March 1954. The route of the subway follows the general line of Yonge Street, a distance of about 4.5 miles from Front Street to Eglinton Avenue. Twelve stations are located along the line and a pedestrian tunnel links the Union Station and the Royal York Hotel with the subway. Sub-surface sections of the subway are from six to 20 feet underground. Rapidtransit cars, 104 in number, each of 62 -passenger capacity, are used. The 500 -foot platforms at all stations accommodate trains of up to eight cars in length which handle a peak load of 40,000 passengers an hour in each direction.

## Section 3.-Express Companies

Express service is an expedited freight service on passenger trains, but express companies do not own the means of performing these services; railway facilities are used by virtue of contracts with the railway companies. Express companies in Canada have always operated in close co-operation with the railways.

Goods are sent by express for quick transit, so that express rates do not generally compete with freight rates. The Dominion Express Company, in pursuance of its contract with the Canadian Pacific Railway, gave, in its first tariff, a rate of two and one-half times the maximum first-class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue and the rates paid by the shipper are subject to the approval of the Board of Transport Commissioners. All express companies are organized under powers conferred by Federal Government legislation and their business consists in the expeditious shipment of valuable live stock and such perishable commodities as fresh fish, fruit, etc., the forwarding of parcels, and the issue of money orders, travellers cheques, letters of credit and other forms of financial paper.

Express Company Operations.-Four express organizations operate in Canada - three Canadian and one American. The Canadian Pacific Express Company, formerly the Dominion Express Company, is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Canadian National and Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency, Incorporated, operates over the Canadian sections of United States railways and over the route from Skagway, Alaska, to points in Yukon Territory. No statistics are available on the volume of traffic carried by express because much of the traffic consists of parcels and small lots that would make statistical classification and measurement very difficult.

## 20.-Milages operated by, and Revenue and Expenditure of, Express Companies, 1944-53

Norg.-Figures for 1911-43 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.

## PART III.--ROAD TRANSPORTATION*

In this Part of the Chapter, highways and motor-vehicles are treated as related features of transportation. Following an introductory section, which summarizes provincial regulations regarding motor-vehicles and motor traffic, the entire subject of road transportation is dealt with under the headings of roads and highways and motor-vehicles.

## Section 1.-Provincial Motor-Vehicle and Traffic Regulations $\dagger$

Nort.-It is obviously impossible to include here the great mass of detailed regulations in force in each province and territory; only the more important general information is given. The sources of information for detailed regulations for specific provinces and territories are given at pp. 857-858.

General.-The registration of motor-vehicles and of motor-vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. Regulations that are common to all provinces and territories are summarized under the following headings:-

[^278]Operator's Licences.-The operator of a motor-vehicle must be over a specified age (usually 16 years) and must carry a licence, obtainable in most provinces only after prescribed qualification tests and is renewable annually. Special licences are required for chauffeurs and, in some jurisdictions, for those granted licences who have not reached the specified age.

Motor-Vehicle Regulations.-In general, all motor-vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two (one only in Saskatchewan and Alberta) registration plates, one on the front and one on the back of the vehicle (one only for the back in the case of trailers). A change of ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days) in any year to visitors' private vehicles registered in another Province or a State that grants reciprocal treatment. Further regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes, and stipulate that equipment include non-glare headlights, a proper rear light, a satisfactory locking device, a muffler, a windshield wiper, and a rear-vision mirror.

Traffic Regulations. - In all provinces and territories, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. Speed limits, usually of 50 miles per hour ( 60 in Alberta), are in effect; slower speeds are always required in cities, towns and villages, in passing schools and public playgrounds, at road intersections, railway crossings, or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. Motor-vehicles must not pass a tram that has stopped to take on or discharge passengers, except where safety zones are provided. Accidents resulting in personal injury or property damage must be reported to a provincial or municipal police officer and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

Penalties.-Penalties ascend in scale from small fines for minor infractions of any of the regulations to suspension of the operator's driving permit, impounding of the car, or imprisonment for serious infractions, recklessness, driving without an operator's licence, and especially for attempting to operate a motor-vehicle while intoxicated.

Safety Responsibility Legislation.-Each province of Canada has enacted legislation under this heading (sometimes referred to as Financial Responsibility Legislation). In general, the legislation provides for the automatic suspension of the driver's licence and motor-vehicle permit of a person convicted of an offence arising out of a motor-vehicle accident. The suspension remains effective until proof of financial responsibility is filed. The object of this law is to encourage safe driving by imposing more severe penalties for carelessness. The latest amendments to the safety legislation of the various provinces is given in the 1954 Year Book, pp. 805-808.

Although Safety Responsibility Legislation has not been enacted in either the Yukon Territory or the Northwest Territories, the Motor Vehicle Ordinances of the two Territories require the owner of a motor-vehicle to submit evidence of stipulated insurance coverage on such vehicle before he can obtain registration.

Unsatisfied Judgment Funds.-In recent years a new type of motor-vehicle legislation has been enacted in all provinces except Quebec and Saskatchewan. This has usually taken the form of an amendment to the motor-vehicle laws of the province and provides for the establishment of an Unsatisfied Judgment Fund, out of which are paid judgments awarded for damages arising out of motor-vehicle accidents in the province which cannot be collected in the ordinary process of law. The Fund is created by the collection annually of an Unsatisfied Judgment Fund fee from the registered owner of every motor-vehicle or from every person to whom a driver's licence is issued. This fee does not exceed $\$ 1$ per annum. A feature of this legislation which is contained in some provincial statutes provides for the payment of judgments in the so-called 'hit and run' accidents. When these occur, if neither the owner nor the driver can be identified, action may be taken against the Registrar of Motor Vehicles; any judgment secured against the Registrar is paid out of the Fund. All of these laws contain a provision limiting the amount that can be paid out of the Fund on one judgment. The limits are $\$ 5,000$ for one person, $\$ 10,000$ for two or more persons injured in one accident and $\$ 1,000$ for property damage. For 'hit and run' accidents payments are made for personal injuries or death only.

Sources of information for provincial motor-vehicle and traffic regulations:-

## Newfoundland

Administration.-Deputy Minister of Public Works, St. John's.
Legislation.-The Highway Traffic Act, 1941, as amended.

## Prince Edward Island

Administration.-The Provincial Secretary, Charlottetown.
Legislation.-The Highway Traffic Act (R.S.P.E.I. 1951, c. 73).

## Nova Scotia

Administration.-Motor Vehicle Branch, Department of Highways and Public Works, Halifax.
Legislation.-The Motor Vehicle Act (1932, c. 6) as amended, and the Motor Carrier Act (R.S.N.S. 1923, c. 78) as amended.

## New Brunswick

Administration.-Motor Vehicle Division, Provincial Tax Branch, Department of Provincial Secretary-Treasurer, Fredericton.
Legislation.-The Motor Vehicle Act (R.S.N.B. 1951, c. 73) as amended.

## Quebec

Administration.-Motor Vehicle Bureau, Provincial Revenue Offices, Finance Department, Quebec.
Legislation.-The Motor Vehicle Act (R.S.Q. 1941, c. 142) as amended.

## Ontario

Administration.-Motor Vehicles Branch, Department of Highways, Toronto.
Legislation.-The Highway Traffic Act (R.S.O. 1937, c. 288) as amended, the Public Vehicle Act, 1949, and the Public Commercial Vehicle Act, 1949.

## Manitoba

Administration.-Provincial Treasurer, Winnipeg.
Legislation.-The Highway Traffic Act (R.S.M. 1940, c. 93) as amended.

## Saskatchewan

Administration.-Treasury Department, Highway Traffic Board, Revenue Building, Regina.
Legislation.-The Vehicles Act (R.S.S. 1951, c. 85).

## Alberta

Administration.-Motor Vehicle Branch, Department of the Provincial Secretary, Edmonton, and the Highway Traffic Board, Department of Highways, Edmonton.
Legislation.-The Vehicles and Highway Traffic Act (R.S.A. 1942, c. 275) as amended, the Motor Vehicles Accident Indemnity Act (1947, c. 11) as amended, the Public Service Vehicles Act (R.S.A. 1942, c. 276), and Rules and Regulations. The Vehicles and Highway Traffic Act and Motor Vehicle Accident Indemnity Act are administered by the Motor Vehicle Branch, Department of the Provincial Secretary, and the Public Service Vehicles Act by the Highway Traffic Board, Department of Highways.

## British Columbia

Administration and Legislation.-Enforcement of the Motor Vehicle Act, the Highway Act and the Motor Carrier Act is vested in the Royal Canadian Mounted Police and the various municipal police forces, while the Highway Act is administered by the Minister of Public Works, the Motor Carrier Act by the Public Utilities Commission, and the Motor Vehicle Act by the Superintendent of Motor Vehicles, Vancouver, B.C.

## Yukon Territory

Administration.-Commissioner of the Yukon Territory, Whitehorse, Y.T. Information regarding regulations may also be obtained from the Northern Administration and Lands Branch, Department of Northern Affairs and National Resources, Ottawa, Ont.
Legislation.-The Motor Vehicle Ordinance (1952, First Session, c. 8) as amended.

## Northwest Territories

Administration.-Commissioner of the Northwest Territories. Address communications to the Director, Northern Administration and Lands Branch. Department of Northern Affairs and National Resources, Ottawa, Ont.
Legislation.-The Motor Vehicles Ordinance (1950, c. 16) as amended.

## Section 2.-Roads and Highways

The figures of Table 1 include the milages of all roads under provincial jurisdiction, those in the National Parks, local roads in the Atlantic Provinces, Ontario and British Columbia and estimates of local roads in the three Prairie Provinces.

There are great stretches of country in Newfoundland, the northern portions of Quebec, Ontario, the Prairie Provinces and British Columbia with very few people and very few roads, but the more densely populated portions are well supplied. The Northwest Highway System (the Alaska Highway), built for military purposes during 1942 and extending 1,600 miles from Fort St. John, B.C., to Fairbanks, Alaska, serves civilian as well as military traffic. It opens up a vast area of hitherto virgin territory and affords a means of all-weather land communication from Alaska through Canada to the United States. Completed in 1949, the Mackenzie Highway which runs 386 miles from Grimshaw, Alta., to Hay River, N.W.T., has been of great value in the development of the Great Slave Lake region and the entire Mackenzie River Valley.

Statistics of urban streets have been collected since 1935 from cities and principal towns; the small municipalities omitted would increase the totals very little. For 1952, the total number of miles of street reported was 15,189 , composed of 4,219 miles of bituminous pavements, 869 miles of portland cement concrete, 3,014 miles of bituminous surfaces, 3,996 miles of gravel and crushed stone and 70 miles of other surfaces; making a total of 12,168 miles of surfaced streets and 3,022 miles of earth roads. These figures for urban streets or roads are not included in Table 1.

## 1.-Milage of each Type of Road, by Province, as at Mar. 31, 1953

Norg.-The figures for Canada are the sums of the milages so reported. Urban streets are not included in the figures.

${ }^{1}$ Excludes surveyed road allowances not in use.
${ }^{2}$ Includes all road allowances.
Expenditure on Roads and Highways.-The roads and highways of Canada, except those in the Yukon and Northwest Territories, the Indian reserves and the National Parks, are under the jurisdiction of the respective provincial or municipal authorities. Expenditure was sharply curtailed during the war years 1939-45 and a considerable backlog of essential repair, improvement and expansion work
accumulated. In 1946, approximately $\$ 144,469,000$ was expended on construction, general maintenance and repair of roads and bridges and in subsequent years outlays increased steadily, the amount expended in the year ended Mar. 31, 1953, being $\$ 404,291,421$. In considering this increase, it must be remembered that the unit cost per mile of construction has also advanced tremendously.

## 2.--Construction, Maintenance and General Expenditure on Rural Roads, Bridges and Ferries, by Province, Years Ended Mar. 31, 1950-53

[^279]The Trans-Canada Highway System.-An outline of the Agreement on, and specifications and construction of, the federal-provincial Trans-Canada Highway and a map showing the proposed route in the provinces participating is given in the 1951 Year Book, pp. 631-634. The road will be a hard-surfaced two-lane highway 22 to 24 ft . in width with ample shoulder widths, bridge clearances and sight distances, low gradients and curvature, and a load-bearing capacity of nine tons for one axle. Railway grade-crossings will be eliminated wherever possible.

The 1954 estimated milage for the eight provinces originally entering into this Agreement with the Federal Government in 1950, and for Nova Scotia which entered in 1952, gave the Highway a length of 4,580 miles, divided as follows: Newfoundland, 610 miles; Prince Edward Island, 74; Nova Scotia, 310; New Brunswick, 388; Ontario, 1,412; Manitoba, 305; Saskatchewan, 414; Alberta, 292; British Columbia, 692; and the National Parks, 83.

Contractual commitments for the nine participating provinces with respect to new construction on the Highway during the period Dec. 9, 1949, to Mar. 31, 1954, amounted to $\$ 142,530,857$ of which the Federal Government's share was 50 p.c., or $\$ 71,265,428$. Federal payments to the provinces during this period for prior, interim and new construction totalled $\$ 47,328,069$. On-site labour expended on the Highway up to Mar. 31, 1954, amounted to 2,721,580 eight-hour man-days of employment; off-site employment required for the provision of necessary materials and services is estimated at 4,627,000 man-days.

The Highway through the National Parks is being constructed with Federal Government funds and the amount of $\$ 2,000,000$ was allotted by Parliament for that purpose for the year ended Mar. 31, 1955.

By June 1954, contracts for 1,483 miles of grading had been approved and the equivalent of 1,250 miles built, contracts for base-course and paving had been approved for 978 miles and the equivalent of 806 miles has been completed, and 83 bridges, over-passes and other structures having over 20 -foot spans, had been completed.

## Section 3.-Motor-Vehicles

Registration.-Automobiles were registered in Canada for the first time in 1904. Ontario was the only province to issue licences in that year. New Brunswick began registering cars in 1905; Quebec, Saskatchewan and Alberta in 1906; British Columbia in 1907; Manitoba in 1908; Nova Scotia in 1909; Prince Edward Island in 1913; and Yukon Territory in 1914.

In 1905, only 565 motor-vehicles were registered in Canada but by 1915 the number had risen to 95,284 and by the end of the next decade to 724,048 . With the exception of 1931-33, an annual increase was in evidence until 1941 when $\mathbf{1 , 5 7 2 , 7 8 4}$ motor-vehicles were registered. The number of commercial vehicles continued to increase during the war years but a considerable decline was shown in passenger cars owing to restrictions on manufacture and the rationing of tires
and gasoline. However, post-war recovery was rapid, reaching a peak in 1953 when the total of $3,430,672$ registrations included $2,513,754$ passenger cars and taxis, 867,773 trucks and miscellaneous vehicles, 8,968 buses and 40,177 motorcycles.

## 3.-Motor-Vehicles Registered, by Province, 1944-53

Note.-Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc. but not trailers or dealer licences. Figures for 1904-35 are given in the 1937 Year Book, p. 668, and those for 1936-43 in the 1948-49 edition, p. 707.

${ }^{1}$ Includes taxis. ${ }^{2}$ Includes service cars, tractors, etc. ${ }^{3}$ Included with trucks. ${ }^{4}$ Includes trolley-buses.

Apparent Consumption of Automobiles.-The apparent consumption of automobiles in Canada in any year is computed by deducting the number exported from the sum of the production and imports. Statistics regarding retail sales and the financing of motor-vehicle sales in Canada are given under Domestic Trade, Chapter XXI.

[^281]Provincial Government Revenue from Motor-Vehicles.-The taxation of motor-vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial government income. In every province, licences or permits duly issued by the provincial authorities are required for motor-vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. In 1953 the average cost per motor-vehicle for operating taxes and licences was almost $\$ 90$. Lower gasoline tax rates in the five provinces from Ontario westward brought the averages for those provinces below the national average. Present gasoline tax rates range from one cent per gallon in the Northwest Territories to 15 cents in Newfoundland, Nova Scotia and New Brunswick.

The more important sources from which provincial revenue from motorvehicles is derived are shown in Table 6. Federal Government revenue from import duties, excise and sales taxes are given in Chapter XXIV.
6.-Provincial Revenue from the Registration and Operation of Motor-Vehicles, Years Ended Mar. 31, 1953

[^282]Motor-Carriers.*-The lack of statistical information regarding commercial traffic on the highways led to the institution, in 1941, of a census of motor-carriers. The carriers are divided into two classes: passenger and freight. Each of these is subdivided into (a) carriers with annual revenue of $\$ 20,000$ or over; (b) carriers with revenue of $\$ 8,000$ to $\$ 20,000$; and (c) carriers with revenue under $\$ 8,000$. Bus companies handling urban traffic exclusively are compiled as a class. Many street-railway systems operate motor-buses but the statistics of such systems are not included here; they are included in electric-railway statistics. Licensed carriers doing highway construction work, building air-fields, etc., are excluded from the compilations. Taxi operators and urban delivery trucks are also excluded, except where their operations include inter-urban business. Carriers operating as both passenger and freight carriers are classed as passenger or freight according to the preponderance of the revenue. The passenger revenue of trucking companies and the freight revenue of bus companies are small percentages of their respective total revenue.

- Statistics are given in more detail in DBS annual report, Motor Carriers, Freight-Passenger.

Table 9 shows the freight and passengers carried by motor-carriers in 1950 and 1951. Traffic data were not available for the majority of the small operators. Many truck operators failed to report tons of freight carried and others reported only estimates so that these data are not complete. A difficulty in compiling weights is that much traffic is carried on a load or package basis and not on a weight basis. Records of passengers appear to be fairly complete, possibly because tickets are sold and accounted for, and the unit is not so complex as for freight carried.

## 9.-Traffic Carried by Motor-Carriers, 1950 and 1951

${ }^{1}$ Tonnage data are not reported by all carriers and totals are, therefore, incomplete.

Motor-Vehicle Accidents.-Motorists are required by law to report accidents but complete statistics of these accidents are not available for all provinces. The Dominion Bureau of Statistics compiles statistics on all deaths from motor-vehicle accidents and these are shown in Table 10. A direct comparison of such statistics between the provinces is of little value owing to differences in size, population, motor-vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor-vehicles has also been tabulated. These data still give no weight to differences in use of motor-vehicles, variations in climate, road conditions, tourist cars, etc., all of which are factors in accidents but it is apparent that more safety education is required in all provinces.

Data presented in Table 11 relate to traffic accidents only and consequently may not be compared with Table 10 which includes details of fatalities occurring elsewhere than on public streets or roads.

## 10.-Deaths Resulting from Motor-Vehicle Traffic and Non-traffic Accidents, by Province, 1943-52

Nors.-This table was compiled in the Health and Welfare Division, Dominion Bureau of Statistics. Figures for 1926-35 will be found in the 1941 Year Book, p. 578, and those for 1936-42 in the 1948-49 edition, p. 712.

## PART IV.-WATERWAYS*

The Canada Shipping Act.-Legislation regarding all phases of shipping is consolidated under the Canada Shipping Act (R.S.C. 1952, c. 29). Under the Act and its amendments the Parliament of Canada accepts full responsibility for the regulation of Canadian shipping.

## Section 1.--Shipping Facilities and Traffic

The developments and equipment to facilitate water traffic are classified under the headings of shipping, harbours, canals and aids to navigation. Subsection 5 gives information regarding pilotage service, steamship inspection, and personnel shipped and discharged.

## Subsection 1.-Shipping

All waterways including canals and inland lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world so that the commerce of Canada is not dependent entirely upon Canadian shipping. However, a large part of the inland and coastal traffic is carried in ships of Canadian registry.

Canadian Registry.-Under Part I of the Canada Shipping Act all ships in excess of 10 tons register tonnage are required to be registered; ships of lower tonnage may be registered voluntarily, otherwise they are required to be operated under a Vessel Licence, if powered by a motor of $10 \mathrm{~h} . \mathrm{p}$. or more. Sect. 6 of the Act restricts ownership to British subjects or bodies corporate established under and subject to the laws of some part of Her Majesty's Dominions and having their principal place of business in those Dominions. Under the British Commonwealth Merchant Shipping Agreement all Commonwealth ships are given the general designation

[^283]'British Ship'; and a ship that should be but is not registered is not entitled to the privileges accorded to British ships. Ships in the planning stage or in course of construction may be recorded before registry by a Registrar of Shipping.

## 1.-Vessels on the Canadian Shipping Registry, by Province, as at Dec. 31, 1951-53

Nors.-Figures for 1935-50 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

| Totals | 15,292 | 1,659,351 | 15,815 | 1,731,064 | 16,181 | 1,694,715 |

Shipping Traffic.-A brief description of the early development of Canadian shipping is given in the 1941 Year Book, pp. 597-598. Complete statistics, comparable with those given for the railways, showing all the freight carried by water, are not available. However, there is a record of the number and tonnage of ships calling at all ports at which there are customs collectors and of cargoes of vessels trading between Canadian and foreign ports. Each vessel visiting a customs port or outport makes a statistical return which is forwarded to the Dominion Bureau of Statistics. Coastwise cargo has been reported from Jan. 1, 1952.

Reports are not made for vessels of less than 10 registered net tons and the tonnage of tugs is the gross ton and not the net ton used for cargo vessels. Fishing vessels are not required by customs regulations to report when operating from certain ports; consequently, the data are not on the same basis as data for cargo vessels.

## 2.-Vessels Entered at Canadian Ports, ${ }^{1}$ 1944-53

Norg.-Figures for the years ended Mar. 31, 1929-35, are given in the 1941 Year Book, p. 597, and for 1936-43 in the 1948-49 edition, p. 733.

## Subsection 2.-Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for
such bulk freight as lumber, coal, oil, grain, etc. Facilities may include cold-storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil-storage tanks and, in the chief harbours, dry-dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board. Seven other harbours come under the supervision of the Department of Transport and are administered by commissions that include municipal as well as Federal Government appointees. In addition, there are about 300 public harbours that are under the direct supervision of the Department of Transport. These harbours are administered under rules and regulations approved by the Governor General in Council. Harbour masters have been appointed by the Minister of Transport for 131 of these harbours, their remuneration being made from fees levied on vessels under the terms of the Canada Shipping Act.

At most ports, in addition to the harbour facilities operated by the National Harbours Board or other operating commission, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil, sugar industries, etc. At a number of ports there are also dry docks but these are dealt with separately at p. 875 .

## 5.-Facilities of the Six Principal Harbeurs, as at Dec. 31, 1953

Note.-The facilities at these ports include those under the control of other agencies as well as those of the National Harbours Board.

National Harbours Board.-The National Harbours Board, a Crown corporation established in 1936, is charged with the administration and operation of the following properties: port facilities such as wharves and piers, transit sheds, grain elevators, cold-storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, Vancouver, and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier Bridge at Montreal. These facilities represent a capital investment of approximately $\$ 236,000,000$. A description of the origin and functions of the Board is given in the 1940 Year Book, pp. 679-681, and current operating revenue and expenditure figures may be found in Table 29, pp. 893-894 of this volume.

Harbour Traffic.-The freight movement through a large port takes a number of different forms. The overseas movement, i.e., the freight loaded on and unloaded from sea-going vessels, frequently constitutes a surprisingly small part of the total. Usually the volume coming in and going out by coasting vessels is larger. There is, as well, the in-transit movement in vessels that pass through the harbour without loading or unloading and the movement from one point to another within the
harbour, which in many ports amounts to a large volume. It is not possible to obtain statistics of the total freight handled at all the ports and harbours of Canada because many of them are small and without the staff necessary to maintain detailed records. However, the National Harbours Board prepares an annual report of the water-borne cargo loaded and unloaded at the eight ports under its control. Six of these are the principal ports of Canada and the cargo handled at each is shown in Table 6. The figures include freight carried by coasting and inland international as well as by sea-going shipping; they include all cargo loaded and unloaded whether by facilities under the jurisdiction of the Board or at private docks and terminals. Cross-harbour movements, ballast (non-revenue), bunkers, ships' stores, mail and passengers' baggage are not included.

## 6.-Principal Commodities in Water-Borne Cargo Loaded and Unloaded at each of the Six Principal Ports, 1953 with Totals for 1952

Nors.-Commodities totalling less than 50,000 tons are not listed.

Dry Docks.-The Department of Public Works of the Federal Government has constructed five dry docks, one at Kingston, Ont., two at Lauzon, Que., and two at Esquimalt, B.C. The dock at Kingston is under lease to the Kingston Shipbuilding Company. The old Esquimalt dry dock was temporarily transferred to the Department of National Defence on Nov. 1, 1934, and, when commercially required, it will be returned to the control of the Department of Public Works. Each of the large dry docks at Lauzon, Que., and Esquimalt, B.C., can be divided for use of small vessels; the larger Lauzon dock cost approximately $\$ 1,500,000$ and the larger Esquimalt dock approximately $\$ 7,000,000$.

## Subsection 3.-Canals

The canals and canalized waters of Canada, under the jurisdiction of the Department of Transport, comprise a series of waterways providing navigation for 1,875 miles inland from salt water. The canals may be divided into two classes: (1) the main or primary canals on the St. Lawrence River and the Great Lakes, including the Lachine, Soulanges, Cornwall and Williamsburg Canals on the St. Lawrence River, the Welland Ship Canal between Lakes Ontario and Erie, and the Sault Ste. Marie Canal between Lakes Huron and Superior; and (2) subsidiary or secondary canals including the St. Peters Canal between Bras d'Or Lake, Cape Breton and the Atlantic Ocean, the St. Ours and Chambly Canals on the Richelieu 92428-56 $\frac{1}{2}$

River, the St. Anne, Carillon and Grenville Canals on the Ottawa River, the Rideau Canal between the Ottawa River and Lake Ontario, and the Trent and Murray Canals between Lake Ontario and Georgian Bay.

Tonnage passing through this transportation system shows its importance as a highway of commerce: during 1953, $33,373,064$ tons of freight passed through, surpassing the peak reached in 1952 when freight traffic amounted to $31,354,139$ tons, and comparing with $24,636,462$ tons in 1938 . In 1953, 27,563 vessels passed through the canals compared with 26,322 in 1952.

In addition to freight and passenger vessels, there are thousands of pleasure craft locked through the canals. The number of passengers on vessels locking at Sault Ste. Marie was 105,366 in 1953 as compared with 97,452 in 1952.

Revenue from canals during the year ended Mar. 31, 1954, amounted to $\$ 1,594,891$, of which $\$ 1,237,648$ was derived from rentals for hydraulic and land privileges and wharfage. In the previous fiscal year, the total revenue was $\$ 1,532,210$, with rentals and wharfage amounting to $\$ 1,196,106$.

The names of the various canals along these routes, their locations and lengths, together with the numbers and dimensions of the locks thereon and other information may be found in the Department of Transport Bulletin, Canals of Canada. A special article on the "Canals of the St. Lawrence Waterway" appears in the 1954 Year Book, pp. 830-833.

Under the jurisdiction of the Federal Department of Public Works are the St. Andrews Lock (length, width and draught, respectively, 215,45 and 17 ft .) at Selkirk, Man., on the Red River, and the lock at Poupore, Que. There are also a few small isolated locks, each controlled under the authority of the province in which it is situated.

## 9.-Lengths of Channels and Dimensions of Locks under the Control of the Department of Transport, as at Dec. 31, 1953

[^286]Canal Traffic.-The canals of Canada are open to the vessels and traffic of all nations upon equal terms and thus Cnited States traffic constitutes an important part of the total carried through certain canals, especially the Welland Ship Canal. This is shown in Tables $\mathbf{1 0}$ and 12. More complete details of the traffic through canals may be found in DBS annual report, Canal Statistics.

## 10.-Traffic through Canadian Canals, by Nationality of Vessel and Origin of Freight, Navigation Seasons, 1944-53

Nors.-Figures include duplications where cargoes use two or more canals. Figures from 1886 are available in the corresponding table of previous Year Books beginning with the 1902 edition.

[^287]The figures in Tables 11 and 12 include duplications where the same freight passes through two or more canals, but in Table 13 duplications in the traffic passing through the St. Lawrence and Welland Ship Canals and the Canadian lock at Sault Ste. Marie have been eliminated wherever possible.

Grain trans-shipped at Georgian Bay, Lake Erie, or other ports above Montreal is treated as new cargo and as most of this grain has passed through either the Canadian or United States locks at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne, Ont., or other trans-shipping port.

## 13.-St. Lawrence-Great Lakes Traffic using St. Lawrence, Welland Ship and Sault Ste. Maric Canals, 1953

| Sault Ste. Marie only. | 761,729 | 1,553,277 | 2,315,006 |
| Totals, Traffic using Canadian Canals. | 4,968,850 | 21,381,414 | 26,350,264 |
| Totals, Traffic using United States Locks at Sault Ste. Marie only. | 10,586,057 | 109,070,040 | 119,656,097 |
| Totals, Canal Traffic. | 15,554,907 | 130,451,454 | 146,006,361 |

Traffic through the Sault Ste. Marie canals, Canadian and United States, has been approximately twice as heavy as the traffic through the Panama Canal during the latest ten years for which records are available and in 1940 it was almost three times as heavy. Canal traffic has varied from $20,484,000$ tons in 1932, which was less than the Panama traffic, to $128,481,596$ tons in 1953. The dominant traffic, from a tonnage aspect, is iron ore and during the past 50 years this has fluctuated from $4,901,000$ tons in 1892, an average of $50,000,000$ tons in the 1920 's, a low of $3,607,000$ tons in 1932, to a high of $98,657,591$ tons in 1953.

Soft coal has usually been second in volume to iron ore, increasing from $8,676,297$ tons during the 1949 season to $13,301,048$ tons in 1950 ; there was a decline, however, to $10,684,734$ tons in 1951, $9,901,211$ tons in 1952, and $8,609,598$ tons in 1953.

Although wheat ranks third in tonnage, its value over the past quarter-century has been greater, generally, than that of either iron ore or coal. Other grains have been about one-quarter to one-fifth of the wheat tonnage and a smaller ratio of the value.

The Panama Canal.-The Panama Canal, which was opened to commercial traffic on Aug. 15, 1914, has been a waterway of great importance to the ports of British Columbia, from which vessels leave direct for United Kingdom and other European ports throughout the year. As an alternative route to that of the transcontinental railway lines, this water passage is of vital importance in the solution of
the larger transportation problems of the Continent. During World War I, the great expectations based upon the opening of the Canal were not realized, owing to the scarcity of shipping. However, with the post-war decline in ocean freight rates, an increase in traffic between Canada's Pacific ports and Europe took place and, while the proportion carried in vessels of Canadian registry was comparatively small, the cargo tonnage, nevertheless, assumed considerable proportions. During World War II, the volume of Canadian traffic through the Canal was again reduced but has since increased considerably.

## 14.-Traffic to and from the East and West Coasts of Canada via the Panama Canal, Years Ended June 30, 1944-53

Note.-Figures for the years 1921-28 are given in the 1938 Year Book, p. 707, and those for 1929-43 in the 1948-49 edition, p. 738.

## Subsection 4.-Aids to Navigation

Included under aids to navigation are the lighthouses and the whole system of marine danger signals on the east and west coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the inland rivers and lakes, and at the entrances to harbours-a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described under Marine Services at p. 882. As a further aid to safe navigation, there are chains of radio signal and
direction-finding stations which are described under radiotelegraphy at pp. 927-928. Lists of aids to navigation, with the exception of very minor ones, are published by the Department of Transport.

## 16.-Marine Danger Signals maintained in Canada, Years Ended Mar. 31, 1948-54

Nors.-In addition to the aids to navigation listed, approximately 9,000 unlighted buoys, balises, dolphins and beacons are maintained. A table showing marine danger signals maintained during the years ended Mar. 31, 1929-40, is given in the 1941 Year Book, p. 581. Figures for 1942 will be found in the 1948-49 edition, p. 716, and for 1943-47 in the 1950 edition, p. 766.

Navigable waters have been improved greatly by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. Ice-breaking operations are carried on at the beginning and at the end of winter to prolong the season of navigation in important waters that freeze over-particularly in connection with sea-going shipping from Montreal, Que.-and to prevent flood conditions during the spring ice break-up.

St. Lawrence River Ship Channel.-This channel extends from about 40 miles below Quebec City to the foot of Lachine Canal at Montreal, a distance of 200 miles of which about 113 miles is dredged channel.

The first minor development began in 1844, on Lake St. Peter, where the limiting depth was $10 \frac{1}{2}$ feet at low water. Since 1851, progress in deepening and widening the original natural channel has been more or less continuous through a series of improvement projects in keeping with the increasing demands of trade and the safety of larger and faster vessels.

The present channel above Quebec City has a limiting depth of 35 feet (opened in 1952) at extreme low water and a minimum width of 550 feet, with additional width up to 1,500 feet at all curves and difficult points. This section comprises about 100 miles of dredged channel. Below Quebec the limiting depth of dredged channel, about 13 miles in length, is 30 feet at low tide, with a width of 1,000 feet. An average tidal range of 15 feet in this area provides ample depth for any vessel using the St. Lawrence route. The latest improvement project (1952) comprised the further widening of critical sections and the provision of additional anchorage and turning areas. Annual maintenance requirements owing to silting in this dredged channel are relatively minor above Quebec but below the city silting is more pronounced because of tidal action.

The ship channel is well defined by buoys, and the centre by range lights permitting uninterrupted day and night navigation throughout the open season from about mid-April to early December. The movements of all shipping, weather and ice conditions and obstructions to traffic throughout the St. Lawrence waterway from Fame Point, Que., to Kingston, Ont., are recorded and made available to all concerned through a series of reporting stations known as the Government Signal Service.

A fleet of ice-breaking vessels is maintained to facilitate the movement of shipping between Montreal and the sea during the opening and closing of navigation, as well as to alleviate flood conditions in low-lying areas.
17.-Seasons of Open Navigation on the St. Lawrence Ship Channel, 1935-54

Note.-Figures from 1882 are given in the corresponding table of previous Year Books, beginning with the 1934-35 edition.

${ }^{1}$ "Channel Open" means the route can be navigated although there may be floating ice in the river.

## Subsection 5.-Marine Services of the Federal Government

The services covered in this Subsection are those dealing with steamship inspection, pilotage service, sea-faring personnel, and the operations of the Canadian Government Merchant Marine Limited and the Canadian National (West Indies) Steamships Limited.

Steamship Inspection.-The Steamship Inspection Service, provided for under Part VII of the Canada Shipping Act, 1934, is responsible for the administration and carrying out of the provisions of the Act respecting the periodic inspection of power-driven ships and the issue of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers employed in loading and unloading ships; and also for the administration and carrying out of the provisions relating to the certification and employment of marine engineers. The Service has a headquarters staff at Ottawa and staffs of inspectors at the principal ocean and inland ports.

The Board of Steamship Inspection decides on questions arising out of the administration of the Act and takes care of the interests of the Federal Government in schools for marine engineers. A matter of recent concern has been the pollution of the sea by oil, and an international conference of the world's leading maritime nations, at which Canada was represented by the Chairman of the Board of Steamship Inspection, was held at London, England, in April 1954 for the purpose of
deciding on measures to deal with this nuisance. A Convention was drawn up at the Conference and signed by the Canadian delegate, subject to ratification by the Canadian Government.

${ }^{1}$ Includes North Sydney, N.S.
Pilotage.-Pilotage service functions under the provisions of Part VI of the Canada Shipping Act. Wherever a pilotage district has been created by the Governor in Council, qualified pilots are licensed by the pilotage authority of the district.

There are in Canada 42 pilotage districts in nine of which the Minister of Transport is the pilotage authority (see Table 19), while in each of the other districts the pilotage authority is a local body appointed by the Governor in Council.

In addition, there are 21 districts in the Province of Newfoundland under local pilotage authority. These districts are administered under Newfoundland statutes which, since the date of union with Canada, come under federal jurisdiction. Part VI of the Canada Shipping Act with respect to pilotage has not been proclaimed in force in Newfoundland.

Seamen Shipped and Discharged.-Seamen shipped and discharged at Canadian ports under the provisions of the Canada Shipping Act during the years ended Mar. 31, 1944-53, are shown in Table 20.

## 20.-Seamen Shipped and Discharged at Canadian Ports, Years Ended Mar. 31, 1944-53

Nore.-Figures from 1918 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

Canadian Government Merchant Marine Limited.-The circumstances under which the Canadian Government became possessed of, and responsible for, the operations of a merchant marine are explained in the 1934-35 Year Book, p. 776. A table showing the operating results from 1919 to 1936 is given in the 1937 Year Book, p. 689.

The original fleet of the Canadian Government Merchant Marine Limited consisted of 66 vessels with a total deadweight tonnage of 391,212 . The original cost of the fleet was $\$ 79,661,921$ and the capital loss thereon was $\$ 74,239,356$. The total capital recovery of $\$ 5,422,565$ was as follows: (1) the sale of 56 vessels for $\$ 2,378,018$; (2) the proceeds of insurance on four vessels lost amounting to $\$ 2,111,475$; and (3) the sale of six vessels for $\$ 933,072$ to the Canadian National (West Indies) Steamships Limited.

The Charter of the Canadian Government Merchant Marine Limited and its subsidiary companies, although inactive since 1936, was not surrendered and in 1940 the Company was reconstituted and, on behalf of the Government of Canada, operated certain ships seized in prize and either requisitioned for use by the Canadian Government or condemned by the Court. When settlement with the owners of requisitioned ships for charter hire had been completed, the organization once more became inactive.

Canadian National (West Indies) Steamships Limited.-In conformity with the Canada-West Indies Trade Agreement of 1926 (16-17 Geo. V, c. 16) the Federal Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships Limited.

At the end of 1953, the Canadian National Steamships owned and operated eight vessels in service between Canada and the British West Indies.

## 21.-Financial Statistics of Canadian National (West Indies) Steamships Limited, 1944-53

Note.-Figures for the years 1929-38 are given in the 1942 Year Book, p. 620, and for 1939-43 in the 1950 edition, p. 777.

## Subsection 6.-The St. Lawrence Seaway

The development of the St. Lawrence waterway with its ship channel and system of canals is reviewed in the 1954 Year Book at pp. 830-833. A special article on "The St. Lawrence Power Project" dealing with joint international development of power on the International Rapids section of the St. Lawrence River will be found at pp. 549-553 of this edition.

## THE ST. LAWRENCE SEAWAY*

The St. Lawrence Seaway project envisages the provision of 27 -foot navigation from Montreal, Que., to the head of the Great Lakes, a distance of over 2,000 miles. Associated with the necessary navigation works is the development of power at two, and possibly three sites on the St. Lawrence River. At the first site, in the International Rapids section, where the River marks the boundary between Canada and the United States, a total of $2,200,000 \mathrm{~h} . \mathrm{p}$. is to be developed and divided equally between the two countries. At the second site in the Soulanges section, the Beauharnois power development already harnesses over $1,300,000 \mathrm{~h} . \mathrm{p}$. and can be expanded eventually to $2,000,000 \mathrm{~h} . \mathrm{p}$. The third possible site is in the Lachine section, where a capacity of $1,200,000 \mathrm{~h} . \mathrm{p}$. could be developed. At the two latter sites the River is entirely within Canadian territory and the power developments there are at the discretion of the Province of Quebec.

Existing Navigation Facilities. - It is convenient to distinguish between the St. Lawrence Seaway project and the St. Lawrence Ship Channel. The Seaway is to 'extend above Montreal. The St. Lawrence Ship Channel (see p. 881) is a Canadian improvement to the natural channel in the section below Montreal to deep water in the Gulf of St. Lawrence. The Ship Channel provides the approach to the Seaway and when the latter is in operation will comprise an integrated waterway with it.

The present St. Lawrence canals replace an earlier 9 -foot canal system completed about 1850, after the union of Upper and Lower Canada. They were completed by 1904 and provide a 14 -foot channel from Montreal to Lake Ontario. Most of the locks are 270 ft . long and have a usable length of 256 ft ., but are limited by their depth and by the $43 \frac{2}{3}$-foot width of the Cornwall Canal.

[^288]In 1952, a new Welland Ship Canal, which follows in part the route of the earlier Welland Canal, was opened to traffic. Built by Canada as a link in the projected Seaway, the general dimensions of its locks have been taken as standard for the new canals now to be built. Seven of its eight locks are 859 ft . long, and of a usable length of 765 ft .; the eighth lock is $1,380 \mathrm{ft}$. long. They are 80 ft . wide and 30 ft . deep over the sills. The limiting depth in the channels between the locks is 25 ft ., though the channels could be deepened by dredging to provide a minimum depth throughout of up to 30 ft .

The United States, in successive programs, has deepened the navigation channels in the St. Mary's River between Lake Superior and Lake Huron, and in the St. Clair and Detroit Rivers between Lakes Huron and Erie. Available depths there are now approximately 25 ft . in downbound channels and 21 ft . in upbound channels. At Sault Ste. Marie, Canada has built one lock, and the United States has built six and retired two, so that, all-told, five are now in operation. The largest of these is the McArthur Lock completed in 1943 by the United States: it is 80 ft . wide, 800 ft . long, and has 31 ft . of water over the sills.

Projected Works.-It will be apparent that existing navigation facilities provide 25 -foot navigation throughout the Great Lakes-from the Lakehead to Prescott, Ont. The great fleet that sails these inland waters is understood to provide the cheapest transportation in the world, and the largest existing vessels are capable of carrying 20,000 - to 25,000 -ton loads. Below Montreal, the St. Lawrence Ship Channel accommodates all but the largest ocean vessels and has made that city a major world port. But between Montreal and Lake Ontario the 14-foot canals with their small locks constitute a bottleneck which will let only small vessels pass which carry little more than 2,500 tons. The breaking of this bottleneck is the essential part of the Seaway plan.

The St. Lawrence River above Montreal divides naturally into five sections and major works are required in three of them. First, in the International Rapids section, the main power works include an upper control dam near Iroquois, Ont., a main dam and power-houses near Cornwall, and channel enlargement to reduce current velocities in some stretches. Two short side canals, one at each of the dams, will carry 27 -foot navigation past these obstacles.

The second section is the Soulanges. The present canal for the Beauharnois, Que., power development incorporates a 27 -foot navigation channel along one side. The necessary locks and short access channels remain to be added.

The third section is Lachine. Here, the minimum development will be a 10 -mile canal and considerable channel enlargement. A combined development for power and navigation is possible here too but, for the present, the St. Lawrence Seaway Authority has announced a plan-for navigation only-for this section.

In the remaining two sections, Lake St. Francis and the Thousand Islands, comparatively minor channel dredging is required. Within the Great Lakes area, the Welland Ship Canal will be deepened to 27 ft ., and the achievement of the Seaway standards will require considerable dredging in the St. Clair-Detroit passage into Lake Huron and in the St. Mary's River to Lake Superior.

International Arrangements.-The St. Lawrence waterway and international power development have been the subject of lengthy discussions and negotiations between Canada and the United States from before the turn of the century. A treaty on the matter was signed in 1932 but was rejected by the United States Senate. Renewed negotiations produced the Great Lakes-St. Lawrence Basin

Agreement of 1941, but this agreement was neither approved nor rejected by Congress. After more than 11 years of uncertainty in this respect, Canada, having advanced an alternative plan for development, finally ended the agreement on Nov. 4, 1952.

Both the 1932 treaty and the 1941 agreement had provided that the governments of the two countries would construct jointly all the works-power as well as navigation-the power facilities to be turned over on completion to an appropriate agency within each country. In 1951, Canada proposed that separate agencies be authorized to construct the power works, on the understanding that Canada would thereupon complete a 27 -foot waterway from Montreal to Lake Erie. This would involve building the two canals in the International Rapids section of the River, previously planned for the United States side, as well as the other canals in the Canadian sections. It would also involve deepening the Welland Canal but not the channels linking the upper lakes, which historically have been a United States responsibility.

In December 1951, the Government of Canada concluded an agreement with the Government of Ontario concerning the international power development and, in the same month, legislation was passed providing for the creation of a Crown company, the St. Lawrence Seaway Authority, to build and operate the Canadian canals.

The power development in the International Rapids section required the approval of the International Joint Commission, under the Boundary Waters Treaty of 1909. The preparation of joint submissions from the two Federal Governments to the Commission was initiated by an exchange of notes on Jan. 11, 1952. On June 30, 1952, the two countries formally agreed to the new plan in an exchange of notes, which set out in detail the Canadian undertaking, and on the same date each made submissions to the International Joint Commission, which issued an Order of Approval on Oct. 29, 1952.

On July 15, 1953, the United States Federal Power Commission issued a licence to the Power Authority of the State of New York to develop the United States share of the power, but the licence was challenged in the United States courts. It was upheld by a unanimous decision of the Court of Appeals for the District of Columbia on Jan. 29, 1954. The decision was appealed to the United States Supreme Court which, on June 7, 1954, announced it would not entertain the appeal.

United States Participation.-The same United States Supreme Court decision opened the way for construction of the navigation works, which depend upon the existence of the power works and would be inoperative without them. Meanwhile, legislation passed in Congress, and approved by the President, in May 1954 created a St. Lawrence Seaway Development Corporation, and ordered it to construct the two United States canals in the International Rapids section of the St. Lawrence River as part of the Seaway system.

The United States proposal was discussed at meetings held in Ottawa, Ont., during July and August 1954. The arrangements of June 30, 1952, were modified, Canada agreeing to be relieved of its undertaking to build one of the canals in the International section near Cornwall and at the same time declaring its intention to proceed with the construction of a canal at Iroquois. Whether the United States will build a canal at that point on the American side is not yet determined.
6.June 7, 1954, the date of the United States Supreme Court decision in favour of the St. Lawrence Seaway and power development, promises to be a historic date for both Canada and_the United States-another link in the chain of co-operative
friendship between two great continental neighbours. As a result of this decision, both the Hydro-Electric Power Commission of Ontario and the Power Authority of the State of New York called, in August 1954, for their first tenders for the construction of power works-and construction started almost immediately. In September, first tenders were called by the St. Lawrence Seaway Authority (followed by the United States Corporation) for construction of the navigation works and work began on that aspect of the undertaking before the close of the 1954 construction season.

## Section 2.-Financial Statistics of Waterways

The principal statistics available of the cost of water-borne traffic consist of the record of public expenditure on waterways. Such expenditure may be classified as capital expenditure, or investment and expenditure for maintenance and operation. Revenue from operation is also recorded. In so far as capital expenditure for the permanent improvement of waterways is concerned, that of the Federal Government covers the major part. There has been some expenditure by municipalities on local harbour facilities, and private capital expenditure is also confined almost entirely to terminal or dockage facilities. The investment in shipping, however, with the exception of the Canadian Government Merchant Marine Limited and the Canadian National (West Indies) Steamships Limited, has come almost entirely from private sources. No figures are available regarding private investment in shipping except those appearing in the reports of the operating companies that cover only a portion of the field. There are no statistics showing the revenue of ship operators from passenger and freight traffic.

Capital Expenditure.-The only figures available of federal capital expenditure on Canadian waterways are those compiled from the Public Accounts and the annual reports of the Departments of Transport, Public Works and Finance. However, such expenditure cannot be regarded as any indication of the present worth of the undertakings represented. The cost of building canals and other waterways and permanent works to facilitate water transportation in Canada is represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of earlier works which have been superseded, as for instance, in the first Welland Canals. To this extent such figures are an overstatement of the present value of the works in use. There is a further limitation that should be noted in regard to such figures: they do not include the cost of maintenance and improvements or the operation of these works, such charges having been made to the consolidated deficit account as annual expenditure and not to capital account. Table 22, which shows capital expenditure on canals, marine services and miscellaneous watertransport facilities to have reached the grand total of $\$ 434,809,000$, must be interpreted with the above qualifications in mind. In Table 23, the capital values of the fixed assets administered by the National Harbours Board are shown as at Dec. 31, 1952 and 1953, and are in addition to the capital expenditure of Table 22. Figures in Table 23 reflect the capital situation in regard to the national harbours of Canada far better than do those of Table 22 in the case of waterways and facilities, inasmuch as they include all buildings, machinery and durable plant improvements; they also have been subject to deductions for depreciation and the scrapping or abandonment of plant and hence more nearly approach the present value of the properties under the administration of the National Harbours Board.

Table 24 on p. 890 shows the amounts advanced by the Federal Government to the National Harbours Board for capital expenditure in 1951, 1952 and 1953.
22.-Capital Expenditure of the Federal Government on Canals, Marine Services and Miscellaneous Water-Transport Facilities, as at Mar. 31, 1952 and 1953
Nors.-Compiled from annual reports of the Department of Transport and the Public Accounts.

Waterway Expenditure and Revenue on Consolidated Fund Account.Expenditure under this heading (Tables 25 to 27) is mainly for the operation and maintenance of various facilities for water transport but, unfortunately, the line between operation and maintenance expenditure is not as finely drawn as is desirable.

In addition to the recurrent expenditure shown here, to facilitate water transportation, the Federal Government expends annually a considerable amount to cover deficits of the Canadian National (West Indies) Steamships Limited and of the National Harbours Board, for mail subsidies and steamship subventions as shown in Table 30. Operating expenditure and revenue of facilities administered by the National Harbours Board are shown separately in Table 29. Revenue in connection with waterways of the Department of Transport and the Department of Public Works is shown in Table 28.

${ }^{1}$ The annual subsidy for this Service is $\$ 15,000$ refundable in whole or in part. Full refund was made in respect of years ended Mar. 31, 1952 and 1953; the amount shown for 1954 is a balance subject to recapture in 1955.

## PART V.-GIVIL AIR TRANSPORTATION*

## Section 1.-Administration and Development

Historical Developments.-Canada's aviation history dates back to 1909 when the Silver Dart piloted by Jack McCurdy (Hon. J. A. D. McCurdy, former Lieutenant-Governor of Nova Scotia) flew at Baddeck, N.S. This was the first aeroplane flight by a British subject in the British Empire.

There was little aviation development in this country until World War I. Following the War, many of Canada's wartime aviators assisted in developing air transportation services into inaccessible areas, air forestry patrols and inter-city air services. During this period, the flying clubs movement received government assistance in the training of pilots and engineers required by Canada's civil aviation industry.

World War II was a period of intensive construction of airports and aerodromes to meet the requirements for training of airmen under the British Commonwealth Air Training Plan. At the end of the War, many Service-trained Canadian airmen

[^291]turned to commercial flying and were absorbed in existing operating companies or helped to develop other flying services. Transatlantic air services were inaugurated by the Department of Transport during the War and were turned over to Trans-Canada Air Lines which had come into being by Act of Parliament in 1937 to provide for the development of a government-controlled transcontinental air service for regular scheduled operations. Canadian Pacific Air Lines was created by the amalgamation of small commercial operators for the servicing of Canada's northland. In 1949, the Canadian Pacific Air Lines was designated to provide transpacific services on behalf of Canada and began its scheduled operations from Vancouver, B.C., to Australia and New Zealand in July of that year and to Japan, China and Hong Kong in September. Service to Mexico and South America was inaugurated in 1953. Current operations of TCA and CPA are covered on pp. 897-899.

The Control of Civil Aviation.-The control of civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act, 1919, and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation, comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Controller of Civil Aviation under the supervision of the Director of Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain statutory functions with respect to the regulation of commercial air services. Part III of the Act deals with matters of government internal administration in connection with the Act.

Weather Services.-Weather services of the Meteorological Division of the Department of Transport have been broadened to meet the demands of aviation for weather information and forecasts at higher levels, over new areas and for extended routes. A Central Analysis Office has been established at Montreal, Que., and an Arctic Forecast Team at Edmonton, Alta. New machine methods are being used in processing weather data, and the network of surface and upper air observing stations has been expanded. Fifty forecast offices were in operation in 1953, linked by teletype, radio teletype and a nationwide facsimile system. Arctic weather stations and a Pacific weather station 1,000 miles to the west of Vancouver, B.C., were maintained under international agreement.

Air Industries and Transport Association.-Commercial flying schools, which are members of the Air Industries and Transport Association, numbered 38 at the end of 1953. During 1953 the number of students instructed and graduated as private pilots was 586 , the number graduated as commercial pilots was 179 , and the number of instructional hours flown was 44,735 .

Royal Canadian Flying Clubs.-At the end of 1953 there were 36 member clubs of the Royal Canadian Flying Clubs Association with a total membership of 7,730 . Instructional hours of flying totalled 77,751 in 1953 and 168 aircraft were utilized for instructional purposes. The number of students instructed and graduated as private pilots was 976 and as commercial pilots 159.

International Air Agreements.-The position of Canada in the field of aviation as well as its geographical location makes co-operation with other nations of the world engaged in international civil aviation imperative. Canada took a major part in the original discussions that led to the establishment of the International Civil Aviation Organization, generally known as ICAO, which has its headquarters at Montreal, Que. A special article on "The International Civil Aviation Organization and Canada's Participation Therein" appeared in the 1952-53 Year Book, pp. 820-827.

In recent years, Canada has been a signatory to agreements concerning civil aviation with: Australia and New Zealand; Belgium, Denmark, France, Germany, Ireland, Iceland, The Netherlands, Norway, Portugal, Sweden, South Africa, and the United Kingdom and with the United States.

## Section 2.-Air Services

Air Transport Services.-These services are grouped into two broad classesScheduled Services and Non-scheduled Services.

Scheduled services provide regular point-to-point service on scheduled advertised routes and Non-scheduled Services include:-
(1) Specific Point Services from a designated base to specific points on the basis of unit rates that may be undertaken as the traffic warrants and that are not on a time schedule;
(2) Chartered Services operated on the basis of the private chartering of an entire aircraft for a specific trip;
(3) Contract Air Services which operate on one or more specific contracts. These do not operate on a time schedule nor need the contractor take the entire space of the aircraft;
(4) Specialty Air Services concerned with large-scale forestry and utility surveys according to some specific agreement.

Trans-Canada Air Lines.-TCA, which began operations in 1938 on a 122 -mile route between Vancouver, B.C., and Seattle, Wash., had, by December 1953, grown to a route pattern of 9,916 miles in North America and 9,078 miles overseas.

Though there were no major changes in the route structure in 1953, there were increases in the frequency of flights between many of the cities served by the airline and 11 p.c. more aircraft miles were flown than in 1952. Passenger transportation rose in volume by 16 p.c. over the previous year, air express and air freight by 12 p.c. and airmail by 11 p.c. A sixth daily service was added to the transcontinental rouke, which involved the extension of North Star operations to Regina, Sask., and Lethbridge, Alta., a line previously served by DC-3's. Later, the Lethbridge service was suspended indefinitely because of runway deterioration at that point. On June 14, 1953, a summer service was inaugurated between Toronto and Muskoka as part of TCA's northern Ontario route. It was designed to serve the tourist needs of that resort area and proved highly popular on a seasonal basis. Late in the year, North Star service was extended to Cleveland, Ohio.

During the summer months, transatlantic services were increased to eight flights weekly from Montreal: Prestwiek, Scotland, was served by four flights; Paris, France, by two; and Shannon, Ireland, and Dusseldorf, Germany, by one
each. Additional flights were also operated to accommodate heavy pre-Coronation traffic. A weekly transatlantic flight originating and terminating at Toronto was inaugurated on Nov. 3, 1953, which eliminated time-consuming flight connections at Montreal for air travellers from Western Canada and Ontario. Montreal, however, remains the principal North American gateway for TCA transatlantic flying.

## 1.-Passenger, Freight and Mail Traffic of Trans-Canada Air Lines, 1944-53

[^292]Canadian Pacific Air Lines Limited.-CPA operates scheduled domestic services over a total of 10,723 route miles, and overseas services from Vancouver to Australia, New Zealand and the Orient and to Mexico and to South America, totalling 20,676 route miles. Domestic services are concentrated mainly in the western and northern regions of Canada, although two daily services are flown in the Montreal-Quebec-Toronto area. CPA has five pressurized 40-passenger Convair air-liners operating on certain domestic routes.

Overseas routes are flown exclusively by DC-6B aircraft designed to accommodate both tourist and first-class passengers. These aircraft are four-engined transports having a normal seating capacity of 64 persons but capable of carrying 82 .

Following are traffic statistics for the year 1953:-

| Item |  | Domestic | Norlh <br> Pacific | South Pacific ${ }^{1}$ |
| :---: | :---: | :---: | :---: | :---: |
| Revenue miles. | No. | 5,969,545 | 1,851,700 | 964, 855 |
| Revenue passengers. | No. | 213,856 | 12,597 | 4,678 |
| Revenue goods | lb. | 6,876,503 | 132,756 | 12,388 |
| Mail. | lb . | 2,441,854 | 78,962 | 7,280 |

${ }^{1}$ Includes Mexico and South America.
Independent Air Lines.-In addition to Trans-Canada Air Lines and Canadian Pacific Air Lines, there are four other domestic air lines licensed to operate scheduled services in Canada. These are:-

Central Northern Airways Limited, Winnipeg, Man.
Maritime Central Airways Limited, Charlottetown, P.E.I.
Queen Charlotte Airlines Limited, Vancouver, B.C.
Quebecair Incorporated, Mont Joli, Que.
Licensed domestic air carriers operating in Canada held valid operating certificates at Dec. 31, 1953, covering 38 scheduled, 88 flying training, and 480 nonscheduled and specialty commercial air services.

Non-scheduled services are operated by the majority of the independent air lines. These services provide effective access to sections of Canada that are inaccessible by other means of transportation, and act as feeders to the scheduled air lines. They also provide specialty services such as recreational flying, aerial photography and survey, aerial pest control and aerial advertising.

Commonwealth and Foreign Scheduled Commercial Air Services.-At the end of December 1953 there were 14 Commonwealth and foreign air carriers holding a total of 18 valid operating certificates covering international scheduled commercial air services operating into Canada, as follows:-

Air France (Compagnie Nationale Air France).-Operating between points in Metropolitan France and Montreal, Que., Canada, direct or via Shannon, Ireland, Keflavik, Iceland, or The Azores and Gander, N'f'ld., Canada; and New York, N.Y., and Chicago, Ill., U.S.A.

American Airlines, Inc.-Operating between Toronto, Ont., Canada, and New York, N.Y./Newark, N.J., U.S.A., direct or via Buffalo, N.Y., U.S.A.

British Commonwealth Pacific Airlines, Ltd.-The Canadian portion of the route between San Francisco, Cal., U.S.A., and Vancouver, B.C., Canada, of the transpacific service between Sydney, N.S.W., Australia, and/or Auckland, New Zealand and Vancouver, B.C., Canada.

British Overseas Airways Corp.-Operating between London, England, and Montreal, Que., Canada, and between London, England, and New York, N.Y., U.S.A., both routes via Prestwick, Scotland, or Shannon, Ireland, and Gander, N'f'ld., Canada; and between London, England, Gander, N'f'ld., Canada, and Bermuda.

Colonial Airlines, Inc.-Operating (a) between the terminals Ottawa, Ont., Canada, and Montreal, Que., Canada, and New York, N.Y., U.S.A., via Burlington, Vt., U.S.A., and (b) between the terminals, Ottawa, Ont., Canada, and Montreal, Que., Canada, and Washington, D.C., U.S.A., via Massena, N.Y., and/or Syracuse, N.Y., U.S.A.
K.L.M. Royal Dutch Airlines.-The Canadian portion of the route between the terminals Amsterdam, Netherlands, and Montreal, Que., Canada; and the Canadian portion of the route between the terminals Montreal, Que., Canada and Willemstad, Curaçao, Netherlands Antilles.

Northeast Airlines, Inc.-Operating between Montreal, Que., Canada, and Boston, Mass., U.S.A., via Burlington, Vt., Montpelier-Barre, Vt., White River Junction, Vt., (Lebanon Airport, N.H.) and Concord, N.H., U.S.A.
Northwest Airlines, Inc.-Operating between Winnipeg, Man., Canada, and Fargo, N.D., U.S.A., and between Minneapolis/St. Paul, Minn., U.S.A., Edmonton, Alta., Canada, Anchorage, Alaska, U.S.A., and beyond.
Pan American World Airways, Inc.-The Canadian portion of the air route between Seattle, Wash., and Fairbanks, Alaska, and with points of call at Juneau and Annette Island, Alaska, and Whitehorse, Y.T., Canada, between New York, N.Y., Philadelphia, Pa., Boston, Mass., U.S.A., and Gander, N'f'ld., Canada, Shannon, Ireland, London, England, and beyond.

Sabena (Société Anonyme Belge d'Exploitation de la Navigation Aérienne).-Operating between Brussels, Belgium, and New York, N.Y., U.S.A., via Shannon, Ireland, and Gander, N'f'ld., Canada.

Scandinavian Airlines System.-Between Stockholm, Sweden; Oslo, Norway; Copenhagen, Denmark; Prestwick, Scotland; Gander, N'f'ld., Canada and New York, N.Y., U.S.A.
T.W.A. (Trans-World Airlines, Inc.),-Operating between New York, N.Y., Boston Mass., U.S.A., and Gander, N'f'ld., Canada; The Azores, Shannon, Ireland; London, England; Paris, France; Lisbon, Portugal; and beyond.
United Air Lines, Inc.--Operating between Vancouver, B.C., Canada and Seattle, Wash., via Bellingham, Wash., U.S.A.
Western Air Lines, Inc.-Operating between Great Falls, Mont., U.S.A.; Cut Bank, Mont., U.S.A.; and Lethbridge and Edmonton, Alta., Canada; via Calgary and Penhold, Alta., Canada.

## Section 3.-Civil Aviation Statistics

Ground Facilities.-Early ground facilities for civil aviation consisted chiefly of municipal or flying-club airports adjacent to the larger urban centres and of numerous terminals from which commercial flying services operated, mainly into the northern mining regions. These airports formed the nucleus of the chain of airports now operated by the Department of Transport. These airports and aerodromes have been progressively improved and enlarged to meet the requirements of larger and heavier aircraft. Instrument Landing Systems (ILS) designed to facilitate safe landings under low visibility conditions have been installed at 17 airports. Twelve of Canada's civil airports are regular ports of call for international commercial air services.

## 3.-Aerodromes, by Province, as of September 1954

Norr.-An aerodrome is defined by the Air Regulations 1951 as: a defined area on land or water (including any buildings, installations and equipment) intended to be used wholly or in part for the arrival, departure, movement and servicing of aircraft. This table was compiled by the Aeronautical Charting Section, Department of Mines and Technical Surveys, and the aerodromes included are in a usable condition.

Air Traffic Control.-The primary functions of Air Traffic Control are to expedite and maintain an orderly flow of air traffic and to prevent collision between aircraft operating within controlled airspace and between aircraft and obstructions on the movement area of controlled airports. This is accomplished through provision of Airport Control Service and Area Control Service. In addition the following services are provided: (a) flight information, (b) alerting for search and rescue, (c) customs notification and (d) aircraft identification.

Airport Control is designed particularly to provide air-traffic control service in the vicinity of major civil airports where the volume and type of aircraft operations, together with weather conditions and other factors, indicate its need in the interest of safety. The service includes the control of pedestrians and vehicles on the manœuvring area of the airport. Control is effected by means of direct radio-telephone communication or visual signals to aircraft and surface vehicles on and in the vicinity of controlled airports. The control towers are located at Patricia Bay and Vancouver, B.C.; Lethbridge, Calgary and Edmonton, Alta.; Saskatoon and Regina, Sask.; Winnipeg, Man.; Windsor, London, Toronto, Toronto Island, Ottawa and North Bay, Ont.; Montreal, Cartierville, Quebec and Seven Islands, Que.; Moncton, N.B.; Sydney, N.S.; and Gander, N'f'ld. Most of these control towers are in continuous operation, but a few provide only 16 -hour daily service.

Area Control is designed particularly to provide air-traffic control service to aircrait operating within controlled airspace during weather conditions which prevent a pilot from seeing other aircraft or obstructions and necessitate his reliance on instruments to conduct the flight.

This service is provided by area control centres at Vancouver, B.C.; Edmonton, Alta.; Winnipeg, Man.; Toronto, Ont.; Montreal, Que.; Moncton, N.B.; and Gander, N'f'ld. Each of these centres is connected to the control towers, radio range stations and operations offices within its control area by means of an extensive system of local and longline interphone or radio circuits and through the radio communication facilities available at these offices to all aircraft requiring area control service. Each area control centre is similarly connected with the adjacent centres, including centres in the United States, for the purpose of co-ordinating the control of aircraft operating through more than one control area. This communications system permits each centre to maintain a continuous detailed record of the movements of all aircraft operating in accordance with the Instrument Flight Rules, and a general record of the movements of all aircraft operating in accordance with the Visual Flight Rules within its control area. In addition to providing area control service to aircraft operating within the controlled airspace over Newfoundland, the Gander area control centre provides this service within the airspace over approximately one-half of the North Atlantic Ocean. Area control service is provided for approximately 15,000 miles of airways, air routes and control channels.

Flight Information is designed to provide advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field condition reports, data concerning aids to navigation, traffic information, refuelling and transportation facilities and other related data of assistance to the pilot in planning or conducting a flight. This service is provided by all air-traffic control units but particularly by the seven area control centres-one to a region.

Alerting for Search and Rescue is designed to ensure that the appropriate organizations are notified of aircraft in need of search and rescue aid and otherwise to assist such organizations, as required. Area control centres are responsible for notifying these organizations promptly of non-arrival at destination of any aircraft for which a flight plan or flight notification has been received. This requires the maintenance and constant supervision of a continuous record of active flights to ensure that non-arrival of any aircraft is detected immediately. The service is available to any pilot who files either a flight plan or a flight notification with any communications agency of the Air Services Branch of this Department or directly with one of the area control centres or control towers.

Customs Notification Service is provided to facilitate the routine notification of the appropriate customs agency by pilots who plan to cross the United States-Canada boundary. The Air Traffic Control communications system and units connected therewith forward pilot requests to notify the customs officer at the airport of destination.

Aircraft Identification Service is provided by area control centres to assist the Department of National Defence in establishing the identification of all aircraft operating within specified areas.

Air Traffic Control employs 125 airport controllers, 75 area controllers, 101 air-traffic control assistants and a headquarters staff of six-a total of 307 persons-and operates 21 airport control towers and seven area control centres. The number of controlled operations in Canada during 1953 was $1,544,980$, an increase of $17 \cdot 7$ p.c. over the preceding year. Of this total, $74 \cdot 6$ p.e. represented civil and 25.4 p.c. military operations.

Summary of Operation Statistics.-The statistics given in Table 4 show the remarkable increase in recent years in passenger freight and mail traffic.

## 4.-Summary Statistics of Civil Aviation, 1919-53

Nork.-Figures from 1921 are given in the corresponding table of previous Year Books beginning with the 1924 edition.

${ }^{1}$ Exclusive of passengers carried between foreign stations who are included in totals. ${ }^{2}$ Includes employees other than crews. ${ }^{3}$ Exclusive of charter services, figures for which are not available. 4 Exclusive of freight carried between stations which is included in totals. 5 Old type licence. - New type licence.
${ }^{7}$ New type of licence for air engineers.
Table 5 shows civil aviation figures for 1953 by type of service. A definition of scheduled and non-scheduled carriers is given on p. 897. Statistics for international carriers include traffic over Canadian territory for both Canadian and
foreign operators; a small traffic across Canadian territory and between foreign stations is also included. Statistics for Canadian carriers operating international routes are included both as "international" and "Canadian" but duplications are excluded from the totals.

## PART VI.-OIL AND GAS PIPELINES

A special article covering the history and development of pipeline construction in Canada appears in the 1954 Canada Year Book, pp. 861-869. The information contained therein is brought up to the end of 1953 in the following Section.

## Section 1.-Pipeline Construction, 1953*

The Trans Mountain pipeline (Edmonton, Alta., to Vancouver, B.C.), construction on which was started in 1952, was completed in October 1953 at a total cost of $\$ 93,000,000$. The line is 24 inches in diameter and 718 miles in length and has three pumping stations. Though its capacity is $120,000 \mathrm{bbl}$. of oil a day, market competition on the Pacific Coast was such that the through-put for 1953 did not exceed $35,000 \mathrm{bbl}$. This flow will increase as refineries are enlarged and new ones are built in the Vancouver district and in adjoining areas of the United States.

A further extension to the Interprovincial pipeline, built in 1950 from Edmonton, Alta., to Superior, Wis., at the head of the Great Lakes, was constructed in 1953 (by the Lakehead Pipeline Company) at a cost of $\$ 72,000,000$. The extension from Superior follows a route south of the Great Lakes and across Mackinac Straits at the head of Lake Michigan. It is 643 miles long and 30 inches in diameter and will ultimately have a capacity of $300,000 \mathrm{bbl}$. of oil a day. Oil from Edmonton may now be transported over this line to Sarnia, a distance of 1,765 miles, at a cost of 64 cents a barrel. In order to utilize the present capacity of the extension, it was necessary to increase the capacity of the line to Superior by the construction (by the Interprovincial Pipe Line Company) of a 135 -mile loop of 24 -inch line from Regina, Sask., to Gretna, Man. There is now storage capacity at Edmonton for $1,000,000 \mathrm{bbl}$. of crude oil and an outlet through the Interprovincial pipeline for $200,000 \mathrm{bbl}$ a day.

[^295]In addition to construction on these trunk pipelines, the system of oil-gathering lines was extended. The capacity of Texaco Exploration Company's pipeline to Edmonton from the fields on the Bonnie Glen-Pigeon Lake trend was increased to $47,000 \mathrm{bbl}$. a day, and the Imperial Pipe Line Company line from Leduc was increased to $96,000 \mathrm{bbl}$. a day. Other construction included small lines to serve the Cessford field in Alberta; the Cantuar, Fosterton and Success fields in Saskatchewan; and a 12 -mile line to tie in the Daly field to the Interprovincial line at Cromer, Man.

In Eastern Canada, the capacity of the Portland (Maine) to Montreal oil pipeline was expanded from 158,000 to $190,000 \mathrm{bbl}$ a day. The pipeline is 236 miles long, of which 70 miles are in Canada. It consists of parallel lines 12 and 18 inches in diameter. A 200 -mile, 8 -inch products line was constructed by SunCanadian Pipe Line Company from Sarnia to Toronto. Initially the line carried 17,500 bbl. a day but ultimate capacity is double that amount. This line is in addition to that of Imperial Oil Limited from Sarnia to Toronto, the capacity of which is to be increased from 39,000 to $55,000 \mathrm{bbl}$ a day. The capacity of Trans Northern Pipe Line Company's 397 -mile, 10 -inch line from Montreal to Toronto, with a spur to Ottawa, was increased to $54,000 \mathrm{bbl}$ a day by additional compression.

At the end of 1953 , there were approximately 3,700 miles of crude-oil trunk lines, gathering lines and oil-products lines in Canada, exclusive of loops. In addition there were 960 miles of lines in the United States, between Gretna, Man., and Sarnia, Ont., carrying Canadian crude oil.

Plans are under way for the building of extensive gas lines in Canada in the next few years but construction so far has been confined to local areas. The town of Grande Prairie in the Peace River area of Alberta is being supplied with gas from the Rycroft field by a pipeline about 40 miles in length. In Saskatchewan, the city of Saskatoon is being supplied with gas from the Brock field near Kindersley by a pipeline 102 miles long. In 1953, more than 4,000 domestic services were installed.

An interesting development that will ultimately affect the building of pipelines in Canada was the construction in the United States of a plastic, oil pipeline from a field in the Williston basin of Montana to a rail point 10 miles distant. The plastic used was cellulose acetate butyrate: a 20 -foot length of pipe weighs only 13 lb . compared with 153 lb . for steel of the same length and diameter. The pipeline was laid in five days.

## Section 2.-Oil Pipeline Statistics*

There were 17 oil pipelines operating in Canada at Dec. 31, 1953, nine of which were directly linked with the Interprovincial Pipe Line Company's system. The British American Alberta Pipe Line Limited, Canadian Gulf, Edmonton, and Imperial Pipe Line Companies and the Texaco Exploration Company all deliver crude oil to Interprovincial, either at Redwater, Alta., or at the Edmonton terminal. The British American Saskatchewan Pipe Line Limited and Saskatoon Pipe Line Company link the Interprovincial system to Moose Jar and Saskatoon, respectively; Anglo-Canadian Oils Limited and the Winnipeg Pipe Line Company are offshoots which supply crude oil to Brandon and Winnipeg, Man. The Trans Mountain

[^296] Statistics.
pipeline-718 miles in length from Edmonton to Vancouver-delivers western Canadian crude oil to British Columbia refineries and in future will serve other refineries in the Pacific northwest. The Valley Pipe Line Company transports crude oil and natural gasoline from Turner Valley to refineries at Hartell and Calgary, Alta. The Amurex Oil Development Company, which commenced operations in July, operates a short gathering system from the South Cessford field in Alberta to rail terminal at Cessford. Oil from Venezuela, Arabia and other countries reaches Montreal refineries from Portland, Me., U.S.A., through the lines of the Montreal Pipe Line Company. The Trans Northern Pipe Line Company, which links refineries at Montreal, Que., and Clarkson, Ont., with numerous consuming centres including Ottawa, Belleville, Kingston, Toronto and Hamilton, carries a large variety of petroleum products. The Products Pipe Line Division of Imperial Oil at Sarnia supplies London, Hamilton, and Toronto, Ont., with products of Sarnia refineries. The Sun Pipe Line Company carries crude and refined oils from the United States to that Company's distributing centre at Sarnia, Ont. The Sarnia refineries are also supplied with considerable quantities of United States crude oil by the Buckeye Pipe Line Company. In October 1953, the SunCanadian Pipe Line Company Limited opened a new line to carry refinery products from Sarnia to Toronto, Ont.

Pipeline deliveries shown in Tables 1, 2 and 3 come to non-pipeline carriers, foreign pipelines and terminals including refineries and distributing centres. Comparative statistics for years before 1950 are not available but deliveries were relatively small as the system of the Interprovincial Pipe Line Company did not go into operation until the latter part of 1950. Net gathering-system deliveries in Alberta fell sharply after the opening of the Interprovincial system because the new trunk line carried most of the oil formerly moved eastward in railway tank cars. Starting January 1953, the Imperial Pipe Line Company have reported their operations in Alberta as a gathering system only and for this reason Alberta gathering and trunk deliveries for 1953 are not strictly comparable with those for previous years.

## PART I.-GOVERNMENT CONTROL OVER AGENCIES OF COMMUNICATION*

The development and control of radio-communication in Canada from the beginning of the century is outlined in the 1945 Year Book, pp. 644-647.

The present phase of national radio broadcasting in Canada was entered upon in 1936 when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission (see p. 931). The Act gave the Corporation wide powers in the operation of the system and gave to the Minister of Transport the technical control of all broadcasting stations and the authority to make regulations for the control of any equipment liable to cause interference with radio reception.

Except those matters covered by the Canadian Broadcasting Act, radiocommunications are now regulated under the Radio Act and Regulations. In addition, all radio-communication matters are administered in accordance with the provisions of the International Telecommunication Convention and Radio Regulations annexed thereto, as well as such regional agreements as the Inter-American Telecommunications Convention and Inter-American Agreement, and the North American Regional Broadcasting Agreement.

By Order in Council, dated June 8, 1948, responsibility for telegraph and telephone services formerly operated by the Federal Department of Public Works was transferred to the Minister of Transport. The general object of these services is to furnish wire communications for outlying and sparsely settled districts where commercial companies do not enter into the field and where the population must receive adequate communication services in the public interest.

A Crown company, Canadian Overseas Telecommunications Corporation was created by Act of Parliament (Dec. 10, 1949) to acquire for public operation all external telecommunication assets in Canada, in keeping with the Commonwealth

[^299]Telegraph Agreement signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth.

Land-line telegraph and telephone tariffs and tolls charged by companies incorporated by the Federal Government are regulated by the Board of Transport Commissioners under the provisions of the Railway Act.

Tariffs and tolls charged to the public by individuals or companies for radio telephone or telegraph communications within Canada are likewise regulated by the Board of Transport Commissioners under the provisions of the Railway Act and the Regulations made under the Radio Act.

## PART II.-WIRE COMMUNICATIONS*

## Section 1.--Telegraphs

The early history of telegraphic communication in Canada is given in the 1934-35 Year Book, p. 778.

Federal Government Telegraph and Telephone Service. $\dagger$-The function of the Telegraph and Telephone Section of the Department of Transport is to furnish wire communications for outlying and sparsely settled districts where commercial companies do not enter into the field and where the population must receive adequate communication services in the public interest. These services include: telegraph and telephone services to scattered settlements along the coast of Cape Breton Island; cable services to Campobello, Grand Manan and other islands in the Bay of Fundy, to Prince Edward Island and to a number of small islands in the Gulf of St. Lawrence; cable connections with Manitoulin Island in Ontario as well as telephone lines thereon; certain lines to outlying districts in northern Saskatchewan; telegraph lines from Edmonton to the Athabasca and Peace River country in Alberta in addition to an extensive telephone system in the latter area; telegraph and telephone communications around the coast of Vancouver Island, B.C., and adjacent islands; service to fishing, lumbering and mining centres in the interior; and an overland telegraph and telephone line serving communities from Ashcroft, B.C., to Dawson, Yukon Territory.

As at Mar. 31, 1954, the Telegraph and Telephone Service comprised 6,995 miles of pole line, 24,580 miles of wire, $224 \cdot 5$ nautical miles of submarine cable, 50 radio stations and 399 offices. The number of messages handled during the year was $1,497,903$, producing a gross revenue of $\$ 1,442,792$ and a net revenue of $\$ 1,009,483$.

Telegraph Systems.-The Canadian telegraph systems are composed of lines owned by the Federal Government and by chartered railway and telegraph companies. The Canadian facilities, in proportion to population, are among the most extensive in the world and are operated under great climatic and geographical difficulties.

[^300]
## 1.-Summary Statistics of Canadian Telegraphs, 1944-53

[^301]Submarine Cables.-Four cable companies operate submarine cables landing in Canada: Cable and Wireless Limited; the Commercial Cable Company; the Western Union Telegraph Company; and the French Telegraph Cable Company. These companies operate to stations in the United Kingdom, Ireland, the United States, Bermuda, Australia, New Zealand, and St. Pierre and Miquelon Islands. The number of cables operating between connected stations and the length of cables are given in the following table.

## 2.-Cable Landings in Canada, 1953

| Company and Station | Cables | Nautical Miles |

## Section 2.-Telephones

A brief account of the early development of telephones in Canada is given in the 1934-35 Year Book, p. 781.

Telephony in Canada to-day is moving ahead at a pace matching that of national progress generally. New devices, new systems and new services are being introduced to provide more and better communications. Operator dialing of long-distance calls is an important step towards faster and more accurate continent-wide telephone service. New equipment and methods fit into a long-range program to enable operators to dial calls straight through to distant telephones in Canada or the United States without the assistance of other operators along the route.

One of the new devices playing an increasingly important role in this development is the transistor, a discovery of telephone research. This tiny and amazingly simple electronic amplifier, based on an entirely new principle, can perform efficiently many of the functions of the ordinary vacuum tube and do many other things besides. The transistor's small size, low power consumption and expected long life make it suitable for application to submarine cable, compact military electronic equipment, computers and other devices for which the vacuum tube is not as well suited. In telephony very wide applications of the transistor are in prospect to increase the speed, accuracy and economy of switching equipment.

Telephone circuits to carry the growing volume of intercity traffic and to perform special communications functions are being provided on a scale to equal the development of switching systems. Canada's first microwave radio relay system, capable of carrying many simultaneous telephone conversations as well as television programs, was opened to service early in 1953, reaching from Toronto through Ottawa to Montreal. Extensions of this system are already being engineered and constructed further to improve long-distance telephone service and to extend the scope of television network broadcasting in Canada.

Telephone Systems.-The 2,888 telephone systems operating in 1952 included the three large provincial systems in Manitoba, Saskatchewan and Alberta, and smaller governmental systems in Ontario, Quebec and New Brunswick, together with the system operated by the Federal Department of Transport and the National Parks of Canada, Department of Resources and Development (now Northern Affairs and National Resources). Also included were 23 municipal systems, the largest being operated by the Cities of Edmonton, Fort William, and Port Arthur. Of the 2,269 co-operative telephone companies, 999 were in Saskatchewan, 838 were in Alberta and 204 in Nova Scotia. The largest among the 431 stock companies operating telephone systems in 1952 were the Bell Telephone Company and the British Columbia Telephone Company. Over 64 p.c. of the total telephone investment in Canada belongs to the Bell Telephone Company, and their telephones in Quebec and Ontario constitute 59 p.c. of the total number for Canada.

Telephone Equipment.-During the period 1943-52, there was an increase of $1,660,204$ in the number of telephones in use, representing an advance from $14 \cdot 3$ to $23 \cdot 2$ telephones per 100 population.

Of the $3,352,366$ telephones in Canada in 1952, 2,240,545 or 67 p.c. were operated from automatic switchboards and the remainder from manual switchboards. Automatic switchboards have largely displaced manual switchboards in the principal cities of Canada and are rapidly displacing them in all urban centres.

## 3.-Milages of Pole Line and Wire and Number of Telephones in Use, 1943-52

Nore.-Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

| Year | Systems | Pole-LineMilage | Milage of Wire | Telephones in Use |  |  |  |  |  |

Includes telephones on rural exchange lines and urban exchange lines that have more than four parties.

The density of telephones in the different provinces is influenced by the urbanization of the population because the number of telephones used for business purposes is much greater in cities and towns than in rural areas.

## 4.-Telephones in Use, by Province, 1952

Telephone Finances and Calls Serviced.-The steady increases in capitalization, revenue and expenditure, salaries and wages and number of employees of telephone companies over the ten years 1943-52 are shown in Table 5.

## 5.-Financial Statistics of Telephones, 1943-52

Norg.-Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

${ }^{1}$ Includes wages charged to expenses and to capital. for Quebec and Ontario are included under Quebec.
${ }^{2}$ Statistics of the Bell Telephone Company ${ }^{2}$ Excludes wages and employees for rural systems.

Telephone Calls.-Table 7 is based on estimates made by systems operating almost 90 p.c. of all telephones in Canada. Actual count of calls on days of normal business was made and after adjustment for incompleted calls, holidays, Sundays, etc., the average was multiplied by 365 . Practically all the long-distance calls were those actually completed.

## 7.-Local and Long-Distance Calls and Average Calls per Telephone and per Capita, 1913-52

Nore.-Figures from 1928 will be found in the corresponding tables of previous Year Books beginning with the 1939 edition.

| Year | Local Calls | LongDistance Calls | Total Calls | Total Calls per Capita ${ }^{1}$ | Average Calls per Telephone |  |  |

${ }^{1}$ Per capita figures are based on official estimates of population given at p. 137.

## PART III.-RADIO COMMUNICATIONS

In the 1945 Year Book, pp. 644-646, an outline is given of the development of administrative control over radio-communication in Canada. See also p. 914 of this volume.

## Section 1.-Administration*

The administration and regulation of radio-communication in Canada is carried out by the Telecommunications Division of the Department of Transport. The radio activities of the Division may be summarized as follows: (1) the administration of national and international radio laws and regulations and of regional agreements, involving the issuance of radio licences, inspection of radio stations, certification of radio equipment, examination of operators, allocation and monitoring of frequencies, study of radio wave propagation, compilation and settling of international accounts for radio messages, investigation and suppression of inductive interference to radio reception; and (2) construction, maintenance and operation of radio-communication stations and radio aids to marine and air navigation.

National and international radio laws and regulations include: the Canadian Broadcasting Act, the Radio Act and Regulations made thereunder; the International Telecommunication Convention and Radio Regulations annexed thereto; the Inter-American Radiocommunications Convention; the Inter-American Arrangement Concerning Radiocommunications; the North American Regional Broadcasting Agreement; those Articles of the International Civil Aviation Convention applicable to aeronautical radio requirements; the Canada Shipping Act and Radio Regulations for Ship Stations issued thereunder, and that part of the International Convention for the Safety of Life at Sea applicable to radio requirements for ships.

[^302]Licensing and Operation.-In all branches of radio, basic control is exercised over the right to establish a station, assignment of frequencies, operator standards, operating procedure, and general regulations concerning the manner in which radio stations are used.

Under the Broadcasting Act, applications for licences to establish broadcasting stations, or for modification of existing stations, are referred to the Canadian Broadeasting Corporation for its recommendations to the Minister of Transport before being dealt with by the Department of Transport. The Canadian Broadcasting Corporation also controls the linking-up of stations that form networks and, in addition, the character of programs being broadcast. With these exceptions, the control of broadcasting stations is carried out by the Telecommunications Division of the Department of Transport.

The standard broadcast band is crowded with stations that are capable of interfering with one another over the entire North American region, particularly at night. A plan for the accommodation of the largest number of stations with the least interference was evolved as a result of extensive studies conducted by Canada, Cuba, the Dominican Republic, Haiti, the Bahama Islands, Mexico, and the United States and was embodied in the North American Regional Broadcasting Agreement.

Before a new standard broadcasting station can be licensed or before modifications can be made in an existing station, engineering briefs covering the selection or change of frequency, amount of power and design of the directional antenna system must be approved by the Department of Transport and notification sent to the signatory countries of the North American Regional Broadcasting Agreement. After the establishment or change is completed, proof of performance must be submitted to establish that the actual installation is in accordance with the approved plan.

The allocation of high frequencies and their efficient utilization requires reasonably accurate information on the transmission properties of the ionosphere which vary with the season, the sunspot eycle and other factors. This information is obtained from hourly measurements of the ionosphere made at some 70 points throughout the world and analysed by the Radio Physics Laboratory, Defence Research Board, Ottawa, and by the United States Bureau of Standards at Washington, D.C. The Canadian measurement stations are located at St. John's, N'f'ld.; Resolute Bay, Cornwallis Island, and Baker Lake, N.W.T.; Fort Chimo, Que.; Churchill and Headingley, Man.; Ottawa, Ont.; and Prince Rupert, B.C. Data from these stations are correlated by the Defence Research Board. Six frequency monitoring stations are maintained at suitable points across Canada to check operating frequencies of all classes of radio stations to ensure that they do not depart from the assigned frequency by an amount greater than that permitted by the international conventions.

Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph or radiotelephone equipment, primarily for distress use. Approval is given for each make and model of equipment that comes up to the required standard and, in addition, the ship station as a whole is inspected before the licence is issued and periodically thereafter. Foreign ships are subject to inspection before sailing from Canadian ports to ensure that they conform with the requirements of the Safety of Life at Sea Convention.

Analogous inspections of aircraft radio stations are carried out. Standards are provided specifying in detail the requirements to be met to ensure an airworthy installation. A certificate of airworthiness is granted to manufacturers for each type or model of aircraft radio equipment that has been demonstrated to meet the requirements. Only type-certificated equipment is accepted for use on scheduled airlines, though other equipment, if inspected, is acceptable for other aircraft.

Marine and aeronautical radio operator standards and related regulations are covered by international agreement. The International Telecommunication Convention prescribes the qualifications for radio operators on mobile stations and the Radio Act provides that all operators, both commercial and amateur, must pass examinations to prove their ability to operate the respective classes of stations on which they are engaged. Competent operators are required on all classes of stations in order that the technical requirements prescribed under international agreement be closely adhered to and are particularly essential on ships and aircraft stations in the interests of safety of life.

Investigation and Suppression of Inductive Interference.-Under the Broadcasting Act, the use of electrical equipment that will produce harmful interference to broadcast reception is not permitted. The Telecommunications Division of the Department of Transport maintains 54 cars equipped for measuring and locating sources of interference to broadcast reception. In addition to locating the sources of interference, advice is given as to how it can be suppressed or eliminated. These cars operate from the permanent Radio Inspection Offices located in 25 cities throughout Canada.
1.-Investigations of Inductive Interference, Years Ended Mar. 31, 1950-53

| Item |  |  |
| ---: | ---: | ---: | ---: | ---: |

Industrial, scientific and medical apparatus is brought under strict control, in accordance with Regulations for Controlling Radio Interference and under the authority of Section 23 of the Canadian Broadcasting Act. Regulations require that radiation from such apparatus, which is liable to cause interference to radiocommunications, must be suppressed either by shielding or by replacing the apparatus with a non-interfering type. The Department of Transport conducts type-tests on diathermy and industrial heating apparatus submitted by manufacturers, and the types that fulfil the requirements of the Department are listed as noninterfering. The radiation from all such sources on communication frequencies must not exceed the tolerances specified by the Canadian Standards Association.

Radio Revenue.-Regulations concerning the rendering and settlement of international accounts are contained in the International Telecommunication Convention and Regulations. Sources of revenue include commercial ship and interstation messages handled by Departmental ships and land stations, radiotelegrams exchanged by foreign ships through Canadian coast stations, private commercial traffic via Departmental airway radio stations, and radio services rendered to aircraft of private airline companies by such stations. The volume of messages and words handled during the year ended Mar. 31, 1951, and the revenue therefrom, together with revenue from licence fees, examination fees, fines and forfeitures, rentals, etc., are given in Table 2.

## Section 2.-Total Radio Stations and Radio Services

The total number of radio stations in operation in Canada and on ships and aircraft registered therein are shown by classes in Table 3. Of these stations, 642 were operated by the Department of Transport. The Department of National Defence, in addition to stations established for military purposes, operated 11 permanent stations and two summer stations, situated along the Mackenzie River and in Yukon Territory, on behalf of the Department of Northern Affairs and National Resources. The Department operated 113 stations to provide communication and time-signal service for survey parties and for the protection and administration of National Parks. The Department of Public Works operated six stations, the Department of Agriculture five stations, the Department of National Health and Welfare 12 stations, the Department of National Revenue two stations, the Department of Citizenship and Immigration four stations, the Department of Fisheries nine stations, the Department of Mines and Technical Surveys 61 stations, the Royal Canadian Mounted Police 902 stations, and the National Research Council 17 stations, 16 of which were experimental.

Stations operated by the Canadian Broadcasting Corporation numbered 140 and those by private owners, 187.
3.-Radio Stations in Operation, by Class, as at Mar. 31, 1954

| Class | No. | Class | No. |
| :---: | :---: | :---: | :---: |

[^304]The Canadian Overseas Telecommunication Corporation.-By virtue of the Canadian Overseas Telecommunication Corporation Act which came into force on Jan. 1, 1950 (R.S.C. 1952, c. 42), the Canadian Overseas Telecommunication Corporation was established to acquire, maintain and operate the external telecommunication facilities in Canada of Cable and Wireless Limited and the Canadian Marconi Company Limited. The Corporation consists of five Directors, one of whom is also the President and General Manager of the Corporation.

By proclamation in the Canada Gazette of June 7, 1950, the said facilities of Cable and Wireless Limited and of the Canadian Marconi Company Limited were expropriated and, since that date, the Corporation has been successfully operating and maintaining these external telecommunication facilities in Canada. On May 1, 1952, a final settlement mas made with respect to the acquisition of the physical assets at a total cost of $\$ 3,143,781$. These physical assets include Headquarters established at Montreal, Que., overseas cable stations at Bamfield, B.C., Halifax, N.S., and Harbour Grace, N'f'ld., and wireless transmitting and receiving stations at Drummondville and Yamachiche, Que., respectively. The Corporation has since constructed a cable station at St. John's, N'f'ld.

The purposes of the Corporation are:-
(a) to establish, maintain and operate in Canada and elsewhere external telecommunication services for the conduct of public communications;
(b) to carry on the business of public communications by cable, radiotelegraph, radiotelephone or any other means of telecommunication between Canada and any other place and between Newfoundland and any other part of Canada;
(c) to make use of all developments in cable and radio transmission or reception for external telecommunication purposes as related to public communication services;
(d) to conduct investigations and researches with the object of improving the efficiency of telecommunication services generally; and
(e) to co-ordinate Canada's external telecommunication services with the telecommunication services of other parts of the Commonwealth.
The Avalon Telephone Company operates public commercial stations in Newfoundland to supplement its wire lines and to provide telephonic communication with isolated communities.

The Manitoba Telephone System operates radiotelephone links involving stations at the following points: Riverton, Manigotagan, Hecla Island, Gimli, Norway House, Bissett, Great Falls, The Pas, Snow Lake and Winnipeg, Man. In addition, the Manitoba Telephone System operates stations at Gimli, The Pas and Norway House, Man., to provide terminal service for ships operating on Lake Winnipeg.

Norwesto Communications Limited operates a public commercial radiotelephone service consisting of stations located at Kenora, Red Lake, Ball Lake, Sioux Narrows, Dryden, Sioux Lookout, Minaki and Redditt, which are used in conjunction with the ordinary telephone exchanges to provide telephonic communication to privately owned stations at isolated points throughout the northwestern part of the Province of Ontario.

The Red Lake Telephone Company operates a public commercial radiotelephone station at Madsen, Ont., to provide a connection between the local wire telephone system and the Norwesto Communications Limited network.

The Okanagan Telephone Company operates a public radiotelephone service between Revelstoke and Arrowhead, B.C., and a public commercial terminal station at Kelowna to provide telephonic communication to privately owned stations at isolated points in the Kelowna area.

Provincial Government Services.-Provincial authorities use radio services in many Departments. Table 4 shows the number of stations operated by the Provincial Governments.

## 4.-Radiocommunication Stations Operated by Provincial Governments, as at Mar. 31, 1954

| Province | Stations | Province | Stations |
| :---: | :---: | :---: | :---: |
|  | No. |  | No. |
| Newfoundland. | 28 | Manitoba. | 212 |
| Nova Scotia.. | 16 | Saskatchewan | 435 |
| New Brunswick | 30 | Alberta...... | 253 |
| Quebec. | + 318 | British Columbia | 692 |
| Ontario. |  | Total. | 3,129 |

Other Radiocommunication Services.-Radiotelegraphy and radiotelephony are used throughout Canada to provide means of maintaining contact with isolated points beyond the reach of the regular telegraph and telephone facilities.

Municipal government departments have steadily increased their use of radio to facilitate operations. This increase is noted in all categories of municipal services using radio as a medium of communication with vehicles, i.e., police, fire, engineering, hydro, etc. In addition, the trend toward expansion in the employment of radio for urban land mobile communication has continued and has shown no signs of abating. Such services as taxi, heavy construction, ready-mix concrete, oil pipeline construction and operation, veterinarian and rural medical have participated extensively in this increase. Public mobile radio relay message services (telephone answering service) have also been licensed to operate in a number of cities including Montreal, Toronto and Edmonton.

Public utilities, power companies, provincial power commissions, oil exploration and mineral development organizations have considerably expanded their use of radio in both urban mobile and point-to-point radio fields.

Commercial air-carrier organizations including those performing off-route charter services were licensed to operate 460 ground communications stations, 30 navigational aids stations and 516 aircraft stations. A relatively large number of licences were also issued to individuals, manufacturers, mining and oil companies, and others, to authorize the operation of aircraft stations and associated ground stations in conjunction with normal business activities.

A total of 2,460 ground stations and 1,415 aircraft stations were operated by commercial air-carrier organizations, individuals and business concerns during the year ended Mar. 31, 1954.

Commercial Point-to-Point Radiotelephone Services.-The North-West Telephone Company operates a radiotelephone service between points in British Columbia not hitherto served by telephone communications. Under licences granted by the Department of Transport, the Company has established a number of permanent public commercial radiotelephone stations in that Province. These stations are authorized to provide communication to private commercial radiotelephone stations located at isolated points in the Province. This Company is also licensed to establish limited coast stations at Lulu Island, Powell River, Vancouver, Nanaimo, Victoria, Harrison Lake, Parksville, Alert Bay, Campbell River, Hardwicke Island, Halberg, Sumas Mountain, and Prince Rupert, B.C., to provide
as ship-to-shore service. These stations, used in conjunction with the ordinary telephone exchange, provide a duplex-radiotelephone service to isolated points and to certain ships at sea, and also provide a limited amount of service to stations of the land mobile category.

The North-West Telephone Company is also licensed to provide emergency radiotelephone communication at any point in British Columbia and to carry out tests for extending the existing radiotelephone service throughout the Province.

To provide trans-river communication in the lower St. Lawrence area, the following companies operate stations in the Province of Quebec at La Malbaie, Tadoussac, Rivière-du-Loup, Rimouski, Matane, Montmagny, St. Antoine, Ile aux Grues, Cap Chat, Forestville, Trinity Bay, Seven Islands, Baie Comeau, Clarke City, Gaspé Copper Mines, Mont Louis, Chicoutimi, and Tour à Pica: La Compagnie de Téléphone de Charlevoix et Saguenay, La Compagaie de Téléphone de Kamouraska, the Quebec Telephone Corporation, Gulf of St. Lawrence Telephone Company and La Compagnie du Téléphone Saguenay, Que.

The wireline facilities between Saint John, N.B., and Digby, N.S., between Saint John, N.B., and Halifax, N.S., between Red Head, N.B., and Mount Hanley, N.S., between Lutz Mountain (Moncton), N.B., and Egmont, P.E.I., and between Charlottetown, P.E.I., and New Glasgow, N.S., are supplemented by radiotelephone lines.

The stations at Saint John, Red Head, and Lutz Mountain (Moncton), are operated by the New Brunswick Telephone Company. The terminals at Digby, Halifax, New Glasgow and Mount Hanley are operated by the Maritime Telephone and Telegraph Company. The stations at Charlottetown and Egmont are operated by the Island Telephone Company.

The Bell Telephone Company of Canada provides a land mobile terminal radiotelephone service at numerous points in Ontario and operates a microwave link between Toronto and Ottawa, Ont., and Montreal, Que., which carries television programs and is capable of providing many additional telephone circuits. Radio links are also maintained between Pelee Island and Leamington, Ont., and across the St. Lawrence between Sorel and Joliette, Que.

The Canadian National Railway Company operates an extensive radiotelegraph and radiotelephone service in Newfoundland including links between Table Mountain, N'f'ld., Cape North, N.S., and New Waterford, N.S. This Company is also authorized to provide a limited coast-station service at Port aux Basques, N'f'ld.

The Canadian National Railway Company and the Canadian Pacific Railway Company are jointly establishing microwave circuits between Toronto and Windsor and between Montreal and Quebec City.

Radio Aids to Navigation.-Marine Radio Stations.-Detailed information covering all marine radio aids to navigation is contained in the annual publication, Radio Aids to Marine Navigation which, along with the supplementary Votices to Mariners may be obtained upon request from the Department of Transport, Ottawa.

Coast Radio Stations.-The primary purpose of the coast radio station organization is to provide radiocommunication facilities whereby any ship within 500 miles of Canada's coast may establish communication with shore. Information is broadcast daily to navigators at advertised hours. In addition, urgent information such as hurricane warnings is broadcast immediately upon receipt.

Coast stations CFH Halifax and CKN Vancouver, operated jointly by the Department of Transport and the Royal Canadian Navy, participate in the British Commonwealth scheme for providing long-range communication with ships.

Coast Radio Direction Finding Service.-A direction finding service is established to enable ships to obtain-without charge-a line of bearing from the Direction Finding station.

Radio-beacon Service.-Radio beacons are established for the purpose of enabling any ship or aircraft equipped with a direction finder to determine its bearing or direction in relation to the radio-beacon station.

Generally speaking, in clear weather, each station transmits, at advertised hours, its characteristic signal for three periods of one minute separated by silent intervals of two minutes. In fog, all stations operate continuously, maintaining a uniform time cycle of three minutes, each station transmitting in its proper sequence for one minute separated by silent intervals of two minutes. At certain stations the radio-beacon signals are synchronized with the emissions of the fog alarms to permit distance finding during foggy weather.

In addition to the above radio-beacon facilities, ships equipped with direction finding apparatus may, upon request, obtain signals for the purpose of taking bearings from any of the coast stations.

Loran Stations.-Loran (long-range aid to navigation) is a system of position finding based on the difference in the time arrival of pulse-type radio signals transmitted from a pair of stations. This time difference is measured on a Loran receiver and is used in conjunction with specially prepared charts or tables to establish a line of position. The intersection of two or more lines of position determined from two or more pairs of stations provides the required position.

Medical Advice to Ships at Sea.-Ships at sea may obtain medical advice from any coast station. The messages are delivered to the port medical officer of the Department of National Health and Welfare and replies are transmitted to the ship free of charge.

Assistance Rendered by Radio to Vessels in Emergency.-Coast stations have many time, given valuable assistance to vessels in danger and a great many of the smaller ships are being fitted with radio to avail themselves of this service.

Aids to Air Navigation.-Radio aids to air navigation are provided from coast to coast and from the United States border to the Arctic along the airways used by the many Canadian airlines, United States airlines flying over Canadian territory, and Canadian and United States military aircraft. To construct and maintain these many facilities, specially trained engineers and technicians are located at six district offices: Moncton, N.B.; Montreal, Que.; Toronto, Ont.; Winnipeg, Man. Edmonton, Alta.; and Vancouver, B.C.

Radio Ranges.-The principal radio aid to air navigation provided by the Department of Transport is the radio range. These stations, located approximately every 100 miles along airways, provide specific track guidance to pilots by means of audible signals. The signals may also be used for the purpose of obtaining direction finding bearings from the aircraft. In addition, radiotelephone communications are provided between the ground and aircraft by means of which pilots may obtain weather and other information concerning the safety of flight. There
are now 94 stations in operation, a new range having been commissioned at Nanaimo, B.C. Work is continuing on the establishment of additional radio ranges to serve the airports at Terrace, B.C., and Sudbury, Ont.

Radio Beacons.-These stations provide radio signals with which pilots may use their direction finding equipment to obtain relative directional bearings to assist in the navigation of their aircraft. Nineteen are now in operation, new ones having been established at Hope, B.C., Mill Bay, B.C., and Lloydminster, Sask. Radio beacons at Prince Albert and Embarras are equipped with radiotelephone facilities to provide communications to and from aircraft. Construction is proceeding of a beacon at Eon, Que., to replace the Mecantina radio range destroyed by fire in the summer of 1952. Additional radio beacons at Terrace, Kitimat, and Alert Bay in British Columbia, and at Beaverlodge, Sask., are in various stages of planning or construction. The beacon at Greata, B.C., was moved to Naramata, B.C.

Fan Markers.-These facilities, operating on very high frequencies, indicate to a pilot when he is directly overhead. Normally, they are placed on an airway to inform the pilot when he may safely lose altitude after passing high terrain or to indicate accurately the distance from an airport. Eleven of these stations are now in operation. The fan marker at Greata, B.C., was moved across Okanagan Lake to Naramata, B.C.

Station Location Markers.-These facilities are similar to fan markers except that the signal radiated is such that aircraft may receive the same indication irrespective of the direction of flight. They are installed at the same location as a radio range to enable a pilot to determine when he is exactly over the station, thus obtaining definite indication of position. Station location markers are installed at all radio range sites except Killaloe, Ont.

Direction Finding Stations.-A high frequency direction finding station for determining the bearing of aircraft from the station is in operation at Cape Harrison, N'f'ld.

Instrument Landing Systems.-Instrument Landing Systems provide radio signals which, when received by special radio equipment aboard aircraft, permit pilots to approach airports for landing during periods of very low visibility. An installation normally consists of a localizer transmitter providing lateral guidance to the runway, a glide path transmitter providing slope guidance to the approach end of the runway, two marker transmitters providing distance indications from the runway at approximately four and one-half miles and $3,500 \mathrm{ft}$. from the runway, and a low-power radio beacon (compass locator) to assist in holding procedures and lining up on the localizer course. The localizer and marker transmitters operate on very high frequencies, the glide path on ultra high frequencies and the compass locators on low and medium frequencies. Twenty-five instrument landing systems are now in operation, a new installation having been completed at Patricia Bay, B.C. The system under construction to serve Runway 26 at Patricia Bay airport has a localizer differing from those normally used in that it is highly directive, having only a front course, and is so controlled that clearance indication is shown only $10^{\circ}$ on either side of the centre of the on-course signal.

Aeronautical Communication Stations.-To assist in providing the required communication between aircraft and the ground, 32 radio stations, operating for the most part on high frequencies, are located at strategic points across the country and into the Arctic. These stations provide communication to both domestic and
international air carriers. The international communications stations at Vancouver, B.C., Montreal, Que., Moncton, N.B., and at Goose and Gander, N'f'ld., form a major contribution on the part of Canada to international aviation. Two international stations, at Sydney and Yarmouth, N.S., provide very high frequency coverage to international airlines flying the Gander-New York route. The services provided by these international stations may be divided broadly into three classes: (1) communication facilities for Meteorological Services ;(2) communication facilities for the Air Traffic Control Services; and (3) facilities for the benefit of the airline operating agencies to provide communication with their aircraft and between their despatch offices.

Because Class 3 is provided solely for the convenience of the airline operating agencies, a system of charges has been introduced to recover from the airlines the cost of providing this portion of the service. The charge is $\$ 13$ per aircraft per oceanic crossing. Revenue for the year ended Mar. 31, 1954, was approximately $\$ 227,000$.

Very High Frequency Communications.-Owing to the overcrowded conditions of the high frequency portion of the radio spectrum and to the fact that communication in the very high frequency portion of the spectrum is relatively free from atmospheric interference, progress is being made in providing air-ground communications on the latter frequencies. Very high frequency air-ground communication facilities are now provided at 93 range stations, 2 radio-beacon stations, 7 air traffic control centres, and all 21 airport control towers. Very high frequency equipment has been provided also in all control towers and in a large number of airport vehicles to facilitate direction to traffic on the airport surface.

Weather Reporting Stations.-Weather reporting stations are located at strategic points throughout the country from coast to coast and into the Far North. Reports from these stations enable meteorological personnel to forecast weather trends that are of great importance to both domestic and transoceanic flying operations. Some of these stations are located in remote areas with which radio is the only means of communication. Radio stations are established in such areas to enable the weather reports to be rapidly forwarded to meteorological offices where the data are correlated. Four such communications stations are located at Dease Lake, B.C., Nitchequon and Indian House Lake, Que., and Coppermine, N.W.T.

Marine Communications.-Two coast stations operating on both medium and high frequencies are maintained in conjunction with the aeronautical stations at Seven Islands, Que., and Goose, N'f'ld., for the exchange of communications between ships and the shore. Communications are conducted by both radiotelegraph and radiotelephone. The station at Frobisher, N.W.T., provides radiotelephone facilities on high frequencies only.

Improvements in Radio Aids to Air Navigation.-The Montreal to Windsor airway is being equipped with VHF omnidirectional ranges. This type of facility enables the pilot in the aircraft to select, at will, his desired course. These stations operate in the very high frequency band between the portion reserved for the ILS localizers and that portion used for very high frequency. A contract has been let for a radar ground-controlled approach system for Gander, N'f'ld., airport. Work on the design of buildings, towers and underground cable system is continuing.

Wireline Services.-The Airway Traffic Control interphone system was expanded to satisfy requirements stemming from an increasing volume of both civil and military air operations. Telecommunications Division teletype circuits were
revised to facilitate the handling of air operational traffic. Additional local teletype, telephone and control-line facilities were engaged to meet new and increased requirements of the Branch. Major revisions to and repair of various governmentowned control lines were undertaken.

Other Communication Facilities.-Public address systems are provided at Air Terminal Buildings. Co-ordination of various wireline service requirements was undertaken. Existing systems, such as pneumatic tube facilities, were analysed and evaluated. A National Weatherfax System to be used for transmitting weather data in the form of maps by wire line and radio to designated stations across the country was commissioned.

## Section 3.-The Canadian Broadcasting Corporation

The history of the Canadian Broadcasting Corporation is given in the 1947 Year Book, pp. 737-740. The Corporation operates under authority of the Canadian Broadcasting Act (R.S.C. 1952, c. 32) and is headed by a Board of 11 Governors, appointed by the Governor in Council and chosen to give representation to the principal geographical divisions of Canada. The Chairman is required to devote the whole of his time to performance of his duties under the Act. The Board determines and supervises policy, but day-to-day operations and executive direction are the responsibility of the General Manager. The CBC is organized in the following divisions: Program, International Service, Engineering, Commercial, Press and Information, Broadcast Regulations, Station Relations, Personnel and Administration, and Treasury.

Under the Canadian Broadcasting Act, the CBC is responsible for regulations controlling the establishment of networks and the proportion of time that may be devoted to advertising in broadcast programs. The CBC neither exercises, nor authorizes any private station to exercise on its behalf, censorship of any broadcast program. The responsibility of having the regulations observed rests with the individual station management.

Frequency Modulation.-The development of frequency modulation is given in the 1948-49 Year Book, p. 773. On Apr. 1, 1954, there were five CBC and 29 privately owned frequency modulation stations in operation.

Television.-Regular CBC television broadcasting was begun from Toronto (CBLT) and Montreal (CBFT) in September 1952, with a program schedule of about 18 hours a week. By July 1954, the schedule averaged 50 hours a week of all types of television programs. At the same time the number of CBC stations in operation was increased to six-CBUT Vancouver, CBWT Winnipeg, CBLT Toronto, CBOT Ottawa, CBFT and CBMT Montreal. Two more CBC television outlets-one in Halifax and a French-language outlet for Ottawa-are under construction.

Twenty cities across Canada have been recommended for private television operating licences, and five private stations were on the air in July 1954. At the same time, Canadian television service had reached 60 p.c. of the population of Canada through CBC and privately owned affiliates. This represents the fastest growth in TV population coverage in the world. When the stations now projected are completed, more than 70 p.c. of all Canadians will be within reach of the national television system.

Although the linking of all Canadian television stations from coast to coast for instantaneous telecasting of programs may take several years because of the distances and difficult terrain involved, microwave facilities had reached London, Ont., on the west, and Quebec City on the east by July 1954.

As gauged by TV sets in use the advent of Canadian television has brought extensive developments in the electronics industry. When CBC television began in September 1952, 146,000 television sets were in use in Canada. One year later that number had tripled and by July 1954 more than 800,000 receivers were in use in Canadian homes.

In the year ended Mar. 31, 1954, CBC television spent $\$ 1,322,000$ on Canadian talent for live Canadian TV production. In addition, more than $\$ 181,000$ was paid to writers and for the rights to plays. Music copying and music rights accounted for another $\$ 38,000$.

Television Program Service.-A total of 7,890 hours of television programs were presented over the five CBC television stations operating during the year ended Mar. 31, 1954. CBLT in Toronto made available to its viewers a total of 2,788 hours, with CBFT presenting 1,931 hours, CBOT 2,117 hours, CBUT (which started in December 1953) 563 hours, and CBMT (the English-language outlet in Montreal which began operation in January 1954) 490 hours. Until CBMT commenced operation, CBFT in Montreal provided a separate service for its French and its English viewers and, in addition, made available a number of programs suitable to both.

Dealing with the stations in this same order, of the total hours broadcast, nature of the programs was 77.9 p.c. sustaining for Toronto, 71.5 p.c. for Montreal, 76.9 p.c. for Ottawa, $67 \cdot 1$ p.c. for Vancouver, and $48 \cdot 9$ p.c. for Montreal's Englishlanguage outlet. The balance of their schedules was taken up with commercially sponsored programs.

Radio Broadcasting Facilities.--Under Section 24 of the Canadian Broadcasting Act, the CBC is required to review all applications for licences for new stations, applications for increases in power and for changes in frequency or location. Two considerations are involved: (1) there must be non-interference with the present and proposed facilities of the CBC, and (2) that high-power transmission facilities, on both long-wave and short-wave bands, are reserved for use by the CBC. Within these limitations, it is the policy of the Board to serve community interests by giving every practical encouragement and assistance to local stations.

The CBC operates three networks: the Trans-Canada and Dominion networks serving English-language audiences from the Atlantic to the Pacific, and the Frenchlanguage network extending from the new CBC station in Moncton, N.B., to Edmonton, Alta.

The Trans-Canada network is made up of 25 basic stations- 12 CBC-owned and 13 privately owned. There are 17 supplementary stations, four of which are CBC-owned Newfoundland stations. The Dominion network consists of 31 basic stations, of which 30 are privately owned. Nineteen supplementary privately owned stations also receive Dominion network service. The French network has five basic stations, four of which are CBC-owned and one privately owned, and 18 privately owned affiliated supplementary stations.

In 1954, the CBC had 21 stations, eight of which had 50,000 -watt transmitters. In order to present programs at suitable times and to give expression to varying interests in the six regions, the CBC maintains regional offices. Production facilities
are maintained at St. John's, N'f'ld., Sydney and Halifax, N.S., Moncton, N.B., Chicoutimi, Quebec City, and Montreal, Que., Ottawa, Toronto, and Windsor, Ont., Winnipeg, Man., Regina, Sask., Edmonton, Alta., and Vancouver and Prince Rupert, B.C.

## 5.-Broadcasting Stations of CBC Networks, as at Apr. 1, 1954

Nors.-The stations marked with an asterisk (*) are CBC-owned.

CBC International Service (Shortwave).-The International Service, inaugurated on Feb. 25, 1945, is operated by the CBC on behalf of the Government of Canada. Its principal aims are to tell the people of other countries about life in Canada and to help to unify the western world in the defence of freedom.

The International_Service has been growing over the years to meet the requirements of Canada's expanding interest and influence abroad. The two 50,000 -watt transmitters at Sackville, N.B., are linked by approximately 600 miles of land lines to the studios and the program headquarters of the service in the Radio Canada Building at Montreal. Programs are broadcast daily in 16 languages-English, French, Dutch, German, Italian, Danish, Swedish, Norwegian, Finnish, Spanish, Portuguese, Czech, Slovak, Russian, Ukrainian, and Polish. In addition, regular programs are prepared on tapes and discs for relay over the radio broadcasting facilities of Austria and Greece. The excellent technical facilities of the CBC International Service assure a signal in Europe which compares very favourably with any other from the North American Continent. The International Service has succeeded in reaching increasingly large audiences in Europe, Central and South America, the Caribbean, the South Pacific area and the far reaches of the North American Continent.

More than 30,000 letters involving over 55,000 items of information are received yearly from listeners in all parts of the world, attesting to the strength of the International Service signal and to a wide interest in Canada and Canadian radio programs. These inquiries are answered by the language sections or are referred to the departments of government concerned. Technical ?reception ${ }_{2}^{154}$ reports are also verified.

Each month the International Service mails a monthly program schedule to listeners in Europe and Latin America. These schedules, in the form of illustrated booklets, contain program notes, times and frequencies, and also touch on some aspect of Canadian life. There are two editions-one for Europe and one for Latin America. They are printed in the languages of the countries to which they are sent and are mailed free on written request. Both editions together have a circulation of almost 150,000 .

In addition to broadcasting Canadian programs for more than 16 hours daily, the International Service has developed a liaison with broadcasting organizations in other countries. As a result, an increasing number of programs are relayed over the national networks of many lands, thus assuring an even wider audience for the International Service programs.

Two operations deserve special mention-the Canadian Forces Broadcast Services and the Music Transcription Service.

The International Service, in co-operation with the National Service of the CBC and the Department of National Defence provides a regular program service on tape amounting to 180 hours of material each week. This tape service is made available to Canadian Armed Forces radio stations in Korea, Japan, England, France and Germany. It also goes to Royal Canadian Navy ships operating in the North Atlantic and in Far Eastern waters. A regular tape program service is also provided to National Defence radio stations in the Yukon and Northwest Territories and in Labrador, N'f'ld. News and news features are transmitted daily in both English and French by shortwave through Radio Australia to the Far East, to the European theatre and to the northern outposts of Canada; the last-named serves both Armed Services personnel and civilians outside the range of other broadcasting services.

The music transcription service was started several years ago and now features over 100 programs of 15 - and 30 -minutes duration. It covers a wide range of material from classical to popular music, including Canadian folk songs. This music transcription service on dises is distributed to national radio organizations and to Canadian Missions abroad. It is currently being used in about 85 countries throughout the world.

Domestic Program Service.-During the year ended Mar. 31, 1951, 67,960 programs representing 22,041 hours of broadcasting were presented over the CBC Trans-Canada, Dominion, and French networks. Of the total broadcasting hours, $83 \cdot 1$ p.c. were devoted to non-commercial and public service programs and the remainder to commercial presentations. Of the total broadcasting hours in 1953-54, $64 \cdot 7$ p.c. was scheduled on the Trans-Canada network; the Dominion network released $9-1$ p.c. and the remainder was released on the French network.

The CBC originated and produced 89 p.c. of its network broadcasts. Of the remainder, $1 \cdot 6$ p.c. came from private stations and $9 \cdot 4$ p.c. were exchange programs from the United States and the British Broadcasting Corporation. Various categories of light music made up the greatest number of broadcast hours, followed in order by drama and feature, news, classical music, talks, variety, agricultural programs, women's programs, semi-classical music, educational broadcasts, children's programs, religious periods, dance music, sports programs, old-time music, symphony music, band music, sacred music, prose and poetry, and opera. Table 6 shows the proportion of time devoted to sustaining programs as compared with commercial programs in radio and analyses those made up of music as compared with the spoken word. The figures are based on the number of programs presented on the CBC's three radio networks as live programs, recorded programs, or programs that were recorded earlier for later presentation. They do not include any program that was repeated to any section of the networks. Actually, there were 11,447 programs representing 4,304 hours repeated at various times and to various sections of the networks. In this way, the figures in Table 6 differ from those presented in previous editions of the Canada Year Book.

## 6.-Classification of CBC Radio Programs, Year Ended Mar. 31, 1954

Nors.-Dashes in this table indicate that no programs were reported under these particular items. Figures do not includeany program repeated to any section of CBC networks. See text immediately preceding.

| Class of Program | Sustaining |  |  | Commercial |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

6.-Classification of CBC Radio Programs, Year Ended Mar. 31, 1954-concluded

${ }^{1}$ Less than 0.05 p.c.
Music and Drama.-Music and drama are two of the chief items in the CBC schedules. In the year ended Mar. 31, 1954, music made up approximately onethird of the entire network schedule, and those in the 'drama and feature' category comprised the largest percentage of time among spoken-word programs. Highquality programs of both types are heard frequently at good listening hours. Apart from regular broadcasts by Canadian symphony orchestras, much fine music is presented on 'CBC Wednesday Night'-an evening of serious programming on the Trans-Canada network-and once a week by the CBC Symphony Orchestra. Chamber music by various groups, as well as choral music originating at many Canadian points and recitals by Canadian artists and those of international reputation, are important features of the music schedules. Productions by the CBC Opera Company and by the CBC Light Opera Company are heard throughout the season. During the 1953-54 season the CBC Opera Company presented several full-scale operatic productions for television.

During an average year more than 1,000 plays are produced by the CBC for its radio networks, and hundreds for television. Chief among the English-language radio plays are the Stage series broadcast Sunday evenings to a national audience, and the longer dramas on 'CBC Wednesday Night'. 'CBC Wednesday Night' also introduced the radio anthology, an evening of prose, poetry, drama, and music woven about a central theme. In television drama CBC has won approval especially for its 90 -minute dramas on Tuesday evenings; in the 1953-54 season, 33 of these were presented. One-third of them were original plays by Canadians, and most of the remainder were adaptations by Canadians.

Finances of the CBC.-Operations for the year ended Mar. 31, 1954, after providing for depreciation and obsolescence, resulted in a surplus of $\$ 6,567,862$, amounting to $\$ 1,283,896$ for sound broadcasting and $\$ 5,283,966$ for television.

In the sound-broadcasting service, revenue from excise tax and broadcasting licence fees fell $\$ 393,620$ short of the previous year's revenue from broadcasting licence fees and the former receiving licence fees. Commercial revenue for sound broadcasting also declined and operating expenditure increased by $\$ 1,241,696$. The television service received $\$ 11,703,149$ in excise tax collections. Commercial revenue for the year was $\$ 1,334,766$ as compared to $\$ 518,380$ for the seven-month period that this service was in operation during the 1952-53 fiscal year; expenditures, however, were $\$ 4,638,174$ higher.

A fourth loan for the television service amounting to $\$ 4,750,000$ was authorized under Appropriation Act No. 3, 1953, and is to be amortized by 30 semi-annual instalments commencing Jan. 1, 1960.

Capital expenditures during 1952-53 were $\$ 1,090,640$ for the sound-broadcasting service. The principal expenditures were in connection with the Moncton, N.B., and Verchères, Que., transmitters and the Winnipeg, Man., studios. Assets costing $\$ 65,360$ were written off during the year. The sum of $\$ 3,323,974$ was spent by the television service in developing production centres at Halifax, Montreal, Ottawa, Toronto, Winnipeg, and Vancouver.

The CBC operates the International Service on behalf of the Government of Canada and all maintenance and operational costs are borne by the Government. These costs are not considered as chargeable to the CBC because the annual statutory grant and revenue from excise tax and licence fees are used only to serve listeners within Canada. Gross operating expenditure for 1953-54 exceeded those of $\mathbf{1 9 5 2 - 5 3}$ by $\$ 45,235$. The value of Crown assets in the custody of the Corporation increased $\$ 57,862$ during the year after write-offs amounting to $\$ 9,004$.

## 7.-Income and Expenditure of the CBC, Year Ended Mar. 31, 1954

| Item | Sound |  | Television |  | Total |  |

| Operating surplus. | 1,283,896 | ... | 5,283,966 | ... | 6,567,862 | ... |

## Section 4.--Privately Owned Radio Broadcasting Stations*

Privately owned (non-government) broadcasting stations began operations during the early 1920 's, about 12 years before any other broadcasting service was available in Canada. By 1929, 65 of these stations, operating mainly in nonmetropolitan areas, provided regular broadcasting service to Canadian communities. In 1954, such stations numbered 147, with a total wattage of 404,450 in daytime and 377,700 at night. Operating in conjunction with AM stations are 29 FM stations with combined power of 49,985 watts. In addition, there are eight shortwave stations operating in conjunction with AM stations, having a combined wattage of 6,685 .

Generally, the privately owned stations are limited in power to 5,000 watts, many operating at 1,000 watts and some at 250 watts. Two non-government stations (CFRB Toronto and CKLW Windsor) have, since 1948, operated at 50,000 watts. Privately owned stations serve, primarily, the localities in which they are situated, the nature of the "community" served varying with circumstances. Many such stations are located in relatively small urban centres. Here, however, they serve not only the urban centre population but a larger population located in surrounding rural areas. Others serve medium-sized and metropolitan cities and, in addition, the population of cities or towns adjacent to the centre in which the station is located together with rural audiences in districts between or beyond the urban areas.

Privately owned stations have a combined capital investment currently estimated at approximately $\$ 40,000,000$, employ more than 5,000 persons, and disburse in salaries and wages an estimated $\$ 11,000,000$ annually. Revenue is obtained entirely from commercial advertising and these stations receive no part of the special 15-p.c. excise tax charged against the purchase of receivers and parts. The privately owned stations are required to pay transmitter licence fees to the Canadian Broadcasting Corporation; these totalled approximately $\$ 245,300$ in the year ended Mar. 31, 1954.

Recent years have shown a marked increase in the interest taken in broadcasting by commercial, political and legal interests, since it has become more generally recognized that broadcasting is a form of publication and a basic means of mass communication in North America. A review of this development may be found in Minute Book No. 5 of the 1951 Special Committee on Radio Broadcasting, Nov. 28, 1951, and in Minute Book No. 9 of the 1953 Special Committee, Apr. 29, 1953.

According to figures submitted to the Royal Commission on National Development in the Arts, Letters and Sciences in April 1950, the privately owned stations showed a net profit of 9 p.c. in 1948, figured as a percentage of capital, as against 7 p.c. in 1947 and 8 p.c. in 1946. The 1918 profit, as a percentage of operating revenue, was 10 p.c. as against 8 p.c. in 1947 and 10 p.c. in 1946. These figures are based on reports obtained by the Department of Transport from 109 stations in 1948,108 stations in 1947, and 88 stations in 1946. Thus, the average net profit per station was $\$ 12,516$ in 1948 , $\$ 8,597$ in 1947 and $\$ 11,228$ in 1946. Of the 109 stations reporting in 1948, 79 showed an aggregate surplus and the remainder an aggregate loss. Though no official compilations have been prepared since that time, unofficial estimates indicate that the 1954 position was relatively the same in terms of percentages.

[^305]Administration.-The non-government stations operate under the Canadian Broadcasting Act, administered by the Canadian Broadcasting Corporation, and under regulations made by the CBC, in addition to the Radio Act administered by the Department of Transport, and regulations made thereunder by that Department. Proof-of-performance statements showing public service, community service and like activities, together with financial statements, must be filed annually with the CBC and the Department of Transport. Regulations limit the amount of advertising that may be carried in any spot announcement or program and the number of announcements that may be carried in any given period of time. Program schedules must be approved in advance by the CBC and food, drug and medicine copy must be approved by the Department of National Health and Welfare.

Licences of the privately owned stations, valid for five years but subject to cancellation at any time during that period, are granted by the Government of Canada upon recommendation of the Board of Governors of the Canadian Broadcasting Corporation. The sale or transfer of any stock or shares held in any broadcasting station must be approved by the Government of Canada after review by the CBC.

Network Operations.-Network operation in Canada is at present restricted to the CBC in both AM and television fields. The CBC also has sole right-except for four private stations-to bring in commercial and other network programs from the United States. Many privately owned stations, however, serve as outletseither basic or supplementary-for CBC network programs. Under the Broadcasting Act any station may be required to carry any program designated by the CBC.

Television.-At the end of May 1954, there were 17 non-government television stations licensed in Canada, located at Sydney, N.S., Saint John, N.B., Rimouski, Quebec City and Sherbrooke, Que., Kingston, Peterborough, Hamilton, Kitchener, London, Windsor, Sudbury, and Port Arthur, Ont., Regina and Saskatoon, Sask., and Calgary and Edmonton, Alta. Five applications for such licences were pending at that date. The same terms of licence and regulations applying to AM broadcasting apply also to television broadcasting, with the additional requirement that the television broadcaster must carry a minimum of 10.5 hours weekly of CBC-produced material.

The present policy of the Government permits the licensing of one non-government television broadcasting station in any area of Canada, other than Toronto, Montreal, Ottawa, Vancouver, Winnipeg, and Halifax. These major areas are reserved exclusively for television broadcasting stations owned and operated by the Canadian Broadcasting Corporation.

## PART IV.-THE POST OFFICE

The Canada Post Office Department was created at the time of Confederation in 1867 by the Canada Post Office Act to superintend and manage the postal service of Canada under the direction of a Postmaster General. For almost a century prior to Confederation, postal services in the Canadian provinces had been controlled by the British Postmaster General and administered by his deputies. Under the French régime a courier service had been organized as early as 1703 between

92428-60 ${ }^{\frac{1}{2}}$

Quebec, Three Rivers and Montreal; in 1734 a post road was constructed over the same route and post houses, complete with post horses and vehicles, were established for the use of travellers. In 1851, the control of their post offices was assumed by the different provinces of British North America and at Confederation these systems merged to form the Canada Post Office.

Functions.-The basic task of the Canadian Postal Service is the handling and transmission of postal matter-letters, parcels, newspapers, magazines, etc.and in discharging this duty it maintains a wide variety of services-post offices and air, railway, land and water transportation facilities.

This basic task involves many associated functions which include the sale of postage stamps and other articles of postage; the furnishing of information to the public respecting postage rates and other postal matters; the registration of letters and other articles of mail; the insuring of parcels; the acceptance of C.O.D. articles for mail and dispatch; the sorting, making up and dispatching of ordinary and registered-mail to other offices; the sorting and delivery of incoming mail of all kinds; and the transaction of money-order and Post Office Savings Bank business.

All functions of the Postal Service, as far as the public is concerned, are centred in the post offices, of which 12,202 were in operation at Mar. 31, 1954, as against 12,259 at the same date in 1953. Postage paid in 1953-54 by means of postage stamps amounted to $\$ 64,546,067$ ( $\$ 67,182,548$ in 1953). Post-office money orders are issued for any amount up to and including $\$ 100$ at more than 7,000 post offices, for payment in almost every country in the world as well as in Canada. Orders payable in Canada only, for amounts under $\$ 16$, are issued at more than 4,000 additional post offices. Post Office Savings Banks are in operation in all parts of the country and, on Mar. 31, 1954, had total deposits of $\$ 37,792,914$.

Post offices are established for the transaction of all kinds of postal business wherever the population warrants. The post office is a complete entity in rural districts and smaller urban centres. In the larger towns and cities there is a main post office and, if size of population calls for extra services, postal stations and subpost offices are operated. Letter-carrier delivery is given in 130 cities and towns by over 5,300 uniformed letter carriers.

Postal stations are maintained on the same lines as the main post offices and perform full postal business, including general-delivery service and a post-office lock-box delivery as well as letter-carrier delivery service accommodating the surrounding district.

Because of its widespread facilities, it has been found expedient for the Post Office to assist other Government Departments in the performance of certain tasks that include the sale of unemployment insurance stamps, the collection of Government annuity payments, the distribution of income-tax forms, Civil Service application forms and the display of Government posters.

Organization.-The Canada Post Office is divided into two parts: the Operating Service and Headquarters at Ottawa. The Operating Service is organized into five regions each under a Regional Director, who is the field representative of
the Deputy Postmaster General. There are five Headquarters Branches, viz., Administration, Operations, Transportation, Financial, and Personnel, each under a Director.

Operating and secretarial features in the operating field affecting the post offices and local mail services in urban centres are taken care of by the local Postmaster. District office functions relating to services in the district, and all inspections and investigations, are under District Directors of Postal Services in strategic centres across the country.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island and from Pelee Island, Ont. (the most southerly inhabited point of Canada), to settlements and missions far within the Arctic.

Canada's air-mail system provides several transcontinental flights daily and constitutes a great air artery from St. John's, N'f'ld., to Victoria, B.C., intersected by branch lines and connecting lines radiating to every quarter and linking up with the United States air-mail system. Since July 1, 1918, all first-class domestic mail up to and including one ounce in weight has been carried by air between one Canadian point and another, whenever delivery can thus be expedited. On Apr. 1, 1954, this service was extended to first-class items up to and including eight ounces in weight. Air-stage service provides the sole means of communication with the outside for many areas in the hinterland. There were approximately 29,640 miles of air-mail and air-stage routes in Canada in 1954 as compared with 29,500 miles in 1953.

The principal means of mail transportation is the railway mail service which operates along about 40,000 miles of track and, in 1954, covered over $47,000,000$ track miles. The railway mail service employed a staff of 1,317 mail clerks in 1954. This staff prepares the mails for prompt delivery and dispatch while en route in the railway mail cars. Like its air-mail service, Canada's railway mail service is one of the most extensive in the world.

The rural mail delivery organization provides direct postal facilities to residents in the rural sections of the country: approximately $\overline{5}, 280$ rural mail routes were in operation in 1954 , involving about 125,000 route miles and serving 424,000 rural mail boxes. Rural mail routes are generally circular in pattern and average about 24 miles in length. About 4,300 side services were in operation in 1954 to transport mail between post offices, railway stations, steamer wharves, and airports, and 2,993 stage services operated to convey mail to and from post offices not located on railway lines. In 1954, there were approximately 750 city mail services, transporting mail to and from post offices, postal stations and sub-post offices, collecting mail from street letter-boxes and delivering parcel post. In all, about 13,000 land mail service couriers are employed and travel in the neighbourhood of $50,000,000$ miles annually. Land mail services are performed under a contract system, the contracts being awarded to the person submitting the lowest tender and competent to provide all the requisite equipment.

The increase in postal business is one of the impressive features of Canada's economic development during the past ten years. From $\$ 59,175,138$ in 1943 , gross revenue has increased year by year to $\$ 129,889,325$ by Mar. 31, 1954, an all-time high.

## Section 1.-Post Office Statistics

Tables 1, 2 and 3 give the numbers of post offices in operation together with revenue and expenditure for the past few years.
1.-Post Offices in Operation, by Province, as at Mar. 31, 1951-54

| Province or Territory | 1951 | 1952 | 1953 | 1954 |
| :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | No. | No. |
| Newfoundland. | 573 | 592 | 606 | 613 |

Postage.-The gross revenue receipts shown in Table 2 are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions. The gross value of the postage stamps and stamped stationery sold during each of the latest five fiscal years was: $\$ 57,249,306$ in $1949-50, \$ 57,178,573$ in 1950-51, $\$ 65,093,099$ in 1951-52, $\$ 67,182,548$ in 1952-53 and $\$ 64,546,067$ in 1953-54. Receipts from postage meter or postage register impressions and postage paid in cash by other means were as follows: $\$ 36,292,710$ in 1949-50, $\$ 39,979,297$ in 1950-51, $\$ 48,945,565$ in 1951-52, $\$ 52,733,682$ in 1952-53 and $\$ 55,398,788$ in 1953-54.

## Section 2.-Auxiliary Postal Services

Auxiliary postal services include the issuing of money orders and the operation of the Post Office Savings Bank.

Table 4 shows the amount of money-order business conducted by the Postal Service in recent years. A table showing the financial business of the Post Office Savings Bank will be found in Chapter XXVI, Currency and Banking.
4.-Operations of the Money-Order System, Years Ended Mar. 31, 1915-54

Nots.-Figures from 1868 will be found in the corresponding table of previous Year Books beginning with the 1911 edition.

## PART V.-THE PRESS

The Canadian Press.-The Canadian Press is the co-operative news-gathering association through which the daily newspapers receive basic world and Canadian (other than local) news reports.

The Canadian news is essentially an exchange between regions, provided by the member papers, edited by CP staffs, transmitted over CP wires and supplemented by direct CP staff reporting, particularly at Ottawa where Parliament is covered directly by CP men for the association's 92 members. World news is obtained from Reuters and the Associated Press, supplemented by a bureau at London, England, and by another at New York, U.S.A., where Canadian editors route AP, Reuters and CP copy into Canada.

Press Statistics.-The following tables are based on data estimated from Canadian Advertising. One serious difficulty has been encountered in connection with the compilation of circulation figures. Reliable circulation figures are relatively easy to obtain for daily newspapers because, in their own best interest, such papers qualify for and subscribe to the Audit Bureau of Circulation requirements: for these, A.B.C. 'net paid' figures were used. However, it is difficult to obtain reliable circulation figures for many weekly newspapers that do not subscribe to the Audit Bureau. Here total circulation (paid and free) was taken where such figures were supported by sworn statements or some other reliable record.

In compiling magazine circulation, total net paid figures, as reported by publishers to the Audit Bureau (including bulk sales), were used. Where such figures were not available-and this was rare-publishers' minimum claims or sworn statements were accepted.

Daily Newspapers.-Daily newspapers are published in Canada in three main language groups: English, French, and foreign. French daily newspapers have, as would be expected, a wide circulation in the Province of Quebec and some of the largest of these papers have been established in that Province for over 60 years. Eleven of the 13 French-language newspapers published in 1953 were established in Quebec Province; and one each in the Provinces of Ontario and New Brunswick.

Many of the daily newspapers extend their influence over the rural areas surrounding the cities where they are published. In this respect, they supplement the weekly newspapers which feature essentially local news and serve the smaller cities, towns and rural areas only.

The larger metropolitan dailies, especially those of Montreal, Que., and Toronto, Ont., have built up considerable circulation in areas outside their own citics. This is especially true since rapid freight transport by highway and latterly by air has become more common. Moreover, because they command exclusive feature services that the dailies of the smaller cities cannot afford, they are thus placed in an advantageous position in competition with the local dailies.

Weekly Newspapers.*-Weekly newspapers circulate within relatively restricted areas around their publication centres. They cater to a limited local interest but, within the areas they serve, exercise an important influence. Canada is well served by foreign-language weekly newspapers; in 1953, these had a stated circulation of 271,831 copies, among which Ukrainian language papers had a circulation of 67,251 copies, German 38,484, Yiddish 28,465, and Polish 24,690 copies.

${ }^{1}$ Includes some bi-and tri-weeklies. $\quad{ }^{2}$ Círculation for 1 newspaper only.

Other Publications and Periodicals.-Table 6 shows the number of publications, other than newspapers, published in Canada. Monthly and weekly magazines and periodicals enjoy the largest circulation: those dealing with home, social and welfare, agricultural and rural topics, and religious, trade, industry and related subjects are the most popular.

## 6.-Estimated Numbers and Circulations of reporting Magazines and Related Publications, by Broad Classifications, 1951-53

Note.-Figures from 1945 will be found in the corresponding table of previous Year Books beginning with the 1947 edition.

Nors.-The interpretation of the symbols used in the tables throughout the Year Book witl be found facing $p .1$ of this volume.

## PART I.-THE MOVEMENT AND MARKETING OF COMMODITIES

Domestic trade is broad and complicated: it encompasses all values added to commodities traded, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services including those directed to the amusement of the people, such as theatres and sports. However, not all phases of this broad field are covered here, though, wherever possible, cross references are given to related material appearing in other Chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The Index will be found useful in this respect.

## Section 1.-Merchandising and Service Establishments

## Subsection 1.-Statistics of the 1951 Census of Distribution*

The 1951 Census of Distribution is the third of its kind taken in Canada. The first complete survey of trading establishments was taken as part of the Census of 1931, and related to business transacted during the calendar year 1930. The

[^312]results of that Census are contained in Vols. X and XI of the 1931 Census report and constitute the first detailed body of data available regarding the wholesale, retail, and service marketing structure of the country.

Results of the second complete Census of Distribution relate to the year 1941, and provide a means of measuring the changes which took place in the marketing structure of Canada during the years 1930-41. These data are contained in Vols. X and XI of the 1941 Census report. The information secured through the 1951 Census of Distribution, reflects the many changes that took place during the great expansion period following World War II. Complete details are contained in Vols. VII and VIII of the 1951 Census report.

Wholesale Trade.-The Census of Distribution bases its survey of wholesale trade on a concept that includes all establishments engaged in trade with customers other than household consumers, provided the establishment is mainly engaged in the resale of goods it originally purchased. Therefore, manufacturing establishments do not fall within this category nor do retailers selling to household consumers, but the definition does include those entrepreneurs who relay goods from the producer direct to retailers for resale, as well as those whose principal trade is with business establishments, and other large non-household consumers, which purchase goods for their own consumption. Contingent upon, or complementary to, these types of operation, are the wholesalers who facilitate this relay of goods, either by bringing buyer and seller together (agents and brokers), or by actually buying the goods for subsequent trading within the wholesale field itself. This results in a considerable volume of trade between the various types of wholesalers, as is shown in Table 1. It follows, therefore, that the sum of the sales of all types of wholesalers overstates the actual value of goods moving out of the wholesale field.
1.-Percentage Distribution of Wholesale Sales, by Major Type of Operation, 1951

| Major Type of Operation | Retailers (for Resale) | Industrial and Other Large Users | Other Wholesalers (for Resale) | Household Consumers | Export |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | p.c. | p.c. | p.c. | p.c. | p.c. |
| Wholesalers proper | 48.9 | 32.5 | 10.5 | $2 \cdot 0$ | $6 \cdot 1$ |
| Petroleum, bulk tank stations............ | 31.8 | $34 \cdot 4$ | 25.5 | $6 \cdot 9$ | 1.4 |
| Assemblers of primary products.......... | 15.5 | 26.9 | 43.4 | $2 \cdot 5$ | 11.7 |
| Manufacturers' sales branches and offices. | 30.8 | 37.2 | 17.3 | $0 \cdot 2$ | 14.5 |
| Agents and brokers..................... Other types of operation........ | 12.7 82.8 | 20.8 14.6 | 32.8 2.0 | 0.1 0.3 | 13.6 0.3 |
| All Establishments............ | $34 \cdot 4$ | 31.8 | 19.4 | $1 \cdot 6$ | 12.8 |

Wholesale establishments are classified by two criteria: according to the manner in which they conduct business operations (type of operation) and according to the type of goods sold (kind of business). Table 2 presents statistics classified by type of operation, and Table 3 is a compilation by kind-of-business classification. In this connection, establishments were classified individually according to the characteristics of the establishment concerned, and not on a firm basis. As a result, multiple establishments under the same ownership could be classified differently, depending on the operations of each establishment. It is also noteworthy that the classifications have their descriptive limits; consequently, each establishment was classified according to its major characteristics. Thus, it is often true that an establishment assigned to a specific category, e.g., "food", was for the most part engaged in the sale of food, but non-food commodities could have been sold in varying minor proportions.

In 1951, there were 26,167 wholesalers of all types whose aggregate volume of business transacted was $\$ 14,401,036,700$. The number of establishments increased $5 \cdot 7$ p.c. as compared with 1941, but the dollar volume of business increased about three-fold.

As in 1941, the Provinces of Ontario and Quebec accounted for most of the trade in 1951 , but to a lesser degree- $65 \cdot 6$ p.c. in 1941 compared with 58.4 p.c. in 1951. The small declines in the proportion of the Canada total accounted for by these two provinces were offset mainly by increases in Manitoba and British Columbia. Most of the total sales volume originated in the larger cities; $79 \cdot 1$ p.c. in cities of 30,000 population or over and 58.4 p.c. in the four largest Canadian citiesMontreal, Toronto, Winnipeg and Vancouver.

By kind of business, wholesalers proper were most active in groceries and food specialties, where sales of $\$ 883,272,800$ accounted for $16 \cdot 1$ p.c. of total trade in those commodities. Manufacturers' sales offices were most active in metals and metal work, machinery and electrical goods; and the trading of agents and brokers was most important in terms of dollar sales volume of farm products (raw materials).

Wholesalers of all types employed a minimum of 178,658 persons and a maximum of 224,526 in 1951. Though the figures for employees were not compiled on a basis comparable with 1941, the payroll in 1951 of $\$ 543,047,800$ was comparable with that of $\$ 189,449,100$ in 1941 , and exceeded it by $180 \cdot 6$ p.c.

Table 5 shows wholesale establishments grouped according to the number of employees for 1951 . Those with five or more employees accounted for only 36 p.c. of the total number of establishments, but were responsible for 78 p.c. of the total dollar volume of wholesale trade.

Retail Trade.-The tables of this Subsection incorporate data for all establishments within the scope of the 1951 Census of Distribution, the basis for inclusion being conformity to the definition that an establishment must be a recognizable place of business, engaged mainly in the selling of merchandise to household consumers. The most significant information tabulated in the Census is the total dollar volume of sales made through retail establishments during the year 1951, and the total number of such establishments in existence at a designated point in time (June 1951).

Total sales and numbers of establishments have been tabulated by province, by county or census division, by incorporated city, town or village of 1,000 population or over and, for the first time, by metropolitan area. Additional information on employment and payrolls, year-end inventories and credit have been tabulated in lesser detail in certain instances. Complete results are available in 1951 Census Vol. VII-Retail Trade.

In addition to the more obvious types of retail outlets, such as drug stores, grocery stores, restaurants and shoe stores, the Census included, among others, gasoline filling stations, lumber and building materials dealers, fuel dealers and florists. Although by far the major part of retail trade is carried on in retail establishments, a fair amount is transacted through other distribution channels, the more important of which are manufacturing bakeries and dairies, service establishments such as hotels and bowling alleys, wholesale establishments and itinerant operators without an established place of business. A summary table showing these segments of retail trade appears in the Census of 1951 Vol. X.

In 1951 , there were 151,626 retail establishments engaged mainly in selling merchandise to household consumers, and they accounted for a total sales volume of $\$ 10,652,779,800$. This was an increase of 14,295 establishments since the previous count was made in 1941, and an increase of $\$ 7,211,877,800$ in terms of dollar sales volume. All provinces, except Saskatchewan, had more retail establishments in operation in 1951 than in 1941, and all shared in the greatly expanded dollar sales volume. Ontario, with one-third of Canada's retail stores, had sales of $\$ 4,116,372,500$ or almost 40 p.c. of the total retail trade in Canada. Quebec, with 43,572 stores, had sales of $\$ 2,436,913,100$ in 1951. Sales in British Columbia were also over $\$ 1,000,000,000$. Newfoundland's retail trade was measured for the first time in 1951 and showed 4,090 stores with sales of $\$ 159,805,000$. Table 7 gives summary figures of retail trade, by province.

## 7.-Summary of Retail Trade, by Province, 1951

| Alberta.................... | 9,943 | 848,283 | 124,227 | 10,319 | 30,501 | 41,008 | 63,750 |
| British Columbia. | 13,151 | 1,082,637 | 147,773 | 12,372 | 45,067 | 62,139 | 101,897 |
| Yukon and N.W.T......... | 156 | 11,858 | 3,528 | 100 | 323 | 429 | 896 |
| Canada............... | 151,626 | 10,652,780 | 1,478,123 | 150,089 | 454,794 | 603,891 | 910,012 |

Results of the Census showed that two of the 15 census metropolitan areas accounted for retail sales well in excess of $\$ 1,000,000,000$ each-Toronto metropolitan area had sales of $\$ 1,244,003,100$ and Montreal metropolitan area, $\$ 1,211,676,300$. The 15 census metropolitan areas had a total retail sales volume of $\$ 5,104,414,300$ in 1951 , or nearly 48 p.c. of all retail sales in Canada. Retail sales in the Toronto metropolitan area represented about 30 p.c. of total Ontario retail sales, and the aggregate sales for the five Ontario metropolitan areas (Toronto, Hamilton, Ottawa, Windsor, and London) accounted for 49 p.c. of the provincial total. In comparison, retail stores in the Montreal metropolitan area had nearly 50 p.c. of the total sales for the Province of Quebec, and those for Quebec City another 8 p.c., making approximately 58 p.c. of the provincial total for the Province's two metropolitan areas. In British Columbia, Vancouver metropolitan area stores had 52.5 p.c., and those of Victoria metropolitan area, $9 \cdot 4$ p.c. of the Province's total sales.
8.-Retail Trade by Major Groups of Business, for Fifteen Census Metropolitan Areas, 1951

[^315]The 106 urban centres in Canada with populations of over 10,000 in 1951 had retail sales totalling about $\$ 6,468,000,000$ in that year, or 61 p.c. of Canada's total retail trade. In the city of Montreal sales exceeded $\$ 1,000,000,000$ and those in the city of Toronto were slightly under that figure. Vancouver and Winnipeg ranked third and fourth with sales of $\$ 456,000,000$ and $\$ 310,000,000$, respectively. Table 9 shows figures for each of the 106 urban centres for 1941 and 1951.

## ${ }^{1}$ Not incorporated in 1941.

When sales figures, tabulated by kind of business, are examined for 1941 and 1951, two groups are of great significance-the food and beverage group with sales of $\$ 3,232,312,000$, and the automotive group with sales of $\$ 2,544,089,000$. Together, these two groups of stores accounted for sales of $\$ 5,776,401,000$ or more than one-half of all sales in Canada's retail stores. In the food and beverage group, the outstanding development has been the growing importance of the combination store selling groceries and fresh meat; the number of such stores doubled between 1941 and 1951, and sales quadrupled. The automotive group sales increase from $\$ 594,719,500$ to $\$ 2,544,088,600$ was the largest of the many substantial increases in the decade.

${ }^{1}$ Includes kinds of business for which separate figures are not shown.

Between the two Census years, 1941 and 1951, no significant change took place in the proportion of Canada's retail trade done by independent (including department) stores and chain organizations operating four or more units in the same kind of business. Chains actually accounted for a slightly smaller part of the total -16.7 p.c. in 1951 compared with $18 \cdot 6$ p.c. in 1941. On the other hand, independent stores had $83 \cdot 3$ p.c. of the total in 1951 compared with 81.4 p.c. in 1941. By individual trades, more noteworthy changes took place. Chain fillingstations dropped from 8.6 p.c. of the total in 1941 to $1 \cdot 1$ p.c. in 1951 , while chain household-appliance and radio stores decreased from $40 \cdot 5$ p.c. to $22 \cdot 6$ p.c. in the same period. In the women's apparel and accessories stores, chains increased their proportion of the total from $13 \cdot 2$ p.c. in 1941 to $17 \cdot 7$ p.c. in 1951. Results, in detail, are shown in Table 11.

A further analysis of this type of relationship is shown in Table 12, in which tabulations are given for independent stores, chain stores, and department stores, classified by economic regions for 1941 and 1951. It is evident from this analysis that the general trend for Canada as a whole, toward a greater portion of the retail business of the country being accounted for by independent stores and a smaller portion by both chain and department stores, holds true for each region.

INDEPENDENT, CHAIN AND DEPARTMENT STORE SALES

12.-Relative Positions of Independent, Chain and Department Stores, by Economic Divisions, 1941 and 1951

Stores, when grouped according to the volume of annual sales, showed a wide and varied pattern. Almost 2,000 stores had less than $\$ 1,000$ sales in 1951, compared with 8,995 stores in 1941 ; sales of these stores accounted for only $0 \cdot 1$ p.c. in 1951 of the Canada total compared with $0 \cdot 2$ p.c. in 1941 . In number of establishments, the small store dominated the picture, 70 p.c. of all stores having sales of less than $\$ 50,000$ in 1951. In contrast, stores with sales of $\$ 50,000$ or over in 1951 accounted for only 30 p.c. of the total number of establishments, but made $63 \cdot 5$ p.c. of all sales in retail stores. Further details are shown in Table 13.

## 13.-Retail Establishments grouped according to Annual Sales, 1941 and 1951

| Group | Stores |  |  |  | Annual Sales |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| $\$ 500,000-8999,999 \ldots$. <br> $\$ 1,000,000$ or over... | 413 | 0.3 | 2,625 | $1 \cdot 7$ | 649,597 | 18.9 | 3,585, 118 | 33.7 |
| Totals, All Groups... | 137,331 | $100 \cdot 0$ | 151,626 | $100 \cdot \theta$ | 3,440,902 | $100 \cdot 0$ | 10,652,780 | $100 \cdot 0$ |

${ }^{1}$ Less than 0.1 p.c.

In 1951, 56,875 or $37 \cdot 6$ p.c. of the retail stores in Canada had no paid employees, but these accounted for only 8 p.c. of total sales. Stores with fewer than 10 paid employees numbered 87,560 or $57 \cdot 7$ p.c. of the total in operation and had $51 \cdot 2$ p.c. of all sales. In comparison, stores with 10 or more employees were only $4 \cdot 7$ p.c. of the total number of establishments but had 40.5 p.c. of all sales.
14.-Retail Stores grouped according to Number of Employees, 1951

In 1951, 60,000 of Canada's 151,000 retail stores did business on a cash basis, and had total sales of $\$ 2,888,489,100$. The bulk of this trade was accounted for by the traditionally cash and carry businesses: restaurants, chain food stores, variety stores and drug stores. The important role which credit, both charge and instalment, has in retail selling is clearly shown in Table 15 and is particularly significant in such trades as the automotive group, department stores, clothing stores, and furniture and appliance stores.

${ }^{2}$ Figures withheld to avoid disclosure of individual operations.

In addition to tabulating the total sales by kind of business (as outlined in previous tables), the Census of Distribution analyzed commodities handled by each kind of business, and estimated the total value of the main commodities sold through Canada's retail stores. Table 16 shows the distribution of total sales of $\$ 10,652,780,000$, in fairly detailed groups of commodities. Two items predominated in 1951: $\$ 2,407,842,000$ worth of food and kindred products sold to consumers was 24 p.c. of all items sold in retail outlets, and $\$ 2,302,480,000$ worth of automotive commodities (new and used cars, gas, oil, parts and accessories, etc.) accounted for 22 p.c. of all commodities sold. Clothing (men's, women's, children's) and shoes accounted for sales of $\$ 1,300,800,000$, or $12 \cdot 5$ p.c. of all commodities. When used in conjunction with the general tabulations, this commodity information becomes significant in any study of distribution problems in Canada.

Service Establishments.-Service establishments as defined in the 1951 Census of Distribution included all those places of business whose major source of gross income (annual turnover) was derived from the rendering of services, as opposed to the sale of merchandise. The following types of service were covered: amusement and recreational, such as motion-picture theatres and bowling alleys; personal services such as barber shops and shoe-repair shops; certain business services such as advertising agencies and window-display services; repair services such as auto repair, radio repair and watch repair; burial services; photography, commercial and portrait; hotels and tourist camps; and other services such as cold-storage locker rentals and taxis.

The Census excluded the following: professional services such as those services rendered by doctors, lawyers and accountants; trade services such as those services rendered by carpenters, plumbers and electricians; public utilities such as gas, electricity and water; services not carried on in an established place of business, such as domestic service in a private home; and transportation services such as air, rail and boat (except taxis operating from stands).

The total number of service establishments enumerated in the 1951 Census was 58,748 , and their total receipts were $\$ 1,085,757,900$. Included in these 1951 figures were 8,741 establishments in the hotel and tourist camp group, with receipts of $\$ 370,911,200$, which were not included in the 1941 figures. Excluding this group of service establishments, the 1951 results showed a moderate increase of 736 establishments, but receipts increased by $\$ 460,168,700$.

All groups of establishments showed very large increases in dollar volume in 1951 compared with 1941, as shown in Table 17. Two groups, however, showed declines in number of establishments-the undertaking and funeral services group and the personal services group. In the latter group declines were shown in the number of barber shops, beauty parlours, shoe-repair shops and shoe-shine parlours and were common to all provinces.

Service establishments provided employment for a minimum of 143,800 , and a maximum of 190,048 , employees in 1951, and a payroll of $\$ 259,709,200$. Excluding hotels and tourist camps, the services payroll increased $\$ 114,228,000$ over the 1941 payroll of $\$ 62,984,000$.

## Subsection 2.-Annual Statistics of Merchandising and Service Establishments*

Current statistics on merchandising and service establishments are, in general, based on the results of the Decennial Census of Distribution. The results of the 1951 Census are shown in considerable detail in Subsection 1. Following completion of a Census, it is necessary to select new sample panels from which to make estimates for certain of the larger continuing surveys such as retail trade, wholesale trade and retail consumer credit. It is also necessary to carry out extensive revisions to bring the past estimates into agreement with the Census base and to continue this revision to the post-census estimates currently produced. At time of writing (September 1954), such new samples and revisions were not completed, so that this Subsection will deal only with certain "full-coverage" surveys not affected by post-census sampling and revising procedures. The latest available annual data on retail trade, wholesale trade and consumer credit are contained in the 1954 Year Book, pp. 928-934.

Operating Results of Retail Stores.-Operating results, profit and loss and balance-sheet data, are not covered by the Census of Distribution but are collected in a biennial survey, alternated with a similar study of certain wholesale and retail chain store trades. The 1952 retail survey gives figures for 20 major trades of the independent type of retail store. Latest results for wholesalers and retail chain stores are given in the 1954 Year Book, pp. 930 and 933 , respectively.

[^318]
## 18.-Operating Ratios of Independent Retail Stores, by Kind of Business, 1952

Note.-All figures except stock turnover are percentages of net sales.

${ }^{1}$ Includes salaries and wages and occupancy expenses.
2 Excludes delivery or proprietors' salaries. $\quad{ }^{3}$ Includes taxes and insurance, light, heat and power, repairs, maintenance, depreciation (except on delivery equipment) and rentals on rented premises. ${ }^{4}$ Includes, for unincorporated stores, proprietors' salaries or withdrawals. ${ }^{\text {Times per year-cost of goods sold, divided by average }}$ of beginning and year-end inventories.

Theatres.-The Canadian public spent a total of $\$ 118,434,481$ on motionpicture entertainment during 1952 of which $\$ 12,975,298$ was amusement taxes. Summary statistics of motion-picture theatre operations are presented in Table 19. The provincial distribution shown in Table 20 does not include itinerant operators.
19.-Summary Statistics of Motion-Picture Theatre Operations, 1952

${ }^{1}$ Includes, in addition to regular theatres, establishments in which motion-picture entertainment $\mathrm{i}^{8}$ provided by community organizations such as churches, lodges, Boards of Trade etc., and drive-in theatres. In 1949 such halls numbered 469, their receipts $\$ 1,140,307$, and drive-in theatres numbered 30 , and had receipts of $\$ 1,392,760$; in 1950,586 halls had receipts of $\$ 1,251,311$ and 62 drive-in theatres had receipts of $\$ 2,290,679$; in 1951, 632 halls had receipts of $\$ 1,499,560$ and 82 drive-in theatres had receipts of $\$ 3,347,670$; and in 1952,657 halls had receipts of $\$ 1,702,824$ and 104 drive-in theatres had receipts of $\$ 1,409,426$. $\quad 2$ Includes the Yukon and Northwest Territories.

Power Laundries, Cleaning and Dyeing Plants.-The value of work performed by 307 power laundries and 991 dry-cleaning plants operating in 1952 totalled $\$ 105,331,139$. The $\$ 51,644,977$ paid in salaries and wages to 28,738 employees during the year, accounted for almost one-half of total receipts.
21.-Statistics of Power Laundries, Dry-Cleaning and Dyeing Plants, 1941 and 1947-52, and by Province, 1952

For footnotes, see end of table.

[^319]Farm Implement Sales.-Sales of new implements and equipment at the wholesale price level amounted to $\$ 250,277,241$ in 1952 approximately 6 p.c. higher than in 1951. This figure represents manufacturers' and importers' sales which, at the retail level, were estimated at $\$ 307,000,000$. Sales of new repair parts amounted to $\$ 31,231,946$ at the wholesale level or an estimated $\$ 42,000,000$ at the retail price. These repair parts are not included with the amounts shown for new implements and equipment.

Sales of New Motor-Vehicles. - The post-war upward trend in new motor-vehicle sales continued in 1953 when 462,526 new vehicles were sold for $\$ 1,162,471,000$. The increase over 1952 was accounted for by passenger cars only, sales of commercial vehicles in 1953 showing a dechine of over 5,000 in number and $\$ 14,000,000$ in value from the previous year.

## Section 2.-Grain Trade

## Subsection 1.-Marketing Problems and Policies, 1953-54

Production of three of Canada's major grain crops-wheat, barley and ryein 1953 was the second highest on record and yields of most other grains were also considerably above average. The cumulative effect of the 1953 crop, following the unusually large production of 1951 and the record production of 1952, continued to impose a severe strain on all grain storage and handling facilities and to call for an unusually high degree of co-ordination in marketing Canadian grain throughout this period. As in recent years, marketing arrangements for wheat, oats and barley in Western Canada in 1953-54 continued under the system of compulsory crop-year pools administered by the Canadian Wheat Board. Rye and flaxseed in Western Canada and all grains in Eastern Canada continued to be sold on the open market.

Unprecedented quantities of Western Canadian grain have necessitated a continuous review by the Canadian Wheat Board of marketing methods considered most suitable to provide adequate supplies of the various grains to meet both domestic and export commitments and, at the same time, to ensure that producers have the opportunity of delivering grain in as equitable a manner as possible. In 1953-54, initial delivery quotas of three bushels per 'specified acre' were established for individual producers on the basis of their 'specified acreage', that is, acreage seeded to wheat (other than Durums), oats, barley, and rye plus summerfallow. The initial quota was adjusted as conditions permitted, all delivery points being on a 7 -bushel quota by July 9, 1954. Durum wheat and flaxseed remained on an open quota basis throughout the crop year.

Although marketings and exports of Canadian grain during the 1953-54 crop year did not continue the record-breaking levels of the preceding two crop years, they were well above average in total volume. Preliminary data on marketings of the five major grains in Western Canada in 1953-54 indicate a total of 610,100,000 bu., compared with $844,100,000$ bu. in 1952-53 and the ten-year (1943-44-1952-53) average of $557,900,000 \mathrm{bu}$. Combined exports of the same grains (including wheat flour, rye flour, rolled oats and oatmeal in grain equivalent) amounted to $437,900,000$ bu. as against $582,800,000 \mathrm{bu}$. in 1952-53 and the ten-year average of $381,800,000 \mathrm{bu}$.

Despite abnormally heavy marketings by farmers for three successive crop years, farm stocks of wheat, barley and rye at July 31, 1954, were the highest on record for the end of a crop year and those of oats and flaxseed had been exceeded only once before.

Combined stocks of the five major grains in all positions were estimated at a record $890,000,000 \mathrm{bu}$., more than two and one-half times as great as the 1944-53 average of $325,000,000 \mathrm{bu}$. These record total stocks of high-quality grain did much to offset the otherwise serious effects of the 1954 crop which was unusually low in both yield and quality.

Wheat.-Supply and Disposition.--Stocks on hand at the beginning of the 1953-54 crop year amounted to $369,200,000$ bu. These stocks, the largest since 1943, represented the fifth consecutive annual increase from the abnormally low level of $77,700,000 \mathrm{bu}$. on hand at July 31, 1948. The next-to-record 1953 wheat crop of $614,000,000 \mathrm{bu}$., together with large carryover stocks, provided total cropyear supplies of $983,600,000$ bu., the highest level on record.

${ }^{1}$ Includes wheat flour in terms of wheat.
${ }^{2}$ Less than 50,000 bu.
Exports of wheat and flour in terms of wheat during 1953-54 amounted to $255,100,000$ bu. $-130,400,000$ bu. lower than the $385,500,000$ in $1952-53$ and $35,300,000$ bu. below the ten-year (1943-44-1952-53) average of $290,400,000$. The $1952-53$ total of $385,500,000 \mathrm{bu}$. constituted the second highest crop exports on record. The 1953-54 figure otherwise is comparable to previous crop years in volume of exports. Exports in 1953-54, however, were well above the pre-war (1935-36-1939-40) average of $183,000,000 \mathrm{bu}$. and included the equivalent of $46,300,000 \mathrm{bu}$. of wheat in the form of wheat flour. Domestic utilization of wheat declined in 1953-54 to $145,800,000$ bu. as against $150,400,000$ in 1952-53 and the ten-year average of $156,000,000 \mathrm{bu}$. This decline is attributed to reductions in each of the main categories of use-animal feed, seed and human consumption; the level of domestic utilization however, was well above the pre-war (1935-36-1939-40) average of $114,000,000 \mathrm{bu}$. Reflecting these reductions in exports and domestic utilization, carryover stocks at July 31, 1954, reached a next-to-record level of $594,200,000$ bu.

Price and Marketing Arrangements.-Marketing of Western Canadian wheat during the 1953-54 crop year was again conducted by the Canadian Wheat Board on a one-year pool basis with the initial payment set at $\$ 1.40$ per bushel, basis No. 1 Northern in store Fort William-Port Arthur or Vancouver. The initial payment for No. 1 C.W. Amber Durum was established at $\$ 1.50$ per bushel as an incentive for farmers to expand production of this type for which a strong demand exists. No adjustment payments on 1953-54 deliveries were made during the 1953-54 crop year but on Nov. 6, 1954, an interim payment of 10 cents per bushel (amounting in total to some $\$ 38,000,000$ ) was announced to cover 1953-54 deliveries of wheat, with the exception of certain special varieties which had not yet been sold in sufficient quantity to justify an interim payment. Final payments to producers for wheat delivered to the $1953-54$ pool will depend on the average prices at which the Board has been able to sell the various grades, as well as on the costs incurred by the Board in carrying abnormally heavy stocks over an extended period of time.

Early in the 1953-54 crop year an interim payment of 12 cents per bushel for all grades was made on the 1952-53 pool and on Feb. 25, 1954, a final payment averaging 10.934 cents per bushel was announced on the 1952-53 pool deliveries. Prior to the deduction of the Prairie Farm Assistance levy, the net price
realized by producers in the 1952-53 pool for No. 1 Northern wheat, basis in store Fort William-Port Arthur or Vancouver, was $\$ 1.81871$ per bushel. The corresponding realized price for the 1951-52 pool was $\$ 1.83569$ per bushel.

The 1953-54 crop year coincided with the first year of the new three-year International Wheat Agreement. Under its provisions, Canada had a guaranteed export quota of $150,800,000$ bushels for $1953-54$ and, according to the final report on the year's transactions, Canadian sales under the Agreement totalled 90,900,000 bushels. The new Agreement operates under a price range of $\$ 2.05$ per bushel maximum and $\$ 1.20$ per bushel minimum in United States funds. Distribution of sales under the Agreement were quite widespread, with all but 14 of the 43 importing countries included in the pact purchasing either wheat or flour or both from Canada. The larger purchasers from Canada under the Agreement were the Federal Republic of Germany, $17,000,000$ bushels; Belgium, 13,000,000; and Japan, 12,000,000. The major part of Canada's wheat trade during 1953-54, however, was carried on in Class II wheat (that is, wheat exported outside the provisions of the International Wheat Agreement). The principal customer for Class II wheat was the United Kingdom which received exports of about $65,800,000$ bu. of Canadian wheat and flour in terms of wheat. The combined Canadian exports of $255,100,000$ bu. of wheat and wheat flour went to 83 countries, territories and colonies during the crop year.

During 1953-54, domestic sales of wheat, with the exception of Durum, were made at the same prices as those prevailing for wheat sold under the International Wheat Agreement. Between Aug. 1 and Sept. 24, 1953, Durums for the domestic market and for I.W.A. were sold at the same price, but on and after September 25 an additional ten cents per bushel was charged for domestic sales of Durum. During the first few weeks of the 1953-54 crop year, Class II prices, excepting Durums, were fractionally above the I.W.A. and domestic sales levels. For the remainder of the crop year, Class II prices for all grades except Durums coincided with I.W.A. and domestic quotations. Throughout the season, Class II Durums sold at a substantial margin over Durums sold under I.W.A. or for domestic use. No. 1 Northern, basis Fort William-Port Arthur for I.W.A. and domestic sales averaged $\$ 2.01 \frac{1}{4}$ during the month of August 1953, but declined to an average of $\$ 1.70 \frac{3}{4}$ per bushel by July 1954, the last month of the crop year.

Other Grains.-Supply and Disposition.-Preliminary data on supply and disposition of the major Canadian grains for the crop year 1953-54 together with revised and more detailed data for 1952-53 are set out in Table 31. Except for rye, production of each of the five major grains was somewhat below the record or nearrecord levels of 1952. Unusually large carryover stocks at July 31, 1953, however, more than offset the decline in production for wheat and barley. As a result, new records were established for crop-year supplies of wheat and barley which reached $983,600,000$ bushels and $373,700,000$ bushels, respectively.

Total exports of coarse grains continued in heavy volume during 1953-54. Exports of barley (including malt in barley equivalent) amounted to $93,700,000$ bushels, exceeded only by the record $122,100,000$ bushels in 1952-53. Exports of oats (including rolled oats and oatmeal) totalled $70,700,000$ bushels, surpassed only by the record $85,800,000$ bushels exported in $1944-45$ and the $74,700,000$ bushels shipped in 1943-44. Rye exports, at $16,800,000$ bushels, set a new record and exports of flaxseed, at $5,200,000$ bushels, were the largest since 1943-44. Despite substantial exports and the continuing high level of domestic use of all grains, new records were set at July 31, 1954, for year-end carryover stocks for both barley and rye, and oats stocks were the third highest on record.
31.-Distribution of Canadian Grain Crops, Crop Years Ended July 31, 1953 and 1954
(Millions of bushels)

${ }^{1}$ Import and export data for wheat, oats, barley and rye, respectively, include flour in terms of wheat, rolled oats in terms of oats, malt in terms of barley and rye flour in terms of rye.
${ }^{2}$ Less than 50,000 bu.
Price and Marketing Arrangements.-As in recent years, marketing of Western Canadian oats and barley was again carried on through compulsory crop-year pools administered by the Canadian Wheat Board. Initial payments for both grains were the same as in 1952-53, on the basis of 65 cents per bu. for No. 2 C.W. oats and 96 cents per bu. for No. 3 C.W. 6-Row barley, in store Fort William-Port Arthur. No interim payments were made on either grain during the crop year but final payments for both were announced in October 1954.

Final payments on the $101,193,954 \mathrm{bu}$. of barley delivered to the 1953-54 pool averaged $9 \cdot 71747$ cents per bu. after deduction of payment expenses and the 1 p.c. Prairie Farm Assistance Act levy. Total prices (basis in store Fort WilliamPort Arthur) realized by producers for representative grades, after deducting carrying charges in country and terminal elevators, Board administrative costs, etc., but before deducting the 1 p.c. P.F.A.A. levy, were $\$ 1 \cdot 05985$ per bu. for No. 3 C.W. 6-Row barley and $\$ 0.95009$ per bu. for No. 1 Feed barley. Final payments on the $89,725,291 \mathrm{bu}$. of oats delivered to the $1952-53$ pool averaged 6.2759 cents per bu. Total prices realized by producers for representative grades, on the same basis as for barley, were $\$ 0.70517$ for No. 2 C.W. and $\$ 0 \cdot 66175$ for No. 1 Feed oats.

Preliminary data indicate that about $11,900,000 \mathrm{bu}$. of rye and $7,400,000 \mathrm{bu}$. of flaxseed were delivered by farmers in Western Canada in 1953-54, both these grains being sold on the open market. In Eastern Canada, where commercial grain production is on a much smaller scale, all grain continued to be sold on the open market.

## Subsection 2.-Miscellaneous Grain Trade Statistics

Grain Handled at Eastern Elevators.-The sharp increases in the amount of grain handled at eastern elevators in the 1952-53 crop year reflect the record western grain production and unprecedented export movement of Canadian grain during that period. With the exception of rye, the volume of each kind of grain handled in 1952-53 showed increases over 1951-52 which in turn was a year of above-average grain movement. Total receipts of the five major grains in 1952-53 amounted to $665,051,141$ bu., about 20 p.c. above those of 1951-52 and nearly double those in each of 1949-50 and 1950-51. Total shipments, at $658,525,326$ bu., were 25 p.c. over those of 1951-52 and almost double those in each of the crop years 1949-50 and 1950-51.

## 32.-Canadian Grain Handled at Eastern Elevators, Crop Years Ended July 31, 1949-53

Nots.-Figures for the crop years ended 1922-29 are given in the 1931 Year Book, p. 626; for 1930-36 in the 1943-44 edition, p. 512; for 1937-42 in the 1947 edition, p. 816; and for 1943-48 in the 1951 edition, p. 830 .

Grain Inspections.-With the exception of oats and soybeans, the volume of grain inspected by the Board of Grain Commissioners for Canada in the crop year ended July 31, 1953, was well above that of the preceding crop year. Inspections of wheat, at $479,844,901$ bu., and barley, at $145,084,914$ bu., were up by 11 p.c. and 33 p.c., respectively, but inspections of oats, at $105,623,582$ bu., were down by 9 p.c. from those of 1951-52. In total, these three grains accounted for 95 p.c. of the Canadian grain inspected in 1952-53.
33.-Quantities of Grain Inspected, Crop Years Ended July 31, 1952 and 1953

Lake Shipments of Grain.-The 1953 navigation season opened with the arrival of the first vessel at the Lakehead in mid-afternoon, Mar. 27, almost equalling the record early opening at 4 a.m. Mar. 27, 1945, and closed on Dec. 14, four days earlier than in 1952. During the season, total vessel shipments of wheat, oats, barley, rye, flaxseed and buckwheat from Fort William-Port Arthur amounted to $441,983,089 \mathrm{bu}$., down slightly from the 1952 total of $450,807,914 \mathrm{bu}$. Shipments of barley and oats, at $110,471,694$ bu. and $98,202,498$ bu., respectively, set new records for the second consecutive year for these grains.

## 34.-Lake Shipments of Canadian Grain from Fort William-Port Arthur, Ont. Season of Navigation, 1952 and 1953

${ }^{1}$ Includes following shipments direct to Europe: wheat, 171,708; rye, 61,210; and flaxseed, $53,277 \mathrm{bu}$. ${ }^{2}$ Includes following shipments direct to Europe: wheat, 251,539 and barley, 695,339 bu.; and 259,524 bu. of wheat lost in shipwreck.

Wheat Flour.-After reaching a peak of $28,588,000 \mathrm{bbl}$. in 1946-47, Canadian wheat flour production dropped to a post-war low of $20,259,000 \mathrm{bbl}$. in 1949-50. Production in each of the following three crop years was only slightly below the five-year ( $1945-46-1949-50$ ) average of $23,985,000 \mathrm{bbl}$. A rather sharp drop in $1953-54$, however, reduced output of flour to $20,801,000 \mathrm{bbl} ., 13$ p.c. below the 1952-53 total. The proportion of milling capacity utilized for the crop year 1953-54 averaged $70 \cdot 1$ p.c. compared with $81 \cdot 4$ p.c. in 1952-53.

Exports of wheat flour during recent years have followed approximately the same pattern as production, dropping from the 1946-47 peak of $16,896,000$ bbl. to $10,151,000 \mathrm{bbl}$. in 1949-50. Exports in 1953-54 amounted to $10,277,000 \mathrm{bbl}$., representing approximately one-half the total production, a ratio which has been maintained fairly consistently in recent years.

## Section 3.-Live Stock Marketings*

Marketings of all classes of live stock, except hogs, were greater in 1953 than in 1952. Recorded marketings of cattle through public stockyards, packing plants and direct export were almost 24 p.c. higher in 1953; the number of graded steers increased 23 p.c., fed calves 47 p.c. and cows and heifers 14 and 13 p.c., respectively. Calf marketings, other than the older fed calves included with cattle, totalled 837,722 head as compared with 637,863 in 1952 and the marketings of sheep and lambs, at 570,289 head, exceeded the previous year's total by about 20,000 . Disposition of sheep and lambs was higher than in 1953 in all provinces except Alberta which had shown a sharp increase in 1952. Although 1953 hog marketings at $5,000,000$ head were lower by $1,700,000$ than 1952 marketings, the 1953 figure represented the third highest annual output since the peak movement of almost $8,900,000$ head in 1944. Hog gradings in 1953 indicated further lowering of quality; the proportion in Grade A dropped to 27.3 p.c. as compared with $28 \cdot 5$ p.c. in 1952 and $31 \cdot 3$ p.c. in 1951. On Mar. 31, 1953, the United States removed the restrictions on the importation of live stock and meats which had been in effect since Feb. 25, 1952. Price differentials, however, were so narrow between Canadian and United States markets that a relatively small export movement took place.

## Section 4.-Warehousing and Cold Storage*

Warehousing ranks high among the means by which the utilities of 'place', 'time' and 'possession' are added to the products of industry. Its importance has been emphasized in modern times because of the introduction of cold-storage methods to the conservation of perishable foods.

The presentation of warehousing statistics is difficult because it is not an easy matter to define clearly what are to be regarded as stocks in storage. In these days of complicated business relationships and especially since the rise of the department store and chain store as characteristic institutions in the retail merchandising field, it often happens that warehousing is carried on in close relationship with merchandising. However, if the strict economic definition of warehousing is adopted then this term should be restricted to those facilities that add the utility of 'time' to the 'form' utilities that are the product of the extraction and manufacturing industries. Because the warehouses established in close connection with retail trade are more often than not convenient places for the temporary storage of goods in process of transfer from the manufacturer or wholesaler to the consumer, then they are not, in the strict economic sense, services that add the utility of 'time' to commodities already worked up into 'form'. At least, as some clear line must be drawn and because separate statistics of the latter branch of storage are not available, it is considered practicable to interpret warehousing in this way.

The statistics of warehousing are shown together under one general heading in this Section. Subsection 1 presents statistics of the licensed storage of grain. Subsection 2 deals with cold-storage facilities without which perishable foods such as meats, dairy products, fish and fruits could not be exchanged or distributed on a wide scale; it includes also figures of stocks of food on hand. Subsection 3 deals with the storage of petroleum and its products and Subsection 4 with public warehouses and customs warehouses. The facilities that specialize in the storage of tobacco and alcoholic liquors are analysed in Subsection 5. These bonded warehouses, as they are called, are under the strict surveillance of Federal Government excise officers who supervise all movements into and from such places of storage.

## Subsection 1.-Licensed Grain Storage

Total grain storage in Canada licensed under the provisions of the Canada Grain Act by the Board of Grain Commissioners for Canada at Dec. 1, 1953, amounted to $561,505,000$ bu., an increase of $22,215,000$ bu. over the level of Dec. 1, 1952. Slightly over $16,000,000 \mathrm{bu}$. of this increase occurred in country elevators, reflecting the need for providing additional storage resulting from the cumulative effect of three large Western Canada grain crops. Licensed grain storage capacity in Canada reached a peak of $603,000,000$ bu. at Dec. 1, 1943, but, following the disposal of heavy wartime stocks, declined to $428,000,000$ bu. at Dee. 1, 1947. Since that date licensed grain storage capacity has increased each year.

[^322]The harvesting and marketing of crops of record or near-record proportions in Western Canada in 1951, 1952 and 1953 have imposed an unusually heavy strain on all grain storage and handling facilities. The problem was further complicated at the beginning of this three-year period by the large proportion of out-of-condition grain harvested in the autumn of 1951, requiring special binning and thereby reducing effective storage capacity, and the abnormally large amount of grain harvested in the spring of 1952. As a result, a much higher proportion than usual of elevator space was occupied at the beginning of the 1952-53 crop year. Despite extremely heavy domestic and export movement of grains in both 1952-53 and 1953-54, an unusually high proportion of elevator space, as indicated in Table 38, remained occupied throughout this period. Although information is given in the following table for only three dates in the crop year, weekly data on stocks of grain in various commercial positions may be obtained from the DBS Grain Statistics Weekly.

## 38.-Licensed Grain Storage Capacity and Grain in Store, 1952-53 and 1953-54

Nore.-Because these figures are exclusive of stocks in transit or in eastern mills, they are lower than those shown in Table 15, p. 412.

[^323]
## Subsection 2.-Cold Storage and Storage of Foods

Cold-Storage Warehouses.-Under the Cold Storage Act (R.S.C. 1952, c. 52), as amended (R.S.C. 1952, c. 313), subsidies are granted by the Federal Government to encourage the construction and equipment of cold-storage warehouses open to the public. The Act is administered by the Department of Agriculture.

There are five classifications of cold-storage warehouses in Canada: (1) public warehouses which store foods and food products and of which the entire space is .open to the public; (2) semi-public, or those which store foods and food products and which, though retaining part of the space for the products of the owner, allot the remainder to the public; (3) private or those which store foods and food products and allot no space to the public, a classification that includes refrigerated space in connection with abattoirs, creameries, dairies, cheese factories and wholesale and retail distributing warehouses; (4) locker plant, where the total space is occupied by lockers for rental to the public and which may, in addition, cut, process, chill and freeze foods and food products for storage in lockers; and (5) bait depots, having space used solely or principally for freezing and storing bait for the use of fishermen.

No hard and fast rule can be laid down for distinguishing between public and private warehouses. In general, those owned and operated by firms trading in the goods stored in the warehouse are considered as private, though most of these places rent space to the public when it is not required for their own purposes.

Though the figures in Tables 39 and 40, compiled by the Department of Agriculture, give some idea of the cold-storage warehouse capacity in Canada, it must be explained that it is not possible to secure completely accurate information on this subject and that these figures are approximations only.

Cold Storage of Fish.-The stocks of frozen fish held in Canada during 1953 followed the normal seasonal pattern. During the first four months, when activity in the industry was reduced because of weather conditions, stocks gradually declined. As summer operations began and production of frozen fish increased, stocks rose and continued to do so until the end of October. Production declined with the coming of winter and a greater proportion of the demand for frozen fish was supplied out of stocks.

Stock figures at the beginning of each month in 1952 and 1953 for the 10 provinces were as follows:-

|  | Month | 1952 | 1958 | Month | 1958 | 1953 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | ' $000,000 \mathrm{lb}$. |  |  | '000, 000 lb . |  |
| Jan. |  | $44 \cdot 5$ | $54 \cdot 7$ | Aug. 1. | $55 \cdot 4$ | $50 \cdot 5$ |
| Feb. |  | $35 \cdot 5$ | $45 \cdot 8$ | Sept. 1. | $60 \cdot 1$ | $58 \cdot 6$ |
| Mar. |  | $33 \cdot 1$ | 38.4 | Oct. 1. | $66 \cdot 3$ | 59.8 |
| Apr. |  | $27 \cdot 4$ | 34-3 | Nov. 1. | $66 \cdot 6$ | $60 \cdot 9$ |
| May |  | $29 \cdot 7$ | $32 \cdot 7$ | Dec. 1. | $60 \cdot 5$ | $57 \cdot 4$ |
| June |  | $35 \cdot 0$ 46.0 | $\stackrel{37 \cdot 3}{46.7}$ |  |  |  |
| July | .... | $46 \cdot 0$ | $46 \cdot 7$ | Averages. | $46 \cdot 7$ | 48.1 |

The holdings of frozen fish reflect the level of production as well as the market at a given time. The demand for some frozen products was not as great in 1953 as in 1952 and, despite slightly reduced supplies of fish for freezing, average monthly holdings of frozen fish were higher than those of the previous year. Dressed Pacific halibut stocks in 1953 showed the greatest increase over 1952; production of this product was high but demand was somewhat lower. Holdings of Atlantic cod fillets were larger in the first four months of 1953 than in the same period of the previous year. Canadian fillets experienced more intensive competition in the United States market from other producers which in turn reduced demand for the Canadian product. Lower than normal output during the summer and autumn period and an improved market caused stocks to decrease below 1952 levels.

Average monthly holdings of the main fish products in 1952 and 1953 for the 10 provinces were as follows:-

| Group and Product | 1952 | 1953 |
| :---: | :---: | :---: |
|  | '000,000 lb. |  |
| Frozen, Fresh Seafish- <br> Salmon, Pacific, dressed and filleted | $8 \cdot 4$ | $7 \cdot 1$ |

Cold Storage of Dairy Products.-Cold-storage facilities are a necessary adjunct in the manufacture of dairy products, most of which are perishable in varying degrees. All creameries have facilities for the storing of butter, the size and type of storage depending on the size of the creamery. If the butter produced at small country plants is not printed for immediate sale, the butter solids are disposed of or are transported to larger creameries where better refrigeration is available or to private or public cold storages in the larger urban centres.

Temperature control is important in the curing process for cheese as well as in the prevention of deterioration. Most cheese factories are equipped with mechanical refrigeration and are required to have storage capacity for 17 days' produce during the period of maximum manufacture. The cheese is then transferred to central warehouses.

Milk is placed in storage as soon as it is bottled and held until delivery. Dry whole milk and other dried milk products containing fat are usually stored in cool air chambers to prevent rancidity.

Cold Storage of Other Foods.-Cold-storage space for apples in Canada has increased rapidly in recent years as a result of the promotion of orderly marketing, the extention of the marketing season generally, and increased production in some areas. The trend has followed the curtailment in shipments to traditional markets in the United Kingdom and other European countries after World War II. There has been an increase recently in the construction of both private and co-operatively owned storages, particularly in the Province of Quebec. Increase in cold-storage capacity is illustrated by the distribution of Dec. 1 storage stocks. During the five-year period 1943-47, only 53 p.c. of the holdings were in cold storage. In 1951, 1952 and 1953 the proportions had risen to 80 p.c., 84 p.c. and 94 p.c., respectively.

Potatoes are not ordinarily held in cold storage but there has been an increase in the construction of modern type potato storage houses and warehouses, particularly in the commercial producing areas.

## Subsection 3.-Storage of Petroleum and Petroleum Products

Bulk storage plants for petroleum and petroleum products are established at convenient distributing centres, usually on a water-front so that full advantage can be taken of the lower cost of water-borne traffic. From these centres the goods are transferred by boat, rail or truck to smaller distributing depots or directly to retail outlets. The principal refining and distributing centres are located at or near Halifax, Quebec, Montreal, Ottawa, Toronto, Sarnia, Fort William, Regina, Calgary, Turner Valley, Edmonton and Vancouver.

## 42.-Inventories of Petroleum and Petroleum Products in Storage at Jan. 1, 1950-54

(Barrels of 35 Imperial gallons)
Notr.-Figures for 1940-48 are given in the 1950 Year Book, p. 852, and for 1949 in the 1954 edition, p. 925.

${ }^{1}$ Not classified separately.

## Subsection 4.-General Warehousing

Public Warehouses.-In 1944, the Dominion Bureau of Statistics began an annual census of the principal public warehouses in Canada. The latest figures available at the time of going to press are those for 1951 , which are summarized in the 1954 Canada Year Book, pp. 925-926. Complete details are given in DBS report, Warehousing, 1951.

Customs Warehouses.-Warehouses for the storage of imported goods are known as customs warehouses. These are divided into nine classes, as follows: (1) those occupied by the Federal Government, some of which are used for examination and appraisal of imported goods and others, known as Queen's Warehouses, are used for the storage of unclaimed, abandoned, seized or forfeited goods; (2) warehouses, consisting of an entire building or part thereof, properly separated from the rest of the building by a partition, which are used exclusively for the storage of imported goods consigned to the proprietor of the building; (3) buildings or parts of buildings properly partitioned off, used for the storage of imported goods consigned to the proprietor or others, or for the storage of unclaimed or seized goods; (4) sufferance warehouses operated by the owners of vessels for the storage of in-bond goods transported by water or air, those operated by railway companies and those operated by express companies; (5) yards, sheds and buildings intended for the storage of imported coal and coke; (6) farms, yards, sheds, etc., which an importer of horses or sheep intends to use for the feeding and pasturing of m ported animals other than pure-bred mares; (7) warehouses for the storage of
animals, including horses for racing, and articles for exhibition or competition for prizes; (8) warehouses for clover seed imported for the purpose of being recleaned and prepared for a foreign market; and (9) yards, sheds, etc., which importers intend to use for the storage of goods too heavy or too bulky to be admitted to an established customs warehouse.

## Subsection 5.-Bonded Warehousing and Storage of Wines

Bonded Warehousing.-The Excise Duty Branch of the Department of National Revenue considers any premises licensed under the Excise Act to be a warehouse, whether for storage of raw materials to produce finished tobacco or cigar products or for spirits or malt used for brewing. Practically the total production of spirits is placed in bonded warehouses and only a small part of the output of beer is retained in storage. Wine, unlike spirits and beer, is not secured under bond. All imports of alcoholic beverages must go through bonded warehouses before being released to Provincial Liquor Commissions or Boards, or other agencies authorized by the Commissions or Boards to take alcoholic beverages out of bond. Similarly, tobacco, cigars and cigarettes that are not stamped and duty paid are secured in bond. In addition to these warehouses, there are those in which no manufacturing or production is carried on but which are being used solely for the storage of goods upon which duty has not been paid. Goods are stored in these warehouses usually for the purpose of rapid distribution and for delivery as ships' stores.

Spirits, Tobacco and Malt in Bond.-Table 43 shows the quantities of distilled liquor, tobacco, cigars and cigarettes in bond in recent years. The yearly inventory of breweries showed an increase of total gallonage of beer in stock from $23,388,779$ gal. in 1952 to $27,334,817$ gal. in 1953.
43.-Distilled Liquor, Tobacco, Cigars and Cigarettes in Bond, Quarterly, 1950-54

Beverage spirits, as shown in Table 44, refer to spirits released for consumption but not to industrial alcohol; malt beer does not include beer made from duty-free malt; malt used is the total malt used to produce the malt beer; tobacco includes all types of manufactured tobacco products and snuff.

## 44.-Beverage Spirits, Malt Beer, Malt, Tobacco and Tobacco Products taken out of Bond, Destined for Consumption, 1944-53

Nore.-The figures published in the corresponding table of the 1952-53 and previous Year Books are on a different basis from those published in this table.

| Year | Beverage Spirits | Malt <br> Beer ${ }^{1}$ | Malt <br> Used | Cigars | Cigarettes | Tobacco |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | pf. gal. | gal. | lb . | '000 | '000 | '000 lb. |

${ }^{1}$ Duty has been paid herein on the malt.
Storage of Wines.-The wine industry is confined to a few localities such as the Niagara Peninsula in Ontario and the Okanagan Valley in British Columbia. Firms manufacturing native wines are not bonded, as far as the Federal Government is concerned, nor is wine in storage for maturing placed in bond. The only goods warehoused in bond in connection with wineries are sugar supplies and supplies of grape spirit distilled by the distilleries and held by the wineries for fortifying wines. Native wine produced and placed in storage for maturing and blending for the years 1948-52 was reported as follows:-

| Year |  | Ontario | Other Provinces | Total |
| :---: | :---: | :---: | :---: | :---: |
| 1948. | $\stackrel{\mathrm{gal} .}{\S}$ | $\begin{aligned} & 4,377,487 \\ & 2,786,186 \end{aligned}$ | $\begin{aligned} & 661,134 \\ & 513,639 \end{aligned}$ | $\begin{aligned} & 5,038,621 \\ & 3,299,825 \end{aligned}$ |

## Section 5.-Co-operative Organizations*

Co-operative business in Canada as reported by marketing, purchasing and service organizations, and fishermen's co-operatives for the crop year ended July 31, 1953 , amounted to $\$ 1,202,325,902$. This figure is $\$ 90,000,000$ greater than the volume reported in 1952. Co-operatives reporting for the year 1953 numbered 2,773 , compared with 2,616 in 1952 and total membership was $1,429,003$, compared with $1,297,614$.

The volume of farm supplies marketed co-operatively was $\$ 876,300,000$ and sales of farm supplies and merchandise through co-operatives were valued at $\$ 256,700,000$.

[^325]Fishermen's co-operatives reported increases in sales values of fish marketed. In 1953, the volume was $\$ 17,200,000$, compared with $\$ 13,900,000$ in 1952 . Sales of supplies to fishermen through co-operatives fell off slightly. Service co-operatives reported total revenue from services offered was $\$ 20,600,000$. This is a substantial increase over the 1952 figure and is the result of more complete and accurate reporting.

Developments 1952-53.-Numerous valuable and interesting publications dealing with co-operatives were issued in 1953. One was A Guide to Co-operative Housing, prepared and published by St. Patrick's College, Ottawa, Ont. The United States Department of Agriculture made a study of the possibilities of trade between Canada and United States Co-operatives and published a bulletin entitled Trade with Canadian Co-operatives. One colour film was in production in 1953 for Manitoba Pool Elevators Limited.

Canada sent a team of agricultural and co-operative specialists to India, Pakistan and Ceylon in 1953, under the auspices of the Colombo Plan; late in the year, the Government of India sent a mission of four co-operative leaders to study co-operatives in Canada.

Marketing.-During 1953, over 1,100 farmers' marketing co-operatives were in operation and marketed agricultural products valued at $\$ 876,287,346$, an increase of $\$ 36,000,000$ over the total reported for 1952 . The sales value of dairy products marketed by co-operatives in 1953 increased by $\$ 2,300,000$ over the comparable figure for 1952.

Co-operatives engaged in marketing grain increased their volume by $\$ 80,000,000$, to a total of $\$ 510,500,000$, mainly owing to the record crop of western wheat. Livestock marketing co-operatives reported decreased sales in 1953 as hog slaughterings were down and prices of eattle fell sharnly.

Cash income from the sale of farm pioducts handled by co-operatives increased by abou: 4 p.c. in 1953 over 1952 . The increase in the sales of farm products by co-operatives also increast 1 by 4 p.c., which would seem to indicate that cooperatives are keeping pace with the increased volume.

Co-operatives handled 32.4 p.c. of all farm products marketed commercially in Canada and there has been little change in this proportion since 1947.

Merchandising.-Total sales of farm supplies, household and consumer goods by co-operatives in 1952-53, were valued at $\$ 256,730,885$, greater than the 1951-52 total by $\$ 22,000,000$. The greatest increase was reported by co-operatives handling food products (groceries). There was a substantial increase in the number of co-operatives reporting business in the grocery line and better analyses and more returns were received from Ontario and Quebec.

Financial Structure.-Total assets of co-operative marketing and purchasing associations in Canada, as at July 31, 1953, amounted to $\$ 419,000,000$. The excess of assets over liabilities was $\$ 185,600,000$ and was made up of direct liabilities to members in the form of loans and deferred patronage dividends amounting to $\$ 73,300,000$ and net worth (share capital, reserves and unallocated surplus) of $\$ 112,300,000$. Plant value was reported to be $\$ 117,000,000$ and working capital totalled $\$ 68,400,000$.

## 45.-Summary Statistics of Co-operative Marketing and Purchasing Associations, Crop Years Ended July 31, 1944-53

${ }^{1}$ Includes other revenue.

## Section 6.-Interprovincial Freight Movements*

Statistics on interprovincial trade are difficult to collect because there are no controls or barriers to it. The only comprehensive statistics available are the loadings and unloadings of freight carried by the railways. Railway traffic is segregated into 76 classes of freight and the differences between loadings and unloadings are the imports and exports by rail for the respective provinces. Freight can, however, be imported by rail and exported by water, as with western grain which may be moved to the Ontario ports of Fort William and Port Arthur. Consequently, the statistics of Table 48 must not be taken as a measure of total interprovincial trade: these figures indicate interprovincial movement of railway freight which is one aspect only of that trade.

[^327]48.-Railway Revenue Freight Movement, by Province, 1952 and 1953

${ }^{1}$ Figures for freight originating and freight terminating do not agree because freight that originates within a certain year does not all terminate within the same year; some that terminated in 1952, for instance, originated within the previous year.

## PART II.-GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

During the post-war period, the elaborate system of government control of trade that the war effort made necessary was gradually relaxed (see the 1948-49 Year Book, pp. 837-841) until, by the beginning of 1949, only those measures to protect domestic requirements and prevent the forcing upward of prices in the Canadian market remained; since then even these have practically disappeared.

## Section 1.-Controls Affecting the Handling and Marketing of Grain

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners, which since 1912 has administered the provisions of the Canada Grain Act and the Canadian Wheat Board, which operates under the Canadian Wheat Board Act, 1935. The former is a quasi-judicial and administrative body which, through the powers vested in it in matters of interprovincial
transportation and patents and copyrights, gives the Federal Government complete power to control the handling of grain; it has no power or duties in respect of grain prices. The Canadian Wheat Board, which began to function in the autumn of 1935, was a natural outgrowth of government stabilization measures that were taken during the depression years of the 1930's in regard to the marketing of grain crops. During this period, the Government acquired a considerable quantity of wheat and, in the 1935 session of Parliament, legislation was passed to serve the dual purpose of disposing of the holdings so acquired and, at the same time, arranging for the marketing of new crops.

An account of the organization and functions of the Board of Grain Commissioners appears in the 1941 Year Book, pp. 481-482. An article on the operations of the Canadian Wheat Board is commenced in the 1939 Year Book, pp. 569-580, and concluded in the 1947 edition.

## Section 2.-Combinations in Restraint of Trade*

The purpose of Canadian anti-combines legislation is to assist in maintaining free and open competition as a prime stimulus to the achievement of maximum production, distribution and employment in a system of free enterprise. To this end, the legislation seeks to eliminate certain practices in restraint of trade that are harmful to a system of free enterprise, practices which serve to prevent the nation's economic resources from being fully used under a system of open competition for the advantage of all citizens.

The first federal legislation in this field was enacted in 1889 and is still effective in amended form as Sect. 411 of the Criminal Code.

The Combines Investigation Act.-The Combines Investigation Act (R.S.C. 1952, c. 314), was enacted in 1923, carried into the Revised Statues of Canada for 1927, as Chapter 26, and amended in 1935, 1937, 1946, 1949, 1951, 1952 and 1954. It provides for the investigation of combinations, mergers, trusts and monopolies that have operated or are likely to operate to the detriment of the public by limiting production, fixing or enhancing prices or otherwise restraining trade. The Act defines such combinations, mergers, trusts and monopolies as "combines" and makes participation in the formation or operation of a combine an indictable offence. The Act also provides for the investigation of complaints about the practice of resale price maintenance, which is forbidden by Sect. 34 of the Act, and complaints about breaches of Sects. 411 and 412 of the Criminal Code $\dagger$ which relate to conspiracy in restraint of trade and certain discriminatory pricing practices respectively.

The functions of investigating and reporting upon alleged violations which formerly were vested in a single Commissioner have, since 1952, been exercised by an agency for investigation and research under a Director of Investigation and Research, and a board known as the Restrictive Trade Practices Commission, which consists of three members, and has the function of appraising the evidence obtained in investigations and reporting thereon.

The report to the Minister of Justice of an investigation into the manufacture, distribution and sale of matches in Canada, submitted in December 1949, alleged that a combine by way of merger, trust or monopoly existed in the wooden match

[^328]industry in Canada. Four formal charges were preferred under the Combines Investigation Act. The trial of the first charge concluded at Montreal, Que., in May 1951 with the five corporation defendants being convicted and fined a total of $\$ 85,000$ and costs. The accused appealed the conviction and sentence to the Quebec Court of Queen's Bench (Appeal Side), but the appeal was dismissed Nov. 30, 1953. Application by the accused for leave to appeal to the Supreme Court of Canada was refused on Dec. 22, 1953. The remaining three charges have been withdrawn.

A report was submitted to the Minister of Justice on May 21, 1952, alleging the existence of combines in six divisions of the rubber industry. In 1953, prosecutions were instituted under Sect. 498 of the Criminal Code in regard to three divisions of the industry, namely mechanical rubber goods, tires and tubes and rubber footwear. Each of the accused pleaded guilty and fines totalling $\$ 220,000$ and costs were imposed. In the mechanical case an application was also made on behalf of the Crown for an order prohibiting the continuation or repetition of the offence. The order was granted by the trial judge and upheld with a variation by the Ontario Court of Appeal Apr. 26, 1954. The application of the accused for leave to appeal to the Supreme Court of Canada was granted in January 1955 and the hearing of the appeal is pending. Applications for similar orders in the other two cases are in abeyance pending the appeal in the mechanical case.

In a report submitted to the Minister of Justice in October 1952, a combine was alleged to exist in the fine paper industry. Prosecution was instituted in 1953 in the Supreme Court of Ontario and on June 4, 1954, seven manufacturers, twentyone incorporated fine paper merchants, one individual fine paper merchant and one trade association secretary were found guilty as charged under Sect. 498 of the Criminal Code and subsequently were fined a total of $\$ 242,000$. The Court granted an order of prohibition pursuant to Sect. 31 of the Combines Investigation Act against the accused but directed that the order will not come into effect until the appeal in the mechanical rubber goods case has been disposed of and, if the appeal is allowed on constitutional grounds the order will not come into effect at all. The accused have appealed the conviction and sentence to the Ontario Court of Appeal.

On Jan. 22, 1953, a report was submitted to the Minister of Justice alleging that, at the time of commencement of the inquiry in 1949, a combine existed in connection with the distribution and sale of coarse papers in and around Vancouver. A prosecution under Sect. 498 was instituted in February 1954 against seven wholesale companies and three manufacturers. Following a preliminary hearing in Vancouver, the accused were committed for trial, in August 1954. At the commencement of the trial in the Supreme Court of British Columbia on Oct. 25, 1954, the seven wholesale companies and one manufacturer pleaded guilty. The trial of the two remaining manufacturers is now in progress.

In a report made to the Minister of Justice in November 1953, a combine was alleged to exist in counection with the distribution and sale of electrical wire and cable products in Canada and nine manufacturers and the selling organization of one of them were named as parties to the alleged combine. In 1954, prosecution was instituted under Sect. 498 of the Criminal Code against nine manufacturing companies and the sales company of one of them. The trial in the Supreme Court of Ontario commenced at Toronto on Jan. 10, 1955.

In May 1953, the Restrictive Trade Practices Commission submitted its first report to the Minister of Justice. This report dealt with two alleged attempts by certain officials of the Montreal District Office of a manufacturer of soap products
to persuade wholesalers to sell at prices suggested by the Company. On Nov. 16, 1953, the Minister of Justice announced that the opinion of counsel, with which he concurred, was that the case was not a suitable one for prosecution, as the offence was technical and isolated and had been committed without the knowledge and approval of the management of the Company, and apparently against its policy.

Also in May 1953, the Commission submitted a report to the Minister of Justice concerning alleged price discrimination by a manufacturer between retail hardware dealers in North Bay. The Commission stated it did not feel that it should express an opinion as to whether an offence had been committed, nor did it feel the evidence permitted it to draw general conclusions about the industry. On Nov. 16, 1953, the Minister announced that the opinion of counsel, with which he concurred, was to the effect that this was a borderline case of a technical violation and was not a suitable case upon which to found the first prosecution under Sect. 498A of the Criminal Code unless the conduct was persisted in.

In a report in January 1954, concerning an alleged attempt at resale price maintenance in the sale of certain household supplies in the Chicoutimi-Lake St. John district, the Commission concluded that there was an attempt at resale price maintenance on the part of a salesman of a manufacturer of these supplies, although responsibility for this should not, in the particular circumstances, be imputed to the Company itself. Following the institution of prosecution proceedings under Sect. 34 of the Combines Investigation Act in the police court at Chicoutimi, Que., a plea of guilty was entered by the salesman and he was fined $\$ 5$ and costs on Nov. 18, 1954.

In February 1954, the Commission submitted a report concerning an investigation into the distribution and sale of gasoline in the Vancouver area. The report expressed the conclusion that gasoline retailers had entered into agreements or arrangements fixing and enhancing the retail price of gasoline, preventing or lessening competition, and substantially controlling the retail sale of gasoline in the area concerned. Prosecution proceedings under Sect. 32 of the Combines Investigation Act against two incorporated trade associations and 32 individuals were instituted in Vancouver, B.C. in January 1955.

In a report in March 1954, concerning alleged instances of resale price maintenance in the sale of china and earthenware, the Commission concluded that a Canadian distributor for figures and other earthenware products had induced or attempted to induce various retailers in Ontario, Quebec, and British Columbia to maintain retail prices specified by such distributor and had also induced a Vancouver wholesaler to maintain wholesale prices specified by it. The Commission also found that the distributor had attempted to induce four Vancouver wholesalers to refrain from selling figures to a Vancouver retailer because the retailer had been selling them at prices less than the resale price specified by such distributor; also, that one such wholesaler had refused to supply the retailer in question for this reason. Following the institution of prosecution proceedings under Sect. 34 of the Combines Investigation Act in the police court at Toronto, Ont., the distributor pleaded guilty on Nov. 17, 1954, and was fined a total of $\$ 1,000$ on two counts.

A report of an inquiry concerning alleged instances of resale price maintenance in the distribution and sale of television sets in the Toronto district was submitted by the Commission to the Minister on Oct. 25, 1954, and made public by him on Nov. 18, 1954. The report stated that, following a newspaper advertisement by a dealer offering television sets of a particular manufacture at substantially reduced
prices, the manufacturer in question had cancelled the dealer's franchise. The cancellation was made by the Toronto branch manager of the manufacturer, acting upon his own responsibility as the officer in charge of sales in that district. The report expressed the opinion that the evidence, in which there was considerable conflict, was not strong enough to prove that the motive of the Company official who cancelled the franchise had been resale price maintenance.

In November 1954, the Commission submitted a report to the Minister concerning an alleged combine in the manufacture, distribution and sale of wire fencing in Canada. The report expressed the conclusion that from 1933 to mid-1952 Canadian manufacturers of wire fencing operated under arrangements directed principally to the maintenance of prices and elimination of price competition. It also expressed the opinion that while the arrangements referred to had been formally terminated in mid-1952, because of the long existence and continuous operation of these arrangements, the acceptance of common prices by the manufacturers had, nonetheless, virtually become a custom of the trade. In making the report public on Nov. 30, 1954, the Minister indicated that the usual consideration would be given the question of what further steps ought to be taken.

A report of an inquiry concerning an alleged combine in the distribution and sale of coal in the Timmins-Schumacher area in Ontario was submitted by the Commission to the Minister on Nov. 22, 1954, and made public by him on Dec. 14, 1954. The report concluded that, since 1947, the retail dealers handling substantially all of the coal trade in the area had been parties to a price fixing agreement; and that, because of the location of this particular market, no effective competition could be expected from outside the area. The Commission also stated that evidence showed that when the coal dealers or some of them found that price competition could not be controlled to their satisfaction through their own efforts, they prevailed upon suppliers to come to their assistance by discontinuing supplies to the dealers who were not maintaining prices. In releasing the report, the Minister indicated that the usual consideration would be given the question of what further steps ought to be taken.

As a result of the recommendation of the MacQuarrie Committee* that the practice of "loss-leader" selling should be studied, an inquiry was instituted for the purpose of determining the prevalence and effects of the practice and recommending to the Minister of Justice suitable amendment, if necessary, of the Combines Act. The information supplied to or gathered by the Director of Investigation and Research was compiled in book form and laid before the Commission in February 1954. This book was then supplied by the Commission to parties who wished to make submissions or supply further information and, with this in view, the Commission arranged for public hearings to be held at various centres in Canada in May, June, July and September 1954. A report is being prepared for submission to the Minister of Justice.

During 1953 and 1954, a variety of matters were disposed of on preliminary inquiry, and in a number of other cases investigations were proceeding. Numerous consultations and interviews were held with individuals and representatives of business groups interested in discussing the possible application of the Act to conditions encountered or to arrangements being considered.

[^329]
## Section 3.-Trade Standards*

The Standards Division of the Department of Trade and Commerce consolidates, under one Director, the administration of the Electricity Inspection Act, the Gas Inspection Act, the Electricity and Fluid Exportation Act, the Precious Metals Marking Act, the Weights and Measures Act, and the National Trade Mark and True Labelling Act.

Commodity Standards.-On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising.

In brief, the use of the National Standard is voluntary and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. In addition, where manufacturers descriptively label any commodity or container, it must be labelled accurately to avoid public deception. The regulation applying to the labelling of fur garments, for example, has been established as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act, 1946 (R.S.C. 1952, c. 215), commodities composed of gold, silver, platinum or palladium may be marked with a quality mark describing accurately the quality of the metal. Where such mark is used, a trade mark registered in Canada, or for which application for registration has been made, must also be applied. Gold-plated or silver-plated articles may also be marked under certain conditions outlined in the Act. The inspection staff of the Standards Division is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale and in checking the marks applied.

Weights and Measures.-The Weights and Measures Act (R.S.C. 1952, c. 292) prescribes the legal standard of weight and measure for use in Canada. The Act requires control of the type of all weighing and measuring devices used for commercial purposes and their periodic verification and surveillance directed towards the elimination of sales by short weight or short measure.

The number of inspections made in the year ended Mar. 31, 1954, was 478,227, compared with 437,644 in 1952-53. The more important inspections comprised the following: weighing machines, including scales of all kinds, 240,037; measuring machines for liquids, 92,701 ; weights, 140,053 ; other measures, 5,436 . Total expenditure was $\$ 688,425$ in 1953-54 compared with $\$ 659,975$ in 1952-53, and total revenue $\$ 658,466$ compared with $\$ 600,641$.

Electricity and Gas Inspection.-Responsibilities of the Standards Division under the Electricity Inspection Act (R.S.C. 1952, c. 94) and the Gas Inspection Act (R.S.C. 1952, c. 129) comprise the testing and stamping of every electricity and gas meter used throughout Canada for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. Canada is divided into 21 districts for administration of the tro Acts, and staff numbers 158. During the year ended Mar. 31, 1954, 1,079,711 electricity and gas meters were tested as compared with 928,827 in the preceding year. Revenue derived from the testing amounted to $\$ 790,753$ and expenditure to $\$ 608,519$.

[^330]
## 1.--Electricity and Gas Meters in Use, Years Ended Mar. 31, 1945-54

| Year | Electricity Meters | Gas Meters |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Manufactured Gas | Natural Gas | Acetylene Gas | Petroleum Gas | Total |

| 1954.. | 3,967,952 | 593,698 | 298,166 | 4 | 429 | 892,297 |

${ }^{1}$ Figures for Newfoundland included for 1950 and subsequent years.
The Electricity and Fluid Exportation Act (R.S.C. 1952, c. 93) came into force in 1907. Under its provisions no electric energy or fluid, whether liquid or gaseous, may be exported from Canada without a licence. Total exports of electric energy during the year ended Mar. 31, 1954, amounted to $2,209,532,219 \mathrm{kwh}$. There was also a small export of natural gas and crude oil.

## Section 4.-Patents, Copyrights and Trade Marks*

Letters patent are issued subject to the provisions of the Patent Act, 1935 (R.S.C. 1952, c. 203). Applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.
2.-Patents Applied for, Granted, etc., Years Ended Mar. 31, 1950-54

| Item | 1950 | 1951 | 1952 | 1953 | 1954 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Applications for patents................... No. | 13,172 | 14,324 | 15,448 | 16,405 | 18,565 |
| Patents granted.......................... " | 8,513 | 8,461 | 9,516 | 9,700 | 9,414 |
| Granted to Canadians................... " | 655 | 627 | 708 | 748 | 606 |
| Caveats granted.............................. "* | 356 | 391 | 253 | 243 | 288 |
| Assignments.................................. " | 12,811 | 11,437 | 11,621 | 12,525 | 13,127 |
| Fees received, net.............................. \$ | 636,772 | 661,069 | 728,241 | 756,714 | 847,874 |

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to a peak of 12,542 in 1923 and has remained between 6,500 and 10,000 for the past ten years. Of the 9,414 granted in 1953-54, 6,849 or 73 p.c. were to inventors resident in the United States, 606 to Canadian residents and 1,013 to residents of the United Kingdom or other Commonwealth countries. Residents of France obtained 198, of Switzerland 143, of The Netherlands, 207, and of other countries 398.

Printed copies of patents issued from Jan. 1, 1949, to date are available at a nominal fee. The Canadian Patent Office Record gives a brief digest of each patent.

Canadian and foreign patents may be consulted at the Patent Office Library. The Library has records of British patents and abridged specifications thereof from 1617 to date, and of United States patents from 1872 to date, as well as many patents,

[^331]indexes, journals and reports from Australia, New Zealand, South Africa, India, Pakistan, France, Belgium, Austria, Norway, Mexico, Italy, Sweden, The Netherlands, Switzerland, Japan, Korea and Brazil.

Copyrights, Industrial Designs and Timber Marks.-Registration of copyright is governed by the Copyright Act, 1921 (R.S.C. 1952, c. 55). Applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Act sets out the qualifications for a copyright and its duration: "Copyrights shall subsist in Canada. .in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol. . .or resident within Her Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death"

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection in Canada, in all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States of America.

Protection of industrial designs and of timber marks is afforded under the Trade Mark and Design Act and the Timber Marking Act. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office and information regarding them is published in the Canadian Patent Office Record.

## 3.-Copyrights, Industrial Designs and Timber Marks Registered, Years Ended Mar. 31, 1950-54

| Item |  | 1950 | 1951 | 1952 | 1953 | 1954 |

| Fees received, net. | \$ | 19,325 | 19,848 | 19,382 | 20,681 | 21,181 |

Trade Marks and Shop Cards.-The Trade Marks Office, a Branch of the Department of the Secretary of State, is charged with the administration of the Unfair Competition Act, 1932 (R.S.C. 1952, c. 274) which repealed all previous Acts governing trade marks, and the Shop Cards Registration Act, which came into force on Sept. 1, 1938. Applications for registration of trade marks and shop cards should be addressed to the Registrar, Trade Marks Office, Ottawa.

A register of Trade Marks is kept, in which, subject to the provisions of the Act, any person may cause to be recorded any trade mark he has adopted and notification of any assignments, transmissions, disclaimers and judgments relating to such trade mark. In order that the public may be kept informed in the matter of trade-mark registration, a list of registered trade marks appears in the Canadian Patent Office Record which is issued weekly.

The Shop Cards Registration Act is designed to afford a measure of protection to organizations, such as trade unions, that were able formerly to register their particular designations as Union Labels under the Trade Mark and Design Act. Registrations under the Act may be renewed every 15 years.

## 4.-Trade Marks and Shop Cards Registered, Years Ended Mar. 31, 1949-53

## Section 5.-Subventions and Bounties on Coal*

The major problem of the Canadian coal-mining industry arises from the fact that its fields are situated far distant from the main consuming markets of the Provinces of Ontario and Quebec while these markets lie in close proximity to the bituminous and anthracite fields of the United States. Transportation subventions, which have been maintained in varying degree during the past 25 years, were designed to further the movement of Canadian coals to some portions of central Canada by equalizing, as far as possible, the laid-down costs of Canadian coals with imported coals. Subventions have been regulated by Orders in Council as it has not been considered practicable to fix the assistance by statute owing to the frequent changes in the competitive situation.
5.-Expenditure for Subventions, by Province, 1949-53

The Canadian Coal Equality Act (R.S.C. 1952, c. 34 -formerly known as the Coke Bounty Act) implemented one of the recommendations of the Royal Commission on Maritime Claims and was approved by Parliament on May 30, 1930. The bounty is paid on Canadian coal converted to coke and used in the manufacture of Canadian iron and steel and places the coal on a basis of equality with imported coal.

Bounties paid under this authority for the years 1949-53 were as follows:-

|  | Item | 1949 | 1950 | 1951 | 1952 | 1953 |

## Section 6.-Control and Sale of Alcoholic Beverages

The retail sale of alcoholic beverages in Canada is controlled by provincial and territorial government liquor-control authorities. Alcoholic beverages are sold directly by most of these liquor-control authorities to the consumer or to licensees for resale. However, in some provinces beer and wine are sold directly by breweries and wineries to consumers or to licensees for resale. During the year ended Mar. 31, 1953, provincial government liquor-control authorities operated 650 retail stores.

Table 6 shows revenue from administration of liquor control by provincial and territorial governments. The figures have been prepared on a new basis so that the detail is not strictly comparable with the information supplied in previous Year Books. Further details are given in DBS report The Control and Sale of Alcoholic Beverages in Canada, (fiscal year ended Mar. 31, 1953).
6.-Provincial and Territorial Revenue from Administration of Liquor Control, Year Ended Mar. 31, 1953, with Totals for 1952

Nort.-Figures include revenue collected direetly by the provincial and territorial governments as well as revenues of the liquor authorities, but exclude general sales tax.

## PART III.-BANKRUPTCIES AND COMMERCIAL FAILURES

The three Sections of this Part, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures and the statistics presented in each Section are not comparable with those given in the other Sections.

Section 1 is limited to the administration of bankrupt estates by the Superintendent of Bankruptcy under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can, therefore, be assumed that this applies in even greater degree to the more extended fields covered in Sections 2 and 3.

Section 2, on the other hand, is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-Up Act) but not failures, sales or seizures carried out apart from such federal legislation. The Dominion Bureau of Statistics figures include failures of individuals such as wageearners. For recent years, separate data are shown for insolvencies by wage-earners as distinct from industrial and commercial mortalities. The figures of assets and
liabilities are estimates made by the debtor and, unfortunately, are not made uniformly. The human element enters into them to a considerable degree and they should, therefore, be accepted with reservations.

The statistics given in Section 3 are compiled by Dun and Bradstreet, Incorporated. This mercantile agency is interested primarily in credit information and their statistics include bankruptcies in general, insolvencies under provincial companies' Acts and such proceedings as bulk sales, bailiffs' sales, landlords' seizures, etc., when loss to creditors results. On the other hand, the statistics do not include assignments of individuals, so that, as a rule, the totals run lower than those in Section 2. Since between the years 1875 and 1919 this agency was the only source of figures of commercial failures, their statistics have an added value because they present a historical series back to 1915 though the basis of classification was changed after 1933 (see text preceding Table 7, p. 1023).

## Section 1.-Administration of Bankrupt Estates*

Federal insolvency legislation now comprises the Bankruptey Act, 1949 (R.S.C. 1952, c. 14), the Farmers' Creditors Arrangement Act, 1943 (R.S.C. 1952, c. 111), the Companies' Creditors Arrangement Act and, to some extent, the Winding-Up Act. The two Arrangement Acts are designed to avert failure and the statistics in this Section and in Section 2, therefore, do not include proposals or arrangements under these Acts. When such proposals or arrangements are rejected by the creditors or fail in their purpose the proceedings may then come under the Bankruptcy Act, the bankruptcy provisions of the Farmers' Creditors Arrangement Act and, in certain circumstances, the Winding-Up Act. There are no provisions in the Companies' Creditors Arrangement Act for the liquidation or winding-up of insolvent companies.

The Bankruptcy Act, 1949, under which the Bankruptcy Act, 1919, and amendments thereto is repealed, restores to all insolvent persons the right to make a proposal prior to bankruptcy. The summary administration provisions of the Act enable insolvent persons, other than corporations, having limited assets to obtain the benefit of the Act. A new principle has also been established in regard to the discharge of bankrupts and the Act provides that "the making of a receiving order against, or an assignment by, any person except a corporation operates as an application for discharge ${ }^{2 /}$ unless a waiver is filed in court and served upon the trustee within the prescribed delays.

The administration of bankrupt estates is supervised by the Superintendent of Bankruptcy, first appointed in 1932, with the object of conserving, as far as possible, the assets of bankrupt estates for the benefit of the creditors.

The series of statistics collected on estates closed under the Bankruptcy Act, 1919, covering the years 1933-50 are given in the 1947 Year Book, p. 846, and the 1952-53 edition, p. 915. The figures given in Table 1 are those of estates closed under the new Bankruptey Act and begin with the year 1951. Figures for the year 1951 are given in the 1954 edition, p. 955.

Bankruptcies Under Genrbal Provisions of tee Act ${ }^{1}$

[^336]Summary statistics of estates closed under the Farmers' Creditors Arrangement Act are available in previous editions of the Year Book beginning with the 1947 edition. From the time the Act first came into effect on Sept. 1, 1934, to the end of 1949 there were 885 assignments and 39 receiving orders, or a total of 924 estates closed. No assignments or receiving orders were reported under the Act in 1951 or 1952 but one case was completed during 1952. During the year 1953, one new estate was reported and one case under administration was completed.

## Section 2.-Returns under the Bankruptcy and Winding-Up Acts as Compiled by the Dominion Bureau of Statistics

As stated on p. 1017, the figures in this Section cover only the bankruptcies and insolvencies under federal legislation-the Bankruptcy Act and the Winding-Up Act-and include assignments of individuals such as wage-earners.

Under the Bankruptcy and Winding-Up Acts (R.S.C. 1952, cc. 14 and 296), certain documents relating to estates administered under these Acts have, since July 1920, been forwarded to the Dominion Statistician for statistical analysis. A statistical series began with 1923, except for the analysis by branches of business which began in 1924. However, changes in the administration of bankruptcies introduced by the Bankruptcy Act of 1949 (see p. 1018) affected the comparability of the series. In that Act, provision was made for proposals from insolvent persons and, since July 1950, agreements made under this method are not included with the statistics of bankruptcies. In Table 2 the number of proposals are shown so as to give a general impression of the trend.
2.-Bankruptcies and Insolvencies under Federal Legislation, by Province, 1944-53

## Section 3.-Statistics of Industrial and Commercial Failures from Private Sources

A table on commercial failures for Canada, by class, for the years 1915 to 1935 (and for Newfoundland for the years 1915-32), is given in the 1936 Year Book, p. 969. In 1936, Dun and Bradstreet, Incorporated, from whose reports these figures were taken, adopted a new method of classification. The principal changes consisted of setting up a new group of construction enterprises, previously included in manufacturing, and a new class for commercial service. Real estate companies, holding and other financial companies, and agents of various kinds were omitted. These changes had the effect of confining the failure records more to industrial and commercial lines of activity, and liabilities were reduced more in proportion to the number of failures, since the companies eliminated usually ran high in indebtedness. This series extends back to 1934.

[^339]In 1953, Quebec accounted for 59 p.c. of the total failures and 50 p.c. of the liabilities; Ontario had 23 p.c. of the failures and 28 p.c. of the liabilities.

According to Dun and Bradstreet, Incorporated, commercial failures during World War II decreased steadily year by year and failures in the retail trade group, in which the majority of failures took place before the War, also decreased. After the end of the War, however, the total number of failures increased again. Failures in the retail trade group in 1953 accounted for over one-half of the total.

| Section 5. Imports and Exports by Degree of Manufacture, by Origin and by Purpose. ........ | 1068 |
| Section 6. Comparison of Value, Price and Volume of Foreign Trade. | 1078 |

Note.-The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The subject of foreign trade covers more than the treatment of imports and exports of commodities, important though this is. In its broader sense, foreign trade is made up of the total international exchanges of goods, services, securities and other financial exchanges, all of which are presented in their proper relationship in this Chapter. Following Part I, which is a review of Canada's trade during the period 1951-53, Part II gives detailed statistics of external commodity trade. Part III summarizes external transactions from the standpoint of the balance of international payments. Part IV outlines the various ways in which the Federal Government promotes and encourages trade relationships, and contains a brief review of the Canadian tariff structure.

## PART I.-REVIEW OF FOREIGN TRADE*

The value of world trade, expressed in United States dollars, reached a post-war peak in 1951 when it totalled $\$ 158,600,000,000$. Falling prices together with some reduction in the quantity of goods traded reduced this value by 3 p.c. in 1952, and in 1953 there was a further decline of 2 p.c. However, the volume of world trade turned upwards in 1953, the entire reduction in value in that year resulting from lower average prices than had prevailed in 1952. The actual volume of trade in 1953 was probably above the 1951 level.

Canada ranked fourth in world trade in 1951 but regained third place in 1952, her exports and imports in 1952 and 1953 being exceeded only by those of the United States and the United Kingdom. The United States increased the value of both exports and imports in 1953, and accounted for 18 p.c. of the trade of the non-communist world. However, the increase in the value of United States exports was caused entirely by sharply higher shipments under that country's mutual

[^340]security program; the value of the commercial trade of the United States declined in 1953. The trade of the United Kingdom declined moderately in value in 1953, a decline accounted for entirely by lower average prices; the volume of both exports and imports increased. Western Germany increased its exports substantially in both 1952 and 1953, and in 1953 rose to fourth place among the leading trading nations. German sales of manufactured goods in foreign markets are becoming increasingly important.

The increase in Canadian trade in the period 1951-53, both in value and volume, was considerably more rapid than was that of most other countries. Canada's share in the trade of the non-communist world advanced from $5 \cdot 2$ p.c. in 1951 to 6.0 p.c. in 1952, and to 6.3 p.c. in 1953. Canada ranked third in trade per capita among the world's important trading countries in 1951, advanced to second place in 1952 when the trade of Hong Kong was sharply reduced by adverse political conditions and, in 1953, for the first time in the post-war period, gained first place after New Zealand's control program sharply reduced that country's imports.

[^341]Canadian Trade, 1951-53.-Canadian trade, like world trade, was very large in the period 1951-53. The volume of imports showed especially pronounced gains in these years under the influence of record levels of investment and consumption, of a rapidly growing population and of a large defence program. Import volume increased by 12 p.c. from 1950 to 1951, by a further 13 p.c. in 1952, and by almost another 10 p.c. in 1953 . Volume of exports increased by 11 p.c. in 1951 over 1950 and a further 11 p.c. in 1952; but in 1953 the volume of exports was about 1 p.c. lower than in 1952. Supply limitations were important in preventing Canadian exports from increasing as rapidly as Canadian imports in this period. Canadian imports account for a relatively amall part of total world production of most important commodities and, therefore, a very sharp increase in Canadian import requirements can usually be satisfied in the markets of the world without
necessitating much change in world production. Foreign sales, however, account for a large proportion of total Canadian production of most of the important export commodities, and to permit a major increase in exports a considerable increase in productive capacity is necessary, if existing capacity is already fully employed. Expansion of capacity is often a slow process, requiring much investment and development work. While a large part of the investment in Canada in recent years will eventually increase export capacity (or reduce import requirements), many major projects had not reached the production stage by 1953.

Grain is among the few important exports of which supplies can be rapidly increased in the short run, weather permitting. The Canadian harvest was exceptional in each year from 1951 to 1953, while 1951 was a year of poor harvests in many important overseas countries. Foreign demand for Canadian grain was therefore very strong in 1951, 1952 and much of 1953. Exports of wheat, barley, oats and rye accounted for about 55 p.c. of the increase in total export volume in 1951 and 72 p.c. of the further increase in 1952. The easing of grain exports in the latter part of 1953, after foreign harvests had improved and grain stocks had been rebuilt, was also the principal cause of the slight decline in export volume in that year.

Most of Canada's important imports increased substantially from 1950 to 1953 but the increase was especially pronounced in the case of investment goods and consumer durables. Imports of business and industrial machinery were 80 p.c. greater in value in 1953 than in 1950 and those of electrical apparatus 140 p.c. greater. Purchases of refrigerators and freezers from foreign countries were 261 p.c. greater than in 1950, those of cooking and heating apparatus 125 p.c. greater and those of household machinery 44 p.c. greater. Thus it appears that the value of imports of investment goods and consumer durable goods increased about twice as rapidly as that of imports in general.

Fuels are among the few items to show no increase in import volume in these years. Oil produced in Canada displaced imported petroleum in an increasing part of the Canadian market, and oil also, to an increasing extent, displaced coal in many domestic and industrial uses. These trends were responsible for a gradual decline in Canadian imports of coal and petroleum.

Trade Balance Changes.-The period 1951-53 was marked by very sharp swings in Canada's trade balance. A small import balance appeared on commodity trade in 1950 for the first time since the end of World War II and grew to $\$ 121,500,000$ in 1951. Especially important in creating this balance was the rapid deterioration in the terms of trade following the outbreak of the Korean war, although the more rapid growth of import than export volume was already important. In the latter part of 1951, the terms of trade improved as import prices fell while export prices continued to rise, and throughout the first half of 1952 the fall in import prices was more rapid than that in export prices. This change in relative prices was sufficient to far outweigh the continued greater growth in import volume than in export volume, and resulted in a large export balance of $\$ 325,500,000$ on trade in 1952.

After the middle of 1952, import prices recovered moderately and export prices continued a slow decline. About the same time the growth in export volume ceased, while that in import volume continued almost unabated. The result of
these developments was the reappearance of a large import balance on commodity trade, amounting to $\$ \mathbf{\$ 1 0 , 2 0 0 , 0 0 0}$ in $\mathbf{1 9 5 3}$. The swing in the trade balance from 1952 to $1953(\$ 535,700,000)$ was greater than has occurred between any other two peacetime years.

Despite the rapid changes in the merchandise trade balance in 1952-53, the Canadian dollar stood at a premium over the United States dollar after February 1952. Other factors in the balance of payments, notably the continued large inflow of investment capital to Canada (chiefly from the United States), offset the trade deficit and kept the Canadian dollar strong. In 1952-53, the Canadian dollar was at a premium over the United States dollar for longer than at any previous time in this century.

Direction of Trade.-Important changes in the direction of trade accompanied the large increase in trade volume in 1951-53. In 1951 and 1952, these changes tended to increase the size of the trade balances incurred with many individual countries. In 1953, they tended generally to reduce the size of individual trade balances.

Overseas countries sharply increased their share of Canada's exports in 1951 and 1952. The principal markets for Canadian grains are overseas and grains played the chief part in the growth of exports in these jears. In addition, many overseas countries sharply increased their purchases of Canadian industrial materials in this period and also of some manufactured goods, notably motor-vehicles and electrical apparatus. At the same time, Canadian imports from most overseas countries either contracted somewhat in volume or showed insufficient increase in volume to offset the severe declines in the prices of many overseas goods from the peaks of early 1951.

These conditions began to change about the middle of 1952. The trade restrictions imposed by many sterling-area countries during the first half of 1952 to protect their exchange reserves began to affect exports, and the important Brazilian market for exports was also seriously limited by exchange problems. Overseas demand for some industrial materials, notably wood pulp, lumber, copper and zinc, was reduced, and supplies from other sources were more readily available.

Prospects of a second good harvest in 1953 in certain overseas countries led to further reductions in Canada's overseas exports in the latter part of the year. While most of the over-all decline in overseas exports was offset by increased sales to the United States, some commodities, notably motor-vehicles, could not compete in that market and others, especially farm implements, found even the United States market shrinking in 1953.

A major portion of the increase in Canada's imports from 1951 to 1953 was drawn from the United States. Many of the goods required by Canada's investment program could most readily be obtained in that market, and also the requirements of defence policy led to a major part of Canada's defence imports being procured in the United States.

In the latter part of 1951 and the early part of 1952 there was some reduction in Canadian demand for many overseas goods, especially textiles and some raw materials. Imports of these had been extremely heavy in the preceding year, but fell off as inventories in Canada were reduced. In addition, rapidly falling prices of many commodities further reduced the value of imports from overseas countries. In the latter part of 1952, prices stabilized and demand recovered, so that imports from most overseas areas in 1953 were considerably greater in volume than in 1952.

Seasonal Pattern of Canadian Trade.*-Seasonal factors exert a considerable influence on Canada's trade and complicate the analysis of that trade over short periods. When trade statistics aggregates are studied, a major concern of the observer is normally to discover whether exports or imports are rising or falling, but for periods shorter than one year it is often difficult to answer this type of question with certainty. What appears to be a change in trend may well be no more than a fluctuation related to change in the time of year, rather than to any change in economic considerations.

Among the factors chiefly responsible for the seasonal variations in Canada's trade are the importance of agricultural commodities in trade, the importance of cheap water transportation which is available for only part of the year, and special demands for certain commodities (and by some industries such as the construction industry) at certain times of the year.

[^342]Exports tend to be especially low in the first quarter when the St. LawrenceGreat Lakes waterway is closed and the movement of heavy and bulky goods is restricted. In the second quarter they rise slightly above the quarterly average, as stocks of heavy goods which have built up at Canadian ports in the winter months are cleared, then in the third quarter they tend to subside again to somewhat less than the quarterly average. In the fourth quarter, exports are especially heavy as the new grain crop moves into commercial channels, and foreign consumers build stocks of those goods that are more expensive to move in the winter months.

Imports, like exports, tend to be low in the first quarter owing chiefly to the winter ebb in economic activity in Canada. They rise sharply in the second quarter, when demand reaches its peak and transportation difficulties are less. Imports tend to fall off in the third quarter and again increase in the fourth, but the lesser importance of heavy and bulky goods in imports than in exports keeps their fourthquarter peak well below that for exports.

The differences in the seasonal pattern of exports and imports tend to produce a strong seasonal fluctuation in the trade balance, which should not be overlooked in interpreting monthly and quarterly trade values. If exports and imports were running evenly at an annual rate of $\$ 4,000,000,000$ each, then seasonal influences would account for a trade deficit of $\$ 38,000,000$ in the first quarter and $\$ 65,000,000$ in the second quarter and at the end of July the cumulative deficit would reach a peak of about $\$ 107,000,000$. The third quarter would show a net export balance of $\$ 10,000,000$ and the fourth quarter one of $\$ 93,000,000$. Although the year's trade would be in balance, every cumulative period until the year end would show an apparent import surplus. Only rarely do the export and import totals approach a balance on an annual basis but a knowledge of the seasonal trend of the trade balance assists greatly in evaluating its significance for any given short period.
4.-Post-war Seasonal Patterns of Change (Percentage of Quarterly or Monthly Average) in Export and Import Value, Price ${ }^{1}$ and Volume

| Period | Value |  | Price ${ }^{1}$ |  | Volume |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Domestic Exports | Imports | Domestic Exports | Imports | Domestic Exports | Imports |
|  | p.c. | p.c. | p c. | p.c. | p.c. | p.c. |
| First Quarter. | 89.9 | 93.7 | 100-5 | $100 \cdot 7$ | 89.4 | 92.8 |
| Second Quarter | $100 \cdot 8$ | 107.3 | $100 \cdot 0$ | 101.0 | $100 \cdot 9$ | 106.2 |

| Average. | 109.0 | 106-0 | $100 \cdot 0$ | $100 \cdot 0$ | $100 \cdot 0$ | $100 \cdot 0$ |
| January . | $94 \cdot 2$ | 95.6 | $100 \cdot 5$ | $100 \cdot 5$ | 93.5 | 94.8 |
| February | 81.9 | 85.5 | $100 \cdot 8$ | $100 \cdot 7$ | 81.1 | 84.4 |
| March.. | $93 \cdot 6$ | $100 \cdot 0$ | $100 \cdot 3$ | $100 \cdot 9$ | 93.5 | 99.3 |
| April.. | 91.1 | 105.0 | $100 \cdot 5$ | $101-5$ | $90 \cdot 4$ | 103.7 |
| May... | 109.1 | 111.7 | 99.8 | 101.1 | 109-7 | 110.2 |
| June.. | 102.2 | 105.2 | 99.9 | 100-3 | 102.8 | $104 \cdot 6$ |
| July.... | $100 \cdot 3$ | 101 -4 | 99.6 | 99.0 | 101 -1 | 102.8 |
| August.... | 99.7 | 95.1 | 99.3 | 98.6 | 99-7 | 96.4 |
| September | 96.3 | 96.5 | $99 \cdot 4$ | 98.5 | 96.7 | 97.8 |
| Oetober... | 109.4 | 106.9 | 99.7 | 99.0 | $109 \cdot 6$ | 108.3 |
| November | 111.9 | 105.0 | $100 \cdot 1$ | $99 \cdot 3$ | 111.1 | $105 \cdot 4$ |
| December. | $110 \cdot 3$ | $92 \cdot 1$ | 100-1 | $100 \cdot 6$ | 110.8 | 92-3 |

${ }^{1}$ The variability among observations for the same month of different years is sufficient to make doubtful the hypothesis that seasonal variation in price exists.

## PART II.-FOREIGN TRADE STATISTICS*

## Section 1.-Explanations re Canadian Trade Statistics

Certain problems of procedure arise in recording trade statistics and require explanation. For the correct interpretation of the statistics of foreign trade, it is necessary that the following definitions and explanations of terms used be kept in mind:-

Quantities and Values.-In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

Imports: Valuation.-"Imports" means imports entered for consumption. "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which said merchandise was exported. (See Sects. 35 to 45 and 55 of the Customs Act.)

Canadian Exports: Valuation.-"Canadian produce"' exported includes Canadian products or manufactures, also exports of commodities of foreign origin that have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminum extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual amount received in Canadian dollars exclusive of freight, insurance and other handling charges.

Foreign Exports: Valuation.-"Foreign produce" exported consists of foreign merchandise that has previously been imported (entered for home consumption). The value of such commodities is the actual amount received in Canadian dollars exclusive of freight, insurance and other handling charges.

Countries to which Trade is Credited.-Imports are classified as received from the countries whence they were consigned to Canada. These countries are not necessarily the countries of actual origin of the goods, since goods produced in one country may be imported by a firm in another country and later re-sold to Canada. In such cases, the second country would be the country of consignment to which the goods would be credited.

There is one exception to this rule. An attempt is made to classify by country of actual origin all imports produced in Central and South America. The effect of this procedure, which has been in force since 1946, is to reduce slightly imports credited to the United States and to increase those credited to Central and South American countries.

Exports are always credited to the country to which they are consigned.
Discrepancies in Trade Statistics between Canada and Other Countries.-Canadian statistics of exports are rarely in exact agreement with the import statistics of its customers and parallel differences occur with Canadian imports. Among the chief factors contributing to these discrepancies are:-
(1) Differences in the system of valuation used by Canada and those of other countries, especially with respect to the treatment of transportation charges.
(2) Differences in the statistical treatment of special categories of trade, such as armaments and military supplies, government-financed gift or mutual-aid shipments, postal and express shipments, or warehouse trade.
(3) Differing definitions of territorial areas.
(4) Differing systems of geographical classification of trade, notably the consignment system used by Canada and the actual origin or ultimate destination system in use by some other countries.
(5) Differences in the time at which trade is recorded in the statistics of partner countries caused by the time required for goods to move from one country to another.

[^343]Treatment of Gold in Trade Statistics.-The general use of gold as a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors rather than by ordinary trade or commercial considerations. Gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price. Also, gold may be bought or sold internationally without any physical movements of the metal, such transactions being recognized by simply setting aside or 'ear-marking' the metal in the vaults of some central bank.

For these reasons, movements of gold in a primary or semi-fabricated state are excluded from the statistics of Canada's commodity trade. However, as gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published as a supplement to the trade statistics. Because this series is calculated on a production basis, a division of the figures into transactions with individual countries is not possible.

NEW GOLD PRODUCTION AVAILABLE FOR EXPORT (NET EXPORTS OF NON-MONETARY GOLD), BY MONTH, 1946-53
(Millions of dollars)

| Month | 1946 | 1947 | 1948 | 1949 | 1950 | 1951 | 1952 | 1953 |

## Section 2.-Total Foreign Trade

In considering the figures in Sections 2 to 6, reference should be made to the explanatory notes on trade in Section 1. It must be emphasized that gold imports and exports are excluded from all tables.

92428-66

TOTAL EXPORTS (excluding gold) AND IMPORTS FOR CONSUMPTION

## 1.-Value of Total Foreign Trade of Canada (Excluding Gold), 1939-53

Nore.-These figures are available on a calendar-year basis only since 1919; figures for 1919-34 are given in the 1950 Year Book, p. 905 and for 1935-38 in the 1954 edition, p. 969 . Figures for the years ended Mar. 31, 1868-1939, are given in the 1940 Year Book, p. 526.

| Year | Imports |  |  | Exports |  |  | Balance of Trade: Excess of Exports ( + ) Imports (-) |

[^349]The proportion of imports subject to duty varies widely between countries and geographic areas. Generally, the Canadian tariff imposes duties on a greater proportion of manufactured goods than of natural products. Countries supplying chiefly manufactures to Canada tend to have duties charged on a greater proportion of their goods and also to have relatively higher average ad valorem rates of duty charged on their goods than is the case with countries supplying chiefly natural products. Variations in the proportion of imports dutiable as between different countries, or in the average ad valorem rates of duty charged on imports from different countries, therefore, do not necessarily indicate differences in the tariff relations between Canada and these countries.

## 9.-Average Ad Valorem Rates of Duty Collected and Percentage Proportions of Imports from the United Kingdom and from the United States to Totals of Dutiable and Free Imports, 1944-53.

Note.-Figures for the years ended Mar. 31, 1868-1938, are given in the 1940 Year Book, p. 532. Calendar-year figures for 1939-43 are given in the 1954 edition, p. 982.

## Section 5.-Imports and Exports by Degree of Manufacture, by Origin and by Purpose

Analyses of Canada's trade from the angle of degree of manufacture of imports and exports with leading countries are of value to the student of economic relationships because they present, in summary form, details with significant meaning in the complementary relationship of manufacturing and commerce between geographical areas and countries.
15.-Imports according to Degree of Manufacture, by Leading Countries, 1952 and 1953

## 17.-Imports of Certain Raw Materials Used in Canadian Manufactures, 1944-53

Norg.-Figures for the years ended Mar. 31, 1902-10, are given in the 1926 Year Book, p. 463; those for the years ended Mar. 31, 1911-39, are given in the 1940 edition, p. 533. Calendar-year figures are available for 1926 and subsequent years; those for 1926-43 are given in the 1918-49 edition, pp. 927-928.

${ }^{1}$ In this classification the expression "Canadian Farm Products" refers to all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, eto.

## Section 6.-Comparison of Value, Price and Volume of Foreign Trade

Since the end of World War II there has been a substantial increase in the value of Canada's exports and imports. Changes in the value of trade, however, are the joint product of changes in the volume of goods traded and of the prices at which transactions are conducted. To assess the significance of value changes it is desirable to eliminate the contributions made to them by the price and volume factors.

Special indexes of export and import prices have been developed to provide this information. These indexes are based chiefly on unit values (average prices) calculated from the trade statistics, supplemented by information on wholesale and retail prices. Price relatives are calculated for a sample of commodities representing the greater part of export and import trade, and these relatives are weighted
by the percentage of 1948 trade represented by each commodity in the sample in obtaining group and total indexes. By dividing these price indexes into the trade values the effects of price change are removed from the values, or by dividing the price index into an index of values on the same time-base an index is obtained showing changes in the volume of trade from year to year.

The grouping of commodities used in these calculations differs slightly from that of the regular trade statistics, changes being desirable to simplify the pricing problem. The chief difference is that the first two main groups of the trade statistics have been combined into one group, "agricultural and animal products", and that the sub-group "rubber and its products" has been transferred from this group to the "miscellaneous" group.

The import totals differ from those usually published by the exclusion of certain goods brought into Canada by the governments of the United Kingdom and NATO countries for the use of their defence forces. Table 22 shows the value of trade adjusted for pricing purposes, and the value, price and volume indexes of Canadian trade for 1950-53.

Movements in value, price and volume have not always been the same. The volume of imports increased in each year shown in the table, but a sharp fall in import prices reduced the value of imports in 1952 below their 1951 value. From 1950 to 1951 rising prices accounted for more than half of the increase in import value; from 1952 to 1953 there was little change in import prices, and the whole of the value gain was caused by a further increase in import volume. Export prices, like import prices, reached a peak in 1951 and have declined since that year, but in 1952 there was a sufficient increase in the volume of exports to more than offset the decline in prices, and the value of exports advanced.

## PART III.-EXTERNAL TRANSACTIONS*

## Section 1.-Canadian Balance of International Payments

Canada experienced a current account deficit of $\$ 339,000,000$ in 1953; this deficit was in contrast to the surplus of $\$ 164,000,000$ recorded in 1952, which had in turn followed two years of deficit, the first since 1933. An underlying tendency for Canada to be a net importer of capital during periods of great economic activity thus reasserted itself in 1953 when the volume of goods and services imported in response to demands in the Canadian economy rose sharply.

The sudden change from surplus to deficit in 1953 can best be regarded in the perspective of developments over several years. Superimposed on an economy with strong and growing investment and consumption demands has been the increased tempo of defence activities since 1950. These influences have been basic factors in the deficits of the past few years. In 1952, the period of deficits was temporarily ended because of two major developments, namely, the very marked improvement in the terms of trade and a large increase in the volume of grain exports. Since further improvements along these lines were not forthcoming in 1953, the underlying strong increase in import volume led to the reappearance of a current deficit. While there was a marked deterioration in the surplus with overseas countries and an increase in the deficit with the United States in 1953, these developments had the effect of yielding current balances with the United States and overseas countries generally which were remarkably close to those of 1951.

The reappearance of a current account deficit of $\$ 439,000,000$ in 1953 was accompanied, of course, by net capital imports of this amount. The deficit was more than balanced by heavy flows of long-term capital into Canada for direct and portfolio investment, which have been a feature of Canada's balance of payments in recent years. In 1952, the current account surplus and long-term inflows were

[^359]balanced by very large outward movements of short-term capital. Short-term movements in 1953, while still outwards, were sharply lower than in 1952. These changes took place without any great change in the external value of the Canadian dollar.

Exchange transfers in settlement of overseas balances were much lower in 1953 than in 1952. In the earlier year, Canada's current account surplus with overseas countries, offset by a small net capital export from Canada, gave rise to record net multilateral receipts of more than $\$ 1,000,000,000$ available in the United States account. In 1953, the overseas surpluses fell to $\$ 485,000,000$ but there was a significant net import of capital from overseas of $\$ 139,000,000$, giving rise to net multilateral settlements of $\$ 624,000,000$. The receipt by Canada in 1953 of exchange transfers in excess of the net balance of goods and services provided to overseas countries represented, in part, a settlement of the earlier current account deficits of these countries, which were financed through the extension of the loans now being repaid; it also reflected the use by overseas countries of their available resources for investment in the Canadian economy rather than for imports on the scale of the previous year.

Current Account Transactions.-The abrupt swing in Canada's current account from surplus to deficit in 1953 was mainly the result of a deterioration of $\$ 546,000,000$ in the commodity trade balance. The most important factor was a continued rise in import volume, although a slight decrease in export volume and some shift in terms of trade were contributory. Unadjusted trade returns indicate a rise of 9 p.c. in the value of imports, attributable to larger volume. The value of domestic exports declined by about 4 p.c., reflecting mainly the fall of 3 p.c. in export prices. On an annual basis, the effect of price changes was to lead to some
worsening of the terms of trade in 1953, compared with 1952; the terms of trade in 1953, however, were still substantially more favourable than those of any year from 1948 to 1951. This was a reflection of the fact that the rapid rise in export and import prices in 1951 had since been largely reversed for imports but not for exports; import prices in 1952 and 1953 were at about the 1950 average, while export prices were well above that average.

The decrease in export values in 1953 was spread over a number of leading commodities. The improved supply situation abroad was an important factor in the $8 \cdot 5$ p.c. decline of wheat exports, but the 1953 total of $\$ 568,000,000$ was above that of any post-war year except 1952. Sales of newsprint rose to an all-time peak of $\$ 619,000,000$, but sales of wood and other wood products fell, owing partly to lower prices. Exports of aluminum, copper and nickel were higher, but these gains were more than offset by the lower values of zinc and lead exports which were particularly affected by low prices. There were some substantial decreases in the value of exports of manufactured goods. Exports of automobiles were well below the exceptional levels of 1952 . Unusually high sales in earlier years, combined with declining farm income in the United States and exchange difficulties overseas, contributed to the decline in exports of farm implements.

The decrease in exports was concentrated in overseas markets. Exports of grains to the United Kingdom rose in 1953, particularly exports of barley, and increases occurred in some other products; sharp decreases in exports of beef, lumber, zinc and aluminum more than offset these increases. Most other sterling-area countries also reduced their imports from Canada; the major exceptions were the Union of South Africa and Pakistan. Large exports of wheat, some of which were financed under the Colombo Plan, raised exports to the latter country. Exports to OEEC countries in Europe and their dependencies fell sharply. The drop in exports of grains to this group of countries (which included Belgium, Canada's third largest market in 1952) was the major factor in the over-all decline. Exports to other foreign countries were generally lower. The major exceptions were Japan and Korea; the former was Canada's third largest export market in 1953. In contrast to overseas markets, purchases by the United States increased. With prices somewhat lower, the increase in value reflected an appreciable increase in volume. Seven of the nine groups of exports to the United States were higher in value in 1953.

For most groups of imports, prices were only slightly different from the 1952 levels. Group price indexes were substantially lower for fibres and textiles and the miscellaneous products groups. Volume indexes were significantly higher in all import groups except non-metallic minerals. The increases are, of course, closely related to the heavy spending on consumption and investment which characterized the Canadian economy in 1953. Import volume from the United States rose by almost 8 p.c. as major increases occurred in the value of imports of electrical apparatus and automobiles and parts. Imports from overseas countries generally rose, the Enited Kingdom accounting for most of the increase.

The deficit on non-merchandise items in 1953 was $\$ 382,000,000$, an increase of $\$ 57,000,000$ over 1952. Large payments on income account and for business services lead each year to substantial net payments on account of this group of transactions. The largest contributor to the change from 1952 was the freight and shipping account where the effects of a much larger volume of imports and a small reduction in the volume of exports led to a significant deficit. Miscellaneous current transactions also led to an increased deficit. Higher defence expenditure
in Canada by the United States Government was more than offset by Canadian Government spending abroad, including some special settlements of costs in Korea. On the other hand, there were larger net receipts by Canada on income account and on migrants' account and inheritances.

Capital Movements.-Persistent inflows of long-term capital to finance Canadian development continued, through 1953, to be the outstanding feature of the capital account in Canada's balance of payments. Of particular significance in 1953 was the net import of capital from overseas countries amounting to $\$ 139,000,000$. In only two other years since the War have net inflows occurred, and the amount in each case was less than half the figure for 1953. While repayments on official loans accounted for a substantial part of the inflow, there were also important transfers of private capital for direct and other long-term investment.

Inflows for direct investment in foreign-controlled companies and branches have risen year by year since the War and reached $\$ 398,000,000$ in 1953, a rise of 15 p.c. over 1952. Movements from the United Kingdom and other overseas countries rose significantly and were greater than in any two previous post-war years, but well over 80 p.c. of the net inflows continued to be from the United States. Slightly more than three-quarters of the gross inflows from that country were for mining, petroleum and related utilities. Movements of capital from Canada for direct investment abroad continued at a high level in 1953, totalling $\$ 56,000,000$, but failed to equal the record of the previous year.

A substantial volume of sales of new Canadian security issues abroad, mainly in the United States, contributed to a net capital inflow from transactions in Canadian securities. Trading in outstanding issues resulted in repatriation. Net repurchases of bonds and debentures of governments and municipalities totalled $\$ 59,000,000$, but were offset to the extent of $\$ 28,000,000$ by sales of corporate securities. While the general pattern of trading over the year as a whole was the same as in 1952, these opposite movements took place on a reduced scale and the net capital export was also smaller in 1953. Transactions with the United Kingdom led to an inflow of $\$ 27,000,000$, the first annual sales balance since 1937, and net sales of $\$ 22,000,000$ to other overseas countries were also higher than in 1952. The capital export to the United States fell from $\$ 104,000,000$ in 1952 to $\$ 80,000,000$ in 1953. Proceeds of the sales abroad of new issues totalled $\$ 342,000,000$; about two-thirds of this total represented borrowing by provincial governments and municipalities, while most of the balance covered new issues of corporation bonds and stocks. Retirements aggregating $\$ 142,000,000$ were dominated by the negotiated repurchase for Government account of $\$ 75,000,000$ of an external loan. Transactions in foreign securities were practically in balance and the result of all security transactions was a capital import of $\$ 168,000,000$.

Other capital movements in 1953 included the receipt by Canada of principal repayments of $\$ 87,000,000$ on loans to other governments, and a reduction of $\$ 17,000,000$ in Canadian dollar holdings of foreigners. Official holdings of gold and foreign exchange were reduced by $\$ 38,000,000$, which was less than the amount of the special repatriation transaction mentioned in the preceding paragraph.

The major change from 1952 to 1953 in the capital account was in "other capital movements", which resulted in a net outflow of $\$ 179,000,000$ in contrast to the spectacular outfiow of over $\$ 500,000,000$ in 1952 . These outflows followed
a period of substantial inflows in 1950 and the first half of 1951 . With the reemergence of a current account deficit in 1953, a much smaller part of long-term capital inflows was available for other capital movements. This category includes a wide variety of transactions including changes in loans and advances outstanding, in inter-company accounts, and in private, commercial and banking balances and short-term investments abroad.

## Section 2.-Travel Between Canada and Other Countries

In 1953, more than $51,000,000$ persons crossed the International Boundary from the United States to Canada, $3,000,000$ more than the previous record established in 1952. United States travellers entering Canada numbered $28,000,000$ and residents of Canada returning from visits to the United States numbered $23,000,000$. Travellers arriving in Canada from overseas by way of both Canadian and United States ports numbered 38,200 in 1953 as compared with 38,000 in 1952, while residents of Canada returning from overseas countries numbered 80,500 in 1953 and 64,800 in 1952.

Receipts from travel in Canada by non-residents had been fairly constant throughout the period $1948-52$, but reached a new record of $\$ 302,000,000$ in 1953 , an increase of $\$ 27,000,000$ over the previous year. On the other hand, expenditures of Canadian travellers in other countries increased by $\$ 24,000,000$ to $\$ 365,000,000$ in the same comparison. The debit balance on travel account with the United States, which had been $\$ 37,000,000$ in 1952 , was reduced to $\$ 25,000,000$ in 1953 , but that with overseas countries increased from $\$ 29,000,000$ to $\$ 38,000,000$, resulting in a total debit balance on travel account with all countries of $\$ 63,000,000$ in 1953 as compared with $\$ 66,000,000$ in 1952.

United States Travel Expenditures in Canada.-Residents of the United States travelling in Canada in 1953 spent a record amount of $\$ 282,000,000$, $\$ 25,000,000$ more than in 1952 ; automobile traffic accounted for over $\$ 14,000,000$ of the increase and non-automobile traffic for nearly $\$ 11,000,000$.

The total number of non-resident automobiles entering Canada in 1953 was $8,200,000$, an increase of nearly 9 p.c. over 1952. Non-permit or local traffic increased by 8 p.c. and entries on customs permits by 10 p.c. Expenditures of customs-permit automobile traffic increased at a rate slightly higher than the volume, resulting in average expenditures somewhat above the 1952 figure. All provinces, except Ontario, recorded increases ranging from $\$ 1.56$ per vehicle in Manitoba to $\$ 12.64$ in Saskatchewan. Ontario's decline amounted to $\$ 2.17$ per vehicle. Expenditures of the non-permit class increased by $\$ 3,000,000$ or 17 p.c. in 1953.

Of the 46,289,129 automobiles registered in the United States in 1953, 2,465,495, or slightly over 5 p.c., entered Canada on customs permits.

Bus traffic accounted for nearly half the $\$ 11,000,000$ increase in expenditures of non-automobile traffic in 1953, although the volume declined by 5 p.c. The $\$ 3,000,000$ increase in expenditures of travellers by air in 1953 was accounted for by increased volume, since average expenditure was slightly less than in 1952. Travellers by rail spent about $\$ 2,000,000$ less in 1953 , the result of a decline of over 8 p.c. in volume, although average expenditure was higher. Lower average expenditure for travellers arriving by boat offset an increase in volume, leaving the aggregate unchanged from the previous year. Expenditures of the residuary classification known as "Other travellers" increased by nearly $\$ 5,000,000$ during 1953 as a result of a greater number of entries. Included in the expenditure of this class are passenger fares earned by Canadian companies carrying residents of the United States overseas.

Although residents of the United States spent more on travel outside their own country in 1953 than in any previous year, for the first time in over twenty years Canada received a smaller portion of that expenditure than Europe and the Mediterranean area. According to the United States Department of Commerce, expenditures on travel outside the United States in 1953 surpassed the previous record established in 1952 by about 10 p.c. In 1953, European and Mediterranean countries received 33 p.c., Canada 32 p.c., Mexico 21 p.c., the West Indies and Central America 9 p.c., and other countries 5 p.c.

Canadian Travel Expenditures in the United States.-Expenditures by residents of Canada in the United States reached a new peak in 1953, but the rate of increase was more moderate than that experienced in 1952 and also more moderate than the rate of increase in volume would indicate. Expenditures by residents of Canada in the United States are estimated at $\$ 307,000,000$, an increase of more than $\$ 13,000,000$ over the previous year.

Although the number of visits to Canada by residents of the United States exceeded visits of Canadians to the United States by nearly $5,000,000$ or over 20 p.c., expenditures of Canadians in the United States exceeded expenditures of Americans in Canada by $\$ 25,000,000$ or approximately 9 p.c. It will be noted that in a corresponding comparison in 1952, visits by Americans exceeded return visits of Canadians by 22 p.c. and Canadian expenditures in the United States were 14 p.c. higher than American expenditures in Canada. Thus, it appears that average expenditures by Canadians in foreign countries are higher than non-resident expenditures in Canada. In 1953, the average rate per person for visits lasting longer than 48 hours was $\$ 86$ for Canadians visiting the United States and $\$ 52$ for Americans visiting Canada compared with $\$ 88$ and $\$ 51$, respectively, in 1952. If the population of the two countries is taken into consideration, residents of Canada spent an average of $\$ 20.79$ per capita in the United States during 1953, and residents of the United States spent an average of $\$ 1.77$ per capita in Canada.

Most of the gain in expenditures by Canadians in the United States was in the short-term category which accounted for nearly 73 p.c. or over $\$ 10,000,000$ of the increase over 1952. Within the short-term group, expenditures of the two-day motorists accounted for 41 p.c. of the increase, followed in order of importance by other travellers making up 34 p.c., and the one-day motorists 25 p.c. Shopping trips close to the 48 -hour period in the United States may have been responsible for a considerable portion of the gain in the two-day class. Purchases declared under the $\$ 100$ customs exemption were $\$ 72,000,000$ in 1953 , an increase of nearly $\$ 6,000,000$ over the previous year. The advance in value of declared purchases made up 42 p.c. of the total increase of Canadian travel expenditures in the United States in 1953 and 41 p.c. of the increase in 1952 over 1951. The pattern of expenditures for purchases of merchandise did not change materially during the period 1950 to 1953 when purchases of clothing made up nearly 50 p.c. of the expenditures declared under the $\$ 100$ exemption.

Travel Between Canada and Overseas Countries.-Travel between Canada and overseas countries produced the greatest debit balance in 1953 of any year on record. The adverse balance on overseas travel account during 1953 amounted to $\$ 38,000,000$, an increase of $\$ 9,000,000$ over the previous high established in 1952.

Visitors arriving in Canada direct from overseas countries by way of Canadian ports in 1953 numbered 21,600 of whom 11,300 or 52 p.c. travelled by boat and the other 48 p.c., representing 10,300 passengers, travelled by air. The total represents a decline from the 1952 figure of over 2 p.c.; ship traffic declined 7 p.c. and air traffic increased between 3 and 4 p.c. In addition to the direct traffic to Canada, 16,600 overseas visitors arrived via the United States, making a total of 38,200 .

Expenditures in Canada by non-immigrant arrivals from overseas countries. are estimated at $\$ 20,000,000, \$ 2,000,000$ higher than the previous record expenditures in 1949 and 1952. Included in these totals are transportation costs paid to Canadian carriers.

Residents of Canada returning from overseas countries via Canadian ports numbered 61,500 , an increase of 12 p.c. over the previous record in 1952. Approximately 45 p.c. of the residents returning direct in 1953 re-entered through the airports of Gander, Dorval and Malton compared with 38 p.c. in 1952. Canadian travellers returning by way of the United States are estimated at 19,000 making a total of 80,500 via Canadian and United States ports.

Expenditures of Canadians travelling in overseas countries amounted to $\$ 58,000,000$ in 1953 , the highest ever recorded and an increase of 23 p.c. or $\$ 11,000,000$ over the previous year. Included in this amount are transportation fares paid to non-Canadian carriers.

Tourist Information.-Tourist information generally is supplied by the Canadian Government Travel Bureau, Ottawa, while detailed information on the National Parks and Historic Sites is available from the Department of Northern Affairs and National Resources, Ottawa. For advice regarding specific provinces or particular cities or resorts, the tourist may apply to the provincial or municipal bureau of information concerned. (See Directory of Sources of Official Information in Chapter XXIX under the heading "Tourist Trade".)

## PART IV.--THE GOVERNMENT AND FOREIGN TRADE

## Section 1.-Foreign Trade Service and Associated Agencies concerned with the Development of Foreign Trade*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, largely because of the fact that the productive capacity of Canada is greater than the ability of its population to consume the output of farms, factories,

[^362]forests, fisheries and mines. Every effort is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the Canadian economy. It is appreciated, however, that two-way trade should be encouraged in order that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore, many commodities that are not indigenous to this country have to be imported from abroad. Some of these are required for Canadian industrial processes and others may be classed as consumer goods necessary for the maintenance of a high standard of living.

Although many private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls, imposed by many countries for a variety of reasons, together with post-war foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without assistance from government representatives.

The Department of Trade and Commerce and associated agencies are at the disposal of exporters and importers engaged directly in the development of Canada's commercial relations with other countries. Services obtainable from the various branches, divisions and agencies are described below.

Canadian Trade Commissioner Service.-The Canadian Trade Commissioner Service is one of the important instruments in the continuous effort to increase Canadian international trade, to give world-wide distribution to Canadian products and to locate the best sources of supply for imports. With headquarters at Ottawa, the Service maintains 53 offices in 43 countries, staffed with trained Canadian trade officials and commodity specialists. The work of the Trade Commissioners in the field is co-ordinated at Ottawa by four Area Trade Officers. These officers are familiar with every aspect of foreign trade in their geographical or political areas and are responsible to the Director of the Service for the collection, preparation and presentation of information on all trade matters in their respective territories.

Trade Commissioners bring together exporters and importers of Canada and other countries. They study potential markets for specific Canadian products and report on the exact kind of goods in demand, prices, competitive conditions, trade and exchange regulations, tariffs, shipping and packaging requirements, labelling, etc. Inquiries for Canadian goods are forwarded to the Department at Ottawa or directly to interested Canadian firms. For Canadian importers, Trade Commissioners seek sources of supply of a wide variety of goods. The preparation of economic and other reports for departmental use is an important activity for the Trade Commissioner, while much attention is given to the dissemination of information on the Canadian International Trade Fair, securing exhibitors and encouraging the visits of foreign buyers. Assistance is also given to Canadian exhibitors at overseas trade fairs and a constant liaison is maintained with foreign goyernment trade departments.

In countries where Canada maintains a diplomatic mission as well as a trade office, Trade Commissioners form an integral part of the mission and assume the title of Commercial Counsellor or Commercial Secretary. In some foreign countries they act as Consuls General, Consuls or Vice-Consuls, according to their_status as Foreign Service Officers.

In order to provide Canadian manufacturers, exporters and importers with up-to-date information concerning their territories more effectively than is possible by correspondence, tours of Canadian industrial centres are arranged from time to time for Trade Commissioners. Such direct contacts enable specific problems to be discussed and, at the same time, serve to bring into focus for the Trade Commissioner the Canadian industrial picture as a whole. He thus returns to his post with a knowledge of current Canadian conditions and in a better position to assist in the development and extension of Canadian trade opportunities.

## FOREIGN TRADE SERVICE REPRESENTATIVES ABROAD, AS AT JAN. 1, 1955

Argentina.-C. S. Bissett, Commercial Counsellor, Canadian Embassy, Bartolomé Mitré 478, Buenos Aires.

Austrania.-C. M. Croft, Commercial Counsellor for Canada, City Mutual Life Bldg., 60 Hunter Street, Sydney, N.S.W.
R. W. Blake, Commercial Secretary for Canada and Agricultural Secretary, 83 William Street, Melbourne.

Belelay Congo.-A. B. Brodie, Canadian Government Trade Commissioner, Forescom Building, Leopoldville. Territory includes Angola and French Equatorial Africa.

Belgrom.-T. J. Monty, Commercial Counsellor, Canadian Embassy, 35 rue de la Science, Brussels. Territory includes Luxembourg.
Brasic.-C. J. Van Tighem, Commercial Secretary, Canadian Embassy, Edificio Metropole, Av. Presidente Wilson 165, Rio de Janeiro. M. P. Carson, Consul and Trade Commissioner, Canadian Consulate, Edificio Alois, Rua 7 de Abril 252, São Paulo.

Crylon.-James J. Hurley, High Commissioner for Canada, 6 Gregory's Road, Cinnamon Garden, Colombo.

Chils.-R. E. Gravel, Commercial Secretary, Canadian Embassy, 6th Floor, Av. General Bulnes, 129, Santiago.

CoLombia.-W. J. Millyard, Commercial Secretary, Cangdian Embassy, Avenida Jimenez No. 7-25, Bogota. Territory includes Ecuador.

Cuba.-G. A. Browne, Commercial Secretary, Canadian Embassy, Edificio Motor Centre, Calle Infanta 16, Havana.

Dramark.-C. F. Wilson, Commercial Counsellor, Canadian Legation, 4 Trondhjems Plads, Copenhagen. Territory includes Greenland.

Dominican Republic.-M. B. Bursey, Commercial Counsellor, Edificio Copello 408, Calle El Conde, Ciudad Trujillo. Territory includes Haiti and Puerto Rico.

Egypt.-M. R. M. Dale, Commercial Secretary, Canadian Embassy, 6 Sharia Rouston Pasha, Garden City, Cairo. Territory includes Aden, Sudan, Cyprus, Ethiopia and Saudi Arabia.

Francz.-B. C. Butler, Commercial Counsellor for Canada, 3 rue Scribe, Paris. Territory includes Algeria, French Morocco, French West Africa and Tunisia. R. Campbell Smith, Commercial Secretary for Canada, 3 rue Scribe, Paris.

Germany.-B. A. Macdonald, Commercial Counsellor, Canadian Embassy, 22 Zitelmannstrasse, Bonn.

Grerce.-H. W. Richardson, Commercial Secretary, Canadian Embassy, 31 Vassillissis Sophias Ave., Athens. Territory includes Israel and Turkey.
Guatzmala.-J. C. Depocas, Canadian Government Trade Commissioner, 5 a Avenida Sud, 10-68, Guatemala City. Territory includes Costa Rica, El Salvador, Honduras, Nicaragua, Panama and Canal Zone.

## FOREIGN TRADE SERVICE REPRESENTATIVES ABROAD-continued

Hong Kong.-T. R. G. Fletcher, Canadian Government Trade Commissioner, Hong Kong and Shanghai Banking Corporation Building, Hong Kong. Territory includes China, Indo-China, Macao and Taiwan.

India.-Richard Grew, Commercial Counsellor, Office of the High Commissioner for Canada, 4 Aurangzeb Road, New Delhi.
D. M. Holton, Commercial Secretary for Canada, Gresham Assurance House, Mint Road, Bombay.

Indonesia.-W. D. Wallace, Commercial Secretary, Canadian Embassy, Budi Krmulian No. 6, Djakarta.

Ireland-T. Grant Major, Commercial Counsellor for Canada, 66 Upper O'Connell Street, Dublin.

Italy.-S. G. MacDonald, Commercial Counsellòr, Canadian Embassy, Via Saverio Mercadante 15, Rome. Territory includes Libya, Malta and Yugoslavia.

Jamaica.-M. B. Palmer, Canadian Government Trade Commissioner, Canadian Bank of Commerce Chambers, Kingston. Territory includes Bahamas and British Honduras.

Japan.-J. C. Britton, Commercial Counsellor, Canadian Embassy, Tokyo. Territory includes Korea.
Paul Sykes, Canadian Government Trade Commissioner, 7th Floor, Crescent Building, 72 Kyomachi, Ikutaku, Kobe.

Lebanon.-G. F. G. Hughes, Commercial Secretary, Canadian Legation, Alpha Building, Rue Clemenceau, Beirut. Territory includes Iraq, Jordan and Syria.

Mexico-M. T. Stewart, Commercial Counsellor, Canadian Embassy, Edificio Internacional, Paseo de la Reforma, Mexico, D.F.
Tex Netherlands.-V.L. Chapin, Commercial Secretary, Canadian Embassy, Sophialaan 1-A, The Hague.
New Zealand.-L. S. Glass, Commercial Secretary, Office of the High Commissioner for Canada, Government Life Insurance Building, Wellington. Territory includes Fiji and Western Samoa.
Norway.-J. L. Mutter, Commercial Counsellor, Canadian Legation, Fridtjof Nansens Plass 5, Oslo. Territory includes Iceland.

Pakistan.-R. K. Thomson, Commercial Secretary, Office of the High Commissioner for Canada, Hotel Metropole, Victoria Road, Karachi. Territory includes Afghanistan and Iran.
Peru.-H. J. Horne, Commercial Secretary, Canadian Embassy, Edificio Boza, Carabaya 831, Plaza San Martin, Lima. Territory includes Bolivia.

Philippinvs.-F. H. Palmer, Consul General of Canada and Trade Commissioner, Ayala Building, Juan Luna Street, Manila.
Portugal--L. M. Cosgrave, Commercial Counsellor, Canadian Legation, Avenida de Praia da Vitoria $48-1^{\circ} \mathrm{D}$, Lisbon. Territory includes The Azores and Madeira.
Singapore.-D. S. Armstrong, Canadian Government Trade Commissioner, Room F-3, Union Building, Singapore. Territory includes Brunei, Burma, Federation of Malaya, North Borneo, Sarawak and Thailand.
South Africa.-K. F. Noble, Canadian Government Trade Commissioner, Mutual Building, Harrison Street, Johannesburg. Territory includes Federation of Rhodesia and Nyasaland, Portuguese East Africa, Kenya, Tanganyika, Uganda and Zanzibar. A. W. Evans, Canadian Government Trade Commissioner, Grand Parade Centre Building, Adderley Street, Cape Town. Territory includes South-West Africa, Mauritius and Madagascar.
Spain.-B. I. Rankin, Commercial Secretary, Canadian Embassy, Edificio España, Avenida de Jose Antonio 88, Madrid. Territory includes Balearic Islands, Canary Islands, Gibraltar, Rio de Oro, Spanish Morocco and Tangier.

FOREIGN TRADE SERVICE REPRESENTATIVES ABROAD-concluded
Swrdxn.-F. W. Fraser, Commercial Counsellor, Canadian Legation, Strandvagen, 7-C, Stockholm. Territory includes Finland.

Switzerland.-W. Van Vliet, Commercial Secretary, Canadian Embassy, Kirchenfeldstrasse 88, Berne. Territory includes Austria, Czechoslovakia and Hungary.
Trinidad.-P. V. McLane, Canadian Government Trade Commissioner, Colonial Building, 72 South Quay, Port-of-Spain. Territory includes Barbados, Windward and Leeward Islands, British Guiana, Dutch Guiana, French Guiana, and French West Indies.
United Kingdom.-R. P. Bower, Commercial Counsellor, Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London, S.W.1.
(Post Vacant) Canadian Government Trade Commissioner, Martins Bank Building, Water Street, Liverpool.
T. Grant Major, Canadian Government Trade Commissioner, 36 Victoria Square, Belfast. Territory includes Northern Ireland.
Unitrd Statrs.-R. G. C. Smith, Commercial Counsellor, Canadian Embassy, 1746 Massachusetts Ave., N.W., Washington, D.C.
H. A. Gilbert, Commercial Secretary, Canadian Embassy, 1746 Massachusetts Ave., N.W., Washington 6, D.C.
S. V. Allen, Consul and Senior Trade Commissioner, Canadian Consulate General, 620 Fifth Avenue, New York, N.Y.
C. R. Gallow, Consul and Trade Commissioner, Canadian Consulate General, 620 Fifth Avenue, New York City 20.
D. H. Cheney, Vice Consul and Trade Commissioner, Canadian Consulate General, 532 Little Building, 80 Boylston Street, Boston 16, Mass.
R. V. N. Gordon, Vice Consul and Trade Commissioner, Canadian Consulate General, Chicago Daily News Building, 400 West Madison Street, Chicago, Ill.
M. J. Vechsler, Consul of Canada and Trade Commissioner, Canadian Consulate, 1035 Penobscot Building, Detroit 26, Mich.
Leslie G. Chance, Consul General, Canadian Consulate General, Associated Realty Building, 510 West Sixth St., Los Angeles 14, Cal.
G. A. Newman, Consul and Trade Commissioner, Canadian Consulate, 215-217 International Trade Mart, New Orleans, La.
Christopher C. Eberts, Consul General, Canadian Consulate General, 3rd Floor, Kohl Building, 400 Montgomery Street, San Francisco, Cal.
C. Norman Senior, Consul General, Canadian Consulate General, The Tower Building, 7th Ave. at Olive Way, Seattle 1, Wash.
Uruguay.-W. Gibson-Smith, Commercial Secretary, Canadian Embassy, Calle Colonia 1013, $7^{\circ}$ Piso, Montevideo. Territory includes Paraguay.
Venezcela.-H. L. Brown, Commercial Counsellor, Canadian Embassy, Edificio Pan American, Puente Urapal, Caracas. Territory includes Netherlands Antilles.

Agricultural Representatives
Argbntina.-W. F. Hillhouse, Agricultural Secretary, Canadian Embassy, Bartolomé Mitré 478, Buenos Aires. Territory includes Paraguay and Uruguay.
Australia.-R. W. Blake, Agricultural Secretary for Canada, 83 William Street, Melbourne.
The Netherlands.-C. J. Small, Acting Agricultural Secretary, Canadian Embassy, Sophialaan 1-A, The Hague. Territory includes Belgium and Luxembourg.
United Kingdom.-D. A. B. Marshall, Commercial Secretary (Agricultural), Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London, S.W.1.
United States.-Dr. W. C. Hopper, Agricultural Counsellor, Canadian Embassy, 1746 Massachusetts Avenue, N.W., Washington, D.C.
Venezuela.-D. B. Laughton, Acting Agricultural Secretary, Canadian Embassy, Edificio Pan American, Puente Urapal, Caracas. Territory includes Colombia.

## Fisheries Representative

Italy.-M. S. Strong, Commercial Secretary (Fisheries), Canadian Embassy, Via Saverio Mercadante 15, Rome.

Timber Representative
Untted Kingdom.-G. H. Rochester, Commercial Secretary (Timber), Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London, S.W.1.

Commodities Branch.-The Commodities Branch is responsible for maintaining the liaison with industry and with export and import trades essential to the foreign trade promotion work of the Department. The Branch assembles trade information and data on products for use by Trade Commissioners in posts abroad, and officers of the Branch maintain contact with industry through personal visits and by exchange of correspondence with this purpose in view. Through correspondence with Canadian Government Trade Commissioners abroad, officers of the Branch are able to follow conditions in foreign markets and to supply this information for the benefit of Canadian traders.

The Branch contains commodity specialists organized in three divisions: the Machinery and Metals Divison, the Forest Products and Chemicals Division, and the Consumer Goods Division. Within these Divisions, individual commodity specialists are concerned with such particular groups of products as machine tools and plant equipment, non-ferrous metals, steel, chemicals, lumber, leather and rubber, as well as a very wide range of consumer products. It is the function of the commodity specialist to call the attention of Trade Commissioners to changes in supply conditions and to products available for export. They also relay market news received from Trade Commissioners to Canadian manufacturers and exporters. Close attention is paid to developing opportunities for promoting sales abroad of Canadian products, and exporters are informed about regulations governing foreign trade.

Agriculture and Fisheries Branch.-The main functions of this Branch include: (1) trade promotion relating to agricultural and fisheries products; (2) the programming, receiving and disseminating of information on foreign agriculture and fisheries; and (3) acting as a focal point for liaison on agricultural and fisheries matters with the Department of Agriculture, the Department of Fisheries, the Canadian Wheat Board, and other government departments and boards.

In the field of trade promotion, the Grain Division and the Food and Agriculture Division assist Canadian exporters of agricultural and fisheries products in finding markets in other countries. Canadian firms are supplied with information with respect to market conditions and requirements in foreign markets, competition from other sources of supply, exchange and tariff restrictions and other related information. Canadian Trade Commissioners throughout the world are kept fully informed on such matters as production and price trends in Canada, quantities of commodities available for export and sources of supply.

The Grain Division deals specifically with matters relating to Canada's grain trade. Assistance is rendered foreign governments and other buyers in the purchase of Canadian wheat, flour and other cereals. Close contact is maintained with the flour millers as well as daily liaison with the Canadian Wheat Board.

The Commodity Officers concerned with live stock, live-stock products, meat, dairy and poultry products, fruits and vegetables, and fish and fisheries products, keep in contact with the trade and trade organizations dealing with these commodities. They are in close touch with the officers of other departments of government concerned with the disposition of Canadian production surplus to domestic requirements, and who are responsible for such items as health standards, grading and inspection.

A great deal of information pertaining to foreign agriculture and fisheries is received from the Canadian Trade Commissioners. This material, which reflects foreign government policy, production trends and market information, is processed in the Branch and distributed to the departments of government concerned and others interested. Much of it is published in Foreign Trade. The Trade Commissioner Service includes a number of officers who deal specifically with agricultural and fisheries matters. Some of these officers are located in Canada's most important export outlets and others in those countries with which Canada competes on world markets, particularly in such commodities as wheat, coarse grains, live stock, meats and dairy products. The information received from the agricultural officers and other Trade Commissioners on foreign agricultural developments is distributed in Canada through publications issued by the Economics Division of the Department of Agriculture and by direct communication with producers and exporters. Fisheries information from abroad is passed immediately to the Department of Fisheries, the provincial departments concerned, the Fisheries Council, and to fish exporters.

International Trade Relations Branch.-This Branch deals with a wide variety of current trade issues, ranging from the analysis of developments in international commercial relations to assisting in the reopening of dollar markets for Canadian products in Europe and to finding practical solutions for tariff difficulties encountered by Canadian exporters. The Branch has under constant review Canada's trading relations with other countries, and studies the effects of the work of such international organizations as the European Payments Union and the Organization for European Economic Co-operation on Canadian and world trade.

Trade treaties are under continuous examination by the Branch, which is responsible for the preparation of material for trade and tariff negotiations with other countries. Material is collected on foreign tariffs, customs legislation, taxes affecting trade, import licensing, exchange regulations, documentation, sanitation, marking and labelling requirements, and measures pertaining to quotas, embargoes and other import restrictions. These data are analysed, interpreted, clarified and made available in easily comprehensible form to exporters, government officials and other export interests.

Exporters who encounter difficulties resulting from the trade policies or regulations of other countries are given expert advice and interpretations of foreign regulations. Also, the Branch initiates official consultations with other governments respecting such problems.

Economics Branch.-The Economics Branch maintains a continuous review of business conditions in Canada and conducts special studies on particular industries or on any aspect of Canada's economic development, as required. Aspects of the general economic situation considered include foreign trade, investment, consumption, production, prices, incomes and employment, as well as conditions in industries and localities.

Industrial Development Branch.-This Branch co-ordinates the assistance offered by the Federal Government in the establishment of new industries in Canada. Acting in this capacity, information is provided on a multiplicity of matters pertaining to industry establishment and assists in solving the variety of problems encountered by Canadian and foreign businessmen.

92428-70

The Branch also.aids those established firms that wish to expand into new lines of production. Inquiries from foreign firms and individuals regarding the manufacture of products in Canada under licence or royalty are screened and brought to the attention of Canadian manufacturers interested in producing additional items.

The Branch acts in an advisory capacity to the Immigration Branch of the Department of Citizenship and Immigration regarding the admission of individuals, other than those from Commonwealth countries and the United States, who wish to establish new industries in Canada. It also works in close co-operation with a widespread network of organizations throughout Canada, including industrial development departments of the provinces, municipalities, railways, banks, power companies, chambers of commerce, boards of trade, and the Canadian Manufacturers' Association.

Information Branch.-The principal function of the Information Branch is to furnish the commercial community of Canada with information concerning the assistance that exporters and importers may obtain from the Department of Trade and Commerce. The Branch is responsible also for stimulating a better appreciation by the general public of the importance of trade to the welfare of Canada. The attention of exporters and potential exporters is directed to opportunities for the disposal of their products in markets abroad, and of importers to the sources of supply for raw materials and consumer goods unobtainable in Canada. Its principal educational and informative medium is Foreign Trade, fortnightly publication of the Foreign Trade Service, in which are reproduced reports of Canadian Trade Commissioners on conditions in their respective territories, articles by Head Office personnel and economists of the Dominion Bureau of Statistics, news items and charts portraying trade trends. Press releases are prepared and distributed to newspapers at home, and material of a similar character dispatched to Canadian Trade Commissioners for distribution to newspapers abroad. Pamphlets and brochures are prepared to supplement other information on foreign markets, sources of supply, documentation, regulations and trade restrictions. Assistance is rendered to correspondents of newspapers and periodicals at home and abroad in the preparation of articles pertaining to various phases of Canada's foreign trade. The educational and promotional work of this Branch is supported by moderate advertising at home and abroad, through the daily press, periodicals and trade papers as well as films and radio.

Canadian Government Exhibition Commission.-The Canadian Government Exhibition Commission publicizes Canada by graphic media of all kinds and helps to sell Canadian products abroad. The Commission is solely responsible for the construction and administration of Federal Government exhibits at international expositions, trade fairs and displays outside Canada and of international trade fairs in Canada sponsored by the Government of Canada. The Commission's first fulfilment of the latter responsibility was the inauguration of the Canadian International Trade Fair, held annually at Toronto since 1948.

The Commission also co-operates with Canadian exporters in securing representation for goods at trade fairs and trade promotional displays, and is equipped to advise individual Canadian companies in the preparation of exhibits. It distributes, at its various presentations, literature produced by other government departments and agencies.

Export Gredits Insurance Corporation.-The Export Credits Insurance Corporation was established under the provisions of the Export Credits Insurance Act, 1944, and as amended in August 1916, May 1948, and March 1954. The Corporation, which is administered by a board of directors including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada, insures exporters against losses arising from credit and political risks involved in the export or in an agreement for the export of goods. Policies are generally issued on a yearly basis, covering exporters' sales to all countries. The main risks covered include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country.

The insurance is available under two main classifications-general commodities and capital goods. Covèrage for general commodities can be procured by exporters under two types of policies: (1) the Contracts Policy, which insures an exporter against loss from the time he books the order until payment is received; or (2) the Shipments Policy, obtainable at lower rates of premium and covering the exporter from the time of shipment until payment is received.

Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit for lengthy periods is often necessary. Specific policies are issued for transactions involving capital goods but the general terms and conditions are the same as those applicable to policies for general commodities.

The Corporation insures exporters on a co-insurance basis up to a maximum of 85 p.c. of the gross invoice value of shipments. This co-insurance basis also operates in the distribution of recoveries obtained after payment of a loss, and these recoveries are shared by the Corporation and the exporter in the proportions of 85 and 15 p.c., respectively.

The Corporation, from its inception to Dec. 31, 1953, issued policies having a total value of $\$ 432,781,526$. Claims paid to exporters during the same period amounted to $\$ 3,888,180$. A large majority of these claims resulted from exchange transfer difficulties, with relatively few arising from insolvencies. Recoveries made amounted to $\$ 1,716,829$. Excess of income over expenditure to Dec. 31, 1953, was \$1,068,112, which was added to the Corporation's underwriting reserve.

International Economic and Technical Co-operation Division.-The administration of Canada's participation in the Colombo Plan-a Commonwealth effort to help the peoples of South and Southeast Asia to raise their standards of living and productivity-is the responsibility of this Division. This contribution is of two types-capital aid and technical co-operation. Under capital assistance, grants of goods or services are made to countries in the area on a government-to-government basis. Technical co-operation embraces the training of Asian peoples in a variety of fields in Canada and the supplying of Canadian experts to advise and instruct abroad. The Division also assists the United Nations and its specialized agencies in the recruiting of technical experts and in the arrangement of courses of instruction for trainees sent to Canada for study. For the year ended Mar. 31, 1954, \$25,000,000 was voted by Parliament for capital aid and an additional $\$ 400,000$ was provided for the Colombo Plan technical co-operation program.

## Section 2.-The Development of Tariffs

A short sketch of trade and tariffs prior to Confederation is given in the 1940 Year Book, pp. 480-482. The 1942 Year Book, pp. 427-428, traces the development from Confederation to the adoption in 1904 of the present form of preferential tariff.

Owing to the limitations of space in the Year Book, it has been necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships in force at present and to summarize as much as possible historical data and details of preceding tariffs, giving references to those editions of the Year Book where extended treatments may be found.

## Subsection 1.-The Canadian Tariff Structure*

The Canadian Tariff consists, in the main, of three sets of tariff rates-British Preferential, Most-Favoured-Nation and General.

The British Preferential Tariff rates are, with some exceptions, the lowest rates. They are applied to imported dutiable commodities shipped direct to Canada from countries of the Commonwealth and from the British colonies and other dependent overseas territories. Some Commonwealth countries have trade agreements with Canada which provide for rates of duty, on certain specified goods, lower than the British Preferential rates.

The Most-Favoured-Nation rates are usually higher than British Preferential rates. They are applied to dutiable commodities imported from countries outside the Commonwealth with which Canada has made trade agreements. The rates are usually lower than the General Tariff rates. Under trade agreements made with various countries, rates of duty lower than the Most-Favoured-Nation rates may be applied to goods from those countries. The most important trade agreement concerning the effective rates applied to goods imported from countries entitled to Most-Favoured-Nation rates is the General Agreement on Tariffs and Trade.

The General Tariff rates are applied to goods imported from the few countries with which Canada has not made trade agreements.

There are numerous goods which are duty free under the British Preferential Tariff, or under both the British Preferential and Most-Favoured-Nation Tariff, or under all Tariffs.

Valuation.-Sect. 35 of the Customs Act provides that, when any ad valorem duty is imposed, the value of the goods for purposes of calculating the duty "shall be the fair market value of such or the like goods when sold for home consumption in the ordinary course of trade under fully competitive conditions, in like quantities and under comparable conditions of sale, etc." or, the price for which the goods were sold to the purchaser in Canada, whichever is the greater. There are further provisions for determining the value for duty when the fair market value cannot be found. Internal taxes in the country of export, the cost of shipping the goods to Canada, and similar charges, however, are not included in the value for duty.

Dumping.-Sect. 6 of the Customs Tariff provides that when the actual selling price of goods being imported is less than their fair market value, and the goods are of a class or kind made or produced in Canada, a special or dumping duty

[^363]shall be collected. This duty is to be equal to the difference between the actual selling price and the fair market value of the goods, except that it may not be more than 50 p.c. of the value for duty. These provisions are designed to offset the advantage foreign exporters may achieve by exporting to Canada at less than the going prices.

Drawback.-There are provisions in the Customs Tariff for the repayment of a portion of the duty paid on imported materials used in the manufacture of products later exported. The purpose of these drawbacks (as these repayments of duty are called) is to assist Canadian manufacturers to compete with foreign producers of similar goods. A second class of drawback, known as "home consumption" drawbacks, applies to imported materials and parts in the production of specified goods to be consumed in Canada.

The Tariff Board.-The Tariff Board, constituted by the Tariff Board Act, 1931, consists of three members, one of whom is chairman and another vice-chairman. The duties and powers of the Board derive from three Statutes of Canada: the Tariff Board Act, the Customs Act, and the Excise Tax Act.

Under the Tariff Board Act, the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada or produced in Canada, are subject to or exempt from duties of customs or excise and on which the Minister of Finance desires information. The investigation into any such matter may include inquiry as to the effect that an increase or decrease of the existing rate of duty upon a given commodity might have upon industry or trade and the extent to which the consumer is protected from exploitation. It is also the duty of the Board to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report. Usually the references take one of two forms: authority for review of sections of the Customs Tariff relating to an entire industry, or for investigation in respect of specified commodities. Reports are tabled in Parliament.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board is authorized to act as a tribunal to hear appeals from rulings of the Department of National Revenue in respect of matters of administration including those of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals on questions of fact are final and conclusive, with provision for appeal on questions of law to the Exchequer Court of Canada. Tariff references and appeals receive public hearings at which interested parties submit oral statements and written briefs relating to matters under consideration.

## Subsection 2.-Tariff and Trade Arrangements with other Countries, as at June 1, 1954

Canads's tariff arrangements with other countries fall into three main categories: trade agreements with a number of Commonwealth countries; the General Agreement on Tariffs and Trade (GATT); and other agreements and arrangements.

The Commonwealth countries with which Canada has trade agreements are as follows: Australia, British West Indies, Ceylon, Ireland, New Zealand, Union of South Africa, and the United Kingdom and Colonies. These agreements have been modified and supplemented by the GATT. Preferential arrangements are also in force with respect to Southern Rhodesia, India and Pakistan.

Canada exchanges most-favoured-nation treatment with 34 countries under the General Agreement on Tariffs and Trade. The Protocol of Provisional Application of the General Agreement on Tariffs and Trade was signed by Canada on Oct. 30, 1947, and brought the Agreement into force on Jan. 1, 1948.

The GATT is a multilateral trade agreement and the most-favoured-nation rates of duty bound under it apply equally to all signatories. The Agreement consists of three parts: the general provisions related to the schedules of tariff concessions and the exchange of most-favoured-nation treatment; the provisions relating to a code of regulations for conducting international trade; and the administrative provisions of the Agreement.

Under the new system of multilateral tariff negotiations, initiated under the GATT, three conferences have taken place: at Geneva, Switzerland, in 1947; at Annecy, France, in 1949; and at Torquay, England, in 1950-51. The tariff concessions Canada granted and received at the Geneva Conference are described in the 1948-49 Year Book, pp. 875-877, and those negotiated at Annecy are discussed in the 1950 Year Book, pp. 968-970. The Torquay negotiations were discussed in the 1952-53 edition, pp. 996-997. The existing tariff concessions remain in force until June 30, 1955, and, thereafter, unless modified in accordance with the terms of the Agreement.

Canada already had most-favoured-nation trade agreements with a number of GATT members prior to the effective date of the General Agreement. These agreements with individual countries continue in force in conjunction with the General Agreement. As an exception, however, the Canada-U.S. Trade Agreement of 1938 is suspended for so long as both countries continue to be contracting parties to GATT.

Tariff and Trade Arrangements with Commonwealth Countries, as at June 1, 1954

| Country | Agreement | Terms |
| :---: | :---: | :---: |
| Australia. | Trade Agreement signed July 8, 1931; in force Aug. 3, 1931. GATT effective Jan. 1, 1948. | Agreement includes schedules of tariff rates and exchange of British preferential rates on items not scheduled. May be terminated on six months notice. |
| British West Indies (Bahamas, Barbados, British Honduras, Jamaica, Leeward and Windward Islands, Trinidad and Tobago), Bermuda and British Guiana. | Trade Agreement signed July 6, 1925, in force Apr. 30, 1927; Canadian notice of termination of Nov. 23, 1938, was replaced by notice of Dec. 27, 1939, which continued the Agreement. <br> The British West Indies, with the exception of Jamaica, are contracting parties to GATT. | The parties exchange specified tariff preferences. Agreement may be terminated on six months notice. |
| Ceylon. | Ceylon is a party to the Trade Agreement of 1937 between United Kingdom and Canada. GATT effective July 29, 1948. | Canada and Ceylon exchange preferential tariff treatment. |

# Tariff and Trade Arrangements with Commonwealth Countries, as at June 1, 1954-concluded 

| Country | Agreement | Terms |
| :---: | :---: | :---: |
| India.................. | Since 1897, Canada has unilaterally accorded British preferential treatment to India but without contractual obligation. GATT effective July 8, 1948. |  |
| Ireland............... | Trade Agreement signed Aug. 20, 1932; in force Jan. 2, 1933. | Canada grants British preferential tariff in return for preferential rates where such exist and for most - favourednation rates on non-preferential items. May be terminated on six months notice. |
| New Zealand......... | Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. GATT effective July 26, 1948. | The parties exchange specific preferences on scheduled goods and reciprocally concede British preferential rates on items not scheduled. May be terminated on six months notice. |
| Pakistan.............. | Canada unilaterally accords Pakistan British preferential treatment but without contractual obligation. <br> GATT effective July 30, 1948. |  |
| Southern Rhodesin. | Trade Agreement of Aug. 20, 1932, was terminated on Jan. 2, 1938, on notice from Southern Rhodesia. Tariff treatment established therein continues to be reciprocally accorded. <br> GATT effective May 19, 1948. | Canada grants British preferential treatment and Southern Rhodesia extends tariff preferences granted to Commonwealth countries other than the United Kingdom. |
| Union of South Africa. | Trade Agreement signed Aug. 20, 1932; in force Oct. 13, 1932. | Agreement includes schedules of tariff preferences granted by each country. May be terminated on six months notice. |
|  | Exchange of notes Aug. 2-31, 1935; effective retroactive from July 1, 1935. GATT effective June 14, 1948. | Exchange of most • favoured nation treatment. May be terminated on six months notice. |
| United Kingdom..... | Trade Agreement signed Feb. 23, 1937; in force Sept. 1, 1937. Modified by an exchange of letters of Nov. 16, 1938, and an exchange of notes Oct. 30 , 1947. <br> GATT effective Jan. 1, 1948. | Various concessions by both countries including exchange of preferential tariff rates (some minor reservations by Canada). Extends to Colonial Empire. |

## Tariff and Trade Arrangements with Non-Commonwealth Countries, as at June 1, 1954

| Argentina............ | Trade Agreement signed Oct. 2, <br> 1941; provisionally in force <br> Nov. 15, 1941. | Exchange of most - favoured <br> nation treatment. Provisional <br> application may be terminated |
| :--- | :--- | :--- | :--- |
| on three months notice. |  |  |

Tariff and Trade Arrangements with Non-Commonwealth Countries, as at June 1, 1954-continued

| Country | Agreement | Terms |
| :---: | :---: | :---: |
| Benelux (Belgium, Luxembourg and The Netherlands). | Convention of Commerce with Belgium (including Luxembourg and Belgian colonies) entered into effect Oct. 22, 1924. The Convention was suspended during the War but reinstated by exchange of notes Feb. 1 and 5, 1946; includes Netherlands Antilles and Surinam. <br> GATT covering Benelux as a whole effective Jan. 1, 1948. | Exchange of most - favoured nation tariff treatment. May be terminated on a one-year notice. |
| Bolivia. | Order in Council of July 20, 1935, accepted Article 15 of the United Kingdom - Bolivia Treaty of Commerce of Aug. 1, 1911. | Exchange of most - favoured nation treatment. May be terminated on a one-year notice. |
| Brazil. | Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. <br> GAT'T effective July 31, 1948. | Exchange of most - favoured nation treatment. May be terminated on six months notice. |
| Burma. | GATT effective July 29, 1948. |  |
| Chille. | Trade Agreement signed Sept. 10, 1941; in force provisionally Oct. 15,1941 , and definitively on Oct. 29, 1943. <br> GATT effective Mar. 16, 1948. | Exchange of most - favoured nation treatment. May be terminated on six months notice. |
| China................. | Modus vivendi signed Sept. 26, 1946; in effect since Sept. 28, 1946. China withdrew from GATT on May 5, 1950. | Exchange of most - favoured nation treatment. May be terminated on three months notice. |
| Colombia. | Treaty of Commerce with United Kingdom of Feb. 16, 1866, applies to Canada. Modified by protocol of Aug. 20, 1912, and exchange of notes Dec. 30, 1938. <br> A Trade Agreement between Colombia and Canada was signed Feb. 20, 1946, but has not been put into force. | Exchange of most - favoured nation treatment. May be terminated on three months notice. |
| Costa Rica. | Modus vivendi signed Nov. 18, 1950; brought into force Jan. 26, 1951. | Exchange of most - favoured nation treatment. May be terminated on three months notice. |
| Cuba. | GATT effective Jan. 1, 1948. |  |
| Czechoslovakia. | Convention of Commerce signed Mar. 15, 1928; in force Nov. 14, 1928. <br> GATT effective May 21, 1948. | Exchange of most - favoured nation treatment. May be terminated on a one-year notice. |
| Denmark (including Greenland). | Treaties of Peace and Commerce with United Kingdom of Feb. 13,1660 , and July 11, 1670, apply to Canada. <br> GATT effective May 28, 1950. | Exchange of most - favoured nation treatment. Declaration of May 9,1912 , provides means for separate termination by Dominions on a one-year notice. |

Tariff and Trade Arrangements with Non-Commonwealth Countries, as at
June 1, 1954-continued

| Country | Agreement | Terms |

| Yuaoslavia.......... | Trade Agreements Act of June 11, 1928, accepted Article 30 of United Kingdom - Serb - CroatSlovene Treaty of Commerce and Navigation of May 12, 1927; in force Aug. 9, 1928. | Exchange of most - favoured nation treatment. May be terminated on a one-year notice. |

## CHAPTER XXIII.-PRICES*

## CONSPECTUS

Note.-The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

## Section 1.-Index Numbers of Wholesale Prices

Wholesale prices are not restricted in this Chapter to the normal meaning of that word but may be conceived as applying to the sale of commodities in large quantities. They may include price quotations ranging from those paid by primary producers for basic raw materials to prices paid by retailers for finished articles. Within this broad group, numerous sub-classifications are available, such as component material, degree of manufacture and special-purpose series. Wholesale prices are frequently very sensitive to changing conditions and are often used to gauge the economic effect of events as well as to forecast retail price changes. An example of this is the price increase that followed the outbreak of hostilities in Korea in 1950.

A new series of wholesale price index numbers, related to the base period 1935-39, was introduced in January 1951. Background material concerning the construction of this index is available in DBS Reference Paper No. 24, Wholesale Price Indexes, 1913-1950.

Wholesale price index numbers in Canada cover the period dating from Confederation in 1867. An intermittent decline characterized the first 30 years of this interval but, from an average of $56 \cdot 8$ in 1897, the general wholesale index (1935-39 = 100) advanced without appreciable interruption to $83 \cdot 9$ in July 1914. By November 1918, this index had reached $173 \cdot 1$ and continued upward to a post-war inflationary peak of $214 \cdot 2$ in May 1920. The subsequent deflationary period lasted about two years, and between 1922 and 1929 price levels remained comparatively stable. Annual averages in this interval held between a high of 133.8 for 1925 and $124 \cdot 6$ for 1929. For the four years following 1929, depressionary influences were so severe that prices fell almost to the level of those of 1913. In February 1933, the wholesale index touched an extreme low of 82.8 before turning upward again.

[^364]Irregular recovery then continued until 1937, but the highest point reached, 110•6 in July 1937, was substantially below the 1926 average. The collapse of the wheat market in 1938, together with a fairly general depression in other markets, carried wholesale price levels just prior to the outbreak of war in 1939 down to about 15 p.c. above the 1913 level. The August 1939 index of $95 \cdot 6$ marked the extreme low of a two-year decline. The movement of prices prior to the outbreak of World War I was very different from that which preceded World War II. The relatively low level of prices in August 1939 probably influenced the sharper initial advance at the outbreak of war. However, during 1940, price levels steadied and showed no sign of a steep increase until 1941. By that time, great expansion in wartime production had made serious inroads into stocks of nearly all basic commodities and, at the end of 1941, wheat remained the only important commodity for which stocks exceeded predictable requirements. The introduction of general price control in December 1941 ended a year in which wholesale prices had advanced 10 p.c. as compared with about 3 p.c. in 1940 . The effectiveness of price control is indicated by the fact that increases in wholesale prices amounted to only $3 \cdot 1$ p.c. and $5 \cdot 2$ p.c. during the years 1942 and 1943, respectively, and the December 1944 index was slightly below the December 1943 figure. The December 1945 index of 132.9 was 10 p.c. above that for December 1941, when price control became generally effective.

The precipitous advance in United States general wholesale prices that began during the latter half of 1946 was of great concern to Canadian price-control authorities. The advance had been anticipated in July 1946, when the Canadian dollar was returned to par with the United States dollar, thus reducing the Canadian dollar cost of imports from the United States. This provided a buffer of 10 p.c. only and the rise in United States prices was greater than that on a majority of imported articles so that continuous pressure was felt, especially among individual items. The Canadian general wholesale price index rose from 132.3 to 142.5 , an increase of over 8 p.c. between May 1945 and December 1946.

The Canadian price rise accelerated in 1947 as internal controls continued to be relaxed. The monthly general wholesale index advanced without interruption from $142 \cdot 5$ at December 1946 to $179 \cdot 9$ at December 1947, an increase of 26 p.c. The rise carried through into 1948, although at a decreasing rate, and by December the index had reached a level of $202 \cdot 0$. Wholesale price levels during 1949 were generally stable, then rose slightly during the first five months of 1950 to reach an index level of 204.7 by May. In June, a sharp gain to $209 \cdot 2$ occurred, owing mainly to rapidly advancing prices for live stock, lumber, iron and steel products and non-ferrous metals. An important factor stimulating further advance was the outbreak of war in Korea. The effect on basic commodities originating in or near that area was particularly sharp and by the end of the year the index had risen to $225 \cdot 2$.

In 1951, the index reached new peak levels, culminating in an all-time high of 243.7 in July. This trend was reversed in the second half of the year when the index declined steadily, reflecting marked recessions in animal products and textile products. The December 1951 index at $237 \cdot 7$, however, was still $5 \cdot 6$ p.c. above December 1950.

The downward movement continued throughout the first 10 months of 1952, the total index standing at 220.2 for $\oint$ ctober. Declines were recorded by most of the main commodity groups, although an upward trend was still apparent in iron and steel products and non-metallic mineral products.

During the period October 1952 to October 1953 the total index changed by only 0.2 points from 220.2 to 220.4 as an increase in the animal products group and continued increases in iron and steel products and non-metallic mineral products offset declines in all other groups. Rather widespread decreases between October 1953 and December 1954 moved the total index down $5 \cdot 1$ points to $215 \cdot 3,11 \cdot 7$ p.e. below the peak figure of July 1951. All groups, except non-ferrous metals and chemicals which rose about 1 p.c., contributed to this decline.

## 1.-Annual Index Numbers of Wholesale Price Groups, 1945-54, and Monthly Indexes, 1953 and 1954

$(1935-39=100)$

| Year and Month | General Wholesale | Raw and Partly Manufactured Goods | Fully and Chiefly Manufactured Goods | Industrial Materials | Canadian Farm Products ${ }^{1}$ |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | Field | Animal | Total |
| 1945. | $132 \cdot 1$ | 136.2 | 129.8 | $143 \cdot 2$ | 162-5 | 170-2 | $166 \cdot 4$ |
| 1946. | 138.9 | $140 \cdot 1$ | 138.0 | $148 \cdot 6$ | 177.9 | 181.2 | $179 \cdot 5$ |

[^365]Residential Building Materials.-In March 1949, a series of index numbers of residential building material prices (basis: $1935-39=100$ ) was established to meet the need for a more precise measurement of material components of residential construction. A description of the index together with a record back to 1926 is given in DBS bulletin, Price Index Numbers of Residential Building Materials 1926 to 1948.

The slow decline in residential building material prices which commenced in the final quarter of 1951 continued through the following three years. This change is illustrated by the composite index which, after touching a post-war peak of 290.8 in September and October 1951, subsequently dropped to 283.3 in December 1952. By March 1953, a slight recovery to $284 \cdot 7$ had taken place, but the index dropped again to reach $278 \cdot 7$ by December 1954. Among the various components, lower prices were most apparent in lumber products, electrical equipment, and plumbing and heating equipment, but other groups continued to exert a firmer price tone.

Non-residential Building Materials.-An index has been prepared to measure the price change of materials used in non-residential building construction. The index has been constructed on the base $1949=100$, using weights obtained from data on cost of building materials provided by general and trade contractors for a sample of buildings constructed in Canada during the years 1948-50. The methods of constructing the index are explained in DBS Reference Paper No. 43, NonResidential Building Materials Price Index, 1935-1952. Price indexes for twelve principal component material groups have been calculated by months from January 1949; indexes for nine of these are given in Table 3 for 1953 and 1954.

The composite index of non-residential building materials increased from 112.6 in January 1951 to a peak of 124.9 in March 1953. Most of this increase of 12.3 points or 10.9 p.c. took place during 1951, the composite index increasing $9 \cdot 7$ points from January 1951 to December 1951 as compared with only $2 \cdot 6$ during the longer period December 1951 to March 1953. All component groups contributed to the increase during this period.

During the period March 1953 to December 1954 the composite index decreased 4.5 points or 3.6 p.c. Changes were relatively small for most of the groups during this period with the exception of plumbing and heating and other equipment which declined 5.4 p.c., and lumber products which declined 2.8 p.c.

## 3.-Annual Price Index Numbers of Non-residential Building Materials, 1950-54, and Monthly Indexes, 1958 and 1954

$(1949=100)$

| Year and Month | Composite Index | Principal Components |  |  |  |  |  |  |  |  |

## Section 2.-The Consumer Price Index

The Consumer Price Index is Canada's official measure of retail price change. It replaces the Cost-of-Living Index and is the fifth in a series of Canadian index numbers of retail prices dating back to 1900. This new measure was introduced by the Dominion Bureau of Statistics in October 1952 in a publication entitled, The Consumer Price Index, January 1949-August 1952. Detailed information on the main aspects of the index is contained in that publication.

The purpose of the Consumer Price Index is to measure changes in retail prices of goods and services bought by a representative cross-section of the Canadian urban population. The families covered by the Index lived in 27 Canadian cities of 30,000 population or over, ranged in size from two adults to two adults with four children and had annual incomes ranging from $\$ 1,650$ to $\$ 4,050$ during the survey year ended Aug. 31, 1948.

The budget of the Consumer Price Index represents the post-war level of consumption of those families. A list of 224 of the principal goods and services they purchased in the survey year forms the pricing sample of the Index, and the relative amounts they spent on those and similar categories of items determine the relative importance, or weight, given to each item in the Index.

The monthly index number is calculated from a sample of more than 50,000 retail price quotations. Prices are collected by field representatives in 16 cities across Canada and they are obtained by mail questionnaires in 17 other cities. All cities covered, except Charlottetown, had a population of 30,000 or over as at the 1951 Census.

Price changes are measured from month to month and applied to the cost of the Index budget. The budget is often described as a market basket of goods and services. The physical content of this basket is kept constant and only changes in retail prices are allowed to influence its cost over time. A comparison between the current cost and the base-period cost of the same constant basket yields the Index, that is, a measure of the average percentage change in all retail prices from the base period to date. For some of the food items entering into the basket, the quantities are allowed to vary as between months but not as between years, in order to take account of seasonal variations in consumption.

Because the Index refers to a post-war level of living it was fitting that a post-war year be selected as the reference level of prices. Of the post-war years, 1949 was considered the most suitable because price levels were relatively stable. The fact that 1949 is a satisfactory reference level for other index number measurements, such as those related to industrial production, agriculture, imports and exports, was another important consideration.

The percentage distribution of the main group weights as of the base period is as follows:-

| Budget Group | $\begin{gathered} 1949 \\ \text { Base } \\ \text { Weight } \end{gathered}$ |
| :---: | :---: |
| Food. | 31.7 |
| Clothing. | 11.5 |
| Shelter. | 14.8 |
| Household operation. | $17 \cdot 3$ |
| Other commodities and services. | $24 \cdot 7$ |
| Total.. | 100.0 |

Consumer Price Index Movements.-From a post-war peak of $118 \cdot 2$ in January 1952, the Consumer Price Index declined $2 \cdot 1$ p.c. in 1952, to reach $115 \cdot 7$ on Jan. 2, 1953. Most of the decrease occurred during the early part of the year, but the summer and autumn months were noticeably stable. The first four months of 1953 witnessed a further drop of slightly more than 1 p.c. which brought the index to 114.4 on May 1. A series of five consecutive monthly increases moved the index up to 116.7 by Oct. 1, but was followed by three decreases which placed the index for January 1954 at 115•7, the same level as a year earlier. The first significant change during 1954 occurred between May and June, when the index rose 0.5 p.c. from $115 \cdot 5$ to $116 \cdot 1$.

In contrast with the two-year period from June 1950 to June 1952 which revealed a general upward movement in prices followed by a sharp fall, the period June 1952 to June 1954 was characterized by the absence of any trend and by diverging movements between the components of the index. Between June 1952 and June 1954, food prices fluctuated seasonally over a wide range and were down $3 \cdot 2$ p.c. over the entire period. Non-food commodities were practically unchanged, but services, including shelter, moved up gradually for a gain of more than 5 p.c. As a result, the index for June 1954 stood only 0.1 point above the level of June 1952.

Table 6 provides single commodity price relatives on the base $1949=100$ for a number of important foods entering into the food component of the Consumer Price Index. It also provides a record of average prices based on the actual average level of prices prevailing in October 1952 and calculated for the other months on the basis of the price relatives.

Consumer Price Indexes for Regional Cities.-Revised regional consumer price indexes were released by the Dominion Bureau of Statistics in November 1953 for nine cities or city combinations. The new series, which replace the cost-of-living indexes for eight regional cities, appear in Table 7. The index for St. John's, N'f'ld., which was prepared subsequent to the date Newfoundland joined Confederation, is calculated on the base June 1951=100 and is shown in Table 7 on that base.

The construction of each regional consumer price index involved three main phases: (1) the conversion of an existing cost-of-living index inclusive of all tobacco taxes, from the base August $1939=100$ to the base $1949=100$, up to and including Sept. 1, 1953; (2) the calculation of an entirely new index incorporating a revised weighting system and price sample, on the base Sept. 1, 1953=100; and (3) the linking of the new series to the converted series as at Sept. 1, 1953, to form a continuous index on the base $1949=100$.

The regional indexes are not designed to show whether it costs more or less to live in one city than in another, and should not be used for that purpose. Their function is to measure percentage changes in retail prices-over a certain time in each city or city combination-of a fixed basket of goods and services representing the level of consumption of a particular group of families.

${ }^{1}$ Explanation of methods used in compiling St. John's, N'f'ld., index (June $1951=100$ ) is given in DBS Reference Paper No. 23.

World Retail Price Indexes.-In order to place changes in Canadian retail prices in perspective with those occurring in other countries, Table 8 provides retail price indexes for selected countries and dates. It will be noted that increases in retail prices since 1949 have been world-wide. With the exception of Chile and Peru, where large increases in retail prices occurred, prices were relatively stable in all countries at the end of 1953. These indexes measure price change only within each country and should not be used to compare actual levels of living costs from country to country.

## 8.-Index Numbers of Retail Prices in Canada and other Countries, 1949 and December 1952 and 1953

(Base: $1948=100$, except for France and The Netherlands where $1949=100$. Source: Monthly Bulletin of Statistics of the United Nations.)

## Section 3.-Index Numbers of Security Prices

Security prices have long been utilized in statistical measurements related to economic phenomena and are, generally, sensitive to changing business conditions although this valuable characteristic is sometimes overshadowed by the fact that their movements may be influenced greatly by speculative interest very remotely associated with underlying economic conditions. Thus, in 1928 and 1929 commonstock prices advanced far beyond levels indicated by business profits and prospects. Security-price trends also have been at variance with other business indexes for short intervals at other periods.

Common Stocks.-Common-stock prices were firmer in the final quarter of 1952 but the trend was reversed in the opening months of 1953 . Changes in security price levels in 1953 reflected, in part, prospects for peace in Korea together with a
less tense international situation. From a 1952 low point of $163 \cdot 6$ for October, the investors composite index advanced to $172 \cdot 3$ by January 1953. Following relative steadiness in February and March, the index dropped sharply in April to touch 160.8. Continued firmness was maintained at this level until October when a further sharp drop to 151.9 occurred-the lowest index level since December 1950. A nearly continuous increase from October 1953 to December 1954 brought the index up to $206 \cdot 8$, above the October 1953 index by $36 \cdot 1$ p.c. In November 1954 the index passed the previous all-time high of $197 \cdot 8$ established in September 1929.

## 9.--Investors Index Numbers of Common Stocks, by Month, 1953 and 1954

$(1935-39=100)$

| December. | $337 \cdot 5$ | $118 \cdot 6$ | 162.9 | 181.8 | 227.0 | 206.8 |

Preferred Stocks.-Preferred stock prices remained within exceptionally narrow limits during the final quarter of 1952 and the first two months of 1953. From a level of $161 \cdot 2$ in October, the index moved to $161 \cdot 6$ by February 1953. A firmer tone lifted prices to 163.6 in March but by April this advance had been cancelled and the index again stood at $161 \cdot 6$. From that date to the end of 1953 prices held relatively steady. Slight increases in January and February 1954 were followed by more substantial subsequent changes to bring the index for December to $175 \cdot 4-8 \cdot 5$ p.c. above the December 1953 index.

## 10.-Index Numbers of Preferred Stocks, by Month, 1945-54

( $1935-39=100$ )
Nore.-Figures for 1927-44 are given in the 1948-49 Year Book, p. 958.

| Year | Jan. | Feb. | Mar. | Apr. | May | June | July | Aug. | Sept. | Oct. | Nov. | Dec. |

| 1950 | 152.4 | 153.0 | 153.7 | $154 \cdot 4$ | 157-3 | 158.2 | $154 \cdot 6$ | $155 \cdot 6$ | 158.2 | $161 \cdot 1$ | $161 \cdot 1$ | $150 \cdot 2$ |
| 1951 | 166.0 | $169 \cdot 3$ | 166.0 | 165.2 | $164 \cdot 3$ | 162.2 | 163.1 | 165.2 | 166.4 | 164.2 | $162 \cdot 8$ | 159.5 |
| 1952 | 161.4 | $160 \cdot 6$ | $159 \cdot 5$ | $157 \cdot 2$ | 157-2 | 157.7 | 159.8 | 163.6 | 162.4 | 161.2 | $160 \cdot 3$ | $160 \cdot 7$ |
| 1953 | $161 \cdot 0$ | $161 \cdot 6$ | 163.6 | 161.6 | 162.9 | 163.0 | 163.8 | $164 \cdot 3$ | $162 \cdot 0$ | 161.0 | 161 -6 | 161-7 |
| 1954. | 162 -6 | 163.6 | 165.4 | 168.0 | 169.7 | 170.7 | 171-3 | 173.0 | $173 \cdot 4$ | $174 \cdot 1$ | 175-4 | 175-4 |

Mining Stocks.-Prices for mining stocks, after touching a 1952 low point of $99 \cdot 1$ in October, advanced to $\mathbf{1 0 6 \cdot 0}$ in January 1953 which subsequently proved to be the turning point for a decline that lowered the index to 79.9 by December. Both golds and base metals shared in the recession but the latter group suffered the greater loss. After reaching a peak of $\mathbf{1 8 0 \cdot 6}$ in January 1953 as compared with 166.9 in October 1952, the base metals index receded to 131.5 by December. Over the same period, gold stocks series moved between $69 \cdot 5$ for October 1952, 73.5 for January, and $57 \cdot 3$ for December. From the December 1953 level the total index increased 26.3 p.c. to $100 \cdot 9$ by December 1954. Golds advanced 18.0 p.c. during this period to $67 \cdot 6$, and base metals moved up $34 \cdot 8$ p.c. to $177 \cdot 2$ p.c.

## Section 4.-Index Numbers of Bond Yields

The exceptional financial requirements of the war years 1914-18 turned the federal authorities to the domestic market, a field that had hitherto served mainly the needs of the provinces and municipalities. Historical records of long-term bond yields in the domestic market prior to 1914 are obtainable, therefore, from provincial and municipal sources only.

The growing importance of Federal Government financing in the domestic market since World War I made it advisable to publish the Government's index of long-term bond yields shown in Table 12. This series $(1935-39=100)$ has been prepared from January 1937 on the basis of yield computed for a 15 -year, 3-p.c. theoretical issue by the Bank of Canada.

92428-71 $\frac{1}{2}$

The easier tone for Government of Canada obligations, which developed in the second half of 1951, continued through 1952 and into 1953. There was, however, evidence of a more stable market in 1953 as indicated by the long-term bond yield index which hovered around $119 \cdot 0$. But a sharp reversal occurred in 1954 as the yield index dropped to 98.9 by December. This reflected to a large extent changes in interest rates abroad, particularly in the United States.

## 12.-Index Numbers of Government of Canada Long-Term Bond Yields, by Month, 1945-54

$(1935-39=100)$

| Month | 1945 | 1946 | 1947 | 1948 | 1949 | 1950 | 1951 | 1952 | 1953 | 1954 |

## Section 1.-Combined Statistics of Public Finance for All Governments

Combined statistics of public finance for all governments in Canada-federal, provincial and municipal-are presented in this Section. Additional information is provided for each level of government in Sections 2, 3 and 4.

Combined Revenue and Expenditure.-Tables 1 and 3 give details of the federal, provincial and municipal net combined revenue by sources and net combined current and capital expenditure by services, respectively, for 1951. This net basis has been prepared by deducting from revenue, and the appropriate expenditure, certain specified amounts such as grants-in-aid and shared-cost contributions from other governments, institutional revenue, certain other sales of commodities and services, and interest, premium, discount and exchange revenue. Amounts provided for debt retirement are excluded to avoid duplication since all expenditure resulting from capital borrowings is included.

Inter-governmental transfers such as subsidy payments by the Federal Government to the provincial governments are unconditional grants and, therefore, cannot be offset against any specific expenditure. These are set out separately in Tables $\mathbf{1}$ and $\mathbf{3}$ in order to prevent duplication and to provide additive totals. Because of the differing accounting practices of governments and variations in fiscal year-ends, discrepancies appear between the amounts recorded as inter-governmental transfers in the two tables.

Tables 2 and 4 show combined revenue of all governments, and combined expenditure of all governments, respectively, for the years 1948-51, both exclusive of inter-governmental transfers.

[^366]
## 1.-Combined Revenue of All Governments, 1951

Nore.-Figures for the fiscal years ended nearest Dec. 31.

## Section 2.-Federal Public Finance

A sketch of public finance from the French regime to the outbreak of World War I appears in the 1941 Year Book, pp. 742-743. Detailed sketches re tax changes from 1914 to 1938 will be found in issues of the Year Book beginning with the 1926 edition. An outline of the financing of Canada's war effort, including the more important changes in taxation during the war years from 1939 to 1945, is given in the 1945 Year Book, pp. 918-923. Budgets for the years ended Mar. 31, 1946-51 will be found in issues of the Year Book beginning with the 1946 edition. The most important post-war Budget changes, up to and including the 1952-53 Budget, are summarized in the 1952-53 Year Book, pp. 1026-1030. The post-war financial policy of the Government of Canada is outlined in the 1954 Year Book at pp. 1061-1064.

The 1954-55 Budget.-The Budget for 1954-55 was presented by the Minister of Finance on Apr. 6, 1954. A number of changes in the tax rate structure were proposed. The more important of these are outlined briefly as follows:-

An amendment to re-establish past policy with respect to the tax status of fire and casualty mutual insurance companies withdrew the provision in the income tax regulations which limits the deductions for capital costs to the amount taken on the taxpayers' books of account.

No immediate provisions were recommended in the succession duty law, but it was announced that work had commenced on rewriting the present statutory provisions.

No increases in customs tariff were proposed, and the duty was eliminated on machinery and apparatus, including tubing of a type not made in Canada, for use in operation of potash and rock-salt mines. Duty free entry was provided for materials and parts used in the construction and repair of railway signal systems. The duties on motor rail cars or units were suspended until July 1, 1956, and on uranium until July 1, 1958.

Some of the principal items on which the tariff was substantially reduced included automatic controls for certain sterilizing processes, tear gas ammunition for use by law enforcement authorities and impregnated jute fabric used by nurserymen. The exemption, from duty and taxes, of motor-vehicles imported as settlers' effects, was increased from a valuation of $\$ 1,500$ to $\$ 2,500$.

Certain items were added to the schedule of exemption with regard to the sales tax: for example, road machinery and fire-fighting equipment (when purchased for use by municipalities), wall panels, sheet music and hearing aids-but no change was proposed in the general sales tax rate. It was expected that a total annual revenue loss under all sales tax changes would be about $\$ 3,000,000$.

Some changes were recommended with regard to the 15 p.c. special excise tax. This was reduced from 15 p.c. to 10 p.c. on items such as soft drinks, candy, cosmetics, tires and tubes, motorcycles, smokers' accessories, clocks, watches and jewellery, and was removed completely from furs, electrical household appliances, certain types of sporting goods, and luggage.

A technical change was made in the method of taxing beer: the tax on malt being replaced by a gallonage tax. A loss of about $\$ 36,000,000$ in annual revenue is expected.

Total revenue, after taking into account these tax changes, was expected to amount to $\$ 4,464,000,000$, plus old age security taxes of approximately $\$ 305,000,000$. Estimated expenditures amount to $\$ 4,460,000,000$. Total ordinary revenue for
the fiscal year ending Mar. 31, 1954, amounted to $\$ 4,321,771,000$; special receipts and credits amounted to $\$ 74,548,000$. Grand total revenue was $\$ 4,396,320,000$ and expenditures were $\$ 4,350,522,000$ resulting in an excess of revenue over expenditure or a decrease in the net debt of $\$ 45,797,000$.

## Subsection 1.-Balance Sheets of the Federal Government

Table 7 shows the balance sheets of the Federal Government as at Mar. 31, 1953 and 1954. The figures of this table are on a basis not strictly comparable to those in previous Year Books, chiefly because of changes in the method of accounting for cash.

## Subsection 2.-Revenue and Expenditure

In the fiscal year ended Mar. 31, 1954, Federal Government revenue amounted to $\$ 4,396,000,000$ compared with $\$ 4,361,000,000$ in the previous year, an increase of $\$ 35,000,000$. During the same period, expenditure increased by $\$ 13,000,000$ from $\$ 4,337,000,000$ to $\$ 4,351,000,000$. The surplus of revenue over expenditure for the fiscal year was $\$ 46,000,000$.

Tax revenue was $\$ 6,000,000$ greater than in the previous fiscal year and nontax revenue increased $\$ 38,000,000$. Special receipts and other credits decreased by $\$ 9,000,000$.

${ }^{1}$ Includes $\$ 87,510,068$ adjustment required to place interest on public debt on accrual basis. $\quad{ }^{2}$ Canadian Broadcasting Corporation now operated as a separate administrative unit; previously shown under National Revenue. ${ }^{2}$ See Resources and Development.

4 Pensions under the Old Age Security Act of 1951 (effective January, 1952) are paid out of the Old Age Security Fund account and are not recorded under departmental expenditure. See pp. 264-267. 5 Name of Department changed to Northern Affairs and National Resources. ©See Citizenship and Immigration. ${ }^{2}$ See Public Works.

## 10.-Per Capita Revenue and Expenditure, by Principal Items, Years Ended Mar. 31, 1952-54

Nore.-Figures of revenue and expenditure to which these per capita figures relate are given in Tables 8 and 9 . The basis of calculation was the estimated population as at June 1 of the immediately preceding year for 1953 and 1954; for 1952, Census of 1951 figure was used.

| Revenue and Expenditure | 1952 | 1953 | 1954 |
| :---: | :---: | :---: | :---: |
|  | \$ | \$ | \$ |

## Subsection 3.-Analysis of Revenue from Taxation

Table 11 gives a comparison of total expenditure with taxation revenue and total revenue for each of the fiscal years ended Mar. 31 since 1950. During the war years expenditure far exceeded revenue but in 1947 taxation met over 92 p.c. of
expenditure and revenue from all sources exceeded expenditure. For 1948 and 1949, revenue from taxation alone exceeded total expenditure by a substantial amount owing to the maintenance of high taxation levels and a greatly increased national income.

## 11.-Relationship of Total Expenditure to Taxation Revenue and to Total Revenue, Years Ended Mar. 31, 1950-54

Note.-Figures for 1940-49 are given in the 1951 Year Book, p. 989.

| Year | Total Expenditure | Taxation Revenue | Total Revenue | Percentage to Total Expenditure of |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Taxation Revenue | All <br> Revenue |
|  | \$ | \$ | \$ | p.c. | p.c. |
| 1950. | 2,448,615,662 | 2,323,117,079 | 2,580,140,615 | 94.87 | $105 \cdot 37$ |
| 1951. | 2,901,241,698 | 2,785,349,899 | 3,112,535,948 | 96.01 | $107 \cdot 28$ |
| 1952. | 3,732,875,250 | 3,657,775,082 | 3,980,908,652 | 97-99 | $106 \cdot 64$ |
| 1953. | 4,337,275,512 | 3,997,592,937 | 4,360, 822,789 | 92.17 | $100 \cdot 54$ |
| 1954.. | 4,350,522,378 | 4,003,584,453 | 4,396,319,583 | 92.03 | 101.05 |

The following analysis of taxation revenue is confined to excise duties, excise taxes, income tax and succession duties; customs receipts constitute a single item in the Public Accounts and cannot be further analysed here.

## Excise Duties

Excise duties proper are presented below with a summary of the excise tariff and statistics arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of goods taken out of bond and subject to excise tax.

Canadian Excise Tariff.-The following is a statement of the Canadian excise tariff, as at Aug. 20, 1954:-

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities for medicinal or research purposes to universities, scientific or research laboratories, bona fide public hospitals, or health institutions in receipt of Federal Government aid.
12.-Gross Excise Duties Collected, Years Ended Mar. 31, 1949-54

| Item | 1949 | 1950 | 1951 | 1952 | 1953 | 1954 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ | \$ | \$ | \$ | 8 | \$ |
| Spirits. | 40,634,697 | 46,547,587 | 60,126,300 | 45,944, 724 | 48,627,965 | 69,194,020 |
| Validation fee | 825,371 | 790,587 | 1,108, 252 | 1,223,933 | 746,877 |  |
| Beer or malt liquo | 3,740,065 | 3,678,316 | 2,745,851 | 3,812,065 | 5,294,283 | 4,799,823 |
| Malt syrup. | 55, 55, ${ }^{\text {5 }}$, 825 |  |  |  |  |  |
| Malt.... | 55,853,055 | 56,018,292 | 65,409.427 | 73,748,003 | 80,584,283 | 78,733,288 |
| Tobacco and cigarette | 106,033,181 | $115,778,732$ | 114,282.662 | 100,547,951 | 116,701,207 | 96,724,855 |
| Cigars.. | 207, 823 | 203.043 | 203,945 | 162.968 | 212,817 | 245, 862 |
| Licence | 39,115 | 38,241 | 38,009 | 36,092 | 38,183 | 36.519 |
| Totals ${ }^{1}$ | 207,385,132 | 223,054,798 | 243,914,446 | 225, 475, 736 | 252,205,615 | 249,734,366 |

${ }^{1}$ These totals do not agree with net excise duties as shown in Table 8 owing to refunds and drawbacks and, for spirits, a transfer tax which is included here.

Statistics of Licences and Distillation.-As a result of the collection of excise duties, statistics are compiled of excise licences issued and of distillation.
13.-Statistics of Licences and Distillation, Years Ended Mar. 31, 1949-54

| Item |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |

The quantity of spirits manufactured has fluctuated greatly since 1920, varying from a low of $2,356,329$ proof gal. in that year to a high of $35,555,059$ proof gal. recorded in 1945.

Alcohol and Tobacco Taken Out of Bond.-The amounts of beverage spirits, malt beer, malt, cigars, cigarettes and other tobacco taken out of bond for consumption are given in Table 44, p. 1002.

## Excise Taxes Collected

The statistics given in Table 14 represent gross excise tax collection by the Excise Division of the Department of National-Revenue.

${ }^{2}$ Includes refunds and drawbacks

## Income Tax

Income Tax Collections by the Department of National Revenue on a Fiscal Year Basis.-Statistics of income tax collections are gathered at the time the payments are made and are, therefore, up-to-date. Over 85 p.c. of individual taxpayers are wage or salary earners who have almost the whole of their tax
liability deducted at the source by their employers. All other taxpayers are required to pay most of their estimated tax during the taxation year. As a result, most of the tax is collected during the same year in which the related income is earned, and only a limited residue remains to be collected when the returns are filed. The collections for a given fiscal year include tax deductions and instalments for twelve months, embracing portions of two taxation years, and a mixture of year-end payments for the first of these years and for the preceding year, and cannot, therefore, be closely related to the statistics for a given taxation year. As little information about a taxpayer is received when the payment is made, and as a single cheque from one employer may frequently cover the tax payments of hundreds of employees, the payments cannot be statistically related to taxpayers by occupation or income. Descriptive classifications of taxpayers are available only from tax returns, but collection statistics, if interpreted with the current tax structure and the above factors in mind, indicate the trend of income in advance of the final compilation of statistics.

The statistics given in Table 15 pertain to tax collections by the Taxation Division of the Department of National Revenue. The collections are for fiscal years ended Mar. 31.

## 15.-Taxes Collected by the Taxation Division of the Department of National Revenue, Years Ended Mar. 31, 1947-54

Nore.-Figures for 1917-34 are given in the 1947 Year Book, pp. 999-1000, for 1935-46 in the 1951 edition, p. 994.

Corporation Income-Tax Statistics.-Corporation statistics presented in Tables 18 and 19 are on a taxation-year basis prior to assessment. The data were extracted and compiled from the returns shortly after they were filed and are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Provincial figures contain an unavoidable bias in favour of Ontario and Quebec because many large corporations operating across Canada file their returns in one or other of these two Provinces.

## Succession Duties

The first imposition of succession duties in Canada was in 1892, when Nova Scotia, New Brunswick, Quebec and Ontario enacted legislation of this nature. Legislation was passed in the other provinces in the following years: Manitoba, 1893; Prince Edward Island and British Columbia, 1894; Saskatchewan and Alberta, 1905. The Federal Government first imposed succession duties in 1941. Current legislation is the Dominion Succession Duty Act (R.S.C. 1952, c. 89).

Table 20 shows the receipts of the various governments from this source for 1952, 1953 and 1954.

In 1947, seven provinces-Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia - withdrew from the succession-duty field. The seven provinces entered into agreements with the Federal Government to 'rent out' the succession-duty field for the period Apr. 1, 1947, to Mar. 31, 1952. Accordingly, in these provinces, the previous combination of federal and provincial succession duties was replaced by a single federal succession duty at double the previous federal level which, for most provinces, resulted in a combined duty approximately the same as previously levied under the separate federal and provincial duties. The Provinces of Quebec and Ontario did not enter into the agreements but the doubled rates of federal duty were applied and are capable of being reduced up to one-half by a credit for the duty paid to these Provinces. Yukon Territory in 1948, and the Province of Newfoundland in 1949, entered into a similar tax-rental agreement.

In 1952, the tax-rental agreements expired but new five-year agreements were negotiated with the same eight provinces which again elected not to tax in the succession-duty field. The Province of Ontario also entered into an agreement on income tax, but elected to continue to tax in the succession-duty field. Consequently, in all the provinces of Canada the situation in regard to succession duty is likely to be the same as that described above until Mar. 31, 1957.

Double taxation of estates resulting from taxation of the same property by more than one Canadian jurisdiction has been common in the past, but with the withdrawal of eight of the provinces from the field, and an interprovincial agreement between Ontario and Quebec, the credit provision of the federal legislation has reduced this problem considerably. In the international field, dual taxation has been dealt with by way of tax conventions. A tax convention between Canada and the United States was signed on June 8, 1944, and amended effective Nov. 21, 1951. An agreement respecting succession duties was signed June 5, 1946, between Canada and the United Kingdom. A convention between Canada and France, signed on Mar. 16, 1951, came into effect on July 2, 1953.

## 20.-Federal and Provincial Net Revenue from Succession Duties, Years Ended Mar. 31, 1952-54

[^371]Federal Duty.-Beneficiaries are divided into four classes, as follows:-
(1) Widow or dependent child or dependent grandchild.
(2) Husband; parent; grandparent; child over 18 years of age, not infirm; son- or daughter-in-law.
(3) Lineal ancestor other than parent or grandparent; brother, sister or their descendant; uncle or aunt or their descendant.
(4) Others.

No duty is payable on estates not exceeding $\$ 50,000$, or on bequests of up to $\$ 1,000$ to any one individual, nor is duty levied on gifts to the Federal Government or provinces, on residential property of certain diplomatic or consular officials, on pensions administered by the Canadian Pensions Commission or those payable by allied nations for war services, nor on insurance moneys or annuities if the person with whom the contract was made was domiciled outside Canada at the time of death. Provision is made for increased exemptions and reduced duties for those dying as a result of war service. Bequests to non-profit charitable organizations in Canada are exempt.

Widows are exempt up to $\$ 20,000$, dependent children to $\$ 5,000$ each and, where dependent children do not benefit, the widow's exemption is increased by $\$ 5,000$ for each child who does not benefit. For dependent orphaned children, there is a further exemption of $\$ 15,000$ (in addition to $\$ 5,000$ ) divisible proportionately among such orphans according to their number and the value of each individual benefit. Duty is payable on the excess only when the limit is passed, i.e., these exemptions are deductible exemptions.

Gifts made during the lifetime of the deceased are exempt if the transfer was carried out more than three years prior to his death and the recipient of such gifts secured full possession at the time of the transfer and the donor (the deceased), thereaf ter, did not retain any rights therein or secure any benefits therefrom.

If gift tax payable under the provisions of the Income Tax Act has been paid in connection with the transfer made by a deceased person during his lifetime then no succession duty is payable in respect of such gift except to the extent that succession duty thereon is in excess of the gift tax.

The difficulties of working out succession-duty tables to show the combined effects of federal and provincial duties are readily realized. The best that can be done here is to choose typical estates in the main classes laid down in the legislation and give examples of the combined duties applicable to them. This has been attempted in Tables 21, 22 and 23.

Examples of the rates of duty and duty levied are given in Table 21.
21.-Occurrence of Succession Duties in all Provinces (except Quebec and Ontario) on Typical Estates

| Class | Aggregate Net Value | Dutiable Value | Rate | Duty |
| :---: | :---: | :---: | :---: | :---: |
| A. Widow only | \$ | \$ | p.c. | \$ |
|  | 60.000 | 40,000 | $10 \cdot 6$ | 4,240 |
|  | 100.000 | 80,000 | 14.7 | 11,760 |
|  | 300,000 | 280,000 | 26.7 | 74,760 |
|  | 500,000 | 480,000 | 32.7 | 156.960 |
|  | 1,000,000 | 980,000 | 38.7 | 379,260 |
| B. Only child over 25 years................... | 60,000 | 60,000 | 11.9 | 7.140 |
|  | 100,000 | 100,000 | 16.7 | 16,700 |
|  | 300.000 | 300.000 | 28.7 | 86,100 |

|  | 100,000 | 100,000 | $20 \cdot 7$ | 20,700 |
|  | 300,000 ) | 300,000 | 32.7 | 98,100 |
|  | 500,000 | 500,000 | 38.7 | 193,500 |
|  | 1,000,000 \% | 1,000,000 | $44 \cdot 7$ | 447,000 |

Occurrence of Combined Federal and Provincial Succession Duties.Only the Provinces of Quebec and Ontario have retained their own succession duties. In Tables 22 and 23, for all classes of beneficiaries, the duties collectable are shown where an estate of given value is left to one beneficiary only. It would be impossible to cover the many different combinations of the various beneficiaries and the exemptions and saving clauses to be found in the legislation of the respective provinces. Each estate is, moreover, assumed to be wholly situated within the province and the beneficiary domiciled therein to be the sole heir.

Quebec.-The current legislation under which succession duties are collected is S.Q. 1943, c. 18, as amended. As stated above, the following text and table can give only a broad outline of such duties as are applied to comparable classes of beneficiaries in other provinces. Full details regarding other cases may be obtained from the Act or from the Collector of Succession Duties, Provincial Revenue Offices, Quebec, Que.

Under the legislation, beneficiaries are divided into three classes, as follows:-
(1) Those in direct ascending or descending line, of a relationship between consorts, between father- or mother-in-law and son- or daughter-in-law, or between step-father or step-mother and step-son or step-daughter. There is no limitation of degree in the direct ascending or descending line in these relationships.
(2) Those in collateral line including a brother or sister, or descendant of a brother or sister of the deceased; or to a brother or sister or son or daughter of a brother or sister of the father or mother of the deceased.
(3) Others.

No duty is payable when the aggregate value of the property passing to persons in Class (1) does not exceed $\$ 10,000$; in an estate, the aggregate value of which does not exceed $\$ 50,000$, this sum is increased by $\$ 1,500$ for each child, in the first degree,
under 25 years of age，domiciled in the Province，left by and surviving the deceased （ $15-16$ Geo．VI，c． 14 ）．If the whole value of the estate is less than $\$ 1,000$ ，bequests to collateral relatives are exempt．No duty is payable on bequests of up to $\$ 1,000$ to beneficiaries in Class（3）who have been in the employ of the testator for five years or more．In estates that devolved prior to Mar．10，1949，no duty is payable on legacies for religious，charitable or educational purposes in Quebec and the same privilege is extended to legacies for similar work outside the Province，pro－ vided that the province or State within which the work is to be carried out extends reciprocal privileges under its succession duty laws．Since Mar．10， 1949 （ 13 Geo．VI，c．32），all legacies，gifts and subscriptions for religious，charitable and educational purposes are tax－free，regardless of the country，province or State where the institutions benefiting therefrom are located．

[^372]（2）Brother；sister；nephew；niece；uncle；aunt；cousin；child of nephew or niece．
（3）Others．
No duty is payable on estates not exceeding $\$ 5,000$ in aggregate value，nor on estates not exceeding $\$ 50,000$ willed to persons in Class（1），nor on those not exceeding $\$ 10,000$ willed to persons in Class（2）．

Where any person in Class（3）was in the employ of the deceased for at least five years immediately prior to his death，no duty is payable with respect to any benefits which such person derived from the deceased where the total value of such benefits is not in excess of $\$ 1,000$ ．Such benefits，though exempt are，nevertheless， taken as a factor in fixing the rates applicable to the dutiable portions of the estate．

Bequests for religious or educational purposes to any religious or educational organization which carries on its work solely in Canada，and bequests for charitable purposes to any charitable organization which carries on its work solely in Ontario， are exempt from duty and are ignored altogether in the computation of duty on the portions of the estate that are not exempt．The same rule applies to bequests to the Canadian National Institute for the Blind，the Canadian Red Cross Society and other approved patriotic organizations．

[^373]
## Subsection 4.-Subsidies and Taxation Agreements with the Provinces

Subsidies.-By the provisions of the British North America Act and subsequent arrangements entered into from time to time, the Federal Government makes certain annual payments to the Provinces.

Interest on Debt Allowance.-By the terms of the union of the provinces at Confederation in 1867, the Federal Government assumed all the outstanding debts and liabilities of the provinces and undertook to pay, except to Ontario and Quebec, interest at 5 p.c. per annum on the amounts by which the actual per capita indebtedness of the provinces fell short of a basic debt allowance calculated at approximately $\$ 25$ per capita. On the subsequent entry of additional provinces into Confederation, similar arrangements were effected regarding the assumption of their pre-Confederation indebtedness. From time to time, adjustments have been made in the basis of calculating the debt allowances of provinces; moreover, the Federal Government pays interest at 5 p.c. per annum on the amounts by which the actual debts of the provinces, on their entry into Confederation, fell short of the allowed debts as adjusted.

Allowances for Governments and Legislatures.-Under the terms of the union, annual specific grants were made to the various provinces toward the support of their governments and legislatures. These amounts vary with the population of the provinces, according to the following scale approved in 1907:-

| Where population is- |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Under $150,000 \ldots \ldots \ldots \ldots \ldots \ldots$. |  |  |  | 100,000 |
|  |  |  |  | 150,000 |
| 200,000, | " | " | 400,000 | 180,000 |
| 400,000, | " | " | 800,000 | 190,000 |
| 800,000, " 1,500,000. |  |  |  | 220,000 |
|  |  |  |  | 240,000 |

Allowances per Capita of Population.-Under the British North America Act of 1867, a grant of 80 cents per capita of population was allowed to each province. The British North America Act of 1907 provided that the grant would be paid to each province at the rate of 80 cents per capita up to a population of $2,500,000$, and at the rate of 60 cents per capita for so much of the population as exceeded that number. These allowances were last adjusted in 1951 following the decennial Census.

The Act to approve the Terms of Union of Newfoundland with Canada in 1949 provided for an annual subsidy equal to 80 cents per capita of the population of the Province (being taken at 325,000 until the first decennial Census after the date of union), subject to increase to conform with the scale of grants authorized by the British North America Act, 1907.

Special Grants.-For certain of the provinces, grants have been added to the original scale of subsidies because of special circumstances.

Prince Edward Island.-Various special grants totalling $\$ 155,880$ per annum.
New Brunswick.-An annual grant of $\$ 150,000$ since 1875 in consideration of the repeal of lumber duties reserved to the Province by the British North America Act of 1867.
Manitoba.-A special grant on the basis of population amounting at present to $\$ 562,500$ per annum.

Saskatchewan and Alberta．－An annual sum as compensation for loss of public lands revenue，based on their respective populations and amounting at present to $\$ 750,000$ for Saskatchewan and $\$ 750,000$ for Alberta．
Brytish Columbia．－A special grant in lieu of lands amounting at present to $\$ 100,000$ per annum．

Additional Special Grants．－Additional special grants were voted annually to the Maritime Provinces，Manitoba，Saskatchewan and British Columbia until 1941；they were suspended when the Wartime Tax Agreements，1942，came into force．The grants were paid in 1947 and later years to the three Maritime Provinces，under the provisions of the Maritime Additional Subsidies Act， 1942. The Terms of Union with Newfoundland，1949，provide for an additional annual subsidy of $\$ 1,100,000$ in recognition of the special problems of its geography and its sparse and scattered population．

Taxation Agreements.-The Wartime Tax Agreements, 1942 are outlined in the 1946 Year Book, pp. $900-901$. The 1947 and 1952 tax rental agreements are outlined in pp. 1087-1090 of the 1954 Year Book.

## Subsection 5.-National Debt

A brief commentary dealing with the national debt of the Government of Canada from 1914 appears at p. 1091 of the 1954 Year Book. The tables which follow summarize the debt position as to interest, currency of payment, outstanding debt and securities issue.

## 26.-Summary of the Public Debt and Interest Payments thereon, Years Ended Mar. 31, 1944-54

Nors.-Statistics for 1867-1913 are given in the 1942 Year Book, p. 775; those for 1914-35 in the 1947 edition, p. 972; and those for 1936-43 in the 1951 edition, p. 1009.

Guaranteed Debt.-Besides the direct debt of the Federal Government, already dealt with, there are large indirect obligations arising mainly out of the guarantee of securities, by the Federal Government, of the railway lines that now form the Canadian National Railways and the subsequent extensions thereof. Together with these are other small indirect obligations originating in the Government's guarantees of the bonds of the Canadian National Steamship services and of the bonds of the Harbour Commissions issued mainly for harbour improvements. Since 1932, guarantees of certain bank loans have been made under the various Relief Acts. When the Bank of Canada commenced business on Mar. 11, 1935, the guarantee [authorized by Sect. 27 (6) of the Bank of Canada Act] of the deposit required, to be maintained in the Bank of Canada by every chartered bank, came into force. This guarantee must be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities and/or if the Bank suspends payment of any of its liabilities'.

## 29.-Guaranteed Debt of the Government of Canada (Amounts held by the Public as at Mar. 31, 1954)

Nore.-These contingent liabilities are expressed in Canadian dollars; stocks and bonds payable optionally or solely in Sterling or United States dollars are converted on the basis of $£ 1=\$ 4.86 \frac{1}{3}$ and $\$ 1$ U.S. $=\$ 1$ Canadian, respectively.

${ }^{1}$ This amount represents the original maximum amount guaranteed. As the authority for making additional guaranteed loans or advances had expired prior to Mar. 31, 1953, the amount authorized at that date is the same as the amount outstanding.

## Section 3.-Provincial Public Finance

To prepare comparable provincial finance statistics it is essential that data be presented, to the greatest possible extent, in uniform categories. Activities relating to a specific function are sometimes excluded by provincial governments from their ordinary account. The special or administrative funds of this nature so excluded are, therefore, added to provincial ordinary account and capital account to arrive at revenue and expenditure in the tables of this Section. The figures of revenue and expenditure presented will, therefore, differ considerably from the totals shown in certain provincial public accounts.

Fiscal periods are dealt with to coincide as nearly as possible in view of the variations in provincial fiscal year-ends. Figures for the Province of Newfoundland are included commencing with the year 1949 and those for Yukon Territory with the year 1950 .

## Subsection 1.-Revenue and Expenditure of Provincial Governments

The figures of revenue and expenditure presented in this Subsection do not agree with those shown in Tables 1 and 3, pp. 1126 and 1127-1128, mainly because of differences in the methods used to compute "net" figures.

The classification of revenue by source and of expenditure by function was revised in 1946 and again in 1948. Details of these changes may be found in the 1951 Year Book, p. 1014, and in the 1952-53 Year Book, p. 1064.
"Net general revenue" (see Tables 30 and 31) is the deduction from "gross general revenue" of (a) all institutional revenue, (b) revenue in the form of interest, premium, discount and exchange, (c) grants-in-aid and shared-cost contributions, and (d) all capital revenue. These revenues are then offset against the related functions of expenditure to arrive at "Net general expenditure", as shown in Tables 30 and 32.

The following statement gives some indication of the increase in the revenue collected and services rendered in 1951 by the provincial governments compared with 1946.

## Subsection 2.-Debt of Provincial Governments

The average coupon rate of gross bonded debt of Provincial Governments in 1952 remained at the 1951 level of $3 \cdot 47$ p.c.

Tables 34 to $\mathbf{3 6}$ deal with the direct and indirect debt of the Provincial Governments and reveal that though total gross bonded debt has steadily increased in the past five years, the average coupon rate has decreased slightly. Table 34 reflects the preponderance of bond issues payable in Canada only. There has been a steady decline in bonded debt payable in London (England).
34.-Gross Bonded Debt (exclusive of Treasury Bills) of ,Provincial Governments, as at Fiscal Year Ends Nearest Dec. 31, 1948-52

## Section 4.-Municipal Finance

## Subsection 1.-Municipal Assessed Valuations

The revenue resources of municipalities are limited, generally, to direct taxation based on assessed valuations of real and other types of property. In the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Manitoba and Alberta, municipalities assess and tax personal property. In Alberta municipal districts, the valuations of personal property assessed have risen sharply with the growth of the oil industry. In Manitoba, the personal property tax is used generally by all classes of municipalities except cities. Aside from property, the most important type of valuation for taxation purposes is business assessment, although not all provinces assess for business purposes separately and distinctly from real property valuations. A variation of methods, schedules and rates exists not only between provinces but also between municipalities within the same province. Some municipalities use the rental basis, others the value of floor space occupied and still others the capital value of the premises occupied. Three provinces have other miscellaneous types of assessment, the general nature of which are given in the footnotes to Table 37.

The figures in Table 37 are not entirely comparable, on an interprovincial basis, from the standpoint of relative values of properties taxable for municipal purposes. Each province operates under its own assessment laws, which are not all similar either in application or in effect. For instance, in British Columbia cities and municipal districts, improvements cannot be taxed on a value in excess of 75 p.c. of taxable values or, in most of the villages, in excess of 50 p.c. of taxable values; the values actually taxed in 1952 ranged from nil to 75 p.c. Improvements were assessed generally for tax purposes at 50 p.c. of taxable values, but for all municipalities the total improvements actually taxed represented $52 \cdot 6$ p.c. of total taxable values. In addition, there are other intra-provincial inconsistencies between municipalities which, in turn, further affect interprovincial comparisons. These may be said to be caused by the lack of integrated municipal assessment systems and uniform standards for establishing values on a province-wide basis, under the direction and control of a central authority. However, there has been considerable progress towards uniformity and improved procedure in recent years.

Complete figures for tax-exempt properties are not available for each province, but the information given shows that these properties have assumed relatively high proportions. Most provinces have shown consistent increases in taxable assessed valuations that may be attributed largely to the war-born stimulus to business and industry and the continued buoyancy of the economy in the post-war years.

${ }^{1}$ Does not include schools; information not available.
${ }^{2}$ Excludes certain provincial and other special taxes (see text following this table).

Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, extreme caution should be exercised in using the figures in Table 38 as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan, municipalities are required to levy certain taxes for and on behalf of the provincial government and for other special purposes for which there is no comparable situation in other provinces. For Saskatchewan, the amounts of such taxes excluded in the municipal levies in Table 38 are as follows:-

| Province and Tax | 1948 | 1949 | 1950 | 1951 | 1958 |

## Subsection 3.-Municipal Debt

The rapid growth experienced by municipalities in Canada, coupled with increased demands and responsibilities for improvements, schools, utilities and other services or facilities, has resulted in the incurring of a heavy burden of debt. Debenture borrowings increased rapidly in the period 1900-12 and again during the 1920's and early 1930's. From 1933 to 1946 the trend was downward but since 1947 it has shown a considerable increase.

Several important factors contributed to the 1933-46 decline-not least important the measure of control exercised by the provincial governments over capital expenditure involving the incurring of debt. In addition, there was a more or less orderly retrenchment during the depression years following periods of what proved to be unwarranted expansion which, along with widespread demands to ease the tax burden on real property, resulted in the severe curtailment of capital undertakings and works requiring debenture financing. Also, the greater part of the municipal long-term debt was represented by serial or instalment-type debentures, which require yearly repayments of principal. During the 1930's, the rehabilitation of existing assets and new works and improvements necessitated by normal expansion and development were sacrificed mainly in the interests of
the taxpayers. After the outbreak of war in 1939, the policy of deferment was continued, or even extended, to free the financial market for the needs of the Federal Government in meeting war-financing requirements. Since the end of the War, however, municipalities have resumed their improvement programs and thus have increased their debenture debts. Table 39 shows figures of municipal indebtedness for 1951 and 1952 and includes temporary loans and other liabilities in addition to debenture debt.

## 39.-Debt of Municipal and School Corporations, by Province, for their Fiscal Years Ended in 1952, and Totals for 1951 and 1952

## Section 1.-National Accounts*

The national accounts constitute a set of accounting summaries for the nation as a whole and portray economic activity in terms of transactions taking place between different sections of the economy. By combining and summarizing these operations into their various classes, information can be obtained on the functioning of the economy which is of particular interest to governments concerned with problems of full employment, taxation and prices, and to businessmen concerned with programs of investment and marketing.

This measurement of the nation's output is in terms of established market prices; hence it is necessary to keep in mind that the value of the nation's production may change because of price variations as well as because of changes in the volume of output.

Data are now available showing volume changes in gross national expenditure, in addition to the value figures. Gross national expenditure is shown in Table 3 in constant dollars (i.e., in terms of average prices prevailing in the period 1935-39). Because the gross national expenditure equals the gross national product, these data also reflect volume changes in the production of goods and services as measured by the gross national product. For all other tables the data are expressed in current dollars so that year-to-year changes must be considered in relation to price changes over the period.

An additional stage in the development of the present accounting framework was the publication, in 1953, of the national accounts on a quarterly basis. $\dagger$ These quarterly estimates are a logical extension of the annual national accounts, but the task of preparing them on a reliable and analytically useful basis is rather more difficult because of the scarcity of quarterly data, special problems arising from the measurement of farm production, and problems in connection with seasonal variation.

The tables in this Section cover the more important aspects of the national income analysis in annual terms. Tables 1 and 2 show the main aggregates of national income, gross national product, gross national expenditure and their

[^382]components and other tables are included to show the source and disposition of personal income, government revenue and expenditure and personal expenditure on consumer goods and services.

National Income.- Net national income at factor cost measures the current earnings of Canadian factors of production (i.e., land, labour, capital) from productive activity. It includes wages and salaries, profits, interest, net rent and net income of farm and non-farm unincorporated business.

Gross National Product.-Gross national product, by totalling all costs arising in production, measures the market value of all final goods and services produced in the current period by Canadian factors of production. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus depreciation allowances and similar business costs.

Personal Income.-Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. It includes transfer payments from government, such as family allowances, unemployment insurance benefits and war service gratuities, in addition to wages and salaries, net income of unincorporated business, interest and dividends and net rental income of persons. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

Gross National Expenditure.-Gross national expenditure measures the same aggregate as gross national product, namely, total production of final goods and services at market prices, by tracing the disposition of production through final sales to persons, to governments, to business on capital account (including changes in inventories) and to non-residents (exports). Imports of goods and services, including net payments of interest and dividends to non-residents, are deducted since the purpose is to measure only Canadian production.

Historical Perspective.-Between 1926 and 1953, gross national product increased approximately fivefold in value. Though a substantial part of this apparent growth was the result of rising prices, the growth in physical production was 166 p.c. (Table 3 gives detail, from 1929-53.) The population of Canada in this period increased by 56 p.c. so that the per capita growth in physical product was 70 p.c.-an indication of the growth in living standards and prosperity. This increase is the more remarkable in the light of the disastrous set-back suffered during the depression years and the more recent decline in the average hours worked weekly in industry. In 1933, at the depth of the depression, per capita real production registered a decline of one-third as compared with the relatively prosperous year of 1929 .

The historical series reveal many other interesting features of the economy including, among others: the relative stability of the portion of total income going to labour in the form of wages and salaries as opposed to the instability of farm and investment incomes (Table 4); the increasing significance of government spending in the economy as opposed to the declining importance of exports (Table 2); the relative changes in the proportion of government revenue represented by direct and indirect taxes (Table 7); and changing consumer preferences as revealed by the composition of personal expenditure (Table 6).

Post-War Period to 1952.-The most impressive characteristic of the Canadian economy in the post-war period has been the sustained high rate of industrial expansion and resource development and the accompanying growth in the country's productive capacity. During the years from 1947 to 1952, the physical output of goods and services as measured by the gross national product in constant dollars increased by 26 p.c., or 5 p.c. per year, compounded annually, compared with an average increase of 4 p.c. per year during the period from 1926 to 1952.

Accompanying the expansion in the country's physical volume of output from 1947 to 1952, the population of Canada increased by 15 p.c. This increase in population has provided a wider market for the country's production and made available additional workers for the labour force. Almost without exception, the labour force was fully employed during the period, the proportion of persons without jobs varying annually between 1.5 p.c. and 2.7 p.c. The number of persons with jobs increased by approximately 8 p.c. between 1947 and 1952, substantially below the rise of 26 p.c. in the physical volume of production, and indicating a considerable gain in output per person.

The first stage in Canada's post-war development covered the period of reconversion and transition to a peace economy ending in 1948. It was characterized by powerful consumer demand, the progressive relaxation of controls, and rapidly rising prices, and must be viewed in the light of two fundamental considerations: the large volume of wartime savings accumulated by individuals and by businesses, and the enormous backlog of deferred demand for all types of consumer and investment goods generated by wartime shortages and restrictions. Accordingly, consumer expenditures rose to new high levels in the reconversion period and business embarked on a capital expansion program of large magnitude. The increases in expenditure of the personal and business sectors offset the sharp declines in government expenditure on goods and services which might otherwise have brought about a serious fall in production and employment. The transition to a peacetime economy was accomplished with a minimum of dislocation and only a moderate and short-lived drop in the physical volume of production. The heavy domestic and foreign demands on production, coupled with high and rising prices in export markets and of imported goods and materials, exerted powerful upward pressures on the Canadian price level.

Though inflationary pressures continued throughout most of 1948, there was a pronounced levelling off in prices toward the end of the year. The strong sellers' market which had existed since the end of World War II appeared to have weakened considerably in 1948, reflecting the attainment of a better balance between supply and demand. At the same time, there was an easing off in external pressures on the Canadian price level.

The next stage of Canada's post-war development, 1949 to mid-1950, was, in general, one of comparative price stability accompanied by a high level of production, employment and income. The excessive demands of the previous few years had yielded to a more balanced pattern in relation to the supply of goods and services. A notable feature of the year 1949 was the levelling off in the quarterly rate of expenditure for fixed investment in durable assets and, for the year as a whole, the value and volume gains in investment expenditures were considerably less than in the preceding two years. However, consumer expenditures remained high in 1949 and, in volume terms, showed a very substantial gain over the previous year.

Economic developments in Canada, in 1949, may be contrasted with those in the United States, which was then undergoing a mild recession. Business investment in plant and equipment and in residential construction was falling off in the United States in the first half of the year, but the major setback occurred in the inventory sector which shifted from a position of net accumulation to one of fairly heavy liquidation. However, after eliminating the effect of seasonal influences, consumer spending remained relatively stable throughout the year. In Canada, the build-up of physical stocks of business inventories was considerable throughout the first half of 1949, although the rate was moderate for the year as a whole. Moreover, the value of consumer purchases in Canada, after allowing for seasonal factors, rose very sharply between the first and second quarters and remained at a high level for the remainder of the year. These two Canadian developments provided the main source of strength in the economy at a time when fixed investment expenditure in Canada was levelling off. Labour income continued to rise in Canada, though at a less rapid rate than in 1948, while the number of persons without jobs rose only moderately. Reflecting all these developments, the Canadian economy did not experience the decline in national income which accompanied economic developments in the United States in 1949.

The third stage in Canada's post-war development covers the period from mid-1950 to the end of 1952, during which the influences set in motion by the outbreak of war in Korea were dominant. This period was characterized by adjustment of the economy to meet the greatly expanded requirements for defence and a renewal of inflationary pressures which were of a severe but temporary nature. Three fairly clear-cut phases are discernible in this stage of Canada's post-war development, and overlap the divisions of the annual data. Each phase is characterized by a significant difference in the pattern and strength of final demand with the change occurring within the calendar year.

The first phase, covering the period mid-1950 to about mid-1951, was one of heavy abnormal demands for consumer goods and business inventories, based on fears of shortages and expectations of higher prices. In this period, defence expenditures played a limited, though increasingly important role, with the rearmament program mainly in the preparatory stage. Prices rose rapidly.

The second phase began about the middle of 1951, when a reaction to this heavy forward buying apparently set in and inflated consumer and business demands subsided against a background of anti-inflationary measures enacted by the Federal Government. The volume of housing construction also fell off sharply. The major expansionary elements in the economy in this period were a growing volume of requirements for defence, investment in non-residential construction, machinery and equipment and exports. The strong inflationary influences of the immediate post-Korean period began to subside and, by early 1952, the downward trend of prices had become general.

A third pattern is discernible beginning early in 1952, when a strong revival of consumer purchasing and a sharp increase in housing outlays were superimposed on the growing volume of expenditures in other sectors. By the middle of 1952, the volume of consumer purchasing was once again exerting an important expansionary influence based on the increase in 'real' income which had been achieved since the beginning of the year, while housing outlays were continuing to rise. The trend of prices was downward throughout the year.

Current Perspective.-Gross National Product and National Income.-The market value of the nation's total production, as measured by the gross national product, was $\$ 24,350,000,000$ in 1953 , an increase of 5 p.c. over 1952. As prices remained relatively steady throughout the year, the total volume increase was about 4 p.c. Although the 1953 grain crop was one of the largest on record, it was considerably below the extraordinary 1952 level, so that a decline in production occurred in the agricultural sector of the economy. The gain in non-agricultural production was thus somewhat higher than the total of 4 p.c. noted above, or about 5 p.c. Accompanying the increase of 5 p.c. in the volume of non-farm output, there was a rise of about 2 p.c. in the number of persons with jobs in the nonagricultural sector of the economy. Thus, the figures indicate a gain in over-all output per working person in the non-farm sector.

National income rose by 4.5 p.c. in 1953 , to reach a total of $\$ 19,043,000,000$. Wages, salaries and supplementary labour income, the largest component of national income, amounted to $\$ 11,661,000,000$ in 1953 , an increase of about 8 p.c. over the previous year. Inasmuch as consumers' prices remained relatively unchanged, this increase represented a 'real' gain in income for wage and salary earners. However, the quarter-to-quarter trend in wages and salaries, seasonally adjusted, which had been very strongly upward in the preceding two-year period, showed no significant rise after the second quarter of 1953. Corporation profits before taxes, the largest single item in investment income, showed a drop of about 3 p.c. between 1952 and 1953. Accrued net income of farm operators from farm production amounted to $\$ 1,649,000,000$ in 1953 , a drop of 11 p.c. from the high level of the previous year. Net income of non-farm unincorporated business increased by 8 p.c. in 1953. The largest single gain was in residential construction, reflecting the sharp increase in house building.

[^383]Gross National Expenditure.-Aggregate final demand, together with additions to inventories, increased by approximately $\$ 1,600,000,000$ or 5 p.c. in 1953 , with consumer expenditures accounting for about one-half of the gain. Additional expansionary elements were provided by housing outlays, which rose by $\$ 275,000,000$, government expenditure on goods and services which rose by $\$ 200,000,000$ and investment in new non-residential construction which showed a gain of $\$ 170,000,000$. Additions to business inventories were quite substantial in 1953, particularly in the second and third quarters of the year: for the year as a whole, they showed a net positive change from last year of $\$ 570,000,000$. Exports of goods and services declined, and additions to stocks of grain and farm inventories were also somewhat smaller than in 1952.

The large expansion in total demand referred to above was met mainly out of the increase in the nation's production of goods and services, which rose by about $\$ 1,100,000,000$ in terms of current dollars. The gap not covered by the production increment was met, on balance, from foreign sources of supply, as reflected in the large increase in imports of goods and services which occurred in 1953.

Price influences featured less prominently in the gain in the value of total production in 1953 than in the preceding two years. While the major components of gross national expenditure were variously affected by price changes, over-all price effects were small, reflecting mainly price stability in the important fleld of consumer goods and services.

Personal expenditure on consumer goods and services amounted to $\$ 15,165,000,000$ in 1953 , a gain of 5 p.c. over 1952. Inasmuch as consumer prices were substantially unchanged from the average of the previous year, the volume increase was also about 5 p.c. In the goods category, durable goods showed the largest percentage increase amounting to about 13 p.c., the greater part accounted for by sales of new automobiles which rose by 24 p.c., and by purchases of television sets, factory shipments of which more than doubled. Non-durable goods purchases showed a gain of nearly 3 p.c. in 1953, reflecting largely an increase in retail sales of food. Consumer purchases of services expanded in most categories, with the total increase amounting to about 7 p.c.

Government expenditure on goods and services rose to $\$ 4,408,000,000$ in 1953, a gain of 5 p.c. over the previous year. Defence expenditure rose to $\$ 1,909,000,000$, an increase of 6 p.c.; this compares with a gain of 56 p.c. in 1952 and 135 p.c. in 1951. Defence spending, though at a high level, was of much less importance in the total expansion of demand in 1953 than in the two preceding years.

Gross domestic investment (excluding investment in inventories) increased to $\$ 4,709,000,000$ in 1953 , an advance of 11 p.c. over 1952 . The entire increase is accounted for by a gain in the value of new construction put in place, with new housing showing the most striking gain; investment in new machinery and equipment showed little change.

The value of investment inventories (business inventories, farm inventories and grain in commercial channels) in 1953 amounted to $\$ 572,000,000$-more than double the 1952 value. Additions to stocks of business inventories, in 1953, amounted to $\$ 376,000,000$ in value terms, compared with a net liquidation in 1952 of $\$ 88,000,000$. They represented about 5 p.c. of total book value holdings by all groups, and were in proportion to increases in non-farm output. The increments in 1953 were concentrated mainly in the manufacturing, wholesale and retail trade groups.

Canada incurred a current account deficit in 1953 amounting to $\$ 440,000,000$ on international transactions in goods and services. This contrasted with a surplus of $\$ 173,000,000$ in 1952 . The major factors underlying the change in the current account balance were a substantial increase in merchandise imports and a small decline in merchandise exports. A 9-p.c. gain in imports reflected the higher levels of consumer purchasing, inventory accumulation, and general industrial activity in Canada; there was, moreover, an improvement in world supplies of goods at competitive prices. The moderate decline in exports was associated with lower prices for some goods, import restrictions in overseas countries, increased world supplies of wheat and some contraction in foreign demand for certain other commodities.

| Residual error of estimate and adjusting entries. | +11 | +9 | -49 | -25 | +20 | +132 | -43 | -56 |
| Gross National Expenditure In Constant Dollars. | 5,337 | 5,664 | 9,721 | 9,045 | 10,330 | 10,935 | 11,646 | 12,090 |

${ }^{1}$ Newfoundland included from 1950.

Personal Income, Personal Saving and Spending.-Personal income amounted to $\$ 18,096,000,000$ in 1953, an increase of 6 p.c. over 1952 which, in turn, showed a gain of 9 p.c. over 1951. Wages, salaries and supplementary labour income rose 8 p.c. in 1953, or somewhat more than the increase in the total of personal income. Interest, dividends and net rental income of persons increased by 8 p.c., while the combined total of farm and non-farm net income of unincorporated business dropped by 5 p.c. Government transfer payments (excluding government interest) rose by 7 p.c. to $\$ 1,469,000,000$ in 1953 ; increases in unemployment insurance benefits, old age security payments and family allowances accounted for the greater part of the gain. The increase in the total of government transfer payments in 1953 was much smaller than in the preceding year, when they showed a gain of 32 p.c., as a result of the introduction of Federal Government old age security payments.

Personal direct taxes rose by $\$ 109,000,000$ or by 8 p.c. over 1952 . The increase was almost entirely attributable to the rise in personal income-tax collections by the Federal Government. The major factor in this increase was the advance in personal income, which yielded higher tax collections despite a reduction in the over-all tax rate which became effective at mid-year. As a percentage of personal income, personal direct taxes were $7 \cdot 7$ p.c. in 1952 and $7 \cdot 9$ p.c. in 1953.

Personal disposable income, that is, personal income less personal direct taxes, rose by $\$ 855,000,000$, or 5 p.c. over 1952. Personal expenditure rose by $\$ 762,000,000$ in the same comparison so that personal saving was higher by $\$ 93,000,000$ in 1953.

## Section 2.-Canada's International Investment Position*

A large balance of Canadian indebtedness to other countries has always been characteristic of Canada's international investment position. Much of the development of Canada has been financed by investments of capital from other countries, particularly in earlier decades. This balance of indebtedness has been reduced from the levels obtaining immediately before World War II which, in turn, were lower than the earlier peak period around 1930. Net indebtedness to other countries at the end of 1953 was $\$ 5,700,000,000$ compared with about $\$ 6,500,000,000$ in 1930.

[^384]Foreign Investments in Canada.-The relative importance of British and United States capital invested in Canada has changed greatly in recent decades. British capital constituted the largest part of the external capital invested in Canada before World War I but United States investments underwent a rapid development during and after that War. By 1926, the first year for which official estimates are available, United States investments in Canada had a value of $\$ 3,196,000,000$ compared with British investments of $\$ 2,636,000,000$. During the 1930 's, reductions occurred in the amount of external capital invested in Canada.

Further growth in United States investments in Canada took place during World War II and, by the end of the War, these investments had reached a new peak, whereas British investments in Canada were sharply reduced by repatriation of securities. As a result of these divergent trends in British and United States investments, total non-resident investments in Canada increased only moderately during World War II.

In the post-war years, there have been substantial increases in the value of United States capital invested in Canada; by the end of 1953, the total reached approximately $\$ 8,600,000,000$, a growth of about $\$ 3,600,000,000$ in the eight years from 1945. The largest increases occurred in the years following 1948, and more particularly since 1950, as a result of substantial net inflows of capital for long-term investment. Direct investments in nearly 3,000 companies in Canada, controlled in the United States, are the most important form of that country's investment in Canada, and were valued at about $\$ 5,000,000,000$ at the end of 1953 . The growth in this group of investments amounted to $\$ 2,700,000,000$ in the eight post-war years, more than 40 p.c. of this representing the retention of earnings. The rate of this growth has been accelerated in recent years by the development of petroleum and other resources. In 1946 to 1953, petroleum development has accounted for about one-half of Canada's net capital import from the United States, so that by the end of 1953, United States investment in the industry in Canada amounted to $\$ 1,144,000,000$, a dramatic increase from the total of $\$ 117,000,000$ at the end of 1945. This investment now represents about one-sixth of United States investment in all Canadian industry.

Holdings of government, municipal, and corporate portfolio securities, which amounted to about $\$ 3,355,000,000$ at the end of 1953 , were the other major form of United States investment in Canada. The growth since 1945 of $\$ 800,000,000$ in these holdings has been relatively much smaller than growth in direct investments: In recent years, the sale abroad of new issues of Canadian securities has been the principal factor contributing to the increase.

By the end of 1953, British long-term investments in Canada were valued at about $\$ 2,000,000,000$, an increase of $\$ 300,000,000$ since 1949. Despite recent increases, however, British investment in Canada is still much smaller than in the pre-war period. The value of investments in Canada of all other overseas countries amounted to almost $\$ 500,000,000$ at the end of 1953 -much lower than the investment from Canada's historic sources of capital, the United States and the United Kingdom.

Canadian capital has been the principal source of financing for Canadian development for many years past. Even in the recent years of current account deficit, the net contribution by non-residents and foreign-controlled companies to the savings used for all types of investment in Canada was only a small fraction of the total. Thus, the ratio of investments of external capital in relation to total
investments of capital in Canada has been declining for some years. Because of the variety of types of investment that must be compared, it is difficult to express this relationship in terms of any simple ratio.

Important changes have taken place in the relative positions of different types of foreign investment in Canada. Non-resident investors now hold about one-tenth of the funded debt of Canadian governments and municipalities; their holdings in 1936 represented about one-quarter of the smaller total then outstanding. In the intervening years this debt has nearly tripled, about 97 p.c. being financed from the savings of Canadians.

Non-resident ownership in the broad field of Canadian industry and commerce has also been declining. By 1951, it represented about 33 p.c. as compared with 38 p.c. before the War. Despite the tremendous in-flows of foreign long-term capital into Canadian enterprises in the post-war years, Canadian capital maintained its proportion of the total. The concentration of post-war investment by foreigners in manufacturing and mining enterprises has increased their share of these fields. Nearly 60 p.c. of the capital of mining, smelting and petroleum exploration and development companies was non-resident-owned at the end of 1951 compared with 40 p.c. in 1939. The share of foreign capital varies widely in different fields of manufacturing. The percentage is comparatively high in some branches such as non-ferrous metals, the automobile industry and petroleum refining, and is comparatively low in other fields such as textiles, and primary iron and steel. In some industries such as newsprint and wood products, non-resident capital plays a very important part but the major share of ownership is Canadian.

There are other important forms of Canadian wealth whose valuation presents serious difficulties, such as farm property and residential real estate. These assets are held mainly in the non-corporate sector of the economy and are owned predominantly by Canadians.

## 9.-Estimate of the Canadian Balance of International Indebtedness, as at Dec. 31, 1939, 1945 and 1949-53

Nore.-Totals are rounded and may not represent the sum of their components. They are exclusive of short-term commercial indebtedness and blocked currencies.

[^386]
## 11.-Foreign Capital Invested in Canada, by Type of Investment, classified by Estimated Distribution of Ownership, as at Dec. 31, 1952

#### Abstract

Note.-Common and preferred stocks are at book values as shown in the balance sheets of the issuing companies; bonds and debentures are valued at par; and liabilities in foreign currencies are converted into Canadian dollars at par of exchange.

${ }^{1}$ Includes some investments held for residents of other countries. $\quad{ }^{2}$ New series.
Canadian Assets Abroad.-Canada's external assets have changed greatly in size and composition in recent years. The total value, including holdings of gold and foreign currencies, rose from about $\$ 1,900,000,000$ in 1939 to $\$ 6,600,000,000$ at the end of 1953. The principal factor in this increase was the extension by the Federal Government of loans and export credits to the United Kingdom and other countries. At the end of 1953, Canadian Government credits outstanding totalled nearly $\$ 1,800,000,000$. Included in this total was $\$ 150,000,000$ outstanding on the 1942 loan to the United Kingdom, $\$ 1,142,000,000$ on the 1946 loan to the United Kingdom and about $\$ 450,000,000$ of post-war export credits and advances. In addition, at the end of 1953, official holdings of gold and foreign exchange aggregated about $\$ 1,779,000,000$. Other official Canadian assets include Canada's subscriptions to the capital of the International Bank and the International Monetary Fund which, by the end of 1952 , amounted to $\$ 70,900,000$ and $\$ 322,500,000$, respectively. A small part of the subscription to the Bank was in the form of convertible exchange and $\$ 75,000,000$ of the subscription to the Fund was in gold. The remainder of both subscriptions was made in the form of demand notes of the Federal Government or in Canadian funds.

Besides the officially owned assets referred to above, there were the privately owned investments in the form of foreign securities and property owned by Canadian companies and individuals. In 1939, these privately owned assets constituted most of the total value of Canadian assets abroad, whereas, since the end of World War II, they have amounted to only a minor part of the total, chiefly because of the sharp rise in officially owned assets. Canadian assets abroad, at the end of 1953, include privately owned long-term direct and portfolio investments valued at
$\$ 2,200,000,000$. These have grown from $\$ 1,300,000,000$ at the end of 1945 , a rate of increase somewhat higher than for foreign private long-term investment in Canada.

About two-thirds of Canada's direct investments abroad are in the United States. These investments, on a per capita basis, are about twice the value of United States direct investments in Canada and are mainly in the beverage, farm implement and petroleum industries and in railways, though a wide range of other concerns is also involved. Investment in other parts of the world is widely distributed and is to be found particularly in industrial and commercial concerns, mining and utilities. About two-thirds of the portfolio holdings abroad are also in the form of United States securities, but Canada has extensive portfolio investments in other parts of the world, particularly Latin America.

## 12.-Canadian Assets Abroad, 1939, 1948 and 1950-52

Note.-Excludes investments of insurance companies and banks, Canada's subscriptions to international financial institutions and short-term assets, other than official holdings of gold and foreign exchange. Holdings of stocks are at book values as shown in the books of issuing companies; holdings of bonds are shown at par values. Foreign currencies are converted into Canadian dollars at current market rates. The series for portfolio investment was reconstructed in 1952 and is not strictly comparable with preceding years.

## Section 3.-Corporation Profits and Income to Shareholders

Estimates of corporation profits presented in this Section cover all Canadian corporations. The figures for the years 1944 to 1952 are based on the reports Taxation Statistics published annually by the Taxation Division, Department of National Revenue, Ottawa. Prior to 1944, corporation financial statistics were made the subject of a comprehensive study in the Department of National Revenue.

Profits, before taxes of Canadian corporations, are shown in Table 14 for selected years 1929-53. From a pre-war peak of $\$ 530,000,000$ in 1929, they dropped to $\$ 17,000,000$ in 1932, and then, with the exception of a decline in 1938, rose steadily from 1932 to 1942, the wartime peak. From 1944 to 1951, they rose fairly steadily, but in 1952 and 1953 there were declines of 6 p.c. and 3 p.c., respectively. In 1953, corporation profits before taxes were $\$ 2,550,000,000$, down $\$ 260,000,000$ from the record $\$ 2,810,000,000$ in 1951.

Corporation profits taxes, which were relatively low during the period 1929 to 1939 , ranged from 40 p.c. to 50 p.c. of profits during the war period. After the War they dropped to 35 p.c. of profits in 1948, but were over 50 p.c. in both 1951 and 1952; in 1953 they declined to 46 p.c. It should be noted that the elective tax on undistributed income amounted to $\$ 54,000,000$ in 1950 , the year in which the tax was initiated, $\$ 48,000,000$ in 1951 , but only $\$ 10,000,000$ in both 1952 and 1953.

Dividends paid by corporations (excluding dividends paid to other Canadian corporations) reached a peak in 1950 of $\$ 681,000,000$ and were $\$ 643,000,000$ in 1953. Undistributed corporation profits also reached a peak in 1950, but declined in both 1951 and 1952. In 1953, however, the decline in income-tax payments from 1952 much more than offset a small increase in dividend payments, and undistributed profits increased from $\$ 634,000,000$ in 1952 to $\$ 643,000,000$ in 1953.

## 14.-Profits, Taxes and Dividends of Canadian Corporations, 1929-53

(Millions of dollars)

${ }^{1}$ Include depletion charges and charitable donations, and are adjusted for corporate losses, renegotiation of war contracts and conversion to a calendar-year basis. ${ }_{2}$ Includes elective tax on undistributed income of $\$ 54,000,000$ in $1950, \$ 48,000,000$ in $1951, \$ 10,000,000$ in 1952, and $\$ 10,000,000$ in 1953.

Analysis by Industries.-Detailed data on profits by industries are available from 1944. Corporation profits as shown in Table 15 do not agree with those in the national accounts since the national accounts figures include depletion charges and charitable donations. National accounts figures are also adjusted for renegotiation of war contracts and for conversion to a calendar-year basis. Provincial taxes and the elective tax on undistributed income are not deducted in arriving at net profits after taxes, since these are not available by industry. It may be noted that the 1952 profits-after-tax figures in Table 15 include tax liabilities of the agreeing provinces since, in that year, they were combined with federal tax liabilities. Profits of Newfoundland corporations are included for 1950 and later years.

In 1952 profits before taxes declined by $\$ 182,000,000$, or by $6 \cdot 8$ p.c. from 1951 totals. Of the 34 sub-groups listed in Table 15, 19 showed declines in profits while 15 showed increases. The largest decline in dollar terms was in the pulp and paper group whose profits dropped from $\$ 376,100,000$ in 1951 to $\$ 259,700,000$ in 1952 , but several groups had larger percentage declines.

Profits after taxes in 1952 declined $13 \cdot 6$ p.c. from 1951, as compared with a 6.8 p.c. decline in profits before taxes. However, only one industry-agricultureshowed a net loss after taxes.

## 15.-Corporation Profits, by Industry, before and after Federal Income Taxes, 1946 and 1950-52

(Millions of dollars)

## Section 4.-Federal Incorporation of Companies

During the year ended Mar. 31, 1953, 751 Supplementary Letters Patent were granted for variation of corporate powers, changes of name, confirmation of compromises or arrangements with shareholders and for various other purposes. In addition to the companies with share capital, 24 corporations without share capital were granted Letters Patent under Part II of the Companies Act, 1934 (R.S.C. 1952, c. 53). Supplementary Letters Patent were granted to 440 existing companies and to five existing corporations without share capital.

Compilation of the capitalization of the companies incorporated under the Companies Act is no longer available. Figures for 1943-52 are given at p. 1123 of the 1954 Year Book and those for 1900-1942 in previous issues.

## PART I.-GURRENCY AND BANKING

A historical sketch of currency and banking in Canada appears in the 1938 Year Book, pp. 900-905.

## Section 1.-The Bank of Canada

The Bank of Canada was incorporated under the Bank of Canada Act 1934 and commenced operations on Mar. 11, 1935.

The Bank of Canada is Canada's central bank and as such its main function is to regulate the total volume of money and credit. The normal way in which this function is performed is through changes in the cash reserves of the chartered banks. Each chartered bank is required by the Bank Act to maintain, on the average during each calendar month, an amount of cash reserves, in the form of Bank of Canada notes and deposits with the Bank of Canada, equal to not less than 8 p.c. of its Canadian dollar deposit liabilities. (Prior to July 1, 1954, each chartered bank was required to maintain, at all times, cash reserves equal to not less than 5 p.c. of its Canadian dollar deposit liabilities; in practice, the chartered banks normally attempted to maintain a ratio of about 10 p.c.) An increase in cash reserves encourages banks to expand their assets (mainly by purchasing securities and making loans), with a resultant similar increase in their deposit liabilities; a decrease in cash reserves tends to discourage expansion and may result in some contraction. Therefore, by taking steps to alter the volume of cash reserves available to the chartered banks, the Bank of Canada is able to influence the total of chartered bank assets and the total of their Canadian dollar deposit
liabilities. The deposit liabilities of the banks, except for those payable to the Government, are, of course, assets of the general public and, together with currency, comprise their most liquid assets. (See pp. 1194-1196 for discussion of general public holdings of liquid assets.)

Open market operations in Government of Canada securities constitute the chief means by which the Bank of Canada influences the volume of chartered banks' reserves. When the Bank of Canada purchases a security it issues a cheque in settlement which, after it is cashed at, or deposited with, a chartered bank by the recipient, is in turn deposited by that chartered bank in its account with the Bank of Canada, thereby increasing its cash reserves. Conversely, when the Bank of Canada sells a security, the cheque which it receives in payment is charged against the account of the chartered bank on which it is drawn thus decreasing that bank's cash reserves. Increases or decreases in other assets and liabilities of the Bank of Canada also have an effect on the chartered banks' cash reserves. For example, an increase in the amount of Bank of Canada notes held by the general public tends to reduce the banks' cash reserves.

The Bank of Canada Act was revised in 1936, 1938 and 1954. The major amendments in 1954 (see also pp. 1197-98) were the following:-
(1) The Bank of Canada was given the power to vary the minimum cash reserve requirements of the chartered banks between 8 p.c. and 12 p.c. of their Canadian dollar deposit liabilities, provided that the chartered banks are given a minimum period of one month's notice before each increase becomes effective and that any increase is not more than 1 p.c. during any one month. When this legislation became effective on July 1, 1954, the initial requirement was 8 p.c.
(2) Restrictions regarding the maximum amount of Bank of Canada holdings of securities issued or guaranteed by Canada or any province were removed. Prior to July 1, 1954, the Bank's holdings of these securities which did not mature within two years were limited to 50 p.c. of the Bank's outstanding note issue and deposit liabilities and holdings of these securities, which did not mature within 10 years, were limited to an amount equal to five times the paid-up capital and rest fund of the Bank.
(3) Provision was made for one-fifth of the annual profits of the Bank to be appropriated to the rest fund until it reaches $\$ 25,000,000$. At the same time the provision for the Bank to pay from its profits cumulative dividends of $4 \frac{1}{2}$ p.c. per annum on the capital stock was removed. (This means that the Bank's profits, except for allocations to the rest fund, will in future be transferred to the Government in a single payment rather than part in the form of a dividend and the balance in another payment.)

The Bank may make loans or advances for periods not exceeding six months to chartered banks, or to banks to which the Quebec Savings Bank Act applies, on the pledge or hypothecation of certain classes of securities. Loans or advances on the pledge or hypothecation of readily marketable securities issued or guaranteed by Canada or any province may be made to the Government of Canada or the
government of any province for periods not exceeding six months. Other loans may be made to the Government of Canada or the government of any province in amounts not exceeding a fixed proportion of such government's revenue; such loans must be repaid before the end of the first quarter after the end of the fiscal year of the borrower. The Bank of Canada is required to make public at all times the minimum rate at which it is prepared to make loans or advances. This rate, known as the Bank Rate, has been 2 p.c. per annum since Oct. 17, 1950.

The Bank has the sole right to issue paper money for circulation in Canada. Details regarding the note issue are given on pp. 1191-92.

The Bank acts as the fiscal agent for the Government of Canada in the payment of interest and principal and generally in respect of the management of the public debt of Canada.

The Bank may buy and sell securities issued or guaranteed by Canada or any province, short-term securities issued by the United Kingdom, treasury bills or other obligations of the United States, and certain classes of short-term commercial paper. The Bank is authorized by the Industrial Development Bank Act to purchase bonds and debentures issued by the Industrial Development Bank. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may also deal in foreign exchange.

The Bank may accept deposits that do not bear interest from the Government of Canada, the government of any province, any chartered bank or any bank to which the Quebec Savings Bank Act applies.

The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

Section 23 of the Bank of Canada Act provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its outstanding notes and deposit liabilities. This requirement was suspended in 1940 when, under the terms of the Exchange Fund Order, the Bank's gold holdings were transferred to the Exchange Fund Account to form part of Canada's official gold and United States dollar reserves. The requirement is still in suspension. The Currency, Mint and Exchange Fund Act, passed in 1952, provides that, notwithstanding Section 23 of the Bank of Canada Act, the Bank of Canada is not required to maintain a minimum or fixed ratio of gold or foreign exchange to its liabilities, unless the Governor in Council otherwise prescribes.

The Bank is under the management of a Board of Directors composed of a Governor, a Deputy Governor and twelve directors. The Governor and Deputy Governor are appointed for terms of seven years each by the directors, with the approval of the Governor General in Council. The directors are appointed by the Minister of Finance, with the approval of the Governor General in Council, for terms of three years each. The Deputy Minister of Finance is a member of the Board but does not have the right to vote. There is an Executive Committee of the Board, composed of the Governor, Deputy Governor, one director and the Deputy Minister of Finance (who is without a vote), which has the same powers as the Board, except that its every decision must be submitted to the Board at its next meeting.

In addition to the Deputy Governor, who is a member of the Board, there may be one or more Deputy Governors who are appointed by the Board of Directors to perform such duties as are assigned to them by the Board.

The Governor is the chief executive officer of the Bank and Chairman of the Board of Directors. The Governor has the power to veto any action or decision of the Board of Directors or of the Executive Committee but such a veto is subject to confirmation or disallowance by the Governor General in Council. In the absence of the Governor, the Deputy Governor, who is a member of the Board, exercises all the powers and functions of the Governor.

The capital of the Bank is $\$ 5,000,000$ and is entirely held by the Minister of Finance. At the end of 1953, the rest fund of the Bank amounted to $\$ 10050,367$. The Bank of Canada Act, as amended in 1954, provides that each year 20 p.c. of the Bank's annual profits (after provision for depreciation in assets, pension funds and such matters) shall be allocated to the rest fund until the rest fund reaches an amount five times the paid-up capital of the Bank and the remainder shall be paid to the Receiver-General and placed to the credit of the Consolidated Revenue Fund.

The head office of the Bank is at Ottawa. It has agencies at Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Regina, Calgary and Vancouver and is represented in St. John's and Charlottetown. The agencies are chiefly concerned with the functions of the Bank as fiscal agent for the Government of Canada and with the issue and redemption of currency. The Industrial Development Bank, which is described on pp. 1190-91, is a subsidiary of the Bank of Canada.

The Bank of Canada Act requires that statements of the assets and liabilities of the Bank on each Wednesday*and the last day of each month be published in the Canada Gazette. A summary of the statement as at Dec. 31, 1951-53, appears in Table 1.
1.-Assets and Liabilities of the Bank of Canada, as at Dec. 31, 1951-53

| Liabilities |
| :--- |
| Liabilities |

[^388]The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors of the Bank of Canada. The $\$ 25,000,000$ capital stock of the Bank (completely paid up) was subscribed by the Bank of Canada. The Industrial Development Bank may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed three times the aggregate of the Bank's paid-up capital and Reserve Fund.

The lending powers of the Bank may be extended only to industrial enterprises or commercial air services in Canada with respect to which it is empowered to:-
(1) lend money or guarantee loans;
(2) enter into underwriting agreements with regard to any issue of stock, bonds or debentures;
(3) acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement.
The Bank may accept any form of collateral security against its advances, including real property.

The Industrial Development Bank is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of incorporation requires that it should extend credit only when the Board of Directors is of the opinion that similar credit would not be available elsewhere on reasonable terms and conditions. The Bank is specifically prohibited from engaging in the business of deposit banking.

## Section 2.-Currency

## Subsection 1.-Notes and Coinage

Note Circulation.-The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. Those features of the development which then became permanent are outlined in the 1941 Year Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of $\$ 1, \$ 2, \$ 5, \$ 10, \$ 20, \$ 50$ and $\$ 100$. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of $\$ 1,000$ to $\$ 50,000$ denomination that had previously been used as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revisions of the Bank Act cancelled the right of chartered banks to issue or re-issue notes after Jan. 1, 1945, and in January 1950, the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

The classification of Bank of Canada notes in circulation, by denomination, shown in Table 3 for 1950-53 is not strictly comparable with the classification for earlier years. Dominion notes have been excluded from the denomination classification and the total only is shown. Also, an item has been added showing the outstanding chartered bank notes issued originally for circulation in Canada. The statistics of total notes in the hands of the general public are comparable with earlier years.

## 3.-Bank of Canada Notes, by Denomination, and Other Notes in Circulation, 1950-53

Nore.-Annual averages of month-end figures. The totals outstanding are not always multiples of the denominations of notes because of adjustments made according to scale when parts of mutilated notes are turned in for cancellation.

${ }^{1}$ Total issue less notes held by chartered banks. $\quad{ }^{2}$ Gross note circulation only; notes held by other chartered banks are not available. Includes, prior to 1950 , a relatively small amount issued for circulation outside Canada. ${ }^{3}$ Figures, to nearest million, supplied by the Bank of Canada. ${ }^{4}$ Figures based on estimates of population as given at p. 137; see headnote to this table.
${ }^{5}$ In January 1950, the chartered banks liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada.

Coinage.-Under the Currency, Mint and Exchange Fund Act (R.S.C. 1952, c. 315), gold coins may be issued in denominations of twenty dollars, ten dollars and five dollars (nine-tenths fine or millesimal fineness, 900). Subsidiary coins include: silver coins in denominations of one dollar, 50 cents, 25 cents and 10 cents (eight-tenths fine or millesimal fineness, 800); pure nickel five-cent coins; and bronze (copper, tin and zinc) one-cent coins. Provision is made for the temporary alteration of composition in event of a shortage of prescribed metals. A tender of payment of money in coins is a legal tender in the case of gold coins for the payment of any amount; in the case of silver coins for the payment of an amount up to $\$ 10$; nickel coins for payment up to $\$ 5$; and bronze coins up to 25 cents.

## 5.-Canadian Coin in Circulation, as at Dec. 31, 1944-53

Nors.-The figures shown are of net issues of coin. Figures for 1901-25 are given in the 1927-28 Year Book, pp. 857-858, and for 1926-43 in the 1916 edition, p. 956.

${ }^{1}$ Tombac, a copper-zinc alloy, was used to conserve nickel for war purposes.
${ }^{2}$ Per capita figures are based on estimates of population as given at p. 137.

The Royal Canadian Mint.-The Mint at Ottawa was established as a branch of the Royal Mint under the (Imperial) Coinage Act, 1870, and opened on Jan. 2, 1908. In 1931 (21-22 Geo. V, c. 48) it was constituted a branch of the Canadian Department of Finance and has since operated as the Royal Canadian Mint. From 1858 the British North American provinces, and later Canada, obtained their coins from the Royal Mint at London or from The Mint, Birmingham. Before that date, coins were mainly British, United States and Spanish. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation and of British sovereigns and small coins struck under contract for Newfoundland and Jamaica.

Before 1914, only small quantities of gold bullion were refined, but during World War I the Mint came to the assistance of the British Government by establishing a refinery in which nearly $20,000,000 \mathrm{oz} . \mathrm{t}$. of South African gold were treated on account of the Bank of England. The subsequent development of the gold-mining industry in Canada has resulted in gold-refining becoming one of the principal activities of the Mint. Fine gold produced from the rough bullion shipments received from the mines is purchased by the Mint and later delivered to the Bank of Canada for account of the Minister of Finance in bars of approximately 400 oz . t. each, or, for those mines authorized to sell gold in the open market, the bullion is shipped to various domestic and foreign processors. The fine silver extracted from the rough gold is generally used for coinage purposes.
6.-Annual Receipts of Gold Bullion at the Royal Canadian Mint, and Bullion and Coinage Issued, 1944-53
Norz.-Figures for 1926-43 are given in the 1946 Year Book, p. 957.

${ }^{1}$ See footnote 1, Table 5.

## Subsection 2.-General Public Holdings of Certain Liquid Assets

The Bank of Canada's presentation of statistics concerning the volume of money is shown in Table 7. This shows not only currency and active bank deposits (formerly referred to as "money supply"), but also inactive chartered bank deposits and Government of Canada securities which, although not used to make payments, are forms in which the public holds its liquid funds. The series has been carried back to 1944 and provides a good approach to the problem of measuring changes in the volume of money under present-day conditions.
7.-General Public Holdings of Certain Liquid Assets, as at Dec. 31, 1944-53
(Millions of dollars)

| Year | Currency and Active Bank Deposits | Inactive Chartered Bank Notice Deposits ${ }^{1}$ | Government of Canada Securities ${ }^{2}$ | Total |
| :---: | :---: | :---: | :---: | :---: |
| 1944. | 3,153 | 2.060 | 9.131 | 14,344 |
| 1945 | 3,514 | 2,391 | 11,310 | 17.215 |
| 1946. | 3.996 | 2,856 | 11.175 | 18,027 |
| 1947. | 3.944 | 3,143 | 10.763 | 17.850 |
| 1948. | 4,335 | 3,408 | 10,249 | 17,992 |
| 1949. | 4,422 | 3,751 | 9,902 | 18,075 |
| 1950. | 4,851 | 3.861 | 10.066 | 18,778 |
| 1951 | 4,843 | 3,894 | 9,388 | 18.125 |
| 1952. | 5.173 | 4,129 | 9,062 | 18.364 |
| 1953. | 5,134 | 4,211 | 9,284 | 18,629 |

[^390]In measuring currency and active bank deposits, it is necessary to decide which categories of bank deposits should be classed as active and which, by their nature, should be regarded more appropriately as part of the public's other liquid asset holdings. Generally, it has been satisfactory to classify bank deposits as active if cheques may be drawn against them. In other countries this criterion
has seemed to work fairly well because cheques may not be drawn against savings deposits. In Canada, however, cheques are, in practice, drawn freely against savings deposits and this poses an awkward problem. To omit all savings deposits of chartered banks would ignore the obvious fact that, for many people, a savings account is an active chequing account which is very similar to a current deposit. On the other hand it is known from available information that, of the total amount on deposit in savings accounts in Canada, much the larger part is, in practice, inactive. Chartered banks pay interest on the minimum quarterly balances in personal savings accounts, i.e., on the sum that has been left undisturbed for the quarterly period; from the amount of interest that is actually paid on this basis as compared with the nominal rate of interest, it is apparent that the aggregate minimum quarterly balances in personal savings accounts are, at present, about five-sixths of the total of such deposits.

It is felt, therefore, that a more realistic account of monetary developments in Canada-and one more comparable with the usual presentation of similar statistics in other countries-is obtained by omitting the minimum quarterly balances in personal savings deposits and non-personal notice deposits from active money statistics. It has seemed preferable to exclude these deposits on the basis that they are inactive in practice rather than to include them on the grounds that they are potentially active because cheques may be issued against them.

The published returns of Canadian chartered banks include among assets "Cheques on Other Banks" which represents the amount of cheques that have been credited to the deposit account of the payee but not yet cleared against the deposit account of the drawer. To the extent of such items in 'float' there is, therefore, duplication in the figures of bank deposits. In Table 8, "Cheques on Other Banks" has been deducted from the figure of chartered bank deposits in order to eliminate this duplication.

Government deposits are given different treatment in different countries as far as volume-of-money statistics are concerned. In general, the commonly used figure of bank deposits excludes Government deposits and, on the whole, it appears preferable to exclude Government of Canada deposits from the Canadian active money figures.

## Section 3.-Commercial Banking

As one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in one historical sketch, which is given in the 1938 Year Book, pp. 900-905. A list of the banks at Confederation appears in the 1940 Year Book, p. 897, and bank absorptions since 1867 are given in the 1941 edition, pp. 812-813. A table in the 1937 Year Book, pp. 894-895, shows the insolvencies from Confederation; the last insolvency occurred in 1923. The more important of the revisions to banking legislation contained in the 1954 Bank Act are outlined in Subsection 1.

## Subsection 1.-Chartered Banks

Canadian commercial banks are chartered or licensed by the Government of Canada and operate under one federal statute - the Bank Act-which is revised every ten years and brought into line with changing economic conditions. In addition to doing a commercial banking business, the chartered banks hold most of the public's savings deposits.

Revisions in Banking Legislation in 1954.-In 1954 there were a number of important changes in legislation affecting the operations of the chartered banks, arising out of the decennial revision of the Bank Act and revisions of the Bank of Canada Act and the National Housing Act.

An amendment to the Bank Act concerned the minimum cash reserves which the chartered banks are required to hold in the form of notes of and deposits with the Bank of Canada. The banks had been required to maintain at all times cash reserves of not less than 5 p.c. of their Canadian dollar deposit liabilities. In practice, they normally attempted to maintain a ratio of about 10 p.c. As a result of the amendment, the banks are now required to maintain cash reserves, on the average during each calendar month, equal to not less than 8 p.c. of their Canadian dollar deposit liabilities. In conjunction with this change, an amendment was made to the Bank of Canada Act which gives the Bank of Canada power to vary the minimum cash reserve requirement between 8 p.c. and 12 p.c. of Canadian dollar deposit liabilities, provided that the chartered banks are given a minimum period of one month's notice before each increase becomes effective and that the increase effective in any one month is not more than 1 p.c.

The National Housing Act 1954 gives the chartered banks authority to lend money for residential construction on the security of mortgages insured by a government agency. Prior to 1954, the Bank Act had prohibited the chartered banks from lending money on the security of mortgages on real or immovable property, except for loans made under the terms of the Farm Improvements Loans Act of 1944 and the Veterans Business and Professional Loans Act of 1946.

Another amendment to the Bank Act allows the banks to lend money to individuals, other than manufacturers or dealers, on the security of motor-vehicles or any other personal or movable household property.

With the development of the Canadian oil industry, a new section has been added to the Bank Act which allows oil loans to be made on various types of security, including oil in the ground.

The amount of capital which a newly-incorporated bank must have before it commences business has been doubled. The requirements are now a minimum subscribed capital of $\$ 1,000,000$ and a minimum paid-up capital of $\$ 500,000$. The previous requirements had been in effect since 1890 .

Another amendment to the Bank Act was related to the problem of raising new capital. Under the provisions of the old Act there were difficulties attached to making a new issue of capital stock if the bank concerned had shareholders resident in countries where considerable detailed information (which banks are not required to make public in Canada) must be filed before the issue of capital stock is approved. The amendment relieves banks of the obligation to make offerings to shareholders resident in such countries.

After 1935, the chartered banks' note circulation in Canada was gradually withdrawn and, in July 1950, the banks paid to the Bank of Canada approximately $\$ 13,500,000$, an amount equal to their outstanding Canadian notes, and, thereafter, the Bank of Canada became liable to redeem the notes on presentation. Some of the banks with foreign branches have continued to maintain a small issue of foreign currency notes but the costs, including taxes, have made it an unprofitable operation. The Bank Act now provides that all note-issuing privileges of the banks shall cease and also provides for methods of retiring the outstanding foreign note circulation

With the above-mentioned payment by the chartered banks to the Bank of Canada, the additional liability, often referred to as the "double liability", which formerly attached to a bank's shares in proportion to its outstanding note issue, was cancelled. When there was additional liability attached to the bank's shares it was essential that the shares could be transferred only by registration on the books of the bank. As this is no longer necessary, an amendment to the Bank Act provides that each bank, if it so wishes, may provide for another method of share transfer.

Branches of Chartered Banks.-Although there are fewer chartered banks now than at the beginning of the century, there has been a great increase in the number of branch banking offices. Owing mainly to amalgamations, the number of banks declined from 34 in 1901 to 10 in 1931, and remained at that figure until the incorporation of a new bank-the Mercantile Bank of Canada-in 1953 brought the total to 11.* The number of chartered bank branches in Canada increased from 747 at Dec. 31, 1902, to 3,932 at the end of 1953.
*The Bank of Toronto and the Dominion Bank amalgamated Feb. 1, 1955, to become the Toronto-
Dominion Bank. Dominion Bank.

## 9.-Branches of Chartered Banks by Province, as at Dec. 31, for Certain Years 1868-1953

Nore.-Figures for 1920 and subsequent years include sub-agencies in Canada receiving deposits for the banks employing them.

## 10.-Branches of Individual Canadian Chartered Banks, by Province, as at Dec. 31, 1953-concluded

[^392]Nors.-This table does not include seven sub-agencies operating outside Canads.

Combined Financial Statistics of Chartered Banks.-In order to afford a clear account of the nature of banking transactions in Canada, bank liabilities have been classified in Table 12 into two main groups: liabilities to shareholders and liabilities to the public. Only the latter group is ordinarily considered when determining the financial position of any such institution. Assets are divided into four groups, 'other assets' being included in the total. The relative rates of increase of capital and reserve funds may be noted in the table, also the great increase in the proportion of liabilities to the public to total liabilities and the gradually increasing percentage of liabilities to the public to total assets. The declining proportion of chartered bank notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times (see p. 1191).

## 12.-Assets and Liabilities of the Chartered Banks, 1944-53

Nore.-These statistics are yearly averages computed from the twelve monthly returns in each year Figures for 1867-1936 will be found in the 1938 Year Book, pp. 918-919, and for 1937-43 in the 1952-53 edition, p. 1105.

| Year | ASSETS |  |  |  |  |  | Public Liabilities Total Assets |

| Grand Totals. | 3,153,713 | 3,229,151 | 3,882,898 |

Cheque Payments.-The monthly record of amounts of cheques charged to customers' accounts at all chartered bank offices situated in the clearing-house centres of Canada is available from 1924. The trend indicated by cheques cashed shows the occurrence of three major economic cycles since World War I. The first reached its peak in 1920 with the low point of the succeeding depression in 1922. A high point was next achieved in 1929, owing partly to economic conditions involving heavy stock speculation. A low point was reached in 1932. Except for a minor set-back in 1938, an upward trend has continued to the present.

The amount of cheques cashed in the clearing-house centres of Canada advanced year by year from 1938 to a maximum of $\$ 137,416,846,658$ in 1953; this advance paralleled the upward movement in the payment of salaries and wages and the greater distribution of consumer goods through wholesale and retail outlets. The increase, amounting to 344 p.c. since 1938, was general in Canada's five economic areas, British Columbia showing the highest gain at 509 p.c. The Prairie Provinces came second, followed by the Atlantic Provinces,* Ontario and Quebec. However, of the $\$ 106,500,000,000$ increase, Ontario and Quebec contributed $\$ 73,000,000,000$, or 69 p.c.

Thirty-four of the 35 clearing-house centres showed an advance in 1953 over 1952, although the magnitude of the gains varied. With the exception of Ottawa, a new maximum was established in each centre. Payments at Toronto, the leading centre, increased 16.3 p.c., those at Montreal 7.8 p.c., Winnipeg 4.9 p.c. and Vancouver 6.5 p.c.

## Subsection 2.-Government and Other Savings Banks

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies: (1) the Post Office Savings Bank, in which deposits are a direct obligation of the Government of Canada; (2) Provincial Government savings banking institutions in Newfoundland, Ontario and Alberta, where the depositor becomes a direct creditor of the province; and (3) two important savings banks in the Province of

Quebec, the Montreal City and District Savings Bank and La Banque d'Économie de Québec, established under federal legislation and reporting monthly to the Federal Department of Finance. Other agencies for the promotion of thrift, through encouraging regular savings, are the co-operative credit unions.

Post Office Savings Bank.-The Post Office Savings Bank was established, under the Post Office Act of 1867 (31 Vict., c. 10) in order to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon". Branches of the Government of Canada's Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years and the amalgamation was completed in March 1929.
22.-Financial Business of the Post Office Savings Bank, as at Mar. 31, 1949-54

Norg.-Figures for earlier years will be found in the corresponding table of previous Year Books. Totals back to 1868 are given in the 1926, 1946 and 1951 editions, at pp. 833-834, 978 and 1051, respectively.

Provincial Government Savings Banks.-Institutions for the deposit of savings are operated by the Provincial Governments of Newfoundland, Ontario and Alberta.

Newfoundland.-The Newfoundland Savings Bank was established in 1834 and the following is a summary financial statement for the years ended Mar. 31, 1952 and 1953:-

The number of accounts increased from 31,601 at Mar. 31, 1952, to 34,094 at Mar. 31, 1953, and deposits from $\$ 24,875,733$ to $\$ 26,035,571$ in the same comparison. The interest rate on deposits of private individuals, trust accounts and estates is 3 p.c. per annum on accounts of up to $\$ 5,000,2 \frac{1}{2}$ p.c. from $\$ 5,001$ to $\$ 7,500$, and 2 p.c. on accounts of over $\$ 7,500$; on deposits of corporations the rate is 1 p.c. per annum. A general reserve of $\$ 1,185,465$ is held.

Ontario.-The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 session and the first branches were opened in March 1922. Interest at the rate of $1 \frac{1}{2}$ and 2 p.c. per annum,
compounded half-yearly, is paid on accounts, and deposits are repayable on demand. Total deposits at Mar. 31, 1954, were $\$ 60,725,000$, and the number of depositors was approximately 95,000 . Twenty-one branches are in operation throughout the Province.

Alberta.-Savings deposits are accepted at 47 Provincial Treasury Branches throughout Alberta. The total of these deposits at Mar. 31, 1954, was $\$ 20,074,646$ payable on demand and bearing interest at from $\frac{1}{2}$ of 1 p.c. to 2 p.c.

The Provincial Treasury has issued demand certificates bearing interest at $1 \frac{1}{2}$ p.c. or term certificates for one, two, three, four or five years, in denominations of $\$ 25$ and upwards, bearing interest at 2 p.e. for one or two years, $2 \frac{1}{4}$ p.c. for three or four years and $2 \frac{1}{2}$ p.c. for five years. The total amount in savings certificates at Mar. 31, 1954, was $\$ 240,078$ made up of $\$ 109,128$ in demand certificates and $\$ 130,950$ in term certificates. Deposits from the public for the purchase of such certificates were discontinued as from April 1951.

Other Savings Banks.-The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871 had, at Mar. 31, 1954, a paid-up capital and reserve of $\$ 7,000,000$, savings deposits of $\$ 191,169,976$, and total liabilities of $\$ 198,630,237$. Total assets amounted to $\$ 199,010,639$, including over $\$ 156,000,000$ of federal, provincial and municipal securities. La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a federal charter by 34 Vict., c. 7, had at Mar. 31, 1954, savings deposits of $\$ 28,202,105$ and a paid-up capital and reserve of $\$ 3,000,000$. Liabilities amounted to $\$ 31,432,601$ and total assets to $\$ 31,876,665$.

Table 23 shows the combined savings deposits in the Montreal City and District Savings Bank and La Banque d'Économie de Québec for the years ended Mar. 31, 1940-54.

Credit Unions.*-At the end of 1953, there were 3,607 credit unions in Canada of which 3,413 reported a membership of $1,393,585$ and total assets of $\$ 492,384,022$. These groups are organized on a co-operative basis to pool savings of members and to make loans to members for provident and productive purposes. During 1953, loans in the amount of $\$ 204,863,000$ were made to members.

Credit unions were established first in the Province of Quebec in 1900 and have shown the greatest growth in that Province. About one-third of all credit unions in Canada are in the Province of Quebec. Ontario follows Quebec in credit union development and in recent years has been adding an average of nearly 150 new groups annually.

[^398]Nearly 50 p.c. of the credit unions in Quebec are located in rural areas but growth in other provinces, especially Ontario, British Columbia and Alberta-has been mainly among industrial and urban groups. Reports from provincial inspectors in 1953 indicated that for the first time credit unions among urban dwellers and industrial workers outnumbered those in rural areas.

Members save by buying shares and making deposits in credit unions. The total amount of savings by members at the end of 1953 , was $\$ 457,100,000$. Thus, average savings per member in 1953 were $\$ 328.07$, compared to $\$ 316.53$ in 1952.

In 1953, the Federal Government passed enabling legislation providing for the organization and incorporation of the Canadian Co-operative Credit Society, which will provide deposit and borrowing service on a nation-wide scale to provincial credit societies and commercial co-operatives operating in more than one province.

## Section 4.-Foreign Exchange

Exchange Rates.-The Canadian dollar, adopted as Canada's currency in 1857, was equivalent to $15 / 73$ of the pound sterling; in other words, the pound was equal to $\$ 4.866$ in Canadian currency at par, and remained so, with minor variations between the import and export gold points representing the cost of shipping gold in either direction, until the outbreak of World War I. During the first 11 years after Confederation, the Canadian dollar was at a premium in the United States, as the United States dollar was not, after the Civil War, redeemable in gold until 1878. From the latter date to 1914, the dollar in the two countries was equivalent at par, and variation was only between the import and export gold points or under $\$ 2$ per $\$ 1,000$.

At the outbreak of World War I, the United Kingdom and Canada suspended the gold standard, and their currencies fell to a discount at New York. However, this discount was 'pegged', or kept at a moderate percentage, by sales of United States securities previously held in the United Kingdom, by borrowing in the United States and, after the United States entered the War, by arrangement with the United States Government. After the War, when the exchanges were 'unpegged', the British pound went as low as $\$ 3.18$ and the Canadian dollar as low as 82 cents at New York. In the course of the next year or two, exchange returned practically to par and the United Kingdom resumed gold payments in April 1925 as did Canada on July 1, 1926. Until 1928, the exchanges were within the gold points but in 1929 the Canadian dollar again fell to a moderate discount at New York. The dislocation of exchange persisted, with the exception of a few months in the latter half of 1930, into 1931. Dollar rates were below the gold export points, however, only for a few scattered intervals. Immediately on the outbreak of World War II in September 1939, the United Kingdom and other sterling countries introduced foreign exchange control, involving fixed buying and selling rates which were $\$ 4.02 \frac{1}{2}$ and $\$ 4.03 \frac{1}{2}$, respectively, in terms of the U.S. dollar. Meanwhile, the Canadian dollar declined gradually until Sept. 16, 1939, when the Government established the Foreign Exchange Control Board.* Fixed buying and selling rates were provided for United States funds and sterling at the outset, being $\$ 1.10$ and $\$ 1.11$, and $\$ 4.43$ and $\$ 4.47$, respectively. The former rates fixed the value of the Canadian dollar at 90.09 cents to 90.91 cents in terms of the U.S. dollar; this was approximately the market rate to which the Canadian dollar had fallen just prior to exchange control and, in terms of devaluation, represented a level midway between the U.S. dollar and sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to $\$ 1.10 \frac{1}{2}$ and $\$ 1.45$, respectively, the Foreign Exchange Control Board's official rates remained unaltered until July 5, 1946. At this time, the rate on the U.S. dollar was restored to par with buying and selling rates for U.S. dollars at $\$ 1.00$ and $\$ 1.00 \frac{1}{2}$ and sterling, $\$ 4.02$ and $\$ 4.04$. These rates continued in effect until Sept. 19, 1949, when, following a $30 \cdot 5$ p.c. reduction by the United Kingdom in the value of sterling to $\$ 2.80$ U.S. (which action was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of $\$ 1.10$ and $\$ 1.10^{\frac{1}{2}}$ for United States funds; sterling was quoted at new rates of $\$ 3.07 \frac{1}{4}$ and $\$ 3.08 \frac{3}{4}$, based on the New York cross rate.

[^400]On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates, which had been in effect at varying levels since 1939, would be cancelled effective Oct. 2 and that rates of exchange would be determined by conditions of supply and demand for foreign currencies, i.e., by market trading within the framework of exchange control. Subsequently, the U.S. dollar fell to a level between $\$ 1.04$ and $\$ 1.05$ in terms of Canadian funds in early December 1950. After strengthening in the second quarter of 1951, it declined to between $\$ 1.01$ and $\$ 1.04$ in December 1951.

On Dec. 14, 1951, the Foreign Exchange Control Regulations were revoked by the Governor in Council and new Regulations were passed which exempted all persons and transactions from the various declaration and permit requirements of the Foreign Exchange Control Act, thus terminating exchange control in Canada. During 1952, the U.S. dollar declined gradually to an average of 96 cents in Canadian funds in September and then rose slightly to an average of 97 cents in December.

In 1953 the U.S. dollar strengthened during the first half of the year, averaging 99 cents in Canadian funds in June, then declined to an average of 97 cents in December.

${ }^{1}$ Includes private holdings, exclusive of working balances. of $\$ 98,000,000$ at Dec. 31,1939 , and $\$ 2,000,000$ at Der. 31, 1940 . ${ }^{2}$ Excludes $\$ 18,200,000$ borrowed in the United States in August 1949 and set aside for the retirement on Feb. 1, 1950, of a security issue guaranteed by the Federal Government and payable at the holder's option in U.S. dollars.

## PART II.-MISCELLANEOUS COMMERCIAL FINANCE

## Section 1.-Loan and Trust Companies*

An outline of the development of loan and trust companies in Canada from 1844 to 1913 is given in the 1934-35 Year Book, p. 993. The laws relating to loan and trust companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, ec. 40 and 55), with the result that the statistics of provincially

[^401]incorporated loan and trust companies ceased to be collected. However, summary statistics of provincial companies have been supplied by those companies since 1922 and summary figures for the years 1952 and 1953 are included in Table 1 in order to complete the statistics for loan and trust companies throughout Canada. It is estimated that more than 95 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with the federally licensed companies.

The statistics of Tables 2 and 3 refer both to those companies incorporated by the Government of Canada and by the provinces. Included in the statistics of federal companies, beginning with 1925, are data of loan and trust companies incorporated by the Province of Nova Scotia and brought by the laws of that Province under the examination of the Federal Department of Insurance, as well as data for trust companies in New Brunswick since 1934 and in Manitoba since 1938.

The progress of the aggregate of loan company business in Canada is indicated by the increase in the book value of the assets of all loan companies from $\$ 188,637,298$ in 1922 to $\$ 323,591,214$ in 1953. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from $\$ 154,202,165$ in 1928 to $\$ 489,740,530$ in 1953 . In the former year, the total of estates, trust and agency funds administered amounted to $\$ 1,077,953,643$ and in 1953 to $\$ 4,102,013,154$.

Functions of Loan Companies.-The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings-department deposits. The extent of investments in mortgages by federal and provincial loan companies may be gauged by the following figures: total assets of such companies for the years 1952 and 1953 amounted to $\$ 303,306,362$ and $\$ 323,591,214$, respectively, which amounts include mortgage loans of $\$ 200,428,729$ and $\$ 237,620,270$, respectively, with resulting percentages of mortgages to total assets of approximately 66 p.c. and 73 p.c., respectively.

Functions of Trust Companies.-Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits for investment, but the investing and lending of such deposits and of actual trust funds are restricted by law.

Statistics of Loan and Trust Companies.-A summary of operations of provincial and federal loan and trust companies is given in Table 1. As a result of the nature of the operations of the latter companies, which are intimately connected with the matter of probate, the larger trust companies usually choose to operate under provincial charters and the provincial figures represent much larger amounts than those of the federal companies.

The figures for federal loan companies include companies chartered by the Government of Nova Scotia which, by arrangement, come under inspection by the Federal Department of Insurance. The data for federal trust companies, likewise, cover companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba for the same reason.

## 1.-Operations of Provincial and Federal Loan and Trust Companies, as at Dec. 31, 1952 and 1953

${ }^{1}$ Includes companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba which, by arrangement, are inspected by the Federal Department of Insurance.
${ }^{2}$ Excludes provincial companies of Nova Scotia, New Brunswick and Manitoba which are included in federal companies.

## Section 2.-Licensed Small Loans Companies and Licensed Money-Lenders*

Licensed small loans companies and licensed money-lenders are subject to the provisions of the Small Loans Act, R.S.C. 1952, c. 251, an enactment of the Parliament of Canada regulating personal loans not in excess of $\$ 500$ made on the security of promissory notes of borrowers. Most of these notes are additionally secured by endorsements or chattel mortgages. The Act permits maximum rates of cost of loan, including charges of every kind, of 2 p.c. per month to licensed lenders and 12 p.c. per annum to unlicensed lenders. The small loans companiesfour in number-were incorporated by special Acts of the Parliament of Canada, the first such company commencing business in 1928. The money-lenders, of which there are 58, are made up of companies otherwise incorporated and include a few partnerships and individuals. In previous Year Books, Table 5, below, gave figures of licensed small loans companies only, but in this edition the comparable data includes the combined experience of small loans companies and licensed moneylenders for the years 1950 to 1953, inclusive.

[^404]
## 5.-Assets and Liabilities of Small Loans Companies and Money-Lenders, 1958-53

| Assets and Liabilities | 1950 | 1951 | 1952 | 1953 |
| :---: | :---: | :---: | :---: | :---: |
| Assets |  |  |  |  |
| Small loan balances. | 58,606,932 | 69,259.906 | 76,990,337 | 81,840,415 |
| Balances, large loans and other contracts. | 19,091,024 | 29,914,099 | 49,584, 133 | 66,082,405 |
| Cash. | 2.378 524 | $3,028,310$ | 4,336.639 | 3,857,635 |
| Other. | 8,453,078 | 2.348,219 | 2,811,792 | 2,957,428 |
| Totals, Assets. | 88,529,558 | 101,550,534 | 133,722.901 | 154,737,883 |
| Liabilities |  |  |  |  |
| Borrowed money | 68,027,497 | 81.739,427 | 105,425,684 | 109,162,651 |
| Reserves for losses | 2,733,502 | 2,994,470 | 2,389,585 | 3,794,272 |
| Paid-up capital. | 8,135,081 | 8,522,842 | 9,143.619 | 9,456,449 |
| Surplus paid in by shareholders | 365,515 | 322,570 | 14,772,570 | 12,222,570 |
| Other | 9,267,063 | 10,971,225 | 14,901,473 | 20,101,941 |
| Totals, Liabilities. | 88,529,558 | 104,550,534 | 133,722,901 | 154,737,883 |

The combined companies showed a substantial increase in business for 1953 as compared with the previous year. The number of small loans made to the public during the year increased from 755,506 to 770,265 , or by 2 p.c., and the amount of such loans rose from $\$ 167,161,448$ to $\$ 174,503,558$, or by 4 p.c. The average small loan made was approximately $\$ 227$ in 1953 compared with $\$ 221$ in 1952. At the end of 1953 , small loans outstanding numbered 482,966 for an amount of $\$ 81,840,415$ or an average of $\$ 169$ per loan, and for 1952 , small loans outstanding numbered 467,594 for an amount of $\$ 76,990,337$ or an average of $\$ 165$ per loan.

## Section 3.-Sales of Canadian Bonds*

Canadian borrowers, whether governments or corporations, sold through various forms of financing a total of $\$ 2,945,488,665$ in new bond issues during the year 1953. This total represented an increase of $\$ 917,260,525$ over the $\$ 2,028,228,140$ worth sold in 1952 but a decrease of $\$ 207,951,788$ from the post-war record of $\$ 3,153,440,453$ sold in 1950. Comparative totals for such sales can be traced in previous editions of the Year Book through the periods of two world wars. Figures for 1944-53 are given in Table 7, pp. 1222-1223 of this volume.

In relation to these totals, it should be noted that the yearly aggregate includes sales of Canadian Savings Loans for the entire amount sold, i.e., either to the yearend or to the closing dates in subsequent years. For example, the total of $\$ 380,761,100$ for Series VII (1952) includes purchases to the closing date on Aug. 31, 1953, and the total of $\$ 850,548,900$ for Series VIII (1953) includes purchases to the closing date at the end of the same year. (See Table 6, p. 1222.)

One interesting development in the sale of Series VIII was the degree to which buyers converted earlier issues in order to take advantage of the higher interest rate. As a report on all redeemed bonds was not available at time of writing, it is not possible to give the proportion of the total. When available, however, it should still leave the "new" money purchases far ahead of previous campaigns.

For purposes of analysis, the 1953 total of $\$ 2,945,488,665$ may be classified as follows: federal, $\$ 1,950,548,900$; provincial and guaranteed, $\$ 436,616,900$; municipal, $\$ 222,027,065$; corporation, $\$ 336,295,800$. (See Table 7.) Of the provincial and guaranteed total, the amount of $\$ 258,500,000$ represented direct issues and the amount of $\$ 178,116,900$ was for guaranteed financing, such as hydro bonds and municipal issues guaranteed by provincial governments. Of the $\$ 222,027,065$ municipal total, the amount of $\$ 186,784,460$ represented direct issues and the amount of $\$ 35,242,605$ represented parochial and miscellaneous issues, borrowed 'mainly for educational and hospital purposes.

During 1953 there was a noticeable increase in volume of Canadian bond issues placed on the United States market. A total of $\$ 306,599,215$ was sold compared with $\$ 284,650,025$ in 1952 -an increase of $\$ 21,949,190$ over 1952 but $\$ 77,423,785$ short of the $\$ 384,023,000$ figure for 1951. The increase in 1953 over 1952 was caused by the return of several large Canadian borrowers to the American market. These borrowers raised new funds in the United States becausa developments there seemed to suggest that the monetary stringency, produced by the anti-inflationary program, had come to an end.

From a study of Table 7, it will be noted that federal financing in 1953 at $\$ 1,950,548,900$ increased by $\$ 1,119,787,800$ over the previous year. This increase was caused, principally, by the success of Savings Loan Series VIII at \$850,548,900

[^405]and by the sale of. $\$ 1,000,000,000$ of Government of Canada issues. The latter were sold during the year with maturities ranging from 18 months to four and onehalf years. In addition, a federal issue for $\$ 100,000,000$, twenty-five-year, $3^{\frac{3}{4}}$-p.c. bonds was offered, initially to yield 3.85 p.c. These sales, which were all financed in the Canadian market, accounted for the entire amount (exclusive of short-term financing) borrowed by the Federal Government in 1953.

Federal short-term financing of less than one year amounted to $\$ 3,665,000,000$ in 1953 but is not included in Table 7 because of its limited distribution. Such financing included Treasury Bills, Treasury Notes and Deposit Certificates. If the total of short-term financing were added to the total of other federal financing (as is done in some reports of Canadian bond sales) the grand total of federal borrowing in 1953 would amount to $\$ 5,615,548,900$ and the grand total of all Canadian bond financing would amount to $\$ 6,610,488,665$.

In 1953, direct provincial flotations totalled $\$ 258,500,000$, an increase of $\$ 42,400,000$ over the $\$ 216,100,000$ total for the previous year. Provinces which entered the 1953 bond market were, by month:-

| Month | Province | Amount |
| :---: | :---: | :---: |
|  |  | 8 |
| January | New Brunswick. | 7,500,000 |
| January | Nova Scotia. | 12,500,000 |
| January. | Ontario. | 50,000,000 |
| February. | Manitoba. | 12,000,000 |
| March. | Quebec. | 26,000,000 |
| March. | Saskatchewan. | 15,000,000 |
| June. | Nova Scotia. | 10,000,000 |
| July. | New Brunswick. | 7,500,000 |
| September | Manitoba. | 12,000,000 |
| September. | Saskatchewan. | 6,000,000 |
| October. | Ontario. | 50,000,000 |
| December. | Ontario. | $50,000,000$ |
|  | Total. | 258,500,000 |

In contrast to the $\$ 42,400,000$ increase in direct provincial financing, the total of $\$ 178,116,900$ for provincial guaranteed financing in 1953 represented a decrease of $\$ 32,756,100$ from the 1952 total of $\$ 210,873,000$. This decrease was principally attributable to a somewhat smaller amount in three flotations by the Hydro-Electric Power Commission of Ontario. These issues totalled $\$ 100,000,000$ in 1953 compared with four similar issues for $\$ 160,000,000$ in 1952. Other points of interest in guaranteed provincial sales for 1953 included a total of $\$ 54,500,000$ by the Quebec Hydro-Electric Power Commission and a total of over $\$ 11,000,000$ for municipal school financing, guaranteed by the Province of British Columbia.

As distinct from provincial guaranteed municipal issues, direct municipal bond financing in 1953 totalled $\$ 186,784,460$, exclusive of $\$ 35,242,605$ for parochial and miscellaneous purposes. Comparable totals for 1952 in the municipal and parochial classifications were $\$ 147,690,940$ and $\$ 49,264,100$, respectively. Thus, direct municipal issues showed an increase of $\$ 39,093,520$ over 1952 while parochial and miscellaneous issues showed a decline of $\$ 14,021,495$ in the same period.

The largest single amount borrowed by any one municipality during 1953 was represented by a flotation of the City of Toronto for $\$ 18,600,000$ (November) which was sold in the United States. Other municipal borrowers in excess of $\$ 3,000,000$ were: City of Toronto, $\$ 12,000,000$ (January); City of Sherbrooke, $\$ 3,700,000$ (March); Montreal Metropolitan Commission, $\$ 3,651,000$ (May); City of Toronto, $\$ 12,610,000$ (June); City of Vancouver, $\$ 9,350,000$ (September); Greater Vancouver Water District, $\$ 3,500,000$ (October); City of Hamilton, $\$ 4,489,715$ (November); City of Ottawa, $\$ 3,417,000$ (December); and Township of Scarborough, $\$ 3,710,215$ (December).

During 1953, corporate financing totalled $\$ 336,295,800$, a decline of $\$ 237,243,200$ from the $\$ 573,539,000$ total for 1952. Largest single issue (at $\$ 60,000,000$ ) in this classification was sold in the United States for the Interprovincial Pipe Line Company. The money was borrowed to help finance an extension from Lake Superior to Sarnia, Ont.

Other prominent borrowers in the corporate field were: Bathurst Power and Paper Co. Limited, $\$ 6,000,000$; Canadian Canners Limited, $\$ 4,000,000$; Cockshutt Farm Equipment Limited, $\$ 5,000,000$; Credit Foncier Franco-Canadien, $\$ 3,000,000$; Dominion Tar and Chemical Company Limited, $\$ 7,500,000$; The T. Eaton Realty Company Limited, $\$ 17,500,000$; Empire Brass Manufacturing Company Limited, $\$ 4,000,000$; General Motors Acceptance Corporation of Canada, $\$ 25,000,000$; General Steel Wares Limited, \$2,500,000; Industrial Acceptance Corporation Limited, $\$ 15,000,000$; Loblaw Groceterias Company Limited, $\$ 8,000,000$; Phillips Electrical Company Limited, $\$ 9,000,000$; Simpsons-Sears Limited, $\$ 15,000,000$; Steinberg's Limited, $\$ 2,500,000$; Traders Finance Corporation Limited, $\$ 12,000,000$; B.C. Telephone Company, $\$ 7,000,000$; Manicouagan Power Company, $\$ 10,000,000$; North Star Oil Limited, $\$ 5,000,000$; Permian Basin Pipeline Company, $\$ 34,125,000$; Union Gas Company of Canada Limited, $\$ 8,000,000$; and George Weston Limited, $\$ 8,000,000$.

Financing for the Canadian transportation industry in 1953 amounted to $\$ 47,100,000$, an increase of more than $\$ 10,000,000$ over 1952 . The largest issue of any concern in this industry was for $\$ 25,000,000$ in equipment trust certificates of the Canadian Pacific Railway. In addition, however, flotations were made by Montreal Transportation Commission for $\$ 18,000,000$ and by Sun Steamships Limited for $\$ 4,100,000$. Since 1951, the Canadian National Railways has made arrangements to have funds provided by the Government of Canada and has not been a large borrower in the open market.

A directory of all "Security Issues Placed During 1953" has been published in The Monetary Times, Annual National Review, 1954. This list indicates that four federal issues (excluding all short-term financing of less than one year), 23 provincial and guaranteed issues, 557 municipal issues (including parochial and miscellaneous) and 75 corporation issues were placed in 1953. For 1952, the same source, dated 1953, indicates that two federal issues, 25 provincial and guaranteed issues, 589 municipal issues and 77 corporation issues were placed.

Thus, 659 new issues of all classifications were sold in 1953 compared with 693 in 1952. Though the total number declined by 34 , the dollar amount increased by $\$ 917,260,525$ from $\$ 2,028,228,140$ to $\$ 2,945,488,665$. This greater dollar amount, however, was partly explained by an increase from $\$ 380,761,100$ for Savings Loan Series VII (1952) to $\$ 850,548,900$ for Savings Loan Series VIII (1953) or by $\$ 469,787,800$ in this one form of financing alone.

## 6.-Sales of and Applications for Federal Government Bonds, Feb. 1, 1940, to Nov. 1, 1953

(Source: The Monetary Times)

#### Abstract

${ }^{1}$ Department of Finance figures. ${ }^{2}$ Total subscriptions were limited to $\$ 2,000$ for any one individual for the 1946 issue, $\$ 1,000$ for the issues of $1947-50$, inclusive, and $\$ 5,000$ for the issues of 1951,1952 , and 1953. Figures for the issues 1946-53 are for the entire loans, i.e., either to the year-end or to the closing date in subsequent years.

Note.-The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

Insurance, for the purpose of statistical analysis, is usually classified as fire, life and casualty. Most companies operate under Federal Government registration although some have provincial licences only. Also, many fraternal orders and societies are engaged in this kind of business. Special articles relating to insurance that have appeared in previous editions of the Year Book are listed in Part II of Chapter XXIX under the heading "Insurance"

## Section 1.-Fire Insurance

In Canada, fire insurance began with the establishment of agencies by British fire insurance companies. These, situated usually at the seaports, were operated by local merchants. The oldest existing agency of such a company commenced business at Montreal in 1804. The first Canadian company dates from 1809 and the first United States company to operate in Canada commenced business in 1821. A short account of the inception of fire insurance in Canada is given in the 1941 Year Book, pp. 846-847.

The report of the Superintendent of Insurance for the year ended Dec. 31, 1953, shows that, at that date, there were 290 fire insurance companies under federal registration; of these, 73 were Canadian, 86 were British and 131 were foreign companies. In 1875, the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada-11 Canadian,

[^408]13 British and 3 United States. The proportionate increase in the number of British and foreign companies from 59 p.c. to 75 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

## Subsection 1.-Total Registered Fire Insurance in Force in Canada

Of the total amount of fire insurance written in Canada during each year, a part is sold by the companies holding provincial licences and permits. Such companies generally confine their operations to the province of incorporation but may be allowed to sell insurance in other provinces. As shown in Table 1, fire insurance companies under Federal registration account for approximately 90 p.c. of the fire insurance in force.

## Subsection 2.-Operational Statistics of Fire Insurance Companies under Federal Registration

The trend in the average rate payable for fire insurance has been generally downward, although the increased fire losses in certain recent years have had the effect of checking that tendency. Moreover, the increase in value of insurable buildings and their contents tends to increase fire insurance premiums despite the downward trend of the average rate.

92428-78

## 2.-Fire Insurance, by Companies Operating under Federal Government Registration, Decennially 1880-1940 and 1941-53

Note.-Figures for 1869-1900 are given in the 1939 Year Book, p. 973, and for 1901-39 in the 1942 edition, pp. 847-848.

[^409]Premiums Written and Claims Incurred.-The relationship of claims incurred to premiums written is shown in Table $\mathbf{3}$ for Federal Government registered fire insurance companies, by province.

## Subsection 3.-Finances of Fire Insurance Companies under Federal Registration

Tables 5 to 7 show the assets, liabilities, income and expenditure of registered companies transacting fire insurance in Canada from 1949 to 1953. The majority of fire insurance companies also transact casualty insurance dealt with in Section 3 of this Chapter. Totals only are given here because it is impossible for such
companies to allocate their assets and liabilities and their general income and expenditure among the various types of business transacted. Table 28, p. 1248, gives similar information for registered companies whose transactions are confined to casualty insurance.

## 5.-Assets of Canadian, British and Foreign Companies Transacting Fire Insurance, or Fire and Casualty Insurance, under Federal Government Registration, 1949-53.

## Subsection 4.-Fire Losses

Fire Losses.-The information in Tables 8 to 11, which deals with the loss of property and life caused by fire, has been summarized from the Statistical Bulletin of the Association of Canadian Fire Marshals and the Dominion Fire Prevention Association, prepared by the Dominion Fire Commissioner.

## 8.-Fire Losses in Canada, 1942-53

Norz.-Figures for 1926-41 are given in the 1947 Year Book, p. 1078. Earlier figures from 1898 may be obtained from the Department of Insurance.

| Year | Fires Reported | Property Loss ${ }^{1}$ | $\begin{gathered} \text { Loss } \\ \text { per } \\ \text { Capita } \end{gathered}$ | Deaths by Fire | Year | Fires Reported | Property Loss ${ }^{1}$ | Loss per Capita | Deaths by Fire |

${ }^{1}$ Excludes federal jurisdiction losses, including forests.
The provincial property losses for 1948-53 given in Table 9 include both insured and uninsured losses. The percentages of the provincial totals uninsured in 1953 were: Prince Edward Island, 44; Nova Scotia, 22; New Brunswick, 33; Quebec, 17; Ontario, 20; Manitoba, 17; Saskatchewan, 26; Alberta, 28; British Columbia, 41; and the Yukon and Northwest Territories, 56. Uninsured losses formed 22 p.c. of total losses for Canada.

## 11.-Value of Property Loss, by Reported Cause of Fire, 1951-53

(Exclusive of Newfoundland)

## Section 2.-Life Insurance

Life insurance in force in Canada, in companies registered by the Federal Government (exclusive of fraternal societies), was over $\$ 21,227,000,000$ at the end of 1953 , an increase of over $\$ 2,136,000,000$ during the year. There was not only an increase in new business, but also a greater stability in business written compared with earlier years. The effect of these factors is reflected in the ratio of gain in business in force expressed as a percentage of the amount in force at the beginning of the same year.

| Year |  | Net in Force <br> at Bepinning <br> of Year |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Subsection 1.-Total Registered Life Insurance in Force in Canada

In addition to the business transacted by life insurance companies registered by the Federal Government, a considerable volume of business is also transacted by companies licensed by the provinces. Table 12 summarizes the volume of business transacted in Canada by Canadian, British and foreign life insurance companies and fraternal societies, whether registered by the Federal Government or licensed by the provinces.

## Subsection 2.-Operational Statistics of Life Insurance Companies under Federal Registration

The net life insurance in force in all companies having federal registration was only $\$ 35,680,082$ in 1869 and in 1953 it was $\$ 21,226,905,619$.* The amount per capita of the estimated population of Canada has more than doubled since 1942evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. British life insurance companies in Canada, the leaders in 1869, have fallen far behind Canadian and foreign companies.

Life insurance business was transacted in Canada, during 1953, by 62 active companies having federal registration, including 31 Canadian, six British and 25 foreign companies. In addition to these active companies, there were seven British and three foreign companies writing little or no new insurance, their business being confined largely to the policies already on their books, and two foreign companies which were registered in 1952 and 1953 but had written no business in Canada.

The operations analysed in the tables of this Subsection, with the exception of Table 17, include only those companies under federal registration and are exclusive of fraternal organizations and provincial licensees. However, as indicated in Table 12, operations of the companies included account for about 97 p.c. of the life insurance in force in Canada.

* This total does not include fraternal insurance.

## 13.-Life Insurance in Force and Effected in Canada by Companies under Federal Government Registration, Decennially 1880-1940 and 1941-53

Note.-Figures for 1869-1900 are given at p. 958 of the 1938 Year Book, and for 1901-39 at p. 855 of the 1942 edition. Statistics of fraternal society insurance, excluded here, are given at pp. 1239-1241.

## Subsection 3.-Finances of Life Insurance Companies under Federal Registration

The financial statistics of Tables 18, 19 and 20 cover only life insurance companies under federal registration and do not include fraternal organizations and provincial licensees. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only, but assets and liabilities, income and expenditure of Canadian companies arise, in part, from business abroad.

Subsection 4.-Life Insurance Effected through Fraternal Benefit Societies
In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 21 gives statistics of life insurance effected through fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of Actuaries) and a readjustment of rates or benefits must be made, unless the actuary certifies to the solvency of each fund. The statistics of the first section of Table 21 relate to the 16 Canadian societies reporting to the Department of Insurance of the Federal Government, of which only one does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, though forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some
foreign societies that had not previously been licensed by the provinces have since obtained federal authority to transact business. Of both classes of societies, 32 transacted business in Canada during 1953; two of the societies do not grant life insurance benefits.

## Subsection 5.-Life Insurance in Force Outside Canada by Registered Canadian Companies

Tables 22 and 23 give summary statistics of insurance in force as at Dec. 31, 1952, in currencies other than Canadian, classified by companies and by the currencies in which business was written. The data given here are in Canadian dollars, mainly at par rates of exchange for the countries concerned, but there are several exceptions where, for purposes of account, certain companies have converted foreign currencies at rates other than par, particularly where the current rate differs substantially from the par rate. Approximately 65 p.c. of all such business in force was written in United States currency and 19 p.c. in sterling. From another standpoint, approximately 28 p.c. was written in currencies of Commonwealth countries outside Canada, and 72 p.c. in currencies of foreign countries.

Canadian life insurance companies, operating under Federal Government registration, at Dec. 31, 1952 had life insurance in force amounting to $\$ 6,012,282,592$ in countries outside Canada. Insurance in force in currencies other than Canadian amounted to $\$ 5,953,568,118$ and the difference between these figures is, presumably, the net amount of non-Canadian business transacted in Canadian currency. As against the total non-Canadian business, including annuity business, the Commonwealth and foreign investments of Canadian life insurance companies as at Dec. 31, 1952, amounted to $\$ 1,856,498,711$. As the business in force in Canada of these companies at Dec. 31,1952 , amounted to $\$ 13,085,349,418$, the total business on their books, Canadian and non-Canadian, amounted to $\$ 19,097,632,010$. Thus, over 31 p.c. of the total business in force was outside Canada.
22.-Life Insurance Effected and in Force and Liabilities of Canadian Companies (excluding Fraternal Societies) operating under Federal Government Registration, in Currencies other than Canadian, by Company, 1952.

## Subsection 6.-- Total Registered Life Insurance in Canada and Business of Canadian Organizations Abroad

Table 24 summarizes the business outside Canada of Canadian life companies and fraternal benefit societies. If to these figures is added the business in Canada of these organizations, as shown in Table 12, p. 1233, total business, internal and external, of all Canadian life insurance companies and fraternal societies may be obtained. Again, adding the business in Canada of British and foreign companies and fraternal societies, a grand total is obtained of all life insurance in Canada and of the life insurance business abroad of Canadian organizations; this total is shown in Table 25.

## 24.-Business of Registered Canadian Life Companies and Fraternal Societies Abroad, $1953^{\text {p }}$

Nore.-Figures for business in Canada will be found in Table 12, p. 1233.

## 25.-Total Registered Life Insurance Business in Canada and of Canadian Organizations Abroad, 1953

## Section 3.-Casualty Insurance

Casualty insurance in Canada includes various forms of accident and 25 other classes of insurance transacted by companies having Federal Government registration. In 1953, such insurance was issued by 308 companies, of which 76 were Canadian, 82 British and 150 foreign; of these, 216 companies also transacted fire insurance. In addition, 19 fraternal orders or societies conducted accident and sickness insurance as well as life insurance business and three fraternal orders or societies carried on accident or sickness insurance only.

Table 27 shows the division of business in this field between Federal Government registrations and provincial licensees and indicates that, as for fire and life insurance, the bulk of the business (about 90 p.c. in this case) is transacted by companies having Federal Government registration.

Because, as indicated above, most of the companies carrying on casualty insurance in Canada also transact fire insurance, their assets, liabilities, income and expenditure are included in the financial statistics of fire insurance companies given in Section 1, Subsection 3, of this Chapter. Table 28, p. 1248, gives corresponding figures for total casualty business of Canadian companies, and the casualty business in Canada of British and foreign companies, whose transactions are confined to insurance other than fire and life. In 1953, there were 18 Canadian, 7 British and 67 foreign companies whose operations were limited to the same field.

During the war years, automobile insurance showed a favourable experience at a loss ratio of about 45 p.c. This ratio was slightly lower than for the pre-war years, as a result of lessened traffic but, since the end of the War, the trend has been less favourable; in 1953 the ratio stood at about 52 p.c. Hail insurance in 1952 showed a loss ratio of 54 p.c. but in 1953 this had increased to 95 p.c.

Marine insurance, for which a certificate of registration is not required, showed a very large increase in Canada during the war years and substantial profits resulted. The results for 1941 to 1953 were as follows:-

| Year | Premiums | Claims <br> Incurred | Underwriting Profits |
| :---: | :---: | :---: | :---: |
|  | \$ | \$ | $\$$ |

## Section 4.-Government Insurance

In addition to the insurance provided by private insurance companies, various types of government insurance schemes have been adopted in recent years by the Federal and Provincial Governments.

Information on unemployment insurance, health insurance, veterans insurance, export credits insurance, etc., will be found in the appropriate Chapters on Labour, Health and Welfare, Foreign Trade, etc.

Provincial Insurance Schemes.-The Saskatchewan Government Insurance Office, a Crown corporation established by the Saskatchewan Government Insurance Act, 1944, commenced business May 1, 1945; it deals in all lines of insurance other than sickness and life.

It administers the Automobile Accident Insurance Act, which provides compensation for the victims of automobile accidents as well as property damage in auto accidents. The Act provides Saskatchewan residents with personal injury coverage without regard to liability and, in addition, all Saskatchewan motorists enjoy public liability, and comprehensive protection, including fire, theft and collision coverages.

The Office, together with the Saskatchewan Department of Natural Resources, administers a trust fund made up of a portion of hunting licence fees and insurance premiums, to compensate farmers for damage done to their crops by certain forms of wildlife, chiefly ducks, geese and deer.

Information regarding the operation of the Saskatchewan Government Insurance Office or the Automobile Accident Insurance Act may be obtained from:-

Public Relations Department,
The Saskatchewan Government Insurance Office, 11th and Cornwall Streets, Regina, Saskatchewan.

In the Province of Alberta, life insurance is provided through the Life Insurance Company of Alberta, a Crown company that is not an emanation from the Proviacial Government. Similarly, another Crown company, the Alberta General Insurance Company, provides all other kinds of insurance except life, accident and sickness. The Alberta Hail Board provides farmers with insurance for their crops against damage by hail. Additional information may be obtained from:-

The Superintendent of Insurance,
Department of the Provincial Secretary for Alberta,
Edmonton, Alberta.

## PART I.-THE ARMED SERVICES AND DEFENCE RESEARCH*

## Section 1.-The Department of National Defence

The Minister of National Defence exercises control over, and management of, the Canadian Armed Forces, the Defence Research Board and other matters relating to national defence. Under his direction, the Armed Forces are commanded by their respective Chiefs of Staff and the Defence Research Board has its Chairman. A Chairman of the Chiefs of Staff Committee, appointed in 1951, is responsible for the co-ordination of the training and operations of the Canadian Armed Forces.

The civilian administrative organization, headed by the Deputy Minister, is constituted on a functional basis. The Deputy Minister maintains a continuing review and control over the financial aspects of operational policy, logistics and personnel, and administration. The Deputy Minister is assisted by two Associate Deputy Ministers, one of whom is stationed in the United Kingdom handling departmental problems arising out of Canada's NATO commitments in Europe. There are also three Assistant Deputy Ministers directing the financial, supply, and administrative and personnel divisions, respectively, of the Deputy Minister's Office. Directly responsible to the Deputy Minister are the Controller General of Inspection Services, the Chief Secretary, the Judge Advocate General and, where staff matters are concerned, the Director of Public Relations.

A number of committees within the Department meet at regular intervals to consider and advise on joint issues. These include:-
(1) Defence Council.-Composed of the Minister of National Defence (Chairman), the Parliamentary Assistant to the Minister, the Deputy Minister, the Chairman, Chiefs of Staff, the three Chiefs of Staff and the Chairman of the Defence Research Board, its purpose is to advise the Minister on administrative matters.

[^418](2) Chiefs of Staff Committee.-Composed of the Chairman, Chiefs of Staff, the three Chiefs of Staff of the Services, the Chairman of the Defence Research Board and the Deputy Minister-the Secretary to the Cabinet and the Under Secretary of State for External Affairs attend when re-quired-its purpose is to maintain a continuous review of all operational problems. Sub-committees consider various aspects of these problems and report to the parent committee.
(3) Personnel Members Committee.-Composed of the Chief of Naval Personnel, Adjutant-General, Air Member for Personnel, Assistant Deputy Minister (Administration and Personnel), Assistant Deputy Minister (Finance) and a representative of the Chairman of the Defence Research Board, its purpose is to examine personnel problems of the three Services with the general aim of achieving uniform personnel policies. Sub-committees consider various aspects of personnel problems and . report to the parent committee.
(4) Principal Supply Officers Committee.-Composed of the Chief of Naval Technical Services, the Quartermaster-General, the Air Member for Technical Services, the Assistant Deputy Minister (Requirements) and a representative of the Chairman of the Defence Research Board, its purpose is to consider all logistical problems. Sub-committees consider various aspects of these problems and report to the parent committee.
(5) Defence Supply Panels.-Twelve panels, composed of a representative from each of the Services as well as representatives of the Deputy Minister, of Inspection Services and of the Department of Defence Production, maintain a continuous review of procurement problems, and consider various aspects of the procurement of equipment, such as ammunition, armament, aircraft, etc., for the Department of National Defence by the Department of Defence Production.

Liaison Abroad.-The Chairman of the Chiefs of Staff, the Canadian military representative in the North Atlantic Treaty Organization, is responsible for coordinating all NATO military matters and acts as a military adviser to Canadian NATO delegations. For purposes of liaison and the furtherance of international co-operation in defence, Canada also maintains (1) Canadian Joint Staff (Washington) representing the three Services and the Defence Research Board; (2) Canadian Joint Staff (London) representing the three Services and the Defence Research Board; (3) Canadian Military Mission, Far East; and (4) Service Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence which is composed of representatives from the two countries.

Mutual Aid.-As at Mar. 31, 1954, Canada had contributed nearly $\$ 850,000,000$ to NATO countries under Mutual Aid programs for the supply of arms and other equipment and the training of aircrews. Over $\$ 5,000,000$ of this amount had been expended, by the same date, on Infrastructure costs (largely towards airfield and pipe-line construction) and contributions to NATO budgets, in addition to over $\$ 25,000,000$ contributed by Canada under the special Infrastructure vote. Details of Canada's Mutual Aid program expenditures are shown in' the chart and further details on Canada's contributions to NATO on p. 132.

The Regular Officer Training Plan (ROTP).-The object of the Regular Officer Training Plan is to train selected high-school and university students for regular commissions in a branch of the active forces. Students are enrolled as officer cadets and subsidized at one of the Canadian Services Colleges or at a university for a period not exceeding four years. An additional year is provided for students who take the preparatory year at the Collège Royal Militaire de SaintJean. Practical training is given during the summer months.

Total Strength and Rates of Pay and Allowances.-The strengths of the active forces of the three Services have continued to increase to keep pace with defence objectives and commitments. At June 30, 1954, the total active force strength was 113,958 composed of: Navy, 17,251; Army, 49,851; and Air Force, 46,856 . The strength of the reserve elements of the three Services was 56,421 .

The entire pay structure for comparable ranks in the different Services is on a uniform basis. Monthly rates for pay and allowances are given in Table 1.
1.-Monthly Rates of Pay and Allowances for the Armed Forces, Effective Dec. 1, 1953

## Subsection 1.-The Royal Canadian Navy

Organization.-The Chief of Naval Staff at Naval Headquarters at Ottawa exercises central authority over the Royal Canadian Navy; Flag Officers at East and West Coasts exercise operational and administrative command of ships and establishments within the Atlantic and Pacific Coast Commands, respectively. There are also 22 Naval Divisions throughout Canada that are established primarily for the recruiting and training of the Royal Canadian Navy (Reserve); they are administered by the Commanding Officer, Naval Divisions with headquarters at Hamilton, Ont. Naval missions are maintained at London and Washington to maintain liaison with the Royal Navy and the United States Navy. As part of Canada's NATO commitment, officers of the Royal Canadian Navy are now serving on the staffs of the Supreme Allied Commander, Atlantic, and the Commander-in-Chief, Eastern and Western Atlantic Areas.

For the protection of shipping and the defence of Canadian coastal areas and harbours, the Royal Canadian Navy had 58 ships in commission during the fiscal year ended Mar. 31, 1954. In the event of war, 36 of these are available for assignment to NATO for the defence of the Canada-United States area and for the protection of convoys under the control of the Supreme Allied Commander, Atlantic. Ships not earmarked for assignment to NATO are required for harbour defence, for training and for miscellaneous duties.

The strength of the Royal Canadian Navy on June 30, 1954, was 2,391 officers and 14,860 men in the regular force and 1,455 officers and 3,610 men and women in the reserve force.

Operations at Sea 1953-54.--During the year ended Mar. 31, 1954, the Royal Canadian Navy continued to maintain three destroyers in Korean waters.

The Canadian Coronation Squadron, HMC Ships Magnificent, Quebec, Ontario, Sioux, La Hulloise and Swansea participated in the Coronation Review at Spithead. En route to the Coronation, the squadron took part in Exercise "Grand Banks", an RCN-RCAF Maritime Training exercise held during May 1953. The Magnificent, Algonquin, La Hulloise and Swansea also participated in Exercise "Mariner", a large-scale NATO exercise held in September 1953. The First Canadian Escort Squadron, formed in November 1953, in the Atlantic Command, consisting of HMC Ships Algonquin, Lauzon, Prestonian and Toronto, participated in NATO Exercise "New Broom" in conjunction with the United States Navy and RCAF in February 1954. The First Canadian Minesweeping Squadron was formed in September 1953 in the Atlantic Command and a second minesweeping squadron is planned for the Pacific Coast. HMCS Ontario departed in February on a three-month goodwill and training cruise to Australia, New Zealand, Tongatabu, Suva and Pearl Harbour. The cruise was arranged so that the ship's visit to Hobart, Tasmania, would coincide with the arrival there of Her Majesty, Queen Elizabeth, and the 150th anniversary of the founding of Hobart. In addition to participation in the Coronation and in joint exercises with other Canadian and NATO forces, personnel and ships of the RCN undertook cruises to various Canadian and American ports. During the year United States Navy and Royal Navy submarines and ships of the RCN carried out combined anti-submarine exercises on both East and West coasts.

Training Ashore.-HMCS Stadacona at Halifax, N.S., and HMCS Naden at Esquimalt, B.C., are the major shore establishments of the Royal Canadian Navy. Their facilities include schools for general and specialized training besides the drafting
depots, hospitals and accommodation facilities necessary for the maintenance of the ships based on each coast. Formal courses in seamanship, gunnery, navigation direction, communications, diving, damage control and fire-fighting, electricity and electronics, marine engineering, meteorology, medical assistant skills, and supply duties are provided in the schools and centres of these two establishments for officers and men of the regular and reserve forces.

A third major shore establishment is HMCS Shearwater at Dartmouth, N.S., which provides technical training for naval aviation.

During the fiscal year ended Mar. 31, 1954, 3,303 regular force new entries and re-entries received training in the new entry training establishment, HMCS Cornwallis. The method of training new entry ordinary seamen has been revised to afford an economy of training time and inter-ship and establishments training.

In order to standardize the professional knowledge of all lieutenants of the executive branch, 11-month technical and leadership courses for junior officers have been conducted since 1949. To assist in overcoming the shortage of skilled tradesmen, the Royal Canadian Navy commenced a Technical Apprenticeship Training program in August 1952 in HMCS Cape Breton, a 10,000-ton maintenance vessel, equipped and commissioned especially for this purpose.

As part of the naval aviation training program, short service appointment midshipmen specializing in naval aviation undergo a 12 -month basic course before commencing flying training. The first six months are spent in HMCS Cornwallis and the second term is spent aboard a cruiser. Training of pilots, observers, air engineering and maintenance personnel, observers' mates and others connected with naval aviation is carried out at HMCS Shearwater with further training aboard HMCS Magnificent. HMCS Stadacona also provides additional instruction in some technical subjects. As part of the naval aviation program, exercises are carried out in conjunction with the Royal Navy, the RCAF and the United States Navy.

Junior officers of the engineering and executive branches on completion of their initial training in Canada proceed to the United Kingdom to take sub-lieutenants courses in gunnery, torpedo, anti-submarine, navigation direction, and ship construction. Advanced training in certain highly technical fields and in staff duties is undertaken by selected officers in Canada, the United Kingdom, and the United States.

At HMCS D'Iberville, where both the French and English languages are used, the program is designed to give all French-speaking regular force new entries a basic knowledge of English together with preliminary training in seamanship and professional naval subjects. Following these courses, French-speaking new entries join with classes in HMCS Cornwallis at an appropriate stage in their training.

Ship Construction, Refitting, and Modernization.-The program for 14 new destroyer escorts, the most complex and challenging of its kind ever undertaken by Canada, progressed at a slower rate than had been anticipated. Compared to similar construction projects in British and American shipyards, Canadian production has not, however, been unsatisfactory, and the skills and experience being gained are expected to be of great future value. By Mar. 31, 1954, five of the destroyer escorts had been launched and the balance of the launchings scheduled in the following fiscal year. HMCS Labrador, an Arctic patrol vessel launched in December 1951, completed trials and was commissioned on July 8, 1954. Thirteen of the 14 coastal minesweepers being built in Canada had been launched by Mar. 31,

1954, and six of these had been completed; six additional coastal minesweepers will be built to replace new minesweepers allocated as part of Canada's Mutual Aid contribution to her NATO allies. The refitting, conversion and modernization program for destroyers, frigates and minesweepers was well under way. HMCS Bonaventure, a replacement aircraft carrier for HMCS Magnificent, was being completed at Belfast, Northern Ireland.

Royal Canadian Navy (Reserve).-Naval Divisions are established in the following centres:-

St. John's, N'f'ld., HMCS Cabot Cornerbrook, N'f'ld., HMCS Caribou Charlottetown, P.E.I., HMCS Oueen Charlotte Halifax, N.S., HMCS Scotian<br>Saint John, N.B., HMCS Brunswicker<br>Quebec, Que., HMCS Montcalm<br>Montreal, Que , HMCS Donnacona<br>Ottawa, Ont., HMCS Carleton<br>Toronto, Ont., HMCS York<br>Kingston, Ont., HMCS Cataraqui<br>Hamilton, Ont., HMCS Star

Windsor, Ont., HMCS Hunter London, Ont., HMCS Prevost Port Arthur, Ont., HMCS Griffin Winnipeg, Man., HMCS Chippawa Regina, Sask., HMCS Queen Saskatoon, Sask., HMCS Unicorn Calgary, Alta., HMCS Tecumseh Edmonton, Alta., HMCS Nonsuch Vancouver, B.C., HMCS Discovery Victoria, B.C., HMCS Malahat Prince Rupert, B.C., HMCS Chatham

Each division, commanded by a reserve officer, is responsible for specialized training in one of the various phases of naval activity: gunnery, harbour defence, aviation, communications, etc. Royal Canadian Navy officers and men assist with instruction.

Since the spring of 1953 , the 22 Naval Divisions have been grouped in a Reserve Command, headed by the Commanding Officer, Naval Divisions, at Hamilton, Ont. The Great Lakes Training Centre handled new entry reserve training in 1953; two gate vessels operated from Hamilton during this period. Great training value was also derived from the Fairmile motor launches attached to the Great Lakes divisions and from three small minesweepers operated by coastal divisions.

During 1953-54, Naval Air reserve squadrons were formed at Toronto and Kingston, Ont. and at Victoria, B.C.

University Naval Training Divisions (UNTD).-The university naval training program is designed to give instruction to students in attendance at universities across Canada with the object of providing well-trained junior officers for the Royal Canadian Navy and the Royal Canadian Navy (Reserve). Twentythree UNTD's, drawing on students in 37 universities and colleges, have been established, with a total strength of 993 cadets at June 30, 1954. The total training period is three years. Cadets are required to complete three winter training periods, two summer periods and certain specified courses. During the year, 11 UNTD cadets were appointed to regular force commissions in the RCN and 192 obtained commissions in the RCN (Reserve).

The Royal Canadian Sea Cadets.-Sea Cadets organization, as of June 30, 1954, consisted of 115 authorized corps sponsored by the Navy League of Canada and administered, trained and supervised by the Royal Canadian Navy. During the spring of 1953, six senior cadets trained in HMCS Ontario for four months during that ship's Australian cruise. Twelve sea cadets and one officer embarked in HMCS Magnificent for the Coronation and Spithead Review and while in the United Kingdom were guests of the U.K. Navy League. Six sea cadets were also embarked in HMCS Micmac for her spring cruises to Bermuda, and to Great Britain for the RNVR Jubilee. Approximately 136 officers and 3,039 sea cadets
received training in RCN establishments and Royal Canadian Sea Cadet camps during the summer of 1953. In addition, some 236 cadets undertook seven weeks trades training. A total of 425 sea cadets joined the RCN in 1953.

## Subsection 2.-The Canadian Army

Organization.-Army Headquarters at Ottawa, organized as the General Staff Branch, the Adjutant-General Branch and the Quartermaster-General Branch, conducts the planning and policy for the administration and training of the regular and reserve forces of the Canadian Army. Public relations, cadet services, military intelligence, chaplain services, provost and associated activities are directed through Commands by Army Headquarters.

| Commands | Headquarters | Areas and Headquarters |
| :---: | :---: | :---: |
| Eastern Command......... | Halifax, N.s. | (1) New Brunswick Area, Fredericton, N.B. |
|  |  | (2) Newfoundland Area, St. John's, N'f'ld. |
| Quebec Command. | Montreal, Que. | (3) Eastern Quebec Area, Quebec, Que. |
| Central Command. | Oakville, Ont. | (4) Eastern Ontario Area, Kingston, Ont. |
|  |  | (5) Western Ontario Area, London, Ont. |
| Prairie Command... | Winnipeg, Man. | (6) Saskatchewan Area, Regins, Sask. |
| Western Command. . | Edmonton, Alta | (7) British Columbia Area, Vancouver, B.C. |

The two main components of the Canadian Army are the Canadian Army (Regular)* and the reserves. The components of the reserves are the Canadian Army (Militia)*, the regular reserve, the supplementary reserve, the Canadian Officers' Training Corps (COTC), the cadet services and the reserve militia. Additional to, but not an integral part of, the Canadian Army are the Services Colleges (see pp. 1266-1267), officially authorized cadet corps, rifle associations and clubs.

At the end of June 1954, there were 5,369 officers in the Canadian Army (Regular) and 44,482 men; the strength of the Canadian Army (Militia) was 7,514 officers and $38,612 \mathrm{men}$.

During the latter part of 1953, the 1st Canadian Infantry Division was formed and with the exception of a few units not required under present conditions, the Division has been activated. The divisional headquarters and two-thirds of the Division are stationed and trained in Canada. The remaining third, the 1st Canadian Infantry Brigade, proceeded to Germany in the autumn of 1953 and relieved the 27th Canadian Infantry Brigade. Canadian units in the Base Area and Communications Zone in Europe are administered by Headquarters, Canadian Base Units, Europe, located at Stockum, Germany.

[^419]A major change in the Royal Canadian Infantry Corps took place at the same time with the formation of a Regiment of Canadian Guards, consisting of four battalions. Two Guards battalions were formed by renaming two heterogeneous infantry battalions originally raised for service in Europe. The other two Guards battalions replaced the third battalions of the Royal Canadian Regiment and the Princess Patricia's Light Infantry. Other changes in the infantry corps included renaming the two Canadian Rifle Battalions as the 1st and 2nd Battalions The Queen's Own Rifles of Canada, and the two Canadian Highland Battalions as the 1st and 2nd Battalions The Black Watch (Royal Highland Regiment) of Canada. The Militia battalions of the Queen's Own Rifles of Canada and The Black Watch (Royal Highland Regiment) of Canada were made the 3rd Battalions of the respective regiments. In the Artillery Corps, the 79th and 81st Field Regiment, Royal Canadian Artillery were made the 3rd and 4th Regiments, Royal Canadian Horse Artillery, and other changes involved changing the identifying numbers of some formations and units to conform to the order of battle of the 1st Canadian Infantry Division.

Operations, 1953-54. - In Korea, the 3rd Battalion, the Royal Canadian Regiment, was engaged on the night of May 2-3, 1953, in sharp combat with enemy units attempting to overrun its position. Following the truce agreement in July 1953, the 25th Canadian Infantry Brigade remained in Korea as part of the 1st Commonwealth Division participating in guard duties and training. The second rotation program had been largely completed before the truce was signed. On Apr. 21, 1953, Brig. J. V. Allard succeeded Brig. M. P. Bogert as commander of the Brigade.

In connection with Canada's military obligations under the North Atlantic Treaty, the 27th Canadian Infantry Brigade Group continued to serve in Germany until November 1953, when it was replaced by the 1st Canadian Infantry Brigade Group. The 1st Brigade moved into four new camps recently constructed in the Soest area of Western Germany. Canadian troops continued to participate in training Exercises with other NATO forces.

As an important part of the defence of Canada the Mobile Striking Force, consisting of infantry and supporting units and an RCAF component, continued preparations to deal effectively with possible small airborne invasions by an aggressor. The battalions forming the infantry element, the 1st Battalions of the Royal Canadian Regiment, the Princess Patricia's Canadian Light Infantry and the Royal 22nd Regiment, have all had valuable battle experience in Korea. Two major exercises were carried out by units of the Mobile Striking Force during the summer and winter. During January and February Exercise "Hot Dog II", in the western sub-Arctic, provided experience in Arctic winter movement and tactics for troops on a battalion scale. In February, Exercise "Loup Garou", conducted in the eastern sub-Arctic, exercised troops on a battalion group scale and included training in airborne skills and close Army-RCAF co-operation. Before this exercise, the army troops participating underwent a period of northern indoctrination training and a preparatory Exercise called "Prairie Beaver I" in the Fort Churchill area.

Training.-Actual training of regular and militia personnel is under the General Officers Commanding Commands as directed by the appropriate branch of Army Headquarters.

The corps training of officers and men and the basic training of 10,129 recruits was carried out at units and at various corps schools during the 1953-54 fiscal year. New training standards for individual training from recruit to junior NCO rank
were instituted during this period. During the year, 9,604 personnel attended courses at various schools of instruction. Initial instruction in current affairs, consisting of 12 lectures, was given to recruits during their depot and recruit training. This instruction is continued for officers and men of the Canadian Army (Regular) on the basis of one lecture each week. Examinations were held to select regular officers to attend the Canadian Army Staff College and the Royal Military College of Science and to qualify militia officers for command and staff appointments. Airborne Arctic training continued for all Mobile Striking Force units. Junior NCO courses were conducted under command and formation arrangements and senior NCO courses were conducted at corps schools. French-language instruction was given at Army Headquarters, in all commands and at the Canadian Army Training School for English-speaking officers and NCO's. Fifteen members of the armed forces of other North Atlantic Treaty countries attended courses conducted at Canadian Army schools of instruction.

Trades and specialist training was given at corps schools or units. When feasible, the facilities of civilian schools are used to supplement training at Army establishments. Trades training is conducted in accordance with the training standards for the appropriate trades. During the past year, several new trades and specialties were authorized and individual units are now training more tradesmen and specialists, thereby lightening the training load at corps schools while increasing the total training capacity. To recognize skills and proficiency required in the fighting arms, new specialties have been recommended so that a soldier in the fighting arms will have the opportunity of progressing to higher group pay.

In order to develop and maintain a high standard of physical fitness in the Canadian Army (Regular) a Physical Training Cadre was authorized and the development of the Cadre is to be carried out by stages over the next few years.

The Apprentice Training program, instituted in January 1953, and designed to train soldier apprentices as tradesmen and to provide basic military and academic qualification for advancement during their service, continued throughout the period under review. During 1953, a total of 470 apprentices were enrolled. To provide academic instruction for soldier apprentices, 24 civilian teachers were employed under arrangements with the Department of Labour. Examinations provided by the Department of Veterans Affairs will enable the students to obtain educational credits recognized in all provinces. Apprentices are being trained as clerks, carpenters, electricians, wireless operators, bandsmen, line mechanics, radio mechanics, cooks, medical assistants, storemen, telecommunication mechanics, gun mechanics, vehicle mechanics and armourers. Apprentices' sleeping and ablution accommodation is separate from that used by other troops.

Equipment.-The Canadian Army equipment development program continues to concentrate on those fields particularly suited to Canadian capabilities and in which there are special Canadian needs.

Particular attention has been given to the problem of living and operating in the north under the most severe and adverse conditions. The development and evaluation of defence equipment for atomic, biological and chemical warfare continued in close co-operation with the RCN, RCAF and Defence Scientific Service. The standardization program in the United States, United Kingdom, Canada and within NATO continues to promote an exchange of knowledge to the mutual advantage of the armies concerned. Additional agreements were reached affecting
procedures and equipment. Agreement between Belgium, Canada, France, the United Kingdom and the United States to adopt the $7.62-\mathrm{mm}$ ( $\cdot 30$-inch) calibre small arms round was reached in the late autumn of 1953. Subsequently, the Canadian Army sponsored a meeting at Ottawa to settle the technical details involved in producing this ammunition in various countries.

The Reserves.-An additional component of the reserves, known as the Canadian Army Regular Reserve, was authorized in December 1953. The purpose of the regular reserve is to provide a means for rapidly expanding the regular army in an emergency. The regular reserve is open to soldiers with good records who have recently served with the regular army. They are required to train, normally with their former units, for not more than 21 days each year and are subject to recall to full-time service in the event of an emergency.

During 1953-54, training in the reserves was conducted at unit headquarters and summer camps with the emphasis placed on producing within each unit a nucleus of instructional and administrative personnel capable of training and organizing the unit in peace and conducting its expansion in the event of mobilization. A training period not exceeding 60 days was authorized for all ranks of the Canadian Army (Militia) with an additional 15 days training at annual camps. Training at summer camps was given a total of 3,754 officers and 10,814 other ranks.

The Canadian Officers' Training Corps (COTC).-Units of the Canadian Officers' Training Corps are maintained at Canadian universities to produce, from among university undergraduates, officers for both the regular and reserve components of the Army. During the past year, 22 officers who had trained with the COTC were granted commissions in the Canadian Army (Regular). Training consists of military studies, drill and physical training during the academic year; the summer term is devoted to practical training at military establishments.

Army Cadet Services.-The number of Royal Canadian Army Cadets was increased during $1953-54$ to 64,200 , enrolled in 527 corps. Their training was conducted by 2,200 cadet instructors assisted by personnel from the Canadian Army (Regular). During the summer of 1953, a total of 4,557 cadets received trade training at six cadet camps situated at Aldershot, N.S., Valcartier, Que., Ipperwash, Ont., Camp Borden, Ont., Dundurn, Sask., and Vernon, B.C. Cadets qualified in such military trades as driver mechanics, radio-telephone operators, wireless and line operators and basic training instructors. The National Cadet Camp was held during the last two weeks of July and the first week of August 1953, at Banff, Alta. This camp was attended by 156 carefully chosen first class and master cadets. The opportunity to attend this camp was an award for outstanding proficiency in cadet work. During the summer of 1953, courses were held at the summer camps for officers of the Cadet Services of Canada and personnel of the civilian instructional cadre of the Royal Canadian Army Cadets.

## Subsection 3.-The Royal Canadian Air Force

Organization.-Air Force Headquarters at Ottawa conducts the planning and policy for administration and training of the active and reserve forces of the Royal Canadian Air Force. The organization of the RCAF is divided into three categories-personnel, logistics, and plans and operations. This functional division is reflected in the Air Force Headquarters organization.

During the fiscal year ended Mar. 31, 1954, the RCAF completed its share of Canada's contribution to the integrated forces of Supreme Headquarters Allied Powers Europe (SHAPE) with the arrival overseas in August 1953 of No. 4 Wing of the 1st Air Division with permanent headquarters at Metz, France.

The major formations of the RCAF remained unchanged, with location of headquarters, as follows:-

Formation
Headquarters
St. Hubert, Que.
Air Defence Command Vancouver, B.C.
12 Air Defence Group. Metz, France
Air Transport Command Lachine, Que.
Air Materiel Command. Ottawa, Ont.
Maritime Air Command Halifax, N.S.
1 Tactical Air Command. Edmonton, Alta.
Training Command Trenton, Ont.
14 Training Group. Winnipeg, Man.

Canada's home defences were augmented during $1953-54$ by the creation of all-weather jet interceptor squadrons equipped with CF-100's, the opening of new bases, the expansion of the Ground Observer Corps and the near completion of the Pinetree radar chain. In June 1954, as a result of the decreased requirement for air transport support to and from Korea, the RCAF airlift was terminated.

At the end of June 1953, the strength of the RCAF regular force was 8,349 officers and $38,507 \mathrm{men}$; the strength of the auxiliary was 1,805 officers and 3,425 men.

Operations, 1953-54-Air Defence.-Air Defence Command continued its planned build-up. The permanent radar system neared completion. Regular force and auxiliary radar units, along with regular fighter, auxiliary fighter and Ground Observer Corps units, participated in the second joint United StatesCanada air defence exercise held during July 1953, to test the continental defence system. Improvements were made at all major airfields, and additional navigation aids were installed and all-weather instrument procedures developed for air defence operations.

NATO.-The 1st Air Division reached its maximum strength with the arrival in Europe of the 3rd and 4th Fighter Wings thus fulfilling Canada's commitment to the NATO integrated fighter force. No. 3 Wing, consisting of three squadrons, arrived in Zweibrucken, Germany, in April 1953, while No. 4 Wing, with three squadrons, followed in August and was based at Baden-Soellingen, Germany. Replacement of Sabre II aircraft with the more powerful Orenda-powered Sabre V was commenced.

Maritime Operations.-The Joint Maritime Warfare School at HMCS Stadacona, Halifax, N.S. continued to train crews in basic and advanced anti-submarine tactics. Maritime Air Command aircrews took part in joint exercises with the RCN on both coasts and participated in a number of NATO exercises in Atlantic and European exercises.

Air Transport Operations.-The squadrons of Air Transport Command continued to provide air support to the Air Division in Europe and, until June 1954, to the Far East; long-range air support operations were performed by North Star aircraft. The Fairchild C-119 aircraft of the Command were used as cargo and personnel carriers in Canads, as well as for paratroop training. Both types of aircraft were used for supply operations to Arctic weather stations.

Other.-RCAF photographic squadron, No. 408 Squadron, completed camera coverage of additional areas under the air photography and survey program. Large portions of territory north of the Arctic circle were photographed and their geographical locations determined and the height of ground contours calculated.

Two new weather forecast stations were opened by the RCAF, one in Moose Jaw, Sask., and the other in Baden-Soellingen, Germany, bringing to 27 the number of forecast offices that provide meteorological services in Canada and overseas.

Training and Equipment.-During the fiscal year ended Mar. 31, 1954, the RCAF graduated a total of $1,590 \mathrm{RCAF}$ and NATO pilots, navigators and radio officers. In the summer of 1953, 185 pilots, 74 navigators and 5 radio officers from the Canadian Services Colleges and universities underwent aircrew training. Basic trades training courses for non-flying list officers produced 116 graduates. Basic trade schools graduated 6,219 regular force airmen during the period under review.

Officers and flight cadets entering the Service received officer development training at the Officers School, London, Ont. Airmen received initial service training at No. 2 Manning Depot, St. Johns, Que. Basic flying training was conducted at four flying training schools, two of which are located at Centralia, Ont., and Claresholm, Alta.; during the summer of 1953 the flying training schools at Gimli, Man., and Calgary, Alta., were moved to Moose Jaw, Sask., and Penhold, Alta., respectively. Advanced flying training on twin-engine aircraft was given at Saskatoon, Sask. Advanced flying training on single-engine aircraft was given at Portage la Prairie, Man., until the autumn of 1953, when the station began to give advanced flying training on jet aircraft. Another advanced flying school for jet aircraft was opened at Gimli during the past year. The Pilot Weapons School at MacDonald, Man., continued to operate and training on jet aircraft was begun in February 1954. Flying instructor courses were given at the Flying Instructors School at Trenton, Ont.; instrument rating courses were conducted at Centralia and North Bay, Ont., and at Saskatoon, Sask., and pilot attack instructor courses were given at MacDonald, Man. Basic navigation training was conducted at Winnipeg, Man., and at Summerside, P.E.I. Central Navigation School continued to operate at Summerside and conducted instructor and advanced courses. Potential radio officers were trained at the Air Radio Officers School at Clinton, Ont., where advanced courses were also conducted for staff radio officers and instructors.

Formal trade courses for newly commissioned non-flying list officers were conducted at RCAF schools in aeronautical engineering, armament supply, telecommunications and security. Basic courses for unit defence officers were conducted at Camp Borden, Ont. Courses were provided to qualify officers in flying control.

The Department of Labour continued to assist in the basic trades training program. Over 50 civilian instructors were provided by the Department of Labour to assist with Janguage and technical training at RCAF Training Command Schools, as well as a lesser number for instructional duties in the RCAF auxiliary. CF-100, Sabre, Silver Star, and C-119 mobile ground training units were used with great success during the year. Trade advancement training program continued at all units, both regular and auxiliary. To help tradesmen advance more rapidly into the qualified trade group levels, quarterly written trade test boards were continued. Language training programs were conducted where necessary.

Equipment.-Aircraft procurement programs have progressed satisfactorily during the fiscal year ended Mar. 31, 1954. A. V. Roe (Canada) Limited completed delivery of the Canuck CF-100 Mark 3 aircraft and delivery has started of the Mark 4 version. Canadair Limited of Cartierville, near Montreal, Que., made deliveries of the Sabre V (F-86) aircraft with the Orenda 10 engine, according to schedule and continued production according to schedule of the Silver Star (T-33) Jet Trainer. The two DeHavilland Comet jet aircraft delivered to the RCAF are undergoing modification, as recommended by the manufacturer. Arrangements were made to obtain a number of Lockheed Neptune (P-2V7) maritime reconnaissance medium-range aircraft, and steps were also taken to produce, in Canada, the Britannia maritime reconnaissance long-range aircraft to be used by Maritime Reconnaissance Squadrons in lieu of Lancasters. Otter aircraft, produced by DeHavilland in Canada, continued to replace the Norseman for use in search and rescue and for transporting personnel and supplies to destinations not easily accessible to larger transport aircraft. Arrangements were made to procure a small number of T-34 Mentor aircraft for use as elementary pilot trainers.

The program to replace worn out wartime equipment continued during the year and 1,348 new vehicles were procured. Two permanent garages were completed at Trenton and North Bay, Ont., and modifications to other garages improved accommodation. Special types of clothing and equipment, such as flying suits, anti-gravity suits and emergency kits, were procured from Canadian, United States and United Kingdom sources to meet the rapidly changing requirements of aircrews flying high-speed, high-altitude aircraft.

RGAF Reserve.-The sub-components of the RCAF reserves are designated as follows: (1) the Auxiliary; (2) the Primary Reserve; and (3) the Supplementary Reserve.

During the fiscal year ended Mar. 31, 1954, officer development courses were conducted at the Reserve Officers School, Royal Military College, Kingston, Ont., for university flight cadets of the primary reserve participating in their first summer training program. Pilot trainees of the Auxiliary, members of reserve university squadrons and Services Colleges flight cadets received flying training during the year. Potential radio officers from the reserve Air Force, reserve university squadrons and Canadian Services Colleges flight cadets were trained at the Air Radio Officers School at Clinton, Ont.

At the Reserve Officers School at Kingston, initial training for the non-flying list primary reserve flight cadets of Canadian Services Colleges and universities, who were participating in their first summer program, was followed by basic courses in aeronautical engineering, supply, telecommunications, armament and flying control as applicable. Second year cadets were commissioned after successfully completing the final phases of their basic courses. Language and technical training at RCAF Training Command Schools was also given for instruction duties in the RCAF Auxiliary. The reserve tradesman basic training plan, instituted in 1952, was continued and approximately 1,400 recruits, both high school students and air cadets, completed training during 1953-54.

Reserve tradesmen are entitled to take regular force training courses but few are able to do so because of their civilian occupations.

Royal Canadian Air Cadets.-The Royal Canadian Air Cadets are closely associated with the RCAF. Under the sponsorship of the Air Cadet League of Canada, the air cadet movement continued to expand. At the end of the fiscal
year Mar. 31, 1954, air cadet strength stood at over 18,000 in 260 squadrons. During the summer of 1953, camps for air cadets were held at RCAF Stations at Greenwood, N.S., Aylmer, Ont., and Abbotsford, B.C. Total attendance at the camps was 3,907 cadets and 448 officers and instructors. The first Air Cadet Senior Leaders Course conducted by the RCAF was held at Camp Borden during July and August. One hundred carefully selected cadets attended the seven-week course and received $\$ 100$ training bonuses upon graduation. A precision drill team of 40 cadets selected from the Senior Leaders course to represent Canada in the International Drill competition, held at the Canadian National Exhibition at Toronto, won the competition and the Beau International Challenge Trophy for Canada for the fourth time.

The international exchange visits program, sponsored jointly by the RCAF and the Air Cadet League, was again very successful in 1953. Twenty-five cadets were exchanged with the United Kingdom, 25 with the United States, and two each with Denmark, The Netherlands, Norway and Sweden.

Of the 250 senior air cadets who received flying training scholarships awarded by the RCAF, 235 completed the course and were awarded private pilot's licenses and air cadet flying badges. Under the Reserve Tradesmen Training Plan, 387 air cadets received trades training in the nine-week summer courses in addition to their preparatory training at their respective squadrons, during the school year. During 1953, in addition to those who joined the reserve force, 711 air cadets enlisted in the regular force.

## Subsection 4.-The Defence Research Board

The Defence Research Board was established on Apr. 1, 1947, by an amendment to the National Defence Act.

The Board consists of a full-time chairman and vice-chairman, six ex-officio members and seven other appointed members. The ex-officio members are the Chiefs of Staff of the three Armed Services, the Deputy Minister of National Defence, the President of the National Research Council, and a representative of the Department of Defence Production. The remaining members, appointed by the Governor in Council for three-year terms, are selected from universities and industry because of their scientific and technical backgrounds.

The organization consists of Headquarters staff, twelve field research stations and liaison officers at London, England, and Washington, U.S.A., and is known collectively as the Defence Scientific Service. Advisory committees composed of leading Canadian scientists provide invaluable assistance to the Defence Scientific Service by their consideration of a variety of problems.

In planning this organization, the Government considered the vital need for continuity in research and planned the Defence Research Board as a fully integrated and permanent part of the defences of the country. To assist co-ordination at the highest level, the Chairman of the Board has the status of a Chief of Staff and is a member of the Chiefs of Staff Committee and of the Defence Council. Thus, the Defence Research Board has been described as a fourth service. Its fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large.

The Board's policy is to select and concentrate its efforts upon defence problems of particular importance to Canada or for which Canada has unique resources or facilities. Existing research facilities such as the National Research Council, are used, wherever possible, to meet the needs of the Armed Forces. The Board has built up new facilities only in those fields which have little or no civilian interest.

From the policy of specialization it follows that close collaboration must be maintained with Canada's larger partners. Specialization is made possible only through the willingness of the United Kingdom and the United States to exchange the results of their broader programs for the less numerous but, nonetheless, valuable benefits of Canadian research.

During the past year, the Defence Research Board conducted research activities in naval, armament, telecommunications, arctic, medical, operational, materials, aeronautical and special weapons problems. Research on naval problems is carried out at the Naval Research Establishment, Dartmouth, N.S., and at the Pacific Naval Laboratory, Esquimalt, B.C. Both stations are engaged in the study of anti-submarine devices, since anti-submarine warfare will be the prime task of the RCN in time of war. Research and development of weapons for the Armed Services is carried out at the Canadian Armament Research and Development Establishment at Valcartier, Que. This is the largest establishment operated by the Board and has facilities for the study of all phases of armament development. The Board operates two laboratories whose prime interest is in the field of electronics. The Radio Physics Laboratory at Shirley's Bay, Ont., is interested mainly in fundamental research associated with radio communications, particularly in northern latitudes. The Electronics Laboratory, situated within the grounds of the National Research Council's Montreal Road Laboratories, is concerned primarily with the development of electronic devices as aids to navigation. The centre for research into arctic and sub-arctic conditions is the Defence Research Northern Laboratory at Fort Churchill, Man., which is mainly occupied with the application of the results of fundamental research into the effect of cold weather on men and materials.

Medical research is conducted in Canadian universities and medical schools, as practicable, and at the Defence Research Medical Laboratories at Downsview, Ont. (near Toronto). The major emphasis is in the field of aviation medicine, but investigations include such problems as blood substitutes, infection and immunity, burns and wounds, nutrition and other factors likely to hinder a military man's ability to perform his duties effectively. Operational research, which may be defined as the application of techniques of scientific research to problems which arise in the Armed Services in the execution of their operational roles, is conducted by the Operational Research Group consisting of a headquarters section and three research sections; in addition there are three operational research organizations in the Armed Forces, staffed largely by personnel from the Defence Scientific Service. The Board continued to support active programs of research into methods of estimating, recovering and fabricating such useful metals at titanium, etc. The titanium program is a series of integrated research projects conducted by the Mines Branch of the Department of Mines and Technical Surveys and the Universities of Toronto, Laval and Montreal, in co-operation with various industrial firms with long experience in this field. In addition to aeronautical research conducted by the National Aeronautical Establishment, the Defence Research Board supports an extensive program on aeronautical and gas dynamics problems at various Canadian universities. Special weapons research is conducted in the atomic, biological and chemical fields at the Defence Research Chemical Laboratories, Shirley's Bay, Ont., the Suffield Experimental Station, Ralston, Alta., the Defence Research Kingston Laboratories at Barriefield, Ont., and at a Department of Agriculture Isolation Station located on Grosse Ile, an island in the St. Lawrence, near Quebec City.

Pursuing its established policy, the Defence Scientific Service continues to make available to the scientific community at large all results of its work other than those of purely military importance.

Close liaison is maintained between the Defence Research Board and the Department of Defence Production to ensure that research and development activities are closely integrated with production.

## Section 2.-Services Colleges and Staff Training Colleges

Canadian Services Colleges.-The Royal Military College of Canada was founded in 1876 at Kingston, Ont. Royal Roads was established in 1941, near Victoria, B.C., as a school for naval officers. In September 1948, both colleges were constituted as the Canadian Services Colleges under the presidency of the Minister of National Defence to provide a joint educational and training program that would produce officers for the three Armed Services of Canada. To these has been added the Collège Royal Militaire de Saint-Jean, located at St-Jean, Que.; established principally to assist in the training of French-speaking candidates, it was formally opened by the Governor General in the autumn of 1952.

The course for technical officer candidates at the Colleges is of four years duration. Cadets of the Collège Royal Militaire take a preparatory year. The first two years of the course run concurrently at all three colleges. Cadets who have taken the first two years at Royal Roads or cadets who have taken the preparatory and first two years at the Collège Royal Militaire, if they are selected to take the full course, proceed to the Royal Military College for the last two years of the general or engineering courses.

Autumn, winter and summer terms make up the college year of 11 months, with the exception of the fourth year at RMC which has no summer term. From September to May, the autumn and winter terms, 85 p.c. of the instructional time is allotted to academic subjects and the remainder to military subjects including drill and physical training. The summer term, May to mid-August, is devoted to practical service training at Navy, Army or Air Force establishments.

Cadets enter the Canadian Services Colleges as regular force cadets under the terms of the Regular Officer Training Plan introduced during the summer of 1952; a few cadets who have won Dominion Cadetships may enter as reserve cadets. The Regular Officer Training Plan enrols each cadet in the branch of the Armed Services of his choice, and provides a university education, with pay, at one of the Services Colleges or at a Canadian university. On successful completion of his academic and military training, the cadet is granted a commission in the regular force.

Completion of Services College training qualifies a cadet for a commission in a non-technical branch of the three Services. A regular force cadet of a technical branch, upon completion of the four-year Services College course, may be sent to a specified university at public expense for training to science degree standard.

For admission to a Services College a candidate must be a Canadian citizen or other British subject, resident in Canada. A candidate for admission to the Royal Military College, Royal Roads or to the first senior year at Collège Royal Militaire de Saint-Jean must have reached his 16th but not his 21st birthday, on Jan. 1 of the year of entry. A candidate for admission to the preparatory year at College Royal Militaire de Saint-Jean must have reached his 16 th but not his 20th birthday on Jan. 1 of the year of entry. A specified standard of physical fitness
is required of all applicants. The academic requirements for admission to Royal Military College, Royal Roads, and the first senior year at Collège Royal Militaire are:

> University senior matriculation (or equivalent) in the following subjects: English, physics, mathematics (algebra, geometry and trigonometry), chemistry, and either history or a language (French for English-speaking candidates and English for French-speaking candidates).

The academic requirement for preparatory year at the Collège Royal Militaire is junior matriculation (or equivalent) including chemistry and a language (French for English-speaking candidates and English for French-speaking candidates).

Candidates are medically examined and take educational tests at one of the six regional centres. In addition, each candidate appears before a Board composed of a member of the directing staff of one of the Colleges and a representative of each of the three Services.

Of the cadets entered in the Canadian Services Colleges, one-half are selected on provincial quotas determined by population; the other half, in open competition. Academic standing and the recommendations of the Service Boards as to the physical and personal characteristics of the candidates are the bases for selection with the final selection being made by a board of senior officers appointed by the Minister of National Defence.

Fifteen Dominion Cadetships, valued at $\$ 580$ each, are offered by the Federal Government each year to the sons of certain ex-service or service personnel. These cadetships are available to cadets on the basis of five to each of the three Services, and cover the total cost of lodging, uniform clothing, tuition, etc., in the first year. In addition, a number of other scholarships and bursaries, sponsored by private associstions, are available to assist qualified cadets. Cadets attending the Colleges as members of the regular forces are not eligible for cadetships, scholarships and bursaries, as the cost of their education is fully met from public funds.

During the 1953-54 academic year, Royal Military College had 97 cadets in first year, 78 in second, 106 in third and 78 in fourth. Royal Roads had 82 cadets in first year, and 69 in second. The Collège Royal Militaire had 134 cadets in the preparatory year and 78 in first year.

Staff Training Colleges.-The Canadian Army and the Royal Canadian Air Force operate colleges to give staff and command training; the National Defence College provides facilities for advanced study of defence problems.

The National Defence College, Kingston, Ont., which was opened on Jan. 5, 1948, is a senior defence college providing an 11-month course of study designed to cover the economic, political and military aspects of the defence of Canada. Senior officers and civil servants from the Armed Forces and Government departments attend as well as one or two representatives from industry. An extensive lecture course is provided, with lecturers chosen from leaders in various fields in Canada, the United States, the United Kingdom and other countries. In addition, educational tours and visits to parts of Canada, the United States, Europe and the Middle East are made to give students more knowledge of conditions and influences in their own and other countries. The seventh course commenced Sept. 1, 1953, and was completed July 24, 1954, with a total of 27 students attending. Two were chosen from the RCN, four from the Army, four from the RCAF, and one from the Defence Scientific Service. The Department of External Affairs sent two students and the Departments of National Defence, Transport, Trade and Commerce,

Defence Production, and Resources and Development* sent one student each, as did the National Research Council, the Royal Canadian Mounted Police and the Canadian Broadcasting Corporation. The United Kingdom and the United States each sent three representatives.

The Canadian Army Staff College, Kingston, Ont., is a military staff College operating on a permanent basis to train officers for positions of staff and command. The course extends over 10 months. A joint instructional staff includes faculty members from the three Canadian Services, the United States and the British armies. The student body is comprised of members from the three Services and from five different nations. Aside from purely military subjects, the curriculum provides for study of current world affairs and lectures by prominent guest speakers in this field. Graduates are qualified for Grade II Staff appointments of Commands in the Service.

The Royal Canadian Air Force Staff College, Toronto, Ont., is a permanent Air Force staff college providing a training program designed to give officers of Squadron Leader to Group Captain rank the necessary background and knowledge to fit them for staff and command positions. The Directing Staff includes officers from the Royal Canadian Air Force, the Canadian Army, and the Royal Air Force, while the student body consists of officers from the Royal Canadian Navy, the Canadian Army, the Royal Canadian Air Force, the Royal Air Force, and the United States Air Force. Besides the normal organizational and administrative subjects, the curriculum includes an advanced study of the three aspects of air power; air strategy and its relation to ground and sea forces; current world affairs and their effect on the Canadian strategic position. Subjects are presented and discussed under the guidance of the Directing Staff or guest speakers, many of whom are prominent in Canadian and United States diplomatic, military, university and industrial life.

## PART II.-DEFENCE PRODUCTION $\dagger$

Department of Defence Production.-This Department was established on Apr. 1, 1951, to carry out the procurement functions of Canada's expanded defence program following the outbreak of hostilities in Korea. The Department took over the responsibilities for the procurement of most goods and services required by the Canadian Armed Forces, and, by arrangement, acted as agent in connection with the purchases required by the Canadian civil defence program and the buying required by the Canadian Commercial Corporation, a Crown company primarily responsible for the purchase of goods in Canada for foreign governments. Under the Defence Supply Act and the Essential Materials (Defence) Act, the Department also became responsible for the provision of an adequate supply of essential materials to support the defence procurement program.

The Department now has two major types of units relating directly to defence procurement. The first represents six production Branches which deal with

[^420]commodities requiring special facilities for their production. These include aircraft, electronics, ships, ammunition, machine tools, and guns. The second is the General Purchasing Branch which procures commodities either of a standard commercial type or having specifications not greatly different from commercial ones. Examples of these items are clothing, food, fuels and barrack stores. One of the original activities-that relating to the provision of essential materials-is no longer handled by this Department, having been transferred to the Department of Trade and Commerce at the end of 1953. Defence Construction (1951) Limited, a Crown company associated with this Department, is responsible for defence construction activities.

Orders and Expenditures.-In the first three years of the current defence program, the Canadian Government has placed about $\$ 3,882,000,000$ worth of defence orders. Against these, and some orders outstanding when the Department was established on Apr. 1, 1951, a total of $\$ 3,262,000,000$ has been spent. Table 1 shows that the peak of defence orders occurred in the first year of the threeyear program when about $\$ 1,625,000,000$ worth of orders were placed. The value of orders fell off to $\$ 1,263,000,000$ during the following year, and declined further to $\$ 994,000,000$ in the fiscal year 1953-54. The rate of expenditure, shown in Table 2, reached a peak level of $\$ 1,235,000,000$ in the fiscal year 1952-53 from $\$ 904,000,000$ during 1951-52. Canadian Government defence expenditure totalled $\$ 1,123,000,000$ in 1953-54.

## 1.-Canadian Government Defence Orders, by Program, Years Ended Mar. 31, 1952-54

Note.-Figures exclude stockpiling and capital assistance.

| Program | 1951-52 | 1952-53 | 1953-54 |
| :---: | :---: | :---: | :---: |
|  | \$'000 | \$'000 | \$'000 |
| Aircraft. | 579,289 | 633,224 | 384,756 |
| Shipbuilding. | 114,898 | 59,565 | 95,194 |
| Tank-automotive. | 65,110 | 102,364 | 53,043 |
| Weapons. | 93,517 | 23,711 | 13,100 |
| Ammunition and explosives. | 104,483 | 75,846 | 69.011 |
| Electronics and communication equipment | 98,954 | 96,419 | 119,068 |
| Fuels and lubricants. | 34,701 | 43,561 | 48,469 |
| Clothing and equipage. | 149,499 | 31,783 | 19,081 |
| Building supplies and equipment. | 29,289 | 3,853 | 3,688 |
| Construction. | 187.011 | 153,919 | 77,548 |
| Other programs. | 99,781 | 83,988 | 59,540 |
| District office orders. | 68,294 | 55,109 | 51,550 |
| Totals. | 1,624,826 | 1,263,342 | 994,048 |

About 39 p.c. of Canadian defence orders, were placed in connection with the aircraft program. The other important programs in terms of the value of orders placed were: defence construction, electronics and communication equipment, shipbuilding, and ammunition and explosives. The aircraft program continues to involve the largest proportion of orders and expenditures because of the importance of air protection in the defence of Canada.

## 2.-Canadian Government Defence Expenditures, by Program, Years Ended Mar. 31, 1952-54

Note.-Figures exclude stockpiling and capital assistance.

| Program | 1951-52 | 1952-53 | 1953-54 |
| :---: | :---: | :---: | :---: |
|  | \$'000 | \$'000 | \$'000 |
| Aircraft. | 244,462 | 361,984 | 454,477 |
| Shipbuilding. | 60,917 | 100,555 | 106,345 |
| Tank-automotive. | 40,201 | 97,717 | 48,846 |
| Weapons.. | 28,726 | 25,543 | 26,182 |
| Ammunition and explosives. | 26,157 | 33,352 | 44,323 |
| Electronics and communication equipment | 49,927 | 89,704 | 96,495 |
| Fuels and lubricants. | 28,050 | 37,058 | 43,965 |
| Clothing and equipage. . | 78,835 | 88,723 | 32,634 |
| Building supplies and equipment. | 20,674 | 12,411 | 11,811 |
| Construction. | 133,897 | 209,652 | 130,700 |
| Other programs. | 192,350 | 178,407 | 126,882 |
| Totals. | 904,196 | 1,235,106 | 1,122,660 |

Table 3 shows Canadian Government defence orders according to the countries in which they have been placed. During the three-year period Apr. 1, 1951, to Mar. 31, 1954, 12 p.c. were placed in the United States and 3.5 p.c. in the United Kingdom. The largest value of orders placed in the United States occurred during the first year of the defence program, and the largest value placed in the United Kingdom occurred during the fiscal year 1952-53. Almost two-thirds of the orders placed in the United States have been for complete aircraft or equipment for installation in aircraft. The complete aircraft have included Fairchild C-119 transports, Expediters, Mitchells, Avengers, Neptunes, Banshees, and some types of helicopter. Aircraft equipment has included J-47 jet engines for earlier versions of the F-86 Sabre, and electronic gear, armament and other equipment for the Sabre, the CF-100, and the T-33 aircraft. Various other electronic equipment accounted for a further one-fifth of the defence orders placed in the United States, the more important items being *the M-33 anti-aircraft fire control systems, sonobuoy receivers, sonar equipment, and early-warning airborne radar sets. The remaining orders placed in the United States were accounted for mainly by weapons, ammunition, machine tools, and tank-automotive programs. Those placed in the United Kingdom were for Centurion tanks, Nene jet engines, and the aircraft carrier Bonaventure.

## 3.-Distribution of Canadian Government Defence Orders, by Countries in which Placed, Years Ended Mar. 31, 1952-54

Besides buying such defence equipment in other countries, Canada at the same time has exported large quantities of defence items. Such aircraft as the F-86 Sabre jet fighter, the Harvard and the T-34 trainers, the Beaver, and the Otter have been exported to the United States. The 3-inch 50-calibre mounts and guns, the $120-\mathrm{mm}$. gun and the Bren machine-gun have also been produced in Canada for the United States. Other items ordered by the United States Government have included shells and cartridge cases for the most modern U.S.-type ammunition, explosives and propellant powders, and mobile communication equipment. Canada has also produced many items such as Sabre jet-fighters, aircraft-engines, guns, ammunition and electronic equipment for the North Atlantic Treaty Organization, under the Canadian Mutual Aid program.

Aircraft Program.-The production of jet-fighter aircraft continued to be the major factor in the aircraft program during the year 1954. Production efficiency has resulted in an increased rate of output, at decreased costs, of the Canadian designed and developed all-weather jet interceptor fighter, the CF-100. The development of a more powerful armament system has continued with considerable success and with the addition of this increased firepower the CF-100 will be one of the most heavily armed fighters in existence. Production of the F-86 Sabre V jet fighter fitted with the Orenda engine continued on schedule for delivery to the

RCAF in Canada and abroad. An improved version of the F-86, the Sabre VI, came into production and initial deliveries were made late in 1954. The development of an advanced series of Orenda engines for these two Sabre fighter aircraft was completed and went into production following acceptance by the RCAF. Production of the T-33 jet trainer, powered with the Rolls-Royce Nene engine, has continued on schedule. The initial requirements of the RCAF for this aircraft have been met but production is continuing at a reduced rate and the Nene engines, manufactured in the United Kingdom, have been delivered on schedule. Deliveries of this aircraft have been made both to the RCAF and to the United States Air Force. Facilities for the production of the Nene engine have been set up in Canada, the first Canadian-built engine passed its type test and all Nene engines subsequently produced in this country have been accepted by the RCAF. A considerable number of L20A Beaver aircraft have been delivered to the RCAF and the United States Air Force.

During the year 1954, the Harvard production line was shut down following completion of the Harvard trainer program but some of the production capacity thus made available was taken up by the production of the T-34 single engine primary trainer. During 1954 also, engineering and tooling necessary to convert the Bristol-Britannia civilian transport to a maritime reconnaisance aircraft for the RCAF got well under way, as well as tooling for the Grumman S2F carrierborne anti-submarine aircraft. A number of helicopters have been purchased to meet the increased demands of the Armed Services for this type of aircraft.

Canadian facilities for the manufacture of artificial horizons, altimeters, machmeters, airspeed indicators, accelerometers, rate-of-climb indicators, pressure transmitters and indicators, and compasses have been established and are well maintained. The quality of the items manufactured by these Canadian facilities is of a very high standard and all items have fulfilled the exacting requirements of RCAF quality control. One particular design of detachable end fittings for aircraft flexible hose has been standardized and two Canadian companies have met the stringent qualification tests. Canada is now self-supporting in this field. Aircraft tires, which are subject to severe wear because of high-speed landings, are to be produced in Canada, with the exception of some extremely high-speed tires for jet aircraft. In the near future, all such tires may be handled in Canada, utilizing the very latest processes.

The major reconditioning programs, started in 1951-52, have been completed and there has been a general decrease in repair work. This reduction has not yet had any great effect on the repair contractors as the establishment of repair facilities across Canada was planned with a view to creating an industry which could operate economically under normal conditions and yet be capable of quick expansion to meet emergency requirements. A facility for the overhaul of Orenda jet engines has been established in the United Kingdom to handle the requirements of the RCAF Divisions in Europe.

Electronics and Shipbuilding.-The development and production of electronic and ancillary electrical equipment is an important part of the Canadian defence procurement program. During the 1954 period, electronic requirements included a vast range of items from large radio and radar equipments to small complex units and components. The major portion of the electronic equipment required for Canadian defence is now being produced in Canada. These items include fixed airborne and shipboard radar, gunfire control, gunsights, identification
radar, flight simulators, radio navigational aids, radio compasses, radio communication sets, training aids, anti-submarine detection equipment, etc. An increasing amount of the components of electronic end items are also being produced in Canada. An important feature of the electronics program has been the creation of the continental radar defence system in collaboration with the United States. Most of the radar and communication equipment for this project has been manufactured in Canada.

In the shipbuilding program, deliveries continued to be made during the past year of the distinctly Canadian-designed non-magnetic coastal minesweepers and converted World War II frigates. The coastal minesweepers are designed to cope with the latest known developments in enemy mines. The original non-magnetic coastal minesweeper (AMC) program, consisting of 14 new ships, was completed during 1954. Six of these minesweepers were assigned to NATO countries. The converted frigates are completely new except for propulsion and auxiliary machinery and the bare hull up to deck level. These ships are fitted with modern anti-submarine armament. Work has also been progressing on the construction of antisubmarine destroyer escorts. The Arctic patrol vessel, the Labrador, which is the first specifically designed Canadian ship for Arctic duty, was accepted by the Navy in 1954 and successfully completed its first mission through the Arctic. Many types of auxiliary craft, such as 150 -foot seagoing tugs, looplayers, steel crane lighters, inner patrol vessels, 75-foot harbour craft, RCMP vessels, clearance diving vessels, and ammunition lighters are being constructed as part of the shipbuilding program. In addition, many small miscellaneous craft, such as whalers, 27 -foot seaboats, steel crashboats, dinghies, etc., are being produced. The aircraft carrier, Bonaventure, which is to replace the Magnificent on loan from the Royal Navy, is being built in the United Kingdom. Delivery of this light fleet-carrier is expected in 1956.

Weapons and Ammunition.-Progress in the production of weapons has been highlighted by the completion of deliveries during 1954 on four major projects. The $0 \cdot 5$-inch Browning machine-gun for the RCAF, the $120-\mathrm{mm}$. gun for the United States Army, and the 3-inch 50-calibre twin mounts for the Canadian and United States Navies were made in Canada but the $155-\mathrm{mm}$. gun was purchased in the United States because of the limited numbers involved.

Scheduled deliveries were met in the case of five other weapons, viz., a small arms item for the United States Army, an anti-submarine mortar for the Royal Canadian Navy, two calibres of mortars for the Canadian Army, and a trial order of light automatic rifles from Belgium. Early in 1954, an agreement was reached among the principal Western nations to adopt a standard cartridge for small arms. This new ammunition is of slightly smaller calibre than that being used by the Canadian and United Kingdom Forces, and a set of manufacturing drawings for a new rifle is being produced.

Production on a wide variety of complete rounds of artillery, mortar, smallarms, pyrotechnic and underwater ammunition has been an important part of the ammunition program. Production in volume of some items was reached for the first time during the past year. Complete round production in 1954 has included nine basic types of small calibre cartridges, nine general types of artillery and mortar ammunition, three types of rockets, and various types of underwater and pyrotechnic stores. Production has also commenced of small air-to-air rockets. As the program for more versatile explosives manufacture develops in Canada, the need
for foreign purchases of complete rounds of explosives inserts is expected to diminish. A nitroglycerin plant was completed in 1954, and work proceeded toward the manufacture of solventless cordite and double base cast or extruded rocket propellants. Shells and cartridges were produced for the United States Government and new orders received for picrite and hexachlorathene. In addition to metal ammunition components, NATO countries were supplied with flashless cordite, rifle powder, Composition " B ", and picrite.

General Purchasing.-The general purchasing program involves the procurement of a wide range of items required for clothing, equipping, feeding, maintaining and servicing the Canadian Armed Forces. This has involved the procurement of many types of defence supplies and services, including textiles and all types of clothing, footwear and leather goods, military pattern, standard commercial and special commercial vehicles, together with parts, replacements, and the reconditioning of service vehicles, food and catering services, furniture and furnishings, petroleum products and hard fuels, medical and dental supplies, research and development projects, building supplies, and all types of barrack stores and other related items.

Special requirements purchased for other governments, Canadian and international agencies, include wheat and flour for the United Kingdom, West Germany and Ceylon, and mechanical transport equipment for the United States. Purchases were also made for stores and products in connection with the contribution of Canada, under the Colombo Plan, to the governments of India, Pakistan, and Ceylon. These have included the purchase of steam and diesel locomotives, agricultural equipment, electric generators, and supplies for a hydro-electric project to serve a large area of Ceylon.

The District Purchasing Offices of the General Purchasing Branch are responsible for the purchase of food and other defence supplies and services of a local or urgent nature, which are required by the Department of National Defence establishments located in the vicinity of the District Office. The principal purchases include food, hardware, electrical and building supplies, electrical and electronic equipment, and barrack stores. Service contracts are arranged for repairs to buildings and to ships, laundry and dry cleaning, repairs to footwear and clothing, coal hauling, disposal of ashes and refuse, snow removal, transportation, and other related requirements.

New Production Facilities.-Technological developments in military equipment which have taken place since World War II, and the desirability of making a greater variety of component parts in Canada have necessitated the establishment of new production facilities in this country. By building new plants or, more frequently, by the installation of new machinery and equipment, Canada has been able to maintain a higher rate of defence production with less dependence on outside sources of supply. Private industry was encouraged to set up these defence production facilities by being granted additional capital cost allowances (commonly known as "accelerated depreciation") for income tax purposes. Many of the applications for these allowances have been for the expansion of facilities to produce basic materials required for the defence program. More recently, however, there have been an increasing number of applications in connection with facilities for direct defence production.

Where it has not been practical for private industry to invest in the new facilities necessary for defence production, capital assistance for machinery and equipment or, in a few instances, for buildifgs has been provided by the Government. During the three-year period Apr. 1, 1951-Mar. 31, 1954, about $\$ 167,000,000$ was spent in capital assistance, almost one-half of which was spent in the fiscal year 1952-53 but most of the projects requiring capital assistance have now been completed. The greater portion of capital assistance has been in the aircraft field, where opportunities are limited for commercial production. Crown-owned machine tools and equipment have also produced such items in Canada as complete sets of propulsion machinery for escort vessels, proximity fuses, gauges, and other specialized types of equipment. Wherever practical, private industry has been encouraged to take over ownership of these facilities by purchasing them from the Crown. To maintain Canada's industrial mobilization base, contracts covering the sale of Crown-owned defence properties contain a proviso that the facilities will be available to produce defence items when required for a minimum period of ten years.

## PART III.-GIVIL DEFENCE

The accelerating threat of aggression that began shortly after the completion of demobilization following World War II made necessary the reorganization of military strength. It also made apparent the need for the development of a plan of civil defence as part of Canada's program of defence against direct attack. Thus, in October 1948, the Minister of National Defence appointed a Co-ordinator of Civil Defence whose task it was to prepare such a plan. To assist in the co-ordination of the planning, an interdepartmental committee-the Federal Civil Defence Planning Committee-was established, as well as a Federal-Provincial Advisory Committee composed of the Federal Minister responsible for civil defence as Chairman and each Provincial Minister responsible for civil defence as members. In February 1951, the administration of civil defence was transferred from the Department of National Defence to the Department of National Health and Welfare.

The Canadian plan was developed after study of similar organizations in the United Kingdom, Western Europe and the United States. It was agreed that civil defence organization should be incorporated within the framework of civil government at each level-federal, provincial and local-each with its own sphere of responsibility. In general, each province is self contained and is divided into a number of areas, with the fundamental idea of mutual support to any disaster region; some areas are organized on a basis of mobile support and reception only. The channel of communication is from the federal authority to provincial authority and thence to local authority.

The Federal Office of Civil Defence consists of the Civil Defence Co-ordinator and the following services: operations and training; administration and supply; health planning; welfare planning; communications and transportation. A number of other federal departments are involved in planning, such as the Royal Canadian Mounted Police, the Department of Agriculture, Department of Transport and the Defence Research Board.

In co-operation with the Royal Canadian Air Force, an early warning system has been established in the more vulnerable areas where sirens have been provided by the Federal Government. In co-operation with the Departments of National Defence and Veterans Affairs, a program of stockpiling medical supplies and equipment is in progress across Canada.

A Federal Civil Defence Training School was started in January 1951, at which courses were given for organizers, general and rescue instructors, and radiological monitors. In March 1954, this school, renamed the Canadian Civil Defence College, was set up in permanent location at Arnprior, Ont., and courses have been continued and expanded into such fields as tactics, emergency feeding and accommodation, technical reconnaissance, and disaster studies. A number of specialist courses have been conducted across the country by the Health Planning Group.

Up to the end of July 1954, 4,929 persons had received training in one or other of these various fields. First Aid training for civil defence workers is undertaken by the St. John Ambulance Association, under an agreement between the Federal Government and the Association whereby the Government pays a per capita grant. Other agreements for co-operation are in force between the Federal Government and the Canadian Red Cross Society, the Canadian Legion and the Boy Scouts Association.

A Financial Assistance Program is in operation which provides each province with a quota of moneys based on population and vulnerability in which 50 p.c. of the cost is contributed by the Federal Government to approved projects shared between a municipality and a province. A minimum of 25 p.c. is contributed direct to a municipality for a similar project in which the provincial government does not share. Also, the Federal Government has offered to bear one-third of the cost of standardizing fire-hose couplings. To date, the Provinces of Ontario, Alberta and British Columbia have accepted the offer and are proceeding with a standardization program. Large quantities of training equipment including rescue and fire-fighting vehicles have been provided by the Federal Government to the provinces in order to foster their training programs. Draft agreements have also been forwarded to all provinces, on an equal basis, in paying workmen's compensation, where necessary, to a civil defence worker; an agreement to this effect has been signed with the Provinces of Ontario, British Columbia and Alberta.

Up to the end of March 1954, 19 civil defence manuals were published by the Federal Civil Defence authorities to assist in the organization, training and general education of civil defence personnel, and nine others were in preparation. In addition to these a considerable amount of guiding literature was issued to assist provincial and local governments.

Each province has developed its own civil defence organization, patterned on that of the Federal Government. Certain provinces have conducted civil defence training courses, similar to those of the Federal Government, with the object of training local instructors and key personnel.

Many of the main centres of population have made considerable advances in organization and training. An estimated 162,000 civil defence workers for the whole of Canada were reported on strength as at Mar. 31, 1954.

In 1951, an agreement was made between Canada and the United States whereby each country pledged itself to go to the assistance of the other in the event of attack and a United States-Canada Civil Defence Committee was set up. A number of working groups were also formed to carry out specific tasks in the development of ways and means of carrying out this agreement. The Provinces of Canada, too, have discussed with adjoining States of the United States the working out of their mutual problems. Close liaison is maintained with the United Kingdom and other NATO countries.

## PART I.-SOURCES OF OFFICIAL INFORMATION

## Section 1.-Federal Government Information Services

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the ten-year and five-year censuses of Canada are planned and statistical information of all kinds-federal and pro-vincial-is centralized. In regard to information that is not mainly statistical, the individual Department concerned with the particular subject should be contacted as indicated in the Directory at pp. 1282-1309. Certain Government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests originating abroad for information on Canada and Canadian affairs; the Information Branch, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Broadcasting Corporation; and the National Film Board. (See Index.) The Departments of Agriculture, Northern Affairs and National Resources, and Mines and Technical Surveys, while not thus classed, are interested in the dissemination of information to a greater extent than most other Government Departments, though several of them have publicity branches or public relations divisions.

Government Departments, with few exceptions, issue their own lists of reports and publications. Departments are required by statute to publish annual reports, which are tabled each year in the House of Commons by their respective Ministers. However, for the purpose of this Section, only the services of the six information agencies mentioned above are described.

Section 2 has been prepared for the purpose of presenting to the reader a directory of all sources of information, federal and provincial, thereby directing him to the proper channels from which he may draw material relating to any párticular subject.

The Dominion Bureau of Statistics.-The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43). In 1948, this statute, which had been consolidated as the Statistics Act (R.S.C. 1927, c. 190), was repealed and replaced by the Statistics Act (R.S.C. 1952, c. 257), subsequently amended in March 1953 (1-2 Eliz. II, c. 18).

The chief aims of the Dominion Bureau of Statistics are: (1) to furnish statistical data, bearing on Canada, for government and administration, whether municipal, provincial, national or international; and (2) to assist in meeting the needs of non-governmental users of statistics, arising from a growing awareness of the value of statistics to business efficiency and social security.

Inquiries.-Hundreds of individual requests for information are received in the Bureau each day, routed through the appropriate divisions and answered as expeditiously as possible. Since the field of effort, from the statistical side, deals with all phases of the national economy, there is scarcely a subject upon which the Bureau is not able to give some information. Nevertheless, only inquiries of a statistical nature should be directed to the Dominion Bureau of Statistics.

Publications.-The Dominion Bureau of Statistics is the principal publication agency of the Federal Government; the subjects of its reports cover all aspects of the national economy.

The policy with regard to the distribution of publications is to extend the service to the public as widely as possible at a minimum cost. A special subscription rate of $\$ 30$ per annum entitles a subscriber to receive, as issued, a copy of each report, including the daily News Bulletin. Statistical information not of general interest is published in the form of Reference Papers or Memoranda for which additional annual subscription rates are charged of $\$ 5$ and $\$ 15$, respectively.

A complete list of DBS publications is available from the Dominion Statistician. Orders for reports should be sent to the Dominion Bureau of Statistics, Ottawa, giving the correct title or titles of the publication or series of reports in which the applicant is interested and should include the necessary remittance in the form of a cheque or money-order made payable to the Receiver General of Canada.

Information Division, Department of External Affairs.-The Information Division has two functions: to promote within Canada interest in and knowledge of international affairs, and to make Canada and Canadian policies better known and understood abroad.

To perform the first function, the Division produces and distributes various documents on external affairs-statements of government policy and reports on related developments abroad and on the work of the Department generally. The Division also answers inquiries from Canadian sources on these subjects (except for inquiries from the press which are handled by the Department's Press Office) as well as requests for information about Canada made by Diplomatic Missions at Ottawa, by Canadian posts abroad, and by individuals and organizations in other countries.

Most of the information work abroad is done, however, by officials at Canadian posts. The Information Division assists by formulating and advising on information policy abroad, in an effort to ensure that this policy is related to the general objectives of Canadian foreign policy, and by producing and procuring material to keep Missions informed of developments within Canada. Journalists and others who
visit Canada to write of Canadian affairs are given assistance from time to time by the Division; its responsibilities also include the co-ordination of the Government's activities in the field of cultural relations.

Information Branch, Department of Trade and Commerce. - For details see p. 1098.

Information Services Division, Department of National Health and Welfare.-The responsibility of this Division, in co-operation with other divisions of the Department of National Health and Welfare and provincial authorities, is the production and distribution of educational material on health, welfare, social security and civil defence, for use throughout the country. This information, issued in the English and French languages, includes books, pamphlets, periodicals, posters, exhibits, displays, radio dramatizations, press and magazine features and releases, as well as films and film-strips prepared in co-operation with the National Film Board. Books, pamphlets, posters and displays are distributed in Canada through provincial authorities. The most important periodicals published by the Division are Canada's Health and Welfare (monthly), Canadian Nutrition Notes (monthly), Occupational Health Bulletin (monthly), Industrial Health Review (semiannually) and Nutrition Bulletin (annually).

Canadian Broadcasting Corporation.*-Radio broadcasting is an important medium of information to the public along with newspapers, films and other means of communication. Radio broadcasting in Canada is a combination of a publicly owned national system and privately owned local community stations, many of which are affiliated with the Canadian Broadcasting Corporation's networks.

Since its establishment in 1936, the Canadian Broadcasting Corporation has become one of the most effective channels through which information, official and unofficial, is broadcast to the people of Canada. Radio is relatively more important in Canada than in most other countries, because of the widely distributed population and the number of sparsely peopled areas, and the CBC has gradually bridged the gaps with high-powered transmitters designed to serve rural as well as urban areas. The CBC has also pioneered in the development of low-powered repeater stations, attached to the network lines, that serve areas unable, because of topographical conditions, to receive an adequate signal from any existing station.

News broadcasts and information programs occupy a considerable proportion of national and regional network time and include news, drama, informative talks, children's programs, school broadcasts, public-service broadcasts, sports, $\mathbf{w}$ men's activities, etc. Listeners have a very wide range of radio fare, since the CEC not only produces its own programs in the various production centres across ( inada, but brings in selected programs from the networks in the United States, the British Broadcasting Corporation, and other national radio systems. The CBC maintains a bureau at London, England, and at United Nations Headquarters, New York, and is credited with having done more to inform listeners of the United Nations' activities than any other broadcasting system.

Through the International Shortwave Service, operated by the CBC on oehalf of the Canadian Government, programs are broadcast in sixteen languager: English, French, German, Dutch, Danish, Norwegian, Swedish, Finnish, Italian, Spanish, Portuguese, Czech, Slovak, Russian, Ukrainian and Polish. Tie CBC International

- See also pp. 931-937.

Service broadcasts information abroad on life and economic conditions in Canada as part of the general information plan for promoting a better understanding of Canada in other countries. The CBC shortwave transmitters at Sackville, N.B., transmit a signal unequalled in Europe by any other transmitted from the North American Continent.

The National Film Board.--The National Film Board provides information on a great variety of subjects in the form of films, film-strips and still photos. In keeping with its terms of reference, the Board's products are both informative and interpretative and are widely distributed, theatrically and non-theatrically. (See also Educational and Cultural Functions of the National Film Board, pp. 350-351.)

As a service to government departments, the Board maintains a film preview library of 4,000 prints where films may be screened with a view to purchase or for informational purposes. Some 500 film-strips are catalogued. The Board also maintains libraries of films on specialized subjects such as health, sociology, medicine and industry.

The Board has over 25,000 motion picture prints on deposit in more than 380 local libraries across the country. Additions to the libraries are circulated in preview blocks to film councils and circuit users before being deposited in a central library. Approximately 20,000 prints have been made available in libraries abroad, both in posts of the Departments of External Affairs and Trade and Commerce and in universities and other loan agencies. Libraries of films and film-strips are maintained in the Board's offices at New York and Chicago, U.S.A., and at London, England.

The Board's library of approximately 100,000 still photos serves government departments, commercial photographers and newspapers and periodicals in Canada and abroad.

## Section 2.-Directory of Sources of Official Information (Federal and Provincial)

To make the best use of the Directory of Sources of Government Official Information, it is necessary that the reader understands the broad differences in function between federal and provincial departments and their separate fields of work.

Certain fields of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, census of population, national defence, etc., are constitutionally federal affairs and, in such fields, the respective Departments at Ottawa are the proper sources with which to communicate. Other fields of effort, such as the administration of lands and natural resources, education, roads and highways, and health and hospitals are the responsibility of the provinces, under the British North America Act, but certain Federal Departments are also concerned with specific aspects of these subjects and, as is the case of the Dominion Bureau of Statistics, in the co-ordination and presentation of the material for Canada as a whole.

As a general guide to the public, it may be pointed out that questions relating to the actual development and administration of resources should be forwarded to the particular provinces concerned. The Federal Government, while not administering the resources within provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data, on a national basis, marketing data on international, national and provincial
bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of live stock and the improvement of strains, on agricultural marketing and on crop yields are cases in point; in forestry, questions of forest research, forest-fire protection and reforestation offer good examples. Inquiries directed to federal sources for information not of a statistical nature should, as a general rule, be sent to the individual Departments listed in the Directory; in the case of statistical information, inquiries should be addressed to the Dominion Bureau of Statistics, Ottawa.

Under the provisions of the Public Printing and Stationery Act, the Queen's Printer and Controller of Stationery has charge of the sale of all official publications of Parliament and the Government of Canada that are issued for sale, as well as of the free distribution of all public documents and papers to persons and institutions (libraries) entitled by statutory provisions to receive them without payment.

The Queen's Printer and Controller of Stationery issues the Daily Checklist of Government Publications, published mainly for administrative convenience. It records all Federal Government publications immediately upon release, for the information of the public service, libraries, etc. All those who are authorized by law or regulation to receive free copies of government publications receive the Daily Checklist automatically and without charge. Other persons desiring the service may purchase an annual subscription to the Daily Checklist, to be forwarded daily or in weekly batches, as requested.

The Monthly Catalogue of Canadian Government Publications, also issued by the Queen's Printer and Controller of Stationery, is a comprehensive listing of all official publications, public documents and papers, not of a confidential nature, printed or "processed" at government expense.

An Annual Catalogue comprising all publications listed in the Monthly Catalogue was issued Jan. 15, 1955. This is a consolidation by departments of all active titles (older publications still available and not superseded by later editions) issued during 1953 and in previous years. Separate prints of departmental lists of publications included in the Annual Catalogue were also made available at the same time.

The Queen's Printer and Controller of Stationery publishes subject catalogues and special bulletins advertising new government publications. The titles of some publications available for free distribution, and obtainable from the issuing federal department, are listed in the Daily Checklist and Monthly Catalogue. Lists of publications are available from some Government Departments.

Most provincial government printed publications may be obtained from the Queen's Printer of the province concerned. Inquiries should be addressed to the provincial capital cities:-

| Newfoundland. | St. John's | - Ontario. | Toronto |

## PART II.-SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions. Therefore, the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the 1955 Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population", which are automatically revived when later Census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

The articles marked with an asterisk (*) are available in reprint form from the Dominion Statistician at the price quoted.

## PART IV.-FEDERAL LEGISLATION, 1953-54

This classified list of federal legislation has been compiled from the Statutes. Naturally, in summarizing material of this kind it is not always easy to convey the full implication of the legislation. The reader who is interested in any specific Act is, therefore, referred to the Statutes of Canada at the given volume and chapter.

## Legislation of the First Session of the Twenty-Second Parliament, Nov. 12, 1953, to June 26, 1954

| Subject, Chapter and Date of Assent | Synopsis |
| :---: | :---: |
| 2-3 Eliz. II |  |
| $\underset{33}{\text { Banking June }} 10$ | An Act to amend the Bank of Canada Act makes a number of changes in the administration, business and powers of the Bank of Canada. The major revision raises the minimum cash reserves which the chartered banks are required to maintain with the Bank of Canada from 5 p.c. to 8 p.c. of their total deposit liabilities and empowers the Bank of Canada to vary that reserve up to 12 p.c. provided sufficient notice is given of any increase and provided such increase be not more than 1 p.c. in any one month. |
| 41 June 10 | The Quebec Savings Banks Act renews for another 10 years the charter of the Montreal and District Savings Bank and of the Quebec Savings Bank. |
| 48 June 26 | The Bank Act is the decennial revision of the legislation respecting banks and banking; it renews the charters of the 11 chartered banks for a 10 -year period from July 1, 1954. Among the amendments are those permitting the chartered banks to make loans on the security of insured mortgages and to make small loans on the security of household goods and chattels. |
| Communica-tions- |  |
| ${ }_{20}{ }^{\text {Mar. }} 4$ | An Act to amend the Post Office Act increases the rate of postage on letters posted in Canada for delivery in Canada. |
| 22 Mar. 4 | An Act to amend the Telegraphs Act authorizes the application of that part of the Act relating to marine electric telegraph companies to any company which, before Apr. 1, 1949, was empowered under the laws of Newfoundland to construct or maintain in Newfoundland waters submarine cables extending beyond the limits of Newfoundland. |
| $31 \quad$ May 27 | An Act to amend the Radio Act makes the necessary revisions to permit the employment of United States personnel as radio operators on United States Government radio stations in Canada. |
| 39 June 10 | An Act to amend the Post Office Act permits a publisher to post newspapers or periodicals in postal areas other than the one in which such publications are printed and still take advantage of the low postal rates provided under the Act. |
| Constitution and Government- |  |
| Gow Dec. 16 | An Act respecting the Use of Election Material for By-elections and Northwest Territories Elections authorizes, in order to avoid the unnecessary expense of printing new election material, the use of material already printed as required by the Canada Elections Act of 1938 to be used in any by-elections or Northwest Territories elections held before the next general election. |
| 8 Feb. 16 | An Act to amend the Acts respecting the Northwest Territories, among other revisions increases from three to four the number of elected members to the Council of the Northwest Territories. The Council now comprises nine members-four elected and five appointed by the Governor in Council. |

## National Defence and Veterans Affairs

2 Dec. 16

13 Mar. 4
(6) June 10

62 June 26

65 June 26

66 June 26

An Act to amend the Children of War Dead (Education Assistance) Act extends the benefits of the Act to certain children previously excluded.

The Canadian Forces Act, 1954, amends five Acts related directly to national defencethe Defence Services Pension Act, the National Defence Act, the Visiting Forces (North Atlantic Treaty) Act, the Senate and House of Commons Act and the Canadian Forces Act, 1950.
An Act to amend the War Service Grants Act among other changes extends for a further five years the period of time during which veterans may use their re-establishment credits-the period is now 15 years from Jan. 1, 1945, or the date of discharge, whichever is the later.

An Act to amend the Pension Act allows for increased salaries for members of the Pension Commission and makes other revisions mainly concerning pensions to children; in those sections dealing with veterans under medical care, the stipulation "in hospital" is changed to "under treatment or care of the Department"; and certain dates for entitlement are advanced.

The Veterans Benefit Act, 1954, gives the statutory definition of "Canadian Forces" and sets forth the application of the following Acts to members of the Canadian Forces: the War Service Grants Act, the Veterans Rehabilitation Act, the Pension Act, the Veterans' Land Act, the Veterans Insurance Act, the Reinstatement in Civil Employment Act, the Veterans' Business and Professional Loan Act, the Civil Service Act, the Public Service Superannuation Act and the Unemployment Insurance Act.

An Act to amend the Veterans' Land Act extends the provisions of the Act to include financial and technical assistance to veterans who wish to build their own homes. It also provides for additional loans up to $\$ 3,000$ for full-time farmers and $\$ 1,400$ for part-time farmers or commercial fishermen already under contract for the purpose of permanently improving or increasing their holdings.

# Legislation of the First Session of the Twenty-Second Parliament, Nov. 12, 1953, to June 26, 1954-continued 

| Subject, <br> Chapter and Date of Assent |  |  | Synopsis |
| :---: | :---: | :---: | :---: |
| Northern Affairs and National Resources- |  |  |  |
|  | Dec. |  | The Department of Northern Affairs and National Resources Act creates a new department of government with the specific duty of co-ordinating the activities of all government departments in the Yukon and Northwest Territories and of promoting measures for the further economic and political development of those areas as well as the development of knowledge of problems in the north and the means of dealing with them through scientific investigation and technological research. Other duties include jurisdiction over the forest and water resources of Canada; irrigation and water power; national parks and historic sites and monuments; archsology, ethnology and fauna and flora; and tourist services. The Department of Resources and Development Act is repealed. |
| 6 | Dec. |  | An Act to a mend the National Parks Act makes certain changes to improve the administration of Canada's National Parks. |
| 17 | Mar. |  | An Act to amend an Act respecting the National Battlefields at Quebec authorizes the expenditure of $\$ 125,000$ a year for four years for the purposes of the Act. |
| 36 | June |  | An Act to amend the International Rapids Power Development Act replaces a reference to the Power Commission Act of Ontario by the St. Lawrence Development Act, 1952, with respect to the expropriation of property. |
| Trade and Commerce- |  |  |  |
|  |  | 4 | An Act to amend the Exports Credits Insurance Act revises the financial structure of the Corporation by increasing the authorized capital from $\$ 5,000,000$ to $\$ 15,000,000$ and stipulating amounts to be credited to an underwriting reserve account. |
| 19 | Mar. | 4 | An Act to amend the Patent Act authorizes certain increases in statutory fees provided under the Act in order to ensure that services are paid for by those to whom they are rendered rather than by the taxpayers generally. |
| 27 | Mar. |  | The Export and Import Permits Act revises and consolidates the legislation with respect to the exporting and importing of strategic and other goods. |
| 40 | June | 10 | The Public Seroants Inventions Act consolidates legislation formerly included in four different Acts concerning the ownership and management of and the payment of awards for inventions made by public servants of the Government of Canads that are connected with the duties and employment of the inventors. |
| Transportation-1Dec. 16 |  |  | An Act respecting the appointment of Auditors for National Railways appoints independent auditors for 1954 to make a continuous audit of the national railway accounts. |
| 7 | Dec. |  | An Act to amend the Pipe Lines Act brings under the authority of the Act the operation and construction of oil or gas pipe lines extending from one province to another. |
| 30 | May | 27 | An Aet to amend the Department of Transport Act provides for the regulation and control of the bulk transport of such goods as grain, ores and minerals, ferrous metals, iron and steel scrap, pulpwood, sand, stone and gravel, etc., in order to ensure prompt, efficient and orderly movement. |
| 37 | June | 10 | An Act to amend the Navigable Waters Protection Act provides for recovery by the government of any costs incurred in marking, removing or destroying any wrecks or other obstruction to navigation from the owner or person responsible for the obstruction. The Act also authorizes the making of regulations concerning the employment of seamen aboard Canadian ships on the Great Lakes. |
| 49 | June | 26 | An Aet respecting the construction of lines of railway by the Canadian National Railway Company from St. Felicien to Chibougamau and from Chibougamau to Beattyville, all in the Province of Quebec. and from Hillsport on the main line of the Canadian National Railways to Manitouwadge Lake, both in the Province of Ontario. |
| 50 | June | 26 | The Canadian National Railways Financing and Guarantee Act, 1954, provides moneys to meet certain capital expenditures of the CNR during the year 1954, including the building of a hotel at Montreal, and to authorize the guarantee by the Government of certain securities to be issued by the Company. |
| 59 | June | 26 | The Molor Vekicle Transport Act provides for the regulation, in agreement with provincial authorities, of interprovincial and international highway transport by provincial agencies having authority to control highway transport within the several provinces. |

# Legislation of the First Session of the Twenty-Second Parliament, Nov. 12, 1953, to June 26, 1954-concluded 

| Subject, Chapter and Date of Assent |  |  | Synopsis |
| :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { Transportation- } \\ & \text { concluded } \\ & 60 \quad \text { June } 26 \end{aligned}$ |  |  |  |
|  |  |  | An Act to amend the National Harbours Board Act makes a number of revisions in the regulations relating to the administration and operation of the national harbours. |
| 63 | June | 26 | An Act to amend the Pipe Lines Act provides that a liquidator or trustee or other personnel appointed in a similar capacity may act for a company authorized to construct or operate pipelines. |
| $\mathrm{Welfare-}_{45}$ June 10 |  |  |  |
|  |  |  | An Act to amend the Vocational Training Co-ordination Act revises the Act of 1942 in the light of present-day requirements for defence and other purposes, including authority to enter into agreements with the provinces to provide assistance for rehabilitation training of disabled persons. |
| 55 | June | 26 | The Disabled Persons Act provides for a nation-wide system of allowances for totally and permanently disabled persons who are in need of assistance. The legislation authorizes the payment of $\$ 40$ a month to such persons who are 18 years of age or over. The passing of enabling legislation is required on the part of each of the participating provinces and each province is given the option of designating by its own law a higher minimum age if desired. |
| 61 | June | 26 | An Act to repeal the National Physical Fitness Act. Although this Act is repealed, agreements already in effect under the Act will be carried out. |
| $\begin{aligned} & \text { Miscellaneous- } \\ & 12 \text { Mar. } 4 \end{aligned}$ |  |  |  |
|  |  |  | An Act to amend the Animal Contagious Diseases Act removes the limits on compensation payable under the Act in respect of swine and sheep and provides for the payment of compensation on the basis of market value. |
| 14 | Mar. | 4 | An Act to amend the Explosives Act makes a number of changes to the Act which provides a measure of control in the manufacture, testing, storage and importation of explosives in the interests of public safety. |
| 18 | Mar. | 4 | The Northwest Atlantic Fisheries Convention Act gives the Government statutory authority to carry out the obligations assumed by Canada under the International Convention for the Northwest Atlantic Fisheries, signed at Washington on Feb. 8, 1949, and ratified on July 3, 1950, following approval by Parliament on Joint resolution of the Senate and the House of Commons. |
| 23 | Mar. |  | The National Housing Act, 1954, makes substantial changes in the financing of residential construction under the National Housing Act. The group of lending institutions is widened to include the chartered banks and the Quebec savings banks, which are empowered to make loans on the security of insured first mortgages on residential property. The former system of joint loans has been replaced by a system of insured mortgage loans. The down-payment is reduced from 20 p.c. to 10 p.c. on the first $\$ 8,000$ of the mortgage value and the down-payment on portions in excess of $\$ 8,000$ is placed at 30 p.c. Monthly payments are reduced by extending the life of the mortgage loans to 25 years from 20 years. |
| 26 | Mar. | 31 | An Act to amend the Emergency Gold Mining Assistance Act extends the application of the Act to the end of 1954 and increases the assigtance with respect to gold produced in 1953 and 1954. |
| 28 | Mar. | 31 | The Fire Losses Replacement Account Act establishes a Fire Losses Replacement Account from which an advance may be made, up to a maximum of $\$ 5,000,000$, for the restoration, rebuilding or repair of any property under the administration or control of a Government department or Crown corporation that has been lost, destroyed or damaged by fire. |
| 34 | June | 10 | An Act to amend the Canadian Citizenship Act enables a person to apply for Canadian citizenship without first giving, as previously required, at least one year's notice of his intention to do so. |
| 42 | June | 10 | An Act to amend the Research Council Act clarifies the position of the Council with respect to its authority to deal with personal property in the course of its operations and makes certain minor adjustments in connection with the powers of the Council. |
| 47 | June | 26 | An Act to amend the Atomic Energy Control Act provides for the incorporation of a holding company to integrate the research and production activities in the atomic energy field, the company to be responsible to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research. Obsolete references to the Civil Service Superannuation Act are eliminated. |

## PART V.-GANADIAN GHRONOLOGY, 1497-1954

Events in the General Chronology from 1497 to 1866 are given in the 1951 Year Book, pp. 46-49, and from 1867-1953 in the 1954 Year Book, pp. 1259-1264. References regarding federal or provincial elections or changes in legislatures or ministries are given in Chapter II on Constitution and Government and in Appendices.
1954. Jan. 8-15, The Conference of Commonwealth Finance Ministers was held in Sydney, Australia, to review developments in the economic field; Hon. D. C. Abbott, Minister of Finance, led the Canadian delegation. Jan. 8, The world's longest pipe-line flow of crude oil starting from Alberta reached Sarnia, Ont., a distance of 1,770 miles. Jan. 23, The U.N. Command in Korea freed 22,000 Korean prisoners-of-war who rejected communism. Jan. 25-Feb. 18, Great Britain, France and the Soviet Union met at a Foreign Ministers' Conference in Berlin, Germany, and considered a conference on Korea and Indo-Chins. ## PART VI.-STATISTICAL SUMMARY OF THE PROGRESS OF GANADA, 1871-1953

In the following summary, the statistics of foreign trade, shipping, the Post Office, the public debt, revenue and expenditure, and the Post Office and Government savings banks relate to the fiscal years ended June 30 up to 1901; subsequently to years ended Mar. 31, except for trade, where calendar-year figures are given for 1931 and later years. Agriculture, dairying, mineral, manufacturing, banking, insurance, loan and trust companies, construction, road-transportation, vital, hospital, and immigration statistics relate to the calendar years, and railway and fisheries statistics to the years ended June 30, 1871-1911, and to the calendar years 1921-53. Canal statistics are those of the navigation seasons. Telegraph statistics relate to the fiscal years for Government lines and to the calendar years for other lines.

## STATISTICAL SUMMARY OF THE PROGRESS OF CANADA

Nore.-The interpretation of the symbols used in the tables will be found facing p. 1 of this volume.

${ }^{1}$ The figures for 1949 and 1950 and those for 1952 and 1953 are intercensal estimates adjusted after the 1941 and 1951 Censuses, respectively. ${ }^{2}$ Includes 485 members of the Royal Canadian Navy recorded separately.

 61892.
ended Sept. 30. Includes other items not specified. ${ }^{11}$ The statistics of manufactures in 1871 , 1881 and 1891 include all establishments irrespective ended Sept. 30 . 11 The statistics of manufactures in 1871,1881 and 1891 include all establishments irrespective
of the number of employees. From 1901, statistics are for establishments with five hands or over. The figures shown for census years prior to 1921 are for the preceding year. From 1922, statistics are exclusive of construction hand trades, repair and custom work. Figures for $1931-53$ include non-ferrous metal smelting not included in earlier years. ${ }^{12}$ Value of factory shipments. ${ }^{13}$ Since 1924 the net value of production is computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products.

#### Abstract

\section*{APPENDIX}

Federal and Provincial By-elections.-The information re federal byelections and provincial elections stated as included in Appendix I in the footnote to Table II, p. 68 and in the footnote to p. 73 will be given in the 1956 edition of the Year Book and may be secured in the meantime from the Canada Year Book Section, Information Services Division, Dominion Bureau of Statistics.

The St. Lawrence Seaway Authority.-The St. Lawrence Seaway Authority (cf. pp. 97, 100 and 105) was established by Act of Parliament in 1951 and came into force by proclamation of the Governor in Council on July 1, 1954. It is incorporated for the purposes of constructing, maintaining and operating all such works as may be necessary to provide and maintain, either wholly in Canada or in conjunction with works undertaken by an appropriate authority in the United States, a deep waterway between the Port of Montreal and Lake Erie. The Authority is composed of a President, a Vice-President and a Member and reports to Parliament through the Minister of Transport. (See also St. Lawrence Seaway Authority.-1954. p. 1320.)

The St. Lawrence Seaway Authority is a proprietary Crown corporation and should be included in the list of such corporations given on p. 99 of this Year Book.

Canadian Government Specifications Board.-The Canadian Government Specifications Board is a co-operative body in which Government and industry participate on a voluntary basis. The Board was formed on June 13, 1934, as the Canadian Government Purchasing Standards Committee, under the auspices of the National Research Council. The Board undertakes the preparation of specifications in commodity fields and for materials, processes and equipment in which government departments and agencies may be interested and arranges for testing and research work.

## INDEX

Note .-This Index does not include references to Special Articles published in previous editions of the Year Book. These are listed at pp. 1310-6.

distances between principal points in canada -

[^0]:    * Prepared in the Research and Development Division, Dominion Bureau of Statistics.
    $\dagger$ It is difficult to compare the extent of the decline in the two countries, not only becsuse of differences in timing but also because of conceptual differences in the measures of total output. An approximate comparison is afforded by the two estimates of Gross National Expenditure (exclusive of accrued net income of farm operators, and in the Canadian data, exclusive of residual error). According to this definition, the decline in the United States from the second quarter of 1953 to the third quarter of 1954, amounted to 4 p.c., and the Canadian data from the third quarter of 1953 to the second quarter of 1954 showed a reduction of 3 p.c.

[^14]:    ${ }^{1}$ Less than 0.005 in .

[^15]:    ${ }^{1}$ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40).
    ${ }^{2}$ Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45), and diminished Mar. 1, 1927, in consequence of the Award of the Judicial Committee of the British Privy Council, whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.
    ${ }^{3}$ Extended by the Extension of Boundaries Act of Manitoba, 1881, and the Manitoba Boundaries Extension Act, 1912 (2 Geo. V, c. 32).
    ${ }^{4}$ Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional Districts of Assiniboia, Athabasca, Alberta and Saskatchewan, established May 17, 1882, by minute of Canadian Privy Council, concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.
    ${ }^{5}$ By an Imperial Order in Council passed on June 23, 1870, pursuant to the Rupert's Land Act, 1868 (31-32 Vict., c. 105), the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada, effective July 15, 1870. These territories were designated as the North-West Territories by the Act of $32-33$ Vict., c. 3, and as the Northwest Territories by R.S.C. 1906, c. 62 . By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880), all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Cansda, and these additional territories were formally included in the North-West Territories by 4-5 Edw. VII, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 ( 33 Vict., c. 3), and a further portion was added to Manitoba in 1881 by 44 Vict., c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905, and in 1912 other portions were added to Manitoba, Ontario and Quebec.
    ${ }^{6}$ By 39 Vict., c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed, and in 1905 the entire Keewatin District was re-annexed. The Act of 39 Vict. was never proclaimed. By Order in Council of May 8, 1882, the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabasca were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895, the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council, dated Mar. 16, 1918 (effective Jan. 1, 1920), the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.
    ${ }^{7}$ The provisional district of Yukon, established in 1895, was created a judicial district of the NorthWest Territories by proclamation issued pursuant to Sec. 51 of the North-West Territories Act (R.S.C. 1886, c. 50) on Aug. 16, 1897, and by the Yukon Territory Act ( 61 Vict., c. 6) was declared to be a separate territory.

[^58]:    - 1951 Census definitions are briefly as follows: Dwellings.-A Dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside. A Single Detached Dwelling, commonly called a single house, is a house containing one dwelling unit and completely separated on all sides from any other building or structure. A partments and Flats include dwelling units in apartment blocks, suites in duplexes or triplexes, suites in structurally converted houses, living quarters located in business premises, janitor's quarters in schools, etc. In determining the number of Rooms in a dwelling, only those used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. Housing.-A Household is a person or group of persons occupying one dwelling unit, the number of households thus equalling the number of occupied dwellings. Every person must be a member of some household, whether it consists of a family group with or without servants, lodgers, etc., a group of unrelated persons sharing a dwelling, or one person living alone. A dwelling is classed in need of Major Repair if it possesses any one of the fol lowing defects: sagging or rotting foundations indicated by cracked or leaning walls; faulty roof or chimney unsafe outside steps or stairways; interior badly in need of repair. A Crowded Dwelling (or Household) is defined as one in which the number of persons exceeds the number of rooms occupied.

[^59]:    ${ }^{2}$ For cities of 30,000 or over only.
    free" dwellings.

[^60]:    * For census purposes, a Family consists of husband and wife (with or without children) or a parent with an unmarried child (or children) living together in the same dwelling. Unmarried sons, and daughters under 25 years of age and living with their parents are classed as Children as well as wards and guardianship children under 21 years of age. Unmarried sons and daughters, 25 years of age or over, living with their parents are counted as family members but not as children.

    $\dagger$ Copies obtainable from the Dominion Statistician or the Queen's Printer, Ottawa, Ont.

[^138]:    ${ }^{1}$ Includes payments made under the Prairie Farm Assistance Act; other government subsidies have been included in cash income from individual commodities.

[^139]:    ${ }^{1} 1953$ values not available at time of going to press; estimates will be published in DBS crop reports and the Quarterly Bulletin of Agricultural Statistics.

[^140]:    ${ }^{1} 1953$ values not available at time of going to press; estimates will be published in DBS crop reports and the Quarterly Bulletin of Agricultural Statistics.

[^141]:    ${ }^{1}$ Cows and heifers, two years or over, kept for milk purposes.

[^142]:    ${ }^{1}$ Factory-made cheese includes cheddar and other cheese made from whole milk. The latter amounted to $5,005,000 \mathrm{lb}$. in $1950,5,477,000 \mathrm{Ib}$. in $1951,5,850,000 \mathrm{lb}$. in 1952 and $6,475,000 \mathrm{lb}$. in 1953 , produced principally in Quebec and Ontario.

[^143]:    ${ }^{1}$ Exclusive of Newfoundland. $\quad{ }^{2}$ Includes malted milk, cream powder and substandard products of a variable fat content, items that do not appear separately in this table. ${ }^{3}$ Since the quantities used for human consumption and live-stock feeding cannot definitely be established, per capita figures cannot be calculated. ${ }^{4}$ Includes milk by-products items not separately listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein and powdered whey.
    ${ }^{5}$ Includes ice cream in terms of milk.

[^144]:    ${ }^{1}$ Price to growers (to pickers in the case of blueberries) for unpacked fruit. ${ }^{2}$ Excludes Quebec, for which no estimate was made; yield reduced by frost to about one-third 1949 crop.
    ${ }^{2}$ Excludes British Columbia.

[^145]:    ${ }^{1}$ Exclusive of Newfoundland.

[^146]:    ${ }^{1}$ Initial payments plus additional payments to producers. $\quad{ }^{2}$ Based on cash closing prices, Winnipeg Grain Exchange. From Aug. 1, 1944, to Oct. 22, 1947, prices of oats and barley remained at or near the government-imposed ceiling prices. From Oct. 23, 1947, to July 31, 1949, open market trading again prevailed. Equalization payments to producers are included for the crop years 1943-44 to 1947-48, inclusive. ${ }^{\text {a }}$ Average cash closing price, Winnipeg Grain Exchange, except where otherwise noted. ${ }^{4}$ Fixed price to growers. 585 fixed price to growers plus 50 cents participation payment. - Winnipeg Grain Exchange renewed trading in flaxseed cash and futures on Aug. 16, 1948. The Canadian Wheat Board was authorized to buy all flaxseed offered to it during the 1948-49 crop year on the basis of $\$ 4$ per bushel for No. 1 C.W. in store Fort William-Port Arthur, Ont.

[^147]:    ${ }^{1}$ Estimated totals, which in the case of production are rounded to millions, include allowances for any missing data for countries shown and data for producing countries not shown.
    ${ }^{2}$ Includes Albania, Bulgaria, Czechoslovakia, Eastern Germany, Hungary, Poland and Roumania.
    ${ }^{3}$ Figures for the periods shown are not strictly comparable since figures for 1952 and 1953 include allowances for non-reporting areas not included for the earlier period shown, but are included in estimated total for Asia.

[^148]:    ${ }^{1}$ Estimated totals, which are rounded to millions, include allowances for any missing data for countries shown and for other producing countries not shown.
    ${ }^{2}$ Comprises Albania, Bulgaria, Czechoslovakia, Eastern Germany, Hungary, Poland and Roumania.
    ${ }^{3}$ Figures for the periods shown are not strictly comparable since figures for 1952 and 1953 include allowances for non reporting areas not included for the earlier period shown, but included in estimated total for Asia.

[^149]:    * Sections of this Chapter that deal with forestry and forest administration have been revised in the Forest Economics Section, Forestry Branch, Department of Northern Affairs and National Resources. Sections dealing with forest and allied industries, except as otherwise noted, have been revised in the Forestry Section, Industry and Merchandising Division, Dominion Bureau of Statistics.
    $\dagger$ A more detailed discussion of forest regions is given in Bulletin No. 89, A Forest Classification for Canada, by W. E. D. Halliday, obtainable from the Forestry Branch, Department of Northern Affairs and National Resources, Ottawa. Accounts of variations in Canadian physiography, climate, etc., are given in Chapter I of this volume.

[^150]:    * Obtainable from the Queen's Printer, Ottawa, price $\$ 1.50$.

[^151]:    * More detailed information is given in the 1954 Canada Year Book, pp. 458-465.

[^152]:    ${ }^{1}$ Includes federal lands within provincial boundaries.
    ${ }^{2}$ Excludes Newfoundiand. ${ }^{3}$ Wood values are based on prevailing stumpage rates only; damage to soil, site quality, streamflow regulation, wildlife, recreational and similar values, is not included.

[^153]:    - Prepared by J. H. Jenkins, Chief of the Forest Products Laboratories of Canada, a Division of the Forestry Branch, Department of Northern Affairs and National Resources.
    $\dagger$ Pulp and paper research is carried out by the Pulp and Paper Research Institute of Canada, at Montreal. This Institute is a non-profit corporation to which the Canadian Government makes an annual grant. Its management is vested in a Board of Directors composed of representatives of the Canadian Pulp and Paper Association, McGill University and the Canadian Government.

[^154]:    ${ }^{1}$ In estimating the annual drain on Canada's forest resources, certain converting factors have been used, each of which represents in cubic feet the quantity of merchantable wood used to produce one unit of the material in question. The factor for logs and bolts for the British Columbia coastal region is 175 and for the rest of Canada 200. Other factors: pulpwood 85, fuelwood 80, hewn railway ties 5 , poles and piling 15 , fence posts $1 \cdot 2$ and wood for distillation 80.

[^155]:    *A special article on the pulp and paper industry appears in the 1952-53 Year Book, pp. 467-475.

[^156]:    ${ }^{1}$ Newfoundland included from 1949.

[^157]:    ${ }^{1}$ Slightly lower than DBS figures given in Table 21, p. 467, owing to the exclusion of certain paper not classed as newsprint by the Association.

[^158]:    * See Chapter XV for further particulars regarding the pulp and paper and paper-converting industries.
    $\dagger$ For reasons given in Section 1, Part II of the Foreign Trade Chapter, gold is excluded from Canadian trade statistics.
    $\ddagger$ Prepared by the Forest Products Laboratories, Forestry Branch, Department of Northern Affairs and National Resources, Ottawa.

[^159]:    * Furniture; sash, door and planing mills; veneer and plywood; hardwood flooring; boxes, baskets and crates; wood-turning; coffins and caskets; cooperage; woodenware; lasts, trees and wooden shoefindings; beekeepers' and poultrymen's supplies; excelsior; and other wood-using industries.

[^160]:    * Paper boxes and bags; roofing paper; and miscellaneous paper goods.

[^161]:    * Prepared under the direction of Marc Boyer, Deputy Minister, Department of Mines and Technical Surveys, as follows: Introduction, Metals and Coal by G. H. Murray. Chief, Editorial and Information Division, and Mrs. M. J. Giroux of the Editorial Staff; Industrial Minerals by M. F. Goudge, Chief, Industrial Minerals Division; and Petroleum and Natural Gas by Dr. G. S. Hume, Director General of Scientific Services.

[^162]:    * Developments in the Quebec-Labrador iron-ore field on described on p. 482.

[^163]:    * Information on the construction of oil and gas pipelines is given in the Transportation Chapter of this volume.

[^164]:    * Revised under the direction of Marc Boyer, Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

[^165]:    - Prepared under the direction of W. E. Uren, O.B.E., Chairman of the Dominion Coal Board.

[^166]:    * Revised under the direction of Marc Boyer, Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

[^167]:    - Compiled from material supplied by the provincial governments.

[^168]:    * Revised in the Mining, Metallurgical and Chemical Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

[^169]:    ${ }^{1}$ Beginning with 1931, exchange equalization on gold production is included. of Newfoundland production from 1949.

[^170]:    ${ }^{1}$ Not released for publication.
    ${ }^{2}$ Sulphur content of pyrite shipped and estimated sulphur contained in the sulphuric acid made from smelter gases.

[^171]:    *The construction of this index, which is a component of the revised index of industrial production, is described in DBS Reference Paper, Revised Index of Industrial Production, 1935-51.

[^172]:    ${ }^{1}$ Includes 6 tons valued at $\$ 1,428$ produced in N.W.T. in 1944 and 1 ton valued at $\$ 536$ in 1951 . ${ }^{\mathbf{2}} \mathbf{I n}$ cludes 383 tons valued at $\$ 218,663$ produced in Nova Scotia and 3 tons valued at $\$ 1,969$ produced in N.W.T. ${ }^{2}$ Includes 959 tons valued at $\$ 574,441$ produced in Nova Scotia.

[^173]:    ${ }^{1}$ The sum of Canadian coal mines' sales, colliery consumption, coal supplied to employees and coal used in making coke, etc., less the tonnage of coal exported.
    ${ }_{2}$ Includes small tonnages from countries other than the United Kingdom and the United States. Deductions have been made from this column to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores. ${ }^{3}$ Figures based on estimates of population given at p. 137.

[^174]:    ${ }^{1}$ 'Production' as used bere means quantity and value of sales.

[^175]:    ${ }^{1}$ Includes minor items not specified.

[^176]:    ${ }^{1}$ Includes freight and smelter charges and cost of ores treated. less cost of process supplies, fuel, electricity, freight and smelter charges.

[^177]:    ${ }^{2}$ Gross value of shipments less
    ${ }^{3}$ Includes natural abrasives.

[^178]:    * Revised in the Water Resources Division, Department of Northern Affairs and National Resources, Ottawa.
    $\dagger$ More detailed information on the water-power resources of other countries is given in the 1951Year Book, pp. 531-533.

[^179]:    ${ }^{1}$ Includes only hydro-electric stations that develop power for sale.
    ${ }^{2}$ Includes only water power actually developed by pulp and paper companies. ${ }^{2}$ Includes only water power actually developed by industries other than central electric stations and the pulp and paper industries.

    4 Includes water wheels and hydraulic turbines installed.

[^180]:    - In addition to water-power development, the construction of fuel-electric plants included: a diesel unit of 3,850 h.p. at St. John's by the Newfoundland Light and Power Company; an additional unit of 22,000 kw . in the Halifax steam plant of the Nova Scotia Light and Power Company; and a unit of $18,780 \mathrm{kw}$. in the Grand Lake steam plant of the New Brunswick Electric Power Commission.

[^181]:    *In addition, the two large steam-electric plants at Toronto and Windsor were completed, the Toronto station having a present capacity of $388,000 \mathrm{kw}$. in four units and the Windsor station $264,000 \mathrm{kw}$. in four units.

[^182]:    *The City of Winnipeg had under installation a $25,000-\mathrm{kw}$. steam-electric unit for 1954 operation. The Saskatchewan Power Corporation completed a $20,000-\mathrm{kw}$. single-unit addition to its steam plant at Estevan, and started, for 1954 operation, the installation of a $25,000-\mathrm{kw}$. unit in the Saskatoon plant. A 4,300-kw. gas-engine generator set was installed at Unity. Additions to thermal capacity in Alberta include a steamturbo generator of $30,000 \mathrm{kw}$. by the City of Medicine Hat in collaboration with Calgary Power Limited; City of Edmonton, a gas-fired steam-turbo generator, $30,000 \mathrm{kw}$.; City of Lethbridge, $5,000-\mathrm{kw}$. steam unit; and Canadian Utilities Limited at Grande Prairie, diesel unit of $1,200 \mathrm{kw}$.
    $\dagger$ The Northern British Columbia Power Company Limited installed a diesel unit of $2,750 \mathrm{~h} . \mathrm{p}$. as auxiliary to its hydro-electric installations. The Powell River Company Limited added a $13,125-\mathrm{kw}$. steam turbo-generator to supply additional power to its mill at Stillwater.

[^183]:    - Contributed by The Hydro-Electric Power Commission of Ontario, Toronto, Ont.

[^184]:    "See the special article on "The St. Lawrence Seaway", Chap. XIX.

[^185]:    ${ }^{1}$ Excludes duplications.
    ${ }^{2}$ Newfoundland included from 1949.

[^186]:    - The information included under the provincial headings of this Subsection has been revised by the various provincial commissions or authorities concerned.

[^187]:    * The Commission also purchases $135,000 \mathrm{~h} . \mathrm{p}$. from the Shawinigan Water and Power Company.

[^188]:    ${ }^{1}$ Installed capacity. When all four units are operating at 60 cycles, installed capacity will be 400,000 kw.

    2 Installed capacity.
    ${ }^{3}$ Installed capacity-four more main generating units to be added as required; ultimate capacity, $1,200,000 \mathrm{kw}$.

[^189]:    ${ }^{1}$ Sum of the maximum 20-minute coincident peak loads (primary plus secondary) of each of the systems operated by the Commission, given in terms of net output of the sources of supply to each system for the last month of each fiscal year
    ${ }^{2}$ Owing to the change in the Commission's fiscal year to coincide with the calendar year, figures shown here for 1950 cover the 14 months ended Dec. 31, 1950.

[^190]:    ${ }^{1}$ Inclades power generated by electric railways for their own use.

[^191]:    - Prepared by the Director, Information and Educational Service, Department of Fisheries, Ottawa.
    $\dagger$ Also known as rosefish and ocean perch.

[^192]:    * Revised in the Department of Fisheries, Ottawa.

[^236]:    ${ }^{1}$ Exclusive of the Yukon and Northwest Territories.

[^237]:    * Prepared in the Business Statistics Section, Research and Development Division, Dominion Buresu of Statistics.

[^238]:    ${ }^{1}$ Newfoundland data exclude agriculture, fisheries, trapping and fish processing in 1949 and 1950, but includes fisheries and fish processing in 1951 and 1952 and trapping in 1952.
    ${ }^{2}$ Forestry and construction figures for the Yukon and Northwest Territories are included with British Columbia.

[^239]:    ${ }^{1}$ Newfoundland data exclude agriculture, fisheries, trapping and fish processing in 1949 and 1950, but include fisheries and fish processing in 1951 and 1952 and trapping in 1952.
    ${ }^{2}$ Forestry and construction figures for the Yukon and Northwest Territories are included with British Columbia.

[^240]:    ${ }^{*}$ Except as otherwise noted, this Chapter has been revised under the direction of A. H. Brown, Deputy Minister, Department of Labour, Ottawa,

[^241]:    ${ }^{1}$ Males over 18 years of age only. or processing of fish, vegetable or fruit. 6 Females; $\$ 26$ for men over 21 years of age. Females, 826 for men over 21 years of age. Females, 60 cents for men applying to a 48-hour week. offices; 54 hours in laundries, shops, beauty pariours and theatres; 60 hours in hotels. ${ }^{7}$ Hourly rates.

[^242]:    ${ }^{1}$ Exclusive of persons in institutions, remote areas and Indian reserves. ${ }^{2}$ Employers, 'own-account' and unpaid family workers. ${ }^{3}$ Revised since publication of the 1954 Year Book. - Newloundland included from 1950.
    ${ }^{5}$ Coverage increased in 1954, see text on p. 768.

[^243]:    - Newfoundland data have been subtracted from 1954 totals; thus all statements made in this analysis are on the basis of the nine other provinces.

[^244]:    - Prepared in the Employment Section, Labour and Prices Division, Dominion Bureau of Statistics.
    $\dagger$ Employment and Payrolls, Man-Hours and Average Hourly Earnings. The methods used in preparing the current statistics are erplained in these bulletins.
    $\ddagger$ Employment, Payrolls and Weekly Earnings, January 1949 - June 1955, with Historical Series.

[^245]:    ${ }^{1}$ Proportion of employees reported in metropolitan areas to the total reported by all employers making returns in Canada (Average of 12 months, 1953.)

[^246]:    ${ }^{*}$ Monthly eatimates of total wages, salaries and supplementary labour income are given in DBS bulletins, Estimates of Labour Income.

[^247]:    ${ }^{1}$ The durable goods group includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metalic mineral products; the nondurable goods group includes the remaining manufacturing industries. ${ }^{2}$ Mainly hotels, restaurants,
    laundries, dry-cleaning establishments and business and recreation service.

[^248]:    ${ }^{1}$ Consists mainly of hotels, restaurants, laundries, dry-cleaning establishments and business and recreation service.

[^249]:    * Prepared in the Employment Section, Labour and Prices Division, Dominion Bureau of Statistics. More complete information is published in the DBS annual bulletins, Earnings and Hours in Manufacturing.

[^250]:    ${ }^{1}$ As at Nov. 30.

[^251]:    * More detailed information is given in the Department of Labour annual publication, Wage Rates, Salaries and Hours of Labour in Canada.

[^252]:    ${ }^{1}$ Meal allowances are sometimes reported as given in addition to other types of overtime compensation; in other cases as the sole type of overtime compensation.

    2 Oct. 1, 1952.
    ${ }^{3}$ Less than $0 \cdot 1$ p.c.

[^253]:    ${ }^{1}$ The daily rates of contribution in respect of each class is one-sixth of the weekly rates. ${ }^{2}$ Unemployment insurance stamps combine both employer and employee contributions. ${ }^{3}$ Rates calculated on the average daily contribution for the last 180 days in the two years greceding claim. The daily rate of benefit is one-sixth of the weekly benefit rate.

[^254]:    * Statistics of unemployment insurance are compiled and published by the Unemployment Insurance Section, Labour and Prices Division, Dominion Bureau of Statistica, from material supplied by the Unemployment Insurance Commission. A more detailed analysis of these data, by province and sex, is available in DBS publications, Annual Report on Benefit Years Established and Terminated Under the Unemployment Insurance Act and the monthly Statistical Report on the Operation of the Unemployment Insurance Act.

[^255]:    ${ }^{1}$ These data are obtained from the daily rate of benefit authorized at the time the benefit year is established and the number of benefit days paid during the benefit year.

[^256]:    ${ }^{1}$ The total number of benefit years terminated was actually 770,684 because for 8,126 benefit years the age of claimant was unspecified; 452,950 benefit days were paid on these 8,126 benefit years, so that the total number of benefit days paid on benefit years terminated was 44,660,188.

[^257]:    * More detailed information is given in the Department of Labour publication, Canadian Vocational Training Annual Report 1952-53.

    92428-52

[^258]:    ${ }^{1}$ Includes unmatched grant of $\$ 10,000$ to each province.

[^259]:    ${ }^{1}$ No training given.

[^260]:    * More detailed information is given in the Department of Labour publication, Workmen's Compensation in Canada, A Comparison of Provincial Laws.

[^261]:    For footnotes, see end of table.

[^262]:    * Information concerning unions is published in the Department of Labour annual publication, Labour Organization in Canada.

[^263]:    * A complete review of strikes and lockouts during 1952 and 1953 will be found in Department of Labour reports.

[^264]:    For footnotes, see end of table.

[^265]:    * Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics. More detailed information is given in the annual reports of the Division. Certain of the financial statistics are compiled in co-operation with the Department of Transport.

[^266]:    ${ }^{1}$ As at June 30 for this and previous years.

[^267]:    ${ }^{2}$ As at Dec. 31 for this and later years.

[^268]:    ${ }^{1}$ Includes for the first time 46 steam and 3 diesel locomotives, 98 passenger cars, and 1,004 freight cars in service in Newfoundland.

[^269]:    * Statistics for individual railways are given in DBS annual report, Statistics of Steam Railways of Canada.

[^270]:    ${ }^{1}$ Includes Newfoundland railways from Apr. 1.

[^271]:    ${ }^{1}$ Includes trespassers walking along tracks, stealing ride3, etc., and persons crossing tracks at level crossings. $\quad{ }^{2}$ Figures for Newfoundiand are included from Apr. 1, 1949.

[^272]:    *The Hudson Bay Railway is a direct responsibility of the Federal Government and has been operated by the CNR for the Government since Apr. 1, 1935; statistics relating to the operation of this line are not included in the data for the CNR.

[^273]:    ${ }^{1}$ Excludes work service.

[^274]:    * Statistics presented in this Section cover the urban and inter-urban operations of the electric railway systems. More detailed information is given in DBS publication, Electric Railways of Canada, 1955.

[^275]:    ${ }^{1}$ Decrease from 1951 accounted for by the re-capitalization of the Winnipeg Electric Company; transit facilities of that Company were transferred to the Greater Winnipeg Transit Company.

[^276]:    ${ }^{1}$ Includes passengers and freight carried on buses and trackless trolley-buses operated by electric railways.

[^277]:    ${ }^{1}$ Over railways, boat lines and motor-carrier and aircraft routes. $\quad{ }^{2}$ Amounts paid by express companies to the carriers, i.e., railways, steamship lines, etc., for transporting express matter.

[^278]:    * Except as otherwise indicated, the material in this Part has been revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.
    $\dagger$ The information in this Section has been revised from material provided by the officials in charge of the administration of motor-vehicle and traffic Acts and Regulations in the individual provinces and territories.

[^279]:    ${ }^{1}$ Year ended Nov. 30, $1949 . \quad{ }^{2}$ Sixteen-month period ended Mar. 31, 1951. ${ }^{3}$ Year ended Oct. 31, 1949. ${ }^{\text {S Seventeen-month period ended Mar. 31, } 1951 . ~}{ }^{5}$ Includes payments from railways and contributions from the Railway Grade Crossing Fund toward elimination of grade crassings, etc., amounting to $\$ 495,486$ in $1950, \$ 529,505$ in 1951 , $\$ 1,443,009$ in 1952, and $\$ 925,580$ in 1953 . The Federal Government also contributed $\$ 121,310$ toward grade separations, etc., on the Trans-Canada Highway during 1951. ${ }^{6}$ Federal administrative costs only. ${ }^{7}$ Includes federal administrative costs $\tau \in$ Trans-Canada Highway amounting to $\$ 175,398$ in 1951, $\$ 282,652$ in 1952 and $\$ 298,230$ in 1953.

[^280]:    ${ }^{1}$ Totals include 4,560 registrations in the Yukon and Northwest Territories.

[^281]:    ${ }^{1}$ Factory shipments since 1952. ${ }^{2}$ Includes Armed Forces vehicles.

[^282]:    ${ }^{1}$ Estimated net sales for Newfoundland, amounting to $7,188,000 \mathrm{gal}$. in $1949,8,842,000 \mathrm{gal}$. in 1950 , and $10,816,000$ gal. in 1951, are included in net totals; gross sales for those years are not available.

[^283]:    * Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services, by the Department of Transport and the National Harbours Board; part of the financial statistics, by the Department of Public Works; shipping subsidies, by the Director of Subsidized Steamship Services, Canadian Maritime Commission; Panama Canal, by the Governor of the Panama Canal Zone: other canal traffic and statistics of shipping, by the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^284]:    ${ }^{1}$ Exclusive of passenger services.
    ${ }^{2}$ Sea-going and inland international.

[^285]:     ${ }^{2}$ Over keel blocks at H.W. 10 ft ., tide 26.1 ft .

[^286]:    ${ }^{1}$ Navigable depths are occasionally less at times of extremely low water. ${ }^{2}$ Minimum depth between locks 23 ft . 6 in . ${ }^{2} \mathrm{~A}$ 12-hour notice must be given by vessels of more than 6 ft . draught-- Marine railways in this section limit navigation to vessels 50 ft . long, 13.5 ft . beam, 4 ft . draught-weight not over 15 tons. $\quad 5$ Minimum depth of canal with Lake Ontario at elevation 243 ft . above sea level is 8.5 ft . The depth of canal prism is 17 ft .

[^287]:    ${ }^{1}$ Figures for the United States include small amounts of traffic from other foreign countries.

[^288]:    ${ }^{*}$ Prepared by G. Gordon McLeod, Economist, Dept. of Transport, Ottawa, with the approval of the Hon. Lionel Chevrier, President, St. Lawrence Seaway Authority.

[^289]:    ${ }^{1}$ Sales of property, stone, etc.
    ${ }^{2}$ These are works not covered elsewhere in these tables and are shown in the Public Accounts as schedules to the Balance Sheet of the Government of Canada.

[^290]:    ${ }^{1}$ Exclusive of harbours under the National Harbours Board as shown in Table 29.

[^291]:    - Sections 1 and 2 of this Part were revised in the Department of Transport and Section 3, except where otherwise indicated, in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics. For military air transportation, see Chapter XXVIII on Defence of Canada.

[^292]:    ${ }^{1}$ Express and excess baggage. $\quad{ }^{2}$ Includes other revenue. ${ }^{2}$ Interest and exchange charges excluded except for 1946, 1947, 1948 and 1949. Includes interest on capital invested.

[^293]:    ${ }^{1}$ Exclusive of charter service, figures for which are not available.
    92428-58

[^294]:    ${ }^{1}$ For footnote, see end of table, p. 910.

[^295]:    * Prepared by Dr. G. S. Hume, Director General of Scientific Services, Department of Mines and Technical Surveys, Ottawa.

[^296]:    * Statistics of oil pipelines are given in greater detail in the DBS monthly report, Pipe Lines (Oil)

[^297]:    ${ }^{1}$ Includes natural gasoline.
    ${ }^{2}$ See text above table.
    ${ }^{2}$ Including deliveries to U.S. pipelines at Gretna, Man., amounting to 949,470 bbl. in 1950, 14,525,755 bbl. in 1951, 21,520,761 bbl. in 1952 and $30,524,131$ bbl. in 1953. 4 Products of refineries.

[^298]:    ${ }^{1}$ Operations of the Imperial Oil Company in Alberta, formerly reported as trunk deliveries, were reported as gathering deliveries as from January 1953; thus, figures given in this table for 1953 are not

[^299]:    * Revised under the direction of G. C. W. Browne, Controller, Telecommunications Division, Department of Transport, Ottawa.

[^300]:    *Except where otherwise noted, this Part has been revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics. The Division issues annual reports dealing with telegraph and telephone statistics.
    $\dagger$ Revised by G. C. W. Browne, Controller of Telecommunications, Telecommunications Division, Department of Transport, Ottawa.

[^301]:    ${ }^{1}$ Excludes commission operators.
    ${ }^{2}$ Includes messages to and from vessels on the Great Lakes and the St. Lawrence River and messages to and from stations. ${ }^{3}$ Excludes messages relayed and includes paid wireless messages to and from ships in the Gulf of St. Lawrence and on the Atlantic Ocean.

[^302]:    - Revised in the Department of Transport, Ottawa.

[^303]:    ${ }^{1}$ The issuance of private receiving radio licences was discontinued as from Apr. 1, 1953.
    ${ }^{2}$ Applied to the operations of the Department of Transport.
    ${ }^{2}$ Section 14 (1) of the Canadian Broadcasting Act, provides that "The Minister of Finance shall deposit, from time to time, in the Bank of Canada, or in a chartered bank to be designated by him, to the credit of the Corporation (a) the gross amount of moneys received in each year from licence fees in respect of private receiving licences and private station broadcasting licences without deducting therefrom any costs of collection or administration"

[^304]:    ${ }^{1}$ Station location (Z) markers are installed at 93 radio range stations. ${ }^{2}$ The station at Port Harrison, Que., also periorms restricted coast station service during the season of navigation, but as it is primarily a weather-reporting station it is shown under this heading only.
    ${ }^{3}$ Includes 51 repeater stations.

    The foregoing classes are numerous and complicated by the fact that many of them perform closely related functions. Descriptions of the services provided by different types of government-operated stations are given in the 1951 Year Book, pp. 804-808.

[^305]:    * Revised by T. J. Allard, Executive Vice-President, Canadian Association of Radio and Television Broadcasters, Ottawa.

[^306]:    ${ }^{1}$ Included in Halifar.

[^307]:    ${ }^{1}$ Less than $\$ 10,000$.

[^308]:    ${ }^{1}$ Less than $\$ 10,000$.

[^309]:    ${ }^{1}$ Less than $\$ 10,000$.

[^310]:    - Includes a very few semi- and tri-weekly newspapers.

[^311]:    ${ }^{1}$ Tri-weekly. 1 Saturday editions.
    ${ }^{2}$ National week-end.
    4 Includes 2 national week-end, 3 bilingual and 1 Saturday editions.
    ${ }^{2}$ Includes 2 national week-end, 2 bilingual and cludes 1 national ${ }^{5}$ Sunday edition.
    ${ }^{7}$ Includes 1 bilingual.

[^312]:    - Prepared in the Decennial Census of Distribution Section, Industry and Merchandising Division of the Dominion Bureau of Statisties.

[^313]:    ${ }^{1}$ Totals for Canada include figures for the Yukon and Northwest Territories, but the individual items under "Canada" are exclusive of the figures for those Territories.

    ## 3.-Wholesale Trade, classified by Major Type of Operation and Kind of Business, 1951

[^314]:    For footnote, see end of table.

[^315]:    ${ }^{1}$ Figures withheld to avoid disclosure of individual operations.

[^316]:    ${ }^{1}$ Excludes refreshment booths and stands, and fish and chip shops.

[^317]:    ${ }^{1}$ Includes kinds of business for which separate figures are not shown.

[^318]:    - Revised in the Merchandising and Servicee Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

[^319]:    ${ }^{1}$ Includes the Yukon and Northwest Territories.

[^320]:    ${ }^{1}$ Included in "Other".

[^321]:    * For more detailed information, see DBS annual, Live Stock and Animal Products Slatistics, and the Department of Agriculture publication, Annual Market Review. Statistics of live stock and poultry are given at DD. 413-415 and 422-423, respectively, of this volume.

[^322]:    - The material in this Section was supplied by various Divisions of the Departments of Agriculture, Fisheries, Mines and Technical Surveys, National Revenue and of the Dominion Bureau of Statistics.

[^323]:    ${ }^{1}$ Excludes Newfoundland.

[^324]:    ${ }^{1}$ Figures are subject to revision.

[^325]:    * Prepared under the direction of Dr. J. G. Taggart, C.B.E., Deputy Minister of Agriculture, by J. E. O'Meara, Economi's Division, Marketing Service, Department of Agriculture.

[^326]:    ${ }^{1}$ Duplication exists in this column as some associations market produce as well as handle supplies. Some associations market more than one product and some handle many of the supplies listed.

[^327]:    ${ }^{*}$ Revised in the Transportation Section, Public Finance and Transportation Division, Dominion Burean of Statigtics.

[^388]:    1Before the transfer of Bank of Canada profits for the year ending Dec. 31 from "All'other liabilities'* to "Government of Canada deposits".

    The Industrial Development Bank.-The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:-
    "To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained. by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises."

[^389]:    ${ }^{1}$ In January 1950, the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada.

    ## 4.-Annual Averages of Note Circulation in the Hands of the Public, 1944-53

    Norg.-Newfoundland has long used Canadian bank notes so that when that Province united with Canada in 1949 no adjustment was necessary in the circulation figures, but the effect of including the population of Newfoundland from 1949 was to reduce the per capita note circulation by an estimated \$1. Figures for the years 1926-43, comparable to those shown below, are given in the 1946 Year Book, p. 959.

[^390]:    ${ }^{1}$ Estimated aggregate minimum quarterly balances in chartered bank personal savings deposits in Canada plus non-personal notice deposits in Canada.
    ${ }^{2}$ Holdings of all investors, other than the Bank of Canada, chartered banks and Government of Canada accounts. Includes direct and guaranteed securities (including refundable taxes) at par. Direct debt includes both matured and unmatured issues outstanding, exclusive of sinking fund holdings; guaranteed debt is included on the basis of total unmatured issues outstanding; Newfoundland debt assumed by the Government of Canada has been included since June 1949. Foreign pay securities have been valued at official mid-rates of exchange to Sept. 30, 1950, and at market rates thereafter.

[^391]:    ${ }^{1}$ Note circulation excluding notes held by chartered banks together with total coin issued by the Mint, ess coin held by the banks. ${ }^{2}$ Demand and notice deposits, deposits of Provincial Governments, United Kingdom and foreign banks; less 'float' deposits, that is, cheques on banks as shown in month-end returns.

[^392]:    ${ }^{1}$ The Bank of Toronto and the Dominion Bank amalgamated Feb. 1, 1955, to become the TorontoDominion Bank.
    11.-Branches of Individual Canadian Chartered Banks outside Canada, with
    their Locations, as at Dec. 31, 1952 and 1953

[^393]:    For footnotes, see end of table.

[^394]:    ${ }^{1}$ Represents certified cheques, interest accrued on interest-bearing accounts, items in transit, etc.

[^395]:    * Includes St. John's. N'f'ld., in 1953, which was excluded in the 1938 data. Excluding St. John's in 1953, ranking would be: Prairie Provinces, Ontario, Maritime Provinces and Quebec.

[^396]:    1 Total Bank of Canada notes in the possession of the chartered bank together with its deposits with the Bank of Canada, but excluding minor amounts of gold carried in such reserves. ${ }^{2}$ Mercantile Bank of Canada commenced business Dec. 7, 1953; December figures included in computation of totals for the year 1953.

[^397]:    ${ }^{1}$ After January 1950, the chartered banks' liability for such of their notes as then remained outstanding was transferred to the Bank of Canada.
    ${ }^{2}$ Mercantile Bank of Canada commenced business Dec. 7. 1953; December figures included in computation of totals for the year 1953.

[^398]:    - Prepared by J. E. O'Meara, Economics Division, Marketing Service, Department of Agriculture, Ottawa.

[^399]:    ${ }^{1}$ Reporting organizations only.

[^400]:    * The operations of the Foreign Exchange Control Board from the time of its establishment to the termination of exchange control in December 1951 are reviewed in previous editions of the Year Book.
