${ }^{1}$ Shipments plus imports less exports. $\quad{ }^{2}$ Includes imported clinker, other than white.
Stone.-The stone industry has two main divisions-stone quarrying and the stone products industry. The granite, limestone, marble, sandstone and slate quarries of Canada yield high-grade structural and decorative materials and also supply requirements for chemical and other allied industries. The gross value of stone of all varieties produced in Canada in each of the years $1958-60$ was estimated at approximately $\$ 61,000,000$. Details for 1961 were not available at time of going to press.

${ }^{1}$ Includes minor items not specified.
Clay Products.-The sales value of clay products produced in 1961 was 10.5 p.c. lower than the peak production of 1959. Common clays suitable for the production of building bricks and tile are found in all the provinces; production is greatest in Ontario and Quebec. Stoneware clays are produced largely from the Eastend and Willows areas in Saskatchewan and shipped to Medicine Hat, Alta., where, utilizing the cheap gas fuel, they are manufactured into stoneware, sewer pipe, pottery, tableware, etc. Stoneware clay also occurs in Nova Scotia and, although it has not been developed extensively for ceramic use, some is used for pottery. Two large plants and a few small plants manufacture fireclay refractories from domestic clay in British Columbia, Saskatchewan and Nova Scotia. Deposits of high-grade, plastic, white burning clays occur in northern

Ontario and deposits yielding high-grade china clay have been found along the Fraser River in British Columbia but these have not been used on a commercial scale, nor have the ball clays of high bond strength occurring in the white mud beds of southern Saskatchewan been developed to any extent.

## 32.-Value (Total Sales) of Clay Products Produced, by Province, 1952-61

## Section 5.-Industrial Statistics of the Mineral Industry

The scope of the annual statistics on mineral production published by the Dominion Bureau of Statistics includes a general review of the principal mineral industries such as the copper-gold, silver-lead-zinc, and nickel-copper industries as well as a section on metallurgical works. Additional data published at irregular intervals include such features as numbers of employees, salaries and wages paid and net value added by processing.

The figures for 'net, value added by processing' of industries given in Tables 33 and 34 are, in each table, the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada, less the cost of materials, fuel, etc. The totals indicate more nearly the actual returns to the different industries than do the values for the minerals in Table 5, p. 519 where, with respect to copper, lead, zinc and silver, values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity and other supplies consumed in the production process.

Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminum, where imported ore only is used, and of cobalt which is derived mainly from African ores. The net shipments of these plants include, therefore, the net value of the metals recovered from these imported ores and to this extent the net values added shown in Tables 33 and 34 include products of other than Canadian origin.

## 33.-Summary Statistics of the Mineral Industry, by Province, 1960

Note.-The figures given in this table for 1960 are not comparable with those given for earlier years in previous editions of the Year Book because of the use of a different method of compilation.

| Province or Territory | Plants or Establishments | Employees | Salaries and Wages | Cost of Process Supplies, Fuel, <br> Electricity, Freight and Smelter Charges | Net Value Added by Processing |

## Section 6．－World Production of Certain Metallic Minerals and Fuels

Table 35 shows the production of certain metallic minerals and fuels in the different countries of the world for the year 1960．These figures are taken from the United Nations Statistical Yearbook 1961 which presents production figures for a much more extensive list of mining and quarrying industries．The 1960 figures are provisional and have been con－ verted from kilograms to ounces troy for gold，from metric tons to ounces troy for silver， and from metric tons to short tons for the other metals and fuels shown．

## 35．－World Production of Certain Metallic Minerals and Fuels， 1960

Nore．－Where dashes occur throughout this table they indicate that no figures were given in the United Nations Statistical Yearbook either because there was no production or because the quantity was not available．

will be found facing $p .1$ of this volume.

## Section 1.-Water Power Resources-Available and Developed*

Canada, a land of many large lakes and fast-flowing rivers, is richly endowed with immense water power resources. With the exception of the prairies of the mid-west, these resources are found in considerable magnitude in almost every part of the country.

British Columbia, traversed by three distinct mountain ranges and with, generally speaking, a high rate of precipitation, has many mountain rivers offering abundant opportunity for the development of hydro-electric power. Notable for their power potential are such rivers as the Columbia, the Fraser, the Peace and the Stikine. Up to the present time, however, hydro-electric developments on smaller rivers in the southern part of British Columbia have supplied the major load requirements of the province. The immense power resources of the larger rivers have gone unused owing to a number of factors, including conflict of interest between fisheries and power development and remoteness from present demand areas. The water power resources of British Columbia, which in total magnitude are the second greatest in Canada, have played and will continue to play a very important part in the development of the province.

The Yukon Territory and the Northwest Territories possess extensive water power resources on the Yukon and South Nahanni Rivers. Indications are that the rivers draining the Keewatin District lying north of Manitoba will also contribute materially to the total power potential of the Northwest Territories. Owing to the lack of developed native fuel sources and to transportation difficulties, water power is of special importance in the development of mining areas such as at Yellowknife in the Northwest Territories and at Mayo in Yukon Territory.

Of the three Prairie Provinces, Manitoba has the greatest water power potential. For many years the more heavily populated southern region of the province has been supplied from hydro-electric developments on the Winnipeg River. With the advent of high-voltage long-distance transmission, however, power from hydro-electric stations on northern rivers can be expected to flow south to help meet the increasing demands of industrial, urban and rural users. In both Alberta and Saskatchewan, abundant reserves of coal, oil and natural

[^168]gas are used to fuel the thermal-electric plants supplying a large part of the province's power requirements. In Alberta, the principal hydro-electric developments are located on the Bow River and its tributaries but there are substantial power resources located in northern regions of the province, somewhat remote from present centres of population. In Saskatchewan, the existing hydro-electric plants are located in the northern areas and their output is used almost exclusively for mining purposes. However, significant water power resources still remain in the central and northern parts of the province and, in 1963, power from new developments on the Saskatchewan River will be fed into the transmission network serving the more settled areas.

The water power resources of Ontario are exceeded in total magnitude only by those of Quebec and British Columbia. In terms of installed hydro-electric capacity, Ontario ranks second. The largest power development in the province is located at Queenston on the Niagara River, where the Sir Adam Beck-Niagara Generating Stations Nos. 1 and 2 and the associated pumping-generating station have a combined capacity of $2,521,000 \mathrm{hp}$. In recent years, the development of water power sites in Ontario has progressed at a formidable rate, particularly those located reasonably close to demand areas. Most of the province's remaining undeveloped hydraulic resources are located in areas relatively distant from power markets, a factor that has increased the emphasis on thermal-electric development. However, this emphasis is being modified as a result of the initiation of development of a number of the more remote hydro-electric sites to supply power to an integrated system drawing energy from both hydraulic and thermal sources.

Quebec is the richest province in terms of water power resources, having more than 30 p.c. of the total recorded for Canada. Quebec also ranks highest in terms of developed water power, the present installation of $12,576,845 \mathrm{hp}$. representing about $47 \mathrm{p} . \mathrm{c}$. of the national total. The Beauharnois development on the St. Lawrence River, with 2,161,000 hp . installed, is the greatest concentration of hydro-electric capacity in one plant in Canada. Notable also are the Bersimis I development on the Bersimis River and the Shipshaw plant on the Saguenay River, each with installed capacities of $1,200,000 \mathrm{hp}$. A major power plan which will represent a significant advance in the development of Quebec's hydro-electric resources is under construction. The plan involves the harnessing of the headwaters of the Manicouagan and Outardes Rivers and will eventually make available nearly $6,000,000$ hp . of additional capacity at new and existing developments on the two rivers.

The water power resources of New Brunswick and Nova Scotia, although small in comparison with those of other provinces, are a valuable source of power. Numerous rivers in both provinces provide moderate-sized power sites advantageously situated for urban or rural use. In Prince Edward Island there are no large streams and, consequently, water power sites are limited in size and are used for small mills. On the Island of Newfoundland, topography and runoff conditions favour the development of power, even though the drainage areas of the rivers are, in general, not great. Considerable development has taken place on the Island, mainly to serve the pulp and paper industry. In Labrador, the Hamilton River and its tributaries rank as one of the largest undeveloped sources of water power in Canada.

An accurate comparison of the magnitude and development of Canada's water power resources with those of other countries is not possible because world statistics are incomplete and are not tabulated on the same basis. From information available, however, it is seen that Canada is exceeded only by the United States in the total of water power capacity actually installed, and only by Norway in the amount of installation per thousand of population. In terms of potential water power resources, Canada ranks fifth. However, with the exception of the United States, water power resources in Canada are more readily available to prospective markets than they are in the countries that have greater power potential.

Table 1 lists, by province or territory, the estimated total water power resources of Canada and the total existing capacity of all water power plants.

## 1.-Available and Developed Water Power, by Province, as at Jan. 1, 1962

${ }^{1}$ Includes water wheels and hydraulic turbines installed. stream-flow regulation based on known storage potentials.

The figures listed in the second and third columns of Table 1 represent continuous 24-hour power based on available data on stream flow and hydraulic head at individual sites. The hydraulic head used is the feasible concentration of head, which has been measured or at least estimated at existing falls, rapids and known power sites. No consideration has been given to possible economic concentrations of head on rivers and streams of gradual gradient, except at those locations where the available head has been definitely established by field investigations.

It should be emphasized that the figures of available power represent only the minimum water power possibilities of Canada. Many unrecorded power sites exist on rivers and streams throughout the country, particularly in the less explored northerly districts. As power surveys are extended, information on new sites will become available, resulting in substantial additions to present estimates of available power. With the exception of British Columbia and Yukon Territory, estimates of available power are based upon existing river flows and do not take into account the benefits of stream-flow regulation resulting from the development of storage potential. In addition, the figures of available power do not include the power potential of major river diversions that have been investigated but not developed.

The figures in the third column of Table 1 are the totals of plant capacities based upon the manufacturer's name-plate rating of each unit. The maximum economic turbine installation at any power site can be determined only by consideration of the conditions pertinent to its development. It is the usual practice, however, to install a total turbine capacity in excess of the power equivalent of the ordinary six-months flow at the site. The extent to which the installed capacity exceeds the power equivalent of the ordinary sixmonths flow depends upon the system of power-plant operation, varying widely throughout the country, and amounting to several hundred per cent in some instances. Therefore, figures of installed turbine capacity are not directly comparable with figures of available power at either ordinary minimum or ordinary six-months flow.

The steady growth of hydraulic turbine capacity is shown in Table 2. The average annual growth of $56,000 \mathrm{hp}$. in the period $1900-05$ increased sharply to about $150,000 \mathrm{hp}$. per annum in the 1906-22 period, owing largely to improvements in electric power transmission and to the construction of large hydro-electric stations. As a result of the heavier demand for electricity during the prosperous 1920 's, the rate of installation increased appreciably in 1923 and continued at a nearly uniform rate of $377,000 \mathrm{hp}$. per annum until
1935. Conditions resulting from the economic depression of the early 1930 's were responsible for a decrease in construction starts and the comparatively low rate of installation during the period 1936-39. The wartime demand for power accelerated the installation rate to an average of $481,000 \mathrm{hp}$. per annum for the period 1940-43. Few new developments were initiated in the later years of the war or in the immediate postwar period so that, from 1944 to 1947, only a small amount of new capacity came into operation. The program of construction of hydro-electric power plants gained momentum soon after the War, however, and the results are apparent in the substantial growth in new capacity brought into service during the period 1948-60. The average annual rate of installation for this period exceeded $1,200,000 \mathrm{hp}$. In sharp contrast to this high average rate is the comparatively moderate net total of $294,650 \mathrm{hp}$.* of new capacity put into service in 1961. During the next few years, however, the installation rate for new hydro-electric developments is expected to pick up again with the completion of a number of major projects planned or under construction.

[^169]
## 2. -Hydraulic Turbine Horsepower Installed, by Province, as at Dec. 31, Decennially 1900-50 and Annually 1951-61

Nors.-Figures for the years 1900-30 are given in the 1939 Year Book, p. 362; for 1931-39 in the 1946 edition, p. 362; and for 1940-49 in the 1954 edition, pp. 556-557.

| 1961. | 988,900 | 142,135 | 414,455 | 3,701,326 | 60,440 | 26,688,094 |

The availability of large amounts of low-cost hydro-electric energy has been an essential factor in the development of Canadian industry. Power from hydro-electric plants ranging in capacity from a few hundred horsepower to more than a million horsepower is carried via transmission line networks to urban centres and rural districts. The ability to transmit power over relatively long distances has facilitated the decentralization of industry and has enabled manufacturers to carry on operations in many of the smaller centres of population.

Table 3 indicates the respective amounts of water power developed by utilities and by industrial establishments. For the purposes of this tabulation, utilities are defined as companies, municipalities or individuals who sell most of the power they develop. In some cases, they include also certain subsidiary companies whose main purpose is to develop and sell power to a parent company for industrial purposes. The total of $20,597,193 \mathrm{hp}$. of turbine capacity installed in plants operated by utilities on Jan. 1, 1962 represented 77 p.c. of Canada's total installed capacity.

Industrial establishments are defined as companies or individuals who develop power mainly for their own use. The total installed capacity of plants operated by industrial establishments on Jan. 1, 1962 was $6,090,901 \mathrm{hp}$. In addition to the power generated in industrial plants, industry purchases a considerable amount from utilities.

The total hydraulic installation at the beginning of $1962(26,688,094 \mathrm{hp}$.) was the total of all existing installations of water wheels and hydraulic turbines in Canada irrespective of whether or not the equipment was in use.

## 3.--Installed Water Power Capacity, by Province, as at Jan. 1, 1962

| Province or Territory | Turbine Installation |  | Total ${ }^{3}$ |
| :---: | :---: | :---: | :---: |
|  | Utilities ${ }^{1}$ | Industries ${ }^{2}$ |  |
|  | hp. | hp. | hp. |
| Newfoundland. | 270,305 | 113,720 | 384,025 |
| Prince Edward Island | 240 | 1,420 | 1,660 |
| Nova Scotia. | 189,345 | 15,193 | 204,538 |
| New Brunswick | 227,940 | 26,318 | 254,258 |

| Percentage of total installation | 77 | 23 | 100 |

[^170]
## Section 2.-Power Generating Capability and Load Requirements*

Power generating capability, as covered in this Section, is the measurement of the available generating resources of all hydro and thermal facilities at the time of the onehour firm peak load for each reporting company, and is not equal to the capacity of such generating facilities. For example, a hydro plant may have a capacity of $100,000 \mathrm{kw}$. but if, at the time of peak-load, the water available for generation is only 80 p.c. of the plant capacity requirements, then its capability is $80,000 \mathrm{kw}$.

Total generating capability has grown at a rapid rate since 1950. The annual rate of increase was 9.2 p.c. in the ten-year period 1951-60 and 8.4 p.c. in the period 1958-61. In comparison, the forecast rate of growth for the years 1962-65 is only 5.8 p.c.; thermal

[^171]
generating capability is expected to grow at the average rate of 14.5 p.c. a year in the forecast period compared with 17.1 p.c. in the period 1951-60, but hydro-electric capability is expected to increase at only 3.3 p.c. a year compared with 8.0 p.c. in the 1951-60 period.

Among the provinces, Quebec has the largest generating capability, followed by Ontario, British Columbia and Alberta. Quebec also has the largest hydro-electric generating capability, followed by Ontario and British Columbia, but Ontario has the largest thermal capability, followed by Saskatchewan and Alberta. The first nuclear capability is scheduled for 1965.

The largest absolute growth in generating capability for the forecast years is indicated for Ontario, amounting to $2,135,000 \mathrm{kw}$., followed by Quebec $1,616,000 \mathrm{kw}$., British Columbia $582,000 \mathrm{kw}$., and Alberta $450,000 \mathrm{kw}$. Quebec will meet most of its increased generating capability by adding over $1,300,000 \mathrm{kw}$. in hydro capability and $200,000 \mathrm{kw}$. in thermal capability. Ontario will add $1,750,000 \mathrm{kw}$. thermal, including $200,000 \mathrm{kw}$. nuclear, and only 385,000 hydro; British Columbia plans to add $466,000 \mathrm{kw}$. thermal and $110,000 \mathrm{kw}$. hydro; and Alberta will add $150,000 \mathrm{kw}$. hydro and $300,000 \mathrm{kw}$. thermal. Thus, it is apparent that thermal capability is becoming of greater importance, partly because of decreasing availability of hydro resources in provinces such as Ontario and partly because technological advances have made possible much more efficient use of thermal fuels in the operation of thermal base load plants.

Firm power peak load is the measure of the maximum average net kilowatt demand of one-hour duration from all loads, including commercial, residential, farm and industrial consumers as well as the line losses. Such load demand increased at the rate of 7.0 p.c. a year from 1951 to 1960 but only 5.7 p.c. a year from 1958 to 1960 ; peak load demand is forecast to increase at the average rate of 6.2 p.c. a year in the period 1962-65. As a result
of the rapid increase in generating capability and the somewhat slower but steady increase in the peak loads as well as the slight reduction in deliveries of firm power to the United States, the indicated reserve on net generating capability, which increased steadily from 1951 to 1960, declined in 1961; it is forecast to increase in 1962, decrease in 1963 and 1964 and increase again in 1965. The reserve ratio as a percentage of firm power peak load, which reached a high of 28.2 p.c. in 1960, is expected to decrease to 15.2 p.c. in 1964, the lowest ratio since 1948, but increase to 20.3 p.c. in 1965.

## 4.-Net Generating Capability, by Province, 1961

## Section 3.-Electric Power Statistics

Electric power statistics presented in this Section are based on reports of all electrical utilities and all industrial establishments that generate energy regardless of whether or not any is sold, and therefore show the total production and distribution of electric energy in Canada. Utilities are defined as companies, commissions, municipalities or individuals whose primary function is to sell most of the electric energy that they have either generated or purchased. Industrial establishments are defined as companies or individuals that generate electricity mainly for use in their own plants.

The current series of electric power statistics dates back to 1956. Earlier reports, entitled Central Electric Stations, were concerned solely with the electrical utility industry and hence excluded statistics relating to power produced by industrial establishments for their own use, although power sold by such establishments was included.

The figures of total water and thermal power generated for the years 1944-55 shown in Table 6 are compiled on the old basis, figures for 1956 are shown on both bases for comparative purposes, and those for later years are on the new basis.
6.-Electric Energy Generated, by Type of Station 1944-60, and by Province 1959 and 1960

| Year and Province or Territory | Generated by- |  | Total | Year and Province or Territory | Generated by- |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

${ }^{1}$ New series, see immediately preceding text.
Of the total generation in 1960 of $114,377,933,000 \mathrm{kwh}$., 92.6 p.c. was produced from water power and 7.4 p.c. was generated thermally; the proportions differed somewhat among provinces as shown in the following statement.

| Province | Hydro | Thermal | Province or Territory | Hydro | Thermal |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | p.c. | p.c. |  | p.c. | p.c. |
| Newfoundland. | 94.2 | 5.8 | Manitoba. | 97.8 | 2.2 |
| Prince Edward Island | 1.2 | 98.8 | Saskatchewan | 22.2 | 71.8 |
| Nova Scotia.. | 33.1 | 63.9 |  |  |  |
| New Brunswick. | 47.0 | 53.0 | Alberta....... | 25.7 | 74.3 |
| Quebec. | 99.4 | 0.6 | British Columbia | 94.0 | 6.0 |
| Ontario.. | 97.6 | 2.4 | Yukon and N.W.T. | 84.7 | 15.3 |

Table 7 gives summary figures of power production and distribution classified by province and Tables 8 and 9 give figures classified by type of production establishment. Total installed capacity in Canada amounted to $23,035,002 \mathrm{kw}$. in 1960, an increase of $1,906,632 \mathrm{kw}$. over 1959. Of the 1960 total, $18,418,749 \mathrm{kw}$. were accounted for by utilities and the remainder by industrial establishments. During 1959 and 1960 total sales to ultimate customers amounted to $71,888,110,000 \mathrm{kwh}$. and $76,829,969,000 \mathrm{kwh}$., respectively, of which 99.7 p.c. was sold each year by utilities.

Sales to power customers made up 61.5 p.c. of the total in 1959 and 61.1 p.c. in 1960, sales to domestic and farm customers were 26.4 p.c. and 26.5 p.c., and commercial sales 11.2 p.c. and 11.5 p.c. in the respective years. Exports to the United States in 1960 amounted to $5,495,572,000 \mathrm{kwh}$. compared with $4,580,619,000 \mathrm{kwh}$. in 1959.

Average domestic and farm consumption rose from 4,338 kwh. in 1959 to $4,489 \mathrm{kwh}$. in 1960. Among the provinces, the averages in 1960 varied from a low of $1,625 \mathrm{kwh}$. in Prince Edward Island to a high of $6,184 \mathrm{kwh}$. in Manitoba. For domestic and farm customers the average annual bill was $\$ 71.75$ in 1960 as against $\$ 69.76$ in 1959, an increase of 2.9 p.c.

Although many utilities do not keep records on farm customers separate from other domestic customers, the data reported on farm service indicate that the average consumption rose from $4,086 \mathrm{kwh}$. per customer in 1959 to $4,345 \mathrm{kwh}$. in 1960 and the average bill from $\$ 93.05$ to $\$ 96.49$.

In 1960, natural gas accounted for 45.8 p.c. of thermal generation by utilities, coal for 41.1 p.c. and petroleum fuels for 13.1 p.c.; corresponding percentages in 1959 were 50.2 p.c., 35.9 p.c. and 13.9 p.c., respectively.
11.-Fuel Used by Electrical Utilities to Generate Power, by Province, 1959 and 1960

## Section 4.-Water and Thermal Power Developments in the Provinces and Territories, 1961

During 1961, hydro-electric turbine capacity of $294,650 \mathrm{hp}$. and thermal-electric generating capacity of $661,075 \mathrm{kw}$. were added to the electric power production facilities of Canada. New installations for the year thus were approximately 25 p.c. water power and 75 p.c. thermal power. This was the first time in recent years that installation of thermal-electric generating capacity during one year exceeded that of hydro-electric capacity. The trend will continue in 1962 when approximately $900,000 \mathrm{kw}$. of new thermal capacity and some $416,000 \mathrm{hp}$. of water power capacity are expected to be added. However, more than $8,100,000 \mathrm{hp}$. of new hydro-electric capacity and about $2,500,000 \mathrm{kw}$. of new thermal-electric capacity were either under construction or in the planning stage at the end of 1961 and are expected to be added in the years subsequent to 1962.

Progress in construction of both hydro-electric and thermal-electric plants during 1961 is outlined below, by province and territory.

Atlantic Provinces.-Although three of the four Atlantic Provinces carried on construction for the development of water power resources, only Nova Scotia brought new hydro-electric capacity into service in 1961. In thermal-electric development, however, some new capacity was completed in each of the four provinces during the year.

In Nova Scotia, the Nova Scotia Power Commission completed the construction of two single-unit hydro-electric developments on the Sissiboo River. One of these, with a capacity of $12,000 \mathrm{hp}$., is located at Weymouth Falls and the other, with a capacity of $8,000 \mathrm{hp}$., at Sissiboo Falls. The Commission was giving active consideration to the construction of two other developments-a $10,800-\mathrm{hp}$. plant at Riverdale on the Sissiboo River, and a $90,000-\mathrm{hp}$. development on Wreck Cove Brook. The Nova Scotia Light and Power Company Limited is expected to complete the construction of its single-unit, 7,500hp . development on the Allain (Lequille) River at Lequille in 1963. In addition, the Company is actively considering the development of a $6,500-\mathrm{hp}$. plant on the Nictaux River at Alpena. In the thermal-electric field, an $11,500-\mathrm{kw}$. steam plant was brought into service at Port Hawkesbury by Nova Scotia Pulp Limited.

In Newfoundland, new electric generating facilities brought into service in 1961 consisted of $1,200 \mathrm{kw}$. of thermal-electric capacity. This new capacity resulted from the addition of a $1,000-\mathrm{kw}$. unit at the Iron Ore Company of Canada thermal plant at Carol Lake in Labrador and the installation of single 100-kw. units at each of the Newfoundland Light and Power Company's plants at Badger and Baie Verte. In the hydro-electric field, the Twin Falls Power Corporation Limited continued construction of its Twin Falls hydro-electric development on the Unknown River in Labrador. The initial stage, comprising two units of $60,000 \mathrm{hp}$. each, is scheduled for completion in mid-1962. Ultimate development of this site is expected to reach $300,000 \mathrm{hp}$. Two other hydro-electric developments, both on the island portion of the province, were in the planning stage. One of these, with an initial installation of $77,000 \mathrm{hp}$. in two units and an ultimate capacity of up to $350,000 \mathrm{hp}$., is planned by the Southern Newfoundland Power and Development Limited for installation on the Salmon River at Head Bay d'Espoir. The other is planned by the Bowater Power Company Limited which proposes to install a $54,000-\mathrm{hp}$. hydro-electric development on Hinds Brook.

In New Brunswick, the New Brunswick Electric Power Commission's Courtenay Bay steam plant at East Saint John was placed in operation in 1961 with an initial installation of $50,000 \mathrm{kw}$. in one unit. With reference to future thermal-electric development, the Commission's plans include the construction of a $60,000-\mathrm{kw}$. steam plant at Newcastle Creek on Grand Lake for operation in 1964. In the hydro-electric field, installation of an additional unit at the Commission's Beechwood plant on the St. John River was expected to be completed early in 1962. The new unit, with a turbine rated at $55,500 \mathrm{hp}$., will bring the total installed capacity at Beechwood to $145,500 \mathrm{hp}$. in three units. The Commission also continued studies of a power site on the St. John River at Mactaquac, about 15 miles upstream from Fredericton. Indications are that a total of about $600,000 \mathrm{hp}$. could be installed at this site.

In Prince Edward Island, the Town of Summerside added a 2,200-kw. unit in its dieselelectric plant, raising the total plant capacity to $5,081 \mathrm{kw}$. in eight units. The Maritime Electric Company Limited plans to install a $20,000-\mathrm{kw}$. unit in its steam plant at Charlottetown to augment the $32,500 \mathrm{kw}$. at present available.

Quebec.-In 1961, the Province of Quebec added only $76,700 \mathrm{hp}$. of new hydroelectric turbine capacity to its already substantial power-producing capability. However, this is not a true indication of the level of activity in the field of hydro-electric construction in the province, as construction under way will bring about the installation of some 240,000 hp . of new capacity in 1962 and more than $5,900,000 \mathrm{hp}$. in subsequent years. In addition, about $300,000 \mathrm{kw}$. of new thermal-electric capacity is planned for 1964.

The third and last stage of the Beauharnois development of the Quebec Hydro-Electric Commission was essentially completed in 1961 when the tenth $73,700-\mathrm{hp}$. unit was brought into operation. Provision has been made for an eleventh and final unit which will raise the installed capacity of the entire Beauharnois development to $2,234,700 \mathrm{hp}$. L'Office de L'Electrification Rurale completed the installation of two units of $1,500 \mathrm{hp}$. each on the

Magpie River near Magpie Village. The province's total reported installed capacity was increased by a further $60,000 \mathrm{hp}$. as a result of re-rating of existing equipment at the Aluminum Company of Canada Limited Shipshaw plant on the Saguenay River.

Construction of the Commission's Carillon development on the Ottawa River continued on schedule. Ultimate installed capacity at this site will be $840,000 \mathrm{hp}$. in 14 units of $60,000 \mathrm{hp}$. each. The first of these units is scheduled to be installed late in 1962 and the remaining units during the 1963-65 period. At the Commission's Rapid II development on the Ottawa River, plans have been completed for the addition of a $16,000-\mathrm{hp}$. unit, raising the capacity of the plant to its ultimate total of $64,000 \mathrm{hp}$. in four units.

First details of a major power plan for the Manicouagan region were announced by the Commission in 1960. This plan, which will involve the harnessing of the headwaters of the Manicouagan and Outardes Rivers, is expected to realize some $3,650,000 \mathrm{hp}$. at three sites on the Manicouagan River and an additional $1,440,000 \mathrm{hp}$. at two sites on the Outardes River. In addition, regulation from upstream reservoirs will permit the installation of up to $625,000 \mathrm{hp}$. of new capacity at existing plants on the two rivers. Construction was initiated in 1961 at one site on the Manicouagan River while work was scheduled to begin in 1962 at a second site. An important engineering feature in the over-all plan will be a buttressed, multi-arch, concrete dam 4,000 feet long and 650 feet high, one of the highest and most massive of its kind in the world. This structure will create a reservoir containing $115,000,000$ acre-feet of water and covering 800 sq. miles.

The Shawinigan Water and Power Company commenced clearing operations at its Rapide des Coeurs site on the St. Maurice River where a power plant with an ultimate installed capacity of $210,000 \mathrm{hp}$. will be constructed. The first stage will be completed in 1965 with an initial installation of four $42,000-\mathrm{hp}$. units. The Company has also commenced construction of a $300,000-\mathrm{kw}$. thermal-electric generating station near Sorel on the south shore of the St. Lawrence River. This plant, scheduled to go into operation in 1964, will consist of two $150,000-\mathrm{kw}$. steam turbines.

Ontario.-During 1961, Ontario's thermal-electric capacity was increased by 500,000 kw . and its hydro-electric capacity by a net total of $144,950 \mathrm{hp}$. after allowing for the dismantling of a $1,550-\mathrm{hp}$. hydro-electric plant. Thus, for the second year, the amount of new hydro-electric capacity added in the province was exceeded by the amount of new thermalelectric capacity, a trend which will occur again in 1962.

The Hydro-Electric Power Commission of Ontario was the only power utility in the province to add new electrical capacity or to carry on construction of new generating facilities. The Commission was engaged in the construction or planning of five hydroelectric developments. One of these was the Red Rock Falls development on the Mississagi River where the second and final unit was added, raising the total capacity to $53,000 \mathrm{hp}$. At the Otter Rapids plant on the Abitibi River, two $60,000-\mathrm{hp}$. units were placed in service and construction was continued for the installation of two similar units in 1963. Provision has been made for the later installation of four additional units. The three remaining developments are located on the Mattagami River. At one of these, Little Long Generating Station, construction was well under way with two $84,000-\mathrm{hp}$. units scheduled for service in 1963. Headworks, complete with headgates, will be constructed for the eventual installation of two additional units. Construction of the two other developments, the Harmon and Kipling Generating Stations, had not started by the end of 1961. The three Mattagami River developments, in common with the Otter Rapids Generating Station, will be controlled from the Pinard Transformer Station which is being constructed some 23 miles upstream from Otter Rapids. The Commission proposes to co-ordinate the development of its northern hydraulic resources with the construction of thermal-electric generating facilities in areas of concentrated load. The output of a number of the hydraulic developments will be directed to a terminal station in the north and, from there, to load centres in southern parts of the province by means of extra-high-voltage transmission lines, using voltages more than double those at present employed by the Commission.

Three conventional thermal-electric projects were under construction in the Commission's 1961 program. At the Richard L. Hearn plant in Toronto, the final 200,000-kw. unit was placed in service, bringing the total installed capacity of the station to $1,200,000$ kw . in eight units. At the Lakeview Generating Station, also in the Toronto area, the first of six $300,000-\mathrm{kw}$. units was placed in service late in the year. The remaining units are scheduled to commence operation at the rate of one per year in each of the succeeding five years. A $100,000-\mathrm{kw}$. unit is scheduled for service in 1962 at the Thunder Bay Generating Station located at Fort William. It will be the first unit to be installed at this site, which is capable of eventual development to a capacity of $1,000,000 \mathrm{kw}$.

Two nuclear-electric stations-the $20,000-\mathrm{kw}$. Nuclear Power Demonstration Project near Rolphton and a $200,000-\mathrm{kw}$. Nuclear Power Station at Douglas Point on the shore of Lake Huron-are being built as joint undertakings of the Commission and Atomic Energy of Canada Limited. The Canadian General Electric Company Limited is also a participant in the Nuclear Power Demonstration Project. The Nuclear Power Demonstration Project will be in service in 1962 and the Douglas Point Nuclear Power Station is scheduled for service in 1965. When the operating characteristics of the Douglas Point station have proved satisfactory, it will be purchased by the Commission at a price which will permit its output to be competitive in price with that of a modern conventional thermal-electric station of similar size.

Prairie Provinces.-In Manitoba, the fifth unit at Manitoba Hydro's Kelsey Generating Station was reported as in service in 1960 but it was not brought into operation until early in 1961. This station has a total capacity of $210,000 \mathrm{hp}$. in five units and provision has been made for the addition of a sixth unit when required. Power from the Kelsey station supplies the International Nickel Company's mining project in the Moak, Mystery and Thompson Lakes area of northern Manitoba. In the thermal-electric field, Manitoba Hydro placed in service a second $66,000-\mathrm{kw}$. steam turbine at the Selkirk Generating Station. This completed the initial stage of development and brought the station's total generating capacity to $132,000 \mathrm{kw}$. The Selkirk site is capable of an ultimate development of as much as $1,000,000 \mathrm{kw}$.

Construction progressed favourably at the site of Manitoba Hydro's Grand Rapids hydro-electric development on the Saskatchewan River near its mouth on the west shore of Lake Winnipeg. Initial installation at Grand Rapids will consist of three $150,000-\mathrm{hp}$. units, two of which are scheduled for service late in 1964 and the third in 1965. Provision is being made in the powerhouse substructure for the eventual addition of a fourth unit. Transmission and terminal station facilities, at present either under construction or being planned, will permit power from developments in northern areas to be fed into networks serving the southern parts of the province.

In Saskatchewan, Eldorado Mining and Refining Limited completed and put into service a single-unit, $10,000-\mathrm{hp}$. hydro-electric development at Waterloo Lake on the Charlot River. The Prairie Farm Rehabilitation Administration continued construction of the South Saskatchewan River Project at the Coteau Creek site. Although this project is being constructed primarily for irrigation purposes, hydro-electric generating facilities will be installed at the dam by Saskatchewan Power Corporation. Initial installation will consist of three units of about $60,000 \mathrm{hp}$. each, with provision being made for the eventual addition of two similar units. The project is scheduled for completion in 1966. Construction of the Saskatchewan Power Corporation's Squaw Rapids hydro-electric development proceeded at a favourable rate. This development, located on the Saskatchewan River 35 miles northeast of Nipawin, will consist of six units, each rated at $46,000 \mathrm{hp}$. Installation of four of these units is planned for 1963 and the remainder for 1964.

In Alberta, Calgary Power Ltd. continued construction at its new hydro-electric development at Big Bend on the Brazeau River. The storage dam, which will create a reservoir of 300,000 acre-feet, was nearing completion at the end of the year and water was
being impounded. Initial installation at Big Bend will consist of one 200,000-hp. unit, scheduled for service in 1964. Work continued on the $150,000-\mathrm{kw}$. addition to the Company's Wabamun steam plant. Installation of this unit, scheduled for completion late in 1962, will raise the total installed capacity of the plant to $282,000 \mathrm{kw}$. in three units.

Canadian Utilities Limited transferred an 8,500-kw. gas turbine unit from Vermilion to Sturgeon, increasing the total installed capacity of the Sturgeon plant to $18,500 \mathrm{kw}$. in two units. The total capacity of the Vermilion station was increased to $39,500 \mathrm{kw}$. in five units by the addition of a $30,000-\mathrm{kw}$. gas turbine.

The City of Edmonton enlarged its thermal-electric generating station to permit the installation of an additional $75,000-\mathrm{kw}$. unit. Installation of this unit in 1963 will increase the station's total capacity to $330,000 \mathrm{kw}$. in nine units.

British Columbia.-In 1961, the Government of British Columbia enacted legislation to bring under public ownership the British Columbia Electric Company and also the interests of the Peace River Development Company, in so far as these interests applied to development of the Peace River hydro-electric project. In addition to filling a role similar to that of the British Columbia Power Commission, also a provincial agency, the British Columbia Electric Company now assumes responsibility for continuing the studies and planning initiated by the Peace River Development Company. During the year, the British Columbia Power Commission completed and placed in operation a $1,000-\mathrm{hp}$. development on Clayton Creek near Bella Coola. Installation of this unit represented the total increase in the province's hydro-electric capacity in 1961.

The Commission continued an active program of investigation of the Duncan Lake, High Arrow, and Mica storage developments in the Columbia River basin. These three developments, which constitute the basis of the Columbia River Treaty signed on behalf of Canada and the United States in January 1961, would be capable of controlling approximately $20,000,000$ acre-feet of usable storage in Canada. The Treaty, not yet ratified by Canada, provides that Canada would receive one-half of the power benefits which result in the United States from the regulation of $15,500,000$ acre-feet of this storage and one-half the value of the estimated flood damage prevented in the United States through operation of the projects for flood control.

The Consolidated Mining and Smelting Company of Canada Limited expects to place in service a third $120,000-\mathrm{hp}$. unit at its Waneta power plant on the Pend d'Oreille River in 1963.

In the field of thermal-electric power generation, the British Columbia Power Commission completed installation of one additional tri-fuel, $3,000-\mathrm{kw}$., internal combustion unit at Prince George and one at Quesnel. These units, previously scheduled to go into operation in December 1960, were not installed until March 1961. At Prince George, installation of a $3,000-\mathrm{kw}$. unit, originally scheduled for late 1961, was postponed; however, two $250-\mathrm{kw}$. units, transferred from an inactive plant, were brought into service at Blue River. In 1962, thermal-electric units varying in size from 250 kw . to $1,000 \mathrm{kw}$. are scheduled to be installed at a number of locations in the province, including Fort Nelson, Chetwynd, Valemount, Sandspit, Hazelton and Houston. These units, with a combined capacity of $4,700 \mathrm{kw}$., will be transferred from plants in which they are considered surplus.

Work progressed on the installation of a $26,000-\mathrm{kw}$. extraction back-pressure turbogenerator unit at the Port Alberni pulp and paper mill of MacMillan, Bloedel and Powell River Limited. This unit is scheduled for operation in November 1962.

The Yukon and Northwest Territories.-Installation of new electric power generating capacity in 1961 by the Northern Canada Power Commission was confined to the Northwest Territories. Three small diesel units with capacities totalling 325 kw . were placed in service at Fort Resolution. Existing generating equipment is considered adequate
to supply present power demand in the Territories and it is unlikely that any new equipment will be installed in 1962. However, to meet anticipated increases in demand, preliminary construction work is expected to begin in 1962 at Frobisher Bay with a view to bringing some $2,000 \mathrm{kw}$. of new capacity into service within the next four or five years. In all probability, growing requirements for power will warrant the installation of a 1,000 kw. unit at Inuvik, a unit of the same capacity at Fort Smith and a 600-kw. unit at Fort Simpson.

## Section 5.-Public Ownership and Regulation of Electrical Utilities*

Federal Government regulation of electrical utilities, particularly with respect to the export of electric power and the construction of lines over which such power is exported, falls within the jurisdiction of the National Energy Board established in November 1959 and concerned with all matters relating to energy resources within the jurisdiction of the Parliament of Canada (see Foreign Trade Chapter XX, Part III, Section 2 for a brief survey of the functions and operations of the National Energy Board).

Power is generated in Canada by publicly and privately operated utilities and by industrial establishments. Table 9, pp. 551-552, giving statistics by type of establishment, shows that 51 p.c. of the total electric power generated in 1960 was produced by publicly operated utilities, 27 p.c. by privately operated utilities and 22 p.c. by industrial establishments. However, ownership differs greatly in different areas of the country. Quebec output, for instance, is predominantly from privately owned plants since a large portion of the power development in that province is connected with pulp and paper establishments and with the aluminum industry. In Ontario, on the other hand, almost all electric power is produced by a publicly owned utility, The Hydro-Electric Power Commission of Ontario.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. Neither Newfoundland nor Prince Edward Island has a provincially operated electric power system, although in the former province a Commission, known as the Newfoundland Power Commission, was established by the provincial government in 1954 for the purpose of supplying electric power wherever needed throughout the province, particularly to rural areas. In Prince Edward Island, the town of Summerside and surrounding area is served by the municipally operated Town of Summerside Electric Light Department. The functions and activities of provincially operated electric power commissions in the other provinces are summarized in the following paragraphs.

Nova Scotia.-The Nova Scotia Power Commission was created under the Power Commission Act of 1919 with the function of supplying electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service by providing financial assistance to equalize cost and revenue of extensions approved by the Governor in Council. In 1941 an amendment to the Power Commission Act authorized the Commission, subject to the approval of the Governor in Council, to regulate and control the generation, transmission, distribution, supply and use of power in the province. Certain investigatory work is carried on in the province by the Federal Government in close association with the Commission, but the control of water resources is vested in the Crown and administered under the provisions of the Nova Scotia Water Act, 1919. The Commission pays regular fees for water rights.

Financially, the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30, 1960 showed total fixed assets of $\$ 62,691,094$ including work in progress amounting to $\$ 11,358,829$. Current assets amounted to $\$ 1,140,572$ and liabilities were as follows: fixed $\$ 51,767,021$; current $\$ 2,646,975$; contingency and renewal reserves $\$ 5,544,253$; sinking fund reserves $\$ 9,225,103$; and general and special reserves $\$ 3,248,690$.

[^172]The initial development of the Commission was an $800-\mathrm{hp}$. installation on the Mushamush River which went into operation in 1921 and delivered $208,752 \mathrm{kwh}$. in the first complete year of operation. Succeeding years showed a marked growth in installed capacity, which at Nov. 30, 1961 reached $132,650 \mathrm{hp}$. in hydraulic turbines, 770 kw . in diesel units and $60,000 \mathrm{kw}$. in steam turbines.

The territory of the Commission extends over the entire province and embraces six systems which include 24 generating stations and more than 4,500 miles of transmission and distribution lines. Power plant construction completed or under way in Nova Scotia during 1961 is outlined at p. 554.
12.-Capacity and Output of the Nova Scotia Power Commission, Year Ended Nov. 30, 1961

${ }^{1}$ Hydro unless otherwise noted.
New Brunswick.-The New Brunswick Electric Power Commission was incorporated under the Electric Power Act, 1920. Generating stations owned by the Commission at Mar. 31, 1961 were as follows:-

| Plant | Type | Capacity | Plant | Type | Capacity |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | hp. |  |  | hp. |
| Grand Falls | Hydro | 84,500 | Saint John. | Steam. | 21,5001 |
| Musquash. | Hydrn | 9,320 | Chatham.. | Steam. | $43,600^{1}$ |
| Tobique.. | Hydro | 27,000 | Grand Manan. | Diesel. | 1,1401 |
| Beechwood. | Hydro | 96,500 | Campobello. | Diesel. | 3201 |
| Milltown... Grand Lake | Hydro | 3,600 $58,700^{1}$ | Total C |  | .346,180 |

${ }^{1}$ Capacity rating of generators in kw. converted to hp.
All the above generating units with the exception of Grand Manan were interconnected in a province-wide grid system. The statistical information given in Table 13 shows the growth of the Commission's undertakings since 1957.

Power plant construction completed or under way in New Brunswick during 1961 is outlined at p. 554.

Quebec.-The Quebec Streams Commission.-Created by SQ 1910, c. 5, and given additional powers in 1912 (RSQ 1925, c. 46) and SQ 1930, c. 34, the Quebec Streams Commission was authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct and operate certain storage dams to regulate the flow of streams. It assisted companies engaged in such work by the systematic collection of data on the flow of the principal rivers and on meteorological conditions, by investigation of numerous water power sites and by the determination of the longitudinal profile of a large number of rivers.

On Apr. 1, 1955, the Quebec Streams Commission was abolished and its powers and attributions transferred to the provincial Hydraulic Resources Department. The rivers controlled by the Commission at the time of transfer, either by means of dams on the rivers or by regulating the outflow of lakes at the headwaters, were: the St. Maurice, the Gatineau, the Lièvre, the St. Francis, the Chicoutimi, the Au Sable, and the Métis. The Commission also operated nine reservoirs on North River, two in the watershed of the Ste. Anne de Beaupré River, and one at the outlet of Lake Morin on Rivière du Loup (lower).

Other Reservoir Control.-Storage reservoirs otherwise controlled or operated are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River, and the Onatchiway on the Shipshaw River; Témiscouata Lake on the Madawaska River, controlled by the Gatineau Power Company; Memphremagog Lake on the Magog River, controlled by the Dominion Textile Company; Témiscamingue and Quinze Lakes on the Ottawa River, controlled by the federal Department of Public Works; Kipawa Lake on the Ottawa River, controlled by the Gatineau Power Company; and Dozois Lake on the upper Ottawa River and Pipmaukin Lake in the Bersimis River watershed, controlled by the Quebec Hydro-Electric Commission.

Power developments on the Saguenay River, benefiting from the Peribonca and Lake St. John reservoirs, have a total capacity of $1,950,000 \mathrm{bp}$.

The Quebec Hydro-Electric Commission.-The Quebec Hydro-Electric Commission was established by SQ 1944, c. 22, with the object of supplying power to the municipalities, to industrial and commercial undertakings and to citizens of the Province of Quebec at the lowest rates consistent with sound financial administration. The Commission at the end of 1961 controlled, among other assets, the following hydro-electric plants:*-

| Plant | River | Installed Capacity |
| :---: | :---: | :---: |
|  |  | hp. |
| Cedars. | St. Lawrence. | 206, 400 |
| Sault au Recollet | Riviere des Prairies. | ${ }_{2}{ }^{60,000}$ |
| Beauharnoi | St. Lawrence.. | 2,161,000 |
| Rapid VII | Cpper Ottawa. |  |
| ${ }_{\text {Rersimis }}$ No. | Upper Ottawa | 1,200,000 |
| Bersimis No. 2 | Bersimis | 900,000 |
|  | Total Hydro | 4,639,400 |
| Gas turbine station | Les Boules. | 51,900 |

The Commission operates a public utility system which supplies the electric light and power requirements of Metropolitan Montreal and surrounding districts, embracing a population of nearly $2,000,000$. From the Cedars plant, electric energy is supplied to the Aluminum Company of America at Massena, N.Y., and through the Beauharnois Light, Heat and Power Company power is sold to The Hydro-Electric Power Commission of Ontario. Sales involved are in the neighbourhood of $75,000 \mathrm{hp}$. to Massena, N.Y., and $250,000 \mathrm{hp}$. of primary power to Ontario.

[^173]
## 14.-Growth of the Quebec Hydro System, 1952-61

Nors.-Figures for the years 1935-46 will be found in the 1950 Year Book, p. 572, and for the years 1947-51 in the 1957-58 edition, p. 579.

| Year | Municipalities Served | Customers Served (end of year) | Power Distributed |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Total | Primary |
|  | No. | No. | hp. | hp. |
| 1952. | 67 | 395.066 | 1,620,000 | 1,462,000 |
| 1953. | 67 | 413,439 | 1,748,000 | 1,625,000 |
| 1954. | 67 | 430,774 | 1,700,000 | 1,687,000 |
| 1955. | 65 | 451,820 | 1,760,000 | 1,725,000 |
| 1956. | 65 | 475,499 | 2,061,000 | 1,955,000 |
| 1957. | 64 | 499, 005 | 2,561,000 | 2,390,000 |
| 1958. | 64 | 521,279 | 2,736,000 | 2,671,000 |
| 1959. | 63 | 542,028 | 3,392,000 | 2,926,000 |
| 1960. | 63 | 567,621 | $3.582,000$ | 3,174,000 |
| 1961. | 63 | 593.960 | 3,773,000 | 3,310,000 |

15.-Distribution of Quebec Hydro Primary Power, by Customer Group, 1955-61
(Coincident with Montreal System peak)

The Commission delivers some $65,000 \mathrm{hp}$. on the south shore of the St. Lawrence River in the Gaspe area-power from its Bersimis plants transmitted across the river through a $69-\mathrm{kv}$. submarine cable, over a distance of 34 miles. The Commission also purchases about $27,000 \mathrm{hp}$. from the Saguenay Transmission Company for delivery to mining companies in the Chibougamau area. The recently completed Lac Ste. Anne reservoir on the Toulnustouc River controls the flow of the Lower Manicouagan River.

Power plant construction completed or under way in Quebec during 1961 is outlined at pp. 554-555.

Ontario.-The Hydro-Electric Power Commission of Ontario is a corporate entity, a self-sustaining public enterprise endowed with broad powers with respect to the supply of electricity throughout the Province of Ontario. Its authority is derived from an Act of the Provincial Legislature passed in 1906 to give effect to recommendations of earlier advisory commissions that the water powers of Ontario should be conserved and developed for the benefit of the people of the province. It now operates under the Power Commission Act (SO 1907, c. 19) passed in 1907 as an amplification of the Act of 1906 and subsequently modified from time to time (RSO 1960, c. 300, as amended). The Commission may have
from three to six members, all of whom are appointed by the Lieutenant-Governor in Council. One commissioner must be, and a second commissioner may be, a member of the Executive Council of the Province of Ontario.

The basic principle governing the financial operations of the Commission and its associated municipal utilities is that electrical service is provided at cost. The Commission interprets cost as including payments for power purchased, charges for operating and maintaining the power systems, and related fixed charges. The fixed charges represent interest on debt, provisions for depreciation, allocations to reserves for contingencies and rate stabilization, and the further provision of a sinking fund reserve for retiring the Commission's capital debt. While the enterprise from its inception has been self-sustaining, the province guarantees the payment of principal and interest on all bonds issued by the Commission and held by the public. In addition, during a period of more than forty years the province has materially assisted the development of agriculture by contributing toward the capital cost of rural distribution facilities.

For the financial and administrative purposes of the Commission, the province is divided into two parts. The roughly triangular part lying south of Lake Nipissing and the French and Mattawa Rivers is served by the Southern Ontario System, a fully integrated power system combining the Niagara, Georgian Bay, and Eastern Ontario Divisions. The System is operated on a co-operative basis predominantly for the benefit of more than 300 municipal electrical utilities supplied with power at cost, but in part also for the benefit of the Rural Power District which it serves. The northern part of the province is served by the Northern Ontario Properties, held and operated for the most part in trust for the province, but operated in part also for the benefit of a group of utilities supplied with power at cost. The Northern Ontario Properties include a Northeastern and a Northwestern Division. Each of these Divisions is an integrated power system, the former being interconnected with the Southern Ontario System.

In addition to administering the enterprise over which it has direct control, the Commission exercises certain regulatory functions with respect to the group of municipal electrical utilities which it serves. In order to provide convenient and expeditious service in this dual function of regulation and supply, the Commission subdivides its provincewide operations into eight regions, six in the south and two in the north, with regional offices located in eight major municipalities. At present the two northern regions coincide with the two northern Divisions.

The Commission is concerned primarily with the provision of electric power by generation or purchase and its delivery in bulk either for resale or for use in the industrial operations of certain customers served directly. Power for resale is delivered to the associated municipal electrical utilities, and to certain interconnected systems, including a number of independent municipal distribution systems, operating within or beyond the provincial boundaries. The industrial customers served directly include mines and industries in unorganized areas. Some power users located within areas served by the municipal utilities are also served by the Commission since their power requirements may be so large, or may create supply conditions so unusual, as to make service by the local municipal utilities impracticable. In total, bulk delivery for resale and for industrial use accounts for about 90 p.c. of the Commission's energy sales. The remaining 10 p.c. of the Commission's sales are made to ultimate customers either in rural areas served on behalf of the townships by the Commission's rural distribution facilities, or in a relatively small group of municipalities served by Commission-owned local distribution systems. In general, however, retail service to ultimate customers in most cities and towns, in many
villages, and in certain populous township areas is supplied by the associated electrical utilities, owned and operated by local commissions and functioning under the general supervision of The Hydro-Electric Power Commission of Ontario as provided for in the Power Commission Act and the Public Utilities Act.

The Commission's power development program as at Dec. 31, 1961 is given in Table 16 and is also outlined at pp. 555-556.

## 16.-Current Power Development Program of The Hydro-Electric Power Commission of Ontario, as at Dec. 31, 1961

| System and Development | Units | In Service | Capacity ${ }^{1}$ |

[^176]During 1961, the Commission's investment in fixed assets at cost increased by $\$ 100,758,461$ and at the end of the year amounted to $\$ 2,461,609,257$. Total assets after deducting accumulated depreciation were $\$ 2,779,738,127$.

In 1961, a total of 354 municipal utilities engaged in the retail distribution of electricity purchased power from the Commission under cost or fixed-rate contracts. The total assets of these utilities, after deducting accumulated depreciation, amounted to $\$ 698,947,256$, of which $\$ 282,255,861$ represented the equity acquired in the Commission's systems by the utilities operating under cost contracts.

Manitoba.-Manitoba Hydro came into being on Apr. 1, 1961, as a result of the amalgamation of the previously separate authorities concerned with the generation and distribution of electric power. Manitoba Hydro generates the electric power requirements for almost all of the province except that for use within the corporate limits of the city of Winnipeg, although it does supply a portion of the energy distributed in that area. It distributes electricity directly to most of the consumers in the province outside of Winnipeg, serving 532 cities, towns, villages and hamlets and 42,000 farms.

Plant additions completed or under way in Manitoba during 1961 are outlined at p . 556.

Saskatchewan.-The Saskatchewan Power Corporation was established on Feb. 1, 1949, and operates under the provisions of the Power Corporation Act (SS 1950, c.10) as amended. It succeeded the Saskatchewan Power Commission which had operated from Feb. 11, 1929. The original functions of the Corporation included the generation, transmission, distribution, sale and supply of hydro and steam electric energy. Since 1952, the Corporation has been authorized to produce or purchase and to transmit, distribute, sell and supply natural or manufactured gas.

In 1960, the Corporation served 984 urban communities (with six or more customers) in retail sales, and served the Cities of Saskatoon and Swift Current, the town of Battleford and the hamlet of Waskesiu in bulk sales. Some bulk power was also sold to the City of Regina on an exchange basis. Activities of the Corporation cover the entire province with the exception of the City of Regina, which owns and operates municipal plants and a distribution system. The local steam plant and distribution system of the City of Moose Jaw, originally owned and operated by a private company, were purchased by the Corporation late in 1960.

At the end of 1960, the Corporation served 221,675 customers, 186,843 of whom were retail customers and 34,832 of whom were located in communities supplied with power through bulk sales. The retail customers included 127,751 urban customers and 59,092 customers classified as rural, predominantly farmers. During the year, $1,233,531,753 \mathrm{kwh}$. were made available to customers, of which $1,230,750,759 \mathrm{kwh}$. were generated in Corporation plants and $2,780,994 \mathrm{kwh}$. were purchased in bulk from Regina. At the end of the year, the Corporation had invested, at cost, a total of $\$ 329,184,514$ in electric and natural gas plant in service.

During the year, the Corporation owned and operated five steam generating plantsone at Prince Albert and two each at Saskatoon and Estevan; a sixth steam plant was purchased along with the Moose Jaw distribution system late in the year. These plants supplied 87.2 p.c. of total system power requirements and three internal combustion gas dual fuel plants at Kindersley, Swift Current and Unity supplied most of the remainder. Five small diesel plants (at Kamsack, Leader, Hudson Bay, La Ronge and Central Butte) acted mainly as standby plants. Total system capability in operation at the end of 1959 was assessed at $548,060 \mathrm{kw}$. with $499,000 \mathrm{kw}$. in steam plants, $45,600 \mathrm{kw}$. in gas dual fuel units and $3,460 \mathrm{kw}$. in diesel plants. At the end of 1960 , the Corporation owned and operated 66,092 miles of transmission and rural lines (excluding urban distribution and hi-lines). Plant additions completed or under way in Saskatchewan during 1961 are outlined at p. 556.

## 20.-Growth of the Saskatchewan Power Corporation, 1951-60

| Year | Communities Served in Bulk and Retail Sales | Individual Meters in Communities Served | Power Distributed | Revenue |
| :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | kwh. | \$ |
| 1951. | 535 | 93,923 | 278, 826,919 | 7,159,876 |

| 1957. | 870 | 178,567 | 780,613,534 | 18,152,460 |
| 1958. | 880 | 188, 293 | 909,086, 629 | 20,687,771 |
| 1959. | 962 | 197,451 | 1,067,349,615 | 23, 909,113 |
| 1980. | 984 | 221,675 | 1,233,531,753 | 26,667,471 |

Alberta.-Public ownership of power generating and distributing systems in Alberta is confined to certain urban municipalities. The regulatory authority over privately owned systems is the Board of Public Utility Commissioners which has jurisdiction over the distribution and sale of electricity. The Board has power to hold investigation upon complaint made either by a municipality or by a utility company and, following such investigation, may fix just and reasonable rates. Three private utility companies serve the province; plant additions completed or under way in Alberta during 1961 are outlined at pp. 556-557.

British Columbia.-The British Columbia Power Commission was appointed in April 1945 under the provisions of the Provincial Electric Power Act. Operations were commenced in August of the same year with the acquisition of electrical properties in several parts of the province. The following statement shows the growth in the number of customers from 1952 to 1961:-

| Year Ended Mar. S1- | Services Acquired | Services | Total Services for $\stackrel{\text { for }}{ }$ | Cumulative <br> to End of <br> Period |

| Totals. | 1,786,382,021 | 100.0 |

Northwest Territories and Yukon Territory.-The Northern Canada Power Commission, formerly Northwest Territories Power Commission, was created by Act of Parliament in 1948 to bring electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. By legislation passed in 1950, the Act was extended to include Yukon Territory. The Commission has authority to construct and operate power plants as required in the Territories and, subject to approval of the Governor in Council, in any other parts of Canada.

The Commission has hydro-electric power developments on the Yukon River near Whitehorse, Y.T., the Mayo River near Mayo Landing, Y.T., and the Snare River northwest of Yellowknife, N.W.T. Diesel-electric plants are operated at Fort Simpson, Fort Smith, Fort Resolution, Frobisher Bay and Inuvik, N.W.T., and at Field, B.C.

The Whitehorse Rapids power development, which has been in service since November 1958, supplies the power for the Department of National Defence at Whitehorse, most of the power for the city of Whitehorse, and the power for heating systems of the Department of National Health and Welfare Hospital and two hostels operated by the Department of Citizenship and Immigration.

The Snare River hydro developments supply power to the mines in the Yellowknife area and, with the Bluefish hydro-electric plant of the Consolidated Mining and Smelting Company of Canada Limited, supply the town of Yellowknife. The original Snare Rapids plant has been in operation since September 1948 and the Snare Falls plant, situated on the same river about 10 miles downstream from the original plant and remotely controlled from Snare Rapids, was placed in service in November 1960.

The Mayo River plant, completed in November 1952, supplies power to mining properties in the Elsa and Keno areas and to the Mayo Landing and Keno City communities.

The diesel-electric plants supply the needs of Federal Government departments and the general public in the communities in which they are located. In addition to these plants the Commission operates a power and heating plant at the Fort McPherson residential school for the Department of Northern Affairs and National Resources, and the municipal water system and central heating plant supplying the hostel and school premises at Fort Simpson, N.W.T. Details of construction completed or under way in the Territories during 1961 are outlined at pp. 557-558.

## PART I.-FISHERIES

## Section 1.-Commercial Fishery Resources*

The waters of two mighty oceans-the Atlantic and the Pacific-and the most extensive inland system of rivers and lakes in the world provide Canada's fishermen with valuable harvests. The annual catch of some $2,000,000,000 \mathrm{lb}$. of fish and shellfish has a marketed value of more than $\$ 200,000,000$. Only about one-third of this catch is used in Canada, the remainder going abroad in fresh, frozen, canned, salted, dried or otherwise preserved form. Of the fish-exporting nations of the world, Canada is surpassed only by Norway and Japan. There are more than 79,000 commercial fishermen in Canada and, in addition, many thousands of persons are employed in the fish-processing industry.

Atlantic Fisheries.-On the Atlantic Coast, lobster and groundfish, especially cod, are the mainstay of the fisheries, while herring, mackerel and alewives supply a pickling industry that is also of considerable importance. The Atlantic catch is ordinarily about twice as heavy as the Pacific and, generally, is more valuable. In 1961 the lobster catch was close to $48,000,000 \mathrm{lb}$. with a landed value of $\$ 18,000,000$, and cod landings of $518,000,000 \mathrm{lb}$. had a value to the fishermen of $\$ 15,400,000$.

Because of their relatively high unit price, lobsters are the main source of income for fishermen in New Brunswick and Prince Edward Island, and provide about one-third of the value of the Nova Scotia catch. They are taken in baited traps as they crawl about in shallow water looking for food. Most of the catch is marketed alive, fresh boiled or as fresh or frozen lobster meat and the remainder is canned. The United States provides an excellent market with peaks of demand in the summer vacation season and at Christmas. Hitherto unexploited scallop beds, recently discovered on George's Bank off the mouth of the Gulf of Maine, are becoming an increasingly valuable resource.

The cod banks in the Atlantic off Newfoundland are known to fishermen all over the world. Besides cod, they yield other groundfish, mainly haddock, redfish, plaice and flounder. Although two-thirds of the cod catch is landed in Newfoundland, the lesser part of the Island's receipts now comes from the banks. The traditional Newfoundland schooner fishery which formerly supplied the saltfish trade has died out but a very active

[^177]inshore summer trap fishery, followed by a trawl fishery from small boats in the late summer and early autumn, continues to supply the industry. The bulk of the trap and trawl catches is salted. The family business which combines fishing with processing has disappeared from the Atlantic Coast except in Newfoundland, and even there it is diminishing. Nova Scotia's drying plants depend more and more on raw supplies from Newfoundland, which they receive in salt bulk form. Heavy exports of saltish go from the Atlantic Provinces to the Caribbean area, with smaller amounts to Italy, Spain and Brazil.

Although schooner fleets are a thing of the past, except for a few vessels sailing from Nova Scotia, modern trawlers and draggers out of ports along the southern coast of Newfoundland and the Atlantic Coast of Nova Scotia fish the banks in all seasons, weather permitting, to supply mixed groundfish to the processing plants in their home ports. These produce fresh and frozen fish and fillets as well as frozen fish blocks to meet a North American demand that increases steadily with the population. Frozen blocks are the raw material of the now important fish-stick industry.

The 1961 Atlantic herring catch was $209,000,000 \mathrm{lb}$., about one-third of which was comprised of the small-sized herring used by New Brunswick's sardine canneries. Smoke houses and pickling plants produce a variety of herring products and the fish are also in steady demand for lobster bait. The bulk of the catch is taken in purse-seines or weirs. Mackerel and alewives are also utilized by pickling plants but both have provided dwindling catches over the past decade. Mackerel are netted in open water and alewives are trapped as they enter estuaries on their way to freshwater spawning beds.

The Atlantic salmon catch, after a long and fairly steady decline, has been on the increase in recent years. This fish goes exclusively to fresh markets. Before the War, frozen Canadian Atlantic salmon was in demand in Britain but after the War until 1959 it was barred from that market by import restrictions although there was scant surplus for export in any case. In 1959, the import restrictions were lifted and, with improved catches, hopes have risen for resumption of this trade.

Pacific Fisheries.-Salmon is the most valuable of the Pacific fisheries, although the landings of herring are heavier. Halibut is third in importance, followed by other groundfish and shellfish. The proportion of the total landed value provided by salmon gives an indication of the importance of that fishery to British Columbia fishermen. For example, in 1961 the total landed value of the Pacific catch was over $\$ 39,000,000$, of which salmon accounted for $\$ 26,000,000$. In the high cycle year of 1958 , the value of the salmon catch alone was $\$ 37,129,000$ and the total landed value was $\$ 51,352,000$.

The salmon catch is made up of five species-sockeye, pink, chum, coho and spring. These fish are caught as they return from the sea to their native streams to spawn and die. Sockeye, for instance, return after four years at sea so that, four years after a favourable hatching year on sockeye streams, a heavy catch of this species may be expected. When the peak runs of several different species occur in the same year, fishing is very good. The fish congregate off the mouths of their rivers and move into them in heavy concentrations. Commercial salmon fishing is limited to tide-water and is divided into two efforts-net fishery by seine and gillnet for the canneries and troll fishery for the fresh fish market. Net fishing is pursued in all the protected waters of British Columbia's deeply indented shoreline, and troll fishing off coasts facing the open sea, especially off the western coast of Vancouver Island. Hundreds of seiners and thousands of gillnet and troll boats engage in the fishery every year.

After hatching, sockeye spend a year or two in a lake before going to sea. When caught on their return from the ocean they weigh about six pounds each. This is a summer fishery, usually from mid-June to September. The bulk of the catch is taken by gillnet and the remainder by purse-seine; as sockeye feed on small crustaceans, they are not attracted by the lures of the troll fishery. Landings are smaller than the catch of chums or pinks but more valuable because, with its firm texture and attractive colour, canned sockeye commands the highest consumer price.

Pink salmon mature and return after only two years at sea. The fish average four to five pounds. Both pinks and chums are widely distributed up and down the coast but pinks appear in a more concentrated run. Chums return after four years at sea when they average about ten pounds in weight. They usually appear in two rather scattered runs, one in early summer and one in the autumn, and contribute their share to the total volume of the salmon catch. Coho hatch in small streams and are vulnerable to summer water levels. At sea they grow rapidly to weights between five and ten pounds and return to spawn after three years. They are taken by net or troll for canning or for the fresh market, depending on current demand. Mature spring salmon usually run between ten and twenty-five pounds in weight. Since they feed on small fish, they can, like coho, be taken by lure but about one-third of the catch is secured with gillnets, notably at the mouth of the Fraser. They are usually caught in their third or fourth year and are favoured on the fresh fish market.

About three-quarters of the annual salmon catch is canned and most of the remainder goes to the fresh market. Vancouver and Prince Rupert are the major processing centres.

The main stocks of herring move inshore in the autumn and winter, spawn in the spring and then return to summer feeding grounds offshore. Only small stocks remain on the fishing grounds throughout the year. Consequently, the bulk of the catch is taken from October to March. As the total known supply of this species in British Columbia is being exploited, catches are limited to local quotas by area. Fishing is by purse-seine and the catch is converted into oil and meal, mainly at Steveston, Vancouver or Prince Rupert. The 1961 herring catch was more than double that of the previous year$448,000,000 \mathrm{lb}$. compared with $187,700,000 \mathrm{lb}$. in 1960. Fishing operations had ceased for several months during 1960 because of a depressed market for products of this phase of the industry.

While salmon and herring live at mid-water depths, halibut feed on the bottom and are usually caught beyond the three-mile limit. Canadian and American longliners share in this fishery off the coasts of both Alaska and British Columbia and, by joint agreement, the catch is controlled by a system of quotas and fishing seasons in various areas. The most productive halibut grounds on the Continent are those adjacent to British Columbia, and American as well as Canadian vessels, even when fishing off Alaska, usually land at Prince Rupert or Vancouver. The catch amounted to $29,500,000 \mathrm{lb}$. in 1961, a decrease of $4,400,000 \mathrm{lb}$. from that of the previous year; however, the landed value at $\$ 6,236,000$ was higher by $\$ 837,000$ than the 1960 value. Much of the halibut caught is frozen for the fresh market in the United States.

Two other species of bottom-feeding fish-soles and grey cod-are taken by the trawler fleet, usually beyond the three-mile limit either in Hecate Strait or off Vancouver Island. These vessels drag a large-mouthed, tapering net across the ocean floor and scoop up the fish feeding there. They operate mainly in the spring and summer and on smooth bottom in depths between twenty and seventy fathoms. During the winter they pursue a limited fishery in the relatively protected waters of the Strait of Georgia. Ling cod and black cod also feed on the bottom. Small boats rigged with one or two lines and a few hooks take most of the ling cod catch in the Strait of Georgia but further supplies are captured together with other groundfish in course of the trawler fishery. The bulk of the black cod is taken off Alaska by the large longliners that also fish for halibut. These vessels lay their long lines on the ocean floor with hundreds of baited hooks attached to them.

Inland Fisheries.-In 1960 the value of fish from Canadian lakes and streams exported to the United States totalled $\$ 18,976,000$. The bulk of the catch comes from the Great Lakes, Lake Winnipeg in Manitoba and Great Slave Lake in the Northwest Territories, but 600 smaller lakes are also fished commercially. Ontario is the heaviest producer, with Manitoba in second place and Saskatchewan in third but output of all western areas is increasing as improved transportation facilities enable fishermen in remote
areas to get their catch to market. Great Slave Lake yields almost all the commercial catch of the Northwest Territories. It supports a gillnet fishery for whitefish and lake trout, with catch limits set by the Federal Government.

Whitefish and pickerel, in approximately equal proportions, together comprise about half the Canadian freshwater catch and perch is next in both quantity and value. Sturgeon and lake trout are valuable additions and tullibee and pike are taken in considerable quantities. A wide variety make up the remaining 10 p.c. of the landings, ranging from the aristocratic goldeye to the lowly chub.

## Section 2.-Governments and the Fisheries

The British North America Act gave the Federal Government full legislative jurisdiction for the coastal and the inland fisheries of Canada and under this Act laws are made for the protection, conservation and development of the fisheries throughout the country. However, the provinces have, by agreement, assumed administrative responsibilities in varying degree. Consequently, though all the regulations governing fishing are made by the Federal Government, the work of administering the fisheries (enforcing the different laws and regulations, inspecting fish products, issuing licences, etc.) is done without duplication of staff either by federal or by provincial officers, according to arrangement.

Specifically, all tidal or sea fisheries except those of the Province of Quebec are administered by the federal Department of Fisheries, and the freshwater or non-tidal fisheries, with some exceptions, are administered by the provincial departments. Quebec takes responsibility for all its fisheries including those in salt waters. Ontario, Manitoba, Saskatchewan and Alberta administer their freshwater species. In British Columbia, provincial government control extends to the freshwater forms and the Federal Government is responsible for marine and anadromous species. In Prince Edward Island, Nova Scotia, New Brunswick, Newfoundland and the Yukon and Northwest Territories, the Federal Government maintains complete control; administration of the fisheries of the National Park areas throughout Canada is the responsibility of the Canadian Wildlife Service, Department of Northern Affairs and National Resources.

## Subsection 1.-The Federal Government

The work of the Federal Government in the conservation, development and general regulation of the nation's coastal and freshwater fisheries is performed by three agencies under the Minister of Fisheries:-
(1) The Department of Fisheries proper with headquarters at Ottawa, Ont., and area offices under Area Directors at Vancouver, B.C., Winnipeg, Man., Halifax, N.S., and St. John's, Nfld.
(2) The Fisheries Research Board of Canada with headquarters at Ottawa and eight stations across Canada.
(3) The Fisheries Prices Support Board with headquarters at Ottawa.

A brief outline of the functions of these agencies is given in this Subsection.
The Department of Fisheries.-The chief responsibilities of the Department of Fisheries throughout Canada are, in brief: to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the optimum utilization of the resource; and to develop a proper public understanding of the resource and the industry.

The larger part of the staff of the Department is stationed in the field and is composed mainly of protection and inspection officers. The protection officers, including those on the Department's 82 patrol and protection vessels, are concerned with the enforcement
of the conservation regulations under the Fisheries Act and other Acts designed to ensure a continuing maximum yield of fish, and are also responsible for the inspection of fish products and processing plants under the Fish Inspection Act and relevant section of the Meat and Canned Foods Act.

A conservation program is carried out by the Conservation and Development Service of the Department. Protection officers enforce regulations pertaining to restricted areas, close seasons, limitations in location and types of gear, and also inspect spawning streams and keep them clear of obstructions. Biologists investigate such problems as pollution and water supply, and engineers construct fishways to enable fish to bypass obstructions of all kinds. Hatcheries are maintained to restock waters where the fisheries are under federal administration.

For the past few years a bounty has been paid for the killing of the parasite-carrying harbour seals along the Atlantic and Pacific Coasts at a rate of $\$ 10$ for adult and $\$ 5$ for young seals. Total payments for the year ended Mar. 31, 1961 amounted to $\$ 26,875$.

Inspection of fish and fish products to ensure a high standard of quality is carried out by the Inspection and Consumer Service, and fish inspection laboratories are maintained on the Atlantic and the Pacific Coasts and in Toronto and Winnipeg. A staff of home economists operates test kitchens in Ottawa, Toronto, Vancouver, Montreal, Halifax, Edmonton and Winnipeg, and conducts demonstrations and lectures on methods of preparing and cooking fish and fish products.

Through the medium of printed material, films, radio, television and exhibitions, the Information and Educational Service of the Department informs the public on the various aspects of the industry and the work of the fisheries services, with the object of developing a better understanding of the resource and those engaged in its exploitation. This Service works closely with the Conservation and Development Service in matters concerning the conservation of fisheries and with the Inspection and Consumer Service toward encouraging increased consumption of Canadian fish products in the domestic, United States and other markets.

The Economics Service engages in two related fields of responsibility: (1) to provide the government and the commercial fishing industry with current information, including statistical data, under the general heading of trade intelligence, and (2) to carry out studies and investigations in the primary fisheries and in the processing and distribution of fish products. In the first field, the Service works in close co-operation with the Dominion Bureau of Statistics and the Foreign Trade Division of the Department of Trade and Commerce; in the second, there is similar collaboration with the Fisheries Research Board. In both, a necessary contribution is made to the formulation of policy for fisheries management, industrial development and market services.

In addition to these regular services, the Department assists the commercial fishing industry in several special ways. To promote efficient primary fishing operations and improve the marketing of fishery products, assistance is provided for the construction of draggers and longliners and for bait-freezing and storage facilities on the Atlantic Coast. The Fishermen's Indemnity Plan affords low-cost protection from losses of boats and lobster traps through storms and other causes. The Plan, in operation since 1953, meets a long-standing need on the part of small-scale individual fishermen. Vessels valued at from $\$ 250$ to $\$ 10,000$ may be insured with payment of a premium of 1 p.c. of the appraised value per annum. Up to Dec. 31, 1961, a total of 5,980 vessels with an appraised value of approximately $\$ 19,750,000$ had been insured under the Plan. In response to considerable demand for a similar type of protection against unusual losses of fishing gear and equipment other than vessels, a first step was taken by the introduction of regulations giving a measure of compensation to the lobster fisherman suffering abnormal losses of lobster traps, provided that a small premium has been paid by the fisherman. The premium rate varies in accordance with conditions in the different fishing areas but has been kept low. The Department also provides financial assistance to educational institutions agreeing to carry out specialized educational work among fishermen.

International Fisheries Conservation.-Conservation of the resources of the high seas can be effected only through regulation, and for this purpose international treaties have had to be made. Canada's obligations under such treaties with the United States and other countries are administered by the Department of Fisheries.

Canada and the United States have led the world in joint fisheries conservation development. Major examples of this joint effort are the International Pacific Halibut Convention, concerned with the preservation of the halibut stocks of the north Pacific and the Bering Sea, and the International Pacific Salmon Fisheries Convention, concerned with the conservation and development of the sockeye and pink salmon of the Fraser River. Investigations carried out under the auspices of Commissions appointed under these conventions, subsequent regulation and limitation of catches, and the construction of salmon fishways appear to have been successful in arresting and reversing an earlier trend toward depletion of these fisheries. Another example of restoring a depleted marine resource by international agreement and action is that of the fur seals of the Pribilof Islands in the Bering Sea. Under a treaty signed in 1911, known as the (North Pacific) Sealing Convention, pelagic sealing was prohibited while the animals were migrating to and from the Pribilofs where most of them breed. This treaty had been signed by the United States, Canada, Russia and Japan, and was one of the earliest conventions on resources of the sea. In 1941 Japan abrogated the treaty and the following year Canada and the United States signed a Provisional Fur Seal Agreement under which Canada, in return for abstaining from pelagic sealing, received 20 p.c. of the annual catch, which was supervised by the United States. A conference to re-negotiate the original convention was begun in Washington in November 1955 and a new settlement was signed by the original four countries on Feb. 9, 1957.

In 1949 the Government of Canada became a signatory, along with nine other countries, to the International Northwest Atlantic Fisheries Convention which came into force in 1950. The Commission established under this Convention, with headquarters at Halifax, N.S., makes scientific investigations of the fishery resources of the northwest Atlantic. The Commission has no regulatory powers but can make recommendations to the respective governments regarding measures that may be necessary for maintaining the stocks of fish that support the international fisheries in the Convention area. Treaty signatories are: Canada, Denmark, Iceland, the United States, Britain, France, Italy, Norway, Portugal and the Federal Republic of Germany.

A step toward international action in regulating the high seas fisheries of the northern Pacific Ocean was achieved in December 1951 when Canada, the United States and Japan conferred at Tokyo. The resulting Convention was ratified by the three contracting governments and instruments of ratification were deposited at Tokyo in June 1953. The treaty is known as the International Convention for the High Seas Fisheries of the North Pacific Ocean and aims at providing the maximum sustained yield of the fishery resources of the northern Pacific non-territorial waters with each of the parties assuming obligations to encourage conservation measures. The Commission established under this Convention is studying the northern Pacific fisheries and will determine the application of the treaty principles and promote and co-ordinate the necessary scientific studies.

The seventh, and latest, international fisheries agreement to which Canada is a signatory is the Great Lakes Fisheries Convention, which provides for joint action by Canada and the United States in Great Lakes fishery research and in a program for the control of the predator lamprey in these waters. This Convention came into force in October 1955.

Canada is a member of the International Whaling Commission and is obligated to collect biological data on whales caught by Canadian vessels. Whaling operations are conducted in some years off the coasts of Newfoundland and British Columbia.

The Fisheries Research Board.-The Fisheries Research Board of Canada is a research organization established by Act of Parliament for the purpose of conducting basic and applied research on Canada's living aquatic resources, their environment and their utilization. It is the only Canadian federal research agency in this broad field.

The antecedents of the present Board go back to 1898 when a Board of Management of the Canadian Marine Biological Station, consisting of eight university professors and the Commissioner of Fisheries, was created in the Department of Marine and Fisheries. This early organization was formalized by Parliament in 1912 when by special Act it established the Biological Board of Canada. Later, in 1937, as the scope and the research responsibilities of the Board were increased the Act was revised and the Board renamed the Fisheries Research Board of Canada. The Act was revised again in 1952-53, further broadening its scope. Thus the present Fisheries Research Board is a lineal descendant of one of the oldest scientific organizations in Canada and one of the oldest government-supported research organizations under the supervision of an independent scientific board in North America.

By its Act, the Board is placed under the control of the Minister of Fisheries. The Board proper consists of a permanent Chairman, who is appointed by the Governor in Council and who is a member of the Public Service of Canada, and "not more than eighteen other members" holding honorary appointments from the Minister of Fisheries for fiveyear terms. The composition of the Board is further defined by the Act to require that "a majority of the members of the Board, not including the Chairman, shall be scientists, and the remaining members of the Board shall be representative of the Department [of Fisheries] and the fishing industry". The scientific members are drawn principally from universities and research foundations across Canada, to include specialists in disciplines related to the Board's work. The industry members are selected from among Canada's leading business men with an intimate knowledge of fishing and the fishing industry and the Department of Fisheries representative is usually a senior staff member in Ottawa. Board members have both advisory and executive functions. The advisory functions are delegated in the first instance to regional Advisory Committees who conduct on-thespot regional reviews and report to the Board on the operations and scientific programs with a view to their improvement. The executive functions are delegated to an Executive Committee elected from Board members and approved by the Minister.

The operations of the Board are highly decentralized, there being only a small administrative, supervisory and publications staff in Ottawa. The Board carries out biological research through five centres across Canada, oceanographic research at two locations and technological studies at five others. The Board employs approximately 800 persons, of whom about 200 are scientists.

Biology.-The Biological program of the Board is designed to add to fundamenta knowledge concerning Canada's vast living marine and freshwater resources. Included here are life history, population and behaviour studies leading to a sound scientific basis for the conservation and management of the commercially important fisheries including those for lobsters, crabs, shrimps, oysters, scallops, clams, marine mammals and other well known economically important aquatic species of animals, such as salmon, cod, herring and halibut, as well as some marine plants, such as phytoplankton and seaweeds. Also included are studies in fish and shellfish diseases, fish enemies including the ill effects of water pollution, and such basic studies as fish genetics, physiology and behaviour, these latter with a view to improving fish cultural and farming methods and toward improving fish farm and hatchery stocks. Besides these basic studies, new fishing grounds and new species for exploitation are sought and experiments in improving fishing methods are undertaken.

The biological work on the Atlantic Coast is conducted out of research stations located at St. Andrews, N.B., and St. John's, Nfld.; work on Arctic fisheries and on sea mammals is directed from a laboratory situated in Montreal, Que.; freshwater work is carried out from a station in London, Ont.; and work on the Pacific Coast is directed from research laboratories situated at Nanaimo, B.C. The Board operates 15 research vessels for its biological studies. These vary from small inshore and lake craft to large seagoing ships specially built for this purpose. The Board also acts as Canada's research agent for three international fisheries commissions and two international sea-mammal commissions to which Canada is party.

Oceanography.-Oceanography includes the study of the marine (and freshwater) environment in which aquatic organisms live. This is under continuing study to further knowledge in primary and secondary productivity and the occurrence of ocean and freshwater life of importance to man. Encompassed here also are investigations into the distribution and physical and chemical characteristics of major ocean currents and the physical and biological structure of large ocean areas including the ocean bottom where concentrations of fish and other aquatic life occur. Ocean climate and ocean weather as they affect the distribution of fish and other living organisms as well as the vertical and horizontal distribution of nutrient matter and the cycle of energy and life in the seas are regularly observed and correlated. These studies, as well as special studies of interest to the Royal Canadian Navy, the Department of Transport and the international fishery commissions, are carried out by the Board's two oceanographic groups operating from Halifax, N.S., and Nanaimo, B.C., with strong ship support from the Navy and the Department of Transport.

Technology.-Technological studies in general are aimed at making the best possible use of Canada's fish catches. Investigations are conducted toward improving methods of preserving, processing, storing and distributing fish products, as well as of utilizing all parts of the fish including parts now wasted. These include developments in refrigeration and the use of antibiotics as fish preservatives, of improved refrigerated rail cars for fish distribution, improvements in canning, smoking and salting of fish as well as the development of new products such as protein concentrates (fish flour) and new uses such as the development of wieners for the utilization of abundant species that are now not used for food. Fundamental studies into the structure and composition of fish proteins, fish oils, fish hormones, the energy expenditure of migrating salmon and the nutrition of marine bacteria are also under way. In recent years handling and processing techniques have been investigated for the purpose of increasing over-all production efficiency and improving the product.

Technological investigations on the Atlantic Coast are carried out at Technological Stations situated at Halifax, N.S., and Grande Rivière, Que., and applied work for Newfoundland is under the supervision of a Technological Unit at St. John's. For inland areas there is a Technological Unit in London, Ont., and a Technological Station in Vancouver, B.C., undertakes investigation of Pacific Coast problems.

The Fisheries Prices Support Board.-Under the Fisheries Prices Support Act passed in 1944, this Board was set up in July 1947 to recommend to the Government pricesupport measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry, representative of the various fish-producing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices nor has it any jurisdiction over operations in the fishing industry or the fish trade. Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum amount of $\$ 25,000,000$ but only on recommendation of the federal Treasury Board and authorization of the Governor in Council.

The Board maintains a small staff for administrative activities. The work is closely integrated with that of the Department's Economics Service and, where possible, services required by the Board are carried out by Department personnel. The Board has carried out field surveys on market conditions and possibilities and on factors affecting the income of fishermen in the various producing areas. The financial position of fishermen is kept under continuous review and recommendations are made to the Government on the basis of the findings. Special investigations are made when serious problems arise in particular areas.

## Subsection 2.-The Provincial Governments*

An outline of the work undertaken by each of the provincial governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

Newfoundland.-The provincial Department of Fisheries in conjunction with the Newfoundland Fisheries Development Authority, a Crown corporation established in 1953, is concerned mainly with improvement and development of fishing and production methods. It conducts experiments and demonstrations in longlining, Danish seining and otter trawling, in the construction of multi-purpose fishing craft, and in the exploration of potential fishing grounds.

Loans are made to processors for the establishment and expansion of fish processing plants and for deepsea draggers and also to fishermen for the construction and purchase of modern vessels capable of a greater variety of fishing operations and larger production. Fishermen receive further aid through bounty payments at the rate of $\$ 160$ per ton for newly constructed vessels under the Fishing Ships (Bounties) Act of 1955. The Fishing and Coastal Vessels Rebuilding and Repairs (Bounties) Act was passed in 1958 to enable the government to assist financially in maintaining and prolonging the life of the existing fleet, and in 1959 the Coasting Vessels (Bounties) Act was passed, designed to encourage the construction of new coastal vessels for service in Newfoundland waters by granting a maximum bounty payment of $\$ 300$ per ton for locally built ships not exceeding 400 gross tons.

Other services include the operation of fisheries training schools in navigation and engineering, advisory services to fishermen on gear and equipment, industrial research, plant construction, plant engineering and economics, assistance to fishermen's unions, weather and ice reports, and search and rescue. The Fisheries Salt Act passed in 1957 implements more rigid control over the use of fisheries salt.

The inland waters of Newfoundland, although they provide excellent sport fishing, are not commercially exploited. The lakes and ponds remain under the authority of the Natural Resources Branch of the provincial Department of Mines and Resources, but the rivers and streams-the resort of migratory fish such as salmon and sea trout-are under federal control. Matters of conservation and guardianship are therefore mainly or wholly the concern of the federal Department of Fisheries although, to the extent to which they affect the ponds and lakes, they are subject to provincial or joint action.

Prince Edward Island.-The sea and inland fisheries of Prince Edward Island are administered by the Federal Government. The provincial Department of Fisheries supplements federal activity and is concerned mainly with development of the fisheries industry. The Department provides technical assistance and, in conjunction with the Fisheries Research Board of Canada and branches of the federal Department of Fisheries, engages in some experimental work.

Financial assistance is made available to fishermen through the Fishermen's Loan Board of Prince Edward Island, a body corporate operating under the provincial Department. The Fishermen's Loan Board operates under authority given by the Re-establishment Assistance Act and regulations thereunder, approved by the Lieutenant-Governor in Council, Jan. 7, 1949, with amendments. Loans are made to fishermen and companies for the purchase of boats, engines and other deck machinery at an interest rate of 4 p.c. From its reorganization in 1949 until the end of March 1961, the Board has lent approximately $\$ 1,620,000$ for the modernization of the inshore and offshore fleets. Loans for the construction or expansion of processing plants are available through the Industrial Establishments Promotion Act under which loans may be made for facilities handling agricultural, horticultural or fishery products.

[^178]Game fisheries are the responsibility of the Department of Industry and Natural Resources. The streams of the province, mostly spring-fed and fairly constant in flow, provide very favourable conditions for the reproduction of game fish, of which speckled trout is the most important variety. Investigations concerning the production of trout of a size attractive to anglers are being conducted by the Fisheries Research Board of Canada at sites provided by the provincial Department. Unfortunately many of the formerly fertile and highly productive ponds of the province have disappeared, and the provincial Department is actively concerned with damming and restoring these for the enjoyment of the public.

Nova Scotia.-Although the Federal Government has exclusive jurisdiction over the marine and inland fisheries of Nova Scotia and attends to all phases of administration related thereto, the Nova Scotia Government operates in several fields where provincial initiative is found to be necessary and appropriate, having regard for the importance of the fishery resources in terms of employment, industry, trade and recreation.

In the commercial fisheries, provincial government interests are the concern of the Fisheries Division of the Department of Trade and Industry. The Fishermen's Loan Board and the Industrial Loan Board are administered within this Department; the first makes loans to fishermen for the purchase of boats and engines, and the second makes loans for the construction or improvement of fish processing plants. A staff of fisheries engineers performs inspection and survey duties for the Loan Boards and provides technical assistance and advice to loan applicants and others in the fisheries and allied industries, notably the boatbuilding industry. A staff of instructors conducts training courses for fishermen in the care and maintenance of marine engines, in basic navigation and in the design, construction and maintenance of nets and other gear. This program receives substantial assistance from the Vocational Training Branch of the federal Department of Labour. The on-course instruction is supplemented frequently by informal on-the-spot assistance to smaller groups who find themselves in need of technical help with particular problems. The Fisheries Division, with financial and/or technical assistance provided by the Industrial Development Service of the federal Department of Fisheries, also organizes and conducts demonstrations of fishing methods and gear of types untried in some or all of the several fishing areas of the province.

Inland Sport Fisheries.-In recent years, Nova Scotia, through the Wildlife Division of its Department of Lands and Forests, has spent a considerable amount of money on the improvement of certain streams in the province with a view to aiding salmon migration. A system of salmon-rearing ponds has been established on the Medway River in Queens County, capable of producing 500,000 smolts each year, as well as a system of troutrearing ponds on the Moser River in Halifax County with an annual capacity of $1,000,000$ fingerlings. A full-time fisheries biologist is employed by the Division.

New Brunswick.-The fisheries of New Brunswick, both tidal and inland, are under the jurisdiction of the federal Department of Fisheries and angling in Crown waters is under the jurisdiction of the provincial Department of Lands and Mines. To supplement the activities of the federal Department of Fisheries and to establish closer liaison between the fishing industry and various government departments and agencies, both federal and provincial, in all matters relating directly or indirectly to fisheries, the New Brunswick government created in 1946 a Fisheries Branch and a Fishermen's Loan Board within its Department of Industry and Development.

Commercial fishing is one of the most important basic industries of the province. More than 6,500 fishermen and 2,500 plant workers are employed in this industry; the gross yearly income of the fishermen is over $\$ 9,000,000$ and the total marketed value of fish products is approximately $\$ 25,000,000$. Recognizing its contribution to the economy of the province, the New Brunswick Government appointed, in 1960, a Deputy Minister of Fisheries who is directly responsible to the Minister of Industry and Development in all matters relating to fisheries.

Since its inception, the Fishermen's Loan Board has disbursed more than $\$ 6,000,000$ for the construction of fishing vessels and the purchase of modern equipment and diesel motors for fishermen of the province. Loans of $\$ 1,500$ to $\$ 2,500$ are made available to inshore fishermen for the purchase of lobster boats and engines, and amounts of $\$ 10,000$ to $\$ 60,000$ to offshore fishermen for the building and equipping of modern longliners, Danish seiners and draggers. These amounts represent the net amount lent to fishermen, which is about 70 p.c. of the total cost of the vessels after deducting the required downpayment and the Federal Government subsidy of $\$ 225$ per gross ton. New Brunswick now has a fleet of 92 groundfish draggers and 25 longliners and Danish seiners.

New designs of fishing vessels are under continuing study by the technical staff of the Fisheries Branch in co-operation with naval architects, boatbuilders and fishermen. A certain pattern of standardization is followed to keep building and maintenance costs at the lowest level, because fishing in New Brunswick is generally a marginal operation. Multi-purpose types have been successfully introduced in the inshore fisheries of the Gulf of St. Lawrence area. Modified versions of the 65 -foot groundfish dragger equipped with more powerful diesel engines and bigger equipment have proven to be more efficient than the original type. The building of a prototype steel stern dragger has been under study for the past two years and arrangements are being made for the construction of three units at a cost of approximately $\$ 250,000$ each. It is expected that the federal subsidy will cover half the cost of these vessels.

Exploratory projects aimed at improving fishing boats and gear are carried out by the Fisheries Branch with the financial and technical assistance of the Industrial Development Service of the federal Department of Fisheries. After a few years of experimental fishing and demonstrations with cod gillnets, Danish seines, mid-water trawls, mechanical clam diggers, etc., these new types of gear are being used by commercial fishermen along the New Brunswick coast. Practical training is made available by the Fisheries Branch to dragger operators and inshore fishermen during the winter season in various parts of the province. A permanent school of fisheries has been in operation, under the auspices of the Caraquet School Board, since the autumn of 1959. Over 30 young fishermen, 17 to 30 years of age, attend the three-year course from November to April each year.

To co-ordinate the efforts of the Atlantic Provinces and the Federal Government in the promotion of fisheries, the federal Department of Fisheries formed a Provincial-Federal Atlantic Fisheries Committee of which the Province of New Brunswick is a member.

Quebec.-From 1941 to early 1962, Quebec's commercial fisheries were administered by the Department of Fisheries and its inland fisheries by the Department of Game and Fisheries (Sport). At the 1962 session of the provincial legislature the two departments were merged into a Department of Game and Fisheries comprising a Division of Commercial Fisheries and a Division of Game and Sport Fisheries.

Commercial Fisheries.-The Quebec Government, through its Department of Game and Fisheries, gives much consideration to the administration of the fisheries of the province. For the benefit of producers and fishermen, it operates a network of cold storage plants for the freezing and preservation of fish. The network comprises 60 plants, together having a daily freezing capacity of 500 tons and a storage capacity of $25,000,000 \mathrm{lb}$. of fish. These plants also perform a valuable service to fishermen by providing them with frozen bait and ice. In addition, the Ministry owns and maintains 123 stations in small fishing ports where fish is kept under proper conditions while awaiting collecting trucks or boats, and also operates an artificial drying plant with a processing capacity of $3,000,000$ lb. of fish annually.

The Department maintains a staff of fish wardens, technicians and technologists to administer fishery legislation and to assist in the application of new techniques for the expansion of the industry. The central administration is located at Quebec City with an office at Gaspe for the administration of cold storage plants. Fish inspection is carried out by federal inspectors who are vested with additional powers by the provincial government with respect to local sales.

Educational work among the fishermen and producers is conducted by the Department to teach the latest methods of fish preparation and of obtaining high-quality products. The Fisheries Training School at Grande Rivière gives to fishermen of all ages the opportunity of taking free theoretical and practical courses in fishery, and the Superior School of Fisheries at Ste. Anne de la Pocatière conducts a four-year course for technologists. Encouragement is given to the co-operative associations of fishermen through the Social Economic Service of the latter institution. Under a maritime credit system, fishermen may obtain loans from credit unions for the purchase of boats and gear. The Department adheres to the federal-provincial agreement on the building of draggers and longliners and assumes the building costs on a capital refunding plan. At the end of 1961 the fishing fleet of Quebec consisted of 65 draggers, 60 longliners ( 50 of which were of the Gaspesienne or small longliner type) and four Danish seiners, representing an investment of $\$ 4,009,153$. After deduction of the federal subsidy of $\$ 165$ per gross ton, the cost to the fishermen was $\$ 3,358,993$. During 1961 , investment in the fleet rose by $\$ 359,550$ with the owners' share amounting to $\$ 310,324$. Late in the year, Quebec launched its first all-steel longliner of domestic design, the MV Bienvenue, which has an over-all length of 78 feet and a gross tonnage of 121.7 tons.

The fish trade is promoted through advertising campaigns in newspapers and magazines, cooking demonstrations, educational films and the free distribution of fish recipes and publicity leaflets as well as through exhibits at fairs.

Biological and hydrographical research in the Gulf of St. Lawrence is directed by the Marine Biology Station at Grande Rivière. The Department also operates a Limnological Laboratory at Quebec City for studying the biology of the freshwater fish of the St. Lawrence River and its tributaries. The Quebec Aquarium at Quebec City exhibits freshwater and saltwater fish in 30 large tanks.

Sport Fisheries.-The Division of Game and Sport Fisheries exercises jurisdiction over the inland waters; it employs 350 full-time wardens. Licences are required for sport fishing and hunting, the revenue from which is applied to the improvement of fishing and hunting conditions. Five hatcheries are maintained at strategic points throughout the province-St. Faustin, Lachine, Lac Lyster, Tadoussac and Gaspe. These establishments distribute speckled trout, Atlantic salmon and grey trout fry, maskinonge fingerlings and older fish.

The Division administers five parks and 13 reserves in all of which, except for Mount Orford Park, excellent fishing may be found. Gaspesian and Laurentide Parks are renowned for their trout fishing. Chibougamau Reserve and La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips in search of pickerel, pike and grey or speckled trout. Five salmon streams are open to anglers-the Romaine River, the St. Jean River, the Petite Cascapédia River, the Matane River and the Port Daniel River. The Department co-operates with sportsmen through a joint committee composed of departmental officials and the directors of the larger fish and game associations. The committee studies the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the province.

Ontario.-The fishery resources of Ontario are administered by the Fish and Wildlife Branch, Department of Lands and Forests. The Branch operates under the authority of the federal Fisheries Act, the Special Fishery Regulations for the Province of Ontario, the Ontario Game and Fisheries Act and the Regulations connected therewith.

Commercial Fishing.-The commercial fishing industry in Ontario provides employment for about 3,200 persons directly and for many more indirectly, and produces an annual yield of from $35,000,000 \mathrm{lb}$. to $45,000,000 \mathrm{lb}$. of fish. An all-time high catch of about $60,000,000 \mathrm{lb}$. was recorded in 1956. The industry, although widely scattered throughout the province, is centred chiefly on the Great Lakes, particularly Lake Erie which is the most productive of these lakes. The principal species of fish taken commercially are perch, smelt, whitefish, pickerel, lake trout, white bass, pike, herring, chub, sheepshead, carp, catfish and bullheads, sturgeon, eels, goldeyes, rock bass, sunfish and suckers. Over one hundred smaller inland lakes are commercially fished, principally those in the northwestern portion of the province, and careful management of these lakes is essential to ensure continued production.

The types of fishing boats in use vary from small craft to 60 -foot tugs, and types of gear vary from the most common gillnets, pound-nets and trap-nets, seines and baited hooks to small hand-operated seines and dip-nets. Fishing methods and equipment have been modernized extensively during the past few years. Diesel-driven steel-hull tugs have replaced steam-driven wooden tugs, such aids as depth-sounding devices, radar, ship-toshore and ship-to-ship communications have been developed and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods are in use as well as new types of fishing gear. Trawling for smelt is being carried out experimentally in Lake Erie. This fishing technique is new in the Ontario fishery but has been proven very efficient in harvesting smelt on a year-round basis in this lake.

Most Ontario fishermen are organized into various local associations. These associations are, in turn, represented by the Ontario Council of Commercial Fisheries and by the Lake Erie Fisheries Council, which perform important services to the industry. The Ontario Fishermen's Co-operative and its member groups are of interest also in the organization of the fishery in the province.

Angling.-The sports fishery in Ontario is rapidly becoming one of the major industries of the province. With an estimated freshwater area of some $68,490 \mathrm{sq}$. miles, the province is one of the most attractive fishing areas on the Continent. Excellent angling opportunities are available for such prized fish as lake, speckled, rainbow and brown trout, yellow pickerel, black bass, pike and maskinonge. It is difficult to measure the total value of the sports fishing industry to the province but the annual revenue from the sale of angling licences alone (mainly to non-residents, as residents require a licence for provincial parks only) is in the neighbourhood of $\$ 2,500,000$. The management of this valuable resource is administered by a well-trained field staff of conservation officers and biologists located in the 22 forestry districts of the province.

Provincial Hatcheries.-Ontario operates 20 hatcheries and rearing stations and excellent results have been produced in the culture and distribution of various species of game and commercial fish. The primary species reared in these operations include trout (lake, speckled, brown and rainbow), maskinonge, bass, whitefish and yellow pickerel. Four of the finest trout-rearing stations on the Continent are located in this provinceat Dorion near Port Arthur, Sault Ste. Marie, Hills Lake near Englehart, and Chatsworth.

Fisheries Research.-Research in Ontario is carried on in the Great Lakes and in inland waters. At the South Bay Mouth Station on Manitoulin Island in Lake Huron, Wheatley on Lake Erie, and Glenora on the Bay of Quinte on Lake Ontario, fishery biological stations are operated for the investigation and study of the commercial and sports fisheries on the respective lakes. In Algonquin Park, detailed studies concerning lake
trout and smallmouth bass are in progress and management techniques are being tested against the background of a creel census which has been continuous since 1936. Studies of speckled trout have been re-instituted after a five-year break in continuity.

A selective breeding experiment concerning the hybrid between lake trout and speckled trout is progressing favourably. The deep-swimming character of the lake trout and the character of maturity at early age of the speckled trout are those being selected for combination in the hybrid.

Co-operation by Ontario in the field of gear development is being extended through the Federal-Provincial Committee for Ontario Fisheries and in the field of sea lamprey control through the Great Lakes Fishery Commission.

Manitoba.-Manitoba's freshwater fishery resources continue to occupy an important position in the economy of the province and will expand as new lake areas are opened for development through the extension of railway lines and road construction into virgin areas. Total production of commercial fish in 1961 was $31,900,000 \mathrm{lb}$., the marketed value being $\$ 6,500,000$; the primary industry provided full- or part-time employment for some 5,279 fishermen and other related industries, such as fish processing, transportation and boatbuilding, provided employment for at least 6,000 persons.

Manitoba's lakes and streams produce 15 varieties of commercial fish, the most important being whitefish, pickerel, sauger and northern pike. Some 2,500 commercial fishing boats are in operation, varying in size from large lake freighters to skiffs powered by outboard motors. The value of these boats together with nets and other equipment is estimated to be $\$ 3,095,000$. The value of cold storage and processing plants represents a further investment in the industry of some $\$ 3,500,000$, making a total capital investment of approximately $\$ 6,600,000$.

The Department of Mines and Natural Resources of Manitoba, in supervising commercial fishing operations and enforcing fishery regulations, operates a fleet of modern diesel-powered patrol boats during the open-water season and uses bombardier snowmobiles and light trucks in winter. All patrol units are equipped with two-way radio providing ship-to-shore communications.

The management and development of commercial and sport fishery resources of the province includes the operation of fish hatcheries. During 1961, the Whiteshell Trout Hatchery reared and distributed 70,000 yearling trout of various species and more than 563,000 fingerlings were raised and planted. Selected lakes and streams were stocked with trout to improve and diversify sport-fishing opportunities. The Department also operates seasonal hatcheries at Duck Bay and Swan Creek, both designated as pickerel hatcheries. The Dauphin River Hatchery provides eyed whitefish eggs and fry which are planted mainly in commercial waters; limited plantings of this species are also made in sport-fishing waters.

Biological studies and investigations involve pollution, sampling of catch to determine fish growth and past spawning success, yield in terms of a lake's potential, analysis of fishing gear success, productivity and catch quotas, movements and fishing mortality as traced by tagging, and general population dynamics. Lake surveys provide information for administration of the fish harvest and a basis for special fish management and cultural operations. Ecological requirements for fish production have been under study, with special attention given to important commercial and game varieties. Tests of water quality have been related to natural abnormalities, as well as to industrial and domestic wastes. Research is both local and short-term as well as fundamental and extensive and its objective is to provide facts for use in the management and administration of the fisheries resource.

Angling is becoming an increasingly popular sport in Manitoba and recently several virgin lakes have become accessible as a result of road extensions into wilderness areas. During the year ended Mar. 31, 1961 almost 104,000 angling licences were sold, an all-time record; 13 p.c. of the sales were to non-residents.

Saskatchewan.-The major water systems of Saskatchewan include the headwaters of the Missouri to the southwest; the tributaries of the Assiniboia to the southeast; the North and South Saskatchewan of the central portion of the province; the Churchill River system northward; and far beyond, on the rugged Precambrian Shield, tributaries of the great Mackenzie River system. These gigantic watersheds comprise more than 31,500 sq. miles of water and in them at least 57 fish species may be found.

The Fisheries Branch of the Department of Natural Resources, with head office at Prince Albert, is responsible for the administration of the fisheries, for the planning of policies and for the development of programs to ensure their proper management and utilization. The legislative authority under which the fisheries resource is administered is the Department of Natural Resources Act, the Fisheries Act (provincial), and the Fisheries Act (Canada).

The commercial fishing industry during 1961 produced $14,529,537 \mathrm{lb}$. taken from 205 lakes and having a value of $\$ 1,367,116$ to the producer. The principal species were whitefish, lake trout, pickerel, northern pike and sturgeon. The 14 processing plants operating in the province produced $2,833,825 \mathrm{lb}$. of fillets; seven of these plants have qualified for federal inspection in accordance with the federal Department of Fisheries voluntary fish inspection program. Mention might be made of a unique industry which has developed at Little Manitou Lake. Brine shrimp and eggs are being harvested from this saline lake and processed and packed at Watrous, Sask. These products are sold to pet fish fanciers as well as to commercial fish hatcheries.

During 1961 there were issued 1,394 domestic fishing licences, 782 free Indian permits, and 75 fur farm fishing licences. Mink ranchers used approximately $6,000,000 \mathrm{lb}$. of coarse fish (cisco, burbot and mullet).

Sport fishing continues to be the main outdoor recreational attraction in the province. During the year, 97,260 angling licences were sold, 89,674 of which were sold to residents.

In the development of the fisheries management program, fisheries research, which commenced in 1948, has been undertaken to provide information on Saskatchewan waters, the life contained therein, and factors influencing that life. Study projects are carried out to determine the productivity of lakes and streams, to secure information on the ecology and life histories of the important species of fish, to investigate pollution and to assess other factors that may affect the environment for fish.

The most important approach is the basic biological survey, in which an inventory of an unsurveyed water body is made. During 1961, 14 major projects were carried out. Fisheries examinations were commenced on a number of smaller Precambrian lakes along the "Roads to Resources" north of La Ronge, as well as on other lakes located throughout the province. Carp research studies were continued, creel census studies instituted on five lakes, and reports covering the survey of six lakes were completed. For the second consecutive year, about 531,000 rainbow trout fingerlings were released in Thomson Lake, a 2,380-acre PFRA reservoir located between Gravelbourg and LaFleche. In addition, about 215,000 rainbow trout fingerlings were released in 16 water areas, $24,100,000$ pickerel fry in 59 lakes, $2,850,000$ northern pike fry in six lakes and 30,000 lake trout fingerlings in Whiteswan Lake.

Alberta.-Commercial and game fishing is administered by the Fish and Wildlife Division of the Department of Lands and Forests under authority of the Fisheries Act (Canada) and the Fishery Act (Alberta).

Commercial production of fish from Alberta waters in the year ended Mar. 31, 1961 amounted to $16,700,000 \mathrm{lb} ., 33 \mathrm{p} . \mathrm{c}$. higher than the harvest of the previous year. About 67 p.c. of the 1960-61 production was exported to the United States. Whitefish accounted for about one-third of the take and over one-half of the total market value of $\$ 2,178,000$. Other commercially utilized fishes, in order of market value, were: tullibee, walleye, northern pike, lake trout, yellow perch, burbot, suckers and goldeye. Although tullibee represented over 45 p.c. of the total catch, they were used primarily as animal food and so had a relatively low market value. Research and management activities were continued in the fields of basic lake productivity and of population structure and harvest of the more important commercial species. Preliminary biological surveys of watersheds and inventorying of their sport fish resources were continued during 1961 with emphasis on headwater streams in the Athabasca drainage basin. Eleven lakes previously devoid of game fish were stocked with trout and two lakes in which fishing success had deteriorated to a marked degree were treated with chemicals to remove undesirable fish. Golden trout were introduced in two high-altitude lakes in an effort to provide added variety to the province's sport fisheries.

Several stream rehabilitation projects were undertaken. Management of smaller eastslope trout streams continued on the open-alternate-year basis and larger rivers were open to fishing the entire year.

Studies to evaluate trout-stocking policies on lakes were carried out for the third year. Experiments to determine hatchery trout survival in streams were continued at the Gorge Creek biological station, and the rate of recovery of hatchery trout by anglers was studied at two locations in the province. Renovation of the trout-rearing facilities during the year is expected to increase production of hatchery yearling trout by approximately 50 p.c.

British Columbia.-A Fisheries Office, which was organized in 1901-02 and became very active in fish culture work, building and operating fish hatcheries and instituting scientific research into various fishery problems, was superseded in 1947 by the Department of Fisheries which in turn was superseded in 1957 by the Department of Recreation and Conservation. Commercial fisheries are represented today as the Commercial Fisheries Branch of the Department of Recreation and Conservation. Broadly speaking, the administrative and regulative jurisdiction over the fisheries of British Columbia rests with the federal authority. The ownership of the fisheries in the non-tidal waters is vested in the Crown in the right of the province, as are the shell fisheries such as oyster fishing and clam fishing in tidal waters. The province administers these fisheries although the regulations covering them are made under federal Order in Council on the advice and recommendation of the province.

The provincial Fisheries Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish processing plants under a system of licensing. Provision is also made for arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations.

Regulation and administration of net fishing in the non-tidal waters of the province, including commercial fishing and authority for regulation of the game fisheries in non-tidal waters, is vested in the Fish and Game Branch which operates a number of trout hatcheries and egg-taking stations for restocking purposes.

The Branch co-operates closely with the Fisheries Research Board of Canada. The biological research into those species of shellfish over which the province has control, principally oysters and clams as well as marine plants, is conducted by the Fisheries

Research Board of Canada at the Pacific Biological Station, Nanaimo, B.C., under agreement with the federal and provincial authorities. The object of this research is to encourage the industry to produce better products more economically and to enable the Commercial Fisheries Branch to regulate the various species so that maximum exploitation may be obtained on a sustained-yield basis.

## Section 3.-Fishery Statistics

## Subsection 1.-Primary Production

The Atlantic Coast fishermen had a very successful year in 1960, recording increases in both quantity and value landed over the previous record attained in 1959. Returns to fishermen amounted to $\$ 59,763,000$, 2 p.c. higher than the 1959 total of $\$ 58,436,000$. Lobster, for the second consecutive year, was the chief source of income for Atlantic fishermen, having a value of $\$ 18,031,000$, and cod remained second with a value of $\$ 16,538,000$. Heavier catches of flounder, sole and pollock aided in making 1960 an exceptional year.

Nova Scotia led the Atlantic Provinces with a value of $\$ 26,094,000$, followed by Newfoundland with a record-breaking $\$ 15,856,000$, New Brunswick with $\$ 9,358,000$, Prince Edward Island with $\$ 4,640,000$ and Quebec with returns to fishermen of $\$ 4,504,000$. An early spring with much of the shoreline free of ice gave the fishermen an early start and heavy landings of groundfish were reported from all areas in May. Newfoundland continued this trend through June and July with a successful cod trap fishery and heavy catches of redfish. Good lobster catches compensated for a decline of the groundfishery in other areas and this scarcity of groundfish remained until early November when haddock suddenly became abundant offshore and dragger fishing out of maritime ports remained good until the end of the year. Good catches of cod and redfish also were reported.

Newfoundland's fishermen received more money from fishing in 1960 than in any other year. The value of landings at $\$ 15,856,000$ was 9 p.c. higher than the $\$ 14,529,000$ reported for 1959; quantity landed increased 2 p.c. Heavier landings of small flatfishes, redfish and lobster combined with higher unit prices, especially for groundfish, contributed to the record year for Newfoundland fishermen.

Although the 1960 landings of $430,310,000 \mathrm{lb}$. by Nova Scotia fishermen were 2 p.c. higher than the $423,273,000 \mathrm{lb}$. reported for 1959 , the value of the catch at $\$ 26,094,000$ was 4 p.c. lower than the 1959 high of $\$ 27,112,000$. Lower unit prices for groundfish, lobster and scallops were mainly responsible for the decline. Lobster was the most important species from a value standpoint at $\$ 8,204,000$, followed by cod, haddock and scallops.

New Brunswick fishermen had a good year in 1960. Landings of $232,662,000 \mathrm{lb}$. were 2 p.c. higher than the $227,994,000 \mathrm{lb}$. taken in 1959 and the value of the catch at $\$ 9,358,000$ increased 7 p.c. from $\$ 8,763,000$. A decline in groundfish landings was offset by increased catches of lobster and herring. Lobster at $\$ 4,059,300$ was still the big moneymaker, accounting for 43 p.c. of the fishermen's returns; herring and cod followed in importance.

Prince Edward Island's 1960 catch was valued at $\$ 4,640,000,8$ p.c. more than the $\$ 4,287,000$ recorded for 1959. The lobster fishery, with a value of $\$ 3,212,500$, accounted for 69 p.c. of the total value of the Island's fishing industry.

Landings by Quebec fishermen amounted to $98,851,000 \mathrm{lb}$. in 1960 , down 12 p.c. from the $112,954,000 \mathrm{lb}$. landed in 1959. However, they received higher unit prices for their catch so that its value at $\$ 4,504,000$ was 4 p.c. higher than the 1959 total of $\$ 4,316,000$. The major species caught was cod valued at $\$ 1,522,000$, followed by lobster valued at $\$ 1,154,000$.

Pacific Coast fishermen had a poor year in 1960; total landings decreased by 45 p.c. and value by 20 p.c. from the previous year. Salmon reached an all-time low of $75,153,000$ lb., a decrease of 29 p.c. from the 1959 total of $105,680,000 \mathrm{lb}$., although its value decreased only 10 p.c. Good catches of halibut were reported but over-supplied markets lowered the unit value; as a result, returns to fishermen were down slightly although there was a 14-p.c. increase in landings. The herring fishery also suffered. World fish meal markets were over-supplied, prices dropped and plants with large supplies of raw materials carried over from the previous year announced that they would buy no more herring. The outcome was that the herring fleet remained idle until late November resulting in a catch of only $187,675,000 \mathrm{lb} ., 58$ p.c. lower than that of 1959 ; the value of the catch was down 70 p.c.

## 1.-Quantity and Value of Sea and Inland Fish Landed, by Province, 1956-60

Nort.-Figures for the years 1918-55 are given in the corresponding table of previous Year Books, beginning with the 1947 edition.

## 2.-Quantity and Value Landed and Marketed Value of the Chief Commercial Fish, by Selected Species, 1959 and 1960

## Subsection 2.-The Fish Products Industry

The Census of Industry survey of the fish products industry covers establishments engaged in the processing of fish at the secondary industrial level. Some fishermen process the fish they land to a certain degree but their operations are not included nor are the minor amounts of processing done in the inland areas (Ontario, the Prairie Provinces, and the Northwest Territories). In 1960, products of fish processing establishments had a selling value of $\$ 169,530,000$, slightly higher than in 1959 . The East Coast fish plants contributed $\$ 101,966,000$ compared with $\$ 94,499,000$ in the previous year and those of British Columbia $\$ 67,564,000$ compared with $\$ 74,522,000$.
5.-Summary Statistics of Seafish Processing Establishments, 1956-60

The most important products of the fish products industry are canned salmon for British Columbia and frozen fillets of groundfish for the Atlantic Coast. The greatly reduced salmon catch in 1960, the lowest on record, had its effect on the canned salmon output which dropped to 631,150 cases from the 1959 output of $1,077,487$ cases, a decrease of 41 p.c. The value at $\$ 22,767,000$ declined 34 p.c.

The frozen groundfish fillet and block production on the Atlantic Coast amounted to $137,530,000 \mathrm{lb}$., a $3-$ p.c. reduction from the $142,086,000 \mathrm{lb}$. produced in 1959 ; the value at $\$ 30,881,000$ was 6 p.c. lower. Smaller catches of cod, haddock and hake and lower unit prices were mainly responsible for the decline. Other important products include dried salted fish, pickled fish, canned sardines and lobster products.

The value of all sea and inland fishery products processed or handled in Canada by processors, handlers or fishermen during 1960 reached a total of $\$ 198,005,000$, an amount 2 p.c. lower than the 1959 level of $\$ 203,040,000$. The value of Atlantic Coast seafish products was up 7 p.c. compared with the previous year but the value of British Columbia fishery products declined by 20 p.c.

## 8.-Value of All Products of the Fisheries, by Province, 1956-60

Nots.-Figures for the years 1917-55 are given in the corresponding table of previous Year Books beginning with the 1922-23 edition. Totals for five-year intervals from 1870 are given in the 1956 edition, p. 597.

[^180]
## PART II.-FURS

## Section 1.-The Fur Industry*

Fur Trapping.-The fur wealth of Canada is still a very valuable asset as it has been since the early days of settlement. Despite the rapid development of the country and the consequent exhaustion of fur resources in the settled areas, the belt of Northern Canada extending across the Yukon and Northwest Territories, the northern parts of the Prairie Provinces, through northern Ontario and Quebec and into the Maritime Provinces and Newfoundland is one of the world's few remaining natural reserves for fine furs. At the same time, conservation measures-including the protection of scarce types by limiting the catch or closing the trapping season completely for a time and the establishment of natural preserves-have also been effective in maintaining the numbers of wild fur bearers. Some species are normally subject to marked fluctuations in numbers from one year to another and the numbers of pelts of these types taken annually is notably affected by these cycles. But probably the most important factor governing the numbers taken of any particular species is the fluctuation in demand and price consequent on changes in fashion. Thus the swing to short-haired furs resulted for some time in the almost total neglect of fox and other long-haired furs. Recently these have shown signs of returning to favour but present demand comes mainly from the trimmings trade wherein price is a major consideration, so that price levels for furs in this class are not yet sufficiently attractive to encourage trappers to concentrate on them.

In recent years, prices for most types of wild furs have not kept pace with rising commodity prices; in fact many varieties are bringing less money than they did immediately prior to World War II and, in areas where the population depends largely for its livelihood upon returns from trapping, a great deal of hardship has been occasioned by the two-way drop in purchasing power. The effect of depressed returns has been to force many trappers to abandon their traplines completely for more rewarding employment, and others have become full-time or part-time wage earners, carrying on their trapping activities on weekends or off days. Thus, with the exception of natives in the more remote areas, few trappers now operate on a full-time basis and this has led to incomplete coverage of the trapping grounds in many parts of the country.

Fur Farming.-During the past decade there has been almost continual growth in mink ranching in Canada. From a total of 589,352 mink pelts produced on 2,557 farms in 1950-an amount that represented a steady increase from the early 1930's when the industry was in its infancy-production by 1960 rose to $1,204,077$ pelts, produced on 1,616 farms. At the same time, this increasing production in Canada was equalled or surpassed in other mink-raising regions, notably the United States and the Scandinavian countries, so that in 1961 estimated world production of mink pelts amounted to approximately $15,000,000$ and at the outset of the selling season in December 1961 considerable concern was expressed regarding the ability of the market to absorb this very large quantity. However, the tremendous popularity of mink, demand for which has easily surpassed the demand for any other fur, proved equal to the task and the 1961 crop, like its predecessors, was completely moved at firm prices.

On the other hand, the fox ranching industry in Canada, as elsewhere, has fallen upon disappointing times. Production of 2,034 pelts valued at $\$ 20,340$ in 1960 contrasted with the production of some 320,000 pelts valued at over $\$ 5,000,000$ in 1939. Currently, a modest demand exists for silver and other ranched foxes but prices realized do not come close to meeting the cost of production and the market is showing little signs of improving.

[^181]

Production of chinchilla pelts, a luxury fur, is increasing slowly in Canada. The first sale took place in 1944 when five pelts brought a total of $\$ 78$; in 1960 the 9,067 pelts sold were valued at $\$ 118,416$. In the early stages of the chinchilla industry, the promotional element was very active but the worst effects of this have been overcome and the chinchilla is beginning to find a place in the world fur market. Canadian raisers are striving to improve the quality of their pelts in order to take advantage of the demand that exists for fine quality merchandise.

Nutria, the only other fur-bearing animal reported on Canadian fur farms, is raised in limited numbers.

Fur Marketing.-The fur industry contributes about $\$ 25,000,000$ annually to Canada's export trade, approximately two-thirds of the total production of pelts going outside the country, principally to the United States and Britain. The majority of Canadian fur skins, both wild and ranch-raised, are sold by auction through one of seven fur auction houses situated across the country. Canadian pelts are traditionally sold in the raw or undressed state, facilitating entry into the many countries which maintain tariffs on imports of dressed furs.

The selling season commences in December with large offerings of fresh ranch mink pelts, and later in the same month quantities of the new season's wild furs become available, including substantial offerings of wild mink. In January and succeeding months, offerings of ranch mink continue and, in addition, quantities of wild furs fresh from the traplines reach the fur auction houses. These include wild mink from the Mackenzie River and Labrador sections and beaver from the Quebec preserves, acknowledged by the trade to be the finest of their types in the world.

Most Canadian ranched mink pelts are shipped directly from farm to auction house where they are sold for the account of the producer, the fur auction house charging a commission for its services, based on a percentage of the selling price. A small percentage of the total catch of wild furs goes direct from the trapper to the auction house. Because most trappers require an outlet close at hand where they can dispose of their pelts immediately in exchange for needed supplies, the bulk of Canadian wild furs passes initially from the trapper to the local dealer who is often the operator of a small country store. Here, furs from many trappers are assembled and may then be shipped to the fur auction house or may await the arrival of a travelling buyer who will add them to his larger collection before shipping.

At the auction sales, furs are purchased by buyers through competitive bidding. In recent years an increasing number of the bidders are overseas members of the trade who come to Canada to fill their requirements. With rapid air transport now available, only a few hours separate them from Canada and their business can be transacted with a minimum of expense and delay. Alternatively, those whose requirements are not sufficiently large to warrant a trip to Canada may engage one of a number of experienced Canadian fur brokers who are experts in their field and fully competent to purchase on behalf of clients.

## Section 2.-Provincial and Territorial Fur Resources and Management

Most of the fur resources of the provinces of Canada are under the administration of the respective provincial governments. Exceptions include those resources within the boundaries of the National Parks and the Indian reserves, and the fur resources of the Yukon Territory and the Northwest Territories, all of which are under the administration of the Federal Government. The Canadian Wildlife Service of the Department of Northern Affairs and National Resources (see pp. 37-38) is responsible for all Federal Government interests in wildlife resources except for those activities closely related to Indian affairs. The Service co-operates with provincial governments and other agencies concerned and handles federal interests in relevant national and international problems.

Detailed descriptions of provincial and territorial fur resources and management activities are given in the 1957-58 Year Book, pp. 616-622.

## Section 3.--Fur Statistics

## Subsection 1.-Fur Production and Trade*

Total Fur Production.-Early records of raw fur production were confined to the decennial censuses when account was taken of the number and value of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of raw fur production. For a number of years the statistics were based on information supplied by the licensed fur trappers. More recently annual statements based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are used in the preparation of the statistics issued annually by the Bureau. Figures for Prince Edward Island are based on returns supplied to the Dominion Bureau of Statistics by fur dealers in that province.

${ }^{1}$ Approximate.
${ }^{2}$ Wildlife pelts for Newfoundland included from 1952.
Ontario continued to lead the provinces in value of fur production, accounting for 26 p.c. of the total in the 1960-61 season. Manitoba followed with 16 p.c., British Columbia with 15 p.c., Alberta 13 p.c., Quebec 10 p.c., Saskatchewan 9 p.c., the Atlantic Provinces 5 p.c., and the Yukon and Northwest Territories combined 5 p.c.

| Canada ${ }^{1}$. | 5,999,414 | 31,186,078 | 100.0 | 6,237,594 | 28,742,458 | 100.0 |

${ }^{1}$ Totals include a few pelts and their values not allocated to a province or territory.
Although the 6,237,594 pelts taken during 1960-61 represented a 4-p.c. increase over the number taken in the previous year, the total value dropped 8 p.c. from $\$ 31,186,078$ to $\$ 28,742,458$. Lower average prices for most important types resulted in the decreased value, particularly for standard and mutation mink, beaver and muskrat. In point of numbers, perhaps the most noteworthy increase was made in the sale of white fox pelts which rose from 14,457 in 1959-60 to 51,995 in 1960-61. The number of muskrat pelts sold increased by 182,959 , mutation mink pelts by 81,806 , standard mink by 77,567 and beaver by 54,693 in the same comparison.

Fur Farm Production.-Fur bearing animals were first raised in Canada on farms in Prince Edward Island about 1887 and in Quebec in 1898; today fur farming is carried on in all the provinces. There was a slow but steady increase in the number of farms until 1920 when 587 were reported, followed by a period of more rapid growth to 1938 when the number reached 10,454 with a production value of $\$ 6,500,000$. During the war years many fur farms went out of business and although prices rose considerably after the War, operating costs increased and the number of fur farms, particularly those conducted in conjunction with other farming operations, continued to decrease. By 1960 only 2,331 farms reported but the value of their production was $\$ 17,040,000$. Although there were 127 fewer farms in 1960 than in 1959, the number of animals on such farms increased from 536,276 to 559,215 and the number of pelts taken from $5,999,414$ to 6,237,594.

${ }^{1}$ Estimated at $\$ 10$ per pelt.
${ }^{2}$ Excluding rejects.
${ }^{3}$ Estimated at $\$ 4$ per pelt.
Exports and Imports.-The Canadian fur trade, both export and import, is mostly in undressed furs, the value of dressed and manufactured furs going out of or coming into Canada being a comparatively small proportion of the total. Canadian fur exports consist largely of those produced in greatest abundance, mink being by far the most valuable followed by beaver, fox, squirrel and muskrat. Furs such as Persian lamb, mink, muskrat, fox, raccoon, Kolinsky, and sheep and lamb make up the major portion of the imports. Exports and imports of all furs, undressed, dressed and manufactured, from and to the United States, Britain and all countries, are given for the years 1960 and 1961 in Table 7.

## Subsection 2.-The Fur Processing Industry*

The rather general term 'fur processing' includes the fur dressing and dyeing industry and the fur goods industry. The former is concerned with the dressing or dyeing of pelts on a custom basis and the latter is a manufacturing industry that makes up fur goods such as coats, scarves and gloves.

[^184]In 1960 the number of skins treated was $7,182,086$, of which muskrat comprised 40 p.c., mink 21 p.c., Persian and other types of lamb 17 p.c., squirrel 5 p.c. and rabbit 2 p.c.

## CHAPTER XIV.-MANUFACTURES

## CONSPECTUS

## The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

This Chapter deals with manufacturing in Canada in three Parts. Part I reviews the changes in manufacturing production during the period 1945-59 followed by an outline of the manufacturing situation in 1960. It also contains a specially prepared treatise on Canada's fast-growing petrochemical industry. Part II provides general statistical analyses including manufacturing statistics from 1917; detailed treatment of production under various groupings and individual industries; and principal factors in manufacturing production such as capital expenditures and size of establishment. Part III deals with the provincial and local distribution of manufacturing production.

Figures for 1960 were available at the time of going to press for most of the tables of Part II, although certain analyses, such as principal commodities produced and manufactures classified by origin and type of ownership, were not yet complete and 1959 is given as the latest year. Similarly, 1959 is the latest year for all provincial and municipal analyses contained in Part III.

## PART I.-REVIEW OF MANUFAGTURING*

Canada is no longer on the fringes of industrialization but ranks among the world's most important manufacturing countries. The rate of expansion throughout the years has been phenomenal but in the past generation alone Canada has changed from a country producing and exporting mainly primary products to one that is increasingly producing and exporting manufactured goods. Today, manufactures account for about 26 p.c. of the value of all goods and services produced and employ a like percentage of the total labour force.

[^185]
## Manufacturing Production during the Period 1945-59

Significant changes in the nature of manufacturing production took place during the 1945-59 period. Emerging in the late 1930's from a depression almost world-wide in scope, the manufacturing industries of Canada entered a period of rapid growth which continued with little interruption throughout the war and postwar years. The problem confronting business economists is to determine how much of the postwar industrial 'drive' was caused by normal growth factors and how much was caused by the backlog of war-accumulated demand. While it is true that the greatest demand accumulation took place in housing and consumer durable goods, non-durable goods such as textiles and clothing also started the postwar period with sizable backlogs of unfilled demand. It is now apparent, after the vigorous pace of business which followed the outbreak of hostilities in Korea in 1950, that a considerable portion of this demand has been satisfied and that some industries, notably textiles, clothing, agricultural implements and certain major appliances, are experiencing difficulties. However, over-all prospects for the near future appear quite favourable. The high level of capital investment during the past few years which greatly increased productive capacity is beginning to be reflected in current production statistics. Large expansion and development programs are still under way in iron ore, aluminum and other metals, oil, chemicals, electric power and in a number of other industries. In addition, Federal Government expenditures for national defence should continue to exert some influence on the economic picture.

In this review the changes in the nature and extent of manufacturing production since the end of World War II are measured by the number of persons employed, salaries and wages paid, and indexes of physical volume of output.

Changes in Employment.-With respect to employment, the most notable feature is the relatively small increase of 15.6 p.c. in the number of persons employed in manufacturing as a whole since 1945 as compared with the $61.2-$ p.c. increase in the volume of production during the same period. Thus, the average annual increase in employment was approximately 1.0 p.c. as against a 4.0 -p.c. increase in output volume. The trend in recent years for the same amount of goods to be produced with fewer employees is being progressively accelerated. As the following figures show, the relatively larger increase in volume than in number of employees was 3.9 p.c. during the $1945-49$ period, 13.7 p.c. during the 1949-54 period and 18.6 p.c. during the 1954-59 period. The over-all efficiency increase during the fifteen years was 39.4 p.c.

The advance in efficiency is even more pronounced when the number of production workers in manufacturing are considered separately from office and administrative employees. Between 1945 and 1959 there was an increase of 6.6 p.c. in the number of production workers and of 59.4 p.c. in the number of office and administrative employees. Therefore, since the increase in volume of output was 61.2 p.c., the efficiency of production workers increased 51.2 p.c. during the period as compared with an increase of 39.4 p.e. for all employees.

| Year | Production Workers | Administrative and Office Employees | $\begin{gathered} \text { Total } \\ (\mathrm{excl} . \text { Nfld.) } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
|  | No. | No. | No. |

| Percentage change. . | +6.6 | +59.4 | +15.6 |

There are several reasons why the number of office employees has increased faster than the number of production workers. As already stated, productivity per production worker is much higher than it was fifteen years ago. Also fluctuation in numbers of workers in periods of changing demand is minimized by a growing tendency to put production workers on part time during periods of curtailed production and to attain through overtime work part of the extra volume required during periods of expanding production. The number of general office workers also remains fairly static in the face of fluctuation in output but this category includes professional and technical employees, the number of whom has been increasing rapidly with the expansion in manufacturing production. As an establishment increases in size, it performs more and more of the functions which, when it was smaller, were conducted by independent specialists outside the manufacturing field. For example, an establishment, as it becomes larger, may decide to do its own selling rather than sell through wholesalers. So, without increasing the number of production workers, the office staff is increased to include a sales manager, salesmen and additional clerks. Other administrative functions, such as research and advertising, are being done increasingly by internal staff, also adding to the number of office and administrative employees without corresponding addition to the number of production workers.

All provinces, with the exception of Prince Edward Island, Nova Scotia and New Brunswick, reported increased employment in manufacturing during the 1945-59 period. Alberta led in this respect with an increase of 83.9 p.c. followed by Ontario with an increase of 18.9 p.c. These were the only provinces that had a greater increase than the Canadian average of 15.6 p.c. British Columbia reported an advance of 15.0 p.c., Manitoba 12.5 p.c., Quebec 12.3 p.c., and Saskatchewan 7.9 p.c. Nova Scotia, New Brunswick and Prince Edward Island reported declines of 15.7 p.c., 7.0 p.c., and 4.4 p.c., respectively.

An outstanding feature was the tremendous advance made by Alberta in the production of chemicals, especially petrochemicals, fertilizers, and other new inorganic products such as caustic soda and chlorine. Sizable gains were also made by the food-processing industries and many factories were constructed for producing building materials, transportation equipment, paper products and textiles. This expansion resulted in a great increase in employment in manufacturing, which was more than five times the increase for Canada as a whole.

Changes in Salaries and Wages.-Inter-industry and year-to-year variations in average earnings result from a variety of causes: the length of the standard work week; the number of casual and part-time workers and the hours they worked in the reported week; amounts of overtime worked, and time lost through absenteeism, labour turnover, industrial disputes, lay-offs, etc.; differing occupational requirements; and varying proportions of men and women.

Differences in average earnings are related to the distributions of employees in industries or areas where pay levels vary from the average because of variations in basic pay rates, in sex and occupational distributions, in amounts of bonus or commission payments, in levels of activity, etc. The earnings of salaried men are substantially higher, on the average, than those of other categories, mainly because their numbers include relatively highly paid managerial and professional workers. Women's earnings are generally well below those of men in the same industries, chiefly because of pay and occupational differences, the greater incidence of part-time work and absenteeism among women, and their higher proportion of younger and less experienced workers.

Salaries and wages paid by Canadian manufacturing industries in 1959 totalled $\$ 5,073,073,706$, an increase of $\$ 3,227,300,257$ or 175 p.c. over 1945 , and average annual earnings per employee rose from $\$ 1,649$ to $\$ 3,891$ or 136 p.c. during the period. Annual earnings of production workers advanced 131 p.c., while those of office employees rose 128 p.c., narrowing the gap between the annual earnings of these groups. In 1945 annual earnings of production workers were 70.2 p.c. of the earnings of office employees and by 1959 the percentage had advanced to 71.0 .

There was also a change in the proportion of female workers engaged in manufacturing. During the war years, owing to the shortage of manpower, the proportion went up and by 1945 reached 27.7 p.c. but by 1949 it had dropped to 24.0 p.c. and by 1954 to 22.6 p.c.; in 1959 it rose again slightly to 22.8 . In comparing annual earnings of one industry with another, the proportion of female workers employed by each must be considered since female workers as a group are paid lower wages than male workers. Industries made up of a large number of small establishments and in which the proportion of female workers is high consequently have lower average annual earnings. Cotton yarn and cloth, fruit and vegetable preparations, women's factory clothing, leather footwear and men's factory clothing are the more important industries in this category.

Interesting comparisons are obtained by comparing salary and wage payments with value added by manufacture. Value added is obtained by subtracting the cost of materials, including fuel and electricity, from the gross value of products. The difference represents the value added by labour to the materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for the payment of salaries and wages, interest, rent, taxes, repairs and all other overhead charges that ordinarily must be met, as well as profits. The value added by manufacture reported by the various industries can be added to produce a non-duplicating total for manufacturing as a whole. Being free of duplication within the manufacturing sector, value added figures are, therefore, more representative of the total value of manufacturing production than are gross value of production figures.

The following figures show that the proportion of salary and wage payments to value added is more or less constant, the average annual change during the past fifteen years was only one-fifth of one per cent, dropping from 51.8 in 1945 to 49.2 in 1959. The proportion of office payments rose from 11.7 to 14.9 while production payments dropped from 40.1 to 34.3 during this period. The ability to increase prices in proportion to increases in salaries and wages no doubt accounts for this phenomenon.

Average annual earnings in 1959 for all employees totalled $\$ 3,891$, an increase of 136 p.c. over the 1945 average of $\$ 1,649$. In 1959 British Columbia and Ontario, with average annual earnings of $\$ 4,165$, were the highest paying provinces, British Columbia having a slight margin over Ontario. Alberta ranked third, followed in order by Saskatchewan, Quebec, Manitoba, Newfoundland, Nova Scotia, New Brunswick and Prince Edward Island. The high figure shown for the Yukon and Northwest Territories is not representative because of the unusual conditions under which industry is carried on in those Territories.

As already mentioned, a notable feature during the past twenty years was the reduction in the disparity between average annual earnings of office and production workers. Whereas in 1939 average annual earnings of production workers were only 56 p.c. of the earnings of office employees, in 1943 the percentage rose to 76 , declined to 69 in 1947 and rose again to 71 in 1959. This tendency toward equalization was caused, in part, by the controls adopted by the Federal Government during the war years which tended to stabilize earnings of office workers more than earnings of production workers. The increase in average earnings of production workers was also influenced by the fact that large numbers were employed in the highly paid iron and steel industries and by the increase in the number of hours worked, some at overtime pay. Another factor that influences annual earnings is the
number of females employed. Ontario has a larger proportion of females among its office employees than any other province and the same situation prevails in Quebec with regard to production workers owing, no doubt to the heavy concentration of textile establishments in that province. Of all female production workers engaged in manufacturing in 1959, 41 p.c. were in the textile and clothing group.

All provinces reported higher annual earnings in 1959 than in 1945, the increases ranging from 158 p.c. in Saskatchewan to 101 p.c. in Nova Scotia. Some significant changes took place in the ranking of the provinces during the period. In 1945 British Columbia with $\$ 1,823$ was in first place and exceeded by $\$ 120$ the annual earnings in Ontario which was second; in 1959 these two provinces remained in first and second places. Alberta and Saskatchewan bettered their positions but Manitoba, Quebec and Nova Scotia dropped behind. New Brunswick and Prince Edward Island showed no change, being in eighth and ninth places, respectively, in both years.

| Province or Territory | Average Annual Earnings |  | $\begin{gathered} \text { Increase } \\ \text { 1945-59 } \end{gathered}$ | Rank |  |

| British Columbia............... | 4,165 | 1,823 | 128 | 1 | 1 |
| Yukon and Northwest Territorie | 5,305 | 1,983 | 167 | ... | ... |
| Canada. | 3,891 | 1,649 | 126 |  |  |

Tables 1 and 2 give comparisons of earnings by province and industrial group for the period 1946-59 since the industrial breakdown is not available for 1945 in comparable form. Table 1 shows that annual earnings of production workers averaged $\$ 3,551$ in 1959, an increase of 134 p.c. over the earnings reported in 1946. Production workers in British Columbia received an average of $\$ 3,918$ in wages, the highest amount in Canada, and those in Ontario received $\$ 3,814$. On the other hand, Prince Edward Island with $\$ 2,005$ paid the lowest annual wages in Canada.

For Canada as a whole, weekly earnings of production workers were 120 p.c. higher in 1959 than in 1946 and hourly earnings were 132 p.c. higher. Hourly earnings increased steadily each year although at a progressively declining rate; between 1946 and 1949 the increase was 32 p.c., between 1949 and 1954, 43 p.c., and between 1954 and 1959, 23 p.c.

Industries producing durable goods generally have higher earnings than the industries producing non-durable or consumer goods. All industrial groups reported increases in annual earnings between 1946 and 1959, ranging between 189 p.c. for tobacco and tobacco products and 89 p.c. for clothing. In 1959 production workers in the products of petroleum and coal group received the highest average annual earnings, amounting to $\$ 5,185$. Transportation equipment was in second place with an annual average of $\$ 4,328,17$ p.c. less than the leading group.

Annual earnings of administrative and office employees averaged $\$ 4,998$ in 1959, an increase of 120 p.c. over the 1946 annual earnings which amounted to $\$ 2,270$. This category of employees in Ontario received the highest average, at $\$ 5,217$, followed by those in British Columbia with $\$ 5,118$ and Quebec with $\$ 4,910$. Prince Edward Island paid the lowest average annual salary of $\$ 2,683$. The fact that head offices of many large corporations are located in Montreal, Toronto, Winnipeg and Vancouver tends to raise the average salary of the provinces in which these cities are located.

For Canada as a whole, weekly earnings advanced 121 p.c. from 1946 to 1959 and hourly earnings 136 p.c. Hourly earnings of office employees increased each year, but at
an uneven rate; between 1946 and 1949 the increase was 28 p.c., between 1949 and 1954 it was 46 p.c. and between 1954 and 1959, 26 p.c. The significant difference in the rate of increase of office employees as compared with production workers occurred during the 1946-49 period, when hourly earnings of office employees increased 28 p.c. and those for production workers 46 p.c. Since 1949 the trend for both classes of employee was about the same.

All industrial groups reported higher annual earnings in 1959 than in 1946, the increases ranging from 166 p.c. for wood products to 80 p.c. for textiles. As with production workers, office employees in the durable goods industries received greater increases generally than office employees in the non-durable or consumer goods industries. Among the industrial groups, office employees in the products of petroleum and coal group received the highest average annual salary of $\$ 6,188$ in 1959; as already noted, this group was also the highest paying group with respect to annual earnings of production workers. Office employees of the paper products group received the second highest average salary and those of the transportation equipment group the third highest. The lowest annual earnings were received by the office employees of the wood products group. In 1959 there were two groups with annual earnings of more than $\$ 6,000$, six groups with earnings of $\$ 5,000$ to $\$ 6,000$, eight groups in the $\$ 4,000$-to- $\$ 5,000$ range and only one group below $\$ 4,000$.

## 1.-Average Annual, Weekly and Hourly Earnings of Production Workers, by Province and Industrial Group, 1946 and 1959

| Province and Industrial Group | Annual Earnings |  |  | Weekly Earnings |  |  | Hourly Earnings |  |  |

${ }^{1} 1950$ earnings.
Changes in the Volume of Goods Produced.-For all types of manufacturing, there was an increase of 61.2 p.c. in the volume of production during the 1945-59 period; non-durable goods-which include foods and beverages; tobacco, rubber, leather, paper, petroleum and chemical products; textiles and clothing; printing and publishing, etc.advanced by 70.2 p.c., and durable goods-which include products of wood, iron and steel, metal and non-metallic minerals, transportation equipment and electrical goods-advanced by 49.8 p.c. The following figures show that non-durable goods increased at an accelerated rate during the whole period but that durables recorded little change between 1945 and 1949 and advanced 25 p.c. between 1949 and 1954 but only 20 p.c. between 1954 and 1959.

As stated above, there was no interruption in the upward movement of production in the non-durable group of industries during the whole period. The population of the country increased by 44.5 p.c. in these years and the filling of the requirements of these
additional people accounted for part of the increase in the demand for such goods. Also contributing to the upward trend were increased exports and generally higher personal expenditure on consumer goods which resulted from the high level of economic activity and attendant increased personal income. The greatest advance in volume of output was achieved by the products of the petroleum and coal group of industries, which amounted to 226 p.c. This was followed by the printing and publishing industries with an increase of 113 p.c., paper products 109 p.c., chemicals and allied products 95 p.c., miscellaneous industries 86 p.c., tobacco and tobacco products 74 p.c., foods and beverages 61 p.c., rubber products 58 p.c., textiles 42 p.c., clothing 24 p.c., and leather goods 5 p.c. Although all these groups reported increases in volume of output, five of them employed fewer persons in 1959 than in 1945, the declines ranging from 15.4 p.c. in the tobacco industry to 9.1 p.c. in the leather goods industry.

While non-durable goods fluctuate more or less in proportion to the growth in population and levels of personal income, the durable goods industries are affected to a much greater extent by fluctuations in the business cycle. When the economy is expanding, durable goods industries expand far more than non-durable goods industries, and in periods of recession they experience a more severe downturn than do non-durables. Thus, the industries producing durable goods showed wider fluctuations in volume of output during the 1945-59 period than did the industries producing non-durable goods.

${ }^{1}$ Exclusive of Newfoundland and "Publishing (only) of Periodicals". $\quad{ }^{2}$ Not included in the totals for the 1945-49 and 1945-59 periods because figures for Newfoundland were included with Canadian manufacturing production only since 1949.

For the period as a whole, the greatest expansion in volume of durable goods output was recorded by the non-metallic mineral products group, which increased 250 p.c. This was followed by electrical apparatus and supplies with an increase of 161 p.c., wood products 77 p.c., iron and steel products 53 p.c., and non-ferrous metal products 36 p.c. The transportation equipment group was the only one to report a decrease, and the $16-$ p.c. decline in the production of this group was accompanied by a $27-$ p.c. decline in number of employees. All other groups of the durable goods classification reported increased employment.

The output of transportation equipment was particularly high during the war years because of the great increase in production of ships and aircraft. The index for this group of industries reached a record level of 236 in 1944, the year of maximum war production. After the end of the War, however, the index dropped to a low of 81 in 1946. During the next few years output increased steadily and a postwar high of 165 was reached in 1953. The minor recession in industrial production in 1954 affected this group more than any other and the index dropped to 137 in that year. Although some recovery occurred during the following few years, the decline in industrial production during 1958 and 1959 brought the index to a level of only 132 in 1959.

The iron and steel group of industries was also considerably affected by war requirements. As most of the industries in this group were more firmly established in the prewar
period, they did not expand relatively to the same extent as the shipbuilding and aircraft industries. When European supplies were cut off early in the War, the Canadian basic steel industry had to rely on the United States for a greater supply and had to increase its own steel-making capacity to meet the abnormal wartime requirements. However, development of the iron and steel group of industries did not halt with the end of hostilities. Canada's industrialization program, together with the strong postwar demand for consumer durable goods, led to a steady expansion of this group of industries so that by 1959 the index had advanced to 147, the highest on record, and exceeded the wartime high by 15 points. The output of pig iron in 1939 was only 755,731 tons and the output of steel ingots and castings $1,551,054$ tons; in 1959 production of these commodities reached record levels of $4,182,755$ tons and $5,901,487$ tons, respectively.

## The Manufacturing Situation in 1960

The recovery that took place during 1959 in manufacturing production, following the moderate recession of 1957-58, was maintained, more or less, in 1960. In that year, the value of factory shipments amounted to $\$ 23,747,457,083$ and value added by manufacture to $\$ 10,517,332,701$, both the highest on record. Salaries and wages at $\$ 5,207,167,393$ were 2.3 p.c. higher than in the previous year, but number of employees and physical volume of production were fractionally lower, recording declines of 1.1 and 0.3 p.c., respectively. The trend in recent years for the same volume of output to be produced with fewer employees was also apparent in 1960; the physical volume of manufactures produced increased by 49 p.c. in the $1949-60$ period and the number of persons employed by only 10.5 p.c. The higher salaries and wages paid in 1960 resulted from the continuing advance in earnings, a trend common to all other sectors of the economy. It should be noted also that the addition of about 372,000 persons to the population in 1960 supplemented labour income and had a stimulating influence on the output of the consumer goods industries.

Of tremendous importance in sustaining the high level of production in 1960 was the continued high spending on capital goods, such as construction and machinery and equipment of all kinds. Investment in capital goods amounted to $\$ 8,262,000,000$ although this was $\$ 155,000,000$ less than in 1959 ; on machinery and equipment expenditures were $\$ 101,000,000$ higher than in 1959 but construction expenditures were $\$ 256,000,000$ lower. However, the big drop in the spending on construction projects had only a moderate effect on the industries producing building materials. An increase in the export of timber, lumber and shingles counterbalanced the decline in domestic demand, resulting in a net decrease of only 0.4 . p.c. in the volume of wood products manufactured; the output of cement, however, dropped 7.9 p.c.

Export demand for Canadian manufactured products was also a strong factor in stimulating the high level of production in 1960. Exports of partly manufactured products at $\$ 1,640,637,000$ were $\$ 186,736,600$ higher than in 1959 and exports of fully manufactured goods at $\$ 1,969,655,000$ were $\$ 109,021,000$ higher. On the whole, exports of partly and fully manufactured products increased 9.0 p.c. Substantial improvements were shown in the amounts of lumber and timber, shingles, wood pulp, newsprint, aluminum and its products, nickel, copper and its products, zinc, automobiles and parts, crude artificial abrasives, fertilizers, lead and lead products and non-farm machinery going abroad but, at the same time, declines occurred in such major export items as veneer and plywood, whisky, wheat flour, farm implements and machinery, aircraft, synthetic resins and their products and uranium ores and concentrates.

As already mentioned, the physical volume of production for manufacturing as a whole reached an all-time high of 149.8 in 1959 but declined somewhat to 149.3 in 1960, a drop of 0.3 p.c. Between 1959 and 1960 the volume of non-durable or consumer goods produced increased 1.1 p.c. but the volume of durable goods manufactured declined by 2.1 p.c. Since the end of the Second World War the production of durable goods industries experienced an almost uninterrupted expansion but recorded an increase in volume of only

54 p.c. from 1946 to 1956 while durable goods increased 92 p.c. in the same period. The gap between the two was narrowed in the years from 1957 to 1960 so that for the whole period 1946-60 durable goods expanded 83 p.c. and non-durable goods 69 p.c.

The trend of production among the non-durable goods industries in 1960 was mixed. Eight groups reported increases ranging from 5.4 p.c. for chemicals and allied products to 1.2 p.c. for tobacco and tobacco products and four groups reported declines. Rubber goods, with a loss of 11.0 p.c., experienced the greatest drop in production followed by leather goods with a loss of 7.1 p.c., clothing 4.6 p.c. and textiles 1.5 p.c. In the durable goods sector only the non-ferrous metal products group reported a greater volume of production in 1960, the increase over 1959 being 10.1 p.c. A decline of 6.7 p.c. was reported by iron and steel products followed by a loss of 5.5 p.c. by the non-metallic mineral products group, one of 2.5 p.c. by electrical apparatus and supplies, 1.1 p.c. by transportation equipment and 0.4 p.c. by wood products.

The level of manufacturing production in 1960, as measured by the number of persons employed, varied from province to province. Compared with the previous year, the greatest increase in employment of 6.1 p.c. was reported by New Brunswick. Prince Edward Island with an increase of 1.6 p.c. was second in this respect, followed by Nova Scotia and Saskatchewan each with an increase of 0.7 p.c. and Quebec with an increase of 0.6 p.c. Manitoba suffered the greatest loss in employment of 2.9 p.c., followed by Ontario with a loss of 2.4 p.c., Newfoundland 1.5 p.c., British Columbia 1.2 p.c. and Alberta 1.1 p.c. Perhaps the most outstanding feature in 1960 was the continued expansion of manufacturing employment in Saskatchewan which increased 0.7 p.c., after a rise of 2.1 p.c. in 1959 and of 2.3 p.c. in 1958, a year when all other provinces reported declines. Another feature was the gain of 2.2 p.c. in employment in the Atlantic Provinces, when other economic regions, with the exception of Quebec, suffered declines.

Of major importance to modern industry is the production of petrochemicals, a sector of the chemical industry that has developed rapidly in Canada during the past decade. This industry is dealt with in detail in the following specially prepared article.

## THE PETROCHEMICAL INDUSTRY IN CANADA*

The term "petrochemicals" identifies, in a general way, not only the raw materials from which these chemicals are derived but also the closely related processes by which they are made. Petrochemicals may be defined broadly as chemicals derived from crude petroleum or natural gas and the development of this sector of the chemical industry has automatically brought it into closer working relationship with the oil and gas industry. Using plants and equipment that frequently resemble oil refineries, and employing techniques that have been only recently discovered, firms in this relatively new field can be separated from the remainder of the chemical industry for purposes of describing their growing importance in the Canadian economy.

For many years production of organic chemicals was hampered by a shortage of raw materials since the output of coal tar products was unable to keep abreast of the needs of chemical producers. This naturally led to the interest in petroleum and natural gas as source materials. In North America today there are some 3,000 petrochemicals in everyday use. Their number is increasing rapidly, with 300 or more being introduced every

[^187]year. In Canada, production of these chemicals is modest by comparison, yet the number of plants that have been built for this purpose since 1950 have succeeded in expanding total output many times over.

Petrochemical production has a double significance. In the first place, petrochemicals compete effectively with other raw materials. Thus, vegetable products, animal fats and coal tar are no longer exclusive sources of such organic chemicals as oils, detergents and synthetic fibres, and sulphur and ammonia no longer need be produced from coal or other minerals. Secondly, petrochemicals have made possible entirely new products. Thus the manufacture of synthetic rubber and many of the plastics has been a direct result of chemical research and engineering in respect to oil and natural gas.

It is extremely difficult to obtain figures demonstrating the value of petrochemical production since there is no clearly defined group of plants that can be said to make up the petrochemical industry. For example, there may be mining companies and oil refineries which produce petrochemicals but do not report them separately to the Dominion Bureau of Statistics, and to include the total production of these plants as petrochemicals would greatly inflate values while to omit them entirely would also be misleading. For purposes of comparing growth rates, however, Table 1 shows the rapid increase in the ten years since 1951 in the number of plants and value of production of a group of firms engaged in petrochemical operations and which provide a set of statistics that include primarily petrochemical production.

## 1.-Principal Statistics of Selected Firms Comprising the Petrochemical Industry, 1947-61

Note.-No attempt has been made to restrict this summary to the petrochemical operations of the plants in this group; accordingly, products not petrochemical in nature made at these plants are included.

| Year | Plants | Employees | Salaries and Wages | Cost of Fuel and Electricity at Works | Cost of Materials at Works | Gross Selling Value of Products at Works |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | \$'000 | \$'000 | \$'000 | 8 '000 |
| 1947. | 3 | 2,366 | 5,391 | 2,485 | 9,379 | 24,286 |
| 1948. | 3 | 2,386 | 5,857 | 3,036 | 12,097 | 30,340 |
| 1949. | 3 | 2,635 | 6,904 | 5,279 | 15,326 | 38,462 |
| 1950. | 3 | 2,731 | 7,774 | 6,334 | 18,595 | 50,466 |
| 1951. | 3 | 3,069 | 10,300 | 6,867 | 21,925 | 64,871 |
| 1952. | 5 | 3,344 | 12,156 | 7,482 | 24,395 | 67,187 |
| 1953. | 13 | 4,124 | 15,908 | 8,504 | 30,103 | 78,050 |
| 1954. | 13 | 4,642 | 19,520 | 9,955 | 41,817 | 99, 450 |
| 1955. | 13 | 4,751 | 20,425 | 10,194 | 48,790 | 127,104 |
| 1956. | 14 | 5,100 | 23,207 | 11,514 | 62,914 | 143,650 |
| 1957. | 18 | 5,800 | 28,855 | 13,507 | 72,017 | 161,000 |
| 1958. | 18 | 6,300 | 32,764 | 19,242 | 80,809 | 190,000 |
| 1959. | 19 | 5,974 | 32,018 | 18,133 | 91,255 | 202,854 |
| 1960 | 18 | 6,500 | 36,958 | 22,584 | 95,153 | 229,113 |
| 1961. | 21 | 6,620 | 39,276 | 21,468 | 97,767 | 252,389 |

History.-Canada's petrochemical history was spawned during World War II with the first two plants being government-controlled operations to produce vital military requirements. Petrochemical production actually began in 1941 with a $\$ 6,000,000$ investment to produce ammonia from natural gas at Calgary, Alta. This ammonia was required to produce ammonium nitrate for military explosives. After the War the plant was purchased by The Consolidated Mining and Smelting Company of Canada Limited and was converted to the manufacture of ammonium nitrate fertilizer. This first plant was followed by the synthetic rubber plant of Polymer Corporation Limited at Sarnia, Ont., which began operations in 1943. The first commercial petrochemical plant, however, was for the production of the plastic material, polystyrene, by Dow Chemical of Canada Limited at Sarnia in 1947.

While these three plants increased in size and diversity of production, it was not until the early 1950's that petrochemical growth accelerated rapidly in both Eastern and Western Canada, not only with respect to variety of product but also from the standpoint of types of feedstocks, new processes and methods of operation. In 1952, Shell Oil Company of Canada Limited pioneered the extraction of sulphur from natural gas in Canada and this was the forerunner of what grew, within a decade, to be the largest volume petrochemical in Canada. Canadian Chemical Company Limited completed a large plant at Edmonton, Alta., in 1953 to produce cellulose acetate for textiles, acetic acid and a variety of other chemicals. Cellulose is obtained from an affiliated pulp mill and propane and butane feedstocks are obtained from oil refineries and gas processing plants near Edmonton. The latter raw materials are partially oxidized to produce acetic acid and a wide range of oxygenated by-products such as alcohols, aldehydes and ketones. At the same time, Canadian Industries Limited constructed a petrochemical plant at Edmonton using ethylene derived from natural gas to produce polyethylene and, in Eastern Canada, Shawinigan Chemicals Limited, Shell Oil Company of Canada Limited and Union Carbide Canada Limited were completing plants at Montreal to produce a variety of petrochemicals from refinery streams. To add to the growth in petrochemical plants in 1953, Dupont of Canada Limited began producing nylon intermediates near Brockville, Ont., and Cabot Carbon Canada Limited commenced operations at Sarnia to produce carbon black for use primarily in the tire industry. In the next three to four years additional sulphur and ammonia plants were constructed in Alberta, Canadian Industries Limited completed a plant near Kingston, Ont., to produce polyester-type synthetic fibres from petrochemicals, and Ethyl Corporation of Canada Limited began production of tetraethyl lead as a gasoline anti-knock. Imperial Oil Limited became a petrochemical producer at Sarnia in 1957 to provide detergent alkylate, a basic ingredient of synthetic detergents, along with other basic raw materials. That same year, Canadian Oil Companies Limited produced the first petroleum-derived benzene.

While continued expansion occurred in many areas of petrochemical production in the intervening years, the major advances occurred in the natural gas processing industries and particularly in the development of sulphur-producing capacity. By 1962 there were seventeen plants in Western Canada extracting sulphur from natural gas and four additional ammonia plants using gas as a raw material, and a total of well over fifty plants, in all, producing chemicals derived from petroleum or natural gas.

The Industry Today.-The Canadian petrochemical industry is centred chiefly at Sarnia and Montreal, which are major petroleum refining centres, and in Alberta close to the low-cost natural gas fields. In Canada, as in other parts of the world, there has been a trend to larger, more economic plants and the establishment of chemical complexes. This was to be expected, because in the chemical business each company frequently becomes both a supplier and a customer of another chemical producer. Furthermore, important freight savings can be realized through pipeline deliveries between the plants. Such a centre usually attracts all types of skills and has services and facilities not available to a single plant or smaller installations.

In determining plant location, whether Eastern or Western Canada, various factors must be evaluated: (1) cost of raw material and fuel; (2) cost of transporting products; (3) economics of plant size; and (4) cost of construction. In general, Western Canada has an advantage in cost of raw materials but the cost of transporting products to market in Eastern Canada can offset this advantage. Large-scale operation usually results in lower unit costs and a plant located to serve only a small sector of the Canadian market and scaled to this size may therefore not normally be desirable. Costs of construction are slightly higher in Western Canada because of climatic conditions. These considerations have led to a greater concentration of petrochemical construction in Ontario and Quebec but there are still opportunities for new developments in Western Canada through upgrading of primary petrochemicals to higher valued intermediates and chemical end products on which transportation costs are not as significant a factor.

Petrochemicals now account for roughly one-third of the volume of chemicals produced in Canada and about two-thirds of the value. It is expected that the physical share will rise to 50 p.c. by 1965 , with a dollar value of almost three-quarters of the production of the entire chemical industry. Capital investment in Canada's petrochemical industry is now roughly $\$ 500,000,000$, a remarkable increase from the $\$ 6,000,000$ invested in the first plant twenty years ago. Sulphur ranks as the number one petrochemical in volume of production, with capacity reaching approximately $2,000,000$ tons in 1962 . This ranks Canada as the world's second largest producer of this material, although more by circumstance than by design since Western Canada's sour natural gas must be cleaned of its sulphur content prior to sale. Sulphur is used almost entirely for the production of sulphuric acid, which probably enters a greater variety of industrial processes than any other single chemical, but goes primarily into the manufacture of fertilizers and pulp and paper. Ammonia is in second place in volume and the capacity of over 500,000 tons is used mainly in the manufacture of fertilizers. Both sulphur and ammonia are inorganic chemicals and are therefore in a class by themselves compared to other petrochemicals.

Approximately 100 different organic chemicals are produced in more than 25 petrochemical plants in Canada, with a combined capacity of over $1,000,000$ tons. Primary petrochemicals are those obtained relatively simply from natural gas streams or oil refineries while secondary petrochemicals are those produced from the primary type. Benzene and ethylene are the two largest volume primary petrochemicals, with a capacity for each of approximately 200,000 tons per year. Both these chemicals are used in the production of a host of secondary petrochemicals such as synthetic rubber, polyethylene and polystyrene plastics, detergent alkylate and ethylene glycol. Carbon black capacity of about 60,000 tons enjoys third position among the primary petrochemicals. Among the secondary petrochemicals, synthetic rubber capacity leads the field at approximately 180,000 tons, and polyethylene capacity is next at nearly 80,000 tons.

One of the most versatile starting materials in the thriving petrochemical industry is ethylene. If ammonia and sulphur are excluded as special cases in Canada, it is expected that by 1965 over one-third of the Canadian-produced organic petrochemicals will utilize ethylene somewhere in their syntheses. Ethylene capacity in Canada now exceeds demand and it is expected to remain in plentiful supply for the foreseeable future. While polyethylene now leads the way as the most important outlet for ethylene, for years the largest market for this primary petrochemical was in the manufacture of ethylene glycol which, in turn, is used in the manufacture of anti-freeze, synthetic fibres, explosives, resins and other miscellaneous chemicals. Tetraethyl lead, polystyrene, synthetic rubber and vinyl chloride are further examples of chemicals produced in large volume and derived at least in part from ethylene.

Recent announcements of various new petrochemical ventures by Canadian oil and chemical establishments have provided fresh proof of the rising importance of the country's wealth of petroleum and natural gas as a source of raw materials for the domestic chemical industry. An especially notable example of its beneficial effects on the national economy was the recent upsurge of projects for the large-scale production of benzene and other aromatic chemicals from petroleum. These materials, which are in fast-growing demand for a host of processes in the manufacture of synthetic chemicals, could hitherto be produced domestically in substantial quantities only as by-products of coke oven operations. However, as supplies from these sources have long been lagging behind requirements by an ever-widening margin, they have had to be supplemented by correspondingly increased imports. Now, four oil companies have embarked on making benzene from petroleum, making Canada not only self-sufficient in the product but also providing a sizable surplus for export. The chart on p. 614 illustrates the basic petrochemical relationships for certain chemicals and the raw material sources from which they originate.

The supply of raw materials by oil refiners to chemical companies is a logical and natural situation. Usually the refiners can provide the chemical companies with a reliable source of basic materials at a definite saving. The chemical company can, in turn, use its

investment capital to build facilities to further process these petrochemicals into intermediates and end products such as plastics, elastomers, agricultural chemicals, surface coatings, textiles, oil additives, drugs, etc.

The desire by refiners to upgrade products and to expand their business in a closely associated field leads them to diversify into petrochemicals. A number of these are produced concurrently with fuel products and only need to be removed from the refinery streams and purified to the desired specifications. Most of the processes involved are closely related to those used in petroleum refining operations and generally, the necessary technical skills are available or can be obtained easily. Location, size of refinery, types of crude oils and other hydrocarbons processed by the refiner are all factors that have an important bearing on a refiner's decision to manufacture petrochemicals.

The force that encourages refiners to consider diversification into petrochemicals is growing in Canada just as it is in other parts of the world, but it should be recognized that because of the small domestic market that prevails in Canada the opportunities are sometimes less numerous.

Foreign Trade in Petrochemicals.-No accurate figures are available on the overall imports or exports of most petrochemicals but these materials enter into a significant portion of Canada's foreign trade. On exports, particularly, it seems likely that the products included in over 90 p.c. of the value of Canadian chemical shipments have utilized one or more petrochemicals in the manufacturing process.

Canada's petrochemical industry has not developed, even on a per capita basis, as quickly as that of the United States. This can be traced mainly to the fact that large markets are needed to enable the economies of large-volume operations. The smaller Canadian market frequently will not support the cost of operating a small plant to compete openly with the lower costs of larger U.S. plants. Imports of petrochemicals have therefore been a significant part of the total sales of these chemicals and it is likely that Canada's petrochemical output will continue at a fraction of the comparable U.S. production.

The Canadian industry's position should, however, become more favourable with time as more and more plants are built here to make products that previously have been imported. To do this, it will be necessary to control costs. Despite an abundance of material resources, the relatively small population of the country and the vast area it covers mean small plants or higher transportation costs, or both. Accordingly, it is usually necessary to obtain export business to secure enough volume to build an economic plant.

Introduction of new products and the expanding population have caused a continuing shortage of many chemicals in most countries of the world. This strong demand has enabled Canadian producers to sell in export markets even in competition with countries having lower costs and export demand has been an important factor in sustaining Canada's petrochemical industry. There is every reason to believe that Canadian plants will continue to depend, directly or indirectly, on export markets for many years to come. While competition is growing abroad for the older established petrochemicals, it is likely that export opportunities will continue to be available as various markets experience imbalances of supply and demand and Canadian firms are alert to capitalize on opportunities.

Outlook in the Field of Petrochemicals.-One of the most important fields for future growth in petrochemicals will be that of plastics and synthetic resins. By 1965 these materials will likely become the most important single outlet in Canada for petrochemicals, with production probably reaching a $500,000,000-\mathrm{lb}$. level. Plans have been announced for the production of polypropylene, a relatively new plastic material, and diisocyanates which will displace imports as a raw material for the existing Canadian manufacture of the polyurethane plastics. Other petrochemicals that appear to be in a favourable position to grow include synthetic rubber (with new facilities under construction), synthetic textiles, oil additives and agricultural products.

[^188]The industry is currently digesting an impressive round of new plant expansion but there is a feeling prevalent that the future holds more difficult times. It would be a mistake to leave the impression that the petrochemical industry has no problems and profit is assured for anyone who engages in it. Despite the fact of rapid growth, profits in the industry, on the average, have been low. With the greater complexity and, hence, higher costs of the processes required for producing these upgraded materials, it obviously has become all the more imperative for manufacturers to aim at large-volume production to achieve economies of scale. In some fields the demands of the Canadian market are not yet large enough to justify plants of economic size or to ensure optimum use of available capacity. Faced with continually sharpening competition in home and export markets from highly efficient producers not only in the United States but also in more and more countries in Europe and elsewhere, most petrochemical firms in Canada must be content with modest profit margins in order to lower their prices to competitive levels.

In the future, the refiner may move forward toward chemicals and the chemical manufacturer backward to improve his competitive raw material position. It is likely, though, that in general the refining industry will remain 'raw material' oriented and the chemical industry will remain 'product' oriented. One solution to the lack of sufficient market to justify large, economic-sized plants may lie in research efforts devoted to reversing the current trend to bigger facilities and which might result in the design of plants that can operate profitably at throughputs tailored to the Canadian market. Greater flexibility of product from a given plant offers another possibility by enabling the same facilities to be shared for the production of different chemicals, thus reducing the unit overhead costs.

The future holds great promise for the Canadian petrochemical industry but in order to maintain the past rate of growth, producers will be faced with the need to develop superior techniques and the industry will require an increasing technical capacity to achieve advantages in the manufacture of selected products.

## PART II.-STATISTICS OF MANUFACTURING

## Section 1.-Growth of Manufacturing

It is impossible to give absolutely comparable statistics of manufacturing over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, though numerous changes have since been made in the information collected and in the treatment of the data, an effort has been made to carry all major revisions back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

The Bureau of Statistics in 1952 changed its policy with regard to the collection of statistics on the production of manufactured goods. Firms in several industries where year-end inventory changes were known to be insignificant were requested to report value of shipments f.o.b. plant instead of gross value of products. Under the "value of products" concept, establishments were asked to report the factory selling value of the products made whether sold or not, the unsold portion being assigned the average selling value of similar articles sold during the year. Under the "selling value of shipments" concept, establishments are required to report their sales during the year regardless of when the products were made, an item usually readily available from the firms' records. The changeover was made in order to ease the burden of reporting for the majority of manufacturing establishments. The value of shipments concept for small and medium sized establishments is more realistic and more readily obtainable from their accounting records, whereas the value of products made, for firms not recording such information, must be derived from special calculations.

## 1.-Summary Statistics of Manufactures, 1917-60

Note.-Statistics of manufacturing from 1870 have been published but between that year and 1917 figures are not on a basis comparable to the series given below. Statistics for significant years appear in the 1943-44 Year Book, p. 363. Figures of the non-ferrous metal smelting industries were first included with manufactures in 1925.

| Year | Estab-lishments | Employees | Salaries and Wages | Cost at Plant of Materials Used | Value <br> Added by <br> Manufacture ${ }^{\text {l }}$ | Gross Value of Products ${ }^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | \$ | \$ | \$ | \$ |
| 1917 | 21,845 | 606,523 | 497, 801,844 | 1,539,678,811 | 1,281,131,980 | 2,820,810,791 |

| 19605. | 36,682 | 1,294,629 | 5,207,167,393 | $12,720,947,113$ | 10,517,232,701 | $23,747,457,083$ |

${ }^{1}$ For 1924-51, inclusive, the value added by manufacture is computed by subtracting cost of fuel, electricity and materials from gross value of products; for 1952 and 1953 the deduction is made from value of factory shipments and for 1954 and subsequent years from the calculated value of production. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available.
${ }^{2}$ In 1952 gross value of products was replaced by selling value of factory shipments, see text immediately preceding this table.
${ }^{3}$ A change in the method of computing the number of employees in the years 1925 to 1930 , inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted.
${ }^{4}$ Newfoundland is included from 1949 but figures for the fish processing industry for 1949 and 1950 are not available for that province and are not included.
${ }^{5}$ Based on the revised Standard Indus-
trial Classification; see text on pp. 623-624.

Provincial distribution of manufactures for certain years from 1917-60 is given in Table 2.

[^189]The figures in Table 3 trace the tendencies in manufacturing industries as clearly as possible from 1917 to 1960. In analysing statistics of production and materials used, price changes should be borne in mind, particularly the inflation of values in the years immediately following World War I, the drop in prices of commodities during the depressions following 1921 and 1930, and the increases again in World War II and the postwar period.

## Subsection 1.-Consumption of Manufactured Products*

The value of all manufactured commodities made available for consumption in 1959 was $\$ 24,470,000,000$, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured goods and deducting the value of the exports. More accurate statistics could be presented were it possible to exclude from the value of factory shipments the duplications involved when the products of one manufacturing establishment become the material worked upon in another. Iron, vegetable, wood and paper, non-ferrous metal, animal, and non-metallic mineral products were, in that order, the leading groups in the value of finished products made available for consumption in 1959. There was an increase of 5.8 p.c. in the total value of manufactured products available for consumption in 1959 compared with the previous year.

Wood and paper, non-ferrous metal, and animal products are manufactured in Canada in greater quantities than required for home consumption, providing export balances in these groups. Canada in the past imported large quantities of iron and steel, textiles, chemicals and non-metallic mineral products, despite large home production. However, the recent expansion of the iron and steel, chemical and non-metallic mineral products industries is enabling Canada to meet a greater proportion of the domestic requirements.

In Table 4, showing consumption of manufactured products, the component material classification is still used to agree with the classification used for imports and exports. The Standard Industrial Classification grouping used elsewhere throughout this Chapter will be adopted for trade statistics beginning with 1960 .

* 1960 figures not available at time of going to press.

## Subsection 2.-Value and Volume of Manufactured Production

Value of Manufactured Production.-In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind. In recent years, owing to great changes in prices, unadjusted value series used in isolation have become increasingly inadequate as indicators of economic trends. Consequently, interest has shifted to measures of volume. The range of prices since 1929, on the base period $1935-39=100$, is as follows:-

| Year | General Wholesale Price Index | Price Index <br> of Fully and Chiefly <br> Manufactured Products |  | Year | General Wholesale Price Index | Price Index of Fully and Chiefly Manufactured Products |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1929. | 124.6 | 123.7 | 1955. |  | 218.9 | 224.5 |
| 1933. | 87.4 | 93.3 | 1956. |  | 225.6 | 231.5 |
| 1939. | 99.2 | 101.9 | 1957. |  | 227.4 | 237.9 |
| 1944. | 130.6 138.9 | 129.1 138.0 | 1958. |  | 227.8 | 238.3 |
| 1949. | 198.3 | 199.2 | 1959. |  | 230.6 | 241.6 |
| 1953... | 220.7 | 228.8 | 1960. |  | 230.9 | 242.2 |

Volume of Manufactured Production.-Real income is ultimately measured in goods and services so that the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services and not whether they are expending more dollars and cents.

During the past few years the Dominion Bureau of Statistics has been engaged in the reconstruction of the index of industrial production* which was first published in 1926 and later subjected to several major revisions. The latest reconstruction was made possible by the availability of a great deal of basic data. Annual statistics valuable for this project have been collected by the Bureau from the end of World War I to the present and the scope of the monthly information has been greatly expanded. Applying methods developed through the experience of the past quarter-century, it has been possible to compute an index with a fair measure of accuracy from 1935 to the present.

The manufacturing sector is divided at the major group level into durable manufactures and non-durable manufactures. The movement of durable goods normally varies from that of non-durables; there tends to be greater fluctuation in durables from prosperity to depression and the demand for non-durables is more constant.

Changes in the volume of durable and non-durable goods produced in the 1945-59 period are discussed at pp. 605-608. Table 5 shows the fluctuations in the volume indexes of durable, non-durable and total manufactured goods produced during the years 1945-60, and Tables 6 and 7 show the fluctuations in the groups comprised within the durable and non-durable classifications during the same period.

Compared with 1959, the durable group as a whole decreased by 2.1 p.c. in 1960 and the non-durable group increased 1.1 p.c., resulting in a slightly lower volume of output for all manufactures. All groups within the durable classification, with the exception of nonferrous metal products, were lower; wood products decreased 0.4 p.c., iron and steel products 6.7 p.c., transportation equipment 1.1 p.c., electrical apparatus and supplies 2.5 p.c. and non-metallic mineral products 5.5 p.c. The increase in non-ferrous metal products was 10.1 p.c.

Within the non-durable classification, only four of the twelve groups reported declines compared with 1959 . Foods and beverages increased 1.4 p.c. and 2.8 p.c., respectively. Tobacco went up 1.2 p.c., paper products 2.6 p.c., printing industries 2.3 p.c., petroleum and coal products 3.8 p.c., chemicals 5.4 p.c. and miscellaneous products 4.6 p.c. Decreases were reported by the rubber, leather, textile and clothing groups.

## Section 2.-Manufactured Production Variously Classified

Beginning with the publication of 1960 statistics of manufacturing, industries and groups of industries follow the revised Standard Industrial Classification,* which has been established to take into account the changes in the structure of Canadian industry that have occurred during the past decade. In the past, commodity terms have been used in describing industries, so that the tables in previous editions of the Year Book (and in certain tables of this volume which have not yet been brought into line) contain industry titles such as pulp and paper, petroleum products, aircraft and parts, etc. In revising the Standard Industrial Classification, it was considered advisable to assign to each industry its most descriptive title, a title to be used whenever the industry was mentioned. Some industries are associated with particular processes (such as knitting mills and foundries)

[^193]and others have traditional titles (such as machine shops and commercial printing). Some are best described in terms of the principal commodities they produce and it is necessary to distinguish these manufacturing industries from industries engaged in wholesale trade or retail trade in the same commodities. Therefore, many new titles of manufacturing industries contain such terms as "manufacturers", "industry", "plants", "mills" and "factories". These terms are applied, as far as possible, according to the usage in the industries concerned because it was felt that this terminology would be widely understood and clarity is more desirable than consistency in industry titles.

Tables 8, 9 and 10 of this Section give 1960 figures on the revised Standard Industrial Classification basis and for Table 8 the figures have been worked back to 1957 on the revised basis, except for value added by manufacture. (All figures for 1959 and previous years based on the revised classification are subject to revision.) For the other tables, 1959 figures on the old basis were the latest available at the time of going to press and those including analyses by industrial groups are based on the old classification.

## Subsection 1.-Manufactures classified by Industrial Groups and Individual Industries

The tables of this Subsection give detailed statistics showing the trends of production by industrial groups and individual industries. Table 8 gives comparative summary statistics for the industrial groups for the period 1957-60; Table 9 contains details of establishments, employment and output for the individual industries within the major groups for 1960 and Table 10 gives similar data for the forty leading industries in 1960, ranked according to selling value of factory shipments; Table 11 gives quantities and values of principal commodities produced in 1959-figures for 1960 were not available at the time of going to press.

## 8.-Summary Statistics of Manufactures, by Industrial Group, 1957-60

Note.-All years based on the revised Standard Industrial Classification; see text above.

| Industrial Group and Year | Estab-lishments | Employees | Salaries and <br> Wages | Cost at Plant of Materials Used | Value Added by Manufacture | Selling Value of Factory Shipments |

8.-Summary Statistics of Manufactures, by Industrial Group, 1957-60-concluded

Detailed Statistics by Group and Individual Industries.-Table 9 presents detailed statistics for 1960 regarding the individual industries under which all industrial plants in Canada are classified. The industries are assembled under 20 main groups according to the revised Standard Industrial Classification.

In interpreting the statistics of individual industries it should be noted that the figures on employment, production, etc., do not refer to individual products but to all the products produced by an industry. For example, the value of production of the confectionery industry amounting to $\$ 142,963,856$ in 1960 does not imply that this was the value of confectionery produced. What it means is that the firms whose principal product was confectionery had a value of production of $\$ 142,963,856$. This figure, in addition to confectionery, includes all the subsidiary products made by these firms, such as chewing gum, ice cream, and bread and other bakery products. Confectionery is also produced as a subsidiary product by firms credited to other industrial classifications. Table 10 gives principal statistics of the forty leading industries, from the standpoint of selling value of factory shipments. During the past few years there has been little change in the ranking of the major industries.

The quantities and values of the principal individual commodities produced in 1959 are given in Table 11 (1960 figures were not available at time of going to press). Commodities produced in small quantities are not included, but the list covers approximately 75 p.c. of total production.

## 9.-Principal Statistics of Individual Manufacturing Industries, 1960

Nore.-Based on revised Standard Industrial Classification (see text on pp. 623-624).

| Group and Industry | Estab-lishments | Employees | Salaries and Wages | Cost at Plant of Materials Used | Value Added by Manufacture | Selling Value of Factory Shipments |

## 11.-Quantity and Value of the Principal Commodities Produced or Shipped by the Manufacturing Industries 1959-continued

## 11.-Quantity and Value of the Principal Commodities Produced or Shipped by the Manufacturing Industries 1959-concluded

## Subsection 2.-Manufactures classified by Origin of Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials. Figures for 1959 are the latest available for this classification at the time of going to press.
12.-Principal Statistics of Manufacturing Industries classified according to Origin of Materials Used, by Main Group, 1959

| Origin of Materials Used | Estab-lishments | Employees | Salaries and <br> Wages | Cost at Plant of Materials Used | Value <br> Added by Manufacture | Selling Value of Factory Shipments |

## Subsection 3.-Manufactures classified by Type of Ownership

Figures showing the classification of the type of ownership under which Canadian manufacturers operate are available from 1946. Although the first survey did not include the fish curing and packing industry, its inclusion in subsequent years has not materially altered the percentage distribution of individual ownership, incorporated companies, etc.

As is to be expected, the smaller establishments, regardless of the type of product manufactured, are carried on under individual ownership. In that category, industries conducted on a small scale contain a large number of establishments, the percentage decreasing as the scale of operations increases, as shown for 1959 in Table 13.

## 13.-Percentage Distribution of Manufacturing Establishments, Employees and Shipments,

 by Type of Ownership and Size of Establishment, 1959| Item and Type of Ownership | $\begin{aligned} & \text { Under } \\ & \$ 25,000 \end{aligned}$ | $\begin{gathered} \$ 25,000 \text { to } \\ \$ 99,999 \end{gathered}$ | $\begin{gathered} \$ 100,000 \text { to } \\ \$ 499,999 \end{gathered}$ | \$500,000 or Over |

| Co-operstives...................................... | 0.8 | 3.2 | 4.9 | 1.1 |
| Totals. | 100.0 | 100.0 | 100.0 | 100.0 |

Of the 36,193 establishments operating in 1959, 1,462 establishments in the periodical publishing industry were unclassifiable, leaving 34,731 establishments in the four categories of ownership. Individual ownership numbered 13,349 establishments, partnerships 3,731, incorporated companies 16,735 and co-operatives 916 . The percentage distribution of the four categories of ownership is given in Table 14 for 1950-59.

## 14.-Percentage Distribution of Establishments in Manufacturing Industries classified by Type of Ownership, 1950-59, and by Province and Industrial Group, 1959

[^199]14.-Percentage Distribution of Establishments in Manufacturing Industries classified by Type of Ownership, 1950-59, and by Province and Industrial Group, 1959-concluded

[^200]${ }^{2}$ Four main categories of ownership only; the non-classifiable

The establishments operating under individual ownership are not as important from the point of view of employment provided as their large numbers would indicate. According to Tables 14 and 15 these establishments, which comprise 38.4 p.c. of the number, had only 4.3 p.c. of the total employees. Partnerships accounted for 10.8 p.c. of the number of establishments and 2.2 p.c. of the total employees. Incorporated companies with 48.2 p.c. of the number of establishments had 92.6 p.c. of the employees. Co-operatives with 2.6 p.c. of the number had less than 1 p.c. of the employees.

Thus on the basis of employment provided, incorporated companies are, by a wide margin, the most important factor in the employment field. Such companies had more than 99 p.c. of the employees in the rubber, paper, transportation equipment, electrical apparatus and supplies, and petroleum and coal groups; 98 p.c. of the employees in the tobacco, non-ferrous metal products and chemicals and allied products groups; 97 p.c. in the iron and steel group; over 96 p.c. in the textiles group; 95 p.c. in non-metallic mineral products; over 94 p.c. in knitting mills; over 93 p.c. in leather products; and 92 p.c. in miscellaneous manufacturing industries. The lowest proportion was 80 p.c. in the wood products group.

## 15.-Percentage Distribution of Employment in the Manufacturing Industries classified by Type of Ownership, 1950-59, and by Province and Industrial Group, 1959

| Year | Individual Ownership | Partnerships | Incorporated Companies | Co-operatives | Total |

## Section 3.-Principal Factors in Manufacturing Production

In addition to the factors dealt with in the following Subsections 1 and 2, one of the principal indicators of growth in manufacturing production is the amount paid as salaries and wages to various groups of employees within those industries. Detailed information on employment, earnings and hours is given in the Labour Chapter of this volume, Section 3.

## Subsection 1.-Capital and Repair Expenditures

The current series of statistics covering expenditures on fixed capital and repairs by manufacturing industries commences with the year 1944. Capital expenditures by manufacturers in 1959 totalled $\$ 373,900,000$ for construction and $\$ 769,900,000$ for machinery and equipment; in addition, $\$ 662,500,000$ was spent for repairs. Of the total capital expenditures amounting to $\$ 1,143,800,000,10.6$ p.c. was reported by petroleum and coal products, 11.1 p.c. by paper products, 14.5 p.c. by iron and steel products, 11.6 p.c. by foods and beverages and 7.1 p.c. by chemicals and allied products.

On the whole, there was an upturn in capital expenditures in 1959 after the considerable drop experienced in 1958. However, in each of the latest four years capital expenditures have exceeded $\$ 1,000,000,000$. There is naturally considerable variation in the amounts spent by the different industrial groups each year. In 1959, nine groups reported capital expenditures of $\$ 50,000,000$ or more, compared with seven in 1958 . Of the nine, five reported increased expenditures over 1958-foods and beverages, wood products, iron and steel, transportation equipment and non-metallic mineral products. The other four reported decreases ranging from 0.5 p.c. for paper products to 36.8 p.c. for non-ferrous metal products.
17.-Capital and Repair Expenditures by the Manufacturing Industries, 1950-59, and by Province and Industrial Group, 1959

| Year, Province and Industrial Group | Capital Expenditure |  |  | Repair Expenditure |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Construction | Machinery and Equipment | Total | Construction | Machinery and Equipment | Total |

${ }^{1}$ Old classification (see text on pp. 623-624).
2 Includes knitting mills.

## Subsection 2.-Size of Manufacturing Establishments

The size of a manufacturing establishment is generally measured either by the value of factory shipments or by the number of employees but each of these methods has its limitations. The former measure has to be adjusted for changes in the price level and, as between industries, it makes those in which the cost of raw materials is relatively high appear to operate on a larger scale. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery may lead to an increase in production concurrently with a decrease in number of employees.

Size as Measured by Selling Value of Factory Shipments.-In 1946, after heavy wartime production had ceased and reconversion had barely begun, there were 1,442 manufacturing establishments, each with an output of $\$ 1,000,000$ or over. Their combined production was valued at $\$ 5,377,870,217$ and accounted for 66.9 p.c. of the total for all manufacturing plants. By 1949, the number of factories in that category had increased to 1,926 and the proportion of their production to the total was 74.4 p.c. As a result of the tremendous industrial expansion and the increase in prices of the 1950 's, the number of plants with shipments valued at over $\$ 1,000,000$ increased to 3,394 in 1959 . These plants contributed 81.4 p.c. of the total output in that year.

## 18.-Manufacturing Establishments and Total and Average Production classified by Value of Product Group, 1946, 1949, 1955 and 1959

${ }^{1}$ In 1952 gross value of products was replaced by selling value of factory shipments. ${ }^{2}$ Newfoundland included from 1955.

Size as Measured by Number of Employees.-In 1946 the 311 establishments employing 500 or more persons accounted for 32.3 p.c. of the total number of employees engaged in manufacturing. In 1959 there were 376 plants with more than 500 employees, 52 of them with over 1,500 . The 376 plants employed 32.9 p.c. of the total workers in all manufacturing establishments.
19.-Establishments and Employees in Manufactures classified by Number of Employees per Establishment, 1946, 1949, 1955 and 1959

## 20.-Manufacturing Establishments classified by Number of Employees and by Province, 1959

Size of Establishments in Leading Industries.-Table 21 shows the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the motor vehicle, non-ferrous metal smelting and refining, primary iron and
steel, railway rolling-stock, pulp and paper, aircraft and parts, and rubber goods industries. On the other hand, the degree of concentration is low in such industries as factory clothing, furniture, butter and cheese, miscellaneous food preparations, fruit and vegetable preparations, sawmills and printing and bookbinding.
21.-Percentage Importance of Establishments, each Employing 200 or more Persons, in the 25 Leading Industries, 1959

|  | Industry ${ }^{1}$ | Number of Establishments Employing 200 or more Persons | Percentage of Total Establishments in the Industry | Percentage of Total Shipments in the Industry |

## PART III.-PROVINGIAL AND LOCAL DISTRIBUTION OF MANUFAGTURING PRODUCTION

Section 1.-Provincial Distribution of Manufacturing Production
This Section shows the distribution and concentration of the manufacturing industries in each province followed by a general analysis of the leading industries in the individual provinces. Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1960 amounted to $\$ 18,892,000,000$ or 80 p.c. of the total factory shipments of manufactured products. The water power and other important resources of the two provinces, their large population concentrations and consumer demands and their nearness to the larger markets of the United States have contributed to this progress.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. In 1960, Quebec led in the manufacture of tobacco products, leather goods, textiles, knitting mills, clothing and products of petroleum and coal and had a very slight margin over Ontario in output of paper. In each of the other groups, except wood products, Ontario had the greater production of the two provinces. In the production of wood products, British Columbia, with 52 p.c. of the total, held the dominant position, outranking both Ontario and Quebec which accounted for 17 p.c. and 19 p.c., respectively, of the total. In each of the other groups Ontario and Quebec led by a wide margin.

## 1.-Summary Statistics of Manufactures of each Province classified by Industrial Group, 1959 and 1960

Nore.-Figures for both years based on the revised Standard Industrial Classification (see text on pp. 623-624).

## Subsection 1.-The Manufactures of the Atlantic Provinces

The Atlantic Provinces are of economic importance in a number of fields, such as pulp and paper, fish processing, sawmills, petroleum products and iron and steel. In Newfoundland, manufacturing production is dominated by the forest and fisheries resources. Pulp and paper is by far the most important industry, having shipments valued at $\$ 67,985,619$ in 1960 , followed by fish products with shipments of $\$ 19,676,901$. These two industries accounted for 67.8 p.c. of the total production of the province. In Prince Edward Island, agriculture and fishing resources make butter and cheese, slaughtering and meat packing, and fish products the leading industries. Nova Scotia is renowned for its coal mines, its fisheries and its extensive forests and agricultural lands and it is also favoured with easy access by sea to the high-grade iron ore supply of Newfoundland. On these resources are based the leading manufacturing industries producing primary iron and steel products, fish products, pulp and paper, sawmill products and pasteurized dairy products. Shipbuilding and repair and petroleum refining together with industries producing railway rollingstock, miscellaneous iron and steel products, cotton yarn and cloth and knitted goods, and aircraft add to the diversification of industry in the province. The forests of New

Brunswick give a leading place to pulp and paper and sawmilling industries in the province. Other important manufacturing and processing activities are based on fish and agricultural resources, and there are also a number of metal working industries producing heating and cooking apparatus, brass and copper products, etc.

Considering the Atlantic Provinces as an economic unit, pulp and paper was by far the leading industry in 1960 , having factory shipments valued at $\$ 196,802,066$. Fish products, with shipments valued at $\$ 95,637,301$ were in second place. Other industries, in order of importance and with shipments exceeding $\$ 30,000,000$, were: petroleum refining, iron and steel mills, sawmills and sugar refineries.

Manufacturing production in the Atlantic area has not quite kept pace with that in the more industrialized provinces of Ontario, Quebec and British Columbia. This is indicated by a drop in the Atlantic Provinces' share of the Canadian total shipments from 4.5 p.c. in 1951 to 4.0 p.c. in 1960 . In number of persons employed there was a decrease of 6.3 p.c. for the Atlantic Provinces but an increase of 2.9 p.c. for Canada as a whole. Salaries and wages paid increased 40.8 p.c. for the Atlantic Provinces compared with 58.9 p.c. for Canada and selling value of factory shipments increased 28.5 p.c. compared with 44.9 p.c. for Canada.
3.-Statistics of the Leading Industries of the Atlantic Provinces 1960, with Totals for 1959 Nore.-Based on the revised Standard Industrial Classification (see text on pp. 623-624).

## Subsection 2.-The Manufactures of Quebec

Quebec has long ranked as the second largest industrial province of Canada. The province has experienced a great industrial expansion during the past decade and a half, an expansion not confined to existing industrial areas but spreading to many towns and villages in the accessible areas and into new areas in the hinterland. In 1960, Quebec's output of $\$ 7,206,096,003$ represented over 30 p.c. of Canada's total selling value of factory shipments.

Several important factors have contributed to the development of industry in Quebec. Its geographic situation is extremely favourable, including as it does the great water highway of the St. Lawrence River with its excellent harbour at Montreal, 800 miles inland. Equally important are the province's abundant natural resources in forests, water power, minerals and agricultural lands. Pulp and paper, traditionally Quebec's major industry, was replaced in 1960 by smelting and refining which had an output valued at $\$ 647,540,895$. Pulp and paper mills, in second place, reported factory shipments amounting to $\$ 601,216,411$; the province is a principal world centre for the production of newsprint. Petroleum refining was in third place in 1960 with shipments valued at $\$ 367,956,705$; the largest agglomeration of petroleum refining facilities in Canada is located in the Montreal East area.

Quebec's industries are not as diversified as those of Ontario but several industries are predominant in that province. Of the forty leading industries in Canada in 1960, Quebec's share of the total value of shipments was 40 p.c. or over in the following: tobacco products manufacturers 84 p.c., cotton yarn and cloth mills 73 p.c., women's clothing factories 70 p.c., men's clothing factories 55 p.c., aircraft and parts manufacturers 55 p.c., synthetic textile mills 49 p.c., smelting and refining 43 p.c., and butter and cheese plants 40 p.c. Other industries in which Quebec predominated included shoe factories, manufacturers of pharmaceuticals and medicines, railway rolling-stock industry, shipbuilding and repair, manufacturers of electric wire and cable, and knitting mills.

Despite the slowing down of Canadian manufacturing production which began in the autumn of 1957 and continued throughout most of 1958 , Quebec recorded a small increase of 2.0 p.c. in selling value of factory shipments between 1956 and 1958. In employment, however, there was a loss of 3.8 p.c. in the same period as compared with a loss of 4.7 p.c.
for Canada as a whole. Improvement took place during the following two years, an increase of 2.4 p.c. being recorded in the value of factory shipments in 1959 and one of 4.2 p.c. in 1960; the increases in employment amounted to 0.4 p.c. and 0.6 p.c., respectively. For the period 1957-60, Quebec recorded an increase of 7.8 p.c. in value of factory shipments compared with 7.0 p.c. for Canada as a whole, and the decrease in number of employees in that province was 3.4 p.c. compared with 4.8 p.c. for Canada.
4.-Statistics of the Leading Industries of Quebec 1960, with Totals for 1959

Nore.-Based on the revised Standard Industrial Classification (see text on pp. 623-624).

[^206]
## Subsection 3.-The Manufactures of Ontario

The southwestern portion of Ontario is one of the world's major industrial areas. Here the proximity of raw materials, cheap hydro-electric power and a strategic location in relation to export markets, not only on this Continent but overseas, have been the decisive factors of development. Most of the manufacturing industries and most of the population of the province are located in this area, which has the inestimable advantage of bordering on the St. Lawrence-Great Lakes waterway system, giving access westward to the heart of the Continent and eastward to the shipping routes of the world. Furthermore, this same waterway is the source of most of Ontario's developed hydro-electric power.

Despite the great industrial progress made by other provinces, Ontario continues to maintain its predominance and in 1960 produced 49.2 p.c. of the nation's manufactured goods. A great increase of steel ingot capacity has been made possible by developments at the Steep Rock iron mines, northwest of Lake Superior. Large investments have gone into the construction of plant and equipment for a whole group of new products based on Alberta oil and gas flowing eastward by pipeline. Significant developments have taken place in synthetic rubber, synthetic textiles and industrial and consumer chemicals. Ontario has continued to gain in such traditional lines as motor vehicles, industrial machinery, and the manufacture of electrical appliances, furniture and other household equipment. The same may be said of other 'hard' goods like business and office machinery, and electrical industrial equipment. In fact, the manufacturers of Ontario now produce almost the complete range of products required by Canadian industry and the Canadian consumer.

Certain industries are carried on practically in this province alone. Of the forty leading industries in Canada in 1960, those dominated by Ontario's share of the total production were: rubber tire and tube manufacturers 99 p.c., motor vehicle manufacturers 98 p.c., motor vehicle parts and accessories manufacturers 97 p.c., manufacturers of electrical industrial equipment 85 p.c., iron and steel mills 79 p.c., manufacturers of major appliances (electrical and non-electrical) 75 p.c., paper converters, n.e.s. 68 p.c., fruit and vegetable canners and preservers 67 p.c., miscellaneous machinery and equipment manufacturers 65 p.c., miscellaneous metal fabricating industries 64 p.c., wire and wire products manufacturers 64 p.c., manufacturers of industrial chemicals 59 p.c., printing and bookbinding 57 p.c., metal stamping, pressing and coating industry 57 p.c., distilleries 56 p.c., printing and publishing 48 p.c., and miscellaneous food industries 45 p.c. In addition, there are a number of medium-sized industries in which Ontario predominates.

As Ontario is a major producer of durable goods, it experiences wider fluctuations in manufacturing production than provinces producing mainly non-durable or consumer goods. As a result, the small economic downturn of 1954 was more keenly felt by Ontario manufacturers. Factory shipments in that year were 3.9 p.c. lower compared with a drop of 1.3 p.c. for Canada as a whole, and employment was 5.6 p.c. lower compared with 4.5 p.c. for Canada. Conversely, with the improvement during the following three years Ontario in 1957 reported an increase of 29.8 p.c. in factory shipments and 7.6 p.c. in employment over 1954 compared with increases of 26.4 p.c. and 7.2 p.c. for Canada as a whole. The minor depression of 1958 followed the usual pattern; Ontario manufacturers suffered an employment loss of 5.8 p.c. as compared with 5.1 p.c. for Canada as a whole and shipments were down 1.9 and 0.1 p.c., respectively. Again, the upturn in 1959 followed the expected trend and the increase in employment and value of shipments were both higher in Ontario
than for all Canada. In 1960, shipments for both Canada and Ontario moved up fractionally, but Ontario showed a loss of 2 p.c. in number of employees compared with a drop of 0.6 p.c. for Canada as a whole.

## 5.-Statistics of the Leading Industries of Ontario 1960, with Totals for 1959

Note.-Based on the revised Standard Industrial Classification (see text on pp. 623-624).

## Subsection 4.-The Manufactures of the Prairie Provinces

In the Prairie Provinces the leading industries have traditionally been those based on agricultural resources-grain-growing, cattle raising and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population such as slaughtering and meat packing plants, petroleum refining, bakeries, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area.

In the Prairie Provinces the nature of development varies from one province to another. Alberta has moved to the forefront, especially since 1950. There, recent emphasis has been on manufactures connected with the expanding oil and gas industries. Chemicals, particularly petrochemicals, have made striking gains and now embrace various rayon intermediates and polythene plastics, as well as fertilizers and the manufacture of other inorganic products such as caustic soda and chlorine. Agriculture-based products still rank high in the province, as do such structural materials as steel, concrete products and hydraulic cement. Sizable gains have also been made by food-processing plants.

In Manitoba, the early commercial centre of the mid-West, water power, forest and, more recently, mineral resources have given rise to a diversity of manufactured products, although slaughtering and meat packing remains in first place and other agriculture-based products rank high among the industries of the province.

Developments in Saskatchewan have continued along more or less traditional lines. Although petroleum refining has been in first place in value of production since 1950, output of this industry has not changed greatly during the past five years. In this province, the food-processing industries are of major importance and have recorded the greatest increases.

Considering the Prairie Provinces as an economic unit, 4,327 establishments reporting in 1960 furnished employment to 94,414 persons who received $\$ 360,367,605$ in salaries and wages. They shipped goods valued at the factory at $\$ 1,972,888,407$ and spent $\$ 1,159,897,195$ for materials. Slaughtering and meat packing, with shipments valued at $\$ 344,320,212$ was the leading industry. Petroleum refining with $\$ 234,442,045$ ranked second, flour mills with $\$ 96,646,870$ third and products of pasteurizing plants with $\$ 69,964,926$ fourth. These four industries accounted for about 38 p.c. of the total value of factory shipments of the Prairie Provinces.

## 6.-Statistics of the Leading Industries of the Prairie Provinces 1960, with Totals for 1959

Norz.-Based on the revised Standard Industrial Classification (see text on pp. 623-624).

## 6.-Statistics of the Leading Industries of the Prairie Provinces 1960, with Totals for 1959-concluded

[^207]
## Subsection 5.-The Manufactures of British Columbia

British Columbia, with factory shipments totalling $\$ 1,937,000,000$ in 1960 , ranked third among the provinces in manufacturing production. Forest resources, fisheries, minerals and electric power have given a broad base and fairly wide diversification to its industrial development. British Columbia holds the dominant position among the provinces in the production of wood products, its output in 1960 making up 52 p.c. of the Canadian total. Sawmilling, pulp and paper, veneer and plywood, and sash, door and planing mills ranked first, second, fourth and fifth, respectively, among the province's leading industries. Third in importance was petroleum refining which moved up from seventh place in 1953, and in sixth place was fish products, based principally on the estuarial salmon fisheries. The province accounted for approximately 40 p.c. of the output of the fish processing industry in 1960 and is mainly responsible for Canada's position as a major fish-exporting nation.

Many new developments have been taking place in areas far removed from older established industrial centres. Lines of communication and transportation are extending into formerly locked interior communities to tap a vast new potential, and factories and
plants in remote sections are drawing greater value in employment and dollars from natural resources. However, the growth in this province has been considerably slower than for Canada as a whole. Value of factory shipments in 1960 was 37.9 p.c. higher than in 1951 compared with an increase of 44.9 p.c. for all Canada. On the other hand the number of employees in manufacturing industries in British Columbia increased 7.3 p.c. over the period, as against 2.9 p.c. in Canada as a whole. Also the consumption of $8,100,000,000$ kwh. of electric power by manufactures during 1960 marked a steady upward climb of 200 p.c. during the decade. British Columbia ranks second among the provinces in available water power resources and its hydraulic development, which at the end of 1960 totalled $3,700,326 \mathrm{hp}$., was exceeded only by Quebec and Ontario.

## 7.-Statistics of the Leading Industries of British Columbia 1960, with Totals for 1959

${ }^{1}$ Reported on a production basis.
${ }^{2}$ Includes sugar refineries; corrugated boxes; and smelting and refining.

## Section 2.-Manufacturing Industries in Urban Centres

Table 8 indicates the extent to which the manufacturing industries are concentrated in urban centres and shows, by province, the proportion of the selling value of factory shipments contributed by cities and towns having shipments of over $\$ 1,000,000$ each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns accounted for 82 p.c. and 94 p.c., respectively, of the total manufactures of those provinces in 1959, compared with 77 p.c. and 94 p.c., respectively, in 1958. In the Atlantic Provinces and British Columbia, where sawmilling, fish products and dairying are leading industries, the proportions were 68 p.c. and 48 p.c., respectively in 1959 , showing little change compared
with the previous year. In the Prairie Provinces, manufacturing is confined largely to a few urban centres. Although there has been some recent tendency to establish new industry in smaller urban centres, for Canada as a whole the percentage of manufactures accounted for by urban centres having shipments of over $\$ 1,000,000$ was 80.5 in 1955 and 81.9 in 1959.
8.-Urban Centres, Each with Selling Value of Factory Shipments of Over $\mathbf{\$ 1 , 0 0 0 , 0 0 0 ,}$ Number of Establishments and Total Shipments in these Centres as a Percentage of the Provincial Total, by Province, 1959, and Totals for Canada, 1957-59.

${ }^{1}$ Net value is derived from gross value by deducting cost of materials, fuel and electricity. In 1952 gross value of products was replaced by selling value of factory shipments; see text on p. 615.

## 10.-Principal Statistics of the Manufacturing Industries in the Six Leading Metropolitan Areas, 1958 and 1959

## 11.-Statistics of Manufactures of Municipalities, each with Selling Value of Factory Shipments of $\$ 5,000,000$ or Over and with Three or More Establishments, 1959

Nore.-Statistics for urban centres with three or more establishments cannot be published when one establishment has 75 p.c. or two establishments 90 p.c. of the total value of shipments.

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

This Chapter provides data on the capital expenditures made by all sectors of the Canadian economy on construction and on machinery and equipment, together with summaries of other available statistics for the construction industry. Section 1 shows the amounts spent by each of the various industrial or economic sectors. Section 2 brings together a number of summaries of related series on construction activity-value of work performed by type of structure, value of materials used, salaries and wages paid and numbers employed, contracts awarded and building permits issued. Government aid to house-building and construction of dwelling units are covered in Section 3.

## Section 1.-Capital Expenditures on Construction and on Machinery and Equipment

Capital expenditures $\dagger$ in all sectors of the economy amounted to $\$ 8,109,000,000$ in 1961, a reduction of 1.9 p.c. from the 1960 total of $\$ 8,262,000,000$. The over-all decline resulted from a 9.8 -p.c. decrease in the purchases of machinery and equipment-from $\$ 2,809,000,000$ in 1960 to $\$ 2,535,000,000$ in 1961 -partially offset by a 2.2 -p.c. increase in construction expenditures from $\$ 5,453,000,000$ in 1960 to $\$ 5,574,000,000$ in 1961. Total capital outlays increased each year throughout most of the decade after 1946 and reached a record level in 1957. Since that time the level of capital spending has been declining slightly. It is expected that this trend will be reversed in 1962, in which year capital expenditure intentions are 6 p.c. above the 1961 level.

In constant (1957) dollars, the total 1961 capital program was 11 p.c. below the peak of 1957, declines having occurred in volume of each of the four years following 1957. It is evident from Table 1, that there have been variations in the generally downward trend in the construction and machinery and equipment components. A continuing high proportion of Canada's gross national product is still being devoted to the expansion, modernization or renewal of the nation's production facilities, although this proportion has been declining in recent years following the peak of 1957.

[^208]
## 1.-Capital Expenditures on Construction and on Machinery and Equipment, in Current and Constant (1957) Dollars, 1952-61

Note.-Actual expenditures 1952-60; preliminary actual 1961.

| Totals........ | 8,417 | 8,262 | 8,109 | 100.0 | 100.0 | 100.0 |

In 1961, the mining industry as a whole increased outlays on new construction by $\$ 68,000,000$. This increase was accounted for largely by heavier expenditures on the construction of natural gas processing plants in Alberta-part of the Alberta-California natural gas export program-which amounted to $\$ 77,709,000$ compared with $\$ 18,565,000$ in 1960. Construction outlays for iron ore mining facilities also increased in 1961, amounting to $\$ 67,959,000$ compared with $\$ 52,866,000$ in the previous year.

Capital outlays of the manufacturing industries as a whole declined $\$ 152,900,000$ in 1961 from the level of $\$ 1,177,400,000$ reached in 1960 . This decline was spread throughout most of the component industries with noticeable decreases in the primary iron and steel industry and the petroleum refining industry. Only the chemical industry showed a marked increase, capital outlays of which rose from $\$ 107,000,000$ in 1960 to $\$ 124,000,000$ in 1961. The heavier expenditure was largely in the area of industrial chemicals.

Capital outlays for utilities-including transportation, communication and storage facilities, as well as such public utilities as gas, water and electricity-declined from $\$ 1,772,700,000$ in 1960 to $\$ 1,663,600,000$ in 1961. The decrease was mainly attributable to declines of $\$ 115,000,000$ in railway transport and $\$ 28,800,000$ in telephones. Partially offsetting the declines in the area of utilities were increased expenditures on oil and gas pipeline construction. The major projects were the gas pipelines constructed in Alberta as part of the Alberta-California gas export program (which were in addition to the gas processing plants mentioned above) and oil pipelines constructed in British Columbia which were substantially completed in 1961.

The trade sector of the economy, consisting of wholesale and retail firms as well as automobile service stations owned by Canada's integrated petroleum companies, made capital outlays of $\$ 329,100,000$ compared with outlays of $\$ 381,000,000$ in the previous year. All trade sectors except department stores recorded decreased expenditures in 1961; the increase recorded by department stores was mainly accounted for by the expansion of discount department outlets, a recent development in retail merchandising and indications are that this type of merchandising will continue to increase. A discount department store is generally defined as a retail store selling a wide range of merchandise with reduced customer services; reduced services on the average permit reduced prices to the consumer.

Continuing the upward trend of recent years, institutional services-including hospitals, schools, universities, churches and welfare institutions-recorded an advance of $\$ 42,100,000$ in capital outlays in 1961 over the level of $\$ 572,900,000$ achieved in 1960. This increase was concentrated on additional facilities for universities and hospitals, universities increasing from $\$ 87,300,000$ to $\$ 103,600,000$ and hospitals from $\$ 155,900,000$ to $\$ 181,100,000$. Expenditures on universities include those for private as well as provincial government institutions, and hospital expenditures include those for provincial, municipal, religious and private hospitals for both mental and general treatment services.

Capital outlays by government departments increased slightly from $\$ 1,273,700,000$ in 1960 to $\$ 1,328,400,000$ in 1961. Government departments, as defined for capital expenditure purposes, include that part of government activity, excluding institutions, generally dependent on tax revenue for financial support; one of the major activities of government, involving expenditures by federal, provincial and municipal governments, is the road, highway and bridge program. In 1961, all three levels of government increased their capital outlays; the Federal"Government, with"additional outlays"of $\$ 42,100,000$, accounted for 75 p.c. of the total increase and brought its spending up to $\$ 395,800,000$; the spending of the provincial governments reached $\$ 564,800,000$, an increase of $\$ 7,600,000$; and the spending of municipal governments amounted to $\$ 367,800,000$, an increase of $\$ 5,000,000$.

Capital spending in Canada as a whole in 1961 declined 1.9 p.c. from the previous year but there was considerable variation in the spending of the different provinces. Newfoundland experienced a substantial increase of 22.6 p.c. as a result of heavier expenditures
by iron mining companies in Labrador. Alberta and British Columbia recorded lessdramatic increases of 4.2 p.c. and 2.3 p.c., respectively. Capital spending in Prince Edward Island and Nova Scotia remained unchanged and each of the other five provinces experienced some decline. In Quebec, Ontario and Saskatchewan the declines were small at 2.7 p.c., 3.4 p.c. and 2.5 p.c., respectively; the greater declines of 9.4 p.c. and 13.3 p.c., respectively, recorded by New Brunswick and Manitoba were mainly attributable to the near completion of major industrial projects in these provinces in 1960.
3.-Summary of Capital and Repair Expenditures, by Economic Sector, 1960 and 1961

Note.-Actual expenditures 1960; preliminary actual 1961.

A summary of the capital expenditures in each province for the years 1960 and 1961 is given in Table 5. Such expenditures represent gross additions to the capital stocks of the province and are a reflection of economic activity in the area, although the actual production of these assets may generate major employment and income-giving effects in other regions. For example, the spending of millions of dollars on oil refineries and pipelines in Western Canada means activity in the steel industries of Ontario as well as construction activity in the western provinces.

## Section 2.-Construction Statistics

## Subsection 1.-Value of Construction Work Performed

Statistics of the construction industry are based largely on information received at the same time and from the same sources as the data on capital expenditures which appear in Section 1.* The data represent the estimated total value of all new and repair construction performed by contractors; by labour forces of utility, manufacturing, mining and logging firms; and by government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry.

Canada's construction program for 1961 is estimated at $\$ 7,039,000,000$, slightly above the 1960 total. Repair construction is estimated to be about $\$ 34,000,000$ higher than in 1960 , and the value of new construction higher by about $\$ 119,000,000$.

## 6.-Value of New and Repair Construction Work Performed, 1952-61

Note.-Actual expenditures 1952-60; preliminary actual 1961.

| Year | New | Repair | Total | Total Construction as Percentage of Gross National Product |
| :---: | :---: | :---: | :---: | :---: |
|  | \$'000,000 | \$'000,000 | \$'000,000 | p.c. |
| 1952. | 3,434 | 1,010 | 4,444 | 18.5 |
| 1953. | 3,756 | 1,070 | 4,826 | 19.3 |
| 1954. | 3,737 | 1,105 | 4,842 | 19.5 |
| 1955. | 4,167 | 1,141 | 5,308 | 19.6 |
| 1956. | 5,272 | 1,182 | 6,454 | 21.1 |
| 1957. | 5,785 | 1,238 | 7,023 | 22.0 |
| 1958.. | 5,831 | 1,261 | 7,092 | 21.6 |
| 1959. | 5,710 | 1,367 | 7,077 | 20.3 |
| 1960........ | 5,454 5,573 | 1,432 1,466 | 6,886 7,039 | 19.2 19.1 |
| 1961....... | 5,573 | 1,466 | 7,039 | 19.1 |

Table 7, which compares contract construction with other construction, shows that contractors account for from 74 p.c. to 77 p.c. of the work each year.

[^209]
## 7.-Value of Construction Work Performed, by Contractors and Others, 1958-61

Norz.-Actual expenditures 1958-60; preliminary actual 1961.
(Millions of dollars)

| Item |  |  |
| ---: | ---: | ---: | ---: | ---: |

${ }^{1}$ Work done by the labour forces of utility, manufacturing, mining and logging firms and by government depart-
ments, home-owner builders and other persons or firms not primarily engaged in the construction industry.

Principal statistics of the construction industry are shown by province and for contractors, utilities, governments and others in Table 11. The statistics given for Canada as a whole may be considered as relatively accurate but those for individual provinces and by class of builder are approximations only. All estimates given for cost of materials used are based on ratios of this item to total value of work performed, derived from annual surveys of construction work and applied to the total value-of-work figures. Estimates of labour content are similarly based but, in addition, are adjusted to include working owners and partners and their withdrawals. Although the ratios were calculated in some detail by type of industry, still further refinements are required. There are also some difficulties in obtaining the precise location of projects undertaken or to be undertaken by large companies operating in a number of provinces. However, if used with these qualifications in mind, the table provides useful estimates.

## 11.-Labour Content, Cost of Materials and Value of Work Performed in Construction, by Province and by Employer, 1958-61

Notz.-Actual expenditures 1958-60; preliminary actual 1961.

## Subsection 2.-Contracts Awarded and Building Permits Issued

In this Subsection statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the capital expenditure surveys. Further, values of contracts awarded, and especially of building permits, are estimates (more often under-estimates) of work to be done.
12.-Value of Construction Contracts Awarded, 1926-61

Building Permits.-The estimated value of proposed construction is indicated by the value of building permits issued. Figures of building permits issued are collected for more than 1,000 municipalities across the country and are available for the individual municipalities, for metropolitan areas, for provinces and for economic areas in Quebec, Ontario and Manitoba.

During 1961, building permits were issued for over $\$ 2,244,000,000$ worth of construction work, 10.8 p.c. more than in the previous year. The value of new residential construction increased by 25.3 p.c., although it was still somewhat below the 1959 and 1958 totals, and industrial and commercial construction increased 7.5 p.c. and 1.2 p.c., respectively, as compared with 1960. On the other hand, institutional and government construction decreased by 6.3 p.c. Building permits issued were higher in all provinces in 1961 than in 1960 except for Manitoba where the decrease was 8.5 p.c.

Table 14 shows the value of building permits issued in each of 50 municipalities for the years 1956-61.

${ }^{1}$ Although this is a metropolitan area, only St. John's proper is included in the building permits survey. ${ }^{2}$ Kitchener proper. ${ }^{2}$ Sudbury proper.

Table 16 shows the value of building permits, by province, for the years 1958-61 and Table 17 the number of dwelling units covered by building permits in each province for the same years. The relative material was compiled from municipal figures and therefore varies with the terms of individual by-laws, with the methods of estimating the value of local construction and with other factors that may differ from area to area. Information is not available on the permits allowed to lapse without the relative construction being undertaken.

The indexes given in Table 18 show as far as possible the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied.

## 18.-Index Numbers of Prices of Building Materials, and Wage Rates and Employment in Construction Industries, 1952-61

(Av. $1949=100$ )

## Section 3.-Housing*

## Subsection 1.-Government Aid to House-Building

Federal Assistance.-The role of the Federal Government in housing has expanded progressively since the introduction of the first continuing statute in 1935. Although the Government originally entered the housing field in 1918, when it made money available to the provinces for re-lending to municipalities for housing purposes, the first general piece of federal housing legislation was the Dominion Housing Act passed in 1935. This was followed by the National Housing Acts of 1938 and 1944, culminating in 1954 with the present National Housing Act, defined as "an Act to promote the construction of new houses, the repair and modernization of existing houses and the improvement of housing and living conditions". Central Mortgage and Housing Corporation, a Crown agency incorporated by Act of Parliament in 1945, administers the National Housing Act and coordinates the activities of the Federal Government in housing. The Corporation has the authority and responsibility for a variety of functions affecting housing in its long-term outlook as well as in its immediate requirements. It is empowered to act as an insurer of mortgage loans, as a lender or investor of public funds, as a guarantor and as an owner of property and other assets. It also acts as a research agency in fields associated with housing and enters into partnership with both provincial and municipal governments to assist in housing.

In general, the Government, through the successive Housing Acts, has attempted to stimulate and supplement the market for housing rather than assume direct responsibilities that rightfully belong to other levels of government or that could be borne more effectively by private enterprise. In each case the aim has been to increase the flow of mortgage money and to encourage lenders to make loans on more favourable terms to prospective owners.

The volume of house-building in Canada since 1935 has been spectacular. Close to half of the country's present stock of more than $4,730,000$ houses have been built since the first covering legislation was enacted; about one-third of these were financed in one way or another under the Housing Acts.

[^212]Under the terms of the National Housing Act, 1954 and its subsequent amendments, the Federal Government is active in many ways.

Loan Insurance.-Mortgage loans made by approved lenders may be insured for home ownership and for rental housing. They are normally available from approved lenders (chartered banks, life insurance, trust and loan companies) to individual home-owner applicants, to builders constructing houses for sale or for rent, to rental investors or to some special groups such as co-operative housing associations and farmers. Upon application, the borrower pays the Corporation a fee of $\$ 35$ per unit to help defray expenses incurred in the examination of plans and specifications, in the determination of lending values and in compliance inspections during construction. An approved lender requires evidence that a home owner or home purchaser is providing 5 p.c. of the value of the house from his own resources. For the home owner this equity may be in the form of cash or a combination of cash, land and labour; for the home purchaser it is in cash or labour. The regulations require that gross debt service-the ratio of repayments of principal, interest and taxes to the income of the borrower-should not exceed 27 p.c. Instances involving higher ratios may be considered on their merits by the approved lender and the Corporation.

The borrower pays an insurance fee which is added to the amount of the loan and is repaid over the term of the mortgage. In the case of a loan for a home-owner unit, the borrower pays a fee of 2 p.c. of the loan if mortgage advances are required during construction and $1 \frac{3}{4}$ p.c. if the total loan is advanced when construction is complete. On a rental loan the borrower pays $2 \frac{1}{2}$ p.c. of the loan if advances are required during construction and $2 \frac{1}{4}$ p.c. if the loan is not required until construction is complete. In some areas, lenders have arranged to make the inspections for progress advances.

For single-family home ownership, loans may be up to 95 p.c. of the first $\$ 12,000$ of lending value and 70 p.c. of the balance but may not exceed a total of $\$ 14,200$ for a house with three or fewer bedrooms. Maximum loan for a house with more than three bedrooms is $\$ 14,900$; for types other than single home-owner units, the maximum loan varies with the type of unit. Loans for rental housing may be up to 85 p.c. of the lending value of the project and are subject to maximum loan amounts on dwelling types. The maximum loan available for multiple-family dwellings is $\$ 8,750$ per family unit. The period for repayment of home-owner loans must be at least 25 years (unless a lesser period is requested in writing by the borrower) and may be up to 35 years if the lender agrees. The term of rental loans may not exceed 35 years and home conversion loans 15 years, unless shorter periods are requested by the borrowers. Repayments are made in equal monthly instalments, including interest and municipal taxes. The maximum interest rate is prescribed by the Governor in Council; on Oct. 30, 1961, it was reduced to $6 \frac{1}{2}$ p.c. per annum from $6 \frac{3}{4}$ p.c.

Loans.-Sect. 40 of the National Housing Act authorizes the Corporation to make any type of loan that may be made by an approved lender under Part I of the Act (homeowner, defence worker, co-operative, builder or rental) or under Sect. 15 (rental guarantee projects) where in the opinion of the Corporation a loan is not available to a satisfactory applicant through an approved lender. By Government policy, direct loans for rental and rental guarantee projects have not been made in recent years. Loans corresponding to Part I loans have in the past been restricted in general to home ownership in the smaller urban centres. On May 22, 1958, however, direct lending was extended to include builders in any area and home owners in the larger centres, with the loans subject to size limitations which placed the houses in the small home category. Loans were made through agents of the Corporation between Sept. 3, 1957 and the suspension of the arrangements-Feb. 8, 1959 for rental loans and Apr. 10, 1959 for home-owner and builder loans. Funds that were available to CMHC under the statutory vote for direct lending purposes were fully committed in the first ten months of 1959 and it was necessary to stop accepting new applications on Oct. 30.

In January 1960, Parliament voted an additional $\$ 500,000,000$ for direct lending by CMHC; lending to prospective home owners was resumed in April and to merchant builders with commitments from bona fide purchasers in September. In September 1961, the amount that may be advanced to the Corporation out of the Consolidated Revenue Fund for direct lending was increased to $\$ 2,000,000,000$ from $\$ 1,500,000,000$.

Under the National Housing Act, the Corporation, with Government approval by Order in Council, may make a loan to a limited-dividend housing company to assist in financing the construction of a low-rental housing project or in the purchase of existing buildings and their conversion into a low-rental housing project. The dividends of the company are limited by the terms of its charter to 5 p.c. or less of paid-up share capital. A loan under Sect. 16 may be up to a maximum of either 85 p.c. or 90 p.c. of the lending value established by CMHC, the larger amount applying only to non-profit companies. The period for repayment may not exceed the useful life of the project and in any case may not be for more than 50 years. The interest rate is established by Order in Council. The equity must be provided by the borrowers before NHA advances can be made. The company must present evidence that conditions of shortage, over-crowding or substandard housing exist in the district. Plans and specifications must be approved by the Corporation. The borrower pays to the Corporation an application fee of $\$ 35$ for each housing unit in the project. This may be reduced to $\$ 17.50$ a unit if evidence is submitted that dividends payable will not be taxable under the Income Tax Act when received by the shareholders.

Limited-dividend projects are subject to proven end costs. If final costs are less than originally established, the loan is reduced proportionately. The loan is also reduced by the net revenue earned prior to the completion of construction. The borrower enters into an operating agreement with the Corporation fixing the rentals, income ranges of eligible tenants, the establishment and use of reserves and the submission of annual financial statements. Those considered eligible for accommodation are persons with incomes in the lower third of the income level of the municipality. The gross family income of ingoing tenants must not exceed the level established by the Corporation. Leases terminate automatically when income exceeds the continued occupancy limit set by the Corporation.

Projects may be designed especially for the elderly. These projects have been sponsored usually by non-profit organizations requiring no return on equity. The Corporation requires that the limited-dividend company contribute at least half of the required 10 -p.c. equity. The remainder may be provided by provincial or other grants; in some provinces, provincial grants are available to non-profit organizations. The income for entry must be at least twice the shelter rent and leases terminate automatically when income exceeds five times the shelter rent that would apply with a $90-\mathrm{p} . \mathrm{c}$. loan.

New legislation enacted in 1960 broadened the facilities of the National Housing Act to include financial assistance to municipalities for the elimination or prevention of water and soil pollution. CMHC is authorized to make a loan to a municipality or a municipal sewerage corporation for the construction or expansion of a sewage treatment project; under the Act, a sewage treatment project consists of a trunk sewage collector system, a central treatment plant, or both, for the collection and treatment of sewage from one or more municipalities. Also included is the expansion of an existing plant or existing trunk collector sewer. The loan may not exceed two-thirds of the cost of the project and the maximum repayment term is 50 years from date of completion. The interest rate is prescribed by the Governor in Council. The agreement also contains a condition whereby 25 p.c. of the loan principal and 25 p.c. of the accrued or paid interest will be forgiven, provided the project is completed to the satisfaction of the Corporation on or before Mar. 31, 1963.

Other 1960 legislation authorizes long-term loans to universities for the construction of student residences or the acquisition of existing buildings and their conversion into a university housing project. CMHC may lend up to 90 p.c. of the project cost as agreed between the university and the Corporation, with the maximum amount limited by regu-
lation to $\$ 7,000$ per student accommodated. Term of the loan may not exceed 50 years from date of the project's completion. The interest rate, prescribed by the Governor in Council, depends on the Government's borrowing rate which changes from time to time.

Guarantees.-Since 1955, loans to assist in financing the improvement of existing houses have been available under Sect. 24 of the National Housing Act. This Section authorizes CMHC to give a limited guarantee to banks or approved instalment credit agencies in return for an insurance fee paid by the borrower on loans made for additions, repairs and alterations to existing houses and apartments. A home improvement loan and the balance owing on any existing NHA home improvement loan on the property may not exceed $\$ 4,000$ for a one-family dwelling or $\$ 4,000$ for the first unit of a duplex, semi-detached, or multiple-family dwelling, plus $\$ 1,500$ for each additional unit. Loans are repayable in monthly instalments, together with interest, in not more than 10 years.

Investments.-Under Sect. 36 of the National Housing Act and complementary provincial legislation, the Federal Government and the government of a province may enter into a partnership agreement to build rental housing for families of low income. The Federal Government bears 75 p.c. of the capital costs and the provincial government the remainder, although the latter may call upon the municipality concerned to bear a portion of the provincial share. Federal-provincial rental housing projects are of two types-subsidized and full-recovery. In subsidized projects, rents are related to the tenant's family income and size of family; in full-recovery projects, rents are set at a level sufficient to amortize capital costs and to recover operating expenses.

A 1960 amendment to Sect. 36 permits the Government to supplement its federalprovincial low-rental housing program by making provision for the acquisition of existing housing stock. The amendment authorizes the Government to pay 75 p.c. of the cost of acquisition, improvement and conversion of these buildings for housing purposes. This financial assistance is available on condition that the existing accommodation is located in a section designated as an urban renewal area in an agreement between a province, a municipality in the province, and the Corporation. Remainder of the cost will be shared by the participating governments in the same manner as for new housing under this Section.

Under the same Section of the National Housing Act, the Federal Government and the government of a province may also enter into an agreement to provide for a land assembly project, which involves the development of raw land for housing purposes. After subdivision planning, installation of sewer and water lines and the construction of roads and sidewalks, serviced lots are made available for sale to prospective home owners or to builders for residential construction. The Federal Government pays 75 p.c. of the cost of such projects and the province concerned pays the remainder.

Corporation Building.-The Corporation may construct and administer housing and certain other buildings on its own account and for other government departments and agencies. Its responsibilities include the provision of architectural and engineering designs, the calling of public tenders and the administration of the construction contracts-including any necessary on-site surveys and engineering. On such contracts the Corporation carries out full architectural and engineering inspections.

Grants.-The Federal Government makes financial assistance available to municipalities for the study of existing conditions and the establishment of their needs for redevelopment and housing. Under Part V of the Act, the Corporation may arrange with a municipality to undertake either a city-wide study or a study in a specific area. In the case of city-wide investigation, the Government may provide as much as 75 p.c. of the cost and up to 50 p.c. for study of a limited area. Under Sect. 23, the Government may pay up to 50 p.c. of the cost of acquisition and clearance of an area marked for renewal.

Research.-The Government's housing agency is concerned also with building technology in the formulation of standards for house construction, in the use of suitable materials and in the development of new building techniques. The Corporation has no laboratory facilities but has direct experience of performance in the field and seeks the advice of specialists in the various agencies and departments of the Federal Government in such matters. Research into the factors affecting housing is concerned with the measurement of the demand for new housing, the volume of new housing built and the supply of mortgage money for house construction. The Corporation also co-ordinates and publishes statistical information on housing. Supported by funds provided under the National Housing Act, the Canadian Housing Design Council directs a program toward the improvement of housing design in Canada.

Other Federal Legislation.-The Farm Credit Act, 1959 provides for federal long-term loan assistance for housing as well as for other farm purposes (see pp. 384-385); the Veterans' Land Act, 1942 provides a form of loan and grant assistance to veterans for housing and other purposes (see pp. 284-285); and the Farm Improvement Loans Act, 1944 (see pp. 385-386) provides for guarantees for intermediate- and short-term loans made by approved lending agencies to farmers for housing and other purposes. These three statutes are concerned only incidentally with housing. The primary provisions for housing as such are those in the NHA.

Provincial Assistance.-All provinces except Prince Edward Island have complementary legislation providing for joint federal-provincial housing and land assembly projects. In addition, separate legislation with respect to housing has been enacted by several provinces.

An Act to Improve Housing Conditions, 1948 (QS 1948, c. 6), passed by the Quebec Government, provides for a subsidy on mortgage loan interest charges in excess of 3 p.c. on new dwellings. In Ontario, the Planning Act (RSO 1960, c. 296) empowers municipalities with approved official plans to designate redevelopment areas and acquire and clear land for designated purposes. The Rural Housing Assistance Act (RSO 1960, c. 355) authorizes the establishment of a Crown company-the Rural Housing Finance Corporation -to lend and invest mortgage money for new rural housing. The Junior Farmer Establishment Act (RSO 1960, c. 198) provides loans to young qualified farmers for housing and other purposes.

Four provinces have legislation enabling their government to make grants for the construction of housing for elderly people. Manitoba provides one-third of the construction costs of a two-person unit or $\$ 1,667$ per unit, whichever is the lesser, and onethird of the construction costs of a one-person unit or $\$ 1,400$ per unit. In addition, grants are made for the construction of hostels and existing buildings-one-third of the construction cost or $\$ 1,200$ per bed for the former and one-third or $\$ 700$ per bed for existing buildings.

Grants in Ontario may be made only to a limited-dividend housing company which has received a loan under NHA provisions. Grants are calculated at the rate of $\$ 500$ for each dwelling unit or 50 p.c. of the costs in excess of the CMHC loan, whichever is the lesser. In British Columbia, capital grants do not exceed one-third of the total cost of the project and the limited-dividend housing company must provide equity amounting to 10 p.c. of the total. In Saskatchewan, capital grants are made up to 20 p.c. of the total capital cost.

## Subsection 2.-Housing Activities in 1961

Following the 1960 lull in house-building, there was a significant recovery in 1961. Starts on new dwellings were 15.4 p.c. higher than in the previous year, reaching a total of 125,577. The year's construction began at an unusually brisk pace, reflecting in part the easier borrowing terms available as a result of amendments to the National Housing Act. Later, new starts followed the normal seasonal pattern.

House-building represented a total expenditure of $\$ 1,467,000,000,17.4$ p.c. of the capital investment in the economy and 4 p.c. of the gross national product. Although in good supply, private funds were insufficient to meet the demand for mortgage loans and the gap was bridged with public funds by means of direct loans by CMHC. More than 59,000 dwellings started during 1961 were financed under the National Housing Act, almost 50 p.c. of the year's total as compared with about 33 p.c. in 1960. Conventional mortgage loans, financed by lending institutions, credit unions and private individuals accounted for the remainder. Private resources were called upon to finance a much larger volume of mortgages on existing real estate, an investment field excluded from the National Housing Act.

Construction costs continued to drop during 1961, building material prices declining sufficiently to offset a 2-p.c. rise in labour costs. Rising land costs were apparently countered by changes in productivity and profit margins, resulting in a construction cost of $\$ 10.44$ per sq. foot compared with $\$ 10.60$ per sq. foot the previous year.

There was immediate national response to the 1960 legislative amendments providing loans for municipalities undertaking sewage treatment projects. Similiar enthusiasm greeted NHA changes permitting construction loans for university and college residences. Urban redevelopment work continued on eight projects of earlier initiation and the Federal Government approved a $\$ 3,700,000$ contribution to Winnipeg's slum clearance program. Additional projects were under consideration for Hamilton and Kingston.

${ }^{1}$ Excludes the fringe areas of the major urban centres.
Operations under the National Housing Act.-The life insurance and trust and loan companies continued to provide the major share of National Housing Act mortgage financing in 1961. These lenders approved loans amounting to over $\$ 439,400,000$, or 62 p.c. of total commitments. Central Mortgage and Housing Corporation provided $\$ 263,400,000$ from public funds, and the chartered banks made insured mortgage loans of $\$ 261,000$. In 1961, 61,353 dwelling units were financed under the Act. Of these, 60,438 were built with mortgage loans ( 36,810 by approved lenders and 23,628 by the Corporation) and federal-provincial partnership arrangements accounted for 915 . In 1960, a total of 37,308 units were financed under the Act.

The volume of insured lending by the life insurance and trust and loan companies increased over 1960 by approximately 89 p.c. The pattern of lending during the year, however, was quite different from that of 1960 when activity was low until after mid-year and then increased. In 1961, lending activity was at a very high rate early in the year
followed by a somewhat lower rate through the summer and then an expansion in the last months of the year. At the year-end, the life insurance and trust and loan companies had approved loans for 36,791 dwellings compared with 21,111 in 1960 . Of the 1961 total, the trust companies were responsible for 14,426 units. Previously, their record volume in any year was 5,195 units achieved in 1960. The chartered banks made loans for only 19 dwellings. However, some banks bought NHA insured mortgages from the Corporation through its secondary mortgage marketing operation. The total of 36,810 units financed by all approved lenders in 1961 was higher than the 1960 aggregate of 21,156 by 74 p.c.

Some 71 p.c. of the dwellings financed by approved lenders in 1961 were for owner occupancy-22,704 to be built by merchant builders for sale to owners and 3,494 by ownerapplicants who made their own construction arrangements. Loans were also made for 10,612 units of rental accommodation. In 1960, approved lenders made loans to merchant builders for 12,966 dwellings, to owner-applicants for 2,594 , and to rental investors for 5,596 units.

With a lending policy that was less restrictive than that in force during the previous year, the Corporation was called upon to approve a volume of mortgage loans sharply exceeding the 1960 total. To ensure an adequate supply of public funds, Parliament approved in September a maximum of $\$ 2,000,000,000$, thus increasing by $\$ 500,000,000$ the amount that may be advanced by the Government to the Corporation for direct lending purposes. During the year, the Corporation made mortgage loans for 23,628 dwelling units, including 20,298 to be occupied by home owners and 3,326 in limited-dividend housing projects. In 1960, the Corporation made loans for 13,861 dwellings for owner occupancy and 1,591 for rental in limited-dividend projects.

During 1961, Corporation loans were available to qualified owner-applicants in any part of Canada and to merchant builders, provided the houses to be financed had been pre-sold to eligible purchasers. In both instances, applicants were required to submit written evidence that they had been unsuccessful in obtaining loans from an approved lender. The income limitations imposed and later removed in 1960 were not re-introduced. There was a more restrictive lending policy in effect where septic tank installations were proposed.

Loans to Limited-Dividend Housing Companies.-In 1961, 3,326 dwelling units were financed with loans made by the Corporation to limited-dividend companies providing rental accommodation for lower-income families and for elderly persons. Developments approved in 1961 provided 2,747 units for lower-income families and 579 for elderly persons. Municipalities and non-profit organizations sponsored projects totalling 724 units, while entrepreneurs were responsible for 2,602 units. Limited-dividend housing continued to be directed to families of the lower third income group.

Borrower and House Characteristics.-The cost of the average single-family house financed under NHA in 1961 was an estimated $\$ 14,474$. Down-payments averaged $\$ 2,475$ compared with $\$ 3,033$ in 1960, the decrease reflecting the higher loan ratios and greater maximum loans made available late in 1960. Monthly payments of principal, interest and municipal taxes came to $\$ 105$ and represented 21.7 p.c. of the borrower's income. Some 34 p.c. of all NHA borrowers had incomes below $\$ 5,000,56$ p.c. had incomes between $\$ 5,000$ and $\$ 7,999$ and the remainder had incomes of $\$ 8,000$ or more. The average income of all NHA borrowers was $\$ 5,810$ compared with $\$ 5,620$ in the previous year.

Bungalows continued in 1961 to be the main type of dwelling for home-ownership financed under the National Housing Act, representing 79 p.c. of the total of these dwellings. Most of the 1961 dwellings had three bedrooms but there was an increase in the proportion with four bedrooms or more. This resulted in part from the higher maximum loan for such dwellings made available in December 1960.

Home Improvement Loans.-The volume of NHA-guaranteed bank loans for home improvement purposes recorded a substantial increase in 1961. The banks approved 28,097 loans for a total of $\$ 42,600,000$ compared with 23,580 loans for $\$ 30,100,000$ in 1960. The greater activity arose in part from the extension, late in 1960, of home improvement loans to rental properties and additions to the list of eligible improvements, including fallout shelters.

Loans for University Housing Projects.-There was a ready response during the year to the National Housing Act amendment of Dec. 2, 1960 that provided for Corporation loans to universities to assist in the construction of resident accommodation for students. Loans aggregating more than $\$ 20,000,000$ were made to 22 universities and colleges for residences to house some 4,300 students. Preliminary applications had also been received by the year-end from 11 universities which, if approved, would result in loans totalling $\$ 14,700,000$ to finance accommodation for an additional 3,500 students. Provincial distribution of 1961 NHA loans for university housing projects was as follows:-

| Province | Loans | Amount | $\begin{gathered} \text { Students } \\ \text { to be } \\ \text { Accommodated } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
|  | No. | \$'000 | No. |

| British Columbia. | 1 | 1,332 | 336 |
| Canada. | 22 | 20,086 | 4,303 |

Loans for Municipal Sewage Treatment Projects.-During 1961, 116 municipalities obtained 144 NHA sewage treatment project loans amounting to about $\$ 39,900,000$ to assist in resolving the problems arising out of water and soil pollution. At the year-end, there were also on hand 238 preliminary inquiries, representing a loan potential of $\$ 79,300,000$.

Loans were made to 78 communities of under 5,000 population; of these, 63 had fewer than 2,000 population and 50 had fewer than 1,000 . The availability of federal loans made possible the constructing of sewage treatment plants in many smaller communities where they did not exist before and, in many instances, encouraged the installation of public water systems to replace individual wells. It also enabled many major centres to extend their trunk sewage systems and either enlarge or, where none existed, establish sewage treatment plants. Provincial distribution of 1961 NHA loans for municipal sewage treatment projects was as follows:-

|  | Province | Loans | Amount |
| :---: | :---: | :---: | :---: |
|  |  | No. | \$'000 |
| Newfoundland. |  | 2 | 116 |
| Prince Edward Island. |  | 4 | 75 |

| Saskatchewan. |  | 43 | 1,822 |
| Alberta. |  | 12 | 1,665 |
| British Columbia. |  | 17 | 9,841 |
| Canada. |  | 144 | 39,927 |

Urban Redevelopment.-During 1961, a $\$ 3,700,000$ grant was approved by the Federal Government to assist the City of Winnipeg in the acquisition and clearance of 49 acres of city blight. The cleared land will be devoted mainly to new housing, although some will be made available for commerce and industry. Revenues derived from re-use of the land will be shared by the participating governments in proportion to their contributions to the project. Urban redevelopment projects for the Cities of Kingston and Hamilton were under consideration, and work continued on eight other projects that were initiated prior to 1961.

Federal-Provincial Projects.-During 1961, the Federal Government approved rental housing projects under federal-provincial arrangements in Oshawa, Sudbury, Toronto (Warden Avenue and O'Connor Drive) and Vancouver that will provide 915 dwellings. Investigations into proposals for projects in 18 municipalities were also approved. From 1950 when the first project was approved under federal-provincial partnership arrangements to the end of 1961, a total of 10,520 rental units were approved in 86 projects. Under arrangements with the Housing Commissions of Nova Scotia and Prince Edward Island, projects were approved for 94 and 93 dwellings, respectively, to be built through cooperative groups and societies.

In 1961, approval was given to service 1,084 lots in phased developments of long-term land assembly projects. The sale of 501 lots during the year brought to 9,089 the number of lots serviced and sold.

Mortgage Marketing.-During 1961, the Corporation undertook to encourage the development of a secondary market for NHA insured first mortgages by offering for sale a part of the large and diversified portfolio acquired as a result of extensive lending operations since 1957. Three offerings were made by tender during the year to members of the Investment Dealers' Association of Canada, NHA approved lenders and their NHA approved correspondents. Parcels varied in size from $\$ 250,000$ to $\$ 500,000$ and both firm bids and 60 -day options were permitted. To give purchasers a reasonable time for re-sale, the Corporation agreed in each instance not to sell additional loans until the option period had expired. Insured mortgages auctioned in 1961 all carried an interest rate of $6 \frac{3}{4}$ p.c., were fully advanced and were repayable over a period of 25 or 30 years. When requested, the Corporation undertook to continue to service the loans for a small monthly fee.

During the year, a total of $\$ 51,000,000$ of mortgages was offered by the Corporation with tenders to be accepted on only $\$ 45,000,000$, the balance affording prospective purchasers with a greater choice of area. Proceeds of sales are used to retire Corporation debentures held by the Federal Government.

Housing Research and Community Planning.-The Corporation engages in studies of many facets of housing in Canada and also provides financial assistance to other organizations and to individuals to facilitate research in house design and community planning. During 1961, more than $\$ 1,000,000$ was expended by CMHC for this purpose. Progress was made during the year toward establishment of a Canadian Council on Urban and Regional Research, as recommended in the Report of the Committee of Inquiry into the Design of the Residential Environment prepared in 1960 by the Royal Architectural Institute of Canada with the assistance of a Federal Government grant.

The Canadian Housing Design Council and the Community Planning Association of Canada continued to receive support from the Corporation. Travelling scholarships, fellowships and bursaries were also provided for students in the fields of housing, planning, urban development and estate management.

## Section 1.-The Government in Relation to Labour

## Subsection 1.-Federal Labour Legislation

The federal Department of Labour was established in 1900 under the Conciliation Act which provided machinery to aid in preventing and settling labour disputes and required the Department to collect, compile and publish statistical and other relevant information. The Department also assumed the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds.

The statutory duty of disseminating information concerning labour and industrial matters is set out in the Department of Labour Act passed in 1909. In addition, the Minister is responsible for the administration of the following statutes: Conciliation and Labour Act (1906); Government Annuities Act (1908) $\dagger$; Government Employees Compensation Act (1918); Fair Wages and Hours of Labour Act (1935); Unemployment Insurance Act (1940); Vocational Training Co-ordination Act (1942); Reinstatement in Civil Employment Act (1946); Merchant Seamen Compensation Act (1946); Industrial Relations and Disputes Investigation Act (1948); Canada Fair Employment Practices Act (1953); Female Employees Equal Pay Act (1956); and Annual Vacations Act (1958).

Fair Wages Policy.-The Fair Wages Policy applying to all Federal Government contracts was first set forth in a Resolution of the House of Commons (1900) and later incorporated in an Order in Council and amended from time to time. Wages and hours on contracts for construction are now regulated by the Fair Wages and Hours of Labour Act and Order in Council P.C. 2029 of Dec. 22, 1954. Hours of work on construction contracts are limited to eight per day and 44 per week, except in an emergency or in special circumstances where exemption is granted by Order in Council; wages to be paid are those current for the type of work in the district or, if there are no current rates, fair and reasonable rates as determined by the Minister of Labour.

[^213]Wages and hours of work on contracts for equipment and supplies are also regulated by Order in Council P.C. 2029. The hours of such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed. This Order in Council contains a clause prohibiting discrimination against any person in matters of employment because of that person's race, national origin, colour or religion, or because he has made a complaint or given information with respect to such alleged discrimination.

Government Prevailing Rate Employees.*-Many departments and agencies of government employ non-office workers in public buildings, defence establishments, parks and forests, experimental farms, canal operation, airports and government vessels, survey parties, special projects, etc. Such positions are exempt from the operations of the Civil Service Act and rates of pay are fixed by the Treasury Board in consultation with the Department of Labour on the basis of prevailing private industry rates for comparable work in the employment area. Data used in the determination of these pay rates are secured from wage surveys made by Industrial Relations Officers of the Department of Labour, from wage research conducted by the Economics and Research Branch, and from collective agreements and wage rates established under the legislation of some provinces.

The Fair Wages and Prevailing Rates Division of the Industrial Relations Branch also recommends rates of pay for 4,000 commissionaires employed by various government departments and agencies throughout Canada, provides wage data to assist certain Crown corporations in the preparation of their wage schedules, and gives assistance in the establishment of class titles, job descriptions and the application of job evaluation techniques.

Three sets of comprehensive Regulations have been established by the Treasury Board governing hours of work, overtime, vacations, statutory holidays, sick leave, pensions, etc., for (1) prevailing rate workers generally employed, (2) ships' officers and (3) ships' crews.

The Industrial Relations and Disputes Investigation Act.-This legislation came into effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regulations in effect since March 1944 and repealing the Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries, both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or of two or more provinces. However, the Act provides that provincial authorities if they so desire may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively and that trade unions may be certified as bargaining agents for employee groups. Trade unions and employers are required, upon notice, to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act, which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such provision is lacking application may be made for its establishment.

[^214]The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade union activity. The conditions that must be observed prior to strike and lockout action are set down in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards, industrial inquiry commissions, consent to prosecute, and complaints that the Act has been violated or that a party has failed to bargain in good faith.

The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents, the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister that a party has failed to bargain collectively.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Department of Labour. In brief, from Sept. 1, 1948 to Dec. 31, 1961, the Canada Labour Relations Board received 1,319 applications for certification, 767 of which were granted, 278 rejected, 258 withdrawn and 16 were pending at the end of the period. Of the 835 industrial disputes dealt with under the conciliation provisions of the Act, 727 were settled by conciliation officers and conciliation boards, 53 were not settled, 24 lapsed and 31 were pending at Dec. 31, 1961.

Labour-Management Co-operation Service.-During World War II, production committees based on the principle of joint consultation between labour and management were established in many vital industries. Since 1947 the establishment of labour-management production committees in industry has been encouraged and assisted by the LabourManagement Co-operation Service, a division of the Industrial Relations Branch of the Department of Labour. The number of active committees has grown from 526 in 1947 to approximately 1,732 at Dec. 31, 1961. Their activities are directed toward such objects as better understanding between management and labour, improved production efficiency, improved quality, reduction of waste, accident prevention, good housekeeping and reduction of absenteeism.

Reinstatement in Civil Employment Act.-This Act provides for the reinstatement in their civil employment of discharged members of the Armed Forces and other designated persons. It was originally passed in 1942, revised in 1946, and broadened in its application in 1954. The Act is administered by the Minister of Labour through the National Employment Service (see p. 741).

Canada Fair Employment Practices Act.-This Act, which came into effect on July 1, 1953, prohibits discrimination in employment based on race, colour, religion or national origin. It applies only to industries within federal jurisdiction-those covered by the Industrial Relations and Disputes Investigation Act (see pp. 699-700). This law prohibits acts of discrimination by employers; discrimination by trade unions in regard to membership or employment; the use by employers of employment agencies that practise discrimination; and of advertisements or inquiries in connection with employment that express, directly or indirectly, any limitation, specification or preference as to race, colour, religion or national origin.

Female Employees Equal Pay Act.-This Act came into effect on Oct. 1, 1956, and applies to employers and employees engaged in works, undertakings or businesses coming within federal jurisdiction. The Act, in its principal provision, prohibits an employer from employing a female for any work at a rate of pay that is less than the rate at which a male is employed by that employer for identical or substantially identical work.

Annual Vacations Act.-This Act was passed in January 1958 and became effective by proclamation on Oct. 1, 1958. It provides a one-week vacation with pay for the first year of employment and a two-week vacation for subsequent years. Vacation pay is computed at 2 p.c. of wages, as defined in the Act, for a vacation of one week and 4 p.c. for a vacation of two weeks.

## Subsection 2.-Provincial Labour Legislation

Because of the authority given by the British North America Act to provincial legislatures to make laws in relation to local works and undertakings and in relation to property and civil rights, there is a large body of provincial labour legislation dealing with relations between employers and employees and the trade unions representing employees, working conditions, qualifications of tradesmen, compensation for work accidents, and other matters. In each province a Department of Labour is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines. The workmen's compensation law in each province is administered by a board appointed by the Lieutenant-Governor in Council.

Factory legislation and shops legislation in several of the provinces prohibit child labour, regulate the hours of work of women and young persons, and contain provisions to ensure the safety and protect the health of employees in industrial and commercial establishments. All provinces have minimum wage legislation, and most have legislation establishing maximum working hours in at least some types of employment. The industrial standards legislation in Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan and Alberta enables the wages and hours of work agreed upon at a conference of representatives of employers and employees in designated trades to be made the minimum standards throughout the trade concerned in specified areas. The Quebec Collective Agreement Act permits certain terms of collective agreements between employers and trade unions to be made binding on all in the industry throughout the province or in a defined area.

In all provinces there is legislation to protect freedom of association, to promote collective bargaining and to assist in the settlement of industrial disputes. Nine provinces have legislation dealing with apprenticeship and all have legislation providing for the licensing of certain classes of workmen. Eight provinces have equal pay laws, and six have fair employment practices Acts prohibiting discrimination in hiring and conditions of employment and in trade union membership on grounds of race, colour, religion or national origin. All have workmen's compensation laws.

Provincial labour legislation enacted in 1961 is outlined in the following paragraphs.
Newfoundland.-The Workmen's Compensation Act was amended, raising the maximum annual earnings on which compensation may be paid from $\$ 3,000$ to $\$ 4,000$. Dependants' allowances were increased and the increases were made applicable to existing pensioners. The allowance for funeral expenses was increased from $\$ 200$ to $\$ 300$, the lump sum payable to a widow from $\$ 100$ to $\$ 200$, and a widow's pension from $\$ 60$ to $\$ 75$ a month. The monthly allowance for a dependent child under 16 years of age was raised from $\$ 20$ to $\$ 25$, and for an orphan under 16 from $\$ 30$ to $\$ 35$. Coverage was extended to learners, and provision was made for bringing members of a volunteer fire brigade under the Act upon the application of the municipality concerned.

The Logging Camps Act, 1960, which among other matters lays down health and welfare provisions for logging camps, was amended to authorize the making of regulations providing for the classification and licensing of such camps.

Prince Edward Island.-An amendment to the Trade Union Act made it unlawful for a member of the police force of a city, town or village or for a full-time employee of a fire department to engage in a strike or work stoppage.

The Workmen's Compensation Act was amended to raise the ceiling on annual earnings from $\$ 3,000$ to $\$ 4,000$. The monthly payment to a widow was increased from $\$ 50$ to $\$ 65$. A further provision broadened the definition of "accident" by including in it the words "as well as disablement arising out of and in the course of his employment".

Nova Scotia.-Amendments to the Workmen's Compensation Act provided for a higher minimum compensation payment for permanent total disability, and empowered the Workmen's Compensation Board to pay an additional allowance to a totally disabled workman requiring special treatment, services or attendance. Increased compensation in respect of past accidents in temporary total, temporary partial and permanent total disability cases was authorized. All disability pensions paid under the Act are now based on 75 p.c. of earnings, regardless of the date of the accident.

Traction plants and internal combustion engine plants were removed from the coverage of the Engine Operators Act. The definition of steam plants was also amended to limit the application of the Act to plants in which steam is used for motive power.

New Brunswick.-An equal pay law, the Female Employees Fair Remuneration Act, was enacted, with effect from Sept. 1, 1961, prohibiting an employer from paying a female employee at a lower rate of pay than the rate paid to a male employee "for the same work done in the same establishment". An aggrieved person may file a written complaint with the Minister of Labour. Administrative and enforcement provisions are similar to those in other Canadian equal pay statutes.

Dieticians, nurses and teachers were excluded from the definition of "employee" in the Labour Relations Act. A further amendment repealed the provision permitting a municipality to pass a resolution removing its employees from the scope of the Act, with the result that all municipal employees are now covered. The certification sections of the Act were amended to make it clear that the appropriateness of a unit and union membership of employees are to be determined as of the date of the application for certification. A further change is that the Act now authorizes a prosecution for an offence under the Act to be brought by or against a trade union or an employers' organization. Previously, a prosecution could be brought only against such organizations.

The Fair Wages and Hours of Labour Act, which formerly required contractors in provincial government construction work to observe an eight-hour day and a 44-hour week, except in special circumstances, was amended to remove the daily limit on hours.

The Stationary Engineers Act was amended, giving new regulation-making authority to the Lieutenant-Governor in Council regarding pressure vessels used in storing compressed gas, the storage, distribution and use of the gas, and the licensing of firms handling it.

Quebec.-The Labour Relations Act was amended to accelerate conciliation proceedings, to provide for final and binding arbitration of grievances resulting from the interpretation or application of a collective agreement and to ensure that a union's certification and collective agreement remain valid when a business changes hands. Changes with respect to conciliation services include a provision enabling the 14-day period within which a conciliation officer is required to report to be extended on the written agreement of the parties. A council of arbitration (conciliation board) must report within 45 days following the date of the conciliation officer's report and is no longer required to make recommendations but will merely advise the Minister whether or not the dispute has been settled. Previously, strikes and lockouts were prohibited until 14 days had elapsed after receipt by the Minister of a conciliation board report. The restriction on a strike or lockout now comes to an end either 14 days after the Minister receives the report or 75 days after the receipt of the original request for conciliation services ( 90 days in the case of a first agreement). A new provision requires the Labour Relations Board to give reasons for its decisions. Another provides for the appointment of a second vice-chairman, enabling the Board to sit in three panels.

An amendment to the Collective Agreement Act permits a provision in a collective agreement in the construction industry prohibiting strikes, lockouts, slowdowns and picketing to be extended by government decree throughout a specified region. If a no-strike provision is included in a decree, the employers and employees concerned would not be subject to the certification, collective bargaining and conciliation sections of the Labour Relations Act for the duration of the decree, with the result that no employer subject to the decree would be obliged to negotiate an individual collective agreement during the period.

An amendment to the Education Act entitled "An Act respecting free education and compulsory school attendance" raised the statutory school-leaving age from 14 to 15 years, effective from July 1, 1962.

Ontario.-The Construction Hoists Act, 1960-61, which is to be brought into force by proclamation, provides for the regulation, inspection and licensing of hoists used in the construction industry. Sections of the Municipal Act giving municipalities authority to pass by-laws regulating elevators, lifts and construction hoists were deleted since these lifting devices are now subject to provincial control under the Elevators and Lifts Act and the Construction Hoists Act, 1960-61.

Amendments were made to the Energy Act requiring any person who installs, repairs, services or removes a gas appliance to be registered under the Act or to be supervised by a registered person.

Manitoba.-A Tradesmen's Qualifications Act was passed, effective from Feb. 15, 1962, instituting a system by which qualified tradesmen who have not had an opportunity to take apprenticeship courses may secure a certificate of proficiency on the basis of their work experience by passing a prescribed examination. The Act provides for voluntary certification but also authorizes the adoption of a system of compulsory certification by empowering the Lieutenant-Governor in Council to make regulations prohibiting any person from engaging in a trade unless he holds a valid certificate of proficiency. The Minister of Labour is authorized to issue certificates of proficiency on the recommendation of the examining board set up for each trade.

Amendments to the Department of Labour Act enable the Manitoba Labour Board to sit in panels. The Board is also given express authority to take a vote of employees with respect to any matter under the jurisdiction of the Minister of Labour.

An amendment to the Workmen's Compensation Act raised the ceiling on annual earnings from $\$ 4,500$ to $\$ 5,000$. In another amendment, the Board is authorized to pay a clothing allowance to compensate an injured workman who has to wear a prosthetic device for the extra wear on his clothing caused by the use of such a device.

Saskatchewan.-The Employees' Wage Act, 1961 is a comprehensive wage protection law, incorporating some provisions of the former Act and introducing important new features. In addition to specific provisions regarding manner and frequency of wage payment, the Act provides for the prosecution of an employer who issues a cheque in payment of wages which is not honoured by the bank on which it was drawn, and makes a construction contractor liable for the payment of wages to employees of his subcontractors. Another new provision empowers the Minister of Labour to require an employer who has been convicted of failure to pay wages to an employee to furnish a bond or equivalent security for the payment of wages. The Act also provides for investigation of wage claims and collection of unpaid wages by inspectors of the Department of Labour.

The Wages Recovery Act, which enables an employee to file a claim for unpaid wages with a magistrate, was amended to provide a more effective means of enforcing a magistrate's order to pay wages found to be due. The magistrate now may, upon the request of the complainant, file a certified copy of the order in the district court, whereupon the order becomes enforceable as an order of the court.

The Trade Union Act was amended to require an employer to negotiate with a union for the settlement of a grievance or dispute which may arise between the time the union first becomes the representative of the employees in a unit and the time of the signing of a first agreement and between the time of the termination of an agreement and its renewal or revision, as well as during the term of an agreement. Another amendment limits the authority of the Labour Relations Board to rescind or amend its orders in cases where a collective agreement is in effect.

The Employee Pension Plans Registration and Disclosure Act, 1961, which is administered by the Department of Labour, provides for the registration of employee pension plans and requires every trustee to furnish each employee, employer and employees' organization concerned with a description of the plan and with an annual report. Information gathered concerning such plans will assist in determining whether portable contributory pension plans are practical and desirable.

An amendment to the Electrical Inspection and Licensing Act extends the application of the Act to the design of electrical equipment. The Act provides for government regulation of the sale of such equipment and requires it to conform to the Canadian Electrical Code.

The Radiological Health Act, 1961, which is to be brought into force by proclamation and to be administered by the Minister of Public Health, is designed to protect radiation workers as well as the general public against radiation hazards. The Act requires the registration of radiation installations and equipment, lays down qualifications of operators, prohibits the employment of expectant mothers and persons under age 18 in work in which there is exposure to ionizing radiation, and provides for the appointment of a Radiological Health Committee to advise the Minister and promote an educational program regarding radiological dangers and protective measures.

Alberta.-The Workmen's Compensation Act was amended, implementing the recommendations of a special legislative committee which reviewed the Act in 1960 . The amendments raised the ceiling on annual earnings from $\$ 4,000$ to $\$ 5,000$, and increased benefits in both fatal and disability cases. The allowance for funeral expenses was raised from $\$ 200$ to $\$ 250$, and provision was made for payment of a sum not exceeding $\$ 50$ for a burial plot. The lump sum payable to a widow was increased from $\$ 150$ to $\$ 200$, a widow's monthly pension from $\$ 60$ to $\$ 75$, and the monthly pension to a dependent child under age 16 from $\$ 30$ to $\$ 40$. The maximum additional monthly allowance payable at the discretion of the Board to an orphan child under age 18 was raised from $\$ 10$ to $\$ 25$. The increases were made applicable to existing pensioners, irrespective of the date of the accident. Another amendment increased the minimum weekly payment of compensation for temporary total or permanent total disability from $\$ 25$ to $\$ 35$ or average earnings, if less.

The minimum period during which a workman must have been exposed to silica dust in his employment in the province in order to qualify for compensation for silicosis was reduced from three years to 450 work shifts (the equivalent of two years) preceding disablement. Changes were also made with respect to subsistence allowances payable to workmen undergoing treatment away from home.

New sections provide for the payment of additional compensation to a workman in receipt of a permanent partial disability pension who becomes entitled to temporary total compensation during a period of further treatment in respect of the original injury, and permit a workman to receive compensation for an injury sustained in work which he is directed by his employer to do but which is outside the scope of his ordinary employment.

British Columbia.-A number of changes were made in the Labour Relations Act. A trade union is now prohibited from making contributions to a political party from union funds, and must make a statutory declaration that it is complying with this provision before an employer may make deductions from wages on behalf of the union under the check-off provisions of the Act. Unions are also required to make copies of an audited financial statement available to their members annually. The provisions permitting the

Minister of Labour to ask a judge of the Supreme Court to decide the legality of a strike, and empowering the judge to nullify a collective agreement, or cancel a union's certification or check-off rights if he found a strike illegal were removed. Other amendments state that the Labour Relations Board may not certify a union that discriminates, contrary to the Fair Employment Practices Act, on grounds of race, religion, colour, ancestry or place of origin; may authorize the Minister to take a settlement vote; and may provide an alternative method of enforcing the Board's orders in unfair labour practice cases.

The Annual Holidays Act was amended to make it clear that, for purposes of calculating vacation pay, "wages" include the vacation pay received in the year.

An amendment to the Health Act authorized the making of regulations providing for the control of radiation sources and radiation hazards.

Regulation of Wages and Hours of Labour under Industrial Standards Legislation and the Quebec Collective Agreement Act.-The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario and Saskatchewan and the Alberta Labour Act provide that wages and hours agreed upon at a conference of representatives of employers and employees, called by the Minister of Labour or his representative, may be made legally binding by Order in Council on the industry in the area concerned. The Nova Scotia Act applies only to construction work at Halifax, Dartmouth and Sydney.

In Nova Scotia, 12 schedules of hours and wages for individual building trades were in force during the year ended Mar. 31, 1961.

In New Brunswick, four schedules for individual building trades were in force during the year ended Mar. 31, 1961.

In Quebec, under the Collective Agreement Act, hours and wages and also apprenticeship, vacations with pay and family allowances provisions, established by a collective agreement voluntarily entered into by employers and unions or groups of employees, may be made legally binding by Order in Council on all employers and employees in the industry in the district covered by the agreement, if the parties are sufficiently representative of the industry. At Mar. 31, 1961, 102 agreements covering 225,529 workers and 32,119 employers had been generalized to apply either throughout the province or to a certain district. The agreements in force throughout the province apply to the following industries: building materials, the manufacture of women's coats and suits, dresses, millinery, women's handbags, men's and boys' clothing, men's and boys' hats and caps, men's and boys' shirts, fine gloves and work gloves, shoes, furniture, paint, corrugated and uncorrugated paper boxes, the tanning industry and the casket manufacturing industry. Other agreements concern industries in particular cities or parts of the province, including all building trades and printing trades in large urban centres and in many rural districts.

In Ontario, there were 144 wages and hours schedules in force at Mar. 31, 1961. Of these, 68 applied to the building trades, four were for the retail gasoline service industry and 66 covered barbering. Throughout the province, schedules were in effect for five clothing industries and for the hard furniture industry.

In Manitoba, the Fair Wage Act provides similar machinery for fixing wages and hours in any business, trade or undertaking except agriculture. Orders in Council under this legislation have been passed fixing wages and hours in the barbering and hair-dressing trades. A schedule for the construction industry applies to private construction work in the larger centres of population as well as to public construction work throughout the province.

In Saskatchewan, 17 schedules were in effect at Mar. 31, 1961. The schedule for barbers covered the whole province; others applied to bakers and bakery salesmen, carpenters, electrical workers, painters, and beauty culture operators in one or more areas.

In Alberta, 30 schedules were in effect during 1961. These governed, in one or more areas, bakers and bakery salesmen, certain individual building trades, dairy employees, garage and service-station workers, radio service, laundry and dry-cleaning employees and barbers.

Regulation of Hours and Annual Holidays.-Five provinces-Ontario, Manitoba, Saskatchewan, Alberta and British Columbia-have statutes that either place absolute limits on working hours or require time and one-half the regular rate to be paid if work is continued after specified limits. There is, in addition, an Act of limited application in Quebec. In the provinces that have no special hours-of-work legislation, the only statutory regulation of hours, apart from that described above under the Industrial Standards Acts and the Quebec Collective Agreement Act, is that imposed by factories Acts, mines Acts and, in Newfoundland, legislation governing shops. In New Brunswick and Quebec the limits imposed by the factories Acts apply only to women and boys under 18 years of age.

In Ontario there is a maximum eight-hour day and 48-hour week with certain exceptions. In Alberta the maximum daily and weekly hours in all centres with a population of over 5,000 are eight and 44 ; in the remainder of the province they are eight and 48 . In British Columbia hours are limited to eight in a day and 44 in a week. In these three provinces the Acts apply to most workers except farm labourers and domestic servants. In Saskatchewan the Act requires time and one-half to be paid for work after eight hours daily and 44 hours weekly and applies to workers in all industries except agriculture and domestic service. A Manitoba Act covering most industrial workers in the province requires time and one-half to be paid for work done after eight hours in a day and after 48 hours in a week for men and 44 hours for women. In all provinces that have Acts regulating hours, longer hours may be worked in an emergency or by permission of the administrative authority.

Seven provinces-Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia-have legislation in effect providing for annual holidays with pay for workers in most industries, and New Brunswick has legislation requiring annual holidays in the mining and construction industries and for fish, fruit and vegetable packers. In Nova Scotia, New Brunswick, Quebec and Ontario, workers are entitled to a holiday with pay of one week after a year of service; in Manitoba, Saskatchewan, Alberta and British Columbia, a holiday of two weeks with pay must be granted after a year of employment. In Saskatchewan, a worker becomes eligible for a holiday of three weeks after five years of service with the same employer. A worker employed for less than a year is entitled, in Quebec, to a half-day for each month of employment and, in Saskatchewan, to one day for each month. Coal miners in Alberta are entitled to a one-day holiday with pay for every 20 days worked in a month but not more than two weeks in a year.

Farm workers are excluded from the holiday provisions in all provinces, and domestic servants in all but Manitoba and Saskatchewan. In addition, Quebec exempts public corporation employees, janitors and caretakers, and certain part-time workers; Ontario exempts professional workers, salesmen, and funeral directors and embalmers; Manitoba and Saskatchewan exempt ranch and market garden employees, and British Columbia exempts professional workers and horticultural workers.

Minimum Wage Regulations.-In Nova Scotia the minimum wage law applies only to women. In Ontario, although the Act applies to both sexes, minimum wage orders apply only to women. The New Brunswick Act has been applied mostly to women workers; the only male order in effect is one applying to the canning industry. Under the Prince Edward Island legislation, orders have been made recently for women restaurant workers in Charlottetown and Summerside; no rates have been set for male workers. With these exceptions, minimum wage laws and orders apply to both sexes and, except in Newfoundland and in a few orders in British Columbia, set the same rates for male and female workers.

Table 1 shows the minimum rates in effect in December 1961 for several classes of establishment in the principal cities. In Newfoundland, New Brunswick, Saskatchewan and British Columbia the rates set are for the entire province. Elsewhere, excluding Prince Edward Island, rates vary according to zone.

## Section 2.-The Labour Force*

A current and periodic analysis of the state of employment in Canada was organized in 1945 to provide up-to-date and reliable information concerning the Canadian labour force. A labour force survey, on a sample basis, was conducted in November 1945 and quarterly surveys were carried out thereafter until November 1952, when the survey was placed on a monthly basis. A multi-stage area sample was used involving the selection of progressively smaller sample areas and ultimately of households. Random methods of choice were used at every stage of selection so that all members of the population had an equal chance of inclusion. The present sample covers more than 36,000 households in about 170 different areas of Canada. The estimates of the labour force are restricted to the civilian labour force. In addition to members of the Armed Forces, inmates of institutions and Indians living on reservations are excluded.

The labour force surveys provide a classification of persons 14 years of age or over on the basis of their activity during the week preceding the beginning of interviewing for the survey. The main divisions of the population are defined as follows:-

Labour Force.-The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age or over who, during the survey week, were employed or unemployed.

Employed.-The employed include all persons who, during the survey week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job but were not at work because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the survey week and who also looked for work are included in the unemployed as persons without work and seeking work.

[^216]Unemployed.-The unemployed include all persons who, through the survey week: (a) were without work and seeking work, i.e., did no work during the survey week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force.-Those not in the labour force include all civilians 14 years of age or over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those going to school, keeping house, too old or otherwise unable to work, and voluntarily idle or retired. Housewives, students and others who worked part time are classified as employed. If they looked for work they are classified as unemployed.

The estimates derived from the labour force surveys are subject to sampling error. In general, the percentage of error tends to decrease as the size of the estimate increases. The chances are about 19 out of 20 that the difference between the estimate and the figure which would have been obtained from a complete count is less than shown below. The sampling variabilities indicated are averages, since sampling error differs from characteristic to characteristic; in particular, for the unemployed the sampling variability is about 40 p.c. higher than the general average.

|  | Size of Estimate | Sampling Vari |
| :---: | :---: | :---: |
| 10,000.. |  | 3,500 |
| 50,000 . |  | 8,000 |
| 100,000.. |  | 11,000 |
| 500,000. |  | 24,000 |
| 1,000,000.. |  | 33,000 |
| $5,000,000$. |  | 58,000 |
| 6,000,000. |  | 60,000 |

## 2.-Estimates of the Civilian Labour Force and its Main Components, Annual Averages, 1946-61

Note.-Annual averages for 1946-52, inclusive, are based on estimates from quarterly surveys and those for $1953-61$ on monthly estimates. Figures do not include inmates of institutions and Indians on reservations. Newfoundland is included from 1950 only.

| Year | Civilian Population (14 years of age or over) | Civilian Labour Force (14 years of age or over) |  |  |  |  |  |  | Persons not in the Labour Force of age or over) |

| 1961. | 12,010 | 4,798 | 577 | 5,375 | 674 | 6,049 | 469 | 6,518 | 5,492 |

Characteristics of the Civilian Labour Force, 1946-61.-During the year 1961, the civilian non-institutional population 14 years of age or over averaged $12,010,000$, a growth of 36.8 p.c. since 1946. The labour force increased 35.0 p.c. from 1946 to an estimated total of $6,518,000$ in 1961. This somewhat slower growth of the labour force is reflected in the labour force participation rate; in 1961, the proportion of the population 14 years of age or over in the labour force was 54.3 p.c. compared with 55.0 p.c. in 1946. The chief factors contributing to the decrease in the labour force participation rate were a higher average school-leaving age for children, a higher proportion of persons 65 years or over in the population, and a lower average retirement age. The net effect of these factors was reduced by the higher proportion of women having jobs outside the home.

There were $6,049,000$ persons employed in 1961, an increase of 29.6 p.c. since 1946. Employment in agriculture, which averaged $1,186,000$ in 1946, declined by 43.2 p.c. to 674,000 in 1961. At the same time, employment in non-agricultural industries increased 54.5 p.c. from $3,480,000$ in 1946 to $5,375,000$ in 1961 ; non-agricultural paid workers increased 60.5 p.c. from 1946 to 1961 . The level of unemployment fluctuated greatly during the years since 1946; in that year, the unemployment rate averaged 3.4 p.c. of the labour force compared with 7.2 p.c. in 1961.

In 1961, the number of persons outside the labour force averaged 5,492,000, an increase of 39.0 p.c. over the 1946 figure of $3,950,000$. This increase, relatively greater than that of the total population 14 years of age or over, was affected by the same factors that contributed to the decrease in labour force participation over the same period. Participation by males 14 years of age or over in the labour force declined from 85.2 p.c. in 1946 to 80.0 p.c. in 1961 . On the other hand, the proportion of females of working years in the labour force went up from 24.7 p.c. in 1946 to 28.8 p.c. in 1961. Married women constituted 48.0 p.c. of all employed women in 1961 compared with 27.2 p.c. in 1946.

As a proportion of the population 14 years of age or over, men and women both showed large decreases in agricultural employment and substantial increases in nonagricultural employment, in unemployment, and in students attending school. The proportion of women keeping house in their own homes was 63.2 p.c. in 1946, rose to 66.7 p.c. in 1953 and then declined to 59.8 p.c. in 1961.

The distribution of the employed by industry group has changed considerably since 1946. As a percentage of the total, employment in service increased from 16.8 p.c. in 1946 to 25.5 p.c. in 1961, in trade from 12.3 p.c. to 16.3 p.c., and in construction from 4.8 p.c. to 6.7 p.c. In agriculture, employment dropped from 25.4 p.c. of the total employed in 1946 to only 11.1 p.c. in 1961. A similar pattern of change was evident in the industrial distribution of employed men. For women, the most notable changes occurred in service, where the proportion of total employed women increased from 33.4 p.c. in 1946 to 47.2 p.c. in 1961, in agriculture where the proportion dropped from 14.8 p.c. to 3.4 p.c. over the 15 years, and in manufacturing which accounted for 23.7 p.c. of total female employment in 1946 compared with 18.7 p.c. in 1961.
3.-Percentage Distribution of the Population 14 Years of Age or Over in the Labour Force and Non-labour Force Categories, by Sex, 1946-61
Nots.-Percentages are annual averages; those for 1946-52, inclusive, are based on estimates from quarterly surveys and those for $1953-61$ on monthly estimates. Newfoundland included from 1950 only.

| Year | Population (14 years of age or over) | Percentage Distribution of the Population 14 Years of Age or Over |  |  |  |  |  |  |  |

## 4.-Percentage Distribution of the Employed by Industrial Group, 1946-61

Nors.-Percentages are annual averages; those for 1946-52, inclusive, are based on estimates from quarterly surveys and those for 1953-61 on monthly estimates.

| Year | Total Employed | Percentage Distribution |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Agriculture | Other Primary Industries | Manufacturing | Construction | Transportation and Other Utilities | Trade | $\begin{array}{\|c} \text { Finance, } \\ \text { Insurance } \\ \text { and } \\ \text { Real } \\ \text { Estate } \end{array}$ | Service |
|  | '000 |  |  |  |  |  |  |  |  |
| 1946. | 4,666 | 25.4 | 4.0 | 26.0 | 4.8 | 8.1 | 12.3 | 2.6 | 16.8 |
| 1947. | 4,832 | 23.2 | 3.8 | 26.2 | 5.2 | 8.5 | 13.2 | 2.7 | 17.2 |
| 1948. | 4,875 | 22.5 | 3.9 | 26.0 | 5.9 | 8.4 | 13.3 | 2.9 | 17.1 |
| 1949. | 4,913 | 21.9 | 3.6 | 26.5 | 6.5 | 8.3 | 13.2 | 2.9 | 17.1 |
| 1950. | 4,976 | 20.5 | 3.9 | 26.4 | 6.7 | 8.5 | 12.9 | 2.9 | 18.2 |
| 1951. | 5,097 | 18.4 | 4.4 | 26.5 | 6.8 | 8.8 | 14.1 | 3.0 | 18.0 |
| 1952. | 5,159 | 17.2 | 4.2 | 25.8 | 6.6 | 9.3 | 15.2 | 3.1 | 18.6 |
| 1953. | 5,235 | 16.4 | 3.8 | 26.4 | 6.6 | 9.2 | 15.6 | 3.2 | 18.8 |
| 1954. | 5,243 | 16.8 | 4.1 | 25.3 | 6.4 | 8.7 | 15.8 | 3.2 | 19.7 |
| 1955. | 5,364 | 15.3 | 4.5 | 25.6 | 6.9 | 8.7 | 15.7 | 3.3 | 20.0 |
| 1956. | 5,585 | 13.9 | 4.6 | 25.7 | 7.4 | 8.9 | 15.8 | 3.5 | 20.2 |
| 1957. | 5,725 | 13.0 | 4.3 | 26.1 | 7.6 | 8.9 | 15.7 | 3.6 | 20.8 |
| 1958. | 5,695 | 12.5 | 3.7 | 25.6 | 7.5 | 8.9 | 16.0 | 3.7 | 22.1 |
| 1959. | 5,856 | 11.8 | 3.4 | 25.5 | 7.5 | 8.9 | 16.2 | 3.7 | 23.0 |
| 1960. | 5,955 $\mathbf{6 , 0 4 9}$ | 11.3 11.1 | 3.5 3.0 | 24.7 25.0 | 7.0 8.7 | 8.6 8.4 | 16.5 16.3 | 3.8 4.0 | 24.6 25.5 |
| 1961. | 6,049 | 11.1 | 3.0 | 25.0 | 6.7 | 8.4 | 16.3 | 4.0 | 25.5 |

Employment was substantially higher in 1961 than in 1946 in all regions. British Columbia experienced the largest increase of 37.4 p.c. followed by Ontario with 36.7 p.c., Quebec with 28.1 p.c., the Prairie region with 14.4 p.c. and the Atlantic region (excl. Newfoundland) with 9.2 p.c. In all regions, however, the increase in employment was not as great as the growth of the labour force and, as a consequence, there was a rise in unemployment. Unemployment in Canada averaged 469,000 in 1961, 7.2 p.c. of the labour force. The unemployed were distributed regionally as follows: Quebec 35.9 p.c., Ontario 28.2 p.c., Atlantic 14.1 p.c., Prairie 11.1 p.c. and British Columbia 10.7 p.c. In 1946 the unemployed were distributed among the regions in just about the same proportions.

Similarly, unemployment rates were higher in 1961 than in 1946. In the later year, the unemployed as a percentage of the labour force in each of the five regions was as follows: Atlantic 11.1 p.c., Quebec 9.3 p.c., Ontario 5.5 p.c., Prairie 4.6 p.c. and British Columbia 8.5 p.c. From 1946 on, unemployment rates for the Atlantic region and Quebec were consistently higher than the national average and for Ontario and the Prairie region they were consistently lower. The British Columbia rate was above the national average in every year except 1955 and 1956.

5.-Estimates of Employment and Unemployment, by Region, 1946-61

Nore.-Figures are annual averages; those for 1946-52, inclusive, are based on estimates from quarterly surveys and those for 1953-61 on monthly estimates.

${ }^{1}$ Newfoundland included from 1950.

## Section 3.-Employment, Earnings and Hours*

Monthly records of employment statistics in Canada date from 1921. At that time a survey of employment in business establishments was instituted to provide employment index numbers which would serve as current economic indicators. In 1941 and 1944 this survey was extended to provide information on payrolls, per capita wages and salaries and hours of work. In this period also, separate records for men and women employees were established.

The survey covers the larger establishments ( 15 persons or more) in the major industrial divisions of forestry, mining, manufacturing, construction, transportation, storage and communication, public utility operation, trade, finance, insurance and real estate. It also covers certain branches of the service industry, including hotels and restaurants, laundries and dry-cleaning plants, recreational and business services. It excludes agriculture, public administration and community services such as health and education. The coverage corresponds closely, therefore, to what might be termed the business sector of the economy. Since the survey does not cover small firms and excludes several industries, these employment records are published in the form of index numbers. The present reference period is the year 1949.

The monthly employment statistics relate to numbers of employees drawing pay in the last pay period of the month. Statistics for casual workers employed for less than one day in the pay period are omitted by definition, as are owners of the business, even though they receive part of the return on their investment in the form of salary. The reported payrolls include payments for straight time and overtime work, and also shift premiums, regularly paid production, incentive and cost of living bonuses, and commissions. Straight time and overtime hours and hours credited to wage-earners absent on paid leave during the reported pay periods are required. Payrolls and hours relating to periods exceeding one week are reduced to weekly equivalents for accumulation with data from employers paying each week.

## Subsection 1.-Employment and Weekly Wages and Salaries

The composite employment index $(1949=100)$ rose almost without interruption from a postwar recession level of 46.9 in 1921 to a high of 62.8 in the boom year of 1929 , but the severe depression that followed reduced the annual figure to a low of 44.0 in 1933. Slow recovery in the next six years left the 1939 index slightly lower than in 1929. However, after the outbreak of the Second World War in the autumn of 1939, employment soon started to increase under the stimulus of production for military requirements. The wartime peak of 93.0 was reached in 1943 when the index was more than 50 p.c. above its 1939 level. A declining tendency that became evident in 1944 persisted after the termination of the War in 1945 but the impact of cutbacks in wartime production was cushioned by public demand for goods and services that had been largely unavailable during the War, so that the over-all loss recorded in 1946 was small. The index showed successive gains

[^218]from 1947 until the first postwar peak of 113.1 was reached in 1953. A slight decline in 1954 was followed by further advances that brought the index to 122.6 in 1957. Since that year, the industrial composite index has not varied greatly, fluctuating around levels some 3 to 4 p.c. below the 1957 peak. Other measures of total employment, including community services and government, have recorded steady gains since 1957.

In 1961 there was general recovery in employment dating from early spring. Among goods-producing industries, recovery was strongest in durable goods manufacturing and construction, although year-end employment levels were still well below the earlier cyclical peak of 1959. Substantial spring recovery in forestry levelled off and, apart from seasonal movements, employment in this industry showed very little change in the latter half of the year. Early recovery in mining was not maintained and there was no significant net change over the year. Among service-producing industries, employment in finance and the various service component industries continued to rise. Trade showed small gains, while transportation, storage and communication continued a gradual long-term decline.

## 6.-Annual Average Index Numbers of Employment by Industrial Division, Significant Years 1921-61, and Monthly Indexes 1961

Note.-These indexes are calculated as at the last pay period of each month, on the base $1949=100$.

${ }^{\text { }}$ Includes New Westminster from 1956.
In the years for which current payroll statistics have been obtained from industrial establishments, average weekly wages and salaries have shown a very large increase, rising from $\$ 23.44$ in 1939 to $\$ 78.11$ in 1961. Less than 16 p.c. of the advance was recorded during the years of the Second World War ending in 1945. With the wartime regulation of pay rates (as of prices) there was a great deal of labour dilution in this period through employment of unskilled and part-time workers, including many inexperienced women. Gains then resulted largely from substantial amounts of overtime work and a concentration of employment in war industries, in which earnings generally exceeded those in industries having low priority in labour procurement. Following relaxation of wage restrictions in December 1949 and the progressive lifting of price controls, the upward movement in per capita earnings gained momentum and average annual increases from 1947 to 1961 were more than twice as much as those between 1939 and 1945. Variations over the years in the occupational and industry mix within the heterogeneous group of industries represented in the per capita weekly wage and salary figures also affected per capita earnings figures. On the whole, these factors have had a buoyant effect. More recently, year-to-year percentage increases have tended to level, those for 1960 and 1961 approximating 3 p.c.

## 10.-Annual Index Numbers of Employment and Payrolls, with Average Weekly Wages and Salaries, by Industry, Province and Urban Area, 1959-61

${ }^{1}$ Mainly hotels, restaurants, laundries, dry-cleaning establishments and business and recreational services.

## Subsection 2.-Hours and Earnings of Wage-Earners

Since the end of 1944, the monthly survey of employment and payrolls has also obtained, for wage-earners, statistics of hours of work and paid absence with corresponding totals of gross wages paid to the wage-earners for whom records of hours are maintained. These are mainly hourly rated or production workers; the necessary information on hours frequently is not kept by employers for ancillary workers nor, in many industries and establishments, for any wage-earners. Salaried employees are excluded by definition from this series. As a result of these exclusions, data are available for fewer industries and workers than are covered in the employment and average weekly wage and salary statistics.

The questionnaire used in the monthly survey calls for entry of the gross wage payments in the reported pay periods, before deductions for income tax, unemployment insurance, etc. They include such items as payments for premium overtime work, shift differentials, production, incentive and cost-of-living bonuses, as well as straight-time wages, including the earnings of wage-earners employed for only part of the pay periods covered by the monthly surveys.

In the 17 years of the record, average hours have fallen in nearly all industries and areas for which data are available, reflecting wide-spread reductions in the standard work week and in the overtime work that was prevalent in many industries during the Second World War. The effect of the latter, however, was partly offset by the employment of a considerable amount of part-time labour. The smallest decline in hours since 1945 (less than 1 p.c.) has taken place in building and structures. This group had been severely affected by wartime shortages of labour and materials and during the war years curtailed operations generally and reduced working hours. The 17-year decrease in manufacturing hours of work approximated 8 p.c.

During the postwar years there have been widely distributed and substantial advances in average hourly and weekly wages. Although these have been attributable in the main to wage-rate revisions, other factors have contributed. Important among these, especially in the earlier part of the period, were progressive increases in cost-of-living allowances, now largely though not entirely absorbed in wage rates. Technological changes, frequently involving the employment of more highly skilled workers at the expense of lower-paid jobs, have also tended to raise wage levels, as has relatively greater expansion over the years in the industries in which pay rates usually exceed the general level. A comparatively high degree of uniformity has been shown in the percentage increases recorded since 1945 by components of the broader groups, also noted in the average weekly wage and salary figures.

## Subsection 3.-Hours and Earnings in Manufacturing Industries*

Information obtained in an annual survey of earnings and hours in manufacturing relating to the last week of October supplements the monthly data dealt with in preceding Subsections. Separate figures of hours and earnings of men and women wage-earners and salaried employees are obtained in each survey and additional material is collected periodically. Distributions of wage-earners in a given range of hours were compiled each year from 1946 to 1949 and every third year thereafter to 1958 for which statistics were given in the 1960 Year Book, p. 777. Percentage distributions of wage-earners and salaried employees by amounts earned in the survey week were obtained triennially from 1950 to

[^220]1959. Hours and earnings of clerical and related workers, given in Table 16 for 1960, were segregated from those for managerial, professional, supervisory and other salaried employees in 1951, 1954, 1957, 1959 and 1960.

The annual survey, like the monthly survey, is limited to establishments usually employing 15 or more persons and covers approximately 90 p.c. of all employees reported to the annual Census of Manufactures. Establishments are asked to report for all casual, part-time and full-time employees on their staffs in the survey week, excluding proprietors, firm members, pensioners, homeworkers, employees absent without pay throughout the week, and staffs in manufacturers' separately organized sales offices. Gross earnings for the week are required, including regularly paid bonuses, overtime pay and amounts paid for absences in the survey week. The reported hours comprise part-time, full-time and overtime hours worked and hours of paid absence. The general averages obtained are usually very similar to those derived from the corresponding monthly survey.

The annual survey reflects a continued upward movement in wages and salaries throughout the postwar period. Table 14 provides year-to-year comparisons of average earnings from 1949. In the 12 years from 1949, men's weekly wages rose by 69.7 p.c. and their salaries by 78.1 p.c. In the same period, women's weekly wages advanced by 61.7 p.c. and their salaries by 77.7 p.c. Because the general trend in working hours has been downward as a result of reductions in the standard work week and other factors, the increases in average hourly earnings of wage-earners have been proportionately greater than in weekly wages, the gains in 1960 over 1949 amounting to 80.4 p.c. for men and 67.6 p.c. for women.

Variations in the magnitude of the changes shown in the general and group averages and in the year-to-year comparisons are obviously related to varying economic and other conditions affecting the component industries in the survey periods, as well as to the industrial and, in some cases, the area distributions of the reported employees. Tables 15 and 16 show the 1960 averages of hours and earnings for wage-earners and salaried employees, respectively, for the provinces, the six largest metropolitan areas, the major industry groups and several important industries. It will be noted that women earn consistently lower average wages or salaries than men in the same area or industry unit. This results not only from pay differentials and occupational differences, but also from such factors as a frequently shorter work week for women, a greater incidence of part-time work and absenteeism among them, their higher proportions of younger and less experienced workers, and their industrial distributions.

Salaried employees comprise increasing proportions of manufacturing staffs as a whole. Table 17 shows that the number of such workers has risen from 18.5 p.c. of the total reported in 1950 to 24.4 p.c. in 1960. This trend is associated with developments in planning, administration and record-keeping which have increased requirements for professional and clerical personnel, and with changes in manufacturing processes which have frequently reduced employment for production workers per unit produced. Changes in industrial distributions of the employees reported also contribute to variations in the ratio of salaried personnel to wage-earners, which in any one period may be further influenced by seasonal, market and other conditions affecting levels of production. These usually cause sharper fluctuations in numbers of wage-earners than of salaried employees.

## 14.-Average Earnings of Male and Female Workers and Increases over the Preceding Year, Weeks Ended Oct. 31, 1949-60

## Section 4.-Wage Rates, Hours of Labour and Other Working Conditions

Statistics on occupational wage rates by industry and region or city and on standard weekly hours of labour are compiled by the federal Department of Labour and published in the annual report Wage Rates, Salaries and Hours of Labour. The statistics published are based on an annual survey covering some 23,000 establishments in most industries and apply to the last normal pay period preceding Oct 1.

Average wage rates of time workers and average straight-time earnings of piece workers and other incentive workers in a given occupation are shown separately but are combined in the calculation of index numbers. Predominant ranges of rates for each occupation used are also given. Overtime pay is excluded.

The industry index numbers measure changes in wage rates for non-office employees below the rank of foreman. They do not, however, provide a basis for comparing the level of wages in one industry with that in another. More detailed information on concepts and methods of developing these statistics is given in the annual report.
18.-Index Numbers of Average Wage Rates for Certain Main Industrial Groups, 1951-60 (1949=100)
Norz.-Indexes back to 1901 may be obtained from the Department of Labour publication Wage Rates, Salaries and Hours of Labour 1980.

${ }^{1}$ Exclusive of Newfoundland.
Table 22 gives summary data on working conditions of plant and office employees in manufacturing industries for the years 1957 to 1961. The percentages in this table denote the proportions which employees-plant or office-of establishments reporting specific items bear to the total number of all such employees in all establishments replying to the survey; they are not necessarily the proportions of employees actually covered by the various items.

It will be noted that for the years 1957 and 1958 the number of establishments shown as having plant employees is identical with the number having office employees, while for 1959 and subsequent years these numbers differ. The explanation is that in 1959 and subsequent years separate counts of establishments having plant workers and establishments having office employees were made, while in previous years counts of establishments were obtained without distinguishing between those with both plant and office employees and those with either one or the other only.

## 22.-Summary of Selected Working Conditions of Plant and Office Employees in Manufacturing Industries, 1957-61

## 22.-Summary of Selected Working Conditions of Plant and Office Employees in Manufacturing Industries, 1957-61-concluded

[^223]Wages of Farm Labour.-The information on farm wages is provided by volunteer farm correspondents located in all provinces except Newfoundland. The rates presented in Table 23 are average wages paid to all farm help regardless of age and skill. Because the rates reported may cover a wide range of skills, of types of work and of ages of hired workers, the value of the resulting data is considered to be an indicator of trends rather than a measure of absolute wage levels. No attempt has been made to have the wage rates reflect such perquisites as separate housing accommodation, fuel, electricity and food which, under some conditions of hiring, are supplied by employers to their hired farm help.

## 23.-Average Daily and Monthly Wages of Male Farm Help as at Jan. 15, May 15 and Aug. 15, 1957-61

Norg.-Figures from 1940 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

## Section 5.-Unemployment Insurance*

During the depression of the 1930's the need for a nation-wide scheme of unemployment insurance became recognized. In 1935 the Employment and Social Insurance Act was passed by the Federal Parliament but was subsequently declared invalid by the Privy Council. Later, by consent of the provinces, an amendment to the British North America Act was obtained empowering the Federal Parliament to legislate on unemployment insurance and in 1940 the Unemployment Insurance Act was passed, making provision for a compulsory contributory unemployment insurance scheme and also for the establishment of a national employment service to operate in conjunction with and ancillary to the unemployment insurance operations carried on under the Act. The Act, which came into effect on July 1, 1941, was later amended on several occasions and was replaced by a new Unemployment Insurance Act passed on July 1, 1955 and effective Oct. 2, 1955.

Legislation provides for compulsory coverage of some four-fifths of all non-agricultural employees under an insurance program administered by the Federal Government, and requires employers to join with their insurable employees and the Government in building up a fund. This fund is held in trust by the Unemployment Insurance Commission for the payment of benefits to unemployed insured persons. The Act is administered by a Commission of three persons appointed by the Governor in Council, of whom one is the Chief Commissioner; one Commissioner, other than the Chief Commissioner, is appointed after consultation with employer organizations and the other after consultation with employee organizations.

The Unemployment Insurance Act applies to all persons employed under a contract of service, except the following: employment in specified industries or occupations such as agriculture, horticulture and forestry (effective Jan. 1, 1956, coverage was also extended to certain employments in these three industries); the Canadian Armed Forces; the permanent public service of the Federal Government; provincial government employees except where insured with the concurrence of the government of the province; certified permanent employees of municipal or public authorities; private domestic service; privateduty nursing; teaching; certain director-officers of corporations; workers on other than an hourly, daily or piece rate earning more than $\$ 5,460$ a year effective Sept. 27, 1959, unless they elect to continue as insured persons; employees in a charitable institution or in a hospital not carried on for purpose of gain except where the institution or hospital consents to insure certain groups or classes of persons with the concurrence of the Commission. All persons paid by the hour, day, or at a piece rate (including a milage rate) are insured regardless of amount of earnings, together with all employees who receive $\$ 5,460$ or less at weekly, monthly, yearly or commission rates.

Under the Canadian Unemployment Insurance Act, benefit payments are made out of a Fund derived from moneys provided by Parliament and from contributions by insured employed persons and their employers. The amount of the employee contribution is determined by his weekly earnings and, since 1950, an equal contribution is required from the employer. Federal Government participation amounts to one-fifth of the aggregate employer-employee contribution. In addition, administrative costs are assumed by the Federal Government. Contributions became payable on July 1, 1941 and by Mar. 31, 1961 a total of $\$ 3,168,000,000$ had been provided from these three sources; accruals from investment over the period brought the net revenue to $\$ 3,436,000,000$. Investment transactions, as authorized by an Investment Committee, are carried out by the Bank of Canada.

Benefits became payable on Jan. 27, 1942 and by Mar. 31, 1961 a total of $\$ 3,251,000,000$ had been paid, the balance in the fund at that date being $\$ 184,700,000$.

[^224]Statistics of the Operation of the Act.-In order to assess the impact of changing economic conditions on the insurance scheme, provision is made for the collection of current operational data, such as claims filed and processed in a month, and weeks and amount of benefit paid. These data, as published monthly in the Statistical Report on the Operation of the Unemployment Insurance Act (Catalogue No. 73-001), are used for administrative purposes as well as public information regarding financial and other aspects of the scheme. The number of initial and renewal claims filed during a month provides an approximation of separations from insured employment during the period while the count of claimants reporting at the month-end is a valuable indicator of the extent to which claimants maintain contact with local offices of the Commission. During the year 1961 there were $2,460,000$ claims filed at local offices of the Commission. On the average, slightly over 487,000 persons were on claim at the end of each month and total payments amounted to $\$ 493,971,000$. These figures compare with $2,700,000$ claims, an average of 518,000 persons on claim at the end of each month, and benefit payments amounting to $\$ 481,836,000$ during 1960 . The average weekly payment in 1961 , at $\$ 23.82$, was slightly higher than the 1960 figure of $\$ 22.31$.

${ }^{1}$ Average of month-end data.
In addition to the monthly data published on the operation of the Unemployment Insurance Act, annual tabulations are compiled regarding persons employed in insurable employment and benefit periods established and terminated. These data are published in the annual report on Benefit Periods Established and Terminated under the Unemployment Insurance Act (Catalogue No. 73-201). The data on the insured population in Table 25 were obtained from returns from the renewal of insurance books and contribution cards at June 1, 1959 and June 1, 1960. Included are persons contributing in insurable employment on those dates and persons on claim. The number insured at June 1, 1960 increased by 36,680 from the previous book renewal to $4,109,580$. Unemployment insurance was extended to fishermen on Apr. 1, 1957. This coverage change is interesting since the majority of commercial fishermen in Canada are not wage-earners but sharesmen or lone workers. It was decided to treat as the "employer" the person who first acquires the catch from the person who does the actual fishing. In some instances this is his actual employer, in others it is the buyer of the catch, and in still others it is the person or organization that markets the catch for the fisherman. Fishermen were not considered for benefit until the 1957-58 seasonal benefit period.

## 25.-Persons Insured under the Unemployment Insurance Act, by Industrial Group and Sex, 1959 and 1960

Notz.-Based on a 10 -p.c. sample of contributors and claimants at June 1.

The following statement shows the current weekly rates of contribution and benefit that became effective Sept. 27, 1959, and those in effect from Oct. 2, 1955 until that date. The weekly contribution is based on actual earnings in the week irrespective of the number of days in which the earnings are obtained; the employer pays a like amount. The benefit rates are calculated on the average weekly contributions for the last 30 weeks in the 104 weeks preceding claim. A claimant must have, to qualify for regular benefit, at least 30 weekly contributions in the last 104 weeks prior to claim; eight weekly contributions since the start of the last preceding regular benefit period or in the last year prior to claim, whichever is the shorter period; and 24 weekly contributions since the start of the last preceding benefit period, or in the year prior to the claim, whichever is the longer period.

${ }^{1}$ A half stamp, except for fishermen.
The duration of regular benefit is related to the contribution history-one week's benefit for every two weeks' contributions in the past 104 weeks with a maximum of 52 weeks (36 weeks prior to Sept. 27, 1959). Disqualifications for benefit include: loss of work owing to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or any institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be imposed if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.

Seasonal benefit is payable in the period Dec. 1 to mid-May to certain claimants whose benefits have been exhausted or who have insufficient contributions to qualify for regular benefit.

Table 26 distributes by province persons establishing regular benefit periods, regular benefit periods terminated, average weeks paid and average dollar benefit paid on these terminations. A claimant establishes a regular benefit period when he submits his claim in the prescribed manner and proves he has fulfilled the minimum contribution requirements. The duration of benefit authorized, the weekly rate authorized and total entitlement are then calculated and the claimant's benefit may be drawn upon during successive intervals of unemployment. His benefit period terminates either when he has exhausted the amount authorized or when 12 months have elapsed since he established, whichever comes first. The number establishing benefit periods in 1960 increased to $1,065,750$ from 985,148 in 1959. The duration of paid benefit in 1960 averaged 13.94 weeks, compared with 13.54 weeks in 1959. Ordinary benefit paid averaged $\$ 315.55$ on terminations in 1960 , up from $\$ 298.90$ on terminations in 1959.

## 26.-Persons Establishing Regular Benefit Periods, Benefit Periods Terminated, and Duration and Amount of Benefit Paid, by Province, 1959 and 1960

Nors.-Based on a 25 -p.c. sample in 1959 and a 20 -p.c. sample in 1960.

Employment Service.-The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act. The public employment offices, which had functioned under a joint federal-provincial arrangement for more than two decades, were taken over by the Commission on Aug. 1, 1941, and additional offices were established in all provinces except Quebec. The Commission established its own offices in Quebec and the provincial government thereupon reduced the number of its offices.

## 29.-Applications for Employment, Positions Offered and Placements Effected by Employment Offices 1951-60, and by Province, 1959 and 1960

Nors.-Figures by province from 1920-57 are given in the corresponding table of previous Year Books beginning with the 1926 edition. Totals for 1920-37 are given in the 1938 edition, p. 766; for 1938 in the 1939 edition, p. 802; for 1939-48 in the 1951 edition, p. 686; and for 1949 and 1950 in the 1960 edition, p. 790.

## Section 6.-Technical and Vocational Training

The federal Department of Labour, under the Technical and Vocational Training Assistance Act (SC 1960-61, c. 6), co-operates with provincial government departments, employers' organizations, organized labour and Federal Government departments and agencies, including Crown companies and the Armed Forces, in the promotion, organization and development of all types of publicly financed training programs deemed necessary to fit persons for employment or to upgrade workers in their present positions.

The federal-provincial program under which all classes and training projects are operated is known as Canadian Vocational Training. In conducting this program, the Minister of Labour receives advice and co-operation from the National Technical and Vocational Training Advisory Council which consists of representatives of provincial governments, employers, organized labour and other bodies concerned with vocational training in Canada. Problems regarding apprenticeship, including federal participation therein, are referred to the Apprenticeship Training Advisory Committee which reports to the Minister through the Council.

The established procedure is for the provinces to provide training facilities and to operate all of the training programs. The provinces are then reimbursed by the Federal Government at the rates specified in the agreements under which expenditures are undertaken.

There are two federal-provincial agreements governing the nature and extent of the sharable expenditures for different types of training: the Technical and Vocational Training Agreement and the Apprenticeship Training Agreement. The provisions of these agreements are outlined in the Education and Research Chapter at p. 296. More detailed information is given in the annual report of the Canadian Vocational Training Branch, published as a supplement to the annual report of the Department of Labour.

## Section 7.-Industrial Accidents and Workmen's Compensation

## Subsection 1.-Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the federal Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners and other government authorities, and from press reports.
30.-Fatal Industrial Accidents, by Industry, 1957-60

| Service. | 80 | 89 | 76 | 99 | 5.8 | 7.0 | 5.7 | 8.7 |
| Totals | 1,387 | 1,269 | 1,326 | 1,134 | 100.0 | 100.0 | 100.0 | 100.0 |

Causes of Industrial Fatalities.-During 1960, of the 1,134 fatal accidents to industrial workers, 293 were the result of the victims being struck by objects- 55 by falling trees or limbs, 35 by materials falling from stockpiles and loads, 33 by landslides or cave-ins, 29 by objects falling or flying in mines and quarries, 26 by automobiles or trucks and 20 by trains or other railway vehicles. Collisions, derailments, wrecks, etc., were responsible for 248 fatalities-automobiles and trucks were involved in 135, tractors and loadmobiles in 70 , aircraft in 25 and railways in 16 . Falls and slips were responsible for 247 industrial deaths, of which 230 were falls to different levels, including 102 deaths caused by falls into rivers, lakes, seas or harbours, 25 by falls from scaffolds or stagings and 20 from buildings, roofs or towers. The classification "caught in, on, or between objects, vehicles, etc." caused 92 fatalities, 21 of which were caused by machinery, 16 by
automobiles and trucks, 15 by tractors and loadmobiles and 12 by hoisting or conveying apparatus. Exposure to dust, poisonous gases and poisonous substances caused 86 fatalities and contact with electric current was responsible for 65 . Conflagrations, explosions and exposure to hot substances caused 60 deaths and 22 were the result of over-exertion, strain, etc.

## Subsection 2.-Workmen's Compensation*

In all provinces legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or for disablement caused by a specified industrial disease, except where the workman is disabled for fewer than a stated number of days. The Acts of all provinces provide for a compulsory system of collective liability on the part of employers. To ensure payment of compensation, each Act provides for an accident fund, administered by the province, to which employers are required to contribute at a rate determined by the Workmen's Compensation Board in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation as determined by the Board and pay a proportion of the expenses of administration. A federal Act provides for compensation for accidents to Federal Government employees according to the conditions laid down by the Act of the province in which the employee is usually employed. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the Merchant Seamen Compensation Act.

In all provinces, free medical aid is given to workmen during disability. Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus, and silicosis is compensated under certain conditions. Other diseases compensated vary according to the industries of the provinces.

Scope of the Workmen's Compensation Acts.-The Acts vary in scope but in general they cover construction, mining, manufacturing, lumbering, transportation and communications and the operation of public utilities. Undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta and British Columbia.

Benefits.-Each Act provides for a waiting period, i.e., a minimum period of time during which a workman must be disabled from earning full wages in order to qualify for compensation. In Manitoba, Saskatchewan and Alberta the waiting period is one day. Compensation is not payable when a workman is off work only for the day on which the accident occurs but if he is disabled for a longer time compensation begins from the day following the accident. The waiting period in British Columbia is three days, in Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick four days, and in Quebec and Ontario five days. Where a disability continues beyond the waiting period, compensation is payable from the date of the accident. The waiting period does not restrict the right of the workman to medical aid which, under all the Acts, is given from the date of the accident.

Burial expenses are paid to the amount of $\$ 400$ in Quebec, $\$ 300$ in Newfoundland, Prince Edward Island, New Brunswick and Ontario, \$250 in Nova Scotia, Saskatchewan, Alberta and British Columbia, and $\$ 200$ in Manitoba. In all provinces an additional sum is allowed for transporting the workman's body.

A widow or invalid widower or a foster mother with children under the age limit receives a monthly payment of $\$ 100$ in Saskatchewan, $\$ 90$ in British Columbia, $\$ 75$ in Newfoundland, Quebec, Ontario, Manitoba and Alberta, \$65 in Prince Edward Island, and $\$ 60$ in Nova Scotia and New Brunswick. In addition, a lump sum of $\$ 300$ is paid in

[^225]Quebec, Ontario, Manitoba and Saskatchewan, \$250 in British Columbia, \$200 in Newfoundland, Prince Edward Island and Alberta, \$150 in Nova Scotia, and \$100 in New Brunswick.

For each child in the care of a parent or foster mother receiving compensation a monthly payment of $\$ 40$ is made in Alberta, $\$ 35$ in Manitoba, Saskatchewan and British Columbia, $\$ 25$ in Newfoundland, Quebec and Ontario, $\$ 22.50$ in Nova Scotia, and $\$ 20$ in Prince Edward Island and New Brunswick. For each orphan child a monthly payment of $\$ 50$ is made in Saskatchewan, $\$ 45$ in Manitoba, $\$ 40$ in New Brunswick, Alberta and British Columbia, $\$ 35$ in Newfoundland, Quebec and Ontario, and $\$ 30$ in Prince Edward Island and Nova Scotia. In Alberta, a further amount, not exceeding $\$ 25$ a month, may be given at the discretion of the Board, and the maximum allowance payable to a family of orphans is $\$ 120$ in Prince Edward Island. In Saskatchewan, the Board may in its discretion make a lump sum payment, not exceeding $\$ 50$, to an orphan child.

Invalids excepted, payments to children are not continued beyond the age of 16 years in seven of the provinces but the Board has discretion to pay compensation to the age of 18 (19 in Saskatchewan) if it is considered desirable for a child to continue his education. In Quebec, the age limit is 18 years, and in New Brunswick and British Columbia compensation is paid to the age of 18 if a child is attending school regularly. In Newfoundland, Prince Edward Island and Alberta, payments are made to invalid children only for the length of time the Board considers that the workman would have contributed to their support. In the other provinces payments are continued until recovery.

All the Acts provide that where the only dependants are persons other than consort or children compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly amount to be paid to all such dependants is limited to $\$ 100$ in Ontario, $\$ 90$ in British Columbia, $\$ 85$ in Alberta, and $\$ 60$ in Prince Edward Island and Nova Scotia. In British Columbia, if a workman leaves dependent parents as well as a widow or orphans, the maximum payable to a parent or parents is $\$ 90$ a month. Manitoba provides for a maximum monthly pension of $\$ 75$ to a wholly dependent mother and for a maximum of $\$ 60$ for other dependants. Compensation to dependants, other than consort or children, is continued only for such time as the Board considers that the workman would have contributed to their support.

Except in Nova Scotia, Alberta and British Columbia, each Act places a maximum on the total amount of benefits payable to dependants if the workman dies. A maximum is placed on the amounts that may be paid to the widow and children and to orphan children in Prince Edward Island- $\$ 170$ to the former and $\$ 120$ to the latter. The maximum to all dependants is 75 p.c. of the workman's earnings in Newfoundland, New Brunswick, Quebec and Manitoba, and in Ontario and Saskatchewan the average earnings of the workman are the maximum amount payable.

Irrespective of the workman's earnings, however, compensation may not fall below certain minimum monthly amounts. The minimum payable to a consort and one child in Quebec is $\$ 100$ a month, to a consort and two children $\$ 125$, and to a consort and more than two children $\$ 150$; in Manitoba, the minimum is $\$ 110$ if there is a consort and one child and $\$ 145$ if there is more than one child; in Saskatchewan, the minimum is $\$ 135$ a month to a consort and one child and $\$ 170$ to a consort and two children plus $\$ 20$ a month for each additional child. In Newfoundland, a widow must receive at least $\$ 75$ a month with a further payment of $\$ 25$ a month for each child under 16 unless the total exceeds $\$ 150$. In Ontario, the minimum payable to a widow is $\$ 75$ a month with a further payment of $\$ 25$ for each child up to but not exceeding $\$ 150$ a month.

Compensation for total disablement in all provinces is a periodical payment for the duration of the disability equal to 75 p.c. of average earnings. Except in New Brunswick, the Acts fix minimum sums to be paid for a permanent total disability. The minimum is $\$ 15$ a week in Quebec, $\$ 20$ in Prince Edward Island, $\$ 25$ in Manitoba and British Columbia, $\$ 30$ in Saskatchewan, and $\$ 35$ a week in Alberta. In Newfoundland, the minimum
is $\$ 65$ a month and in Ontario it is $\$ 100$ a month. In Nova Scotia, the minimum payment is $\$ 110$ a month or, if the totally disabled workman has more than one child under 16, the amount which a widow with the same number of dependent children would receive. If average earnings are less than the minimum amount allowed, the amount of the earnings is paid in all provinces except Nova Scotia and Saskatchewan. For partial disablement, compensation is either 75 p.c. of the difference in earnings before and after the accident or an amount determined by the Board on the basis of impairment of earning capacity estimated from the nature of the injury. In the latter case the workman is entitled to the same fraction of 75 p.c. of earnings as his impairment is of his full earning capacity. In all provinces, if the impairment of earning capacity is 10 p.c. or less (5 p.c. or less in Alberta), a lump sum may be given.

The average earnings on which compensation is based are limited to $\$ 6,000$ a year in Saskatchewan, $\$ 5,000$ in Quebec, Ontario, Manitoba, Alberta and British Columbia, $\$ 4,000$ in Newfoundland, Prince Edward Island and New Brunswick, and $\$ 3,600$ in Nova Scotia. If the workman's earnings at the time of accident are not considered a proper basis for compensation, the Board may use as a basis the average earnings of another person in the same grade of work. Compensation paid to a workman under 21 years of age may be raised later if it appears that his earning power would have increased had the injury not occurred.

Table 31 gives the number of industrial accidents reported by each of the provinces and the amount of compensation paid by Workmen's Compensation Boards in the years 1959 and 1960.

## 31.-Industrial Accidents Reported and Compensation Paid by Workmen's Compensation Boards, 1959 and 1960

## Section 8.-Organized Labour in Canada

At the beginning of 1961 the membership of labour organizations in Canada was approximately $1,447,000$, a slight decline from the January 1960 total. Unions affiliated with the Canadian Labour Congress accounted for 74 p.c. of the organized workers, and approximately 7 p.c. of union members belonged to affiliates of another central body, the Confederation of National Trade Unions which until 1960 was known as the Canadian and Catholic Confederation of Labour. The remainder of union membership was represented either by organizations independent of a central labour congress or, to a lesser extent, by unions having no congress link in Canada but affiliated with the American Federation of Labor and Congress of Industrial Organizations.

Unions belonging to the Canadian Labour Congress had a total membership of $1,071,000$, and the Confederation of National Trade Unions had over 98,000 members at the beginning of 1961 .

More than two-thirds of the organized workers in Canada are represented by unions that operate in the United States as well. In January 1961, 89 of the 108 international unions active in Canada were affiliates of the Canadian Labour Congress, and 85 of these were also within the American Federation of Labor and Congress of Industrial Organizations. Eleven of the remaining 19 international unions had no congress link in Canada but were affiliated with the AFL-CIO. National and regional unions operating in Canada at the beginning of the year totalled 50, with 18 unions in this group holding CLC affiliation and 13 belonging to the CNTU.

International, national and regional unions had within their ranks close to $1,364,000$ workers in a total of 158 organizations ranging in size of their Canadian membership from under ten members to the 82,000 reported by the United Steelworkers of America. The United Brotherhood of Carpenters and Joiners of America, with 65,000 members, continued to rank second among unions in Canada, followed by the International Union, United Automobile, Aircraft and Agricultural Implement Workers of America with 56,000 members. Among national unions, the National Union of Public Employees, with 46,000 members, continued to be the largest for the third consecutive year, followed by the 33,000 -member Canadian Brotherhood of Railway, Transport and General Workers.

The grand total of $1,447,000$ members reported by labour organizations in 1961 was equal to approximately 32 p.c. of the estimated total number of non-agricultural paid workers in Canada.

## Section 9.-Strikes and Lockouts

Statistical information on strikes and lockouts in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. Tables 35 and 36 cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine mandays. The developments leading to work stoppages are often too complex to make it practicable to distinguish statistically between strikes on the one hand and lockouts on the other. However, a work stoppage that is clearly a lockout is not often encountered.

The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Where the number of workers involved varied in the course of a stoppage, the peak figure is used in tabulating annual totals. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included in the number of workers involved.

Duration of strikes and lockouts in terms of man-days is calculated by multiplying the number of workers involved in each work stoppage by the number of working days the stoppage was in progress. Where the number of workers involved varied during the period of a stoppage, an appropriate adjustment is made in the calculation as far as this is practicable. The duration in man-days of all work stoppages in a year is also shown as a percentage of estimated working time, based on the annual average of all non-agricultural paid workers in Canada.

The data on duration of work stoppages in man-days are provided to facilitate comparison of work stoppages in terms of a common denominator. They are not intended as a measure of the loss of productive time to the economy.

## Section 10.-Canada and the International Labour Organization

The Department of Labour is the officially designated liaison between the Government of Canada and the International Labour Organization. The ILO was established in 1919, in association with the League of Nations under the Treaties of Peace, with the object of improving labour and social conditions throughout the world by international agreement and legislative action. Under an agreement approved by the General Conference of the International Labour Organization and by the United Nations General Assembly in 1946, the Organization became a specialized agency of the United Nations although it retained its autonomy.

The ILO is an association of 102 Member States, financed by their governments and democratically controlled by representatives of those governments and of their organized employers and workers. It is comprised of three main organs: (1) the Governing Body; (2) the International Labour Office; and (3) the International Labour Conference. Since World War II the ILO has extended its field of activities by the establishment of ten tripartite industrial committees to deal with problems of important world industries, by the holding of regional and special technical conferences, and by technical assistance to aid under-developed countries in such fields as co-operatives, social security, vocational training, productivity techniques and employment service organization.

The Governing Body consists of 40 members- 20 government representatives, 10 employers' representatives and 10 workers' representatives. Of the government seats, each of the 10 Member States of chief industrial importance (of which Canada is one) holds a permanent place and the other 10 government representatives are elected triennially by the Conference. The worker and employer members are elected by their groups every three years at the Conference. The Governing Body meets three times a year and has supervision over the work of the International Labour Office and the various Conferences and Committees, in addition to framing the budget and approving the agendas of the Conferences and meetings. Canada's representative on the Governing Body is the Deputy Minister of Labour for Canada.

The International Labour Office acts as the permanent secretariat of the ILO and as a world research and information centre and publishing house on all subjects concerned with working and living conditions. In the operational field it assists Member States by furnishing experts on manpower training and technical and other types of assistance. The ILO maintains branch offices in all parts of the world; the Canada Branch is located at 202 Queen Street, Ottawa.

The International Labour Conference is a world assembly for the consideration of labour and social problems. It meets annually and is attended by four delegates from each Member State (two representing the government, one representing the employers and one representing the workers) accompanied by technical advisers. The Conference formulates international standards concerning working and living conditions in the form of Conventions and Recommendations. A Convention, after adoption, must be considered by the competent authorities in each Member State with a view to possible ratification; however, each Member State decides whether or not to ratify any Convention, and only by ratification does it assume the obligation to bring its legislation in that field up to the standard set by the Convention. A Recommendation is less formal; it contains general principles for the guidance of governments in drafting legislation or in issuing administrative orders and is not subject to ratification by the Member States.

There have been 45 Sessions of the International Labour Conference, at which 116 Conventions and 115 Recommendations have been adopted, covering a wide range of subjects such as industrial relations, freedom of association, hours of work, weekly rest, holidays with pay, minimum wages, night work of women and young persons, industrial health and safety, workmen's compensation, conditions of work for seamen, dockers and fishermen, unemployment and health insurance, protection of migrant workers, equal
remuneration, discrimination, forced labour, radiation protection, and many other aspects of industrial and social problems. By Mar. 30, 1962, ratifications of Conventions by Member States numbered 2,501.

Canada has ratified 20 ILO Conventions, of which 12 concern maritime and dock labour. In Canada the provincial legislatures are the competent legislative authorities with jurisdiction over the subjects covered by most of the ILO Conventions and Recommendations. The Department of Labour, as the official link with the International Labour Organization, is responsible for forwarding to the ILO reports on ratified Conventions as well as periodical reports on many other industrial and social matters. Canada is represented at most of the ILO annual and special meetings, and accounts of the discussions and the decisions are regularly published in the Labour Gazette. The Department also keeps the provincial governments and the major employer and worker organizations informed of ILO activities.

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

The physiographic and population characteristics of Canada present unusual difficulties from the standpoint of transportation. The country extends 4,000 miles from east to west and its main topographic barriers run in a north-south direction, so that sections of the country are cut off from one another by such water barriers as Cabot Strait and the Strait of Belle Isle separating the Island of Newfoundland from the mainland; by rough, rocky forest terrain such as the New Brunswick-Quebec border region and the areas north of Lakes Huron and Superior dividing the industrial region of Ontario and Quebec from the agricultural areas of the Prairie Provinces; and by the mountain barriers between the prairies and the Pacific Coast. Unevenly distributed along a narrow southern strip of Canada's vast area is its relatively small population of $18,238,000$ (Census 1961). To such a country, with a population so dispersed and producing for export as well as for consumption in distant parts of the country itself, efficient and economical transportation facilities are necessities of existence.

The following special article gives some idea of the competitive problems that have faced the major agencies of transport during recent years of economic and technological change.

## REVOLUTION IN CANADIAN TRANSPORTATION*

About a century ago Canada completed its first major railway-the Grand Trunk, extending from Sarnia through Toronto and Montreal to Portland, Maine. For the next seventy-five or eighty years the railways, which in the meantime had been extended across the country, continued to meet substantially all Canada's requirements for inland transport with one exception-sailing vessels and steamships served ports along the St. Lawrence

[^228]River and the Great Lakes. Although other modes of transport-passenger cars, buses, trucks, aircraft and, quite recently, pipelines-gradually came into use, the position of the railways was not greatly affected by competition until the 1930's and was not seriously challenged until the late 1940's.

At the end of World War II, railways were handling nearly three-quarters of the tonmiles (one ton carried one mile) of the freight moved between cities; fifteen years later their share was barely one-half. The proportion carried by water was roughly unchanged during this period, rising only from 22 p.c. to 25 p.c. On the other hand, highway carriers moved only 3.5 p.c. of the freight traffic in 1945 but almost 11 p.c. in 1960, and pipelines, which did not exist for long-distance transport in 1945, carried almost 14 p.c. in 1960. Although the amount of freight and express moved by air jumped as much as 17 p.c. per annum in some recent years, air cargo still totals less than 1 p.c. of all intercity ton-miles. Indeed, in 1960 less than one and one-half pounds were moved by air for every ton moved by rail.

It should be noted that the foregoing data are for intercity traffic only and do not include rural, intra-urban and suburban carriage such as the local delivery of farm produce, coal, fuel oil, bread, milk and merchandise of all sorts-a traffic that has expanded greatly in the past fifteen years. Also, the figures relate to quantity rather than revenue, a distinction that is important since much of the traffic of railways, inland steamships and pipelines is carried at low rates per ton-mile. Truckers and, particularly, airlines handle the more valuable goods, usually those of light weight in proportion to their bulk, and typically at fairly high rates per ton-mile.

The passenger traffic trend has also been away from the railways. Accurate statistics on passenger-miles are available for railways, airlines and the larger bus companies but no one knows exactly how many people ride in automobiles in addition to the driver or how far they go. However, through a complicated procedure, it is possible to make rough estimates of automobile passenger-miles (one passenger carried one mile) and such estimates show that in 1928 the distribution of total intercity passenger-miles was 38 p.c. to railways, 2 p.c. to buses and 60 p.c. to private automobiles. During the War when gasoline was rationed and new automobiles and repair parts were generally unavailable, the proportion of passengers carried by rail was, of course, much greater but by 1949, when the automotive industry had recovered from its wartime restrictions and air travel was beginning to enter the picture, the proportions were roughly 19, 11, 68 and 2 for trains, buses, automobiles and aircraft, respectively. Over the next few years the Canadian population became much more mobile and the number of passenger-miles increased steadily and rapidly, but almost every year railways and buses supplied fewer intercity passenger-miles than they had the year before, which, of course, resulted in a slump in their share of the total market. By 1962 the ratios were more like 6 p.c. for trains, 4 p.c. for buses, 82 p.c. for automobiles and 8 p.c. for aircraft. Not taken into account is the basically urban or rural traffic, such as trips by children in school buses, by suburban dwellers commuting to work in a city, by farmers taking their families to a nearby town to shop or to church, and by neighbours visiting each other. The gist of the matter is that, while many of the figures used are far from precise, it is quite evident that passengers have been deserting trains and even buses to travel for relatively short distances by automobile and for longer distances by air.

These shifts in patterns of travel and carriage of freight have raised a succession of problems. If the railway problem had consisted merely of a relative decline in their part of the market, the rail companies might have met their difficulties by running fewer trains and by abandoning unprofitable branches. However, abandonment of all passenger service over a line or of the line itself requires approval of the Board of Transport Commissioners and, as the Board carefully weighs the inconvenience to the public arising from such abandonment against the monetary savings of the carrier, complete withdrawal of service is a slow process. Moreover, sudden and wholesale elimination of service must always be avoided in the interests of public acceptance.

Railways are also handicapped in trying to raise tolls. Higher fares encourage travellers to use their own cars or to use commercial aircraft. Rates on grain exported from Western Canada-the so-called Crow's Nest Pass rates-are held down legally to the level
prevailing in 1899 and rates on many other kinds of freight traffic cannot be raised without driving more and more business to trucks. Alternatively, higher rates have a tendency to encourage local production, thus eliminating the need to move goods by rail or even by truck or water from distant sources of supply. Then, too, the Atlantic and Western Provinces allege that competition from trucks and inland steamships is so much greater in southern Ontario and Quebec than elsewhere in Canada that the burden of higher railway tolls is unfairly thrust upon other regions and certain kinds of traffic. Hence, the governments of all the provinces except Ontario and Quebec have vigorously opposed all postwar applications made by the railways to the Board of Transport Commissioners for increases in the general level of tolls. This has meant that tolls could not be raised until after long and expensive hearings before the Board and often before the Cabinet which is, by law, a court of appeal in such matters. Meanwhile, railways have suffered financially because of the lag between increases in wages and material prices on the one hand and freight rates on the other. In December 1958, however, an increase in tolls was permitted almost simultaneously with an increase in wage rates.

Since 1945, railways have also been going through a technological revolution, notably in the use of diesel locomotives, the construction of electronically operated freight yards, and the machine-processing of data for operational, analytical and accounting purposes. These innovations, plus the building of new lines to Chibougamau, Chisel Lake, and other new mining camps, necessitated the investment of vast sums of money. The new investments would have cut significantly the cost of moving passengers and freight and would have added to gross revenues if wage rates and material prices had remained at the level of, say, 1950. As things turned out, the savings from the technological advances were more than offset by the effects of postwar inflation and by competition. As a result, the Canadian National has been operating at a deficit and the Canadian Pacific has earned only about 3 p.c. per annum on its investment in rail property.

Broadly speaking, competitors of railways do not have to face the problem of eliminating redundant plant nor do they have any serious trouble in raising funds for modernization and extension of services. The Federal Government built the St. Lawrence Seaway and, although traffic through the Seaway has been below expectations, the benefits to inland shipping are already considerable. Pipelines for natural gas, petroleum and petroleum products were easily financed by the sale of bonds and stocks to the public. Although the Governments of Ontario and Canada lent money to the promoters of a natural gas pipeline north of Lake Superior, the loan was quickly repaid and would not have been necessary at all except that Canada wanted it to follow an all-Canadian route rather than a cheaper route through the United States.

Operators of motor transport vehicles are in an especially fortunate position. They may buy trucks, cars and buses second-hand or on the instalment plan but the really heavy capital investment in highway transport is in roads and these are provided by governments. The Federal Government has assisted the provinces in completing the Trans-Canada Highway and has built roads through the National Parks and resource development roads under the Roads-to-Resources program (see p. 784). Municipalities build local roads to give access to abutting property and provincial governments have the major responsibility for through-roads. They attempt to recover their costs from taxes on gasoline and diesel fuel as well as from the sale of licences for vehicles, drivers and chauffeurs. Through these taxes highway users pay about 50 p.c. of the cost of provincial highways in Newfoundland and Prince Edward Island, and roughly 90 p.c. in Ontario, Quebec and Saskatchewan. Many disputes have arisen over the apportionment of the total highway bill among heavy intercity trucks, local or light-weight trucks, private passenger cars, taxicabs, buses, motorcycles, and the general public. The latter gain from improved police and fire protection, better mail service, and good access to hospitals, markets and amusements at all seasons of the year. The important point, for present purposes, is that truckers have been able to enter the business cheaply. They pay for roads largely in proportion to their use of them. They are subject to provincial regulation as regards rates, admission to the industry, withdrawal
of unprofitable services, and adherence to schedules. The rulings vary greatly from one province to another but, in general, truckers are relatively free of regulation (as compared with the railways) except with regard to safety.

Truckers have other advantages over railways. They pick up goods at the warehouse of the shipper and deliver them at the factory, office or home of the consignee. This eliminates transfers to and from freight cars, saves time and expense and reduces claims for loss and damage. The unit of sale - a truckload or less-is smaller than a carload and many consignees prefer to receive goods in small lots. Truckers can usually give more frequent deliveries than railways. For short distances trucks are faster than trains, mainly because they do not have to contend with delays in terminals at origin and destination. For reasons too complicated to summarize, railway rates on valuable, light-weight products were originally much higher than those on bulky, low-valued goods so that, by under-cutting the high rates of railways, truckers are able to build up a profitable volume of business with comparatively little difficulty.

However, it should be noted that in the course of time truckers have lost some of their early advantages. The average investment of intercity truckers in land, buildings and equipment is $\$ 50,000$. Although many operators have only one or two trucks, a few have nearly 1,000 trucks, road tractors, trailers and semi-trailers each. Small trucks used for collection and local delivery are unsuited to long-distance haulage so that intercity freight often must be transferred between small and large vehicles. Accordingly, for some types of traffic, truckers have had to more or less duplicate the terminal operations of railways and thereby incur additional expense. Furthermore, in the face of truck competition, the railways have improved their door-to-door services and simplified their tariffs on such traffic. They have consolidated their less-than-carload and express services with the object of cutting costs and speeding delivery. Railway traffic moves faster than formerly because of diesel locomotives, block signals and modern yards. Railways have cut many rates and have refrained from raising others for fear of losing still more business to trucks. They have introduced 'agreed charges' whereby, with the approval of the Board of Transport Commissioners, they give roughly the same rates as truckers in return for an undertaking by the shipper to send an agreed proportion of his freight by rail. Because truckers are increasingly participating in moving bulky freight over fairly long distances, railways publish incentive rates; for instance, they quote lower rates per ton-mile when the car is heavily laden than when it is not filled to its maximum carrying capacity. Generally, in the movement of bulky freight in carloads over long distances, railways have much lower costs than trucks. Piggyback or trailer-on-flatcar service combines the advantages of carriage by rail and highway and has grown very rapidly in recent years.

Truckers can often compete on the basis of service even though their rates are somewhat higher than railway charges. This fact mainly accounts for the growth of private trucking. Instead of using railways or for-hire trucks, the shipper puts his own vehicle on the highway, thus owning both the truck and the goods it carries. By having his own employees make deliveries, he is often able to reduce loss and damage. More important, he can increase his sales by having his trucks arrive at the times most convenient for the consignee. His employees can see that stale goods are promptly disposed of and that his product is attractively displayed. On the other hand, private trucking is impracticable where a shipper's business is highly seasonal, where consignees are numerous and widely scattered, and where return loads are unobtainable but, in any event, commercial truckers face growing competition from both railways and shipper-owned vehicles.

In the carriage of passengers, private cars are by far the most commonly used medium. The risk of accident and the strain of driving are great and, unless every seat in the car is occupied, the cost per passenger-mile is higher than by common carrier. Yet people prefer to use their own cars. They enjoy the satisfaction of leaving when they wish, of stopping en route, and of relative privacy in transit. Private cars are primarily responsible for the problems of urban travel, including congestion, frayed tempers, the difficulty of finding parking space, the elimination of street cars (except in Toronto, which also has the nation's only subway), and the need for costly expressways. They carry most travellers'between
cities up to distances of 200 miles or more, and convey tourists over trips of several thousand miles. Railways and buses have not been successful in meeting this competition, notwithstanding the provision of more comfortable coaches and speedier service, and various experiments in fares.

For long-distance travel, aircraft have great superiority in speed although this gain is partly offset by time lost in travel between the city centre and the airport at origin and destination. Airlines have overcome many of their early disabilities, such as non-adherence to schedules, risk of accident, air-sickness, and delays in making reservations and handling luggage, and their fares are often about the same as first-class fares by rail plus berth, meals and tips. Scheduled air services now link the metropolitan areas across Canada and abroad and, to a growing extent, connect the smaller cities. Isolated points in Northern Canada are also served by air and for many of them it is the only means of transport.

The emergence of so much competition has created innumerable problems for railway companies and for various segments of the industry. Furthermore, competition, as well as automation, dieselization and the abandonment of non-paying branches and passenger trains, has reduced the need for labour and raised difficulties in 'railway towns'. Railway companies contend that competition limits their ability to raise tolls and their capacity to pay higher wage rates. At the same time, rising interest rates makes it harder and more expensive to modernize plant. On the contrary, railway workers claim that their productivity has risen steadily as measured by ton-miles per man-hour and other indexes. They also contend that they should not be expected to work for lower wages than those prevailing for jobs of equivalent skill in industry generally. Finally, they claim that they are entitled to job security in the face of labour-saving innovations and abandonment of passenger trains and branch lines.

In 1958-61, Canada's transportation problem was investigated by a federal Royal Commission under the chairmanship of the Hon. C. P. McTague who was formerly Chief Justice of Ontario and, after his illness and resignation, under the chairmanship of M. A. MacPherson who had been legal counsel for Saskatchewan in all the postwar controversies over freight rates. Briefly, the Commission recommended: (1) A subsidy to cover the difference between railway costs and revenues for handling export grain in the West (under the Crow's Nest Pass Agreement of 1897, as amended in 1925 and interpreted by the Board of Transport Commissioners, such traffic is carried at the rates of 1899); this subsidy would amount to $\$ 22,000,000$ a year on the basis of the operating costs of 1958 . (2) A subsidy of $\$ 13,000,000$ a year for five years and at a diminishing rate for each of the following ten years to cover losses on the operation of unprofitable branch lines which are to be abandoned except where no reasonably satisfactory alternative means of transport exists. (3) A subsidy of $\$ 62,000,000$ in 1961, declining in regular stages to $\$ 12,400,000$ in 1965 , to meet operating deficits on the passenger services of the two major railways; the Commission would not allow any return on the investment in passenger-train cars, passenger stations, and the like. (4) Cancellation (except for Newfoundland) of the subsidy of 20 p.c. which has been paid since 1927 under the Maritime Freight Rates Act on local freight carried by rail within Canada east of Lévis, Que. (5) Retention of the current subsidy of 30 p.c. on the Maritime portion of the rate on traffic from the area east of Lévis to stations in Canada which are west thereof. (6) Cancellation of the so-called bridge subsidy of $\$ 7,000,000$ annually which has applied since 1951 to non-competitive traffic moving by rail between Eastern and Western Canada, north of Lake Superior. (7) Re-examination by the Federal Government of its policy of subsidizing the movement of feed grain from the Prairie Provinces to other parts of Canada.

In general, the Commission worked on the theory that competition rather than regulation should prevail. Therefore, it admonished the provinces not to regulate either rates or admission to the industry. (Oddly enough, in 1962 a Royal Commission appointed by Newfoundland reached exactly the opposite conclusion on this point.) The MacPherson Commission proposed, however, that the Board of Transport Commissioners should make sure that railways do not cut tolls below their out-of-pocket costs for handling any kind of traffic and thus compete unfairly with truckers. The Commission felt that, as far as
possible, carriers and shippers should pay the full cost of the facilities which they use and which are provided at public expense. It recognized that some railways, highways and air fields are needed for national defence, for the development of remote, newly discovered resources, and for the provision of passenger and freight services where no alternative means of transport exist. In these instances, the costs should be borne directly by the government and not by carriers or shippers. Finally, the Commission worked on the principle that government policy should be neutral in the sense that it should not favour one mode of transport above another. This means, among other things, that any subsidies continued under the Maritime Freight Rates Act should be paid to common carriers by water and highway as well as to railways.

For a variety of reasons, none of the recommendations of the MacPherson Commission have yet (August 1962) been incorporated in legislation but during the year ended Mar. 31, 1962 the railways received from the Federal Government $\$ 50,000,000$ as an interim payment related to the recommendations of the Commission, plus $\$ 20,000,000$ to be applied specifically to the reduction of freight rates. These sums were in addition to the continuing payments to railways under the Maritime Freight Rates Act and other older pieces of legislation.

## PART I.-GOVERNMENT CONTROL OVER AGENGIES OF TRANSPORTATION

The Federal Government's control and regulation of transportation reflect to a considerable extent conditions that date back to the period when the railways possessed a virtual monopoly of transportation within the country. Although federal regulation was a direct outcome of such particular matters as the prevention of unjust discrimination in rates and charges resulting from monopoly conditions in the industry and the safety of transportation facilities and operating practices, yet the railways have been so involved in the public interest that their regulation has been extended to become the most comprehensive of any industry in Canada.

In the meantime, conditions in the transportation industry have been drastically altered by the increasing competition arising from the advance of highway transportation. Unlike the competition that existed between railways in early stages of their development, today's competition shows little indication of starting a trend toward consolidation and a return to semi-monopolistic conditions within the industry. Because so many shippers now provide their own transportation, it is evident that a large part of the present competition between common carriers has become a permanent feature of the transportation industry.

It is not surprising that regulations, which under monopoly conditions were not onerous to the railways or were purely nominal in their effect, are now alleged to have become increasingly restrictive and hampering under highly competitive conditions. Regulatory authorities are therefore faced with the problem of piecemeal revision of their regulations-retaining those where railway monopoly or near-monopoly conditions still make them necessary in the public interest, and relaxing those where competition can be relied on to protect the public in order to enable the railways to meet this competition more effectively. The emphasis has shifted from the regulation of monopoly to maintaining a balance between the several competing modes of transport. Indicative of this trend is the amendment to the Transport Act passed in 1955, which extends the freedom of the railways to make contract rates with shippers known as 'agreed charges'.

On Nov. 2, 1936, the amalgamation of the Department of Railways and Canals and the Department of Marine, together with the Civil Aviation Branch of the Department of National Defence to form the new Department of Transport brought under one control railways, canals, harbours, marine and shipping, civil aviation, radio and meteorology.

Road and highway development is mainly under provincial or municipal control or supervision. According to the judgment of the Judicial Committee of the Privy Council dated Feb. 22, 1954, jurisdiction over interprovincial and international highway transport
rests with the Federal Government. Federal and provincial representatives conferred at Ottawa in April 1954 on means of implementing that decision and on June 26, 1954, the Motor Vehicle Transport Act was passed by the Federal Parliament giving to all provinces, at their option, the authority to apply to interprovincial and international highway transport the same regulations respecting certificates of public convenience and necessity and rates as they apply to undertakings operating entirely within the province. This Act has since been proclaimed in seven provinces.

The Board of Transport Commissioners for Canada.-The Board of Transport Commissioners for Canada was created and initially named the Board of Railway Commissioners for Canada by the Railway Act 1903, and was given its present name by the Transport Act 1938. It was organized on Feb. 1, 1904, and succeeded to all the powers and duties of its predecessor, the Railway Committee of the Privy Council. It was also given additional powers and duties which have been greatly enlarged since that date. When organized, the membership of the Board consisted of a Chief Commissioner, a Deputy Chief Commissioner and one Commissioner. In 1908 an Assistant Chief Commissioner and two other Commissioners were added. The Board is a statutory court of record, so constituted by the Railway Act and recognized as such by other courts, but it also has extensive regulative and administrative powers.

The great majority of applications and complaints to the Board are disposed of without hearing in open court, but public hearings are held in various places throughout Canada as the Board sees fit, particularly to suit the convenience of the parties and avoid expense to them. Evidence at public hearings is given under oath and interested parties appear personally or by counsel or representatives. The finding or determination of the Board upon any question of fact within its jurisdiction is binding and conclusive and no order or decision may be questioned or reviewed except on appeal to the Supreme Court of Canada upon a question of law or a question of jurisdiction with leave of a judge of that Court, or by the Governor in Council.* Two Commissioners are a quorum or 'panel' for the hearing of a case and it is not unusual for two panels to be sitting at the same time on different cases.

The Board has jurisdiction under more than a score of Acts of Parliament, including jurisdiction, under the Railway Act and the Transport Act, over transportation by railway and by inland water, and over communication by telephone and telegraph.

Under the Railway Act its jurisdiction is, stated generally, in respect of construction, maintenance and operation of railways that are subject to the legislative authority of the Parliament of Canada, including matters of engineering, location of lines, crossings and crossing protection, safety of train operation, operating rules, investigation of accidents, accommodation for traffic and facilities for service, abandonment of operation, freight and passenger rates, and uniformity of railway accounting. The Board also has certain jurisdiction over telephones and telegraphs, including regulation of the telephone tolls of The Bell Telephone Company of Canada, the British Columbia Telephone Company, the Bonaventure and Gaspe Telephone Company and the Yellowknife Telephone Company, over tolls for express traffic, and tolls for the use of international bridges and tunnels.

The Board has jurisdiction to inquire into, hear and determine any application by any party interested who complains that any company or person has violated or failed to comply with the Railway Act or a Special Act or any order made thereunder, or who requests the Board to make any order or give any direction, leave, sanction or approval that, by law, it is authorized to make or give or with respect to any matter, act or thing that by the Railway Act or Special Act is prohibited, sanctioned or required to be done. It has power to make orders and regulations generally for carrying the Railway Act into effect and for exercising jurisdiction conferred on the Board by any other Act.

[^229]Regulation of railway freight and passenger rates is one of the Board's principal tasks. Except for certain statutory rates, it has power "to fix, determine and enforce just and reasonable rates, and to change and alter rates as changing conditions or cost of transportation may from time to time require"; it may disallow any tariff that it considers to be unjust or unreasonable or contrary to any provision of the Railway Act; it may prescribe other tolls in lieu of the tolls disallowed, or require the railway company to substitute a tariff satisfactory to the Board. Since the end of World War II there has been a succession of applications for authority to make general freight rate increases and general telephone rate increases.

A review of transport regulation was undertaken by the Royal Commission on Transportation, under the chairmanship of the Hon. W. F. A. Turgeon, which held extensive hearings in 1949-50 and issued its Report in 1951. (See 1952-53 Year Book, p. 741.) Certain of its recommendations, including the following, were incorporated into the Railway Act by amendments made in 1951: the equalization of freight rates; the requirement that, when transcontinental competitive freight rates are published, the corresponding rates to intermediate points shall not be more than one-third greater than the former; the payment by the Government of Canada of the cost of maintaining the so-called 'bridge' lines of the transcontinental railway systems in Ontario (between Sudbury, Capreol and Cochrane, and between Port Arthur and Armstrong) up to the amount of $\$ 7,000,000$ annually, the amounts so received by the railways to be applied to reductions in freight rates between Eastern and Western Canada over the trackage referred to; and the requirement of a uniform classification of accounts to be prescribed by the Board of Transport Commissioners for the Canadian Pacific Railway and the Canadian National Railways. Pursuant to the amendments, a uniform scale of milage class rates has been prescribed by the Board and equalization of commodity rates is being proceeded with. The Board has also prescribed a uniform classification and system of accounts for railways and has approved a new freight classification.

Under the Transport Act, the Board entertains applications for licences for ships to transport goods or passengers for hire or reward between places in Canada on the Great Lakes and the Mackenzie and Yukon Rivers, except goods in bulk on waters other than the Mackenzie River. Before granting a licence the Board must be satisfied that public convenience and necessity require such transport. The Board also has regulative powers over tolls for such transport.
'Agreed charges' between shippers and carriers, authorized by the Transport Act, were also reviewed by the Hon. W. F. A. Turgeon in 1955 and his recommendations were implemented in amendments to that Act in 1955. Under the amendments, an agreement for an agreed charge shall be executed in tariff form and a duplicate original shall be filed with the Board within seven days after the making of the agreement; the agreed charge will take effect twenty days after the filing without necessity of the Board's approval of the charge. The Board continues to have power to fix a charge for a shipper who is unjustly discriminated against by an agreed charge and it also has power to vary or cancel an agreed charge referred to it by the Minister of Transport or the Governor in Council for investigation.

During the year 1961, a total of 3,156 applications were submitted to the Board under the provisions of the Railway Act, the Transport Act, the Maritimes Freight Rates Act, and other legislation under the Board's jurisdiction; 3,279 Orders and 11 General Orders were issued.

The Board, shortly after the interim freight rate increase of 17 p.c. was authorized in November 1958, required the railways to specify, before Apr. 10, 1959, the amount of supplementary relief sought. But before that date, the Government announced that no further general increases would be allowed for a period of one year pending the findings of a Royal Commission to be established to inquire into the railway rate structure and other matters affecting railway transportation. The Royal Commission was appointed May 13, 1959 with the Hon. C. P. McTague named as chairman (later succeeded by M. A.

MacPherson), and conducted hearings across Canada, receiving submissions from the railways and all interested parties. Volume I of its report was submitted in March 1961 and Volume II in December 1961; another volume will follow. (See also pp. 757-758.)

On July 8, 1959, Parliament passed the Freight Rates Reduction Act designed as a relief measure for shippers. The Act provided a fund of $\$ 20,000,000$ to permit a reduction in class and commodity rates (other than competitive rates) on Canadian railways for a period of one year to Aug. 1, 1960. In compliance with the Act, the Board of Transport Commissioners ordered the substitution of an increase of 10 p.c. for the permissive increase of 17 p.c. A further reduction, substituting an increase of 8 p.c. in lieu of 10 p.c., was ordered by the Board, effective May 1960. By two later amendments, the Freight Rates Reduction Act was extended first to Apr. 30, 1961 and then to Apr. 30, 1962. The authorized expenditure was raised from $\$ 20,000,000$ to $\$ 35,000,000$ and then to $\$ 55,000,000$. The reduced rates, as ordered by the Board in May 1960, have continued in effect. As at Feb. 12, 1962, and for the period Aug. 1, 1959 to Dec. 31, 1961, the Board had certified $\$ 44,989,453$ for payment to companies under authority of the Freight Rates Reduction Act.

On July 13, 1961, Parliament passed Appropriation Act No. 4-61 which included tentwelfths of $\$ 50,000,000$ in respect of Vote No. 590 of the Supplementary Estimates for the year ended Mar. 31, 1962; the remainder was included in Appropriation Act No. 5-61, passed on Sept. 28, 1961. Vote No. 590 provided for "Interim payments, related to recommendations of the Royal Commission on Railway Problems pending its complete report, to Companies as defined in the Freight Rates Reduction Act of an aggregate amount in respect of the calendar year 1961 of $\$ 50,000,000$ " It also provided that the Board determine the method of allocation, and that payment be made to such Companies as compensation for the maintenance of their rates on freight traffic at reduced levels as provided for in the Freight Rates Reduction Act. As of Feb. 12, 1962, payments totalling $\$ 49,850,000$ had been made under Board Orders, the remainder of the Vote to be allocated after the claims under the Freight Rates Reduction Act were received for the calendar year 1961 .

The Air Transport Board.-The Air Transport Board was established in September 1944 by amendment to the Aeronautics Act. Subsequent amendments to the Act were made in 1945, 1950 and 1952. The Board has three members including the Chairman, and the staff is comprised of a Senior Adviser; a Legal Branch; an Operations Branch which includes the Traffic Division, Operations Analyst, Special Traffic Adviser, International Relations Division, and the Licensing and Inspection Division; an Economic and Accounting Branch which includes the Economics Division, Audit Division and Financial Analyst; and a Secretary's Branch which includes the Administrative Division. In addition, a small staff is located in Montreal to service the Senior Canadian Representative on the Council of the International Civil Aviation Organization.

The Board is responsible for the economic regulation of commercial air services in Canada and is also required to advise the Minister of Transport in the exercise of his duties and powers in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad and to foreign air services operating into and out of Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. As provided by the Act, the Board issues Regulations, approved by the Governor in Council, dealing with the classification of air carriers and commercial air services, applications for licences to operate commercial air services, accounts, records and reports, ownership, transfers, consolidations, mergers and leases of commercial air services, traffic tolls and tariffs, and other related matters. Detailed regulatory instructions are issued by the Board in the form of General Orders, relating to all air services or groups of air services; Board Orders relating to individual air services; and Rules and Circulars for general guidance and information. Financial and operating statistics are collected under authority of the Board's Regulations.

Regional route operations are under current review by the Board by way of public hearings throughout Canada. The Board also has under study the potential for and requirements of increased and improved air services into the Canadian North. Continued attention is being given to the question of uniformity in the rules governing the filing and application of tariffs in both the fixed and rotating wing services. The rules governing applications for licence procedures are also being examined for improved processing methods.

In the field of international aviation, the Board continues to take an active part in the work of the International Civil Aviation Organization, and to undertake bilateral negotiations for the exchange of traffic rights when appropriate. At present, Trans-Canada Air Lines, Canadian Pacific Air Lines Limited and TransAir Limited are Canada's designated international scheduled carriers.

The Canadian Maritime Commission.-The Canadian Maritime Commission Act passed in 1947 (RSC 1952, c. 38) constitutes the Canadian Maritime Commission a body corporate exercising its powers as an agent of Her Majesty. The Commission is established as a separate department of the Government reporting to Parliament through the Minister of Transport. The Commission is charged by Sect. 6 of the Act with the following responsibility:-
"The Commission shall consider and recommend to the Minister from time to time such policies and measures as it considers necessary for the operation, maintenance, manning and development of a merchant marine and a ship-building and ship-repairing industry commensurate with Canadian maritime needs."
For the discharge of this responsibility the Commission is authorized to examine into, ascertain and keep records of all phases of ship operation. In addition, the Commission is specifically directed by paragraph (b) of Sect. 8 to:-
"administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament."
On May 12, 1961, the Minister of Transport announced in the House of Commons a national maritime policy designed to encourage the construction and operation of ships in Canada and, as well, provide assistance to Canadian fishermen. To this end a capital subsidy amounting to 35 p.c. of the cost will be paid by the Government toward the construction of self-propelled ships in Canadian shipyards, to be increased to 40 p.c. for work done between May 12, 1961 and Mar. 31, 1963. For steel fishing trawlers the assistance will be 50 p.c. of the cost in cases where the new trawler will replace an old vessel withdrawn from service. Capital grants toward the construction of small wooden fishing vessels are also to be increased. Payments of capital subsidy are made under regulations of the Governor in Council. About $\$ 2,000,000$ was expended during the first fiscal year but this figure cannot be taken as a guide to future yearly expenditures because part of the subsidy is to be applied toward the construction of large ships which require from a year to a year and a half to complete.

Subsidies have been paid by the Government for the maintenance of essential steamship services since the latter part of the nineteenth century. Included in this program were subsidies for domestic services and, as well, mail and operating subventions for overseas services. At the outbreak of World War II all subventions except those for domestic services were suspended and since the end of the War subsidies for ocean-going ships have been paid on only two occasions. On one occasion the purpose was for the preservation of a water transportation link with Australia and New Zealand but this was discontinued in 1952 when the Aorangi was withdrawn from service for demolition; the other occasion was a special one-year subsidy for Canadian ocean-going ships generally during a period of depressed freight rates in 1950.

The National Energy Board.-The National Energy Act (SC 1959, c. 46) proclaimed Nov. 1, 1959, provided for the establishment of a five-member Board charged with the duty of assuring the best use of energy resources in Canada. In the performance of this function, the Board is responsible for the regulation of the construction and opera-
tion of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipeline, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. During 1960 the most prominent activity of the Board was the processing and disposition of the applications for licences to export large quantities of natural gas which awaited the Board upon its creation in 1959. In 1961, its major activities were concerned with the implementation of the national oil policy and the processing of applications for renewal or issuance of licences to export electric power and energy. These activities are covered in more detail in the Foreign Trade Chapter of this volume (see Index).

## PART II.-RAIL TRANSPORT*

## Section 1.-Railways

Since Confederation the railways of Canada have been the principal transport facility throughout, and beyond, the nation. The two great national systems, supplemented by a recently completed north-south line on the West Coast and a number of regional independent railways, are the only carriers able to transport large volumes of freight at low cost in all weather by continuous passage over Canadian transcontinental routes. Though highway and air competition is increasing, the railways still retain their primary position in the freight transport field.

The two national railway companies control a wide variety of Canadian and international transport and communication services. The government-owned Canadian National Railway System is the country's largest public utility and operates the greatest length of trackage in Canada. In addition, it operates a highway service, a fleet of coastal and ocean-going steamships, a national telegraph system connecting the principal points of Canada with other parts of the world, an extensive express service in Canada and abroad, a chain of large hotels and resorts, and a scheduled air service connecting all major cities across the country and Canadian with other North American and European points. Its chief competitor, the Canadian Pacific Railway Company, is a joint-stock corporation operating a transcontinental railway supported by a national telegraph system with connections throughout the world, a large fleet of inland, coastal and ocean-going vessels, a chain of year-round and resort hotels, a domestic airline servicing points in British Columbia, Alberta and Yukon Territory, a transpacific airline service to the Orient and the Antipodes, air services to Mexico, Peru, Chile and Argentina, a transpolar air route connecting Vancouver and Amsterdam, a transatlantic service to Portugal, Spain and Italy, and a limited (one flight daily each way) transcontinental air service between Vancouver and Montreal. Also included in the company's operations are a world-wide express service and a domestic truck and bus network.

The Pacific Great Eastern Railway, owned by the British Columbia Government, operates over a 789.5 -mile route from North Vancouver to Fort St. John in the Peace River area of northeastern British Columbia, with a branch line from Chetwynd to Dawson Creek. The completion in 1958 of the northern extension of this line opened up to development the vast interior of the province and brought to an end the largest railway construction job undertaken in North America for two decades. With the completion in May 1959 of the last link in the microwave system, the PGE became the first railway on the Continent to be operated entirely by means of radio communication.

The statistics of Subsections 1 to 3 of this Section cover the combined railway facilities of all companies operating in Canada, including intercity freight and passenger services of electric railway companies. Details relating to the Canadian National Railway System are dealt with separately in Subsection 4. A special article covering the consolidation and organization of the CNR appears in the 1955 Year Book at pp. 840-847.

[^230]
## Subsection 1.-Milage and Equipment

Construction was begun in 1835 on the first railway in Canada-the short link of 14.5 miles between Laprairie and St. Johns, Que.-but only 66 miles were in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and the Great Western Railways were built as well as numerous smaller lines. The building of the Intercolonial and the Canadian Pacific railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last period of extensive railway building (1900-17), the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

Only a gradual increase has taken place in first main track milage since the 1920's. Recently, however, the development of a number of large industrial projects in districts far removed from transport facilities has necessitated the building of branch lines. Those completed up to 1956 are listed in the 1957-58 Year Book, p. 815, and those completed in 1957 and 1958 in the 1959 Year Book, p. 775. During 1959 the eastern section of the Chibougamau branch line constructed by the CNR from St. Félicien to Cache Lake in Quebec, a distance of 133 miles, was officially placed in service; the western section of this line, from Beattyville to Chibougamau, was completed in 1957, opening up mineralrich areas and linking them with the industrial centres of the province. Another branch of this line, to serve Mattagami Lake mines in northwestern Quebec, will be constructed during 1961-62; it will be 60 miles in length and cost an estimated $\$ 9,660,000$. Also, as agent of the Federal Government, the CNR is carrying out a branch line location survey from the vicinity of Grimshaw, Alta., on the Northern Alberta Railways, to Great Slave Lake, a distance of about 400 miles. The 52 -mile line from Optic Lake to Chisel Lake in Manitoba, built at a cost of $\$ 8,800,000$ to connect a base metal mining development with the smelter at Flin Flon, was completed in September 1960.

While new construction has added considerably to first main track milage placed in operation in the past few years, other lines have been abandoned because they have become unprofitable. Thus, new milage is not reflected in the totals shown in Table 1.

## 1.-Railway Track Milage Operated, 1900-60

Nore.-Figures of total milage of single track operated for 1835-1909 are given in the 1941 Year Book, p. 546; for 1911-14 in the 1954 edition, p. 786; for 1916-24 in the 1955 edition, p. 830; and for 1926-49 in the 1956 edition, p. 792.

| First Main Track Milage |  | Track Milage by Area and Type |  |  |  |  |

${ }^{1}$ Includes one gasoline locomotive．$\quad{ }^{2}$ Includes 13 cars not specified as to type．${ }^{3}$ Includes 20 cars not specified as to type． Includes those of non－rail industrial firms such as oil，chemical and railway car leasing companies which furnish freight cars to，or on behalf of，any railway line．

## Subsection 2．－Finances

The tables in this Subsection give information on capital liability and capital invest－ ment，earnings，operating expenses，employees and their earnings and government aid to all railways．＊Financial statistics of government－owned railways are given separately and in

[^232]detail in Subsection 4. A Uniform Classification of Accounts for common carriers became effective for the Canadian National and the Canadian Pacific railways on Jan. 1, 1956, and for all other common carrier railways on Jan. 1, 1957. In transportation statistics a distinction is made between expenditures and expenses. In this Subsection, the term 'expenses' is used as defined in the Uniform Classification of Accounts and refers to the expenses of furnishing rail transportation service and of operations incident thereto, including maintenance and depreciation of the plant used in such service.

Capital Liability and Investment.-The capital liability of railways operating in Canada for the years 1941 to 1960 is shown in Table 3. The increase of $\$ 178,662,014$ in 1960 over 1959 compares with an increase in investment in road and equipment property of $\$ 107,374,071$ as shown in Table 4.

## 3.-Capital Liability of Railways, 1941-60

Note.-Figures for 1876-1925 are given in the 1927-28 Year Book, p. 649, and those for 1926-40 in the 1947 edition, p. 662.
(Exclusive of Canadian railway capital owned by Canadian railways)

[^233]Revenues and Expenses.-The ratio of expenses to revenues of railways operating in Canada was 96.34 p.c. in 1960 compared with 89.80 p.c. ten years previously; the high for the period 1951-60 was 97.30 p.c. recorded in 1958. The trend of both revenues and expenses was generally upward during the period, revenues increasing by 5.8 p.c. and expenses by 13.5 p.c. The all-time high point for operating revenues was reached in 1956. Because outlay increased more rapidly than income during the ten years, the net operating revenue per mile of line dropped from $\$ 2,585$ in 1951 to $\$ 936$ in 1960 , although the lowest figure during the period was recorded in 1958 at $\$ 696$.

## 5.-Operating Revenues and Expenses of Railways, 1951-60

Norg.-Operating revenues and expenses from 1875 are given in previous editions of the Year Book beginning with the 1916-17 edition.

| Year | Total Operating Revenues | Total Operating Expenses | Ratio of Operating Expenses to Operating Revenues | Per Mile of Line |  |  | FreightTrain Revenue per FreightTrain Mile | PassengerTrain Revenue per <br> PassengerTrain Mile |

Employment and Salaries and Wages.-Railway employment in 1960 declined 7 p.c. from employment in the previous year, 18 p.c. from that in 1956 and was 14 p.c. lower than the average for the ten-year period 1951-60. Compared with 1951, equipment maintenance employees on hourly rates in 1960 worked 12 p.c. fewer average hours but their wages per hour were 65 p.c. higher. The average number of hours worked by transportation employees decreased 17 p.c. but their pay per hour was about 60 p.c. higher. Since 1956, statistics have been reported in accordance with the revised "Canadian Classification of Railway Employees and Their Compensation", which became effective Jan. 1, 1956.

## 7.-Railway Employees and Their Earnings, 1951-69

Notz.-Figures include employees and wages for 'outside' operations amounting to from 3 to 6 p.c. of total employees and from 2 to 5 p.c. of total salaries and wages. Figures for 1912-39 are given in the 1941 Year Book, p. 551; for $1940-49$ in the 1951 edition, p. 723; and for 1950 in the 1961 edition, p. 785.

${ }^{1}$ Includes employees engaged in cartage and highway transport (rail) operations.
Government Aid to Railways.-In order that the private railways of Canada might be constructed in advance of settlement as colonization roads or through sparsely settled districts where little traffic was available, it was necessary for federal and provincial governments and even for municipalities to extend some form of assistance. The form of aid was usually a bonus of a fixed amount for each mile of railway constructed and, in the early days, grants of land were also made other than for right-of-way. As the country developed, objections to the land-grant method became increasingly apparent and aid was given more frequently in the form of a cash subsidy for each mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling-stock, have been guaranteed by the Federal Government.

During the era of railway expansion before 1918, provincial governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. These bonds as they mature or are called are paid off by the Canadian National Railways, in large measure through funds raised by the issue of new bonds with Federal Government guarantee. Bonds guaranteed by the Governments of New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia have been eliminated in this manner in recent years. Railway bonds guaranteed by the Government of Canada at Dec. 31, 1961 amounted to $\$ 1,670,653,176$; this amount includes $\$ 97,756$ perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National Railway System, on which interest and dividends are guaranteed by the Federal Government.

## Subsection 3.-Passenger and Freight Traffic

Tables 8 and 9 show passenger and freight statistics for all railways for the years 1951-60. A separate analysis of the operations and traffic of the Canadian National Railways is given at pp. 775-776.
8.-Statistics of Passenger Service and Revenue, 1951-60

| 1960. | 1.517 | 6.26 | 413 | 1,024 | 33.11 | 15.54 |

${ }^{1}$ Includes caboose miles but excludes miles made in passenger and non-revenue trains. ${ }^{2}$ Excludes traffic handled by more than one railway; see Table 10 for details of freight carried.

The total tonnage of revenue freight carried (including national loadings and receipts from United States rail connections) was 4.6 p.c. lower in 1960 than in 1959. Among the main commodity groups, agricultural products, mine products and manufactures and miscellaneous products recorded decreases but animal and forest products were up slightly. Of the $158,462,134$ tons carried in 1960 (excluding freight handled by more than one railway and in intermediate switching), mine products accounted for 41.4 p.c., manufactures and miscellaneous products for 30.5 p.c., agricultural products 16.8 p.c., forest products 9.4 p.c., animal products 1.1 p.c., and less-than-carload freight for 0.8 p.c.

## 10.-Commodities Hauled as Freight by Railways, 1957-60

Norz.-In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

Railway Accidents.-The figures given in Tables 11 and 12 of persons killed or injured on railways include those involved in both train and non-train accidents. All passengers injured are included in the figures but, for employees, only those that kept the employee from his work for at least three days during the ten days following the accident are recorded.

## 11.-Passengers, Employees and Others Killed or Injured on Railways, 1951-60

Nore.-Figures for 1919-50 are given in the corresponding table of previous Year Books beginning with the 1922-23 edition.

| Year | Passengers |  | Employees |  | Others ${ }^{1}$ |  | Totals |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1958. | 1 | 124 | 46 | 3,315 | 280 | 445 | 327 |  |
| 1959. | 9 | 193 | 42 | 3,256 | 265 | ${ }_{5}^{627}$ | 316 | 4,076 3,491 |
| 1960. | 2 | 215 | 33 | 2,683 | 237 | 593 | 272 | 3,491 |

${ }^{1}$ Includes postal, express and pullman employees, trespassers and others.
Accidents tabulated include all those in which railway trains were involved and accidents on railway property. The classification of accidents used for DBS vital statistics treats collisions between motor vehicles and trains as motor vehicle accidents; provincial statistics also class them as motor vehicle accidents and consequently adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor vehicle.

## 12.-Persons Killed or Injured on Railways, by Specified Cause, 1958-60

| Class of Person and Description of Accident | 1958 |  | 1959 |  | 1960 |  |

## Subsection 4.-The Canadian National Railway System*

In view of the interest in Canada's publicly owned railway, the Canadian National Railway System is given separate treatment in this Subsection. Its history is presented in a special article published in the 1955 Year Book at pp. 840-847. More detailed information than can be given here is obtainable from DBS annual report Canadian National Railways (Catalogue No. 52-201).

Financial Statistics.-The original financial structure of the CNR and the steps taken through the Capital Revision Acts of 1937 and 1952 to alleviate the burden of interest debt undertaken by the company on its formation in 1923 are described in the special article mentioned above. Briefly, the Capital Revision Act of 1937 wrote off all loans that had been made to cover deficits and also unpaid interest on loans, and certain loans made for the purpose of additions and betterments were converted to equity capital, relieving the CNR from paying fixed charges on this amount. Under the 1952 Capital Revision Act, 50 p.c. of the company's interest-bearing debt was changed to preferred stock on which, after settling income taxes, a dividend of 4 p.c. is paid on earnings. Also, for a term of ten years ended Dec. 31, 1961, the Railway was not obliged to pay interest on $\$ 100,000,000$ of its long-term debt. The Government is authorized to buy additional

[^234]preferred stock annually in amounts related to the company's gross revenues. As a consequence, the proportion of total capitalization represented by equity capital in shareholders' account was raised from 34.5 p.c. at Dec. 31, 1951 to 67.2 p.c. at Jan. 1, 1952, and the proportion of borrowed capital was correspondingly reduced.

## 13.-Capital Structure of the Canadian National Railway System as at Dec. 31, 1952-61

[^235]The financial details presented in Table 15 are those of the entire Canadian National Railway System, including both Canadian and United States operations. Revenues and expenses include those of express and commercial communications throughout, and highway transport (rail) operations from 1956. In conformity with the requirements of the Uniform Classification of Accounts, tax accruals and rents have been charged to operating expenses since Jan. 1, 1956.

## Section 2.-Express Companies

Express, which is actually expedited freight carried on passenger trains, is a service provided by rail carriers either through a separate express company or as a department of the railway organization. Many express and package freight shipments are handled on a contract basis-contracts which provide for payment to the railways of a fixed percentage of the gross express revenue.

Express companies are organized under authority of federal legislation and their business concerns the rapid transit of valuable or perishable commodities and animals, the delivery of parcels and the issuing of financial papers, money orders, travellers cheques and letters of credit. Express rates are usually much higher than freight rates and the two services are not normally competitive. Both tariffs are subject to the approval of the Board of Transport Commissioners.

Five express organizations operate in Canada-four Canadian and one American. The Canadian Pacific Express Company is a subsidiary of the Canadian Pacific Railway Company and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Algoma Central and Hudson Bay Railway, the Canadian National Railway System, and the Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency Incorporated, of the United States, operates mainly over the Canadian sections of United States railways and over the route from Skagway in Alaska to points in Yukon Territory. Operations of the Algoma Central and Hudson Bay Railway express department were reported for the first time in 1957. No statistics are available on the volume of express traffic because much of it consists of parcels and small lots that cannot be classified.

## 17.-Summary Statistics of Express Companies, 1951-60

## PART III.-ROAD TRANSPORT*

Highways and motor vehicles are herein treated as related features of transportation. An introductory Section summarizes provincial regulations regarding motor vehicles and motor traffic.

## Section 1.-Provincial Motor Vehicle and Traffic Regulations

#### Abstract

Nore.-It is obviously impossible to include here the great mass of detailed regulations in force in each province and territory; only the more important general information is given. The source of information for detailed regulations for each province and territory is given at p. 780.

The registration of motor vehicles and the regulation of motor vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. Regulations common to all provinces and territories are summarized as follows.

Operators' Licences.-The operator of a motor vehicle must be over a specified age, usually 16 years ( 17 in Newfoundland and Quebec, and 18 for class A licence in Alberta), and must carry a licence, obtainable in most provinces only after prescribed qualification tests and renewable annually, except in Alberta and British Columbia where it is renewable every five years, and in New Brunswick and Manitoba where it is renewable every two years. Special licences are required for chauffeurs in all provinces except Newfoundland and in some jurisdictions special licences may be granted to those who have not reached the specified age.

Motor Vehicle Regulations.-In general, all motor vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back of trailers), with the exception that Alberta does not require the licensing of trailers used for personal purposes. In most provinces, in event of sale the registration plates stay with the vehicle but in Manitoba, Saskatchewan and Alberta the plates are retained by the owner. In Nova Scotia vehicles pass from owner to owner by due process of law and title must be secured before issue of plates and permit. A change of ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days, except in Quebec where the maximum is 90 days and in British Columbia and Ontario where it is six months) in any year to visitors' private vehicles registered in another province or a state that grants reciprocal treatment. Regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes and stipulate that equipment include non-glare headlights, a proper rear light, a muffler, a windshield wiper, a rear-vision mirror, and a warning device.

Traffic Regulations.-In all provinces and territories, vehicles keep to the righthand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. The speed limit in Quebec and New Brunswick is 60 miles an hour in daytime and 55 at night; in Manitoba and Alberta it is 60 in daytime and 50 at night, with the exception of a few selected sections of four-lane highways in Alberta where maximum speeds are 65 in daytime and 55 at night. In Nova Scotia the limit is a "reasonable and prudent" speed, with a maximum of 60 miles an hour. In Ontario maximum speeds vary from 50 to 60 miles an hour, depending on type of highway. In the other provinces the maximum speed permitted is normally 50 miles an hour. Slower speeds are always required in cities, towns and villages, when passing schools and public playgrounds, at road intersections, railway crossings or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. In almost all provinces, truck speed limits are at least five miles an hour below automobile speed limits. In all provinces and territories, accidents resulting in personal injury or property

[^237]damage of $\mathbf{\$ 1 0 0}$ or more must be reported to a police officer (in Quebec to the Motor Vehicle Bureau) and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

Driver Licensing Controls.-All provinces impose penalties for infractions of driving regulations, ranging from fines for minor infractions to suspension of the operator's driving permit, impounding of the car, or imprisonment for more serious infractions. In most provinces penalties have been linked to a driver-improvement program, the aim of which is to correct faulty driving habits, not to take drivers off the road. The most common driver-improvement program includes the demerit-point-system.

Safety Responsibility Legislation.-Each province has enacted legislation under this heading (sometimes referred to as financial responsibility legislation). In general, these laws provide for the automatic suspension of the driver's licence and motor vehicle permit of a person convicted of a serious offence (impaired driving, driving under suspension, etc.) or a person involved directly or indirectly in an accident who is not covered for thirdparty insurance at the time of the accident. The suspension remains effective until any penalty or judgment has been satisfied and proof of financial responsibility for the future is filed. In Quebec, Manitoba, Saskatchewan, Alberta, British Columbia and the Yukon Territory, uninsured motor vehicles may be impounded following an accident of any consequence, i.e., an accident resulting in personal injury or death, or property damage in excess of $\$ 100$ ( $\$ 200$ in Saskatchewan and $\$ 250$ in British Columbia).

Although safety responsibility legislation has not been enacted in the Northwest Territories, the Motor Vehicle Ordinance requires the owner of a motor vehicle to submit evidence of stipulated insurance coverage on such vehicle before he can obtain registration. In the Yukon Territory, proof of insurance must be supplied before vehicle licence is issued. When the insurance expires or is cancelled, vehicle licence plates must be returned to the Registrar of Motor Vehicles.

Unsatisfied Judgment Fund.-Legislation has been enacted in all provinces except Saskatchewan and in the Territories, usually in the form of an amendment to the motor vehicle laws of the province, providing for the establishment of an Unsatisfied Judgment Fund out of which are paid judgments awarded for damages arising out of motor vehicle accidents in the province which cannot be collected in the ordinary process of law. The Fund is created by the collection annually of an Unsatisfied Judgment Fund fee from the registered owner of every motor vehicle or from every person to whom a driver's licence is issued, except in Newfoundland, Nova Scotia, Quebec and British Columbia where the Fund is maintained by insurance companies. This fee does not exceed $\$ 1$ per annum except that Ontario collects $\$ 20$ from each uninsured owner of a motor vehicle at the time of registration or transfer. A feature of this legislation which is contained in some provincial statutes provides for the payment of judgments in the so-called 'hit-and-run' accidents. When these occur, if neither the owner nor the driver can be identified, action may be taken against the Registrar of Motor Vehicles; any judgment secured against the Registrar is paid out of the Fund. All of these laws contain a provision limiting the amount that can be paid out of the Fund on one judgment. In Nova Scotia, Ontario and Alberta, the limits are $\$ 10,000$ for one person and $\$ 20,000$ for two or more persons injured in one accident. Ontario and Alberta provide for claims up to $\$ 2,000$ for property damage and Nova Scotia up to $\$ 5,000$. In Manitoba the legal limits are $\$ 10,000, \$ 20,000$ and $\$ 1,000$, respectively. In British Columbia, commencing Jan. 1, 1962, the limit is based on the single amount of $\$ 25,000$ for any one accident for claims for injury or property damage, with the proviso that not more than $\$ 5,000$ may be paid on a property damage claim until injury claims up to $\$ 20,000$ have been satisfied; the $\$ 25,000$ limit exists in British Columbia for hit-and-run accidents but does not apply to payments for property damage. In the other provinces lower limits of $\$ 5,000, \$ 10,000$ and $\$ 1,000$ are retained. For hit-and-run accidents, payments are made for personal injuries or death only.

Sources of information on provincial motor vehicle and traffic regulations:-

## Newfoundland

Administration.-Deputy Minister of Finance, St. John's.
Legislation.-The Highway Traffic Act, 1951, as amended.

## Prince Edward Island

Administration.-The Provincial Secretary, Charlottetown.
Legislation.-The Highway Traffic Act (RSPEI 1951, c. 73).

## Nova Scotia

Administration.-Registry of Motor Vehicles, Department of Highways, Halifax.
Legislation.- The Motor Vehicle Act (1954, c. 184, as amended) and the Motor Carrier Act (RSNS 1923, c. 78, as amended).

## New Brunswick

Administration.-Motor Vehicle Division, Provincial Tax Branch, Department of Provincial Secretary-Treasurer, Fredericton.
Legislation.-The Motor Vehicle Act (RSNB 1955, as amended).

## Quebec

Administration.-Motor Vehicle Bureau, Department of Transportation and Communications, Parliament Bldgs., Quebec.
Legislation.-The Highway Code (RSQ 1941, c. 142 and 142A, as amended).

## Ontario

Administration.-Ontario Department of Transport, Toronto.
Legislation.-The Highway Traffic Act (RSO 1960, c. 172), the Public Vehicles Act (RSO 1960, c. 337) and the Public Commercial Vehicles Act (RSO 1960, c. 319).

## Manitoba

Administration.-Minister of Public Utilities, Winnipeg.
Legislation.-The Highway Traffic Act (RSM 1954, c. 112, as amended).

## Saskatchewan

Administration.-Treasury Department, Highway Traffic Board, Revenue Building, Regina.
Legislation.-The Vehicles Act, 1957.

## Alberta

Administration and Legislation.-The Vehicles and Highway Traffic Act (RSA 1955, c. 356) and the Motor Vehicles Accident Indemnity Act (RSA 1955, c. 209) are administered by the Motor Vehicle Branch, Department of Highways, Edmonton. The Public Service Vehicles Act (RSA 1955, c. 265) and the Rules and Regulations are administered by virtue of authority vested in the Highway Traffic Board, Department of Highways, Edmonton.

## British Columbia

Administration and Legislation.-Enforcement of the Motor Vehicle Act, the Commercial Transport Act and the Motor Carrier Act is vested in the Royal Canadian Mounted Police and the various municipal police forces. The Motor Carrier Act is administered by the Public Utilities Commission, the Motor Vehicle Act by the Superintendent of Motor Vehicles and the Commercial Transport Act by the Minister of Commercial Transport, Victoria, B.C.

## Yukon Territory

Administration.-Commissioner of the Yukon Territory, Whitehorse, Y.T. Information regarding regulations may also be obtained from the Registrar of Motor Vehicles, Government of the Yukon Territory, Whitehorse, Y.T.
Legislation.-The Motor Vehicles Ordinance (Revised Ordinances 1958, c. 77, as amended).

## Northwest Territories

Administration.-Commissioner of the Northwest Territories. Address communications to the Director, Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.
Legislation.-The Revised Ordinances of the Northwest Territories (SC 1956, c. 3, as amended).

## Section 2.-Highways, Roads and Streets

Highways and Roads.-The populated sections of Canada are well supplied with highways and roads. Access to outlying settlements is provided to some extent by roads built by logging, pulp and paper, and mining companies, although these are not generally available for public travel. At the same time, great areas of Newfoundland, Quebec, Ontario, the Prairie Provinces, British Columbia and the Territories are very sparsely settled and are virtually without roads of any kind.

At the end of 1960, the milage of highways and rural roads in Canada was 421,448 , a decrease of 1,587 miles from the 423,035 reported in 1959. The main reasons for the decrease were the exclusion in 1960 of some mining roads not open to public traffic and the elimination of some unused road allowance. The total of 421,448 miles includes all roads under provincial jurisdiction, federal roads, and local roads under municipal jurisdiction other than the milages in metropolitan areas and urban centres of more than 1,000 population. The latter are given separately under the heading of "Urban Streets", p. 785.

## 1.-Highway and Rural Road Milage classified by Type and by Province, 1959 and 1960

Norg.-Excludes urban streets but includes milages under jurisdiction of rural and small urban municipalities; excludes milages of all roads on Indian reservations except those of flexible pavement.

Total expenditures on highways and rural roads in the year ended Mar. 31, 1961 was $\$ 794,873,201$, an amount 4.1 p.c. lower than that for the previous fiscal year; construction expenditures decreased by 4.0 p.c. and maintenance costs were 1.1 p.c. lower. Table 2 shows expenditure by province and the federal-provincial-municipal distribution of such expenditure for the years ended Mar. 31, 1957-61.

[^238]The Trans-Canada Highway.-The original federal-provincial agreement for construction of the Trans-Canada Highway is given in outline, together with other data on specifications and proposed route across the participating provinces, in the 1951 Year

Book, pp. 631-634. Under the Act, which became effective Dec. 10, 1949, agreements covering the Federal Government's participation in the cost of construction were entered into with each of the provinces (except Quebec). The Act set the standards to be meta hard-surfaced, two-lane highway, 22 to 24 feet wide with ample shoulder widths, bridge clearances and sight distances, low gradients and curvature, a maximum load capacity of nine tons for one axle, and the elimination, wherever possible, of railway grade crossings. The shortest practicable east-west route was to be designated by each province within its own borders, in agreement on terminal points with adjoining provinces. Those sections within the National Parks were to be the responsibility of the Federal Government. Federal contribution was to be 50 p.c. of the cost of new construction and up to 50 p.c. of the cost of construction of sections of highway built prior to the passing of the Act, where those sections were properly incorporated in the Trans-Canada Highway. Total Federal Government contribution under this Act was limited to $\$ 150,000,000$.

An amendment to the Act in 1956 increased the extent of federal financial participation by providing for an additional 40-p.c. contribution on one-tenth of the highway milage in each province. The construction period was extended to Dec. 31, 1960 and the aggregate limit of federal funds available for the purpose was increased to $\$ 250,000,000$. A second amendment passed in March 1959 added $\$ 100,000,000$ to the federal contribution and a third amendment passed in June 1960 raised the total amount of funds available for federal expenditure under the Act and its amendments to $\$ 400,000,000$. The 1960 amendment also extended for three years the period in which construction costs might be incurred under the Act. On Oct. 27, 1960, an agreement was signed between the Federal and Quebec Governments for participation in the Trans-Canada Highway.

Under present agreements, a paved highway is to be completed across Canada by May 31, 1964 -a highway constructed in conformity with the general specifications laid down in the Act or paved to a satisfactory provincial standard. The latter concession was made to eliminate the need for reconstructing highways already paved in order to speed up the work on other sections. However, federal participation in the cost is limited to that portion constructed to Trans-Canada Highway standards.

In the ten provinces the routes, as amended in 1961, totalled 4,859 miles-in Newfoundland, 540 miles; Prince Edward Island, 71 miles; Nova Scotia, 318 miles; New Brunswick, 390 miles; Quebec, 398 miles; Ontario, 1,453 miles; Manitoba, 309 miles; Saskatchewan, 406 miles; Alberta, 282 miles; British Columbia, 552 miles; and in the National Parks, 140 miles. Later revisions in location have made some minor alterations. For instance, the milage through Mount Revelstoke and Glacier National Parks in British Columbia was shortened by a change of route, as was the milage in Newfoundland when the Highway was routed through Terra Nova National Park. The Federal Government expenditure for construction of the Highway through the National Parks during the year ended Mar. 31, 1961, totalled $\$ 9,212,344$.

Contractual commitments for new construction on the Highway up to February 1962 amounted to $\$ 689,709,986$, of which the federal share, including the additional 40 p.c. under the amended Act, approximated $\$ 400,000,000$. Federal payments to the provinces during this period for prior, interim and new construction totalled $\$ 332,256,103$. Onsite labour expended on the Highway up to Mar. 31, 1961 was $10,682,043$ eight-hour mandays of employment; off-site employment required for the provision of necessary material and services was estimated at $18,159,473$ man-days.

In Saskatchewan, work was completed over the whole route of 406 miles in 1957 and the Highway was officially opened and dedicated on Aug. 21 of that year. In provinces more handicapped by problems of terrain and construction, progress was reported. At Dec. 31, 1961, contracts for 3,612 miles of grading had been approved and the equivalent of 3,387 miles built; paving to specified standards had been completed over a distance of 3,100 miles; and 557 bridges, overpasses and other structures of more than 20 -foot span had been approved for construction.

Roads to Resources and Roads in the North.*-"Roads to Resources", a national program of resource development roads begun in 1958, approached the half-way mark in work completed in 1962. Entering the fifth year of the program, more than $\$ 64,000,000$ worth of work had been carried out in the ten provinces, contracts exceeding $\$ 101,000,000$ had been approved, and federal payments to the provinces amounted to more than $\$ 31,000,000$. The length of the new or reconstructed roads to be built under the program is almost 4,500 miles, of which over $1,700 \mathrm{had}$ been completed. An expenditure of more than $\$ 18,000,000$ is expected during 1962-63; under the terms of the Roads to Resources agreements, the Federal Government will reimburse the provinces for half the amount.

Construction carried out under the program is designed to provide a series of resource development roads, for industries based on mining, forestry, commercial fishing, or the tourist trade. The roads vary in length from the less-than-one-mile French River Spur in Prince Edward Island to the 505 -mile Uranium City road in northern Saskatchewan. No single date has been set for completion of all the roads, but the national average will be about eight years. The purpose of the program is essentially to open up and explore resource areas off the beaten track of established transportation routes. When completed, it will represent a joint investment by the federal and provincial governments of at least $\$ 150,000,000$. However, most provinces are carrying out work in excess of $\$ 15,000,000$ so that direct expenditures may reach a national total of $\$ 177,000,000$. The federal contribution to each province will remain at $\$ 7,500,000$.

Approximately 100 projects make up the Roads to Resources program. In any province the construction program may consist of as many projects as can qualify for inclusion and for which there are funds available. It is difficult to measure the effect that these access roads will have in the years to come on regional economies. A number of routes, such as those in Prince Edward Island and Nova Scotia, were chosen for their tourist potential and will no doubt play an important role in the growth of tourism. The tourist industry is now second only to newsprint as a dollar earner for Canada. The building of the roads also provides thousands of man-hours of employment, work that is spread over many levels of skills and labour.

Leading the provinces in length of routes are Saskatchewan with 811 miles and Manitoba with 692 miles. In British Columbia, the 320 -mile Stewart-Cassiar Road to be built at an estimated cost of $\$ 20,500,000$ will open up new mining areas. In contrast to this one-project program of British Columbia, there are in Prince Edward Island 30 different projects with a total length of approximately 442 miles being constructed at an estimated cost of $\$ 15,000,000$.

Some of the more important projects in Western Canada will eventually be linked with the system of roads that is being built by the Federal Government in the Yukon and Northwest Territories. Under the development road program, the Federal Government will build 900 miles of road in the Yukon Territory on which will be spent an estimated $\$ 36,000,000$ and some 1,300 miles of road in the Northwest Territories at an estimated cost of $\$ 64,000,000$. Three hundred miles of road have been completed in the Yukon Territory and 395 miles are in use in the Northwest Territories. These two types of road system are distinct. In the Roads to Resources program, the contribution of the Federal Government is wholly financial; in the northern roads program, the Federal Government is responsible for construction. Maintenance of resource roads in the North is shared by the Federal Government and the territorial government concerned on an 85-15 p.c. basis.

The largest single project being carried out in the Northwest Territories is the reconstruction of the Mackenzie Highway. The first 60 miles of an extension to the EnterpriseYellowknife Road, leading from Yellowknife to MacKay Lake, will be completed in 1962. In the Yukon Territory, a $\$ 4,500,000$ road construction program will be carried out during 1962. More than 100 miles of road will be built during the year as part of two major pro-jects-the Watson Lake-Ross River Road and the Nahanni Range Road.

[^239]Revisions in the territorial roads policy came into effect in April 1962, permitting greater federal financial assistance to mining companies with exploration and development work, including road construction. Where two or more companies are developing a mineralized region, a mine development road may be built and paid for by the Federal Government. Assistance may also be given in the building of more elementary roads to give access to a mine or to enable the supplies for development to be transported to a property. Two-thirds of the cost of a mine-access road may be paid by the Federal Government, and one-half the cost of a basic tote-trail may be contributed by the territorial government concerned. Tote-trail assistance will be financed from a $\$ 50,000$ fund provided to each territorial government by the Federal Government.

Urban Streets.-Information on urban streets is obtained from urban authorities in all centres with populations of over 1,000 and also centres with fewer than 1,000 population located within census metropolitan areas. Brief statistical data are given in Table 3; more detail may be obtained from DBS annual report Road and Street Mileage and Expenditure (Catalogue No. 53-201).

## Section 3.-Motor Vehicles

Motor Vehicle Registrations.-Registrations continue to increase year by year, a record of $5,256,341$ being reached in 1960 . Of that total, $4,104,415$ were passenger carsone for every 4.3 persons. Registrations by province are given in Table 4 and types of vehicles registered by province in Table 5.

${ }^{2}$ Includes service cars, road tractors, etc.
${ }^{2}$ Included with trucks.
Apparent Supply of Automobiles.-The apparent supply of automobiles in Canada in any year is computed by deducting the number exported from the sum of the production and imports. Statistics regarding retail sales and the financing of motor vehicle sales are given in Chapter XIX on Domestic Trade and Prices.

## 6.-Apparent Supply of New Automobiles, 1951-60

[^241]Provincial Government Revenue from Motor Vehicles.-The taxation of motive fuels, motor vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial government income. In every province licences or permits duly issued by the provincial authorities are required for motor vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. In 1960 the average cost per motor vehicle for operating taxes and licences was about $\$ 108$. Motive fuel tax rates in the different provinces and territories in that year were as follows:-

| Province or Territory | Gasoline | Diesel Fuel | Liquefied Petroleum Gases |
| :---: | :---: | :---: | :---: |
|  | cts. | cts. | cts. |
| Newfoundland. | 19 | 19 | - |
| Prince Edward Island. | 16 | 16 | - |
| Nova Scotia...... | 17 | 17 | - |
| New Brunswick. | 15 | 15 | 15 |
| Quebec................ | 13 | 13 | 13 |
| Ontario........... | 13 | $18 \frac{18}{1}$ | 181 |
| Manitobs......... | 11 | 11 | 11 |
| Saskatchewan.... | 12 | 12 | 12 |
| Alberta....... | 10 | 12 | 10 |
| British Columbia. | 10 | 12 | 12 |
| Yukon Territory... | 6 | 6 | 6 |
| Northwest Territories. | $1 \frac{1}{1}$ | 13 | 112 |

The more important sources from which provincial revenue from motor vehicles is derived are shown in Table 7. Federal Government revenue from import duties, excise and sales taxes are given in Chapter XXI on Public Finance.

[^242]Sales of Motive Fuels.-It is the intention here to provide estimates of the total amount of motive fuel used by motor vehicles on Canadian public roads only. As the information is not available precisely in accordance with the concept, it has been necessary to approach the objective by the process of eliminating the amount of motive fuel used for other purposes. From the total gross sales, the following are subtracted to obtain sales on which the full rate of tax is paid: tax exempt sales to the Federal Government and other consumers, exports, and sales on which refunds are paid. The resulting data, which are net sales, are considered to be equivalent to the actual amount of motive fuel used on Canadian public highways. Although there is included in net sales an undetermined amount of motive fuel which is taxable but not used on the public highways, including in some provinces aviation gasoline, turbo fuel and motive fuels consumed by power boats, the total effect of this is considered to be insignificant.

Data for gasoline and diesel oil are shown separately in Table 8. Liquefied petroleum gases are included with gasoline. The consumption of taxable gasoline, which is used almost entirely for automotive purposes, rose 5.3 p.c. to $3,017,000,000 \mathrm{gal}$. in 1960 . Net sales of diesel oil in 1960 increased by 7.3 p.c. to $129,000,000$ gal.

## 8.-Sales of Motive Fuels, by Province, 1956-60

Motor Carriers-Freight.*-Statistics of the common carrier segment of the intercity and rural motor carrier industry have been collected on a continuing basis since 1941. However, as little capital is required to enter the trucking business, many marginal operators are associated with the industry and the large turnover and numerous changes each year have created many problems in the collection of statistics, although these are gradually being overcome. Statistics of contract carriers were collected for the first time in 1958. Commencing in 1960, the statistics of household goods movers, formerly included with motor carriers-freight, have been compiled separately and are now presented in Table 11, p. 790.

[^243]

Household Goods Movers and Storage Operators.-Statistics of household goods movers and storage operators, summarized in Table 11, are presented separately for the first time. Before 1960, these figures were included with those of either motor carriersfreight or warehousing, depending upon the predominant source of operating revenues of the companies concerned.

Passenger Buses.*-The operations of motor carrier companies predominantly engaged in passenger bus service are summarized in Tables 12 and 13. Data refer to the for-hire segment of the industry and only those firms engaged in intercity and rural operations and having an annual gross revenue of $\$ 6,000$ or over are covered. Operators predominantly involved in the provision of charter or school bus service are not included.

[^244]12.-Summary Statistics of Intercity and Rural Passenger Bus Companies, 1957-60

Nots.-Only carriers with an annual gross revenue of $\$ 6,000$ or over are included.

Motor Transport Traffic.*-Surveys of motor transport traffic in all provinces were placed on a continuing basis in 1957. Approximately 3 p.c. of total registrations were sampled for surveys of truck operations during each quarter of 1960. Each quarterly sample was spread over three survey weeks with one-third of the sample being used for a seven-day period (Sunday through Saturday) per month.

Excluding vehicles that do not perform normal transportation services, such as cranes, tow trucks, road building equipment, etc., the average number of trucks licensed in Canada during the year 1960 was 909,400 . Of these, 6.0 p.c. were for-hire carriers, 20.4 p.c. were private intercity trucks, 39.8 p.c. were private trucks operated predominantly within urban areas, and 33.7 p.c. were farm trucks. Almost one-third of the total number were registered in Ontario and one-half were registered in the two provinces of Ontario and Quebec.
14.-Average Truck Population, by Type of Operation and Province, 1959 and 1960

Canadian registered trucks travelled $6,432,000,000$ miles in Canada during 1960, of which milage 22 p.c. was accounted for by for-hire trucks, 34 p.c. by private intercity vehicles, 30 p.c. by urban trucks and 14 p.c. by farm trucks.

For-hire trucks averaged 193,700 net ton-miles per vehicle and, although amounting to only 6.1 p.c. of total registrations, they accounted for 66 p.c. of the total net ton-miles performed by all commercial trucks in Canada, a result of the comparatively high average yearly milage of for-hire trucks and also of the heavier average load carried ( 10.3 tons as compared with an average of 5.0 tons for all trucks). The predominance of heavier vehicles in the for-hire group also explains the low milage per gallon of gasoline of 6.1 as compared with an average of 9.8 for all vehicles.

Urban Transit Systems.-The collection of statistical information on urban transit systems has been extensively reorganized in the past few years. Because of major changes made in the types of vehicles used for mass passenger movement in urban centres, the statistical series that began with the financial and operating statistics of electric railways and later included their motor bus and trolley coach lines, became quite inadequate. The current series, which was started in 1956, includes operations of motor buses, trolley coaches, streetcars and subway cars carrying passengers in urban and suburban service.

Motor Vehicle Accidents.-Motorists are required by law to report accidents but complete statistics of these accidents are not available for all provinces. Statistics on all deaths from motor vehicle accidents are shown in Table 19. A direct comparison of such statistics between the provinces is of little value because of differences in size, population, motor vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor vehicles has been tabulated. These data still give no weight to differences in use of motor vehicles, variations in climate, road conditions, tourist cars, etc., all of which are factors in accidents.

Data presented in Table 20 relate to traffic accidents only and consequently may not be compared with figures of Table 19 which include details of fatalities occurring elsewhere than on public streets or roads.

## 19.-Deaths Resulting from Motor Vehiele Traffic and Non-traffic Accidents, by Province, 1951-60

Nors.-Figures for 1926-50 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

## PART IV.-WATER TRANSPORT*

The Canada Shipping Act.-Legislation regarding all phases of shipping is consolidated in the Canada Shipping Act (RSC 1952, c. 29). Under the Act and its amendments the Parliament of Canada accepts full responsibility for the regulation of Canadian shipping.

## Section 1.-Shipping Facilities and Traffic

## Subsection 1.-Shipping

All Canadian waterways including canals, lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world so that the commerce of Canada is not dependent entirely upon Canadian shipping. However, a large part of the inland and coastal traffic is carried in ships of Canadian registry.

In his major policy statement in the House of Commons on May 12, 1961, the Minister of Transport announced the decision of the Government to exclude the Great Lakes and St. Lawrence River system from some of the reciprocal provisions of the British Commonwealth Merchant Shipping Agreement.

[^246]Under the Agreement, all Commonwealth ships enjoy equal privileges with Canadian ships in the carriage of goods and passengers from one port in Canada to another port in Canada, commonly known as the coasting trade. Prior to the completion of the St. Lawrence Seaway most of the domestic Great Lakes traffic was moved in Canadian-registered ships and the rights of other Commonwealth ships in this trade were largely theoretical. After the Seaway was finished the intrusion of other Commonwealth ships, particularly United Kingdom ships, became a reality. The new policy gives legal recognition to a state of affairs that has prevailed in point of fact for many decades and restores the status quo as it existed before the advent of the Seaway.

When the statement of policy becomes translated into law, the exclusive right to carry goods and passengers between Canadian ports in the Great Lakes and the St. Lawrence River system from Havre St. Pierre westward will be restored to Canadian-registered ships.

Canadian Registry.-Under Part I of the Canada Shipping Act, ships in excess of 15 tons net register and pleasure yachts in excess of 20 tons net are required to be registered; ships of lower tonnage may be registered voluntarily, otherwise they are required to be operated under a Vessel Licence if powered by a motor of 10 hp . or more. Sect. 6 of the Act restricts ownership to British subjects or bodies corporate incorporated under the law of a country of the Commonwealth or of the Republic of Ireland, and having their principal place of business in those countries. Under the British Commonwealth Merchant Shipping Agreement, all Commonwealth ships are given the general designation 'British Ship'; and a ship that should be but is not registered is not entitled to the privileges accorded to British ships. Ships in the planning stage or in course of construction may be recorded before registry by a Registrar of Shipping at one of the 75 Ports of Registry in Canada.
1.-Vessels on the Canadian Shipping Registry, by Province, as at Dec. 31, 1959-61

[^247]Shipping Traffic.-Before 1952 the only information available on shipping activity in Canada was the number and registered net tonnage of vessels operating in and out of Canadian customs ports and the tonnage of cargoes loaded and unloaded at these ports destined for or arriving from foreign countries. In 1952 the coastwise movement of cargo in and out of customs ports was reported for the first time and in January 1957 the coverage was extended to include tonnage of vessels and tons of cargo in and out of non-customs ports. Reports are not required for vessels of less than 15 registered net tons.

${ }^{1}$ Includes small ports not shown separately.
The freight movement through a large port takes a number of different forms. The overseas movement of freight loaded on and unloaded from sea-going vessels frequently constitutes a surprisingly small part of the total. Usually the volume from coasting vessels is larger. There is, as well, the in-transit movement in vessels that pass through the harbour without loading or unloading and the movement from one point to another within the harbour, which in many ports amounts to a large volume.

Since 1957, shipping statistics are available covering traffic in and out of both customs and non-customs ports. Table 5 shows the principal commodities loaded and unloaded in foreign and coastwise trade at the ten ports handling the largest cargo volumes in 1960.

## 5．－Principal Commodities in Water－Borne Cargo Loaded and Unloaded at Ports Handling the Largest Tonnages in 1960

Nore．－Only commodities totalling over 50,000 tons are listed．

## Subsection 2.-Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil and grain. Facilities may include cold storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks and, in the chief harbours, dry dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board. Eleven other harbours come under the supervision of the Department of Transport and are administered by commissions that include municipal as well as Federal Government appointees. In addition, there are about 300 public harbours that are under the direct
supervision of the Department of Transport. These harbours are administered under rules and regulations approved by the Governor General in Council. Harbour masters have been appointed by the Minister of Transport for 132 of these harbours, their remuneration being paid from fees levied on vessels under the terms of the Canada Shipping Act.

At most ports, in addition to the harbour facilities operated by the operating authorities, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil and sugar industries. At several of the ports there are also dry dock facilities.

National Harbours Board.-The National Harbours Board, a Crown corporation established in 1936, is charged with the administration and operation of the following properties: port facilities such as wharves and piers, transit sheds, grain elevators, cold storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Trois Rivières, Montreal, Vancouver and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier Bridge at Montreal. These facilities represent a capital investment of approximately $\$ 340,000,000$. Current operating revenues and expenditures are given in Table 26, p. 818.

## 6.-Facilities of the Larger Harbours Administered by the National Harbours Board, as at Dec. 31, 1961

Nore.-The facilities at these ports include those under the control of other agencies as well as those of the National Harbours Board.

## Subsection 3.-Canals

The canals and canalized waters of Canada under the jurisdiction of the Department of Transport, together with those under the jurisdiction of the St. Lawrence Seaway Authority, comprise a series of waterways providing navigation for 1,875 miles inland from salt water.

The canals included under the two classifications-Seaway canals and Department of Transport canals-are listed in Table 7 with their locations, lengths and lock complement. In addition to these, the federal Department of Public Works administers the St. Andrew's

Lock (length, width and draught, respectively, 215, 45 and 17 feet) on the Red River at Selkirk, Man., and the lock at Poupore, Que. A few small locks are operated by provincial authorities.

During 1960, 52,947,000 tons of freight and 29,629 vessels passed through the canals as compared with $51,076,132$ tons of freight and 30,559 vessels during 1959. In addition to freight and passenger vessels, thousands of pleasure craft are locked through the canals. Vessels locking at Sault Ste. Marie during 1960 carried 171,932 passengers as compared with 193,721 in 1959.

## 7.-Lengths of Channels and Dimensions of Loeks under the Control of the St. Lawrence Seaway Authority or the Department of Transport

[^249]
## 8．－Traffic through Canadian Canals，by Nationality of Vessel，Navigation Seasons 1951－60

Nore．－Figures include duplications where vessels use two or more canals．Figures from 1886 are available in the corresponding table of previous Year Books beginning with the 1902 edition．

The figures in Tables 10 and 11 include duplications where the same freight passes through two or more canals，but in Table 12 duplications in the traffic passing through the St．Lawrence and Welland Ship canals and the Canadian lock at Sault Ste．Marie have been eliminated wherever possible．

Grain trans-shipped at Georgian Bay, Lake Erie, or other ports above Montreal is treated as new cargo and as most of this grain has passed through either the Canadian or United States locks at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne, Ont., or other trans-shipping port.

## 12.-St. Lawrence-Great Lakes Traffic using St. Lawrence, Welland Ship and Sault Ste. Marie Canals, 1960

| Canals Used | Up- <br> bound <br> Freight | Downbound Freight | Total |
| :---: | :---: | :---: | :---: |
|  | tons | tons | tons |
| Traffic using Canadian St. Lawrence-Great Lakes System. | 11,690,411 | 23,840,810 | 35,531,221 |
| St. Lawrence and Ottawa. |  | 279,620 | 279,700 |
| St. Lawrence and Richelieu | 4,267 |  | 4,267 |
| St. Lawrence only | 2,790,127 | 1,966,005 | 4,756,132 |
| St. Lawrence and Welland Ship | 6,011,503 | 8,437,045 | 15,448,548 |
| St. Lawrence, Welland Ship and Sault Ste. Marie | 57,920 | 207,663 | 265,583 |
| Welland Ship only ............. | 2,156,778 | 11,165,174 | 13,321,952 |
| Welland Ship and Sault Ste. Marie | 171,124 | 79,923 | 251,047 |
| Sault Ste. Marie only.. | 498,612 | 705,380 | 1,203,992 |
| Traffic using United States Locks at Sault Ste. Marie only | 9,421,712 | 80,632,290 | 90,054,002 |
| Totals | 21,112,123 | 104,473,100 | 125,585,223 |

Traffic through the Sault Ste. Marie canals, Canadian and United States, has fluctuated between a high of $128,489,000$ tons reached in 1953 and a low of $70,906,000$ tons in 1959. The dominant traffic from a tonnage aspect is iron ore which also reached its highest point in 1953 at $98,658,000$ tons, decreasing to $47,214,000$ tons in 1959 and rising to $67,938,901$ tons in 1960. Soft coal has usually been second in volume to iron ore with a volume ranging from $13,301,000$ tons in 1950 to a low of $6,389,000$ in 1958, rising to $7,361,000$ tons in 1959 and declining again to $6,964,000$ in 1960. Although wheat has generally been third in tonnage, during the three years 1958-60 it has remained in second place, totalling $7,478,000,7,496,000$ and $7,611,000$ tons, respectively. Other grains range between 40 p.c. and 60 p.c. of the wheat tonnage.

Canadian use of the Panama Canal.-The use of the Panama Canal as a transport facility for the movement of goods from one Canadian port to another is of relatively minor importance. Of the total of $4,135,000$ long tons of cargo leaving the West Coast of Canada in the year ended June 30, 1961 and passing through the Panama Canal, only 19,000 long tons were destined for Eastern Canadian ports. Similarly, of the 771,000 long tons of cargo leaving Eastern Canadian ports and passing through the Panama Canal, 28,000 long tons were destined for Western Canadian ports. The total tonnage passing through the Panama Canal and arriving in Canadian West Coast ports from any origin, Canada or elsewhere, amounted to 679,000 long tons in the year ended June 30, 1961; the total from any origin arriving at Eastern Canadian ports after having passed through the Panama Canal was 801,000 long tons.

## Subsection 4.-The St. Lawrence Seaway

Events leading up to the beginning of the St. Lawrence Seaway project and the progress made during the years of its construction are covered in the 1954 to 1959 Year Books. A special article carried in the 1956 edition (pp. 821-829) gives detailed information on Great Lakes-St. Lawrence waterway traffic immediately prior to the beginning of con-
struction on the project and another special article carried in the 1960 Year Book (pp. 851-860) covers the story of the Seaway, its new facilities and services and the movement of freight during the second year of its operation.

The St. Lawrence Seaway Authority, constituted as a Corporation by Act of Parliament in 1951 (RSC 1952, c. 242), undertook the construction (and subsequent maintenance and operation) of Canadian facilities between Montreal and Lake Erie to allow 27-foot navigation, concurrently with the construction of similar facilities in the International Rapids Section of the St. Lawrence River by the Saint Lawrence Seaway Development Corporation of the United States. The Seaway was opened to commercial traffic on Apr. 1, 1959 and officially opened on June 26, 1959. With the opening of the Seaway, certain ancillary canals were transferred to the jurisdiction of the St. Lawrence Seaway Authority for operation and maintenance purposes. These include the Lachine, a section of the Cornwall Canal, a portion of the third Welland Canal and the Canadian locks at Sault Ste. Marie. Tolls are not assessed against vessel movements on these waterways and traffic data for them are not included in this Subsection.

Tables 13 and 14 give combined traffic statistics of the St. Lawrence and Welland Canals for the year 1961. Duplicate transits are eliminated so that the figures show the actual total movement of goods through the St. Lawrence Seaway. On this basis, 5,141 ships carrying more than $10,196,000$ tons of cargo moved upbound through the Seaway in 1961 and 5,082 vessels carrying $26,011,000$ tons moved downbound. Ocean-going ships carried 21.3 p.c. of the total cargoes, lakers 78.4 p.c. and other craft 0.3 p.c. There is still evident an imbalance of loading, 56.8 p.c. of the gross registered tonnage of all vessels upbound being in ballast compared with 43.2 p.c. loaded. Downbound, however, only 12.5 p.c. of the tonnage was in ballast.

Of the total tonnage carried upbound in $1961,8,481,000$ tons were domestic cargo and $1,716,000$ foreign traffic; downbound, $20,328,000$ tons were domestic freight and $5,683,000$ tons were carried to and from foreign ports.

On the Montreal-Lake Ontario Section, upbound freight decreased 6.3 p.c. in 1961 compared with 1960 but downbound traffic increased by 31.7 p.c. This decrease in upbound traffic was accounted for almost entirely by a reduction in the volume of iron ore shipped from St. Lawrence ports to Hamilton and Lake Erie. The number of transits both upbound and downbound were 23 more in 1961 than in 1960, indicating a slight increase in the size of vessel using this portion of the Seaway and in the volume of cargo carried. Bulk cargo comprised 91.1 p.c. of the total traffic through the Montreal-Lake Ontario Section for 1961, amounting to $21,344,000$ tons compared with $18,056,000$ tons in 1960. General cargo totalled nearly $2,074,000$ tons, a decrease of 7.9 p.c. from the 1960 season. The principal commodities through the St. Lawrence canals were wheat, iron ore, corn, scrap iron and steel, bituminous coal and fuel oil. Traffic patterns according to country of origin or destination show that 38.6 p.c. of the total movement was between two Canadian ports, 29.2 p.c. moved between Canadian and United States ports and 31.7 p.c. consisted of foreign trade to and from Canada and the United States.

In the Welland Canal there were 7,747 transits in 1961 and the registered gross tonnage of all transiting vessels was $40,724,000$. Cargo volume amounted to $7,668,000$ tons upbound and $23,787,000$ tons downbound and bulk cargo accounted for 94.0 p.c. of the traffic. Although many vessels pass through both the St. Lawrence and the Welland Canals on "through" trips, there is a substantial amount of local traffic between Great Lakes ports which involves only the Welland Canal. These movements are largely iron ore, grain and coal. The Welland Canal traffic was nearly $8,000,000$ cargo tons greater than that reported for the Montreal-Lake Ontario Section.

## 13.-Summary Statistics of Total St. Lawrence Seaway Traffic, 1961

(Combined traffic of the Montreal-Lake Ontario Section and the Welland Canal, with duplications eliminated)

Income of the St. Lawrence Seaway Authority for 1961 amounted to $\$ 10,447,256$, comprising toll revenue of $\$ 8,078,448$ assessed for transits through the Seaway locks between Montreal and Lake Ontario, $\$ 1,460,450$ on transits through the Welland Canal, plus sundry revenues (rentals, wharfage, bridge revenue, etc.) amounting to $\$ 908,358$. Operating and maintenance expenses amounted to $\$ 5,401,395$ and administrative expenses were $\$ 1,616,737$, making a total of $\$ \$ 7,018,132$, excluding an amount of $\$ 272,957$ for non-toll canals. Table 15 gives toll revenue separately for the Montreal-Lake Ontario Section and the Welland Canal, variously classified for the years 1960 and 1961. Other financial statistics are given in Section_2, pp. 817-818.

Pleasure craft locked through the Montreal-Lake Ontario Section canals numbered 306 upbound and 346 downbound in 1961, and those locked through the Welland Canal numbered 69 upbound and 96 downbound.

## 15.-Toll Revenue from St. Lawrence Seaway Traffic, classifled by Type of Vessel and Type of Cargo, 1960 and 1961

Nots.-Figures are for gross tolls collected only and include United States toll funds.

## Subsection 5.-Marine Services of the Federal Government

The services covered in this Subsection deal with aids to navigation, including the maintenance of the St. Lawrence River Ship Channel, steamship inspection and pilotage service.

Aids to Navigation.-Included under aids to navigation are the lighthouses and the whole system of marine danger signals on the East and West Coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the Mackenzie River and Arctic passages, and the inland rivers and lakes-a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described at p. 814. A further aid to safe navigation is found in the chains of radio signal and direction-finding stations described under Marine Navigation at pp. 848-849. Lists of aids to navigation, with the exception of very minor ones, are published by the Department of Transport.

## 16.-Marine Danger Signals Maintained in Canada, Years Ended Mar. 31, 1960 and 1961

Note.-In addition to the aids to navigation listed, approximately 10,400 unlighted buoys, balises, dolphins and beacons are maintained. Lists of marine danger signals maintained from 1929 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

| Type of Signal | 1960 | 1961 | Type of Signal | 1960 | 1961 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. |  | No. | No. |

| Diaphones and tyfons... | 268 | 270 | buoys......................... | 138 | 136 |
| Mechanical bells and gongs | 18 | 18 | Explosive signals. | 3 | 3 |

Navigable waters have been improved greatly by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. Icebreaking operations are continuous throughout the winter. The objective is to reduce the danger of flash floods in the Montreal area during the winter caused by deep accumulations of drift ice, and to prevent flood conditions during the spring ice break-up.

St. Lawrence Ship Channel.-This channel extends from about 40 miles below Quebec City to the foot of Lachine Canal at Montreal, a distance of 200 miles. About 130 miles of this distance is dredged channel.

Above Quebec the channel has a limiting depth of 35 feet at extreme low water and a minimum width of 550 feet, with additional width up to 1,500 feet at all curves and difficult points, and additional anchorage and turning areas. Widening of the channel to a minimum width of 800 feet, commenced in 1952, is now 40 p.c. completed. This section comprises about 115 miles of dredged channel. Below Quebec the limiting depth of dredged channel, about 15 miles in length, is 30 feet at low tide, with a width of 1,000 feet. An average tidal range of 15 feet in this area provides ample depth for any vessel using the St. Lawrence route. Above Quebec, maintenance requirements as a result of silting in this dredged channel are relatively minor but below the city silting is more pronounced because of tidal action.

The ship channel is well defined by buoys and the centre marked by range lights, permitting uninterrupted day and night navigation throughout the open season from about mid-April to early December. The movements of all shipping, weather and ice conditions and obstructions to traffic throughout the St. Lawrence waterway from Fame Point, Que., to Kingston, Ont., are recorded and made available to all concerned through a series of reporting stations known as the Marine Reporting Service.

## 17.-Seasons of Open Navigation on the St. Lawrence Ship Channel, 1942-61

Nore.-Figures from 1882 are given in the corresponding table of previous Year Books beginning with the 1934-35 edition.

| Year | Channel Open, Quebec to Montreal ${ }^{1}$ |  | First Arrival from Sea, Montreal Harbour |  | Last <br> Departure for Sea, Montreal Harbour |  | Year | Channel <br> Open, <br> Quebec to <br> Montreal ${ }^{1}$ |  | First Arrival from Sea, Montreal Harbour | Lastre Departu for Sea, Montreal Harbour |  |

| 1951. |  | 11 |  | 13 |  | 13 | 1961 |  |  | " 27 | " |  |

${ }^{1}$ "Channel Open" means the route can be navigated although there may be floating ice in the river.
Steamship Inspection.-The Steamship Inspection Service was established by authority of the Canada Shipping Act. Its functions include the approval of design of the hulls, machinery and equipment of ships; inspection during construction; periodic inspection and the issue of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers employed in loading and unloading ships; the prevention from pollution of Canadian territorial waters by oil from ships; and the certification of marine engineers. The Board also looks after the interests of the Federal Government in schools for marine engineers.

The Chairman and the Board of Steamship Inspection are located at Ottawa and field offices are maintained in the principal ocean and inland ports.

## 18.-Statistics of Steamship Inspection, by Inspection Division, Years Ended Mar. 31, 1960 and 1961

Pilotage.-Pilotage service functions under the provisions of Part VI and Part VIa of the Canada Shipping Act. Wherever a pilotage district has been created by the Governor in Council, qualified pilots are licensed by the pilotage authority of the district. There are in Canada 23 pilotage districts, in 11 of which the Minister of Transport is the pilotage authority (see Table 19); in each of the other districts the authority is a local body appointed by the Governor in Council. There are also three districts that are administered jointly by Canada and the United States.
19.-Pilotage Service, by Pilotage District, Years Ended Mar. 31, 1960 and 1961

In addition there are known to be five districts in Newfoundland under the local pilotage authority. These districts continued to be administered under Newfoundland statutes after union with Canada (Mar. 31, 1949). Part VI of the Canada Shipping Act with respect to pilotage has not been proclaimed in force in Newfoundland.

## Section 2.-Financial Statistics of Waterways

The principal statistics available on the cost of facilities for water-borne traffic consist of the record of public expenditure on waterways. Such expenditure may be classified as capital expenditure, or investment and expenditure for maintenance and operation. Revenue from operation is also recorded. The major part of the capital expenditure for the permanent improvement of waterways is provided by the Federal Government. Capital expenditure by municipalities and private capital expenditure are confined almost entirely to terminal or dockage facilities. On the other hand, investment in shipping has come almost entirely from private sources. No figures are available regarding private investment in shipping except those appearing in the reports of the operating companies that cover only a portion of the field. There are no statistics showing the revenue of ship operators from passenger and freight traffic.

Capital Expenditure.-The only figures available of federal capital expenditure on Canadian waterways are those contained in the Public Accounts and the annual reports of the Departments of Transport, Public Works and Finance and in the annual report of the St. Lawrence Seaway Authority. It must be realized that such expenditure cannot be regarded as an accurate indication of the present worth of the undertakings represented. The cost of building canals and other waterways and permanent works to facilitate water transportation in Canada is represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of works that have been superseded, such as, for example, the first Welland canals and the now flooded St. Lawrence River canals. To this extent, such figures are an over-statement of the present value of the works in use. The figures are further limited by the fact that they do not include the cost of maintenance and improvements or the operation of these works, such charges having been made to the consolidated deficit account as annual expenditure and not to capital account. Thus, such capital expenditure on waterways is not included in this publication, with the exception of that made by the National Harbours Board on facilities under its jurisdiction. Capital values of the fixed assets administered by the Board are shown as at Dec. 31, 1959 and 1960 in Table 20. These figures include all buildings, machinery and durable plant improvements and have been subject to deductions for depreciation and the scrapping or abandonment of plant and therefore represent a fair approximation of the present value of the properties.

## 20.-Capital Values of Fixed Assets Administered by the National Harbours Board, as at Dec. 31, 1959 and 1960

Nore.-Compiled from the annual reports of the National Harbours Board.

Waterways Expenditure and Revenue on Consolidated Fund Account.Expenditure under this heading (Tables 22 to 24) is mainly for the operation and maintenance of various facilities for water transport but, unfortunately, the line between operation and maintenance expenditure is not as finely drawn as is desirable. Revenue in connection with waterways of the Department of Transport, the Department of Public Works and the St. Lawrence Seaway Authority is shown in Table 25.

To facilitate water transportation, the Federal Government expends annually, in addition to the recurrent expenditure shown here, a considerable amount to cover deficits of the Canadian National (West Indies) Steamships Limited and of the National Harbours Board, and for mail subsidies and steamship subventions as shown in Table 27. Operating revenue and expenditure of facilities administered by the National Harbours Board are shown separately in Table 26.

## 23.-Department of Public Works Expenditure on Waterways (Harbours, Rivers, Roads and Bridges) charged to Consolidated Fund Account, Years Ended Mar. 31, 1960 and 1961

Norz.-Compiled from the annual reports of the Department concerned by the Comptroller of the Treasury, Department of Finance. Excludes expenditures on harbours administered by the National Harbours Board as shown in Table 26.

| Year and Province or Territory | Dredging ${ }^{1}$ | Construction | Improvements and Repairs | Staff and Sundries | Total |

## PART V.-CIVIL AIR TRANSPORT

Administration.-Civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act 1919 and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Director of Civil Aviation under the supervision of the Assistant Deputy Minister, Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain regulatory functions of commercial air services (see p. 761). Part III deals with matters of government internal administration in connection with the Act.

International Air Agreements.-The position of Canada in the field of aviation as well as its geographical location makes co-operation with other nations of the world engaged in international civil aviation imperative. Canada therefore took a major part in the original discussions that led to the establishment of the International Civil Aviation Organization (ICAO) which has headquarters at Montreal, Que. A special article on The International Civil Aviation Organization and Canada's Participation Therein appears in the 1952-53 Year Book, pp. 820-827. At present Canada has 21 air agreements with other countries; the only one to be signed in 1961 was with Mexico, signed Dec. 21, to replace the former agreement with that country signed on July 27, 1953.

## Section 1.-Air Services

Air transport services may be grouped into two broad classes-Scheduled Services and Non-scheduled Services. Services in the first group are operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft, serving designated points in accordance with a service schedule and at a toll per unit. The second group includes the following:-
(1) Regular Specific Point Air Services-operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft serving designated points on a route pattern and with some degree of regularity, at a toll per unit.
(2) Irregular Specific Point Air Services-operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft from a designated base, serving a defined area or a specific point or points, at a toll per unit.
(3) Charter Air Services-operated by air carriers who offer public transportation of persons and/or goods by aircraft from a designated base, at a toll per mile or per hour for the charter of the entire aircraft, or at such other tolls as may be permitted by the Air Transport Board.
(4) Contract Air Services-operated by air carriers who do not offer public transportation but who transport persons and/or goods solely in accordance with one or more specific contracts.
(5) Flying Clubs-operated by air carriers incorporated as non-profit organizations for the purpose of furnishing flying training and recreational flying to club members.
(6) Specialty Services-operated by air carriers for purposes not provided for by any other class, such as flying training, recreational flying, aerial photography and survey, aerial pest control, aerial advertising, aerial patrol and inspection, etc.
Current operations of the two major airlines forming the nucleus of Canada's freight and passenger air service are outlined below.

Trans-Canada Air Lines.-On the threshold of its 25th anniversary, TCA in 1961 carried a record $3,712,068$ passengers and flew almost $2,500,000,000$ passenger-miles. Tonmiles of revenue commodity traffic, including express, totalled $24,091,000$ and ton-miles of mail traffic totalled $11,934,000$.

During the year, TCA introduced new North American passenger fares which gave Canadians the lowest general fare structure in the world. It began operating only DC-8 jets across the North Atlantic to Britain and Continental Europe early in the year, and introduced the turbo-prop Vickers Vanguard on transcontinental routes and on services to the United States and the Caribbean. During the summer months, TCA offered 508 transcontinental seats daily in each direction and more than 2,600 seats a week across the ocean. At the year-end, TCA was serving 59 communities in Canada, the United States, Britain, Continental Europe, Bermuda and the islands of the Caribbean over 39,000 miles of air routes.

TCA's fleet at the end of the year consisted of 10 DC-8's, 20 Vickers Vanguards, 49 Vickers Viscounts, 11 Super Constellations and two DC-3's. An additional DC-8 was delivered early in 1962 and all Super Constellations were retired from scheduled service. Three more Vanguards were scheduled for delivery in 1962 and four Douglas DC-8F's for delivery in 1963.

${ }^{1}$ Express and excess baggage.
${ }^{2}$ Includes other revenue.

Canadian Pacific Air Lines Limited.-Canadian Pacific Air Lines operates a 45,287 -mile route pattern linking five continents as well as major cities in Canada. This pattern comprises 6,900 domestic route miles, including 2,450 miles on Canadian mainline service.

In 1961, CPA carried 380,919 passengers, a greater number than in any other year since the company's inception in 1942. The increase in passenger load, on both domestic and international routes, amounted to 10.9 p.c. over 1960 . As a result of this increase in the number of passengers carried, the revenue passenger-miles showed a corresponding advance to 603,481,033-a 10.1-p.c. increase over 1960.

CPA's international routes, 37,600 miles in extent, operate from Vancouver to Honolulu, Fiji, New Zealand and Australia on the South Pacific service; to Japan and Hong Kong via the Great Circle Route across the North Pacific; from Vancouver, Calgary and Edmonton to Amsterdam via the Polar Route; and across the Atlantic from Montreal to Portugal, Spain and Italy. A South American network serves Mexico City, Lima, Santiago and Buenos Aires. Three services link Mexico with Windsor, Toronto and Montreal in Eastern Canada and Vancouver in the West. In Canada, CPA operates a mainline transcontinental service linking Vancouver, Winnipeg, Toronto and Montreal and a domestic network of north-south routes in British Columbia, Alberta and the Yukon Territory.

CPA's fleet of aircraft consists of four Super DC-8's, six Bristol Britannias, two DC-6B's, five Convair 240's, three DC-3's and two C-46's. The international routes are served by the DC-8 jetliners and the Bristol Britannias.

Independent Airlines.-In addition to the two major Canadian air carriers-Trans-Canada Air Lines and Canadian Pacific Air Lines Limited-there are four domestic air carriers licensed to operate scheduled commercial air services in Canada, namely, Maritime Central Airways Limited, Charlottetown, P.E.I.; Quebecair, Inc., Rimouski, Que.; TransAir Limited, Winnipeg, Man.; and Pacific Western Airlines Limited, Vancouver, B.C.

Licensed Canadian air carriers operating in Canada as at Mar. 31, 1961 held valid operating certificates covering 43 scheduled, 140 flying training, and 1,153 other non-scheduled and specialty services. These non-scheduled services, in addition to providing effective access to sections of Canada that are inaccessible by other means of transportation, act as feeder lines to the scheduled airlines. They also include such specialty services as recreational flying, aerial photography and surveying, aerial pest control, aerial advertising and aerial patrol.

Maritime Central Airways Limited.-Maritime Central Airways operates throughout the Atlantic Provinces, the Gulf of St. Lawrence area and the Eastern Arctic, serving Charlottetown and Summerside in Prince Edward Island; Moncton in New Brunswick; New Glasgow and Halifax in Nova Scotia; Stephenville, Gander and St. John's in Newfoundland; Goose Bay and Saglek in Labrador; Frobisher in the Northwest Territories; the Magdalen Islands and Sept Iles in Quebec; and the French Islands of St. PierreMiquelon in the Atlantic.

The Airways fleet consists of two DC-4's, four C-46's, four DC-3's and two Beechcraft. Two Handley Page Dart Heralds will be placed in operation in the summer of 1962. The company operates daily scheduled flights throughout the above area and carries on an extensive contract freight operation between the Atlantic Provinces and the Eastern Arctic; the latter service accounts for a large portion of the company's revenue.

Quebecair, Inc.-Quebecair, a privately owned commercial airline with headquarters at Rimouski, serves various points in the Province of Quebee including Montreal, Quebec, Saguenay, Rivière du Loup, Rimouski, Mont Joli, Sept Iles, Wabush, Schefferville, Gagnon, Baie Comeau, Forestville and Manicouagan. No point served is more than five flying hours from Montreal.

The company began operations in 1946 under the name of Rimouski Aviation Syndicate and was incorporated under the name of Rimouski Airlines in 1947. At the beginning of 1954, the newly created Rimouski Airlines bought out Gulf Aviation and formed Quebecair. Since then, passenger service has multiplied six times, air mail carried fourteen times and freight carried sixteen times. The number of passengers flown in 1961 was 108,647 and the amount of freight carried totalled $3,831,135 \mathrm{lb}$.

The Quebecair fleet consists of five DC-3's, three F-27's, and one C-46 cargo aircraft.
Pacific Western Airlines Limited.-Pacific Western Airlines Limited, with head office at Vancouver International Airport, is one of the largest independent air carriers in Canada. Total route miles in the system is close to 7,200 and services operated include scheduled mainline, local regular unit toll and charter flights in Saskatchewan, Alberta, Yukon Territory, the Northwest Territories including the Arctic Islands, and British Columbia.

Regularly scheduled mainline services are operated by Pacific Western northbound from Edmonton to Peace River, McMurray, Uranium City, Fort Smith, Fort Resolution, Fort Vermilion, Hay River, Yellowknife, Fort Simpson, Wrigley, Norman Wells and Inuvik. Regular local services are flown from Yellowknife to Cambridge Bay; and from Inuvik to Aklavik to Fort McPherson to Arctic Red River. Local services also originate from Norman Wells to Fort Good Hope, Fort Norman, Wrigley and Fort Simpson; and from Yellowknife to Rocher River, Port Radium, Coppermine and Bathurst.

On the prairies, mainline service is scheduled between Regina, Saskatoon, Prince Albert, North Battleford and Edmonton. On the Pacific Coast, mainline services are operated from Vancouver to Comox, Powell River, Campbell River, Tofino and Port Hardy and local services are operated between Prince Rupert, Stewart, Ford's Cove, Anyox, Maple Bay and Alice Arm in northern British Columbia. In addition, charter services are operated out of Vancouver, Nelson, Kamloops, Prince George, Terrace and Prince Rupert; in the Northern Division from Edmonton, Peace River, Fort Smith, Hay River, Yellowknife, Inuvik and Cambridge Bay.

Aircraft operated by Pacific Western number 48 and range from DC-4's, Super 46's and DC-3's on mainline services, to Otters, Beavers and Cessnas on charter and freight flights. Revenue passengers carried in 1961 totalled 149,903, freight and express carried amounted to $18,403,781 \mathrm{lb}$. and miles flown numbered $5,725,104$.

TransAir Limited.-TransAir Limited operates scheduled, charter and sportsmen's flights in Manitoba, Ontario and the Northwest Territories as well as in the State of Minnesota, U.S.A. Thirty aircraft are in service from headquarters in Winnipeg and a major base at Churchill. Scheduled flights also originate from bases at Pickle Lake and Sioux Lookout in Ontario, Lac du Bonnet, Norway House, Flin Flon, Lynn Lake and Wabowden, in Manitoba, to adjacent points. The airline has scheduled DC-3 and DC-4 services over 2,852 unduplicated route miles. Mainline stops are made at Winnipeg, Dauphin, The Pas, Flin Flon, Lynn Lake, Churchill, Thompson, Red Lake, Winisk, Ottawa, Montreal and International Falls. TransAir also has regular flights between Churchill and Rankin Inlet, Baker Lake and Coral Harbour in the Northwest Territories. From its Winnipeg and Churchill bases, TransAir operates the vertical re-supply flights to the four main sites in the Canadian Sector of the Distant Early Warning Line. The company's head office is at Winnipeg International Airport.

Commonwealth and Foreign Scheduled Commercial Air Services.-At the end of 1960 there were 18 Commonwealth and foreign air carriers holding valid Canadian operating certificates and licences covering international scheduled commercial air services operating into Canada, as follows:-

Air France (Compagnie Nationale Air France) operates between Paris and other points in Metropolitan France, Montreal Canada, Chicago and Los Angeles U.S.A., and points beyond.
Alitalia Airlines operates between Rome Italy, Milan Italy, Montreal Canada and Chicago U.S.A.

American Airlines, Inc. operates between Toronto Canada, and New York/Newark, via Buffalo U.S.A.
British Overseas Airways Corp. operates between London England, Manchester England, Prestwick Scotland, Shannon Ireland, Gander Canada, Montreal Canada, and Toronto Canada; and between London England, Montreal Canada, and Bermuda, the Bahamas and Jamaica.
Eastern Air Lines, Inc. operates between the terminals Ottawa Canada and Montreal Canada and New York U.S.A., direct or via Burlington Vt., U.S.A.; and between the terminals Ottawa Canada and Montreal Canada, and Washington U.S.A., direct or via Massena and/or Syracuse N.Y., U.S.A.
KLM Royal Dutch Airlines operates between Amsterdam the Netherlands, and Montreal Canada.
Lufthansa German Airlines operates between Hamburg Germany and other points abroad, Montreal Canada and San Francisco U.S.A.
North Central Airlines, Inc. operates between Duluth, Minn./Superior, Wis., Hancock/Houghton, Mich., U.S.A., and Port Arthur/Fort William Canada.
Northeast Airlines, Inc. operates between Montreal Canada, and Boston U.S.A., via Burlington, Vt., Montpelier-Barre, Vt., White River Junction, Vt. (Lebanon Airport, N.H.), and Concord, N.H., U.S.A.
Northwest Airlines, Inc. operates between Winnipeg Canada, and Fargo, N.D., U.S.A.; and between Minneapolis/St. Paul U.S.A., Edmonton Canada, Anchorage Alaska, and beyond.

[^250]Flying Schools and Clubs.-At the end of 1961, 79 commercial flying schools were registered as members of the Air Industries and Transport Association. During the year, these schools instructed and graduated 1,638 students as private pilots and 142 students as commercial pilots.

Membership in the 39 flying clubs connected with the Royal Canadian Flying Clubs Association numbered 10,504 at the end of 1961. During the year these clubs instructed and graduated 1,473 students as private pilots and 90 students as commercial pilots.

Weather Services.-Weather services are provided by the Meteorological Branch, Department of Transport, to meet the demands of the general public and all basic economic endeavours such as agriculture, industry, forestry, shipping and fishing. Meteorological service is provided to national and international aviation. The military meteorological requirements in Canada and overseas are met by special co-operative arrangements with the Department of National Defence. The observing and forecasting of ice conditions in navigable waters, both inland and coastal, are rapidly expanding services.

There are 53 forecast offices in Canada, one on shipboard and four in Europe. Forecast offices are linked by 54,000 miles of teletype and radio-teletype circuits, and a national facsimile system 13,000 miles long is used for the distribution of meteorological information in chart form. As of Jan. 1, 1962, the Branch maintained 270 surface synoptic and hourly weather reporting stations, a network of 31 radiosonde stations including five in the Arctic operated jointly with the United States, 87 stations recording upper winds, and 1,732 climatological stations. One Ocean Weather Station in the Pacific, 1,000 miles west of Vancouver, is maintained under International Agreement. (See also pp. 43-44.)

Ground Facilities.-Aircraft landing areas in Canada are classified in Table 3 by administrative agency, as licensed or unlicensed land facilities or seaplane bases, and military air fields. The unlicensed aerodromes and seaplane bases shown are kept in varying degrees of readiness but lack one or more of the facilities usually found in licensed airports, such as lights, passenger accommodation, ground/air communication, etc. Associated with these facilities is a network of radio aids to navigation designed to facilitate en route navigation and safe landings under low visibility conditions.

As at February 1962, the Department of Transport operated 93 low frequency radio ranges ( 12 of which were scheduled to be downgraded to non-directional radio beacons during 1962) and 34 VHF omni-directional ranges ( 13 additional ranges were under construction). Instrument landing systems in operation totalled 35 (one of which was scheduled for decommissioning and 12 additional systems were under construction) and there were 155 non-directional radio beacons in operation (an additional 31 were under construction). These facilities are regularly calibrated and flight-checked by civil aviation inspectors.

## 3．－Aircraft Landing Areas classified by Type of Facility and Operator，by Province， as at February 1962

Air Traffic Control．－The primary functions of the Air Traffic Control Division of the Department of Transport are to expedite and maintain an orderly flow of air traffic and to prevent collision between aircraft operating within controlled air space，and between aircraft and obstructions on the movement area of controlled airports．This is accom－ plished through airport control，terminal control and area control services，together with flight information，alerting for search and rescue，customs notification and aircraft identifi－ cation．These services are described below．

Airport Control is designed particularly to provide air traffic control service in the vicinity of major civil airports where the volume and type of aircraft operations，weather conditions and other factors indicate its need in the interests of safety．The service includes the control of pedestrians and vehicles on the manoeuvring area of the airport．Control is effected by means of direct radiotelephone communication or visual signals to aircraft and surface vehicles on and in the vicinity of controlled airports．The control towers are located at Whitehorse，Y．T．，Victoria（International），Port Hardy，Abbotsford and Vancouver，B．C．；Lethbridge，Calgary，Edmonton（Municipal）and Edmonton（Inter－ national），Alta．；Saskatoon and Regina，Sask．；Winnipeg（International），Man．；Lakehead， Windsor，London，Toronto Island，Toronto（International），Ottawa and North Bay，Ont．； Montreal（International），Cartierville，Quebec，Val d＇Or，Baie Comeau and Sept Îles， Que．；Moncton，Fredericton and Saint John，N．B．；Halifax（International）and Sydney， N．S．；Gander，Nfld．；and Frobisher，N．W．T．Most of the control towers are in con－ tinuous operation but a few provide 16 －hour daily service only．
Terminal Control service consists of the provision of standard IFR separation to aircraft oper－ ating in accordance with Instrument Flight Rules within the local terminal control area， （which is generally within a 30 －mile to 40 －mile radius of the airport）．Such service is provided by terminal control units at Vancouver，B．C．；Edmonton and Calgary，Alta．； Saskatoon and Regina，Sask．；Winnipeg，Man．；Lakehead，Toronto，Ottawa and North Bay，Ont．；Quebec and Montreal，Que．；Halifax（International），N．S．；Gander，Nfld．；and Frobisher，N．W．T．

Area Control is designed particularly to provide air traffic control service to aircraft operating within controlled airspace during weather conditions which prevent a pilot from seeing other aircraft or obstructions and necessitate his reliance on instruments to conduct the flight. Control centres are located at Vancouver, B.C.; Edmonton, Alta.; Winnipeg, Man.; Toronto, Ont.; Montreal, Que.; Moncton, N.B.; and Goose Bay and Gander, Nfld. Each centre is connected with the control towers, radio range stations and operations offices within its area by means of an extensive system of local and long-line interphone or radio circuits, and through the radio communication facilities available at these offices to all aircraft requiring area control service. Each area control centre is similarly connected with the adjacent centres, including centres in the United States, for the purpose of coordinating the control of aircraft operating through more than one control area. This communications system permits each centre to maintain a continuous detailed record of the movements of all aircraft operating in accordance with the Instrument Flight Rules, and a general record of the movements of all aircraft operating in accordance with Visual Flight Rules within its control area. In addition to providing area control service to aircraft operating within the controlled airspace over Newfoundland, the Goose and Gander control centres provide this service within the airspace over approximately onehalf of the North Atlantic Ocean. The Vancouver area control centre also provides control service over the Pacific Ocean within the Vancouver Oceanic Control Area. Area control service is provided for approximately 16,000 miles of airways and control channels.
Radar Service aids in the control of both terminal and en route IFR traffic at certain locations. Terminal radar service is provided by the following terminal control units: Vancouver, B.C.; Calgary and Edmonton, Alta.; Regina and Saskatoon, Sask.; Winnipeg, Man.; Lakehead, Toronto and Ottawa, Ont.; Montreal and Quebec, Que.; Halifax, N.S.; and Gander, Nfld. In addition to an en route radar facility located at Kenora, Ont., further en route radar control service is provided by the following area control centres: Goose and Gander, Nfld.; Moncton, N.B.; Montreal, Que.; Winnipeg, Man.; and Vancouver, B.C.
Flight Information provides advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field condition reports, data concerning aids to navigation, traffic information, refuelling and transportation facilities and other related data of assistance to the pilot in planning or conducting a flight. Such service is provided by all air traffic control units but particularly by the eight area control centres.
Alerting for Search and Rescue is designed to ensure that the appropriate organizations are notified of aircraft in need of search and rescue aid and otherwise to alert such organizations promptly of non-arrival at destination of any aircraft for which a flight plan or flight notification has been received. This requires the maintenance and constant supervision of a continuous record of active flights to ensure that non-arrival of any aircraft is detected immediately. The service is available to any pilot who files either a flight plan or a flight notification with any communications agency of the Air Services of the Department or directly with one of the area control centres or control towers.
Customs Notification Service facilitates the routine notification of the appropriate customs agency by pilots who plan to cross the Canada-United States boundary. The Air Traffic Control communications system and units concerned therewith forward pilot requests to notify the customs officer at the airport of destination.
Aircraft Movement Information Service is provided by area control centres to assist the Department of National Defence in establishing the identification of all aircraft operating within specified areas.

The number of controlled operations in Canada during 1961 was 2,409,099.

## Section 2.-Civil Aviation Operation Statistics

Table 4 gives data on miles and hours flown, traffic carried, fuel and oil consumed, employees, salaries and operating revenues and expenses, by type of service, for Canadian air carriers followed by summary statistics for both Canadian and foreign air carriers operating in Canada. Figures for Canadian carriers include domestic and international operations, and figures for foreign companies cover miles and hours flown over Canadian territory only and exclude passengers and goods in transit through Canada. Unit toll service refers to the transportation of passengers or goods at a toll per unit, whereas bulk service is the transportation of passengers or goods at a toll per mile or per hour for the entire aircraft. Other flying services comprise non-transportation services such as flying training, aerial photography and aerial patrol and inspection.

${ }^{1}$ Includes other flying services.
Summary statistics of Canadian and foreign commercial air carriers, by type of carrier, are given for 1960 in Table 5. No breakdown between the domestic and the international operations of the Canadian carriers is available for bulk services. For the foreign carriers, hours and miles reported are those flown over Canadian territory only and passengers and goods in transit through Canada are excluded.

It is interesting to note that 90.5 p.c. of all revenue passengers carried in 1960 were transported on unit toll service and that 55.7 p.c. were transported on domestic services of Canadian scheduled carriers. On the other hand, 51.6 p.c. of all freight carried was transported on unit toll service and 45.0 p.c. by the non-scheduled Canadian carriers.

Table 9 shows the number of civil air personnel and airport licences in force and the number of civil aircraft registered at the end of each of the years 1956 to 1960.
9.-Personnel and Airport Licences in Force and Aircraft Registered as at Dec. 31, 1956-60

## PART VI.-OIL AND GAS PIPELINES

A special article covering the history and development of pipeline construction in Canada appears in the 1954 Year Book at pp. 861-869. Additional information has been carried in each succeeding edition and the following Section brings pipeline development up to the end of 1961.

## Section 1.-Pipeline Developments*

Oil Pipelines.-Almost all of the important oil-producing countries rely on pipelines to transport oil from producing regions to markets or to ocean ports for trans-shipment. In some countries the distances are small; in others, such as Canada, the distances are great and pipelines constitute the only means of providing economic access to consuming areas. In most cases crude oil, rather than petroleum products, is transported long distances because refineries that produce petroleum products are generally market-oriented.

The gathering and trunkline systems that make up the Canadian pipeline network total about 9,500 miles of pipe. There are two major arterial systems, both originating in the chief oil-producing province of Alberta at Edmonton. One extends eastward as far as Toronto and the other southwestward to Vancouver and the State of Washington.

In 1961, about 1,000 miles of new oil pipeline were laid in Canada. This was the greatest milage laid in one year since 1953, although no very large diameter lines were built.

An important new pipeline was completed in British Columbia, providing British Columbia's oil fields with pipeline access to the Vancouver market for the first time. This line, owned by Western Pacific Products \& Crude Oil Pipelines, Ltd., consists of 504 miles of 12 -inch pipe running from Taylor in northeastern British Columbia to Kamloops where it joins the Trans Mountain pipeline and is served partly by the previously built system of Trans-Prairie Pipelines, Ltd. This company had laid 169 miles of pipe in northeastern British Columbia by early 1961, providing pipeline connections between Taylor, where the Western Pacific line begins, and the Boundary Lake, Peejay, Milligan Creek, Beatton River, and Beatton River West fields. Also serving the Western Pacific pipeline is a new $66-\mathrm{mile}$, eight-inch line from the Blueberry field to Taylor, owned by British Columbia Oil Transmission Co., Ltd.

Peace River Oil Pipe Lines Co. Ltd. laid the longest oil pipeline in Alberta in 1961, to connect the Kaybob field with Edmonton by 161 miles of 12 -inch pipe. The system has an eight-mile, eight-inch lateral from the Windfall field. Rimbey Pipe Line Company Ltd. installed a 64-mile eight-inch line from the large new Rimbey gas processing plant to Edmonton for delivering natural gas liquids. Rangeland Pipe Lines Company Limited built a 41 -mile pipeline to transport natural gas liquids from the Waterton and Pincher Creek fields to the proposed new half-mile export line of the Aurora Pipe Line Company near Carway, Alta. In the United States, the Continental Oil Company was awaiting presidential approval at the end of 1961 to construct the Aurora pipeline across the AlbertaMontana boundary to connect with the United States Glacier pipeline system.

Interprovincial Pipeline.-The system of the Interprovincial Pipe Line Company is Canada's longest oil pipeline. The line extends from the Redwater field, 29 miles northnortheast of Edmonton, through the main terminal at Edmonton, to Port Credit near Toronto, a right-of-way distance of 1,928 miles. This includes the portion of the line passing through the United States which is operated by Interprovincial's wholly owned subsidiary, the Lakehead Pipe Line Company Incorporated. The Interprovincial system has various throughput capacities in different sections of the system to meet market requirements; the maximum is $434,000 \mathrm{bbl}$. per day near Gretna, Man.

The efforts made by industry and government to encourage greater use of Canadian crude oil in Ontario and the Great Lakes region of the United States proved highly beneficial to Interprovincial Pipeline in 1961. Deliveries of crude and natural gas liquids averaged 399,816 bbl. daily, 14.4 p.c. more than for the preceding year. Of the total deliveries, 55 p.c. were to Ontario, 23 p.c. to the United States, and 22 p.c. to the western provinces.

[^251]Trans Mountain Pipeline.-The system of Trans Mountain Oil Pipe Line Company extends from Edmonton to Vancouver, enabling West Coast refineries to use Alberta crude oil in place of foreign crude brought in by tanker. The line was completed in 1953 and consists of 718 miles of 24 -inch pipe. Crude oil is piped to refineries at Vancouver and at Ferndale and Anacortes in the State of Washington. The extensions to the United States were built in 1954 and 1955. Although the pumping capacity of the line is $250,000 \mathrm{bbl}$. per day, the average daily throughput for the five-year period from the beginning of 1957 until the end of 1961 was 121,000 bbl., with annual average daily throughputs varying from a low of $81,000 \mathrm{bbl}$. per day in 1958 to a maximum of 156,500 bbl. per day in 1961 . In addition to taking deliveries at Edmonton, Trans Mountain receives crude at Edson, Alta., from the Peace River pipeline which serves the Sturgeon Lake, Kaybob and Simonette areas, and at Kamloops from the recently completed pipeline of Western Pacific Products \& Crude Oil Pipelines, Ltd., which delivers oil from fields in northeastern British Columbia.

Other Oil Pipelines.-Federated Pipe Lines Ltd. has a 123-mile main line which delivers crude oil from the Swan Hills group of fields to the Edmonton pipeline and refinery centre. Pembina Pipe Line Ltd. serves the Pembina and Willesden Green fields, also delivering their crude to Edmonton. Britamoil Pipe Line Company Limited operates a pipeline that originates 140 miles south of Edmonton in the Drumheller area and gathers crude from several fields en route to Edmonton. The Imperial Pipe Line Company Limited has four systems that serve the fields in the Edmonton area including Leduc-Woodbend, Golden Spike and Redwater. Many fields between Edmonton and Calgary are served by a composite pipeline owned by three companies: Texaco Exploration Company, which owns the Edmonton-Rimbey section; Rangeland Pipe Lines Company Limited, the Rimbey-Sundre section; and Home Oil Company Limited-Cremona Pipeline Division, Sundre to Calgary. There are also numerous shorter or smaller-diameter oil pipelines in Alberta.

In Saskatchewan, Producers Pipelines Ltd. and its wholly owned subsidiary Westspur Pipe Line Company gather crude from most of the fields in the southeastern part of the province and deliver it to the Interprovincial pipeline at Cromer, Man. Trans-Prairie Pipelines, Ltd. has three systems which serve separate areas: the Weyburn field in southeastern Saskatchewan, connected to Westspur by one system; fields in southwestern Manitoba, linked to Interprovincial by another; and five fields in northeastern British Columbia served by the company's third system. The trunk and gathering system of South Saskatchewan Pipe Lines Company delivers oil from the group of fields in southwestern Saskatchewan to Moose Jaw, Regina and the Interprovincial pipeline at Regina.

Pipeline Tariffs.-The changing pattern of crude oil distribution to the West Coast in 1961 resulted in Trans Mountain Oil Pipe Line Company altering some tariff rates on Jan. 1, 1962. Because of the growing importance of the export market, the rate from Edmonton to Puget Sound refineries in the State of Washington was reduced two cents to equalize it with the Edmonton-Vancouver rate; the latter remained unchanged. Trans Mountain had to cut its tariff rate from Edmonton to Kamloops by five cents to equalize the delivered price of Alberta oil at Kamloops with that of British Columbia oil delivered there by the new Western Pacific pipeline. Interprovincial Pipe Line Company retained the tariff rates it had set late in 1960. Some examples of tariffs for the two major systems follow.

| Route | Transmission Distance | Tariff as of Jan. 1, 1962 |
| :---: | :---: | :---: |
|  | miles | ots. per bbl. |
| Edmonton, Alta., to mil |  |  |
| Regina, Sask. | 438 | 20 |
| Superior, Wis., U.S.A. | 1,098 | 37 |
| Sarnia, Ont.. | 1,743 | 50 |
| Port Credit, Ont. | 1,899 | 54 |
| Kamloops, B.C. | 510 | 33 |
| Vancouver, B.C. | 718 | 40 |
| Anacortes, Wash., U.S.A | 740 | 40 |

Natural Gas Pipelines.-The year 1961 was the most important period for gas pipeline installation since the completion of the Trans-Canada pipeline in 1958, mainly because of the construction of the Alberta-to-California pipeline. The laying of the new pipeline was started in October 1960 and completed in November 1961. Natural gas started flowing into the United States in December. The cost of the complete system was more than $\$ 300,000,000$, nearly half being expended on the Canadian portion. The system consists of 1,243 miles of 36 -inch line from Rocky Mountain House, Alta., to San Francisco, Cal., and 125 miles of 30 -inch from Rocky Mountain House north to Whitecourt, Alta. The Alberta Gas Trunk Line Company Limited owns the 351 -mile section in Alberta, plus 221 miles of new feeder laterals. The 107 -mile section of the line which crosses southeastern British Columbia from the Crowsnest Pass area to Kingsgate is owned by Alberta Natural Gas Company. The two companies exporting natural gas through this pipelineAlberta and Southern Gas Co. Ltd. and Westcoast Transmission Company Limitedtogether are allowed to export a maximum of $610,800 \mathrm{Mcf}$. per day at the British ColumbiaIdaho boundary. This amount is about one-half the ultimate throughput capacity of the pipeline. A 66-mile pipeline passes through the Waterton field and close to the Pincher Creek field to the Montana boundary near Cardston, Alta. This line will serve CanadianMontana Pipe Line Company Limited, which has a licence to export a maximum of 36,000 Mcf. daily along this route. Numerous smaller pipeline systems were installed in Western Canada during 1961, such as the extensive gathering system completed to serve the large new gas plant of Petrogas Processing Ltd. near Calgary. In Saskatchewan, Saskatchewan Power Corporation was the most active builder, constructing an 88 -mile line from Hatton to Success and adding smaller lines elsewhere.

Trans-Canada Pipe Lines Limited.-The Trans-Canada pipeline, completed in 1958, is the longest pipeline system in Canada, extending 2,145 miles from Burstall on the AlbertaSaskatchewan boundary to Montreal, Que. In addition, there are 145 miles of lateral lines and a 50 -mile lateral completed in 1960 which delivers gas from the main line at Winnipeg to the United States near Emerson, Man. This lateral, Trans-Canada's only export line, had its first full year of operation in 1961, with $59,139,000 \mathrm{Mcf}$. exported during the year. Total sales by the company were $210,400,000 \mathrm{Mcf}$. in 1961, 65 p.c. above the 1960 volume. The system has 18 compressor stations with a total capacity of $196,510 \mathrm{hp}$. Trans-Canada Pipe Lines Limited operates no pipelines in Alberta but is supplied through the extensive network of The Alberta Gas Trunk Line Company.

Westcoast Transmission Company Limited.-The Westcoast Transmission pipeline, which was completed in October 1957, connects the producing fields of the Peace River district of British Columbia and adjacent areas in Alberta with consuming regions in central and southern British Columbia and with a United States pipeline on the Washing-ton-British Columbia boundary. The completed pipeline consists of 930 miles of trunk and gathering lines, including 650 miles of 30 -inch main line from Taylor in northeastern British Columbia to Huntingdon at the Washington-British Columbia boundary. The ultimate throughput capacity of the present main line, after installation of more compression equipment, will be 660,000 Mcf. per day. In 1961, peak daily deliveries were approximately 460,000 Mcf. Exports of natural gas to the United States through the Westcoast pipeline averaged $233,000 \mathrm{Mcf}$. daily for the year. In addition the company began moving gas from southern Alberta to Idaho, Washington and Oregon in December through the AlbertaCalifornia pipeline.

Other Gas Pipelines.-The Alberta Gas Trunk Line Company has the longest systems of gas pipelines in Alberta. The plains division has trunk lines running from the Home-glen-Rimbey and Nevis areas in the north and from Pincher Creek in the southwest to Princess, from whence a short line runs eastward to join the Trans-Canada pipeline at the Saskatchewan boundary. The newly completed foothills division, discussed earlier, serves the Alberta-California pipeline. In British Columbia, the British Columbia Electric Company Limited provides natural gas service to the Vancouver and lower mainland areas,
and Inland Natural Gas Co. Ltd. serves the southern interior region. Saskatchewan Power Corporation has an extensive pipeline system in Saskatchewan, which serves almost all centres of population in the province. In Manitoba, Greater Winnipeg Gas Company distributes natural gas in the Winnipeg area. Union Gas Company of Canada Limited serves southwestern Ontario in the Windsor, London, Sarnia and Chatham areas. Consumer's Gas Limited distributes gas in Metropolitan Toronto and in the Niagara Falls, Peterborough and Barrie regions as well as the Ottawa valley. The Montreal area is served by Quebec Natural Gas Limited, and Hull is served through a line from Ottawa by Société Gazifère de Hull. The gas pipeline companies in Eastern Canada receive nearly all their gas from the Trans-Canada pipeline, although a small amount of gas is imported directly into Ontario from the United States.

## Section 2.-Pipeline Statistics

Oil Pipeline Statistics.*-There were 41 oil pipeline companies operating in Canada at the end of 1961. Pipeline deliveries shown in Table 1 were made to non-pipeline carriers, foreign pipelines, and terminals including refineries and distributing centres.

Revenue and employee data shown in Table 2 are not complete; both revenue and employee figures have been omitted for some companies, since pipeline operation forms only a part of the activities of these establishments and the data are not separable.

[^252]
## 2.-Operating Statistics of Oil Pipelines, 1958-61

Gas Pipeline Transport Statistics.-The gas pipeline transport industry became a significant factor in the Canadian economy in 1957, with the completion of the first of several extensive pipelines constructed to transport natural gas from the field or processing plant to distribution outlets. The first detailed statistics for the industry cover the year 1959. Companies included are those that obtain the bulk of their revenue from the sale of gas to distribution companies for resale; those that derive most of their revenue from the sale of gas to final consumers are not included.

During 1961, Canadian transmission lines increased their net deliveries of natural gas by 37.7 p.c. to a total of $401,079,119 \mathrm{Mcf}$. from $291,164,211 \mathrm{Mcf}$. in 1960. Deliveries to distribution systems increased 27.2 p.c. and deliveries to foreign transmission lines 54.5 p.c. Deliveries averaged $1,098,847$ Mcf. per day in 1961 compared with 795,531 Mcf. in 1960.

Receipts of natural gas were mainly from domestic sources-only 1.4 p.c. was imported. Imports were down slightly to $5,480,890 \mathrm{Mcf}$. from the 1960 total of $5,550,597$ Mcf., while gas received from gathering systems increased to $393,652,677$ Mcf. from 279,651,100 Mcf.

Operating revenues increased 41.2 p.c. to $\$ 138,516,655$ in 1961 from $\$ 98,083,659$ in 1960.

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

Communications media in Canada have been shaped to meet the needs of the country. Great networks of telephone, telegraph and radio services, inextricably bound together, provide adequate and efficient service which, in this era of electronic advancement, is under continual technological change and development. The familiar challenges of the country-its size, its topography, its climate, its small population-which have reared their heads in other areas of development, have had to be faced as well in the field of communications. That these have been overcome is evidenced by the fact that today Canada possesses communication facilities and services second to none in the world.

## Section 1.-Telecommunications*

During the past half-century, Canada has experienced tremendous economic expansion. Population growth and the advance to new industrial frontiers have been matched by an upward surge in national productivity and general standard of living. Continuing development of Canada is dependent on both individual pioneering and the co-operative efforts of many industries and the telecommunications industry is filling a vital role in this drama of growth.

Business and industry have expanded and ventured into isolated areas assisted and promoted by Canadian telecommunications industries which have anticipated the needs of the future with vast programs of development in virgin territories. Technological development has been particularly important to the extension of telecommunications in Canada. To meet the demands placed upon it, the industry has constantly introduced newer and better equipment, tools and methods of operation. In the growth of urban centres, the development of rural communities and the pioneering of new territory, Canadian telecommunications agencies have constantly sought to provide the highest quality of service for the greatest number of people. The major railways, the hundreds of co-operating telephone companies, the radio and television companies and federal communications organizations work together with a common purpose, building networks of telecommunications from coast to coast. They provide such familiar services as telephone, telegraph, teletype, radio and television, and many other related means of communication; in addition, mutual co-operation has allowed them to satisfy a variety of defence needs.

[^253]
## Subsection 1.-Government Control over Telecommunications Agencies

Telephone and telegraph companies incorporated under the Federal Government are subject to the jurisdiction of the Board of Transport Commissioners in the matter of rates and practices under the provisions of the Railway Act (see pp. 759-761); other companies are responsible to provincial regulatory bodies. International telegraph and telephone communications are handled subject to the International Telecommunication Convention and the Regulations thereunder and/or under regional agreements. Tolls charged to the public for radio communication service are subject to the provisions of the Regulations made under the Radio Act. Overseas cables landed in Canada are subject to the External Submarine Cable Regulations under the Telegraphs Act.

Radio communications in Canada, except for those matters covered by the Broadcasting Act, are regulated under the Radio Act and Regulations and also under the Canada Shipping Act and Ship Station Radio Regulations. In addition, radio communication matters are administered in accordance with the International Telecommunication Convention and Radio Regulations annexed thereto; the International Civil Aviation Convention; the International Convention for the Safety of Life at Sea; the Inter-American Telecommunication Convention and the Convention between Canada and the United States of America relating to the operation by citizens of either country of certain radio equipment or stations in the other country; and also in accordance with such regional agreements as the agreement between Canada and the United States for the promotion of safety on the Great Lakes by means of radio, the Inter-American Radio Agreement and the North American Regional Broadcasting Agreement (see also pp. 847-848).

National radio broadcasting in Canada entered its present phase in 1936 when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission. The Act gave the Corporation wide powers in the operation of the system and gave to the Minister of Transport the technical control of all broadcasting stations.

During 1958 the Government established a Board of Broadcast Governors and the Canadian Broadcasting Corporation Board of Governors was abolished. The Board of Broadcast Governors regulates the establishment and operation of networks of sound and television broadcasting stations, the activities of public and private broadcasting stations and the relationship between them, in the interest of providing a national broadcasting service of high standard, basically Canadian in content and character. While the Minister of Transport is the licensing authority under the Radio Act, the Broadcasting Act requires that applications for broadcasting station licences or for any change in an existing broadcasting station be referred to the Board of Broadcast Governors for its recommendation before being dealt with by the Department.

## Subsection 2.-Telephones

Alexander Graham Bell first transmitted human speech through electrically energized equipment in March 1876, and in August of the same year a one-way call from Brantford to Paris in Ontario marked the first successful long-distance test of the new invention Soon after the instrument was perfected, telephone exchanges sprang up in many Canadian communities, sometimes two competing companies in one place. As a result, in April 1880 The Bell Telephone Company of Canada was established by Act of Parliament and authorized as the official agent for telephone service in thirty-two cities and towns across the country. However, it came to be recognized that, in the existing state of the industry, one
company could scarcely develop and organize service over so wide a territory and separate companies were set up in British Columbia. The Bell Telephone withdrew from the Maritime Provinces in the 1880's and installations in the Prairie Provinces were sold to the respective provincial governments in 1908-09. The seven major telephone systems that developed across Canada worked together to establish long-distance service on a national basis and in 1931 they founded the Trans-Canada Telephone System, which now has eight full members including both shareholder-owned companies and provincial government systems. They are as follows:-

The Avalon Telephone Company Limited (joined in 1957)<br>Maritime Telegraph and Telephone Company Limited<br>The New Brunswick Telephone Company Limited<br>The Bell Telephone Company of Canada (serving Ontario and Quebec)<br>Manitoba Telephone System<br>Saskatchewan Government Telephones<br>Alberta Government Telephones<br>British Columbia Telephone Company.

These eight systems, together with the Island Telephone Company (P.E.I.), QuébecTeléphone (lower St. Lawrence), Ontario Northland Communications and the Okanagan Telephone Company, comprise The Telephone Association of Canada. This organization was established to ensure general co-operation in telephone matters.

As already mentioned, the steadily rising demand for local and long-distance service has called not only for general expansion of Canadian telephone systems but for the constant introduction of modern facilities and services. A number of Canadian companies have developed what is called "Extended Area Service" in many of the communities they serve. This plan eliminates long-distance charges between the larger centres and their suburbs, or between two or more places with close community of interest.

As part of the transmission facilities needed to carry the great volume of long-distance traffic as well as network television programs, the members of the Trans-Canada Telephone System collaborated to build a microwave radio relay network spanning Canada from coast to coast. The longest such network in the world, it was placed in operation on July 1, 1958. It is maintained jointly, each System member being responsible for the section falling in its operating territory. The Trans-Canada microwave system carries simultaneously many hundreds of long-distance telephone conversations, large volumes of data, and television programs for the CBC and CTV television networks. Extensions to the original network have been made, bringing long-distance telephone service and television programs to many of the more remote areas of Canada.

For several years operators have been dialing many long-distance calls direct to the wanted telephone. The modern switching system that makes this possible also permits customer dialing of long-distance calls. Known as Direct Distance Dialing, customer dialing of long-distance calls has been in effect for some time in several Canadian communities and more centres are being added to the list each year. A long-range international plan, developed by the telephone companies of Canada and the United States, eventually will allow practically every telephone-user in North America to dial direct to almost any other telephone on the Continent. Direct dialing, an added convenience for telephone customers, will allow Canadian telephone companies to handle economically the evergrowing volume of long-distance calls.

The volume of long-distance calls is being greatly augmented by machine-to-machine communications over the regular telephone network. Much of the growth of machine-tomachine communication has been made possible by the introduction of Data-Phone data sets. These data sets convert electrical pulses from business machines into tone-signals acceptable to telephone circuits; a Data-Phone data set at the receiving business machine re-converts the tone-signals into machine language. It is expected that, within the next few years, the volume of machine-to-machine communications will equal that of regular voice calls. Several new optional services introduced recently provide even greater flexibility for machine-to-machine and voice calling over long distances. One of these extends a customer's flat-rate calling to telephones within seven progressively wider zones, the largest of which includes the whole of Canada. The charge for this service is based upon the zone the customer chooses and on whether he elects to use the service on a full-time or a part-time basis. A new private line inter-city service is available to organizations which transmit large volumes of information requiring an exceptionally broad band of frequencies, such as data from advanced computers and high-speed facsimile equipment. Alternatively, it may be used to carry simultaneously many smaller loads of information such as voice calls and teletype, which require relatively narrow bands of frequencies.

All-Number calling-a telephone numbering plan which uses seven figures instead of two letters and five figures-is being introduced gradually to eliminate the potential problem of a shortage of usable exchange prefixes. On a continent-wide basis it will almost double the total of such exchange prefixes.

The northward extension of industry in Canada has, of course, required the northward expansion of telephone communications. The British Columbia Telephone Company operates a radio chain from Vancouver up the coast to Kitimat. Uranium City in northern Saskatchewan, located in a vast area of muskeg and swamp, is provided with communications through a radio network out of Prince Alberta, Sask. In Manitoba, the radiotelephone service reaches out to a large number of isolated settlements and bush camps and provides communications for aircraft and for boats plying Lake Winnipeg. Goose Bay in Labrador and the Schefferville area of the Quebec-Labrador boundary are now in immediate telephone contact with the remainder of the world through a radio relay network operated out of Quebec City through Sept Iles. A branch of this system extends longdistance service to the new mining settlement of Gagnon, Que. In 1959, Bell Telephone opened its farthest-north exchange at Frobisher Bay on Baffin Island.

The summer of 1961 marked the further expansion of northern communications with the inauguration of radio-telephone service for that great northern area between the Quebec shore of Hudson Bay, the Atlantic coast of Labrador and the Northwest Territories. Radio facilities linked directly with the long-distance system permit communication from within this vast and sparsely populated area to virtually anywhere within the civilized world. Focal point of the radio network is a base station located near Alma, Que. It serves all settlements desiring service wherever they may be located throughout the thousands of square miles that comprise this immense region, as well as aircraft operating in the area. As additional requirements arise, either in established or new communities, radio-telephone service will be provided.

Numerous flexible services are provided by Canadian telephone companies for business and industry. Special conference circuits can be quickly arranged, enabling widely scattered business interests to discuss their affairs without the inconvenience and expense of travel. Telephoto and facsimile services provide photographic copy direct from the originator. Radio installations link the traveller with the regular telephone network, providing mobile service for such users as highway departments, trucking and construction firms, fire and ambulance services and police departments. Pipeline and power companies also use the telephone network to carry telemetering information between remote control units and central offices.

There is a significant demand for efficient service combined with attractive telephone instruments. Business customers have been quick to accept the products of telephone research such as the Call Director, a telephone offering a flexible combination of dial telephone and push-button or dial intercommunication. Another new service called Centrex, designed for large customers, was introduced in 1961. This is a centralized system for private branch exchange service which permits outside calls to be dialed straight through to an extension without being relayed at the switchboard.

Telephone Statistics.-There were 2,558 telephone systems operating in Canada in 1960 compared with 2,605 in 1959. The number of co-operative systems in rural districts decreased from 2,195 to 2,180 and the number of shareholder-owned companies decreased from 304 to 283 . The largest of the stock companies, The Bell Telephone Company of Canada operating throughout the greater part of Ontario and Quebec, served 63 p.c. of all the telephones in Canada as compared with 61 p.c. in 1959. The British Columbia Telephone Company, also shareholder-owned, served 9 p.c. of the total in both years.

The number of telephones in use in Canada has risen by 84 p.c. during the ten-year period 1951-60. At Dec. 31, 1960, there were 5,728,167 telephones in service compared with $5,439,023$ in 1959 and $3,113,766$ in 1951. The number of residential telephones and the number of business telephones increased by 6 p.c. and 7 p.c., respectively, during 1960. Pay telephones were also up 3 p.c. but rural telephones decreased by 2 p.c. By the end of the year, 88 p.c. of all telephones in Canada were dial-operated as compared with 85 p.c. at the end of 1959.

## 1.-Milages of Pole Line and Wire and Number of Telephones in Use, 1951-60

${ }^{1}$ Ontario 4-party telephones included under Rural Lines.

The major telephone systems record completed calls on representative days throughout the year and on this basis estimate the number of local conversations which, added to the actual count of long-distance calls, gives their total volume of business. Estimates are included for the smaller systems. The number of completed calls on all systems in 1960 was estimated at $9,579,861,000$, or an average of 1,672 calls per telephone and 537 calls per person. Despite the increase in extended area service which eliminates toll charges between adjacent communities, long-distance calls continue to increase in number.

## 3.-Local and Long-Distance Calls and Average Calls per Capita and per Telephone, 1951-60

The steady increases in capitalization, income and expenditure of telephone companies together with the figures of number of employees and salaries and wages paid are shown for the years 1951-60 in Table 4. Provincial figures for 1960 are given in Table 5.

## 4.-Financial Statistics of Telephone Systems, 1951-60

Note.-Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

| Year | Capital Stock | Funded Debt | Cost of Property and <br> Equipment | Income | Expenditure | Net Income | Employees ${ }^{1}$ | Salaries and Wages ${ }^{2}$ |

[^255]5.-Financial Statistics of Telephone Systems, by Province, 1960

${ }^{1}$ Full-time employees only.
${ }^{2}$ Full-time and part-time.
${ }^{3}$ Certain statistics of The Bell Telephone Company of Canada ior both Quebec and Ontario are included under Quebec.
${ }^{4}$ Excludes wages and employees for rural systems.

## Subsection 3.-Telegraphs

At the end of 1961 nine telegraph and cable companies were in operation in Canada. These systems, composed of lines owned by the chartered railway and telegraph companies, including the Canadian Overseas Telecommunication Corporation (see p. 845), increased their property and equipment to $\$ 299,568,298,12$ p.c. above that reported in 1960 . A new record was set for operating revenues at $\$ 64,053,626$, up 9.4 p.c. from the previous high of 1960 , and net income decreased to $\$ 10,696,819,10$ p.c. below the 1960 figure. Fewer telegrams were sent, the lowest number since 1942, but cablegrams continued to increase, numbering 2,809,691 in 1961.

## 6.-Summary Statistics of Canadian Telegraphs, 1952-61

Note.-Figures from 1920 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

| Year | Operating <br> Revenues | Operating <br> Expenses | Net Operating Revenue | PoleLine Milage | Wire Milage | Employees ${ }^{1}$ | Messages, Land ${ }^{2}$ | Cablegrams and Marconigrams ${ }^{3}$ | Money Transferred |

[^256]
## Subsection 4.-Overseas Telecommunication Services

The Canadian Overseas Telecommunication Corporation was established in 1950 to maintain and operate external telecommunication services for the conduct of public communications by cable, radiotelegraph and radiotelephone and any other means of telecommunication between Canada and overseas points; to make use of all developments in cable and radio transmission and reception for external telecommunication services; and to conduct investigation and research with the object of improving and co-ordinating such telecommunication services with the telecommunication services of other parts of the Commonwealth.

In 1952 the Corporation commenced an expansion program of overseas services designed to meet future requirements and the following services have so far been established: direct telegraph, telephone and telex communications between Canada and Argentina, Australia, Barbados, Bermuda, Britain, Denmark, Finland, France, Germany, Italy, Jamaica, Japan, Netherlands, New Zealand, Norway, Sweden and Switzerland.

In 1956 the first transatlantic telephone cable, a joint project with the British Post Office, the American Telephone and Telegraph Company and the Corporation, was brought into service. Apart from normal use of the system for public telephone and telegraph message traffic, capacity is available for private leased circuits. The Corporation introduced International Telex service to Canada in 1956 and service with 63 countries is available. The first transatlantic slow-scan television pictures were transmitted between Canada and Britain in 1959. In addition, 35 telephone circuits have been provided by cable and microwave for use between the mainland and Newfoundland.

The Canada-Britain 80-circuit telephone cable (CANTAT) was opened for service on Dec. 19, 1961. The Corporation will provide, jointly with the Great Northern Telegraph Company, a Canada-Greenland-Iceland 24 -circuit telephone cable-primarily to meet the North Atlantic communication needs of international civil aviation-scheduled to go into operation in 1962. Its connecting counterpart between Iceland and Scotland (SCOTICE) was brought into service on Jan. 22, 1962. A four-party project (Canada, Britain, Australia and New Zealand) will provide a Canada-New Zealand-Australia 80 -circuit telephone cable. This section of a Commonwealth round-the-world telephone cable system is scheduled for completion early in 1964. The Tasman section between Australia and New Zealand will be opened in July 1962. Arrangements were completed for the right of use of a number of circuits for Canadian purposes in a telephone cable system connecting Bermuda and the United States and these were brought into operation on Jan. 8, 1962.

In addition to the overseas services operated by the Canadian Overseas Telecommunication Corporation, two cable companies operate submarine cables landing in Canadathe Commercial Cable Company and the Western Union Telegraph Company. These companies operate to stations in Britain, Ireland, the United States, the Azores and St. Pierre and Miquelon Islands.

A list of cables landed in Canada is given in Table 7.
7.-External Cables Landed in Canada, 1961

## 7.-External Cables Landed in Canada, 1961-concluded

| Company and Station | Cables | Nautical Miles |

[^257]
## Subsection 5.-Meteorological Communications

Weather stations operated by the Meteorological Branch of the Department of Transport throughout Canada are linked coast-to-coast by means of teletype and in the remote northern areas by radio or radioteletype. The landline teletype circuits are leased from commercial companies. The radio circuits are operated chiefly by the Telecommunications and Electronics Branch of the federal Department of Transport.

Weather stations on the teletype network transmit their reports directly; other stations report via commercial or radio facilities to the nearest station on the teletype line for subsequent transmission on the meteorological circuit. The reports are collected on a regional basis and then relayed to other parts of the country as required. There are two coast-tocoast teletype systems transmitting weather information, with main relay points at Vancouver, Edmonton, Winnipeg, Toronto, Montreal. Halifax, Gander arrd Goose Bay. These main meteorological communications centres not only handle the distribution of weather information within Canada including the Arctic, but also effect international exchange with the United States and Europe and, through them, with many other countries. For the latter purpose, the Canadian Meteorological Branch and the British Meteorological Office share the cost of a leased duplex circuit in the transatlantic cable. Altogether, the Meteorological Branch uses 54,000 miles of teletype circuits connecting 351 teletype offices.

In addition, a facsimile network connects forecast offices including radio facsimile transmission to Arctic stations and ships at sea. Weather charts originating at the Central Analysis Office in Montreal receive national distribution over this network. Regional transmissions of additional charts are distributed on a local basis. Altogether, the Meteorological Branch utilizes 13,100 miles of facsimile circuits, serving 66 offices.

## Subsection 6.-Federal Government Civil Telecommunications and Electronics Services

Radio in Canada traces its origin to the year 1900 when wireless telegraphy was introduced and placed under the jurisdiction of the Department of Public Works. The first commercial radio circuit was established between Chateau Bay, Que., and Belle Isle in the Strait of Belle Isle in 1901, replacing an underwater cable which was difficult to maintain. In the first days of radio there did not appear to be any necessity for special legislative control, but the growth of this new medium of communication was very rapid and the Wireless Telegraph Act of 1905 became the first legislation in Canada controlling radio communication.

Radio regulation and radio coast station services are now under the jurisdiction of the Telecommunications and Electronics Branch of the Department of Transport. The functions and responsibilities of the Branch may be summarized as follows: (1) administration of the Radio Act and Regulations and the Radio Provisions of the Canada Shipping Act and Ship Station Radio Regulations; (2) research into and development of new and improved communication and electronic equipment and systems needed for aeronautical, marine, meteorological and other services; (3) construction, maintenance and operation of radio aids to marine and air navigation and of radio communication stations including procurement of the necessary equipment; (4) development and administration of government policy with respect to the Canadian Overseas Telecommunication Corporation and Canada's participation on the Commonwealth Telecommunications Board; (5) administration of the leasing of landline services required for all services of the Department; (6) planning of emergency measures and administration of the Emergency National Telecommunication Organization (ENTO); (7) administration of the Telegraphs Act and the Regulations thereunder covering the licensing of overseas submarine cables; (8) participation in the work of the International Telecommunication Union and its subsidiary organs; and (9) participation in the communication and electronic activities of the International Civil Aviation Organization (ICAO), the International Air Transport Association (IATA) and the International Marine Consultative Committee (IMCC).

Licensing and Regulation of Radio Stations.-The Radio Act requires that all radio stations be licensed by the Department of Transport including television, radar and any form of Hertzian wave transmission. Licensing, which provides basic control over the right to establish a radio station, involves the assignment of specific frequencies to each station with a view to avoiding direct interference between stations. The setting of standards for the equipment, installation and operation of a station provides control for efficient use of the radio spectrum. Control over station operation is exercised through examination and certification of operating personnel.

The standard broadcast band is crowded with stations that are capable of interfering with one another over the entire North American region. Engineering briefs covering the selection or change of frequency, amount of power and design of the directional antennae system must be approved by the Department of Transport and notification sent to the signatory countries of the North American Regional Broadcasting Agreement before a new broadcasting station can be licensed or before modification can be made in an existing station. After the establishment or change is completed, proof of performance must be submitted to establish that the actual installation is in accordance with the approved plan.

Ten monitoring stations are maintained at suitable points across Canada to make frequency measurements and record transmissions to ensure that radio stations are complying with the procedures set forth for their particular service, to detect non-licensed stations, to assist in the investigation of inter-station interference and to make studies of spectrum utilization.

Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph or radiotelephone equipment, primarily for distress use. Approval is given for each make and model of equipment that comes up to the required standard and, in addition, the ship station as a whole is inspected after the licence is issued and periodically thereafter. Foreign ships are subject to inspection before sailing from Canadian ports to ensure that they conform to the requirements of the Safety of Life at Sea Convention. Also, certain passenger, cargo and other ships plying the Great Lakes are inspected to ensure compliance with the requirements of the agreement between Canada and the United States for the promotion of safety on the Great Lakes by means of radio.

Standards have been developed for the installation of aircraft radio stations specifying the techniques and materials that may be used, to ensure that such stations will satisfactorily perform the function for which they are intended. Inspections of radio stations aboard civil aircraft of all operational categories are carried out at prescribed periods. Inflight inspections of the radio communications and navigational aspects of proposed new air carrier operations, encompassing both land and oceanic routes, are also made as required.

Marine and aeronautical radio operator standards and related regulations are covered by international agreement. The International Telecommunication Convention prescribes the qualifications for radio operators on mobile stations and the Radio Act provides that all operators, both commercial and amateur, must pass examinations to prove their ability to operate the respective classes of stations on which they are engaged. Competent operators are required on all classes of stations to ensure that the requirements prescribed under international agreement are adhered to closely; they are particularly essential on ship and aircraft stations in the interest of safety of life.

Investigation and Suppression of Inductive Interference.-The Radio Act provides penalties for selling or using apparatus liable to cause interference to radio reception. Standards are developed and type approvals issued for certain classes of such equipment. The Telecommunications and Electronics Branch of the Department of Transport provides also a country-wide interference service using special investigation equipment for the purpose of tracing sources of interference and recommending cures for interference to broadcast, television and other radio reception.

Cars equipped for measuring and locating sources of interference operate from offices located in 30 cities throughout Canada; 20,491 cases were dealt with during the year 1960. Sources include power lines, auto ignitions, heavy electrical equipment, domestic appliances, electro-medical apparatus, industrial radio frequency generators and TV receivers. Negotiation with public utilities and industrial firms is required to decide corrective measures.

Regulations specifying the limits to be met by particular types of apparatus are contained in the Radio Noise Limits Order. Certain low-powered radio transmitting and receiving equipment is exempt from the operation of the Radio Act, e.g., garage door radio controls for a number of models have been exempted and consequently may be operated without the radio station licence otherwise required.

Radio Aids to Marine and Aeronautical Navigation.-Services of the Telecommunications and Electronics Branch of the Department of Transport in aid of marine and aeronautical navigation are described in the following paragraphs. Details may be obtained on request from the Department of Transport, Ottawa.

Marine Navigation.-Radio aids to marine navigation are provided for about 4,000 radio-equipped Canadian vessels and almost as many foreign ships using Canadian waters. A safety and communications service for shipping is provided covering the East and West Coasts, the Great Lakes, the St. Lawrence River and Gulf, Hudson Bay and Hudson Strait.

Coast radio stations provide a safety watch and communications service for ships at sea and provide, as well, regularly broadcast weather reports, storm warnings and notices of dangers to navigation. Ships at sea may obtain medical advice from any coast station. The messages are delivered to the port medical officer of the Department of National Health and Welfare and replies are transmitted to the ship free of charge. The stations carry out communications by radiotelegraph and/or radiotelephone and many of them provide connections to land telephone lines so that ships may communicate directly with any telephone subscriber. At Halifax (CFH) and Vancouver (CKN), shortwave facilities are furnished for world-wide communications. These stations participate in the Commonwealth long-range ship communication scheme. The coast stations on Hudson Bay and Hudson Strait, in addition to the regular services, provide commercial communications for posts of the Hudson's Bay Company and various prospecting and development organizations, make weather observations, handle administrative traffic and assist aircraft with information, landing conditions and direction finding bearings.

Coast radio direction finding stations, operated on Hudson Strait, enable ships to obtain a line of bearing from the station. No charge is made for this service.

Automatic radiobeacon stations are maintained on the East and West Coasts, the St. Lawrence River and Gulf, and Hudson Bay and Strait, to provide a navigational aid to mariners by transmitting signals on which bearings may be taken by ships. These stations are arranged, where possible, in groups of three, transmitting on a common frequency but in proper time sequence so as to avoid interfering with one another. A navigator may thus obtain three bearings within three consecutive minutes and fix his location. For distance finding in foggy weather, a number of radiobeacons are synchronized with fog alarms at the same point. Ships may also request the transmission of signals from the coast stations for direction finding purposes.

Loran is a long-range radio aid to marine and air navigation which provides accurate fixes at distances up to 600 miles by day and 1,500 miles by night. Two Loran stations operate in Nova Scotia, three in Newfoundland and one on the West Coast. These stations, in conjunction with Loran stations of the United States Coast Guard, give service to ships and aircraft plying the North Atlantic and Pacific Oceans.

Decca is a short-range radio aid to navigation which provides accurate fixes at distances up to 250 miles. Four chains of Decca stations are in operation, the East and West Newfoundland Chains, the Nova Scotia Chain and the Anticosti Chain. These stations give service to ships off Newfoundland and Nova Scotia, and in the St. Lawrence River and Gulf.

Radar is a valuable aid to marine navigation and it has become general practice to equip merchant ships with this device. Important buoys are fitted with radar reflectors to increase their radar visibility. Two shore-based radar installations are in operation-one at Camperdown near the mouth of Halifax Harbour and the other on the Lion's Gate Bridge across the entrance to Vancouver Harbour. (See also p. 850-Airport and airway surveillance radars.)

Low-powered transceivers are provided for use in emergencies at lighthouses, particularly at locations where they would otherwise be completely cut off from summoning help in case of illness.

Aeronautical Navigation.-Radio aids to air navigation are provided from coast to coast and from the Canada-United States border to the Arctic along and off the airways, and are used by many Canadian and foreign air carriers flying over Canadian territory. Six regional offices located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., and Moncton, N.B., carry out the construction and efficient operation of facilities.

Low-frequency radio range stations, located approximately every hundred miles along airways, provide specific track guidance to pilots by means of audible signals and the signals may also be used for the purpose of obtaining direction finding bearings. In addition, radiotelephone communications are provided between ground and aircraft, by which means pilots may obtain weather data, air traffic control instructions and other information concerning the safety of flights.

Thirty-four very high frequency omni-directional ranges (VOR) are now in operation. Unlike the low-frequency radio range stations, this type of facility does not limit the aircraft using the station to one of four distinct courses but enables the pilot to select any desired course. The 34 omni-directional ranges have permitted the establishment of VOR airways across Canada and of 25 trans-border airways. Seven additional installations under construction are scheduled for operation by the autumn of 1962 and three others at a later date.

Aeronautical radiobeacon stations provide radio signals with which pilots may use their direction finding equipment to obtain relative directional bearings. Fan markers, operating on very high frequencies, are usually placed on an airway so as to inform the pilot when he may safely lose altitude after passing high terrain or to indicate accurately the distance from an airport. Station location markers are similar to fan markers except that the signal radiated is such that aircraft may receive the same indication irrespective of the direction of flight. They are installed at the same location as a radio range to enable a pilot to determine when he is exactly over the station, thus obtaining definite indication of position. Station location markers are installed at most radio range sites.

Airport and airway surveillance radars ( 150 nautical-mile) are in operation at 14 airports for air traffic control purposes. One additional installation under construction is expected to be completed by late autumn 1962. A 50 -mile-range surveillance radar at Gander forms part of a complete ground-controlled approach facility. A Precision Approach Radar facility is in operation at Toronto International Airport and another under construction at Montreal International Airport will be in operation by mid-1962.

Instrument landing systems (ILS) provide radio signals which, when received by special radio equipment aboard aircraft, permit pilots to approach airports for landing during periods of very low visibility. An installation normally consists of a localizer transmitter providing lateral guidance to the runway, a glide path transmitter for slope guidance to the approach end of the runway, two marker transmitters giving distance indications from the runway and a low-power radiobeacon (compass locator) to assist in holding procedures and lining up on the localizer course. The localizer and marker transmitters operate on very high frequencies, the glide path on ultra high frequencies and the compass locators on low and medium frequencies. Thirty-five instrument landing systems are in operation.

To assist in providing communication between aircraft and ground, aeronautical radio communications stations are located at strategic points across the country, including the Arctic. These stations, operating for the most part on high frequencies, provide communication with both domestic and international air carriers. The 13 international communication stations provide coverage from coast to coast as well as over the oceans and form a major contribution on the part of Canada to international aviation. Their functions may be grouped as follows: (1) communication for meteorological services; (2) communication for air traffic control services; and (3) communication for the benefit of airline operating agencies with their aircraft and between their dispatch offices.

## Subsection 7.-Miscellaneous Radio Communication Services

In addition to radio communication services provided by the Federal Government, radio services have been established by all provincial governments, mainly for police, highway and forestry protection purposes.

Municipal government departments have steadily increased their use of radio to facilitate operations particularly as a medium of communication with vehicles-police,
fire, engineering, hydro, etc. Such services as taxi, heavy construction, ready-mix concrete, oil pipeline construction and operation, veterinarian and rural medical have participated extensively in the use of radio.

Public utilities, power companies, provincial power commissions, oil exploration and mineral development organizations have expanded considerably their use of radio in both urban mobile and point-to-point radio fields.

The member companies of the Telephone Association of Canada (see p. 839) operate coast-to-coast microwave facilities to augment existing inter-city communication services and to provide television network service. This system has a number of trans-border (Canada-United States) inter-connections. The railway companies also operate a number of large microwave radio systems to facilitate their inter-city communication services. Telephone companies and the railways are extending communication service, by means of radio, to northern areas and other areas not served by normal wire facilities where such service was previously not available. In addition, the telephone companies provide an extension of land telephone service, by radio, to suitably equipped vehicles. This service is available in all major cities in Canada and along many of the nation's arterial highways. Restricted common-carrier mobile radio service (this service to vehicles does not permit inter-connection with the over-all telephone system but only with specific dispatchers) is available in most major cities in Canada as well as in a number of smaller urban centres. The latter service is provided by telephone companies as well as by other common-carrier organizations.

## Subsection 8.-Radio and Television Broadcasting*

Broadcasting in Canada has developed over a period of some forty years as a combination of public and private enterprise. Since the opening program from Canada's first radio station was beamed into a few Montreal homes in 1918, the role of the radio and television program in the daily life of the Canadian family has grown to startling prominence. Today, radio service reaches 98 p.c. of Canada's homes and its programs are listened to for an average of two hours and 20 minutes a day. Television reaches over 90 p. c. of the homes and is watched for an average period of four hours and 45 minutes a day.

To have become such an integral force in the daily life of the nation, broadcasting had to learn the needs of the people and how to serve them. Two official languages forming two distinct cultures had to be served independently but without diminishing the concept of national unity. Dozens of other smaller groups, distinct in culture and frequently dwelling in the same radio or TV coverage area but in separate communities with widely divergent program interests, had to be served. Physical problems of distance and geography had to be overcome. It requires some 360 radio transmitters and 105 TV stations and satellites to reach a population distributed across a 4,000-mile southern frontier, through seven time zones and a variety of topographical and climatic regions, and scattered northwest through thousands of square miles to the shores of the Arctic Ocean. Not only do these people have local service that is a reflection of life in their own districts, but by means of 15,000 miles of land lines for radio networks and 8,500 miles of microwave circuits for television nearly every Canadian may, at the same time, listen or watch as an event of national interest takes place.

Since 1932, a publicly owned body, now known as the Canadian Broadcasting Corporation, created to develop a national service, has worked with the private or independent station-owner to establish this service. A more recent addition is the Board of Broadcast Governors. Each of these-the private station-owner, the CBC and the BBG-is playing a responsible part in the present efforts to refine and develop broadcasting service.

The Broadcasting Act, proclaimed in November 1958, established the Board of Broadcast Governors to consist of three full-time members including the Chairman and

[^258]Vice-Chairman and 12 part-time members. Sect. 10 of this Act provides that the Board of Broadcast Governors shall "for the purpose of ensuring the continued existence and efficient operation of a national broadcasting system and the provision of a varied and comprehensive broadcasting service of a high standard that is basically Canadian in content and character, regulate the establishment and operation of networks of broadcasting stations, the activities of public and private broadcasting stations in Canada and the relationship between them, and provide for the final determination of all matters and questions in relation thereto".

The Broadcasting Act also requires that, before dealing with any application for a licence to establish a broadcasting station or for an increase in power, change of frequency or change of location of a broadcasting station, the Minister of Transport must receive a recommendation from the Board of Broadcast Governors. The same requirement exists with respect to the making of a new regulation or effecting changes in the regulations under the Radio Act. Before making the appropriate recommendation to the Minister of Transport, the Board considers all such applications at a public hearing at which the applicant, licensees and the Canadian Broadcasting Corporation are given the opportunity of being heard.

Under the provisions of the Radio Act, the Minister of Transport must also receive a recommendation from the Board before dealing with any application to change the ownership or control of any share of capital stock in the licensee of a broadcasting station which is incorporated as a private company. The Board of Broadcast Governors has established a policy that any such application, which would result in a change of ownership or control of a licensee, would be referred to a public hearing before a recommendation is made to the Minister. Applications of this kind not involving a change of ownership or control may be dealt with by the Board or the Executive Committee of the Board at a regular meeting.

Under the provisions of the Broadcasting Act, the Board has issued the Radio Broadcasting Stations Regulations and the Radio (TV) Broadcasting Regulations, these regulations applying to radio and television stations respectively, covering all aspects of station operation and the enforcement of them as the responsibility of the Board.

From its establishment in November 1958 to March 1962, the Board made 494 recommendations to the Minister of Transport on applications referred to it under Sect. 12 of the Act.

The Broadcasting Act also provides authority for the publicly owned Canadian Broadcasting Corporation, established "for the purpose of operating a national broadcasting service" The Corporation consists of a President and a Vice-President and nine other directors appointed by the Governor in Council. It is accountable to Parliament through a Cabinet Minister designated by the Governor in Council and is empowered to establish and maintain program networks and stations.

As of Mar. 1, 1962, there were 37 CBC radio stations and 17 CBC television stations; 203 privately owned radio stations and 59 privately owned television stations. All but 11 of the privately owned television stations and many of the privately owned radio stations are affiliated with the CBC and help to distribute national radio and television services over six networks operated by the CBC.

Radio Broadcasting Facilities.-The CBC operates three AM radio networks-the Trans-Canada and Dominion networks serving English-language audiences from the Atlantic to the Pacific, and the French-language network extending from Moncton, N.B., to Edmonton, Alta. As at Mar. 1, 1962, the Trans-Canada network was made up of 26 basic stations-13 CBC-owned and 13 privately owned. There were 29 supplementary stations, four of which were CBC-owned Newfoundland stations and eight of which were stations of the CBC Northern Service. The Dominion network consisted of 31 basic stations of which 30 were privately owned. Nineteen supplementary privately owned stations also received Dominion network service. The French network had five basic stations, four of which were CBC-owned and one privately owned, and 22 privately owned supplementary stations.

Table 8 lists the broadcasting stations of the CBC radio networks,

## 8.-Broadcasting Stations of CBC Radio Networks, as at Mar. 1, 1962

Norz.-The ststions marked with an asterisk ( ${ }^{*}$ ) are CBC-owned. The symbols used in the Power column have the following meanings: D , daytime; N , night; DA-1, one directional antenna both day and night; DA-2, two directional antennae, one in daytime, the other at night; DA-N, single directional antenna used at night only. DA-D, single directional antenna used in daytime only. Wattage of some stations differs between day and night as shown.

CBC Northern Radio Service.-Since November 1958 five radio stations in Northern Canada have been taken over by the CBC-at Whitehorse in the Yukon Territory, at Yellowknife and Hay River in the Northwest Territories, at Goose Bay in Labrador and at Fort Churchill in northern Manitoba. Three others have been built-at Fort Smith, Inuvik and Frobisher Bay in the Northwest Territories. Low-power relay transmitters* were installed at Fort Nelson, B.C., and Dawson, Hays, Elsa and Watson Lake in the Yukon Territory.

Northern stations are able to pick up and relay news and topical programs from CBC transmitters at Lacombe, Alta., Watrous, Sask., and Sackville, N.B. Greater use of facilities at Sackville has resulted in the transmission of programs more extensively to the North.

Network features are provided for all stations on tapes recorded in Montreal and flown to the North on regular airline flights. The stations are staffed with local recruits wherever possible and the CBC Northern Service works closely with the educational service of the Department of Northern Affairs and National Resources.
*An sutomatic transmitter connected to a network line which relays the network service.

FM Radio.-With the opening of the three-city CBC-FM network on Apr. 4, 1960, a new bilingual aspect entered Canadian network radio. The network is bilingual in the sense that each station in Toronto, Ottawa and Montreal announces the programs it originates in English or French, without translation into the other language. At the start of each day's programming, however, a program résumé is given in both English and French.

The schedule planners have placed emphasis on the best of the world's music, both popular and classical, live and recorded. CBC news, talks and commentaries in depth and great dramatic works in English and French are also presented.

The network broadcasts during the evening hours from 7 p.m. to midnight, Monday to Friday, and from noon to midnight on Saturday and Sunday. The network links three existing CBC stations-CBC-FM in Toronto, CBM-FM in Montreal, and CBO-FM in Ottawa.

## 10.-CBC-FM Stations

| Station and Location | Frequency | Power | Station and Location |  | Frequency | Power |

Television Broadcasting Facilities.-As of Mar. 1, 1962, there were 76 television stations in Canada, including three network relay stations plus 40 rebroadcasting stations.* There were 51 television stations in operation on the English network, 12 of which were CBC-owned. On the French network, 14 stations were in operation, five of which were CBC-owned. The CBC and affiliated stations, plus supplementary stations and rebroadcasting and network repeater stations, were located and powered as shown in Table 11.

[^259]11.-Broadcasting Facilities of CBC Television Networks, as at Mar. 1, 1962

Nore.-An asterisk denotes a network relay station.

11.-Broadcasting Facilities of CBC Television Networks, as at Mar. 1, 1962-concluded

About 90 p.c. of Canada's population is covered by Canadian television stations. Microwave facilities linking television stations from coast to coast for instantaneous telecasting of programs went into full operation July 1, 1958. In June 1959 these facilities were extended from Sydney, N.S., to St. John's, Nfld., providing a direct visual link between all ten provinces. When television broadcasting began in September 1952, television sets in use in Canada totalled 146,000 . One year later the number had tripled and by Mar. 1, 1962 it was estimated that programs of the CBC networks could be viewed in approximately $3,700,000$ Canadian homes.

Canadian Broadcasting Corporation Services.-The CBC's Head Office is in Ottawa and from that point over-all direction is provided for the two complete and distinct broadcasting services, one in English and the other in French. Headquarters and main production facilities for the French networks are in Montreal and for the English networks, in Toronto. A truly national program service is provided to the whole country on these networks by programs contributed from the CBC's nine operating divisions: British Columbia, the Prairie Provinces, Quebec, Ontario, Ottawa area, the Maritimes, Newfoundland, the Northern and Armed Forces Service, and the International Service. Facilities for the production of radio programs have been developed in some 25 communities as far apart as Prince Rupert in British Columbia, Corner Brook in Newfoundland and Inuvik in the Northwest Territories. Television production facilities have been developed at nine of these 25 locations.

Domestic Radio Program Service.-During the year ended Mar. 31, 1961, about 1,500 programs representing 506 hours of broadcasting, were presented each week over the CBC's Trans-Canada, Dominion and French networks. Of the total broadcasting hours in 1960-61, 72 p.c. were released on the Trans-Canada network; the Dominion network released 5 p.c. and 23 p.c. were carried on the French network.

The CBC originated and produced 93 p.c. of its network broadcasts. Of the remainder, 1 p.c. came from the private stations, 2 p.c. were exchange programs from the United States, 3 p.c. from Britain, and 1 p.c. came from other countries. An analysis of network programs by categories for 1960-61 shows that a large proportion of CBC radio network time was devoted to music-an estimated 43 p.c.; 60 p.c. of programming was predominantly entertainment (music, drama, sports, etc.); 25 p.c. was predominantly information programs (news and weather, farm and fisheries, science, nature, etc.); and 15 p.c. was predominantly idea or opinion programs.

## 12.-Hours of English and French Radio Network Programming, by Category

Nore.-Estimated on basis of sample week, Jan. 22-28, 1961.

${ }^{1}$ Less than one hour of broadcasting.
Domestic Television Program Service.-During the year ended Mar. 31, 1961, the CBC English-language television network presented 67 hours per week of programs. Of this, 70 p.c. was produced by the CBC, 28 p.c. was drawn from sources in the United States, and 2 p.c. from Britain. Of the 64 hours presented each week on the French network, 76 p.c. originated with the CBC, 2 p.c. with other Canadian sources, 12 p.c. with sources in France, 8 p.c. in the United States, and 2 p.c. in Britain.

[^260]CBC International Service.-The International Service of the Canadian Broadcasting Corporation broadcasts news, news reports, commentaries, interviews, talks, accounts of special events, actualities and other programs that tell people in other lands about life in Canada. The headquarters and studios are in the Radio-Canada Building in Montreal and the two $50-\mathrm{kw}$. shortwave transmitters and antenna arrays are in Sackville, N.B. The programs are transmitted directly by shortwave to listeners in 11 languagesEnglish, French, German, Czech, Slovak, Russian, Ukrainian, Polish, Hungarian, Spanish and Portuguese. Shortwave service to Africa in English and French was inaugurated in 1961. A recorded program service is provided regularly to radio organizations in Austria, Finland and Greece. As required, all radio organizations throughout the world are provided with special relays and recorded programs.

The International Service also provides a Transcription Service to radio organizations in other countries. This consists of music and spoken-word recordings on long-playing discs. The music transcriptions feature the works of Canadian composers, performers, arrangers, conductors and orchestras. The spoken-word transcriptions in the English, French and Spanish languages include programs that deal with Canadian drama, history, biography, folklore, documentaries and literature.

In addition to their use for the regular programs of the International Service, the shortwave transmitters at Sackville are employed to provide programs for people living in Canada's Far North and for relay to the members of Canada's Armed Forces stationed abroad. On special occasions, the regular facilities of the International Service are supplemented by commercial radiotelephone facilities to provide simultaneous service to areas of the world beyond the range of the signal from Sackville.

More than 400,000 letters, cards and reception reports have been received from listeners since the official inauguration of the International Service on Feb. 25, 1945. Replies are sent in the language of the letter-writer and a great variety of printed and illustrated information on all aspects of life in Canada is provided. An illustrated Program Schedule is distributed periodically to some 200,000 listeners around the world.

In addition to its international shortwave service, the CBC maintains two domestic shortwave stations-CBNX at St. John's, Nfld., and CBUX at Vancouver, B.C.-for the purpose of extending coverage of the existing standard band stations CBN and CBU.

Canadian Broadcasting Corporation Finances.-Table 14 is a statement of CBC finances for the year ended Mar. 31, 1961. During that year the Corporation supplemented its income from the public treasury by $\$ 37,601,651$ from commercial sales, reflecting a slight decrease in commercial revenue.

Privately Owned Stations.-As already stated, privately owned broadcasting stations are subject to the Radio Act, the Canadian Broadcasting Act and Regulations made thereunder, and the provisions of the Radio Regulations annexed to the International Telecommunication Convention and Regional Agreements in effect in Canada. Since Mar. 31, 1923, private commercial broadcasting station licences have been required by government regulation and both sound and television broadcasting stations are now authorized by this class of licence.

Any application for a licence to establish a new private station or for an increase in power, change of channel, or change of location of any existing private station must be referred by the Minister of Transport to the Board of Broadcast Governors. The Broadcasting Act requires that the Board consider such applications at a public hearing and following the hearing the Board makes a recommendation to the Minister of Transport. The approval of the Governor in Council must be obtained before any licence for a new private station is issued. Private commercial broadcasting station licences are conditional upon the ownership or control of the stations, and none of the shares of capital stock of licensed private companies nor the control of licensed public companies may be changed without the permission of the Minister of Transport having been first obtained upon the recommendation of the Board of Broadcast Governors. The Board of Broadcast Governors has ruled that any change in share structure of a licensee involving a change of ownership or control of the licensee will be considered at a public hearing of the Board before a recommendation is made to the Minister. The Radio Broadcasting Stations Regulations require all broadcasting stations to present to the Board at the end of each week a program log for that week indicating the total programming carried by the station. Organizational and financial statements are filed annually, on a confidential basis, with the Department of Transport.

The first sound broadcasting in Canada took place when a privately owned communications company in Montreal was authorized to transmit programs on an experimental basis during the latter part of 1918 and in the winter evenings of 1919 over its Station XWA. Under the first licensing regulations in the year ended Mar. 31, 1923, 34 licences were issued. On Feb. 1, 1962, the number was 243, of which 207 were AM standard band stations, 30 were FM stations and six were shortwave stations.

A privately owned broadcasting station is required to pay to the Receiver General of Canada an annual licence fee based on the gross revenue for licence fee computation for the fiscal year of the station.

The first privately owned television broadcasting station in Canada, located at Sudbury, Ont., was authorized to commence scheduled broadcasting on Oct. 20, 1953. By Mar. 1, 1962, 59 privately owned television stations were in operation (see Table 11).

## Section 2.-The Post Office

The Canada Post Office Department was created at the time of Confederation in 1867 by the Canada Post Office Act to superintend and manage the postal service of Canada under the direction of a Postmaster General. For almost a century before Confederation, postal services in the Canadian provinces had been controlled by the British Postmaster General and administered by his deputies. Under the French régime a courier service had been organized as early as 1703 between Quebec, Trois Rivierres and Montreal. In 1734 a post road was constructed over the same route and post houses, complete with post horses and vehicles, were established for the use of travellers. In 1851 the control of their post offices was assumed by the different provinces of British North America and at Confederation these systems merged to form the Canada Post Office.

Functions.-The basic tasks of the Canadian Postal Service are to receive, convey and deliver postal matter with security and dispatch. In discharging these duties it maintains post offices and utilizes air, railway, land and water transportation facilities. Associated functions include the sale of stamps and other articles of postage, the registration of letters and other mail for dispatch, the insuring of parcels, the accounting for COD articles, and the transaction of money order and Post Office Savings Bank business. Because of its widespread facilities, it has been found expedient for the Post Office to assist other government departments in the performance of certain tasks including the sale of unemployment insurance stamps, the collection of government annuity payments, the distribution of income tax forms and Civil Service employment application forms, and the display of government posters.

Post offices are established wherever the population warrants. Those in rural areas and small urban centres transact all of the functions of the city office. In larger urban areas postal stations and sub-post offices have full functions similar to the main post office, including a general delivery service, lock-box delivery and letter-carrier delivery.

At Mar. 31, 1961, there were 11,421 post offices in operation compared with 11,497 in 1960. Letter-carrier delivery, performed in 180 urban centres, employed over 7,900 uniformed letter carriers. Postage paid in 1960-61 by means of postage stamps amounted to $\$ 85,807,987$ as compared with $\$ 83,961,344$ in 1960 . Post office money orders, issued for any amount not exceeding $\$ 100$ and payable in almost any country of the world, were sold at more than 8,400 post offices and money orders payable in Canada only, for amounts not exceeding \$16, were sold at some 2,300 additional post offices. Post Office Savings Banks operate in all parts of the country and, on Mar. 31, 1961, had total deposits of \$28,512,786.

Organization.-Following a major study of the entire Department during the period July 1961 to April 1962, a new organization plan was developed, designed to further the principle of decentralization of authority from Headquarters to the Operating Service and, at the same time, ensure that areas of accountability and control are clearly defined. The Operating Service is organized into 14 Districts, each under a District Director. Ten of the Districts report directly to the Assistant Deputy Postmaster General. In addition, there are two Regions, each consisting of two Districts and a major Post Office, under a Regional Director. These also report to the Assistant Deputy Postmaster General who carries the responsibility for conducting the normal field operations of the Postal Service. Managing the operating and support functions required in the provision of postal service to the public is the responsibility of the local postmaster. District Offices located at strategic points throughout the country assist the postmasters by providing expert technical advice and other assistance, and by performing certain administrative details. The Headquarters organization as developed, groups all operating functions under the Assistant Deputy Postmaster General and all accounting activities and financial controls under the Comptroller; the support functions of personnel, management audit service, planning and public relations each report directly to the Deputy Postmaster General.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island and from Pelee Island, Ont., (the most southerly inhabited point of Canada) to settlements and missions far into the Arctic. Canada's airmail system provides several transcontinental flights daily and constitutes a great air artery from St. John's, Nfld., to Victoria, B.C., intersected by branch lines and connecting lines radiating to every quarter and linking up with the United States airmail system. Since July 1, 1948, all first-class domestic mail up to and including one ounce in weight has been carried by air between one Canadian point and another, whenever delivery can thus be expedited. On Apr. 1, 1954, this service was extended to first-class items up to and including eight ounces in weight. Air stage service provides the only means of communication for many areas in the hinterland. There were approximately 41,825 miles of airmail and air stage routes in Canada in 1961 as compared with 41,069 miles in 1960 .

The principal means of mail transportation is the railway mail service that operates along 22,550 miles of track and, in 1961, covered more than $34,900,000$ service-miles. A staff of 667 mail clerks prepared the mails for prompt delivery and dispatch while en route in railway mail cars.

The rural mail delivery organization provided direct postal service over approximately 5,600 rural mail routes in 1961 , extending over 142,400 route-miles and serving 530,846 rural mail boxes. Rural mail routes are generally circular in pattern and average about 25.7 miles in length. Considerable progress has been made toward the development of mail service by means of group boxes - a service intended for the more densely populated rural areas and for suburban residents not within the area of letter-carrier delivery service. About 2,075 side services were in operation in 1961 to transport mail between post offices, railway stations, steamer wharves and airports, and 1,966 stage services operated to convey mail to and from post offices not located on railway lines. Transportation of mail by motor vehicle on highways is being developed and over 380 such services are in operation, many of them replacing or reducing conveyance by rail. A local exchange of mails between offices on the route is effected by way-mail wallet. In 1961 there were approximately 879 city mail services transporting mail to and from post offices, postal stations and sub-post offices, collecting mail from street letter-boxes and delivering parcel post. The 9,641 land-mail service couriers employed travelled approximately $52,200,000$ miles during the year. Land-mail services are performed under a contract system, the contracts being awarded to the person submitting the lowest tender and competent to provide all the requisite equipment.

Coastal mail service is conducted by 31 contractors who operate as far north along the West Coast as Alaska and on the East Coast to the northern part of Labrador.

Mechanization.-The larger post offices in Canada may be described as intricate industrial plants where mail is unloaded, cancelled, transported and shipped by semiautomatic means. Conveyor belts, automatic chutes and other devices increase output of mail matter without increasing staff and all the larger offices now being constructed are provided with the latest mechanical equipment. Even the letter carrier has been mechanized in some areas-the use of the mailmobile (part motorcycle and part truck) has shown that even the traditional door-to-door method of delivering mail can be improved upon. In most cities, postage stamps may be obtained at any time from automatic vending machines which offer a variety of denominations in neat packages. This service has been followed by the development of a curbside mail receptacle (snorkel) in which patrons may deposit mail without leaving their automobiles. Electronic methods have been introduced for the checking of money orders and for accounting for the $\$ 900,000,000$ annually that they represent. Money order forms have been redesigned to improve handling and reduce costs.

Post Office Statistics.-Tables 15 and 16 give the numbers of post offices in operation, together with revenue and expenditure for recent years.
15.-Post Offices in Operation, by Province, as at Mar. 31, 1957-61

| 1960 | 193,659,715 ${ }^{\text {r }}$ | 167,629,053 | 165,792,339 | $+1,836,714{ }^{\prime}$ |
| 1961. | 202,003,790 | 173,645,658 | 178,371,716 | -4,726,058 |

[^261]The gross revenue receipts shown in Table 16 are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions. The gross value of the postage stamps and stamped stationery sold during each of the latest five fiscal years was: $\$ 77,735,659$ in 1956$57, \$ 81,192,007$ in 1957-58, $\$ 82,008,654$ in 1958-59, $\$ 83,961,344$ in 1959-60 and $\$ 85,807,987$ in 1960-61. Receipts from postage meter or postage register impressions and postage paid in cash by other means were as follows: $\$ 78,041,479$ in 1956-57, $\$ 83,706,744$ in 1957-58, $\$ 87,920,080$ in 1958-59, $\$ 95,943,284$ in 1959-60 and $\$ 101,414,855$ in 1960-61.

Auxiliary Postal Services.-Auxiliary postal services include the issuing of money orders and the operation of the Post Office Savings Bank.

Table 17 shows the amount of money order business conducted by the postal service in recent years. A table showing the financial business of the Post Office Savings Bank will be found in Chapter XXIII on Currency and Banking.
17.-Operations of the Money Order System, Years Ended Mar. 31, 1957-61

## Section 3.-The Press

An article in the 1957-58 Year Book traces developments in Canadian journalism from their beginnings in 1752 to (circa) 1900. A second article appearing in the 1959 edition brings that account up to the date of writing (1958). The complete presentation is available in reprint form from the Dominion Bureau of Statistics.

Daily newspapers published in Canada numbered 109 in 1961, counting morning and evening editions separately. English and French dailies had an aggregate reported circulation of more than $4,000,000$-about 82 p.c. in English and 18 p.c. in French. Twelve of those with circulations in excess of 100,000 accounted for over 53 p.c. of the circulation. French dailies, as would be expected, have their widest circulation in Quebec where 10 of the 12 in existence in 1961 were published. Some of the largest of these papers have been established in that province for over 60 years. Weekly newspapers serve more people in rural communities than do the dailies. They cater to local interests and exercise an important influence in the areas they serve.

The Canadian Press, a co-operative organization owned and operated by Canada's daily newspapers, provides its 100 members with world and Canadian news and news photographs, mostly by means of teletype and wirephoto transmission. It also serves weekly newspapers and radio and television stations. It is, in effect, a partnership through which each member newspaper provides its fellow members with the news of its particular area
and through which the general news of the world is brought to Canada. Cost of editing and transmission is divided among members according to the population of the cities in which they publish. CP gets world news from Reuters, the British agency, and from the Associated Press, the United States co-operative, and these agencies have reciprocal arrangements with CP for their coverage of Canada.

The British United Press is a limited company in Canada and maintains a close association with the United Press International, of which it is an affiliate. From its headquarters in Montreal and its 12 Canadian bureaus, it serves directly (1961) North America, South America, Europe and Australia with news from Canada, as well as 185 subscribers including 59 private broadcasting stations in Canada. Agence France Presse maintains offices in Montreal and Ottawa and certain foreign newspapers have agencies in Ottawa to interpret Canadian news for their readers.

Press Statistics.-The following tables are based on data estimated from Canadian Advertising and include English and French newspapers only. No information is available regarding foreign-language newspapers for 1960 or 1961; numbers and circulations for 1958 and 1959 are given in the 1960 Year Book at p. 919 and figures back to 1945 in previous editions beginning with the 1947 edition.

One serious difficulty has been encountered in connection with the compilation of newspaper circulation figures. Reliable circulation figures are relatively easy to obtain for daily newspapers because, in their own best interest, such papers qualify for and subscribe to the Audit Bureau of Circulation requirements; for these, A.B.C. 'net paid' figures have been used. However, it is difficult to obtain reliable circulation figures for many weekly newspapers and those shown in the following tables should be used with reservations. No figures are available for magazines.
18.-Estimated Numbers and Circulations ${ }^{1}$ of reporting English-Language Newspapers, by Province, 1960 and 1961

19.-Estimated Numbers and Circulations ${ }^{1}$ of reporting French-Language Newspapers, by Province, 1960 and 1961

## The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

## PART I.-THE MOVEMENT AND MARKETING OF COMMODITIES

Domestic trade is broad and complicated; it encompasses all values added to commodities traded, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services including amusement services, such as theatres and sports. Only certain phases of this broad field are covered here and, wherever possible, cross references are given to related material appearing in other Chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The index will be found useful in this respect.

## Section 1.-Merchandising and Service Establishments*

The next census of merchandising and service establishments will be for the year 1961. The first census of this kind in Canada related to business transacted for the year 1930 and similar censuses were taken for 1941 and 1951. It is worth noting now that the scope of the data being collected for 1961 has been widened. Gross margin information will be collected from retail stores and wholesalers. Operating expense figures will be collected from wholesalers and service businesses and more information will be sought about the operating characteristics of retailers and wholesalers.

The results of the 1930 and 1941 Censuses of Merchandising and Service Establishments are contained in Vols. X and XI of the Census reports for those years and the results of the 1951 Census of Distribution in Vols. VII and VIII of the 1951 Census reports. Summary data for 1951 are given in the 1955 Year Book, pp. 953-977. The results of the 1961 Census will be available about mid-1963.

Census information is supplemented in intercensal years by monthly, quarterly and annual surveys on the more important phases of the retail, wholesale and service tradessample surveys for some businesses and full coverage for others. The 1951 Census formed a new base for such surveys and certain improvements have been implemented for continuance during the 1951-61 intercensal period. Current information available on the distributive trades is given in the following Subsections. Estimates for the years prior to 1951 have been revised in accordance with the census base.

## Subsection 1.-Wholesale Trade

Wholesale Sales and Inventories.-Estimated sales of wholesalers expanded from $\$ 5,784,400,000$ in 1951 to $\$ 8,764,500,000$ in 1960 , and estimated inventories increased from $\$ 682,500,000$ in 1951 to $\$ 1,047,400,000$ in 1959 (inventory data result from a special survey made for the years 1958 and 1959). These figures, given respectively in Table 1 for 195660 and Table 2 for 1958 and 1959, include only wholesalers proper, i.e., they exclude agents and brokers and manufacturers' sales branches. Sales estimates have been revised but have not been adjusted for price changes. Table 3 shows the business of agents and brokers for the years 1957-59; such sales increased from $\$ 2,493,563,000$ in 1951 to $\$ 3,187,206,300$ in 1959.

## Subsection 2.-Retail Trade

The trend of retail trade is one of the best general indicators of the economic condition of the country. It is through retail stores that most goods are ultimately sold and such sales reflect the financial strength of the consumer except in times of short supply. The estimated value of retail sales increased by 61.3 p.c. during the period 1949-61. Estimates, not adjusted for price changes, are shown by province in Table 4 for 1930 and 1941-61 and by kind of business for the latest five years in Table 5.

## 4.-Retail Trade, by Province, 1930 and 1941-61

Note.-Figures for 1931-40 are given in the 1957-58 Year Book, p. 938.

Farm Implement Sales.-Sales of new farm machinery also reached a peak in 1960 when they amounted to $\$ 217,465,000$, a figure 2.5 p.c. above the 1959 total. Increases reported by the Atlantic Provinces, Manitoba and Saskatchewan more than counterbalanced decreased sales in the other provinces.

In addition to the amount spent on new machinery, $\$ 41,312,625$ was spent in 1960 for repair parts, which was 6.2 p.c. more than the amount so spent in 1959.

## 11.-Sales of Farm Implements and Equipment, by Major Group, 1956-60 <br> (Values at wholesale prices)

Consumer Credit.-Total balances outstanding on credit extended to consumers by retail stores and certain financial institutions are increasing very rapidly. Although the financial institutions included in the survey do not cover all sources of consumer credit, returns from the selected holders indicate that balances outstanding on credit extended to individuals for the purchase of consumer goods and services have almost doubled in the past nine years. The figures of Table 14 do not include credit extended for commercial purposes.

Accounts outstanding on the books of retailers stood at $\$ 1,088,200,000$ at the end of 1961. This amount excludes lumber and building material dealers and farm implement dealers, two trades included up to and including 1957, so that the results for 1958 and subsequent years more closely approximate "consumer" credit shown in Table 15.

## Subsection 3.-Service Establishments

Service establishments as defined in the Census of Distribution included all those places of business where the major part of gross income (annual turnover) was derived from the rendering of services as opposed to the sale of merchandise. The following types of service were covered: amusement and recreation such as motion picture theatres and producers, and bowling alleys; personal services such as laundries and dry-cleaning plants, barber shops and shoe repair shops; certain business services such as advertising agencies and window display services; repair services such as automobile repair, radio repair and watch repair; burial services; photography, commercial and portrait; hotels and tourist camps; and other services such as cold storage locker rentals and taxis.

Summary statistics of the detailed coverage in 1951 are given in the 1955 Year Book at pp. 974-977. Annual data for certain services only are included here.

Motion Picture Theatres.-The receipts of motion picture theatres increased steadily up to 1953 when they amounted to $\$ 108,603,966$, but thereafter decreased each year to $\$ 72,294,344$ in 1960 . The number of theatres in operation has also decreased rapidly. The receipts of drive-ins, the most recent of theatre developments, amounted to $\$ 6.790,000$ in 1960, somewhat below the total receipts of 1959; the previous peak was in 1954.
16.-Summary Statistics of Motion Picture Theatre Operations, 1958-60

Motion Picture Production.-Table 17 shows the operations of private firms in the production and printing of motion picture films and film-strips for industry, government, education, entertainment, etc. Films are also produced by government agencies but information concerning such production is, of course, not available. In addition, nine firms in other business categories produced films in 1960 (one theatrical short, one film for television use, nine other non-theatrical films of five minutes or longer, 280 newsreel stories and ciné-magazines for television, four for other uses, 16 commercial advertising films and seven non-commercial advertising films for television and 20 film titles for unspecified uses). This work brought in revenue amounting to $\$ 66,000$.
17.-Summary Statistics of Motion Picture Production by Private Firms, 1952-60

| Year | Firms | Employees | Salaties and Wages | Gross Revenue |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Production | $\begin{gathered} \text { Printing } \\ \text { and } \\ \text { Laboratory } \end{gathered}$ | Other Revenue |
|  | No. | No. | \$ | \$ | $\delta$ | \$ |
| 1952. | 30 | 286 | 1,006,918 | 1,331,393 | 1,274,137 | $\cdots$ |
| 1953. | 32 | 387 | 1,150,890 | 1,592,779 | 1,230,493 |  |
| 1954. | 45 | 478 | 1,549,233 | 2,106,131 | 1,456,405 | 1,328,021 |
| 1955. | 46 | 445 | 1,460,421 | 2,456,038 | 1,051,673 | 512,727 |
| $1956{ }^{1}$. | 59 | 1,127 | 2,483,910 | 3,726,557 | 2,095,985 | 423,899 469,369 |
| 1957. | 58 | 1,216 | 2,758,560 | 4,471,710 | 2,978,626 | 469,369 |
| 1958. | 52 | 1,133 | 2,770,375 | 3,902,780 | 3,344,948 | 421,975 |
| 1959 r. | 54 | 1,065 | 3,609,537 | 5,814,690 | 3,229,240 | 389,480 |
| 1960. | 88 | 1,194 | 3,475,118 | 7,038,810 | 2,590,759 | 342,582 |

Figures from 1956 include laboratories with no motion picture production; these are not included in previous years.

Table 18 shows types of film produced by private industry, classified by major producing region and by government agencies during 1959 and 1960. Of the total of 750 films of five minutes or longer produced by private industry in 1960, 181 theatrical (one feature included), 13 television and 18 other non-theatrical films were adaptations or language versions of original films; 14 were made for other than Canadian sponsors. Of the government films, seven theatrical shorts, seven television and 170 other non-theatrical films of five minutes or longer were adaptations or language versions of original films and all films were produced for Canadian sponsors.

Private industry and government agencies together printed $44,298,059$ feet of 16 mm . film in black and white, $8,766,135$ feet of 16 mm . film in colour, $19,155,561$ feet of 35 mm . film in black and white and 10,596 feet of 35 mm . film in colour.

Hotels.-In 1960 there were 5,294 hotels in operation in Canada, 4,416 of them fullyear hotels and 878 seasonal hotels. Table 21 shows the provincial distribution of these establishments, together with the sources of their revenue.

## Section 2.-The Marketing of Agricultural Products

A special article covering the general movement of farm-produced foods from producer to consumer, with the exception of the grain trade and livestock, appears in the 1956 Year Book, pp. 917-922. Grain and livestock marketings are covered in each edition of the Year Book; 1960-61 data on grain appear in Subsection 1 following, and 1960 figures on livestock in Subsection 2.

## Subsection 1.-Grain Trade

## Marketing Problems and Policies, 1960-61

Based on the combined total of the five major Canadian grains (wheat, oats, barley, rye and flaxseed) production, marketings, exports and domestic disappearance during the 1960-61 crop year each recorded increases over their respective 1959-60 levels, and carryover stocks at the close of the crop year were lower than those at Aug. 1, 1960. Growing conditions were variable across the country in the 1960 season. Wet weather delayed seeding operations in parts of New Brunswick, Ontario and the Prairie Provinces, but early-season growing conditions favoured rapid growth in most areas. Although hot, dry weather in the Prairie Provinces during July considerably reduced prospects for a bumper crop, yields of the major Canadian grains were slightly above average in 1960. Harvest conditions were generally favourable and, as a result, most grain was stored in dry condition.

Marketing of wheat, oats and barley continued under the compulsory crop-year pools system of the Canadian Wheat Board. According to the Canadian Wheat Board delivery quota policy for the 1960-61 crop year for western grain, an initial quota of 100 units was in effect at local delivery points at the beginning of the marketing year. Permit holders were entitled to deliver a maximum of 300 bu . of wheat or 800 bu . of oats or 500 bu . of barley or 500 bu . of rye or any combination of these grains which, when calculated on the unit basis, did not exceed 100 units.

Deliveries of Durum wheat were placed on a number of special open quotas between Aug. 3, 1960 and Feb. 28, 1961. On Feb. 28, 1961, Durum was declared on an open quota for the remainder of the crop year. Deliveries of flaxseed were subject to an initial quota of 5 bu. per seeded acre, effective Aug. 1. This quota was increased to 8 bu . on Oct. 31, 1960 and, on Jan. 23, 1961, was declared open for the remainder of the crop year.

The initial unit quota was followed by general quotas, based upon bushels per specified acreage. Specified acreage consisted of each permit holder's acreage seeded to wheat (including Durum), oats, barley and rye as well as summerfallow and eligible acreage seeded to cultivated grasses and forage crops. The first general quotas were established in late September and were extended and increased as local space became available. By the close of the crop year, all of the 1,994 delivery points in the Western Division were on a 7 -bu. quota, largely owing to the heavy volume of grain moved out of country elevators to replenish supplies in export positions. At the same time, it was apparent that many producers, apprehensive of the unusually dry conditions that commenced in early June, were retaining on farms grain that would otherwise have been delivered before the crop year ended. During the crop year, a number of supplementary delivery quotas were issued on soft white spring wheat, oats, barley and rye. The amount of grain marketed under these special authorizations was, of course, in addition to the quantities (of these grains) that producers chose to deliver under the initial and general quota policies.
22.-Supply and Disposition of Canadian Grain, Crop Years Ended July 31, 1960 and 1961
(Millions of bushels)

[^267]Wheat.-Supply and Disposition.-Total supplies of wheat in the 1960-61 crop year returned to the $1,000,000,000-\mathrm{bu}$. level, after having fallen below this quantity in 1959-60 for the first time in five years. The $1,027,200,000 \mathrm{bu}$. available in $1960-61$ consisted of the carryover of $537,600,000 \mathrm{bu}$. and the 1960 production of $489,600,000 \mathrm{bu}$. Thus supplies were 7 p.c. higher than those of the preceding year and 14 p.c. higher than the ten-year (1949-50-1958-59) average of $901,700,000$ bu. Exports of wheat and flour in terms of wheat at $353,200,000 \mathrm{bu}$. were 27 p.c. above the $277,300,000 \mathrm{bu}$. exported in the preceding year and were the fourth highest on record. Domestic disappearance of wheat amounted to $147,100,000 \mathrm{bu}$. in 1960-61, little changed from the preceding year, reflecting only minor variations in requirements for human food, animal feed and seed. With total disappearance amounting to $500,400,000$ bu. and production to $489,600,000$ bu., carryover stocks at July 31,1961 registered a small decline of $10,700,000 \mathrm{bu}$. and amounted to $526,800,000 \mathrm{bu}$. This was the fourth successive year of decline of carryover stocks from the record of $733,500,000$ bu. attained at July 31, 1957.

## 23.-Production, Imports, Exports and Domestic Use of Wheat, Crop Years Ended July 31, 1956-61

(Millions of bushels)

${ }^{1}$ Includes bagged seed wheat and wheat flour in terms of wheat. $\quad{ }^{2}$ Fewer than $50,000 \mathrm{bu}$.
Price and Marketing Arrangements.-Marketing of Western Canadian wheat during the crop year 1960-61 was again conducted by the Canadian Wheat Board on a one-year pool basis, with the initial payment remaining at $\$ 1.40$ per bu. basis No. 1 Northern in store Fort William-Port Arthur or Vancouver. No adjustment payments on 1960-61 deliveries were made during the crop year but on Nov. 3, 1961 an interim payment on the 1960-61 pool account for wheat was announced. As in the two preceding years, this payment was based on 10 cents per bu. for all grades and the full amount of payment was some $\$ 39,300,000$. The final payment on the $1960-61$ wheat pool was announced on Mar. 30, 1962 and amounted to $\$ 125,088,385$ after allowing for the Prairie Farm Assistance Act levy and the cost of issuing the final cheques, and crediting the account with estimated additional interest earnings. The average final payment amounted to a record 31.843 cents per bu. while the total payment for No. 1 Northern, basis in store Fort William-Port Arthur or Vancouver, prior to deduction of the PFAA levy amounted to $\$ 1.79526$ per bu.

The crop year 1960-61 coincided with the second year of the fourth three-year International Wheat Agreement. Sales under the Agreement were quite widely distributed

with 29 of the 35 importing countries included in the pact purchasing wheat and/or flour from Canada. Purchases of Canadian wheat and flour under the terms of the International Wheat Agreement amounted to the equivalent of $233,700,000 \mathrm{bu}$. during $1960-61$ and accounted for 44 p.c. of all sales by the nine exporting countries participating in the Agreement. The leading market for Canadian wheat and flour under the Agreement was Britain; shipments to that country, at some $91,800,000$ bu., accounted for 26 p.c. of the total Canadian International Wheat Agreement exports. Other major importers through the medium of the International Wheat Agreement were: Japan, $55,600,000$ bu.; the Federal Republic of Germany, $33,000,000$ bu.; Belgium-Luxembourg, $12,400,000$ bu.; Switzerland, $7,300,000$ bu.; and the Netherlands, $6,600,000 \mathrm{bu}$. The larger importers of Class II wheat in 1960-61 were: Communist China, 34,700,000 bu.; Czechoslovakia, 12,100,000 bu.; France, $9,900,000$ bu.; Russia, $7,500,000$ bu.; and Poland, $5,700,000$ bu.

Total domestic (commercial and farm) disappearance of wheat in 1960-61 amounted to $147,100,000 \mathrm{bu}$. compared with the $1959-60$ total of $147,600,000 \mathrm{bu}$. and the ten-year (1949-50-1958-59) average of $155,200,000$ bu. The carryover at July 31, 1961 amounted to $526,800,000 \mathrm{bu}$. and represented a decline of 2 p.c. from the 1960 total of $537,600,000$ bu. During 1960-61 domestic sales of all classes of wheat were made at the same prices as those prevailing for wheat sold under the International Wheat Agreement. Class II prices for all grades of wheat coincided with the IWA and domestic quotations.

Other Grains.-Supply and Disposition.-Data re supply and disposition of the major Canadian grains for the crop years 1959-60 and 1960-61 are given in Table 22.

Price and Marketing Arrangements.-Marketing of Western Canadian oats and barley was again carried on through compulsory crop-year pools administered by the Canadian Wheat Board. The initial payment for oats in the 1960-61 crop year, basis No. 2 C.W. in store Fort William-Port Arthur was 60 cents per bu., the same as in 1959-60. The initial payment for barley, basis No. 3 C.W. Six-Row in store Fort William-Port Arthur, at 96 cents per bu. was also unchanged from that of 1959-60. No interim payments were made on either grain during the crop year. The final payment on the 1960-61 oats pool was announced on Dec. 11, 1961. The final surplus for distribution was some $\$ 5,100,000$ and, based on deliveries of $36,000,000 \mathrm{bu}$. to the 1960-61 pool, the average payment amounted to 14.094 cents per bu. Total prices (basis in store Fort William-Port Arthur) realized by producers for representative grades after deducting Board operating costs, including carrying charges in country and terminal elevators and Board administrative expenses, etc., but before deducting the 1-p.c. PFAA levy, were $\$ 0.74196$ per bu. for No. 2 C.W. oats and $\$ 0.69542$ per bu. for No. 1 Feed oats. The final payment on the 1960-61 barley pool was announced on Jan. 5, 1962 and amounted to $\$ 7,207,194$, an average of 8.36 cents per bu. based on producers' deliveries of $86,100,000$ bu. Total prices (basis in store Fort WilliamPort Arthur) realized by producers for representative grades, after deduction of the alreadymentioned costs but before deducting the 1-p.c. PFAA levy, were $\$ 1.04475$ per bu. for No. 3 C.W. Six-Row barley and $\$ 0.94975$ per bu. for No. 1 Feed barley. Some 5,800,000 bu. of rye and $18,100,000$ bu. of flaxseed were delivered by farmers in Western Canada in 1960-61.

## Miscellaneous Grain Trade Statistics

Grain Handled at Eastern Elevators.-Total receipts of the five major grains at eastern elevators in the 1960-61 crop year amounted to $357,855,000$ bu., 2 p.c. more than in 1959-60. Shipments amounted to $357,171,000$ bu., 7 p.c. over the $1959-60$ total. With the exception of a relatively slight increase in receipts of oats, these increases were entirely accounted for by larger receipts and shipments of wheat.

## 24.-Canadian Grain Handled at Eastern Elevators, Crop Years Ended July 31, 1957-61

Note.-Figures for the crop years ended 1922-56 are given in the corresponding table of previous Year Books beginning with the 1931 edition.

| Item and Crop Year | Wheat | Oats | Barley | Rye | Flaxseed | Total Grain |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Grain Inspections.-The volume of Canadian wheat, oats, barley, rye, flaxseed, corn, buckwheat and mixed grain inspected by the Board of Grain Commissioners for Canada in the crop year $1960-61$ amounted to $586,100,000$ bu., 8 p.c. above the $1959-60$ total of $542,000,000$ bu. Quantities of the various grains inspected at eastern and western points, as well as inspections of soybeans, beans, peas, sample grain, condemned grain, screenings, sunflower seed, rapeseed, mustard seed, safflower seed, and sorghums appear in Table 25.

## 25.-Quantities of Grain and Other Field Crops Inspected, Crop Years Ended July 31, 1960 and 1961

Lake Shipments of Grain.-The 1961 navigation season opened on Apr. 9 and closed on Dec. 13. During that period, total vessel shipments of wheat, oats, barley, rye, flaxseed and buckwheat amounted to $326,100,000$ bu., 17 p.c. more than the 1960 total of $278,700,000$ bu. The 1960 season of navigation opened on Apr. 10 and closed on Dec. 13.

Wheat Flour.-Production of wheat flour in the crop year 1960-61 amounted to $39,915,000$ cwt., about 1 p.c. lower than in the previous crop year. Similarly, wheat milled for flour at $89,700,000 \mathrm{bu}$. was slightly less than during 1959-60. Of the wheat milled for flour, about $79,700,000 \mathrm{bu}$. were Western Canadian spring wheat (other than Durum), the remainder consisting of Ontario winter wheat to the amount of $6,200,000$ bu., Durum $3,100,000 \mathrm{bu}$. , and "other" $740,000 \mathrm{bu}$. Based on a daily operating potential of some 157,800 cwt., utilization of milling capacity averaged 82.6 p.c. in $1960-61$ compared with 78.0 p.c. in the preceding year.

Exports of wheat flour during the $1960-61$ crop year amounted to $15,514,000 \mathrm{cwt}$., 3 p.c. lower than exports during the previous crop year.

## Subsection 2.-Livestock Marketings*

Marketings of all classes of livestock, except cattle, were lower in 1960 than in 1959. Exports of live cattle and sheep were sharply reduced with increased feedlot finishing in Canada. During 1960, cattle marketed through stockyards and packing plants numbered $2,322,626$, an increase of 7.4 p.c. over the $2,161,628$ marketed in 1959, and a higher proportion of the steers and heifers marketed were graded choice and good. The number of cattle moved from stockyards and plants to feedlots in Canada was 347,269 in 1960, a decrease of about 4 p.c. from the 1959 total. Cattle prices varied within a limited range, the high and low for good steers at Toronto were $\$ 23.87$ and $\$ 21.73$, respectively, and the average for the year was $\$ 22.65$ compared with $\$ 25.10$ a year earlier. The marketings of calves at 864,928 were about 2 p.c. lower than in 1959 and there was a slight increase in the number returned to country points for feeding.

Output of hogs, which was at a near record level in 1959, showed considerable reduction in 1960 and the volume of hog carcasses handled through approved and inspected plants numbered $6,764,196$, a decrease of 21 p.c. from 1959 gradings; the percentage of Grade A hogs was slightly higher in 1960 than in 1959 . With the reduced output there was a sharp gain in hog prices in 1960. Grade A hogs at Toronto ranged from a low of $\$ 20.65$ per cwt. in March to $\$ 28.89$ in December.

The number of sheep and lambs graded alive was about the same as the previous year, while carcass gradings were 12 p.c. fewer. Price declines were general on all grades except for a small increase in good lambs at Toronto and Calgary which showed yearly average prices per 100 lb . of $\$ 21.85$ and $\$ 17.50$, respectively. A moderate increase occurred in the number of lambs returned to country points for feeding.

## Section 3.-Warehousing and Cold Storage*

Warehousing ranks high among the means by which the utilities of 'place', 'time' and 'possession' are added to the products of industry. Its importance has been emphasized in modern times because of the introduction of cold storage methods in the conservation of perishable foods.

The presentation of warehousing statistics is difficult because it is not an easy matter to define clearly what are to be regarded as stocks in storage. In these days of complicated business relationships and especially since the rise of the department store and chain store as characteristic institutions in the retail merchandising field, it often happens that warehousing is carried on in close relationship with merchandising. However, if the strict economic definition of warehousing is adopted, then this term should be restricted to those facilities that add the utility of 'time' to the 'form' utilities that are the product of the extraction and manufacturing industries. Because the warehouses established in close connection with retail trade are more often than not convenient places for the temporary storage of goods in process of transfer from the manufacturer or wholesaler to the consumer, they are not, in the strict economic sense, services that add the utility of 'time' to commodities already worked up into 'form'. As some clear line must be drawn and because separate statistics of the latter branch of storage are not available, it is considered practicable to interpret warehousing in this way.

The statistics of warehousing are gathered together under this Section. Subsection 1 presents statistics of the licensed storage of grain. Subsection 2 deals with cold storage facilities without which perishable foods such as meats, dairy products, fish and fruits could not be exchanged or distributed on a wide scale; it includes also figures of stocks of food on hand. Subsection 3 deals with the storage of petrolum and its products, and Subsection 4 with public warehouses and customs warehouses. The facilities that specialize in the storage of tobacco and alcoholic liquors are analysed in Subsection 5. These bonded warehouses, as they are called, are under the strict surveillance of Federal Government excise officers, who supervise all movements into and from such places of storage.

[^269]
## Subsection 1.-Licensed Grain Storage

Total grain storage capacity in Canada, licensed under the provisions of the Canada Grain Act by the Board of Grain Commissioners for Canada, amounted to $645,000,000 \mathrm{bu}$. at Dec. 1, 1960 and represented a decrease of $3,300,000 \mathrm{bu}$. from the level of Dec. 1, 1959. Although elevator capacity in Eastern Canada increased by close to $12,000,000 \mathrm{bu}$. with the opening of the new Cargill elevator at Baie Comeau and an additional $1,500,000$ was added to Lakehead capacity, this expansion was more than offset by a decline in country elevator space equivalent to some $17,200,000$ bu. During the period 1948-59 licensed storage facilities recorded greater capacity each year.

The 1960-61 crop year brought little or no change in the pressure that prevailed on Canada's grain storage and handling facilities for the past several years. However, a feature of the year's operations was that, because of the sharp increase in wheat exports, the licensed elevator system was much more concerned with grain handling than with storage. Marketings of the five major grains to country elevators increased by 6 p.c. over the 1959-60 level while shipments of the same grains from country elevators were up 10 p.c. As indicated in Table 30, there was relatively little variation in the proportion of occupied elevator space at specified periods during the crop year.

## Subsection 2.-Cold Storage and Storage of Foods

Cold Storage Warehouses.-Under the Cold Storage Act (RSC 1952, c. 52), as amended (RSC 1952, c. 313), subsidies are granted by the Federal Government to encourage the construction and equipment of cold storage warehouses open to the public. The Act is administered by the Department of Agriculture.

There are five classifications of cold storage warehouses in Canada: (1) public warehouses that store foods and food products and where the entire space is open to the public; (2) semi-public, or those that store foods and where part of the space is retained for the products of the owner and the remainder is available to the public; (3) private, or those that store foods and food products and allot no space to the public, a classification that includes refrigerated space in connection with abattoirs, creameries, dairies, cheese factories and wholesale and retail distributing warehouses; (4) locker plant, where the total space is occupied by lockers for rental to the public and where food and food products may be cut, processed, chilled and frozen for storage in lockers; and (5) bait depots, where space is used solely or principally for the freezing and storing of bait for the use of fishermen.

No hard and fast rule can be laid down for distinguishing between public and private warehouses. In general those owned and operated by firms trading in the goods stored in the warehouse are considered as private, although most of these places rent space to the public when it is not required for their own purposes.

The figures in Tables 31 and 32, compiled by the Department of Agriculture, give some idea of the cold storage warehouse capacity in Canada, but it must be explained that it is not possible to secure completely accurate information on this subject and that the figures are approximations only.

[^270]Cold Storage Holdings of Fish.-Stocks of frozen fish held in Canada during 1961 followed the usual seasonal trend. Normally, stocks decrease gradually during the early months of the year and reach a low point at the beginning of April or May when fishing activity is at its lowest ebb; during subsequent months they increase and reach a peak at the beginning of October or November.

In 1961, stocks were on the average much lower than in 1960 but at about the same level as in 1959. Groundfish fillets and blocks constitute the most important item in the production of frozen fish in Canada. In 1961 the production of frozen groundfish fillets on the Atlantic Coast reached an all-time high of more than $150,000,000 \mathrm{lb}$. The demand
for this product in the United States, which was weak in the latter part of 1959 but improved at the end of 1960, was very good in 1961. Exports were considerably higher than in 1960 and stocks at the end of the year were lower than the year before. On the Pacific Coast, the production of frozen, dressed halibut was higher than 1960 by more than 25 p.c. However, in contrast to conditions in 1960, when shipments of chilled halibut were chiefly in demand (and supplies of the frozen product had to be held in storage for an extended period), there was a steady movement of frozen halibut to the market in 1961. Stocks in storage on Dec. 31 were 20 p.c. below those on the same date of 1960 .
34.-Storage Stocks of Fish, by Month and by Type, 1959-61

Nore.-Stock totals are as at the beginning of each month; stocks of the individual products are monthly averages

Cold Storage of Dairy Products.-Cold storage facilities are a necessary adjunct in the manufacture of dairy products, most of which are perishable in varying degrees. All creameries have facilities for the storing of butter, the size and type of storage depending on the size of the creamery. If the butter produced at small country plants is not printed for immediate sale, the butter solids are disposed of or are transported to larger creameries where better refrigeration is available or to private or public cold storages in the larger urban centres. Temperature control is important in the curing process for cheese as well as in the prevention of deterioration. Most cheese factories are equipped with mechanical refrigeration and are required to have storage capacity for 17 days' produce during the period of maximum manufacture. The cheese is then transferred to central warehouses. As soon as milk is bottled it is placed in storage and held until delivery. Dry whole milk and other dried milk products containing fat are usually stored in cool air chambers to prevent rancidity.

Cold Storage of Apples and Potatoes.-Cold storage space for apples in Canada has increased rapidly in recent years as a result of the promotion of orderly marketing, the extension of the marketing season generally, and increased production in some areas. This trend has followed the curtailment in shipments to traditional markets in Britain and other European countries after World War II. There has been an increase recently in the construction of both privately and co-operatively owned storages, particularly in the Province of Quebec.

Potatoes are not ordinarily held in cold storage but recently there has been an increase in the construction of potato storage houses and warehouses in the commercial producing areas.

## Subsection 3.-Storage of Petroleum and Petroleum Products

Bulk storage plants for petroleum and petroleum products are established at convenient distributing centres, often on a waterfront so that full advantage may be taken of the lower cost of water-borne traffic. From these centres the goods are transferred by boat, rail or truck to smaller distributing depots or directly to retail outlets. The principal refining and distributing centres are located at or near Halifax, Saint John, Quebec, Montreal, Ottawa, Toronto, Sarnia, Fort William, Regina, Calgary, Turner Valley, Edmonton and Vancouver.

## Subsection 4.-Warehousing of General Merchandise and Refrigerated Goods

Public Warehouses.-The summary statistics of the warehousing industry in Canada presented in Table 36 cover the operations of the majority of firms offering general merchandise and refrigerated storage facilities to the public. Associations and organizations such as co-operatives operating warehouses or storages for their own members are not included nor are packing houses and other firms operating storage facilities in connection with their respective businesses. Small food lockers are not included except where they may be part of a general warehousing business.

Commencing in 1960, the statistics of household goods storage operators, formerly included with warehousing statistics, were compiled separately and are presented in Table 11 under Road Transport, p. 790.
36.-Summary Statistics of Warehousing of General Merchandise and Refrigerated Goods, 1957-60

| Item |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: |

${ }^{1}$ Includes household goods storage operators (see bottom of p. 894). ${ }^{2}$ Includes $32,331,441 \mathrm{cu}$. ft . of
 ${ }^{4}$ Includes 1,574,620 cu. ft . of storage space for household goods.

Customs Warehouses.-Warehouses for the storage of in-bond goods are known as customs warehouses and are divided into three categories. (1) Those occupied by the Federal Government, some of which are used for examination and appraisal of imported goods and others, known as Queen's warehouses, used for the storage of unclaimed, abandoned, seized or forfeited goods. (2) Bonded warehouses operated and owned by a person other than the Crown and used for the storage and safekeeping of imported goods after entry and conforming to one of the following: ( $a$ ) an entire building or part of a building completely separated from the remainder of the building by adequate partitions or walls and devoted to the safekeeping of imported goods consigned or sold to the warehouse keeper or other persons; (b) a yard, shed or other suitable enclosure or area devoted to the safekeeping of imported goods too large or too heavy for lodging in a Class 2(a) warehouse; and (c) a farm, yard or other suitable enclosure devoted to the safekeeping of horses, sheep and cattle for feeding and pasturage. (3) Sufferance warehouses for the landing, storage, safekeeping, transfer, examination, delivery and forwarding of imported goods before entry and conforming to one of the following: (a) a warehouse operated or provided by railway, express, airline and shipping companies; (b) warehouses for in-bond goods arriving by commercial motor vehicle; and (c) all sufferance warehouses not described under (a) or (b).

## Subsection 5.-Bonded Warehousing and Storage of Wines

Bonded Warehousing.-The Excise Duty Branch of the Department of National Revenue considers any premises licensed under the Excise Act to be a warehouse, whether for storage of raw materials to produce finished tobacco or cigar products or for spirits or malt used for brewing. Practically the total production of spirits is placed in bonded warehouses and only a small part of the output of beer is retained in storage. Wine, unlike spirits and beer, is not secured under bond. All imports of alcoholic beverages must
go through bonded warehouses before being released to Provincial Liquor Commissions or Boards, or other agencies authorized by the Commissions or Boards to take alcoholic beverages out of bond. Similarly, tobacco, cigars and cigarettes that are not stamped and duty paid are secured in bond. In addition to these warehouses, there are those in which no manufacturing or production is carried on but which are used solely for the storage of goods upon which duty has not been paid. Goods are stored in these warehouses usually for the purpose of rapid distribution and for delivery as ships' stores.

Table 37 shows the quantities of distilled liquor, tobacco, cigars and cigarettes in bond in recent years. In addition, the year-end inventories of beer in breweries amount to some $30,000,000$ gal.
37.-Distilled Liquor, Tobacco, Cigars and Cigarettes in Bond, Quarterly 1957-61

${ }^{1}$ Excludes Newfoundland.
Beverage spirits, as shown in Table 38, refer to spirits released for consumption but not to industrial alcohol; malt beer does not include beer made from duty-free malt; malt used is the total malt used to produce the malt beer; tobacco includes all types of manufactured tobacco products and snuff.

## 38.-Beverage Spirits, Malt Beer, Malt, Tobacco and Tobacco Products Taken Out of Bond and Destined for Consumption, 1952-61

[^272]${ }^{2}$ Duty solely on gallonage basis since 1954.

Storage of Wines.-The wine industry is confined to a few localities such as the Niagara Peninsula in Ontario and the Okanagan Valley in British Columbia. Firms manufacturing native wines are not bonded, as far as the Federal Government is concerned, nor is wine in storage for maturing placed in bond. The only goods warehoused in bond in connection with wineries are sugar supplies and supplies of grape spirit distilled by the distilleries and held by the wineries for fortifying wines.
39.-Native Wine Produced and Placed in Storage for Maturing, 1951-60

## Section 4.-Co-operative Organizations

Canadian co-operative activities continued to be dominated by marketing and purchasing associations which did a volume of business, including other revenue, amounting to $\$ 1,363,986,000$ during the year ended July $31,1960-$ an increase of almost 4 p.c. over the previous year. Other revenue, which included payment for services provided by the cooperatives such as grinding, chopping, trucking and revenue for rent, interest dividends and commissions, accounted for $\$ 28,742,000$.

Co-operative associations reported a membership of $1,316,484$ during 1960, although this number includes some duplication since many individuals belong to more than one co-operative. The number of associations decreased from 1,982 in 1959 to 1,936 in 1960, mostly through amalgamations. However, the number of places of business continued to increase and reached 5,469 in 1960.

Farm products marketed through co-operatives represented 33 p.c. of the total value of farm products marketed in Canada in 1960. This proportion has varied very little in each of the past ten years. Total sales of farm products by co-operatives were recorded at $\$ 972,333,000$, an increase of $\$ 9,003,000$ over the previous year. Grain and seed sales were valued at $\$ 377,720,000$ and represented 39 p.c. of the total sales of farm products by cooperatives; livestock sales were next in importance and were valued at $\$ 276,792,000$; dairy product sales ranked third and were valued at $\$ 219,533,000$. Sales of eggs and poultry, and fruit and vegetables, which accounted for most of the remainder, were valued at $\$ 42,026,000$ and $\$ 40,950,000$, respectively.

On the provincial level, Saskatchewan recorded the greatest value of farm products marketed co-operatively. Sales in that province amounted to $\$ 260,225,000$, and grain and seed sales accounted for 62 p.c. of that amount. Other provinces sharing substantially in the sales of farm products by co-operatives were: Ontario with $\$ 184,280,000$, Alberta with $\$ 162,568,000$, Quebec with $\$ 115,714,000$, Manitoba with $\$ 88,452,000$ and British Columbia with $\$ 65,142,000$.

Sales of merchandise and supplies by co-operatives amounted to $\$ 362,910,000$ in 1960 , an increase of 9 p.c. over the previous year. Sales of feed, fertilizer and spray material amounted to $\$ 116,340,000,32$ p.c. of total sales of merchandise and supplies. Food products and petroleum products, and auto accessories amounted to $\$ 100,831,000$ and $\$ 63,447,000$, respectively. Leading provinces for co-operative sales of merchandise and supplies were: Quebec with $\$ 89,760,000$, Saskatchewan with $\$ 74,291,000$ and Ontario with $\$ 67,031,000$.

Members' equity in marketing and purchasing co-operatives increased by $\$ 21,643,000$ in 1960 and an increase of $\$ 20,072,000$ was recorded in liabilities to the public.

Wholesale co-operatives are federations of local co-operatives which act as central marketing agencies for farm products and as wholesalers of farm supplies, machinery and consumer goods. The wholesale associations had assets amounting to $\$ 86,473,000$ in 1960 , of which members' equity represented 40 p.c. Total sales of supplies and farm products by these associations amounted to $\$ 295,081,000$, an increase of 4 p.c. over the 1959 total.

In addition to the above-mentioned associations, there were 865 service co-operatives in 1960 which provided a wide range of functions such as housing, rural electrification, medical insurance, transportation, recreation facilities, custom grinding, seed cleaning, operation of farm machinery and restaurant operation. These associations had a total membership of 281,427 and assets amounting to $\$ 106,417,000$.

Data for marketing and purchasing co-operatives do not include fishermen's co-operatives. Co-operatives in this category were found in all provinces in 1960, with the exception of Manitoba and Alberta, and reported a total membership of 10,297, sales of fish amounting to $\$ 20,630,000$ and sales of fish supplies amounting to $\$ 2,164,000$, the latter constituting about 10 p.c. of all fish and fish supplies marketed in Canada. The proportions of sales of fish for the different areas across the country were: the Atlantic Provinces 42 p.c. (including the business of United Maritime Fishermen, an interprovincial co-operative), British Columbia 30 p.c., Quebec 17 p.c., Ontario 9 p.c., and Saskatchewan 2 p.c.

## 40.-Summary Statistics of Co-operative Marketing and Purchasing Associations, Crop Years Ended July 31, 1951-60

## Section 5.-Interprovincial Freight Movements*

Statistics relating to interprovincial freight movements are difficult to collect since there are no controls over, or barriers to, such trade. Provincial freight traffic statistics are available for loadings and unloadings of goods carried by rail, water, pipeline and motor transport.

Details of railway freight movement are confined to tons loaded and unloaded by province and contain a certain amount of import and export of goods shipped by water. The figures given in Table 43, however, do not give a precise measure of total interprovincial freight movement by rail; they indicate only the net interprovincial movement of railway freight, which is but one aspect of that trade. For water-borne traffic, Table 44 shows tonnages of all cargoes unloaded at Canadian ports in both interprovincial and intraprovincial trade, by province of origin. Interprovincial data for oil and gas carried by pipeline are given in the Transportation Chapter at pp. 835-836. Interprovincial and international traffic carried by Canadian registered trucks is shown in Table 45.

# PART II.-GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE 

## Section 1.-Controls Affecting the Marketing of Farm Products

## Subsection 1.-Control of the Grain Trade

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners which, since 1912, has administered the provisions of the Canada Grain Act, and the Canadian Wheat Board which operates under the Canadian Wheat Board Act, 1935.

The Board of Grain Commissioners.*-The Board of Grain Commissioners was established in 1912 under the authority of the Canada Grain Act, 1912 (RSC 1952, cc. 25 and 308 and amendments). It is a quasi-judicial and administrative body of three-a Chief Commissioner and two Commissioners-reporting to the Minister of Agriculture.

The Canada Grain Act has been called the Magna Charta of the Canadian grain trade or, more particularly, of the Canadian farmer, and the Board's chief duties are to ensure that the rights conferred on the different parties by the provisions of the Act are properly protected. Transportation of grain is restricted except from or to licensed elevators, and restriction is placed on the use of established grade names. The Act does not provide for any control or supervision of grain exchanges and the Board of Grain Commissioners has no power or duties in the matter of grain prices.

The Board manages and operates, under semi-public terminal licences, the Canadian Government elevators situated at Moose Jaw and Saskatoon, Sask., Lethbridge, Edmonton and Calgary, Alta., and Prince Rupert, B.C., and leases the Canadian Government elevator at Port Arthur, Ont., to a privately owned grain company. The Executive Offices of the Board and other principal offices are situated at Winnipeg, Man., but branch offices are maintained at numerous points from Montreal in the east to Victoria in the west. Total personnel is approximately 900 .

On a fee basis, the Board provides official inspection, grading and weighing of grain, and registration of warehouse receipts. All operators of elevators in Western Canada and of elevators in Eastern Canada that handle western-grown grain for export, as well as all parties operating as grain commission merchants, track buyers of grain, or as grain dealers, are required to be licensed by the Board annually and to file security by bond or otherwise as a guarantee for the performance of all obligations imposed upon them by the Canada Grain Act or by the regulations of the Board.

To protect the rights of the different parties, the Board has jurisdiction to inquire into and is empowered to give direction regarding any matter relating to the grading or weighing of grain; deductions made from grain for dockage; shortages on delivery of grain into or out of elevators; unfair or discriminatory operation of any elevator; refusal or neglect of any person to comply with any provision of the Canada Grain Act; and any other matter arising out of the performance of the duties of the Board.

In the Prairie Provinces the Board maintains four Assistant Commissioners-one in Alberta, two in Saskatchewan and one in Manitoba. These Assistant Commissioners investigate complaints of producers and inspect periodically the country elevators in their respective provinces; all elevators with their equipment and stocks of grain are subject at any time to inspection by officials of the Board.

The Board sets up, annually, Committees on Grain Standards and also appoints Grain Appeal Tribunals to give final decisions in cases where appeals are made against the grading of grain by the Board's inspection officials. To assist in maintaining the uniform quality of the top grades of Red Spring Wheat handled through terminal elevators, the Canada Grain Act provides that wheat of these grades shall be stored with grain of like grade only.

[^276]In addition to its duties under the Canada Grain Act, certain other duties are performed by the Board. Under the provisions of the Inland Water Freight Rates Act (RSC 1952, c. 153), the Board maintains records of rates for the carriage of grain from Fort William or Port Arthur, Ont., by lake or river navigation and is empowered to prescribe maximum rates for such carriage. Under the provisions of the Prairie Farm Assistance Act (RSC 1952, c. 213 as amended), the Board collects from licensees under the Canada Grain Act, 1 p.c. of the purchase price of wheat, oats, barley, rye, flax and rapeseed purchased by such licensees.

The Canadian Wheat Board.*-The Canadian Wheat Board was established under the Canadian Wheat Board Act of 1935 for the purpose of "the marketing in an orderly manner, in interprovincial and export trade, of grain grown in Canada". The Board was at first a voluntary Board, that is, farmers had the option of marketing their wheat through it or through the private grain trade. In 1943, under the War Measures Act, the Board was made a compulsory Board, and all wheat going into commercial channels was required to be marketed through it. At the end of the War, the Transitional Powers Act continued the Board as the sole marketing agency for wheat until 1947 when the Canadian Wheat Board Act was amended. The major wartime powers of the Board were continued in the 1947 Act. It is under provisions of this 1947 legislation (RSC 1952, c. 44 and amendments) that the Board is operating today.

The Canadian Wheat Board accomplishes its objective of orderly marketing of grain through regulation and agreement. It owns no grain handling facilities but, by entering into agreements with the owners of these facilities, it attempts to bring about an orderly flow of grain through each of the steps involved in merchandising the grain from the producer to the domestic or overseas buyer.

In the selling of wheat, the Board utilizes the services of shippers and exporters. In its sales operations, the Board endeavours to meet the wishes of overseas buyers and, on occasion, enters into direct contracts. When an exporter completes an export sale, in his capacity as an agent of the Board, he is responsible for the transaction; he completes the transaction with the buyer and settles with the Board for the purchase of the wheat from the Board.

When the commercial storage facilities are inadequate to handle all the grain produced, it is necessary for the Board to regulate the flow of grain from the producer to these forward positions. The first step is accomplished by the use of producer's delivery permits issued annually by The Canadian Wheat Board. Every delivery of grain made to country elevators by a producer is entered in his permit book. By regulating the amount of grain delivered by the producer to the country elevator by the use of a quota system, and by apportioning shipping orders to country elevators according to the needs created by sales commitments, the Wheat Board regulates the amount of grain coming into the marketing channel.

The next step is the handling of the grain by the country elevator. The maximum charges for the handling and storing of the grain are set by the Board of Grain Commissioners, but the actual charges are subject to negotiation between the elevator companies and the Wheat Board.

The third step in the marketing process-transporting the grain from the country elevators to the large terminal elevators in Eastern Canada, Churchill or on the West Coast - is carried out by the railways. The Wheat Board determines the kinds and grades of grain that are required at the different terminal destinations to meet its sales commitments and informs the elevator companies and the railways of these needs. The maximum tariffs are set by an agreement between the railways and the Government of Canada.

The fourth major step-storing and handling of the grain at terminal elevatorsis done in privately or co-operatively owned elevators. Maximum charges are established for this service by the Board of Grain Commissioners.

[^277]In the case of oats and barley, the Board's operations are less extensive than those relating to wheat. These two grains are sold in store positions at the terminal elevators at Fort William-Port Arthur and Vancouver. Oats and barley are marketed either on a straight cash basis at prices quoted daily by the Board or on the basis of exchange of futures concluded through the facilities of the Winnipeg Grain Exchange. The Board controls the movement of coarse grains to the Lakehead. The private trade is responsible for the movement of oats and barley from Lakehead or Vancouver positions.

The producer receives payment for his wheat, oats and barley in two or three stages. An initial payment price is established early in the crop year by Order in Council. The initial payment price less the cost of handling grain at the local elevator and the transportation costs to the Lakehead or Vancouver is the initial price received by the producer. This price is a guaranteed floor price in that if the Wheat Board, in selling the grain, does not realize this price and the necessary marketing costs, the deficit is borne by the Federal Treasury. However, with very few exceptions, the Wheat Board has operated without financial aid from the Federal Treasury.

After the end of the crop year, but prior to the final payment being made, if the Wheat Board can confidently foresee a surplus accumulating and if authorized by Order in Council, an interim payment is made to producers. This interim payment is the same amount per bushel to all producers of the same grade of grain. When the Board has sold all the grain or otherwise disposed of it in accordance with the Canadian Wheat Board Act, the Board, if authorized by Order in Council, makes a final payment to producers.

Under the Prairie Grain Advance Payments Act, administered by the Board, producers may receive, through their elevator agents, cash advances on farm-stored grain in accordance with a prescribed formula. The purpose of this legislation is to make cash available to producers pending delivery of their grain under delivery quotas established by the Board. Cash advances are interest-free as far as producers are concerned.

Western Canadian producers receive the price for their grain that the Wheat Board receives, less its operating costs including carrying charge, and the general level of prices received by the Board is determined by competitive conditions in world markets. The only subsidy received by the farmer in the Canadian wheat marketing system is the part payment of storage costs for wheat made by the Government of Canada. Under provisions of the Temporary Wheat Reserves Act, the Minister of Finance, out of the Consolidated Revenue Fund, pays to the Wheat Board the storage costs on wheat in storage at the end of the crop year in excess of $178,000,000 \mathrm{bu}$.

## Subsection 2.-Controls Over Farm Products Other Than Grain*

With the growing complexity of agricultural marketing caused by the fact that the producer is more and more becoming a specialist and produces more for marketing off the farm than for his own needs, a substantial and continuing change in the approach to marketing problems is evident.

With the exception of tobacco, little or no attempt at production control has been introduced in Canada, although in some countries this also forms part of a broad program of market control. The methods of control might be summarized as follows, although some of those mentioned may be combined in certain operations: (1) producers may organize co-operative marketing agencies; (2) producers may establish compulsory marketing boards to bargain with groups buying the product for processing or further sale; (3) producers may establish compulsory marketing boards to direct the flow of product and bargain on price; (4) producers may request the Federal Government to establish a government marketing board; and/or (5) producers may request intervention in the pricing system through an offer by the Government to either assist in financing the orderly marketing of the product or in the support of the price of the product in the marketplace.

[^278]The Government of Canada and provincial governments have, through legislation and in other ways, given marketing aids such as those related to research, education, information, inspection, grading and many other service measures of this type, designed to assist in making adjustments in marketing within agriculture and between agriculture and the remainder of the economy.

There exists in Canada today considerable legislation at the federal, provincial and municipal levels which gives government agencies and farmers the power to take measures for controlling the marketing of farm products. Legislation relating to grain marketing is dealt with in Subsection 1, pp. 903-905, and an attempt is made here to cover in a general way some of the other types of legislation, with particular reference to the Agricultural Products Co-operative Marketing Act, the Agricultural Products Marketing Act and the Agricultural Stabilization Act.

General Marketing Controls.-At the municipal level, many cities and towns have controls with respect to the sale of foods in certain areas or with respect to health standards. For example, most municipalities have some form of health regulation concerning milk being sold within their boundaries. This is often extended to licensing for the purpose of assuring sanitary standards on the farms where the milk originates. Similarly, zoning bylaws may not only control the areas where commercial merchandising generally can take place, but also state that public markets where fruit and vegetables and other goods are sold may operate only under fairly strict supervision of the municipality.

With respect to provincial government controls, most of the provinces enacted milk control legislation before 1940. Most of them finance these milk-control agencies out of public funds, others finance through the collection of licence fees and assessments from those engaged in the fluid milk industry, and some combine the two methods. Most milk-control agencies have authority to carry out some system of licensing which provides for the revocation of such licences if those engaged in the fluid milk business do not conform with the orders of the milk control board.

In all provinces with such boards, the milk control board sets the minimum price which distributors in specified markets may pay producers for Class I milk, that is, milk which is actually sold for fluid consumption. In a number of provinces this price is based on a formula. Most provinces also set either minimum or fixed wholesale and retail prices for milk. However, in Manitoba a maximum and not a minimum retail price is set, and in British Columbia and Ontario no control is exercised over milk prices at the retail level. In these three provinces some degree of price competition between store and home delivery sales has developed.

The powers given to or requirements made by milk control boards include: (1) authority to inquire into all matters pertaining to the fluid milk industry, to define market areas, to arbitrate disputes, to examine the books and records of those engaged in the industry, to issue and revoke licences, and to establish a price for milk; and (2) authority to require a bond from distributors, periodic reports from distributors, payments to be made to producers by a certain date each month, distributors to give statements to suppliers, distributors to give notice before ceasing to accept milk from any producer, producers to give notice before ceasing to deliver milk to any distributor, and the prohibition of distributors requiring capital investment from producers.

Thus fluid milk controls are not only widespread but also numerous. They are generally considered to be administered in the public interest as well as in the interest of those who have regular opportunities to appear before the boards in connection with requests for price changes.

Federally, the Food and Drug Directorate of the Department of National Health and Welfare has wide control over the content of foods sold. The Department of Agriculture establishes grades or quality standards for various foods and exercises some control over
size and type of packages and containers used in food preparation. The Weights and Measures Division of the Department of Trade and Commerce also exercises controls in its sphere.

The Agricultural Products Co-operative Marketing Act.-In the late 1930's, the Federal Government decided to assist orderly marketing by encouraging the establishment of pools which would give to the producer the maximum sales return for his product less a maximum margin for handling expenses agreed upon in advance. Thus the Agricultural Products Co-operative Marketing Act and the Wheat Co-operative Marketing Act were passed in 1939. The latter was used in one year only but the Agricultural Products Co-operative Marketing Act, which covers the marketing of all agricultural products except wheat, has been used to a greater or lesser degree from time to time during the intervening years.

The purpose of this Act is to aid farmers in pooling the returns from sale of their products by guaranteeing initial payments and thus assisting in the orderly marketing of the product. The Government will undertake to guarantee a certain minimum initial payment to the producer at the time of delivery of the product including a margin for handling, sales returns to be made to the producer on a co-operative plan. The guaranteed initial payment may be up to a maximum of 80 p.c. of the average price for the previous three years, the exact percentage to be recommended by the Minister of Agriculture who enters into an agreement with the selling agency for the product. The payment to the producer is to be made through the sales agency on a graded basis at the time of delivery of the product.

Agreements under this Act have been made with respect to the marketing of maple products, honey, onions, potatoes, cheddar cheese, apples, peaches, apricots, cherries, oats, barley, flax, rye, corn, fox and mink pelts, and the following seeds: alfalfa, crested wheat grass, brome grass, slender wheat grass, western rye grass, timothy, red clover, alsike clover, sweet clover, creeping red fescue, meadow fescue, and peas. Thus far the Government of Canada has suffered losses under this Act only with respect to fox pelts and potatoes. This experience indicates that any service to agriculture rendered by this Act has been at relatively small expense to the taxpayers of Canada except for minor administrative expenses, most of which have been taken care of as part of the day-to-day administration of the Department of Agriculture.

The Agricultural Products Marketing Act.-Following the withdrawal of wartime powers of the Federal Government, the Agricultural Products Marketing Act of 1949 was enacted to provide delegation for like powers to those established for marketing boards within a province for the purposes of interprovincial and export trade. A Supreme Court judgment in January 1952 cleared the validity of the Agricultural Products Marketing Act but left some doubt with respect to how licences, levies or other charges could be made by marketing boards beyond the extent of immediate administrative expenses without some approval by the Federal Government in its constitutional field of indirect taxation. In April 1957, following a further Supreme Court judgment in respect to Ontario legislation, an amendment to the Federal Agricultural Products Marketing Act vested in the Governor in Council the right to authorize local boards to "fix, impose and collect levies or charges from persons engaged in the production or marketing of the whole or any part of any agricultural product and for such purpose to classify such persons into groups and fix the levies or charges payable by the members of the different groups in different amounts, to use such levies or charges for the purposes of such board or agency, including the creation of reserves, and the payment of expenses and losses resulting from the sale or disposal of any such agricultural product, and the equalization or adjustment among producers of any agricultural product of moneys realized from the sale thereof during such period or periods of time as the board or agency may determine"

There are at present 76 such marketing boards organized in Canada, 60 p.c. of which are in the Province of Quebec and 21 p.c. in Ontario; all other provinces with the exception of Newfoundland have one or more boards.

The annual statistical report prepared by the Economics Division of the Department of Agriculture in relation to these boards indicates that about one-sixth of the farm cash income in Canada in 1960 was received from sales made under the control of provincial marketing board plans, including the following commodities: seed corn, potatoes, other vegetables, sugar beets, tobacco, hogs, certain dairy products, fruits, wool, honey, white beans, maple products, pulpwood, wheat and soybeans. As at Mar. 15, 1962, 35 of these provincial boards had received an extension of powers for purposes of interprovincial and export trade from the Federal Government. Three had received authority to collect levies in excess of administrative expenses.

The Agricultural Products Marketing Act does not give the local or provincial marketing board any greater control over agencies outside the province than is possible through the control of the commodity by the board and whatever contractual arrangements it may make with such agencies outside the province. It does make it possible, however, for marketing boards to give groups within a province complete marketing control over any commodity produced in that province, or any area of that province which may be defined.

The Agricultural Stabilization Act.-The functions of this Act, passed in 1958, and its administration are outlined in the Agriculture Chapter, pp. 388-389. Under the Act, all price support levels must be related to a price formula based on the most recent ten-year average of market prices for the product concerned. In addition, the Agricultural Stabilization Board, unless the Government sets a higher support level, must support the prices of nine key commodities at not less than 80 p.c. of the ten-year average market price.

The named commodities are: butter, cheese, eggs, cattle, hogs, sheep, wheat, oats and barley (for the latter three, the support applies only to grains produced outside the prairie areas designated under the Canadian Wheat Board Act). Other commodities can be supported at such percentage of the ten-year average market price as may be approved by the Government from time to time. Prices established for the nine named commodities must be announced so that they can apply for 12 months from the effective date. Support of designated commodities is also normally for a 12 -month period.

In the first year of operation of the Agricultural Stabilization Board, 21 commodities were under price support. In the year ended Mar. 31, 1960, 18 commodities were under price support and in each of the two following years, 17 commodities. Each year support prices for most of these commodities were set at 80 p.c. of the ten-year average or higher. The net cost of support in the fiscal year 1959-60 was approximately $\$ 60,000,000$ and about $\$ 51,000,000$ in $1960-61$.

The Agricultural Stabilization Board may support the price of products in any one or more of three ways: (1) an offer to purchase by the Board; (2) underwriting the market through producer guarantees, commonly called the "deficiency payment" method; or (3) making such payment for the benefit of producers as may be authorized for the purpose of stabilizing the price of an agricultural commodity. The third method is new under the Agricultural Stabilization Act. All methods have been used during the first years of operation of the Act, although recently there has been some tendency to use the so-called deficiency payment method to a greater degree.

## Section 2.-Combinations in Restraint of Trade*

The purpose of Canadian anti-combines legislation is to assist in maintaining free and open competition as a prime stimulus to the achievement of maximum production, distribution and employment in a system of free enterprise. To this end, the legislation seeks to eliminate certain practices in restraint of trade, which serve to prevent the nation's economic resources from being most effectively used for the advantage of all citizens.

By amendments which came into force on Aug. 10, 1960 (SC 1960, c. 45), all the provisions of the anti-combines legislation which previously had been divided between the Combines Investigation Act (RSC 1952, c. 314) and the Criminal Code were amended and consolidated in the Act. The substantive provisions now are contained in Sects. 2, $32,33,33 \mathrm{~A}, 33 \mathrm{~B}, 33 \mathrm{C}$ and 34 of the Combines Investigation Act. The Act was enacted in 1923 and was amended extensively in 1935, 1937, 1946, 1949, 1951 and 1952 as well as in 1960.

Sect. 32, generally speaking, forbids in Subsect. (1) combinations that prevent or lessen "unduly" competition in the production, manufacture, purchase, barter, sale, storage, rental, transportation or supply of an article of trade or commerce or in the price of insurance. Subsect. (1) derives from Sect. 411 of the Criminal Code which was enacted originally in 1889. While Subsect. (2) provides that no person shall be convicted for participation in an arrangement relating only to such matters as the exchange of statistics or the defining of product standards, etc., Subsect. (3) provides that Subsect. (2) does not apply if the arrangement has lessened or is likely to lessen competition unduly in respect of prices, quantity or quality of production, markets or customers or channels of distribution, or if the arrangement "has restricted or is likely to restrict any person from entering into or expanding a business in a trade or industry". Subsect. (4) provides that, subject to Subsect. (5), no person shall be convicted for participation in an arrangement which relates only to the export trade. Subsect. (5) provides that Subsect. (4) does not apply if the arrangement has had or is likely to have harmful effects on the volume of export trade or on the businesses of Canadian competitors or on domestic consumers.

Sects. 2 and 33 make it an offence to participate in a merger which has or is likely to have the effect of lessening competition to the detriment or against the interest of the

[^279]public. These Sections also make it an offence to participate in a monopoly which has been operated or is likely to be operated to the detriment or against the interest of the public.

Sect. 33A deals with what are commonly called "price discrimination" and "predatory price cutting". It provides that a supplier may not make a practice of discriminating among those of his trade customers who come into competition with one another by giving one a preferred price which is not available to another if the second is willing to buy in like quantities and qualities as the first; and it also forbids a supplier from selling at prices lower in one locality than in another, or unreasonably low anywhere, if the effect or tendency of such policy is to lessen competition substantially or eliminate competitors or the policy is designed to have such effect.

Sect. 33B provides that where a supplier grants advertising or display allowances to competing trade customers he must grant them in proportion to the purchases of such customers; any services he exacts in return must be such that his different types of customers are able to perform; and if such customers are required to incur expenses to earn such allowances, such expenses also must be proportionate to their purchases.

Sect. 33C makes it an offence for any person, for the purpose of promoting the sale or use of an article, to make any materially misleading representation to the public concerning the price at which such or like articles have been, will be or are ordinarily sold.

Sect. 34 prohibits a supplier of goods from prescribing the prices at which they are to be resold by wholesalers or retailers or from cutting off supplies to a merchant because of the merchant's failure or refusal to abide by such prices, i.e., the practice of "resale price maintenance". The Section also provides that it shall not be inferred that a person practised resale price maintenance simply because he refused, or counselled the refusal of supplies to a merchant if there was reasonable cause to believe and the supplier did believe that the merchant was making a practice of using articles of such supplier as "lossleaders" or as bait advertising or was making a practice of engaging in misleading advertising in respect of such articles or of not providing services that purchasers of such articles might reasonably expect.

The Act provides for a Director who is responsible for investigating combines and other restrictive practices, and a Commission (the Restrictive Trade Practices Commission) which is responsible for appraising the evidence submitted to it by the Director and the parties under investigation, and for making a report to the Minister. When there are reasonable grounds for believing that a forbidden practice is engaged in, the Director may obtain from the Commission authorization to examine witnesses, search premises, or require written returns. After examining all the information available, if the Director believes that it proves the existence of a forbidden practice, he submits a statement of the evidence to the Commission and to the parties believed to be responsible for the practice. The Commission then sets a time and place at which it hears argument on behalf of the Director in support of his statement, and hears argument and receives evidence on behalf of any persons against whom allegations have been made in the statement. Following this hearing, the Commission prepares and submits a report to the Minister, ordinarily required to be published within thirty days.

The Act also provides for general inquiries into restraints of trade which, while not forbidden or punishable, may affect the public interest. It further provides in Sect. 31 that the courts, including the Exchequer Court of Canada, in addition to imposing punishment for a contravention of the legislation, may make an order restraining persons from embarking on, continuing or repeating a contravention or directing the dissolution of a merger or monopoly as the case may be. Application also may be made to the courts for such an order in lieu of prosecuting and convicting for a contravention of the legislation. By virtue of the 1960 amendments, prosecutions for offences against the substantive provisions of the legislation (other than Sect. 33C which is punishable only on summary conviction) may be taken either in the provincial courts or with the consent of the accused in the Exchequer Court of Canada. The amendment conferring jurisdiction on the Exchequer Court came into force on Dec. 1, 1960.

In the years 1956-61, the following reports of inquiries under the legislation have been published:-
(1) Retail Distribution and Sale of Coal in Winnipeg.
(2) Manufacture, Distribution and Sale of Quilted Goods, Quilting Materials and Related Products.
(3) Manufacture, Distribution and Sale of Boxboard Grades of Paperboard.
(4) Production, Purchase and Sale of Flue-Cured Tobacco in Ontario.
(5) The Sugar Industry in Western Canada and a Proposed Merger of Sugar Companies.
(6) Manufacture, Distribution and Sale of Metal Culverts and Related Products.
(7) Purchase of Pulpwood in Certain Districts in Eastern Canada.
(8) Manufacture, Distribution and Sale of Yeast.
(9) Production, Distribution and Sale of Zinc Oxide.
(10) Wholesale Trade in Cigarettes and Confectionery in the Edmonton District.
(11) Study of Certain Discriminatory Pricing Practices in the Grocery Trade.
(12) Manufacture, Distributionand Sale of Ammunition in Canada.
(13) Distribution and Sale of Electrical Construction Materials and Equipment in Ontario.
(14) Sale and Distribution of Surgical Rubber Gloves and Certain Other Surgical Supplies.
(15) The Sugar Industry in Eastern Canada.
(16) Alleged Attempts at Resale Price Maintenance in the Distribution and Sale of Gasoline in the Toronto Area.
(17) Manufacture, Distribution and Sale of Specialty Bags and Related Products.
(18) Automobile Insurance in Canada.
(19) Distribution and Sale of Coal in Sault Ste. Marie, Ontario.
(20) Production and Supply of Newspapers in the City of Vancouver and Elsewhere in the Province of British Columbia.
(21) Manufacture, Distribution and Sale of Transparent Packaging Products and Related Products.
(22) Manufacture, Distribution, Supply and Sale of Belts.
(23) Distribution and Sale of Gasoline in the Toronto Area (Alleged Price DiscriminationSupertest Petroleum Corporation, Limited).
(24) Distribution and Sale of Gasoline in the Toronto Area (Alleged Price DiscriminationThe British American Oil Company Limited).
(25) Distribution and Sale of Gasoline in the Toronto Area (Alleged Price DiscriminationTexaco Canada Limited).
(26) Alleged Attempts at Resale Price Maintenance in the Distribution and Sale of Cameras and Related Products (Arrow Photographic Equipment Limited).
(27) Meat Packing Industry and the Acquisition of Wilsil Limited and Calgary Packers Limited by Canada Packers Limited.
(28) Alleged Attempts at Resale Price Maintenance in the Distribution and Sale of Cameras and Related Products (Garlick Films Limited).

These reports and copies of the Annual Reports under the Act may be obtained from the Queen's Printer or the office of the Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

## Section 3.-Control and Sale of Alcoholic Beverages

The retail sale of alcoholic beverages in Canada is controlled by provincial and territorial government liquor control authorities. Alcoholic beverages are sold directly by most of these liquor control authorities to the consumer or to licensees for resale. However, in some provinces beer and wine are sold directly by breweries and wineries to consumers or to licensees for resale. During the year ended Mar. 31, 1961, provincial government liquor control authorities operated 898 retail stores.

Table 1 shows revenue from administration of liquor control by provincial and territorial governments. Details are given in DBS report, The Control and Sale of Alcoholic Beverages in Canada (Catalogue_No. 63-202).

## 1.-Provincial Revenue from Administration of Liquor Control, Years Ended Mar. 31, 1959-61

Note.-Figures include revenue collected directly by the provincial and territorial governments as well as revenue of the liquor authorities, but exclude revenue resulting from a general retail ssles tax on alcoholic beverages levied by seven provinces.

## Section 4.-Miscellaneous Aids or Controls

Subsection 1.-Domestic Commerce Service*

Government Aid to Small Business.-The Small Business Branch of the Department of Trade and Commerce provides liaison between the Federal Government and small business. It is a contact point for businessmen, either individually or through their associations, to explain their problems to the Government. These problems are studied and, in consultation with other departments, recommendations are made where appropriate.

The Small Business Branch provides information and help to businessmen on many aspects of business operation including such matters as the establishment of various types of businesses, sources of capital, types of business organization, production and marketing, government procurement, managerial techniques, and laws and regulations, including patents, copyrights, taxes, tariffs and unfair trade practices.

The Branch prepares and distributes information of value to small business generally. Publications available include a manual entitled Selling to the Canadian Government, which outlines the kinds of requirements and the procurement procedures of the Federal Government; a booklet entitled Management Education, which describes the management courses offered by Canadian universities to business executives and supervisors; and a booklet entitled Federal Services for Business, which outlines the various services available to businessmen from the Federal Government.

Industrial Promotion.-The Industrial Promotion Branch of the Department of Trade and Commerce assists manufacturers, processors and assorted service industries to expand operations in Canada. It assists Canadian manufacturers to diversify their production, and assists foreign companies and individuals interested in negotiating a manufacturing arrangement with a Canadian firm or in establishing a new branch plant in Canada. In the pursuit of these objectives, the Branch works closely with other federal agencies and with provincial, regional and municipal bodies, and also maintains liaison with private development agencies such as railways, power companies, Boards of Trade, Chambers of Commerce, and business organizations and associations.

To encourage new or increased Canadian production, the Branch provides manufacturers with information on production and marketing opportunities within the domestic market. In this regard, a program of industry studies has been developed to investigate areas of opportunities for industrial expansion and a large number of import surveys have been undertaken to obtain information about Canadian market possibilities. In addition, the Branch is equipped to assist Canadian businessmen with information on such matters as licensing arrangements, taxation, tariffs, financing and government rules and regulations. Branch publications to assist in industrial expansion include the Industrial Promotion Bulletin and a series of manuals on Doing Business in Canada.

Product Design.-The National Design Branch of the Department of Trade and Commerce administers the programs of the National Design Council. Together, the Branch and the Council have developed a number of programs to assist Canadian industry on all aspects of design and to create a greater interest and awareness among businessmen and the general public in the importance of design in the successful production and marketing of goods. A national design index illustrating and describing products of superior Canadian design is maintained. This index is a reference catalogue for buyers and the general public and is available in Canada and various centres abroad. To display products from the index, national and regional exhibitions are held in co-operation with industry. A permanent place of exhibition will be opened in 1962.

The National Design Branch organizes seminars and workshops where manufacturers and designers may meet to discuss design and its relevance to particular products and

[^280]industries. Scholarships and grants for institutional and specialized training in design and for research in industrial design are awarded on a competitive basis and are tenable in Canada and abroad. Studies are conducted to ascertain the present and emergent needs of industry in the design field and the facilities, processes and techniques available to the manufacturer and, in this connection, a survey of secondary industry is being made to establish the manner in which product design is now carried out and the extent to which professional designers are employed in Canadian industry.

A national register of practicing designers and design consultants has been installed by the Branch so that manufacturers seeking assistance to product development and in packaging may be brought into contact with those best equipped to supply expert help. Steps have also been taken to establish a reference centre and information service to cover the whole field of international design.

Capital Cost Allowance for New Products.-The Depreciation Certification Division of the Department of Trade and Commerce administers the special capital cost allowance program for new products, announced in the Budget of December 1960. The aim of the program is to encourage the expansion and diversification of Canadian industry and to improve employment opportunities, particularly in surplus-manpower areas. In brief, the program permits faster write-off of assets than is allowed under the normal depreciation regulations, thus providing taxpayers with additional working capital.

There are two parts to the program. Under the first, a firm is eligible for the special allowance if it manufactures a product not ordinarily produced in Canada. Under the second, even if a product is made in Canada, a firm may be eligible for double depreciation if it is located in a designated surplus-manpower area and the product is not ordinarily produced in that particular area.

In the first year of operation of the program a large number of applications were reviewed and approvals given for special capital cost allowances covering such products as new types of steel, chemicals, electronics, plastics, foods, paper and textiles.

Trade Standards.-The Standards Branch of the Department of Trade and Commerce consolidates under one Director the administration of the Electricity Inspection Act, the Gas Inspection Act, the Precious Metals Marking Act, the Weights and Measures Act, and the National Trade Mark and True Labelling Act.

Commodity Standards.-On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act (RSC 1952, c. 191) which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising. In brief, the use of the National Standard is voluntary and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. This is exemplified in the National Trade Mark Garment Sizing Regulations which were passed on Mar. 16, 1961. In addition, where manufacturers descriptively label any commodity or container, it must be labelled accurately to avoid public deception. The regulation applying to the labelling of fur garments, for example, has been established as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act, 1946 (RSC 1952, c. 215), commodities composed of gold, silver, platinum or palladium may be marked with a quality mark describing accurately the quality of the metal. Where such mark is used, a trade mark registered in Canada, or for which application for registration has been made, must also be applied. Gold-plated or silver-plated articles may also be marked under certain conditions outlined in the Act. The inspection staff of the Standards Branch is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale, and in checking the marks applied.

Weights and Measures.-The Weights and Measures Act (RSC 1952, c. 292) prescribes the legal standards of weight and measure for use in Canada. The Act requires control of the type of all weighing and measuring devices used for commercial purposes and their periodic verification and surveillance directed toward the elimination of sales_by
short weight or short measure. The number of inspections made in the calendar year 1961 was 500,737 compared with 493,700 in 1960. The more important inspections comprised the following: weighing machines including scales of all kinds, 235,421; measuring machines for liquids, 122,949 ; weights, 135,024 ; other measures 7,342 . Total expenditure was $\$ 1,215,510$ in the year ended Mar. 31, 1961, compared with $\$ 1,111,276$ in the previous fiscal year and total revenue $\$ 1,081,603$ compared with $\$ 1,036,860$.

Electricity and Gas Inspection.-Responsibilities of the Standards Branch under the Electricity Inspection Act (RSC 1952, c. 94) and the Gas Inspection Act (RSC 1952, c. 129) comprise the testing and stamping of every electricity and gas meter used throughout Canada for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. Canada is divided into 21 districts for administration of the two Acts and staff numbers 199. During the year ended Mar. 31, 1961, 1,071,835 electricity and gas meters were tested as compared with $1,097,124$ in the preceding year. Revenue derived from the testing amounted to $\$ 859,367$ and expenditure to $\$ 1,025,203$.
4.-Electricity and Gas Meter Registrations, 1951-60

| Year | ElectricityMeters | Gas Meters |  |  |  |

| 1960. | 5,317,704 | 25,041 | 1,232,215 | 12,109 | 1,269,365 |

${ }^{1}$ Includes five acetylene meters in 1951 and 1952 and four in 1953, 1954 and 1955.

## Subsection 2.-Patents, Copyrights and Trade Marks*

Patents.-Letters patent are issued subject to the provisions of the Patent Act (RSC 1952, c. 203), effective since 1935. Applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.

[^281]
## 5.-Patents Applied for, Granted, etc., Years Ended Mar. 31, 1957-61

| Item | 1957 | 1958 | 1959 | 1960 | 1961 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Applications for patents............... No. | 21,762 | 22,257 | 22,912 | 24,292 | 24,529 |
| Patents granted. | 15,513 | 16,261 | 18,293 | 22,021 | 22,014 |
| Granted to Canadians.............. | 1,787 ${ }^{\text {r }}$ | 1,488 ${ }^{\text {r }}$ | 1,515 | 1,903 | 2,036 |
| Caveats granted. | 245 | 242 | 296 | 291 | 281 |
| Assignments.............................. | 19,124 | 19,744 | 20,208 | 22,015 | 22,587 |
| Fees received, net.................... | 1,405,136 | 1,438,218 | 1,559,705 | 1,793,685 | 1,806,279 |

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to a peak of 22,014 in the year ended Mar. 31, 1961. Roughly, 68 p.c. of the patents granted resulted from inventions made by residents of the United States, 11 p.c. by residents of Britain and other Commonwealth countries and 6 p.c. by residents of Canada.

Printed copies of patents issued from Jan. 1, 1948 to date are available at a nominal fee. The Canadian Patent Office Record gives a brief digest of each patent.

Canadian and foreign patents may be consulted at the Patent Office Library. The Library has records of British patents and abridged specifications thereof from 1617 to date, and of United States patents from 1845 to date, as well as many patents, indexes, journals and reports from Australia, New Zealand, South Africa, India, Pakistan, France, Belgium, Austria, Norway, Mexico, Italy, Sweden, the Netherlands, Switzerland and Japan.

Copyrights, Industrial Designs and Timber Marks.-Registration of copyright is governed by the Copyright Act 1921 (RSC 1952, c. 55) in force since 1924. Applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Act sets out the qualifications for a copyright and its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol . . . or resident within Her Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection in Canada, in all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States of America.

Protection of industrial designs and of timber marks is afforded under the Industrial Design and Union Label Act and the Timber Marking Act. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office.
6.-Copyrights, Industrial Designs and Timber Marks Registered, Years Ended

| Item | 1957 | 1958 | 1959 | 1960 | 1961 |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Fees received, net...................... \$ | 21,628 | 21,986 | 23,440 | 24,614 | 27,446 |

Trade Marks.-The Trade Marks Office, a Branch of the Department of the Secretary of State, administers the Trade Marks Act (SC 1952-53, c. 49) which covers all legislation concerning the registration and use of trade marks and supersedes from July 1, 1954, former legislation enacted under the Unfair Competition Act, the Union Label Act and the Shop Cards Registration Act. All correspondence relating to an application for registration of a trade mark should be addressed to the Registrar of Trade Marks, Ottawa.

Applications are advertised for opposition purposes in the Trade Marks Journal, a weekly publication that also gives particulars of every registration of a trade mark and every registration of a registered user. The required fee payable on application for registration of a trade mark is $\$ 25$, for advertisement of an application $\$ 15$ and for registration of a person as a registered user of a trade mark $\$ 20$.
7.-Trade Marks Registered, Years Ended Mar. 31, 1957-61

| Item |  |  |

## Subsection 3.-Subventions and Bounties on Coal*

A major problem of the Canadian coal mining industry arises from the fact that its fields are situated far distant from the main consuming markets of the Provinces of Ontario and Quebec while these markets lie in close proximity to the bituminous and anthracite fields of the United States. Transportation subventions, which have been maintained in varying degree during the past 30 years, were designed to further the movement of Canadian coals by equalizing, as far as possible, their laid-down costs with the laid-down costs of imported coals in various market areas. This assistance is authorized from year to year by Parliamentary vote and payments are administered in accordance with regulations established by Orders in Council.
*Revised by the Administrative Officer, Dominion Coal Board, Ottawa.
8.-Expenditure for Coal Subventions, by Province, 1957-61

Nore.-Tonnages and expenditures shown in a given year, being on a calendar-year basis, are not necessarily in direct relationship; certain of the amounts include adjustments on movements of previous years.

| Province | 1957 | 1958 | 1959 | 1960 | 1961 |

[^282]The Canadian Coal Equality Act (RSC 1952, c. 34), which implemented one of the recommendations of the Royal Commission on Maritime Claims (1926), was designed to assist the Canadian steel industry and only incidentally affects coal. It provides for the payment of 49.5 cents per ton on bituminous coal mined in Canada and converted into coke to be used in the Canadian manufacture of iron and steel. Bounties paid under this authority for the years 1957-61 were as follows:-

## PART III.-BANKRUPTCIES AND COMMERCIAL FAILURES

The two Sections of this Part, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures; thus the statistics presented in each Section are not comparable with those given in the other Section.

Section 1 is limited to the supervision, by the Superintendent of Bankruptcy, of the administration of bankrupt estates under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can therefore be assumed that this applies in even greater degree to the more extended fields covered in Section 2.

Section 2 is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-Up Act) but does not include failures, sales or seizures carried out apart from such federal legislation. The Dominion Bureau of Statistics coverage was revised from January 1955 to include business failures only (see p. 920). The figures of assets and liabilities are estimates made by the debtor and, because they are not made uniformly, should be accepted with reservations.

## Section 1.-Administration of Bankrupt Estates*

Federal insolvency legislation now comprises the Bankruptcy Act 1949 (RSC 1952, c. 14), the Farmers' Creditors Arrangement Act 1943 (RSC 1952, c. 111), the Companies' Creditors Arrangement Act and to some extent the Winding-Up Act. The two Arrangement Acts are designed to avert failure and the statistics in this Section and in Section 2 therefore do not include proposals or arrangements under these Acts. When such proposals or arrangements are rejected by the creditors or fail in their purpose, the proceedings may then come under the Bankruptcy Act, the bankruptcy provisions of the Farmers' Creditors Arrangement Act or, in certain circumstances, the Winding-Up Act. There are no provisions in the Companies' Creditors Arrangement Act for the liquidation or winding-up of insolvent companies.

[^283]
## 1.-Assets, Liabilities, Assets Realized and Cost of Administration under the Bankruptey Act, by Province, 1960

${ }^{1}$ Includes summary administration provisions of the Bankruptcy Act.
${ }^{2}$ In addition to the amount paid to creditors by the trustee, secured creditors realized direct from their security approximately $\$ 17,572,240$.

## Section 2.-Returns under the Bankruptcy and Winding-Up Acts as compiled by the Dominion Bureau of Statistics

The statistics concerning bankruptcies and insolvencies published by the Dominion Bureau of Statistics cover only the failures coming under federal legislation, i.e., the Bankruptcy Act and the Winding-Up Act. Certain documents relating to estates administered under these Acts have been forwarded, since July 1920, to the Dominion Statistician for statistical analysis. The Bankruptcy Act of 1949 altered the administration of bankruptcies by providing for proposals from insolvent persons. Since July 1950, agreements made under this method have not been included with the statistics of bankruptcy, so that subsequent figures are not strictly comparable with those for previous years. Table 2 shows the number of proposals in order to give a general impression of the trend.

A major revision made in the compilation and presentation of commercial failures statistics by the Dominion Bureau of Statistics extends back to January 1955. The revised series covers business failures only, excluding failures of individuals such as wage-earners, salesmen and executive personnel formerly included. In Tables 2,3 and 4 figures for the year 1955 are given on both the old and new bases, so as to show the extent to which the series was altered by the revision.

## 2.-Bankruptcies and Insolvencies under Federal Legislation, by Province, 1951-60

## PART IV.-PRICES*

## Section 1.-Index Numbers of Wholesale Prices

The term "wholesale prices" refers in this Section to transactions that occur below the retail level. It has more of a connotation of bulk purchase and sale than of any homogeneous level of distribution.

Wholesale price indexes and individual price series have numerous uses. One of the most important is in escalator contracts which contain a price adjustment clause. Other major uses include: studies of replacement and construction costs in investment projects; analysis of price movements of both individual items and commodity groups in relation to purchases and sales; industrial planning and market analysis; valuation for tax purposes and inventory analysis; and studies in changes of physical volume. They are also used by business firms abroad in connection with sales and purchases in Canada.

General Wholesale Index.-The General Wholesale Index includes prices mainly of manufacturers but also included are those of wholesalers proper, assemblers of primary products, agents and operators of other types of commercial enterprises who trade in commodities of a type, or in quantities characteristic of primary marketing functions. In the General Wholesale Index, prices are grouped according to a commodity classification scheme based on chief component material similarities. In addition, indexes classified according to degree of manufacture are available. In Table 1, the General Wholesale Index is presented for the period 1952-61. Also presented are price indexes for three major price groups of commodities within the General Wholesale Index-raw and partly manufactured, fully and chiefly manufactured, and non-farm products.

General wholesale price indexes have been calculated by most countries for many years but the question "What does a general wholesale price index measure?" cannot be given a precise answer. A retail price index can be identified with consumer expenditure, but a general wholesale index covers a much wider range; yet it is not a measure of the purchasing power of money since it does not include prices of land, labour, securities or services, except in so far as prices of these things enter into commodity prices. As a conventional summary figure, its use has tended toward a reference level against which to observe the behaviour of particular price groups such as farm products, raw materials, and building materials, for which separate price indexes have been constructed. These more specific indexes and the General Wholesale Index are published regularly in the DBS monthly publication Prices and Price Indexes (Catalogue No. 62-002), which also contains current series on retail and security prices. Vol. 23 of that publication is a historical summary reaching back to the year 1867 for some series.

Recently, the DBS introduced a new system of wholesale price indexes called Industry Selling Price Indexes $1956=100$, referring exclusively to manufacturing industries. The foremost objective of this system is to provide measurements of price movements that occur in industries as defined under the Standard Industrial Classification. Thus, they are co-ordinated with the many other statistical series organized according to this classification. In addition, the system includes series for the most important products of the industries concerned. There are approximately 100 industry and 175 commodity indexes published. Consequently, the indexes are too numerous to re-publish here, but interested readers may consult DBS Reference Paper No. 62-515 which contains tables, explanatory text, charts and weights relating to these indexes. Current Industry Selling Price Indexes are published monthly in Prices and Price Indexes (Catalogue No. 62-002).

The General Wholesale Index rose 1 p.c. from 230.9 in 1960 to 233.3 in 1961. Thus, there was a return to the gradual annual increase which stalled between 1959 and 1960 when the index remained virtually unchanged.

[^285]The raw and partly manufactured goods index increased 1.4 p.c. from 209.6 to 212.6 and thus exceeded the increase of 0.9 p.c. shown by the fully and chiefly manufactured goods index. The non-farm products group, which contains more commodities common to the latter than to the former, also increased 0.9 p.c. from 237.0 to 239.1 from 1960 to 1961.

## 1.-Annual Index Numbers of Wholesale Price Groups 1952-61, and Monthly Indexes 1960 to Mid-1962

Nots.-Canadian farm products indexes subsequent to July 1960 are subject to revision; other indexes are final to the end of 1961.

[^286]Index Numbers of Building Materials Prices.-Price movements of materials entering into building construction are currently measured by two special-purpose series: price index numbers of residential building materials and price index numbers of nonresidential building materials, for which the base years are 1935-39 and 1949, respectively. Details of weighting and construction and historical series may be found in the special bulletins prepared at the time the indexes were first published.* More recently the composite indexes have been calculated on an annual basis back to 1913; current indexes are published monthly in DBS Bulletin Prices and Price Indexes (Catalogue No. 62-002).

The indexes of prices of building materials fluctuated in a narrow range over the year 1961 to close at slightly lower levels. The residential building materials price index $(1935-39=100)$ at 292.4 in December 1961 was down from 293.8 a year earlier. The nonresidential building materials price index $(1949=100)$ in the same period moved down from 132.3 to 131.2.

[^287]
## 2.-Annual Price Index Numbers of Residential Building Materials 1952-61, and Monthly Indexes 1960 to Mid-1962

(1935-39=100)

## Section 2.-Consumer Price Index

The purpose of the Consumer Price Index is to measure the movement from month to month in retail prices of goods and services bought by a representative cross-section of the Canadian urban population. For a particular article or service, a price index number is simply the price of the article in one period of time expressed as a percentage of its price in a reference period, usually called a base period. However, indexes for individual goods may be combined to form indexes representing prices of broad groups of goods and services. Thus, the Consumer Price Index relates to the wide range of goods and services bought by Canadian urban families. The index expresses the combined prices of such goods each month as a percentage of their prices in the base period 1949.

The group of goods and services represented in the index is called the index "basket" and "weights" are assigned to the price indexes of individual items for purposes of combining them into an over-all or composite index. The weights reflect the relative importance of items in expenditures of middle size urban families with medium incomes. The basket is an unchanging or equivalent quantity and quality of goods and services. Only prices change from month to month and the index, therefore, measures the effect of changing prices on the cost of purchasing the fixed basket. The basket and weights now used in the index are based on expenditures in 1957 of families of two to six persons, with annual incomes of $\$ 2,500$ to $\$ 7,000$, living in cities of 30,000 population or over.

A comprehensive description of the index is contained in the publication The Consumer Price Index $(1949=100)$-Revision Based on 1957 Expenditures (Catalogue No. 62-518).

Movements in the Consumer Price Index Since 1949.-During the 15 years of almost continuous economic growth following the end of the Second World War there have been several distinct periods of retail price behaviour, the latest of which was in evidence throughout 1959, 1960 and 1961. The gradual relaxation of price controls in 1946 combined with consumer demands far in excess of supply brought on a period of rapidly advancing prices, so that between 1946 and 1948 the consumer price index advanced more than 25 p.c. A significant exception to these general price increases was the behaviour of rents which, continuing under some degree of control, increased only 7 p.c. in the same period. Toward the end of 1948, production appeared to be matching consumer demands and, during the slight recession of 1949, consumer prices levelled off. Between the latter months of 1948 and May 1950, retail prices increased only slightly more than 1 p.c. However, with the outbreak of war in Korea in June 1950 came a resurgence of pressure on prices and in the course of the next 18 months further major upward movements took place. The consumer price index rose from 102.7 in July 1950 to 118.1 by December 1951, an increase of 15 p.c. Food advanced sharply from 102.6 to 122.5 or by 20 p.c. The housing component, comprised of shelter and household operation groups, rose from 104.3 to 117.2. The shelter index, based on both home ownership and rents-the latter freed from most of the wartime controls-moved from 107.4 to 118.2, or by about 10 p.c. Household operation, covering such items as furniture, appliances and fuel, rose about the same degree, from 101.6 to 116.4. Clothing experienced a more substantial rise of 16 p.c. from 99.1 to 115.2 . The wide variety of goods and services covered in the other groups followed a somewhat similar pattern.

The peak in consumer price levels was reached in January 1952 when the index stood at 118.2, dropping off gradually in the first half of 1952 to reach 115.9 in May, mainly as a
result of a drop of about 5 p.c. in the food index. From this point a plateau in retail prices was established which lasted for four years. Over this period, the consumer price index displayed noteworthy stability, ranging narrowly from a low of 114.4 to a high of 116.9 . Although the general level of prices remained almost unchanged during this lengthy period, significant variations were taking place around a stable average. Food recorded mostly seasonal movements during 1953, 1954, 1955 and the first half of 1956. Non-food commodities experienced a decline of about 3 p.c. in a steady, gradually downward movement, much of it accounted for by appliances which moved down 17 p.c. On the other hand, rents advanced steadily to stand 13 p.c. higher in May 1956 than in May 1952. The entire group of service items also experienced continuous increases throughout this period.

From May 1956 a distinct change occurred in price patterns. A trend toward higher prices continued through the remainder of 1956 and the first ten months of 1957 and the total index moved up steadily from 116.6 to a new postwar peak of 123.4 in October 1957. Food, which was the component responsible for most of the upward movement at the total index level, rose from 109.3 in May 1956 to 121.9 by September 1957. Housing continued to advance steadily, although at a slightly moderating rate, as did other groups, particularly the service elements. In contrast, clothing prices remained practically unchanged and household operation, continuing to reflect the easy price situation of major household appliances, rose only 2.8 p.c.

The most recent period of upward movement in the consumer price index, which began in mid-1956 and continued throughout 1957, persisted in 1958 but with some evidence of moderating. Over the latter year, consumer prices averaged 2.6 p.c. above 1957 , while 1957 prices were 3.2 p.c. above 1956. In the fourth quarter of 1958 consumer prices averaged 2.4 p.c. higher than in the same period a year earlier, while in the fourth quarter of 1957 prices were 2.6 p.c. above the fourth quarter of 1956.

During 1959, the upward movement in the consumer price index was far less marked than in the preceding years. For the year as a whole, the average level of consumer prices increased by 1.1 p.c. as compared with increases of 2.6 p.c. and 3.2 p.c. in 1958 and 1957, respectively. As in the case of the total index, all major groups, with the exception of the food component, averaged slightly higher in 1959 than in 1958. The increases, however, were mostly smaller than in the previous years. The largest increase in 1959, as in earlier years, occurred in the groups other than food, housing and clothing, particularly health and personal care and recreation and reading. Clothing prices were fractionally higher while the housing index increased almost 2 p.c. The most significant change in the pattern of price movement occurred in food prices which were fractionally lower on average in 1959. This was in marked contrast to increases of 3.0 p.c. in 1958 and 4.6 p.c. in 1957 . From 1953 to 1956, the downward movement in food prices had offset increases in other components and provided stability in the total index, a condition that reappeared in 1959.

During 1960, consumer prices continued to reflect the relative stability of the previous year with an over-all price rise of 1.2 p.c. compared with an increase of 1.1 p.c. in 1959 over the year 1958. Changes in six of the seven component groups were quite similar; each of the six was at a higher level compared with 1959 with the increases ranging from 0.9 p.c. for food to 1.8 p.c. for recreation and reading. The health and personal care component, which in the past has risen faster than any of the other components, again experienced the largest gain in 1960, rising 2.9 p.c. above the 1959 level.

In 1961, the index ranged narrowly from a low of 128.9 in February to a high of 129.7 in November. Two factors in price movement during the year were (1) the introduction of
the 3-p.c. sales tax in Ontario in September, which was taken into account, and (2) the change in the exchange rate of the Canadian dollar. Although the latter was considered likely to result in higher prices on imported goods and ultimately in higher consumer prices, no evidence of this was available up to December 1961 as the index stood at just about the same level as in December 1960.
5.-Annual Consumer Price Index Numbers 1952-61, and Monthly Indexes 1960 to Mid-1962

Consumer Price Indexes for Regional Cities.-Table 7 gives regional consumer price indexes for ten cities or city combinations. These indexes do not show whether it costs more or less to live in one city than in another and should not be used for such comparison. Their function is to measure percentage changes in retail prices-over a certain time in each city or city combination-of a fixed basket of goods and services representing the level of consumption of a particular group of families.

World Retail Price Indexes.-In order to place changes in Canadian retail prices in perspective with those occurring elsewhere, Table 8 provides retail price indexes for selected countries for 1958, 1959 and 1960. These indexes measure price changes only within each country and should not be used to compare actual levels of living costs from country to country.

## 8.-Index Numbers of Retail Prices in Canada and Other Countries, 1958-60

## Section 3.-Consumer Expenditure Surveys

A continuing program of surveys of family income and expenditure in urban areas was begun in 1953 and surveys have been conducted since then at two-year intervals. The primary purpose of these surveys has been to collect information for reviewing and revising, if necessary, the weights of the consumer price index. The surveys have therefore been restricted to cover only those families which were comparable in family composition and income level to the consumer price index target group which was selected for index number purposes from a nation-wide survey conducted in 1947-48. For each of the three survey periods covering 1953, 1955 and 1957, respectively, the program consisted of a series of monthly surveys in which the major objective was the collection of detailed expenditure data on food, followed by a recall survey of all expenditures and income for the same calendar year. Detailed results for each survey have been published in two series of occasional publications, of which the latest are Urban Family Food Expenditure, 1957, (Catalogue No. 62-516) and City Family Expenditure, 1957 (Catalogue No. 62-517).

The 1959 survey, carried out in March and April of 1960, marked a departure from this pattern in that the program of monthly food expenditure surveys was omitted, and the universe of the recall survey was enlarged to include all families and individuals, regardless of income level, in urban centres of 15,000 or over. The results shown in Tables 9 and 10 are therefore not comparable with results of the nine-city expenditure survey of 1957.

Table 9 shows how expenditure patterns varied among families grouped by income levels. For the basic necessities of food and shelter, expenditure per family increased as income rose, but relative importance of these categories in total expenditure decreased from 58 p.c. for families with incomes under $\$ 2,500$ to 39 p.c. for families with incomes of $\$ 10,000$ and over. Relative expenditure on household operation also declined fractionally as income rose. The proportions spent on clothing and other commodities and services, which included transportation, personal care, medical care and recreation, increased as income rose. The largest relative increase was shown by gifts and contributions and personal taxes and security which increased from 5 p.c. in the lowest income groups to 25 p.c. in the highest.
(Families of two or more)

Table 10 shows average dollar expenditure per family by main expenditure categories for families of two or more, by main regions and for the composite of 60 urban centres. The expenditure pattern of one-person units is shown only for the composite of 60 urban centres. It should be noted that the term "family" in these surveys is used synonymously with spending unit, which is defined as a group of persons dependent on a common or pooled income for the major items of expense, and living in the same dwelling. One-person spending units are defined as financially independent individuals; this group, however, does not include unmarried sons or daughters living in their parents' households.

Average of total family expenditure for 1,672 families in 60 urban centres was $\$ 5,570$, or $\$ 1,505$ per person. Although the level of family expenditure was $\$ 740$ higher than expenditure of the restricted group surveyed in 1957, the percentage distribution of expenditure among main consumption categories was not significantly different. Approximately 40 p.c. of 1959 expenditure of families of two or more was allocated to food and shelter, with 23.8 p.c. going to food and 16.4 p.c. to housing, fuel, light and water. About 4 p.c. of total family expenditure was for household operation, 5 p.c. for furnishings and equipment and 9 p.c. for clothing. The remaining expenditure on commodities and services amounted to 27 p.c., of which automobile purchase and operation constituted 9 p.c. Outlays not classified as current consumption, representing gifts, contributions, personal taxes and security were 15 p.c. of total expenditure.

Shelter was a major item in the outlay of one-person units, amounting to 22.4 p.c. of total expenditure, while food accounted for 21.6 p.c. The proportions allocated to other categories of current consumption were generally below those for families of two or more. Gifts and contributions bulked more largely in the one-person pattern, averaging 6.1 p.c. of total expenditure in contrast to 3.0 for families of two or more.

## Section 4.-Index Numbers of Security Prices

Investors price indexes for common stocks are calculated on the 1935-39 base* and published weekly and monthly for a sample of issues, broadly classified under the headings: industrials, public utilities and banks. Within the first category the sample is further classified by industry. Weekly and monthly indexes of mining stocks including both golds and base metals are calculated and published separately, as are monthly indexes of preferred stocks.

For purposes of index calculation, Thursday closing prices are used for the issues of companies listed on either or both the Montreal and Toronto stock exchanges. Weights are applied to each issue on the basis of the number of shares currently outstanding. The list of stocks included in the various security series (which at January 1962 totalled 88 for the investors index and 27 for the mining stocks index) are revised annually so that issues that have become important in stock market activity may be included and those of declining interest removed. Provision is also made for stock splits, mergers and the exercise of 'rights'. The indexes are designed to reflect weekly and monthly changes of interest to the investor rather than day-to-day changes of more speculative interest. For that reason the historical record of indexes dating back to January 1914 on a monthly basis is of significance in any analysis of the degree of fluctuation in stock prices through time.

Investors Index.-A continuation of the strong upward trend inaugurated with the inception of the bull market in December 1953 culminated in a new high in the investors total index of 291.8 in August 1956; the September 1929 peak was 197.8. Subsequent sharp declines that brought the level to 262.3 by November 1956 were reversed in December, and by May 1957 losses had been largely recouped. In mid- 1957 prices broke sharply and commenced a seven-month slide to 215.4 by January 1958. At this point the index swung upward to 262.1 in October, continued slowly higher to 279.3 in July 1959, only to break sharply in September. Later it fluctuated moderately, touching a low of 241.7 in October 1960, after which the index again moved strongly upward. In March the index broke through the ceiling and continued strongly to 333.3 at December 1961, for a new alltime high. The major group indexes all moved up over the period January-December 1961 as follows: banks 21.6 p.c., industrials 21.1 p.c., and utilities 15.7 p.c. All sub-groups advanced; in industrials increases were headed by beverages, industrial mines, and textiles and clothing; in utilities, transportation and telephones were up sharply while power and traction showed only a small rise.

${ }^{1}$ See footnote to p. 937.

Four supplementary indexes of common stock prices, relating to important categories of stocks not covered by existing series, were introduced in May 1960. These are published as interim indexes pending complete revision of the security price indexes. The price reference date for the new series is 1956; construction and weighting methods conform to those of existing indexes. Each of the four supplementary indexes advanced between January and December 1961 as follows: primary oils and gas 56.0 p.c., investment and loan 49.7 p.c., pipelines 33.0 p.c., and uraniums 15.5 p.c. For comparison, Table 12 shows related existing series from Table 11 converted to the $1956=100$ base.

Mining Stocks.-Mining stocks rose strongly in 1961 from 115.5 in January to 139.3 in December for a gain of 20.6 p.c.; the advance reflected chiefly increases for base metals for which the index rose 39.6 p.c. from 188.0 to 262.4 . Golds, after weakness early in the year, rallied for a 2.0 p.c. rise from 83.9 to 85.6 .

Part IV.-Travel between Canada and Other Countries

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

The subject of foreign trade covers more than the treatment of exports and imports of commodities, important though this is. In its broader sense foreign trade is made up of the total international interchange of goods, services, securities and other financial transactions, all of which are presented in their appropriate relationship in this Chapter. Following Part I, which is a review of Canada's trade during recent years, Part II gives detailed statistics of external commodity trade. Part III outlines the various ways in which the Federal Government promotes and encourages trade relationships, and contains a brief review of the Canadian tariff structure. Part IV gives a fairly detailed review of the extent of international travel between Canada and other countries in 1960 with estimates of the amount of money expended for this purpose.

## PART I.-RECENT DEVELOPMENTS IN CANADA'S FOREIGN TRADE*

The value of Canada's external trade in 1961 was considerably greater than in any previous year. Total trade-exports and imports together-was valued at $\$ 11,666,800,000$ in 1961 , an increase of 7.3 p.c. above the total for the previous year of $\$ 10,869,500,000$. For the first time since 1952 there was an export trade surplus, which amounted to $\$ 124,700,000$ as compared with an import balance of $\$ 95,900,000$ in 1960 . Both exports and imports showed gains, particularly in the last half of the year, although part of this increase was a reflection of the difference in the exchange value of the Canadian dollar. Total exports rose by 9.4 p.c. in 1961, advancing to $\$ 5,895,700,000$ from $\$ 5,386,800,000$ in 1960 , and imports gained 5.3 p.c., increasing to $\$ 5,771,000,000$ in 1961 as against $\$ 5,482,700,000$ in the preceding year.

Over the period from 1956 to 1960 export prices remained relatively stable, declining fractionally in the first three years and then advancing by 1.8 p.c. in 1959 and very slightly in 1960. During 1961, the average index of export prices rose approximately 1 p.c. but

[^291]the enhanced value of exports was attributable mainly to the greater volume of goods moved, especially in the second half of the year. Import prices rose modestly during the same period, except for a 1.8-p.c. decrease in 1959. Following the mid-1961 decline in the foreign exchange value of the Canadian dollar, the average index of import prices advanced considerably and for the year showed an increase of 3.2 p.c. over the 1960 level, while the index of physical volume of imports rose by 2.0 p.c. Table 1 traces the movements in Canadian trade totals and in the indexes of price and volume over the five years 1957-61, and also shows percentage changes during 1960 and 1961.

${ }^{1}$ Revised to cover the adjustment for "Special Transactions-Non-Trade" (see p. 949).
The general trend of Canada's trade during the ten years 1952-61 is also shown in the chart on p. 943 and the higher level of both exports and imports attained during the latter half of the period is noticeable. Large increases were made in 1955 and 1956, the total value of Canadian trade reaching a higher plateau. In 1957 and 1958, exports were virtually unchanged and there was a considerable decline in imports in 1958, but in 1959 and 1960 exports again climbed and imports generally regained their earlier level. During most of 1961 there was an upward trend in both export and import trade, particularly in the last six months, resulting in new record heights for each in this year.

During the first part of 1960 , international trade and economic activity had increased among the industrial nations, but the rate of growth lessened in the latter half. Then in 1961 there was an added intensification of competition in the international trade field, surpluses in raw materials and in many manufactured goods taking the place of former scarcities. Economic activity in the United States reached a low point in February and then showed a steady advance, except for a pause in September. Output and demand rose in Britain during the first six months of 1961 but tended to level off in the second half. The volume of output in Western Europe and Japan increased but the rate of expansion was somewhat slower. The value of commodities traded by leading countries in 1961 remained high, but purchasers could afford to be more selective than in previous years. Nevertheless, Canadian exports exceeded those in any preceding year, although concentrated more in shipments to foreign rather than Commonwealth countries.

The direction of Canadian foreign trade in 1961 varied somewhat, with lesser shares of exports going to traditional markets. The United States was the destination of 54.4 p.c. of total exports as compared to 56.3 p.c. in 1960 . Britain took 15.6 p.c. as against 17.1 p.c.; the remainder of the Commonwealth 5.5 p.c. versus 6.2 p.c.; and other countries absorbed 24.5 p.c. as compared to 20.4 p.c. in 1960 . In the last group, the proportion destined to Western European countries remained constant but the Asian share increased considerably and Latin America's share increased moderately. Imports showed only minor fractional variations from the shares supplied in the preceding year. In 1961, the United States was the source of 67.0 p.c. ( 67.2 p.c. in 1960 ), Britain 10.7 p.c. ( 10.8 p.c.), the remainder of the Commonwealth 5.0 p.c. ( 5.1 p.c.) and other countries 17.3 p.c. ( 16.9 p.c.); the latter included a small increase in imports from Western Europe.

The importance of foreign trade to the Canadian economy is reflected in the fact that exports of goods and services have been close to 20 p.c. of gross national expenditure in recent years while imports of goods and services have been slightly more. Among the major trading nations of the world, Canada in 1961 ranked fifth in the total value of commodities exchanged preceded by the United States, the Federal Republic of Germany, Britain and France. In recent years, including 1959, Canada ranked fourth but increased economic activity in France in the past two years put the value of that country's total trade above Canada's. Also, for the first time since World War II, West Germany's total trade exceeded that of Britain. On a per capita basis, Canada's position has declined considerably, dropping from second place in 1957 and 1958 to third in 1959 and to eighth in 1960 and 1961. According to preliminary returns, Canada is preceded by Switzerland, Trinidad and Tobago, Belgium and Luxembourg, the Netherlands, Sweden, Denmark and Norway, with the possibility that New Zealand may also be higher. Figures based on available statistics are recorded in Table 2, countries being ranked in order of their total trade in 1961.

## 2.-World Trade, by Leading Countries, 1960 and 1961

International Background.-Since a large part of the national income and major portions of the revenues of many important industries are derived from foreign trade, developments in principal world markets are of direct interest to Canada's economy. On the international scene, the rising importance of the European Economic Community (EEC) or Common Market has been underlined by the July 1961 decision of Britain to apply for membership. This group, set up by the Treaty of Rome, came into existence on Jan. 1, 1958, and is composed of France, West Germany, Italy, the Netherlands, Belgium and Luxembourg. By January 1962, these countries had made successive reductions totalling 40 p.c. in their tariffs against each other, except for some rates on agricultural produce, and had abolished most import licences and quotas between members. Effective July 1962, a further decrease of 10 p.c. in industrial tariffs has been agreed to, and also a 5-p.c. reduction on a number of agricultural products, bringing total cuts thereon to 35 p.c. These latest reductions mean that the member countries are two and one-half years ahead of the program originally laid down. Agreement on a common farm policy was also reached in early 1962, and negotiations for Britain's entry into the EEC was continuing at mid-year.

A second European group, the European Free Trade Association (EFTA), was brought into being by the Stockholm Convention of Nov. 20, 1959, and is composed of Britain, Norway, Sweden, Denmark, Austria, Switzerland and Portugal. The participating countries have reduced duties on most industrial goods produced and sold among themselves by 40 p.c. as from Mar. 1, 1962, by all but Austria and Norway, which two have agreed to follow not later than Sept. 1, 1962. Each nation of this group retains its own tariff against non-members. Should Britain join the EEC, mutual arrangements between EFTA countries would, as a consequence, be reviewed.

Canada and the United States joined eighteen European countries to form the Organization for Economic Co-operation and Development (OECD) which was set up in Paris Dec. 14, 1960. The main objectives of the OECD are to encourage economic and financial growth among member countries, to contribute to the sound expansion of the underdeveloped nations, and to work for an increase in world trade on a multilateral and nondiscriminatory basis.

Most of the main world trading nations, Canada included, are associated in the General Agreement of Tariffs and Trade (GATT) and continued their efforts in 1961 toward the reduction of duties and the removal of import restrictions. New techniques for wider tariff reductions, better access to world markets for agricultural commodities and further aid for exports from under-developed countries were studied.

In Latin America, the seven original signers of the Latin American Free Trade Association (LAFTA)-Argentina, Brazil, Chile, Mexico, Paraguay, Peru and Uruguay-have ratified the Treaty of Montevideo, which thus became effective in July 1961. Colombia and Ecuador have subsequently become members and the treaty is open to adherence by all other Latin American countries. The aim of the Association is to remove customs duties and other trade restrictions at a minimum reduction rate of 8 p.c. annually, reaching a duty-free status in twelve years. In Central America, further steps were taken in 1961 toward economic integration and the establishment of a common market among Central American countries.

The future impact of these regional groups on Canadian trade is difficult to judge, particularly if the main members of EFTA should agree to participate in the European Common Market. At present, a large proportion of Canadian exports to the EEC countries enter those markets duty free, but if and when the proposed common external rates are implemented almost half of these products will be dutiable. Under current conditions, the bulk of Canadian exports to Britain are imported without payment of duty and almost half come in under a Commonwealth preference. If Britain joins the European Economic Community, the competitive position of Canadian merchandise on the British market may well undergo significant changes. Other re-alignments in world trading arrangements may emerge; for instance, there is a distinct possibility of major change in United States trading policies which could lead to a reduction of tariff barriers of consequence to Canadian trade. Continued entry into world markets is of vital importance to the Canadian economy.

Canadian Trade in 1961.-Exports.-The principal components of Canadian export trade are drawn from the forests, farms and mines of the nation. Shipments of wood, wood products and paper, agricultural and vegetable products, and non-ferrous metals and products together account for over two-thirds of the total exports. Newsprint remained the leading commodity, shipments being valued at $\$ 761,300,000$ for 1961 . Wheat exports, at $\$ 661,800,000$, were 61.2 p.c. greater than in 1960, the main amounts going to Britain, West Germany, Japan and Communist China. Lumber shipments, which had slowed down at the beginning of the year, picked up during the last half to rise to $\$ 354,900,000$ or 2.5 p.c. above 1960 figures. Wood pulp followed, at $\$ 346,700,000$, a $6.6-$ p.c. advance. Nickel, at $\$ 338,500,000$, the fifth export in value, was 34.8 p.c. above shipments in the preceding year.

Exports of aluminum, copper and uranium all showed decreases in 1961 as compared to 1960 shipments. Aluminum, at $\$ 250,700,000$, was 6.9 p.c. less; copper, at $\$ 201,800,000$, was 9.9 p.c. below; and shipments of uranium and concentrates, as a result of the deferral of contracts, were down 26.9 p.c., being valued at $\$ 192,700,000$. Crude petroleum exports rose by almost two-thirds to reach $\$ 154,300,000$ and fish products at $\$ 141,100,000$ were 4.8 p.c. above the 1960 figure. A decrease of 12.7 p.c. was noted in 1961 iron ore shipments, which declined to $\$ 135,800,000$; asbestos, at $\$ 131,300,000$, rose 9.3 p.c.; and plastics and synthetic rubber accounted for $\$ 103,800,000$, somewhat lower than in the previous year. Sales of non-farm machinery rose by 44.2 p.c. to $\$ 96,700,000$. Farm machinery, including tractors, at $\$ 79,800,000$, fell by 6.6 p.c. although sales began to pick up toward the end of the year.

Domestic exports to the United States in 1961 advanced 6.0 p.c. and were valued at $\$ 3,109,109,000$ as compared with $\$ 2,932,171,000$ during the previous year. Shipments fell off considerably in the first quarter but rallied in the second, gained substantially in the third and advanced 23.1 p.c. in the fourth quarter. The chief gains were in nickel and crude petroleum while aircraft and natural gas added substantial amounts. Shipments of uranium and concentrates were off by more than one-quarter and copper exports were
over one-third less. Newsprint was the chief Canadian export to the United States but shipments were fractionally less than in 1960 . Wood pulp and lumber were next, sales of the former advancing by 5.0 p.c. and of the latter by 2.4 p.c. Uranium and crude petroleum followed, a decline in the first counterbalancing an increase in the second. Nickel was sixth and fish and fishery products, iron ore, alcoholic beverages and farm machinery completed the list of the ten most important exports. Shipments of iron ore, which had declined severely in the first six months, rallied in the third quarter and nearly doubled in the last quarter; however, for the year they were 9.4 p.c. below the 1960 total.

Domestic exports to Britain at $\$ 908,837,000$ were 0.7 p.c. less than the 1960 total of $\$ 915,290,000$, a large decline in the second quarter and a fractional one in the third overweighing gains in the first and fourth quarters. There were considerable advances in the sales of nickel and precious metals and wheat and tobacco also increased. However, considerably lower quantities of aluminum, iron ore, uranium, zinc, and grains were forwarded during 1961. Wheat remained the leading product, followed by nickel, aluminum, copper and newsprint; lumber, wood pulp, precious metals, tobacco and seeds were next in importance.

Exports to Commonwealth and preferential countries, other than Britain, totalled $\$ 328,900,000$ or 1.5 p.c. less than in 1960 . Australia was the main market, 1961 shipments being valued at $\$ 78,628,000$ or approximately one-fifth below the previous year. Sales of lumber, wood pulp and newsprint declined, as did those of engines and boilers and aluminum, although sales of machinery increased. India came next, exports increasing by 16.5 p.c. to $\$ 42,885,000$, composed mainly of wheat, wood pulp, engines, aluminum, zinc and copper. Shipments to South Africa decreased by 28.2 p.c., totalling $\$ 37,819,000$ in 1961, but exports to New Zealand rose by 30.5 p.c. to $\$ 31,125,000$. There were also larger wheat and wood pulp shipments to Pakistan, aircraft and more wheat flour to Ghana, and more plastics and synthetic rubber to Hong Kong.

Domestic exports to all other countries aggregated $\$ 1,408,700,000$, an increase of 29.3 p.c. over the 1960 figure of $\$ 1,089,700,000$. Of these exports, $\$ 640,300,000$ in 1961 were consigned to Western Europe, a rise of 9.7 p.c. over the previous year's total of $\$ 583,900,000$. West Germany was the principal destination, that country purchasing $\$ 212,753,000$ of Canadian produce and thus accounting for almost one-third of Canada's trade with Western Europe in 1961. Belgium and Luxembourg, France, Norway and Italy followed. There was a large gain in shipments to Germany and considerable advances in exports to Belgium and Norway, while those to Italy and France declined slightly from 1960 figures. The European Common Market countries purchased $\$ 488,965,000$, an increase of 11.5 p.c. over the 1960 total of $\$ 438,582,000$. Sales to Eastern Europe rose to $\$ 97,500,000$, chiefly attributable to substantial shipments of wheat.

Also contributing to the rise in shipments to other foreign countries were exports to Asia which increased by over three-quarters to $\$ 384,600,000$, of which those to Japan, at $\$ 231,574,000$ and to Communist China at $\$ 125,448,000$, were the most important. Trade with Japan, Canada's third customer, rose by 29.5 p.c. and was spread over many items, but consisted chiefly of wheat, lumber and basic industrial materials. Shipments to Communist China were mainly wheat and barley.

Exports to Latin America increased by nearly one-quarter, those to South America being valued at $\$ 140,500,000$ and to Central America and the Antilles at $\$ 104,900,000$. Mexico, Venezuela, Cuba, Argentina and Brazil were the main markets in 1961 and the chief gains were in shipments to the last three. Exports to Middle East countries also advanced, rising 11.6 p.c. to $\$ 25,900,000$ while exports to other African countries increased slightly to $\$ 11,400,000$.

Imports.-For many years, iron and its products have accounted for over one-third of total imports and non-farm machinery and parts have headed the list of principal commodities. Automobile parts, crude and partly refined petroleum, electrical apparatus, passenger cars, engines and boilers, rolling-mill products (iron and steel), tractors and
parts, aircraft and parts, and farm implements and machinery have followed, the order of importance shifting slightly from year to year. In 1961, each of these products exceeded $\$ 95,000,000$ in value.

Most of the leading import commodities showed increases in 1961 when compared with arrivals in the preceding year. Non-farm machinery at $\$ 603,100,000$, by far the most valuable import, was valued at 4.0 p.c. above 1960 . Automobile parts, at $\$ 304,500,000$, which had fallen off at the beginning of the year, advanced sharply in the last part of the year and were 2.7 p.c. above those in the preceding year. Crude petroleum, at $\$ 291,200,000$, rose 4.0 p.c. and electrical apparatus n.o.p., at $\$ 265,300,000$, advanced 1.8 p.c. Arrivals of aircraft and parts valued at $\$ 217,000,000$ were nearly double those in the preceding year, and engines and boilers, including aircraft engines, also advanced considerably. Passenger cars declined considerably as did rolling-mill products. Cotton fabric imports were well maintained and paper and paperboard showed a substantial increase.

The United States supplied the greatest proportion of foreign goods brought into Canada, imports from that country totalling $\$ 3,863,968,000$ in 1961 , an increase of 4.8 p.c. over the 1960 total. There was a considerable decline in the first quarter and a small drop in the second quarter, but imports rallied in the third and rose quite sharply in the final three months of the year. The leading import from the United States was non-farm machinery and parts, arrivals of which totalled $\$ 512,400,000$, a 2.2 -p.c. increase over 1960; advances in the last half of the year made up for the sizable declines in the first two quarters. Automobile parts, at $\$ 292,000,000$, were in second place, rising by almost one-quarter in the July-December period and gaining 2.3 p.c. over the 1960 total. Third was farm implements and machinery, at $\$ 209,900,000$, fractionally below the total for the preceding year. These were followed by electrical apparatus at $\$ 199,800,000$, a 4.1 -p.c. gain over the year before. Aircraft and parts were fifth at $\$ 168,600,000$, gaining by almost two-thirds over 1960, but this item included a large element of military aircraft obtained under special arrangements as well as some purchases of civilian aircraft. Engines and boilers, chiefly aircraft engines, amounted to $\$ 114,300,000$, a 10.2 -p.c. rise over arrivals in 1960 . Fruits, at $\$ 115,900,000$, increased by 5.3 p.c.; books and printed matter, at $\$ 96,600,000$, gained 10.4 p.c.; and plastics and products, at $\$ 95,400,000$, rose 7.9 p.c. For those remaining commodities, imports of which were over $\$ 50,000,000$, decreases were noted in arrivals of rolling-mill products, coal, automobiles, cotton products and vegetables, while paper and products and scientific and educational equipment advanced.

Imports from Britain, except for a fractional drop in the first quarter, showed a rising trend throughout 1961. Compared with the similar period of 1960, arrivals advanced 2.2 p.c. in the second quarter of $1961,8.5$ p.c. in the third and 10.1 p.c. in the fourth quarter, giving a cumulative increase of 5.0 p.c. for the year. Among commodities, a striking advance was noticeable in engines and boilers, which increased by 89.0 p.c. to occupy the first place at $\$ 65,400,000$, mainly owing to aircraft engines. Imports of British automobiles, however, fell to $\$ 63,800,000$, a decline of 41.0 p.c. from the 1960 total of $\$ 108,200,000$. Aircraft and parts were nearly three and one-half times as great as in the preceding year, rising to $\$ 47,600,000$ and constituting aircraft mainly for commercial use. Non-farm machinery rose 14.3 p.c. to $\$ 47,200,000$ while electrical apparatus declined 11.5 p.c. to $\$ 36,900,000$ and wool products dropped 7.4 p.c. to $\$ 33,600,000$ for the year despite a recovery in the last quarter. Considerable gains were made in imports of British farm implements and machinery, raw wool, clay and products, automobile parts, alcoholic beverages and books, and lesser advances in sugar and products of leather. Declines were registered in arrivals of precious metals, mainly platinum, during the last six months; in apparel, rolling-mill products and pipes and tubing, despite rallies in the fourth quarter; and in wire and chain and cotton products.

Imports from other Commonwealth countries and from the Republics of Ireland and South Africa totalled $\$ 294,500,000$ in 1961, a 4.7 -p.c. rise over the previous year's figure of $\$ 281,200,000$. Arrivals increased considerably in the first and third quarters, only fractionally in the second, and by 4.7 p.c. in the final three-month period. Jamaica was
the leader in this group, supplying $\$ 39,085,000$ worth of merchandise, followed by Australia at $\$ 36,685,000$, and India at $\$ 33,465,000$. Imports from Jamaica were chiefly bauxite and sugar, from Australia principally sugar, meats and wool, while India sent mainly jute, tea, nuts, spices and cotton fabrics. Malaya and Singapore, at $\$ 23,597,000$, forwarded chiefly rubber, palm oil and tin; British Guiana, at $\$ 23,281,000$, sent bauxite and sugar; and Kuwait, at $\$ 20,225,000$, almost entirely petroleum. Ghana forwarded more cocoa but less was imported from Nigeria, and Kenya and Uganda increased their shipments of coffee; Ceylon supplied less tea and rubber than in 1960 and Trinidad less petroleum.

Imports from Western Europe advanced throughout the year, particularly in the fourth quarter when they rose by more than one-fourth. The total for 1961 reached $\$ 411,700,000$, an increase of 11.6 p.c.; the bulk of the trade was supplied by the Federal Republic of Germany, at $\$ 136,530,000$; France, at $\$ 54,280,000$; Italy, at $\$ 49,140,000$; Belgium and Luxembourg, at $\$ 44,780,000$; and the Netherlands, at $\$ 33,493,000$. Arrivals from each of these countries showed gains over 1960 totals, particularly Italy at 14.7 p.c., but averaged around 7 p.c. There were also appreciable increases in imports from Switzerland and Sweden. Germany supplied larger amounts of rolling-mill products, non-farm machinery and automobiles. France sent more machinery but fewer cars. Italy forwarded more machinery and Belgium more rolling-mill products, while the Netherlands increased its shipments of electrical apparatus. More machinery came from Sweden and Switzerland.

South American countries provided $\$ 282,300,000$ worth of goods, an increase of 9.6 p.c. over 1960. The largest single item was crude petroleum from Venezuela, at $\$ 192,200,000$, which, together with $\$ 23,500,000$ of petroleum products, made Venezuela the third largest source of imports, exceeded only by the United States and Britain. Brazil and Colombia increased the value of their coffee sales to Canada. Imports from the nonCommonwealth countries of Central America and the Antilles fell by 3.7 p.c. to $\$ 81,200,000$. The main supplier was the Netherlands Antilles which accounted for $\$ 31,137,000$, practically all being petroleum products. Mexico, at $\$ 18,193,000$, was next, although this total represented a drop of 13.4 p.c. from 1960 imports because of lower shipments of raw cotton and coffee. Larger supplies of bananas were brought into Canada from Honduras and Panama, Costa Rica sent the same amount as in 1960 and Ecuador's banana shipments were down nearly 30 p.c. Imports from Cuba declined substantially, arrivals of sugar, which made up half the value, dropping by almost 40 p.c.

Imports from Asian countries outside the Commonwealth rose 2.6 p.c. to $\$ 124,200,000$ in 1961, Japan at $\$ 116,607,000$ supplying the main proportion. Japanese goods advanced 5.6 p.c. in value and covered a wide range of commodities; electrical apparatus increased but rolling-mill products and machinery declined. From the Middle East, imports decreased 6.1 p.c., mainly because of the drop in petroleum from Iran, although more crude was brought in from Saudi Arabia. Imports from Eastern Europe increased 28.3 p.c. to $\$ 17,700,000$, of which almost half were from Czechoslovakia and the remainder from Poland and the U.S.S.R. There were also larger imports, totalling $\$ 8,300,000$, from nonCommonwealth African countries, bauxite from Guinea being the main item.

Leading Trade Partners.-Following the United States and Britain, Japan and the Federal Republic of Germany, each purchasing over $\$ 200,000,000$, were the third and fourth most important markets for Canadian goods in 1961 and in the preceding year. As a result of the large wheat and barley sales to Communist China in 1961 that country rose to fifth position among Canada's purchasers, exports being valued at over $\$ 125,000,000$. Next in line were Australia, Belgium and Luxembourg, France, Norway, Italy and the Netherlands, all buying between $\$ 60,000,000$ and $\$ 80,000,000$. Considerable quantities of Canadian exports also went to India, Poland, Mexico, the Republic of South Africa, Venezuela, New Zealand, Cuba, Argentina and Brazil.

For imports, after the United States and Britain, Venezuela, the Federal Republic of Germany and Japan were the principal sources of supply. Arrivals from Venezuela amounted to over $\$ 200,000,000$, while those from West Germany and Japan were each
above $\$ 100,000,000$. Following in importance, but considerably less in value, were imports from France, Italy, Belgium and Luxembourg, Saudi Arabia, Jamaica, Australia, the Netherlands, India, and the Netherlands Antilles. Details covering export and import trade with leading countries are given in Table 4, p. 953.

## PART II.-FOREIGN TRADE STATISTICS*

## Section 1.-Explanatory Notes on Canadian Trade Statistics

Sources.-Canadian foreign trade statistics are compiled from information recorded on customs documents received in the Dominion Bureau of Statistics from the various customs ports in Canada (except for exports of electric energy, which are based on data received from the National Energy Board). Record is kept of value and, whenever possible, of quantity. In considering these trade figures, it should be noted that the statistics do not necessarily reflect the financial transactions relating to the movement of goods since the method and time of payment are affected by many factors.

Coverage.-"Domestic exports" or "exports of Canadian produce" include exports of goods wholly produced in Canada together with exports of previously imported goods that have been changed in form by further processing in Canada. "Re-exports" or "exports of foreign produce" include previously imported goods that are exported from Canada in the same form as when imported.
"Imports" or "imports entered for consumption" include all goods that enter Canada and are cleared through customs for domestic sale or use, i.e., imports on which all duties are paid and which have passed from customs control into the possession of the importer. Goods re-exported without being cleared for domestic consumption are not included. It should be noted that the fact that imports have been "entered for consumption" does not necessarily imply that the goods will all be consumed in Canada but only that consumption can take place without further customs formalities.

The most important exclusions from export totals are: gold, goods shipped to Canadian Armed Forces or diplomats stationed abroad, goods financed under the Defence Appropriation Act and shipped to other NATO countries, temporary exports for exhibition or competition, fuel and stores sold to foreign vessels and aircraft in Canada, settlers' effects, private donations and gifts, and identifiable tourist purchases.

The most important exclusions from import totals are: gold, goods for use of the United States Armed Forces stationed at treaty bases in Canada, Canadian-owned military equipment returned to Canada, ships imported for use in foreign trade and ships of British construction and registry imported for use in the coasting trade, temporary imports for exhibition or competition, fuel and stores purchased by Canadian vessels and aircraft abroad, settlers' effects, private donations and gifts, tourist purchases exempt from duty, and goods imported for foreign armed forces or diplomats stationed in Canada.

From Jan. 1, 1960, a new category was established in both export and import statistics entitled "Special Transactions-Non-Trade". This category includes certain commodity movements which either have no international financial implications or, for various reasons, are better considered separately from merchandise trade in economic analysis. The value of transactions of these types is now excluded entirely from published totals of Canadian merchandise trade, and do not appear in this volume, but statistics for the classes of this category are contained in the regular monthly export and import reports. As a result of these changes, the export and import totals have substantially the same coverage and provide a much truer picture of the merchandise trade component of the

[^292]balance of payments. As the deductions from import totals have considerably exceeded those from export totals, the effect of these changes has been to reduce significantly the size of the import balances published in the 1960 and previous editions of the Year Book.

Valuation.-Exports are normally valued f.o.b. point of consignment from Canada, i.e., at the actual amount received or to be received by the exporter in Canada dollars, exclusive of inland freight, ocean freight, insurance, handling and other charges.

Imports are normally valued f.o.b. point of consignment to Canada, i.e., excluding inland freight, ocean freight, insurance, handling and export or import duties. The statistical value of imports is usually the value as determined for customs duty purposes, which is basically the fair market value at which equivalent goods would be sold for home use in the country from which the imports were received; the customs value of imports usually corresponds to the invoice value of the goods. From Jan. 1, 1959, the statistical value of imports on which dumping duty has been collected is considered to be the value of the goods as declared by the importer, i.e., the value for duty less the amount of the dumping duty. This change was introduced to conform with the principle that trade statistics should show, whenever possible, the actual amount paid for imports; previously the statistical value of such imports was considered to be the value for duty.

Country Classification.-Trade is credited to countries on the basis of consignment. For exports from Canada, the country of consignment is that country to which goods are, at the time of export, intended to pass without interruption of transit except in the course of transfer from one means of conveyance to another. For imports into Canada, the country of consignment is the country from which the goods came without interruption of transit except in the course of transfer from one means of conveyance to another. This is not necessarily the country of actual origin, since goods produced in one country may be imported by a firm in another country and re-sold to Canada; in such cases the second country is the country of consignment to which the goods are credited. There is one exception to this rule; an attempt is made to classify by country of origin goods produced in South America, Central America, Bermuda and the Antilles and consigned to Canada from the United States. The effect of this procedure, in force since 1946, is to reduce slightly the imports credited to the United States and to increase those credited to South and Central American countries.

The country sub-totals, which formerly related to Commonwealth countries only, now include trade with other countries entitled to Preferential rates of duty (the Republic of Ireland and the Republic of South Africa). These totals are now described as "Commonwealth and Preferential".

## Discrepancies in Trade Statistics between Canada and Other Countries.-

 Canada's statistics of exports are rarely in exact agreement with the import statistics of its customers and parallel differences occur with Canadian imports. Major factors contributing to these discrepancies include:-(1) Differences in the system of valuation used by Canada and those of other countries, especially with respect to the treatment of transportation charges.
(2) Differences in the statistical treatment of special categories of trade, such as armaments and military supplies, government-financed gift or mutual aid shipments, postal and express shipments, or warehouse trade.
(3) Differing definitions of territorial areas.
(4) Differing systems of geographical classification of trade, notably the consignment system used by Canada and the actual origin or ultimate destination system in use by some other countries.
(5) Differences in the time at which trade is recorded in the statistics of partner countries caused by the time required for goods to move from one country to another.

## Section 2.-Total Foreign Trade

In considering the figures in Sections 2 to 6, reference should be made to the explanatory notes on trade in Section 1. Exports and imports of gold are excluded from all tables.

## 1.-Value of Total Foreign Trade of Canada (excluding Gold), 1947-61

Nors.-Figures have been revised to cover the adjustment for "Special Transactions-Non-Trade", see p. 949.

| Year | Exports |  |  | Imports |  |  | Balance of Trade: Excess of Exports ( + ) Imports ( - ) |

Treatment of Gold in Trade Statistics.-The general use of gold as a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors rather than by ordinary trade or commercial considerations. Gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price. Also, gold may be bought or sold internationally without any physical movements of the metal, such transactions being recognized by simply setting aside or 'ear-marking' the metal in the vaults of some central bank.

For these reasons movements of gold in a primary or semi-fabricated state are excluded from the totals of Canada's commodity trade. However, since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published as a supplement to the trade statistics. Because this series is calculated on a production basis, a division of the figures into transactions with individual countries is not possible.

## 2.-New Gold Production Available for Export, by Month, 1954-61

Nore.-Since Mar. 21, 1956, mines not receiving aid under the Emergency Gold Mining Assistance Act have been allowed to sell their gold to private residents and non-residents, either for export or for safe-keeping in Canada. Such sales, commencing in April 1956, are included in the figures for new gold production available for export.
(Millions of dollars)

[^299]6.-Value of Imports, by Geographic Region and Country, 1954-61-concluded

[^300]The proportion of imports subject to duty varies widely between countries and geographic areas. Generally, the Canadian tariff imposes duties on a greater proportion of manufactured goods than of natural products. Countries supplying chiefly manufactures to Canada tend to have duties charged on a greater proportion of their goods and also to have relatively higher average ad valorem rates of duty charged on their goods than is the case with countries supplying chiefly natural products. Variations in the proportion of imports dutiable as between different countries or in the average ad valorem rates of duty charged on imports from different countries therefore do not necessarily indicate differences in the tariff relations between Canada and these countries.

## Section 5.-Exports and Imports by Degree of Manufacture, by Purpose and by Origin

This Section of the Foreign Trade Chapter normally contains tables showing Canada's exports and imports classified according to degree of manufacture, by geographical region and leading countries; according to purpose, by group; and according to origin, by group and degree of manufacture. The latest data available at the time of going to press-that for 1958 and 1959 --for the first two classifications are given in the 1961 Year Book, pp. 9971001. Tables $\mathbf{1 6}$ and $\mathbf{1 7}$ following give the classification by group and degree of manufacture according to origin for those years.

## Section 6.-Comparison of Value, Price and Volume of Foreign Trade

In recent years there has been a substantial increase in the value of Canada's exports and imports. Changes in the value of trade, however, are the joint product of changes in the volume of goods traded and in the prices at which transactions are conducted. To assess the significance of value changes, it is desirable to isolate the contributions made to them by the price and volume factors.

Special indexes of export and import prices have been developed to provide this information. These indexes are based chiefly on unit values (average prices) calculated from the trade statistics, supplemented by information on wholesale and retail prices. Price relatives are calculated for a sample of commodities representing the greater part of export and import trade, and these relatives are weighted by the percentage of 1948 trade represented by each commodity in the sample in obtaining group and total indexes. By dividing these price indexes into the trade values the effects of price change are removed from the values, or by dividing the price index into an index of values on the same timebase an index is obtained showing changes in the volume of trade from year to year.

The grouping of commodities used in these calculations differs slightly from that of the regular trade statistics, the changes being desirable to simplify the pricing problem. The chief differences are that the first two main groups of the trade statistics have been combined into one group, "agricultural and animal products", and that the sub-group "rubber and its products" has been transferred from this group to the "miscellaneous" group. The declared values of domestic exports and imports have been revised to cover the adjustment for "Special Transactions-Non-Trade". An explanation of that adjustment is contained in Part II of this Chapter, p. 949. Table 18 shows the revised values of trade adjusted for pricing purposes and the value, price and volume indexes of Canadian trade for 1958-61.

## 18.-Declared Values, and Value, Price and Physical Volume Indexes of Foreign Trade, by Commodity Group, 1958-61

For footnote, see end of table, p. 984.

[^308]
## PART III.-THE GOVERNMENT AND FOREIGN TRADE

## Section 1.-Foreign Trade Service and Associated Agencies concerned with the Development of Foreign Trade*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, largely because the productive capacity of Canada is greater than the ability of its population to consume the output of farms, factories, forests, fisheries and mines. Every effort is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the Canadian economy. It is appreciated, however, that two-way trade should be encouraged in order that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore, many commodities that are not indigenous to this country must be imported. Some

[^309]of these are required for industrial processes and others may be classed as consumer goods necessary for the maintenance of the Canadian standard of living.

Although many private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls imposed by many countries for a variety of reasons, together with postwar foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without assistance from government representatives.

The Department of Trade and Commerce and associated agencies are at the disposal of exporters and importers engaged directly in the development of Canada's commercial relations with other countries. Services obtainable from the various branches, divisions and agencies are described below.

Agriculture and Fisheries Branch.-The main activities of the Agriculture and Fisheries Branch are directed toward trade promotion of agricultural and fisheries products in world markets. The Branch has four commodity Divisions-a Grain Division, a Fisheries Division, a Livestock and Animal Products Division and a Plant Products Division-each of which is staffed with specialists in their respective fields. The Grain Division, since the transfer of the Canadian Wheat Board to the jurisdiction of the Minister of Agriculture, has operated as a 'joint unit', being responsible to the Minister of Agriculture on domestic matters and to the Minister of Trade and Commerce on trade matters. A close working relationship is maintained with other Branches of the Department of Trade and Commerce, with producers and processors, with industry associations and provincial marketing boards, and with other government departments, both federal and provincial.

The Department's trade fair program provides an excellent medium for the introduction and promotion of agricultural and fisheries products in foreign markets. Branch officers organize and co-ordinate participation in these exhibits and are also active in organizing trade missions to a number of countries and in arranging for visiting agricultural missions to Canada. Such missions have proved to be a valuable means of stimulating exports of Canadian products. As a basis for export promotion, studies of foreign markets and special surveys are carried out for various segments of the agriculture export industry. Considerable emphasis is placed on assisting export firms in locating markets for their products and Canadian Trade Commissioners are kept informed of the supply situation for various products, of prices and of other related details to assist them in assessing market potential in their areas.

Branch officers participate in activities relating to international commodity agreements and foreign agricultural policy problems as they relate to trade. The Branch Director is the departmental representative on the Interdepartmental FAO Committee and the Branch provides a chairman and secretary for the Canadian Fur Council. Delegates were also provided for 1961 meetings of the International Sugar Council and the International Coffee Study Group.

In addition to direct trade promotion activity, the Branch reviews and disseminates information on foreign agriculture and fisheries. This information, received from officers of the Trade Commissioner Service, is collated and distributed to the Departments of Agriculture and Fisheries, the Canadian Wheat Board and other interested government departments and boards, as well as to the agricultural industry.

Canadian Government Exhibition Commission.-The Canadian Government Exhibition Commission is responsible for the planning, organization and administration of all Canadian exhibits in fairs and exhibitions abroad. In addition, the Commission endeavours to advise private exhibitors and their agents on the best means of displaying Canadian products at overseas fairs. The Commission is also responsible for any international fairs and exhibitions held in Canada, financed and sponsored by the Federal Government.

Commodities Branch.-The principal role of the Commodities Branch is active trade promotion. The Branch provides liaison with industry and the business community in Canada, and passes on information about trade opportunities brought to light by officers of the Department at home and abroad.

The Branch has commodity specialists organized in seven divisions: Engineering and Equipment, Minerals and Metals, Forest Products, Chemicals, Appliances and Commercial Machinery, Textiles and Consumer Goods, and Transportation and Trade Services. Within these divisions, individual commodity specialists are concerned with such particular groups of products as engineering services and plant equipment, electrical and electronic equipment and transportation equipment, ferrous and non-ferrous metals, lumber, pulp and paper, chemicals and petroleum products and leather and rubber, as well as a wide range of consumer products. Commodity officers visit plants, attend meetings of business associations, prepare trade studies and market surveys, and assist in arranging displays of Canadian goods abroad for the purpose of introducing them in foreign markets. Commodity specialists direct the attention of trade commissioners to changes in supply conditions and to products available for export, and also relay market news received from trade commissioners to Canadian manufacturers and exporters.

The Branch is concerned with the administration of the Export and Import Permits Act and is active in the export control field, including international arrangements for the control of strategic materials. Branch representatives attend international commodity study groups in such products as tin, rubber, cotton, lead and zinc, where major world suppliers and users of the commodity concerned meet to arrange a framework for orderly marketing and price stability in principal world markets. The Branch also acts as a source of commercial intelligence and compiles and distributes trade information essential to the operation of other branches of the Department.

Export Credits Insurance Corporation.-The Export Credits Insurance Corporation was established under the provisions of the Export Credits Insurance Act 1944 (RSC 1952, c. 105, as amended by 1953-54, 1957, 1957-58, 1959, 1960-61 and 1962), and is administered by a Board of Directors that includes the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance. It insures persons carrying on business in Canada against risks involved in the export, manufacture, treatment or distribution of goods or the rendering of engineering, construction, technical or similar services. The main risks covered include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country.

The insurance is available under three main classifications: general commodities, capital goods and services. Coverage for general commodities may be procured by exporters under two types of policies: the Contracts Policy, which insures an exporter against loss from the time he books the order until payment is received; or the Shipments Policy, obtainable at lower rates of premium and covering the exporter from the time of shipment until payment is received. These policies are issued on a yearly basis, covering exporters' sales to all countries.

Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, ete., where extended credit up to a maximum of five years may be necessary. Specific policies are issued for transactions involving capital goods, but the general terms and conditions are the same as those applicable to policies for general commodities. Specific policies are also issued to cover engineering, construction, technical or similar service contracts entered into between Canadian firms and persons in foreign countries who have agreed to purchase such services.

The Corporation insures exporters on a co-insurance basis up to a maximum of 85 p.c. of the gross invoice value of shipments. This co-insurance basis also operates in the
distribution of recoveries obtained after payment of a loss; these recoveries are shared by the Corporation and the exporter in the proportions of 85 p.c. and 15 p.c., respectively.

Under the Export Credits Insurance Act, Sect. 21, the Corporation may be authorized by the Government to enter into certain contracts of insurance, where the Board of Directors of the Corporation is of opinion that a proposed contract of insurance would impose upon the Corporation a liability for a term or in an amount in excess of that which the Corporation would normally undertake, and in the opinion of the Minister of Trade and Commerce it is in the national interest that the proposed contract be entered into. Under Sect. 21A of the Act, the Corporation may be authorized by the Government to provide financing in respect of an export transaction. Such financing is available only in cases where extended credit terms in excess of five years are involved.

International Trade Relations Branch.-The International Trade Relations Branch deals with a wide variety of current trade issues including analysis of developments in international commercial relations and assistance in maintaining and further improving the access for Canadian goods in foreign markets. The Branch endeavours to find practical solutions for tariffs and other difficulties encountered by Canadian exporters. It has under constant review Canada's trading relations with other countries, and participates in conferences and negotiations under the General Agreement on Tariffs and Trade. In addition, the Branch is concerned with work being done in the trade field by other international organizations.

The Branch has a major responsibility for the administration of Canada's existing trade agreements and is responsible for the preparation of material for trade and tariff negotiations with other countries. Information is maintained on foreign tariffs, customs legislation, taxes affecting trade, import licensing, exchange regulations, documentation, sanitary regulations, marking and labelling requirements, and measures pertaining to quotas, embargoes, and other import restrictions. This information is made available to exporters, government officials and others interested in these regulations as they affect Canadian export trade. The assistance of the Branch is available to exporters in dealing with difficulties resulting from the trade policies or regulations of other countries.

Trade Publicity Branch.-The principal function of the Trade Publicity Branch is to promote trade between Canada and other countries in the publicity field. It furnishes the commercial community of Canada with information concerning the assistance that exporters and importers may obtain from the Department of Trade and Commerce. The Branch is responsible also for stimulating a better appreciation by the general public of the importance of trade to the welfare of Canada. The attention of exporters and potential exporters is directed to opportunities for the disposal of their products in markets abroad, and of importers to sources of supply for raw materials and consumer goods unobtainable in Canada.

Its principal information medium is Foreign Trade, fortnightly publication of the Foreign Trade Service, in which are reproduced reports by Canadian trade commissioners on conditions in their respective territories, articles by Head Office personnel, commodity notes, foreign exchange rates, the itineraries of trade commissioners on tour in Canada, and trade and tariff regulations. A list of trade offices throughout the world is published once a month, and a directory of Head Office at periodic intervals.

Press releases are prepared and distributed to newspapers, trade publications, trade associations, chambers of commerce and individuals to whom this information may be of assistance at home, and material of a similar character is dispatched to Canadian trade commissioners for distribution to newspapers abroad. Pamphlets and brochures are prepared to supplement other information on foreign markets, sources of supply, documentation, regulations and trade restrictions. Assistance is rendered to correspondents of newspapers and periodicals at home and abroad in the preparation of articles pertaining to various phases of Canada's foreign trade. The promotional work of this Branch is supported by moderate advertising at home and abroad through the daily press, periodicals and trade papers, and by films and radio.

Trade promotion, through the medium of trade fairs in other lands, is the responsibility of a Division in this Branch, which maintains close liaison with other branches of the Department and agencies of government and prepares information for consideration by the Committee on Trade Fairs Abroad.

Trade Commissioner Service.-The Trade Commissioner Service is the overseas arm of the Department and is actively engaged in the promotion of Canadian trade and the protection of Canada's commercial interests; 65 offices are maintained in 47 countries.

The prime function of the trade commissioners is to stimulate Canada's export trade. In so doing, every effort is made to bring Canadian exporters and prospective buyers together. On their own initiative, and in response to requests from the Department and Canadian businessmen, they study potential markets for specific Canadian commodities and services. Reports are provided on the demand in the country concerned, prices, competition, trade and exchange regulations, tariffs, shipping and packaging requirements, credit terms, channels of distribution, labelling regulations, etc. Inquiries from local businessmen for goods obtainable from Canada are forwarded to the Department in Ottawa, or directly to Canadian firms in a position to supply the products required.

The supervision of Canadian exhibits at overseas trade fairs and the provision of assistance to participating Canadian firms is an important function of many offices. Trade commissioners make local arrangements for and travel with Canadian trade missions visiting overseas markets. They also seek sources of supply for a wide variety of goods on behalf of Canadian importers.

In developing trade opportunities, Canada's trade commissioners travel extensively in their territories, visit leading industrial and commercial centres, and call on government officials, businessmen, trade associations and municipal authorities in an effort to arouse interest in Canadian products. They establish social contacts with commercial interests, thereby developing goodwill for Canada and Canadian products, while creating connections for Canadian exporters and facilitating the collection of trade information. They return to Canada at periodic intervals and make tours of Canadian industrial and commercial centres. Such direct contacts enable them to discuss specific problems with businessmen and bring into focus the Canadian commercial scene. Trade commissioners report to the Department and advise Canadian firms on economic conditions and trade opportunities in their respective territories. Many reports are published in Foreign Trade, and provide Canadian businessmen with a wealth of commercial intelligence.

In countries where Canada has a diplomatic mission, the Canadian trade office is the commercial division and the trade commissioner has the rank of Minister (Commercial), Minister-Counsellor (Economic), Commercial Counsellor or Commercial Secretary. When attached to a consulate, he carries the title of Deputy Consul General (Commercial), Consul (Commercial), or Vice-Consul (Commercial), according to his rank, in addition to that of Trade Commissioner. He may also be the Consul General, in charge of the office. Where trade offices are detached, and do not form part of a diplomatic mission, the trade commissioner may also be required to undertake consular, immigration and other duties as the sole representative of Canada.

## CANADIAN FOREIGN TRADE OFFICES ABROAD, AS AT MAR. 1, 1962

Argentina.-Commercial Secretary, Canadian Embassy, Bartolome Mitre 478, Buenos Aires. Territory includes Paraguay.

## Australia.-

Sydney: Commercial Counsellor for Canada, 21st Floor A.M.P. Bldg., Sydney Cove, N.S.W. Mail: P.O. Box 3952 G.P.O.
Melbourne: Commercial Counsellor for Canada, Mobile Centre, 2 City Road, South Melbourne. Canberra: Commercial Counsellor, Office of the High Commissioner for Canada, State Circle, Canberra.
Austria.-Commercial Counsellor for Canada, Opernringhof, Opernring 1, Vienna 1. Territory includes Albania, Bulgaria, Czechoslovakia, Hungary, Romania and Yugoslavia.

Brigrum.-Commercial Counsellor, Canadian Embassy, 35 rue de la Science, Brussels 4. Territory includes Luxembourg.

## Brazal.-

Rio de Janeiro: Commercial Counsellor, Canadian Embassy, Edificio Metropole, Av. Presidente Wilson 165, Rio de Janeiro. Mail: Caixa Postal 2164.
São Paulo: Consul and Trade Commissioner, Canadian Consulate, Edificio Alois, Rue 7 de Abril 252, São Paulo. Mail: Caixa Postal 6034.

Britain.-
London: Minister (Commercial), Office of the High Commissioner for Canada, One Grosvenor Square, London W.1.
Liverpool: Canadian Government Trade Commissioner, Martins Bank Bldg., Water Street, Liverpool.
Glasgow: Canadian Government Trade Commissioner, Cornhill House, 144 West George St., Glasgow C.2, Scotland.
Belfast: Canadian Government Trade Commissioner, 15/17 Chichester St., Belfast 1, Northern Ireland.

Cexlon.-Commercial Secretary (absent), Office of the High Commissioner for Canada, 6 Gregory's Road, Cinnamon Gardens, Colombo. Mail: P.O. Box 1006.
Chme.-Commercial Secretary, Canadian Embassy, 5th Floor, Agustinas 1225, Santiago. Mail: Casilla 771.

CoLombin.-Commercial Secretary and Consul, Canadian Embassy, Edificio Banco de Los Andes, Carrera 10, No. 16-92, Bogota. Airmail: Apartado Aereo 8582. Surface Mail: Apartado 1618. Territory includes Ecuador.

Congo.-Consul General, Canadian Consulate General, C.C.C.I. Bldg., Boulevard Albert 1 er , Leopoldville 1. Mail: Boite Postale 8341. Territory includes Angola, Central African Republic, Chad, Gabon and Congo (Community).

Cuba.-Commercial Counsellor, Canadian Embassy, Edificio Ingenieros Civiles, Calle 17 y 0 Vedado, Havana. Mail: Gaveta 6125.

Denmark.-Commercial Counsellor, Canadian Embassy, Prinsesse Maries Allé 2, Copenhagen V. Territory includes Greenland and Poland.

Dominican Republic.-Commercial Counsellor, Canadian Embassy, Edificio Copello 408, Calle El Conde, Santo Domingo. Mail: Apartado 1393. Territory includes Puerto Rico.

Francz.-Commercial Counsellor, Canadian Embassy, 35 Ave. Montaigne, Paris $8^{\circ}$. Territory includes Algeria, Cameroon Republic, Dahomey, Guinea, Ivory Coast, Mali Republic, Mauritania, Morocco, Niger, Senegal, Togoland and Upper Volta.

## Grrmany.-

Bonn: Commercial Counsellor, Canadian Embassy, 22 Zitelmannstrasse, Bonn.
Duesseldorf: Consul, Canadian Consulate, Bismarckstrasse 95, Duesseldorf. Mail: P.O. Box 2102.

Hamburg: Consul General, Canadian Consulate General, 69 Ferdinandstrasse, Hamburg.
Ghana.-Commercial Secretary, Office of the High Commissioner for Canada, E115/3 Independence Ave., Accra. Mail: P.O. Box 1639. Territory includes Gambia, Liberia and Sierra Leone.

Grezce.-Commercial Counsellor, Canadian Embassy, 31 Vassilissis Sophias Ave., Athens. Territory includes Cyprus and Turkey.

Guatemala.-Commercial Secretary, Canadian Embassy, 5 a Avenida 11-70, Zone 1, Guatemala City, C.A. Airmail: P.O. Box 400. Surface mail: P.O. Box 444. Territory includes Costa Rica, El Salvador, Honduras, Nicaragua, Panama and Canal Zone.

Harri.-Charge d'Affaires ad interim and Consul, Canadian Embassy, Route du Canape Vert, St. Louis de Turgeau, Port-au-Prince. Mail: P.O. Box 826.
Hong Kong.-Canadian Government Trade Commissioner, Hong Kong and Shanghai Banking Corporation Bldg., Hong Kong. Mail: P.O. Box 126. Territory includes Cambodia, Communist China, Laos, Viet Nam and Macao.

## India.-

New Delhi: Commercial Counsellor, Office of the High Commissioner for Canada, 13 Golf Links Area, New Delhi 1. Mail: P.O. Box 11. Territory includes Bhutan, Nepal and Sikkim.
Bombay: Canadian Government Trade Commissioner, Gresham Assurance House, Mint Road, Bombay. Mail: P.O. Box 886.
Indonesta.-Commercial Division, Canadian Embassy, Djl. Budi Kemuliaan No. 6, Djakarta.
Iran.-Commercial Counsellor, Canadian Embassy, Bezrouke Bldg., Corner of Takht Jamshid Ave. and Forsat St., Tehran. Mail: P.O. Box 1610.

Ireland.-Commercial Secretary for Canada, 66 Upper O'Connell St., Dublin.
Israfl.-Commercial Secretary for Canada, 35 Carlebach St., Tel Aviv. Mail: P.O. Box 20140.
Italy.-Commercial Counsellor, Canadian Embassy, Via G.B. De Rossi 27, Rome. Territory includes Libya and Malta.

Japan.-Commercial Counsellor, Canadian Embassy, Tokyo. Territory includes Korea and Okinawa.

Lebanon.-Commercial Counsellor, Canadian Embassy, Alpha Bldg., Rue Clemenceau, Beirut. Mail: Boite Postale 2300. Territory includes Iraq, Jordan, Persian Gulf Area and Syria.
Mexico.-Commercial Counsellor, Canadian Embassy, Melchor Ocampo, 463, 7th Floor, Mexico 5, D.F. Mail: Apartado 25364.

Netherlands.-Commercial Counsellor, Canadian Embassy, Sophialaan 5-7, The Hague.
New Zealand.-Commercial Counsellor, Office of the High Commissioner for Canada, Government Life Insurance Bldg., Wellington. Mail: P.O. Box 1660. Territory includes Fiji, Samoa, Tahiti and Tonga.
Nigeria.-Commercial Counsellor, Office of the High Commissioner for Canada, 4th Floor Barclays Bank Bldg., 40 Marina Road, Lagos. Mail: P.O. Box 851.

Norway.-Commercial Counsellor, Canadian Embassy, Fridtjof Nansens Plass 5, Oslo. Mail: P.O. Box 1379-Vika. Territory includes Iceland.

Pakistan.-Commercial Secretary, Office of the High Commissioner for Canada, Hotel Metropole, Victoria Road, Karachi. Mail: P.O. Box 3703. Territory includes Afghanistan.

Peru.-Commercial Secretary, Canadian Embassy, Edificio Boza, Carabaya 831, Plaza San Martin, Lima. Mail: Casilla 1212. Territory includes Bolivia.
Philippines.-Consul General and Trade Commissioner, Canadian Consulate General, L \& S Bldg., 3rd Floor, 1414 Dewey Blvd., Manila. Mail: P.O. Box 1825. Territory includes Republic of China (Taiwan).
Portugal.-Commercial Counsellor, Canadian Embassy, Rua Marques de Fronteira, No. 8-4ㅇ․ ${ }^{\circ}$, Lisbon. Territory includes Azores, Cape Verde Islands, Madeira and Portuguese Guinea.
Rhodesia and Nyasaland, Federation of.-Canadian Government Trade Commissioner, 8th Floor, Grindlays Bank'Chambers, Baker Ave., Salisbury. Mail: P.O. Box 2133. Territory includes Kenya, Seychelles Islands, Tanganyika, Uganda and Zanzibar.
Singapore.-Canadian Government Trade Commissioner, American International Bldg., Robinson Road and Telegraph St., Singapore. Mail: P.O. Box 845. Territory includes Brunei, Burma. Federation of Malaya, North Borneo, Sarawak and Thailand.

## South Africa. -

Johannesburg: Canadian Government Trade Commissioner, Mobil House, 17th Floor, Corner Rissik and De Villiers Sts., Johannesburg. Mail: P.O. Box 715. Territory includes Mauritius, Mozambique, Reunion and Malagasy.
Cape Town: Canadian Government Trade Commissioner, 602 Norwich House, The Foreshore, Cape Town. Mail: P.O. Box 683. Territory includes St. Helena and South West Africa.
Sparn.-Commercial Counsellor, Canadian Embassy, Edificio España, Avenida de Jose Antonio 88, Madrid. Mail: Apartado 117. Territory includes Balearic Islands, Canary Islands, Gibraltar, Rio Muni and Rio de Oro.

Sweden.-Commercial Counsellor, Canadian Embassy, Strandvagen, 7-C, Stockholm. Mail: P.O. Box 14042. Territory includes Finland.

Switzerland.-Commercial Counsellor, Canadian Embassy, Kirchenfeldstrasse 88, Berne. Territory includes Tunisia.
Union or Soviet Socialist Republics.-Commercial Counsellor, Canadian Embassy, 23 Starokonyushenny Pereulok, Moscow.

Untred Arab Republic.-Commercial Counsellor, Canadian Embassy, 6 Sharia Rouston Pasha, Garden City, Cairo. Mail: Kasr el Doubara Post Office. Territory includes Aden, Sudan, Ethiopia, Saudi Arabia and Yemen.

United States.-
Washington: Minister-Counsellor (Economic), Canadian Embassy, 1746 Massachusetts Ave., N.W., Washington 6, D.C.

New York City: Deputy Consul General (Commercial), Canadian Consulate General, 680 Fifth Ave., New York City 19. Territory includes Bermuda.
Boston: Consul and Trade Commissioner, Canadian Consulate General, 607 Boylston St., Boston 16.
Chicago: Consul and Trade Commissioner, Canadian Consulate General, 111 North Wabash Ave., Chicago.
Detroit: Consul and Trade Commissioner, Canadian Consulate, 1139 Penobscot Bldg., Detroit 26.

Los Angeles: Consul and Trade Commissioner, Canadian Consulate General, 510 West Sixth St., Los Angeles 14.
New Orleans: Consul and Trade Commissioner, Canadian Consulate General, 215-217 International Trade Mart, New Orleans 12.
Philadelphia: Consul and Trade Commissioner, Canadian Consulate, 3 Penn Center Plaza, Philadelphia 2.
San Francisco: Consul General, Canadian Consulate General, 3rd Floor, Kohl Bldg., 400 Montgomery St., San Francisco 4.
Seattle: Consul General, Canadian Consulate General, The Tower Bldg., Seventh Ave. at Olive Way, Seattle 1.

Urdguay.-Commercial Division, Canadian Embassy, No. 1409 Avenida Agraciada, Piso $7^{\circ}$, Montevideo. Mail: Casilla Postal 852. Territory includes Falkland Islands.

Venezurla.-Commercial Counsellor, Canadian Embassy, Avenida La Estancia No. 10, Ciudad
Comercial Tamanaco, Caracas. Mail: Apartado 11452-Este. Territory includes Netherlands Antilles.

## West Indies.-

Port-of-Spain: Commercial Counsellor, Office of the High Commissioner for Canada, Colonial Bldg., 72 South Quay, Port-of-Spain, Trinidad. Mail: P.O. Box 125. Territory includes Barbados, Trinidad and Tobago, Windward and Leeward Islands, British Guiana, French Guiana, Surinam, Guadeloupe and Martinique.
Kingston: Canadian Government Trade Commissioner, Barclays Bank Bldg., King Street, Kingston, Jamaica. Mail: P.O. Box 225. Territory includes Bahamas and British Honduras.

## Section 2.-The National Energy Board*

The National Energy Board was established by the National Energy Board Act, 1959 (SC 1959, c. 46) for the broad purpose of assuring the best use of energy resources in Canada. The Board is responsible for the regulation in the public interest of the construction and operation of oil and gas pipelines subject to the jurisdiction of the Parliament of Canada, the tolls charged for transmission by such pipelines, the export and import of gas, the export of electric power and the construction of those lines over which such power is exported. The Board is also required to study and keep under review all matters relating to energy within the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary or advisable in the public interest with regard to such matters. The Act also authorizes the extension of the export and import provisions to

[^310]oil upon proclamation by the Governor in Council. The Board, which reports to the Minister of Trade and Commerce, consists of a Chairman, a Vice-Chairman and three other members.

The Act was given Royal Assent on July 18, 1959, the members were appointed by Order in Council on Aug. 10, 1959 and the Act came into force by proclamation on Nov. 2, 1959. The Act supersedes the Pipe Lines Act, formerly administered by the Board of Transport Commissioners for Canada, and the Exportation of Power and Fluids and Importation of Gas Act, formerly administered by the Standards Branch of the Department of Trade and Commerce. Provision was made in the new Act for the continuation or re-definition of authorizations issued under the two previous Acts, and in 1960 the Act was amended to extend to Dec. 31, 1961 the duration of licences to export power issued under the Exportation of Power and Fluids and Importation of Gas Act unless earlier replaced by a licence issued under the National Energy Board Act.

Whereas the most prominent activity of the Board during its first full year of operation (1960) was the processing and disposition of the backlog of applications for licences to export large quantities of natural gas and the completion of the issuance of certificates for power export facilities already in use when the Board came into existence (see the 1961 Year Book, pp. 1022-1023), the major preoccupations of the Board during 1961 were the implementation of the National Oil Policy (announced by the Minister of Trade and Commerce on Feb. 1, 1961) and the processing of applications for renewal or issuance of licences to export electrical power and energy.

As stated at p. 480, the National Oil Policy sought the co-operation of the oil industry in achieving a series of target levels of Canadian production of oil and natural gas liquids to attain an average daily output of $640,000 \mathrm{bbl}$. for 1961 and $800,000 \mathrm{bbl}$. per day in 1963 . These targets were to be achieved by the increased use of Canadian oil in domestic markets west of the Ottawa Valley and by some expansion of export sales, largely in existing markets which could be reached through established pipelines. Under the policy, importers of crude oil and petroleum products were required to report their imports to the National Energy Board which, in turn, was required to evaluate the contribution of individual companies to the production targets and to report periodically on the progress and development of the program. At Dec. 31, 1961, the Board's assessment of the achievement of the target levels of production gave substantial weight to the increases in exports of oil and to the facts that importation into Ontario of foreign crudes (with the exception of minor quantities of specialty crudes) had been eliminated, that direct imports of products into the target area of Ontario were reduced by 40 p.c. in 1961, and that transfers of products from Montreal into that area were reduced by 5 p.c. The co-operation by the industry was further manifested by the projected construction by mid-1963 of additional Ontario refinery capacity of some $55,000 \mathrm{bbl}$. per day.

During 1961, the Board issued 16 licences, valid for periods ranging from one to five years, to the following eight utilities and companies: the B.C. Electric Company, the Canadian Niagara Power Company, the Southern Canada Power Company, the Cedars Rapids Transmission Company, the Ontario-Minnesota Pulp and Paper Company, The HydroElectric Power Commission of Ontario, the New Brunswick Electric Power Commission, and the Maine and New Brunswick Electric Power Company. In addition, the Board dealt with four minor exports.

In respect of oil pipelines, during 1961 the Board conducted three public hearings on applications as a result of which certificates were issued for the construction of oil pipeline facilities: that of Matador Pipe Line Company, Ltd. to construct and operate an 8-inch oil pipeline of some 54 miles in length from a point on the international boundary 12 miles east of the Manitoba-Saskatchewan border to a point near Cromer, Man., where it will connect with the facilities of the Interprovincial pipeline, thereby enabling North Dakota oil to move by pipeline, rather than by rail, to markets in the United States; that of Interprovincial Pipe Line Company to construct and operate a $12 \frac{3}{3}$-inch pipeline from its facilities near Westover, Ont., some 64 miles in length to a point on the international
boundary near Chippawa, Ont., for the purpose of exporting Canadian crude oil to refineries in the vicinity of Buffalo, N.Y.; and that of Aurora Pipe Line Company to construct and operate an 8 g -inch oil pipeline of one-half mile in length from a point near Carway, Alta., to a point on the Canada-United States boundary.

In respect of gas pipelines, the Board held two public hearings as a result of which certificates were issued for the construction and operation of gas pipeline facilities: that of Trans-Canada Pipe Lines Limited for additional facilities to its existing pipeline system; and that of Westcoast Transmission Company Limited for a one-mile 16-inch pipeline in the Boundary Lake gas field in Alberta and British Columbia.

The Board approved three applications for licences for the export of natural gas: that of Canadian-Montana Pipe Line Company to alter the time of expiry and increase the maximum quantities of gas permitted to be exported; that of Texaco Exploration Company to export various grade butanes aggregating $15,120,000$ gal. through the facilities of Trans Mountain Oil Pipe Line Company to Anacortes, Wash., for a period of 12 months; and that of Shell Oil Company of Canada, Limited, to export field grades of butanes aggregating $260,000 \mathrm{bbl}$. to Anacortes for a like period.

During the year, the Board concerned itself also with requirements of the National Energy Board Act respecting the protection of the public safety, such as those providing for control of crossings by pipelines of various other utilities and vice versa, and those providing that no pipeline shall be opened for the transmission of hydrocarbons without leave of the Board. Under the former, 226 crossing orders were processed. Under the latter, 14 applications were reviewed as to adequacy of pipeline testing and safety devices; these applications represented some 113 miles of new and relocated pipelines, approximately 52,000 additional horsepower for gas compression and approximately 20,000 additional horsepower for pumping of liquid hydrocarbons. Forty-five other orders were issued on applications received under other sections of the Act.

Pursuant to its obligations to keep under review certain matters relating to energy, the Board continued the preparation of detailed energy supply and demand forecasts. In co-operation with the Dominion Coal Board a study of the interrelationship between coal and oil in Quebec and the Atlantic Provinces was undertaken. Because of the importance of comprehensive statistics on energy, the National Energy Board, in co-operation with the Dominion Bureau of Statistics, sponsored the formation of an Interdepartmental Advisory Committee on Energy Statistics, which has representation from the various government departments interested in the energy field. This Committee, formed in the latter part of 1961, has established liaison with agencies of the provincial governments and of industry working in the energy field, and is directing its efforts toward the establishment of improved statistical series on energy.

The Board has participated in the work of the Emergency Measures Organization in association with the Emergency Supply Planning Branch of the Department of Defence Production, and has strengthened its liaison with international organizations such as the Organization for Economic Co-operation and Development. Close liaison has been maintained with the Department of Northern Affairs and National Resources on problems associated with the disposal of the Canol Pipeline facilities. Also, as a result of investigations into two pipeline failures that occurred on the system of Trans-Canada Pipe Lines Limited, a more extensive study of pipeline steels and pipe fabrication procedures has been initiated in co-operation with the Department of Mines and Technical Surveys.

## Section 3.-The Development of Tariffs

Limitations of space in the Year Book have made it necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships in force at present and to summarize as much as possible historical data and details of preceding tariffs, giving references to those editions of the Year Book where extended treatments may be found.

## Subsection 1.-The Canadian Tariff Structure*

The Canadian Tariff consists, in the main, of three sets of tariff rates-British Preferential, Most-Favoured-Nation, and General.

British Preferential Tariff rates are, with some exceptions, the lowest rates. They are applied to imported commodities from British countries, with the exception of Hong Kong, when conveyed without trans-shipment from a port of any British country enjoying the benefits of the British Preferential Tariff into a port of Canada. Some Commonwealth countries have trade agreements with Canada which provide for rates of duty, on certain specified goods, lower than the British Preferential rates.

Most-Favoured-Nation rates are usually higher than the British Preferential rates and lower than the General Tariff rates. They are applied to commodities imported from countries with which Canada has trade agreements. These rates would apply to British countries when they are lower than the British Preferential Tariff rates. The most important trade agreement concerning the effective rates applied to goods imported from countries entitled to Most-Favoured-Nation rates is the General Agreement on Tariffs and Trade (GATT).

General Tariff rates are applied to goods imported from the few countries with which Canada has not made trade agreements.

There are numerous goods which are duty free under the British Preferential Tariff, or under both the British Preferential and Most-Favoured-Nation Tariffs, or under all Tariffs.

Valuation.-In general, the Customs Act, as amended effective Sept. 6, 1958, provides that the value for duty of imported goods shall be the fair market value of like goods as established in the home market of the exporter at the time when and place from which the goods are shipped directly to Canada when sold " $(a)$ to purchasers located at that place with whom the vendor deals at arm's length and who are at the same or substantially the same trade level as the importer, and (b) in the same or substantially the same quantities for home consumption in the ordinary course of trade under competitive conditions". In cases where like goods are not sold for home consumption but similar goods are sold, the value for duty shall be the cost of production of the goods imported plus an amount for gross profit at least equal in percentage to that earned on the sale of similar goods in the country of export. The value for duty may, in no case, be less than the amount for which the goods were sold to the purchaser in Canada, exclusive of all charges thereon after their shipment from the country of export. Internal taxes in the country of export (when not incurred on exported goods), the cost of shipping goods to Canada and similar charges do not normally form part of the value for duty. There are, of course, further provisions for determining value for duty under the Act.

Dumping.-Sect. 6 of the Customs Tariff provides that when the actual selling price of goods being imported is less than the fair market value and the goods are of a class or kind made or produced in Canada, a special or dumping duty shall be collected. This duty is to be equal to the difference between the actual selling price and the fair market value of the goods, except that it may not be more than 50 p.c. ad valorem. These provisions are designed to offset the advantage foreign exporters may achieve by exporting to Canada at less than the going prices.

Drawback.-There are provisions in the Customs and Excise Tax Acts for the repayment of a portion of the duty, sales and/or excise taxes paid on imported goods used in the manufacture of products later exported. The purpose of these drawbacks (as these repayments are called) is to assist Canadian manufacturers to compete in foreign markets with foreign producers of similar goods. A second class of drawback, known as "home

[^311]consumption" drawbacks, is provided for under the Customs Tariff Act and applies to imported materials and/or parts used in the production of specified goods to be consumed in Canada.

The Tariff Board.-The organization and functions of the Tariff Board are described at p. 100 of this volume.

## Subsection 2.-Tariff and Trade Arrangements with Other Countries as at Dec. 31, 1961

Canada's tariff arrangements with other countries fall into three main categories: trade agreements with a number of Commonwealth countries; the General Agreement on Tariffs and Trade (GATT); and other agreements and arrangements.

The Commonwealth countries with which Canada has trade agreements are as follows: Australia; the West Indies and the Bahamas, Bermuda, British Guiana and British Honduras; New Zealand; Federation of Rhodesia and Nyasaland; and Britain and Colonies. Preferences are accorded by Canada to India, Pakistan, Ghana, Nigeria and Tanganyika. Tariff relations between Canada and Ceylon, Ghana, the Federation of Malaya, Cyprus and Sierra Leone are governed by the Canada-United Kingdom Agreement. These agreements and arrangements have been modified and supplemented by GATT.

Canada exchanges most-favoured-nation treatment with 40 countries under the General Agreement on Tariffs and Trade. These countries are shown in the list on pp. 997-1004. In addition, Switzerland and Tunisia have acceded provisionally, and arrangements were being made for Argentina's provisional accession. At the end of the year Cambodia, Israel, Portugal and Spain were expected to become full contracting parties in the near future. Poland and Yugoslavia also participate in the work of the GATT. The protocol of Provisional Application of the General Agreement on Tariffs and Trade was signed by Canada on Oct. 30, 1947 and brought the Agreement into force on Jan. 1, 1948.

GATT is a multilateral trade agreement providing for scheduled tariff concessions and the exchange of most-favoured-nation treatment among the contracting parties and laying down rules and regulations to govern the conduct of international trade. Under the system of multilateral tariff negotiations initiated under GATT, four general rounds of negotiations have taken place: at Geneva, Switzerland, in 1947; at Annecy, France, in 1949; at Torquay, England, in 1950-51; and again at Geneva in 1955-56. A fifth tariff conference opened in Geneva on Sept. 1, 1960.* The tariff concessions Canada granted and received at the first Geneva Conference are described in the 1948-49 Year Book, pp. 875-877, and those negotiated at Annecy are discussed in the 1950 Year Book, pp. 968-970. The Torquay negotiations are discussed in the 1952-53 edition, pp. 996-997.

Canada already had most-favoured-nation trade agreements with a number of GATT members prior to the effective date of the General Agreement. These agreements with individual countries continue in force in conjunction with the General Agreement. As an exception, however, the Canada-U.S. Trade Agreement of 1938 is suspended for as long as both countries continue to be contracting parties to GATT.

Other arrangements include trade agreements with the Republic of Ireland and the Republic of South Africa exchanging preferences and most-favoured-nation agreements, and other arrangements of a less formal nature with many countries not contracting parties to GATT.

[^312]
# Tariff and Trade Arrangements with Commonwealth Countries as at Dec. 31, 1961 

| Country | Agreement | Principal Terms |
| :---: | :---: | :---: |
| Australia. | Trade Agreement signed Feb. 12, 1960; in force June 30, 1960. GATT effective Jan. 1, 1948. | Agreement includes schedules of tariff rates and exchange of British preferential rates on items not scheduled. May be terminated on six months notice. |
| Britain..................... | Trade Agreement signed Feb. 23, 1937, effective Sept. 1, 1937; modified by exchanges of letters Nov. 16, 1938 and Oct. 30, 1947. GATT effective Jan. 1, 1948. | Various concessions are granted by each country including exchange of preferential tariff rates. <br> The Agreement (as modified) includes provisions relating to the Colonies, Dependencies and Trusteeships. |
| British Caribbean: The | Trade Agreement signed July 6, | The parties exchange specified |
| West Indies (Barbados, | 1925, in force Apr. 30, 1927; Ca- | tariff preferences. Agreement |
| Leeward and Wind- | nadian notice of termination of | may be terminated on six |
| ward Islands, Trinidad and Tobago), | Nov. 23, 1938, was replaced by notice of Dec. 27, 1939, which | months notice. |
| Bahamas, Bermuda, | continued the Agreement. |  |
| British Guiana, | The British West Indies, Bermuda, |  |
| British Honduras and Jamaica. | British Guiana and British Honduras participate in GATT. |  |
| Ceylon.................... | Relations continue to be governed by the Trade Agreement of 1937 between Canada and Britain. GATT effective July 29, 1948. | Canada and Ceylon exchange preferential tariff treatment. <br> Exchange of most-favoured-nation treatment. |
| Cyprus..................... | Relations continue to be governed by Trade Agreement of 1937 with Britain. | Canada exchanges preferential treatment with Cyprus. |
| Ghana..................... | Relations continue to be governed by the Trade Agreement of 1937 between Canada and Britain. GATT effective Oct. 18, 1957. | Canada grants Ghana the British preferential rates, except on cocoa beans. |
| India. | Since 1897 Canada has unilaterally accorded British preferential treatment to India but without contractual obligation. <br> GATT effective July 8, 1948. | In addition to preferences granted to India, most-favoured-nation treatment is exchanged under GATT. |
| Malaya, Federation of... | Relations continue to be governed by the Trade Agreement of 1937 between Canada and Britain. GATT effective Oct. 24, 1957. | Canada grants Malaya British preferential rates in return for such preferences as exist in the Malayan tariff. |
| New Zealand. | Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. GATT effective July 26, 1948. | The parties exchange specific preferences on scheduled goods and reciprocally concede British preferential rates on items not scheduled. May be terminated on six months notice. |
| Nigeria, Federation of... | Relations continue to be governed by Trade Agreement of 1937 with Britain. <br> GATT effective Oct. 1, 1960. | Canada accords British preferential treatment to Nigeria. Exchange of most-favoured-nation treatment. |

# Tariff and Trade Arrangements with Commonwealth Countries as at <br> Dec. 31, 1961-concluded 

| Country | Agreement | Principal Terms |
| :---: | :---: | :---: |
| Pakistan................... | Canada unilaterally accords Pakistan British preferential treatment but without contractual obligation. <br> GATT effective July 30, 1948. | In addition to preferences granted to Pakistan, most-favoured-nation treatment is exchanged under GATT. |
| Rhodesia and Nyasaland, Federation of. | Trade Agreement signed Feb. 6, 1958; in force Feb. 7, 1958. GATT effective in Southern Rhodesia May 19, 1948; extended to whole Federation, Oct. 29, 1954. | Canada exchanges preferential treatment with the Federation of Rhodesia and Nyasaland. |
| Sierra Leone. . . . . . . . . . . | Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Apr. 27, 1961. | Canada and Sierra Leone exchange preferential tariff treatment. |
| Tanganyika.............. | Relations continue to be governed by Trade Agreement of 1937 with Britain. <br> GATT effective Dec. 9, 1961. | Canada accords British preferential treatment to Tanganyika. Exchange of most-favoured-nation treatment. |

# Tarifi and Trade Arrangements with Non-Commonwealth Countries as at Dec. 31, 1961 

| Argentina. | Trade Agreement signed Oct. 2 1941; provisionally in force Nov. 15, 1941. | Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months notice. |
| :---: | :---: | :---: |
| Austria.. | GATT effective Oct. 19, 1951. | Exchange of most-favoured-nation treatment. |
| Belgium-Luxembourg.... | Convention of Commerce with Belgium-Luxembourg Economic Union (including Belgian colonies) entered into effect Oct. 22, 1924. <br> GATT effective Jan. 1, 1948. | Exchange of most-favoured-nation treatment. May be terminated on one years notice. |
| Bolivia. | Order in Council of July 20, 1935, accepted Article 15 of BritainBolivia Treaty of Commerce of Aug. 1, 1911. | Exchange of most-favoured-nation treatment. May be terminated on one years notice. |
| Brazil. | Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. <br> GATT effective July 31, 1948. | Exchange of most-favoured-nation treatment. |
| Burma. | GATT effective July 29, 1948. | Exchange of most-favoured-nation treatment. |
| Cambodia. | Franco-Canadian Trade Agreement of 1933 applied to Cambodia. | Since the creation of Cambodia as an independent state in 1955, Canada has continued to grant most-favoured-nation rates. |

Tariff and Trade Arrangements with Non-Commonwealth Countries as at Dec. 31, 1961-continued

| Country | Agreement | Principal Terms |
| :---: | :---: | :---: |
| Cameroun. | Franco-Canadian Trade Agreement of 1933 applied to Cameroons. | Since the creation of Cameroun as an independent state in 1960, Canada has continued to grant most-favoured-nation rates. |
| Central African Republic. | Franco-Canadian Trade Agreement of 1933 applied to Central African Republic. | Since the creation of the Central African Republic as an independent state in 1960, Canada has continued to grant most-favourednation rates. |
| Chad | Franco-Canadian Trade Agreement of 1933 applied to Chad. | Since the creation of Chad as an independent state in 1960, Canada has continued to grant most-favoured-nation rates. |
| Chile. | Trade Agreement signed Sept. 10, 1941; provisionally in force Oct. 15, 1941, and definitively on Oct. 29, 1943. GATT effective Mar. 16, 1948. | Exchange of most-favoured-nation treatment. |
| China. | Modus vivendi signed Sept. 26, 1946; in effect since Sept. 28, 1946. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| Colombia. | Treaty of Commerce with Britain of Feb. 16, 1866, applies to Canada. Modified by protocol of Aug. 20, 1912, and exchange of notes Dec. 30, 1938. <br> A Trade Agreement between Colombia and Canada was signed Feb. 20, 1946, but has not been put into force. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| Congo, Republic of (Brazzaville). | Franco-Canadian Trade Agreement of 1933 applied to Congo (Brazzaville). | Since the creation of Congo (Brazzaville) as an independent state in 1960, Canada has continued to grant most-favoured-nation rates. |
| Congo, Republic of (LeopoldVille). | Belgo-Canadian Convention of Commerce of 1924 applied to the Congo. | Since the Congo's independence in 1960, Canada has continued to grant most-favoured-nation rates. |
| Costa Rica. | Modus vivendi signed Nov. 18, 1950; brought into force Jan. 26, 1951. | Exchange of most-favoured-nation treatment. May be terminated on three months notice |
| Cuba. | GATT effective Jan. 1, 1948. | Exchange of most-favoured-nation treatment (excluding preferences accorded by Cuba to the United States). |
| Czechoslovakia. | Convention of Commerce signed Mar. 15, 1928; in force Nov. 14, 1928. <br> GATT effective May 21, 1948. | Exchange of most-favoured-nation treatment. May be terminated on one years notice. |
| Dahomey. | Franco-Canadian Trade Agreement of 1933 applied to Dahomey. | Since the creation of Dahomey as an independent state in 1960 , Canada has continued to grant most-favoured-nation rates. |

Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Dec. 31, 1961-continued

| Country | Agreement | Principal Terms |
| :---: | :---: | :---: |
| Denmark (including Greenland). | Treaties of Peace and Commerce with Britain of Feb. 13, 1660 and July 11, 1670, apply to Canada. GATT effective May 28, 1950. | Exchange of most-favoured-nation treatment. Declaration of May 9, 1912 provides means for separate termination by Dominions on one years notice. |
| Dominican Republic. | Trade Agreement signed Mar. 8 , 1940; in force provisionally Mar. 15. 1940, and definitively Jan. 22, 1941. <br> GATT effective May 19, 1950. | Exchange of most-favoured-nation treatment including scheduled concessions. |
| Ecuador. | Modus vivendi signed Nov. 10, 1950; in force Dec. 1, 1950. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| Egypt. | (See United Arab Republic) |  |
| El Salvador. | Exchange of notes of Nov. 2, 1937; in force Nov. 17, 1937. | Exchange of most-favoured-nation treatment. May be terminated on four months notice. |
| Erhiopia. | Exchange of notes effective June 3 , 1955. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| Finland. | Exchange of notes of Nov. 13-17, 1948; effective Nov. 17, 1948. GATT effective May 25, 1950. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| France and French overseas territories. | Trade Agreement signed May 12, 1933; in force June 10, 1933. Exchange of notes of Sept. 29, 1934, and additional protocol of Feb. 26, 1935. <br> GATT effective Jan. 1, 1948. | Exchange of most-favoured-nation treatment including scheduled concessions. May be terminated on three months notice. |
| Gabon....... | Franco-Canadian Trade Agreement of 1933 applied to Gabon. | Since the creation of Gabon as an independent state in 1960, Canada has continued to grant most-favoured-nation rates. |
| Grrmany, Frderal Republic of. | GATT effective Oct. 1, 1951. | Exchange of most-favoured-nation treatment. |
| Grezce. | Modus vivendi by exchange of notes of July 24-28, 1947; effective Aug. 28, 1947. <br> GATT effective Mar. 1, 1950. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| Greenland. | (See Denmark) |  |
| Guatrmala. | Trade Agreement signed Sept. 28, 1937; in force Jan. 14, 1939. | Exchange of most-favoured-nation treatment. May be terminated on six months notice. |
| Guinea. . | Franco-Canadian Trade Agreement of 1933 applied to Guinea. | Since the creation of Guinea as an independent state in 1958, Canada has continued to grant most-favoured-nation rates. |

Tariff and Trade Arrangements with Non-Commonwealth Countries as at Dec. 31, 1961-continued

| Country | Agreement | Principal Terms |
| :---: | :---: | :---: |
| Harti. | Trade Agreement signed Apr. 23, 1937; in force Jan. 10, 1939. GATT effective Jan. 1, 1950. | Exchange of most-favoured-nation treatment. |
| Honduras. | Exchange of notes signed July 11, 1956, effective July 18, 1956. <br> Ratified in Honduras Sept. 5, 1956. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| Iceland. | Although there is no contractual obligation, Canada and Iceland adhere to the terms of a treaty originally concluded between Denmark and Britain on Feb. 13, 1660. | Exchange of most-favoured-nation treatment. |
| Indonesia.. | GATT effective Mar. 1, 1948. | Exchange of most-favoured-nation treatment. |
| Iran. | Special arrangement by Order in Council effective Feb. 1, 1951. | Canadagrants most-favoured-nation tariff rates as long as Iran accords reciprocal treatment. <br> Iran accorded most-favoured-nation treatment from Sept. 5, 1956. |
| Iraq. | Special arrangement by Order in Council effective Sept. 15, 1951. | Canada grants and receives most-favoured-nation tariff rates. |
| Ireland. | Trade Agreement signed Aug. 20, 1932: in force Jan. 2, 1933. | Canada grants British preferential tariff in return for preferential rates where such exist and for most-favoured-nation rates on non-preferential items. May be terminated on six months notice. |
| Israel. | Canada-Britain Agreement of 1937 applied under the British Palestine Mandate. | Since the creation of the State of Israel in May 1948, Canada has continued to grant most-favourednation rates. |
| Italy. | Modus vivendi by exchange of notes of Apr. 23-28, 1948; effective Apr. 28. 1948. <br> GATT effective Jan. 1, 1950. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| Ivory Coast. | Franco-Canadian Trade Agreement of 1933 applied to the Ivory Coast. | Since the creation of the Ivory Coast as an independent state in 1960, Canada has continued to grant most-favoured-nation rates |
| Japan.. | Agreement on Commerce signed Mar. 31, 1954; effective June 7, 1954. <br> GATT effective Sept. 10, 1955. | Exchange of most-favoured-nation treatment. Remains in force for one year from ratification and thereafter unless terminated on three months notice. |
| Laos. | Franco-Canadian Trade Agreement of 1933 applied to Laos. | Since the creation of Laos as an independent state in 1955, Canada has continued to grant most-favoured-nation rates. |

Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Dec. 31, 1961-continued

| Country | Agreement | Principal Terms |
| :---: | :---: | :---: |
| Lebanon. | Special arrangement by Order in Council of Nov. 19, 1946. | Canada grants most-favourednation tariff rates as long as Lebanon accords reciprocal treatment. |

## PART IV.-TRAVEL BETWEEN CANADA AND OTHER COUNTRIES*

Canada continues to be a popular attraction to residents of other countries. During 1961 a record $30,500,000$ visits to Canada by persons residing in the United States represented an increase of close to 3 p.c. over the volume in 1960. On the other hand, Canadians made $29,300,000$ trips to the United States, an insignificant increase over 1960. At the same time, re-entries of Canadian travellers from journeys to overseas countries in 1961 registered a gain of 18 p.c. over the previous year.

Preliminary estimates for 1961 indicate that $\$ 1,106,000,000$ was spent on international travel between Canada and other countries, a rise of between 5 p.c. and 6 p.c. over 1960 expenditures. Total receipts from visitors to Canada amounted to $\$ 473,000,000$, comprising $\$ 429,000,000$ from United States residents and $\$ 44,000,000$ from overseas travellers. The amount spent by United States residents was between 14 p.c. and 15 p.c. higher than in 1960 but expenditures of overseas visitors to Canada were about 2 p.c. lower. Estimates of expenditures by Canadians travelling abroad in 1961 also reached a record high of $\$ 633,000,000$, an increase of $\$ 6,000,000$ or 1 p.c. over 1960 . Travel to the United States accounted for $\$ 453,000,000$ of this amount, which was 2 p.c. lower than the amount spent by Canadians in that country in 1960 . On the other hand, the $\$ 180,000,000$ spent on visits to countries other than the United States in 1961 was $\$ 15,000,000$ or 9 p.c. higher than the amount so spent in 1960. It is estimated that Canada's balance of payments deficit on travel account with other countries was reduced by $\$ 47,000,000$ or nearly 23 p.c. in 1961 compared with 1960. The total debit balance amounted to $\$ 160,000,000$ and comprised a $\$ 24,000,000$ deficit with the United States and a $\$ 136,000,000$ deficit with other countries.

Only the above summary figures, subject to revision, were available for 1961 at the time of writing (July 1962). Detailed information for 1960 is given in the following text and tables.

[^313]Receipts from non-resident travel in Canada during 1960 increased by $\$ 29,000,000$ over 1959 and reached an all-time high of $\$ 420,000,000$, although the total number of entries, at $29,726,500$, was down slightly from the previous year. Most of the gain in receipts was accounted for by visitors from the United States who, although fewer in number, spent $\$ 375,000,000$ in Canada compared with $\$ 351,000,000$ in 1959 ; the number of such visitors declined from $29,880,800$ to $29,654,600$. The number of travellers from areas other than the United States, mainly overseas countries, increased by 7 p.c. to 71,900 and their expenditures amounted to $\$ 45,000,000$, between 12 p.c. and 13 p.c. higher than in 1959. Canadian travel abroad continues to set new records year by year. The number of re-entries of Canadians in 1960 was $29,286,400,4$ p.c. above 1959, and their expenditures amounted to $\$ 627,000,000,5$ p.c. above the previous year. Although the increase in reentries was for the most part from visits to the United States, which advanced by $1,055,900$, the increase in expenditures $(\$ 28,000,000)$ was more evenly distributed between the United States ( $\$ 13,000,000$ ) and overseas areas $(\$ 15,000,000)$. There was no appreciable change from 1959 in Canada's balance of payments on travel account which showed a total deficit of $\$ 207,000,000$, comprising an $\$ 87,000,000$ deficit with the United States and a $\$ 120,000,000$ deficit in the overseas account. There has been some reduction in Canada's travel deficit with the United States during the past few years but its effect has been somewhat lessened by a substantial growth in the travel deficit with overseas areas.

${ }^{1}$ Inclusive of Hawaii.
Travel between Canada and the United States.-The gain in receipts from the United States travellers in Canada during 1960 was more than accounted for by a $\$ 28,100,000$ increase in the expenditures of automobile visitors, as receipts from visitors travelling by other means of transport declined by some $\$ 4,100,000$. Entries by car, which numbered $23,270,500$, advanced by 439,300 , but the $6,384,100$ visitors coming by other means was a decline of 665,500 . Entries by rail at roughly 590,000 (including

310,600 in transit) were 29,000 fewer than in 1959 and their expenditures at $\$ 31,000,000$ were down by $\$ 5,000,000$. On the other hand, the number of arrivals by bus at 416,000 (including 54,200 in transit) advanced some 24,000 and their expenditures at $\$ 32,000,000$ showed a gain of $\$ 5,000,000$. The 435,000 entries by aircraft (including 9,100 in transit) were some 3,000 higher than in the previous year and their receipts at $\$ 53,000,000$ were up $\$ 2,000,000$. A similar analysis of boat travel revealed a drop of $\$ 3,000,000$ in expenditures, which amounted to $\$ 18,000,000$ in 1960 , although the number of entries by this mode of transport increased from 419,000 to 439,000 . There was a decrease of 684,000 in the number of visitors crossing into Canada by all other forms of transportation (pedestrians, local bus, etc.) and their expenditures were down by $\$ 3,000,000$.

Because of the proximity of heavily populated areas on both sides of the International Boundary and the relative ease with which border crossings are made, much of the travel between Canada and the United States is of a short-term nature. In 1960, non-residents remaining in Canada 24 hours or less numbered 20,909,700 and represented 70.5 p.c. of the total entries but their expenditures, which amounted to $\$ 53,000,000$, accounted for only 14.2 p.c. of all receipts. However, the proportions of short-term traffic showed considerable variation according to the type of transportation used, ranging from 59 p.c. of the automobile visitors to 18 p.c. of the bus traffic, 15 p.c. of the air traffic and 14 p.e. of the rail traffic. For non-automobile visitors (exclusive of those in transit), it was found that lengths of stay lasting from three to seven days were most common, accounting for 40 p.c. of the bus travellers, between 43 p.c. and 44 p.c. of the rail travellers and 49 p.c. of the air travellers. On the whole, there was a fairly sharp decline in the number of visits after the eight-day length of stay both in the automobile and non-automobile categories. Only 812,900 or between 4 p.c. and 5 p.c. of the non-resident motorists and 220,500 or 21 p.c. of those travelling by rail, bus and air stayed nine days or over in 1960 .

Data on length of stay and area of origin for foreign vehicle traffic in Canada staying longer than 24 hours during 1960 disclosed the following averages: Northwestern region, 6.8 days; West Coast region, 5.5 days; Northeastern States, 4.5 days; Great Lakes area, 4 days; and other States, 7.2 days. Average lengths of stay per car from the five States supplying the highest proportions of over-24-hour automobile traffic were: Michigan 3.3 days; New York 3.7 days; Ohio 6.2 days; Washington 4.5 days; and Pennsylvania 5.5 days. It is interesting to note that the total of non-resident automobiles travelling in Canada for two days or more during 1960 represented only 4.5 p.c. of all passenger cars registered in the United States. The highest ratio of entries in relation to registrations by State was from Vermont with 43.8 p.c. followed by Maine with 30.7 p.c. and Michigan with 25.7 p.c. The State of Arkansas showed the lowest ratio; only 0.2 p.c. of the automobiles registered in that State entered Canada in 1960.

Canadians made $29,045,800$ visits to the United States in 1960 and spent $\$ 457,000,000$, exclusive of visitors to Hawaii whose expenditures amounted to $\$ 5,000,000$. Persons travelling by automobile numbered $23,357,700$, an increase of $1,152,900$ or approximately 5 p.c., and travellers by other means of transport numbered $5,688,100$, a slight decline of 97,000 from the 1959 total. However, an examination of the expenditures by these two classifications reveals that disbursements of the automobile group at $\$ 232,000,000$ decreased $\$ 3,000,000$ or just over 1 p.c., while expenditures of the non-automobile class advanced by $\$ 12,000,000$ or between 5 p.c. and 6 p.c. to $\$ 225,000,000$. Canadians who spent 24 hours or less in the United States during 1960 accounted for some 80 p.c. of the total visits but for only 12.6 p.c. of the disbursements. Their average expenditure per visit amounted to about $\$ 2.50$ compared with the average expenditure per visit of close to $\$ 70$ for those remaining over 24 hours. Although the average outlay per visit for Canadians travelling
in the United States regardless of length of stay fell slightly from about $\$ 16$ in 1959 to approximately $\$ 15.75$ in 1960 , there was a moderate gain on a per capita basis. The average amount spent in the United States for each resident of Canada was close to $\$ 25.75$, an increase of 1.2 p.c. compared with 1959; population growth in the year amounted to 0.8 p.c. Purchases of merchandise as declared under the 48 -hour customs exemption privilege were valued at $\$ 71,000,000$ in 1960 , a decrease of $\$ 2,000,000$ from the 1959 valuation despite a slightly higher average value per declaration.

Travel between Canada and Overseas Countries.-Although the number of persons travelling between Canada and overseas countries generally represents less than 1 p.c. of the total travel movement, expenditures involved are relatively high compared with travel between Canada and the United States. Substantial amounts are required to cover the cost of oceanic transportation and lengths of stay overseas are on the average much longer than in the United States, thereby adding to the amount spent on lodging, meals, entertainment, merchandise, etc. Transportation charges alone, covering fares to and from Canada, accounted for $\$ 25,000,000$ or 55 p.c. of the receipts from overseas visitors in 1960 and $\$ 53,000,000$ or 32 p.c. of the expenditures of Canadians travelling overseas. Roughly two-thirds of the 71,900 non-immigrant entries from overseas arrived in Canada by air and the remainder by vessel, with Canadian air and steamship facilities handling approximately 39 p.c. A classification according to country of origin shows very little change from 1959 data, with 54 p.c. originating in Britain, 10.3 p.c. in other Commonwealth countries, 30.3 p.c. in Continental Europe and 5.4 p.c. in other areas.

In 1960, as in previous years, about 75 p.c. of the visitors coming to Canada from overseas came for the purpose of touring the country or visiting friends and relatives; almost 14 p.c. were concerned with temporary professional services or matters of the clergy; just over 4 p.c. were classified as students; 2 p.c. were in transit or members of ships' crews; 2 p.c. were either diplomats or members of the Allied Armed Forces; and entertainers and all other miscellaneous categories represented slightly more than 2 p.c. A distribution of entries by country of last permanent residence shows that tourists and visitors accounted for 80 p.c. of the arrivals from Britain, 74 p.c. of those from Continental Europe, 69 p.c. of those from other Commonwealth areas, and 61 p.c. of those from all other countries. The frequency of arrivals classified as temporary professionals and clergymen varied from 8 p.c. for Commonwealth countries (excluding Britain) to 15 p.c.for countries of Continental Europe. In addition, the popularity of academic study in Canada by nonresidents ranged widely from 1 p.c. of the visitors from Britain to 19 p.c. of those from other Commonwealth areas, notably India, the West Indies and Bermuda. Of the tourists and persons visiting friends or relatives, temporary professionals and clergymen, diplomats and members of the Allied Forces, respectively, slightly over 50 p.c. were from Britain. Of the total number of students, between 51 p.c. and 52 p.c. originated in other Commonwealth countries. At the same time, Continental European countries accounted for the largest proportion of in-transit travel and members of crews, entertainers and the residual classifications of overseas visitors, amounting to 41 p.c., 47 p.c., and 66 p.c., respectively.

## 4.-Non-Immigrant Visitors Entering Canada Direct from Overseas Countries, by Type of Transportation, 1959 and 1960

Re-entries of Canadians from trips overseas reached a record 240,600 in 1960, between 18 p.c. and 19 p.c. higher than in 1959. This number included 188,600 re-entries direct and 52,000 via the United States, increases of 20 p.c. and 13 p.c., respectively. Expenditures by Canadians in overseas countries also reached a new high of $\$ 165,000,000$, exceeding 1959 payments by some $\$ 15,000,000$. Canadians returning direct were responsible for all of this gain, having increased their spending by $\$ 17,000,000$ to $\$ 140,000,000$; on the other hand, expenditures of re-entries via the United States declined by $\$ 2,000,000$ to $\$ 25,000,000$. Payments for transportation (excluding domestic and United States carriers) direct between Canada and overseas countries amounted to $\$ 45,000,000$, of which 74 p.c. was allocated to airlines compared with 67 p.c. in 1959. Direct re-entries through principal Canadian airports numbered 142,400 in 1960 compared with 106,600 in 1959 and
represented 75 p.c. of all direct re-entries; the number of residents returning at major Canadian seaports decreased by about 5,300 . Seasonal variation was much more pronounced in re-entries by vessel than by air. There were almost three times as many return trips by sea in the second quarter of the year as in the first, while re-entries by aircraft during these two periods were approximately equal. The volume of Canadian travellers returning by vessel is considerably lower in the first half of each year because of the winter hold-up of traffic in the St. Lawrence River ports of Quebec and Montreal. For this reason also, direct re-entries at the Atlantic seaports of Halifax and Saint John reach their maximum during this time of year.

In both 1960 and 1959 about 59 p.c. of the Canadians returning from overseas had visited Britain (including 29 p.c. in combination with trips to Continental Europe) but their expenditures in 1960 in that area increased by almost $\$ 10,000,000$ to $\$ 64,000,000$ compared with 1959. Approximately 48 p.c. of the direct re-entries had travelled to countries in Continental Europe (including the 29 p.c. in combination with visits to Britain), a slightly higher percentage than in 1959, and disbursements in this area, which amounted to almost $\$ 57,000,000$, showed a gain of just under $\$ 8,000,000$. The proportion of persons who had been to other Commonwealth countries fell slightly to between 10 p.c. and 11 p.c. but their expenditures of around $\$ 9,000,000$ were about the same as in 1959 . The remainder of Canadian direct re-entries in 1960 had travelled to other areas and spent $\$ 11,000,000$, a moderate increase over the previous year.

Canadians returning from overseas travel via the United States in 1960 were estimated to have spent less money than during 1959, despite an increase of 6,000 in the number of visits. Lower expenditures in Britain and other European areas were largely responsible for the decrease, as payments to other countries advanced slightly and transportation charges (except those paid to United States and Canadian carriers) remained at $\$ 8,000,000$. It is estimated that total expenditures of Canadians returning from overseas via the United States were distributed as follows: Britain, $\$ 6,000,000$; other Europe, $\$ 8,000,000$; other British areas, $\$ 5,000,000$; and destinations not already specified, $\$ 6,000,000$. There are certain features characteristic of overseas travel via the United States that distinguish it from direct travel; these include a higher proportion of visits to more southerly destinations such as Bermuda, the West Indies, the Bahamas and Mexico, greater frequency of recreation travel and generally shorter lengths of stay outside Canada.

Tourist Information.-Tourist information generally is supplied by the Canadian Government Travel Bureau, Ottawa, and detailed information on the National Parks and Historic Sites is available from the Department of Northern Affairs and National Resources, Ottawa. For advice regarding specific provinces or particular cities or resorts, application should be made to the provincial or municipal Bureau of Information concerned.

## Section 1.-Combined Statistics of Public Finance for All Governments

Combined statistics of public finance for all governments in Canada-federal, provincial and municipal-are presented in this Section and Section 2 covers the incidence of taxation at the three levels. More detailed information for each level of government is given in Sections 3, 4 and 5.

Combined Revenue and Expenditure.-Tables 1 and 2 give details of the federal, provincial and municipal net combined revenue by source and net combined current and capital expenditure by function, respectively, for 1958 and 1959. This net basis has been prepared by deducting from revenue, and the appropriate expenditure, certain specified amounts such as grants-in-aid and shared-cost contributions from other governments, institutional revenue, and interest, premium, discount and exchange revenue. Amounts provided for debt retirement are excluded to avoid duplication since all expenditure resulting from capital borrowings is included.

Inter-government transfers such as subsidy payments by the Federal Government to the provincial governments are unconditional grants and therefore cannot be offset against any specific expenditure. These are set out separately in Tables 1 and 2 in order to prevent duplication and to provide additive totals. Because of the differing accounting practices of governments and variations in fiscal year-ends, discrepancies appear between the amounts recorded as inter-government transfers in the two tables.

## Section 2.-Taxation in Canada*

Canada is a federal state with a central government and ten provincial governments. In 1867 the principal colonies of the British Crown in North America joined together to form the nucleus of a new nation and the British North America Act of that year became its written constitution. This statute created a central government with certain powers while continuing the existence of political subdivisions called provinces with powers of their own.

Under the British North America Act the Parliament of Canada has the right of raising "money by any mode or system of taxation" while the provincial legislatures are restricted to "direct taxation within the Province in order to the raising of a Revenue for Provincial purposes". Thus the provinces have a right to share only in the field of direct taxation while the Federal Government is not restricted in any way in matters of taxation. The British North America Act also empowers the provincial legislatures to make laws regarding "municipal institutions in the Province". This means that the municipalities derive their incorporation with its associated powers, fiscal and otherwise, from the provincial government concerned. Thus, from a practical standpoint, municipalities are also limited to direct taxation.

A direct tax is generally recognized as one "which is demanded from the very person who it is intended or desired should pay it". In essence, this conception has limited the provincial governments to the imposition of income tax, retail sales tax, succession duties and an assortment of other direct levies. In turn, municipalities, acting under the guidance of provincial legislation, tax real estate, water consumption, places of business and in some cases retail sales. The Federal Government levies direct taxes on income, on gifts, and on the estates of deceased persons and indirect taxes such as excise taxes, excise and customs duties, and a sales tax.

The increasing use by both the federal and the provincial governments of their rights in the field of direct taxation in the 1930's resulted in uneconomic duplication and some severe tax levies. Starting in 1941, a series of tax agreements, each normally enduring for a period of five years, were concluded between the federal and the provincial governments to promote the orderly imposition of direct taxes. All provinces surrendered their claims to personal income tax for the duration of the wartime agreements which expired in 1947. The Provinces of Quebec and Ontario did not rent any tax fields under the 1947 agreements. The Province of Quebec did not rent any of its tax fields under the 1952 and 1957 agreements; the Province of Ontario did not rent succession duties under the 1952 agreements and did not rent either succession duties or corporation income tax under the 1957 agreements. Apart from these exceptions all provinces participated in the various tax agreements as fully as possible. Newfoundland rented its tax fields as soon as it entered Confederation.

Under these agreements, the participating provinces undertook, in return for compensation, not to use or permit their municipalities to use certain of the direct taxes. Under the last two agreements, the federal income tax and death tax otherwise payable in nonparticipating provinces were abated by a fixed percentage to make room for the provincial levies. The Wartime Tax Agreements of 1942 are outlined in the 1946 Year Book, pp. 900-901; the 1947 and 1952 Tax Rental Agreements in the 1954 Year Book, pp. 1087-1090; and the 1957 fiscal arrangements in the 1961 Year Book, pp. 1067-1069. The 1962 fiscal arrangements are authorized by the Federal-Provincial Fiscal Arrangements Act, assented to Sept. 29, 1961. They became operative on Apr. 1, 1962 and will run until Mar. 31, 1967.

Basically, the new arrangement entails a partial federal withdrawal from the field of direct taxation and the re-entry of all provinces into the vacated area. The Federal Government will reduce its personal income tax otherwise payable on income earned in a province, and on income received by a resident of a province, by the following percentages:

[^318]16 p.c. in 1962; 17 p.c. in 1963; 18 p.c. in 1964; 19 p.c. in 1965; and 20 p.c. in 1966 . Also, the Federal Government has reduced its rate of corporation income tax on taxable income of corporations earned in the provinces. The reduction is 9 p.c. of taxable income earned in any province except Quebec and 10 p.c. of taxable income earned in Quebec. The additional 1-p.c. reduction in respect of taxable income earned in Quebec is to compensate for the additional tax levied by the province on corporation income to provide grants to universities. These provincial grants replace federal grants which in other provinces are paid to the universities by the Federal Government through the Canadian Universities Foundation. This additional 1 p.c. in Quebec had not yet been brought into force by legislation as of June 1962.

The Federal Government will continue to abate the estate tax otherwise payable by 50 p.c. in respect of property situated in a province which levies its own death tax. Only Ontario and Quebec have signified their intention to levy death taxes in the form of succession duties for the period 1962-67.

These reductions in federal income tax and estate tax under the new arrangement do not apply to the Yukon Territory or the Northwest Territories or to income earned outside Canada. The Yukon and Northwest Territories do not impose income taxes or death taxes.

The provincial tax rates are not restricted to the extent of the federal withdrawal. Their constitutional position permits them unlimited use of direct taxes for the raising of revenue for provincial purposes. However, in all but four provinces (Ontario, Quebec, Manitoba and Saskatchewan) rates of income tax coincide with the amount of the federal abatement.

As part of the new arrangement, the Federal Government has entered into tax collection agreements under which it collects the provincial personal income taxes for all provinces except Quebec and the provincial corporation income taxes for all provinces except Ontario and Quebec.

The Atlantic Provinces Adjustment Grants are continued for another five years at the increased level of $\$ 35,000,000$ per annum, with the distribution as determined by the four provinces being: Newfoundland, Nova Scotia and New Brunswick $\$ 10,500,000$ each, and Prince Edward Island $\$ 3,500,000$. The additional grant to Newfoundland, payable under the Newfoundland Additional Grants Act of 1959, is continued at $\$ 8,000,000$ per annum for the five-year period of the new arrangement.

## Subsection 1.-Federal Taxes

## Individual Income Tax

Every individual who is a resident of Canada at any time during a year is liable for the payment of income tax for that year. In addition, every non-resident individual who is employed or carries on business in this country during a year is required to pay tax on the part of his taxable income earned in Canada. Canadian taxation practice is based to a large extent on the British experience. This is reflected particularly in the fact that taxation is on the basis of residence rather than citizenship, and in the tax freedom for capital gains. The term "residence" is difficult to define simply but, generally speaking, it is taken to be the place where a person resides or where he maintains a dwelling ready at all times for his use. There are also extensions of the meaning of Canadian resident to include a person who has sojourned in Canada for an aggregate period of 183 days in a taxation year, or a person who was during the year a member of the Armed Forces of Canada, or an ambassador, a high commissioner, or an officer or servant of Canada or of any one of its provinces, or the spouse or dependent child of any such person.

The Canadian tax law uses the concepts "income" and "taxable income" The income of a resident of Canada for a taxation year comprises his revenues from all sources inside or outside Canada and includes income for the year from all businesses, property, offices and employments. It does not include capital gains unless they arise out of the conduct of a business or as a result of an adventure in the nature of trade.

In computing his income for a taxation year, an individual must include all dividends, fees, annuities, pension benefits, allowances, interest, alimony, maintenance payments and other miscellaneous sources of income. On the other hand, war service disability pensions paid by Canada or an ally of Her Majesty at the time of the war service, unemployment insurance benefits, compensation in respect of an injury or death paid under a Workmen's Compensation Act of a province and family allowances do not have to be included in the computation of income.

In computing his income, an individual who is carrying on business may deduct business expenses including depreciation (called capital cost allowances), interest on borrowed money, reserves for doubtful debts, contributions to pension plans or deferred profitsharing plans for his employees, bad debts, and expenses incurred for scientific research. In general, no deductions are allowed in computing income from salary and wages although there are exceptions. These exceptions include travelling expenses of employees who have to travel as they perform their work (such as employees on trains), union dues, alimony payments, and contributions to registered pension plans. Individuals may deduct, within limits, amounts set aside to provide a future income under registered retirement savings plans. Students in full-time attendance at a university or other educational institution in a course at a post-secondary school level may deduct their tuition fees in computing their income.

Having computed his income the individual then calculates his taxable income by deducting certain exemptions and deductions: for single status an exemption of $\$ 1,000$; for married status an exemption of $\$ 2,000$; for dependent children eligible to receive family allowance* $\$ 300$ per child; $\dagger$ for other dependants (as defined in the law), $\$ 550$ per dependant; $\dagger$ for a taxpayer over 65 years of age, an additional $\$ 500$; for a taxpayer who is blind or confined to a bed or a wheelchair for the whole of the taxation year, an additional $\$ 500$; for charitable donations, up to 10 p.c. of income; and for medical expenses, in excess of 3 p.c. of income. In lieu of claiming deductions for charitable donations, medical expenses and membership dues in trade unions or professional societies, an individual may claim a standard deduction of $\$ 100$.

As already stated, an individual who is resident in Canada for the whole year is taxed on his income from both inside and outside Canada. An individual who is not resident in Canada at any time during the year but who carries on business in Canada or who earns salary or wages in Canada is taxed only on the income earned in Canada. In computing taxable income earned in Canada, such a non-resident individual is allowed to deduct that part of the exemptions and deductions that may reasonably be attributed to the income earned in Canada. (A non-resident who derives investment income from Canada is taxed in a different way described under a separate heading.) An individual who ceases to be a resident of Canada during the year or who becomes a resident during the year so that he is resident for only part of the year will be subject to income tax in Canada on only that part of his income for the year received while he is resident in Canada. In these circumstances the deductions from income permitted for determining taxable income will be the amount that may reasonably be considered as applicable to the period during which he is resident in Canada.

A progressive schedule of rates is applied to taxable income. These rates begin at 11 p.c. on the first $\$ 1,000$ of taxable income and increase to 80 p.c. on taxable income in excess of $\$ 400,000$. In addition, an old age security tax is levied on taxable income at the rate of 3 p.c. with a maximum of $\$ 90$ reached at the level of $\$ 3,000$.

In calculating the amount of his income tax, an individual is allowed tax credits under three main headings: (1) Dividend Tax Credit-to partially eliminate the double taxation of corporate profits and to encourage participation in the ownership of Canadian companies, Canadian resident individuals are allowed to deduct from their tax an amount equal

[^319]to 20 p.c. of the net dividends they receive from Canadian taxable companies; (2) Foreign Tax Credit-foreign taxes paid on income from foreign sources may be credited against Canadian income tax but the credit may not exceed the proportion of Canadian tax relative to such income; and (3) Abatement under Federal-Provincial Arrangement-in 1962 the federal personal income tax otherwise payable on income of a resident of a province and on income earned in a province is reduced by 16 p.c. and will increase by one percentage point a year until it becomes 20 p.c. in 1966.

To a very large extent individual income tax is payable as the income is earned. Taxpayers in receipt of salary or wages have tax deducted from their pay by their employer and in this way pay nearly 100 p.c. of their tax liability during the calendar year. The balance of the tax, if any, is payable at the time of filing the tax return before Apr. 30 in the following year. People with more than 25 p.c. of their income from sources other than salary or wages must pay tax by quarterly instalments throughout the year. Here again returns must be filed before Apr. 30 in the following calendar year.

The following statement shows what taxpayers pay at various levels of income. In calculating these taxes it has been assumed that all taxpayers take the standard deduction of $\$ 100$. No allowance has been made for the 20 -p.c. dividend tax credit. In calculating the taxes shown for a married taxpayer with two children eligible for family allowances, a deduction of $\$ 300$ has been allowed for each child.

| Status | Income | Income Tax | $\begin{gathered} \text { Old Age } \\ \text { Security Tax } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
|  | 8 | 8 | \$ |
| Single taxpayer - no dependants.......................... | 1,200 | 11 | 3 |
|  | 1,500 | 44 | 12 |
|  | 2,000 | 99 | 27 |
|  | 2,500 | 166 | 42 |
|  | 3,000 | 236 | 57 |
|  | 5,000 | 591 | 90 |
|  | 10,000 | 1,840 | 90 |
|  | 20,000 | 5,825 | 90 |
|  | 50,000 | 20,965 | 90 |
|  | 100,000 | 50,855 | 90 |
| Married taxpayer-no dependants.......................... | 2,200 | 11 | 3 |
|  | 2,500 | 44 | 12 |
|  | 3,000 | 99 | 27 |
|  | 5,000 | 403 | 87 |
|  | 10,000 | 1,544 | 90 |
|  | 20,000 | 5,375 | 90 |
|  |  | 20,415 | 90 |
|  | 100,000 | 50,205 | 90 |
| Married taxpayer-two children eligible for family allowances. |  |  |  |
|  | 2,800 3,000 | ${ }_{33}^{11}$ | 3 9 |
|  | 5,000 | 301 | 69 |
|  | 10,000 | 1,388 | 90 |
|  | 20,000 | 5,105 | 90 |
|  | 50,000 | 20,085 | ${ }_{90}^{90}$ |
|  | 100,000 | 49,815 | 90 |

The income taxes shown above are abated by 16 p.c. in all provinces. In all provinces except Quebec, Manitoba and Saskatchewan the provincial tax is the same as the federal abatement. Therefore in these provinces the taxes shown above are the combined federal and provincial taxes. In Quebec the provincial tax does not coincide with the federal abatement. In Manitoba and Saskatchewan the provincial tax exceeds the abatement by 6 p.c.

## Corporation Income Tax

The Income Tax Act levies a tax upon the income from everywhere in the world of corporations resident in Canada and upon the income attributable to operations in Canada of non-resident corporations carrying on business in Canada.

In computing their income, corporations may deduct operating expenses including municipal real estate taxes, reserves for doubtful debts, bad debts and interest on borrowed money. They may not deduct provincial income taxes other than provincial taxes on
income derived from mining operations. (For this purpose "income from mining operations" is specially defined.) Prior to 1962, corporations could deduct provincial taxes on income derived from logging operations (as defined in the law). However, it was announced in the 1962 Budget Speech that, for 1962 and subsequent taxation years, this deduction from income would be repealed and replaced by a deduction from tax of an amount equal to the lesser of two-thirds of a provincial tax on income from logging operations or two-thirds of 10 p.c. of the corporation's income from logging operations in the province. This change had not yet been brought into force by legislation as of June 1962.

Regulations covering capital cost allowances (depreciation) permit taxpayers to deduct over a period of years the actual cost of all depreciable property. The yearly deductions of capital cost allowances are computed on the diminishing balance principle. (Taxpayers engaged in farming and fishing may choose between this and the straight line method.) Published regulations establish a number of classes of property and maximum rates. There is provision for recapture of any amount allowed in excess of the ultimate net capital cost of any asset. Since Jan. 1, 1961, accelerated depreciation provisions have been available to taxpayers in certain circumstances and for a limited period of time. Businesses established in surplus manpower areas (specific areas officially designed as such) which produce goods new to these areas or a business engaged in the production of goods that are new to Canada are allowed to claim depreciation at double the normal rates of capital cost allowance for one year in respect of capital expenditures incurred for the purpose of producing these new goods. This special incentive, which became operative on Jan. 1, 1961, will remain available until Jan. 1, 1964. Since June 20, 1961, a modernization allowance in the form of a 50 -p.c. increase in the first year in the rates of capital cost allowance can be claimed by a business for expenditures on new capital assets which exceed its expenditures on capital assets in the previous year or its average expenditures on capital assets in the three previous years. This special allowance is available in respect of all depreciable assets eligible for depreciation by the diminishing balance principle which are acquired before Apr. 1, 1964.

Expenditures on scientific research by corporations qualify for special tax treatment. Generally speaking, all expenditures on scientific research in Canada may be written off for tax purposes in the year when incurred. In addition, it was announced in the 1962 Budget Speech that, for 1962 and subsequent taxation years, corporations will be permitted to deduct from income for tax purposes 150 p.c. of their increased expenditures on industrial research. This special incentive had not yet been brought into force by legislation as of June 1962.

Taxpayers operating mines, oil wells and gas wells are allowed a depletion allowance, usually computed as a percentage of profits derived from mineral, oil or gas production, which continues as long as the mine or well is in operation. This allowance is in addition to capital cost allowances on buildings, machinery and similar depreciable assets used by the taxpayer. Taxpayers operating timber limits receive an annual allowance sometimes called a depletion allowance. This is a rateable proportion of the amount invested in the limit and is based on the amount of timber cut in the year. When the amount invested in the limit has been recovered no further allowance is given.

In computing taxable income, corporations may deduct dividends received from other Canadian taxpaying corporations and also from foreign corporations in which the Canadian corporation has at least 25 p.c. stock ownership. Business losses may be carried back one year or forward five years and deducted in computing taxable income. Corporations may also deduct donations to charitable organizations up to a maximum of 10 p.c. of their income.

The general rates of tax on corporate taxable income are 18 p.c. on the first $\$ 35,000$ of taxable income plus 47 p.c. on taxable income in excess of $\$ 35,000$. Corporations deriving more than one-half of their gross revenue from the sale of electrical energy, gas, or steam pay tax on their taxable income from such sources at the rate of 18 p.c. on the first $\$ 35,000$ of taxable income plus 45 p.c. on taxable income in excess of $\$ 35,000$. Corporations that qualify as investment companies pay a tax of 18 p.c. on their taxable income. In addition to these rates all corporations pay an old age security tax of 3 p.c. of taxable income bringing
their rates up to 21 p.c. and 50 p.c. ( 21 p.c. and 48 p.c. for the public utility companies and 21 p.c. for investment companies).

In calculating the amount of their income tax, corporations are allowed tax credits under two headings: (1) Foreign Tax Credit-foreign taxes paid on income from foreign sources may be credited against Canadian income tax but the credit may not exceed the proportion of Canadian tax relative to such income; and (2) Abatement under FederalProvincial Arrangement-corporations may deduct from their federal tax otherwise payable a tax abatement equal to a fixed percentage of their taxable income attributable to operations in a Canadian province. This abatement is to make room for the provincial income tax levied by each Canadian province. The amount of the abatement is 9 p.c. of taxable income attributable to operations in any province except Quebec and 10 p.c. of taxable income attributable to operations in Quebec. This additional 1 p.c. in Quebec had not yet been brought into force by legislation as of June 1962.

It was announced in the 1962 Budget Speech that a tax incentive based upon increased sales would be available to corporations engaged in manufacturing or processing. This concession will consist of cancellation of 50 p.c. of the federal income tax on the first $\$ 50,000$ of taxable income arising from increased sales and cancellation of 25 p.c. of the tax on any additional taxable income arising from increased sales. This proposal for a tax incentive had not yet been brought into force by legislation as of June 1962.

Corporations are required to pay their taxes (combined income and old age security taxes) in monthly instalments. In each of the last six months of their fiscal year and the three months following the end of their fiscal year, they must pay one-twelfth of their estimated tax for the year. The estimate of the amount payable may be based on the taxable income of the previous year or the estimated taxable income of the year in progress. In each of the following two months they pay one-third of the estimated balance of the tax computed by reference to the income of the fiscal year. In the sixth month following the end of their fiscal year the final return must be filed and the remainder of the tax paid for the year.

## Taxation of Non-residents

A non-resident is liable to the payment of income tax if he was employed or was carrying on business in Canada during a taxation year. The expression "carrying on business in Canada" includes: (1) maintaining a permanent establishment in Canada; (2) processing goods even partially in Canada; and (3) entering into contracts in Canada.

The taxable income of a non-resident individual derived from carrying on business in Canada or from employment in Canada is taxed under the same schedule of rates as Canadian resident individuals, and non-resident corporations deriving income from carrying on business in Canada are taxed on their taxable income attributable to operations in Canada at the same rates as Canadian resident corporations. (Tax treaties with some countries provide certain exemptions from tax for remuneration for services performed in this country by residents or employees of the other country.)

Furthermore, the Income Tax Act provides for a tax at the rate of 15 p.c. on certain forms of income going from Canada to non-resident persons. It applies to interest, dividends, rentals, royalties, income from a trust or estate and alimony. This 15 -p.c. tax applies whether the income goes to non-resident individuals or corporations. The rate on royalties on motion picture films is only 10 p.c. This tax is withheld at the source by the Canadian payer. It is an impersonal tax levied without regard to the status or other income of the non-resident recipient. Non-residents who receive only this kind of income from Canada do not file tax returns in Canada.

## Special Tax on Branch Businesses

Profits earned in Canada by a non-resident corporation carrying on business through a branch or permanent establishment in Canada are subject to an additional tax of 15 p.c. This tax is imposed on profits attributable to the branch after deducting therefrom Canadian federal and provincial income taxes and an allowance in respect of the net increase in capital investment in property in Canada.

## Gift Tax

The Income Tax Act levies a tax upon gifts. The rates range from 10 p.c. on an aggregate taxable value of $\$ 5,000$ or under to 28 p.c. on an aggregate taxable value of over $\$ 1,000,000$. Exemptions include complete exemption of gifts of $\$ 1,000$ or less and a general deduction of $\$ 4,000$ from aggregate taxable value of gifts in the year.

## Estate Tax

This tax applies to property passing, or deemed to pass, at death. All the property of persons who were domiciled in Canada before their death must be taken into consideration no matter where that property is situated; for persons dying domiciled outside of Canada, only their property situated in Canada is subject to tax.

In computing the tax of a Canadian domiciliary the value of the whole estate is first determined. Once the aggregate value of the estate has been determined, estate debts and certain expenses may be deducted. From the resulting "aggregate net value", there may be deducted the amount of a basic exemption, which is increased where the deceased leaves a widow or dependent child, and also the amount of any bequests to charitable organizations in Canada. After these deductions, the amount remaining is the "aggregate taxable value" to which is applied the tax rates. From the tax so calculated may be deducted: (1) a tax abatement in respect of property situated in a province that levies a succession duty; (2) a credit for gift tax paid on gifts made within three years of death (the value of which must be included in the aggregate net value of the estate); and (3) a credit for foreign taxes.

No estate valued at less than $\$ 50,000$ is subject to estate tax. This $\$ 50,000$ is not an exemption but the starting point for tax. The estate tax must not reduce the value of an estate after tax to less than $\$ 50,000$. The basic deductible exemption which applies to all estates of Canadian domiciliaries is $\$ 40,000$. This basic exemption of $\$ 40,000$ is increased to $\$ 60,000$ in respect of a deceased male survived by a spouse, or in respect of a deceased female survived by an incapacitated spouse and a dependent child. In both cases, there is an additional exemption of $\$ 10,000$ for each surviving dependent child (under 21). Finally, the basic exemption of $\$ 40,000$ is increased by $\$ 15,000$ for every surviving dependent child made an orphan by the death of the deceased.

The tax on the estates of Canadian domiciliaries is calculated by applying a graduated scale of rates. For an aggregate taxable value of $\$ 5,000$ or less the rate is 10 p.c., for an aggregate taxable value of $\$ 100,000$ the tax is $\$ 19,000$, and anything between $\$ 100,000$ and $\$ 150,000$ is taxed at 24 p.c. At $\$ 2,000,000$ of taxable value the tax is $\$ 816,500$ and the excess over $\$ 2,000,000$ is chargeable at the highest rate of 54 p.c.

As already stated, there is an abatement from federal estate taxes otherwise payable, in respect of provincial succession duties. Generally, the abatement is a deduction of 50 p.c. from the federal tax otherwise payable in respect of property situated in a province that levies succession duties.

The property situated in Canada of a deceased person not domiciled in Canada is subject to estate tax at a flat rate of 15 p.c. No deduction is allowed against the assessed value of such property except for debts specifically chargeable to it. However, there is a special provision that exempts all such property of less than $\$ 5,000$ value and also provides that the tax must not reduce the value of the property to less than $\$ 5,000$. (A new Estate Tax Convention between Canada and the United States ratified recently increases this figure to $\$ 15,000$; the change is retroactive to Jan. 1, 1959.) Where property is subject to provincial duties the 15 -p.c. tax is abated by 50 p.c.

## Excise Taxes

The Excise Tax Act levies a general sales tax and special excise taxes. Both the sales tax and the special excise taxes are levied on goods imported into Canada and on goods produced in Canada. They are not levied on goods exported.

General Sales Tax.-The sales tax, which is at the rate of 8 p.c., is levied on the manufacturer's sale price of goods produced or manufactured in Canada or on the duty-paid
value of goods imported into Canada. For alcoholic beverages and tobacco products the sale price for purposes of the sales tax includes excise duties levied under the Excise Act referred to below. An old age security tax of 3 p.c. is levied on the same basis as the 8 -p.c. tax bringing the total sales tax to 11 p.c.

Many classes of goods are exempt from sales tax. One important category is comprised of machinery and apparatus used in the process or manufacture or production of goods. The equipment to be exempt must enter directly into production. Thus, a stamping or cutting machine used in a factory is exempt from sales tax while office equipment or delivery equipment used by the same manufacturer is not. This exemption was established to reduce to a minimum the effect of the tax as a cost of production. Similarly, most equipment used by farmers, fishermen, loggers and mining companies is also exempt.

Most building materials, foodstuffs and fuels for lighting or heating are exempt from the tax as well as articles and materials used by public hospitals. The products of farms, forests, mines and fisheries are, to a large extent, exempt. Finally, a variety of items are exempt from sales tax when purchased by municipalities. These and other exemptions are set forth in schedules to the Excise Tax Act.

## Special Excise Taxes.-The Excise Tax Act also provides for a number of special excise

 taxes which are in addition to the sales tax. Where these are ad valorem taxes they are levied on exactly the same price or duty-paid value as the general sales tax. Articles subject to special excise taxes include jewellery, cosmetics, toilet articles, radios, record players and television sets. Tobacco products and wines are also taxed under the Excise Tax Act.The special excise taxes levied at present are listed as follows:-

| Cigarettes. | 23 cents per 5 cigs. |
| :---: | :---: |
| Cigars | 15 p.c. ad valorem |
| Jewellery, including clocks, watches, jewellery, articles of ivory, amber, shell, precious or semi-precious stones, goldsmiths' and silversmiths' products except gold-plated or silver-plated ware for the preparation or serving of food or drink. | 10 p.c. ad valorem |
| Lighters................................................................... | the greater of 10 cents per lighter or 10 p.c. ad valorem |
| Playing cards. | 20 cents per pack |
| Radios. | the greater of $\$ 2$ per radio or 15 p.c. ad valorem |
| Phonographs and television sets. | 15 p.c. ad valorem |
| Tubes for radios, phonographs and television sets, not including television picture tubes, priced under $\$ 5$ per tube. | the greater of 10 cents per tube or 15 p.c. ad valorem |
| Television set picture tubes............................................. | 15 p.c. ad valorem |
| Slot machines-coin, dise or token-operated games or amusement devices.... | 10 p.c. ad valorem |
| Matches.. | 10 p.c. ad valorem |
| Tobacco-pipe tobacco, cut tobacco and snuff............................. | 80 cents per lb. |
| Tobacco pipes, cigar and cigarette holders and cigarette rolling devices....... | 10 p.c. ad valorem |
| Toilet articles, including cosmetics, perfumes, shaving creams, antiseptics, etc. | 10 p.c. ad valorem |
| Wines-* <br> Wines of all kinds containing not more than 7 p.c. absolute alcohol by volume. | 25 cents per gal. |
| Non-sparkling wines containing more than 7 p.c. absolute alcohol by volume but not more than 40 p.c. proof spirit. | 50 cents per gal. |
| Sparkling wines........................................................ | \$2.50 per gal. |
| Insurance premiums paid to British or foreign companies not authorized to transact business in Canada or to non-resident agents of authorized British or foreign companies. | 10 p.c. of net premium for property, surety, fidelity and liability insurance. (Most other kinds of insurance are exempt.) |
| Electric power exported from Canada | $3 / 100$ of one cent per kwh. |

[^320]All the foregoing items, except the last two, are also subject to the general sales tax of 8 p.c. and the old age security tax of 3 p.c. Cigarettes, cigars and tobacco are subject to further taxes under the Excise Act (referred to as excise duties).

## Excise Duties

The Excise Act levies taxes (referred to as excise duties) upon alcohol, alcoholic beverages and tobacco products produced in Canada. These duties are not levied on imported goods but the customs tariff on these products includes a levy to correspond to the duties levied on domestic production. These duties are not levied on goods exported.

Spirits.-The duties are on a per-gallon basis in proportion to the strength of proof of the spirits. These duties do not apply to denatured alcohol intended for use in the arts and industries, or for fuel, light or power, or for any mechanical purpose. The various duties are as follows:-

On every gallon of the strength of proof distilled in Canada..................... $\$ 13.00$

Canadian Brandy.-Canadian brandy is a spirit distilled exclusively from juices of native fruits without the addition of sweetening materials. It is subject to a duty of $\$ 11$ per gal.

Beer.-All beer or other malt liquor is subject to a duty of 38 cents per gal.
Tobacco, Cigars and Cigarettes.-The excise duties make up nearly as large a part of the total tax on tobacco products as the special excise taxes which have already been described. The rates of duty are as follows:-

| On manufactured tobacco of all descriptions, except ciga | 5 cents per lb. |
| :---: | :---: |
| Cigarettes weighing not more than 3 lb . per thousand (nearly all of the cigarettes used in Canada are of this type) | \$4.00 per thousand |
| Cigarettes weighing more than 3 lb . per thousand. | \$5.00 per thousand |
| Cigars. | \$2.00 per thousand |
| Canadian raw leaf tobacco when sold for consumption | 10 cents per lb. |

## Combined Effect of Excise Taxes and Excise Duties on Tobacco Products

Bringing together the taxes imposed on tobacco products under the Excise Tax Act and the duties imposed under the Excise Act gives the following total taxes:-

| Cigarettes | $\$ 9.00$ per thousand (or 18 cents per pack of 20 cigarettes) plus the 11-p.c. sales tax on the manufactarer's sale price |
| :---: | :---: |
| Manufactured tobacco.. | $\mathbf{\$ 1 . 1 5}$ per lb. plus the 11-p.c. sales tax on the manufacturer's sale price |
| Cigars | $\$ 2.00$ per thousand plus the 15 -p.c. special excise tax and the 11-p.c. sales tax on the manufacturer's sale price. |

## Customs Duties*

Most goods imported into Canada are subject to customs duties at various rates as provided by tariff schedules. Customs duties, which once were the chief source of revenue for the country, have declined in importance as a source of revenue to the point where they provide only about 10 p.c. of the total. Quite apart from its revenue aspects, however, the Tariff still occupies an important place as an instrument of economic policy.

[^321]The Canadian Tariff consists mainly of three sets of rates, namely, British Preferential, Most-Favoured-Nation and General. The British Preferential rates are, with some exceptions, the lowest rates. They are applied to imported dutiable commodities shipped directly to Canada from countries within the British Commonwealth. Special rates lower than the ordinary preferential duty are applied on certain goods imported from designated Commonwealth countries.

The Most-Favoured-Nation rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled to the British Preferential rate. Canada has Most-Favoured-Nation arrangements with almost every country outside the Commonwealth. The most important agreement providing for the exchange of Most-Favoured-Nation treatment is the General Agreement on Tariffs and Trade.

The General Tariff applies to imports from countries not entitled to either the Preferential or Most-Favoured-Nation treatment. Few countries are in this category and in terms of trade coverage are negligible.

In all cases where the tariff applies there are provisions for drawbacks of duty on imports of materials used in the manufacture of products later exported. The purpose of these drawbacks is to assist Canadian manufacturers to compete with foreign manufacturers of similar goods. There is a second class of drawbacks known as "home consumption" drawbacks. These apply to imported materials used in the production of specified classes of goods manufactured for home consumption.

The tariff schedules are too lengthy and complicated to be summarized here but the rates which apply on any particular item may be obtained from the Department of National Revenue which is responsible for administering the Customs Tariff.

## Subsection 2.-Provincial Taxes

All of Canada's ten provinces impose a wide variety of taxes to raise the revenue necessary for provincial purposes. All provinces now levy a tax on the income of individuals and corporations who are residents within their boundaries or who derive income from activities or operations carried out therein. Only the Provinces of Ontario and Quebec impose special taxes on corporations or a tax on property passing at death. Under the terms of the existing federal-provincial fiscal arrangement, the Federal Government makes payments called "equalization payments" to some provinces in recognition of the fact that the potential tax revenue from the fields of income tax, death duties and natural resource revenue in those provinces, measured on a per capita basis, is lower than an agreed upon level. For some provinces these payments constitute a very important source of revenue.

Some of the more important provincial levies are reviewed briefly below.

## Individual Income Tax

All provinces levy a tax on the income of individuals who reside within their boundaries or who earn income therein. In nine of the ten provinces, these taxes are computed as a percentage of federal income tax otherwise payable at full federal rates and are collected by the Federal Government on behalf of these provinces. In Quebec, provincial income tax is levied at graduated rates that progress from 2.5 p.c. on the first $\$ 1,000$ of taxable income to a maximum of 13.2 p.c. on the excess over $\$ 400,000$. The determination of taxable income for Quebec tax is based on exemptions and deductions similar to those for federal tax. The Province of Quebec collects its own tax.

The percentages that provincial income tax liability is of federal income tax liability computed at full federal rates for 1962 are: Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Alberta and British Columbia each 16 p.c., Quebec approximately 18 p.c. and Manitoba and Saskatchewan each 22 p.c. The Provinces of Quebec, Manitoba and Saskatchewan levy provincial income taxes in excess of the 16-p.c. abatement of federal income tax allowed by the Federal Government.

## Corporate Income Tax

All provinces levy a tax on the profits of corporations derived from activities carried out within their boundaries. In all provinces except Ontario and Quebec the provincial tax is imposed on taxable income in the province determined on the same basis as for federal income tax. In Ontario and Quebec the determination of taxable profits for purposes of provincial tax follows closely the federal rules. The rate of tax in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Alberta and British Columbia is 9 p.c. The rate that applies in Manitoba and Saskatchewan is 10 p.c., in Ontario 11 p.c and in Quebec 12 p.c.

Four of the ten provinces levy corporate income taxes at rates in excess of the abatement allowed by the Federal Government. This abatement is equal to 9 p.c. of corporate profits except in Quebec where it is 10 p.c. (see p. 1020). All provinces except Ontario and Quebec have signed agreements for the collection of their income taxes by the Federal Government.

## Alcoholic Beverages

Generally speaking the sale of spirits in all provinces is made through provincial agencies operating as boards or commissions which exercise monopolistic control over this commodity. The provincial mark-up over the manufacturers' price is the effective means of taxation. Beer and wine may be sold by retailers or government stores depending on the province but in all cases they contribute to provincial revenues.

## Retail Sales Taxes

Retail sales taxes are levied on the final purchaser or user and are collected by the retailer. Eight provinces now levy this type of tax at rates varying between 3 p.c. and 5 p.c. These provinces are Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan and British Columbia. In the Province of Quebec, the general rate is 4 p.c. but the province allows its municipalities to levy an additional 2 p.c. for municipal purposes.

## Amusement Taxes

Each of the provinces with the exception of Alberta and Saskatchewan has a tax on admission to places of entertainment. In addition, there is generally a licence fee imposed on the operator or owner of these amusement places. The tax on admissions is within the range of 5 p.c. to 13 p.c.

## Gasoline and Diesel Fuel Oil Taxes

Each of the ten provinces imposes a tax on the purchase of gasoline by motorists and truckers. The rates vary from 12 cents per gallon in Alberta to 19 cents in Nova Scotia and Newfoundland. The amount of tax borne by one gallon of motor vehicle fuel in each province is as follows:-

|  | Gasoline | Diesel Fuel |  | Gasoline | Diesel Fuel |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | cts. | cts. |  | cts. | cts. |
| Newfoundland.......... | 19 | 19 | Ontario.................. | 13 | 18.5 |
| Prince Edward Island... | 16 | 16 | Manitoba............... | 14 | 17 |
| Nova Scotia............ | 19 | 27 | Saskatchewan. | 14 | 17 |
| New Brunswick........ | 18 | 23 | Alberta.. | 12 | 14 |
| Quebec................. | 13 | 18.5 | British Columbia | 13 | 15 |

## Motor Vehicle Licences and Fees

Each province also levies a fee on the annual registration of motor vehicles. This registration is compulsory and each vehicle is issued with licence plates for the year. The rates of this licence fee vary from province to province. The amount to be paid may be assessed in relation to the weight of the car, the number of cylinders of the engine, or at a
flat rate. The operator or the driver of a motor vehicle must also register annually and pay a fee for a new driver's licence; in Alberta and British Columbia, drivers' licences must be renewed every five years at a cost of $\$ 5$. Alberta, in addition to registration fees, imposes a milage tax on buses, based on milage operated outside city limits by public service vehicles carrying passengers.

## Taxes on Mining Operations

All provinces except Prince Edward Island levy taxes of various kinds on mining operations. All provinces except Prince Edward Island and Alberta impose a tax on the income of firms engaged in mining operations in general or in specific kinds of mining operations. The Provinces of British Columbia, Alberta, Saskatchewan, Manitoba and Ontario impose a tax on the assessed value of minerals or a flat rate per acre of mining property.

## Tax on Logging Operations

The Provinces of British Columbia and Ontario levy a tax on the income from logging operations of individuals, partnerships, associations or corporations engaged in this activity. In British Columbia the tax is 10 p.c. on income in excess of $\$ 25,000$. In Ontario, the rate is 9 p.c. on income in excess of $\$ 10,000$.

## Business Taxes

The Province of Quebec imposes a tax of one-tenth of 1 p.c. on paid-up capital of corporations while Ontario levies a similar tax at the rate of one-twentieth of 1 p.c.

The Provinces of Quebec and Ontario have a place-of-business tax. In Quebec the tax ranges from $\$ 20$ to $\$ 50$ for each place of business with the higher amounts being levied in the cities of Montreal and Quebec. In Ontario, the tax for each permanent establishment is the lesser of $\$ 50$ or one-twentieth of 1 p.c. of paid-up capital of the corporation involved, but the total of the capital tax and the place-of-business tax cannot be less than $\$ 20$. Ontario also imposes an office tax of $\$ 50$ on every corporation that does not maintain a permanent establishment in the province but merely maintains a buying office, or merely holds certain provincial licences, or merely holds assets, or is represented by a resident employee or agent who is not deemed to operate a permanent establishment of the corporation.

Both provinces levy special taxes on certain kinds of companies such as banks, railway companies, express companies, trust companies, insurance companies and sleeping-car, parlour-car, and dining-car companies. In Ontario these special taxes and the capital and place-of-business taxes are payable only to the extent that they exceed the corporate income tax otherwise payable.

The Province of Prince Edward Island charges special annual licence fees to most insurance companies, banks, acceptance companies, chain theatres and chain stores, steamship companies, telephone, telegraph and electric light companies and brokers, as well as nominal licence fees to other incorporated companies, the latter being similar to filing fees in other provinces.

## Land Transfer Taxes

The Provinces of Alberta and Ontario levy a tax based on the price at which ownership to land is transferred. In Alberta the rate is one-fifth of 1 p.c. up to $\$ 5,000$ and one-tenth of 1 p.c. over $\$ 5,000$; in Ontario a straight one-fifth of 1 p.c. tax is imposed. In Alberta the tax is in the form of an assurance fee, and an additional fee of 25 cents per $\$ 1,000$ is charged for registration of mortgages. In Quebec a tax of $2 \frac{1}{2}$ p.c. of the purchase price is imposed only when property is transferred under the Bankruptcy or Winding-Up Acts.

The Provinces of British Columbia, Saskatchewan and Manitoba do not have a land transfer tax but have an equivalent in the land title fees which are based on land values.

## Tax on Security Transfers

The Provinces of Ontario and Quebec levy a tax on the sale price of securities transferred; the rates in each province are:-

## Premium Income of Insurance Companies

All ten provinces impose a tax of 2 p.c. on the premium income of insurance companies relative to risks incurred in the province.

## Succession Duties

Only the Provinces of Ontario and Quebec levy succession duties. These duties are a tax upon the right to succeed to property and are assessed upon the interest or benefit passing at death to an heir or beneficiary. Both provinces impose succession duties on all property situated in the province belonging to the deceased and passing at his death whether the deceased was domiciled in the province or elsewhere. Personal property wherever situated of a person dying domiciled within the province is also liable if passing to a successor resident or domiciled in the province.

The rates of succession duty are governed by the value of the estate, the relationship of the beneficiary to the deceased and the amount going to any one person. The rate of tax will increase as the degree of relationship between the deceased and his successor becomes more remote.

## Provincial Property Taxes

In unorganized (non-municipal) areas, British Columbia levies property taxes at varying rates according to class for provincial revenue. Improved, forest and tree-farm lands are taxed at 1 p.c. of assessed value; farm land at one-half of 1 p.c.; wild land at 3 p.c.; coal land at 2 p.c. (non-operating) or 7 p.c. (operating); and timber land at $1 \frac{1}{2}$ p.c.

## Subsection 3.-Municipal Taxes

The municipalities in Canada levy taxes on the owners of property situated within their jurisdiction according to the assessed value of such property. Methods of determining assessed value vary widely but for taxation purposes it is generally considered to be a percentage of the actual value. The revenues from such taxes are used to pay for street maintenance, schools, police and fire protection, snow removal in certain communities and other community services. Special levies are sometimes made on the basis of street frontage to pay for local improvements to the property such as sidewalks, roads, and sewers. Not only is there a widespread difference in the bases used for property tax but there is also a wide variety of rates applied depending on the municipality.

In addition to the taxes described above, municipalities usually impose a charge for the water consumption of each property holder or a water tax based upon the rental value of the property occupied. There are no municipal income taxes although certain localities have retained the use of a poll tax. In Newfoundland, Quebec and Saskatchewan municipalities are empowered to levy an amusement tax on the admission of persons to places of amusements. This practice differs from that of the other provinces where the amusement tax is generally a provincial preserve. Electricity and gas are taxed at the consumer level
in some western municipalities while coal and fuel oil for heating purposes are chargeable in urban areas of Newfoundland. Telephone subscribers are subject to a special levy in Montreal while certain Ontario municipalities impose a tax on the gross receipts of telephone companies.

In most municipalities, a tax is levied directly on the tenant or the operator of a business. In general, business tax rates are lower than those applying to property. Three bases of assessment are in use-a fraction of the property assessment, the annual rental value of the premises, or the area of the premises. Certain municipalities may charge a licence fee instead of a business tax while others will charge both a licence fee and business tax. In Nova Scotia, all but one of the municipalities tax personal property (stock in trade, equipment, etc.) the same as real property.

## Subsection 4.-Miscellaneous Levies

These are not generally referred to as taxes but they are similar to taxes in many ways.

## Unemployment Insurance

For the past twenty-two years, a national program of unemployment insurance has been in operation in Canada. Essentially, it provides relief to those qualified persons who temporarily find themselves without work. It is administered by a federal commission appointed for this purpose and financed by equal contributions from employers and employees plus a contribution from the Federal Government. The amount paid into the fund by employee and employer is directly proportional to the weekly wages of the employee. The rates of contributions, together with statistics on the operation of the program, are given at pp . 735-741.

## Workmen's Compensation

Legislation in force in all provinces provides compensation for personal injury suffered by workmen as a result of industrial accidents. In general, these provincial statutes establish an accident fund administered by a Board to which employers are required to contribute at a rate proportional with the hazards of the industry. See also pp. 743-745.

## Hospital Insurance

A federal-provincial hospital insurance plan has now been adopted by each of the ten Canadian provinces. Under this arrangement, the Federal Government pays approximately one-half of the cost of hospitalization for patients who are participants under the plan. The provinces meet the rest of the cost. Provincial revenues for this purpose are raised by various means. The Province of Quebec has increased its personal and corporation income tax. Certain provinces require the deduction of a monthly premium from the wages of their residents as a contribution or premium for the plan. In such provinces nonsalaried people must also pay the premium directly if they wish to be covered by the plan. In some other provinces the proceeds of a retail sales tax are earmarked in whole or in part for the support of the hospital plan. See also pp. 224-229.

## Section 3.-Federal Public Finance

Subsection 1 of this Section contains tables dealing with statistics of the Federal Government prepared as far as possible in accordance with the classifications, concepts and definitions used in the preparation of provincial and municipal finance statistics. These tables differ from the information presented in Subsection 2 in that the latter has been extracted directly from the Public Accounts. Detailed reports published by the Dominion Bureau of Statistics provide reconciliations of revenue, expenditure and debt as set out in Subsections 1 and 2. The Public Accounts presentation is retained for continuity and also because there is interest in and use for information on this basis.

Historical Data.-A sketch of public finance from the French regime to the outbreak of World War I appears in the 1941 Year Book, pp. 742-743. Detailed sketches re tax changes from 1914 to 1938 will be found in issues of the Year Book beginning with the 1926 edition. An outline of the financing of Canada's war effort, including the more important changes in taxation during the war years from 1939 to 1945, is given in the 1945 Year Book, pp. 918-923. The postwar financial policy of the Government of Canada is outlined in the 1954 Year Book at pp. 1061-1064, and tax changes proposed in subsequent Budgets are outlined briefly in the respective Year Books.

The 1962-63 Budget.-The Budget presented to the fifth session of the 24th Parliament on Apr. 10, 1962 did not change personal income tax rates but the exemption for children qualified for family allowance was raised from $\$ 250$ to $\$ 300$ each, and for other dependants from $\$ 500$ to $\$ 550$.

Benefits were announced for corporations engaged in manufacturing or processing (except those whose principal business is shipbuilding, mining, logging or the operation of oil or gas wells) in the form of a reduction in tax on profits derived from increased sales calculated in accordance with prescribed methods. These benefits consist of cancellation of 50 p.c. of the tax on the first $\$ 50,000$ of taxable income arising from increased sales and cancellation of 25 p.c. of the tax on any additional income arising from increased sales. Corporations undertaking increased industrial research in Canada are permitted to deduct 150 p.c. of their increased expenditures on scientific research for industrial purposes when computing taxable income.

Minor tariff changes were announced, consisting of reductions or extensions of free entry provisions due to expire shortly.

## Subsection 1.-DBS Statistics of Federal Public Finance

Revenue and Expenditure.-Table 4 shows details of net general revenue of the Federal Government for the years ended Mar. 31, 1959 and 1960.

Guaranteed Debt.-In addition to the direct debt already dealt with, the Government of Canada has assumed certain contingent liabilities. The major categories of this indirect or contingent debt are the guarantee of insured loans under the National Housing Act, the guaranteed bonds and debentures of the Canadian National Railways and the guarantee of deposits maintained by the chartered banks in the Bank of Canada. The remainder consists chiefly of guarantees of loans made by chartered banks to the Canadian Wheat Board and to farmers and veterans for certain authorized purposes and guarantees under the Export Credits Insurance Act.

[^325]A brief commentary dealing with the national debt of the Government of Canada from 1914 appears at p. 1091 of the 1954 Year Book. The following table summarizes the debt position during the period 1952-61 as to interest and amount outstanding. Details of
unmatured debt and treasury bills outstanding and information on new security issues of the Federal Government may be found in the Public Accounts. They are summarized by standard classification in DBS publication Financial Statistics of the Government of Canada (Catalogue No. 68-211).

## Subsection 3.-Revenue from Taxation

The incidence of Federal Government taxation is dealt with in Section 2. This Subsection includes statistical data on revenue received from individual income tax, corporation tax, estate tax, excise duties and excise taxes; customs receipts constitute a single item in the Public Accounts and are not included here.

## Individual and Corporation Income Tax

Statistics of income tax collections are gathered at the time the payments are made and are therefore up to date. Over 85 p.c. of individual taxpayers are wage or salary earners who have almost the whole of their tax liability deducted at the source by their employers. All other taxpayers are required to pay most of their estimated tax during the taxation year. Thus, the greater part of the tax is collected during the same year in which the related income is earned and only a limited residue remains to be collected when the returns are filed. The collections for a given fiscal year include tax deductions and instalments for twelve months, embracing portions of two taxation years, and a mixture of year-end payments for the first of these years and for the preceding year; they cannot therefore be closely related to the statistics for a given taxation year. As little information about a taxpayer is received when the payment is made and, as a single cheque from one employer may frequently cover the tax payments of hundreds of employees, the payments cannot be statistically related to taxpayers by occupation or income. Descriptive classifications of taxpayers are available only from tax returns but collection statistics, if interpreted with the current tax structure and the above factors in mind, indicate the trend of income in advance of the final compilation of statistics.

The statistics given in Table 14 pertain to tax collections by the Taxation Division of the Department of National Revenue. The collections are for fiscal years ended Mar. 31.

## 14.-Taxes Collected by the Taxation Division of the Department of National Revenue, Years Ended Mar. 31, 1953-62

Nort.-Figures for 1917-34 are given in the 1947 Year Book, pp. 999-1000; for 1935-48 in the 1951 Year Book, p. 994; and for 1949-52 in the 1959 edition, p. 1066.

| Year Ended Mar. 31- | Income Tax ${ }^{1}$ |  |  | Estate Tax | Total Collections |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Individual ${ }^{2}$ | Corporation | Total |  |  |

[^328]17.-Individual Income Tax Statisties, by Income Class, 1959 and 1960-concluded

${ }^{1}$ Includes old age security tax.
Corporation Income Tax Statistics.-Corporation statistics presented in Tables 18 and 19 are on a taxation-year basis prior to assessment. The data were extracted and compiled from the returns shortly after they were filed and are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Provincial figures contain an unavoidable bias in favour of Ontario and Quebec because many large corporations operating across Canada file their returns in one or other of these provinces.

## 20.-Corporations Reporting a Profit, by Income Class and Size of Total Assets, Taxation Years 1959 and 1960

Nors.-Figures are for corporations described as "fully tabulated", which means corporations for which sufficient information has been received for complete analyses.

## Succession Duties and Estate Taxes

A history of succession duties in Canada, together with examples of the occurrences of federal duty on typical estates and of combined federal and provincial duties on typical estates, is given in the 1956 Year Book, pp. 1064-1068.

Since 1947, only Ontario and Quebec among the provinces have been levying succession duties, the other provinces having leased this field to the Federal Government under terms of the 1947, 1952 and 1957 tax rental agreements (p. 1015). Effective Apr. 1, 1962, in accordance with the Federal-Provincial Fiscal Arrangements Act, the Federal Government may, in the case of any province choosing not to levy a succession duty, pay to such province half of the yield from the federal estate tax in that province calculated in the same way as under the previous tax rental agreements. A tax abatement of 50 p.c. of the federal estate tax otherwise payable is granted in respect of property situated in a province which levies succession duties.

An outline of the Estate Tax Act passed by Parliament in 1958 is given in the 1959 Year Book, pp. 1070-1071. The Act was amended in 1960 with respect to charitable donations, life insurance and annuities.

Table 21 shows the receipts of the various governments from succession duties and estate taxes for the years ended Mar. 31, 1958-61.

## 21.-Federal and Provincial Revenue from Succession Duties and Estate Taxes, Years Ended Mar. 31, 1958-61

Nore.-Statistics for 1948-52 are given in the 1954 Year Book, p. 1080; for 1953-54 in the 1956 edition, p. 1064; and for $1955-57$ in the 1959 edition, p. 1071.

## Excise Duties

Gross excise duties collected during the years ended Mar. 31, 1957-61 are given in Table 23 and other data of interest arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of goods taken out of bond and subject to excise duty, are given in Table 24. The totals given in Table 23 do not agree with net excise duties as shown in Table 9 because refunds and drawbacks are included. A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities for medicinal or research purposes to universities, scientific or research laboratories, public hospitals, or health institutions in receipt of federal and provincial government aid.

The quantity of spirits manufactured has fluctuated greatly since 1920, varying from a low of $2,356,329$ proof gal. in that year to a high of $35,555,059$ proof gal. recorded in 1945. The total for 1961 was $33,650,346$ proof gal.

The amounts of beverage spirits, malt beer, malt, cigars, cigarettes and other tobacco taken out of bond for consumption are given in the Domestic Trade Chapter, Table 38, p. 896 .

## Section 4.-Provincial Public Finance

Provincial government accounting and reporting practices vary considerably so that certain adjustments to the Public Accounts figures are required in order to produce comparable statistics. For example, transactions relating to a specific function are sometimes excluded from ordinary account; therefore special or administrative funds of this nature have been added to provincial ordinary account in the tables of this Section.

As of 1952, the fiscal years of all provinces end on Mar. 31. Figures for the Northwest Territories are included from 1955.

## Subsection 1.-Revenue and Expenditure of Provincial Governments

Table 25 shows net revenue and expenditure of provincial governments for the years ended Mar. 31, 1956-60, and Tables 26 and 27 give details of such revenue and expenditure for the fiscal years ended in 1959 and 1960 . "Net general revenue" and "net general expenditure" are arrived at by first analysing the combined revenues and expenditures of capital account, current or ordinary account and those working capital funds and special funds for which separate accounts are kept. Then the following types of revenue are deducted from revenue and offset against related expenditure: interest, premium, discount and exchange; institutional revenue; grants-in-aid and shared-cost contributions from other goveruments; and capital revenue. Table 28 gives details of the amounts paid to other governments by provincial governments, according to nature of payment.

## Subsection 2.-Debt of Provincial Governments

Table 29 shows total bonded debt, by province, as at Mar. 31, 1957-61. Table 30 shows that the majority of bond issues are payable in Canada, but that the portion payable in the United States increased only from 19 p.c. in 1957 and 1958 to about 23 p.c. in 1961. Table 31 provides details of total direct and indirect debt of provincial governments as at Mar. 31, 1961.

## Section 5.-Municipal Public Finance

## Subsection 1.-Municipal Assessed Valuations and Taxation

Table 32 shows municipal assessed valuations and total exemptions, by province, for the year 1959 together with local taxes levied by municipalities and by some school authorities and total taxes outstanding at the end of the year. Assessment figures in the various provinces are not entirely comparable as there are still variations in methods, schedules and rates, not only between provinces but also between municipalities within the same province.

${ }^{1}$ City of St. John's only. $\quad{ }^{2}$ Includes: N.S.-household tax, Halifax; N.B.-occupancy tax, Fredericton, and rentals tax, Moncton; Sask.-special franchise. ${ }^{2}$ Total of valuations assessed but exempt from taxation; excludes exempt property not assessed. ${ }^{4}$ Incomplete. ${ }^{5}$ Excludes permissive exemptions. ${ }^{6}$ Cities of Dawson and Whitehorse. ${ }^{7}$ Yellowknife only. ${ }^{8}$ Excludes partial statutory and permissive exemptions.

Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, extreme caution should be exercised in using the figures in Table 32 as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan municipalities are required to levy certain taxes for and on behalf of hail insurance associations and rural telephone companies and for other special purposes for which there is no comparable situation in other provinces. The amounts of such taxes excluded in the Saskatchewan municipal levies in Table 32 are as follows:-

| Tax | 1955 | 1956 | 1957 | 1958 | 1959 |

Subsection 2.-Municipal Revenue, Expenditure and Debt
Tables 33, 34 and 35 show comparative totals and details of gross ordinary revenue and expenditure of municipal governments, by province. Table 36 sets out the direct and indirect debt of local governments for the year 1959. The amounts shown include debt incurred for general and school purposes, debenture debt incurred for and by utilities, and debenture debt incurred by certain special areas organized to provide specific local services.

# GHAPTER XXII. - NATIONAL ACGOUNTS, SURVEY OF PRODUCTION AND BALANCE OF INTERNATIONAL PAYMENTS AND INVESTMENTS* 

## CONSPECTUS

Page Page<br>Section 3. Canadian Balance of International Payments.<br>1073<br>Section 4. Canada's International Investment Position.<br>1079

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

In this Chapter various statistical statements and studies are presented in which broad areas of Canadian economic activity are covered in a comprehensive but summary form. These integrated aggregative economic accounts provide an inter-related framework for economic analysis and the observation of changes in the functioning of the Canadian economy and its structure and in economic and financial relationships with other countries.

## Section 1.-National Accounts

The national accounts constitute a set of accounting summaries for the nation as a whole and portray economic activity in terms of transactions taking place between different sections of the economy. By combining and summarizing these operations into their various classes, information may be obtained on the functioning of the economy which is of particular interest to governments concerned with problems of full employment, taxation and prices, and to businessmen concerned with programs of investment and marketing.

This measurement of the nation's output is in terms of established market prices; hence it is necessary to keep in mind that the value of the nation's production may change because of price variations as well as through increase or decrease in volume of output.

Data are available showing volume changes in gross national expenditure in addition to the value figures. Gross national expenditure is shown in Table 4 in constant dollars (i.e., in terms of 1949 prices). Because the gross national expenditure equals the gross national product, these data also reflect volume changes in the production of goods and services as measured by the gross national product. In all other tables the data are expressed in current dollars so that year-to-year changes must be considered in relation to price changes over the period.

National accounts calculated on a quarterly basis are a logical extension of the annual national accounts and have been published since 1953. However, their preparation on a reliable and analytically useful basis is rather more difficult because of the scarcity of quarterly data, special problems arising from the measurement of farm production and problems in connection with seasonal variation.

[^334]The tables in this Section cover the more important aspects of the national income analysis in annual terms. Table 1 gives total gross national product in current and constant dollars for the years 1926-61. Tables 2 and $\mathbf{3}$ show the main aggregates of national income, gross national product, gross national expenditure and their components; other tables are included to show the source and disposition of personal income, government revenue and expenditure and personal expenditure on consumer goods and services.

National Income.-Net national income at factor cost measures the current earnings of Canadian factors of production (i.e., land, labour, capital) from productive activity. It includes wages and salaries, profits, interest, net rent and net income of farm and nonfarm unincorporated business.

Gross National Product.-Gross national product, by totalling all costs arising in production, measures the market value of all final goods and services produced in the current period by Canadian factors of production. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus capital consumption allowances and miscellaneous valuation adjustments.

Personal Income.-Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. It includes transfer payments from government (such as family allowances, unemployment insurance benefits and war service gratuities) in addition to wages and salaries, net income of unincorporated business, interest and dividends and net rental income of persons. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

Gross National Expenditure.-Gross national expenditure measures the same aggregate as gross national product, namely, total production of final goods and services at market prices, by tracing the disposition of production through final sales to persons, to governments, to business on capital account (including changes in inventories) and to non-residents (exports). Imports of goods and services, including net payments of interest and dividends to non-residents, are deducted since the purpose is to measure only Canadian production.

Economic Activity in 1961.-The advance in gross national product was resumed in 1961. During the previous year the trend of economic activity had eased as downward tendencies developed in several components of end-product demand. These downward pressures were largely reversed in 1961 and, following a weak first quarter, the level of activity moved on a rising trend for the remainder of the year. By the final quarter of the year, the gross national product was running at a seasonally adjusted annual rate about 3 p.c. above the 1961 annual average in terms of current dollars, and almost 3 p.c. higher in terms of the physical volume of production. For 1961 as a whole, the gross national product amounted to $\$ 36,800,000,000,2.5$ p.c. above 1960 in value terms, and almost 2 p.c. higher in terms of the physical volume of output. The year's economic performance was marred by a poor crop out-turn in Western Canada, estimated to have been lower than in 1960 by about $\$ 400,000,000$; this represents a production loss of about 1 p.c. on a gross national product base of $\$ 36,800,000,000$.
The upswing in activity in 1961 was characterized by sharply rising exports-to the United States, where a strong recovery from the 1960 business down-turn was under wayand to Communist China and Eastern Europe where special sales of wheat raised the level of agricultural exports to new levels. Also, the decline in business outlays for new plant and equipment was reversed in the last half of the year. Business inventories, which had been liquidated briefly in 1960, were being accumulated at a modest rate throughout most of 1961 ; in the fourth quarter of the year the build-up became more pronounced and added a sizable element of new strength to the expansion of total demand. Consumer expenditure, following a small but unusual decline in the first quarter, advanced moderately thereafter, with outlays for consumer durable goods showing a sharp recovery during the course of the year. Government outlays for new goods and services continued to give support to the
rising level of total demand throughout 1961. Outlays for new housing showed little pronounced trend during the year but moved irregularly at a level only slightly above the average for 1960 as a whole.

These developments on the demand side during 1961 were accompanied by changes in the direction and magnitude of the income flows. The down-trend in corporation profits, which was a prominent feature of 1960, was sharply reversed in 1961 and by the fourth quarter of the year corporation profits were running at a seasonally adjusted annual rate about 30 p.c. ahead of the first quarter trough and 4 p.c. above the previous peak in the fourth quarter of 1959. The trend of labour income was more strongly upward in 1961 than in 1960, with the fourth quarter rate at a level some 6 p.c. above the same period of the previous year. The revenues of the government sector reflected this rising flow of incomes during 1961, as well as higher levels of imports and sales, with the result that the deficit on consolidated government account was somewhat narrower in the last half of the year.

Production and Employment.-The increase of close to 2 p.c. in the volume of total output in 1961 was mainly attributable to gains in the service industries, where production is estimated to have risen by about 3 p.c. In the goods-producing industries the advance in production was fractional, amounting to only about one-half of 1 p.c. This latter development reflected in part the sharp drop in crop production in 1961 and also a decline in output in the forestry industry. Most other goods-producing industries showed sizable advances in 1961.

Production of manufactured goods was higher than in the previous year, by 2.0 p.c.; non-durable goods were up by 3.5 p.c. and durables by about 0.5 p.c. in terms of the annual averages. However, it may be noted that, within the year 1961, the durables group showed a better performance, rising by 12 p.c. between January and December compared with a 7-p.c. advance in the non-durables group for the same period. In part, these differences reflect the fact that the decline in the production of durables during the previous year was much steeper than that which occurred in the production of non-durable goods.

All main non-durable manufacturing groups showed gains in 1961 with the exception of the clothing products group, which was unchanged. Gains ranged from 1 p.c. in chemicals and in printing and publishing to more than 10 p.c. in leather and textile products. Rubber products were higher by 2 p.c., foods and beverages, paper products and petroleum products by 3 p.c., and tobacco products by 6 p.c. Strength in the textile group was particularly widespread, with all components higher, particularly cottons and synthetics.

Changes in the major groups of durables manufacturing were mostly marginal, being of the order of 1 p.c. The one exception was a 4-p.c. gain in non-metallic mineral products, which reflected greater activity in the construction-oriented industries. Despite a 7-p.c. gain in primary steel, the iron and steel products group as a whole was only slightly higher, reflecting declines in agricultural implements and in the bridge and structural steel industry. A decline of 1 p.c. took place in total transportation equipment production. The output of Canadian mines increased by almost 4 p.c. in 1961, reflecting for the most part considerably higher crude petroleum and natural gas production. Although metal mining was regaining some of the lost ground toward the end of 1961, the year as a whole was some 7 -p.c. lower than 1960, associated with the continued decline of uranium production and lower iron ore output; nickel and lead showed strong gains throughout the year. Nonmetal mining was 10 p.c. higher, reflecting a large increase in asbestos output. Among the other goods-producing industries, output in the public utilities industry increased by 7 p.c. in 1961 and output in the construction industry by 3 p.c.

Within the service industries, all major groups showed advances in 1961, including gains of 5 p.c. in transportation, storage and communications, 3 p.c. in finance, insurance and real estate, 2 p.c. in trade and 4 p.c. in government service. The 5 -p.c. gain in transportation, storage and communications reflected advances in air transport, water transport, and oil and gas pipelines; the volume of output in urban and suburban passenger services declined further in 1961, while the volume of railway services showed no change.

Within the trade group, sales volume changes were small. The larger increases occurred in the variety, furniture, appliance and radio stores, while the more notable declines were in the motor vehicle and farm implement trades. The gain in the volume of output in the government service reflected mainly higher employment at the provincial and municipal levels of government.

These developments in the production of goods and services in 1961 were closely matched by corresponding changes on the employment side. Total employment, like output, rose by 2 p.c. over the previous year, implying little change in the rate of output per person employed. The highest rates of gain, approaching 6 p.c. in some cases, occurred in the services groups, while employment in the goods-producing industries, with the exception of manufacturing, was lower. The advance of 3 p.c. in manufacturing employment in 1961 contrasts with the decline of about 1.5 p.c. in the previous year. The increases in the manufacturing and service industries more than accounted for the total increase in employment but there were some offsetting declines in the construction and other primary industries.

In the early months of the year there was a downward movement in the level of employment in the predominantly male-employing manufacturing and construction industries, but by spring this was reversed, and a rising trend emerged for the remainder of the year. The labour market continued to offer relatively more opportunities for women than for men in 1961 although the disparity was less marked than in 1960. The increase in the number of employed women was about 5 p.c., whereas the increase in the number of employed men was only 0.5 p.c. The narrowing of the difference between 1960 and 1961 reflects mainly the improvement in job opportunities in the more cyclically sensitive manufacturing industries during the course of 1961.

Prices.-Price changes were small in 1961. From the fourth quarter of 1960 through to the fourth quarter of 1961, the price of all goods and services as measured by the implicit gross national expenditure price deflator is estimated to have risen by only about 0.5 p.c. For the year as a whole, the over-all price increase was the smallest for several years, amounting to less than 1 p.c. over the average for the full year 1960. The price component of imports of goods and services is estimated to have risen almost 3 p.c., associated with the exchange rate decline after mid-year.* This development was also reflected in the price component of machinery and equipment investment, which has a high import content. In the consumer sector, there was little change in the price component of total goods sold at retail, but the price of services continued to increase although at a somewhat slower rate than in the recent past. It may be noted that the introduction of a 3-p.c. retail sales tax by the Province of Ontario in September was reflected in the relatively small increase in prices at the consumer level in 1961.

Since imports are excluded by definition from the gross national product, the increase in import prices which followed the decline in the exchange rate after mid-year is not reflected in the over-all implicit price deflator of gross national expenditure.

The Components of Demand.-After a weak first quarter, consumer spending picked up in succeeding quarters and for the year 1961 as a whole reached $\$ 24,300,000,000$, a gain of 4 p.c. over the level of the preceding year. Price increases were again moderate, amounting to less than 1 p.c., so that most of the rise in spending represented an increase in real consumption.

As in the recent past, the strongest rate of growth came from spending on services, which was up almost 5 p.c. in 1961 . Most of the service categories registered some gains, the sharpest rate of advance being the 9 -p.c. increase in spending for medical care. Spending for shelter is estimated to have risen by 5 p.c., for transportation by 3 p.c. and for personal services by 5 p.c.

In 1961, as in 1960, purchases of durables showed little change. The increase of 1 p.c. compares with the marginal decline recorded in 1960. All the advance in spending was for durables other than automobiles; purchases of cars were almost unchanged. There were

[^335]increases in purchasing of the three categories of household durables, home furnishings, appliances and radios and furniture. These year-to-year comparisons for the durables group conceal a changing trend within the year. A sharp decline in the first quarter, reflecting a drop in automobile purchases, was followed by an up-turn in durable buying in the three succeeding quarters of the year. The greatest strength was shown in the third quarter, where outlays for all classes of durable goods were advancing.

Spending for non-durables rose by nearly 4 p.c. in 1961. The increases in spending were well distributed over the non-durable categories. Among the larger items were increases in food and clothing of 2 p.c., tobacco and alcoholic beverages of 2.5 p.c., fuel of 3 p.c., and household cleaning supplies of 5 p.c.

Personal income in 1961 was higher than in the previous year by a little over 3 p.c.; however, an increase of 6 p.c. in direct taxes paid by persons reduced the gain in disposable income to just under 3 p.c. This represented a considerably smaller advance than the 4 -p.c. rise in consumer spending so that the rate of personal saving declined from 5.9 p.c. of disposable income in 1960 to 5.1 p.c. in 1961.

Business gross fixed capital formation, including housing, was estimated at $\$ 6,500,000,000$ in 1961, a decline of about 3 p.c. from the 1960 level. All of the decline was centred in business outlays for plant and equipment, which were lower by about 4 p.c.; outlays for new housing were very little changed from the levels of the preceding year. The 4-p.c. decline in outlays for plant and equipment reflected a large drop, amounting to 11 p.c., in business investment for new machinery and equipment; non-residential construction expenditures in 1961 were higher than the previous year by close to 3 p.c.

The over-all decline in outlays for plant and equipment in 1961 reflected a considerable falling off in investment activity in the durable manufacturing industries, in transportation and in trade. The low point in outlays appears to have been reached in the second quarter, followed by some recovery in the latter part of the year. By the fourth quarter of 1961, the seasonally adjusted rate of plant and equipment investment was running about 4 p.c. above the 1961 annual average, although it was 15 p.c. below the record peak reached in the first quarter of 1957.

The decline of 11 p.c. in outlays for new machinery and equipment in 1961 reflected major cutbacks in the programs of the manufacturing and utilities group. The drop of 10 p.c. in expenditures by manufacturers in the face of a rising level of production suggests a lack of any general pressures on productive capacity during the year. The 19-p.c. decline in machinery and equipment investment by the utilities group is associated with the completion of major projects by the railways and electric power utilities.

The relatively small gain in outlays for non-residential construction in 1961 was associated mainly with a sharp increase in expenditures undertaken by the mining industry and an expanded building program in the institutional sector; both hospitals and universities undertook larger capital programs in 1961. However, these increases were partially offset by reduced spending in the manufacturing industries, particularly the primary metals group and the group processing products of petroleum and coal.

The total value of housing put-in-place showed little change between 1960 and 1961. At a level of $\$ 1,500,000,000$, the total value of housing construction was only about 1 p.c. above that of the previous year. The number of housing units started in 1961 rose from 109,000 in 1960 to 126,000 ( 16 p.c.) but the number of units completed fell from 124,000 to 116,000 ( 6.5 p.c.). The rate of starts, which had risen sharply in the latter part of 1960 and early 1961, in association with the liberalization of lending terms under the National Housing Act, was lower in the last three quarters of the year. The approval of loans under the National Housing Act increased by 67 p.c., to 63,044 in the year; direct lending by Central Mortgage and Housing Corporation increased by just over $\$ 100,000,000$ to a level of $\$ 271,000,000$.

Except in the fourth quarter, when there was a pronounced building up of stocks, accumulation of business inventories had only a small impact on the rate of economic
activity in 1961. Manufacturers' stocks were being depleted at an increasing rate until the fourth quarter when the movement was sharply reversed. The last quarter's accumulation spread through every stage of fabrication and this build-up was accompanied by rising new orders and a mounting backlog of unfilled orders. Despite this fourth quarter build-up, however, the ratio of stocks to sales at year-end was the lowest since the end of 1955. The build-up of inventories in wholesale and retail trade was also most pronounced in the closing quarter of the year, particularly at the wholesale level where a sharp turnaround occurred. In both groups the quarterly pattern was to a large extent a reflection of partially offsetting movements in stocks of durable and non-durable goods.

Canada's exports of goods and services rose to $\$ 7,600,000,000$ in 1961, an increase of nearly 8 p.c. over the level of 1960 . At the same time, imports of goods and services rose by 4 p.c. Thus, the contraction in the deficit on international current account from $\$ 1,100,000,000$ to $\$ 900,000,000$ (on the National Accounts basis) was one of the notable developments of the year; the deficit in 1961 was the smallest in any year since 1955. Among the factors raising the value of Canadian trade was the change in the exchange rate of the Canadian dollar. The improvement in the deficit was wholly attributable to the emergence of a surplus in merchandise trade, the first in many years; the deficit on invisible transactions continued to rise to reach the highest level on record, partly because of the unusually high level of dividends paid abroad in the first quarter of the year.

Merchandise exports followed a rising trend through the year and for the year as a whole were $\$ 5,900,000,000,9$ p.c. higher than in 1960 , most of this rise being in volume. Among the influences fostering the growth in exports was the recovery in the United States from a mild and short-lived recession and the large sales of wheat to Communist China and Eastern Europe. Exports were also notably higher to Japan, Latin America and some countries in Western Europe. Exports to Britain were unchanged, while exports to other countries of the Sterling Area declined slightly. The rise in wheat exports accounted for about half the total increase in exports in 1961. Other important contributors were such commodities as nickel, forest products, petroleum and natural gas, cattle and aircraft. Partially offsetting these increases were reduced sales of such major commodities as uranium, iron ore, copper and aluminum.

Merchandise imports, estimated at $\$ 5,700,000,000$, were up about 3 p.c. in 1961, most of the increase being accounted for by the rise in prices of imports. The record value in 1961 compares with a previous peak of $\$ 5,600,000,000$ in 1956 , when import prices were considerably lower. The advance in imports was concentrated in the second half of the year and reflects the renewal of expansionary influences at that time. The gain in imports was widely distributed by commodities. Preliminary data indicate increased imports of many industrial materials and machinery and equipment items and, toward the end of the year, increased purchases of some grain and other agricultural products to help make good the loss in production in Western Canada. Imports of some other types of consumer goods were also higher at the end of the year.

Turning to consider the service account, receipts from services rose by nearly 4 p.c. and payments for services rose by nearly 6 p.c. The major factor on the side of payments was a more than 15-p.c. rise in the outflow of interest and dividends, a large part of which was concentrated in the first quarter of the year. On the receipts side, there was a considerable rise in income from tourism and travel expenditures, partially offset by changes in other items.

Government expenditures on goods and services exerted an expansionary influence on the economy in 1961. At an estimated level of $\$ 7,200,000,000$, they were 7.5 p.c. higher than in 1960. The highest rate of increase was in Federal Government outlays for purposes other than defence- 14.7 p.c.-but defence expenditure was also up significantly. The substantial rise in non-defence outlays reflected higher wage and salary payments, increased public investment outlays, and the accumulation of inventories held by the Agricultural

Stabilization Board. At the same time, outlays by provincial and municipal governments were higher by about 7 p.c. Higher wages and salaries were an important element in the increment at all levels of government.

Transfer payments to persons increased by about 7 p.c. Transfers paid by the Federal Government were only slightly higher; higher payments were made under social security schemes, but this was offset by the fact that the 1960 figures included payments under the Western Grain Producers' Acreage Payment Plan. The major rate of increase- 17 p.c.was at the provincial level. The magnitude of this increase is largely accounted for by the rapidly expanding costs of the hospital insurance schemes and the introduction of the provincial government hospital insurance in Quebec at the beginning of the year. An 11-p.c. increase in municipal transfer payments is mainly attributable to direct relief. These changes in expenditure, together with some increase in interest on the public debt and in subsidies, brought total government outlays, excluding inter-governmentạl transfers, up 7 p.c. At the same time, government revenues rose, reflecting the improvement in economic conditions during the course of the year and some revisions in tax rates. However, the increase was not as large as in expenditure, so that the gap between revenue and expenditure left a deficit (on a National Accounts basis) of over $\$ 890,000,000$ in 1961 compared with one of about $\$ 650,000,000$ in 1960.

Income Flows.-Labour income continued to rise in 1961 and, at an estimated $\$ 18,900,000,000$, was a little more than 4 p.c. above 1960 , an advance somewhat greater than that in the preceding year. The gain reflected the strengthening of the employment situation, which made for increased numbers of paid workers as well as a somewhat longer work week in some industries. Higher average earnings also played a part.

Most industrial divisions shared in the advance in labour income; forestry, mining and construction were the three exceptions. As in the past several years, the major gains were in the service-producing group; labour income in non-government service was up 10 p.c., in government service close to 9 p.c., and in finance, insurance and real estate more than 7 p.c. The advance in the important manufacturing segment, where employment began to pick up during the course of the year, was slightly more than 3 p.c.

Accrued net income of farm operators was at a level of $\$ 937,000,000$ in 1961, about 22 p.c. lower than in 1960 . All of the decline was attributable to the reduction in grain production resulting from drought conditions in the Prairie Provinces. This factor, along with the greatly increased export demand for wheat, led to a marked drawing down of farm-held grain inventories in 1961. At year-end, the carry-over of grain on farms and in commercial channels was the lowest since 1950. Cash income from the sale of farm products reached an all-time high level in 1961. Major items contributing to the increase were greater returns from the sale of wheat, cattle, calves, poultry, hogs, tobacco and dairy products. The sharp increases in Canadian Wheat Board participation payments and in the undistributed profits of the Wheat Board were a reflection of the higher wheat export sales during the year.

After declining in the first quarter, corporate profits (before taxes and before dividends paid abroad) rose substantially in each of the three succeeding quarters in response to the quickening in economic activity. By the fourth quarter they were at a seasonally adjusted annual rate of $\$ 3,800,000,000$, 30 p.c. above the annual rate of $\$ 3,000,000,000$ in the first quarter and 4 p.c. above the previous peak attained in the fourth quarter of 1959. For the year as a whole, the increase amounted to about 5 p.c. Among the factors tending to raise corporate profits was the decline in the exchange rate on the Canadian dollar which has pushed up profit margins in a number of commodity-producing industries whose prices are set in world markets.

Most industry groups recorded some increase in profits in 1961. The most pronounced up-trend was in mining, quarrying and oil wells where the year-over-year gain was about 16 p.c. The increase in manufacturing as a whole was 5 p.c. but most of the component groups recorded higher profits. The gain in profits in trade, both wholesale and retail, was relatively small and there was a decline in profits in service industries.

## Section 2.-Survey of Production

Scope of the Series.-The scope of the survey of production is limited to industries chiefly engaged in the production of commodities. The activities of such industries as transportation, communications, trade, finance and service are excluded except as certain of their costs are indirectly reflected in the value of output of the commodity-producing industries. This is in contrast to the scope of the gross national product series in the national accounts (see p. 1058) which encompasses all industries.

The term "production" is used in its popularly accepted sense as applied to such processes as the growing of crops, the mining of minerals, the catching of fish, the conversion of water power to electric energy, the construction of buildings and the manufacturing and processing of goods. Primary production includes agriculture, forestry, fisheries, trapping, mining and electric power; construction and manufacturing are classified as secondary production.

In combining value of production figures for a number of industries, it is essential, in order to assess accurately the contribution of each industry to the total, that inter-industry duplication be eliminated. Thus only the "net" value of production, or "value added", is considered in this series. Net value is obtained by deducting from gross value of production, exclusive of excise and manufacturers' sales taxes, the cost of purchased materials, fuel and electricity; purchased services and certain indirect taxes such as licences, property taxes, public domain taxes on oil and gas extraction, etc., are included in net value.

Relation to National Income Accounting.-As already mentioned, "net" production or "value added" is generally considered the most significant measure of production. Value added is computed by deducting from the total value of output (excluding indirect taxes) for each industry, the cost of materials, fuel, purchased electricity and process supplies consumed in the production process. This measurement is similar to but not strictly comparable with the concept involved in the contribution of each industry to the gross domestic product at factor cost. There are conceptual differences as well as problems of classification.

The value of gross domestic* product at factor cost can be measured either directly by summing the factor incomes and capital consumption allowances paid or charged by each industry, or indirectly by subtracting all intermediate goods and services from the revenue (excluding indirect taxes) arising from the production of goods and services in each industry. The latter approach is followed in the compilation of the value added statistics of the survey of production series. These value added residuals for each com-modity-producing industry, however, are not exactly equivalent to gross domestic product originating in these industries since they still contain certain miscellaneous indirect taxes such as licences and property taxes as well as the cost of such services as insurance, advertising, communications, etc., which originate in the non-commodity-producing industries. For instance, while the cost of insurance incurred by manufacturers is included in the net value of the manufacturing industry as given in this Section, it is not included in the contribution of manufacturing to total gross domestic product at factor cost.

The data necessary to make the deduction of these business service costs from value added to arrive at a true figure of gross domestic product for each industry and province are not collected. However, available data $\dagger$ indicate that these costs constitute a smaller share of value added for such industries as agriculture and mining than for manufacturing and construction. The contribution to total gross domestic product of the primary industries and of those provinces whose economies are largely dominated by the primary industries is thus proportionately greater than the data contained in this Section indicate. Thus, the measurement of the value of output based on "value added" contains some duplication if it is used as an approximation of gross domestic product originating.

One of the major problems of classification is that the data for three components of the gross domestic product by industry estimates (net income of unincorporated business, investment income, and capital consumption allowances and miscellaneous valuation adjustments) are on an enterprise basis while data for the other components (wages, salaries and supplementary labour income and the inventory valuation adjustment) are on an establishment basis. By contrast, most of the value added data for the commodityproducing industries are on an establishment basis, each unit of an enterprise being treated as a separate entity and classified to the industry in which it operates. A company may own several establishments which are classified to different industrial divisions. The nature of the available data makes it extremely difficult, in compiling industrial distributions of the gross domestic product, to get an accurate breakdown of enterprise-type statistics on a plant-by-plant basis for such companies; for this reason, the adjustment to an establishment basis was not made to the industrial distribution of the gross domestic product series. Nor is a geographical allocation of data available for that series, although the personal income component is capable of provincial distribution. Thus, a major advantage of the net value of commodity production series is that it can be broken down by province. Also, in compiling the gross domestic product series it is difficult to allocate corporation profits according to the provinces in which they are generated by productive activity, but it should be borne in mind that the commodity production estimates by province exclude the non-commodity-producing industries.

Statistics of Commodity Production.-The postwar period 1947 to 1960 has been a period of tremendous growth in commodity production in Canada. The total net value

[^337]of output all but doubled between 1947 and 1955 and increased another 21.3 p.c. by 1960. Among the primary industries, mining showed the greatest absolute increase, advancing from $\$ 402,539,000$ to $\$ 1,470,407,000$, or by 265.3 p.c. Electric power followed, rising 242.7 p.c. in the same comparison and reflecting a substantial increase in installed generating capacity during the period. However, the great activity experienced by the construction industry all across the country during these years resulted in that industry showing the largest proportionate gain of all the major commodity-producing industries in the 1947-60 comparison; its net value of output rose by 277.4 p.c. from $\$ 963,100,000$ to $\$ 3,634,633,000$, although the 1960 figure was slightly lower than those for 1957, 1958 and 1959. Manufactures advanced steadily throughout the period, except for slight decreases in 1954 and 1958, reaching a total of $\$ 10,517,333,000$ in 1960 , a figure 145.0 p.c. above that of 1947 .

The shift in relative importance of primary and secondary production during the 194760 period is noteworthy. In the earlier year primary production represented 34.4 p.c. of the total net value of Canadian production and secondary output 65.6 p.c.; by 1960 the proportions were 26.4 p.c. and 73.6 p.c., respectively. Internally, agriculture's share of the total net value dropped from 20.1 p.c. to 10.4 p.c. and the relative importance of construction increased from 12.0 p.c. to 18.9 p.c. The contribution of manufacturing remained fairly steady at from 53.6 p.c. to 54.7 p.c.

Tables 11 and 12 show the long-term growth of net output of the commodity-producing industries, by industry and by province. The classification of establishments was revised for the year 1960 in accordance with the Standard Industrial Classification Manual (Catalogue No. 12-501) and the figures for net value of production in certain industries for that year are not comparable with those for previous years. Manufacturing and mining are particularly affected by this revision, although there will be minor changes in forestry and agriculture. Although it is planned to carry the revisions back to 1957, all tabulations had not been completed for the earlier years at the time of writing and for that reason the data shown in the following tables for years previous to 1960 are on the unrevised basis; revised data for mining are included in a footnote to Table 11. It is not expected that the classification changes will have any significant effect on historical comparisons.

## 11.-Net Value of Production and Percentage Analysis, by Industry, 1947, 1950, 1953 and 1958-60

Note.-Net production represents total value under a particular heading, less the cost of materials, fuel, purchased electricity and supplies consumed in the production process. Data for fisheries and trapping represent total value.

${ }^{1}$ Excludes agriculture in all years, and fisheries and trapping in 1950. ${ }^{2}$ Construction figures for Yukon and Northwest Territories are included with British Columbia. $\quad{ }^{3}$ Not exactly comparable with previous years; see text on p. 1070.

Net value of Canadian commodity-producing industries reached a record high during 1960 of $\$ 19,220,000,000$, a figure 2 p.c. above the 1959 total of $\$ 18,839,000,000$. All provinces with the exception of Ontario, which declined fractionally, contributed to this gain. The contribution of individual industries to the total varied from 55 p.c. for manufacturing to less than 0.5 p.c. for trapping. Construction ranked second in importance, contributing 19 p.c., followed by agriculture with 10 p.c. and mining with 8 p.c. Electric power and forestry each contributed 4 p.c. to the total net value and fisheries 0.5 p.c.

The absolute and percentage contributions of each industry by province are given for the two latest years available in Table 13. Preliminary information available for 1961 indicates that the net value of commodity-producing industries in that year was up slightly from the 1960 level. Manufacturing shipments and inventory data suggested an approximate 3-p.c. increase in the value of manufactures compared with 1960. Construction showed a 2-p.c. rise, with increases reported in all provinces except Prince Edward Island, Nova Scotia, New Brunswick and Manitoba. Increases were also indicated for fishing, mining and electric power but decreases for forestry and trapping. Agriculture for Canada as a whole was down 18 p.c. as a result of the poor grain crops in Manitoba and Saskatchewan and lower output values in the Atlantic Provinces; all other provinces recorded increases in net value of agriculture.

## Section 3.-Canadian Balance of International Payments*

In late June 1962, the Prime Minister announced that a comprehensive program had become necessary to relieve the pressure on the Canadian dollar in the exchange field, to bring about a greater stability in Canada's international transactions and to strengthen the exchange reserves. The deficit in the current account, although it had been reduced, remained a continuing problem. Canada had become accustomed to large capital inflows from abroad and the immediate difficulties had been precipitated by the drying-up of the net capital inflow and, more recently, a net capital outflow. The excess of imports of goods and services over exports had been paid for out of reserves of gold and United States dollars.

The measures introduced by the Government included temporary, graduated surcharges ranging between 5 p.c. and 15 p.c. on approximately one-half of all imports. Imports which were exempted from any surcharge include many basic foodstuffs, raw materials, industrial components and agricultural machinery, which enter directly into the cost of

[^338]Canadian production or the cost of living of the average Canadian, or which are highly essential for other reasons. The lowest surcharge applied to a large volume of imports of a less essential nature, for some of which a surplus capacity existed in Canada and for others of which alternative Canadian products were available. A 10-p.c. surcharge applied to imports for most of which it was possible for consumers to defer purchases or for which Canadian production was available, while the heaviest surcharge was imposed on a group of imports including luxury items. The second measure, also temporary, involved a reduction in the amount of goods which Canadians travelling abroad are permitted to bring duty-free into Canada. These two measures were expected to lead to a significant improvement in the Canadian international account.

The third course of action involved reductions in Government expenditures amounting to $\$ 250,000,000$, which, when combined with the import surcharges, were expected to narrow the budgetary deficit by about $\$ 450,000,000$ in a full year. As a further financial measure, the Minister of Finance would earmark, for financing increases in the exchange reserves, Canadian dollar cash balances equivalent to the sales of exchange from the reserves.

The Prime Minister stated that at the time of the introduction of these measures Canada's official holdings of gold and U.S. dollars stood at approximately $\$ 1,100,000,000$. At the beginning of 1962 they had been $\$ 2,056,000,000$. To reinforce these reserves, Canada had arranged for international financial support for well over $\$ 1,000,000,000$ in cash and stand-by credits from the International Monetary Fund, the Federal Reserve System of the United States and Britain, and the Export-Import Bank in Washington. After drawing $\$ 650,000,000$ of these resources, Canada's official holdings of gold and foreign exchange at the mid-year were $\$ 1,809,000,000$.

The measures reflected the determination of the Government to defend the foreign exchange value of the Canadian dollar established in May at $92 \frac{1}{2}$ cents United States funds. (See also Section 4, Part I of Chapter XXIII on Currency and Banking.)

The changes in Canada's total commercial and financial transactions with other countries which contributed to the necessity for these measures are presented in summary form in statements of the Canadian balance of international payments. The current account statement, covering all current exchanges of goods and services, indicates the main categories of transactions giving rise to receipts from and expenditures abroad, and the extent to which these are out of balance. The capital account presents an analysis of the movements of short-term and long-term capital that have occurred during a comparable period.

During the first quarter of 1962 Canada's purchases of goods and services from other countries exceeded Canada's sales by $\$ 363,000,000$. Net movements of capital into Canada in long-term forms fell sharply from a quarterly average of over $\$ 150,000,000$ in 1961 to $\$ 8,000,000$, and capital movements in short-term forms, apart from changes in Canada's official holdings of gold and foreign exchange, led to a net capital outflow of $\$ 9,000,000$. The official holdings of gold and foreign exchange had, therefore, to bear the full brunt of the deficit on current account of $\$ 363,000,000$. In the second quarter the current account deficit together with net capital outflows led to an even sharper decline in Canada's official holdings of gold and foreign exchange, apart from the additional resources obtained under the emergency arrangements.

Each year since 1950, with the exception of 1952, Canada's current expenditures abroad exceeded external current receipts. The current account deficits that resulted in this period of rapid Canadian development were financed by inflows of capital. Current account deficits have customarily been associated with periods of Canadian prosperity. For example, the rate of Canadian growth of the 1950's, based on the development of new resources, provided the underlying element in the strength of Canadian demands for imported goods and services. High levels of investment at a time when defence expenditures were also very heavy, together with rising levels of consumption, contributed to the deficits. Until 1956 the deficits were not large in proportion to the high levels of total current transactions and capital inflows of a long-term type were large enough to finance the deficits in most years. In 1956 and 1957, as the result of continuing high levels of
investment and consumption, the deficits rose to peaks of $\$ 1,366,000,000$ and $\$ 1,455,000,000$; at the same time, inflows of capital in long-term forms rose very sharply. The figure for 1958, reflecting some moderation of economic activity in Canada, was substantially smaller but nevertheless amounted to $\$ 1,131,000,000$. After reaching a record high level of $\$ 1,504,000,000$ in 1959 , the deficit receded sharply to $\$ 1,243,000,000$ in 1960 and to $\$ 982,000,000$ in 1961. Since 1956, capital inflows in long-term forms have progressively fallen short of current account deficits.

Current Account Transactions.-The deficit of $\$ 982,000,000$ on current account in 1961 was made up of a surplus of $\$ 173,000,000$ (first since 1954) on merchandise account* and $\$ 1,155,000,000$ from non-merchandise transactions. The merchandise deficit has varied widely and was as high as $\$ 728,000,000$ in 1956 , when it accounted for more than one-half of the total deficit. On the other hand, the deficit on non-merchandise transactions has risen since 1952 with a persistence and significance characteristic of this type of transaction.

Since 1954, when merchandise exports and imports were almost equal at $\$ 3,000,000,000$, exports have risen to a peak of $\$ 5,889,000,000$ in 1961 but imports have registered wide fluctuations. In current dollars, the record high import total of $\$ 5,716,000,000$ for 1961 was only about 2.5 p.c. higher than imports for 1956 and 1959, but 13 p.c. above 1958. In the past decade or so, the relative importance of exports of metal and mineral materials increased markedly, those of other materials for industry such as chemicals and fertilizers more moderately, while the percentage share for forest products tended to narrow somewhat. The relative position of wheat, flour and other grains, which had been diminishing, recovered in 1961, owing to large shipments of grain to Mainland China and other Communist countries, to the average level of 1955 and 1956. In addition to newer products for export, such as iron ore, uranium, petroleum and natural gas, there have been general increases in more traditional staples like pulp and paper, nickel, aluminum and copper. Over four-fifths of the 9-p.c. export rise in 1961 was derived from larger shipments of wheat, nickel, petroleum and natural gas, with wheat alone accounting for about one-half of the increase. On the other hand, exports of uranium declined sharply and those of other metals less substantially. A 3-p.c. rise in imports in 1961 resulted from larger deliveries of civil aircraft, machinery, fruits, grains, meats and oils, which were offset in part by lower purchases of cars, trucks and rolling-mill products. (See also Part I of Chapter XX on Foreign Trade.)

The 1961 deficit on non-merchandise transactions of $\$ 1,155,000,000$ was nearly ten times as great as that in 1949 and two and one-half times that for as recent a year as 1955. This rise was attributable largely to the continued rapid growth in Canada's indebtedness to other countries and to the high level of incomes spent by an enlarged population. Roughly one-half of this deficit in 1961 was directly related to Canada's indebtedness abroad and subject to the effects of continued growth, with total interest and dividend payments by Canadians to other countries reaching $\$ 770,000,000$. Other forms of transfer of investment income added over $\$ 100,000,000$ of related payments, and there were also large payments by Canadian subsidiaries to parent companies for services. The net payments of interest and dividends alone totalled $\$ 561,000,000$ while the net payments on account of all the above groups of transactions that are related to foreign investment amounted to well over $\$ 700,000,000$. In addition, there were some hundreds of millions of dollars accruing to non-residents which were retained in Canada for further investment and are therefore not reflected in the current account.

The travel account involves substantial net outlays and reflects high levels of income in Canada. In 1961 net payments amounted to $\$ 160,000,000$, a substantial improvement from the deficit of $\$ 207,000,000$ in each of the two preceding years, as a result of a heavy influx of tourists from the United States during the summer of that year. To these payments were added net deficits of $\$ 82,000,000$ from freight and shipping transactions,

[^339]$\$ 71,000,000$ from inheritances and transfers by migrants, and very large net payments of $\$ 443,000,000$ covering business services, miscellaneous income, government transactions, and personal remittances. Against these expenditures there was $\$ 162,000,000$ available from new gold production.

The bilateral distribution of the improvement in the current account deficit in 1961 was similar to that of 1960, but the increase in the surplus with the overseas countries was not as great as in 1960 and the widening of the deficit with the United States was appreciably reduced. The establishment of the surplus with the overseas countries at $\$ 404,000,000$ in 1961, following a smaller one in 1960 of $\$ 118,000,000$ and a deficit of $\$ 274,000,000$ in 1959, again reflects the traditional pattern of Canada's chronic current deficit with the United States being offset in part at least by a surplus with overseas countries. Over nine-tenths of the addition to the overseas surplus in 1961 arose from merchandise trade with countries outside Western Europe and outside the Sterling Area. The current account surplus with Britain increased $\$ 16,000,000$ to $\$ 182,000,000$ in 1961 . The current deficit with the United States of $\$ 1,386,000,000$ was higher than for any year except 1956 and 1957.

Capital Movements.-In 1961, Canada again drew substantially on the resources, real and financial, of the rest of the world. The inflow of capital for direct investment in foreign-controlled establishments during the year was placed at $\$ 420,000,000$, roughly two-thirds of the highest figure recorded in the previous year and identical with the 1958 inflow. Transactions in Canadian securities led to a further inflow of $\$ 303,000,000$, up about one-quarter over 1960 but down sharply from the $\$ 650,000,000$ recorded in 1959 . These two groups of transactions added $\$ 723,000,000$ to Canadian external liabilities in long-term forms. On the long-term assets side, there were outflows of $\$ 110,000,000$ for direct investment abroad and $\$ 30,000,000$ for the acquisition of foreign stocks and bonds, but inflows of $\$ 38,000,000$ from repayments on inter-governmental loans. Transactions in all long-term forms led to a net capital import of about $\$ 604,000,000$ which was sufficient to finance about 62 p.c. of the current account deficit; the corresponding inflows of $\$ 873,000,000$ in 1960 were equivalent to 70 p.c. of the larger deficit in that year. Including outflows taking the form of a sizable increase in official holdings of gold and foreign exchange, and reductions in holdings of Canadian dollars by non-residents, all other capital movements in short-term forms led to a net capital inflow of $\$ 378,000,000$ in 1961. In that year the net capital inflow in long-term forms from the United States exceeded that from all countries as there were outflows on balance to other countries; in 1960 the net inward movement of capital in long-term forms was about 78 p.c. from the United States.

Inflows in 1961 of $\$ 420,000,000$ of capital for direct investment in foreign-controlled enterprises, while substantially below the peak figure of $\$ 645,000,000$ in 1960 , were only slightly lower than their average level for the period since 1950. During this period, these direct investment inflows have been a specially significant element in the capital account of the Canadian balance of payments. Persistent and substantial, these receipts were directed particularly to resource development and associated industries, and by far the largest part of the new capital went into the petroleum and natural gas industry, which was one of the dynamic developments in the Canadian economy in this period. Substantial amounts also went into other mining industries, particularly for the development of iron ore, and to various branches of manufacturing.

From 1956 to 1959, the inflow for direct investment, large though it was, was less than the inflow of portfolio capital. This arose in part from substantial sales of outstanding Canadian stocks as non-resident investors added to their stake in Canadian growth. The largest factor, however, was the sharply increased demands on the Canadian capital market, some of which were diverted to foreign capital markets through the sale to non-residents of new issues of Canadian bonds and debentures. Corporations, provincial governments and municipalities were all important borrowers abroad in this period.

For some years now there has been a tendency for an increasing proportion of large deficits on current account to be financed by capital movements in short-term forms, amounting in 1961 to nearly 40 p.c. During the first half of 1962 movements of capital in both long-term and short-term forms were on balance outwards, apart from changes in Canada's official holdings of gold and foreign exchange and from official international financial aid extended to Canada. Comments and statistics on the effects of the unprecedented capital inflows of recent years upon the ownership of investments in Canada will be found in Section 4 on Canada's International Investment Position.

## Section 4.-Canada's International Investment Position*

The international financial difficulties which beset Canada in mid-1962 were the immediate result of a sharp reduction in the net inflow of foreign capital coupled with an increased movement abroad of private Canadian capital. The cessation of net private

[^341]capital inflows occurred in the face of the continuation of a substantial deficit on current account, largely determined by the apparently intractable deficit on account of "invisibles" To a considerable extent these out-payments were a manifestation of the size and character of Canada's balance of international indebtedness, a phrase used in the broad sense generally accepted in balance of payments terminology to include equity investments as well as contractual borrowings. This was true not only through the servicing of capital involving interest, dividends and miscellaneous income payments, but also through the influences of foreign investment on the Canadian economy and on the shape and direction of its external demands.

For a number of years Canada was by far the world's largest importer of private long-term capital, and the very substantial capital formation which was a feature particularly of the 1950's was associated with an unprecedented growth in the country's external liabilities. These investments contributed to a rapid rate of growth in the Canadian economy, particularly in the exploitation of natural resources, and added significantly to Canadian production, employment and income. At the same time they added substantially to the continuing burden of Canada's external debt and to the proportion of Canadian industry controlled by non-residents.

Canada's gross external liabilities amounted to $\$ 26,100,000,000$ at the end of 1960 ; non-resident-owned long-term investments in Canada had reached a book value of $\$ 22,200,000,000$, having tripled since the end of World War II (by the end of 1961 they totalled well over $\$ 23,000,000,000$ ). The part of these investments in establishments controlled outside of Canada totalled $\$ 12,900,000,000$. These direct investments have been growing more rapidly than the total. Investments in other Canadian equities, although smaller, have also been substantial and there have been periods in recent years of sharp increase in foreign holdings of Canadian bonds and debentures.

Investments of non-resident capital have been closely related to the high rate of growth in Canada and to the heavy demands placed on capital markets by this factor and by the financial needs of governments and municipalities. Large development projects have been initiated and financed by investors from other countries and the growth effects from this investment have, in turn, led to Canadian borrowing in capital markets outside of Canada. While capital inflows have been the principal source of the increased indebtedness abroad, another substantial contributor has been the earnings from non-resident-controlled branches and subsidiaries which were retained in Canada. New resource industries depending to a large extent on non-resident financing include all branches of the petroleum industry, iron ore and other mining, aluminum, nickel, pulp and paper, and chemical industries. In addition, secondary industry has also benefited from non-resident investment.

Canada's gross external assets totalled $\$ 9,200,000,000$ at the end of 1960 and govern-ment-owned assets made up a substantial part of that total. Canada's net balance of international indebtedness, including equity investments, at the same date was estimated at $\$ 16,900,000,000$, well over half of which was incurred in the five years since 1955 and more than two-thirds in the eight years since 1952. By the end of 1961 Canada's net balance of international indebtedness had risen to around $\$ 18,000,000,000$.

Foreign Investments in Canada.-Dependence upon external sources of capital for financing in earlier periods of heavy investment activity has been characteristic of Canadian development. During the exceptional growth period that occurred before World War I the rate of increase in non-resident investment was very high and dependency upon external sources of capital was greater than in later periods. Total non-resident investments in Canada increased from an estimated $\$ 1,232,000,000$ in 1900 to $\$ 3,837,000,000$ by 1914, mainly in the form of bonded debt for railway and other expansion guaranteed by the Canadian Government. This was the period when the principal external source of capital was London, and by 1914 British investments in Canada, estimated at
$\$ 2,778,000,000$, were at about their highest level. By the same date, United States investments, although they had been increasing rapidly, had only about one-third of the value of British-owned investments.

During the first part of the inter-war period the United States became the principal source of external capital, and by 1926 the United States-owned portion of Canada's international debt exceeded that owned in Britain which had not increased since 1914. Growth in United States investments in Canada continued for some years but was interrupted in the 1930's when the total was reduced by repatriations of securities and other withdrawals of capital. Increases began again in the 1940's, and by the end of World War II United States investments of $\$ 4,990,000,000$ compared with British investments of $\$ 1,750,000,000$. The latter had been reduced by wartime repatriation measures and the proceeds were used in financing British expenditures in Canada. Following the War, up to 1948, some further declines occurred in British investments in Canada but since then they have increased.

United States investments have risen each year since the end of World War II, particularly since 1947 when the period of intense activity in the petroleum industry got under way following new discoveries. More than half the growth in United States investment in Canada has occurred since 1952. At $\$ 16,718,000,000$, United States investments in 1960 continued to represent more than three-quarters of all non-resident investments in Canada and also made up a similar ratio of the increase since 1952. The main rise occurred in direct investments in companies controlled in the United States, which are prominent in many branches of Canadian industry. By 1960 these had increased to well over twice their value in 1952. In the same period portfolio investments in Canada owned in the United States rose by more than two-thirds. A considerable part of this latter rise occurred in the period 1956-59 when large sales of new issues of securities were made in that country.

British investments in Canada totalled $\$ 3,359,000,000$ at the end of 1960. Although these investments then exceeded by some hundreds of millions of dollars the levels reached at the end of World War I and again in the early 1930's, they accounted for only about 15 p.c. of the total non-resident investments in Canada compared with 36 p.c. at the end of 1939 before most of the wartime repatriations. British investments in Canada had more than doubled from the low point in 1948; the increase had been particularly concentrated in direct investments which had more than tripled and which, at the end of 1960, represented a much larger portion of the total than in the prewar period. In absolute terms, this rise in total British investments in Canada is slightly below the rise in investments by all other overseas countries in the same period, although the rate of increase has been lower.

Investments of countries other than the United States and Britain reached a record total of $\$ 2,123,000,000$ at the end of 1960 . Exceeding four times the corresponding 1952 figure, this represented a much higher rate of increase than had occurred in either United States or British investments and large increases had taken place in portfolio holdings of securities as well as in direct investments. At more than 9 p.c. of the total, this group of countries, mostly in Western Europe, made up a larger portion of total investments than ever before. Over 90 p.c. of the direct investments, which totalled $\$ 788,000,000$ in 1960, also came from Western Europe; more than one-quarter was of Belgian origin with Dutch, French, Swiss and German investments making up the next largest groups.

The degree of dependence upon non-resident capital for financing Canadian investment has been relatively much less in the postwar period than in the earlier periods of exceptional expansion, even though the rise in non-resident investments has been so great. Thus, from 1950 to 1955 the net use of foreign resources amounted to about one-fifth of net capital formation in Canada, and direct foreign financing amounted to about one-third. But from 1956 to 1960 when these ratios had increased considerably to 33 p.c. and 45 p.c., respectively, they were still less than the corresponding ratios in the period 1929 to 1930 when inter-war investment activity was at its highest point. In that shorter period more
than one-half of net capital formation was financed from outside of Canada, and in the period of heavy investment before World War I an even larger ratio of investment was financed by external capital. In considering these changes it should be noted that for a decade and a half, between 1934 and 1949, Canada was a net exporter of capital and that Canadian assets abroad have been rising over a long period.

It should also be noted that the above ratios relate to the place of non-resident investments in all spheres of development including those where Canadian sources of financing predominate such as in merchandising, agriculture, housing, public utilities, and other forms of social capital. Thus non-resident financing of manufacturing, petroleum and mining has been much higher than the over-all ratios indicate, and has provided the major portion of the capital investment in this field in the period since 1948. The most recent comprehensive calculation of the ratios of non-resident ownership in Canadian manufacturing, mining and petroleum is for the year 1959 and it should be noted that subsequent changes may have increased non-resident ownership even more. In that year the Canadian manufacturing industry was 51 p.c. owned by non-residents but capital subject to foreign control was 57 p.c. These proportions compared with 47 p.c. and 51 p.c., respectively, as recently as the end of 1954. In the field of petroleum and natural gas, non-resident ownership and control amounted to 63 p.c. and 75 p.c., respectively, at the end of 1959 whereas at the end of 1954 non-resident ownership and control had amounted to 60 p.c. and 69 p.c., respectively; in mining and smelting, non-resident ownership and control amounted to 59 p.c. and 61 p.c., respectively, compared with 53 p.c. and 51 p.c. in 1954. However, resident-owned Canadian capital continued to play a leading role in the financing of such areas of business as merchandising, railways and other public utilities. Hence non-resident ownership of business as a whole, including manufacturing, petroleum, mining, merchandising and railways and utilities, rose only slightly from 32 p.c. in 1948 to 34 p.c. in 1959 (the last year for which the calculation has been made). But, in the same years, companies subject to non-resident control increased from 25 p.c. to 32 p.c. their share of the total even in this broad area of business, a trend also evident in many subdivisions of the manufacturing and extractive industries.

The petroleum and natural gas industry, including exploration and development, refining, merchandising, pipelines and other distribution facilities, has been the largest single recipient of capital inflows in the postwar period, accounting directly for far more than 40 p.c. of the inflow of United States capital for direct investment in Canada. By the end of 1959, investments in Canadian petroleum concerns controlled in the United States made up 69 p.c. of the total. Another 6 p.c. of the investment was controlled in overseas countries. Investments owned in the United States and overseas were 57 p.c. and 6 p.c., respectively, of the total.

Another basis of judging the place of foreign-controlled business in Canadian industry is provided by a special study of production and employment in the larger Canadian manufacturing establishments controlled in the United States. Such establishments having an investment of $\$ 1,000,000$ or more accounted for about 30 p.c. of Canadian manufacturing production in 1953 and 21 p.c. of employment in that field. These ratios in non-residentcontrolled plants were considerably higher than in 1946-the previous year for which a study of this kind was made.

In some industries the proportions of production and employment in plants controlled in the United States were much higher than this. Automobiles, for example, are mainly produced in United States-controlled plants, but this is exceptional. Among other industries where well over one-half of the production is in United States-controlled firms are the smelting and refining of non-ferrous metals, petroleum refining, rubber products, and motor-vehicle parts. In several major industries like electrical apparatus and supplies and non-ferrous metal products the distribution of control between Canadian and United States-controlled companies is more evenly divided. In other industries the non-resident share is large although less than one-half the total. These include pulp and paper, other paper products, chemicals, medicinal and pharmaceutical products, sheet-metal products, and certain branches of the machinery industry.

There are, however, many industries where the largest part of production has been in Canadian-controlled plants. Prominent among these are such important branches of industry as primary iron and steel, and some other subdivisions of the iron and steel industry, textiles, clothing, and divisions of the foods and beverages industry, such as bakery products, beverages and dairy products. But even in some of these industries changes in ownership and control have been occurring in recent years.
19.-Estimate of the Canadian Balance of International Indebtedness, as at Dec. 31, 1939-60 Norz.-Totals are rounded and may not represent the sum of their components.

Canadian Assets Abroad.-While there has been a great growth in non-resident investment in Canada and in the balance of indebtedness to other countries, it will be noted that Canadian assets abroad, shown in Tables 22 and 23, have continued to rise in value each year. These now represent a larger proportion of liabilities abroad than was the case before World War II, but more than half of the increase since then has been in government-owned assets such as the official reserves and the loans by the Canadian Government to other governments which were extended during the war and early postwar years. At the end of 1961 the government credits outstanding had a value of $\$ 1,380,000,000$ while official holdings of exchange amounted to $\$ 2,154,000,000$ in terms of Canadian dollars. Other official Canadian assets include Canada's subscriptions to the capital of the International Bank, the International Development Association, the International Finance Corporation and the International Monetary Fund which, by March 1962, amounted to $\$ 73,700,000,000, \$ 16,400,000,000, \$ 3,500,000,000$, and $\$ 564,700,000,000$, respectively, a substantial part being offset by liabilities to these institutions.

The portion of the assets in private investments, particularly in the form of direct investments abroad by Canadian companies, is still small in relation to the corresponding non-resident stake in equities in Canada. Private long-term investments abroad by Canadians in 1960 were made up of direct investments of $\$ 2,495,000,000$ and portfolio investments of $\$ 1,280,000,000$. More than two-thirds of the privately owned investments were located in the United States. Direct investments in that country by Canadian businesses have grown rapidly and are found in many fields, among which the beverage and farm implement industries are particularly noteworthy.

Private investments in overseas countries are widely distributed. About one-half of the total in 1960 were located in Commonwealth countries, with slightly less in Britain than in the remainder of the Commonwealth. Most of the direct investments in Britain were in industry, while in other Commonwealth countries there were investments in mining and petroleum as well as in industry. In foreign overseas countries the largest part is in the countries of Latin America where Canadian holdings in public utilities are substantial.

## 22.-Canadian Assets Abroad, 1939, 1948 and 1955-60

#### Abstract

Notz.-Excludes investments of insurance companies and banks, Canada's subscriptions to international financial institutions and short-term assets, other than official holdings of gold and foreign exchange. Holdings of stocks are at book values as shown in the books of issuing companies; holdings of bonds are shown at par values. Foreign currencies are converted into Canadian dollars at current market rates. The series for portfolio investment was reconstructed in 1952 and is not strictly comparable with preceding years.

## PART I.-CURRENCY AND BANKING*

## Section 1.-The Bank of Canada

The Bank of Canada is Canada's central bank. It was incorporated under the Bank of Canada Act in 1934 and commenced operations on Mar. 11, 1935. The Act of Parliament which established the central bank charged it with the responsibility for regulating "credit and currency in the best interests of the economic life of the nation", and conferred on it certain specific powers for discharging this responsibility. Through the exercise of these powers the Bank of Canada determines broadly the combined total of the basic forms of Canadian money held by the community-currency outside banks plus deposit balances in chartered bank accounts.

By virtue of the provisions of the Bank of Canada Act, which enable the central bank to increase or decrease the total amount of cash reserves available to the chartered banks as a group, the Bank of Canada is able to determine broadly the over-all level of the total assets and deposit liabilities of the group, and hence of the combined total of currency and bank deposits. The Bank Act requires that each chartered bank maintain a minimum amount of cash reserves in the form of deposits at the Bank of Canada and holdings of Bank of Canada notes. This minimum requirement is 8 p.c. of the bank's total Canadian dollar deposit liabilities on a monthly average basis. The ability of the chartered banks as a group to expand their total assets and deposit liabilities therefore depends on the level of total cash reserves. An increase in cash reserves will encourage the banks to expand their total assets (which consist chiefly of loans and marketable securities) with a concomitant increase in deposit liabilities; a decrease in cash reserves will bring about a decline in their total assets and deposit liabilities as they seek to restore their cash reserve ratios.

[^343]The chief method by which the Bank of Canada can affect the level of cash reserves of the chartered banks, and through them the total of chartered bank deposits, is by purchases and sales of government securities. Payment by the central bank for the securities it purchases in the market adds to the cash reserves of the chartered banks as a group and puts them in a position to expand their assets and deposit liabilities. Conversely, payment to the central bank for securities it sells causes a reduction in reserves of the chartered banks and makes it necessary for them to reduce their assets and deposit liabilities.

The influence that the Bank of Canada has on credit conditions and hence on economic behaviour stems from its ability to determine broadly the level of total holdings of currency and chartered bank deposits. The trend of total holdings of these forms of money can have an influence on liquidity generally, including effects on interest rates and bond prices and the availability of credit, and on expectations regarding future financial and economic trends, all of which have some effect on decisions to spend or to save. However, many factors other than changes in the money supply also have important influences on financial and economic developments, such as: the state of economic conditions and prospects outside Canada; the competitive strength of Canadian business enterprises both at home and abroad; the character of the investment decisions and price and wage policies in domestic industries; the skills and degree of mobility of labour; and the nature of public policies at all levels of government with regard to such matters as expenditure, taxation, subsidies and the regulation of industry.

In forming its judgments in the light of changing circumstances as to whether its operations should be such as to facilitate an increase or induce a decrease in the supply of money or to hold it more or less constant, the Bank of Canada is bound by criteria laid down by Act of Parliament in the preamble to the Bank of Canada Act of 1934. In addition to the broad directive to the Bank "to regulate credit and currency in the best interests of the economic life of the nation", and "generally to promote the economic and financial welfare of the Dominion", it is also prescribed that the Bank should endeavour "to mitigate by its influence fluctuations in the general level of production, trade, prices and employment as far as may be possible within the scope of monetary action". Its operations must be based, not on any simple mechanical formula, but rather on continuous observation and appraisal of the constantly changing state of the economy as reflected in the complex pattern of economic and financial developments.

While the Bank of Canada has the power to determine the combined total of currency and chartered bank deposits, it has no means of determining how much of this total is held in the form of currency and how much in the form of chartered bank deposits. That depends on the wishes of the public, since deposits can be converted freely into notes and coin and back again. Nor does the Bank have any direct control over the growth of other forms of money or of close substitutes for money as a store of wealth in liquid form, of which there are many varieties in Canada-mainly deposit balances in savings institutions other than chartered banks and short-term securities issued by governments and corporations.

The cash reserve system in Canada, which is similar to that in a number of other countries, while placing the central bank in a position where it can determine within broad limits the total amount of chartered bank assets and deposits, leaves the allocation of bank credit and other forms of credit to the private sector of the economy. Each chartered bank can attempt to gain as large a share as possible of the total cash reserves by competing for deposits. Each bank determines how its assets will be distributed, for example, between various kinds of securities and loans to various types of borrowers. The Bank of Canada has no power to direct banks or other lenders to make funds available to certain groups or in certain regions on the same terms or on different terms than to other groups or in other regions. The influence of the central bank-based in essence on its power to expand or contract chartered bank cash reserves through its market purchases or sales of securitiesis both indirect and impersonal and is brought to bear on financial conditions generally through the chartered banks and the numerous inter-connected channels of the capital market.

The powers of the Bank are set forth in the Bank of Canada Act, 1934 (RSC 1952, c. 13), revisions in which were made in 1936, 1938 and 1954. Some of these powers are outlined below.

The Bank may buy and sell securities issued or guaranteed by Canada or any province, short-term securities issued by Britain, treasury bills or other obligations of the United States, and certain classes of short-term commercial paper. The Bank is authorized by the Industrial Development Bank Act to purchase bonds and debentures issued by the Industrial Development Bank. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may also deal in foreign exchange. The Bank may accept deposits that do not bear interest from the Government of Canada, the government of any province, any chartered bank or any bank to which the Quebec Savings Bank Act applies. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

The Bank acts as the fiscal agent for the Government of Canada in the payment of interest and principal and generally in respect of the management of the public debt of Canada.

The Bank has the sole right to issue paper money for circulation in Canada. Details regarding the note issue are given on p. 1092.

The Bank of Canada may vary the minimum cash reserve requirement of the chartered banks between 8 p.c. and 12 p.c. of their Canadian dollar deposit liabilities, provided that the chartered banks are given a minimum notice period of one month before each increase becomes effective and that any increase is not more than 1 p.c. during any one month. When this legislation became effective on July 1, 1954, the requirement was 8 p.c. and it has since remained at that level. (Prior to July 1, 1954, each chartered bank was required to maintain at all times cash reserves equal to not less than 5 p.c. of its Canadian dollar deposit liabilities; in practice the chartered banks as a group normally worked to a ratio of about 10 p.c.)

The Bank may make loans or advances for periods not exceeding six months to chartered banks, or to banks to which the Quebec Savings Bank Act applies, on the pledge or hypothecation of certain classes of securities. Loans or advances on the pledge or hypothecation of readily marketable securities issued or guaranteed by Canada or any province may be made to the Government of Canada or the government of any province for periods not exceeding six months. Other loans may be made to the Government of Canada or the government of any province in amounts not exceeding a fixed proportion of such government's revenue; such loans must be repaid before the end of the first quarter after the end of the fiscal year of the borrower.

The Bank of Canada is required to make public at all times the minimum rate at which it is prepared to make loans or advances; this rate is known as the Bank Rate. Since Nov. 1, 1956 the Bank Rate has been established weekly at a fixed margin of $\frac{1}{2}$ of 1 p.c. above the latest weekly average tender rate for 91-day treasury bills.

Sect. 23 of the Bank of Canada Act provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its outstanding notes and deposit liabilities. This requirement was suspended in 1940 when, under the terms of the Exchange Fund Order, the Bank's gold holdings were transferred to the Exchange Fund Account to form part of Canada's official gold and United States dollar reserves. The Currency, Mint and Exchange Fund Act passed in 1952 provides that, notwithstanding Sect. 23 of the Bank of Canada Act, the Bank of Canada is not required to maintain a minimum or fixed ratio of gold or foreign exchange to its liabilities unless the Governor in Council prescribes otherwise.

The Bank is under the management of a Board of Directors composed of a Governor, a Deputy Governor and twelve Directors. The Governor and Deputy Governor are appointed for terms of seven years each by the Directors, with the approval of the Governor General in Council. The Directors are appointed by the Minister of Finance, with the
approval of the Governor General in Council, for terms of three years each. The Deputy Minister of Finance is a member of the Board but does not have the right to vote. There is an Executive Committee of the Board composed of the Governor, the Deputy Governor, one Director and the Deputy Minister of Finance (who is without a vote) which has the same powers as the Board except that its decisions must be submitted to the Board at its next meeting. In addition to the Deputy Governor who is a member of the Board, there may be one or more Deputy Governors appointed by the Board of Directors to perform such duties as are assigned by the Board.

The Governor is the chief executive officer of the Bank and Chairman of the Board of Directors. The Governor has the power to veto any action or decision of the Board of Directors or of the Executive Committee but such veto is subject to confirmation or disallowance by the Governor General in Council. In the absence of the Governor, the Deputy Governor, who is a member of the Board, exercises all the powers and functions of the Governor.

The capital of the Bank is $\$ 5,000,000$ and is held entirely by the Minister of Finance. The Bank of Canada Act as amended in 1954 provides that each year 20 p.c. of the Bank's annual profits (after provision for depreciation in assets, pension funds and such matters) shall be allocated to the Rest Fund until the Rest Fund reaches an amount five times the paid-up capital of the Bank and the remainder shall be paid to the Receiver General and placed to the credit of the Consolidated Revenue Fund. At the end of 1957, the Rest Fund of the Bank reached its maximum of $\$ 25,000,000$ so that, since that date, the whole of the Bank's profits have been transferred to the Receiver General.

The head office of the Bank is at Ottawa. It has agencies at Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Regina, Calgary and Vancouver and is represented in St. John's and Charlottetown. The agencies are concerned chiefly with the functions of the Bank as fiscal agent for the Government of Canada and with the issue and redemption of currency. The Industrial Development Bank, which is described on the following page, is a subsidiary of the Bank of Canada.

The Bank of Canada Act requires that statements of the assets and liabilities of the Bank on each Wednesday and on the last day of each month be published in the Canada Gazette. A summary of the statements as at Dec. 31, 1958-61, appears in Table 1.

1.-Assets and Labilities of the Bank of Canada, as at Dec. 31, 1958-61-concluded

The Industrial Development Bank.-The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:-
> "To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises."

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors of the Bank of Canada and the Deputy Minister of Trade and Commerce. The authorized capital of the Bank is $\$ 50,000,000$ and it may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed five times the aggregate of the Bank's paid-up capital and Reserve Fund.

The Bank may extend financial assistance to industrial enterprises in Canada which, by definition in the Act, include any industry, trade or other business undertaking of any kind. With respect to such enterprises the Bank is empowered to lend money or guarantee loans; and where an enterprise is a corporation the Bank may also enter into underwriting agreements with regard to any issue of stock, bonds or debentures; acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement; and acquire certificates issued by a trustee to finance the purchase of transportation equipment. The total amount of commitments of the Bank, in the form of loans, guarantees, etc., in excess of $\$ 200,000$ each, may not exceed $\$ 200,000,000$.

The Bank may accept any form of collateral security against its advances, including realty and chattel mortgages which constitute the usual kind of security taken. The Bank is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of Incorporation provides that it should extend credit only when, in the Bank's opinion, credit or other financial resources would not otherwise be available on reasonable terms and conditions. Its lending takes the form of fixed-term capital
loans rather than current operating loans. The Bank is specifically prohibited from engaging in the business of deposit banking. It has branch offices in the following cities: St. John's, Halifax, Saint John, Moncton, Quebec, Trois Rivières, Montreal, Ottawa, Toronto, Hamilton, Waterloo, London, Sudbury, Port Arthur, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver and Victoria.

${ }^{1}$ Includes investments; the change in loans outstanding does not equal the difference between disbursements and repayments because of year-end accounting adjustments.

## Section 2.-Currency

## Subsection 1.-Notes and Coinage

Note Circulation.-The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. Those features of the development which then became permanent are outlined in the 1941 Year Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of $\$ 1, \$ 2, \$ 5, \$ 10, \$ 20$, $\$ 50$ and $\$ 100$. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of $\$ 1,000$ to $\$ 50,000$ denomination that had previously been used as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered banks to issue or re-issue notes after Jan. 1, 1945, and in January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

${ }^{1}$ Total issue less notes held by chartered banks.
Coinage.*-Under the Currency, Mint and Exchange Fund Act (RSC 1952, c. 315), gold coins may be issued in denominations of twenty dollars, ten dollars and five dollars (nine-tenths fine or millesimal fineness, 900 ). Subsidiary coins include: silver coins in denominations of one dollar, 50 cents, 25 cents, 10 cents (eight-tenths fine or millesimal fineness, 800); pure nickel five-cent coins; and bronze (copper, tin and zinc) one-cent coins. Provision is made for the temporary alteration of composition in event of a shortage of prescribed metals. A tender of payment of money in coins is a legal tender in the case of gold coins issued under the authority of Sect. 4 of the Currency, Mint and Exchange Fund Act for the payment of any amount; in the case of silver coins for the payment of an amount up to $\$ 10$; nickel coins for payment up to $\$ 5$; and bronze coins up to 25 cents.

[^345]
## 5.-Canadian Coin in Circulation, as at Dec. 31, 1952-61

${ }^{1}$ Tombac, a copper-zinc alloy, was used to conserve nickel for war purposes; no coins of this metal have been
issued since 1944 .
The Royal Canadian Mint.*-The Mint at Ottawa was established as a branch of the Royal Mint under the (Imperial) Coinage Act 1870 and opened on Jan. 2, 1908. In 1931 (RSC 1952, c. 240) it was constituted a branch of the Canadian Department of Finance and has since operated as the Royal Canadian Mint. From 1858 the British North American provinces, and later Canada, obtained their coins from the Royal Mint at London or from The Mint, Birmingham, England. Before that date, coins were mainly British, United States and Spanish. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation and of British sovereigns and small coins struck under contract for Newfoundland and Jamaica.

Before 1914 only small quantities of gold bullion were refined but during World War I the Mint came to the assistance of the British Government by establishing a refinery in which nearly $20,000,000$ oz.t. of South African gold were treated on Bank of England account. The subsequent development of the gold mining industry in Canada resulted in gold refining becoming one of the principal activities of the Mint. Fine gold produced from the rough bullion shipments received from the mines is purchased by the Mint and later delivered to the Bank of Canada for account of the Minister of Finance in bars of approximately $400 \mathrm{oz} . \mathrm{t}$. each or, for those mines authorized to sell gold in the open market, the bullion is shipped according to instructions from the mines. The fine silver extracted from the rough gold is generally used for coinage purposes.

* Revised by the Master of the Royal Canadian Mint, Ottawa.

${ }^{1}$ Less total float, i.e., cheques and other items in transit. $\quad{ }^{2}$ The deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes were reclassified from "personal savings deposits" to "other notice deposits" as at Sept. 30, 1957, in the returns of the banks to the Department of Finance; from that date the figures are thus not comparable with those for previous years. The amount of deposits reclassified was approximately $\$ 140,000,000$.

## Section 3.-The Commercial Banking System*

The Canadian commercial banking system consists of eight privately owned banks, chartered by Parliament and operating under the provisions of the Bank Act. Of these eight, five are nation-wide institutions; two operate mainly in the Province of Quebec and in other French-speaking areas and one, a subsidiary of a Netherlands bank, has a branch in each of the three largest cities. At the end of 1961, these banks together operated 5,381 banking offices of which 5,224 were in Canada and 157 abroad. At that date Canada had roughly one banking office for every 3,300 people, compared with one for 4,000 in Britain and one for 7,300 in the United States. These facts illustrate the chief distinguishing features of the Canadian banking system: a relatively small number of large banks having an extensive network of branches, operating under a single legislative jurisdiction (the Federal Government) and under one detailed and comprehensive statute (the Bank Act).

Since the first banks were established during the first quarter of the nineteenth century, the commercial banking system has developed in response to the changing needs of the Canadian economy, an evolution which is still in rapid progress today. Canadian economic development has been characterized by two main features-successive but by no means continuous periods of rapid geographical expansion of settlement, and a continued dependence on export markets as new natural resources (agricultural land, forests and

[^346]minerals) were exploited. Thus, Canadian banking has continually had to migrate to new areas and to find appropriate methods of financing new industries and new products; and it has from the beginning possessed a strongly 'international' character* with a good deal of emphasis on the financing of foreign trade, on foreign exchange operations, and on correspondent relations with foreign banks. At the same time, as regional isolation has gradually broken down and the economy has been integrated, banks originating in local areas have become part of a nation-wide banking system, in part by process of amalgamation particularly marked in the first twenty-five years of the present century.

## Bank Legislation

From the first, banks in what is now Canada sought to operate under Acts of incorporation (charters) passed by the legislatures of the colonies in which they operated. As new banks were incorporated and older ones obtained charter renewals, there developed in the bank charters themselves a quite extensive and fairly uniform code of banking law. At Confederation, responsibility for banking and currency was given to the Dominion Government and in 1871 the first general Bank Act was passed. This legislation is subject to review and revision every ten years, a feature that has helped to keep the banking system adapted to the needs of a changing economy.

Certain characteristic features of the Canadian financial system have thus emergednotably the traditional emphasis of the chartered banks on "commercial" banking. The early banks were established by merchants for merchants. Their note issues provided a badly needed medium of internal exchange and they advanced working capital to finance the processes of trade. The aim was to make lending as far as possible short-term and self-liquidating. The bank charters from the first contained prohibitions against lending on the security of real property, except as secondary or subsequent security. Now, however, exceptions to the rule against lending upon security of real property, incorporated in the Bank Act in 1944 and 1954, allow the banks to participate in government-guaranteed loans to farmers and fishermen and for housing constructed under the National Housing Act, to lend to oil companies on the security of oil "in, under or upon the ground" and production equipment, and to extend their consumer-finance lending by taking chattel mortgages. It is also permissible for banks to make advances on the security of natural products and goods, wares and merchandise while they remain in the borrower's possession. These 'pledge' arrangements have facilitated loans to small businesses and farmers and have aided in commercial and manufacturing development, while giving the banks a reasonable degree of protection for their loans.

Today the Bank Act has become a most detailed and comprehensive piece of legislation which provides for the internal regulation and organization of the banks, for the auditing of their accounts, and for the ways in which their capital stock may be issued and transferred, their dividends paid, and their affairs settled in case of amalgamation, winding-up or insolvency. In addition, it states what cash reserves the banks must keep, what reports they must make to the Government and to the Bank of Canada about their affairs and sets forth a variety of rules governing the conduct of business with the public. The Bank Act also specifies the maximum rate of interest that may be charged on bank loans. (Since the 1944 Bank Act Revision this ceiling has been 6 p.c., replacing the 7-p.c. ceiling that had prevailed since 1871.) The banks derive their corporate existence from the Act, which states that "each bank. . . . is a body politic and corporate and this Act is its charter"; successive Bank Acts have empowered the banks to do business for a period of ten years, until the next revision of the Act.

## Banking Operations

Operating under the Bank Act, the chartered banks at their branches accept deposits from the public, make loans covering a wide range of commercial, industrial, agricultural and consumer activities, deal in foreign exchange, receive and pay out Bank of Canada

[^347]notes and coin, provide safekeeping facilities, and perform a variety of other services coming within the scope of the general business of banking. The head office of a Canadian bank does not transact ordinary day-to-day business with the public; it performs general administration and policy-making functions, manages the bank's investment portfolio, does its centralized accounting work, and maintains specialized departments devoted to inspection of branch operations, the development of branch office methods, the acquisition of new business, premises, staff, arrangements with foreign banks, advertising, etc.

Under its branch system, Canadian banking is able to provide standard banking facilities throughout the country. Every branch, even the smallest, can provide all banking services, and each has behind it the resources of a large bank, which means that lending requirements can be met just as well by a branch in a small town or a suburban branch as in the main branches of a large city. Branch banking also provides an excellent training for Canadian bank officers, through the system of promotion and transfer from branch to branch. Almost without exception, the chief executives of the Canadian banks have grown up in the service and have been trained in this way.

The branch system has proved to be most flexible and Canadian banking has been able to keep pace with settlement and economic development during its periods of most rapid growth. Particularly since the end of the Second World War, with a rapidly expanding economy, sharply rising population and growing urbanization, new branches have been opening at a very rapid rate. Offices have been established along the frontiers of the economy, in new towns, oil fields and mining camps, as well as in the long-established urban centres where industrial and commercial growth have so enlarged the demand for banking services. The banking needs of new groups of suburban dwellers have also been met by the establishment of offices in shopping centres. In all, the number of banking offices in Canada, which was about 3,300 at the end of 1939 and 3,100 at the end of 1945 , grew by over 2,100 in the sixteen postwar years. As the growth in the number of branches suggests, Canadian banks have been taking full advantage of the expansive postwar atmosphere to extend the volume and variety of their services to industry and to individuals. Strongly competing for customers, they have offered a wide variety of new deposit arrangements, including new savings programs of various kinds and new forms of chequing accounts, and greatly broadened their lending activities.

By the end of the War, the banks had experienced more than fifteen years of restricted demand for commercial credit. Loans had declined sharply during the depression and shown only a slightly rising trend during the pre-war years of incomplete recovery and, of course, in the wartime economy bank lending was subject to a variety of restrictive influences. The result was a marked change in the composition of bank assets; by the end of 1945 security holdings accounted for about 55 p.c. of the banks' total assets, compared with a little over 40 p.c. just before the War and only about 15 p.c. in 1930. In the early years of postwar reconstruction, the economic control apparatus created for the War was gradually dismantled. The expansion of the private sector of the economy and the contraction of the government sector was quickly reflected in a shift of bank assets from government securities to commercial loans. Between the end of 1945 and the end of 1950, bank loans in Canadian currency increased from about 21 p.c. to 31 p.c. of total assets. There was, at the same time, a rapid growth in total assets, as the monetary authorities leaned to the side of relatively easy money conditions to stimulate the economy and to ward off the widely anticipated postwar recession. In the five years ended Dec. 31, 1950, total assets expanded from about $\$ 7,300,000,000$ to $\$ 9,400,000,000$, almost all of the increase being in Canadian assets.

It was not until the outbreak of the Korean war in June 1950, that the fear of inflation, arising from the heavy demands on Canadian resources, led to the adoption of restraining measures. Since then the banks have experienced substantial changes in their creditgranting capacity, as the country's official monetary policy was adapted to meet changes in business conditions. Alternating periods of ease and restraint have been marked by periods of rapidly rising bank assets followed by levelling-off phases, though never by actual declines.

The Korean boom of 1950-51 was followed, after only a short pause, by the investment boom of 1953-54. Recession in 1954-55 was accompanied by an easy monetary policy, during which the banks built up their liquid assets in the form of government bonds. Then a second and greater investment boom got under way in late 1955 , which carried the Canadian economy and the banking system into another period when resources were strained to the limit. At this time new measures of restraint were introduced into the Canadian banking system by the monetary authorities, including an agreed secondary reserve ratio of 7 p.c. in addition to the cash reserves of 8 p.c. already prescribed in the Bank Act Revision of 1954. A further agreement with the Bank of Canada was aimed at restraining term loans for capital purposes* and in 1956 bank loans to instalment finance companies were also put under some restraint. The boom of $1955-57$ was followed by a mild recession in 1957-58, moderate recovery in 1958-59, slackening in 1960 and recovery again in 1961. In this period the banks have not regained the liquidity which characterized earlier postwar recessions, and there has been a growing need to husband resources carefully for the various and growing alternative outlets which developed as the result of economic growth, and of the efforts of both the Government and the banks themselves to provide new uses for bank credit.

One of the first government measures was the Farm Improvement Loans Act of 1944, under which the chartered banks were authorized to make loans to farmers for the purchase of equipment and livestock and for making various improvements to their farm buildings and facilities. These loans are often for sizable amounts (an average about $\$ 1,500$ ) and the terms have been gradually extended to a maximum sum of $\$ 7,500$ outstanding to any one borrower with a maximum period of ten years (four years for implements). The banks are guaranteed against loss up to 10 p.c. of their loans made during the three-year "lending periods", up to a maximum total of loans by all banks. This total is $\$ 400,000,000$ for the lending period to end in mid-1962. By the end of 1961 the total amount of loans made under this Act was more than $\$ 1,100,000,000$.

The 1954 Revision of the Bank Act introduced a major change in banking practice, by enabling the banks to acquire mortgages issued under the National Housing Act. About 35 p.c. of all NHA mortgage loans in the years 1954-59 were made by the chartered banks, but at the end of 1959 the NHA interest rate was raised to $6 \frac{3}{4}$ p.c. and the banks withdrew from this field of lending. Notwithstanding this, by Dec. 31, 1961 they held some $\$ 950,000,000$ in NHA mortgages, representing about 5 p.c. of total assets.

Another change affecting housing in the 1954 Revision enabled the banks to make Home Improvement Loans under a guarantee system rather similar to the one developed for Farm Improvement Loans. By the end of 1961, Home Improvement Loans amounting to $\$ 238,000,000$ had been approved and the banks had about $\$ 66,000,000$ of such loans on their books.

A more recent measure, passed in November 1960, is the Small Business Loans Act, which guarantees, under terms to the banks almost exactly similar to those of the Farm Improvement Loan Act, certain types of bank loan to small businesses for the purposes of making capital improvements to premises and equipment. This provides for loans that do not fall within the usual scope of bank lending to small business, by reason of the term nature of the loan, together with the lack of collateral resources of the borrower. Of course, chartered banks already make loans to small businesses for a great variety of purposes, including many of a medium-term character; indeed, the working capital loan to the small-size or medium-size industry or commercial enterprise is the traditional stock-in-trade business of the chartered banks.

In April 1961 the charter of the Export Finance Corporation of Canada Limited, which had been incorporated by special Act of Parliament in June 1959 for private interests, was acquired by the chartered banks. The principal purpose of the Corporation is to assist in the medium-term (one to five years) financing of exports which have been insured by the Export Credit Insurance Corporation, a Crown company.

[^348]Still another area of lending which has expanded greatly in recent years is that of consumer credit. While the banks have always made some personal loans, they have not until recently moved aggressively into the general field of lending to the general public for the purchase of automobiles, consumer durables and debt consolidation. Following the 1954 Bank Act Revision, and partly as a result of the change then made which enabled the banks to take chattel mortgage security, some of the banks have developed extensive consumer credit divisions. Personal loans made by the banks, other than those secured by stocks and bonds and Home Improvement Loans, mounted from $\$ 420,000,000$ at the end of 1957 to $\$ 1,067,000,000$ outstanding at Mar. 31, 1962.

Outside of Canada, the Canadian banks have continued to expand their branch systems in the Caribbean area, though the two Canadian banks operating in Cuba have found it necessary to withdraw. Elsewhere abroad, the banks have expanded their representation in South America and in Europe. In recent years the growth of an international money market, following the economic recovery in Europe and the restoration of confidence in the stability of the Western economies and their currencies, has led to large movements of Western capital from one centre to another. The Canadian banks have participated extensively in this international money market, mainly through New York and London where most of them maintain large offices.

The postwar growth in bank assets has been accompanied by a substantial increase in total earnings. Earnings per share of capital employed did not increase to the same extent, however, as the banks found it necessary to raise new funds from time to time after 1950 in order to maintain an appropriate relationship between their shareholders' capital and the rapidly rising level of risk assets. The banks have been among the largest issuers of new share capital to Canadians in the postwar period.

## Subsection 1.-Statistics of Chartered Banks

Branches of Chartered Banks.-Although there are fewer chartered banks now than at the beginning of the century, there has been a great increase in the number of branch banking offices. As a result of amalgamations, the number of banks declined from 34 in 1901 to 10 in 1931, and remained at that figure until the incorporation of a new bankThe Mercantile Bank of Canada-in 1953 brought the total to 11. Since then the amalgamation in 1955 of The Bank of Toronto and The Dominion Bank as The TorontoDominion Bank, the amalgamation of Barclays Bank (Canada) with the Imperial Bank of Canada in 1956 and the amalgamation of the Canadian Bank of Commerce and the Imperial Bank of Canada as the Canadian Imperial Bank of Commerce on June 1, 1961 have reduced this number to eight. The number of branches of chartered banks in each province periodically from 1868 is given in Table 8.
8.-Branches of Chartered Banks, by Province, as at Dec. 31 for Certain Years 1868-1961

Norz. Figures for 1920 and subsequent years include sub-agencies in Canada receiving deposits for the banks employing them; there were 768 such sub-agencies at Dec. 31, 1961.

Financial Statistics of the Chartered Banks.-The classification of chartered bank assets and liabilities was revised by the Bank of Canada Act 1954, so that the statistical series given in the following tables begins with that year. Figures shown in Table 11 prior to July 1954 have been adjusted to comply with the new classification. Month-end data are available from Dec. 31, 1954, to date in the Bank of Canada Statistical Summary.
11.-Assets and Liabilities of the Chartered Banks, as at Dec. 31, 1952-61
(Millions of dollars)

## 13.-Canadian Cash Reserves, 1952-61

Nore.-For periods prior to July 1954 all figures are daily averages; from July 1954, in accordance with the Bank Act 1954, Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposits are averages of the four consecutive Wednesdays ending with the second last Wednesday in the previous month.
(Millions of dollars)

| Year | Cash Reserves |  |  | Canadian Dollar Deposit Liabilities ${ }^{1}$ | Average Cash Reserve Ratio ${ }^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Bank of Canada Deposits | Bank of Canada Notes | Total |  |  |
| 1952. | 606 | 239 | 844 | 8,110 | 10.4 |
| 1953. | 627 | 256 | 883 | 8,624 | 10.2 |
| 1954--January to June | 634 | 260 | 894 | 8,820 | 10.1 |
| 1954-July to December | 525 | 286 | 811 | 9,097 | 8.9 |
| 1955...................... | 541 | 293 | 834 | 9,915 | 8.4 |
| 1956. | 548 | 325 | 873 | 10,527 | 8.3 |
| 1957.. | 535 | 335 | 870 | 10,601 | 8.2 |
| 1958. | 607 | 336 | 943 | 11,452 | 8.2 |
| 1959. | 648 | 351 | 999 | 12,187 | 8.2 |
| 1960. | 625 | 360 | 985 | 12,052 | 8.2 |
| 1961. | 673 | 367 | 1,040 | 12,804 | 8.1 |

${ }^{1}$ From July 1954 the figures are not adjusted for items in transit and are not strictly comparable with the figures for earlier periods.

2 Prior to July 1, 1954, the statutory minimum requirement was 5 p.c. for each day; since that date it has been a monthly average of 8 p.c.

Liquid Asset Ratio.- In the course of discussions with the chartered banks in November and December 1955, the Bank of Canada urged the adoption of a standard practice regarding the maintenance of a minimum ratio of liquid assets (cash, day-to-day loans and treasury bills) to deposits. The purpose of this suggestion was to establish a working principle of bank operations which would help the central bank in the task of restraining inflationary pressures that might threaten in the future. After discussion the banks agreed to work to achieve, by May 31, 1956, a minimum liquid asset ratio of 15 p.c. which they would endeavour to maintain on a daily average basis from June on. On this basis, fluctuations above or below 15 p.c. might occur from day to day or week to week, but for the month as a whole the average would not be below the target ratio. From June 1956 the banks have maintained a daily average ratio of at least 15 p.c.

## 14.-Classification of Chartered Bank Deposit Liabilities Payable to the Public in Canada

Cheque Payments.-A monthly record of the value of cheques charged to customer accounts at all chartered bank offices in 35 major clearing-house centres of Canada is available from 1924. Except for a minor setback in 1938, the value of cheques cashed shows a continuously upward trend from 1932, the low point of the depression years. The total $\$ 293,784,342,000$ in 1961 was a record, 850 p.c. greater than in 1938; the increase equalled the gain in gross national product during the same period. The advance was well distributed throughout Canada's five economic areas. British Columbia showed the largest gain with an increase of 955 p.c. The Prairie Provinces were second with an advance of 896 p.c., followed by Ontario with 876 p.c., the Atlantic Provinces with 819 p.c. and Quebec with 775 p.c.

Value of cheques cashed in 30 of the 35 centres was higher in 1961 than in 1960. Payments in Toronto showed the same 7.8 p.c. gain over 1960 as over 1959 and Montreal rose by 7.4 p.c. In comparison, Winnipeg advanced by 10.8 p.c. and Vancouver by 14.5 p.c.

## Subsection 2.-Government and Other Banking Institutions

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies: (1) the Post Office Savings Bank, in which deposits are a direct obligation of the Government of Canada; (2) Provincial Government savings banking institutions in Ontario and Alberta, where the depositor becomes a direct creditor of the province; and (3) two important savings banks in the Province of Quebec-the Montreal City and District Savings Bank and La Banque d'Economie de Québec-established under federal legislation and reporting monthly to the federal Department of Finance. In addition, co-operative credit unions encourage savings among low-income classes and extend small loans to their members.

Post Office Savings Bank.-The Post Office Savings Bank was established under the Post Office Act of 1867 (SC 1867, c. 10) to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon" Branches of the Government of Canada's Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years and the amalgamation was completed in March 1929. Summary financial statistics for the years ended Mar. 31, 1959-62, follow. Figures back to 1868 are available in previous editions of the Year Book.

| Item | 1959 | 1960 | 1961 | 1962 |

Provincial Government Savings Banks.-Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta.

Ontario.-The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 Session and the first branches were opened in March 1922. Interest at the rate of $2 \frac{1}{4}$ p.c. and $2 \frac{3}{4}$ p.c. per annum, compounded half-yearly, is paid on accounts, and deposits are repayable on demand. Total deposits at Mar. 31, 1962 were $\$ 78,830,000$ and the number of depositors was approximately 95,000 . Twenty-one branches were in operation throughout the province.

Alberta.-Savings deposits are accepted at 52 Provincial Treasury Branches throughout Alberta. The total of these deposits at Mar. 31, 1961 was $\$ 32,068,563$, of which $\$ 30,916,147$ was payable on demand bearing interest at $2 \frac{3}{4}$ p.c. per annum, and $\$ 1,152,416$ in Term savings for terms ranging from three months to five years bearing interest at rates from $2 \frac{3}{4}$ p.c. to 4 p.c. per annum depending on the term.

Authority was also given for the issue by the Provincial Treasury Department of savings certificates after Jan. 1, 1960 on the following basis: demand certificates bearing interest at $2 \frac{3}{4}$ p.c. per annum in denominations of $\$ 10$ and up, and five-year certificates bearing interest at $4 \frac{1}{2}$ p.c. per annum in denominations of $\$ 25$ and up. Nine of these certificates were outstanding as at Mar. 31, 1961.

Quebec Savings Banks.-The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871 had, at Mar. 31, 1962, a paid-up capital and reserve of $\$ 10,500,000$, savings deposits of $\$ 270,338,633$ and total liabilities of
$\$ 283,370,627$. Total assets amounted to $\$ 283,370,627$, including $\$ 146,964,464$ of federal, provincial, municipal and other securities. La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a federal charter by SC 1871, c. 7, had, at Mar. 31, 1962, savings deposits of $\$ 49,041,290$ and a paid-up capital and reserve of $\$ 3,000,000$. Liabilities amounted to $\$ 58,873,637$ and total assets to a like amount.

The following statement shows the combined savings deposits in the Montreal City and District Savings Bank and La Banque d'Économie de Québec for the years ended Mar. 31, 1953-62. Figures back to 1868 are available in previous editions of the Year Book.

| Year | Deposits | Year | Deposits |

Credit Unions.-Credit unions are savings and loan associations operated by people with a common bond. The bond of association may be membership in a parish, club, lodge or labour union, that of employment in a plant, industry or department, or that of residence in a rural or a well-defined urban community. Figures showing the growing importance of credit unions as savings and loan associations in Canada are given in Table 18. During the ten-year period 1951-60 the number of credit unions chartered increased by 50 p.c.; the number of members in reporting organizations by 124 p.c.; and the assets of reporting organizations by 262 p.c. Membership exceeded 2,500,000 in 1960. Quebec holds the lead in the Canadian credit union movement having more than half the total membership and about 60 p.c. of the total assets of all credit unions in Canada in 1960.

Occupational credit unions are growing at a faster rate than those of other types; they accounted for 35 p.c. of the number of credit unions in Canada in 1960, the same percentage as rural credit unions. In Ontario they represented 68 p.c. of the provincial total in 1960. Occupational credit unions also lead in Alberta and British Columbia. In Manitoba, their number was about the same as that of rural credit unions. In the Atlantic Provinces, Quebec and Saskatchewan the credit unions are predominantly rural.

Savings, which include shares and deposits, reached $\$ 1,195,000,000$ in 1960 , an increase of 13 p.c. over 1959; the average saving per credit union member was \$471. Loans made to members from these savings amounted to $\$ 482,137,000$, at interest rates of 1 p.c. per month or less on the unpaid balance.

There were 27 central credit unions in 1960. The main function of the central credit union is to act as a credit union for credit unions mainly by accepting deposits from them and making loans to them. The centrals facilitate the flow of funds to credit unions that cannot meet the demand for local loans. Some of these central credit unions admit cooperative associations to membership.

The Canadian Co-operative Credit Society serves as a central credit union for provincial centrals and co-operatives all across Canada. In 1960, membership in this national organization included four provincial centrals, four commercial co-operatives, The Cooperative Life Insurance Company and The Co-operative Fire and Casualty Insurance Company.

## Section 4.-Foreign Exchange

The dollar, established officially as the currency of the united provinces of Canada on Jan. 1, 1858, and extended to cover the New Dominion by the Uniform Currency Act of 1870 , was defined as $15 / 73$ of the British gold sovereign.* That is, the par rate of exchange between the dollar and the pound sterling was fixed at $\$ 4.866$, making the Canadian currency the equivalent of the United States dollar at parity. With minor variations between the import and export gold points representing the cost of shipping gold in either direction, the value of the pound sterling in Canada remained at this level until the outbreak of World War I. The United States dollar, on the other hand, was at a discount in terms of Canadian funds for the first eleven years after Confederation since it was not redeemable in gold from February 1862 to January 1879. On the basis of gold equivalents it would appear that the greatest monthly average discount on the United States dollar after Confederation was approximately 31 p.c., reached in August 1868. From 1879 to 1914 the dollars of the two countries remained at par, varying only within the gold points or under $\$ 2$ per thousand.

[^349]On the outbreak of World War I, Canada and Britain suspended the gold standard. For some weeks both the pound and the Canadian dollar rose to a premium in New York. Subsequently both fell back with the pound going to a slight discount. In January 1916 the pound was officially pegged at $\$ 4.76$ in American funds. This level was maintained with the help of funds realized by sales of United States securities owned by residents of Britain, by borrowing in the United States and, after the American entry into the War, by the United States Government financing Allied purchases in that country.

From 1915 to the end of 1917, fluctuations in the rate of exchange between the Canadian and United States dollars did not exceed 2 p.c. on either side of parity; the pound was stable in terms of United States dollars during this period. In 1918 the Canadian dollar began to weaken. After the pound was unpegged in 1919, the Canadian dollar declined further and in 1920 it fell to 82 cents in New York with sterling going as low as $\$ 3.18$.

By the latter half of 1922 the Canadian dollar had returned practically to par in New York. Despite some further weakness in sterling, the dollar remained close to that level during the next two years, averaging 98.04 and 98.73 cents in terms of the United States dollar in 1923 and 1924, respectively, and fluctuating between a discount of about 3.6 cents and a premium of approximately 0.4 cents. After Britain resumed gold payments in April 1925, the range of fluctuation of the Canadian dollar narrowed further. From Canada's return to the gold standard in the period July 1, 1926 to January 1929, the exchange rate remained within the gold points. The Canadian dollar then went to a slight discount in New York. With the exception of the period July to November 1930, when it went to a small premium in New York, the dollar remained below parity until Britain abandoned the gold standard in September 1931. After that month the pound sterling depreciated sharply and the Canadian dollar followed, reaching lows* in New York of 80.5 cents in December 1931 and 82.6 cents in April 1933.

Following the prohibition of gold exports in the latter month by the United States, the pound and the Canadian dollar strengthened rapidly in terms of American funds. By November 1933, both currencies had reached a premium in New York. Meanwhile in a series of steps beginning with permitting the export of newly mined gold in August 1933, the United States moved toward resumption of the gold standard. As of Feb. 1, 1934, the United States Treasury undertook to buy all gold offered at $\$ 35$ per ounce. After that the exchange rate between the Canadian and United States dollars stabilized. Until the outbreak of war in 1939 much of the trading was conducted within one cent of parity although the Canadian dollar in New York did go as high as 103.6 cents (September 1934) and as low as 98.0 cents (September 1938).*

On the outbreak of World War II in September 1939, Britain and other sterling countries introduced foreign exchange control involving fixed buying and selling rates of $\$ 4.02 \frac{1}{2}$ and $\$ 4.03 \frac{1}{2}$, respectively, in terms of the United States dollar. The Canadian dollar in New York declined until Sept. 16, 1939, when the Government instituted foreign exchange control $\dagger$ in Canada and established fixed buying and selling rates of $\$ 1.10$ to $\$ 1.11$ for the U.S. dollar and $\$ 4.43$ to $\$ 4.47$ for sterling. As compared with previous months, the depreciation of the Canadian dollar in terms of United States funds was approximately half as great as that of the pound sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to $\$ 1.10 \frac{1}{2}$ and $\$ 4.45$, respectively, the official rates for the Canadian dollar remained unchanged until July 5, 1946. At that time the rate on the U.S. dollar was restored to par, with buying and selling rates for that currency of $\$ 1.00$ to $\$ 1.00 \frac{1}{2}$ and for sterling $\$ 4.02$ to $\$ 4.04$. These rates continued in effect until Sept. 19, 1949 when, following a 30.5 -p.c. reduction by Britain in the value of sterling to $\$ 2.80$ U.S. (an action which was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of $\$ 1.10$ and $\$ 1.10 \frac{1}{2}$ for United States funds. Sterling was quoted at $\$ 3.07 \frac{1}{2}$ and $\$ 3.08 \frac{3}{4}$ on the basis of the New York cross rate.

[^350]On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates which had been in effect at varying levels since 1939 would be withdrawn effective Oct. 2, and that the rate would henceforth be determined in the market for foreign exchange. This policy was carried out within the framework of exchange control until Dec. 14, 1951, at which time the Foreign Exchange Control regulations were revoked by the Governor in Council, terminating the period of exchange control that had prevailed in Canada since 1939. The Foreign Exchange Control Act was repealed in 1952. On May 2, 1962, the Minister of Finance announced that the Canadian dollar was being stabilized at a fixed par value of $92 \frac{1}{2}$ cents in terms of United States currency. This action was taken with the concurrence of the International Monetary Fund and, in accordance with the Articles of Agreement of that organization, the Government of Canada undertook to maintain the Canadian exchange rate within a margin of 1 p.c. on either side of the established par value.

The movements of the U.S. dollar in Canadian funds from January 1954 to August 1962 are shown in Table 20.

## PART II.-MISCELLANEOUS COMMERCIAL FINANCE

## Section 1.-Loan and Trust Companies*

Canadian loan and trust companies, registered with either the federal or provincial governments, operate under the Loan and Trust Companies Acts (RSC 1952, c. 170 as amended by SC 1953, c. 5, and SC 1958, c. 35, and SC 1961, c. 51; and RSC 1952, c. 272 as amended by SC 1953, c. 10, and SC 1958, c. 42, and SC 1961, c. 55, respectively) and corresponding provincial legislation. $\dagger$ Although statistics of provincially registered companies are not collected in detail, it is estimated that more than 95 p.c. of the business of such companies is represented in the figures of this Section, so that they may be accepted as fairly inclusive and representative of the volume of business transacted.

The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings department deposits. The extent of investments in mortgages by federal and provincial loan companies may be gauged by the following figures: total assets of such companies for the years 1959 and 1960 amounted to $\$ 671,508,632$ and $\$ 751,369,090$, respectively, which amounts include mortgage loans of $\$ 509,669,369$ and $\$ 583,982,535$, respectively; thus, the resulting percentages of mortgages to total assets for those years were approximately 76 p.c. and 78 p.c., respectively.

Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies, as transfer agents and registrars for stocks and bond issues, as trustees for bond issues and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits for investment but the investing and lending of such deposits and of actual trust funds are restricted by law. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from $\$ 154,202,165$ in 1928 to $\$ 1,305,789,251$ in 1960 . In the former year the total of estates, trust and agency funds administered amounted to $\$ 1,077,953,643$ and in 1960 to $\$ 7,390,429,637$.

A summary of operations of provincial and federal loan and trust companies is given in Table 1. As a result of the nature of the operations of the latter companies, which are intimately connected with the matter of probate, the larger trust companies usually choose to operate under provincial charters. The statistics of Tables 2, 3 and 4 refer to those companies incorporated both by the Government of Canada and by the provinces. Included in the statistics of federal companies are data of loan and trust companies incorporated by Nova Scotia and brought by the laws of that province under the examination of the federal Department of Insurance, as well as data for trust companies in New Brunswick and Manitoba.

## Section 2.-Licensed Small Loans Companies and Licensed Money-Lenders*

Licensed small loans companies and licensed money-lenders are subject to the provisions of the Small Loans Act (RSC 1952, c. 251) as amended by c. 46 of the Statutes of 1956, an enactment of the Parliament of Canada regulating personal loans not in excess of $\$ 1,500$ made on the security of promissory notes of borrowers. Most of these notes are additionally secured by endorsements or chattel mortgages. The Act permits, in the case of licensed lenders, maximum rates of cost of loan, including charges of every kind, of 2 p.c. per month

[^354]on that portion of the unpaid balance of a loan not exceeding $\$ 300$, 1 p.c. per month on that portion of the balance exceeding $\$ 300$ but not exceeding $\$ 1,000$, and one-half of 1 p.c. per month on any remainder of the balance exceeding $\$ 1,000$. The maximum rate permitted to be charged by an unlicensed lender is 1 p.c. per month. Prior to Jan. 1, 1957, the scope of the Act extended only to loans of $\$ 500$ and under and the maximum rate permitted to be charged by licensed lenders was 2 p.c. per month and by unlicensed lenders 12 p.c. per annum. The small loans companies-five in number-were incorporated by special Acts of the Parliament of Canada, the first such company commencing business in 1928. Moneylenders, of which there are 75, are made up of companies otherwise incorporated and include a few partnerships and individuals. Table 5 gives the combined financial experience of small loans companies and licensed money-lenders for the years 1957-60.

| Surplus paid in by shareholders | 12,478,629 | 9,475,379 | 377,890 | 390,390 |
| Earned surplus. | 18,184,528 | 17,877, 114 | 17,999, 186 | 20,107,677 |
| Other..... | 15,942,693 | 19,880,717 | 27,142,315 | 32,325,589 |

The combined companies showed a sizable increase in the amount of business for 1960 as compared with 1959. While the number of small loans made to the public during the year 1960 decreased from $1,097,226$ to $1,094,512$, or by less than 1 p.c., the amount of such loans rose from $\$ 526,682,817$ to $\$ 547,824,471$, or by approximately 3 p.c. The average small loan made was approximately $\$ 501$ in 1960 compared with $\$ 480$ in 1959. At the end of 1960 small loans outstanding numbered 957,965 for an amount of $\$ 391,548,554$ or an average of $\$ 409$ per loan. These figures compare with $920,747, \$ 360,019,949$ and \$391, respectively, for 1959.

Gross profits of small loans companies and money-lenders before income taxes and before taking into account any increase or decrease in reserves for bad debts, increased from $\$ 24,767,979$ in 1959 ( $\$ 18,857,377$ being the profit on small loans and $\$ 5,910,602$ the profit on business other than small loans) to $\$ 28,220,425$ in 1960 ( $\$ 20,922,425$ being the profit on small loans and $\$ 7,298,382$ the profit on business other than small loans).

## Section 3.-Sales of Canadian Bonds*

Previous editions of the Year Book have traced sales of Canadian bonds to the end of 1960. This review continues a record of new issues placed in 1961 and refers to developments in the first two quarters of 1962.

Excluding all financing of less than one year, the grand totals of new security issues placed amounted to $\$ 5,265,956,355$ in 1961 compared with $\$ 4,267,173,888$ in 1960 . When these totals were broken down into various classifications, they showed the following comparisons: federal and guaranteed financing amounted to $\$ 3,240,430,400$ in 1961 compared with $\$ 2,680,048,600$ in 1960 ; provincial and guaranteed financing amounted to

[^355]$\$ 996,696,931$ in 1961 compared with $\$ 616,025,000$ in 1960 ; municipal financing (including parochial and miscellaneous) amounted to $\$ 441,769,524$ in 1961 compared with $\$ 472,214,288$ in 1960; corporation financing amounted to $\$ 567,059,500$ in 1961 compared with $\$ 498,886,000$ in 1960. In addition, a total of $\$ 20,000,000$ was placed in Canada during 1961 under the category of foreign government financing. This total was entirely represented by a Commonwealth of Australia issue, dated Apr. 15 and having an interest rate of $5 \frac{3}{4}$ p.c. With maturity on Apr. 15, 1981, it was offered at $\$ 98.50$ to yield 5.88 p.c.

## 6.-Sales of Canadian Bonds, by Class of Bond and Country of Sale, 1952-61

Note.-Figures from 1904 are given in the corresponding table of previous Year Books beginning with the 1933 edition.
(Source: The Monetary Times)

[^356]The federal total shown in the above table does not include refunding issues and new financing of less than one year. In that category (at $\$ 6,493,000,000$ in 1961 and $\$ 6,490,000,000$ in 1960 ), the greater part of total financing was represented by Treasury Bill sales.

Included in the federal total for 1961 is an amount of $\$ 1,040,430,400$ for Series 16 , Canada Savings Loan, as reported for subscriptions received to May 7, 1962. This Series was dated Nov. 1, 1961, to mature in ten years on Nov. 1, 1971. The bonds were available in denominations of $\$ 50, \$ 100, \$ 500, \$ 1,000$ and $\$ 5,000$. A maximum of $\$ 10,000$ was allowed per buyer, with payment to be made either at time of purchase or spread over

12 monthly savings plan instalments. Interest rates were payable annually and graduated to provide $4 \frac{1}{4}$ p.c. for the first year, $4 \frac{1}{2}$ p.c. for each of the next six years and 5 p.c. for each of the remaining three years. These various rates resulted in an average yield of 4.60 p.c. when held to maturity. Bonds could be registered in estate names or in the names of trustees under a will or administration of an estate.

Sales of Canada Savings Loans issued during the postwar period are shown in Table 7.

## 7.-Sales of Canada Savings Loans, 1946-61

Nort.-Figures for the issues $1946-60$ are for the entire loans, i.e., either to the year-end or to the closing date within the year or in the subsequent year. The figure for Series ic (1961) is to May 7,1962 and is subject to revision when complete returns are available.

| Series | Applications | Limits per Individual | Total Sales |

Provincial financing at $\$ 996,696,931$ in 1961 comprised direct sales totalling $\$ 492,405,600$ and provincial guarantees for utility, municipal and parochial purposes totalling $\$ 504,291,331$. Of a comparable total at $\$ 616,025,000$ in 1960 , the amount of $\$ 250,000,000$ represented direct provincial financing and $\$ 366,025,000$ was of a guaranteed nature. Direct provincial entries into the bond market during 1961 were as follows:-

| Province | Month | Amount | Province | Month | Amount |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | \$ |  |  | \$ |

* Provincial Savings Bonds, Series 1.

A new feature in Canadian provincial bond financing came in April of 1961 with the flotation of Savings Bonds, Series 1, by the Provinces of Saskatchewan and Manitoba. The first of these issues (Saskatchewan) was for $\$ 13,829,300$, maturing Mar. 15, 1971 and the second (Manitoba) was for $\$ 40,816,300$, maturing Apr. 1, 1971 . Both issues carried a 5 -p.c. interest rate and were offered at par by a syndicate of investment dealers and chartered banks.

In the category of direct municipal financing (exclusive of municipal issues guaranteed by various provinces), the market for new flotations totalled $\$ 441,769,524$ in 1961 compared with $\$ 472,214,288$ in 1960 . Exclusive of loans for parochial and other educational purposes
(at $\$ 102,515,500$ in 1961 and $\$ 85,320,000$ in 1960), these issues amounted to $\$ 339,254,024$ in 1961 and $\$ 386,894,288$ in 1960. Among the largest municipal borrowers in 1961 were the Metropolitan Areas of Montreal and Toronto and the Cities of Saskatoon, Winnipeg, Hamilton, Kitchener, London, Ottawa, Montreal and Halifax.

Over the past five years, a fairly stable volume of new bond sales has been recorded for federal, provincial and municipal financing. In contrast, new corporation issues have shown more varied trends, attributable principally to a general slow-down of business activity. In 1961, corporation sales totalled $\$ 567,059,500$, an increase over the totals of $\$ 498,886,000$ in 1960 and $\$ 369,025,000$ in 1959 but a decided decrease from the totals of $\$ 729,255,000$ in 1958 and $\$ 1,024,604,100$ in 1957.

The largest corporate borrowers during 1961 were The Alberta Gas Trunk Line Company Limited and The Bell Telephone Company of Canada. The Alberta Gas Trunk Line Co. Ltd. entered the market in May of 1961 with an issue of $\$ 67,000,000,5 \frac{3}{4}$ p.c., first mortgage, sinking fund bonds, Series " B ", maturing on May 1, 1981. This issue was sold privately in Canada and the United States. The Bell Telephone Company of Canada entered the market in November with an issue of $\$ 40,000,000$, first mortgage bonds, Series " V ", maturing on Jan. 2, 1982. This issue was offered at 100.25 by a syndicate of dealers.

The total of all new Canadian bond sales financed in the United States amounted to $\$ 181,902,000$ in 1961 . Following the declining trend over the past five years, it was down from $\$ 283,169,000$ in 1960 , from $\$ 472,856,431$ in 1959 , from $\$ 486,950,621$ in 1958 and from $\$ 606,876,100$ in 1957. Of the total financed in the United States in $1961, \$ 26,402,000$ was for municipal issues and $\$ 155,500,000$ was for corporation issues compared with $\$ 110,909,000$ and $\$ 80,260,000$, respectively, in 1960 . In the latter year, an additional amount at $\$ 25,000,000$ was for provincial financing and $\$ 67,000,000$ was for provincial guaranteed financing in the United States.

During the early part of 1962 (based on developments up to June 30), there were some extremely significant trends on the Canadian bond market. For example, the Provinces of Saskatchewan and Manitoba began issuance of 91-day Treasury Bills; amounts were for $\$ 1,000,000$ each with a total outstanding at $\$ 13,000,000$. While patterned on similar federal activity, there have been a number of distinctive developments in this provincial Treasury Bill financing. To date, there has been only one weekly 91 -day issue (instead of 91-day and 182-day issues) and maturities have been on Wednesdays instead of Fridays. When this study was being prepared, informed opinion suggested that the amount outstanding would soon be increased and other provinces would undertake similar flotations. The general effect should greatly broaden the scope of Canada's short-term money market with increased applications for investor participation.

Another event of major significance for the Canadian bond market came on May 2, 1962, when the international exchange rate for the dollar was fixed at $92 \frac{1}{2}$ cents in terms of United States currency. As a result, Canadian borrowers in the United States were automatically assessed increased interest and capital charges. In experiencing these losses, however, it should be realized that certain offsetting factors were involved. Had the money been borrowed in Canada, higher interest rates would have been mandatory at the time of flotation.

While it is most difficult to assess long-term results from the foreign exchange devaluation, it can be expected that Canadian bond sales in the United States will continue to decline. If comparable amounts of new financing are to be undertaken, therefore, the domestic market must be prepared to absorb them. By mid-1962 an encouraging volume of new issues had been received with few indications of any decidedly upward pressures on interest rates.

Section 3. Government Insurance. . . . . . . 1137

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

Insurance, for the purpose of statistical analysis, is usually classified as life, fire and casualty. Most companies operate under Federal Government registration although some have provincial licences only. . Also many fraternal orders and societies are engaged in this kind of business. The special articles relating to insurance that have appeared in previous editions of the Year Book are listed in Part II of Chapter XXVI under the heading "Insurance".

## Section 1.-Life Insurance $\dagger$

Life insurance in force in Canada with companies registered by the Federal Government (exclusive of fraternal benefit societies) amounted to nearly $\$ 44,649,000,000$ at the end of 1960 , an increase of $\$ 3,775,000,000$ during the year. The ratio of gain in business in force expressed as a percentage of the amount in force at the beginning of the same year, which had hovered around 10 p.c. each year during the decade ended in 1955, stood at 14.3 p.c. in 1956, 13.8 p.c. in 1957, 10.3 p.c. in 1958, 12.0 p.c. in 1959 and 9.2 p.c. in 1960.

|  | Year | In Force at Beginning of Year | Increase in Force for the Year | Percentage Gain |

## Subsection 1.-Summary of Life Insurance in Canada

Tables 1 and 2 summarize insurance premiums, claims, amounts of new policies effected, and amounts of insurance in force on Dec. 31 for the years 1959 and 1960. These data are presented in Table 1 on the basis of the supervising government authorities for the companies and societies concerned, and the same data are presented in Table 2 classified on the basis of nationality of company or society and by supervising government authorities.

## Subsection 2.-Operational Statistics for Life Insurance Transacted in Canada by Companies under Federal Registration

The amount of life insurance in force in Canada has shown an almost continuous advance year by year since the beginning of the record in 1869. The amount per capita of the estimated population has more than doubled since 1950-evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. At the end of 1960 there were 98 companies federally registered to transact life insurance in Canada, including 36 Canadian companies, 15 British and 47 foreign companies. During the year, 15 companies (six Canadian and nine foreign) became registered and 10 companies (one Canadian, four British and five foreign) ceased to be registered.

The operations analysed in the tables of this Subsection, with the exception of Table 7, include only those companies under federal registration and are exclusive of fraternal organizations and provincial licensees. However, companies under federal registration account for over 93 p.c. of the life insurance in force in Canada.

## 3.-Life Insurance Effected and in Force in Canada by Companies under Federal Registration, Decennially 1880-1950 and Annually 1951-60

Norg.-Figures for 1869-1900 are given in the 1938 Year Book, p. 958; for 1901-39 in the 1942 edition, p. 855; and for 1940-49 in the 1957-58 edition, p. 1168. Statistics of fraternal society insurance, excluded here, are given at pp. 1126-1128.

## Subsection 3.-Finances of Companies Transacting Life Insurance under Federal Registration

The financial statistics in Tables 8 and 9 relate only to life insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising outside of Canada as well as in Canada.

## Subsection 4.-Life Insurance in Canada Transacted by Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 10 gives statistics of life insurance in Canada transacted by fraternal benefit societies and Table 11 shows statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having
regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of Actuaries) and a readjustment of rates or benefits must be made, unless the actuary certifies to the solvency of each fund. The first sections of Tables 10 and 11 relate to the 16 Canadian societies registered by the federal Department of Insurance, only one of which does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, though forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not been licensed previously by the provinces have since obtained federal authority to transact business. At the end of 1960 there were 32 foreign fraternal benefit societies federally registered to transact business in Canada although two of these do not grant life insurance benefits.

## Subsection 5.-Life Insurance Effected and in Force Outside Canada by Canadian Companies under Federal Registration

In this Subsection, there are given for the years 1959 and 1960 summary statistics of insurance effected and insurance in force at the end of the year in currencies other than Canadian dollars, as written by Canadian companies under federal registration. The statistics for individual companies are shown in Table 12 and for individual currencies in Table 13. The data given in both of these tables are in terms of Canadian dollars, the conversions from the various foreign currencies having been made at the book rates of exchange used by the various companies. Although these book rates of exchange do not follow the day-to-day fluctuations in the current rates of exchange, they are adjusted when necessary to keep them reasonably in line with the current rates.

Canadian life insurance companies operating under federal registration at Dec. 31, 1960 had life insurance in force amounting to $\$ 12,869,133,074$ in countries outside Canada. Insurance in force in currencies other than Canadian dollars amounted to $\$ 12,794,026,168$; the difference between these figures is presumably the net amount of business in countries outside Canada transacted in Canadian currency. The business in force in Canada of Canadian companies registered by the Federal Government amounted to $\$ 30,418,380,871$ at Dec. 31, 1960, and the total business on the books of these companies, in and out of Canada, amounted to $\$ 43,287,513,945$. Thus, about 30 p.c. of the total business in force for Canadian companies registered by the Federal Government was in force in countries outside Canada.

In connection with their business outside Canada, the Canadian life insurance companies registered by the Federal Government held, at the end of 1960, Commonwealth and foreign investments in the amount of $\$ 2,795,873,262$.
12.-Life Insurance Effected and in Force for Canadian Companies (excluding Fraternal Socleties) under Federal Registration, in Currencies other than Canadian Dollars, by Company, 1959 and 1960.

## Section 2．－Fire and Casualty Insurance

At the end of 1960 there were 284 companies registered by the Federal Government to transact fire insurance in Canada（ 87 Canadian， 79 British and 118 foreign）．Of these companies， 276 （ 81 Canadian， 79 British and 116 foreign）were also registered to transact casualty insurance．In addition， 95 companies were registered by the Federal Government to transact casualty insurance but not fire insurance（ 22 Canadian， 8 British and 65 foreign）．Of the companies registered to transact fire and／or casualty insurance， 67 were also registered to transact life insurance； 13 of these were registered for fire，life and casualty insurance and 54 for life and casualty but not fire insurance．It should be noted also that，in addition to the companies registered by the Federal Government to transact casualty insurance，there were 25 registered fraternal benefit societies transacting accident and sickness insurance，of which 22 also transacted life insurance．

As shown in Table 14, some fire and casualty insurance is transacted in Canada by companies that are provincially licensed only. These companies generally confine their operations to the province of incorporation but may be allowed to sell insurance in other provinces. Many of them are mutual organizations transacting only fire insurance on a county, municipal or parish basis.

Table 14 summarizes net premiums written and net claims incurred for the years 1959 and 1960 in the fields of fire insurance and casualty insurance in Canada. These data are presented on the basis of the supervising government authorities for the companies concerned. The table relates to insurance companies only; no data are included with respect to fraternal benefit societies.

${ }^{1}$ Includes certain 'floater' business that cannot be apportioned to any one province.

## Subsection 2.-Fire Losses

The information in Tables 17 to $\mathbf{2 0}$, which deals with the loss of property and life caused by fire, has been summarized from the annual Statistical Report of Fire Losses in Canada prepared by the Dominion Fire Commissioner, Department of Public Works. Federal losses not included in these figures in 1960 amounted to $\$ 2,553,339$ from 2,015 fires; average federal losses for the period 1951-60 amounted to $\$ 5,021,626$ from an annual average of 2,205 fires.

## 17.-Statistics of Fire Losses, 1951-60

Nore.-Figures for 1926-46 are given in the 1947 Year Book, p. 1078, and those for 1947-50 in the 1960 edition, p. 1169. Figures from 1922 may be obtained from the Dominion Fire Commissioner, Department of Public Works.

## Subsection 4.-Finances of Companies Transacting Fire and Casualty Insurance under Federal Registration

The financial statistics of Tables 22 to 24 relate to fire and casualty insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising outside of Canada as well as in Canada.

## Section 3.-Government Insurance

## Federal Government Insurance

For more than fifty years the Federal Government has operated an annuity service, instituted to assist Canadians to make provision for old age; this service is described below. In addition, various insurance schemes have been adopted in recent years by the Federal Government or co-operatively by the federal and provincial governments. Information on unemployment insurance, health insurance, veterans insurance, export credits insurance, etc., will be found in the appropriate Chapters on Labour, Health and Welfare, Foreign Trade, etc.

Government Annuities.*-The Government Annuities Act (RSC 1952, c. 132) was passed in 1908 and is administered by the Minister of Labour.

A Canadian Government annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in monthly instalments for life, or for life and guaranteed for a period of years. The minimum annuity is $\$ 10$ and the maximum $\$ 1,200$ a year or the actuarial equivalent if the annuity is to reduce by the amount of payments under the Old Age Security Act. Annuity contracts may be deferred or immediate. Deferred annuities are purchased by periodic or single premiums. Immediate annuity contracts provide immediate income. Annuities may be arranged to reduce by $\$ 65$ a month at age 70 to fit in with payments under the Old Age Security Act.

The property and interest of the annuitant are neither transferable nor attachable. In the event of the death of the annuitant before a deferred annuity vests, all money paid is refunded with interest. Provision is made in the Act for group annuity contracts whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members, the purchase money being derived partly from wages and partly from employer contributions or entirely from employer contributions. Group annuity plans now in effect cover a variety of industries and many municipal corporations throughout Canada. Annuities arising from individual contracts may be taxable in either of two ways: (1) if registered under Sect. 79B of the Income Tax Act for tax exemption on premiums, the annuity is fully taxable, or (2) if not registered the annuity is taxable on the interest portion only. Annuities arising from registered pension plans are fully taxable but the employee and the employer are entitled to tax exemption year by year on their annual contributions to the pension plan.

From Sept. 1, 1908, the date of the inception of the system, to Mar. 31, 1961, the total number of annuity contracts and certificates issued, excluding replacements, was

[^366]505,704 . On the latter date, 83,480 annuities were being paid amounting to $\$ 45,174,444$ annually and 349,900 deferred annuities were being purchased. The net total amount of purchase money received up to Mar. 31, 1961 was $\$ 1,270,359,478$.

Up to Mar. 31, 1961, 1,226 corporations, institutions and associations, as compared with 1,223 up to Mar. 31, 1960, had entered into agreements with the Government to purchase annuities. Under these arrangements, 203,940 employees or members were holding certificates for purchase of deferred annuities as compared with 205,201 one year earlier. The number of group certificates issued in the year ended Mar. 31, 1961 was 10,007 as compared with 11,564 for 1959-60.

## 25.-Individual Annuity Contracts and Certificates Issued and Net Receipts, Years Ended Mar. 31, 1956-61, with Cumulative Totals for 1909-61

## Provincial Government Insurance

Saskatchewan.-The Saskatchewan Government Insurance Office, a Crown corporation established by the Saskatchewan Government Insurance Act, 1944, commenced business in May 1945. It deals in all types of insurance other than sickness and life. The aim of the legislation is to provide residents of the province with low-cost insurance designed for their particular needs. Rates are based on loss experience in Saskatchewan only and the surplus is invested, to the extent possible, within the province. Premium income for 1961 amounted to $\$ 8,079,113$ and earned surplus to $\$ 248,419$. The total amount made available to the Government of Saskatchewan since the beginning of government insurance operations in 1945 to Dec. 31, 1961, was $\$ 4,131,654$. Assets at the latter date were $\$ 17,044,-$ 723 , of which more than $\$ 10,000,000$ were invested in bonds and debentures issued by Saskatchewan schools, municipalities and hospitals. Over 600 independent insurance agents sell government insurance throughout the province.

The Automobile Accident Insurance Act, which became effective Apr. 1, 1946, is administered by the Saskatchewan Government Insurance Office. It establishes a compulsory automatic insurance plan designed to provide a reasonable minimum of compensation for losses arising from motor vehicle accidents regardless of fault. It also provides public liability insurance, with limits of $\$ 10,000 / \$ 20,000$ for bodily injury and $\$ 5,000$ for property damage, as well as comprehensive and collision coverage subject to a $\$ 200$ deductible for private passenger cars. Rates vary from $\$ 4$ a year for trucks to $\$ 40$ for late-model private passenger cars, and also vary for other types of motor vehicles depending on size and usage. From the inception of the Act in 1946 to Dec. 31, 1961, more than $\$ 53,000,000$ were paid in claims.

The Saskatchewan Government Insurance Office, under contract with the Saskatchewan Department of Natural Resources, offers insurance to farmers covering damage to unharvested crops by certain wildlife such as ducks, geese, sandhill cranes, deer, elk, bear and antelope.

Information regarding the operation of the Saskatchewan Government Insurance Office or the Automobile Accident Insurance Act may be obtained from the Librarian, The Saskatchewan Government Insurance Office, Regina, Sask.

Alberta.-Provincial government insurance in Alberta, coming within the purview of the Alberta Insurance Act, relates (1) to the Alberta General Insurance Company, in which the entire business of the fire branch of the Alberta Government Insurance Office was vested by the Legislature on Mar. 31, 1948, and (2) to the Life Insurance Company of Alberta, which was constituted on the same date to take over the life branch of the Alberta Government Insurance Office. Each company is administered by a separate
board of directors. The Lieutenant-Governor in Council appoints the members to the respective boards but the charter of the Life Insurance Company of Alberta provides for the election of two policyholder directors. While both companies are Crown corporations, they are not entitled to the usual immunities of the Crown, since they may sue and be sued in any court of competent jurisdiction.

A variety of agencies in Alberta offer forms of prepaid protection corresponding to insurance but the nature of the enabling legislation governing these plans emphasizes the fact that they do not constitute insurance. Because such exemptions are specifically provided by the insurance laws of the province, reference to these plans is necessary only to make it clear that they do not come within the scope of the Alberta Insurance Act. It should be noted that the Alberta Hail Insurance Act is administered by the Provincial Treasurer but none of the provisions of the Alberta Insurance Act apply to the Alberta Hail Insurance Board.

Further information on provincial insurance matters may be obtained from the Superintendent of Insurance, Department of the Provincial Secretary, Edmonton, Alta.

## PART I.-THE ARMED SERVICES AND DEFENCE RESEARCH*

## Section 1.-The Department of National Defence

The Minister and Associate Minister of National Defence exercise control over and management of the Canadian Armed Forces, the Defence Research Board and other matters relating to national defence. Under their direction the three Chiefs of Staff are responsible for the control and administration of their respective Services and the Chairman of the Defence Research Board is responsible for research and development in defence matters. The Chairman, Chiefs of Staff Committee is responsible to the Minister for ensuring that all matters of joint defence and defence policy, in their widest sense, are carefully examined and co-ordinated before decisions are made.

The civilian administration of the Department is organized under the Deputy Minister and is constituted on a functional basis. The Deputy Minister maintains a continuing review and control over the financial aspects of operational policy, logistics, and personnel and administration. The Deputy Minister is assisted by an Associate Deputy Minister and four Assistant Deputy Ministers each of whom administers a division of the Deputy Minister's branch responsible for matters of: administration and personnel; construction, engineering and properties; finance; and supply. Also responsible to the Deputy Minister are: the Controller General of Inspection Services, the Judge Advocate General, the Chief Secretary. and the Director of Public Relations.

A number of committees meet at regular intervals to consider and advise on joint issues. These include:-
(1) Defence Councll.-Composed of the Minister of National Defence (Chairman), the Associate Minister (Vice-Chairman), the Parliamentary Secretary, the Deputy Minister, the Chairman, Chiefs of Staff Committee, the three Chiefs of Staff, the Chairman, Defence Research Board, and the Associate Deputy Minister; its purpose is to advise the Minister on administrative and other matters.
(2) Chiefs of Staff Committee.-Composed of the Chairman, Chiefs of Staff, the Chiefs of Staff of the three Armed Services and the Chairman, Defence Research Board. The Deputy Minister of National Defence, the Secretary to the Cabinet and the Under Secretary of State for External Affairs attend when required. The purpose of the Committee is to maintain a continuous review of all operational problems; sub-committees consider various aspects of these problems and report to the parent committee.

[^367](3) Personnel Members Committee.-Composed of the Chief of Naval Personnel, the Adjutant-General, the Air Member for Personnel, the Assistant Deputy Minister (Administration and Personnel), the Assistant Deputy Minister (Finance) and a representative of the Chairman, Defence Research Board. The purpose of the Committee is to examine personnel problems of the three Services with the general aim of achieving uniform personnel policies; sub-committees consider various aspects of personnel problems and report to the parent committee.
(4) Principal Supply Officers Committee.-Composed of the Chief Naval Technical Services, the Quartermaster-General, the Air Member for Technical Services, the Assistant Deputy Minister (Requirements) and a representative of the Chairman, Defence Research Board. The purpose of the Committee is to consider logistical problems: sub-committees consider various aspects of these problems and report to the parent committee.

Defence Supply Committee.-An interdepartmental committee composed of the Deputy Ministers of National Defence and of Defence Production and the senior military and civilian supply officers of the two Departments has been established to review interdepartmental procurement and production problems and consider various policy aspects of the procurement of ammunition, armament, aircraft, etc. Six panels consider various aspects of these problems and report to the parent committee.

Canada-United States Committee on Joint Defence.-Composed of: for Canada, the Secretary of State for External Affairs, the Minister of National Defence and the Minister of Finance; for the United States, the Secretary of State, the Secretary of Defense and the Secretary of the Treasury; together with such appropriate Cabinet Members as either Government may designate from time to time as the need arises.

The function of this Committee is to consult periodically on any matters affecting the joint defence of Canada and the United States; to exchange information and views at the Ministerial level on problems that may arise, with a view to strengthening further the close and intimate co-operation between the two Governments on joint defence matters; and to report to the representative Governments on such discussions in order that consideration may be given to measures deemed appropriate and necessary to improve defence co-operation. The Committee meets when considered necessary by the two Governments. Meetings normally alternate between Canada and the United States with the host country providing the chairman.

Liaison Abroad.-The Chairman, Chiefs of Staff, who is the Canadian military representative in the North Atlantic Treaty Organization, is responsible for co-ordinating all NATO military matters and acts as a military adviser to Canadian NATO delegations. For purposes of liaison and the furtherance of international co-operation in defence, Canada also maintains: (1) the Canadian Joint Staff (London) representing the three Services and the Defence Research Board in Britain, the chairman of which is the principal military adviser to the Canadian High Commissioner in London, the principal military adviser to the Permanent Canadian Delegate to the NATO Council and the Canadian National Military Representative to SHAPE; (2) the Canadian Joint Staff (Washington) representing the three Services and the Defence Research Board in the United States, the chairman of which is the principal military adviser to the Canadian Ambassador in Washington, the Canadian National Liaison Representative to SACLANT Headquarters and the Canadian member of the NATO Military Committee in Permanent Session; and (3) Service Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence.

Mutual Aid.-Canada's contributions to NATO are outlined on pp. 141-142.
Rates of Pay and Allowances.-The entire pay structure for comparable ranks in the different Services is on a uniform basis. Monthly rates for pay and allowances effective Oct. 1, 1960 are given in Table 1.

[^368]The allowances shown in Table 1 are explained briefly as follows.
Subsistence Allowance.-This allowance is granted whenever rations and quarters are not provided. A married man living with his family uses his subsistence allowance for their maintenance as well as his own.

Ration Allowance.-A ration allowance is granted when quarters are available but rations are not provided. It is not payable concurrently with subsistence allowance.

Marriage Allowance.-The amount of this allowance is $\$ 30$ a month for men and $\$ 40$ a month for officers, subject to a reduction of $\$ 10$ a month where permanent married quarters are occupied or $\$ 2.50$ a month where temporary married quarters are occupied. All ranks may draw this allowance upon marriage provided the initial training period has been completed and the age of 21 years has been attained by men and 23 years by officers.

Separated Family's Allowance.-An officer or man while separated from his dependants for any of various reasons (i.e., movement of dependants prohibited, illness of dependants, lack of suitable accommodation), on being moved other than temporarily may be entitled to separated family's allowance at a rate and for a period depending on circumstances (i.e., rank, reason for separation, whether or not he has children, whether or not his family is accommodated in married quarters, whether or not he is provided with quarters and rations). The rates listed are the maximum.

In addition to the above, Foreign Allowances of various kinds are granted to officers and men posted for duty outside Canada to compensate for additional living expenses or hardships incurred; these vary with rank, appointment and location. Isolation Allowances are granted to officers and men serving at specified isolated posts in Canada at rates depending upon location and circumstances. Outfit Allowances and Clothing Credits are as follows: Officers receive a single payment of $\$ 450$ on appointment and Warrant Officers Class I, \$270; men receive a free issue of clothing when they join and thereafter a monthly clothing credit or allowance of $\$ 7$, Navy Petty Officer 1st class and above $\$ 8$, and women \$8. An Aircrew Allowance of $\$ 75$ a month is paid to an officer or man undergoing flying training. For qualified aircrew this allowance may be increased to $\$ 150$, depending on rank, if filling an appointment requiring active and continuous flying duties and to $\$ 100$, depending on rank, for maintaining proficiency. Submarine Allowance is granted an officer or man undergoing submarine training or filling an appointment in a submarine; the allowance varies from $\$ 65$ to $\$ 115$ a month depending on rank. An officer or man actively engaged or undergoing training as a parachutist or on flying or submarine duty and not entitled to aircrew allowance or submarine allowance is paid a Risk Allowance at the rate of $\$ 30$ a month. Medical and Dental Officers are granted extra allowances according to rank.

## Subsection 1.-The Royal Canadian Navy

Role and Organization.-The role of the Royal Canadian Navy, in support of Canada's defence policy, is to maintain sea communications, to defend Canada against attack from the sea, to contribute to the collective defence of the NATO area against attack from the sea and to contribute naval forces to the United Nations as may be required. It is substantially an anti-submarine ( $\mathrm{A} / \mathrm{S}$ ) role.

The Royal Canadian Navy comes under the central authority of the Chief of the Naval Staff at Naval Headquarters in Ottawa. The Flag Officer Atlantic Coast, at Halifax, N.S., and the Flag Officer Pacific Coast, at Esquimalt, B.C., exercise operational and administrative command of ships and establishments within the Atlantic and Pacific Coast Commands. The Flag Officers also hold the additional appointments of Maritime Commander Atlantic and Maritime Commander Pacific, respectively. As such, each is responsible for anti-submarine operations involving RCN and RCAF forces in his Command. The 21 Naval Divisions of the Royal Canadian Naval Reserve are under the over-all command of the Commanding Officer Naval Divisions, with headquarters at Hamilton, Ont. There are naval staffs in London, England, and Washington, D.C., U.S.A., to maintain liaison with the Royal Navy and the United States Navy. As a result of Canada's NATO commitments, officers of the Royal Canadian Navy serve on the staffs of: the

Supreme Allied Commander, Atlantic, at Norfolk, Va., in the United States; the Com-mander-in-Chief, Eastern Atlantic Area, at Northwood in Britain; and the Commander-in-Chief, Western Atlantic Area, at Norfolk, Va. The Flag Officer Atlantic Coast holds the NATO appointment of Commander, Canadian Atlantic Sub-Area.

The strength of the RCN on Mar. 31, 1962, was 21,456 officers, men and women in the regular force and 3,710 in the reserve force.

Operations at Sea, 1961-62.-The Royal Canadian Navy set a peacetime record in 1961-62 by having more ships and men spend more time at sea and steam more miles than in any previous corresponding period. Fifty-eight combatant ships were in commission and more than one-half of the Navy's personnel were serving afloat.

At mid-1962, six destroyer escorts and a 22,000 -ton tanker-supply ship were under construction in Canadian shipyards, and the fitting of Variable Depth Sonar and Helicopter platforms in the seven St. Laurent class destroyer escorts had begun. Plans for the construction of eight new general purpose frigates and negotiations with Britain for the purchase of three Oberon class submarines had been announced by the Government.

The Navy took part in 22 national and international exercises in 1961-62, including simultaneous participation in a NATO exercise in the Atlantic and a Commonwealth exercise in the Indian Ocean. Ships of the RCN visited more than a score of countries including Iceland, Ceylon, Ghana, Malaya, Nigeria, Sierra Leone, Thailand, Japan and Burma.

Training.-At the end of 1961, the Navy had approximately 1,100 men taking newentry training, 1,200 men undergoing other training in the various trade areas, and 441 cadets and 180 officers on courses. The major training establishments of the RCN are HMCS Cornwallis, near Digby, N.S.; HMCS Shearwater, near Dartmouth, N.S.; HMCS Stadacona at Halifax; HMCS Hochelaga at LaSalle, Que.; HMCS Gloucester near Ottawa; and HMCS Naden at Esquimalt, B.C.

Cadets entered under the Regular Officers Training Plan (ROTP) or College Training Plan (CTP) receive most of their early training at the Canadian Services Colleges or a Canadian university while those entered on a short service appointment are trained in HMCS Venture at Esquimalt, B.C. All cadets receive practical training with the Fleet at various times of the year.

Men and women entering the RCN receive their basic training at HMCS Cornwallis; the courses are normally of 15 weeks duration.

A University Naval Training Division program is conducted to give instruction to university students with the object of providing well-trained junior officers for the RCN Reserve and the RCN. The training period is three years and the cadets are required to complete three winter-training periods, two summer-training periods and certain specified courses. In March 1962, there were 588 UNTD cadets at 26 Canadian universities and colleges. Most of these will receive training during the summer in ships and establishments of the RCN.

Royal Canadian Naval Reserve.-The recruiting and training of officers and men of the Royal Canadian Naval Reserve is conducted mainly through 21 Naval Divisions across Canada under the over-all command of the Commanding Officer Naval Divisions, with headquarters at Hamilton, Ont. Naval Divisions are established in the following centres:-

[^369][^370]Naval Divisions, commanded by Reserve officers, provide both basic and specialized training for officers and men of the RCN Reserve. The Great Lakes Training Centre at Hamilton conducts new-entry reserve training afloat during the summer months.

Royal Canadian Sea Cadets.-Royal Canadian Sea Cadets, sponsored by the Navy League of Canada and supported by the RCN, consist of 159 authorized corps. These are divided into seven Sea Cadet areas, supervised by 16 naval officers responsible to the Commanding Officer Naval Divisions. Instruction is carried out by RCSCC officers. Two RCSCC training establishments-Acadia on the East Coast and Quadra on the West Coast -accommodated officers and cadets for two-week training periods in 1961. In addition, selected Sea Cadets received eight-week training courses at the two establishments. Sea experience was provided for Cadets throughout the year in various types of ships of the RCN. The strength of the Corps was 1,052 Sea Cadet officers and 10,692 Sea Cadets in March 1962.

## Subsection 2.-The Canadian Army

Organization.-Army Headquarters at Ottawa is organized into three separate Branches. The General Staff Branch deals with all matters affecting the fighting efficiency of the Army, the Adjutant-General Branch deals with all problems affecting the soldier as an individual and the Quartermaster-General Branch is responsible for supply. The senior appointment at Army Headquarters is the Chief of the General Staff who, through the Heads of the three Branches, directs all activities of the Canadian Army. For command and control, Canada is divided into Commands and Areas with Headquarters as follows:-

| Command | Headquarters |  | Area and Headquarters |
| :---: | :---: | :---: | :---: |
| Eastern Command. | Halifax, N.S...... | (1) | New Brunswick Area, Fredericton, N.B. |
|  |  | (2) | $\begin{aligned} & \text { Newfoundland } \quad \text { Area, } \quad \text { St. } \\ & \text { John's, Nfld. } \end{aligned} \quad .$ |
| Quebec Command. | Montreal, Que..... | (3) | Eastern Quebec Area, Quebec, Que. |
| Central Command. | Oakville, Ont.. | (4) | Eastern Ontario Area, Kingston, Ont. |
|  |  | (5) | Central Ontario Area, Oakville, Ont. |
|  |  | (6) | Western Ontario Area, London, Ont. |
| Western Comman | Edmonton, Alta.. | (7) | British Columbia Area, Vancouver, B.C. |
|  |  | (8) | Alberta Area, Edmonton, Alta. |
|  |  | (9) | Saskatchewan Area, Regina, Sask. |
|  |  | (10) | Manitoba Area, Winnipeg, |

The Canadian Army comprises the Canadian Army (Regular) and the Reserves. The Canadian Army (Regular) consists of a field force of four Infantry Brigade Groups, headquarters and administrative, training and logistic support units. One of the Infantry Brigade Groups is in Europe with the NATO Force and is under command of the Supreme Allied Commander in Europe. The Reserves include the Canadian Army (Militia), the Regular Reserve, the Supplementary Reserve, the Canadian Officers' Training Corps, the Cadet Services of Canada and the Reserve Militia. Additional to but not an integral part of the Canadian Army are the Services Colleges, officially authorized cadet corps, rifle associations and clubs.

The strength of the Canadian Army (Regular) at Mar. 31, 1962 was 51,855 officers and men and the strength of the Canadian Army (Militia) was 82,614 , including personnel taking the special militia training courses.

Operations in 1961.-In fulfilment of military obligations under the North Atlantic Treaty, Canada has continued to provide ground forces for the defence of Western Europe. The 4th Canadian Infantry Brigade Group, the major units of which are the 8th Canadian Hussars (Princess Louise's), the 3rd Regiment Royal Canadian Horse Artillery, No. 1 Surface-to-Surface Missile Battery, the 1st Battalion, The Canadian Guards, the 1st Battalion, The Queen's Own Rifles of Canada, and the 1st Battalion, The Black Watch (Royal Highland Regiment) of Canada, constituted the Canadian Army contribution to NATO at the end of the year. The Headquarters of the Brigade Group is at Soest, and married quarters are located in the vicinity of Soest, Werl, Hemer and Iserlohn.

The Canadian Army continued to provide forces in support of United Nations operations as follows. (1) A force of approximately 870 officers and men forms a part of the United Nations Emergency Force in the Middle East; its tasks are the patrolling of a sector of the Egypt-Israel International Frontier, the provision of engineer services, communications, stores, transport and workshop services, and postal facilities for the Force. (2) In the Congo, 57 Canadian Signal Unit, with a strength of approximately 310 officers and men, supports the United Nations force by the provision of communications, staff officers and other headquarters personnel; the bulk of the Unit is stationed in Leopoldville, with signal detachments at subordinate headquarters throughout the country. (3) Canadian Army contributions to United Nations commissions include some 25 officers employed in Kashmir, Korea and Palestine.

A specially trained and equipped infantry battalion is maintained on standby in Canada to provide at short notice a force for service in support of the United Nations in any part of the world. In addition to its United Nations commitments, the Canadian Army, as a result of Canadian participation in the International Commissions for Supervision and Control in Viet Nam, Cambodia and Laos continues to provide approximately 75 officers and men for truce supervisory duties in Indo-China. During 1961, a Canadian Armed Forces Training Team was established in Ghana to assist in the training of the Ghana Armed Forces. The Canadian Army provides 24 of the members of this Team, the Royal Canadian Navy three, and the Royal Canadian Air Force three.

Survival Operations.*-On Sept. 1, 1959, certain civil defence responsibilities were assigned to the Army. The Army is supported in this assignment by the Royal Canadian Navy and the Royal Canadian Air Force, the Defence Research Board providing assistance in research. (See also pp. 1164-1167.)

A National Survival Attack Warning System has been established to give warning of an impending attack. A Canadian Army Liaison Officer is stationed at NORAD Headquarters and Canadian Army Sections are located in the appropriate NORAD Regional Headquarters in the United States and at Northern NORAD Regional Headquarters at St. Hubert. All of these have access to early warning information which enables them to keep a watch over friendly and enemy air traffic over Canada and the Northern United States. Warning centres near Ottawa and in each province are manned 24 hours a day. Dissemination of alerts to the general public will be by siren signals and radio broadcasts over emergency networks in the provinces. Responsibility for the provision of sirens, their maintenance and necessary control circuits lies with the Army. The siren program is being extended to ensure adequate coverage for the probable target areas, the surrounding municipalities and other selected cities. Communication links have been installed from federal and provincial warning centres to designated broadcast studios to ensure that warnings can be disseminated to the public.

The establishment of a Nuclear Detonation and Fallout Reporting System was approved in June 1960. Since then the system has progressed steadily and at an accelerated rate since August 1961. The system will provide for the reporting of nuclear detonations, their ground zero, height of burst, and yield. This information is needed to determine the

[^371]areas that would likely be affected by fallout so that the public may be warned. The co-operation of other federal, provincial and municipal departments and agencies and volunteer civilian and commercial organizations has been sought and obtained to permit an effective system to be provided. Information from this system will be passed to the public via the National Survival Attack Warning System. Provision has been made for an exchange of nuclear detonation and fallout data with the United States.

The Army was also given the responsibility for re-entry into areas damaged by nuclear detonations or contaminated by serious radioactive fallout, decontamination work in those areas and the rescue and provision of first aid to those trapped or injured. The problem of re-entry into each of the 16 most probable target cities has been studied and it resolves itself into two basic tasks. The first is to establish immediate control in the stricken area and the second is to bring the maximum number of rescuers to bear in the shortest possible time. To accomplish this, a headquarters responsible for planning the re-entry operation has been established in the vicinity of each target city. Planning staffs are now functioning and interim plans, based on the present capability, will be completed shortly. Further planning is in progress to increase the forces available by the use of military cadres and civilian volunteers. These units will provide not only basic first aid and rescue but also decontamination, casualty sorting and police and fire services. Assistance and instruction will be given to those who remain in the damaged area and plans are being made in respect of those who live in areas that may be subjected to serious radioactive fallout. Planning is being conducted in conjunction with all levels of civil government and their agencies such as police, fire and health services.

The Army was also given the task of assessing the amount of damage and the number of casualties after a nuclear detonation. Procedures have been evolved through which government agencies will use information provided by the Army to determine the resources remaining after an attack. These procedures were practised during Exercise TOCSIN B in November 1961. Pamphlets covering procedural and training matters are being distributed.

Planning of emergency communications has been completed by the Army and construction of the various stations is in progress.

Training.-The policy of training is determined at Army Headquarters. General Officers Commanding Commands implement the training policies within their Commands except for training conducted at Army and corps schools that are under the direct supervision of Army Headquarters. During 1961, the basic training of 6,387 recruits and the corps training of officers and men of the Canadian Army (Regular) was carried out at regimental depots, units and corps schools, and 9,032 personnel attended courses at the schools of instruction. Promotion qualification examinations consisting of written and practical tests were held to qualify Regular and Militia officers for the ranks of Captain and Major; 233 Regular officers completed qualification for the rank of major and 124 Regular officers completed qualification for the rank of captain. Five officers passed the entrance examinations for the Royal Military College of Science. Fifty-one Canadian Army officers commenced a two-year course at the Canadian Army Staff College and five officers commenced courses at Commonwealth Staff Colleges. A training program was conducted during the winter months for all Regular officers to further their professional knowledge. Militia Staff Course examinations were conducted for Militia officers to qualify Captains and Majors for command and staff appointments. Qualifying courses for junior NCO's were conducted under General Officers Commanding Commands. Senior NCO courses were conducted at corps schools in accordance with training standards.

French and English language training, which is available to all ranks of the Canadian Army, was conducted by Commands and AHQ. The R22eR Depot (Language Wing) conducted six-month French language courses for English-speaking officers and NCO instructors. A number of French-speaking potential NCO's also received English language training.

Officers from the RCN and RCAF as well as officers from Australia, Britain, Denmark, France, India, Italy, Pakistan, Turkey and the United States attended courses at Canadian Army schools of instruction.

Trade and specialty training is given at corps schools and units. Where feasible, the facilities of civilian schools are used to supplement training at Army establishments. Training is conducted in accordance with the appropriate training standard for each trade or specialty. When required by technical developments in the Army, trades are revised and new trades are introduced. Trades relating to aircraft maintenance have been introduced in keeping with the decision that the Army will use certain aircraft.

The apprentice training program inaugurated in September 1952 is designed to train selected young men as soldier tradesmen and to give them a background for advancement to senior non-commissioned ranks in the Army. A high entry standard has been set to ensure that the prospective soldier apprentice will be capable of absorbing trade and academic training and also of developing the leadership qualities essential in Senior NCO's. During 1961 an additional 495 apprentices were enrolled and 42 civilian teachers were employed to provide academic instruction for about 900 apprentice soldiers. Academic credits are obtained from the educational authorities of the province where the training is conducted. Apprentices receive training as technical assistants (field), surveyors RCA, field engineers, radio and telegraph operators, radio equipment technicians, teletype and cipher equipment technicians, teletype operators, linemen, transport operators, administrative clerks, storemen, accounting clerks, storemen clerks, radio technicians, electrical mechanics, tracked vehicle mechanics, weapons technicians and instrument technicians. In addition, apprentices enrolled in the Royal Canadian Engineers may, on completion of the apprentice training, be trained as carpenters, masons, painters, electricians, draughtsmen (architectural and engineering), training aids artists and driver radio operators. A balanced training program is designed to stimulate the interest of the apprentice. Military, trade, academic and recreational training are integrated. Separate messing, canteen and sleeping arrangements are provided for apprentices.

The training of the Defence of Canada Force continued throughout 1961. Airborne continuation training was carried out by each unit in conjunction with unit exercises. Defence of Canada Force units carried out exercises during the winter under cold weather conditions. Parachute and air supply courses were conducted at the Canadian Joint Training Centre at Rivers, Man., and courses in Arctic training at Fort Churchill, Man. Collective training for units in Canada was carried out during the summer months at Camp Gagetown, Camp Petawawa and Camp Wainwright. All arms training comprised sub-unit and unit training and culminated in exercises at the Brigade Group level.

The Regular Officer Training Plan (ROTP).-The Regular Officer Training Plan is in effect at the three Canadian Services Colleges and at all Canadian universities and affiliated colleges that have contingents of the COTC. The purpose of the Plan is to train selected students for commissions in the Canadian Army (Regular). Students enrol in the Canadian Army (Regular) with a special rate of pay; tuition and essential fees are paid and grants are given for books and instruments needed for study. During the year ended Mar. 31, 1962, 108 of these sponsored students graduated and were commissioned in the Canadian Army (Regular). Training consists of military studies, drill and physical training during the academic year; the summer term is devoted to practical training at military establishments.

The Canadian Officers' Training Corps (COTC). -In addition to the Regular Officer Training Plan, units of the Canadian Officers' Training Corps are maintained at Canadian universities to produce primarily, from among university undergraduates, officers for the reserve components of the Army. University graduates who have been members of the Canadian Officers' Training Corps are also eligible for commissions in the Canadian Army (Regular). Members of the COTC undertake the same training as members of the ROTP. During the year ended Mar. 31, 1962, 16 who had trained with the COTC were awarded commissions in the Canadian Army (Regular).

Canadian Army (Militia).-Funds were provided to permit an average of 40 days of training for all ranks, plus up to 70 days of training for key personnel in the Militia. This included seven days of summer training for selected personnel by attachment to Regular Army units, attendance at command National Survival camps and in-job training at headquarters. During the summer, 23,707 all ranks, including members of the Canadian Women's Army Corps and Young Soldiers, participated in this training. A special Militia training program designed to train 100,000 men for national survival operations was undertaken for the period November 1961 to May 1962. At Mar. 31, 1962, a total of 71,942 men had enrolled.

Royal Canadian Army Cadets.-The aim of the Army Cadet Organization is to provide cadets with a sound knowledge of military fundamentals based on the qualities of leadership, patriotism and good citizenship. Planning and the supervision of organization, administration and training are carried out by the Canadian Army (Regular). A total of 113 officers and men are employed continuously on these duties.

Training and administration of Army cadets are the responsibility of officers of the Cadet Services of Canada, a sub-component of the reserves, and civilian instructors. As at Mar. 31, 1962, a total of 2,366 cadet instructors were engaged in these activities. The cadet training year is divided into local headquarters and summer camp periods. At local headquarters, cadets take a progressive three-year course in basic military subjects. Selected cadets are given additional training at summer camps.

In 1961, 5,034 army cadets attended seven-week trades and specialist courses at summer camps at Aldershot, N.S.; Farnham, Que.; Camp Borden, Ont.; Ipperwash, Ont.; and Vernon, B.C. An additional 931 cadets attended two-week junior leader and special courses at Aldershot, N.S.; Camp Borden, Ont.; Clear Lake, Man.; and Rivers, Man. Two hundred and fifteen Master and First Class cadets attended the National Cadet Camp, Banff, Alta., for four weeks. Four hundred and five cadet instructors attended qualifying courses of up to seven weeks and another 495 were employed on training and administrative duties at summer camps.

In 1961 there was an increase of 3,963 in the number of cadets registered; in July the strength ceiling was raised from 67,600 to 75,000 . As at Mar. 31, 1962, a total of 69,934 boys organized into 498 corps were enrolled as Royal Canadian Army Cadets.

## Subsection 3.-The Royal Canadian Air Force

Organization.-The RCAF is controlled from Air Force Headquarters at Ottawa, which is responsible for planning, policy and administration of the Regular and Reserve components of the RCAF. The Headquarters organization comprises four major Divisions -Plans and Operations, Technical Services, Personnel, and Resources Control. On Mar. 31, 1962, the major RCAF formations and their Headquarters locations were as follows:-

| Formations | Headquarters |
| :---: | :---: |
| Air Defence Command |  |
| 5 Air Division. | Victoria, B.C. |
| 1 Air Division | Metz, France |
| Air Transport Command | Trenton, Ont. |
| Air Materiel Command | Rockcliffe, Ont. |
| Maritime Air Command | Halifax, N.S. |
| Training Command. | Winnipeg, Man. |

The organization included 27 flying squadrons of the RCAF Regular and 11 flying squadrons of the RCAF Auxiliary. The Auxiliary squadrons performed an emergency and rescue role. Five of the Regular squadrons contributed to the air defence of the CanadaUnited States regions; 12 squadrons were assigned to the air defence of Western Europe; five squadrons were required for RCAF transport operations at home and abroad; four maritime squadrons operated in conjunction with other forces for the defence of Canada's East and West Coasts; and one reconnaissance squadron carried out aerial photography and reconnaissance in Canada.

The strength of the RCAF at Mar. 31, 1962 was 53,119 officers and men in the Regular Force and 2,398 in the Auxiliary Air Force.

Operations in 1961.-The RCAF continued to fulfil its air defence commitments in Canada under the North American Air Defence Command (NORAD). The Canadian air defence force of nine squadrons of $C F-100 \mathrm{Mk}-V$ aircraft was replaced by five squadrons of $C F-101 B$ Voodoo aircraft. In addition, the first of two Bomarc squadrons was activated. No. 1 Air Division in Europe, comprised of eight $F-86$ and four $C F-100$ squadrons and an Aircraft Control and Warning Squadron, continued to fulfil Canada's commitment to the NATO air defence fighter force.

Air Defence Command continued its planned build-up and had under operation three radar systems-the Distant Early Warning Line (DEW), the Mid-Canada Line (MCL), and the Pinetree Line-as an integral part of NORAD. The RCAF is progressively assuming responsibility for the U.S. financed and manned radar sites in accordance with the governmental agreement. The Ground Observer Corps continued operations in the North as a supplement to the Distant Early Warning radar system.

The RCAF Maritime Air Command during 1961 contributed four land-based maritime squadrons to the Maritime Defence of North America. Three of these squadrons, based on the East Coast, have been completely equipped with Argus aircraft, the largest and most modern anti-submarine aircraft in the world. A continuous program of aircraft modernization and re-equipping with improved anti-submarine devices was also conducted throughout the period. These three squadrons and a third Neptune aircraft squadron on the West Coast participated in a number of national, international and NATO anti-submarine exercises conducted throughout the year. Daily patrols and surveillance of ocean areas adjacent to the Canadian coastline were also maintained.

Air Transport Command continued to provide support to the Air Division and to the Army brigade in Europe using its new Yukon aircraft, and continued to support the United Nations Emergency Forces in Egypt and the Congo using North Stars and Comets. In addition, a flying unit operating Caribou and Otter aircraft was maintained for local employment in Egypt in support of UNEF. In Canada the North Star, C-119 and Hercules aircraft of ATC were engaged in cargo and personnel carrier operations in Canada and in the support of Arctic weather stations. C-119's were used for paratroop training of the Canadian Army, and 408 Squadron carried out routine reconnaissance flights in the Arctic Archipelago and photographic missions for the Department of National Defence.

During the year, the RCAF continued to provide search and rescue services in Canadian areas of responsibility. Of the 40 major searches conducted, 34 were for civil aircraft and six were for military aircraft. In addition, there were six major marine searches and 229 mercy flights. The total time for search and rescue operations was 7,292 hours.

Training.-During the year ended Mar. 31, 1962, the RCAF provided training for approximately 4,500 officers and airmen to replace releases, meet increased establishments and assume new appointments resulting from modernization of equipment. Basic training qualified personnel to do the rather simple but vital jobs in the RCAF; conversion and advanced training qualified personnel to perform more complex jobs and to assume increased responsibilities. During the year, training continued in the operation and maintenance of the SAGE and Bomarc systems which are becoming operational in the RCAF. To keep pace with rapid technological developments, a number of officers and airmen attended short familiarization courses on guided missiles and space technology at Clinton, Ont.; some attended brief familiarization courses on computers and other electronic equipment at Clinton; a few attended specialized courses with industrial firms in new technological developments applicable to the Air Force; and a few took postgraduate courses, mainly at Canadian universities, to qualify for highly specialized positions in technical, medical or management fields.

Pilot and radio navigator trainees received training at the Central Officers School at Centralia, Ont. Pilot trainees were given primary flying training at Centralia, basic training at Moose Jaw, Sask., or Penhold, Alta., and advanced flying training at Portage la Prairie, Man., or Gimli, Man. Radio navigators received training at Winnipeg, Man. Approximately 1,000 entrants whose native language is French were given from 10 to 21 weeks of instruction in the English language in schools located at St. Jean, Que., and Centralia, Ont.

Under bilateral agreements, 45 Danish and 30 Norwegian nationals entered training as pilots and five Turkish Air Force officers were trained as advanced jet instructors. About 10 Canadian Army officers received a special 133-hour flying training course at Centralia and 30 RCN personnel, following regular primary and basic phases, received advanced twin-engine training at Saskatoon, Sask.

Formal trade courses for tradesmen and technicians and newly commissioned nonflying list officers in aeronautical engineering, armament, supply, telecommunications and flying control were conducted at RCAF technical schools in Ontario located at Camp Borden, Centralia and Clinton. Aircraft system trainers were used extensively to support technician and aircrew training programs at field technical training units and operational training units. Advanced personnel, both Regular and Reserve, were given assistance in a wide range of subjects to help them improve in job proficiency and to qualify for higher trade groupings. Semi-annual trade examinations were written under the direction of the Training Standards Establishment located at Trenton, Ont.

RCAF Reserve.-The active sub-components of the RCAF reserves are designated as the Auxiliary and the Primary Reserve. Eleven Auxiliary Flying Squadrons, equipped with transport aircraft, are maintained to carry out emergency transport and reconnaissance operations. The RCAF also maintains 13 Auxiliary Medical Units and eight Technical Training Units. Where two or more units are located in the same city, a Wing Headquarters controls Auxiliary activities as directed by the RCAF Regular. The Primary Reserve is concerned mainly with the training of members of the University Reserve Training Plan (URTP). Other Primary Reserve components are Air Cadet Officers (ACO) and Manning Support Officers (MSO).

Each summer, some 300 first-year URTP university undergraduates attend an officers' training course at the Reserve Officers School (ROS), RCAF Station, Centralia, Ont. Following this initial training, cadets in the aeronautical engineering, telecommunications, armament, supply and accounts branches commence basic training at RCAF training schools while cadets in the medical, air services and personnel branches are employed at Regular Force units on contact training. Second-year and third-year cadets continue formal or contact training commenced in previous years.

Manning Support Officers are employed for a minimum of 15 or a maximum of 30 days during each fiscal year on Career Counselling duties at RCAF Recruiting Units. Because the majority of the MSO's are affiliated with educational institutions, their employment is normally during the summer months.

Royal Canadian Air Cadets.-Air cadet activities in Canada are sponsored and administered by the Air Cadet League of Canada. The League is a voluntary civilian organization formed in 1940 to provide preliminary aviation training for potential members of the Royal Canadian Air Force. The peacetime objectives of air cadet training are: to encourage air cadets to develop the attributes of good citizenship, to stimulate in them an interest in aviation and space technology and to help them develop a high standard of physical fitness, mental alertness and discipline. The RCAF works in partnership with the League and provides training personnel, syllabi and equipment.

The authorized ceiling of cadet enrolment is 27,000 and the strength at Apr. 15, 1962 was approximately 25,775 attached to 339 squadrons across Canada. Air cadet training is carried out in more than 270 communities from Newfoundland to British Columbia.

During the summer of 1961, camps were held at RCAF Stations at Greenwood, N.S., St. Jean, Que., Trenton, Ont., and Sea Island, B.C., attended by over 6,500 cadets together with officers and instructors. A seven-week course for senior leaders was held for 200 cadets at RCAF Station, Camp Borden, Ont.

Under the International Exchange Visits Program for 1961, sponsored jointly by the RCAF and the Air Cadet League, 58 cadets were exchanged with Britain, the United States, Denmark, the Netherlands, Norway and Sweden.

About 250 senior air cadets receive flying training annually at flying clubs through scholarships provided by the RCAF and additional scholarships are awarded by the Air Cadet League and other organizations, which in 1961 numbered 109.

## Subsection 4.-The Defence Research Board

The Defence Research Board was established on Apr. 1, 1947 by an amendment to the National Defence Act. The Board consists of a full-time chairman and vice-chairman, five ex officio members and nine other appointed members. The ex officio members are the Chiefs of Staff of the three Armed Services, the Deputy Minister of National Defence and the President of the National Research Council. The other members, appointed by the Governor in Council for three-year terms, are selected from universities and industry because of their scientific and technical backgrounds.

The organization consists of headquarters staff, an operational research group and nine field research stations, and liaison offices at London, England, and Washington, U.S.A. Advisory committees composed of leading Canadian scientists provide invaluable assistance to the Board by their consideration of a variety of problems.

The Government, realizing the vital need for continuity in research, planned the Defence Research Board as a fully integrated and permanent part of the defences of the country. To assist co-ordination at the highest level, the Chairman of the Board has the status of a Chief of Staff and is a member of the Chiefs of Staff Committee and of the Defence Council. Thus the Defence Research Board has been described as a fourth Service. Its fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large. The Board's policy is to select and concentrate its efforts upon defence problems of particular importance to Canada or for which Canada has unique resources or facilities. Existing research facilities such as the National Research Council are used whenever possible to meet the needs of the Armed Forces. The Board has built up new facilities only in those fields that have little or no civilian interest. From the policy of specialization it follows that close collaboration must be maintained with Canada's larger partners. Specialization is made possible only through the willingness of Britain and the United States to exchange the results of their broader programs for the less numerous but nevertheless valuable benefits of Canadian research.

The Defence Research Board operates nine specialized research and development establishments which are concerned primarily with maritime warfare, guns and rockets as armaments, defence against missiles, research on the upper atmosphere using ground-based equipment as well as balloons, rockets and satellites, propulsion and propellants, telecommunications, geophysical studies of the Arctic, defence against atomic, chemical and biological weapons, studies of shock and blast, biosciences research and operational research.

In addition to the research in its own establishments, the Defence Research Board supports and organizes an extramural program of research in the universities and industry. Some 200 grants are awarded annually to Canadian university staff members for research on problems of defence interest. In order to increase the research and development capability of Canadian industry, the Defence Research Board has a special fund which is used to place contracts with industry for research in selected fields of particular interest to defence.

Research on maritime warfare problems is carried out at the Naval Research Establishment, Dartmouth, N.S., and at the Pacific Naval Laboratory, Esquimalt, B.C. The principal emphasis at each station is on problems related to submarine detection and tracking.

Research and development of weapons and defence against various weapons is undertaken by the Defence Research Board in co-operation with the Armed Services at several establishments. The largest of these is the Canadian Armament Research and Development Establishment near Valcartier, Que. Its principal activities include studies of defence against missiles, studies of the properties and application of infrared and other detection devices, exploration of the upper atmosphere with balloons and rockets, and the development of rocket propellants.

Research on telecommunications is carried out at the Defence Research Telecommunications Establishment in Ottawa. This Establishment is concerned mainly with problems of communications and the applications of the science of electronics to military problems. Communications research involves exploration of the ionosphere with ground-based equipment, with rockets and with satellites.

The Defence Research Northern Laboratory, Fort Churchill, Man., is a field station at which a variety of experiments requiring an Arctic environment are conducted. Studies of the aurora borealis, communications experiments and rocket firings are the principal activities at this establishment.

Special weapons is the generic term used to cover research on the defensive aspects of chemical, biological and atomic weapons. This work is carried out at three Defence Research Board establishments-the Defence Research Chemical Laboratories at Ottawa, Ont., the Suffield Experimental Station at Ralston, Alta., and the Defence Research Kingston Laboratory at Barriefield, Ont.

Biosciences research is carried out at the Defence Research Medical Laboratories near Toronto. The program is concerned chiefly with raising the operating efficiency of man working in the military environment and includes such subjects as human physiology, experimental psychology and research on clothing.

Operational research is carried on in the Defence Research Board by a Headquarters group. This group conducts long-range scientific analyses of future defence problems. In addition to this group, trained operational research scientists are provided by the Defence Research Board to the operational research teams in the three Armed Services.

In all, the Board continues to support those fields of research that are of foremost interest to the Canadian Armed Services and the program is under continuing review to ensure that cognizance is taken of all changes in emphasis in defence requirements. Close liaison is maintained between the Defence Research Board and the Department of Defence Production to ensure that research and development activities are closely integrated with production.

## Section 2.-Services Colleges and Staff Training Colleges

Canadian Services Colleges.-The three Canadian Services Colleges are the Royal Military College of Canada founded at Kingston, Ont., in 1876, Royal Roads which was established in 1941 near Victoria, B.C., as a school for naval officers, and Collège Militaire Royal de Saint-Jean established at St. Jean, Que., primarily to meet the needs of Frenchspeaking cadets. The Royal Military College and Royal Roads were constituted as Canadian Services Colleges in 1948, and Collège Militaire Royal de Saint-Jean was opened in 1952. In 1959 the Legislature of the Province of Ontario granted the Royal Military College a charter empowering it to grant degrees.

The purpose of the instruction and training at the Services Colleges is to impart the knowledge, to teach the skills and to develop the qualities of character and leadership essential to officers of all three Armed Services. The courses of instruction provide a sound
and balanced liberal scientific and military education leading to degrees in arts, science and engineering which are granted by the Royal Military College. The organization and training give cadets the opportunity to command and to exercise judgment.

For cadets entering the Royal Military College and Royal Roads the course is of four years duration. As the third and fourth years of the course are given only at the Royal Military College, cadets entering Royal Roads must proceed to that College for the final two years of the arts, science or engineering courses. For cadets entering Collège Militaire Royal de Saint-Jean, which gives a preparatory year, the course is of five years duration. Cadets take the preparatory, first and second years at that institution and the final two years at the Royal Military College.

The College year is eleven months, divided into three terms-autumn, winter and summer. The months September to May are devoted to academic training supplemented by such military studies as drill and physical training. The summer term, June to midAugust, is spent in practical training at an establishment of the Service in which the cadet is enrolled. Academic requirements for admission to the first year at the Royal Military College and Royal Roads is senior matriculation (or its equivalent) in the following subjects: English, physics, mathematics (algebra, geometry and trigonometry), chemistry and either history or a language, preferably French. French-speaking candidates having a B.A. degree from a classical college may be accepted directly into the first year at College Militaire Royal. For admission to the preparatory year at that institution the academic requirement is junior matriculation (or its equivalent) in English, French, algebra, geometry, physics and chemistry, although consideration is given candidates who do not possess the standing in French. Candidates from the classical colleges require at least sixth-year standing.

To be accepted, a candidate must be single, a Canadian citizen or British subject normally resident in Canada and physically fit in accordance with the medical standards of the Service in which he enrols. The age limits for admission to the first year are between 16 and 21 years as of Jan. 1 of the year of entry; for admission to the preparatory year a cadet must have reached his 16th but not his 20th birthday on Jan. 1 of the year of entry. Personal interviews and medical examinations of candidates are carried out by Service Boards located at various centres across Canada. Senior officers representing the Services and a faculty member from the Services Colleges sit on interview boards. The boards base their recommendations on the physical and personal qualifications of the candidates; responsibility for final selection rests with a board appointed by the Minister of National Defence.

Since September 1954, virtually all cadets entering the Services Colleges have been required to enrol under the Regular Officer Training Plan. Under this Plan applicants accepted for entry enrol according to their choice, as naval cadets in the Royal Canadian Navy, as officer cadets in the Canadian Army or as flight cadets in the Royal Canadian Air Force. Costs of tuition, board, lodging, uniforms, books, instruments and other essential fees are borne by the Department of National Defence and cadets are paid at the rate of $\$ 63$ a month. On successfully completing their academic and military training, cadets are granted permanent commissions in the Regular Force but may, if they so wish, apply for release after three years of service following completion of academic training.

Reserve entry was reintroduced in 1961, whereby a limited number of high school students may be selected to enter the Services Colleges on payment of tuition fees, etc. Graduates are granted commissions and serve in the reserve components of the Forces. Young men who qualify for Dominion Cadetships also serve in a reserve capacity. These Cadetships are awarded by the Federal Government in recognition of a candidate's parent having been killed, died or been severely incapacitated in the service of one of Canada's Armed Forces. A maximum of 15 Dominion Cadetships may be awarded in any one year, five in each Service. Each is valued at $\$ 580$, which covers first-year fees.

During the 1961-62 academic year, 1,082 cadets were in attendance at the Services Colleges, 454 of them at the Royal Military College of Canada, 214 at Royal Roads and 414 at College Militaire Royal de Saint-Jean. Of the total, 241 were enrolled in the Navy, 403 in the Army and 438 in the Air Force.

Staff Training Colleges.-The Canadian Army Staff College at Kingston, Ont., trains officers for staff appointments in peace and war. The course is 21 months in duration with a student intake every second year. Although most of the student body is composed of Canadian Army officers, officers from the other two Services and from the armies of other Commonwealth and NATO countries also attend. The system of instruction is based upon the study of précis and other references, demonstrations and lectures, and indoor and outdoor exercises. Most of the work is carried on in syndicates, each under a member of the directing staff. Attention is paid to both individual and team work. Aside from purely military subjects such as the study of tactics, the curriculum includes national survival, research and development, world affairs and lectures by prominent guest speakers.

The Royal Canadian Air Force College at Armour Heights in Toronto, Ont., is a permanent establishment consisting of a Staff School for junior officers and a Staff College for senior officers. The Staff School course is for RCAF officers only; the Staff College course is for officers of other Services as well as Air Force officers. The course affords professional education for officers normally of Squadron Leader and Wing Commander ranks, preparing them to assume higher appointments. The directing staff selected from the Royal Canadian Air Force is augmented by an exchange officer from each of the Royal Canadian Navy, the Canadian Army and the Royal Air Force. The student body, in addition to Royal Canadian Air Force officers, has eight representatives from the Royal Canadian Navy and one or two from each of the Canadian Army, Royal Air Force and United States Air Force. The course is designed to assist the student to think logically and express his ideas with precision, both orally and in writing; to know his Service and understand the employment of air forces; to keep abreast of scientific and technical developments that may affect the employment of air forces; and to gain a perspective of national and international problems. Lecturers are drawn, when desirable, from industry, the Armed Forces, the diplomatic corps and universities. Instructional visits are made to commercial and military establishments in Canada and abroad.

The National Defence College at Kingston, Ont., which opened on Jan. 5, 1948, is a senior defence college providing an 11 -month course of study covering the economic, political and military aspects of the defence of Canada. Senior officers and civil servants from the Armed Forces and government departments attend, as well as a few representatives from industry. An extensive lecture course is provided, with lecturers chosen from among the leaders in various fields in Canada, the United States, Britain and other countries. In addition, educational tours and visits to certain parts of Canada, the United States, Europe and the Middle East give students more knowledge of conditions and influences in their own and other countries. The 15th course from August 1961 to July 1962 was attended by students from the following organizations: three from the Royal Canadian Navy, four each from the Canadian Army and the Royal Canadian Air Force; and one each from the Defence Research Board, the Department of External Affairs, the Department of National Defence, the Department of Finance, the Royal Canadian Mounted Police, the Air Transport Board, the Department of Northern Affairs and National Resources, Atomic Energy of Canada Limited and the Quebec Hydro Commission. Representation from outside Canada included one member each from the Royal Navy, the British Army, the Royal Air Force, the British Admiralty, the United States Army, the United States Navy, the United States Air Force and the State Department of the United States.

## PART II.-DEFENCE PRODUCTION*

Under the provisions of the Defence Production Act (RSC 1952, c.62, as amended), the Department of Defence Production has exclusive authority to procure the goods and services required by the Department of National Defence and the responsibility to ensure that the necessary productive capacity and materials are available to support the defence production program. The Department also serves as procurement agent for the Canadian Commercial Corporation, a Crown company primarily responsible for the purchase in Canada of defence goods required by other governments and of supplies to meet Canadian requirements under External Aid programs and other international agreements. The Department is responsible for planning and making other necessary arrangements for the immediate establishment of a War Supplies Agency should there be a nuclear attack. Military construction is the prime responsibility of Defence Construction (1951) Limited, a Crown company reporting to Parliament through the Minister of Defence Production.

Procurement and construction contracts issued by the Department of Defence Production and its associated Crown company, Defence Construction (1951) Limited, had a net value of $\$ 701,381,000$ in 1961 and $\$ 212,122,000$ in the first quarter of 1962 . (The net value of contracts is made up of the value of new contracts issued as well as amendments that increased or decreased existing contracts.) Three-quarters of the net value of contracts in 1961 was placed on behalf of the Department of National Defence and one-quarter was placed against Defence Production Votes for assistance to defence industry and the Department's Revolving Fund, for other Canadian Government departments and agencies, and for foreign governments. The net value of contracts in 1961 according to the various sources for which they were issued was as follows:-

|  | Net Value in 1961 | Per Cent of Total Value |
| :---: | :---: | :---: |
|  | \$ |  |
| Department of National Defence. | 528,773,000 | 75.4 |
| Department of Defence Production <br> (DDP Votes and Revolving Fund) | 56,562,000 | 8.1 |
| Foreign Governments- |  |  |
| United States. | 97,544,000 | 13.9 |
| Britain... | 2,053,000 | 0.3 |
| Other governments | 1,006,000 | 0.1 |
| Canadian sources other than DND and DDP- |  |  |
| Colombo Plan....... | 9,855,000 | 1.4 |
| Other Canadian sources........................ | 5,588,000 | 0.8 |
| Totals. | 701,381,000 | 100.0 |

Of the $\$ 212,122,000$ in contracts issued during the first quarter of $1962, \$ 148,147,000$, or 70 p.c., was for the Department of National Defence and the remainder was for the other sources noted above.

The $\$ 528,773,000$ in contracts placed for the Department of National Defence in 1961 was 34.3 p.c. below the value in 1960 . The aircraft program accounted for the major part of this decrease, falling from $\$ 363.210,000$ in 1960 to $\$ 113,194,000$ in 1961. The 1960 value was particularly high, however, because of high-valued contracts placed in connection with Canadian production of $C F-104$ aircraft. Contracts having a net value of $\$ 122,593,000$ were placed for the electronics and communication equipment program in 1961, a decrease of 8.3 p.c. from 1960 . Shipbuilding and repairing contracts also declined significantly in 1961, dropping to $\$ 26,585,000$ from $\$ 84,657,000$ in 1960 . The high 1960 figure included contracts for four destroyer escorts and a tanker-supply vessel. Armament contracts

[^372](which include weapons, ammunition and explosives) amounted to $\$ 11,311,000$ in 1961, and defence construction contracts increased from $\$ 51,571,000$ in 1960 to $\$ 90,671,000$ in 1961.

Contracts placed outside Canada on behalf of the Department of National Defence in 1961 amounted to $\$ 26,141,000$, or 4.9 p.c. of the total net value of prime contracts issued. Contracts valued at $\$ 16,747,000$ were placed in the United States, $\$ 5,022,000$ in Britain and $\$ 4,372,000$ in other countries.

Expenditures on contracts placed for the Department of National Defence amounted to $\$ 622,535,000$ in $1961,0.3$ p.c. more than in 1960 . Expenditures for electronics and communication equipment increased by $\$ 35,944,000$ to $\$ 123,838,000$ and those for the ships program increased by $\$ 14,775,000$ to $\$ 45,978,000$. Expenditures on the aircraft program, however, fell off by $\$ 44,251,000$ to a level of $\$ 222,485,000$ in 1961 . During the first quarter of 1962, Canadian defence procurement and construction expenditures amounted to \$227,553,000.

The Department of Defence Production placed \$15,976,000 in contracts in 1961 and $\$ 2,218,000$ in the first quarter of 1962 against certain appropriations to assist Canadian defence industry. The major area of assistance in 1961, which involved contracts totalling $\$ 13,844,000$, was to sustain research and development capability in Canadian industry related to the needs of the Canada-United States development and production sharing program. Revolving Fund contracts amounted to $\$ 40,586,000$ in 1961, primarily to finance the production of five swing-tail CC-106 aircraft and to make funds available for initial production in connection with the Canada-United States $F$-104G mutual aid program. Revolving Fund contracts amounted to $\$ 3,692,000$ in the first quarter of 1962.

Contracts placed for all sources other than the Departments of National Defence and Defence Production totalled $\$ 116,046,000$ in 1961 , of which $\$ 97,544,000$ was for the United States Government, $\$ 2,053,000$ for the British Government, and $\$ 9,855,000$ for Canadian External Aid.

## 1.-Canadian Government Defence Contracts and Expenditures, by Defence Program, 1960, 1961 and 1st Quarter of 1962

Norz.-The contract values include all contracts placed by the Department of Defence Production and Defence Construction (1951) Limited on behalf of the Department of National Defence, and the expenditure values include all payments made by the Department of National Defence against such contracts. The net value includes the value of all new contracts issued together with the value of amendments which increased or decreased the commitments of existing contracte.

| Program | Net Value of Total Contracts |  |  | Expenditures on Contracts |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1960 | 1961 | $\begin{gathered} 1962 \\ \text { (1st } \\ \text { quarter) } \end{gathered}$ | 1960 | 1961 | $\begin{gathered} 1962 \\ (1 \mathrm{st} \\ \text { quarter) } \end{gathered}$ |
|  | \$'000 | \$'000 | \$ 000 | \$'000 | \$'000 | \$'000 |
| Aircrait. | 363,210 | 113, 194 | 44,961 | 266.736 | 222,485 | 65,237 |
| Armament. . . . . . . . . . . . ${ }^{\text {Electronics }}$. | 18,703 | 11,311 | 5,021 | 26,035 | 22,323 | 6,726 |
| Electronics and communication equipment. | 133.617 | 122.593 | 17,013 | 87,894 | 123,838 | 43,459 |
| Ships........ | 84,657 | 26,585 | 4,883 | 31,203 | 45,978 | 20.871 |

| Construction. | 51,571 | 90,671 | 14,690 | 64,193 | 67.106 | 27.754 |
| Other. | 87,800 | 92,569 | 32,740 | 92,830 | 87.242 | 42.713 |
| Totals | 804,286 | 528,773 | 148,147 | 620,592 | 622,535 | 227,553 |

Aircraft.-Initial deliveries of Canadian-produced CF-104 Starfighter aircraft began during 1961. Plans were laid to establish a facility in Canada to produce gyros for the CF-104 inertial platform. Canadian sources of supply were also established for CF-104
equipment previously imported, such as pylons, tires, wheels, drag chutes, brakes and instruments. Under an agreement between the Governments of Canada and the United States a number of $F-104 G$ aircraft, associated support equipment and initial spares are to be produced in Canada as a $\$ 200,000,000$ mutual aid program. The United States is to pay three-quarters of the cost and Canada is to pay one-quarter.

Deliveries of $C C-106$ long-range transport aircraft were completed in 1961. Production of the Caribou Mk.I aircraft continued during the year. Seventy-three of these Canadiandesigned aircraft had been sold to the end of 1961, and in the first quarter of 1962 an order for an additional 53 was received from the United States. Preliminary discussions and negotiations for the production of a new jet trainer, the CT-114 (CL-41), began late in 1961.

> Twenty-four CH-112 (Hiller UH-12E) light observation helicopters and four Cessna L-19L aircraft were delivered during 1961 . Orders were placed for a small number of CH-118 (Vertol 107-II) heavy helicopters, with deliveries scheduled for 1963 .

Moderate activity continued on aircraft engine production. Approximately 100 $J-79-7$ turbo jet engines for the CF-104 aircraft were delivered in 1961. Preparatory work was started on the production of $J-79-11 A$ engines for the $F-104 G$ mutual aid aircraft. Orders were placed for a small quantity of $T-58$ turboshaft engines for use in search and rescue helicopters.

In the area of research and development, extensive development was done on the proposed Canadian manufacture of a photographic reconnaissance pod for external fitment to the CF -104 aircraft. Some other NATO countries have indicated an interest in this pod. Contracts were issued for an earth orbital vehicle escape technique study for the United States Air Force, for development of the CL-91 high mobility tracked vehicle for the United States Army, and for development of the CL-89 surveillance and target acquisition system.

Research and development programs were also undertaken in co-operation with Canadian manufacturers. One was a study of the feasibility of the design of an all-weather anti-submarine hydrofoil craft and the other was the development and testing of a high lift wing system for a short take-off and landing (STOL) fighter aircraft. The PT-6 turboshaft engine passed an official 50 -hour preliminary flight rating test and was being flown in two aircraft. Development continued on a $600-\mathrm{hp}$. gas turbine engine for the United States as a possible replacement for diesel engines in some applications.

Electronics.-Production of aircraft electronic equipment continued to be a major sector of the electronics program. Canadian production was under way on such items as the NASARR system of fire control and terrain avoidance, bomb toss computers, air data computers and sight optical display and computer equipment for the $C F-104$ aircraft. Planning was begun to ensure an adequate supply of electronic items for the $F-104 G$ aircraft to be produced under a Canada-United States mutual aid program. Requirements of other governments, particularly for doppler navigation equipment and position and homing indicators, contributed to the increased production of aircraft electronic equipment.

Production and installation were completed on the microwave air defence communication system (ADCOM) for the Royal Canadian Air Force. Installation of additional heavy radars and their data processing equipment for the general air defence network in Canada was continued. The CADIN/SAGE leased line communications program was about two-thirds completed by the end of 1961. All major items of equipment for the Canadian Army's main communications control centre were under contract. Contracting and production continued on equipment for the ten provincial communications centres and the National Survival Attack Warning System. A beginning was made on leasing communication facilities for this program.

Production of sonar and sonobuoys continued, while production of gyro compasses, logging equipment, and plotting tables for the Royal Canadian Navy was completed. Plotting tables were also in production for the United States Navy. Variable depth sonars
were manufactured for the Royal Navy and sonobuoys for the United States Navy. A contract was placed for an additional quantity of VT fuses. Work continued on a joint Canada-United States development program for moored sonobuoys.

There was a drop in production of radars for air defence systems in 1961 but design and production for countermeasure equipment, radomes, and counter-mortar radars was continued. Electronic counter countermeasure receiver groups were in production, and production on an order for height-finding radars and spares was nearly completed. Modification kits were being produced for two types of radars so that they could perform airport surveillance as well as a ground controlled approach function. Contracts for electronic countermeasure devices and spares for radars were received from the United States Air Force. Requirements for data processing equipment also began to offset the decline in radar production.

Production of training aid simulators continued. The tactical crew procedure trainer for the Argus aircraft and the operational flight trainer for the Yukon (CC-106) aircraft were delivered to the Royal Canadian Air Force. Production proceeded satisfactorily on the CF-104 operational flight and tactics trainer for the Royal Canadian Air Force and other NATO air forces. A models control trainer was completed and delivered to the Royal Canadian Navy.

Maintenance, repair and overhaul, and contracts for leased lines increased significantly during 1961 as a result of progress on the air defence networks and the taking over by the Royal Canadian Air Force of some of the United States Air Force Pinetree Line sites. Operation and maintenance of the Mid-Canada Line was continued.

In order to maintain a satisfactory level of Canadian content in equipment production for both Canadian and foreign requirements, financial support for the establishment of qualified sources for component parts and materials was continued. Financial assistance was also given for the development of new equipment in advance of the formulation of defence requirements so as to ensure future production for the requirements of other countries. A joint Canada-United States financed program for development in this country of an infrared acquisition unit for the Mauler system was approved and a contract awarded to the Canadian contractor

Shipbuilding.-Work continued satisfactorily on all six destroyer escorts in the repeatRestigouche program. The last two vessels are an improved version of the first four, the major changes involving a helicopter flight deck with hangar and variable depth sonar equipment. All important contracts were placed for the components needed for this program.

Work on the tanker-supply vessel for the Royal Canadian Navy proceeded satisfactorily. A standard diving vessel, a tank cleaning barge and five stevedoring barges were completed and accepted by the Royal Canadian Navy in 1961. A contract was placed for an additional tank cleaning barge as a result of competitive tenders.

Construction continued on a hydrographic and oceanographic survey vessel for the Department of Mines and Technical Surveys. Specifications for two more hydrographic survey vessels were received during 1961.

Drawings and design documents required for tendering of a Pacific Naval Laboratories research vessel were completed. Drawings and procurement of equipment for the modernization of the St. Laurent class destroyer escorts proceeded during 1961. Negotiations were concluded for the establishment in Canada of production facilities for the manufacture of noise-reducing five-bladed propellers for naval ships.

Armament.-Production for the Canadian Armed Services was completed on contracts for .30 calibre small arms ammunition, anti-submarine projectiles, pyrotechnic devices, and naval gun weathershields. Among the major items in production were practice
depth charges, $9 \mathrm{~mm}, 20$ pounder and 105 mm howitzer ammunition, $4^{\prime \prime}, 3^{\prime \prime} / 50$ calibre and $3^{\prime \prime} / 70$ calibre naval gun ammunition, torpedo warheads, spares for $3^{\prime \prime} / 70$ calibre naval guns, $7.62 \mathrm{~mm} \mathrm{C1}$ automatic rifles and spares, 9 mm sub-machine guns, navigational aids, trainfire target devices, mortar base plates, various types of sights, anti-submarine devices, and high-altitude rockets. Production began in 1961 on 105 mm armour-piercing ammunition, practice bombs and pyrotechnic devices. Action was taken to procure two new antitank weapon systems for the Canadian Army and an improved design of acoustic homing torpedo for the Royal Canadian Navy and the Royal Canadian Air Force.

A feasibility study was undertaken in connection with the launching of test rockets from aircraft to altitudes of 100,000 feet and velocities up to ten times the speed of sound. The Black Brant development program to meet United States requirements progressed satisfactorily.

Construction.-Construction activity for the Armed Services increased slightly to $\$ 67,106,000$ in 1961 , as measured by payments to contractors. The value of contracts issued increased sharply to $\$ 90,671,000$. Some of the larger contracts were for mobile homes and storage units at various locations, the extension of a hangar at Summerside, P.E.I., a runway at Chatham, N.B., the extension of a runway at Comox, B.C., a water treatment plant at Camp Gagetown, N.B., buildings at Whitehorse, Y.T., and Camp Borden, Ont., and an electronics workshop and a chiefs' and petty officers' block at Halifax, N.S. Contracts valued in excess of $\$ 17,000,000$ were awarded for regional emergency centres at six sites. Contracts were also awarded for five heavy radar bases of the Pinetree Line in Western Canada, and construction for the SAGE system was carried on at a number of Pinetree Line sites.

There was a large amount of construction in Canada in 1961 for the United States Air Force. The value of payments to contractors by the United States was $\$ 13,044,000$ as work continued on a number of projects involving the radar improvement programs.

General Purchasing.-The procurement of supplies and services not normally requiring special production facilities increased slightly in 1961 to $\$ 181,370,000$. Headquarters procurement involved major contracts for medical and dental stores, lamps, photographic equipment and supplies, canned and preserved foods, paper products, packaging materials, building supplies and hardware, furniture and furnishings, appliances, and other barrack, camp and hospital stores. Also purchased centrally were petroleum products and solid fuels, clothing and footwear, electric power generating control and distributing equipment, aircraft ground handling equipment, and all types of mechanical transport, construction and road maintenance equipment. Services arranged by headquarters included repair and overhaul, engineering studies, food catering, aerial surveys, and certain research and development projects.

Markets were thoroughly explored to promote the maximum participation by Canadian industry in the manufacture of ground handling equipment for the $C F-104$ aircraft. Significant orders were placed with firms in Canada for noise suppressors, engine trailers, munition trailers, test equipment, maintenance tools, and combined ground services equipment. Research projects undertaken during the year included an investigation into the use of lignin as a rubber reinforcing agent, a study of the combustion characteristics of liquid hydrogen, and the design and development of a high acuity film processing machine for the United States Air Force. Emergency health and welfare supplies and certain Canadian Army requirements for the national survival program were purchased by headquarters. A Canadian company was awarded the contract for the initial supply and installation of dual fuel gas turbine generating sets and waste heat boilers at five radar sites. A product improvement program was undertaken for the Bobcat family of light vehicles. Initial action was taken on procurement in connection with a new Army combat uniform. Field boots made by the direct moulded sole process were ordered in Canada for the first time.

Substantial purchases were made on behalf of the Colombo Plan for delivery to Pakistan, Ceylon, Indonesia, Viet Nam, India and Malaya. These included flour, wood pulp, newsprint, chemical fertilizer, dump trucks, steel towers, electric cables, generators, turbines, circuit breakers, transformers and insulators.

The fourteen district offices across Canada arranged contracts with regional suppliers for fresh food, stores and services needed for immediate use by military establishments in the areas concerned. Requirements for the national survival program were given precedence and the normal procurement period was greatly reduced.

#### Abstract

Defence Production and Development Sharing.-The value of United States defence production and development sharing prime contracts and subcontracts received in Canada in 1961 was $\$ 142,600,000$, an increase of 25 p.c. over 1960. The steady growth of United States defence sharing business in Canada from the beginning of 1959 indicates that this program has become an important part of Canada-United States joint defence and defence production arrangements.

During 1961 a continuing effort was made to refine procedural arrangements such as those involved in United States duty regulations, in security matters, and in obtaining specifications. The Buy American Act was further liberalized in relation to Canadian supplies, and the source listing of Canadian firms with United States agencies was carefully reviewed.

Working groups designed to provide closer liaison between the Department of Defence Production and the United States Air Force were established during the year, and the United States Navy named specific officers to act as contact points on production sharing in appropriate bureaus. The United States Services issued further directives and instructions which placed Canadian industry on more equal terms with United States industry in defence contracting and subcontracting.

The provision of information on the program to prime contractors and subcontractors, as well as to government procurement officers, was emphasized by both governments. A new edition of the Canadian Commodities Index, listing over 500 Canadian companies actively interested in defence production sharing, was issued in 1961 primarily for use in the United States. A steady demand continued for the handbook, Canada-United States Defence Production Sharing, issued in 1960, of which over 15,000 copies had been distributed to the end of 1961. Similar publications concerned with research and development were being prepared for distribution in 1962.

In some special cases where American contractors have written off their preproduction and tooling costs under previous contracts, the Department provided assistance to Canadian firms bidding on United States contracts by absorbing part of their preproduction and tooling costs. New contractual commitments for such assistance totalled $\$ 1,370,000$ in 1961, largely for assistance in the production of counter-mortar radar, 7.62 mm cartridges, an electronic counter countermeasure device and circuit boards. Assistance was also given to research and development projects by Canadian industry which were of interest to the United States Services. Contracts amounting to $\$ 13,844,000$ were made in 1961 for this type of assistance. The major new commitments were in connection with the Caribou Mk.II aircraft, the PT-6 turboshaft and turboprop engines, a $600-\mathrm{hp}$. gas turbine engine, airborne doppler radar and the CL-91 high mobility light utility carrier.

These efforts resulted in significant increases in bid solicitation and submissions for prime contracts. Solicitations rose from 2,693 in 1960 to 5,786 in 1961, and submissions from 957 to 1,799 . Contracts placed by the United States Government with Canadian Commercial Corporation increased from 446 to 830 , the latter valued at $\$ 70,383,000$. In the subcontract area, solicitations fell from 2,719 in 1960 to 2,524 in 1961, and responses from 2,120 to 1,986 . Subcontracts received by Canadian firms, however, rose from 882 to 1,111 , valued at $\$ 69,082,000$. Other prime contracts received directly from the United States Government by industry and universities in Canada totalled \$3,135,000.

Co-operation in NATO on RDP and Exports Overseas.-This program of research, development and production endeavours to attain maximum efficiency in standardization and production of military equipment by member countries of the North Atlantic Treaty Organization. Canada has submitted for consideration by the NATO groups a number of projects in the fields of vertical and short take-off and landing (V/STOL) aircraft, mobile radar, vehicle navigation equipment, sonar equipment, personnel carriers, anti-tank weapons, anti-personnel land mines, airborne navigation aids, aircraft engines, and telephone terminal equipment.

Canadian industry was encouraged to participate in supplying the defence needs of European and other countries in such areas as aircraft, navigation aids and engine spares. During 1961, Canadian firms reported that they had received $\$ 41,954,000$ in prime contracts and subcontracts from NATO and other countries (excluding the United States). Prime contracts accounted for $\$ 24,893,000$, of which the major items were Otter and Caribou aircraft for Ghana, flight simulators for a number of NATO countries that have adopted the $F-104 G$ aircraft, and engine spares and power flight controls. Subcontracts placed in Canada by overseas countries amounted to $\$ 17,060,000$, the largest being for position and homing indicators.

Emergency Supply Planning.-During 1961, significant progress was made with preparations necessary to bring a War Supplies Agency into effective existence immediately on the outbreak of nuclear war, should one occur. This Agency would assume full control over all aspects of the production, distribution and pricing of supplies for both civil and military purposes, except certain aspects of agriculture and fishing. An interim organizational structure for the War Supplies Agency, designed to meet anticipated supply requirements during the first few weeks after nuclear attack, was developed and approved.

The staffing of the national component of the War Supplies Agency was completed by the selection, on a standby basis, of suitably qualified persons from various government departments and agencies in Ottawa. The staffing of the ten regional components, also on a standby basis, neared completion and arrangements were under way with the various provincial governments to draw on their personnel resources for this purpose, as well as on business and industry and the field staffs of various federal departments and agencies.

In order to provide a basis on which the War Supplies Agency could make a post-attack assessment of surviving supply resources, a research program was initiated to produce in readily usable form comprehensive inventory data on major stocks of essential commodities and related production facilities normally available in this country. Substantial progress was made in the collecting and processing of data on stocks of food and petroleum products. Also, methods were developed in co-operation with the Canadian Army and the Emergency Measures Organization for evaluating surviving resources after attack. Various regulations and orders likely to be required by the War Supplies Agency in exercising effective control of supplies under conditions of nuclear war were prepared in draft form. Considerable work was done on the development of an industrial preparedness program.

## PART III.-GIVIL EMERGENGY PLANNING (CIVIL DEFENCE)

In 1958, the Canadian Government instituted a survey of the civil defence situation in Canada in the context of the total military and civilian arrangements necessary to prepare the nation for the possibility of nuclear war. This review led to a major rearrangement of federal civil defence functions, together with an offer from the Federal Government to assume certain responsibilities previously carried out by the provinces and municipalities. This reorganization of civil defence became effective on Sept. 1, 1959, and was based on the two principles that, first, civil defence should be considered a function or activity of government rather than a separate organization as such and, second, the civil defence
function should be divided into clearly defined tasks, assigned to the appropriate level of government and, at each governmental level, made the responsibility of those departments and agencies best able to undertake and discharge them.

At the federal level, the reorganization may be summarized briefly as follows:-
(1) The Emergency Measures Organization is the co-ordinating agency for all civil emergency planning and for all federal-provincial planning. It is responsible for planning for continuity of government, for tasks hitherto grouped under the designation "civil defence" and not now specifically assigned to some other department of government, and for general liaison with the provinces, NATO and foreign countries on matters relating to civil emergency planning.
(2) The Department of National Defence, more particularly the Army, has been given a primary role in survival operations and has been delegated responsibility for a substantial number of functions that are technical in character such as the complete public warning system, radiation monitoring and fallout prediction, emergency governmental communications, re-entry into damaged areas and support of local authorities in the maintenance of law and order (see also pp. 1148-1149).
(3) The Department of National Health and Welfare (which formerly had the major responsibility for civil defence) will concentrate its attention mainly on advising and assisting provincial authorities with respect to the provision of emergency health and welfare services. This Department has retained responsibility for the operation and management of the Canadian Civil Defence College at Arnprior, Ont.
(4) The Royal Canadian Mounted Police has the responsibility of providing advice and assistance to provinces concerning the preservation of law and order and the control of road traffic under emergency conditions.
(5) Other federal departments and agencies have duties that relate chiefly to carrying on essential functions or to maintaining the country's economic life under conditions of nuclear attack-the Department of Defence Production, the Department of Agriculture, the Department of Finance, the Bank of Canada, the Department of Transport, the Canadian Broadcasting Corporation and the Department of Labour in consultation with the National Employment Service of the Unemployment Insurance Commission.
(6) What was known as Federal Civil Defence Headquarters has disappeared.

Certain emergency functions of government are a projection of normal peacetime provincial responsibilities. In such fields, the provinces and municipalities understandably have more experience and knowledge of local conditions and problems than has the Federa] Government and its agencies. The following represent responsibilities of this kind and are considered to be the proper concern of provincial authorities with such federal assistance as may prove necessary:-
(1) Preservation of law and order and the prevention of panic, by the use of their own police, municipal police, and special constables, with whatever support is necessary and feasible from the RCMP and the Armed Services at provincial request.
(2) Control of road traffic, except in areas damaged or covered by heavy fallout, including special measures to assist in the emergency movement of people from areas likely to be attacked or affected by heavy fallout.
(3) Reception services, including arrangements for providing accommodation, emergency feeding and other emergency supplies and welfare services for people who have lost or left their homes or who require assistance because of the breakdown of normal facilities.
(4) Organization and control of medical services, hospitals, and public health measures.
(5) Maintenance, clearance and repair of highways.
(6) Organization of municipal and other services for the maintenance and repair of water and sewage systems.
(7) Organization of municipal and other fire fighting services, and control over and direction of these services in wartime except in damaged or heavy fallout areas, where fire fighting services would be under the direction of the Army as part of the re-entry operation.
(8) Maintenance and repair of electrical utilities, and the allocation of the use of electricity to meet emergency requirements.
(9) Training of civilians as civil defence workers.

In outline, the federal Civil Emergency Planning Organization consists of a Cabinet Committee on Emergency Plans to give policy guidance in all areas of civil emergency planning for war; the federal Emergency Measures Organization with a headquarters staff at Ottawa and regional offices in each provincial capital, and departmental planning staffs. The function of the regional offices of the Emergency Measures Organization is to co-ordinate the emergency planning of federal departments and agencies in the provinces and maintain effective liaison with provincial governments, the provincial emergency planning organizations and the appropriate military authorities. At the international level, the Emergency Measures Organization has an officer in Paris to maintain liaison with other NATO countries and to keep abreast of developments in civil emergency planning in these countries. Liaison with the United States in this field is carried out by the headquarters staff in Ottawa.

The federal Emergency Measures Organization administers a Financial Assistance Program to assist the provinces and municipalities with the development of emergency plans. Under this program, the Federal Government may pay up to 75 p.c. of the cost of approved civil defence projects. For the fiscal year ending Mar. 31, 1963, $\$ 4,800,000$ has been earmarked for this purpose. In addition to offering financial assistance, the federal Emergency Measures Organization gives advice and guidance where possible, and during 1961 issued a Survival Planning Guide for Municipalities to assist communities in the preparation of emergency plans.

In order to provide the public with information on survival measures, shelter designs and related matters, the federal Emergency Measures Organization and other government agencies have been active in the publication of informative literature of various kinds. In March and April 1962 the federal Emergency Measures Organization made available to the public a booklet called Survival in Likely Target Areas and a leaflet entitled Simpler Shelters. The first of these publications was designed to assist Canadians who live in major cities which might be target areas in the event of nuclear war. The booklet examines the advantages and disadvantages of evacuation as opposed to shelter. Simpler Shelters provides five designs for less complex shelters for both basement and outdoor construction. These two publications supplement the booklet 11 Steps to Survival, a general outline of what Canadians can and should do to protect themselves, Your Basement Fallout Shelter giving instructions for do-it-yourself fallout shelters, and Fallout on the Farm describing the effects of radioactive fallout on agriculture and the protective measures which might be taken against it. Copies of these various publications may be obtained from provincial civil defence or emergency measures co-ordinators in provincial capitals.

Because of the importance of goods and commodities in time of emergency, the government created the elements of a War Supplies Agency in 1960. This agency, under the Department of Defence Production, will in time of war control the distribution and use of essential supplies, their prices, and their rationing as required. The Emergency Supply Planning Branch of the Department of Defence Production, which has direct responsibility for the development of this agency, has a headquarters staff in Ottawa and representatives in each region of Canada. (See also pp. 1163-1164.)

One of the major responsibilities of the Emergency Measures Organization is the development of plans for the continuity of effective government in an emergency. To this end emergency facilities for the Federal Government have been established outside Ottawa and construction is under way to provide regional facilities in six of the ten provinces. In the remaining provinces plans are proceeding for the development of similar facilities.

To ensure continuity of communications in an emergency, a peacetime planning nucleus of a wartime agency to control and administer national telecommunications systems has been established within the Department of Transport. It is known as the Emergency National Telecommunications Organization (ENTO) and under its authority the Canadian Broadcasting Corporation has developed plans for emergency broadcasting which can be instituted at any time of the day or night to broadcast to all areas of Canada. The plan provides for the maintenance of broadcast services under emergency conditions.

To ensure the close co-ordination of federal and provincial activities, a FederalProvincial Conference on Civil Emergency Planning was held in November 1961. All provinces were represented and five federal Cabinet Ministers attended. This represented a continuation of conferences that have been held in previous years. Matters reviewed and discussed included the Financial Assistance Program, public information, training and exercises, shelter policy, radiological defence, and the decentralization of government in an emergency.

# CHAPTER XXVI.-SOURGES OF OFFIGIAL INFORMATION AND MISCELLANEOUS DATA 

## CONSPECTUS

Page | Page<br>Part I.-Sources of Official Information. 1168<br>Part II.-Special Material Published in<br>Former Editions of the Canada Year<br>Book.<br>Part III.-Register of Official Appoint ments. . . . ...............................<br>1176<br>Part IV.-Federal Legislation 1961-62. ... 1181<br>Part V.-Canadian Chronology.......... 1184

## PART I.-SOURCES OF OFFICIAL INFORMATION

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the ten-year and five-year censuses of Canada are planned and statistical information of all kinds-federal and provincial-is centralized. Certain areas of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, population and national defence are constitutionally federal affairs and on such subjects the respective departments at Ottawa are the proper sources of information with which to communicate. Other fields of effort such as the administration of lands and natural resources, education, roads and highways, and health and hospitals are the responsibility of the provinces and data may be obtained concerning the individual provincial efforts in these fields from the respective provincial government departments. However, certain federal departments are also concerned with specific aspects of these subjects and, as in the case of the Dominion Bureau of Statistics, in the co-ordination and presentation of the material for Canada as a whole. The Government of Canada, while not administering the resources within the provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of livestock and the improvement of strains, on agricultural marketing and on crop yields are cases in point; in forestry, questions of forest research, forest fire protection and reforestation offer good examples.

Certain Federal Government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests originating abroad for information on Canada and Canadian affairs; the Trade Publicity Branch, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Broadcasting Corporation; and the National Film Board. The Departments of Agriculture, Fisheries, Forestry, Northern Affairs and National Resources, and Mines and Technical Surveys, and such agencies as the National Gallery of Canada, the National Museum of Canada, the National Library, and the National Research Council, while not thus classed, are interested in the dissemination of information to a greater extent than most of the remaining government departments, although several of the latter have publicity branches.

Thus, inquiries for information of a statistical nature should be forwarded to the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa. Inquiries to federal sources for information not of a statistical nature should be sent as a general rule to the individual departments and agencies of government which are listed, with their functions, at pp. 92-109 of this publication. Inquiries relating to provincial efforts may be directed to the provincial government department concerned. Inquiries about the Yukon and Northwest Territories should be addressed to the Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

Sale of Official Publications.- Under the provisions of the Public Printing and Stationery Act, the Queen's Printer and Controller of Stationery, Ottawa, has charge of the sale of all official publications of Parliament and the Government of Canada that are issued to the public, as well as of the free distribution of all public documents and papers to persons and institutions (libraries) entitled by statutory provisions to receive them. The regulations relating to the distribution and sale of government publications made in accordance with the provisions of Sect. 7 of the Public Printing and Stationery Act and Sect. 7 (e) of the Financial Administration Act were brought up to date and approved by Treasury Board on Mar. 31, 1955.

In compliance with these regulations, the Queen's Printer and Controller of Stationery issues the Daily Checklist of Government Publications which records for the information of the public service, libraries, etc., all Federal Government publications immediately upon release. Those authorized by law or regulation to receive free copies of government publications receive the Daily Checklist without charge; others desiring the service may purchase an annual subscription to be forwarded daily or in weekly batches as requested.

The Queen's Printer and Controller of Stationery also issues the Monthly Catalogue of Canadian Government Publications, a comprehensive listing of all official publications, public documents and papers not of a confidential nature published at government expense, an Annual Catalogue (in January) listing all publications issued during the previous year, as well as sectional catalogues and selected titles bulletins advertising new government publications.

Dominion Bureau of Statistics Publications.-The Dominion Bureau of Statistics acts as the agent of the Queen's Printer with respect to the sale of DBS publications. Reports of the Bureau cover all aspects of the national economy; the Canada Year Book and Official Handbook Canada constitute authoritative compendiums of information on the institutions and economic and social development of Canada.

DBS publications are listed with their prices in a catalogue of Current Publications and in the Queen's Printer's Catalogue of Canadian Government Publications. The DBS Daily Bulletin and Weekly Bulletin, available from the Bureau's Information and Public Relations Division at an annual subscription of $\$ 1$ each, are designed to serve persons wishing to keep closely informed on the full range of published information issued by the Bureau. Subscription orders for DBS publications or orders for single copies should be addressed to the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, and should contain the necessary remittance in the form of a cheque or money order made payable to the Receiver General of Canada.

Provincial Government Publications.-Most provincial government publications may be obtained from the Queen's Printer of the province concerned. Inquiries should be addressed to the provincial capital cities:-

| Newfoundland.........St. John's | Ontario....................Toronto |
| :---: | :---: |
| Prince Edward Island. . .Charlottetown | Manitobs..................Winnipeg |
| Nova Scotia...........Halifax | Saskatchewan............. Regina |
| New Brunswick. . . . . . . Fredericton | Alberta...................Edmonton |
| Quebec................Quebec | British Columbia..........Victoria |

Directory of Sources of Official Information.-The Canada Year Book normally carries a detailed Directory of Sources of Official Information (Federal and Provincial) as a Section of this Chapter, which is designed for the purpose of directing the reader to the proper channels from which he might draw published material relating to any particular subject. Since there was little change required in the Directory as presented in the 1961 edition of the Year Book at pp. 1192-1224, it is not repeated here in the interests of economy but will be included again in subsequent editions.

## PART II.-SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions. Therefore the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the 1962 Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population", which are automatically revived when later census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

The articles marked with an asterisk (*) are available in reprint form from the Information and Public Relations Division, Dominion Bureau of Statistics.

## PART IV.-FEDERAL LEGISLATION, 1961-62

The Acts passed at the Fourth Session of the Twenty-Fourth Parliament from its opening on Nov. 17, 1960 to July 13, 1961 when it recessed are listed in the 1961 Year Book at pp. 1237-1241. The legislation passed at the remainder of the Session which began on Sept. 7, 1961 and prorogued Sept. 28, 1961 is outlined below, followed by the legislation passed at the Fifth Session of the Twenty-Fourth Parliament which began Jan. 18, 1962 and ended Apr. 19, 1962.

These classified lists of federal legislation have been compiled from the Statutes. Naturally in summarizing material of this kind it is not always possible to convey the full implication of the legislation. The reader who is interested in any specific Act is therefore referred to the Statutes of Canada in the given volume and chapter.

## Legislation of the Latter Part of the Fourth Session of the Twenty-Fourth Parliament, Sept. 7, 1961 to Sept. 28, 1961*

## Pages 92-109, Administrative Functions of the Federal Government

There were no important changes made in the functions of the various departments of government and the special boards and commissions between the time the material on the above pages was prepared (Jan. 31, 1962) and the date of going to press with this volume (Sept. 30, 1962).

## APPENDIX II

## POPULATION

As stated on p. 145 of this volume, summary population data resulting from the 1961 Census, available at Sept. 30, 1962, are given in this Appendix. A short review of population growth during the present century is included, followed by tables showing 1961 rural and urban classifications, populations of incorporated urban centres and metropolitan areas, age and sex distribution, origins, religious denominations and language and mother tongues. Because of limitations of space, these tables are presented without textual comment.

Corresponding figures for previous census years are available from earlier editions of the Canada Year Book and from published census bulletins (see pp. 145-146).

Population Growth.-Canada's population stood at 18,238,000 in 1961 as against $10,377,000$ in 1931 and $5,371,000$ in 1901. In the first decade of the century, the gain of 34 p.c. was greater than in any censal period up to 1961. Growth was associated with the opening up of the West for settlement and massive immigration from overseas. During the 1901-11 period, about $1,760,000$ immigrants entered the country and natural increase amounted to an estimated $1,000,000$. As the total increase in population was $1,835,328$, it is evident that there was substantial emigration during the period. In the 1911-21 period, population growth dropped to 22 p.c. Military losses in the First World War and losses during the influenza epidemic, which together amounted to about 120,000 , were a factor in this decline. Although the flow of immigrants was reduced during the war years, it had been very heavy immediately preceding the War, so that the total number for the period $(1,612,000)$ was very close to that for the previous censal period. However, emigration was also extemely high and the increase in population amounted to 1,581,306, representing 2 p.c. per annum compared with 3 p.c. in the 1901-11 period.

In the decade 1921-31, the rate of increase dropped to 18 p.c. Immigration fell to $1,200,000$ and emigration was estimated at $1,000,000$. Thus the increase in population, which amounted to $1,588,837$, was only 229,000 greater than the natural increase. A feature of this period was the rapid growth of population in Western Canada, partly the result of immigration and partly the result of an influx of people from Eastern Canada. During 1931-41, the population increase was just under 11 p.c. During the depressed conditions of the 1930's, marriage and birth rates were significantly lower and only 150,000 immigrants came to Canada, although, in addition, 75,000 Canadians returned from the United States. Emigration was also much lower than in the previous decades, amounting to an estimated 250,000 . Natural increase was only $1,220,000$, the crude birth rate falling from 27 per thousand of the population in the 1921-25 period to 24 per thousand in the succeeding four-year period and to 20 per thousand during much of the 1931-41 decade. During 1941-51, population was restored to pre-depression levels. Excluding Newfoundland which became part of Canada in 1949, it amounted to 19 p.c.; including Newfoundland it was 22 p.c. Much of the increase took place in the second half of the decade, reflecting heavy postwar immigration and a sharp rise in the marriage and birth rates.

In the 1951-61 period, the population growth rate at 30.2 p.c. came close to approaching the extremely high rate of the first decade of the century. However, the two periods contrast in many ways. In the early period there was a wider dispersal of population increases as whole regions across the continent were opened up; in the recent period there was a concentration of growth in urban communities although some spreading of population into newly developed northern areas took place. Natural increase accounted for about 75 p.c. of the growth. While there was some decline in the death rate, the trend of natural increase reflected very closely that of the crude birth rate which began to rise during the War and remained high throughout the period. Net immigration accounted for the remainder of the increase; during the decade, $1,542,853$ immigrants entered the
country, more than double the estimated emigration. While all provinces gained in population during 1951-61, the rates of increase varied widely. The greatest increases resulted from a combination of natural increase and net migration which in the two large provinces of Central Canada and the two most westerly provinces accounted for over 87 p.c. of the total natural increase. In contrast, increases in the other six provinces were entirely accounted for by natural increase.

## 1.-Numerical Distribution of Population by Province, and Percentage Change from Preceding Census, Decennial Census Years 1901-61

Nore.-Populations for the decennial census years 1871, 1881 and 1891 are given in the 1956 Year Book, p. 149. The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 will be found in the 1951 edition, p. 131 , and census populations for 1956 in the 1961 edition, p. 146.

## 12.-Annual Estimates of Population, by Province, as at June 1, 1951-62

Nore.-At every census the previous post-censal estimates, made at June 1 each year, are adjusted to the newly recorded population figures. Figures for 1951, 1956 and 1961 are census figures. Figures for 1867-1904 will be found in the 1936 Year Book, p. 141; for 1905-30 in the 1946 edition, p. 127; for 1931-40 in the 1952-53 edition, p. 143; and for $1941-50$ in the 1961 edition, p. 165.

[^7]:    - Prepared by Dr. N. L. Nicholson, Director, Geographical Branch, Department of Mines and Technical Surveys, Ottawa.

[^8]:    ${ }^{1}$ Includes Gatineau Park ( 97 sq. miles) and Quebec Battlefields Park ( 0.36 sq. mile) which are under federal jurisdiction but are not technically National Parks. ${ }^{2}$ Less than one square mile. ${ }^{2}$ Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, but which are not regarded as National Parks. $\quad 4$ Includes that part of Wood Buffalo Park in Alberta ( 13,675 sq. miles); this park, although established under the National Parks Act, is administered by the Northern Administration Branch, Department of Northern Affairs and National Resources.
    ${ }^{5}$ That part of Wood Buffalo Park in N.W.T. ${ }^{6}$ A forest experiment area of 25 sq. miles is included in National Parks figure.

[^9]:    ${ }^{1}$ Administered by the Northern Administration Branch, Department of Northern Affairs and National Resources.

[^10]:    * Prepared in the Information and Historical Division, National Capital Commission, Ottawa.

[^11]:    * A series of special articles relating to the wildlife resources of Canada has been carried in previous editions of the Year Book. See list of special articles in Chapter XXVI, Part II, under the heading of "Fauna and Flora".

[^12]:    * Prepared by the Meteorological Branch of the Department of Transport, Toronto. A comprehensive study on The Climate of Canada, also prepared by the Meteorological Branch, was carried in the 1959 Year Book, pp. 23-51. Supplementing that textual material, detailed tabulations of climatic factors for 45 individual meteorological stations across the country were carried in the 1960 Year Book, pp. 33-77. A reprint is available from the above source giving the complete textual and tabular data.

[^13]:    ${ }^{1}$ Total rainfall and one-tenth of the total snowfall.

[^14]:    * Prepared by the Meteorological Branch, Department oi Transport, Toronto.

[^15]:    *Prepared by Dr. G. S. Garland, Physics Department, University of Alberta, Edmonton.

[^16]:    ${ }^{1}$ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (SC 1912, c. 40).
    ${ }^{2}$ Extended by Quebec Boundaries Extension Act, 1912 (SC 1912, c. 45) and diminished Mar. 1, 1927 in consequence of the Award of the Judicial Committee of the British Privy Council whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.
    ${ }^{2}$ Extended by the Extension of Boundaries Act of Manitoba, 1881 and the Manitoba Boundaries Extension Act, 1912 (SC 1912, c. 32).
    ${ }^{4}$ Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional districts of Assiniboia, Athabaska, Alberta and Saskatchewan established May 17, 1882 by minute of Canadian Privy Council concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.
    ${ }^{5}$ By an Imperial Order in Council passed on June 23, 1870 pursuant to the Rupert's Land Act, 1868 (Br. Stat. 1868, c. 105), the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada effective July 15, 1870. These territories were designated as the North-West Territories by the Act of SC 1869, c. 3 and as the Northwest Territories by RSC 1906, c. 62 . By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880), all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada and these additional territories were formally included in the NorthWeat Territories by SC 1905, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (SC 1870, c. 3) and a further portion was added to Manitoba in 1881 by SC 1881, c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905 and in 1912 other portions were added to Manitobs, Ontario and Quebec.

    - By SC 1876, c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed and in 1905 the entire Keewatin District was re-annexed. The Act of 1876 was never proclaimed. By Order in Council of May 8, 1882 the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabaska were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895 the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council dated Mar. 16, 1918 (effective Jan. 1, 1920) the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.
    ${ }^{7}$ See p. 86.
    ${ }^{3}$ The provisional district of Yukon established in 1895 was created a judicial district of the North-West Territories by proclamation issued pursuant to Sect. 51 of the North-West Territories Act (RSC 1886, c. 50) on Aug. 16, 1897 and by the Yukon Territory Act (SC 1898, c. 6) was declared to be a separate Territory.

[^17]:    * See A Consolidation of The British North America Acts 1867 to 1952, prepared by Elmer A. Driedger (Queen's Printer, Ottawa, 1956, 50 cents).

[^18]:    * Also available in reprint form from the Dominion Bureau of Statistics, Ottawa, 25 cents.

[^19]:    ${ }^{2}$ Members of Her Majesty's Privy Council for Canada take rank inter se according to the dates of their being sworn in.
    ${ }^{2}$ Ranks as the Prime Minister of Canada.
    ${ }^{3}$ Ranks as a Member of the Cabinet.

[^20]:    ${ }^{1}$ The ordinary legal limit of duration for each Parliament is five years.
    ${ }^{2}$ Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (B.N.A. Act, Sect. 50). $\quad{ }^{3}$ Date of general election. ${ }_{4}{ }^{4}$ Writs returnable. ${ }^{6}$ Dissolution of Parliament. ${ }^{6}$ Includes long adjournment from Nov. 29, 1956 to Jan. 8, 1957. ${ }^{7}$ Includes long adjournment from July 13 to Sept. 7, 1961.

[^21]:    ${ }^{1}$ Any changes occurring between Jan. 31, 1962 and the date of going to press will be carried in an Appendix to this volume.

[^22]:    ${ }^{1}$ Died Jan. 4, 1961; see Table 11 for by-election.
    ${ }^{3}$ Resigned Sept. 12, 1960; appointed to the Senate Sept. 12, 1960; see Table 11 for by election.

[^23]:    ${ }^{1}$ Resigned Jan. 19, 1960; appointed to the Senate Jan. 20, 1960; see Table 11 for by-election. ${ }^{2}$ Resigned June 11, 1958 to assume leadership of the Liberal Party in Quebec; see Table 11 for by-election.
    ${ }^{3}$ Appointed
    Lieutenant-Governor of Quebec Oct. 6, 1961; results of by-election in Appendıx.

[^24]:    ${ }^{1}$ Died May 11, 1958; see Table 11 for by-election.

[^34]:    ${ }^{1}$ Life of Legislature not expired at Jan. 31, 1962,

[^35]:    ${ }^{1}$ Life of Legislature not expired at Jan. 31, 1962.

[^36]:    * Further information on officials of various Federal Government departments serving Yukon Territory may be obtained from the Director, Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.
    $\dagger$ Prepared in the Public Finance and Transportation Division, Dominion Bureau of.Statistics.

[^37]:    ${ }^{1}$ Municipalities grouped according to their official nomenclature, which is roughly indicative of size and nature (see footnote 6). ${ }^{2}$ Municipalities grouped under the classification devised by the Dominion-Provincial Conferences on Municipal Statistics, designed to bring municipalities into comparable groups for statistical presentation. ${ }_{3}$ Includes 62 local improvement districts and 12 commissions. ${ }_{4}$ Designated by the province as towns (33), rural districts (4) and local improvement districts (3); all operate under the same Act. ${ }^{\text {s }}$ Classified by the province as 'community councils'.

    6 Rural municipalities are designated by different names in

[^38]:    *This Royal Commission was appointed in 1960 but was omitted from the list for that year published in the 1961 Canada Year Book.
    $\dagger$ As at Jan. 31, 1962; any major changes taking place between that date and the time of going to press will be carried in an Appendix to this volume.

[^39]:    * Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary the Industrial Development Bank, because of the special nature of their functions, are excluded from operations of the Crown corporations Part of the Act and are governed by their own Acts of incorporation as is also the Eastern Rockies Forest Conservation Board, a joint federal-provincial enterprise. Though not included in the Schedules to the Financial Administration Act, certain provisions of the Act apply to the Northern Ontario Pipe Line Crown Corporation, set up on June 7, 1956 to oversee the building of a cross-country natural gas pipeline. The Canada Council was set up under the Canada Council Act (assented to Mar. 28, 1957) as a Crown corporation but has been declared not an agency of the Crown and hence is not included in the Schedules to the Financial Administration Act; the same situation applies to the National Productivity Council set up under the National Productivity Act (assented to Dec. 20, 1960).

[^40]:    * Compiled from information supplied by the respective Departments.

[^41]:    ${ }^{1}$ Includes Christmas overtime pay of Post Office employees.

[^42]:    For footnotes, see end of table, p. 127.

[^43]:    ${ }^{1}$ Employees abroad and their earnings included beginning November 1959. As an indication, there were 8,534 such employees at the end of March 1960 and earnings for the period November 1959 to March 1960 amounted to $\$ 22,176,000$.

[^44]:    *This organization is staffed by employees of the National Research Council.

[^45]:    * Prepared by the Department of External Affairs, Ottawa.

[^46]:    * Dual accreditation; representative not resident in the country.
    $\dagger$ New Mission, not yet established at Jan. 31, 1962.

[^54]:    * Sections 1 and 2 of this Part were revised under the direction of the Deputy Minister, Department of Citizenship and Immigration, Ottawa.

[^55]:    ${ }^{1}$ Included in Africa. ${ }^{2}$ Excludes Commonwealth countries. ${ }^{\mathbf{3}}$ Includes 531 from Republic of South Africa.

[^56]:    ${ }^{1}$ Includes a few minor groups.
    such as German, French, Italian, etc.
    ${ }^{2}$ Reported as Swiss origin but evidently one of the constituent races

[^57]:    * Prepared in the Citizenship Registration Branch under the direction of the Deputy Minister, Department of Citizenship and Immigration, Ottawa.

[^58]:    ${ }^{1}$ Canadian-born persons who lost their citizenship by marriage; this applies to females only.

[^59]:    ${ }^{1}$ Mainly children over 14 years of age.

[^60]:    *Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics.

[^61]:    ${ }^{1}$ Excess of births over deaths.
    ${ }^{2}$ Deaths under one year of age.
    ${ }^{8}$ Per 1,000 population.
    ${ }^{4}$ Per
    ${ }^{1}$ Excess of b

[^62]:    ${ }^{1} \mathrm{As}$ at the 1956 Census; residents only.
    ${ }^{2}$ By place of occurrence.
    ${ }^{3}$ Per 1,000 live births.

[^63]:    * Unless otherwise indicated, "births" in this Section refers to infants born alive; stillbirths are dealt with under a separate heading on p. 194 and under multiple births on p. 190. For international comparisons. see Section 7, pp. 214-215.

[^64]:    ${ }^{1}$ Excludes Newfoundland and the Territories for which data are not available.

[^65]:    *The term "illegitimate", for statistical purposes, does not refer to births conceived out of wedlock but to those in which parents reported themselves as not having been married to each other at the time of birth or registration and, in Ontario, those in which the marital status of the mother was reported as "single".

[^66]:    ${ }^{1}$ Figures for Newfoundland are included from 1949, and those for the Yukon and Northwest Territories from 1951.

[^67]:    * A crude rate is one based on the total population.

[^68]:    *Although there are at present some provincial differences in the requirements for compulsory registration of stillbirths (i.e., with respect to minimum gestational age-limits and specific criteria of life), stillbirths, as referred to here, may be summarized as including "foetuses of 28 or more weeks of gestation, which did not show any sign of life".

[^69]:    * For international comparisons, see Section 7, pp. 214-215.

[^70]:    1Excludes the Yukon and Northwest Territories.

[^71]:    - For international comparisons, see Section 7, pp. 214-215.

[^72]:    ${ }^{1}$ Newioundland included from 1951 and the Yukon and Northwest Territories from 1956.

[^73]:    ${ }^{1}$ Includes one in the Northwest Territories. ${ }^{2}$ Includes two in the Northwest Territories.

[^74]:    * Except where otherwise indicated, this Chapter was prepared by the Research and Statistics Division of the Department of National Health and Welfare, Ottawa.

[^75]:    *Prepared by Dr. J. W. Willard, Deputy Minister of Welfare, Department of National Health and Welfare, Ottawa.

[^76]:    ${ }^{1}$ As set out in the General Health Grant Rules. $\quad{ }^{2}$ Merged with Medical Rehabilitation Grant, Apr. 1, 1960. ${ }^{3}$ Expenditure exceeds 100 p.c. of amount available through revote of funds unused in previous years. ${ }^{4}$ Absorbed into General Public Health Grant, Apr. 1, $1960 .{ }^{5}$ Lapsed in $1953 . \quad{ }^{6}$ Introduced in 1953 and absorbed into General Health Grant, Apr. 1, 1960. ${ }^{7}$ Introduced in 1953 and merged with Crippled Children Grant, Apr. 1, 1960. ${ }^{8}$ Introduced in 1953 . $\quad$ Amounts for 1960-61 only; see footnotes ${ }^{2}$ and ${ }^{7}$.

[^77]:    ${ }^{1}$ A holdback of $\$ 10,799,716$ was payable during the year ended Mar. 31, 1962. ${ }^{2}$ Amount of holdback not available.

[^78]:    ${ }^{1}$ Per 1,000 total population; based on population estimated as at June 1, 1959.
    ${ }^{2}$ Per 1,000 insured population; based on annual average number of insured persons under provincial plans, 1959. ${ }^{3}$ Excludes six hospitals for which data were not reported.

    4 Excludes two hospitals for which data were not reported and six for which data were not appropriately segregated. ${ }^{5}$ Excludes one hospital for which data were not appropriately segregated. ${ }^{6}$ Excludes one hospital for which data were not reported and three for which data were not appropriately segregated.

[^79]:    ${ }^{1}$ Based on claims processed during period Jan．1－Dec．31，1959．$\quad{ }^{2}$ Based on figures provided by Provincial Plan for most Saskatchewan hospitals．

    ## 6．－Number and Percentage Distribution of Adult and Child Separations from Budget Review General Hospitals，by Length of Stay and by Province， 1959

[^80]:    ${ }^{1}$ Excludes 55 separations unspecified as to length of stay．$\quad{ }^{2}$ Based on claims processed during period Jan．1－Dec．31， $1959 . \quad{ }^{8}$ For most Saskatchewan hospitals，the reported distribution of separations included only persons insured under the Provincial Plan．

[^81]:    - See also Subsection 3 of Section 4 of that Part of the Education and Research Chapter relating to Scientific and Industrial Research.

[^82]:    * Prepared in the Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics. Detailed information will be found in the following DBS publications: Hospital Statistics, Vols. I to VIII (Catalogue Nos. 83-210 to 83-216); Mental Health Statistics (Catalogue No. 83-204) and Financial Supplement (No. 83-205); Tuberculosis Statistics (No. 83-206) and Financial Supplement (No. 83-207).

[^83]:    ${ }^{1}$ Mental hospitals only；does not include psychiatric or mental units in general hospitals．
    ${ }^{2}$ Tuberculosis ${ }^{1}$ Mental hospitals only；does not include psychistric or mental units
    hospitals only；does not include tuberculosis units in general hospitals．

[^84]:    ${ }^{1}$ Based on estimated population as at June 1， 1960.

[^85]:    * Prepared in the Public Health Section of the Health and Welfare Division, Dominion Bureau of Statistics.

[^86]:    ${ }^{1}$ Based on gross payment for March.

[^87]:    ${ }^{1}$ Includes dependants.
    ${ }^{2}$ Payment figures shown are for the months to which the claims made under the program relate and include amounts paid to the provinces by the Federal Government after the end of the fiscal year.
    ' Includes persons of a class formerly granted aid under a mothers' allowances program.

[^88]:    ${ }^{1}$ Approximate.

[^89]:    *Prepared by the Department of Veterans Affairs, Ottawa.

[^90]:    ${ }^{1}$ Completed by Mar. 31, 1962 or scheduled for completion before the end of the year. Final costs estimated for incompleted projects.

[^91]:    *A more comprehensive explanation of the operation of Prosthetic Services is contained in the 1961 Year Book, pp. 291-292.

[^92]:    * Effective June 1, 1962, extension permissible at Ministerial discretion.
    $\dagger$ Legislation amended March 1962 to change amount to $\$ 79$ a month.
    $\ddagger$ Legislation amended March 1962 to change maximum age to 30 years. effective June 1, 1962.

[^93]:    * Legislation amended March 1962 to make final contracting date Oct. 31, 1968.

[^94]:    * For assessments lower than 100 p.c., the awards are proportionately less.

[^95]:    ${ }^{-}$Prepared in the Education Division, Dominion Bureau of Statistics.

    ${ }^{2}$ Includes causing death in the operation of a motor vebicle or otherwise.

[^116]:    - Prepared under the direction of A. J. MaçLeod, Commissioner of Penitentiaries, Ottawa.

[^117]:    - Prepared by T. G. Street, Chairman, National Parole Board, Ottawa.

[^118]:    * Prepared under the direction of S. C. Barry, Deputy Minister of Agriculture, Ottawa.

[^119]:    * Figures are based on unofficial estimates published in trade journals.

[^120]:    - Prepared under the direction of S. C. Barry, Deputy Minister of Agriculture, Ottawa.

[^121]:    *This Act repealed the Canadian Farm Loan Act, 1927.

[^122]:    -This Act repealed the Agricultural Prices Support Act, 1944.

[^123]:    * Information supplied by the agricultural authorities of the various provinces.

[^124]:    * Except as otherwise credited, prepared under the cirection of S. C. Barry, Deputy Minister of Agriculture, Ottaws.

[^125]:    Water Development.-Projects constructed under the water development program and carried out under the supervision of the Water Development Division of the Agricultural Services Branch are divided into two main categories according to size of project, number of people benefiting, and cost of construction: (1) individual and neighbour projects and (2) community projects.

    Individual and neighbour projects are works serving the needs of one or two farmers. They are generally in the form of small dams and dug-outs that supply water for stockwatering and domestic use and/or for irrigation purposes. PFRA provides all engineering services required to plan and design such projects and a portion of the construction costs. The rate of assistance paid on individual projects is based on yardage of earth moved and amounts to seven cents per cubic yard up to a maximum of $\$ 250$ for dug-outs, $\$ 300$ for stockwatering dams and $\$ 600$ for irrigation projects. Where two or more farmers pool their water resources to build neighbour projects, assistance is paid up to a maximum of $\$ 1,000$. Responsibility for the actual construction is left to the farmer who either contracts the work out or builds the project himself.

[^126]:    * Prepared in the Water Resources Branch, Department of Northern Affairs and National Resources, Ottawa.

[^127]:    ${ }^{*}$ Revised by the Deputy Minister, Saskatchewan Department of Agriculture.
    $\dagger$ Revised in the Deputy Minister's office, Alberta Department of Agriculture.

[^128]:    *Revised by the Comptroller of Water Rights, British Columbia Department of Lands and Forests.

    $\dagger$ Available from the Dominion Bureau of Statistics or the Queen's Printer, Ottawa.

[^130]:    ${ }^{1}$ Values for 1961 not available at time of going to press-see footnote 2, Table 11.

[^131]:    ${ }^{1}$ Cows and heifers, two years old or over, kept for milk purposes.

[^132]:    ${ }^{1}$ Used in farm butter only.

[^133]:    ${ }^{-1}$ Factory-made cheese includes cheddar and other cheese made from whole milk and cream.
    ${ }_{2}$ Amounts for "other cheese" are included in Quebec and Ontario figures but, as fewer than three firms reported in the other provinces, data cannot be included except in the Canada total.

[^134]:    ${ }^{1}$ Includes malted milk, cream powder, formula milks, whole milk powder of less than 26 p.c. fat, evaporated milk of 2 p.c. fat, multi-milk and sterilized cream manufactured by fewer than three firms. ${ }^{2}$ Includes sugar of milk (lactose), condensed buttermilk, multi-skim milk and special formula skim milk products manufactured by fewer than three firms.

[^135]:    ${ }^{1}$ Includes Newfoundland for all manufactured dairy products.

[^136]:    ${ }^{1}$ Price to growers (to pickers in the case of blueberries) for unpacked fruit.

[^137]:    ${ }^{1}$ Acreages of peas in Prince Edward Island and New Brunswick are included with Nova Scotia in 1959; in 1960 and 1961, Prince Edward Island and Nova Scotia acreages of peas are included with New Brunswick. ${ }^{2}$ Acreages of beans, corn and peas in Manitoba are included with Alberta.

[^138]:    ${ }^{1}$ Includes Agricultural Stabilization Act payments of 28 cents per lb . in 1958, 21 cents per lb . in 1959, and 23 cents per lb. in 1960 on qualifying graded wool.

[^139]:    For footnotes, see end of table.

[^140]:    ${ }^{1}$ Fluctuations in apparent per capita flour consumption are caused partly by lack of complete data on flour inventories in all positions. ${ }^{2}$ Includes soybean flour. ${ }^{3}$ Tomatoes canned, tomato juice, tomato pulp, paste and purée. ${ }^{\text {Ex }}$ Exclusive of Newfoundland.

    - Includes process cheese.
    - Includes cream expressed as milk.

    Disappearance of Meats and Lard.-Production of meats from slaughter in Canada, total supply, distribution and per capita disappearance of meats and lard are shown in Table 46. All estimates are on a carcass-weight basis except canned meats, which are in terms of product.

[^141]:    ${ }^{1}$ Excluding canned meats. ${ }^{2}$ Included with beef. ${ }^{3}$ Includes commercial lard production and estimated lard equivalent of renderable pork fat available from all uninspected slaughter.

[^142]:    ${ }^{1}$ Estimated totals，which are rounded to millions，include allowancee for any missing data for countries shown and for other producing countries not shown．
    ${ }^{2}$ Tentative unofficial production estimates．

[^143]:    * Sections of this Chapter that deal with forestry and the federal forestry program were revised in the Department of Forestry, Ottawa. Provincial forestry programs were prepared by the forestry officials of the respective provincial governments. Sections dealing with forest and allied industries, except as otherwise noted, were revised in the Forestry Section, Industry and Merchandising Division, Dominion Bureau of Statistics.
    $\dagger$ A more detailed discussion of forest regions is given in Bulletin 123, Forest Regions of Canada, published by the Department of Forestry. Accounts of variations in Canadian physiography and climate are included in a special article on The Climate of Canada, appearing in the 1959 Year Book, pp. 23-51.

[^144]:    *The sixth edition, 1961, is obtainable from the Queen's Printer, Ottawa, price $\$ 2$.

[^145]:    ${ }^{1}$ Prince Edward Island is not included, but 1960 was a particularly serious year for forest fires in that province; an estimated 25 fires burned 18,000 acres with damage assessed at $\$ 221,000$. Cost of fire fighting is not available.

[^146]:    Research in the economics of forestry provides the basis for intelligent decisions on the economic aspects of managing forest lands and of utilizing their products and services. It embraces the whole range of economic activities that relate to the use of forest resources,

[^147]:    *The history of the federal-provincial agreements and their relation to the Canada Forestry Act is described in a special article appearing in the 1956 Year Book,pp. 459-466.

[^148]:    * Prepared by B. W. Burgess, Secretary, Pulp and Paper Research Institute of Canada, Montreal, Que.

[^149]:    ${ }^{1}$ In eatimating the annual drain on Canada's forest resources, certain converting factors have been used, each of which represents in cubic feet the quantity of merchantable wood used to produce one unit of the material in question. The factor for logs and bolts for the British Columbia coastal region is 175 and for the remainder of Canads 200. Other factors: pulpwood and round mining timber 85, fuelwood and wood for charcoal 80, poles and piling 15, hewn railway ties 5 , fence posts 1.2 and fence rails $1 . \quad{ }^{2}$ Converted to rough cords and included with pulpwood.
    ${ }^{3}$ Chiefly Christmas trees but also includes balsam gum, cascara bark, etc.

[^150]:    ${ }^{1}$ Prior to 1958 , employment statistics included those individuals employed in the transportation of products from the woods to the manufacturing plant or user. In order to report only employment in woods operations, and to avoid duplication of data collected elsewhere, 1958 and subsequent employment statistics have been compiled to conform with this principle.

[^151]:    ${ }^{1}$ Figures differ slightly from DBS figures given in Tables 20 and 22, because of different bases of calculation.

[^152]:    * See Chapter XIV for further particulars regarding the pulp and paper and paper-converting industries.
    $\dagger$ For reasons given in Section 1, Part II of the Foreign Trade Chapter, gold is excluded from Canadian trade statistics.

[^153]:    ${ }^{1}$ Calculated on the same basis as for 1960.
    ${ }^{2}$ Includes wood preservation industry and miscellaneous wood

[^154]:    * Asphalt roofing manufacturers, folding box and set-up box manufacturers, corrugated box manufacturers, paper bag manufacturers, and miscellaneous paper converters.

[^155]:    * Prepared under the direction of Dr. Marc Boyer, Deputy Minister of Mines and Technical Surveys, Ottawa, in the following Divisions: Introduction and Subsections 1 and 3 by the Mineral Resources Division; Subsection 2 by the Mineral Processing Division, Mines Branch; and Subsection 4 by the Fuels and Mining Practice Division, Mines Branch.

[^156]:    *On May 22, 1962, the Prime Minister announced that agreement on the terms of a contract had been reached with Britain.

[^157]:    ${ }^{*}$ This review covers the year 1960.

[^158]:    * Revised, under the direction of the Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

[^159]:    *Revised under the direction of C. L. O'Brian, Chairman of the Dominion Coal Board.

[^160]:    * Compiled from material supplied by the respective provincial governments.

[^161]:    - Compiled from material supplied by the provincial governments.

[^162]:    ${ }^{1}$ Not shown to avoid revealing individual company operations.

[^163]:    *For a description of this index, as well as one for manufacturing and electric power and gas utilities, see DBS Reference Paper Revised Index of Industrial Production, 1935-1957 (1949=100) (Catalogue No. 61-502). To update these series and others in the Index of Industrial Production, see DBS monthly report Index of Industrial Production (1949=100) (Catalogue No. 61-005).

[^164]:    ${ }^{1}$ Based on commodity data.

[^165]:    ${ }^{1}$ Includes relatively small quantities produced in New Brunswick and Alberta; there has been no silver produced in New Brunswick since 1958.

[^166]:    ${ }^{1}$ The sum of Canadian coal mines' sales, colliery consumption, coal supplied to employees and coal used in making coke, etc., less the tonnage of coal exported. $\quad{ }^{2}$ Imports of briquettes are not included in this table but are shown separately in Table 24. ${ }^{3}$ Includes small tonnages from countries other than Britain and the United States. Deductions have been made from this column to take account of foreign coal re-exported from Canads and bituminous coal ex-warehoused for ships' stores.

[^167]:    ${ }^{1}$ Exports．${ }^{2}$ Excludes Northern Ireland．${ }^{\mathbf{3}}$ Final DBS figures．${ }^{4}$ Exports to United States．

[^168]:    *Revised by the Water Resources Branch, Department of Northern Affaira and National Resources, Ottawa.

[^169]:    - This net total takes into account the deletion of $1,550 \mathrm{hp}$. at a dismantled plant in Ontario, but does not reflect an increase of $60,000 \mathrm{hp}$. brought about by the re-rating of an existing plant in Quebec.

[^170]:    ${ }^{1}$ Includes only hydro-electric installations that develop power mainly for sale. $\quad{ }^{2}$ Includes only water power installations developed by industries mainly for their own use. ${ }^{2}$ Includes installed capacity of all water wheels and hydraulic turbines.

[^171]:    * Prepared by the Public Utilities Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^172]:    *Revised by the various provincial commissions concerned.

[^173]:    * The Commission also purchases $135,000 \mathrm{hp}$. from the Shawinigan Water and Power Company.

[^174]:    ${ }^{1}$ Capacities quoted are dependable at time of system peak except those marked with an asterisk (*), which are installed capacities.

    ## 17.-Resources of The Hydro-Electric Power Commission of Ontario Generated and Purchased (All Systems), December 1959-61

[^175]:    ${ }^{1}$ Dependable peak capacity-the amount of power which resources can be expected to supply at the time of the system primary peak requirements, assuming that all units are available and that the supply of water is normal. This capacity will vary from time to time in accordance with changing conditions. The capacity of a source of purchased power is based on the terms of the purchase contract.

[^176]:    ${ }^{1}$ Sum of the maximum 20 -minute coincident peak loads (primary plus secondary) of each of the systems operated by the Commission, given in terms of net output of the sources of supply to each system for the last month of each fiscal year.

[^177]:    * Prepared by the Information and Educational Service, Department of Fisheries, Ottawa.

[^178]:    * Prepared by the respective provincial departments responsible for fisheries administration.

[^179]:    ${ }^{1}$ Excludes livers. ${ }^{2}$ Includes value of livers and liver products. ${ }^{3}$ Included with "Herring". ${ }^{4}$ Includes seals, seaweed, etc., quantities of which cannot be added. ${ }^{5}$ Excludes landings by Canadian fishermen in United States ports.

[^180]:    ${ }^{1}$ Totals in this table differ from provincial totals because salted groundfish (except boneless) are based on sales rather than production; duplications for blosters are also removed.

[^181]:    * Prepared by A. Stewart, Chief, Fur Seetion, Production and Marketing Branch, Department of Agriculture, Ottawa. A more detailed article on the fur industry appears in the 1961 Year Book at pp. 618-622.

[^182]:    *Revised in the Agriculture Division, Dominion Bureau of Statistics.

[^183]:    ${ }^{1}$ Includes some pelts not valued by province.

[^184]:    * Prepared in the Industry and Merchandising Division, Dominion Bureau of Statistics.

[^185]:    ${ }^{*}$ Except as otherwise noted, prepared by A. Cohen, Assistant Director, Industry and Merchandising Division, Dominion Bureau of Statistics.

[^186]:    ${ }^{1} 1949$ earnings.
    ${ }^{2} 1950$ earnings.

[^187]:    - Prepared by G. E. McCormack, Commodities Branch, Department of Trade and Commerce, Ottawa.

[^188]:    * NOT YET MADE IN CANADA

[^189]:    ${ }^{1}$ See footnote 1, Table 1, p. 616. shipments; see text on p. 615 . for 1949. ${ }^{2}$ Excludes figures for the fish processing industry which are
    4 Based on the revised Standard Industrial Classification; see text on pp. 623-624.
    6 Includes Yukon Territory.
    footnote 3, Table 1, p. $616 . \quad$ Includes Yukon Territory.

[^190]:    ${ }^{1}$ A change in the method of computing the number of production workers in the years 1925 to 1930 inclusive increased the number somewhat over that which the method otherwise used would have given. There was therefore a proportionate reduction in the averages for $1925-30$ per employee as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are therefore comparable with those for 1924 and earlier years.
    ${ }^{2}$ Net value of products; see footnote 1, Table 1, p. 616. text on pp. 623-624. on p. 615 .

[^191]:    ${ }^{1}$ In 1952 gross value of products was replaced by selling value of factory shipments; see text on p. 615. ${ }^{2}$ Figures for the years 1929 and 1933 are for the fiscal years ended Mar. 31 of the following years; 1939-59 figures are for the calendar year. Net imports are total imports less foreign products re-exported.
    ${ }^{3}$ Not comparable with years prior to 1958 since certain items formerly included are no longer considered as merchandise trade; these exclusions dropped about $\$ 30,000,000$ from the value of exports, $\$ 150,000,000$ from the value of imports, and thus $\$ 120,000,000$ from the available-for-consumption value.

[^192]:    *For a description of the methods used in constructing the index and a description of its scope, see DBS publication Revised Indez of Industrial Production, 1935-1957 (Catalogue No. 61-502).

[^220]:    *More detailed information is given in DBS annual report Earnings and Hours of Work in Manufacturing (Catalogue No. 72-204). Data for 1960 include milk bottling and pasteurizing plants in manufacturing for the first time.

[^221]:    ${ }^{1} 1958$ survey coverage.

[^222]:    ${ }^{2}$ Expanded survey coverage.

[^223]:    1 Distinction between vacation policies providing for increasing vacation periods with increasing service and vacation policies providing for vacations of one stated period regardless of length of service was made for the first time in 1960; thus, in comparing 1960 and 1961 figures with those for previous years, the percentages of employees granted vacations under both policies should be added.

[^224]:    - Prepared by the Unemployment Insurance Section, Labour Division, Dominion Bureau of Statistics; statistics of unemployment insurance are compiled and published by the DBS from material supplied by the Unemployment Insurance Commission.

[^225]:    ${ }^{*}$ More detailed information is given in the Department of Labour publication Workmen's Compensation in Canada, A Comparison of Provincial Laws.

[^226]:    ${ }^{1}$ Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for compensation; the period varies in the several provinces. ${ }_{2}$ Includes, except where noted otherwise, payments to compensate loss earnings, medical aid payments, cost of rehabilitation and hospitalization (not including capital expenditures) and pensions paid (not pensions awarded) for temporary and permanent disabilities.
    ${ }^{2}$ Excludes payments for hospitalization and rehabilitation.

    4 Excludes payments for hospitalization. ${ }^{5}$ Excludes payments by employers who make direct compensation to their employees; such employees come under Schedule II of the Ontario and Quebec Workmen's Compensation Acts. rehabilitation and funeral and related expenditures.

[^227]:    ${ }^{1}$ Figures for years up to and including 1949 are as at Dec. 31 ; figures from 1951 are as at Jan. $1 . \quad{ }^{2}$ Newfoundland included from 1949.
    ${ }^{3}$ Adjustment in coverage resulted in a net addition of approximately 23,000 members for the first time.

[^228]:    *Prepared by Dr. A. W. Currie, Professor of Political Economy, University of Toronto.

[^229]:    *The Board's judgments are reported in Canadian Railway Cases and Canadian Railway and Transport Cases, and its judgments, orders, rulings and regulations are published by the Queen's Printer, Ottawa, in what is known as J.O.R. \& R.

[^230]:    *Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics; more detailed information is given in the annual reports of the Division.

[^231]:    joint track. $\quad$ Excludes 52 miles of joint track.

[^232]:    －Statistics for individual railways are given in DBS annual report Railway Transport，published in six parts （Catalogue Noe．52－207－52－212）．

[^233]:    ${ }^{1}$ A restatement of investment totals by railways adopting the new Uniform Classification of Accounts in 1956 and year-to-date investments in non-rail property, which were not previously available, has increased the cumulative figure by $\$ 481,268,776$.
    ${ }_{2}$ Includes investments totalling $\$ 11,188,835$ of the British Columbia Electric
    Railway which reported for the first time in the railway transport series.

[^234]:    *The Hudson Bay Railway, formerly managed and operated for the Federal Government by the CNR, was absorbed into the Canadian National Railway System on Jan. 1, 1958, to be operated in the same manner as other Canadian Government railway lines. Statistics of the Hudson Bay Railway are therefore included with CNR data for 1958 and subsequent years.

[^235]:    ${ }^{1}$ Includes "loans and bills receivable" and "rents receivable".

[^236]:    ${ }^{1}$ Full-time employees only for 1951-53 and all employees, including part-time, for 1954-60.

[^237]:    * Except as otherwise indicated, the material in this Part has been revised in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^238]:    ${ }^{1}$ Includes payments from railways and contributions from the Railway Grade Crossing Fund toward elimination of grade crossings, etc., amounting to $\$ 2,700,155$.
    ${ }^{2}$ Includes federal administrative costs re Trans-Canads Highway amounting to $\$ 168,000$ in $1956-57, \$ 235,000$ in $1957-58, \$ 242,100$ in $1958-59, \$ 204,000$ in $1959-60$ and $\$ 188,265$ in 1960-61. ${ }^{2}$ Includes $\$ 8,974,818$ for property purchases. ${ }^{4}$ Includes expenditures of $\$ 1,767,698$ by municipalities in Manitoba for which no breakdown is available. ${ }^{5}$ Includes expenditures of $\$ 2,573,262$ by municipalities in Manitoba, of $814,932,793$ by municipalities in Saskatchewan and of $\$ 1,514,533$ by the British Columbia Department of Highways for which no breakdown is available.

    - Includes expenditures of $\$ 3,091,156$ by municipalities in Manitobs for which no breakdown is available.

[^239]:    * Prepared in the Editorial and Information Division, Department of Northern Affairs and National Resources, Ottawa.

[^240]:    ${ }^{1}$ Includes registrations in the Yukon and Northwest Territories.

[^241]:    ${ }^{1}$ Factory shipments since $1952 . \quad$ 2 Includes Armed Forces vehicles.

[^242]:    ${ }^{1}$ Includes other items not shown such as transfer of motor vehicles, garage and service station licences, and
     cluded with passenger automobiles.

[^243]:    * Statistics are given in more detail in DBS annual report Motor Carriers-Freight (Catalogue No. 53-205).

[^244]:    - Statistics are given in more detail in DBS annual report Passenger Bus Statistics (Catalogue No. 53-215).

[^245]:    * Statistics are given in more detail in DBS annual reports Motor Transport Traffic Statistics for Canada and the provinces (Catalogue Nos. 53-207-53-214).

[^246]:    * Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services by the Department of Transport and the National Harbours Board; the St. Lawrence Seaway by the St. Lawrence Seaway Authority; part of the financial statistics by the Department of Public Works; shipping subsidies by the Director of Subsidized Steamship Services, Canadian Maritime Commission; and canal traffic and statistics of shipping by the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^247]:    ${ }^{1}$ Includes N.W.T.-see footnote 2. $\quad$ aklavik, N.W.T., closed as a port of registry Dec. 12, 1958. Ships using the Mackenzie River system are registered at Edmonton, Alta.

[^248]:    ${ }^{1}$ Includes small ports not shown separately.

[^249]:    ${ }^{1}$ Minimum depth of Seaway canals is 27 feet and minimum width 200 feet. Wiley-Dondero canal and two locks near Massena, N.Y., are in United States territory; dimensions are approximately the same as those of Canadian facilities.
    ${ }^{2}$ Notice must be given by vessels of more than six-foot draught.
    ${ }^{3}$ With Lake Ontario at elevation of 243 feet.

[^250]:    Pan American World Airways Inc. operates between Seattle, Wash., and Fairbanks, Alaska, U.S.A. with points of call at Juneau and Annette Island, Alaska, and Whitehorse, Y.T., Canada; and between points in the United States, Gander Canada, and Europe.
    Qantas Empire Airways Ltd. operates between Sydney Australia, San Francisco U.S.A., and Vancouver Canada.
    Sabena Belgian World Airlines operates between Brussels Belgium, Shannon Ireland, and Montreal Canada.
    Seaboard and Western Airlines, Inc. operates between points in the United States, Gander Canada, and beyond.
    TW A (Trans-World Airlines, Inc.) operates between points in the United States, Gander Canada, and points abroad.
    United Air Lines, Inc. operates between Vancouver Canada, and Seattle U.S.A., via Bellingham U.S.A.

    West Coast Airlines, Inc. operates between Spokane, Wash., U.S.A., and Calgary Canada.
    Western Air Lines, Inc. operates between Great Falls, Mont., U.S.A., Calgary Canada and Edmonton Canada.

[^251]:    * Prepared in the Mineral Resources Division, Department of Mines and Technical Surveys, Ottawa, under the direction of Dr. Marc Boyer, Deputy Minister.

[^252]:    - Statistics of oil pipelines are given in greater detail in the DBS monthly report Oil Pipe Line Transport (Catalogue No. 55-001). Additional information on the interprovincial movement of oil by pipeline will be found in Chapter XIX, Part I, Section 5.

[^253]:    *Subsections 1 and 4 to 7 were revised in the Telecommunications and Electronics Branch of the Department of Transport, Ottawa. Textual data in Subsection 2 were prepared by The Bell Telephone Company of Canada, Montreal. Statistical material of Subsection 2 and Subsection 3 was revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^254]:    ${ }^{1}$ Includes underground conduits and buried cable. urban exchange lines having more than four parties.

[^255]:    ${ }^{1}$ Full-time only. $\quad{ }^{2}$ Full-time and part-time.

[^256]:    ${ }^{1}$ Excludes commission operators. $\quad 2$ Includes messages to and from vessels on the Great Lakes and the St. Lawrence River and messages to and from stations.
    ${ }^{3}$ Excludes relayed messages.

[^257]:    ${ }^{1}$ Twin cable from Clarenville, Nfld. to Oban, Scotland and single cable from Clarenville, Nfld. via Terranceville, Nfid. to Sydney Mines, N.S. ${ }^{2}$ Licensed for operation by two carriers-COTC and ET\&T. One cable unserviceable.

[^258]:    *With the exception of the paragraphs relating to the establishment and functions of the Board of Broadcast Governors and the material on privately owned stations (pp. 859-860) prepared by the Secretary of the Board, the material in this Subsection was supplied by the Information Services of the Canadian Broadcasting Corporation,

[^259]:    ""Station" is defined as a transmitter with production facilities; a "rebroadcasting station" picks up and relays the signal of a master station; and a "network relay station" is an automatic unmanned transmitter connected to a network line which relays the network service.

[^260]:    ${ }^{1}$ Less than one hour of broadcasting.

[^261]:    ${ }^{1}$ Gross revenue less commissions and allowances to postmasters, and other small items.
    ${ }^{2}$ Excludes rental of semi-staff and staff post offices.

[^262]:    ${ }^{1}$ Includes one week－end newspaper which is circulated with newspapers in other cities（circulation not available）．
    ${ }^{2}$ Includes one week－end newspaper which is circulated with newspapers in other cities．${ }^{3}$ Bilingual．
    ${ }^{4}$ Includes 9 bilinguals and 11 week－end newspapers including one which is circulated with dailies in other cities． 5 Circulation for 3 dailies only．$\quad{ }^{6}$ Includes 11 bilinguals and 11 week－end newspapers including one which is circulated with dailies in other cities．${ }^{7}$ Week－end newspaper．
    －Includes one bilingual． ${ }^{10}$ Circulation for 3 weeklies only．
    ${ }_{8}$ Includes one week－end newspaper．
    lacludes one bilingual．$\quad$ Circulation for 3 weeklies only．$\quad{ }^{\circ}$ Circulation for 2 weeklies only．

[^263]:    * Prepared in the Merchandising and Services Section of the Industry and Merchandising Division, Dominion Bureau of Statistics.

[^264]:    ${ }^{1}$ Newfoundland included from 1949. ${ }^{2}$ Includes the Yukon and Northwest Territories. ${ }^{3}$ Totals are not the exact addition of the components because of rounding of the figures.

[^265]:    ${ }^{1}$ Excludes delivery and, for unincorporated stores, also excludes proprietors' salaries.
    ${ }^{2}$ Includes taxes and insurance, light, heat and power, repairs, maintenance, depreciation (except on delivery equipment) and rentals on rented premises. $\quad$ Includes salaries and wages and occupancy expenses. income and, for unincorporated stores, proprietors' salaries or withdrawals.

[^266]:    ${ }^{1}$ Excludes lumber and farm implement dealers. ${ }^{2}$ Included in "Charge"

[^267]:    ${ }^{1}$ Import data for wheat, oats, barley and rye, respectively, include flour in terms of wheat, rolled oats and oatmeal in terms of oats, malt and pot and pearl barley in terms of barley, and rye flour in terms of rye. ${ }^{2}$ Fewer than 50,000 bu.
    ${ }^{2}$ Export data for wheat, oats and barley, respectively, include bagged seed wheat, wheat flour in terms of wheat, rolled oats and oatmeal in terms of oats, and malt and pot and pearl barley in terms of barley.

    - Includes human food, seed requirements, industrial use, loss in handling and animal feed.

[^268]:    *More detailed information is available from DBS annual report Livestock and Animal Products Statistics (Catalogue No. 23-203), and the Department of Agriculture publication Livestock Market Review. Statistics of livestock and poultry are given on pp. 418-421 of this edition of the Year Book.

[^269]:    *Information supplied by various Divisions of the Departments of Agriculture, Fisheries, Mines and Technical Surveys, and National Revenue and of the Dominion Bureau of Statistics.

[^270]:    ${ }^{1}$ Includes amounts in transit.

[^271]:    ${ }^{1}$ At refineries only.

[^272]:    ${ }^{1}$ Duty has been paid herein on the malt.

[^273]:    ${ }^{1}$ Includes other revenue.

[^274]:    ${ }^{1}$ Duplication exists in this column as some associations market produce as well as handle supplies, some associations market more than one product and some handle many of the supplies listed.

[^275]:    *Revised in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^276]:    * Prepared by W. J. MacLeod Secretary of the Board of Grain Commissioners for Canada, Winnipeg, Man.

[^277]:    * Prepared by C. B. Davidson, Executive Assistant, The Canadian Wheat Board, Winnipeg, Man.

[^278]:    ${ }^{*}$ Prepared in the Economics Division of the Administration Branch, Department of Agriculture, Ottawa. A more detailed statement on this subject, including the history of developments leading to the present situation, appears in the 1960 Canada Year Book, pp. 961-966.

[^279]:    *Revised by D. W. H. Henry, Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

[^280]:    *The information on Government Aid to Small Business, Industrial Promotion, Product Design and Capital Cost Allowance for New Products was prepared by the Director of the Trade Publicity Branch of the Department of Trade and Commerce and the material on Trade Standards by the Director of the Standards Branch of the same Department.

[^281]:    * The material relating to patents and copyrights was revised by the Commissioner of Patents, and that relating to trade marks by the Registrar of Trade Marks, Department of the Secretary of State, Ottawa.

[^282]:    ${ }^{1}$ Includes $\$ 500,000$ paid by the Nova Scotia Government as its share of the joint cost of certain Nova Scotis subvention payments.

[^283]:    * Prepared by the Superintendent of Bankruptcy, Ottawa. Early bankruptey and insolvency legislation is reviewed in the 1952-53 Year Book, pp. 914-915.

[^284]:    ${ }^{1}$ New series not strictly comparable with previous figures; see text on p. 920.

[^285]:    *Prepared in the Prices Division, Dominion Bureau of Statistics.

[^286]:    2 Wheat prices used in this index are Canadian Wheat Board buying prices for Nos. 1, 2 and 3 Manitoba Northern at Fort William-Port Arthur. The initial payment is first used and the index revised as further payments are announced. Between August 1945 and July 1950 the price included for No. 1 Manitoba Northern was $\$ 1.83$ per bushel. For subsequent crop years the price was as follows: 1950-51, $\$ 1.85 ; 1951-52, \$ 1.83 ; 1952-53, \$ 1.82 ; 1953-54$, $\$ 1.56 ; 1954-55, \$ 1.65 ; 1955-56$, $\$ 1.61 ; 1956-57$, $\$ 1.586 ; 1957-58, \$ 1.619 ; 1958-59, \$ 1.594 ; 1959-60, \$ 1.588$; and 1960-61, \$1.791. For the crop year 1961-62 the initial payment of $\$ 1.40$ for No. 1 Manitoba Northern was increased to $\$ 1.50$ as of Mar. 1, 1962. Western oats and barley were brought under control of the Canadian Wheat Board on Aug. 1, 1949. Since then prices for the Canadian farm products index have been initial payments to farmers, with participation payments included whenever announced.

[^287]:    * Price Index Numbers of Residential Building Materials, 1986-48 (Catalogue No. 62-505) and Price Index Numbers of Non-tesidential Building Materials, 1935-52 (Catalogue No. 62-506). Revised item list and weighting for the electrical component of the residential building materials index, effective July 1960, is available on request.

[^288]:    ${ }^{1}$ Shelter and household operation combined. Services".

[^289]:    *Text and indexes presented here are on the $1935-39=100$ base (except the four supplementary indexes). In the 1963 edition of the Year Book, revised indexes on the base 1956=100 will replace the present series. An outline of the revision and historical indexes on the new base are available on request from the Prices Division, Dominion Buresu of Statistics.

[^290]:    ${ }^{1}$ See footnote to p. 937.

[^301]:    ${ }^{1}$ Included with Saudi Arabia prior to 1960.
    2 Included with British Middle East, n.e.s. prior to 1960.

[^302]:    ${ }^{1}$ Less than $\$ 500$.

[^303]:    ${ }^{1}$ Less than $\$ 500$.

[^304]:    ${ }^{1}$ Lees than $\$ 500$.

[^305]:    ${ }^{1}$ Less than $\$ 500$.

[^306]:    In this classification the expression "Canadian Farm Products" refers to commodities actually produced, in their original form, on Canadian farms. "Foreign Farm Products" covers materials or commodities Canada does not produce, e.g., cane sugar, tea, rubber, cotton, silk, etc.
    ${ }^{2}$ Less than $\$ 500$.

[^307]:    ${ }^{1}$ In this classification the expression "Canadian Farm Products" refers to commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers materials or commodities Canads does not produce, e.g., cane sugar, tea, rubber, cotton, silk, etc.

[^308]:    ${ }^{1}$ The groups, though classified by component material, differ slightly from conventional groups (see text, pp. 982-983).

[^309]:    * Prepared in the several branches concerned and collated in the Trade Publicity Branch, Department of Trade and Commerce, Ottawa. The work of the Small Business Branch, the Industrial Promotion Branch, the National Design Branch, the Depreciation Certification Division and the Standards Branch of the Department, which are concerned with domestic matters, is dealt with in the Domestic Trade Chapter, pp. 914-916.

[^310]:    * Prepared from the report of the National Energy Board for the year ended Dec. 31, 1961.

[^311]:    * Information relating to rate of duty and value for duty is available from the Department of National Revenue, Customs and Excise Division, which administers the Customs Act and the Customs Tariff Act.

[^312]:    -This conference, ended on July 16, 1962, included negotiations concerning European Common Market rates of the 'Six' (Belgium, France, Germany, Italy, Luxembourg and the Netherlands) whose national tariffs are being aligned with the Common Market Tariff over a transition period scheduled to be implemented by Dec. 31, 1969. When these tariff concessions come into force, the national tariffs of the member states of this European Economic Community will be adjusted to the basis of the negotiated concessions. As a result of these negotiations, the Minister of Trade and Commerce stated that Canada had obtained assurances with respect to its rights of access to the European Common Market (EEC) covering fisheries products, wood and wood products, base metals, minersls and chemicals, and other miscellaneous products totalling nearly $\$ 250,000,000$ of Canadian trade and, in addition, assurances regarding the access of Canadian wheat and certain other agricultural items to the said Market pending the working out of the agricultural tariff policy of the EEC.

[^313]:    * Prepared in the Travel Statistics Unit, National Accounts Division, Dominion Bureau of Statistics.

[^314]:    ${ }^{1}$ These figures are the number of entries and re-entries into Canada and thus include substantial amounts of in-transit, commuting and local traffic. ${ }^{2}$ Exclusive of Hawaii.

[^315]:    ${ }^{*}$ Except as otherwise indicated, revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^316]:    ${ }^{1}$ Incomplete; not separable from real property taxes in some provinces.

[^317]:    ${ }^{1}$ Excludes capital expenditures out of capital fund for the Province of Quebec.
    from Old Age Security Fund.

[^318]:    - Revised (June 1962) in the Taxation Division, Department of Finance, under the direction of F. R. Irwin, Director of the Division, and by the provincial authorities concerned.

[^319]:    - See p. 252.
    $\dagger$ Prior to 1962 , these deductions were $\$ 250$ and $\$ 500$, respectively. The 1962 Budget Speech announced that, effective Jan. 1, 1962, they would be raised to $\$ 300$ and $\$ 550$, respectively. The proposed changes had not yet been brought into force by legislation as of June 1962.

[^320]:    * These taxes apply only to wines manufactured in Canada. The customs tariff on wines includes a levy to correspond to these taxes on domestic production.

[^321]:    * See also pp. 993-995.

[^322]:    ${ }^{1}$ Includes pensions paid from the Old Age Security Fund.
    2 Unconditional payments; grants for specific purposes are classified by function.

[^323]:    IEOI SLNGWNUGAOD TVIDNIAOYd OL SLNAWXVd TVタタagy

[^324]:    ${ }^{1}$ Having a term of three months.
    ${ }^{2}$ Included in "Other liabilities"
    ${ }^{3}$ Excludes deposits of chartered banks in Bank of Canada.

[^325]:    ${ }^{1}$ These contingent liabilities are expressed in Canadian dollars; where applicable, stocks and bonds payable solely in sterling or United States dollars are converted on the bssis of $£ 1=\$ 2.80$ and $\$ 1 \mathrm{U} . \mathrm{S} .=\$ 1$ Canadian, respectively. In addition the government has an indeterminate contingent liability in respect of rental guarantee contracts which in 1960 amounted to approximately $\$ 15,500,000$. Against this amount was a reserve of $\$ 3,389,644$. ${ }^{2}$ As at Dec. 31, 1960.
    ${ }^{3}$ As reported (in accordance with Sect. 45, National Housing Loan Regulations) by approved lenders for their respective fiscal years ended between Oct. 31 and Dec. 31, 1960.

[^326]:    ${ }^{1}$ Based on the official estimates of population for June 1 of the year indicated.
    ${ }^{2}$ Based on the official estimates of population for June 1 of the year immediately preceding the one indicated. adjustment required to place interest on public debt on accrued basis.
    ${ }^{3}$ Excludes \$87,510,068

[^327]:    ${ }^{1}$ Includes old age security tax.

[^328]:    ${ }^{1}$ Includes old age security tax.

[^329]:    ${ }^{1}$ Includes old age security tax.

[^330]:    ${ }^{1}$ Estate tax, including succession duties. ${ }^{2}$ Under terms of the 1947, 1952, 1957 and 1961 DominionProvincial Taxation Agreements all provinces except Ontario and Quebec refrain from levying succession duties; amounts shown for other provinces are collection of arrears.

[^331]:    ${ }^{1}$ Excludes bonds assumed by_the provinces.

[^332]:    ${ }^{1}$ Less than $\$ 500$.

[^333]:    ${ }^{1}$ Debentures of the Montreal Transportation Commission guaranteed by the City of Montreal, not previously in DBS publications.

[^334]:    ${ }^{4}$ Prepared in the National Accounts and Balance of Payments Division, Dominion Bureau of Statistics.

[^335]:    * See p. 1110.

[^336]:    ${ }^{1}$ Excludes dividends paid to non-residents. ${ }^{2}$ Includes changes in farm inventories. ${ }^{1}$ Includes net income of independent professional practitioners.

[^337]:    *The difference between gross national product and gross domestic product is that the former measures production of Canadian factors of production by excluding interest and dividends paid to non-residents and including interest and dividends from non-residents, while the latter measures production within the territorial boundaries of Canada by including interest and dividends accruing to non-residents and excluding interest and dividends receivable from nonresidents. For statistical reasons it is not possible to measure the contribution of industries to the gross national product.
    $\dagger$ See supplement to DBS Reference Paper No. 72 Supplement to the Inter-Industry Flow of Goods and Services, Canado, 1949.

[^338]:    * More detailed information is given in DBS annual report Canadian Balance of International Payments and International Investment Position (Catalogue No. 67-201) and in Quarterly Estimates of the Canadian Balance of International Payments (Catalogue No. 67-001).

[^339]:    * The adjustments from commodity trade statistics to merchandise imports and exports for balance of payments purposes include some items covered elsewhere in the balance of payments, as well as other adjustments necessary to conform to international receipts and payments.

[^340]:    ${ }^{1}$ Includes all net exports of non-monetary gold.

[^341]:    *A more extended historical review appears in DBS report Canada's International Investment Position, 1926 to 1954 (Catalogue No. 67-503) and more recent statistics in the annual report The Canadian Balance of International Payments and International Investment Position (Catalogue No. 67-201).

[^342]:    ${ }^{1}$ Excludes short-term commercial indebtedness. ${ }^{2}$ Includes international financial agencies.
    ${ }^{2}$ Country distribution not available. $\quad$ Excludes Government of Canada holdings of gold and foreign exchange.

[^343]:    * Except where otherwise indicated, this material has been revised by the Research Department of the Bank of Canada.

[^344]:    ${ }^{1}$ Note issues in the process of being retired, the liability for which has been taken over by the Bank of Canada from the original issuers.

[^345]:    * Revised by the Master of the Royal Canadian Mint, Ottawa.

[^346]:    * Condensed and revised article prepared for the 1961 Year Book by J. Douglas Gibson, General Manager of The Bank of Nova Scotia. The early history of currency and banking in Canada is given in the 1938 Year Book, pp. 900-905. A list of the banks at Confederation appears in the 1940 Year Book, p. 897, and bank absorptions since 1867 are given in the 1941 edition, pp. 812-813. A table in the 1937 Year Book, pp. 894-895, shows the insolvencies since Confederation; the last insolvency occurred in 1923.

[^347]:    * The larger Canadian banks have long maintained offices in London and New York. In addition, some Canadian banks for more than half a century have been providing an important part of commercial banking facilities in the Caribbean area (see Table 10, p. 1100). The Bank of Montreal opened an office in Tokyo in January 1962, the first to be established in Japan by a Canadian bank.

[^348]:    * Such loans were almost entirely a postwar innovation in Canadian lending practice, and had increased markedly during the easy-money period of 1954-55. Since 1956, term lending has generally been confined within narrower limits though it is still practised when conditions permit.

[^349]:    * The gold sovereign remained the standard for the Canadian dollar until 1910 when the currency was defined in terms of fine gold, making it the exact gold equivalent of the United States dollar. Both British and United States gold coins were, however, legal tender in Canada for this whole period.

[^350]:    - Noon quotations. Daily highs and lows may have exceeded these rates.
    $t$ The operations of the Foreign Exchange Control Board from the time of its establishment to the termination of exchange control in December 1951 are reviewed in the 1941 to 1952-53 editions of the Year Book.

[^351]:    ${ }^{1}$ Does not include $\$ 18,200,000$ in U.S. funds borrowed in the U.S. in August 1949 by the Government of Canada and set aside for the purpose of retiring an equal amount of certain securities payable in U.S. dollars on Feb. 1, 1950. ${ }^{2}$ On Oct. 1, 1959, $\$ 62,500,000$ representing the gold portion of Canada's increased quota was transferred to the International Monetary Fund.

[^352]:    * Revised under the direction of the Superintendent of Insurance for Canada, Ottawa.
    $\dagger$ An outline of the development of loan and trust companies in Canada from 1844 to 1913 is given in the 1934-35 Year Book, p. 993. The federal laws relating to their operation were revised in 1914.

[^353]:    ${ }^{1}$ Includes companies chartered by the Governments of Nova Scotia, New Brunswick and Manitobs which, by arrangement, are inspected by the federal Department of Insurance.
    ${ }^{2}$ Excludes provincial companies of Nova Scotia, New Brunswick and Manitoba which are included with federal companies.

[^354]:    *Further details are given in the Department of Insurance report Small Loans Companies and Money-Lenders for the year ended Dec. 31, 1960.

[^355]:    * Prepared by E. C. Gould, Financial Editor, The Monetary Times.

[^356]:    ${ }^{1}$ Excludes treasury bills, deposit certificates and other financing for a term of less than one year and the Canada Conversion Loan of 1958.
    ${ }^{2}$ Excluding a total of $\$ 20,000,000$ placed in Canada during 1961 under the category of foreign government financing. ${ }^{3}$ Total of all financing in Canada and the United States is shown at $\$ 13,600,000$ less than the grand total of all financing during the year since this amount was raised elsewhere than in Canada or the United States.

[^357]:    - Material in this Chapter, except as otherwise indicated, has been prepared under the direction of the Superintendent of Insurance for Canada, Ottaws. More detailed data are available in the Annual Reports of the Department of Insurance.
    $\dagger$ All the amounts given in the tables of this Section are net amounts after deduction of reinsurance ceded.

[^358]:    ${ }^{1}$ Death, disability and maturity under insurance and annuity contracts.

[^359]:    ${ }^{1}$ Based on official estimates of population; figures for $1952-59$ revised since previous publication, in accordance

[^360]:    ${ }^{1}$ Death, disability and maturity under insurance and annuity contracts.

[^361]:    ${ }^{1}$ At book values. The liabilities include a reserve equal to the amount, if any, by which the total book value of bonds, atocks and real estate exceeds the total market value (or amortized value where applicable). ${ }_{3}$ At market values.

[^362]:    ${ }^{1}$ Includes amounts written off shares purchased under mutualization plan. than those purchased by the company under mutualization plan.

[^363]:    ${ }^{1}$ Excludes forest fires and Federal Government property losses.

[^364]:    ${ }^{1}$ Excludes forest fires and Federal Government property losses.

[^365]:    ${ }^{1}$ Includes marine insurance.

[^366]:    - Revised in the Government Annuities Branch, Department of Labour, Ottawa.

[^367]:    ${ }^{*}$ Prepared in the Office of the Deputy Minister, Department of National Defence, Ottawa.
