

# CANADA YARR BOOK 1962 

The Trans-Canada Highway winds its way through the Selkirk Mountains just south of Rogers Pass, B.C. This spectacular section was completed in mid1962 and the dream of a highway stretching unbroken from coast to coast, skirting cities and towns and crossing mountains, muskeg, wilderness and prairie, became a reality-a milestone in the historic struggle for Canadian unity. The Highway was officially opened at the summit of Rogers Pass by Prime Minister Diefenbaker on September 3, 1962.

# CAMAD YEAR BOOK 1962 

OFFICIAL STATISTICAL ANNUAL OF THE<br>RESOURCES, HISTORY, INSTITUTIONS AND SOCIAL AND ECONOMIC CONDITIONS OF CANADA

Published by Authority of<br>The Honourable George Hees<br>Minister of Trade and Commerce<br>DOMINION BUREAU OF STATISTICS<br>Canada Year Book, Handbook<br>and Library Division

> Cloth-bound.......... $\$ 5$

> Paper-bound......... $\$ 3$
> (Order No. CS 11-205)

## PREFACE

The 1962 edition of the Canada Year Book continues a series of annual publications giving official statistical and other information on almost every measurable phase of Canada's development. As the economy of the country has expanded, the Dominion Bureau of Statistics has endeavoured to present the story of this development, summarizing a great mass of detailed statistical information concisely within the covers of one volume and supplementing it with data from other Departments of the Federal Government and from the provinces.

Special feature articles are presented in each edition of the Year Book. Those in the current issue include: "Economic Regions of Canada" (pp. 17-23); "Social Welfare Expenditures in Canada" (pp. 217-222); "Recent Changes in Canadian Agriculture" pp. (377-380); "The Petrochemical Industry in Canada" (pp. 609-615); and "Revolution in Canadian Transportation" (pp. 753-758). Certain of the feature articles appearing in previous editions of the Year Book, such as those on Taxation in Canada and the Marketing of Agricultural Products other than Grain, have been considered of continuing importance and have been incorporated into the Year Book as standard material.

All chapters include the latest data available at the time of printing. In this edition, summary population statistics from the 1961 Census, which were not available at the time Chapter III was prepared, appear in Appendix II. Appendix I lists the members of the Eighteenth Ministry as at July 1962 and the Members of the House of Commons as elected at the twenty-fifth General Election of June 18, 1962. The concluding chapter, entitled "Sources of Official Information and Miscellaneous Data", presents special material published in earlier Year Books, federal legislation of the 1961-62 session of Parliament, a Canadian chronology of events from January 1961 to the end of August 1962, and a register of official appointments. The detailed directory of sources of official information and the statistical summary of the progress of Canada normally carried in this Chapter have been omitted from this edition for reasons of economy. Enclosed in the pocket on the inside cover of the volume is a recently completed 140 -mile-to-the-inch political map.

The present volume was produced in the Canada Year Book, Handbook and Library Division by Miss Margaret Pink, Associate Editor, and the Year Book staff under the editorship and direction of Dr. C. C. Lingard, Director of the Division. The charts and maps were prepared by L. Tessier of the Drafting Unit and the Surveys and Mapping Branch of the Department of Mines and Technical Surveys.

The co-operation of numerous officials of the various Departments of the Federal and Provincial Governments and of this Bureau in the preparation of material for the Year Book is gratefully acknowledged. Credit by means of footnotes is given where possible either to the persons or to the branches of the public service concerned.

## WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada as a rule the Imperial system of weights and measures is followed; an exception is the ton where, unless otherwise stated, the short ton of $2,000 \mathrm{lb}$. is meant.

## Relative Weights and Measures, Imperial and United States

The following list of coefficients may be used to translate amounts expressed in one unit to the other. Where reference is made to Imperial pint, quart and gallon, their equivalent in ounces is also in Imperial measure; likewise United States designations for these quantities are shown in the U.S. equivalent in ounces. The Imperial (or British) fluid ounce and the U.S. fluid ounce are different measures. One Imperial fluid ounce equals 0.96 U.S. fluid ounce and one Imperial gallon equals 1.2 U.S. gallons.

1 short ton $=2,000 \mathrm{lb}$.
1 long ton $=2,240 \mathrm{lb}$.
1 barrel crude petroleum $=35$ Imperial gallons
1 ounce avoirdupois $=0.91146$ ounce troy (oz.t.)
1 statute mile $=5,280$ feet
1 nautical mile $=6,080$ feet

The following weights and measures are used in connection with the principal field crops and fruit; 2.3 bu . of wheat are required to produce 100 lb . of flour.

Pounds

## Fiscal Years of Federal and Provincial Governments

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31. Throughout the Year Book, all figures are for calendar years except where otherwise indicated in text or table headings.

## Miscellaneous

Maritime Provinces = Prince Edward Island, Nova Scotia and New Brunswick
Atlantic Provinces=Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick
Central Canada $=$ Quebec and Ontario
Prairie Provinces=Manitoba, Saskatchewan and Alberta
n.e.s. $=$ not elsewhere specified
n.o.p. $=$ not otherwise provided for
psi. (atomic research) $=$ per square inch
D.B.H. (forestry) $=$ diameter at breast height.

## SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:-
figures not available.
... figures not appropriate or not applicable.

- nil or zero.
-- amount too small to be expressed or where "a trace" is meant.
p preliminary figures.
$r$ revised figures.

will be found on the facing page.

## PART I.-GEOLOGY*

North America comprises six main natural regions which are both physiographic and geological because the ages, kinds and structures of the underlying rocks determine the natures of the land surfaces. Knowledge of these regions is important because their geological characteristics have much influence on the suitability of different areas for such activities as agriculture, mining, petroleum production and sports, and contribute as well to the varied scenery of the country. The six regions are: the Canadian Shield, a vast area of ancient rocks that is mainly in Canada; the Interior Plains and Lowlands, the largest area of which extends throughout the mid-Continent from the Gulf of Mexico to the Arctic Ocean; the Appalachian Region, mainly in the United States but also forming an important part of Eastern Canada; the Cordilleran Region, extending along the entire west coast of the Continent; the Atlantic Coastal Plain along the eastern seaboard of the United States; and the Innuitian Region, a mountainous belt in the Arctic Archipelago. Canada includes parts of four of these regions and all of the Innuitian Region, but none of the Atlantic Coastal Plain.

The Canadian Shield, embracing about one-half of the total area of Canada, is a roughly horseshoe or shield shaped terrain of some $1,850,000$ sq. miles, having Hudson Bay at its approximate centre. The Shield continues into the United States west and south of Lake Superior, and east of the upper St. Lawrence River where a belt of resistant rocks called the Frontenac Axis forms the Thousand Islands and, to the south, broadens to form the Adirondack area. Far back in geological time the Shield contained many ranges of high mountains

[^1]but these have been mainly worn down to a surface of moderate relief consisting of hills, ridges and valleys containing innumerable lakes and streams. Most of the surface is from 600 to 1,200 feet above sea-level but higher uplands form such well-known features as the Laurentian Mountains north of Montreal and the Haliburton Highlands in southeastern Ontario. Along the coast of Labrador and in Baffin Island are mountains rising 5,500 and 8,500 feet, respectively, above the sea. The Shield is a complex assemblage of Precambrian rocks that, as a whole, represent at least five-sixths of the long duration of geological time. Most of the rocks have been subjected to more than one and in some cases several periods of orogeny, resulting in intricate structures, intense metamorphism, widespread igneous intrusions, and alteration of much ancient sedimentary rock to granite and related material. These complexities combined with the absence of fossils, which facilitate the correlation of strata younger than Precambrian, hamper interpretation of the geology of the Shield. Nevertheless, progress has been made and methods developed in Canada have been applied to Precambrian shields of other continents.

Flanking the Shield are large expanses of plains and lowlands underlain by relatively young and soft rocks overlain in many places by good agricultural soils. A notable characteristic of the boundary between the Shield and the lowlands is the presence of large lakes that lie partly in rock basins in the Shield and partly in depressions in the younger strata. The most prominent are Great Bear Lake, Great Slave Lake, Lake Athabasca, Lake Winnipeg and Lake Huron. The largest lowland area is that of the Interior Plains, sometimes called the Great Plains or Western Interior Lowlands. These constitute the prairies of Western Canada and their wooded continuation to the north. The Northern Interior Lowlands include the Hudson Bay Lowlands south of Hudson Bay, the Foxe Basin Lowlands in and near western Baffin Island, and the Southern Archipelago Lowlands which occupy large parts of the more southerly Arctic islands. The Arctic Coastal Plain farther to the north is sometimes classed as a separate physiographic region comparable to the Atlantic Coastal Plain but is here grouped with the other plains and lowlands for simplicity. The Great Lakes-St. Lawrence Lowlands form two important agricultural and industrial areas in southern Ontario, separated by the Frontenac Axis; the more easterly continues in Quebec, on both sides of the St. Lawrence River, and an isolated continuation forms Anticosti Island. Sedimentary strata of Palæozoic and younger ages overlap the Shield to form the Plains and Lowlands. These strata once covered much more of the Shield before being removed by erosion. The Shield continues under the Plains, as is proved by numerous wells drilled for oil or gas in the Great Plains and in southern Ontario having been bottomed in typical Shield rocks, but it is customary to regard the Canadian Shield Region as the part that is exposed or covered by glacial deposits. The overlying strata are undisturbed or gently tilted or flexed, the Shield and the Plains and Lowlands together forming a central continental region that has been relatively stable since Precambrian time, while orogenies were active in the flanking geosynclinal belts now indicated by the Appalachian, Cordilleran and Innuitian mountains.

The Canadian Cordilleran Region is a northwesterly-trending belt about 500 miles wide composed of high mountains and lower plateaux and valleys. It comprises southwestern Alberta, all of British Columbia except its northeastern corner, almost all of Yukon Territory and the southwestern part of the Northwest Territories. The individual mountain groups and plateaux are arranged in a complex pattern divisible into three parallel northwesterly-trending zones; in most places these zones are quite distinct and are called the Western, Interior and Eastern Systems. The greater part of the Western System is composed of the high, rugged Coast Mountains along the mainland coast of British Columbia. Along part of the Yukon-Alaska boundary they are flanked to the southwest by the still higher St. Elias Mountains. Separated from the mainland by the Insular Passage are ranges forming Vancouver and Queen Charlotte Islands. The Interior System is a complex group of plateaux and mountains. The Eastern System is divided into the Northern Ranges and the Rocky Mountains, separated by a plain and plateau along the Liard River

near the British Columbia-Yukon boundary. The main features of the Northern Ranges are the British and Richardson Mountains near the Arctic Coast, and the Mackenzie and Franklin Mountains in the western part of the Northwest Territories. The Rockies are composed of high, serrated ranges extending northward from the 49th Parallel; the elevation of the highest peak, Mount Robson, is 12,972 feet. Flanking them on the east are the Rocky Mountain Foothills which form a transition with the Plains. Because the Rocky Mountains, although extensive, are but a relatively small part of the mountains of Western Canada, the popular tendency to apply the name to the entire Canadian Cordillera is inadmissible.

The Cordillera are on the site of a great geosyncline where sediments were laid down at least as early as late Precambrian time, where marine sedimentation continued in places as late as the Upper Cretaceous, and where freshwater sediments were deposited locally during the Tertiary. The principal mountain-building and igneous processes of which good

GEOLOGICAL TIME CHART

[^2]evidences remain began locally in early Mesozoic time, culminated in the western Cordillera in the Nevadan orogeny in late Jurassic and early Cretaceous time, but was not significant in the eastern Cordillera until the Laramide orogeny early in the Tertiary. Thus the western Cordillera were formed much earlier than the eastern, were largely worn down by erosion by the time the Rockies and other eastern mountains were built, and the western part of the region was uplifted at the time of the Laramide orogeny so that renewed erosion could carve the surface into the present mountains and plateaux. The strata in the western Cordillera are intruded by many bodies of igneous rocks, from small to very large in size. Most are granodiorite or diorite but many others are granite, gabbro or other related types; still others are ultrabasic, i.e., composed mainly of iron and magnesium minerals. Most are related to the Nevadan orogeny but some must have been intruded in late Cretaceous or early Tertiary time, and there is incomplete evidence that some are of ages from late Precambrian to Triassic. The intrusions are scattered widely, the largest concentration being the Coast Range Intrusions which form the greater part of the Coast Mountains. Intrusive rocks are rarely exposed in the eastern Cordillera, probably because the mountains there have not been eroded sufficiently to reveal many.

The Appalachian Region is the northern continuation of a long belt of folded strata extending along the eastern side of the United States. It is on the site of a geosyncline that existed mainly in Palæozoic time in which great thicknesses of sedimentary and volcanic strata were laid down. The northwestern boundary of the region is a long curving fault or zone of faults which extends from Lake Champlain at least as far as the Gulf of St. Lawrence and which causes the curved shape of the northern coast of Gaspe. The strata in the Appalachians have been folded and faulted by successive periods of orogeny along axes that strike northeasterly; thus strata of different kinds and ages and belts of intrusive rocks form northeasterly-trending bands, many of which are responsible for the peninsulas, bays and ridges of the region. Three principal periods of orogeny-the Taconic, the Acadian and the Appalachian-have been recognized. The Taconic occurred at the close of the Ordovician, the Acadian during the Devonian, and the Appalachian at the close of the Palæozoic. In Canada the Taconic disturbances were fairly widespread, the Acadian were more so, affecting areas that were previously affected by the Taconic and areas that were not, but the Appalachian orogeny, which was a major feature in parts of the United States, was of minor and local importance.

The Innuitian Region is known mainly from reconnaissance surveys. It is underlain by moderately-to-intensely folded sedimentary, volcanic and metamorphic rocks of various ages, the oldest being probably Proterozoic and the youngest being Tertiary. Folding occurred at different times and in different directions, some before the Silurian period, some in Silurian or Devonian time, some late in the Palæozoic era, and some in Tertiary time. Five fold-belts have been recognized-Cornwallis, Parry Islands, Central Ellesmere, Northern Ellesmere and Eureka Sound. Granitic intrusions have been found in the Northern Ellesmere belt.

Brief sketches of the geological regions together with an outline of geological processes are given in the 1961 Year Book at pp. 5-14. Further information is supplied by Geology and Economic Minerals of Canada (\$2, including Map 1045A) and Prospecting in Canada; the latter also contains chapters on the principles of geology and on minerals and rocks. The Geological Map of Canada (1045A, 50 cents) and Canada, Principal Mining Areas (900A) are also recommended. Map 900A is revised annually; one copy is sent free to residents of Canada and additional copies are 25 cents each. These publications can be ordered from the Director, Geological Survey of Canada,* together with lists of reports and maps of the Geological Survey of Canada on specific topics and areas, for each province. Other publications are available from provincial mines departments.

[^3]
## PART II.-GEOGRAPHY*

Canada occupies the northern half of the North American Continent with the exception of Alaska and Greenland, extending in longitude from Cape Spear, Newfoundland, at $52^{\circ} 37^{\prime}$ W, to Mount St. Elias, Yukon Territory, at $141^{\circ} \mathrm{W}$, a distance of $88^{\circ} 23^{\prime}$. In latitude it stretches from Middle Island in Lake Erie, at $41^{\circ} 41^{\prime} \mathrm{N}$, to the North Pole. The northernmost point of land is Cape Columbia on Ellesmere Island, at $83^{\circ} 07^{\prime} \mathrm{N}$. Canada is thus a western and a northern country, a fact of increasing strategic significance.

In shape, Canada resembles a distorted parallelogram with its four corners making important salients. In the north the salient formed by the Arctic Archipelago, which penetrates deep into the Arctic basin, guards the northern approaches to the Continent from Europe and Asia and makes Canada neighbour to the Union of Soviet Socialist Republics. In the south the salient of peninsular Ontario thrusts far into the heart of the United States. In the east the salient of Labrador and the Island of Newfoundland commands the shortest crossings of the North Atlantic Ocean and links Canada geographically with Britain and France. In the west the broad arc of land between Vancouver in southern British Columbia and Whitehorse in Yukon Territory provides the shortest crossings of the North Pacific Ocean between continental North America and the Far East. Canada thus lies at the crossroads of contact with the principal powers and some of the most populous areas of the world.

## 1.-Approximate Land and Freshwater Areas, by Province or Territory

Nore.-A classification of land areas as agricultural, forested, etc., is given at p. 24.

| Province or Territory | Land | Freshwater | Total | Percentage of Total Area |
| :---: | :---: | :---: | :---: | :---: |
|  | sq. miles | sq. miles | sq. miles |  |
| Newfoundland | 143,045 | 13,140 | 156,185 | 4.1 |
| Island of Newfoundland. | 41, 164 | 2,195 | 43,359 | 1.1 |
| Labrador. | 101,881 | 10,945 | 118,826 | 8.0 |
| Prince Edward Island | 2,184 20,402 | -1,023 | 2,184 21,425 | 0.1 |
| New Brunswick | 27,835 | 519 | 28,354 | 0.7 |
| Quebec. | 523,860 | 71,000 | 594,860 | 15.4 |
| Ontario.. | 344,092 | 68,490 | 412,582 | 10.7 |
| Manitoba. | 211,775 | 39,225 | 251,000 | 6.5 |
| Saskatchewan | 220,182 | 31,518 | 251,700 | 6.5 |
| Alberta. | 248,800 | 6,485 | 255,285 | 6.6 |
| British Columbia | 359,279 | 6,976 | 366,255 | 9.5 |
| Yukon Territory. | 205,346 | 1,730 | 207,076 | 5.4 |
| Northwest Territories. | 1,253,438 | 51,465 | 1,304,903 | 33.9 |
| Franklin. | 541,753 | 7,500 | 549,253 | 14.3 |
| Keewatin | 218,460 | 9,700 | 2288,160 | 5.9 |
| Mackenzie | 493,225 | 34,265 | 587,490 | 18.7 |
| Canada | 3,560,238 | 291,571 | 3,851,809 | 100.0 |

In size, Canada is the largest country in the Western Hemisphere and the second largest country in the world. Its area of $3,851,809$ sq. miles may be compared with that of the Union of Soviet Socialist Republics, $8,649,821$ sq. miles, $\dagger$ the United States of America (including Alaska and Hawaii), $3,615,213$ sq. miles, $\dagger$ and Brazil, $3,287,204$ sq. miles. $\dagger$ It is more than forty times the size of Britain and eighteen times that of France. The immense size of the country, while encompassing many resources and seeming to afford much scope for settlement, imposes its own burdens and limitations, particularly because much of the land is mountainous and rocky or is under an arctic climate. The developed portion is probably not more than one-third of the total; the occupied farm land is less than 8 p.c. and the currently accessible productive forested land 19 p.c. of the

[^4]total．The population of Canada，estimated at $17,814,000$ on June 1，1960，may be com－ pared with 180，670，000＊for the United States（including Alaska and Hawaii）（1960）and with 65，743，000＊for Brazil（1960）．

The milages in Table 2 are another indication of the size of Canada and of the length of communication facilities required between the larger cities，between outlying industrial communities built up around large mining or smelting projects and the nearest cities，and between northern outposts and the supplying cities．Milage given is for the major means of transport used between the points concerned；air milages are used for most transcon－ tinental distances．

## 2．－Distances between Certain Cities and Other Points of Interest in Canada

Notg．－The dash used in this table indicates that the distance concerned is of no particular interest．In each case the milage given is for the type of travel most generally used－road（ H ），rail（ R ），air（ A ）or water（ $\mathbf{w}$ ）；air milages are given for most transcontinental distances．Water routes are given in nautical miles．

## Section 1．－Physical Geography

## Subsection 1．－Physiographic Regions

Since structure tends to dominate relief to a remarkable degree even though its effects have been modified by glacial and river erosion or deposition，the main physiographic regions of the country coincide with the geological regions，which are described in Part I on Geology．For a description of the physical structure of the country in its relation to climatic phenomena，reference should be made to a special article on The Climate of Canada appearing in the 1959 Year Book at pp．23－51．

[^5]
## Subsection 2.-Inland Waters

The inland waters of Canada (not including saltwater areas that are a part of Canada) are extensive, constituting about 7.6 p.c. of the total area of the country. Aside from their basic essentiality to the support of life, Canada's fast-flowing rivers and chains of lakes have had a great bearing on the development of the country and on its economic and social wellbeing. In the early days of exploration and settlement, they were the avenues of transportation and often the source of subsistence. These functions have now diminished in importance; with the exception of the St. Lawrence and certain water routes in the interior and the Far North, the rivers and lakes have assumed other roles in the domestic, industrial, agricultural and recreational life of the people. They still serve as efficient carriers of pulpwood from the forests to the mills and their waters are harnessed to provide power for industry or are dammed and diverted to irrigate and bring life to otherwise waste land.

The inland waters of Canada are best studied by segregating the main drainage basins. The Atlantic drainage basin is the most important, being dominated by the Great Lakes-St. Lawrence system which drains an area of approximately 678,000 sq. miles and forms an unequalled navigable inland waterway through a region rich in natural and industrial resources. From Duluth, Minn., at the head of Lake Superior to Belle Isle at the entrance to the Gulf of St. Lawrence the distance is 2,280 miles. The entire drainage area to the north of the St. Lawrence and the Great Lakes is occupied by the southern fringe of the Canadian Shield-a rugged, rocky, plateau region from which tributary rivers tumble over the edge of the Shield. These rivers, as well as the St. Lawrence itself, provide the electric power necessary to operate the great industries of the area. South of the St. Lawrence, the smaller rivers are important locally. The St. John, for instance, drains a fertile area and provides most of New Brunswick's hydro power.

The Hudson Bay drainage basin, though the largest in area, is the least important economically. Only the Nelson and Churchill Rivers have power potential within economical distance of settled areas. The two main branches of the Saskatchewan River, tributary to the Nelson, drain one of Canada's great agricultural regions and are now the bases of important irrigation projects.

The Arctic drainage basin is dominated by the Mackenzie, one of the world's longest rivers, which flows 2,635 miles from the head of the Finlay River to the Arctic Ocean and drains an area in the three westernmost provinces of approximately $700,000 \mathrm{sq}$. miles. Except for a 16 -mile portage in Alberta, it is possible for steamboats to navigate from the end of steel at Waterways on the Athabasca River to the mouth of the Mackenzie, a distance of 1,700 miles.

The rivers of the Pacific basin rise in the mountains of the Cordilleran Region and flow to the Pacific Ocean over tortuous, precipitous courses, rushing through steep canyons and tumbling over innumerable falls and rapids. They provide power for large hydro developments and in season swarm with salmon returning inland to their spawning grounds. The major rivers of the basin are the Fraser which rises in the Rocky Mountains and toward its mouth flows through a rich agricultural area, the Columbia which is an international river with a total fall of 2,650 feet during its course and has thus a tremendous power potential, and the Yukon River which is also an international river but, though the largest on the Pacific slope, is at present relatively unimportant economically.

Table 3 lists the principal rivers of Canada and their tributaries. The tributaries and sub-tributaries are indicated by indention of names; thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

## 3.-Lengths of Principal Rivers and Their Tributaries

The outstanding lakes of Canada are the Great Lakes, although only parts of these are in Canadian territory. The International Boundary between Canada and the United States passes through Lakes Superior, Huron, St. Clair, Erie and Ontario. Details are given in Table 4.
4.-Elevations, Areas and Depths of the Great Lakes

| Lake | Elevation Above Sea Level | Length | Breadth | $\underset{\text { Depth }}{\text { Maximum }}$ | Total Area | Area on Canadian Side of Boundary |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | ft. | miles | miles | ft. | sq. miles | sq. miles |
| Superior. | 602.23 | 383 | 160 | 1,302 | 32,483 | 11,524 |
| Michigan (U.S.A.). | 580.77 | 321 | 118 | 923 | 22,400 | - |
| Huron. | 580.77 | 247 | 101 | 750 | 23,860 | 15,353 |
| St. Clair. | 575.30 | 26 | 24 | 23 | 432 | 270 |
| Erie. | 572.40 | 241 | 57 | 210 | 9,889 | 4,912 |
| Ontario. | 245.88 | 193 | 53 | 774 | 7,313 | 3,849 |

There are no tides in the Great Lakes although considerable variation in water levels is caused by strong winds.

Other large lakes of Canada, ranging in area from 9,500 to 12,300 sq. miles, are Lake Winnipeg, Great Slave Lake and Great Bear Lake. Apart from these, notable for size, are innumerable lakes scattered over that major portion of Canada lying within the Canadian Shield. In an area of 6,094 sq. miles, accurately mapped, south and east of Lake Winnipeg, there are 3,000 lakes. In an area of $5,294 \mathrm{sq}$. miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

## 5.-Elevations and Areas of Principal Lakes, by Province

Nore.-Areas given are for mean water levels. For those reservoirs and lakes for which two elevations are given, HW means high water and LW low water.

## 5.-Elevations and Areas of Principal Lakes, by Province-concluded

## Subsection 3.-Coastal Waters*

The coastline of Canada, one of the longest of any country in the world, comprises the following estimated milages:-

Mainland-<br>Atlantic, 6,110; Pacific, 1,580; Hudson Strait, 1,245; Hudson Bay, 3,155; Arctic, 5,770; total, 17,860 miles.<br>\section*{Islands-}<br>Atlantic, 8,680; Pacific, 3,980; Hudson Strait, 60; Hudson Bay, 2,305; Arctic, 26,785; total, 41,810 miles.

A comprehensive description of the coastal waters of Canada would require information from sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea floor, and the scope of the information presented here is therefore restricted to this and a few salient features of the Atlantic, Arctic and Pacific marginal seas surrounding Canada.

Atlantic.-Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged continental shelf, protruding seaward from the shore, effects the transition from continental to oceanic conditions. This shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 120 to 50 miles (at the entrance of Hudson Strait), and northward it merges with that of the Arctic Ocean. The outer edge of the shelf, known as the continental shoulder, is of varying depths of from 100 to 200 fathoms before the shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic continental shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia the 40 -fathom line lies at an average of 12 miles from the shore and constitutes the danger line for coastal shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the shelf.

The main topographical features of the Atlantic marginal sea floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shore banks washes away enormous masses that are deposited over the surrounding sea floor. The topography of the continental sea floor is therefore constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Hudson Bay and Hudson Strait bite deeply into the Continent. Hudson Bay is an inland sea 250,000 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms.

Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea floor are indicated but, except in inshore waters, few navigation hazards have been located.

Arctic.-The submerged plateau extending from the northern coast of North America is a major part of the great continental shelf, surrounding the Arctic Ocean, on which lie all the Arctic islands of Canada, Greenland, and most of the Arctic islands of Europe and Asia. This shelf is most uniformly developed north of Siberia, where it is about 500 miles wide; north of North America it surrounds the western islands of the Archipelago and extends 50 to 300 miles seaward from the outermost islands.

The topography of the floor of the submerged part of this continental margin is only partly explored but sufficient has been charted to indicate, in common with continental shelves throughout the world, an abrupt break at the oceanward edge to the relatively steep

[^6]declivity of the continental slope. This slope borders the western side of the Queen Elizabeth Islands and, from it, deep well-developed troughs enter between the groups of islands. Sills across Davis Strait, Barrow Strait and other channels, on which the depth is about 200 fathoms, interrupt the network of deep troughs and separate the Arctic basin from the Atlantic.

That part of the continental shelf bordering the Arctic Ocean in the vicinity of the Queen Elizabeth Islands is currently the subject of extensive study. Since 1959 a party based at the joint Canadian-United States weather station at Isachsen on Ellef Ringnes Island has been investigating the oceanography, hydrography, submarine geology, gravity, geomagnetic features and crustal seismic properties of the continental shelf area, carrying out physiographic, hydrological, permafrost and glaciological studies on the islands of the region, mapping the nature, distribution and movement of the sea ice, and running basic topographic control surveys. This work is continuing, with a party in the field from March to September each year, and should eventually cover all of the unmapped parts of the shelf between Greenland and Alaska. The region between, and offshore from, Meighen Island and Borden Island has received the first detailed study; the work is being extended to the southwest toward Mould Bay on Prince Patrick Island. The investigations should ultimately yield detailed and accurate information on the physical and chemical composition and dynamic characteristics of the Arctic oceanic waters, the bathymetry of the continental shelf and slope and the straits and sounds of the Archipelago; the topography and structure of the shelf and the nature of its sediments, its underlying rocks and possible mineral resources; the structure and physical characteristics of the northern edge of the North American continental platform and its contact with the Arctic Ocean basin, the factors controlling the development of the Arctic landscape and the evolution of the islands; and the behaviour of sea level, glaciers, sea ice and climate in the recent geological past.

Pacific.-The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief-a repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coast for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet-strewn coast, the continental shelf extends from 50 to 100 sea miles to its oceanward limit where depths of about 200 fathoms are found. There the sea floor drops rapidly to the Pacific deeps, parts of the western slopes of Vancouver Island and the Queen Charlotte Islands lying only four miles and one mile, respectively, from the edge of the declivity. These great detached land masses are the dominant features of the Pacific marginal sea. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating cautious navigation. A grave menace to coastal shipping plying the Seymour Narrows between Vancouver Island and the mainland was eliminated on Apr. 5, 1958 when the twin peaks were blasted off Ripple Rock in one of the largest nonatomic explosions created by man. The peaks had reached to within 9 feet and 21 feet of the surface during low water, and had been responsible for the sinking and damaging of some 114 vessels during the preceding 80 years. Their presence caused treacherous disturbances and whirlpools to form as the ocean tides rushed through the Narrows, and only the most highly powered vessel would attempt to navigate the channel during any period other than the 20 to 40 minutes of slack water between tides. The blast increased the clearance to 47 feet and 69 feet at low water and the channel is now navigable at all times.

## Subsection 4.-Islands

The largest islands of Canada are in the north and all experience an Arctic climate. The northern group extends from the islands in James Bay to Ellesmere Island which reaches $83^{\circ} 07^{\prime} \mathrm{N}$. Those in the District of Franklin lie north of the mainland of Canada and are generally referred to as the Canadian Arctic Archipelago; those in the extreme north-lying north of the M'Clure Strait-Viscount Melville Sound-Barrow Strait-Lancaster Sound water passage-are known as the Queen Elizabeth Islands.

On the West Coast, Vancouver Island and the Queen Charlotte Islands are the largest and the most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick, and Anticosti Island and the Magdalen group included in the Province of Quebec are the chief islands off the East Coast.

Notable islands of the inland waters include Manitoulin Island ( 1,068 sq. miles in area) lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

## Subsection 5.-Mountains and Other Heights

The predominant geographical feature in Canada is the Great Cordilleran Mountain System which contains many peaks over 10,000 feet in height. The highest peak in Canada is Mount Logan in the St. Elias Mountains of Yukon Territory, which rises 19,850 feet above sea level. The highest elevations in all parts of the country are shown in Table 7 in feet above mean sea level.

## 7.-Principal Heights in each Province and Territory

Nore.-Certain peaks, indicated by an asterisk (*), form part of the line of demarcation between political subdivisions. Although their bases technically form part of both areas, they are listed only under one to avoid duplication.

## Section 2.-Economic Geography

The main physical and economic features of each of the political divisions of Canadathe provinces and territories-are described briefly in the 1956 Year Book at pp. 12-17 and are also covered in their relation to climate in the 1959 edition at pp. 23-51. However, the economic development of the country, based in the first instance on physical features and later on other factors, has formed regions quite distinct from the political divisions. These economic regions are described in the following special article.

## ECONOMIC REGIONS OF CANADA*

The map of Canada that is most familiar shows the country divided into provinces and territories-in other words, a political map. Almost as familiar, perhaps, is the map of Canada that shows topography-the distribution of the mountains, plains and plateaux, and usually also the lakes and principal river systems. Neither of these maps, however, shows the relative economic importance of the various parts of Canada nor the different emphasis which the economy has in different parts of the country. The key to these differences lies in the distribution of population, for this sums up all other factors in terms of human ends and means. The outstanding feature of the distribution of population in Canada has always been its unevenness. Today, Montreal and Toronto each has well over a million people in a rather small metropolitan area, while in the Northwest Territories there are but 23,000 persons scattered over more than a million and a quarter square miles. The city of Ottawa alone, with a population of over 268,000 , has more than ten times as many people as the whole of the Northwest Territories. Thus, 90 p.c. of the people of Canada live on 10 p.c. of the land. The larger part of the population is distributed over a

[^7]fairly narrow strip extending from the Atlantic to the Pacific across the southern part of the country and north of this ecumene lies the sparsely populated or almost uninhabited part. This distribution of population has resulted from differences in the economy of the people which, in turn, stem principally from differences in physical environment. The far northern or arctic portion, a land generally treeless, is different from the sub-arctic where the climate is less rigorous and where forests dominate the landscape. Where the subarctic borders on the ecumene, there is a broad transitional zone where the economy of the south intermingles with that of the north. Thus the broad economic regions of Canada form four tiers or festoons-zones running across the country from east to west-but within these primary divisions there are marked differences in physical environment and economic activity as well as differences in the cultural origin of the population, which give rise to differing "communities of interest" These are shown on the inserted map and the following brief description of each of them brings out the differences.

## Arctic Zone

This Zone can be set apart from the remainder of the country because of its treeless nature and its ice cap and tundra climates. It is dry and cold with long, dark winters and short summers. The warmest month does not average above $50^{\circ} \mathrm{F}$. and the average January temperatures are from $-10^{\circ} \mathrm{F}$. to $-35^{\circ} \mathrm{F}$. The whole area is underlain by permanently frozen ground known as permafrost. It is a zone of treeless plains, covered in summer with grasses, sedges, mosses and many varieties of flowering plants, as well as dwarf species of willow and birch and other forms of tundra vegetation, which form grazing grounds for such animals as the musk-ox and caribou. The direct economic assets of the Arctic Zone are few. It has no trees and therefore no lumbering and, as there is almost no summer (in the southern sense of the word), there is no agriculture. The small, scattered population is serviced by isolated administrative and scientific outposts. The region is almost completely devoid of roads; local travel is by dog team but air travel is increasing and the use of ice-breaking ships is also becoming more important. In reality, the Zone may be considered as being made up of two tiers of three regions.

Queen Elizabeth Islands.-This is the region in the extreme north, whose ice-girt shores make them almost inaccessible by ship. They have been avoided by Eskimos and there are no economic activities in the generally accepted sense. However, many of the islands are of sedimentary rock where oil and natural gas might be found and active exploration for these minerals is taking place. The only permanent settlements are small weather stations and RCMP posts. The Arctic south of Parry Channel may be divided into two regions, between which there is very little intercommunication.

Western Arctic Region.-This region lies west of Boothia Peninsula and Somerset Island. It is serviced chiefly from the west, usually from the Mackenzie Valley, but occasionally from around the coast of Alaska. Most of the inhabitants are Eskimos living on a subsistence basis with hunting and trapping as the mainstay of an elementary commerce.

Eastern Arctic Region.-This region includes Hudson Bay and Strait and Foxe Basin, with the treeless mainland and islands around them. It is supplied from the east, either from Churchill or from the Atlantic and St. Lawrence ports. The extreme east is mountainous and generally more rugged than the west but nearly all of the region is part of the Canadian Shield. Metallic minerals are known to exist but, so far, the only modern economic activity that has resulted from this knowledge is the nickel mine at Rankin Inlet. Two railways lead from the south into the region, terminating at Churchill in Manitoba and Moosonee in Ontario.

## Sub-arctic Zone

The Sub-arctic tier of regions immediately to the south of the Arctic Zone has a subarctic climate which is a climate of extremes, with very bitter winters and short but surprisingly warm summers. Temperatures range from a record low of $-81^{\circ} \mathrm{F}$. to a record
high of $103^{\circ} \mathrm{F}$. In the short summer, lasting up to 90 days with long periods of sunshine, temperatures rise to an average of over $60^{\circ} \mathrm{F}$. Its southern boundary is the northern limit of commercial agriculture; under present demand for land in Canada, these regions are too cold or too rough for any large development of agriculture. They are three in number and each differs from the others in several important respects.

Yukon Region.-This is a region of hills, plateaux and high mountains consisting of large portions of the drainage basins of the Yukon and Liard Rivers. Lying between the Mackenzie region and the Alaska border, it is an almost self-contained unit. There is very little traffic between the Yukon and Mackenzie regions, the main direction of road traffic being NW-SE, a route followed by the Alaska Highway which traverses the region. Whitehorse, the largest settlement, is the transportation centre and is connected by rail to the Pacific port of Skagway in Alaska. Gold was the lure that brought thousands of prospectors to the Yukon in the early part of the present century and, although production has decreased considerably since then, the area is still an important producer of placer gold. Rich deposits of lead-zinc-silver ore occur in the Mayo area, from which a substantial production of these metals is obtained. Coal is mined near Carmacks and asbestos at Cassiar.

Mackenzie Region.-This region is tributary to the northward flowing Mackenzie River, although it does not include the whole of the Mackenzie drainage basin. The region generally has an elevation of less than 1,000 feet above sea level. Most sections of it are very flat and covered with muskegs, swamps and lakes, sometimes interrupted by low limestone escarpments. It is dominated by the Mackenzie River which, unlike many of the other rivers of the country that are characteristically interrupted by rapids and falls, is one of the most magnificent navigable waterways in the world. It flows through an area that is sparsely populated and therefore lacks other easy means of transportation. The only break in navigation in the 1,700 -mile stretch from the end of rail at Waterways in Alberta to the Beaufort Sea is 16 miles of rapids in the Slave River south of Fort Smith. Impressive to the end, the Mackenzie River reaches the sea through a maze of channels in the delta which spreads over several hundred square miles. Owing to the great latitudinal extent of the Mackenzie system, there is usually a difference of about three weeks between the time when the southern tributaries are ice-free in early May and the time when the delta channels break up. The fall freeze-up occurs in late October in the delta and in midNovember on the upper Mackenzie. The small settlements are scattered along the waterways. Access is possible to Waterways on the southern fringe by rail from Edmonton and a highway runs from the Peace River country northward to Yellowknife on the north shore of Great Slave Lake and beyond to MacKay Lake. A railway is under construction to Pine Point on the south shore of the lake. Farther northward, transportation is by water or by air. The permanent population is largely Indian. Mining replaced the fur trade as the most valuable industry of the Mackenzie Valley in 1938 and the mineral wealth comes mainly from three products-petroleum, uranium and gold-the latter two being mined in the edge of the Canadian Shield. The principal gold mines are near the town of Yellowknife, which is the largest settlement; Uranium City on Lake Athabasca is the uranium centre; and Norman Wells on the Mackenzie River is the source of oil. When the railway is completed, the development of large lead-zinc deposits at Pine Point is anticipated. The other settlements are little more than fur trading posts but the fur catch of the Mackenzie lowlands is still of importance. The chief fur bearer caught is the muskrat, especially in the Mackenzie Delta. In this area each of the two settlements of Inuvik and Aklavik has attained the size of what would be described as a village in southern Canada.

Central Forest Region.-The Central Forest Region is part of the northern forests or boreal forests of Canada, as are the Yukon and Mackenzie Regions, but it differs from them in that it is not dominated by a single river system and in that it is located mainly on the

Canadian Shield. Consequently, it consists of a network of rivers, lakes and swamps of great use to the Indians who still hunt, trap and fish. Transportation is provided by three widely separated railway systems-the line to Churchill with its important branch to Lynn Lake, the line to Moosonee, and the line to Schefferville. Water routes along the coasts of Labrador and Hudson Bay also provide access. The most important economic activity in this area is mining, well exemplified by the base-metal mines in western Manitoba from which nickel, copper, cobalt, zinc, gold, silver, lead and other metals are obtained, and the iron mines of Newfoundland-Quebec.

## Transitional Zone

This tier of regions is transitional in nature between the under-developed regions to the north and the highly developed regions to the south.

Pacific Transition Region.-Mountains predominate in the Pacific Transition Region but dissected plateaux, narrow river valleys, a fiorded coast and offshore islands are also i mportant features. Because of its coastal location and extreme variation in topography, various climates are experienced. The warm moist air blowing in from the sea drops most of its moisture on the seaward-facing slopes of the coast ranges, producing a maritime, humid, equable climate dominated by the polar Pacific air mass which is mild and wet in winter, cool and moist in summer. Westerly winds from the ocean keep average temperatures below $40^{\circ} \mathrm{F}$. in January and between $55^{\circ} \mathrm{F}$. and $60^{\circ} \mathrm{F}$. in July. The annual rainfall in many of the coastal areas exceeds 100 inches with a marked winter maximum, but the deep interior valleys between the mountain ranges are considerably drier and colder. Most of the settlements are along the coast where the combination of sea, rushing rivers and forests provides the basis for fishing and fish processing, power production, lumbering and the manufacture of pulp and paper. One of the greatest pioneering efforts in Canada was the establishment of the aluminum smelting facilities and the associated settlement at Kitimat. The protected seaway to Alaska affords relatively safe coastal access and links with the south. Railways traverse the centre of the region, connecting lumbering and agricultural settlements. Mining is important in the southern part of the region, particularly for iron in northern Vancouver Island and on Texada Island and for gold on the mainland.

Prairie Transition Region.-This region is part of the Interior Plains of Canada. It is the connecting link between the almost empty slopes of the Rockies, the Mackenzie region, the Central Forest region and the fairly well settled areas of the Prairie region. In the northwest, in the Peace River country, its rolling hills and plains are dotted with lakes and waterways. The climate is sub-arctic but, although the winters are very cold, most parts have a growing season of about 160 days so that crops will ripen. Indeed, the main pioneer occupation is farming although lumbering is important and sawmills are numerous. Cattle and sheep ranching are carried on in the foothills and in the Peace River area mixed farming has become highly successful. Here the real pioneer has been the scientist who has developed new types of grain that will mature and ripen in a short growing season. The extensive network of roads and railways covering the prairies makes it possible to enter this region along a wide front as settlement advances into the forest. Oil and gas from the Peace River country are moved to market by pipeline by way of either Edmonton or Vancouver.

Eastern Transition Region.-This region is similar to the Prairie Transition Region although agriculture on the whole has been less successful because most of the region is part of the Canadian Shield. There are notable exceptions, however, in the clay belts centred on Kapuskasing, New Liskeard and Taschereau, the soils of which were deposited on the floors of old glacial lakes, and in the Lake St. John area. Lumbering is important and there are several large pulp and paper mills in the region but the economy is associated principally

with mining and the smelting and refining of metals. Only a few of the larger operations are mentioned here: the Sudbury area produces some 65 p.c. of the world's supply of nickel, as well as copper, gold, cobalt and a variety of other metals; the area from Timmins to Val d'Or has long been famous as Canada's 'gold belt'; the Steep Rock Lake area west of Lake Superior accounts for a large proportion of Canada's iron ore shipments; the Elliot Lake camp is the largest uranium mining camp in the world; the copper resources of Chibougamau have recently come into prominence; and the smelters at Arvida have placed Canada in the forefront of aluminum production. The region is crossed by transcontinental railways, air routes and highways, and the use of the hinterland for recreational purposes is becoming increasingly important.

## The Ecumene

The fourth tier of regions is the area referred to as the Ecumene of Canada, but even within this more intensely occupied belt the population distribution is far from regular. The major centres of the Atlantic Provinces are separated from those of Quebec by the Appalachian Highlands. The densely populated portions of Ontario and Quebec are separated from the prairies by sparsely populated northern Ontario, and the densely populated portion of the Far West is separated from the remainder of the country by the mountains of the Canadian Cordillera. Thus this zone falls into four parts.

Southern British Columbia.-This is part of the series of high parallel ranges of mountains and the resulting system of parallel linear valleys that forms the Canadian Cordillera. Under natural conditions these were very difficult of access, but the construction of railways and highways, often following the same routes, have made travel easier. It is this relative ease of travel that sets aside, as a separate region, the roughly triangular-shaped area bounded by the Canada-United States border, the Rocky Mountains, that portion of the transcontinental railway between Yellowhead Pass and Prince George, and the line from Prince George to North Vancouver; included also is part of Vancouver Island. The mountain ranges give southern British Columbia a variety of climates, ranging from marine west coast (almost Mediterranean) in the extreme southwest to semi-arid in the interior plateaux and deep interior valleys. The mountainous country and the variable climate limit the amount of land suitable for cultivation to narrow strips along the valley floors where specialized crops are grown, sometimes with the aid of irrigation using water from the snow-fed rivers and numerous lakes, as is exemplified by the fruit and vegetable farms of the Okanagan Valley. The best areas of all are the post-glacial delta lands of the lower Fraser Valley, which are intensively utilized, especially for vegetable-growing and dairying. On southern Vancouver Island intensive berry-farming, bulb-growing and dairying are carried on. In the plateau sections of the region, cattle and sheep farming dominate. Lumbering is important throughout the area, the greatest number of sawmills being found in the Vancouver, Victoria and Prince George areas. The region also accounts for nearly 80 p.c. of the lead and 50 p.c. of the zinc produced in Canada, most of it from the Sullivan mine near Kimberley, from which the ore is shipped to Trail for smelting; gold, nickel, copper and silver are also obtained in significant commercial quantities. Almost all of the people of British Columbia live in this region, the greatest concentrations being in the Vancouver and Victoria areas. Much of the processing of the raw materials of the sea, forest, mine and farm are carried on in these two areas; the administrative and educational services are centred there, and they are also the foci of land, sea and air transportation routes.

Prairie Region.-This region forms the southern part of the Interior Plains of Canada. The southeastern portion is a lake-strewn lowland within which lies the Red River Valley, an area covered with some of the most fertile soil in Canada. The eastern limit of this portion is the Manitoba escarpment and west of these hills lie the Saskatchewan plains,
also an area of gentle relief and fertile soil of great depth. Farther west still, the third prairie level, which is more elevated and has more relief than the other levels, merges into the foothills of the Rocky Mountains. This region is subject in winter to the very dry mass of polar continental air, with average January temperatures of around $0^{\circ} \mathrm{F}$. The winter cold is moderated in the extreme west from time to time by the Chinook winds. In summer, average July temperatures are around $65^{\circ} \mathrm{F}$. and the tropical air produces the chief rains of the area. But the average annual precipitation is only 15 to 20 inches, with less in the southwest, and is extremely variable with periodic droughts. In the northern part of the area, the precipitation effectiveness is highest and supports a 'parkland' vegetation of tall grasses interspersed at intervals with groves of trees. Elsewhere, however, the low precipitation and high evaporation discourage tree growth and the present economy is based on the substitution of grains for the natural grasses-a process aided by the generally level nature of the terrain and the ease with which large-scale agricultural machinery can be used. Normally there is sufficient moisture for rapid growth and the abundant sunshine during the long summer season in this northern latitude quickly ripens the crops. In the areas where precipitation is more precarious, a number of large irrigation projects have been developed which take their water supply from the rivers rising in the mountains to the west. Thus the core of the region is the central grain-growing area, with wheat emphasized in the drier. warmer parts and barley and oats elsewhere. This is flanked by cattle-raising on the west where the land is rougher, and dairying emphasis on the east where there is more precipitation. The settlement pattern is related almost exclusively to the railway network which was developed at the same time as modern migration into the area occurred. Other unifying forces are the mineral resources of coal, oil and gas which underlie the region. They are particularly abundant in the Alberta portion, especially in the Edmonton area, and their exploitation has led to the growth of some industrialization in the larger cities. The construction of oil and gas pipelines has aided in the distribution of these products westward and eastward.

Great Lakes-St. Lawrence Region.-This region supports three-quarters of the population of Canada and is the financial, administrative and educational heart of the country; each of its two metropolitan areas of Toronto and Montreal has a population in excess of one million. Although a lowland, the region is not everywhere level but, in combination with good soils and a relatively mild climate, is level enough to make the region one of Canada's most important agricultural areas. Mixed farming is predominant but dairying is well developed to meet the needs of the urban population and the area produces the major part of Canada's output of such special crops as tobacco, fruit, sugar beets, soybeans, honey, nursery stock and maple products. Physically, the principal subdivision of the region occurs where an outlier of the Canadian Shield crosses the St. Lawrence River, but cultural and historical factors have dictated a political boundary between Ontario and Quebec, which is fundamentally based on the language spoken by the majority-English or French. More than three-quarters of Canada's manufacturing is done here and the economy of the region rests on these activities. Their growth is attributable to easy access to a variety of raw materials, an abundant supply of electric power, a skilled labour force and anintricate network of highways and railways closely linked with the Great Lakes-St. Lawrence inland water system. The latter permits economic domestic and international movement of bulk commodities such as iron ore and coal for the basic iron and steel industries of Hamilton, Welland and Sault Ste. Marie. In the Ontario portion of the region the emphasis is on the production of automobiles, industrial and farm machinery, electrical goods, household equipment, rubber goods, synthetic textiles and industrial and consumer chemicals. The agricultural resources of the area are used in flour and feed mills, slaughtering and meatpacking plants, leather tanneries and fruit and vegetable canneries. In Quebec, many of the industries are located along or near the southern edge of the Canadian Shield, close to the great water power developments. The manufacture of pulp and paper, using the
forests of the Shield, is the most valuable industry followed by the refining of non-ferrous metals and the production of a variety of petroleum products. Almost 90 p.c. of the tobacco products produced in Canada are manufactured in Quebec and the textile and clothing industries are also very important. The portion of the region south of the St. Lawrence River is part of the Appalachian Mountain system, and of the minerals produced there asbestos is by far the most important, amounting to some 70 p.c. of the world's output.

Gulf Region.-The most common element unifying the lands about the Gulf of St. Lawrence is the sea, with which the region is in intimate contact. It is therefore a region of islands and peninsulas, and hundreds of small coves and harbours indent the coasts, particularly of Nova Scotia and the Island of Newfoundland, which are admirably suited for fishing ports. Off-shore lie some 200,000 sq. miles of shallow sea, comprising one of the most prolific fishing grounds of the world, particularly for cod. In addition to this socalled deepsea fishery, there are several thousand square miles of in-shore fishing grounds within 15 miles of land, and even closer lie the lobster and oyster beds, particularly associated with Prince Edward Island and New Brunswick. The region is part of the Appalachian Mountain system and heights of over 3,000 feet are found in the Gaspe area of Quebec; also, a few points in the western part of the Island of Newfoundland and northern New Brunswick exceed 2,000 feet. However, the general topography is hilly rather than mountainous and this feature, combined with a cool marine climate, produces an environment generally less favourable to agriculture than other parts of Canada. Where exceptions to the hilly country occur, as in Prince Edward Island, the Annapolis Valley of Nova Scotia, the Avalon Peninsula of Newfoundland and the St. John Valley of New Brunswick, agriculture is carried on and in some areas has become highly specialized. Lumbering is the most important inland activity and supports a number of pulp and paper mills and sawmills. The mineral resources, though relatively modest, are not insignificant to the economy of the region. The iron and steel industry of the Sydney area is based on local coal and iron ore from the Wabana deposits off the Island of Newfoundland. Other important minerals produced are lead, zinc, copper, gypsum and salt. Settlement is mainly along the coasts and river valleys where the various national origins of the people have tended to be perpetuated in the local cultures of the communities.

## PART III.-LAND RESOURCES AND PUBLIC LANDS

## Section 1.-Land Resources

Information currently available regarding Canada's vast land resources is shown in Table 1, where the land area is classified as occupied agricultural, forested and 'other' land, the latter including urban land, road allowances, grass and brush land and all waste land such as open muskeg, swamp and rock. Soil surveys now under way by the Department of Agriculture will make it possible in the future to estimate the amount of arable land Canada possesses and, as provincial inventories are completed, more information will be available regarding land now non-forested but not productive in an agricultural sense. The Department of Forestry estimates that about 48 p.c. of the land area of Canada is forested and, according to the Census of 1956, less than 8 p.c. is classed as occupied farm land. A great part of the $1,606,146 \mathrm{sq}$. miles of 'other' land is located in the Yukon and Northwest Territories which together have a land area of $1,458,784$ sq. miles. The occupied farm land in these Territories is practically nil and the forested area is estimated at 275,800 sq. miles.

## 1.-Land Area classified as Occupied Agricultural or Forested, by Province

Nore.-Figures for occupied agricultural land were obtained from the 1956 Census; areas of forested land were compiled by the Department of Forestry from estimates supplied by the Forestry Service in each province.

| Description | New-foundland | Prince Edward Island | Nova Scotia | New <br> Bruns- <br> wick | Quebec | Ontario | Manitoba | Saskatchewan | Alberta | British Columbia | Yukon and N.W.T. | Canada |

| Totals. | 251,000 | 251,700 | 255,285 | 366,255 | 1,511,979 | 3,851,809 |

[^8]Federal Public Lands.-Public lands under the administration of the Federal Government comprise lands in the Northwest Territories including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, Ordnance and Admiralty Lands, National Parks and National Historic Sites, Forest Experiment Stations, Experimental Farms, Indian reserves and, in general, all public lands held by the several departments of the Federal Government for various purposes connected with federal administration (see Table 2). These lands are administered under the Territorial Lands Act (RSC 1952, c. 263) and the Public Lands Grants Act (RSC 1952, c. 224) which became effective June 1, 1950 and replaced previous legislation.

The largest areas under federal jurisdiction are in the Northwest Territories and Yukon Territory where only 78 sq. miles of a total area of $1,511,979$ sq. miles are privately owned. This part of the national domain, with the exception of the islands in Hudson Bay and James Bay, is all north of the 60th parallel of latitude and occupies about 40 p.c. of the surface of Canada. It is under the administration of the Northern Administration Branch of the Department of Northern Affairs and National Resources.

Provincial Public Lands.-Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the provincial governments. In 1930 the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan and Alberta and of sections of British Columbia to the respective governments, and all unalienated lands in the Province of Newfoundland, except those administered by the Federal Government, became provincial public lands under the Terms of Union on Mar. 31, 1949. All land in the Province of Prince Edward Island has been alienated except 126 sq. miles under federal or provincial administration.

Information regarding provincial public lands may be obtained from the respective provinces. (See the Directory of Sources of Official Information, Chapter XXVI, under "Lands".)

## Subsection 1.-National Parks

The National Parks of Canada are areas selected for their natural or historic importance which are to be preserved for all time for the "benefit, education and enjoyment of the people of Canada" Through the wisdom of farsighted legislators more than 75 years ago, Canada has today a system of National Parks that compares favourably with that of any other country. Initially, an area of 10 sq . miles around mineral hot springs on Sulphur Mountain in Alberta was reserved "from sale, or settlement or squatting" for the benefit of the nation. Two years later-in 1887-the Rocky Mountain Park Act established the first National Park (now Banff) and, since then, other areas across the country have been so preserved. These protected areas, which now cover more than 29,000 sq. miles, are administered by the National Parks Branch of the Department of Northern Affairs and National Resources. They are classified as: National Parks-natural wilderness areas set apart for preservation because of the national importance of their flora, fauna and geological features; and National Historic Parks and Sites-sites selected as of national significance in the colourful history of the nation.

Fine specimens of plains and wood bison, prong-horned antelope and whooping crane survive today because of the protection afforded them within National Parks. Although hunting is prohibited, angling is permitted in all the parks under regulation as to seasons, bag limits and licences. Nature trails have been set out in most parks and the interpretation of the natural features of each park is made available to the visitor through Park

Naturalists. Park Wardens, supervised by Park Superintendents, are responsible for the various districts of each park and maintain constant vigilance for the safety of their areas and of visitors. Various types of accommodation are available ranging from primitive campgrounds to luxury hotels. The camping facilities are provided by the Park Service but private accommodations are operated by lessees of such establishments.

National Historic Parks, declared of importance in the history of Canada upon advice of the Historic Sites and Monuments Board of Canada, include military, fur-trade and Mounted Police forts, houses of historic interest, and examples of outstanding earlyCanadian architecture. Some of the buildings and their surroundings have been partially restored and others have been preserved as they were found; many contain museums. In addition, more than 570 sites have been marked by official tablets commemorating historic events in the life of the nation.

## 3.-Location, Year Established, Area and Characteristics of National Parks and National Historic Parks

| Park | Location | Year Established | Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | sq. miles |  |
| National Parks |  |  |  |  |
| Terra Nova............ | On Bonavista Bay, Newfoundland, 205 miles north of St. John's. | 1957 | 153.0 | Maritime area now under development; rocky headlands, wooded areas with abundant wildlife, off-shore and freshwater fishing. Serviced campground and cabin accommodation. |
| Prince Edward Island. | North shore of Prince Edward Island. | 1937 | 7.0 | Strip 25 miles long on shores of the Gulf of St. Lawrence. Recreational area, fine bathing beaches. Accessible by highway. Hotel and cabin accommodation. Serviced campgrounds. |
| Cape Breton Highlands. | Northern part of Cape Breton Island, N.S. | 1936 | 367.0 | Rugged Atlantic coastline with mountainous background. Fine seascapes. Recreational opportunities. Hotel and cabin accommodation. Serviced campgrounds. |
| Fundy................ | On Bay of Fundy between Moncton and Saint John in New Brunswick. | 1948 | 79.5 | Delightful recreational area. Forested region, wildlife sanctuary, rugged terrain. Cabin accommodation. Serviced campgrounds. |
| Georgian Bay Islands.. | In Georgian Bay, north of Midland, Ont. | 1929 | 5.4 | Recreational and camping area. Unique pillars on Flowerpot Island. Accessible by boat from nearby mainland points. Serviced and unserviced campgrounds on Beausoleil Island. |
| Point Pelee............ | On Lake Erie in southwestern Ontario. | 1918 | 6.0 | Wildlife sanctuary. Remarkable beaches, southern flora. Resting place for migratory birds. Accessible by highway. Serviced campground. |
| St. Lawrence Islands... | In St. Lawrence River between Brockville and Kingston, Ont. | 1914 | $\underset{\text { (acres) }}{260.0}$ | Mainland area and 14 islands among the Thousand Islands. Recreational and camping area. Accessible by highway; by boat from nearby mainland points. |
| Riding Mountain....... | Southwestern Manitobs, west of Lake Winnipeg. | 1929 | 1,148.0 | Wildlife sanctuary on summit of escarpment. Fine lakes. Accessible by highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds. |
| Prince Albert.......... | Central Saskatchewan, north of Prince Albert. | 1927 | 1,496.0 | Forested region dotted with lakes and interlaced with streams. Summer recreational area. Accessible by highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds. |

## 3.-Location, Year Established, Area and Characteristics of National Parks and National Historic Parks-continued

| Park | Location |  | Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
| National Parksconcluded |  |  | sq. miles |  |
| Banff................. | Western Alberta, on east slope of Rockies. | 1885 | 2,564.0 | Magnificent scenic area; noted resorts, Banff and Lake Louise. Mineral hot springs; summer and winter sports. Accessible by rail and highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds. |
| Elk Island............. | Central Alberta, near Edmonton. | 1913 | 75.0 | Fenced preserve containing large herd of buffalo; also deer, elk and moose. Popular recreational area. Accessible by highway. Cabin accommodation and serviced campground. |
| Jasper................. | Western Alberta, on east slope of Rockies. | 1907 | 4,200.0 | Mountainous area and noted wildlife sanctuary. Majestic peaks, icefields, beautiful lakes and famous resort, Jasper. Mineral hot springs, summer and winter sports. Accessible by rail and highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds. |
| Waterton Lakes........ | Southern Alberta, adjoining Glacier Park in Montana, U.S.A. | 1895 | 203.0 | Canadian section, Waterton-Glacier International Peace Park. Mountainous area with spectacular peaks and beautiful lakes. Accessible by highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds. |
| Glacier............... | Southeastern British Columbia, on summit of the Selkirk Range. | 1886 | 521.0 | Superb alpine region, towering peaks, glaciers and forests. Climbing, skiing, camping. |
| Kootenay.............. | Southeastern British Columbia, on west slope of Rockies. | 1920 | 543.0 | Includes Vermilion-Sinclair section of Banff-Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and cabin accommodation. Serviced and unserviced campgrounds. |
| Mount Revelstoke..... | Southeastern British Columbia, on west slope of Selkirks. | 1914 | 100.0 | Rolling mountain-top plateau. Colourful alpine meadows. Accessible by secondary highway. Summer accommodation in Park. Championship ski runs and ski jump. Unserviced campgrounds. |
| Yoho................... | Eastern British Columbia, on west slope of Rockies. | 1886 | 507.0 | Lofty peaks, magnificent waterfalls, colourful lakes. Yoho and Kicking Horse Valleys. Accessible by rail and highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds. |
| Wood Buffalo ${ }^{1}$. ........ | Partly in Alberta and partly in Northwest Territories, between Athabasca and Slave Rivers. | 1922 | 17,300.0 | Immense region of forests and open plains. Home of largest remaining herds of plains bison and wood bison on the Continent. Other wildlife abundant. |
| National Historic Parks |  |  | acres |  |
| Signal Hill... | St. John's, Nfld............ | 1958 | 243.4 | $\begin{aligned} & \text { Location of military instailations and site } \\ & \text { of operations and battles in } 1762 . \\ & \text { Cabot Tower. } \end{aligned}$ |

[^9]
## 3.-Location, Year Established, Area and Characteristics of National Parks and National Historic Parks-concluded

| Park | Location |  | Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | acres |  |
| National Historic Parks-concluded |  |  |  |  |
| Fort Amherst......... | Prince Edward Island, near Rocky Point. | 1959 | 222.0 | Remaining earthworks of British fort built after 1758. |
| Fort Anne. . . . . . . . . . | Nova Scotia, at Annapolis Royal. | 1917 | 31.0 | Site of French fort first built about 1635, finally captured and occupied by British in 1710. Museum and well-preserved earthworks. |
| Fortress of Louisbourg. | Cape Breton Island, N.S. 25 miles from Sydney. | 1941 | 339.5 | Ruins of walled city erected by the French, 1713-58. Interesting excavations. Museum. |
| Halifax Citadel........ | Halifax, N.S. | 1956 | 36.9 | Defence post constructed 1828-35. Museums. |
| Port Royal............ | Port Royal, N.S., 8 miles from Annapolis Royal. | 1941 | 20.5 | Restoration of "Habitation"-first fort built in 1605 by Champlain and DeMonts. |
| Alexander Graham Bell | Baddeck, N.S. . . . . . . . . | 1955 | 14.0 | Museum contains mechanical and documentary records of research by the inventor. |
| Grand Pré............ | Grand Pré, N.S........... | 1957 | 14.0 | Commemorates the story of the Acadians and the New England Planters. Museum. |
| Fort Beauséjour........ | New Brunswick, near Sackville. | 1926 | 81.3 | Site of French fort erected in middle of 18th century. Museum. |
| Fort Chambly........ | Chambly, Que............ | 1941 | 2.5 | Original French fort built on Richelieu River in 1665 was burned. Present fort built by English in 1709-11. Museum. |
| Fort Lennox........... | Île aux Noix, Que., near St. Paul. | 1941 | 210.0 | Original fort, ile aux Noix, built by French in 1759. Fort Lennox built by English in 1820's. |
| Cartier-Brébeuf........ | Quebec, Que............ | 1957 | 14.0 | Commemorates the 1535 wintering of Jacques Cartier and party. |
| Sir Wilfrid Laurier's Birthplace. | St. Lin, Que.............. | 1941 | 1.0 | Original house containing furniture of the period. |
| Fort Malden. . | Amherstburg, Ont........ | 1941 | 8.0 | Site of defence post built 1797-99. Museums. |
| Fort Wellington........ | Prescott, Ont............. | 1941 | 8.5 | Defence post built 1812-13. Museum. |
| Woodside.............. | Kitchener, Ont. . . . . . . . . | 1954 | 12.0 | Boyhood home of the Rt. Hon. William Lyon Mackenzie King, former Prime Minister of Canada. |
| Fort Prince of Wales... | Northern Manitoba, near Churchill. | 1941 | 50.0 | Ruins of fort built 1733-71 to secure control of Hudson Bay for England. |
| Lower Fort Garry..... | Manitoba, 20 miles north of Winnipeg. | 1951 | 13.0 | Stone-walled fort built by the Hudson's Bay Company between 1831 and 1839. |
| Batoche Rectory...... | Saskatchewan, near Duck Lake. | 1954 | 1.3 | Scene of Northwest Rebellion, 1885. Ancient rectory and adjoining Middleton's trenches. Museum. |
| Fort Battleford........ | Saskatchewan, 4 miles south of North Battleford. | 1951 | 36.7 | North West Mounted Police post built in 1876. Museum. |

## Subsection 2.-Provincial Parks

Most of the provincial governments of Canada have established parks within their boundaries. Some of these, particularly in Quebec and Ontario, are wilderness areas set aside in order that some portions of the country might be retained in their natural state without change brought about by the hand of man. Most of them, however, are smaller areas of exceptional scenic or other interest which are easily accessible and are equipped
or slated for future development as recreational parks with camping and picnic facilities. The more important parks in each province are mentioned briefly in the following paragraphs.

Newfoundland.-There are 84 sq. miles of provincial parkland in NewfoundlandSir Richard Squires Memorial Park, an area of 6 sq. miles on the Upper Humber River, Butterpot Park, an area of 7 sq . miles near St. John's, and Barachois Park, an area of 11 sq. miles near Stephenville, are under development. Two larger areas- 42 sq. miles on the west coast known as Serpentine Park and 16 sq. miles in central Newfoundlandare undeveloped. In addition, 15 rest and camping parks have been completed along the Trans-Canada Highway, each park containing about 100 acres.

Prince Edward Island.-Eleven areas totalling 250 acres have been developed as provincial parks: Strathgartney Park, a 40 -acre tract of land at Churchill on the TransCanada Highway between Charlottetown and Borden, is an excellent picnic site and camping ground with its hardwood groves, fresh spring water and beautiful view over West River and the surrounding country; Lord Selkirk Park, an area of 30 acres at Eldon, is of historic interest in that it contains an old French cemetery and marks the spot on the shoreline where Lord Selkirk landed; Brudenell River Park, comprising 80 acres at Roseneath, has a considerable area of woodland and runs to the shore of the Brudenell River; Jacques Cartier Park, an area of 13 acres under development at Kildare Beach four miles from Alberton, is of historic significance as the place where Jacques Cartier first landed on Prince Edward Island; Green Park, 27 acres of land under development on the Trout River, is an attractive combination of land, trees and water and is also of historic interest as one of the oldest shipbuilding centres in the province. Small parks have been developed at Bloomfield, Linkletter Shore and Pinette, and others are under development at Marie, St. Peters and Red Point Beach. These parks are maintained by the Department of Industry and Natural Resources and fill a long-felt need for public picnic grounds and campsites.

Nova Scotia.-The Department of Lands and Forests of Nova Scotia operates 12 small parks scattered throughout the province, some of which are equipped for camping and pienicking and others for pienicking only. During 1961 considerable improvement and expansion was carried out on existing parks and one new park was opened-Laurie Park, an area of 60 acres on a lakeside 18 miles north of Halifax. The Department also operates the Provincial Wildlife Park at Shubenacadie, a 30 -acre tract of land maintained in its natural state, as far as is consistent with the need for providing food and protection for the animals and birds that are its main attraction. Facilities of the park are such that visitors, which number about 200,000 each year, may see the wildlife at close range. Expansion is planned as more varieties of animals and birds become available and can be absorbed.

A master plan has been prepared of theoretically desirable park locations in the province, taking into consideration the need for roadside facilities, regional picnic parks and camping grounds. Geographic location, population density, volume of traffic and aesthetic features are being evaluated for each site. Roadside table sites, formerly administered by the Department of Highways, are being incorporated into this provincial scheme and will be operated according to provincial park standards. Many of the existing sites will be retained and improved, some will be retained on a temporary basis only and unsuitable sites will be discontinued. The provincial parks program will require about five years of development work for completion.

Quebec.-The Province of Quebec has established five provincial parks and seven Fish and Game Reserves. Four of the park areas are quite extensive. La Vérendrye Park, 140 miles northwest of Montreal, has an area of 4,746 sq. miles; Laurentide Park, 30 miles north of Quebec City, is $3,612 \mathrm{sq}$. miles in extent; Mont Tremblant, 80 miles north of Montreal, 1,223 sq. miles; and Gaspesian Park, Gaspe Peninsula, 514 sq. miles. Mount Orford Park, situated 15 miles west of Sherbrooke, has an area of 15 sq . miles.

The Fish and Game Reserves together occupy more than 10,000 sq. miles. The Chibougamau Reserve and the Mistassini Reserve, both northwest of Lake St. John, cover 3,400 sq. miles and 5,200 sq. miles, respectively. Smaller reserves are the Kipawa Reserve in the Témiscamingue district, the Shickshock Reserve adjoining Gaspesian Park, and the Petite Cascapedia and the Port Daniel, reserved for salmon and trout fishing, both of which lie along the Bay of Chaleur in Gaspe Peninsula.

These parks and reserves are wilderness areas of great scenic interest-for the most part mountainous country threaded with many rivers, lakes and streams and abounding in wildlife. In all of them, except Mount Orford, excellent fishing may be found and most of them have been organized to accommodate sportsmen and tourists in camps, cottages and lodges. Mont Tremblant Park, located close to a famous year-round recreational area, is, in summer, easily reached by highway from Montreal and is very popular for tent or trailer camping and for swimming and pienicking. The Department of Fisheries and Game administers the parks and reserves, and also six salmon streams which are open to anglers.

Ontario.-The provincial parks system in Ontario has been greatly expanded in recent years. There are 77 parks now available for public use and five new parks are in process of development. Thirteen other areas are reserved for future development. The total area in the Ontario Provincial Parks system is about 5,460 sq. miles.

The four largest provincial parks-Algonquin, Quetico, Lake Superior and Sibley-together have an area of about 5,200 sq. miles. Algonquin, 180 miles north of Toronto and 105 miles west of Ottawa, has several campgrounds which are accessible by car from Highway 60 and its numerous waterways may be traversed and enjoyed by canoe. There are several commercial children's camps in the Park but the present administration policy is to provide development facilities, such as campgrounds, on the Park fringes and to retain the interior in a natural condition. The interiors of Quetico and Lake Superior Parks are also retained as wilderness areas with only fringe development. Quetico Park is accessible by road at the Dawson Trail Campground on French Lake, and also by water via Basswood Lake in the south. Highway 17 north from Sault Ste. Marie provides access to Lake Superior Park, and Sibley Park may be reached by road from Highway 17 east from Port Arthur. There are small charges for entry of automobiles into provincial parks and for overnight camping.

Under the Wilderness Areas Act, which came into effect in 1959, 35 areas have now been established. These tracts of land, widely distributed across the province, vary in size, character and significance but all are regarded as important for their historical, scientific, aesthetic or cultural values. The largest is a $225-\mathrm{sq}$. mile area of treeless tundra in the northeastern tip of the province, jutting out at the base of Hudson Bay where it meets James Bay. All the other areas are small and none exceeds 640 acres. Perhaps the most widely known is the Sleeping Giant, a geological formation resembling a recumbent man, in Thunder Bay at the Lakehead.

The parklands of Ontario are administered by the Parks Branch of the Department of Lands and Forests, Parliament Buildings, Toronto, from which detailed information in booklet form is available.

Manitoba.-In Manitoba, four large areas of virgin forest have been set aside as provincial parks. In addition, numerous recreational areas, camp and pienic grounds, and roadside stopping places have been established. These park areas are administered by the Parks Division of the Forest Service.

Saskatchewan.-Saskatchewan has 14 provincial parks with a total area of about 2,300 sq. miles. Cypress Hills, Duck Mountain, Greenwater Lake, Moose Mountain and Valley Centre are operated as summer resorts with chalet, lodge, cabin and trailer
accommodation as well as camping and picnic facilities. The other parks have camping, picnicking, boating and swimming facilities. Recreational activities include fishing, boating, swimming, golf, tennis, dancing, baseball, hiking, nature study, horseback riding, etc., and the parks are all well fitted with playground and beach equipment for children. In Cypress Hills Park, elk, antelope, deer, sharp-tailed grouse and beaver are plentiful and brook and other trout abound in the streams and lakes. Heavy stands of tall, straight lodgepole pine provide forest cover in this area. In Duck Mountain, Moose Mountain and Greenwater Lake Parks, moose, elk, deer, bear and beaver are common, as well as several varieties of grouse, and many species of water and smaller land birds. Spruce, poplar and white birch provide excellent cover for wildlife. Pickerel, pike and perch are prevalent in most of the lakes. Lake trout are ardently sought by fishermen in the northern lakes. Three wilderness parks (LaRonge, Nipawin and Meadow Lake) offer wilderness-style canoe routes and 'fly-in' commercially operated fishing and hunting camps. Many roadside picnic grounds are located throughout the province and several excellent Trans-Canada Highway campsites have been developed.

Sites of historic interest are marked throughout the province and include the Touchwood Hills Hudson's Bay Post, where picnic facilities are available.

Alberta.-In Alberta, 41 provincial parks have been established, with a total area of about 139 sq. miles. Of these, 37 are under development. Cypress Hills Provincial Park, with an area of 77 sq. miles, is the largest and is situated in the southeast portion of the province. The other Parks under development are: Aspen Beach, Beauvais Lake, Big Hill Springs, Bow Valley, Bragg Creek, Crimson Lake, Cross Lake, Dillberry Lake, Entrance, Garner Lake, Gooseberry Lake, Hommy, Kinbrook Island, Lac Cardinal, Little Bow, Little Fish Lake, Long Lake, Ma-Me-O Beach, Miquelon Lake, Moonshine Lake, O'Brien, Park Lake, Pembina River, Red Lodge, Rochon Sands, Saskatoon Island, Steveville Dinosaur, Taber, Thunder Lake, The Vermilion, Wabamun Lake, Williamson, Willow Creek, Winagami Lake, Woolford, and Writing-on-Stone. These parks generally are provided with picnic, camping and playground facilities and are maintained by the Department of Lands and Forests primarily for the recreation and enjoyment of the residents of the province. A former provincial park-Sylvan Lake-is now operated by the Department of Highways as a campsite.

In addition to the recreational parks, 11 sites have been established to mark and preserve locations of historic interest in the province. They include: Fort DeL'Isle, Fort Vermilion, Ribstones, Twelve Foot Davis, Massacre Butte, Early Man, Standoff, Fort Victoria, Fort White Earth, Fort George and Buckingham House.

British Columbia.-There are 183 provincial parks in British Columbia with a total area of about 13,000 sq. miles. These parks are classified as A, B and C. Class A parks are those considered most highly for immediate recreational development and are strongly protected. Class B parks are areas slated for development-valuable wilderness areas or places set aside for a specific reason. Class C parks are intended primarily for the use of local residents and are usually under Board management. The parks are in all stages of development and dedicated to a variety of recreational uses. There are immense wilderness areas such as Tweedsmuir and Wells Gray Parks and outstanding scenic and mountain places which include Garibaldi, Mount Robson and E. C. Manning Parks. Thousands of city dwellers throng to the ski slopes of Mount Seymour or pienic at Cultus Lake Park. The formal gardens of Peace Arch are a monument to the goodwill between Canada and the United States. Vancouver Island has a chain of small forest parks that have achieved a tremendous popularity with tourists-the best known are Little Qualicum Falls, Miracle Beach and Goldstream. In addition there is a campsite system closely integrated with the provincial parks, many campsites actually being located in the parks. The famous
gold town of Barkerville has become the first Provincial Historical Park. A new venture is the establishment of a marine park system; there are now five marine parks, all with water access.

## Subsection 3.-Canada's National Capital*

Ottawa, the city selected by Queen Victoria in 1857 to be the seat of government for the Province of Canada in British North America, was designated the National Capital upon Confederation on July 1, 1867. The community had grown out of the military and construction camp that served as headquarters for the building of the Rideau Canal, a project carried out between 1826 and 1832 to establish a safe navigable waterway between Lake Ontario and the Ottawa River. The building of the Canal was the crowning achievement in the life of a distinguished British military engineer, Lieutenant-Colonel John By, R.E., who gave his name to the new settlement inhabited mainly by stone masons and discharged soldiers. As time passed, Bytown prospered as a timber centre and was incorporated as a town in 1847. Then, on Dec. 18, 1854, by Act of the Legislature of the Canadas, the name of Bytown was changed to Ottawa and under that name the community was incorporated as a city on Jan. 1, 1855.

The city, situated in an area of great natural beauty and surrounded by waterways, has remained a self-governing municipality and, although throughout the years the Federal Government co-operated with the municipal authorities in the development of a system of driveways and parks, the city expanded without the benefit of a comprehensive plan. However, in 1950 a Master Plan was presented to the Government of Canada, designed to guide the development of the Capital's urban area over the following half-century and to protect the beauty of the surrounding National Capital Region. This Region originally covered 900 sq. miles but was increased in 1959 to 1,800 sq. miles-half in the Province of Ontario and half in the Province of Quebec. Although the successful implementation of the Plan is dependent upon the co-operation of the cities of Ottawa and Hull-which are treated as a physical, social and economic whole-and of about sixty other autonomous municipalities and the two provincial governments involved, the National Capital Plan is not officially recognized by the Governments of Ontario and Quebec, and the City of Ottawa has as yet no municipal plan to govern its growth and development.

The federal agency responsible for the planning of Canada's Capital is the National Capital Commission, created in 1959 to replace the Federal District Commission which, in turn, was the lineal descendant of the Ottawa Improvement Commission. The National Capital Commission, which reports to Parliament through the Minister of Public Works, is composed of twenty members appointed by the Governor in Council and representing each of Canada's ten provinces. It is headed by a chairman and a general manager and has a personnel of about 650, although this number fluctuates because of the seasonal character of a large part of the work involved. Six committees give advice and direction to the Commission: the Executive Committee consists of the chairman and vice-chairman of the Commission and three other members appointed by the Commission, one of whom is from the Province of Quebec; the Land Committee, composed of several experts in land evaluation, advises the Commission on matters of land purchases and property administration; the Advisory Committee on Design, comprising prominent Canadian architects, town planners and landscape architects, gives advice on the external appearance of government buildings, locations, site plans and landscape designs; the Historical Advisory Committee advises the Commission on matters of preservation, marking and interpretation of buildings and sites having historical significance within the National Capital Region; the Information and Historical Advisory Committee studies and considers the publicity and public relations activities of the Commission, and carries out an extensive program of historical research and preservation; and the Gatineau Park Advisory Committee looks after matters concerning Gatineau Park.

[^10]The National Capital Plan, as conceived by the eminent French town planner Jacques Gréber, was dedicated to those who gave their lives for Canada during the Second World War and has since constituted the Commission's planning guide for the Capital of Canada. In accordance with the first proposal of the Master Plan, the principle of "open space" is being applied, a policy beneficial to both residents and visitors. Part of this policy involves the restoration to their natural beauty of the shores of the waterways in and around Ottawa, a program evident in the work of the Commission at Rideau Falls Park opposite the City Hall and in the development of Vincent Massey Park in the heart of the city; the latter is a 75-acre park and playground extension to 50-acre Hog's Back Park at the foot of Hog's Back Falls. On the Quebec side of the Ottawa River the Commission maintains two parks - the historically interesting Brébeuf Park and Jacques Cartier Park, both on the shores of the river. Driveways and parkways in and around the Capital are also part of the open-space treatment. There are at present 40 miles of wide landscaped roadways in Ottawa and Hull, and 30 miles of right-of-way have been acquired for future expansion. The Commission cares for the landscaping of twelve municipal parks in Ottawa-Hull, of which Strathcona Park in Sandy Hill district and Rockcliffe Park are the most extensive and attractive. The acquisition of land along both shores of the Ottawa and Rideau Rivers and the exceptionally wide rights-of-way for parkways have given to Ottawa about 7,000 acres of open space.

One of the five recommendations of the Master Plan is that new government buildings should be dispersed from the heart of the city. This program of decentralization has been under way for some time and excellent examples of planned sites for government structures now exist at Confederation Heights, at Tunney's Pasture and at the Printing Bureau site in Hull. Other areas, such as the large tract of already serviced land at Pinecrest, are awaiting development. The advantages of decentralization are many-planned government building areas away from centre-town offer at least partial solution to the everpressing problem of traffic congestion and, from the humanitarian point of view, workers occupy buildings erected on large landscaped grounds with plenty of parking space and are close to main traffic arteries and shopping centres, and often to good housing developments. The grounds of more than 140 government buildings in the National Capital Region are cared for by the Commission, which also gives assistance to municipal projects that enhance the attractiveness of the area, such as the provision of land and landscaping for the $12-$ mile Queensway being built under a four-way partnership between the Federal Government, the National Capital Commission, the Province of Ontario and the City of Ottawa.

A main proposal of the Master Plan calls for the establishment of a greenbelt around the National Capital, one of the main objectives of which is to restrain the tentacular growth of the city so that family dwelling projects will be built on lands that can be supplied, at reasonable cost, with water and sewer services. There is also the aesthetic consideration that this belt of green open space and planned building sites will provide the beautified Capital with suitable approaches. The present semicircular greenbelt on the Ontario side occupies 41,000 acres of land and surrounds, to a depth of about two and one-half miles, the urban zone at an average distance of nine miles from the Peace Tower. The Commission encourages agricultural activity within this area and at the same time reserves within its boundaries certain tracts of land to be occupied by government buildings, public institutions and some types of industrial development such as research and experimentation establishments requiring considerable space to operate. By the end of March 1962, the Commission will have spent approximately $\$ 23,000,000$ to purchase for the Crown about 27,000 of the planned 41,000 acres. The entire project should be rompleted by 1963.

A primary task of the Commission is to carry out the railway relocation program strongly advocated in the Master Plan. At the very beginning of his study of Ottawa and Hull, Jacques Gréber discovered that little could be done for the National Capital unless
unsightly railway lines, of which there were 52 miles, and adjoining roundhouses and sheds were removed from the urban areas. The Commission has begun the large-scale program of relocating trackage and yards with the co-operation of the railway companies. The abandoned rights-of-way are destined to become planned roadways which will relieve traffic bottlenecks within the heart of the city; the Queensway, now under construction, runs on a former railway bed. This program is ahead of schedule and is now expected to be complete by 1965. It involves the removal of 32 miles of track, the elimination of 72 railway crossings and the consequent acquisition of 449 acres of high-value land for redevelopment.

The Master Plan also includes the establishment and development of the beautiful and impressive Gatineau Park, a 75,000-acre forest and lake area in the shape of a triangle stretching from its apex in the city of Hull northwestward for 35 miles into the Laurentian Hills. The National Capital Commission owns more than 62,000 acres of the projected area, and the acquisition of private holdings is continuing. The parkways through this area now measure about 20 miles and extensions are under construction. Camping and pienic sites are being improved by the installation of drinking fountains, barbecues and outdoor ovens, and well-designed restrooms, and by the addition of fishing and swimming facilities. At Lac Philippe and Lac Lapêche, two of the four big lakes in Gatineau Park, the Commission has developed or is planning large-scale public recreation facilities with easy road access.

In addition to these major development projects, the National Capital Commission, through its Historical Advisory Committee, plans to conserve historic buildings and sites as mementoes of the past. Such sites are carefully studied and their preservation and suitable marking is an important part of the over-all program.

Planning aid to municipalities in the National Capital Region is given in the form of grants in special circumstances and advice on establishing areas of subdivision control, preparation of basic plans and maps, master plans for communities and zoning legislation. This advice is available upon request and the Commission, having no planning powers, must seek to persuade rather than impose its proposals. Its planning staff has served a score of local municipalities in this capacity with varied success, and advice to many of them is continuing.

Estimated expenditures for the Commission projects in the year ending Mar. 31, 1962 total $\$ 21,345,525$, which includes $\$ 2,557,470$ for administration, operation and maintenance, $\$ 3,971,285$ for construction, $\$ 11,100,000$ for property acquisition and $\$ 1,925,000$ in grants and aid to municipalities.

## Section 3.-Wildlife Resources and Conservation*

Wildlife in Canada is still considered to be an important and renewable natural resource. In the early days, wildlife was, and in large areas still is, the sustenance of the aborigines and trade in fur determined the course of exploration and settlement. During the period of the opening up of the country, many species of animals and birds became seriously depleted or completely extinct. The passenger pigeon, the great auk and the Labrador duck were extirpated, the buffalo vanished from the prairies, and wapiti, pronghorn antelope and musk-oxen were reduced to small fractions of their former numbers. The destruction was not limited to the animals and birds but in the areas of settlement their habitat was endangered by the cutting and burning of the forests, the diversion and pollution of streams and the changing of the face of the land.

[^11]Since then, it may be said that wildlife has been changed and influenced by man to the degree that he has changed and influenced the environment. The arctic and alpine tundra, one of Canada's major vegetational regions, has been changed hardly at all; the adjacent sub-arctic and sub-alpine non-commercial forest has been changed principally as a result of increased human travel causing more forest fires; the great commercial forest farther south has not lost its real character through being managed; cultivable lands, whether originally forest or grassland, have completely changed but often they and the managed forest are better for many forms of wildlife than the original wilderness. Some creatures thrive on change. There are more moose, deer, grouse and probably more coyotes than in Indian days. Fur species, such as beaver and muskrat, are easily managed and many small mammals and birds thrive better in fields and woodlots than in the virgin forest, provided that they are not poisoned by pesticides. At the present time, the harvestable surplus of game and fur species across Canada is seldom fully utilized and it is quite clear that wildlife will remain abundant in Canada wherever there is space.

Thus, Canada today is known throughout the world for the wealth and variety of its wildlife. It maintains most or all the existing stocks of woodland caribou, California bighorn sheep, wolves, grizzly bears, trumpeter swans and wolverines, to mention a few. And these animals exist not only because of the vastness of their habitat but also because of man's efforts to preserve them. There is evidence of concern about the preservation of wildlife among the early Canadians; there were game laws in force in the original provinces when all but a few thousand acres of land were still the patrimony of the Indians. In 1887 pioneer conservationists were instrumental in establishing Banff Park in Alberta and in setting up a bird sanctuary at Last Mountain Lake in Saskatchewan, the first on the Continent. The same fervour for preservation of Canada's wildlife heritage led to the complete protection of wood bison in 1893 and the purchase and establishment of a nucleus herd of plains bison at Wainwright in Alberta in 1907. Thus was formed the basis of wildlife conservation efforts which, for a long time, took the form of complete protection of certain species from destruction by man or predator. Better knowledge of nature's operations and the recognition of the fact that many other factors combine to cause fluctuation in wildlife numbers are now being reflected in a loosening of restrictions on hunting and a rescinding of preserves. The science of animal numbers is new and sometimes runs counter to popular prejudice. But it is well understood that any area will support only so many animals and species that are highly productive must have a quick turnover. Wildlife must never be separated from the consideration of its environment and if the environment is fully stocked the annual increment need only replace the losses. All extra is surplus, only part of which is taken by predators and part, if the animal is a game species, by man.

As a natural resource, wildlife within the provinces comes under the administration of the respective provincial governments; wildlife on federal lands and certain problems of national or international interest are the concern of the Federal Government.

The Canadian Wildlife Service.-The Canadian Wildlife Service deals with most wildlife problems coming within the jurisdiction of the Federal Government. It was organized in 1947 to meet the growing need for scientific research in wildlife management and is a division of the National Parks Branch of the Department of Northern Affairs and National Resources. The Service conducts scientific research into wildlife problems in the Northwest Territories, Yukon Territory and the National Parks, advises the administrative agencies concerned on wildlife management, and co-operates in the application of such advice. It administers the Migratory Birds Convention Act, provides co-ordination and advice in connection with the administration of the Game Export Act in the provinces, deals with national and international problems relating to wildlife resources, and co-operates with other agencies having similar interests and problems in Canada and elsewhere.

The Migratory Birds Convention Act was passed in 1917 to give effect to the Migratory Birds Treaty signed at Washington in 1916. It provides a measure of protection for numerous species of birds that migrate between the two countries. The Canadian Wildlife Service, in its capacity as administrator of the Act, is responsible for the annual revision of the Migratory Bird Regulations, which govern such matters as open seasons and other waterfowl hunting details, taking and possessing migratory birds for scientific or propagating purposes, eiderdown collecting, etc. The Act and Regulations thereunder are enforced by the Royal Canadian Mounted Police and in both administration and enforcement cooperation is received from provincial authorities. There are 108 migratory bird sanctuaries in Canada, having a total area of 39,136 sq. miles. A sanctuary may be established on the initiative of the Department of Northern Affairs and National Resources or of a provincial or municipal government, or on petition by a private person or organization. Bird banding provides valuable information on the migration of birds and their natural history and is especially useful in waterfowl management. Serially numbered bands supplied by the United States Bureau of Sport Fisheries and Wildlife are used in Canada as well as in the United States.

Many research projects under way were continued during 1961. These included the study, in co-operation with the Government of Manitoba and the Council of the Northwest Territories, of barren-ground caribou and of animals that prey upon caribou-wolves, grizzlies and wolverines. With better understanding of caribou physiology and of the effects of destruction of winter range by fire, factors associated therewith have assumed increasing importance, although human utilization still heads the list of recognized mortality causes. Studies continued of such fur mammals as mink, muskrat and beaver in the Mackenzie District, and of polar bear and white fox in Keewatin and Franklin Districts. A systematic aerial survey of the Queen Elizabeth Islands in the Far North was undertaken to assess the resources of large mammals available there. Big game mammals in the National Parks were also the object of continued study, special attention being given to mountain sheep and wapiti in the mountain parks of Alberta where large populations of those species facilitate investigations, and to the competition for food between wapiti and the livestock still allowed to graze in Riding Mountain Park in Manitoba. In Wood Buffalo Park, investigations into the problems of disease and low reproductive rates among the animals were continued as a long-term project in the hope that some control of each might be achieved.

Damage to cereal crops by wild ducks and sandhill cranes continued to receive intensive study and much time was devoted to other species greatly reduced in number or in danger of extinction such as Ross's geese, trumpeter swans and whooping cranes. Nationwide investigations of migratory waterfowl included kill surveys in the Provinces of New Brunswick, Quebec and Ontario and a crop-damage survey in Saskatchewan. In addition, a mourning dove census was begun and the Arctic bird-banding program was continued.

At the end of 1961 the research staff included 41 wildlife biologists stationed at various centres throughout Canada. Ornithologists were located at Vancouver, B.C., Edmonton, Alta., Saskatoon, Sask., Winnipeg, Man., Ottawa and Aurora, Ont., Quebec, Que., Sackville, N.B., and St. John's, Nfld. Mammalogists were stationed in the Northwest Territories at Yellowknife, Fort Smith and Aklavik, and at Edmonton and Ottawa. Two limnologists were located at Edmonton and a range specialist and two pathologists at Edmonton and Ottawa, respectively. A number of university graduates and undergraduates are engaged annually to assist in summer field work. Ottawa headquarters has an administrative staff of about 30 in addition to supervisory research officers and about 25 part-time migratory bird wardens and sanctuary caretakers are employed.

## PART IV.-CLIMATE AND TIME ZONES

## Section 1.-Climate*

Just as there are great differences in the weather throughout Canada at any given instant, there are also many climates. These climates are not unique but are similar to those in Europe and Asia extending from the Arctic down to the mid-northern hemispheric latitudes. Because Canada is situated in the northern half of the hemisphere, most of the country loses more heat annually than it receives from the sun. The general atmospheric circulation compensates for this and at the same time produces a general movement of air from west to east. Migrant low pressure areas move across the country in this "westerly zone", producing storms and bad weather. In intervals between storms there prevails the fair weather associated with high pressure areas.

Although the movement of migrant high and low pressure systems within the zone of the westerlies is the most significant climatic control over Canada, the physical geography of North America contributes greatly to the climate. On the West Coast, the western Cordillera limits mild air from the Pacific to a narrow band along the coast, while the prairies to the east of the mountains are dry and have extreme temperatures because they are shielded from the Pacific Ocean and are in the interior of a large land mass. In addition, the prairies are part of a wide north-south corridor open to rapid air flow from either north or south which often brings sudden and drastic weather changes to this interior area. On the other hand, the large water surfaces of Eastern Canada produce a considerable modification to the climate. In southwestern Ontario winters are milder with more snow, and in summer the cooling effect of the lakes is well illustrated by the number of resorts along their shores. On the East Coast, the Atlantic Ocean has considerable effect on the immediate coastal area where temperatures are modified and conditions made more humid when the winds blow inland from the ocean. The following paragraphs describe the climate of Canada by region.

The Arctic climatic region takes in the Arctic islands and that part of the Arctic Coast north of the tree line. This line corresponds in general to the position of the $50^{\circ} \mathrm{F}$. isotherm in the warmest month of summer. In the Arctic there is no summer as that season is known in Southern Canada, since July temperatures average lower than $50^{\circ} \mathrm{F}$. Winters are long and severe with January temperatures averaging in the neighbourhood of $-20^{\circ} \mathrm{F}$. Along the coastal areas of the Arctic islands; temperature extremes over the year may vary from about $65^{\circ} \mathrm{F}$. in summer to $-65^{\circ} \mathrm{F}$. in winter. Snowfall is relatively light but snow on the ground drifts and blows to an extent unknown in Southern Canada.

The Northern climatic area extends in a broad band from the Yukon Territory in the west to Labrador in the east and from the tree line southward to the more settled portions of Southern Canada. Thus, this region includes both the lightly treed barren lands in the north and the heavily timbered Boreal Forest Region in the south. Average temperatures in January are in the neighbourhood of $-10^{\circ} \mathrm{F}$. and in July range from $50^{\circ} \mathrm{F}$. to $60^{\circ} \mathrm{F}$. Rainfall and snowfall (especially snowfall) are abundant in the eastern portions but deficient in the northwestern section.

The Pacific climatic region embraces the islands and a narrow coastal belt of British Columbia, nowhere extending more than 100 miles, and frequently only a few miles, inland. This is the only portion of Canada where January average temperatures are above $32^{\circ} \mathrm{F}$. Temperatures rarely drop below zero in winter or rise above $90^{\circ} \mathrm{F}$. in summer and the average temperature in July is between $55^{\circ} \mathrm{F}$. and $60^{\circ} \mathrm{F}$. This is the area of heaviest

[^12]rainfall in Canada, annual averages of more than 80 inches being common along the coast. There are, however, rain shadow areas in the lee of the mountains where the annual precipitation is less than 30 inches.

The most complex climatic region of Canada is the Cordillera which extends in a northwest-south belt through British Columbia and the Yukon Territory. In general, precipitation decreases eastward from the coast and, in contrast, temperature ranges decrease westward from the interior of the Continent. In this region, diurnal temperature variations are greater than anywhere else in Canada and, as a rule, altitude is more a climatic determinant than latitude.

The Prairie climatic region of interior Canada takes in most of the settled agricultural land of Manitoba, Saskatchewan and Alberta. Precipitation averages from 12 to 20 inches, with an early-summer maximum. July temperatures average in the neighbourhood of $65^{\circ} \mathrm{F}$., although there have been extremes recorded as high as $115^{\circ} \mathrm{F}$.; January temperatures average about $5^{\circ} \mathrm{F}$., with observed extremes of $-50^{\circ} \mathrm{F}$. and $-60^{\circ} \mathrm{F}$. The Prairie region is well known for two wintertime weather phenomena-the blizzard and the chinook. Bitterly cold temperatures with high winds and driving snow combine to produce the blizzard, while the chinook is a warm air invasion, usually in Alberta, bringing temperature increases of $40^{\circ} \mathrm{F}$. to $50^{\circ} \mathrm{F}$. within a few hours.

The sixth general climatic region, called the Southeastern region, takes in southern Ontario, southern Quebec and the four Atlantic Provinces. Precipitation in this area is usually ample and ranges from 30 inches in northern Ontario to 50 inches in coastal Nova Scotia and Newfoundland. Snowfall is also abundant in winter, there being little seasonal variation in precipitation. July temperatures average between $65^{\circ} \mathrm{F}$. and $70^{\circ} \mathrm{F}$. and January temperatures from $10^{\circ} \mathrm{F}$. to $25^{\circ} \mathrm{F}$. Climatic conditions in general are modified in southwestern Ontario by the Great Lakes and those along the coastal areas by the Gulf of St. Lawrence and the Atlantic Ocean. In southern Ontario high sensible humidity or sultry conditions are felt more often than in any other area in Canada but these spells usually last only a few days at a time.

The following table gives temperature and precipitation data for typical stations in the various regions of Canada. Temperatures in this table refer to observations taken in a thermometer shelter which has been placed in a representative location with the thermometer bulbs four feet above the surface of the ground. Mean January and July temperature data are based on records over the 30-year period from 1921 to 1950 except for far northern stations where the available period of record is shorter. After an average temperature is obtained for each day in January over a 30 -year period, the mean January temperature may be arrived at by striking a mean of these 930 daily values. The mean July temperatures may be obtained in a similar manner. The highest and lowest temperatures on record refer to the absolute extremes for the entire period of record at each station. Average dates are shown for the last occurrence in spring of a temperature of $32^{\circ} \mathrm{F}$. or lower and for the first occurrence in autumn of freezing temperatures at the fourfoot level in the thermometer shelter.

The official Canadian rain gauge is a small cylinder in which the rain is caught and then measured to one-hundredth of an inch with a simple measuring device. Freshly fallen snow is measured as it lies on the ground and recorded to the tenth of an inch. Total precipitation values as shown in the table are the sum of the total rainfall and one-tenth of the total snowfall. This assumes a specific gravity of 0.1 for freshly fallen snow. Snow gauges are being installed at many of the main observing stations in the country. At these stations it will be possible to observe and record the snow density for each snowfall. For the purposes of this table, a day with precipitation is one on which at least one-hundredth of an inch of rain or one-tenth of an inch of snow has fallen.

Temperature and Precipitation Data for Typical Stations in the Various Districts

[^13]
## Section 2.-Meteorological Observing Stations in Canada*

In 1961, official meteorological observations were taken and recorded at some 2,049 weather reporting stations in Canada. There are several different classes of stations, ranging from the first-order reporting stations at airports where hourly observations of all aspects of the weather are recorded, to the co-operative precipitation observing stations where a volunteer observer makes daily observations of rainfall and snowfall.

The official recording of weather observations in Canada began early in 1840. Although there were some scattered weather records prior to that date, it was at the Toronto Observatory, established by the British Government, that the first scientifically precise Canadian weather observations were recorded. Several additional observing stations were established in the 1860's after control of meteorological work had passed into local government hands and a national meteorological service was organized in 1871. By 1876 there were more than 100 stations, 15 of them reporting daily by telegraph to Toronto for forecasting purposes.

Since then, the number of meteorological observing stations has grown steadily. As the mid-west opened up around the turn of the century, observing stations were established in that area, and during the past three decades in the sub-Arctic and Arctic regions. At the same time, the coverage has improved in the older settled portions of southeastern Canada. While there are vast areas of Canada where the weather stations are several hundred miles apart, most of the settled parts of the country are represented by first-order hourly reporting stations every 100 miles or so, and by co-operative climatological observing stations at least every 25 miles.

Of the 2,049 weather reporting stations across Canada, about 274 are classified as first-order synoptic stations. At most of these stations complete weather observations are made every six hours and at a large percentage of them only slightly less complete observations for aviation forecasts are made every hour. These weather data, including information on temperature, precipitation, pressure, wind, humidity, cloud and visibility, are sent first by radio and teletype to the different weather offices across the Continent to be used for weather forecasting purposes, and then at each month-end the manuscript reports are sent by mail to Meteorological Branch Headquarters for use in compiling climatic statistics. At some 90 of these observing stations, personnel of the Telecommunications Branch of the Department of Transport take weather observations as part of their scheduled duties, and 35 stations are operated in a similar manner by the different Armed Services; 70 stations are operated by Meteorological Branch personnel and the remainder are operated under contract, mainly by various transportation and communications companies.

Twice daily at 34 locations throughout the country, complete upper air observations are made from the surface to altitudes upwards to 100,000 feet. Pressure, temperature and humidity measurements are determined by radiosonde instruments carried aloft by balloons and the information reported by radio to the ground receiving station; winds are determined by observing the drift of the balloon by means of radar or radio direction finding ground equipment. There are also 38 other locations where the winds in the lower layers of the atmosphere are determined by observing free balloon drift by means of a theodolite or by radar. As in the case of the first-order synoptic reporting stations, these upper air weather observations are made available immediately to forecast offices for weather forecasting purposes, and the manuscript reports are collected at Meteorological Branch Headquarters for compilation of climatic statistics.

About 1,100 weather observing stations in Canada are classified as climatological stations where the observers record temperature extremes and precipitation once or twice daily and send in monthly data sheets. Most of these observers serve on a voluntary basis and willingly spend several hours a month on their hobby. They come from all walks of life-farmers, business men, clergymen, retired people, etc. In addition, many governmental and industrial organizations such as agricultural experimental farms and

[^14]power companies have incorporated brief climatological duties into the general work of some of their employees. These climatological stations have contributed much useful information on temperature and precipitation for publication by the Meteorological Branch.

There are about 630 stations classified as precipitation stations where rainfall and snowfall only are observed and recorded. Since precipitation varies more rapidly than temperature over short distances, a dense network of these stations is required, especially in large urban areas. Finally, there are about 45 miscellaneous stations where observations of wind, sunshine and temperature are taken for special purposes. In all, the total number of weather stations in Canada has been growing at a rate of more than 50 a year for the past decade and thus a steadily increasing climatic intelligence is assisting Canadians in all economic pursuits.

## Section 3.-Standard Time and Time Zones

Standard time, which was adopted at a World Conference held at Washington, D.C., in 1884, sets the number of time zones in the world at 24 , each zone extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians $15^{\circ}$ longitude apart. The basis of world time is Greenwich time and all other time zones are a definite number of hours behind Greenwich.

Canada has seven time zones, the most easterly being Newfoundland standard time, three hours and thirty minutes behind Greenwich time. In the west, Pacific standard time, used throughout British Columbia and part of the Northwest Territories, is eight hours behind Greenwich, and Yukon standard time, used throughout the Yukon Territory, is nine hours behind Greenwich. Some municipalities adopt the time used by the local railways which, in certain cases, differs from the standard. There are also villages that adopt such time as seems best to suit their convenience but in general the legal boundaries of the different time zones are actually in use.

Daylight Saving Time.-For some years before World War I there was active propaganda, particularly in the cities, for the use during the summer months of an earlier time usually referred to as 'daylight saving time', one hour ahead of standard time. It was considered from the economic as well as from the health point of view that people in industrial towns and cities would gain by having longer periods of sunlight at their disposal for recreation. Canada adopted daylight saving time in 1918 but the Canadian Act lapsed at the end of that year. Since that date, however, most cities and towns have adopted daylight saving for varying periods in the summer months.

Legal Authority for the Time Zones.-Most of the regulations made in Canada concerning standard time have been passed by the provincial legislatures and the Northwest Territories Council. Legislation, besides determining the boundaries of zones, regulates such matters as the times of coming into effect or expiration of Acts, ordinances, contracts and agreements, times of opening and closing registration offices, law courts, post offices and other public offices, times of open or close seasons for hunting and fishing, and times of opening and closing business houses and places of amusement.

## PART V.-GEOPHYSICS AND ASTRONOMY

## Section 1.-Geophysics*

Geophysics is the study of the earth, including the oceans and atmosphere, by the methods of physics. Because it extends over such a very wide range of topics, it is generally divided into seven fields, each a well developed science in itself. Of these, one of the oldest is geodesy, the study of the earth's shape, and of variations in the gravitational attraction of the earth, which are related to the shape. Seismology originally was the study of earthquakes but it now includes investigations of the earth's interior by means of vibrational waves, which may be produced by explosions as well as earthquakes. Meteorology deals with the atmosphere, and hydrology deals with the surface waters of the earth, excluding the oceans but including ice and snow. The study of the oceans, their currents and bottom profiles, forms a subject in itself-oceanography. Geomagnetism is involved with the earth's magnetic field and with many related phenomena, such as the ionosphere and the radiation belts that surround the earth. Finally, volcanology is the study not only of existing volcanoes but of volcanoes of the past and of the rocks they produced.

The seven fields all deal with the investigation of some major property of the earth. They may be considered as pure sciences but it is apparent that they all have applications that are vital to modern life. The findings of geodesy on the precise shape of the earth are needed for accurate maps. The search for minerals and oil by scientific methods makes use of the techniques of gravity measurements, seismology and geomagnetism. Meteorology obviously has great practical importance, and the contributions of hydrology to water supply problems and of oceanography to the fisheries are also very large.

Activity in geophysics continued to increase in Canada during 1961. Historically, those fields of greatest application in this country were developed first but work is now in progress in all branches of the subject. Geophysical studies are conducted by a number of groups in the Department of Mines and Technical Surveys, the Department of Northern Affairs and National Resources, the Department of Transport, the National Research Council, the Defence Research Board, several provincial laboratories and virtually all universities. Research in geophysics in Canadian universities is generally carried on in the departments of physics or geology, although in the University of Western Ontario there is a Department of Geophysics. At least nine universities offer courses in geophysics, which can be taken by students intending to pursue geophysical research or to apply it in mining or petroleum exploration.

[^15]In the field of geodesy, the work of precisely locating points upon the earth's surface is performed by the Geodetic Survey, Department of Mines and Technical Surveys. Nets of triangulation, the basis for the most accurate horizontal control, were extended toward the Arctic Coast in the Northwest Territories and in northern Quebec. Research was continued on the electronic measurement of distances, which has been widely used throughout the North for preliminary geodetic surveys and now promises to accelerate the precise location of points. The Geodetic Survey is also responsible for determining the height of the land surface above sea level and during the year it extended its network of level lines. Measurements of gravity are used to determine the shape of the sea level surface of the earth and a broad program of observations over the country is being conducted by the Dominion Observatory, Department of Mines and Technical Surveys. During 1961, measurements were made in Eastern Canada north to Ungava Bay, by a party using Beaver aircraft for transportation and landing on lakes to make the observations. Gravity readings provide information on the structure of the earth's crust as well as on the shape of the earth, and a large number of observations were made in the Arctic as part of the study of the polar continental shelf. Many of these were made on sea ice. Some measurements were made in Hudson Bay by lowering an instrument to the bottom. A number of universities, notably the University of Manitoba, include gravity measurements in the study of geological structures and the method is also used in the reconnaissance phase of oil exploration in Western Canada.

The recording of waves from earthquakes is an activity of the Dominion Observatory, which maintains seismograph stations at Halifax, Montreal, London, Alert, Resolute, Mould Bay, Penticton, Victoria, Banff and Shawinigan, as well as at Ottawa. This represents a considerable expansion over previous years, and more stations will be established until they are located at intervals of 500 miles over the entire country. The detailed study of waves that have passed through the earth is one of the most powerful methods of studying the interior, and also provides an important method of detecting nuclear explosions. Theoretical investigations on the stress systems in the earth responsible for earthquakes are in progress at the Dominion Observatory and the University of Toronto. Seismological studies using explosions are useful in studying geological structures in the earth's crust, and measurements of this type were made by the Geological Survey, Department of Mines and Technical Surveys, in Sverdrup Basin, as part of the Polar Continental Shelf Project; in the vicinity of Vancouver Island by the University of British Columbia; and in northern Manitoba by the University of Saskatchewan. Seismic studies continue to be the chief geophysical method used in oil and gas exploration, with most of the operations being conducted in the winter because of muskeg conditions in northwestern Canada.

The Meteorological Branch of the Department of Transport is responsible not only for routine meteorological observations and forecasting but also for research into the physics of the earth's atmosphere. The other principal research centre in the field is the Department of Meteorology, McGill University. Canada offers a large scope for meteorological research because of the importance of the arctic air mass to the weather of a large portion of the world, and the existence of the jet stream of high wind velocity that crosses the country. Current interest includes the increased use of high-speed electronic computers to solve the complex problems encountered. Special programs involve the use of radar methods to study stormy weather conditions, in particular hail-producing storms in Alberta. A series of measurements on the speed of sound through the air from the explosion in August of 100 tons of TNT by the Defence Research Board at Suffield, Alta., is being analysed at the University of Alberta to provide information on upper air temperatures.

The importance of water as a national resource is being increasingly recognized and work in hydrology plays an important role in water conservation. Studies in surface waters, run-off, snowfall accumulation and underground water movements are included in the programs of the Water Resources Branch, Department of Northern Affairs and National Resources, and of several provincial groups and universities. Research in the field involves both field studies to provide the basic information and theoretical work on
the flow of water through soils and rocks. Canada has a great number of glaciers, the study of which is becoming increasingly important. Glaciers are an important source of water for many rivers of Western Canada and, in addition, their fluctuations provide a useful record of climatic variations. During 1961, field studies in no less than 15 areas of the Arctic and western mountains were made by expeditions from the Department of Mines and Technical Surveys, the Department of Northern Affairs and National Resources, the Defence Research Board, Arctic Institutes and university groups. The measurements made in the field included ice thickness determinations by geophysical methods, ice flow measurements and local meteorology. A complete inventory of Canadian glaciers is being prepared by the Geographical Branch, Department of Mines and Technical Surveys.

The study of the earth's magnetism has been important to navigators for many years but recently the subject has been greatly enlarged to include investigations on the cause of the magnetic field, the magnetic properties of rocks, and the effect of magnetic forces on the electrically charged particles in the upper atmosphere. In 1961 the Dominion Observatory made observations by aircraft along 45,000 miles of line over central Canada to provide information for magnetic charts and established new observatories for recording magnetic changes at Alert and Mould Bay in the Northwest Territories to supplement the work of previously established observatories at Agincourt, Ont., Meanook, Alta., Victoria, B.C., and Baker Lake and Resolute, N.W.T. The Geological Survey made airborne magnetometer surveys over many parts of the country to produce detailed maps of the magnetic field, which are of use in the study of geological structures and the location of mineral deposits. Surveys were conducted in the Yukon and Northwest Territories and, in co-operation with provincial governments concerned, in British Columbia, Ontario and Saskatchewan; 91 map sheets were issued during the year. Similar airborne surveys were conducted by the mining industry.

The study of the magnetic properties of rocks is important in studying the history of the earth's magnetism, which throws light on such fascinating possibilities as wandering of the earth's poles and moving of the continents. Measurements of this type were continued during 1961 at the Geological Survey and the Universities of Toronto, Alberta and Western Ontario.

Studies on the magnetic and electric properties of the earth's upper atmosphere have benefited in recent years by improved facilities, such as rockets, to carry instruments aloft and by new techniques that can be used from the ground. Canada is in a favourable position for such research because the belt of disturbances that produce the northern lights or aurora crosses the country. Such studies have a very important practical application to the problem of radio communication during periods of magnetic storms. The Institute of Upper Atmospheric Physics at the University of Saskatchewan is particularly involved, as are the University of Western Ontario and several laboratories of the Defence Research Board and the National Research Council. (See also Chapter VIII, Part III, Section 3 which relates to Space Research in Canada.)

Studies of very small, rapid pulsations of the earth's magnetism produced by electric currents in the high atmosphere can provide further information on this region. These pulsations are being studied by the Pacific Naval Laboratory of the Defence Research Board and by the Universities of British Columbia and Alberta.

Canada is bounded on three sides by major oceans, in which the motions of water have an important bearing on fisheries, on ice conditions and shipping and on climate. Indicative of the growing importance of oceanography was the formation during 1961 of the Marine Sciences Branch of the Department of Mines and Technical Surveys, which will operate a modern laboratory for oceanography at Bedford, N.S. The Branch will co-operate with Dalhousie University in the Atlantic, and with the Institute of Oceanography, University of British Columbia, in the Pacific. Oceanographic measurements are made on cruises by specially equipped ships and include the determination of bottom topography by electronic depth sounders, ocean currents, temperature and salinity of
the water, and plankton content. Cruises have been made in the North Pacific to longitude $165^{\circ} \mathrm{W}$ and along the inlets of the British Columbia coast. On the East Coast, observations have been made along the Scotian shelf and north to Davis Strait. In connection with the Polar Continental Shelf Project, oceanographic measurements are being extended throughout the Arctic islands wherever possible. Similar measurements have been extended in the waters of the Great Lakes by the Great Lakes Institute of the University of Toronto.

While there are no active volcanoes in Canada, many of the physical studies that can be made of rocks are grouped under volcanology. The dating of rocks by radioactive methods has been especially important in this country, because of the great area of the Canadian Shield in which there are no fossiliferous rocks which can be dated by palaeontological methods. Laboratories of the Geological Survey and the Universities of Toronto, British Columbia, Alberta and St. Francis Xavier have been active in this study, which is based on the slow accumulation in rocks of certain elements formed from the radioactive decay of others. Ages as great as $2,700,000,000$ years have been determined for some of the rocks of the Canadian Shield.

Late in 1961 it was announced that Canada would participate in an international study of the earth's interior, particularly the solid mantle that lies below the outer crust at a depth of some 20 to 30 miles. The project, known as the Upper Mantle Project, is being organized by the International Union of Geodesy and Geophysics, to which this country adheres, and will extend from 1962 through 1964. Those fields that deal with the solid earth-such as geodesy, seismology and geomagnetism-will play an important role in the project, which is expected to yield valuable information on the earth's interior. One major result may be a better knowledge of how and where mineral deposits are produced and emplaced in the earth's crust.

## Section 2.-Astronomy

The modern era of astronomy in Canada may be said to have begun in 1905 with the completion of the Dominion Observatory at Ottawa, the national observatory of Canada. Prior to that time, an astronomical observatory established in 1851 at Fredericton, N.B., was used for a short time to determine the longitude of that centre and for general astronomical purposes; it has been rehabilitated as a historic monument. Other small observatories were established, one at Quebec City in 1854 and one at Kingston in 1875. Astronomical instruments were to be associated with the Magnetic Observatory built by the British Government at Toronto in 1839 but there is no record of their being set up until 1881. A small observatory established at McGill University in 1879 was used for many years for time observations.

Today, an increasing number of universities and other scientific organizations are devoting a substantial part of their efforts to the study of astronomy and astrophysics. The Dominion Observatory at Ottawa, which with its sister institutions is administered by the Department of Mines and Technical Surveys, specializes in the astronomy of position, solar physics, meteoric astronomy and various branches of Geophysical work. This Observatory also maintains a subsidiary (the Dominion Radio Astrophysical Observatory) near Penticton, B.C., for the study of Radio Astronomy. Also associated in the same group is the Dominion Astrophysical Observatory at Victoria, B.C., which devotes its efforts to the motions and physical characteristics of the stars and of inter-stellar material. Other Federal Government institutions carrying out meteoric and radio astronomy, including a study of the upper atmosphere by essentially astronomical methods, are the National Research Council and the Defence Research Board. Solar observations at the Algonquin Radio Observatory of the National Research Council, located in Algonquin Park 150 miles west of Ottawa, are now under way. The program is being extended to
galactic studies with the addition of several new radio telescopes, including one under construction by the University of Toronto. At the Springhill Meteor Observatory, near Ottawa, studies of meteors and the aurora are carried out.

The David Dunlap Observatory of the University of Toronto carries on an active program of astrophysical research as well as the teaching of astronomy. It performs not only the functions of a privately financed and administered research institution, but is also the nucleus of the Department of Astronomy of the University of Toronto. The Physics Department of Queen's University in Kingston, which devotes considerable effort to the teaching of astronomy, has recently installed a new optical telescope and has for some time been carrying on advanced work in the science of radio astronomy. The University of Western Ontario maintains a small but active Department of Astronomy and several other Canadian universities give some instruction in astronomical science.

# CHAPTER II.-CONSTITUTION AND GOVERNMENT 

The interpretation of the symbols used in the tables throughout the Year Book
will be found facing $p .1$ of this volume.

## PART I.-CONSTITUTION OF CANADA

The Canadian federal state, which today comprises ten provinces and two vast northern territories, had its beginning ninety-five years ago in the enactment (Mar. 29, 1867) by the British Parliament of the British North America Act, 1867. Fashioned largely out of the Seventy-two Resolutions drafted at Quebec (1864) by the Fathers of Confederation, the British North America Act, 1867 provided for the federal union of the three British North American provinces (Canada, New Brunswick and Nova Scotia) in one Dominion under the name of "Canada".

While the new nation that came into being on July 1, 1867 was a federation comprised of four provinces, namely, Ontario, Quebec, New Brunswick and Nova Scotia, Sect. 146 of the Act provided for the admission into the Union of the Crown colonies of Prince Edward Island and Newfoundland on the Atlantic and the united (1866) island and mainland colony of British Columbia on the Pacific, and also of the vast expanse of Hudson's Bay Company territory in the North West known as "Rupert's Land and the North-Western Territory". Following the negotiation of an agreement on terms comprising the Company's surrender of its authority and territories to the Crown (which was to transfer them at once to Canada) and the retention of one-twentieth of the land of the fertile belt (the southern territories) with designated blocks of land around its trading posts and a Canadian cash payment of $£ 300,000$, the new nation of Canada was ready to expand westward with unmatched momentum across the Continent to the Pacific.

[^16]The acquisition by Canada of Rupert's Land and the North-Western Territory enabled the Red River settlement, after a few months of disturbance, to receive limited provincial establishment under the name of "Manitoba" in 1870; provided the Federal Government with the public lands needed to help subsidize a transcontinental railway linking the Pacific with the Canadian East, thereby fulfilling the pledge to British Columbia to begin the Canadian Pacific Railway within two years and to complete it within ten years of the date of union, July 20, 1871; and laid, through the provision of millions of acres of public lands, the land and economic bases for the Federal Government's adoption of a freehomestead policy for the Canadian prairies that, in conjunction with the completion of the Canadian Pacific Railway and the launching of other railway lines, brought wave after wave of settlers into the Northwest Territories in such numbers as to justify the creation of the two Provinces of Saskatchewan and Alberta in 1905 out of the portion of the Northwest Territories south of the 60th parallel of north latitude. Although provision for their entry was included in ${ }_{4}^{9}$ the British North America Act, 1867, the Province of Prince Edward Island held back from the Union until 1873 and Newfoundland became Canada's tenth province on Mar. 31, 1949.

The Constitution of Canada, which had a corporate beginning in 1867, combines, in a set of rules determining the creation and operation of the machinery or institutions of government, the Cabinet system of responsible government (based on an inheritance from Britain) with a Canadian adaptation of federalism (as then practised in the United States for eighty years). A written document, the British North America Act of 1867, contains a substantial portion of Canada's Constitution and this Act, with its various amendments,* is popularly held to be the Canadian Constitution. There is, however, another and perhaps more important part which appears, through the evolutionary processes of historical growth, in various guises including well-established usages and conventions found in the unwritten provisions of the Constitution.

Thus, the British North America Act is not a comprehensive constitutional document presenting an exhaustive statement of fundamental laws and rules by which Canada is governed. The Constitution of Canada in its broadest sense includes other British statutes (such as the Statute of Westminster, 1931) and Orders in Council (notably those admitting various provinces and territories to the federation), statutes of the Parliament of Canada relating to such matters as the succession to the Throne, the Royal Style and Titles, the Governor General, the Senate, the House of Commons, the creation of courts, the establishment of government departments, the franchise, elections, and also statutes of provincial legislatures relating to provincial constitutional institutions and government matters. Federal and provincial Orders in Council, legally authorized by their respective statutes, provide further constitutional material as do the decisions of the courts which interpret the British North America Act and all ordinary statutes and indeed possess the power to set aside any laws which they hold to be ultra vires or beyond the jurisdiction of the enacting legislative bodies, whether federal or provincial. Moreover, the Canadian Constitution comprises, in addition to the statutory law and its judicial interpretation, substantial sections of the common law, unwritten constitutional usages and conventions and principles of democratic government which were transplanted from Britain over two hundred years ago and have since then been thriving and evolving in the Canadian environment. For example, the Cabinet system of responsible government (see pp. 55-57) and its functioning through close identification of the executive and the legislative powers (that is, of the Cabinet and the House of Commons) is not mentioned in the British North America Act but derives from an unwritten convention of the Constitution.

[^17]Although the essential principles of Cabinet government are based in custom or constitutional usage, the federal structure of Canadian government rests on the explicit written provisions of the British North America Act. Apart from the creation of the federal union, the dominant feature of the Act and indeed of the Canadian federation was the distribution of powers between the central or federal government on the one hand and the component provincial governments on the other. In brief, the primary purpose was to grant to the Parliament of Canada legislative jurisdiction over all subjects of general or common interest, while giving to the provincial legislatures jurisdiction over all matters of local or particular interest (see pp. 59-60 and 73-74).

Unlike the written constitutions of many nations, the British North America Act lacks comprehensive "bill of rights" clauses, although it does accord specific constitutional protection to the use of the English and French languages (clause 133) and special safeguards with respect to sectarian or denominational schools. Such vital rights as freedom of speech, freedom of assembly, freedom of religion, freedom of the press, trial by jury and similar liberties enjoyed by the individual citizen are not recorded in the British North America Act but rather depend on the statute law and the common law inheritance. Additional security of these rights may be expected to flow from the recent passage of a Canadian Bill of Rights-An Act for the Recognition and Protection of Human Rights and Fundamental Freedoms (SC 1960, c. 44), assented to Aug. 10, 1960.

No provision was made in the British North America Act of 1867 for amendment thereof by any legislative authority in Canada but both the Parliament of Canada and the provincial legislatures were given legislative jurisdiction with respect to some matters relating to government. Thus, for example, the Parliament of Canada was given jurisdiction with respect to the establishment of electoral districts and election laws and the privileges and immunities of Members of the House of Commons and the Senate, and each provincial legislature was empowered to amend the constitution of the province except as regards the office of Lieutenant-Governor. By an amendment to the British North America Act passed in 1949, the authority of the Parliament of Canada to legislate with respect to constitutional matters was considerably enlarged and it may now amend the Constitution of Canada except as regards the legislative authority of the provinces, the rights and privileges of provincial legislatures or governments, schools, the use of the English or the French language, and the duration of the House of Commons other than in time of real or apprehended war, invasion or insurrection.

The question of devising amendment procedure within Canada which satisfies the need to safeguard or entrench such basic provincial and minority rights as are noted immediately above and yet possesses sufficient flexibility to ensure that the Constitution can be altered to meet changing circumstances is one that still engages the attention of the federal and provincial governments and legislatures. The constitutional background to the problem, the present amending procedures, the attempts since 1935 to devise amending procedures, and the complexities inherent in amendment of a federal constitution are all discussed in a special article published in the 1961 Canada Year Book, pp. 51-57, entitled "Amendment of the Canadian Constitution".* The only barrier to Canada's complete control over the amendment of its own written constitution (i.e., the British North America Act of 1867, a statute of the British Parliament) has been the inability of the Canadian people and their elected representatives in the federal and provincial fields to draft amendment procedures on which they will be in general agreement.

[^18]
# PART II.-MACHINERY OF GOVERNMENT 

## Section 1.-The Federal Government

Subsection 1.-The Executive

The Crown.-The British North America Act provides that "the Executive Government and authority of and over Canada is . . . vested in the Queen". The functions of the Crown, which are substantially the same as those of the Queen in relation to the British Government are discharged in Canada by the Governor General in accordance with established principles of responsible government. The practical executive functions of government are exercised by the Cabinet.

The Queen.-The personal participation of the Queen in the functions of the Crown in Canada has been limited to such occasions as the granting of honours and awards, approval of changes in the Table of Precedence, institution of new military awards, or the periodic appointment of a Governor General. On the occasion of a royal visit, the Queen may participate in those ceremonies that otherwise are carried out in her name, such as the opening and dissolution of Parliament, the assent to Bills, and the granting of a general amnesty.

Apart from her constitutional position in relation to the various governments of the Commonwealth countries, the Queen is Head of the Commonwealth and symbolizes the association of the member countries. Until 1953 the title of the Queen was the same throughout the Commonwealth. Constitutional developments put the title somewhat out of accord with the facts of the position, and in December 1952 it was decided by the Prime Ministers of the Commonwealth countries meeting at London, England, that new forms of title for each country should be devised. The title for Canada was approved by Parliament and established by a Royal Proclamation on May 29, 1953. The title of the Queen, so far as Canada is concerned, now is:-
"Elizabeth the Second, by the Grace of God of the United Kingdom, Canada and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith".
1.-Sovereigns of Canada"since Confederation, 1867

| Name | Dynasty | $\begin{gathered} \text { Year } \\ \text { of } \\ \text { Birth } \end{gathered}$ | $\begin{gathered} \text { Date } \\ \text { of } \\ \text { Accession } \end{gathered}$ |

| George VI. | House of Windsor. | 1895 | Dec. 11, 1936 |
| Elizabeth II. | House of Windsor | 1926 | Feb. 6, 1952 |

The Governor General.--The Governor General, appointed by the Queen as her personal representative on the advice of the Prime Minister of Canada, traditionally serves for a term of five years. He exercises the executive authority of the Queen in relation to the Government of Canada under Letters Patent issued under the Great Seal of Canada (revised and re-issued, effective Oct. 1, 1947) and the provisions of the British North America Acts, 1867 to 1952. Acting under the recommendations of his responsible Ministers, in the Queen's name, he summons, prorogues and dissolves Parliament, assents to Bills, and exercises other executive functions.

The Governor General's annual salary and allowances provided by the Parliament of Canada are $\$ 48,666$ and $\$ 100,000$, respectively. In addition, other expenses of office are provided for, including the salary of the Governor General's secretary.

The present Governor General is styled His Excellency Major-General Georges P. Vanier, D.S.O., M.C., C.D.
2.-Governors General of Canada since Confederation, 1867

| Name | Date of Appointment | Date of Assumption of Office |

| The Right Honourable Vincent Massey, C.H. | Jan. 24, 1952 | Feb. 28, 1952 |
| Major-General Georges P. Vanier, D.S.O., M.C., C.D. | Aug. 1, 1959 | Sept. 15, 1959 |

The Cabinet.-The Cabinet is a committee of Ministers chosen by the Prime Minister generally from Members of Parliament. By convention, all members of the Cabinet must either have seats in Parliament or secure seats within a short time and, again by convention, all Ministers in charge of departments of government must be Members of the House of Commons. Ministers without Portfolio can be members of either House.

The Cabinet, under the leadership of the Prime Minister, directs the business of the Commons, initiates nearly all public Bills placed before Parliament, and has complete responsibility for the initiation of taxes and the recommendation of expenditures. Following established precedent or convention, it is always responsible to the Commons. When the Cabinet (the Government) suffers defeat on a Government Bill or a vote of censure or on a motion of want of confidence in the Commons, the existing Government or Cabinet must either resign or request a dissolution from the Governor General. If it resigns, the Governor General may call on the Leader of the Opposition in the Commons to form a new Government. Alternatively, if a Government that has been defeated in
the House is granted a dissolution and is defeated in the ensuing general election then, should no clear majority be indicated, the Government may decide (1) to remain in office and seek a vote of confidence in the House when it meets or (2) to resign immediately with the consequent result that the Governor General will ask the leader of the party with the highest number of members returned to form a new Government. These alternatives may also eventuate as a result of a general election subsequent to the normal dissolution of Parliament at or near the close of its statutory life.

The primary responsibility of the Governor General in either of the above circumstances is to provide the nation with a Cabinet or Ministry capable of conducting Her Majesty's Government with the support of the House of Commons.

Although appointed by the Governor General, Cabinet members are selected by the Prime Minister from among his party colleagues in such manner as to ensure, as far as possible, representation of the several geographical and political regions of the country and its principal ethnic, religious and social interests. Each Cabinet Minister generally assumes charge of one of the departments of government, although a Minister may hold more than one portfolio at the same time or he may hold one or more portfolios and one or more acting portfolios, or a Minister without Portfolio may hold one or more acting portfolios. In his acting capacity, the Minister exercises the same authority as if he were the Minister of the department. Sessional and other allowances received by Cabinet Ministers are given at p. 70.

## 3.-Prime Ministers since Confederation, 1867

| Ministry | Prime Minister | Length of Administration |
| :---: | :---: | :---: |
| 1 | Rt. Hon. Sir John Alexander Macdonald | July 1, 1867 - Nov. 5, 1873 |

${ }^{1}$ Any changes occurring between Jan. 31, 1962 and the date of going to press will be carried in an Appendix to this volume.

Parliamentary Secretaries.-As provided by the Parliamentary Act (SC 1959, c. 15), assented to June 4, 1959, 15 Parliamentary Secretaries were appointed (one on Aug. 20, 1959 and 14 on Nov. 18, 1959) from among the Members of the House of Commons to hold office for 12 months and to assist the respective Ministers in such manner as each Minister may direct. In so doing, the Government revived the system of parliamentary assistantships in practice during the war and postwar years subsequent to 1943 , whereby Cabinet Ministers might receive assistance in the performance of their parliamentary functions and promising Members of the House might secure a degree of apprenticeship for higher public office. A second Parliamentary Secretary to the Minister of Agriculture was appointed on Oct. 11, 1960, raising the number to 16 , and the appointments were extended for one year on Nov. 18, 1960. On Jan. 18, 1962, the following Parliamentary Secretaries were appointed for a 12 -month period:-

|  | Secretary | Minister |
| :---: | :---: | :---: |
| Richard A. Bell |  | Finance |
| Thomas M. Bell |  | Justice |
| L. E. Cardiff. |  | National Health and Welfare |
| Egan Chambers. |  | National Defence |
| John A. Charlton |  | Agriculture |
| Roland L. English. |  | Fisheries |
| Harry Jones. |  | Veterans Affairs |
| Warner J. Jorgenson |  | Agriculture |
| Marcel Lambert. |  | National Revenue |
| Q. Martini. |  | Transport |
| Edmund L. Morris |  | Trade and Commerce |
| John C. Pallett. |  | Prime Minister |
| T. Ricard |  | Prime Minister |
| Yvon-Roma Tabses. |  | Public Works |
| Richard D. Thrash |  | Labour |

The Privy Council.-The Queen's Privy Council for Canada is composed of around ninety members who are sworn of the Council by the Governor General on the advice of the Prime Minister and who retain membership for life. The Council consists chiefly of present and former Ministers of the Crown. It seldom meets as a body and its constitutional responsibilities as adviser to the Crown in respect to Canada are performed exclusively by a committee thereof consisting of the Ministers who constitute the Cabinet of the day and are also members of the Queen's Privy Council for Canada.

## 5.-Members of the Queen's Privy Council for Canada According to Seniority Therein' as at Jan. 31, 1962

## Subsection 2.-The Legislature

The federal legislative authority is vested in the Parliament of Canada consisting of the Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House subject to the provisions of Sect. 53 of the British North America Act, 1867, which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice most public Bills originate in the House of Commons, although there has been a marked increase recently in the introduction of public Bills in the Senate, at the instance of the Government, in order that Bills may be dealt with in the Senate while the Commons is engaged in other matters such as the debate on the Speech from the Throne. Private Bills usually originate in the Senate. The Senate may delay, amend or even refuse to pass Bills sent to it from the Commons, but differences are usually settled without serious conflict. (See Chap. XXVI for current legislation.)

Under Sect. 91 of the British North America Acts, 1867 to 1952, the legislative authority of the Parliament of Canada extends to the following matters: the amendment of the Constitution of Canada (subject to certain exceptions); the public debt and property; the regulation of trade and commerce; unemployment insurance; the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and naval service, and defence; the fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses and Sable Island; navigation and shipping;
quarantine and the establishment and maintenance of marine hospitals; sea coast and inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks and the issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by these Acts assigned exclusively to the legislatures of the provinces.

Under Sect. 95, the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures although federal legislation is paramount in the event of conflict. By the British North America Act, 1951 (Br. Stat. 1950-51, c. 32) it is declared that the Parliament of Canada might make laws in relation to old age pensions in Canada but no such law shall affect the operation of any provincial laws in relation to old age pensions.

The Senate.-From an original membership of 72 at Confederation, the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is traced in the 1940 Year Book, pp. 47-49, and is summarized by provinces in Table 7.

Senators are appointed for life by the Governor General by instrument under the Great Seal of Canada on the recommendation of the Prime Minister. The actual power of appointing Senators resides by constitutional usage in the Prime Minister whose advice the Governor General accepts in this regard. In each of the four main divisions of Canada, except Quebec, Senators represent the whole of the province for which they are appointed; in Quebec one Senator is appointed for each of the 24 electoral divisions of what was formerly Lower Canada. The deliberations of the Senate are presided over by a Speaker appointed by the Governor General in Council (in effect by the Government) and government business in the Senate is sponsored by the Government Leader in the Senate.

The Senate is not a competitor of the House of Commons in the field of legislation but, in the main, acts as a second chamber giving further scrutiny to legislation initiated in the House of Commons. Under the Constitution, Bills for appropriating any part of the public revenue or for imposing a tax or impost must originate in the Commons but in every other respect, since both Houses must concur in every piece of legislation, the Senate has an equal voice with the House of Commons.

[^21]The House of Commons.-The British North America Act, 1867 provided that in respect of representation in the House of Commons the Province of Quebec should have the fixed number of sixty-five members and that there should be assigned to each of the other provinces such a number of members as would bear the same proportion to the number of its population as the number sixty-five bears to the number of the population of Quebec. This Act also provided that on the completion of a census in 1871 and of each subsequent decennial census the representation of the several provinces should be readjusted from time to time provided the proportionate representation of the provinces as prescribed by the Act were not thereby disturbed.

In the session of 1946 the House of Commons adopted a resolution stating that the effect of the provisions of the British North America Act relating to representation had not been satisfactory in that proportionate representation of the provinces according to population had not been maintained and that a more equitable apportionment of members to the various provinces could be effected if readjustments were made on the basis of the population of all the provinces taken as a whole. The Act was amended accordingly in 1946 to provide a new rule to regulate representation in the House of Commons. Generally speaking, representation was fixed as follows:-

The membership assigned to each province shall be computed by dividing the total population of the provinces by two hundred and fifty-four and by dividing the population of each province by the quotient so obtained.
This rule, employed in the redistribution of representation made in 1947, was effective in the General Election of 1949.

After the completion of the 1951 Census it was apparent that as a result of a wartime shift of population a substantial reduction in the representation of the Province of Saskatchewan would ensue under the rules then regulating representation. Accordingly, in an effort to eliminate sharp reductions in provincial representation from one census to another, the British North America Act was again amended to provide representation on the following basis:-
"Sect. 51.-(1) Subject as hereinafter provided, the number of members of the House of Commons shall be two hundred and sixty-three and the representation of the provinces therein shall forthwith upon the coming into force of this section and thereafter on the completion of each decennial census be readjusted by such authority, in such manner, and from such time as the Parliament of Canada from time to time provides, subject and according to the following rules:-
"1. There shall be assigned to each of the provinces a number of members computed by dividing the total population of the provinces by two hundred and sixty-one and by dividing the population of each province by the quotient so obtained, disregarding, except as hereinafter in this section provided, the remainder, if any, after the said process of division.
" 2 . If the total number of members assigned to all the provinces pursuant to rule one is less than two hundred and sixty-one, additional members shall be assigned to the provinces (one to a province) having remainders in the computation under rule one com mencing with the province having the largest remainder and continuing with the other provinces in the order of the magnitude of their respective remainders until the total number of members assigned is two hundred and sixty-one.
" 3 . Notwithstanding anything in this section, if upon completion of a computation under rules one and two, the number of members to be assigned to a province is less than the number of senators representing the said province, rules one and two shall cease to apply in respect of the said province, and there shall be assigned to the said province a number of members equal to the said number of senators.
"4. In the event that rules one and two cease to apply in respect of a province then, for the purpose of computing the number of members to be assigned to the provinces in respect of which rules one and two continue to apply, the total population of the provinces shall be reduced by the number of the population of the province in respect of which rules one and two have ceased to apply and the number two hundred and sixty-one shall be reduced by the number of members assigned to such province pursuant to rule three.
" 5 . On any such readjustment the number of members for any province shall not be reduced by more than fifteen per cent below the representation to which such province was entitled under rules one to four of this subsection at the last preceding readjustment of the representation of that province, and there shall be no reduction in the representation of any province as a result of which that province would have a smaller number of members
than any other province that according to the results of the then last decennial census did not have a larger population; but for the purposes of any subsequent readjustment of representation under this section any increase in the number of members of the House of Commons resulting from the application of this rule shall not be included in the divisor mentioned in rules one to four of this subsection.
" 6 . Such readjustment shall not take effect until the termination of the then existing Parliament.
"(2) The Yukon Territory as constituted by chapter forty-one of the Statutes of Canada, 1901, shall be entitled to one member, and such other part of Canada not comprised within a province as may from time to time be defined by the Parliament of Canada shall be entitled to one member." (RSC 1952, c. 304.)
The principal effect of these latest rules is that the representation of any province shall not be reduced by more than 15 p.c. at any one readjustment, subject however to the qualification that the rule shall not work out in such manner that the representation of a province with a smaller population shall be greater than any province with a larger population.

Subsequently, Parliament enacted a measure, "An Act to readjust the Representation in the House of Commons, 1952", effective in the General Election of 1953, which provided that representation in the House of Commons shall be on the following basis:-
"Sect. 2.-Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members." (RSC 1952, c. 334.)

The number of representatives of each province elected at each of the 24 General Elections since Confederation is given in Table 9.
9.-Representation in the House of Commons, as at Federal General Elections 1867-1958

Under their parliamentary system of representation, based on a "constitution similar in principle to that of the United Kingdom", the people of Canada elect representatives having various political party affiliations as shown in Table 10. In a general election, the Canadian electorate not only determines what political party leader shall be called on to form the Government of the day, but it also decides which of the parties is to become the Official Opposition. Her Majesty's Loyal Opposition occupies an essential place in constitutions based on the British parliamentary system, in that its function is to oppose or criticize in debate the Government in power-an essential to good government at all times. The Official Opposition is founded, like such institutions as the Cabinet and the Prime Ministership, on unwritten custom that has become firmly established. Although the position of Leader of the Opposition is not recognized in the British North America

Act, it received statutory acknowledgment in the Canadian Parliament in 1905 when the Senate and House of Commons Act (SC 1905, c. 43, Sect. 2) provided an additional sessional allowance to "the member occupying the recognized position of Leader of the Opposition in the House of Commons".
10.-Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons as Elected at the Twenty-Fourth General Election, Mar. 31, 1958, and Revised to Jan. 31, 1962.

Nore.-The vote is summarized by province in Table 12, p. 71. The leaders of the political parties are indicated by asterisks (*). This information, except the population of constituencies, has been supplied by the Chief Electoral Officer. Party affiliations are unofficial. ${ }^{1}$ Any by-elections held between Jan. 31, 1962 and the date of going to press will be carried in an Appendix to this volume.
${ }^{2}$ New Democratic Party.

Indemnities and Allowances.-Members of the Senate receive a sessional allowance at the rate of $\$ 8,000$ per annum. In addition they receive at the end of each calendar year an annual expense allowance of $\$ 2,000$ which is subject to income tax. The member of the Senate occupying the recognized position of Leader of the Government in the Senate is paid, in addition to his sessional allowance, an annual allowance of $\$ 10,000$, and to the member of the Senate occupying the recognized position of Leader of the Opposition in the Senate there is paid, in addition to his sessional allowance, an annual allowance of $\$ 6,000$; but if the Leader of the Government is in receipt of a salary under the Salaries Act, the annual allowance is not paid. Members of the House of Commons are paid a sessional allowance at the rate of $\$ 8,000$ per annum. In addition they receive $\$ 2,000$ as an expense allowance paid at the end of each calendar year. This allowance, except that for Ministers of the Crown and for the Leader of the Opposition in the House of Commons, is not subject to income tax. The remuneration of the Prime Minister is $\$ 25,000$ a year and of a Cabinet Minister and the Leader of the Opposition $\$ 15,000$ a year in addition to the sessional allowance and expense allowance each receives as a Member of Parliament. A Cabinet Minister is also entitled to a motor car allowance of $\$ 2,000$. The remuneration of a Minister without Portfolio is $\$ 7,500$ a year in addition to the sessional allowance and expense allowance, the latter taxable. The Speaker of the Senate and the Speaker of the House of Commons each receives, besides the sessional allowance and expense allowance, a salary of $\$ 9,000$ and a motor car allowance of $\$ 1,000$ and each is entitled to $\$ 3,000$ in lieu of a residence. The Deputy Speaker of the House of Commons receives a salary of $\$ 6,000$ and an allowance of $\$ 1,500$ in lieu of a residence. The Deputy Chairman of Committees receives an annual allowance of $\$ 2,000$. Parliamentary Secretaries to the Ministers of the Crown receive $\$ 8,000$ sessional allowance as Members of Parliament, $\$ 4,000$ a year as Parliamentary Secretaries and the $\$ 2,000$ expense allowance paid to all Members of Parliament.

The Federal Franchise.-The present federal franchise laws are contained in the Canada Elections Act (SC 1960, c. 39). The franchise is conferred upon all Canadian citizens or British subjects, men and women, who have attained the age of 21 years, are ordinarily resident in the electoral district on the date of the issue of the writ ordering an election and, in the case of British subjects other than Canadian citizens, have been ordinarily resident in Canada for twelve months prior to polling day at such election. Persons denied the right to vote are:-
(1) the Chief Electoral Officer and the Assistant Chief Electoral Officer;
(2) judges appointed by the Governor General in Council;
(3) the returning officer for each electoral district;
(4) persons undergoing punishment as inmates of any penal institution for the commission of any offence;
(5) persons restrained of their liberty or deprived of the management of their property by reason of mental disease; and
(6) persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices.
Prior to July 1, 1960, the list of persons denied the right to vote included "Indians ordinarily resident on an Indian reserve who were not members of His Majesty's Forces in World Wars I or II or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property". Legislation proclaimed on the above-mentioned date confers upon all Indians who have attained the age of 21 years the right to vote at federal elections, without taking from them any of the rights and privileges to which they are entitled under the Indian Act.

The Canadian Forces Voting Rules set out in Schedule II to the Canada Elections Act prescribe voting procedure for members of the Armed Forces of Canada and also for veterans in receipt of treatment or domiciliary care in certain institutions.

## 12.-Voters on the Lists and Votes Polled at the Federal General Elections of 1949, 1953, 1957 and 1958

Note.-Corresponding statistics for the General Elections of 1911, 1917, 1921 and 1925 are given in the 1926 Year Book, p. 82; those for 1926 in the 1945 edition, p. 66; those for 1930 and 1935 in the 1948-49 edition, p. 94; those for 1940 in the 1956 edition, p. 81; and those for 1945 in the 1957-58 edition, p. 57.

District of Mackenzie River.

## Subsection 3.-The Judiciary

## The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act to provide from time to time for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision, Parliament has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

Supreme Court of Canada.-This Court, first established in 1875 and now governed by the Supreme Court Act (RSC 1952, c. 259), consists of a chief justice, who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or the House of Commons on private Bills referred to the Court under any rules or orders of the Senate or of the House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of $\$ 10,000$. An appeal may be brought from any other final judgment with leave of the highest court of final resort in the province; if such court refuses to grant leave the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgment whether final or not. Appeals in respect of indictable offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts. The judgment of the Supreme Court of Canada in all cases is final and conclusive.

## 13.-Chief Justice and Judges of the Supreme Court of Canada, as at Jan. 31, 1962

(In order of seniority)

| Name | Date of Appointment |
| :---: | :---: |
| Hon. Chief Justice Parrick Kerwin. | July 1, 19541 |
| Hon. Justice Robert Taschereau... | Feb. 9, 1940 |
| Hon. Justice Charles H. Locke.. | June 3, 1947 |
| Hon. Justice John R. Cartwright | Dec. 23, 1949 |
| Hon. Justice J. H. Gerald Fauteux. |  |
| Hon. Justice Douglas Charles Abbott | July 1, 1954 |
| Hon. Justice Ronald Martland....... | Jan. 15, 1958 |
| Hon. Justice Wilfred Judson... | Feb. 5, 1958 |
| Hon. Justice Roland A. Ritceie. | May 5, 1959 |

${ }^{1}$ First appointed as a Judge of the Supreme Court, July 20, 1935.
Exchequer Court of Canada.-The Exchequer Court was first established in 1875 as part of the Supreme Court of Canada but is now a separate court governed by the Exchequer Court Act (RSC 1952, c. 98). The Court consists of a president and four puisne judges who are appointed by the Governor in Council. The president and the puisne judges hold office during good behaviour but may be removed by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and also at any other place in Canada where sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (RSC 1952, c. 210).

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds $\$ 500$; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed $\$ 500$ or where the judgment is not final.

The Exchequer Court also exercises admiralty jurisdiction in Canada. This was first conferred in 1891 by the Admiralty Act (SC 1891, c. 29) and is now governed by the Admiralty Act (RSC 1952, c. 1). Under this statute the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court exercise admiralty jurisdiction throughout the whole of Canada. In addition, Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or direct to the Supreme Court of Canada.

Miscellaneous Courts.-Railway Act.-The Railway Act, 1903 (RSC 1952, c. 234) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (RSC 1952, c. 271) the name was changed to the Board of Transport Commissioners for Canada. This Court exercises jurisdiction with respect to railway matters. The Governor in Council is given jurisdiction to vary any order of the Board and an appeal lies from the Board to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

Bankruptcy Act.-By virtue of Sect. 91(21) of the British North America Act, 1867, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (RSC 1952, c. 14) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

Income Tax Act and Estate Tax Act.-By the Income Tax Act (RSC 1952, c. 148) the Tax Appeal Board is established consisting of a chairman and not fewer than two or more than four members with jurisdiction over appeals against income tax assessments. A further appeal may be taken to the Exchequer Court. Under the Estate Tax Act (SC 1958, c. 29) the Tax Appeal Board also has jurisdiction to hear appeals from assessments under that Act.

## Provincial and Territorial Judiciaries*

Certain provisions of the British North America Act govern to some extent the provincial judiciaries. Under Sect. 92 (14) the legislature of each province exclusively may make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General shall appoint the judges of the superior, district and county courts in each province, except those of the courts of probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (RSC 1952, c. 159 and amendments). Under Sect. 99, the judges of the superior courts hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. The tenure of office of district and county court judges is fixed by the Judges Act as being during good behaviour and their residence within the area for which the court is established.

All provinces have minor courts with limited civil and criminal jurisdiction, the judges of which are appointed by provincial authority as, for example, justices of the peace, magistrates and juvenile court judges. Except in Quebec, there are county or district courts of each province with limited jurisdiction varying from $\$ 500$ to $\$ 2,500$ in amount. Each province has a superior court with virtually unlimited jurisdiction variously known as Court of Queen's Bench, Supreme Court, Superior Court, etc. There is also a Court of Appeal in each province.

The Yukon Act and the Northwest Territories Act each provide for a superior court of record in and for the Territory, called the Territorial Court, and consisting of one or more judges appointed by the Governor in Council. The judges of the Territorial Court of the Yukon Territory are ex officio judges of the Territorial Court of the Northwest Territories and vice versa. In 1960 provision was made for a Court of Appeal for the Yukon Territory, comprised of the Chief Justice and Justices of Appeal of British Columbia and judges of the Territorial Court of Yukon and of the Northwest Territories. Police magistrates and justices of the peace have jurisdiction in minor civil and criminal cases.

## Section 2.-Provincial and Territorial Governments $\dagger$

In each of the provinces, the Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council which is responsible to the Legislature and resigns office under circumstances similar to those described on pp . 55-56 concerning the Federal Government.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly, except for the Province of Quebec where there is a Legislative Council as well as a Legislative Assembly.

The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

[^27]The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (Br. Stat. 1867, c. 3 and amendments). Under Sect. 92 of the Act the Legislature of each province exclusively may make laws in relation to the following matters: amendment of the constitution of the province except as regards the LieutenantGovernor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, though wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment for enforcing any law of the province relating to any of the aforesaid subjects; generally all matters of a merely local or private nature in the province.

Further, in and for each province the Legislature exclusively may, under Sect. 93, make laws in relation to education subject to certain restrictions relating to the establishment of schools by religious minorities. These powers with similar restrictions were conferred on the more recently admitted provinces on their inclusion in the federation.

The Provincial Legislatures may also make laws under Sect. 95 in relation to agriculture and immigration, subject to any laws of the Parliament of Canada in relation to these subjects.

Provincial Franchise.--Details regarding qualifications and disqualifications of the franchise are contained in the Elections Act of each province. In general, every person, male or female, at the age of 21 years who is a Canadian citizen or other British subject, who complies with certain residence requirements in the province and the electoral district of polling and who falls under no statutory disqualifications, is entitled to vote. These qualifications apply with modifications to voters in most provinces. The principal exceptions give voting privileges to persons in Saskatchewan at the age of 18 and in Alberta and British Columbia at 19 years.

## Subsection 1.-Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Legislative Assembly has 36 members elected for a term of five years. The Legislature elected Aug. 20, 1959 is the 32nd in the history of Newfoundland and the 4th since Confederation.

Since the date of Confederation, Mar. 31, 1949, the province has had three LieutenantGovernors: the Hon. Sir Albert Joseph Walsh commissioned Apr. 1, 1949; the Hon. Lt.-Col. Sir Leonard Outerbridge commissioned Sept. 5, 1949; and the Hon. Campbell Macpherson commissioned Dec. 16, 1957. The first Ministry, formed on July 13, 1949 under the leadership of the Hon. Joseph R. Smallwood, was still in office on Jan. 31, 1962.

The Premier receives a salary of $\$ 10,000$ and the other Cabinet Ministers $\$ 9,000$ per annum, plus a sessional indemnity of $\$ 3,333.33$. Each member of the House of Assembly receives a sessional indemnity of $\$ 3,333.33$ plus a travelling and expense allowance of $\$ 1,666.66$. An additional allowance of $\$ 3,000$ is made to the Leader of the Opposition.

## 14.-First Ministry of Newfoundland, as at Jan. 31, 1962

(Party standing at latest General Election, Aug. 20, 1959: 31 Liberal, 3 Progressive Conservative and 2 United Newfoundland.)

| Office | Name | Date of First Appointment | Date of Present Appointment |

| Premier and Minister of Economic Development. | Hon. J. R. Smallwood. |  |  |
| Attorney General............................. | Hon. L. R. Curtis. . | Apr. 1, 1949 | Apr. 1, 1949 |
| Minister of Mines and Resources | Hon. W. J. Krovar | July 29, 1949 | May 1, 1957 |
| Minister of Labour | Hon. C. H. Ballam | Apr. 4, 1950 | Apr. 4, 1950 |
| Minister of Finance | Hon. E. S. Spencer | July 29, 1949 | May 1, 1957 |
| Minister of Public Wo | Hon. J. R. Chalker | Apr. 4, 1950 | May 1, 1957 |
| Minister of Highways. | Hon. F. W. Rowe. | May 21, 1952 | May 11, 1959 |
| Minister without Portfolio | Hon. P. J. Lewis | Dec. 15, 1951 | Dec. 15, 1951 |
| Minister of Provincial Affairs and Solicitor General. | Hon. Myles P. Murray | Dec. 15, 1951 | $\left\{\begin{array}{lll} \text { Dec. } & 15, & 1951 \\ \text { Apr. } & 10, & 1955 \end{array}\right.$ |
| Minister of Fisheries | Hon. J. T. Cheeseman | May 1, 1957 | Apr. 10, May 1, 1957 |
| Minister of Health.. | Hon. J. M. McGrath. | July 5, 1956 | Aug. 7, 1956 |
| Minister of Municipal Affairs and Supply | Hon. B. J. Abbott. | May 1, 1957 | May 1, 1957 |
| Minister of Education. | Hon. G. A. Frecker | Aug. 26, 1959 | Aug. 26, 1959 |
| Minister of Public Welfare | Hon. C. M. Lane. | June 12, 1961 | June 12, 1961 |

## Subsection 2.-Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Hon. F. W. Hyndman, LieutenantGovernor at Jan. 31, 1962, was commissioned to office Mar. 31, 1958. Lieutenant-Governors from Confederation (1873) to 1959 are cited in the 1960 Year Book, p. 105.

The General Assembly elected Sept. 1, 1959 is the 49th in the history of Prince Edward Island Legislatures and the 24th since Confederation. It has 30 members from 15 electoral districts who serve for a statutory term of five years. One-half of the members of the Legislative Assembly are elected on a property vote. Each district elects one Councillor (elected on a property vote) and one Assembly member (elected on a general franchise vote). Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 105.

The annual salary of the Premier is $\$ 6,000$ and that of a Cabinet Minister $\$ 4,000$. Each member of the Assembly is paid $\$ 1,450$ for each session attended by him and an additional $\$ 500$ tax free as indemnity for expenses incurred. The Speaker is paid an additional $\$ 400$ and a further additional $\$ 200$ tax free as an indemnity. The Leader of the Opposition is paid an additional $\$ 800$ and a further additional $\$ 200$ tax free for expenses incurred by him in performance of official duties.

## 15.-Legislatures of Prince Edward Island, 1935-60, as at Jan. 31, 1962

Notz.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 75, and for 1924-35 in the 1938 edition, p. 110.

[^28]
# 16.-Twenty-Fourth Ministry of Prince Edward Island, as at Jan. 31, 1962 

(Party standing at latest General Election, Sept. 1, 1959: 22 Progressive Conservative and 8 Liberal.)

| :--- | :--- | :--- | :--- | :--- |

## Subsection 3.-Nova Scotia

The Government of Nova Scotia consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Maj.-Gen. the Hon. E. C. Plow, Lieutenant-Governor at Jan. 31, 1962, was commissioned to office Sept. 1, 1958. Lieutenant-Governors since Confederation (1867) are cited in the 1960 Year Book, p. 106.

The Legislature has 43 members elected for a maximum term of five years. The Legislature elected June 7, 1960 is the 47th in Nova Scotia's history and the 24th since Confederation. Premiers since Confederation are listed in the 1960 Year Book, p. 107.

The Premier of the province receives a salary of $\$ 12,000$ per annum and each Cabinet Minister a salary of $\$ 10,000$ per annum. Each member of the House of Assembly receives a sessional indemnity of $\$ 3,200$ and an allowance of $\$ 1,600$ for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of $\$ 6,000$ in addition to his sessional indemnity.
17.-Legislatures of Nova Scotia, 1933-60, as at Jan. 31, 1962

Note.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 76, and for 1924-33 in the 1938 edition, p. 111.

## Subsection 4.-New Brunswick

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly. The Hon. J. Leonard O'Brien, Lieutenant-Governor at Jan. 31, 1962, was commissioned to office June 6, 1958. Lieutenant-Governors since Confederation (1867) are cited in the 1960 Year Book, p. 108.

The Legislature elected June 27, 1960 is the 44th in New Brunswick's history and the 17th since Confederation. It has 52 members who are elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 108.

The Premier receives $\$ 5,000$ per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is $\$ 7,500$ and the amount paid as indemnity to each member of the House of Assembly is $\$ 2,400$ plus an additional $\$ 1,200$ allowance for expenses. The Leader of the Opposition receives an additional $\$ 3,000$ and the Speaker receives an allowance of $\$ 1,000$ in addition to the regular indemnity.

## 19.-Legislatures of New Brunswick, 1935-60, as at Jan. 31, 1962

Nore.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 77, and for 1924-35 in the 1938 edition, p. 112.

## Subsection 5.-Quebec

The Government of Quebec consists of a Lieutenant-Governor, an Executive Council and a bicameral legislature-the Legislative Council and the Legislative Assembly. The Hon. Paul Comtois, Lieutenant-Governor at Jan. 31, 1962, was commissioned to office Oct. 6, 1961. Lieutenant-Governors since Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 109.

The Legislative Council has 24 members nominated for life by the LieutenantGovernor in Council. The Legislative Assembly has 95 elected members and, like the Legislative Council, has the power to bring forward Bills relating to civil and administrative matters and to the amendment or repeal of existing laws. A Bill to be approved by the Lieutenant-Governor must have received the assent of both Houses. Only the Legislative Assembly can bring forward a Bill requiring the expenditure of public money. The maximum life of a Legislature is five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 110.

## 21.-Legislatures of Quebec, 1935-60, as at Jan. 31, 1962

Note.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 78, and for 1924-35 in the 1938 edition, p. 113.

## Subsection 6.-Ontario

The Government of Ontario consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. The Hon. Justice John Keiller Mackay, Lieutenant-Governor at Jan. 31, 1962, was commissioned to office Dec. 30, 1957. Lieutenant-Governors since Confederation (1867) are cited in the 1960 Year Book, p. 112.

The House of Assembly, the single-chamber Legislature of the province, is composed of 98 members elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 112.

Besides the regular departments of government, the Niagara Parks Commission, the Ontario Municipal Board, The Hydro-Electric Power Commission of Ontario, the Ontario-St. Lawrence Development Commission, the Ontario Northland Transportation Commission, the Liquor Control Board, the Liquor Licence Board, the Hospital Services Commission and The Water Resources Commission have been created.

Under the provisions of the Legislative Assembly Act (RSO 1960, c. 208) each member of the Assembly is paid an annual indemnity of $\$ 5,000$ and an allowance of $\$ 2,000$ for expenses. In addition, the Speaker receives a special indemnity at the annual rate of $\$ 3,000$ and an expense allowance of $\$ 2,000$; the Chairman of the Committee of the Whole a special indemnity at the annual rate of $\$ 2,000$; and the Leader of the Opposition a salary of $\$ 12,000$ per annum. Each member of the Cabinet having charge of a department receives the ordinary indemnity as a member of the Legislature in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Premier is $\$ 16,000$ and for a Cabinet Minister having charge of a department $\$ 12,000$. By the 1956 amendment, every Minister of the Crown in charge of a department, the Minister of the Crown who is a member of The Hydro-Electric Power Commission of Ontario, and the Leader of the Opposition receives a representation allowance of $\$ 2,000$ per annum. Each Minister without Portfolio, other than the Minister who is a member of The Hydro-Electric Power Commission, receives $\$ 2,500$ salary and $\$ 1,000$ representation allowance per annum, by amendments in 1959 to the Executive Council Act and the Legislative Assembly Act, respectively.

## 24.-Legislatures of Ontario, 1931-60, as at Jan. 31, 1962

Nore.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 79, and for 1924-34 in the 1938 edition, p. 114.

| Minister of Municipal Affairs. | Hon. E. I. Wood. | Nov. 21, 1961 | Nov. 21, 1961 |

## Subsection 9.-Alberta

The Government of Alberta is composed of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. There are 65 members in the Legislative Assembly, elected for a maximum period of five years. The Hon. J. Percy Page, Lieutenant-Governor at Jan. 31, 1962, was commissioned to office Dec. 19, 1959. Lieutenant-Governors since Confederation (1905) are listed in the 1960 Year Book, p. 116. Premiers since Confederation are listed in the same edition, p. 117.

Each member of the Legislative Assembly (except the Speaker and the Deputy Speaker) receives a sessional indemnity of $\$ 3,000$ plus $\$ 1,500$ expense allowance plus $\$ 15$ for each day during the session when he is necessarily absent from his ordinary place of residence, both tax free. The Speaker's sessional indemnity is $\$ 4,750$ plus $\$ 2,250$ expense allowance and the Deputy Speaker's sessional indemnity is $\$ 4,000$ plus $\$ 2,000$ expense allowance. Each also receives $\$ 15$ for each day during the session when he is necessarily absent from his ordinary place of residence. The Premier, in addition to the sessional indemnity, receives $\$ 14,000$, other Ministers receive $\$ 11,000$ and each member of the Opposition receives $\$ 625$; there is no Opposition Leader in the present Legislature.
30.-Legislatures of Alberta, 1935-60, as at Jan. 31, 1962

Note.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 82, and for 1924-34 in the 1938 edition, p. 117.

| Date of Election | Legislature | Number of Sessions | Date of First Opening | Date of Dissolution |

## Subsection 10.-British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Maj.-Gen. the Hon. George Randolph Pearkes, Lieutenant-Governor at Jan. 31, 1962, was commissioned to office Oct. 13, 1960. LieutenantGovernors from Confederation (1871) to 1959 are cited in the 1960 Year Book, p. 118.

The Legislative Assembly, elected for a statutory term of five years, has 52 members. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 118.

Each member of the Executive Council and the Legislative Assembly receives a sessional allowance of $\$ 3,400$ and $\$ 1,000$ for expenses. There is also paid to each member a living allowance of $\$ 15$ for each day's attendance at the session and for each Saturday, Sunday or holiday that intervenes between two sittings of the House; the allowance of $\$ 15$ in any session is not paid in respect of more than 40 days. Each member also receives an allowance of 25 cents per mile of the distance between his place of residence and the city of Victoria, reckoning such distance, going and coming, according to the nearest mail route. In addition, the Premier receives a salary of $\$ 15,000$ and each member of the Executive Council $\$ 12,500$. The Leader of the Opposition has a special allowance of $\$ 3,500$ for expenses, the Speaker receives a special allowance of $\$ 3,500$ and the Deputy Speaker an allowance of $\$ 1,000$.

## 32.-Legislatures of British Columbia, 1937-61, as at Jan. 31, 1962

Nore.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 83, and for 1924-37 in the 1938 edition, p. 118.

| Member of Executive Council without Portfolio. $\qquad$ | Hon. Buda Hosmer Brown..... | Nov. 28, 1960 | Nov. 28, 1960 |

## Subsection 11.-Yukon and Northwest Territories

Yukon Territory.-The Yukon was created a separate Territory in June 1898. Provision is made for a local government administered by a Commissioner appointed by the Governor in Council. There is an elected Council of seven members (1961). The Commissioner administers the Government under instructions from the Governor in Council or the Minister of Northern Affairs and National Resources. The Commissioner in Council has power to make ordinances dealing with the imposition of local taxes, sale of liquor, preservation of game, establishment of territorial offices, maintenance of municipal institutions, issue of licences, incorporation of companies, solemnization of marriage, property and civil rights, and generally all matters of a local nature in the Territory. The seat of local government is Whitehorse, Yukon Territory.

# GOVERNMENT OF THE YUKON TERRITORY <br> (as at Jan. 31, 1962) 

(At Jan. 31, 1962 the Government consisted of an appointed Commissioner and a Council of seven members elected in 1961 for a three-year term. The Council elects its own Speaker.)

The Northern Administration Branch, Department of Northern Affairs and National Resources, has the responsibility for the general administration of the natural resources of the Yukon Territory, except game. The Department maintains lands and mining offices at three points in the Territory. Other departments and agencies of the Federal

Government, including the Department of Justice, the Royal Canadian Mounted Police, the Departments of National Defence, Citizenship and Immigration, Mines and Technical Surveys, National Revenue, Transport, Post Office, Agriculture, Fisheries, Public Works and the Unemployment Insurance Commission also maintain offices in the Yukon Territory.*

Northwest Territories.-As reconstituted on Sept. 1, 1905, these comprise: (1) all that part of Canada north of the 60th parallel of north latitude, except the portions thereof within the Yukon Territory and the Provinces of Quebec and Newfoundland; and (2) the islands in Hudson Bay, James Bay and Ungava Bay, except those islands within the Provinces of Manitoba, Ontario and Quebec.

The Northwest Territories Act (RSC 1952, c. 331) provides for the appointment of a Commissioner to administer the government of the Territories under instructions given from time to time by the Governor in Council or the Minister of Northern Affairs and National Resources. As a matter of practice, the appointment is held by the Deputy Minister of Northern Affairs and National Resources. The Northwest Territories Act, as amended, also provides for a Council of nine members, four of whom are elected in the Mackenzie District and five of whom are appointed by the Governor in Council. The Commissioner in Council has legislative powers respecting such matters as direct taxation, establishment and tenure of Territorial offices, municipal institutions, controverted elections, licences, incorporation of companies, property and civil rights, administration of justice, game, education, hospitals and generally all matters of a local or private nature. The Council meets once each year in the Territories and at least once each year in Ottawa, which is the seat of government. The resources, except game, remain under the control of the Federal Government. The administration of legislation passed by the Commissioner in Council and the management of resources under federal legislation are conducted by the Northern Administration Branch of the Department of Northern Affairs and National Resources. Administrative offices are located at a number of centres in the Territories including Fort Smith, Yellowknife, Hay River, Inuvik and Frobisher Bay.

## COUNCIL OF THE NORTHWEST TERRITORIES <br> (as at Jan. 31, 1962)

| Commissioner | R. G. Robertson |

| Officers of the CouncilSecretary Legal Adviser | G. A. MacKinnon <br> E. R. Olson |

## Section 3.-Municipal Government $\dagger$

The British North America Act of 1867 placed municipal government in Canada under the control of the provincial legislatures. The powers and responsibilities of municipalities are those delegated to them by statutes passed by their respective provincial legislatures. Some of these statutes apply to all municipalities within a province, some to a certain type or group and many to one municipality only. The types of municipal organization in existence, and the nature of the municipal services provided, vary greatly

[^36]from region to region and are adjusted from time to time to meet changing needs and conditions. In very general terms, municipalities have the power to raise revenue locally and to borrow, and have the responsibility of providing local government services.

In addition to the well-known types of organized municipalities-cities, towns, villages, counties, etc.-there are various other forms of local government organization. Certain municipal government bodies encompass a number of municipalities or parts of municipalities. For example, special district authorities (greater water and sewerage districts, drainage and irrigation districts and health units) may provide services to a number of municipalities. Similarly, metropolitan government authorities provide certain services to a number of area municipalities. In some provinces, the more sparsely settled areas do not have organized municipalities. Instead, they are divided into local improvement districts, local government districts or special areas in which the local government services are administered by officials appointed by the provincial Departments of Municipal Affairs.

The major local revenue source available to municipalities is the taxation of real property. It is supplemented in varying degrees by taxation of personal property, business, persons (poll taxes) and tenants. In two provinces municipalities may levy an amusement tax, in four they may impose sales taxes on specific commodities, and in Quebec most cities have been granted the right to levy a general sales tax. Miscellaneous general revenue is derived from licences, permits, rents, concessions, franchises and fines. Most urban municipalities of any size operate utilities for the provision of water and, in many instances, electricity, gas, transportation, telephone and other services. These sometimes provide surplus funds that may become available to help pay for other municipal services. On the other hand, expenditures of municipalities often include provision for the deficits of their utilities and enterprises.

In differing degrees and with varying provincial assistance, municipalities are responsible for the following services: protection to persons and property through police and fire forces, courts and local gaols, and inspection services; roads and streets; sanitation; certain health and welfare services; and some recreation and other community services. In most provinces, municipalities are responsible for levying and collecting local education taxes on property on behalf of the local schools, and often for borrowing capital funds for school construction. Local administrative responsibility for education lies with boards of trustees separate from the councils that govern municipalities (except Alberta; see p. 89).

All provinces give some form of financial assistance to their municipalities. This may be in the form of monetary grants, such as unconditional subsidies which may be spent as the municipalities see fit, or grants in aid of specific services which are the municipal responsibility. The provinces may also make loans to municipalities for capital purposes or guarantee the bonds issued by the municipalities. Other forms of indirect assistance are the resumption by the provincial governments of responsibilities formerly delegated to the municipalities and the extension of municipal taxing privileges into what were formerly considered to be provincial revenue fields. The provinces also provide various technical and consultative services to their municipalities.

The following paragraphs describe municipal organization in each province and the Territories as at Jan. 1, 1961. In Table 34 (which gives the number of each type of municipality in each province) all fully incorporated cities, towns and villages are regarded as 'urban' municipalities.

Newfoundland.-The Province of Newfoundland has two cities-St. John's and Corner Brook. A number of the province's many settlements have been organized into 33 towns, four rural districts, three local improvement districts and 43 local government communities. The towns, rural districts and local improvement districts operate under the Local Government Act; towns and rural districts have elected councils and local improvement districts have appointed trustees. Local government communities established under the Community Councils Act in the smaller settlements have limited powers
and functions. There are no rural municipalities in the usual sense. Only about one-fifth of 1 p.c. of the total area is municipally organized. Municipalities are supervised by the Department of Municipal Affairs and Supply.

Prince Edward Island.-In this island province, one city and seven towns have been incorporated under special Acts and 16 villages have been established under the Village Services Act. There is no municipal organization for the remainder of the province although it is divided into school sections which have elected school boards.

Nova Scotia.-Municipal organization in Nova Scotia covers the whole of the province. The three cities operate under special charters and special legislation. Thirtynine towns operate under the Town Incorporation Act but there are no municipalities incorporated as villages. Cities and towns are independent of counties. The rural area is divided into 18 counties which, in themselves, do not represent units of local government. However, 12 of these counties each comprise one municipality and the other six each comprise two municipalities, making a total of 24 rural municipalities. Supervision of municipalities is exercised through the Department of Municipal Affairs.

New Brunswick.-This province is divided into 15 counties which are incorporated municipalities and have direct powers of local self-government as rural municipalities, although certain of their powers often apply in both rural and urban municipalities. The six cities have special charters and the 20 towns operate under the Towns Incorporation Act. There is also one village. There are 62 local improvement districts and 12 commissions within the counties but outside the cities, towns and villages; these have been incorporated for the provision of limited municipal services. The Department of Municipal Affairs exercises supervision.

Quebec.-Municipal divisions in Quebec embrace the more thickly settled areas comprising about one-third of the province and the remainder is governed by the province as 'territories'. The organized area is divided into 74 county municipalities which are divided again into local municipalities and designated as village, township or parish municipalities or simply as municipalities. The counties as such have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. Parts of some counties are not yet organized into incorporated units of local government, being in outlying areas and having little or no population. There are 337 villages and 1,116 townships and parishes. A small number of these are independent of the counties in which they are located. The Municipal Code governs local municipalities and the 55 cities and 168 towns have special Acts. The supervision and assistance of municipalities is through the Department of Municipal Affairs and the Quebec Municipal Commission. Municipal statistics are gathered by the Quebec Bureau of Statistics.

The Montreal Metropolitan Corporation was created in 1959 and was granted all the powers and functions of the former Montreal Metropolitan Commission (created in 1921) and certain additional ones. The Corporation is administered by a council of representatives from the City of Montreal and 14 area municipalities. It exercises certain financial authority over these area municipalities, including approval of borrowings, and if any area municipality is unable to meet its obligations the Corporation may levy assessments on the other area municipalities until such time as the aided municipality can fulfil its own obligations. The Corporation may, with a municipality's consent, borrow in its own name on the municipality's behalf but all area municipalities and the City of Montreal are jointly and severally liable for such loans. The Corporation is authorized to undertake and finance the planning of metropolitan roads and in due course it expects to take on more of the functions of an over-all metropolitan administration.

The County of Laval was replaced in March 1959 by the Interurban Corporation of Jesus Island in order to facilitate solution of inter-municipal problems on the island.

Ontario.-Slightly more than one-tenth of the area of Ontario is municipally organized and the remainder is governed entirely by the provincial government. The older settled section of the province is divided into 43 counties, five of which are united with others for administrative purposes. Each county, although it is an incorporated municipality, is comprised of the towns, villages and townships situated within its borders and these provide its revenue. There are 30 cities, 157 towns, 156 villages, 574 townships and 20 improvement districts in the province. Some of each are located in the northern districts which are not organized into counties. Supervisory control of municipalities is exercised by the Department of Municipal Affairs and the Ontario Municipal Board under the Municipal Act and other Acts governing aspects of municipal government.

The Municipality of Metropolitan Toronto encompasses one city, four towns, three villages and five townships. It has been in existence since Jan. 1, 1954. The council is a federation of the 13 area municipalities and the councillors represent those municipalities. The chairman of the council is elected by the councillors and need not be a councillor. The council has jurisdiction over assessments, water works, sewerage works, metropolitan road systems, transit, municipal housing developments, community planning, parks and recreation areas, the Court House and certain health and welfare services. It also controls a unified metropolitan police force and a metropolitan licensing commission. The expenditures are financed by a levy apportioned among the area municipalities. All borrowing of the area municipalities for capital purposes is done by the Municipality of Metropolitan Toronto.

Manitoba.-Manitoba has six cities, which derive their powers from special Acts and do not come under the supervision of the Department of Municipal Affairs. The Department supervises the 35 towns, 37 villages and 112 rural municipalities under the Municipal Act. There are local government districts in settled areas not within municipalities where the province has placed a resident administrator to carry out the functions of a municipal council. The unorganized areas are the direct responsibility of the provincial government.

The Metropolitan Corporation of Greater Winnipeg has been in existence since Nov. 1,1960 . Its council is separate and distinct from those of the 16 area municipalities. The councillors are elected as individuals from ten new districts, each containing approximately the same number of voters. The council has jurisdiction over planning, zoning, land development, assessments, arterial roads, water supply, sewage disposal, transit and other services. It borrows money only for its own undertakings and leaves to its area municipalities the responsibility for welfare, police, fire protection and other services. Its expenditures are financed by a proportion of the business and other taxes levied on industrial or commercial property by the area municipalities and by a uniform levy on the equalized assessment of all taxable real property in the area municipalities.

Saskatchewan.-All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are 11 cities, 110 towns, 369 villages and 296 rural municipalities. The area so organized consists of most of the southern two-fifths of the province; the remainder of this portion is administered for local purposes by the province in unincorporated local improvement districts. The northern three-fifths is sparsely populated and without local government, although some municipal services are provided by the province through operation of the Northern Administrative Area. Municipalities are supervised by the Department of Municipal Affairs.

Alberta.-The whole province of Alberta is under some type of municipal organization. The province has an Act applying to each type of municipality and under these Acts the Department of Municipal Affairs supervises the 10 cities, 88 towns, 161 villages, 31 municipal districts and 17 counties. The latter administer schools as well as municipal services. Municipal government for the 49 improvement districts and two special areas is provided by the Department of Municipal Affairs.

British Columbia.-Less than one-half of 1 p.c. of the area of British Columbia is organized into municipalities. Additional small areas have sufficient population to require administration of local activities by the provincial government. There are 32 cities, three towns, 58 villages and 30 districts; the latter are chiefly rural municipalities, except for those adjacent to the principal cities of Victoria and Vancouver which are largely urban in character. It should be emphasized, however, that the application of the name 'city' is somewhat different from the commonly accepted meaning, in that several of them have populations of fewer than 1,000 and perhaps one-half or more would not normally be incorporated as cities in another province. Municipalities are supervised by the Department of Municipal Affairs.

Yukon and Northwest Territories.-There are two cities, Whitehorse and Dawson, and one unincorporated town, Mayo, in the Yukon Territory and two municipal districts, Yellowknife and Hay River, in the Northwest Territories, all of which provide some municipal services to their local areas. These are not shown in Table 34.

## Section 4.-Federal and Provincial Royal Commissions

Federal Royal Commissions Established.-Royal Commissions established from Jan. 1, 1961 to Jan. 31, 1962 under Part I of the Federal Inquiries Act are given here in continuation of those previously reported in the Year Books beginning with the 1940 edition, pp. 1108-1110. Any Commissions established between Jan. 31, 1962 and the date of going to press will be found in an Appendix to this volume.

| Nature of Commission | Chief Commissioner | Date <br> Established |
| :---: | :---: | :---: |
| To inquire into and report upon the existing facilities and the future need for health services for the people of Canada and the resources to provide such services. | Hon. Emmett M. Hall.... | June 20, 1961 |
| To inquire into and report upon the suitability of the scope, basic principles and provisions of the Unemployment Insurance Act and the regulations thereunder and the manner of operating thereunder. | Ernest C. Gill......... | July 17, 1961 |
| To inquire into and report upon the structure and methods of operation of the Canadian financial system. | The Hon. Mr. Chief Justice Dana Harris Porter. . | Oct. 18, 1961 |

## PART III.-ADMINISTRATIVE FUNCTIONS OF THE FEDERAL GOVERNMENT $\dagger$

A special article presenting information on the administration and control of the financial affairs of the Federal Government appears in the 1956 Year Book at pp. 101-107.

## Section 1.-Departments, Boards, Commissions, etc.

The following paragraphs indicate the functions of the various departments of government and the special boards and commissions in connection with the work of government.

Though it is not possible, owing to the limitations of space, to enumerate in this Section the details of each service or the divisions or sections of all departments, the main branches are given along with those services that differ in some quality from the larger class of subjects handled by a department. The work of many of these departments and boards is given in detail in later Chapters of this volume. The Index will be useful in locating required information.

[^38]

Department of Agriculture.-This Department was established in 1867 (SC 1868, c. 53) and undertakes work on all phases of agriculture. Research and experimentation are carried out by the Research Branch; the maintenance of standards and protection of products by the Production and Marketing Branch; reclamation and development by the Prairie Farm Rehabilitation Administration and the Maritime Marshland Rehabilitation Administration; security and price stability policies are administered under the Prairie Farm Assistance Administration and the Agricultural Stabilization Board. The Farm Credit Corporation, the Canadian Wheat Board and the Board of Grain Commissioners are responsible to Parliament through the Minister of Agriculture.

Air Transport Board.-The Air Transport Board was established in 1944 by amendment of the Aeronautics Act. The Board is responsible for the economic regulation of commercial air services in Canada and for advising the Minister in the exercise of his duties and powers under the Act in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad, and to foreign air services operating into Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. The Board reports to Parliament through the Minister of Transport.

Auditor General's Office.-This Office originated in 1878 (SC 1878, c. 7) and currently functions under the Financial Administration Act (RSC 1952, c. 116). The Auditor General is responsible for examining accounts relating to the Consolidated Revenue Fund and to public property, and for reporting annually to the House of Commons the results of his examinations. He also audits the accounts of various Crown corporations and other instrumentalities.

Board of Broadcast Governors.-This Board was established pursuant to the Broadcasting Act assented to on Sept. 6, 1958 and is responsible for the regulation of radio and television broadcasting in Canada. This regulatory function includes the establishment and operation of networks of broadcasting stations, the activities of public and private broadcasting stations in Canada and the relationship between them. Applications for licences to establish new broadcasting stations and for changes in conditions of existing licences or changes in the ownership or share structure of licensees are referred to the Board by the Department of Transport for a recommendation to the Minister of Transport. The Board consists of three full-time members and twelve part-time members and reports to Parliament through the Minister of National Revenue.

Board of Grain Commissioners.-Constituted in 1912 under the Canada Grain Act, now the Canada Grain Act, 1930 (RSC 1952, c. 25), the Board of Grain Commissioners provides general supervision over grain handling in Canada by licensing elevator operators, inspecting and weighing grain en route to and shipped from terminal elevators, and other services. The Board, comprising a Chief Commissioner and two Commissioners, has authority to inquire into any matter relating to the grading and weighing of grain, deductions for dockage or shrinkage, deterioration of any grain during storage or treatment, unfair or discriminatory operation of a grain elevator, etc. The Board publishes its regulations in the Canada Gazette and reports to Parliament through the Minister of Agriculture.

Board of Transport Commissioners.-The powers of this Board, which was organized as the Board of Railway Commissioners in 1904, have been extended from time to time until today it has regulatory and judicial functions dealing with almost all aspects of railway activity including location, construction and operation of lines, rates and charges. It is also entrusted with the regulation of other transportation and communication agencies, including express companies, telegraph companies, telephone companies other than those provincially or municipally controlled, international bridges and tunnels and inland shipping. The Board reports to Parliament through the Minister of Transport.

Canadian Government Specifications Board.-This is an interdepartmental body composed of the Deputy Heads of 24 Federal Government departments and agencies. The Board operates under the auspices of the National Research Council through the medium of committees in which government and industry co-operate on a voluntary basis. The Board prepares specifications in commodity fields and for materials, processes and equipment required by government agencies, and arranges for necessary testing and research. An Index of Specifications is available on request to the CGSB Secretary, National Research Council, Ottawa.

Canadian Pension Commission.-This Commission, established in 1933 by amendments to the Pension Act (RSC 1952, c. 207), replaced the Board of Pension Commissioners, the first organization created to deal solely with war pensions for service in Canada's Armed Forces. The Commission's main function is the administration of the Pensions Act under which it adjudicates upon all claims for pension in respect to disability or death arising out of service in Canada's Armed Forces. It consists of eight to twelve Commissioners and up to five ad hoc Commissioners appointed by the Governor in Council. Its chairman has the rank and powers of a deputy head of a department and the Commission reports to Parliament through the Minister of Veterans Affairs.

Chief Electoral Office.-This Office was established in 1920 under the provisions of the Dominion Elections Act, now the Canada Elections Act (RSC 1960, c. 39, and amendments thereto), and is responsible for the conduct of all federal elections as well as the elections of members of the Northwest Territories Council and of the Yukon Territory Council. In addition, it conducts any vote taken under the Canada Temperance Act. The Chief Electoral Officer reports to Parliament through the Secretary of State.

Department of Citizenship and Immigration.-This Department was constituted in December 1949 (RSC 1952, c. 67) and came into existence on Jan. 18, 1950 under the Minister of Citizenship and Immigration. Most departmental work is carried on through four branches. The Canadian Citizenship Branch assists governmental and non-governmental agencies engaged or interested in facilitating the adjustment and integration of newcomers and in making Canadians conscious of their privileges and responsibilities as citizens. The Canadian Citizenship Registration Branch administers the Canadian Citizenship Act and is the custodian of all records under that Act and all Naturalization Acts previously in force. The Immigration Branch administers the Immigration Act and Regulations and is responsible for the selection, examination and movement of immigrants, the exclusion or deportation of undesirables and the settlement or establishment of immigrants in Canada. The activities of the Indian Affairs Branch include management of all Indian affairs. Its organization consists of a headquarters office at Ottawa, a regional supervisory staff, and 89 local agencies in the field.

The Minister of Citizenship and Immigration is responsible to Parliament for the National Film Board, the National Library, the Public Archives and the National Gallery of Canada.

Civil Service Commission.-The Civil Service Commission of Canada dates from the Civil Service Act of 1908 . Under this Act the Commission was given the responsibility of applying, wherever possible, the principle of appointment by merit in filling permanent positions within departmental headquarters at Ottawa, termed the "inside service". The Civil Service Act of 1918 extended the competitive system of appointments to cover the outside as well as the inside service and temporary as well as permanent appointments. It also gave the Civil Service Commission various other responsibilities in the field of personnel administration including responsibility for promotion, for classification of positions and for recommending rates of pay.

The Civil Service Act of 1961, which came into force on Apr. 1, 1962, has three main features. First, it preserves the independence of the Civil Service Commission and carries forward and strengthens all the fundamental principles of the merit system. Secondly, it clarifies the role of the Civil Service Commission in those other areas of personnel administration with which it is concerned but which do not bear directly upon the merit system. Thirdly, it confers on staff associations the right to be consulted on matters which have to do with remuneration and conditions of employment.

The Act applies to about 130,000 employees in all the departments and certain agencies of government and this constitutes the "civil service" within the legal meaning of that term. The "public service" is defined as those departments and agencies which are listed in Schedule A of the Public Service Superannuation Act and which embrace about 180,000 employees including the 130,000 under the Civil Service Act. This definition of public service does not include certain Crown corporations.

The Civil Service Commission, which is responsible only to Parliament and not to the executive government, consists of three members, one of whom is chairman. Each member of the Commission is appointed by the Governor in Council for a term of ten years and has the rank and standing of a deputy minister. The Commission has a staff of over 700 persons located in its headquarters at Ottawa and in its field offices at St. John's, Nfld., Halifax, N.S., Moncton, N.B., Saint John, N.B., Quebec, Que., Montreal, Que., Toronto, Ont., London, Ont., Winnipeg, Man., Regina, Sask., Saskatoon, Sask., Edmonton, Alta., Calgary, Alta., Vancouver, B.C., and Victoria, B.C.

Department of Defence Production.-This Department was established on Apr. 1, 1951 under the provisions of the Defence Production Act (RSC 1952, c. 62, as amended). Under this Act the Minister is given, with certain exceptions, authority to buy defence supplies and construct defence projects required by the Department of National Defence. The Minister may, if authorized by the Governor General in Council, undertake for an associated government anything he may undertake for the Canadian Government. In addition, all powers, duties and functions that theretofore were vested in the Minister of Trade and Commerce under any contract, agreement, lease or other writing entered into pursuant to the Department of Munitions and Supply Act, 1939, or the Defence Supplies Act, 1950, are vested in the Minister of Defence Production.

Broadly, the Department's functions are to procure military goods, to construct defence installations and to organize industry for defence as required on behalf of the Department of National Defence, other government departments, and associated governments; to promote the expansion of defence production facilities and the development of defence-supporting industries, particularly of strategic resources important for the defence of Canada and its allies; and to ensure adequate supplies of essential materials and services for defence requirements. The main procurement units of the Department are five production branches-Aircraft, Armament, Electronics, Machine Tool and Shipbuilding-and a General Purchasing Branch. Major offices for foreign procurement
are located at London, England, and Washington, U.S.A.; the General Purchasing Branch has 14 district purchasing offices located throughout Canada for local of urgent procurement. In addition, there are various service branches which include Administration, Comptroller's, Economics and Statistics, Financial Adviser's, Industrial Security, Legal, and Secretary's. The Emergency Supply Planning Branch is responsible for planning economic controls for a national emergency.

The following Crown companies report to Parliament through the Minister of Defence Production: Canadian Arsenals Limited, Canadian Commercial Corporation, Crown Assets Disposal Corporation, Defence Construction (1951) Limited, and Polymer Corporation Limited.

Dominion Bureau of Statistics.-The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (SC 1918, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (RSC 1927, c. 190), was repealed and replaced by the Statistics Act (RSC 1952, c. 257); it was amended by SC 1952-53, e. 18, assented to Mar. 31, 1953.

The function of the Dominion Bureau of Statistics is to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct a census of population and agriculture of Canada as required under the Act.

The Bureau is a major publication agency of the Federal Government; the subjects of its reports cover all aspects of the national economy. The administrative head of the Bureau is the Dominion Statistician who reports to Parliament through the Minister of Trade and Commerce.

Emergency Measures Organization.-This Organization is a section of the Privy Council Office, established in June 1957 for the purpose of co-ordinating civil emergency planning. On Sept. 1, 1959, the Departments of National Defence, Health and Welfare, and Justice became responsible for specific civil defence functions and the Emergency Measures Organization for all other aspects of planning civil emergency measures. The Organization is responsible, through the Secretary of the Cabinet, to the Prime Minister.

Department of External Affairs.-This Department was established in 1909 by "An Act to create a Department of External Affairs" (RSC 1952, c. 68). Its main function is the protection and advancement of Canadian interests abroad. The Minister responsible for the Department is the Secretary of State for External Affairs. The senior permanent officer (Deputy Minister) of the Department, the Under-Secretary of State for External Affairs, is assisted by a Deputy UnderSecretary who is also Legal Adviser and by four Assistant Under-Secretaries and is advised by the officers in charge of the various divisions. The divisional heads are each responsible for a part of the work of the Department and they are assisted by Foreign Service Officers, administrative officers and an administrative staff. Officers serving abroad are formally designated as High Commissioners, Ambassadors, Ministers, Counsellors, First Secretaries, Second Secretaries, Third Secretaries and Attachés at diplomatic posts and Consuls General, Consuls and Vice-Consuls at consular posts. There are 66 diplomatic, consular and other missions maintained abroad by the Department. In 13 additional countries, Canada is represented by non-resident Ambassadors or High Commissioners.

The work of the Department at Ottawa is performed by 23 units, comprising 21 divisions and two sections. The divisions may be grouped into three categories-area, functional and administrative. There are six area divisions-African and Middle Eastern, Commonwealth, European, Far Eastern, Latin American and United States; eleven functional divisions-Communications, Consular, Defence Liaison (1), Defence Liaison (2), Disarmament, Economic, Historical, Information, Legal, Protocol and United Nations; and four administrative divisions-Administrative Services, Finance, Personnel, and Supplies and Properties. The two sections are Inspection Service and Liaison Services.

The International Joint Commission reports to the Secretary of State for External Affairs of Canada as well as to the Secretary of State of the United States.

Department of Finance.-This Department was created by Act of Parliament in 1869 and now operates under the Financial Administration Act (RSC 1952, c. 116). The Department is responsible for the financial administration of Canada including the raising of money required for the various governmental activities by way of taxation or borrowing. The Comptroller of the Treasury, an officer of the Department, is responsible for all government disbursements. The work of the Department is organized in six principal divisions: Administration, Economic and International Affairs, Federal-Provincial Relations, Farm Improvement Loans, Taxation, and Treasury Board. The Royal Canadian Mint is a branch of the Department and the Inspector General of Banks is an officer of the Department.

The Tariff Board is responsible to Parliament through the Minister of Finance.
Department of Fisheries.-The Department of Fisheries was first organized under a Minister of Fisheries in 1930. Prior to that date the federal fisheries services were maintained by the former Department of Marine and Fisheries, established in 1868. The provinces, under various arrangements, have certain administrative responsibilities in the fisheries but the legislative authority for the regulations of coastal and freshwater fisheries is with the federal Department of Fisheries.

The work of the Department includes: conservation and development of the fisheries through the enforcement of fishing regulations, the operation of fish culture establishments, management and improvement of spawning streams and control of predators; inspection of fish products for quality control and the encouragement of industrial development; promotion of the greatest utilization of fishery products and a proper public understanding of the resource and the industry. The Department administers the Fishermen's Indemnity Plan to assist fishermen in the event of loss or serious damage to their fishing vessels or lobster traps.

Agencies connected with the Department are the Fisheries Prices Support Board and the Fisheries Research Board of Canada. The Department is represented on the following international commissions: Pacific Salmon Fisheries, Pacific Halibut, the Northwest Atlantic Fisheries, North Pacific Fisheries, Whaling, Great Lakes Fishery, and North Pacific Fur Seal.

Fisheries Research Board.-The Fisheries Research Board operates under the Fisheries Research Board Act of 1937 (amended in 1947 and 1952-53). It has been active as a fisheries research body since 1898, first as the Board of Management of the Canadian Marine Biological Station and later (1912) as the Biological Board of Canada.

The Board operates under the Minister of Fisheries and membership consists of a full-time chairman and not more than 18 other members. The majority of Board members are scientists, and other members are representative of the fishing industry and the Department of Fisheries.

The Board operates four biological stations and an Arctic Unit across Canada, also three technological stations with two technological application units and two oceanographic groups. It serves as the scientific arm of the Department of Fisheries and its principal objective is to increase the scope and value of Canadian fisheries through scientific research.

Department of Forestry.-The Department of Forestry was established in October 1960. It brings together the former Forestry Branch of the Department of Northern Affairs and National Resources and the Forest Biology Division of the Research Branch of the Department of Agriculture. The Department conducts comprehensive programs of research relating to forestry and the utilization of forest products, and carries out economic studies relating to forest resources and the forest industries. It provides information regarding forestry and the forest industries and promotes public interest in the proper management, protection and use of the forest resources. Financial assistance is offered to the provinces under agreements authorized by the Governor in Council in order to expedite progress in specific forestry programs. It carries out forest surveys and provides technical advice and assistance to other agencies of the Federal Government which are responsible for the administration of forest lands. The Department co-operates with international organizations concerned with forestry and in which Canada maintains membership, and the Minister of Forestry reports to Parliament for the Eastern Rockies Forest Conservation Board.

Department of Insurance.-The Minister of Finance is responsible for the Department of Insurance which originated in 1875 as a branch of the Department of Finance but was constituted a separate Department in 1910. It is authorized and governed by the Department of Insurance Act (RSC 1952, c. 70). Under the Superintendent of Insurance, the Department administers the statutes of Canada applicable to: insurance, loan and trust companies incorporated by the Parliament of Canada; provincially incorporated insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; co-operative credit societies registered under the Co-operative Credit Associations Act; and Civil'Service insurance.

Under the relevant provincial statutes the Department examines provincial trust companies in the Provinces of Manitoba and New Brunswick and loan and trust companies in the Province of Nova Scotia.

International Joint Commission.-This Commission was established under a Britain-United States treaty signed Jan. 11, 1909 and ratified by Canada in 1911. The Commission, composed of six members (three appointed by the President of the United States and three by the Government of Canada) is governed by five specific Articles of the Boundary Waters Treaty of 1909. The Commission's approval is required for any use, obstruction or diversion of boundary waters affecting the natural level or flow of boundary waters in the other country; and for any works in waters flowing from boundary waters or below the boundary in rivers flowing across the boundary which raise the natural level of waters on the other side of the boundary.

Problems arising along the common frontier are also referred to the Commission by either country for examination and report, such report to contain appropriate conclusions and recommendations. In addition, questions or matters of difference between the two countries may be referred to the Commission for decision, provided both countries consent.

The Commission reports to the Secretary of State for External Affairs of Canada and to the Secretary of State of the United States.

Department of Justice.-This Department, established by SC 1868, c. 39, now operates under authority of the Department of Justice Act (RSC 1952, c. 71). It provides legal services to the Government and various government departments including preparing and settling government legislation, settling instruments issued under the Great Seal of Canada, regulating and
conducting litigation for or against the Crown, superintending the acquisition of property and prosecutions under federal legislation other than the Criminal Code, administering federal statutes dealing with legal matters and providing administrative services for the Supreme Court of Canada and the Exchequer Court. The Department also superintends the penitentiaries and administers the prison system of Canada.

The Commissioner of the Royal Canadian Mounted Police operates under the direction of the Minister of Justice who also reports to Parliament for the National Parole Board.

Department of Labour.-The Department of Labour was established in 1900 by Act of Parliament (SC 1900, c. 24) and now operates under authority of the Department of Labour Act (RSC 1952, c.72). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of fair wages and hours of labour; reinstatement in civil employment; female employee equal pay; government annuities; government employee compensation; merchant seamen compensation; technical and vocational training assistance; co-ordination of services for vocational rehabilitation of disabled persons; annual vacations with pay. It promotes joint consultation in industry through labour-management committees; organizes manpower utilization programs, e.g., farm labour; and operates a Women's Bureau. The Department publishes the Labour Gazette and other publications, as well as general information on labour-management, employment, manpower and related subjects.

The Canada Labour Relations Board acts on behalf of, and the National Technical and Vocational Training Advisory Council and the National Advisory Council on the Rehabilitation of Disabled Persons act in an advisory capacity to the Minister of Labour, and the Merchant Seamen Compensation Board reports to the Minister of Labour. The Department is the official liaison agency between the Canadian Government and the International Labour Organization. The Unemployment Insurance Commission, which maintains the National Employment Service, reports to Parliament through the Minister of Labour.

Library of Parliament.-The Library of Parliament as such was established in 1871 (SC 1871, c. 21) although it existed earlier. It currently functions under RSC 1952, c. 166 and SC 1955, c. 35. The Library of Parliament keeps all books, maps and other articles that are in the joint possession of the Senate and the House of Commons. The Parliamentary Librarian is also responsible for the House of Commons Reading Room. Persons entitled to borrow books from the Library of Parliament are the Governor General, Members of the Privy Council, Members of the Senate and the House of Commons, Officers of the two Houses, Justices of the Supreme Court of Canada and the Exchequer Court, and members of the Press Gallery. In addition, books are lent to other libraries and government agencies and reference service is given to scholars. The Parliamentary Librarian has the rank of a Deputy Head of a Department and is responsible for the control and management of the Library under the Speaker of the Senate and the Speaker of the House of Commons assisted by a Joint Committee appointed by the two Houses.

Department of Mines and Technical Surveys.-This Department was created by an Act of Parliament (SC 1949, c. 17) which received Royal Assent on Dec. 10, 1949. Its establishment resulted from the reorganization of certain former departments. A primary function of the Department is to provide technological assistance in the development of Canada's mineral resources through investigations and research in the fields of geology, mineral dressing and metallurgy. The Department establishes the framework of surveys throughout the country that provides control for all surveying and mapping in Canada. It produces the base maps used in the development of Canada's natural resources, conducts all the charting of Canada's coastal and inland waters, and issues official sailing directions and Canadian sea and air navigation charts. The Department is under the Minister of Mines and Technical Surveys and is divided into five branches: the Surveys and Mapping Branch, the Geological Survey of Canada, the Mines Branch, the Dominion Observatories, and the Geographical Branch. The Mineral Resources Division, a unit of head office, gives its whole attention to matters concerned with the economics of mineral resources development.

In 1959 the Department became actively interested in oceanography and made two major moves toward setting its program into motion: (1) the establishment of the Polar Continental Shelf Project to carry out a long-term investigation of the continental shelf lying north and west of the Canadian Arctic Archipelago and of the waters above it, together with the islands of the Archipelago and the straits and sounds between the islands; and (2) the setting up of a $\$ 3,000,000$ oceanographic institute in the Bediord Basin near Halifax which will have facilities for study in any phase of the science.

The Department administers the Explosives Act which regulates the manufacture, testing, sale, storage and importation of explosives, and the Emergency Gold Mining Assistance Act which provides cost-aid to the Canadian gold mining industry.

Boards and Commissions are: Canadian Board on Geographical Names; Board of Examiners for Dominion Land Surveyors; the International Boundary Commission; and the Interprovincial Boundary Commissions. The Minister of Mines and Technical Surveys reports to Parliament for the Dominion Coal Board.

Department of National Defence.-The Department of National Defence was established on Jan. 1, 1923 by the Department of National Defence Act, 1922, and was an amalgamation of the Department of Militia and Defence, the Naval Service and the Air Board. The Department and the Canadian Forces (the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force) now operate under the National Defence Act, 1950 (RSC 1952, c. 184).

In 1940 additional Ministers for Naval and Air Services were appointed and the Department was organized under a Minister of National Defence and two additional Ministers so that there was a Minister and staff for each of the Armed Services. Upon demobilization of the wartime Forces the appointment of Ministers of National Defence for Naval Services and Air Services ceased, and the Armed Forces were, in 1946, again administered by the Minister of National Defence without additional Ministers. Under the National Defence Act, the Canadian Forces are being administered solely by the Minister of National Defence and the Associate Minister of National Defence.

The Defence Research Board, created in 1947 to carry out research relating to national defence and to advise the Minister on all relevant matters of a scientific or technical nature, now functions under the National Defence Act. The Chairman of the Board has a status equivalent to that of a Chief of Staff of one of the Canadian Forces.

National Energy Board.-This Board was established under the National Energy Board Act, 1959 for the broad purpose of assuring the best use of energy resources in Canada. The Board, composed of five members, is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipelines, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The Board is also required to study and keep under review all matters relating to energy under the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary and advisable on the subject. The Board reports to Parliament through the Minister of Trade and Commerce.

National Film Board.-The National Film Board, established in 1939, operates under the National Film Act (RSC 1952, c. 185) which provides for a Board of Governors of nine membersa Government Film Commissioner, appointed by the Governor in Council, who is Chairman of the Board, three members from the public service of Canada and five members from outside the public service. The Board reports to Parliament through a designated Minister of the Crown (at present the Minister of Citizenship and Immigration). The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and, in particular, films "designed to interpret Canada to Canadians and to other nations".

Department of National Health and Welfare.-This Department was established in October 1944 under authority of the Department of National Health and Welfare Act (RSC 1952, c. 74). It was originally formed as the Department of Health in 1919 and later became part of the Department of Pensions and National Health. That Department was replaced in 1944 by the Department of National Health and Welfare and the Department of Veterans Affairs.

The Department, headed by the Minister of National Health and Welfare, is composed of three branches-Administration, Health, and Welfare-and is administered by two Deputy Ministers.

The Department has charge of all matters relating to the promotion or preservation of the health, social security and social welfare of the people of Canada over which the Federal Parliament has jurisdiction. It administers the Acts listed in Sect. 3, pp. 111-112, and is also responsible for: the administration of the National Health Program under which grants are made available to the provinces for the development and extension of health services; the federal aspects of emergency health and welfare services; health and safety in the peaceful uses of atomic energy and other sources of radiation affecting the population; the provision of health, medical and hospital services to Indians and Eskimos and to other elements of the population in the Yukon and Northwest Territories; the provision of assistance and consultative services to the provinces upon request on blindness control, child and maternal health, mental health, dental health, nursing, medical rehabilitation, nutrition and hospital design; the inspection and medical care of immigrants and seamen and the administration of marine hospitals; the supervision of public health facilities on railway, water and other forms of transportation; the enforcement of regulations of the International Joint Commission relating to public health; the promotion and conservation of the health of civil servants and other government employees; the collection, publication and distribution, subject to the provisions of the Statistics Act, of information relating to public health, improved sanitation and social and industrial conditions affecting the health of Canadians.

National Library.-The National Library came formally into existence on Jan. 1, 1953, with the proclamation of the National Library Act (RSC 1952, c. 330). It publishes Canadiana, a monthly catalogue of new publications relating to Canada, with an annual cumulation. The Library also publishes other bibliographies. Its Reference Division maintains the National

Union Catalogue, which embodies the author catalogues of the major libraries in the ten provinces and is thus a key to the book collections of the whole country. Its book collection is growing steadily and at the end of 1961 consisted of about 250,000 volumes. The National Librarian reports to Parliament through the Minister of Citizenship and Immigration.

National Parole Board.-The establishment of the National Parole Board, which was formed in January 1959, is authorized by the Parole Act (SC 1958, c. 38) by which it is given absolute jurisdiction over all matters of parole. It is composed of a chairman and three members appointed by Order in Council for a ten-year period. The Board reports to Parliament through the Minister of Justice.

Department of National Revenue.-From Confederation until May 1918, customs and inland revenue Acts were administered by separate departments; after that date they were amalgamated under one Minister as the Department of Customs and Inland Revenue. In 1921 the name was changed to the Department of Customs and Excise. In April 1924 collection of income taxes was placed under the Minister of Customs and Excise and, under the Department of National Revenue Act, 1927, the Department became known as the Department of National Revenue.

The Customs and Excise Division of the Department is responsible for the assessment and collection of customs and excise duties as well as sales and excise taxes, by ports and outports. The Taxation Division is responsible for the assessment and collection of income taxes and estate taxes by 29 district offices throughout Canada.

The Minister of National Revenue is responsible to Parliament for the Tax Appeal Board and also reports to Parliament for the Canadian Broadcasting Corporation and the Board of Broadcast Governors.

Department of Northern Affairs and National Resources.-The Department of Northern Affairs and National Resources was established in December 1953, superseding the Department of Resources and Development. In addition to Administration Services, which performs auxiliary functions, the Department is divided into six branches: the National Parks Branch administers the National Parks and National Historic Parks of Canada, National Historic Sites, and wildlife matters coming within the jurisdiction of the Federal Government; the Water Resources Branch is responsible for the investigation of water power resources, for the administration of federal assistance to the provinces under the Canada Water Conservation Assistance Act and for federal interest in certain joint federal-provincial construction projects; the Northern Administration Branch is responsible for the administration of various federal Acts, territorial ordinances and regulations pertaining to the government of the Northwest Territories, for the conduct of certain business arising from the general administration of the Yukon Territory, for the administration of natural resources in those Territories and for Eskimo affairs, as well as for certain other lands and mineral rights vested in the Crown in the right of Canada; the Natural History Branch and Human History Branch of the National Museum of Canada are responsible for research, publication of scientific studies, and public exhibitions in their respective fields of natural history and human history; and the Canadian Government Travel Bureau promotes the tourist industry by encouraging travel to Canada.

The Minister of Northern Affairs and National Resources is also responsible to Parliament for the Northern Canada Power Commission and the National Battlefields Commission. The Historic Sites and Monuments Board of Canada, an honorary body of recognized historians representing the various provinces, and the Advisory Committees on Northern Development and Water Use Policy act in an advisory capacity to the Minister in their respective fields. The Deputy Minister is Commissioner of the Northwest Territories and Chairman of the Northern Canada Power Commission.

Post Office Department.-Administration and operation of the Canada Post Office, by virtue of the Post Office Act (RSC 1952, c. 212) and under the Postmaster General, includes all phases of postal activity, personnel, mail handling, transportation of mails by land, water, rail and air and the direction and control of financial services including the operation of money order and savings bank business.

Public Archives.-The Public Archives was founded in 1872 and is administered under the Public Archives Act (RSC 1952, c. 222) by the Dominion Archivist who has the rank of a Deputy Minister and reports to Parliament through the Minister of Citizenship and Immigration. Its purpose is to assemble and make available to the public a comprehensive collection of historical source material relating to the history of Canada. Major emphasis is placed on official records of the Government and the personal papers of political leaders and other prominent figures. These are supplemented by copies of many records in the British and French archives that relate to Canada, a fine map collection, a historical library, and many prints, paintings and photographs. In 1956 the Archives opened a large Records Centre, designed to provide economical accomodation for departmental records that are used relatively seldom. The building, equipped with over 50 miles of shelving, also serves as a sorting centre in which papers of long-term interest are picked out of obsolete files, and useless material is segregated for destruction.

Under the terms of the Laurier House Act (RSC 1952, c. 163) the Public Archives is responsible for the administration of Laurier House as a museum and study centre. The Dominion Archivist also administers the Government's Central Microfilm Unit, which is housed in the Records Centre.

Department of Public Printing and Stationery.-This Department, established in 1886, is responsible for supplying all requirements of printing and stationery to Parliament and departments of the Canadian Government; the cataloguing, distribution and sale of government publications; the publication of the Canada Gazette and all departmental reports, papers, etc., required to be published by authority of the Governor General in Council (RSC 1952, c. 226); and the publication of the Statutes of Canada (RSC 1952, c. 230).

The Department of Public Printing and Stationery is under the jurisdiction of the Secretary of State. The Deputy Head is the Queen's Printer and Controller of Stationery.

Department of Public Works.-This Department was constituted in 1867 and operates under the legislative authority of the Public Works Act and other Acts of Parliament. It is responsible for the management and direction of the public works of Canada and, except as specifically provided in other Acts, attends to the construction and maintenance of public buildings, wharves, piers, roads and bridges and the undertaking of dredging and navigable waters protection work. The Department maintains district offices at key points across the country. The main operating Branches of the Department with headquarters in Ottawa are: Harbours and Rivers Engineering, Building Construction, Development Engineering, Property and Building Management, and Purchasing and Stores. In addition, the Fire Prevention Branch, organized in 1919 and now a part of the Department of Public Works, maintains fire-loss records, makes inspections, reports on fire protection legislation and protection methods and endeavours to extend and coordinate fire prevention work in Canada. Federal interests in the Trans-Canada Highway are also handled by the Department.

The Minister of Public Works is responsible to Parliament for the Central Mortgage and Housing Corporation and for the National Capital Commission.

Royal Canadian Mounted Police.-The Royal Canadian Mounted Police, a civil force maintained by the Federal Government, was organized in 1873 as the North West Mounted Police. It now operates under the Royal Canadian Mounted Police Act, 1959 and is responsible for enforcing federal laws throughout Canada. By agreement with certain provincial governments, it is also responsible for enforcing provincial laws within those provinces and for policing many district municipalities, cities and towns. The Force is controlled and administered by the Minister of Justice.

Department of the Secretary of State.-The Secretary of State and Registrar General of Canada is the official medium of communication with the Throne through the Governor General, and is the custodian of the Great Seal of Canada and of the Privy Seal of the Governor General. He is responsible for the preparation and tabling of returns in Parliament. He administers legislation relating to patents of invention, trade marks, industrial designs, timber marking, copyright, companies, boards of trade, the registration of trade unions, public officers, public documents and governmental and parliamentary translations. He is also the Custodian of Enemy Property.

The Secretary of State has certain responsibilities with respect to civilian decorations, precedence and ceremonial. The Committee on the use of Parliament Hill and the National War Memorial falls within his purview. He is the Minister of the Department of Public Printing and Stationery and the spokesman in Cabinet and Parliament for the Civil Service Commission and the Chief Electoral Officer.

The Tariff Board.-Constituted in 1931 under the Tariff Board Act (SC 1931, c. 55), the Board derives its duties and powers from three statutes: the Tariff Board Act (RSC 1952, c. 261, as amended); the Customs Act (RSC 1952, c. 58, as amended); and the Excise Tax Act (RSC 1952, c. 100, as amended).

Under the Tariff Board Act, the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada, are subject to or exempt from duties of customs or excise taxes. Reports of the Board are tabled in Parliament by the Minister of Finance. It is also the duty of the Board to hold an inquiry under Sect. 14 of the Customs Tariff and to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board acts as a court to hear appeals from rulings of the Department of National Revenue, Customs and Excise Division, in respect of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals on questions of fact are final and conclusive but the Acts contain provisions for appeal, on questions of law, to the Exchequer Court of Canada.

Department of Trade and Commerce.-The Department of Trade and Commerce was established by Act of Parliament on June 23, 1887, but did not function until Dec. 5, 1892, when an Order in Council to this effect was passed. Before the formation of the Department, assistance in the development of Canada's external trade was provided by eight Canadian Commercial Agents-five in the West Indies, two in Great Britain and one in France-who served on a parttime basis and were responsible to the Minister of Finance. A Canadian Commerical Agent was appointed at Sydney, Australia, in 1895, as the first full-time salaried Agent of the Department.

The framework of the present Trade Commissioner Service emerged during the next decade or so, the Commerical Agents gradually giving place to career Trade Commissioners. There are now 156 Trade Commissioners serving at Headquarters and abroad in 63 posts (including Assistant Trade Commissioners and agricultural, fisheries and timber specialists). Where a Trade Commissioner is a member of a mission maintained by the Department of External Affairs, he holds diplomatic status and is known as a Minister (Commercial), Commercial Counsellor or Commercial Secretary.

The Department provides a wide range of services to Canadian businessmen through the Agriculture and Fisheries Branch, the Canadian Government Exhibition Commission, the Commodities Branch, the International Trade Relations Branch, the Trade Commissioner Service, the Trade Publicity Branch and the Domestic Commerce Service. The latter comprises the Depreciation Certification Branch, the National Design Branch, the Industrial Promotion Branch, the Small Business Branch and the Standards Branch.

The following boards, commissions, Crown corporations and agencies report to Parliament through the Minister of Trade and Commerce: the Dominion Bureau of Statistics, the Export Credits Insurance Corporation, the National Energy Board, the Northern Ontario Pipe Line Crown Corporation, the Northern Transportation Company Limited, Eldorado Aviation Limited and Eldorado Mining and Refining Limited.

Department of Transport.-The Department was created on Nov. 2, 1936 from the former Departments of Marine and of Railways and Canals, and the Civil Aviation Branch of the Department of National Defence (RSC 1952, c. 79).

The work of the Department consists of three main Services-Marine, Air and Railways. Marine Service operations include aids to navigation, nautical and pilotage services, marine agencies, secondary canals, steamship inspection and floating equipment, and direct supervision over 300 public harbours; 11 other harbours come under supervision of the Department but are administered by commissions. Air Services cover the operation of civil aviation, meteorological and telecommunications branches. The latter includes the administration and regulation of radar, radio marine and radio aeronautical aids to navigation and of communication by wire and by government telegraph and telephone.

Other services of the Department are in connection with the Government-owned companies: the Canadian National Railways, Canadian Government Railways, the Prince Edward Island, Newfoundland, and Yarmouth-Bar Harbour ferry services, and Trans-Canada Air Lines.

The Minister of Transport is responsible to Parliament for the following boards, commissions and Crown companies: the Air Transport Board, Board of Transport Commissioners, the Canadian Maritime Commission, the National Harbours Board, the Park Steamship Company Limited, the St. Lawrence Seaway Authority, and the Canadian Overseas Telecommunication Corporation.

Department of Veterans Affairs.-This Department, established in 1944 (RSC 1952, c. 80), is concerned exclusively with the welfare of veterans and with the dependants of veterans and of those who died on active service. The Department provides treatment services (hospital, medical, dental and prosthetic), welfare services, education assistance, life insurance, and land settlement and home construction assistance. The Veterans' Bureau assists veterans in the preparation and presentation of pension claims.

The Canadian Pension Commission established by the Pension Act (RSC 1952, c. 207), and the War Veterans Allowance Board established by the War Veterans Allowance Act (RSC 1952, c. 340) also report to Parliament through the Minister of Veterans Affairs.

The Department has treatment institutions and facilities in a number of urban centres. It also maintains, in large cities across Canada, administrative offices, which are shared with the Canadian Pension Commission and the War Veterans Allowance Board, and an office in London, England.

War Veterans Allowance Board.-This Board was established under the authority of the War Veterans Allowance Act, 1930 (RSC 1952, c. 340). It is a statutory body responsible to the Minister of Veterans Affairs for the administration of the Act and consists of three to ten members (three to five permanent, up to three temporary, and up to two additional without pay) appointed by the Governor in Council. Its functions include the responsibility of ensuring that all 18 District Authorities located in various regions throughout Canada interpret the legislation in a fair, reasonable and equitable manner. It is also an appeal body and may consider an appeal of an applicant against the decision of a District Authority.

## Section 2.-Crown Corporations

The Crown corporation form of public enterprise is not a new type of organization in Canada but in recent years, as the work of government has become more complex, greater reliance has been placed on it as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial and industrial objectives has led to the adoption of many different forms and formulas of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purposes and sets forth its powers and responsibilities. However, during World War II the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934, or under any provincial Companies Act to which he might delegate any of the powers conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation about 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

In 1946 the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However, it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment the financial provisions of the Government Companies Operation Act were repealed.

One of the more interesting features of the later legislation is the attempt that has been made to define and classify Crown corporations.* The Act defines a Crown corporation as a corporation that is ultimately accountable, through a Minister, to Parliament for the conduct of its affairs and establishes three classes of corporation-departmental, agency and proprietary.

Departmental Corporations.-A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. Ten departmental corporations are listed in Schedule B to the Act:-

Agricultural Stabilization Board (formerly Agricultural Prices Support Board) Atomic Energy Control Board<br>Canadian Maritime Commission<br>Director of Soldier Settlement<br>The Director, The Veterans' Land Act<br>Dominion Coal Board<br>Fisheries Prices Support Board<br>National Gallery of Canada<br>National Research Council<br>Unemployment Insurance Commission.

[^39]Agency Corporations.-An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of trading or service operations on a quasi-commercial basis or for the management of procurement, construction or disposal activities on behalf of Her Majesty in right of Canada. The following agency corporations are listed in Schedule C to the Financial Administration Act or have been subsequently added to that Schedule by the Governor in Council:-

Atomic Energy of Canada Limited<br>Canadian Arsenals Limited<br>Canadian Commercial Corporation<br>Canadian National (West Indies) Steamships Limited<br>Canadian Patents and Development Limited<br>Crown Assets Disposal Corporation<br>Defence Construction (1951) Limited<br>National Battlefields Commission<br>National Capital Commission (formerly Federal District Commission)<br>National Harbours Board<br>Northern Canada Power Commission (formerly Northwest Territories Power Commission)

Park Steamship Company Limited.
Two corporations, Canadian Sugar Stabilization Corporation Limited and Commodity Prices Stabilization Corporation Limited, listed in Schedule C when the Financial Administration Act was proclaimed, have since discontinued operations and surrendered their charters. By an Order in Council of June 15, 1955, the name of the Northwest Territories Power Commission (now Northern Canada Power Commission) was deleted from Schedule D and added to Schedule C, effective Apr. 1, 1954.

Proprietary Corporations.-A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or dealing in goods and the supplying of services to the public, and (2) is ordinarily required to conduct its operations without Parliamentary appropriations. The following proprietary corporations are listed in Schedule D to the Act or have been subsequently added to that Schedule by the Governor in Council:-

```
Canadian Broadcasting Corporation
Canadian Overseas Telecommunication Corporation
Central Mortgage and Housing Corporation
Eldorado Aviation Limited
Eldorado Mining and Refining Limited
Export Credits Insurance Corporation
Farm Credit Corporation (formerly Canadian Farm Loan Board)
National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933
Northern Transportation Company Limited
Polymer Corporation Limited
The St. Lawrence Seaway Authority
Cornwall International Bridge Company Limited (subsidiary to the St. Lawrence Seaway Authority)
Trans-Canada Air Lines.
```

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations, however, are subject to the provisions of the Crown corporations Part of the Act although, if there is any inconsistency between the provisions of that Part and those of any other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, limited loans for working-capital purposes, the awarding of contracts and the establishment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission to Parliament through the appropriate Minister.

A further form of control is exercised by Parliament through the power to vote financial assistance. This may take different forms. For some corporations, capital may be provided by parliamentary grants, loans or advances that may subsequently be converted into capital stock or bonds; for others it may be by the issue of capital stock to be subscribed and paid for by the Government; or by the sale of bonds to either the Government or the public. A few corporations have financed all or a portion of their requirements from their own resources or earnings. Under a special financing arrangement, a 15 -p.c. excise tax charged on radio and television sets and their parts and accessories was allocated to the revenue of the Canadian Broadcasting Corporation, but this was discontinued under the provisions of the Broadcasting Act, which came into foree on Nov. 10, 1958. and since that time the Corporation has received federal financing solely by parliamentary grants.

Prior to 1952, Crown corporations did not pay corporate income taxes. However, the Income Tax Act was later amended so that, in respect of financial years commencing after Jan. 1, 1952, proprietary Crown corporations pay taxes on income earned in the same manner as any privately owned corporation. One desirable result of this amendment is that the financial statements of these Crown companies are now more comparable with those of private industry, with which in some instances they are in competition, and thus it is easier to assess the relative efficiency of their operations.

The functions of the various Crown corporations are given briefly in the following paragraphs. For a number of them, further details are included in the Chapters dealing with the subjects concerned (see Index).

Agricultural Stabilization Board.-The Board was established in 1958 (SC 1957-58, c. 22) to administer the provisions of the Agricultural Stabilization Act, which has replaced the Agricultural Prices Support Act. The Board reports to Parliament through the Minister of Agriculture.

Atomic Energy Control Board.-By Act of Parliament (RSC 1952, c. 11), proclaimed October 1946, the regulation and control of atomic energy in Canada was placed under the Atomic Energy Control Board. The Board reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Veterans Affairs).

Atomic Energy of Canada Limited.-This Crown company was incorporated in February 1952 under the Atomic Energy Control Act, 1946 (RSC 1952, c. 11) to take over from the National Research Council on Apr. 1, 1952 the operation of the Chalk River project. The main activities of the company are (a) the development of economic nuclear power, (b) scientific research and development in the atomic energy field, (c) the operation of nuclear reactors and (d) the production of radioactive isotopes and associated equipments such as Cobalt-60 beam therapy units for the treatment of cancer. The company reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Veterans Affairs).

Bank of Canada.-Legislation of 1934 (RSC 1952, c. 13) provided for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment so far as may be possible within the scope of monetary action. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a Governor, a Deputy Governor and 12 Directors; the Deputy Minister of Finance is also a member of the Board. The Bank reports to Parliament through the Minister of Finance and is governed by its own Act of incorporation. (See footnote, p. 102.)

The Canada Council.-Established by Order in Council dated Apr. 15, 1957, this corporation of 21 members, a Director and an Associate Director operates under the terms of the Canada Council Act, assented to Mar. 28, 1957. The function of the Council is to encourage the arts, humanities and social sciences in Canada; its work is financed by a $\$ 50,000,000$ University Capital Grants Fund and the earnings from a $\$ 50,000,000$ Endowment Fund. In the making, managing and disposing of investments under the Act, the Council has the advice of an Investment Committee of five, including the Chairman and another member of the Council. The proceedings of the Council are reported each year to Parliament through the Prime Minister. (See footnote, p. 102.)

Canadian Arsenals Limited.-This company was established under the Companies Act by Letters Patent dated Sept. 20, 1945 and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and certain provisions of the Financial Administration Act (RSC 1952, c. 116). The company was set up to take over and operate Crown-owned plant and equipment. Among the items it now manufactures are propellants and explosives, small arms, radar equipment, optical and electronic instruments, and a wide variety of ammunition and components. Its divisions, together with the locations of their plants, are as follows: Dominion Arsenal Division (Quebec and Val Rose, Que.); Explosives Division (Valleyfield, Que.); Filling Division (St. Paul l'Ermite, Que.); Gun Ammunition Division (Lindsay, Ont.); Small Arms Division (Long Branch, Ont.); Instrument and Electronic Division (Scarborough, Ont.). The company is responsible to Parliament through the Minister of Defence Production.

Canadian Broadcasting Corporation.-The new Broadcasting Act, 1958 continues the CBC as a Crown corporation for the purpose of operating a national broadcasting service. It has the authority to maintain and operate broadcasting stations and networks and to originate and secure programs from within and outside Canada. This national radio and television service is financed through annual grants from Parliament and revenues from commercial operations. The Board reports to Parliament through the Minister of National Revenue.

The Corporation consists of a board of 11 Directors appointed by the Governor in Council and chosen to give representation to the principal geographical divisions of the country. The Corporation reports to Parliament through a Minister of the Crown (at present the Minister of National Revenue). The President and Vice President are full-time executives appointed for a period of seven years; the other nine Directors, including a Chairman and Vice Chairman, are appointed for periods of three years and may serve two consecutive terms. A change in the size and representation of the Board is planned by the Government; details will be announced later in 1962.

As the chief executive of the Corporation, the President, with the Vice Presidents, is responsible to the Board of Directors for the conduct of its affairs. They administer the Corporation with four Staff Departments and three Operating Divisions. The Departments, headed by Vice Presidents are: Programs; Administration and Finance; Corporative Affairs; and Engineering and Operations. The Divisions, headed by General Managers, are: Regional, French Networks and English Networks.

The Corporation's Head Office is situated in Ottawa with Headquarters for English Networks in Toronto, for French Networks in Montreal and with Regional Headquarters in St. John's for Newfoundland, Halifax for the Maritime Provinces, Winnipeg for the Prairie Provinces, and Vancouver for British Columbia. Headquarters for the Northern and Armed Forces Services is in Ottawa and for the International Service in Montreal.

Canadian Commercial Corporation.-This Corporation was established on May 1, 1946 by the Canadian Commercial Corporation Act (RSC 1952, c. 35). It purchases goods and commodities in Canada for the governments of other countries. It also acts as purchasing agent for international agencies such as the United Nations International Children's Emergency Fund and the United Nations Korean Reconstruction Agency. Other functions include arranging production and shipment of Canadian contributions of military stores to NATO countries. The Corporation also serves other departments of the Government of Canada. For instance, it arranges for the purchase and production of supplies and services which the External Aid Office is making available to other countries under the Colombo Plan. In carrying out its functions the Corporation works closely with the Department of Defence Production. It is responsible to Parliament through the Minister of Defence Production.

Canadian Maritime Commission.-This Commission was created in 1947 by the Canadian Maritime Commission Act (RSC 1952, c. 38). It considers and recommends policies and measures necessary for the operation, maintenance, manning and development of a merchant marine and a shipbuilding and ship-repairing industry. The Commission administers the Ship Construction Assistance Regulations established by Order in Council P.C. 1961-1290 passed Sept. 8, 1961 and the Canadian Vessel Construction Assistance Act (RSC 1952, c. 43). It also administers steamship subsidies voted by Parliament. Other functions include advice to other government departments on their shipbuilding requirements, consultation with the Department of National Revenue in the administration of the laws relating to the coasting trade of Canada and the co-ordination of the overseas movement of men and material for the Department of National Defence. It has responsibility in international matters relating to merchant shipping, such as NATO, IMCO and other international bodies. The Chairman has the status of a Deputy Minister and the Commission reports to Parliament through the Minister of Transport.

Canadian National Railways.-The Canadian National Railway Company was incorporated (SC 1919, c. 13) to operate and manage a national system of railways, including the Canadian Northern Railway System, the Canadian Government railways and all lines entrusted to it by Order in Council. In 1923 the Grand Trunk Railway Company of Canada was amalgamated with the Canadian National Railway Company and since 1923 a number of railway lines acquired by the Government have been entrusted to the Company for operation and management, including the Newfoundland Railway and steamship services in 1949, the Temiscouata Railway in 1950, and the Hudson

Bay Railway and the Northwest Communication System in 1958. The Canadian National Railways Act, 1919 was repealed in 1955 and the Canadian National Railways Act (SC 1955, c. 29) substituted therefor.

The Canadian National Railway Company is controlled by a Chairman and Board of Directors appointed by the Governor in Council, who report to Parliament through the Minister of Transport.

Canadian Overseas Telecommunication Corporation.-This Crown company was created on Dec. 10, 1949 by Act of Parliament (RSC 1952, c. 42) to acquire for public operation external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation is responsible to Parliament through the Minister of Transport.

Canadian Patents and Development Limited.-Canadian Patents and Development Limited is a Crown corporation established in 1948, pursuant to authority granted in an amendment to the Research Council Act which was passed in 1946. The primary purpose of the company is to make available to industry, through licensing arrangements, new processes developed by scientific workers of the National Research Council. Its services are equally available to government departments, publicly supported institutions and universities. The company also has crossagency arrangements with similar government agencies in other Commonwealth countries. The Board of Directors is composed of representatives from the National Research Council, from government departments and from industry and the universities. Any profits that the company may derive from licensing arrangements are available for further research and development. The Corporation reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Canadian Wheat Board.-The Board was incorporated in 1935 under the Canadian Wheat Board Act to market, in an orderly manner, in the interprovincial and export trade, grain grown in Canada. Its powers include authority to buy, take delivery of, store, transfer, sell, ship or otherwise dispose of grain. Except as directed by the Governor in Council, the Board was not originally authorized to buy grain other than wheat but, since Aug. 1, 1949, it may also buy oats and barley if authorized to do so by Regulation approved by the Governor in Council. Only grain produced in the designated area, which includes Manitoba, Saskatchewan, Alberta and parts of British Columbia and Ontario, is purchased by the Board, which controls the delivery of grain into elevators and railway cars in that area as well as the interprovincial movement and export of wheat, oats and barley generally. The Board is governed by its own Act of incorporation (see footnote, p. 102). It reports to Parliament through the Minister of Agriculture.

Central Mortgage and Housing Corporation.-This Corporation was incorporated by Act of Parliament (RSC 1952, c. 46) in December 1945 to administer the National Housing Acts. Under the National Housing Act, 1954 (SC 1953-54 c. 23, as amended by 1956 c. 9, 1957-58 c. 18, 1958 c. 3,1959 c. $6,1960 \mathrm{c} .10$, and $1960-61 \mathrm{cc} .1$ and 61 ), the Corporation insures mortgage loans made by approved lenders for home ownership and rental housing; insures home improvement loans made by banks; makes direct loans to individual home-owners, to municipalities for construction of sewage treatment projects designed to eliminate pollution in water and soil and to universities for construction of student residences; undertakes jointly with provincial governments the assembly of land and construction of housing projects; provides financial assistance for studies to identify urban areas with blighted and substandard housing; assists municipalities in clearance and rehabilitation of substandard areas; conducts housing research; encourages community planning and owns and manages rental housing units built for war workers and veterans. The Corporation also arranges for and supervises construction of housing projects on behalf of the Department of National Defence and other government departments and agencies. The Corporation is responsible to Parliament through the Minister of Public Works.

Crown Assets Disposal Corporation.-This Corporation is established under the Surplus Crown Assets Act (RSC 1952, c. 260) and is subject to the Financial Administration Act (RSC 1952, c. 116). In June 1944, War Assets Corporation was established by statute to replace War Assets Corporation Limited which had been incorporated in 1943. In 1949 the name of War Assets Corporation was changed to Crown Assets Disposal Corporation. The Corporation's function is to dispose of surplus Crown assets. It is responsible to Parliament through the Minister of Defence Production.

Defence Construction (1951) Limited.-This company was established by Letters Patent in 1951 to take over the general undertakings of Defence Construction Limited. The company carries out major defence construction projects with the exception of houses and airfield runways and is responsible to Parliament through the Minister of Defence Production.

Director of Soldier Settlement and Director of the Veterans' Land Act.-The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, and in each capacity is legally a corporation sole. For administrative purposes, however, the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

Dominion Coal Board.-The Board, established as a department in 1947 by the Dominion Coal Board Act (RSC 1952, c. 86), has the responsibility of studying and recommending to the Government policies concerning the production, import, distribution and use of coal. The Chairman has the status of a deputy minister and the Board reports to Parliament through the Minister of Mines and Technical Surveys. The Board administers transportation and other subventions relating to coal, including those under the Atlantic Provinces Power Development Act (SC 1957-58, c. 25). It also administers loans authorized under the Coal Production Assistance Act (RSC 1952, c. 173, as amended by SC 1959, c. 39). The Dominion Coal Board Act makes provision for the regulation and control of the production, distribution and use of fuel in times of national emergency.

Eastern Rockies Forest Conservation Board.-The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act which authorized an agreement between the Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that portion of the eastern slope of the Rocky Mountains which gives rise to the major tributaries of the Saskatchewan River. The function of the Board is to determine the policy necessary to obtain the greatest possible flow of water in the Saskatchewan River system. The planning of programs of forest use and conservation is a joint duty of the Board and the provincial Forest Service. The administration of the conservation area is a function of the province.

Funds for capital expenditures during the first seven years of the agreement were provided by the Federal Government with maintenance expenditures being paid by the Province of Alberta. In 1955 the province undertook the responsibility of financing both capital improvements and maintenance work. Currently, one member of the three-man Board is appointed by the Federal Government and the province has the right to appoint two members. The choice of one of the three members as Board chairman is vested in the province. The Board reports to Parliament through the Minster of Forestry. (See footnote, p. 102.)

Eldorado Aviation Limited.-This company was incorporated Apr. 23, 1953 to carry air traffic, both passenger and freight, for Eldorado Mining and Refining Limited and its wholly owned subsidiary, Northern Transportation Company Limited. It reports to Parliament through the Minister of Trade and Commerce.

Eldorado Mining and Refining Limited.-Set up in 1944 under the name of Eldorado Mining and Refining (1944) Limited (the date was omitted from the name in June 1952), the company's business is the mining and refining of uranium and the production of nuclear fuels in Canada. The company has also entered into contracts for the purchase of uranium concentrates from private producers in Canada. It reports to Parliament through the Minister of Trade and Commerce.

Export Credits Insurance Corporation.-This Corporation commenced operations in 1945 under the Export Credits Insurance Act, 1944 (RSC 1952, c. 105, as amended by 1953-54 c. 15, 1957 c. $8,1957-58 \mathrm{c} .15,1959 \mathrm{c} .24$, and $1960-61 \mathrm{c} .33$ ) and is administered by a Board of Directors (including the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance) with the advice of an Advisory Council. Its function is to insure Canadian exporters against non-payment by foreign buyers arising out of credit and political risks involved in foreign trade. The Corporation is also authorized to provide financing in respect of an export transaction involving extended credit terms. It reports to Parliament through the Minister of Trade and Commerce.

Farm Credit Corporation.-This Corporation was established on Oct. 5, 1959 (SC 1959, c. 43) for the purpose of providing for the extension of long-term mortgage credit to farmers. The Corporation is responsible to Parliament through the Minister of Agriculture.

Fisheries Prices Support Board.-The Board was set up in July 1947 (RSC 1952, c. 120) to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and cooperative firms in the industry. The Board has authority to buy fishery products and to sell or otherwise dispose of them or to pay producers the difference between a price prescribed by the Board and the average price the product actually commands.

Industrial Development Bank.-The Bank, a subsidiary of the Bank of Canada, was incorporated in 1944 to provide loans to industrial enterprises where financing is not available through recognized lending organizations. (See footnote, p. 102.)

National Battlefields Commission.-This Commission was established by Act of Parliament in 1908 to preserve the historic battlefields at Quebec City. The Commission is composed of nine members, seven being appointed by the Federal Government and one each by the Provinces of Ontario and Quebec. The Commission is supported by an annual statutory grant from the Federal Government and is responsible to Parliament through the Minister of Northern Affairs and National Resources.

National Capital Commission.-This Commission is a Crown agency created by the National Capital Act (SC 1958, c. 37), proclaimed Feb. 6, 1959. It is the lineal descendant of the Federal District Commission.

The Commission is served by a full-time paid chairman and comprises a total of twenty members representative of the ten provinces of Canada. There is a staff of seven officials reporting to a general manager, and a permanent work force of about 600 .

Co-ordination and development of public lands in the National Capital Region are undertaken by direct planning and construction by the Commission's staff; by co-operation with municipalities; by provision of planning aid or financial assistance in municipal projects; and by advising the Department of Public Works on the siting and appearance of all Federal Government buildings in the 1,800 -sq. mile National Capital Region. The Commission reports to Parliament through the Minister of Public Works.

National Gallery of Canada.-The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquis of Lorne, then Governor General, had recommended and assisted the founding of the Academy. One of the three tasks he assigned to that institution was the establishment of a National Gallery at the seat of government.

By Act of Parliament in 1913, re-enacted in 1951, the National Gallery was placed under the management of a Board of Trustees appointed by the Governor General in Council and now operates under the National Gallery Act (RSC 1952, c. 186). It is responsible to Parliament through a Minister of the Crown (at present the Minister of Citizenship and Immigration).

The first charge of the National Gallery is the development and care of the national art collections. Through its Exhibition Extension Service, travelling exhibitions, educational services such as lectures and art films, guided tours of the National Gallery collections in Ottawa and other services to the general public are controlled. In addition, the National Gallery publishes art publications and reproductions which are distributed by the Queen's Printer.

National Harbours Board.-The Board was established by Act of Parliament in 1936. It is responsible for the administration of port facilities at Halifax, Saint John, Chicoutimi, Quebec, Trois Rivières, Montreal, Vancouver and Churchill, the Jacques Cartier and Champlain bridges at Montreal Harbour, and the government grain elevators at Prescott and Port Colborne, Ont. The Board is responsible to Parliament through the Minister of Transport.

National Productivity Council.-Established by Act of Parliament (SC 1960, c. 4), the Council operates under the terms of the National Productivity Council Act assented to Dec. 20, 1960. The Council consists of 25 members, one of whom is designated Chairman, and includes five members from industry and commerce, five from organized labour, five from agriculture and primary industry, five from the general public, four officers or employees of Her Majesty, and an Executive Director.

The function of the Council is to promote and expedite contin uing improvement in productive efficiency in the various aspects of Canadian economic activity and in particular to foster and promote (1) the development of improved production and distribution methods; (2) the development of improved management techniques; (3) the maintenance of good human relations in industry; (4) the use of training programs; (5) the use of re-training programs; (6) the extension of industrial research programs; and (7) the dissemination of technical information. The proceedings of the Council, which is not an agent of Her Majesty, are reported to Parliament each year through the Ministers of Trade and Commerce and Labour. (See footnote, p. 102.)

National Research Council.-In 1917 the Research Council Act was passed and in 1928 laboratories for scientific research were established at Ottawa. The National Research Council now has Divisions of Pure and Applied Chemistry, Building Research, Mechanical Engineering, the National Aeronautical Establishment, Radio and Electrical Engineering, Pure and Applied Physics and Applied Biology. Regıonal laboratories have been established at Saskatoon, Sask., and Halifax, N.S. A Medical Research Council fully responsible for policy in the field of medical research, but functioning under the general administration of the National Research Council, was established in November 1960. Patentable processes and improvements developed by the Council are made available under licence to industry through a Crown company, Canadian Patents and Developments Limited.

The National Research Council reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Northern Canada Power Commission.-The Commission was established by Act of Parliament in 1948 to provide electric power to points in the Northwest Territories where a need developed and where power could be supplied on a self-sustaining basis; the Act was amended in 1950 to give authority to the Commission to provide similar services in Yukon Territory. The name of the Commission, formerly Northwest Territories Power Commission, was changed in 1956. The

Commission is composed of a chairman and two members appointed by the Governor in Council. The Commission operates four hydro-electric plants, two of which are located in the Northwest Territories on the Snare River near Yellowknife, and two in the Yukon Territory on the Yukon River at Whitehorse and on the Mayo River near Mayo, and diesel electric plants at Fort Smith, Fort Simpson, Fort Resolution, Frobisher Bay, N.W.T., and Field, B.C., and a diesel power and central heating plant and water supply and sewerage systems at Inuvik, N.W.T.; the Commission also operates, on behalf of the Department of Northern Affairs and National Resources, a small diesel electric and heating plant at Fort McPherson, N.W.T., and a central heating plant and domestic water supply system at Fort Simpson, N.W.T.

The Minister of Northern Affairs and National Resources reports to Parliament for the Commission.

Northern Ontario Pipe Line Crown Corporation.-This Corporation was established by the Northern Ontario Pipe Line Crown Corporation Act (SC 1956, c. 10) for the purpose of constructing the northern Ontario section of the all-Canadian natural gas pipeline and of leasing, with an option to purchase, this section to Trans-Canada Pipe Lines Limited. The northern Ontario section, which extends from the Manitoba-Ontario border to the vicinity of Kapuskasing, Ont., was completed on Oct. 22, 1958 and is now under lease to Trans-Canada Pipe Lines Limited. The Corporation is responsible to Parliament through the Minister of Trade and Commerce. (See footnote, p. 102.)

Northern Transportation Company Limited.-This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the date being omitted from the name in 1952. Previously a company chartered under an Alberta statute, it has been a wholly owned subsidiary of Eldorado Mining and Refining Limited since that Crown company was established and carries out the business of a common carrier in the Mackenzie River watershed. The Company is responsible to Parliament through the Minister of Trade and Commerce.

Park Steamship Company Limited.-After World War II this Company acted as an agent for Crown Assets Disposal Corporation in the sale and delivery to purchasers of government warbuilt ships. This work is completed but the Company remains available to carry out any appropriate duties. It has no staff of its own, any necessary work being done by the staff of the Canadian Maritime Commission (see p. 105). The Company reports to Parliament through the Minister of Transport.

Polymer Corporation Limited.-This Corporation was established in 1942 by Letters Patent under the Companies Act and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and the Financial Administration Act (RSC 1952, c. 116). It was set up to construct and operate a synthetic rubber plant which now produces a variety of synthetic rubber products and some chemicals. The Corporation's principal plant is located at Sarnia, Ont., with specialty rubber and butyl plants in France and Belgium, respectively. The Corporation is responsible to Parliament through the Minister of Defence Production.

St. Lawrence Seaway Authority.-The St. Lawrence Seaway Authority was established by Act of Parliament in 1951 (RSC 1952, c. 242) and came into force by proclamation on July 1, 1954. The Authority was incorporated for the purposes of constructing, maintaining and operating all such works as may be necessary to provide and maintain, either wholly in Canada or in conjunction with works undertaken by an appropriate authority in the United States, a deep waterway between the Port of Montreal and Lake Erie. The Authority is composed of a President and a Vice President and reports to Parliament through the Minister of Transport.

Trans-Canada Air Lines.-TCA came into being by Act of Parliament in 1937 (RSC 1952, c. 268) to provide for the development of a publicly owned scheduled transcontinental air service. Transatlantic air services were inaugurated by TCA on behalf of the Canadian Government during World War II and scheduled operations were commenced at the end of the War. TCA now maintains passenger, mail and commodity traffic services over nationwide routes and also services to the United States, England, Scotland, Ireland, France, Belgium, Switzerland, West Germany, Austria, Bermuda, the Bahamas, Jamaica, Antigua, Barbados and Trinidad. TCA is responsible to Parliament through the Minister of Transport.

Unemployment Insurance Commission.-The Commission was appointed on Sept. 24, 1940 under the provisions of the Unemployment Insurance Act, 1940 (RSC 1952, c. 273) for the purpose of administering the Act and providing a National Employment Service. It is composed of three Commissioners appointed by the Governor in Council, of whom one is designated Chief Commissioner. One Commissioner, other than the Chief Commissioner, is appointed after consultation with organizations representative of workers and the other after consultation with organizations representative of employers. The Chief Commissioner is appointed to hold office for a period of ten years and each of the other Commissioners to hold office for a period not exceeding ten years. The Commission is responsible to Parliament through the Minister of Labour.

## Section 3.-Acts Administered by Federal Departments*

## List of the Principal Acts of Parliament Administered by Departments of the Government of Canada

Nore.-Copies of individual Acts of Parliament and amendments may be obtained from the Queen's Printer, Ottawa, at prices of from 10 cents to $\$ 1.50$ per copy according to number of pages. Where duplications of certain Acts appear in the list, parts of these Acts are administered under the Departments given.

## PART IV.-FEDERAL GOVERNMENT EMPLOYMENT

The Civil Service Commission.-As the central personnel agency of the Federal Government, the Civil Service Commission is the custodian of the merit system in the Civil Service of Canada. It is also concerned, however, with many other aspects of personnel administration.

The Civil Service Commission was first established in 1908 under the provisions of the Civil Service Amendment Act of that year which introduced the principle of selection by order of merit for positions in Ottawa. Prior to that, a Board of Examiners (established in 1882) held qualifying examinations for appointment to the service but it did not have the power to appoint. In 1918, the Civil Service Amendment Act was superseded by a Civil Service Act which had the effect, among other things, of bringing positions outside of Ottawa, as well as those at headquarters, under the jurisdiction of the Act and consequently the Commission. This Act served Canada and the civil service well for over four decades until with the passage of time it, too, was in need of substantial amendment. This was accomplished through a new Civil Service Act which received Royal Assent in September 1961 and which came into effect on Apr. 1, 1962.

The new Act applies to about 130,000 employees in all the departments and certain agencies of government and this constitutes the 'civil service' within the legal meaning of that term. The 'public service' is defined as those departments and agencies listed in Schedule A of the Public Service Superannuation Act which embrace about 180,000 employees including the 130,000 under the Civil Service Act. This definition of public service does not include certain Crown corporations-for example, the Canadian Broadcasting Corporation, the Central Mortgage and Housing Corporation, the Canadian National Railways and the Trans-Canada Air Lines. Agencies outside the civil service make their own arrangements, in accordance with various statutes, for the selection and employment of staff.

Recruitment.-The recruitment of civil servants under the Civil Service Act is conducted by means of open competitive examinations through which every citizen has the opportunity to compete for positions in the service of his country. Examinations are held periodically as staff requirements of the civil service dictate. Ordinarily, any Canadian citizen may apply for headquarters positions at Ottawa but applicants for local positions must normally be residents of the locality in which the vacancy occurs. Competitive examinations are announced through the press and through posters displayed on the public notice boards of the larger post offices, offices of the National Employment Service, offices of the Civil Service Commission and elsewhere. The examinations may be written, oral, a demonstration of skill, or any combination of these.

The names of persons successful in civil service examinations, arranged in order of rank, are recorded on eligible lists. Examination results are formally announced by publication in the Canada Gazette and each candidate-successful or unsuccessful-is advised of his standing. Appointments are made as required from the eligible lists which usually remain valid for one year.

The rank of the various successful candidates on eligible lists is influenced by the veterans' preference. Actually the preference is limited largely, in accordance with its definition by law, to members of the Armed Forces who have served overseas in World Wars I or II or in the Korean theatre of operations. The highest order of preference is the disability preference accorded to pensioners of the Armed Forces who, as a result of their war service, have been unable to resume their pre-war civilian occupations.

The operations of the Civil Service Commission are decentralized to a considerable degree and the Commission now has ten district offices and six sub-offices across the country. These offices have a significant measure of autonomy enabling them to give quick and efficient service to the field agencies of departments which comprise over threequarters of the civil service.

Each year the Civil Service Commission conducts about 5,000 competitions, receives about 180,000 applications and makes about 20,000 appointments, mainly to offset the turnover occasioned by deaths, retirements, resignations and the other forms of attrition. One feature of its recruiting program is the annual selection of 700 or more university graduates. There are some 10,000 university graduates in the civil service and, of course, many more in agencies and corporations not under the Civil Service Act.

Promotion.-It is a prime feature of the Civil Service Act to create a career service. The result is that promotion, like entrance, is based on merit and a sound promotion system is in operation. Promotion competitions are of two kinds, inter-departmental and departmental. The former are open to employees of all departments and agencies and are conducted by the Civil Service Commission. The latter, the departmental competitions, are restricted to employees of one department or a portion of a department and are conducted by the departments themselves subject to audit and approval by the Commission. There is appeal machinery under Commission jurisdiction for those employees who feel that their qualifications have not been properly assessed. Each year approximately 6,000 promotion competitions are conducted and as a result of these about 20,000 employees are promoted.

Position Classification.-Provision is made in the Civil Service Act for the classifying of positions in the civil service. A formal system of position classification was first instituted in 1919 and positions with like duties and responsibilities were classified alike and remunerated equally. Each position has a title, a set of tasks or duties which are proper to it in the organization in which it occurs and, arising out of these duties, a set of qualifications appropriate for their performance. Positions with duties of a similar kind are grouped together under a common title to form a class and grades within the class reflect the level of responsibility. There are some 1,800 classes and grades in the civil service and the Commission is constantly reviewing them to ensure that the specifications are accurate. Position classification is a mainspring in the Commission's primary function of recruitment, involving as it does the fixing of standards of qualification for each class of position.

Salary Determination.-It is also a responsibility of the Civil Service Commission to recommend to the Governor in Council rates of pay for each class and grade in the civil service. In order that its recommendations may be soundly based, the Commission has established a Pay Research Bureau which provides objective information on compensation and working conditions for various occupations in government, business and industry. These data are studied in relation to comparable classes in the civil service and in combination with other relevant factors-such as the need to recruit and retain sufficient staff, and in the light of the relationship of one class to another-and after this process is complete a recommendation is submitted to the Governor in Council for consideration. The Governor in Council also fixes the salaries for those employees who are not under the Civil Service Act.

Organization and Methods.-In recent years there has been an increasing awareness of the extent to which economical administration depends on the adoption of modern management techniques and devices. To meet this need the Commission has created a Management Analysis Division and an Organization Division to study problems of management in collaboration with officials directly responsible for major areas of administration. These Divisions afford practical assistance to departments and other agencies of the Government through the systematic examination of structures, operations, procedures and work methods. Their facilities are offered free of charge to all departments.

Staff Training.-In 1947 the Commission set up a Staff Development and Training Division to promote and guide a systematic service-wide training scheme. The training scheme sponsored by the Commission is a joint venture undertaken in co-operation with the various departments, most of which have parallel training divisions. The Commission's Staff Development and Training Division is primarily a co-ordinating agency. It promotes
and organizes training activities, trains departmental instructors in the presentation of courses, prepares and gives certain courses of general application to all departments, publishes booklets and other training aids, assists departments in developing training to meet specialized needs and acts as a general clearing-house for the exchange of information on training matters. It also studies requests for educational leave in order to satisfy itself that such leave is in the public interest.

Employee Relations.-The Civil Service Act confers on recognized staff associations the right to be consulted on matters of remuneration and conditions of employment. This consultation may be initiated by either the official or staff sides and may take three forms. On questions of remuneration, which include certain allowances as well as pay, the consultation takes place between the associations and the Minister of Finance or such members of the public service as he may designate and this may, of course, include members of the Commission. On terms and conditions of employment as enumerated in Sect. 68 (1) of the Civil Service Act (which are mainly those with a fiscal effect, such as leave), the consultation takes place between the associations and the Commission and such members of the public service as the Minister of Finance may designate. On those terms and conditions of employment that come within the exclusive jurisdiction of the Commission, the consultation takes place between the associations and the Commission alone. This form of tripartite consultation was introduced on Apr. 1, 1962 when the new Civil Service Act came into force and is designed to be consistent with the distribution of authority in the Act. It is expected to introduce a more sophisticated employee-employer relationship to the federal civil service.

Statistics of Federal Government Employment.*-The current monthly survey of Federal Government employment, started in 1952, covers all employees of the Government of Canada; employees in this sense exclude the Governor General and LieutenantGovernors, Ministers of the Crown and Members of Parliament, judges, persons under contract and members of the Armed Forces, but include Force members of the Royal Canadian Mounted Police. The survey is divided into two main categories: (1) departmental branches, services and corporations, and (2) agency and proprietary corporations and other agencies. Table 1 combines the two groups; Tables 2 to 6 cover employees in the first category and Table 7 covers employees in the second category.
*Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

The first of what will be an annual survey of employment in departmental branches, services and corporations in metropolitan areas was prepared covering the month of March 1961. This report, entitled Federal Government Employment in Metropolitan Areas (Catalogue No. 72-205), contains details of the number of employees at Mar. 31, 1961 and the earnings of all persons employed during that month. Summary statistics are given in Table 8.

Departmental Branches, Services and Corporations.-The salaries of employees in this group are paid from the Consolidated Revenue Fund. Definitions of classifications are as follows. "Salaried" employees include all persons paid on the basis of an annual salary rate with the exception of ships' officers who, though paid an annual salary rate, are subject to special treatment under the regulations made pertaining to the Financial Administration Act. The salaried staff are employed in departmental branches, services and corporations which are subject to regulation by the Treasury Board and for which the positions are outlined in detail in the Estimates of Canada, or are established by means of supplementary Treasury Board Minutes. Thus this category of employees includes persons subject to the provisions of the Civil Service Act plus salaried persons employed on the staffs of Cabinet Ministers and appointed by statute or by Order in Council, and also the salaried staffs of certain administrative branches of the Government that do not fall under the jurisdiction of the Civil Service Act.
"Prevailing Rate" employees are those who occupy continuing positions that are subject to prevailing rate regulations and are therefore paid on the basis of standard wage rates for similar work in the area in which the individual is employed. Regulations made under authority of the Financial Administration Act govern the third group entitled "Ships' Officers and Crews"

These three groups comprise what may be called the "regular" employees of the government service. "Casuals and Others" are principally persons employed on a noncontinuing basis.

Table 5 presents statistics for departmental branches, services and corporations on the basis of a classification by function. The purpose of such classification is to supply a means of studying the operation of government without the complication that results from differences in administrative establishment. This analysis is useful in three ways. First, it permits a detailed study of employment by the Government of Canada according to the main purposes or functions and, since these functions are not subject to the periodic changes that alter the administrative structure of the Government, it is possible to develop a statistical series which, with minor exceptions, is consistent over an extended period of time. Secondly, since differences in administrative establishment are eliminated, it is possible to make meaningful comparisons between Federal Government expenditures on employment and similar expenditures by other levels of government. Thirdly, an analysis of the relationship between expenditures on employment and total expenditures may be made with regard to each function.

Table 6 is an administrative analysis of departmental branches, services and corporations, showing data for these bodies as they were organized at Mar. 31, 1961. Because of periodic changes in the administrative structure of the Government, comparisons over a period of years should be based on the classification by function given in Table 5. Although most salaried staffs fluctuate little during the year, the Taxation Branch of the Department of National Revenue increases its staff considerably in March and April because of the heavy flow of income tax returns during that period, the Legislation branches employ extra staff during each session of Parliament, and several departments employ considerable numbers of students in the summer months. Prevailing rate and other types of employment generally reach a peak in numbers during summer and decline to a lower level in winter.

## 2.-Employees in Departmental Branches, Services and Corporations of the Federal Government, at End of Each Month, Years Ended Mar. 31, 1960 and 1961

Nore.-Excludes agency and proprietary corporations and other agencies, figures for which are given in Table 7.

## PART V.-CANADA'S EXTERNAL RELATIONS*

Canada's Status in the Commonwealth.-The Imperial Conference held in London in 1926 marked a turning point in the history of the then British Empire and was an important step in the evolution from an Empire to a Commonwealth. At the 1926 Conference the self-governing countries, consisting of Britain and the Dominions, were described as being "autonomous countries within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations" The Governors General of the Dominions were recognized as having in all essential respects the same constitutional position as the Crown in Britain. It was also stated by the Conference that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". Subsequent to this important meeting, Canada's stature and status in the international community continued to grow. It exercised the powers of treaty-making and established its own diplomatic missions overseas. The Statute of Westminster in 1931 provided more explicit recognition of the principles of equality of status by removing the remaining limitations on the legislative autonomy of Commonwealth countries. As a further development of Canada's independent position, all legal cases started in Canada after Dec. 23, 1949 can no longer be appealed to the Privy Council in London. The Supreme Court of Canada has become, therefore, the final court of appeal for all Canadian legal cases. Talks have been held recently between the federal Minister of Justice and the provincial Attorneys General with a view to planning a program to give Canada the sole right of amending its own Constitution-now an Act of the British Parliament, entitled "The British North America Act of 1867"-and the Government has announced that it intends to introduce legislation to this end in due course.

[^45]Canada's International Status.-The growth of Canada's international status is reflected in the development of the Department of External Affairs. A review of the organization and development of that Department is given in the 1952-53 Year Book, pp. 101-104; a brief outline is given at p. 95 of this volume.

The following Section 1 covers Canadian diplomatic representation abroad and representation of other countries in Canada. Section 2 deals with Canada's main international activities during 1961 with respect specifically to the Commonwealth, the United Nations, and the North Atlantic Treaty Organization. International economic aid programs are covered separately. Although these fields are considered to be the most significant for the purposes of this publication, it should be noted that Canada's activities in other areas are also of importance. The External Affairs Monthly Bulletin* covers all activities of the Department on a detailed, monthly basis.

* Obtainable from the Queen's Printer, Ottawa, $\$ 1$ per year.

## Section 1.-Diplomatic Representation as at Jan. 31, 1962

Nore.-Changes in this listing subsequent to Jan. 31, 1962 and names of current representatives are given in Canadian Representatives Abroad and Representatives of Other Countries in Canada, published thrice yearly and obtainable from the Queen's Printer, Ottawa, price 35 cents per copy.

## Section 2.-International Activities, 1961

## Subsection 1.-Canada and Commonwealth Relations

Membership in the Commonwealth is one of the cornerstones upon which Canadian foreign policy is built, for Canada supports the extension and development of a strong Commonwealth of Nations and believes that no other association throughout the world has a greater influence for good. Commonwealth membership allows Canada to enjoy an especially close, if perhaps undefinable, relationship with a group of important nations which, despite a diversity of ethnic, economic, racial, religious, cultural and political backgrounds, find usefulness in shared ideals and traditions. Exchanges taking place between Commonwealth countries are characterized by a readiness to understand, if not always to agree. Consultations and exchanges of views are the very lifeblood of the Commonwealth; these exchanges are continuous, not only in the capitals of Commonwealth countries but in other capitals, at the United Nations, and at international gatherings.

Besides these continuing consultations at many levels, several special Commonwealth meetings were held in 1961. The Prime Ministers of the Commonwealth met in London in March, the latest of a series of Prime Ministers' Meetings which have been held at intervals since the end of the Second World War. This Meeting was of particular importance as the question of South African membership was considered-a subject of vital interest, the treatment of which was keenly watched throughout the world. The decision of South Africa not to apply for readmission after it had become a Republic was made after its representatives had heard the views of other Commonwealth leaders. The decision can be said to have marked a turning point in Commonwealth relations. This development emphasized the present position of the Commonwealth as an association based on the
principles of equality of colour, race and creed. In September, the Finance and Trade Ministers of the Commonwealth travelled to Accra where they met as the Commonwealth Economic Consultative Council to discuss problems of mutual interest in the economic and financial fields. This Meeting had a particular significance in view of the application to join the European Economic Community made by the British Government. Commonwealth countries spent the last months of the year assessing the effects that British membership in the EEC would have on their respective economic positions and on the Commonwealth as a whole. Among others, Canada expressed concern over the British entry to the EEC and the year closed with feelings of uncertainty among the members over this aspect of Commonwealth relationships.

During 1961 there was an important increase in the membership of the Commonwealth. At the Prime Ministers' Meeting in March, Cyprus applied for and was admitted to membership. A month later, on Apr. 27, Sierra Leone became independent within the Commonwealth and was joined on Dec. 9 by another African State-Tanganyikawhose Prime Minister, Mr. Julius Nyerere, stated his faith in the Commonwealth association in the following words: "Past associations are now behind us; but for the future we are linked with you in the light but enduring bonds which have made the Commonwealth of Nations so potent a force for goodwill and common sense in a world that sorely feels the want of both. I am indeed glad that this should be so." Canada already had High Commissioners accredited to Cyprus and Sierra Leone and announced on Dec. 8 that a Canadian High Commission would be established at Dar-es-Salaam (Tanganyika) early in 1962.

Canada's overseas aid for under-developed countries continued to be directed, in the main, to Commonwealth countries through the Colombo Plan, the Canada-West Indies Aid Programme and the Special Commonwealth African Aid Programme (SCAAP). Canada's total contribution under the Colombo Plan since the Plan's inception exceeds $\$ 330,000,000$; the aid to the West Indies is expected to reach some $\$ 10,000,000$ over the period 1958-63 and Canada has pledged aid to Commonwealth countries in Africa through SCAAP to a total of $\$ 10,500,000$ for the period 1960-63.

Canada is also an active participant in the Commonwealth Scholarship and Fellowship Plan. At the end of 1961 there were approximately 200 Commonwealth students in Canada under this Plan and many Canadians were studying in other Commonwealth countries. Canada has also played a significant part in the training and provision of teachers for service in Commonwealth countries and has assisted in plans for co-operation in technical education.

Commonwealth visitors to Canada during the year included the Prime Minister of Britain, the Rt. Hon. Harold Macmillan; the Premier of British Guiana, Dr. the Hon. Cheddi Jagan; the Premier of the Western Region of Nigeria, the Hon. Chief S. L. Akintola; the Deputy Prime Minister of New Zealand, the Hon. J. R. Marshall; the Foreign Minister of Ghana, the Hon. Ako Adjei; the Minister of Finance of Nigeria, the Hon. Chief F. S. Okotie-Eboh; and two of Sierra Leone's Cabinet Ministers, the Hon. H. M. Mustapha and the Hon. A. Margai.

## Subsection 2.-Canada and the United Nations

Although the 16th session of the General Assembly met under the shadow of the Secretary-General's tragic death and in the uneasy atmosphere of resumed nuclear testing by the Soviet Union, of continued conflict in the Congo and of glowering crisis in Berlin, positive steps were taken in many fields. At the end of the year the United Nations seemed to have emerged from a particularly trying period with renewed confidence in its capacity to face the future. The most urgent task before the Assembly was the appointment of a successor to Mr. Hammarskjold, a task complicated by Soviet insistence on a "troika"
reform of the office of the Secretary-General. After intensive behind-the-scenes negotiations, the Security Council recommended the appointment of the Permanent Representative of Burma to the United Nations, U Thant, as Acting Secretary-General for the unexpired portion of Mr. Hammarskjold's term. A resolution to this effect was adopted unanimously by the General Assembly on Nov. 3.

At the 16th session, Canada took the lead in focusing world attention on the hazards created by increasing levels of fallout from atmospheric explosions. The Assembly unanimously adopted a Canadian resolution calling for a new program for measuring the incidence of radioactive fallout and endorsing the view that principles of international law and concern for the future of mankind impose responsibilities on any State whose actions increase the level of radioactive fallout. Canada also gave active support to resolutions calling for the cessation of nuclear tests and co-sponsored an appeal to the Soviet Union not to carry out its intention to explode a 50 -megaton nuclear bomb.

In the field of disarmament, Canada underlined the desirability of an expansion of the ten-power disarmament negotiating body, of which Canada is a member, to include new members representing the main geographical areas of the world. A resolution reflecting United States-Soviet Union agreement along these lines was approved unanimously by the Assembly. The Assembly had previously agreed on a set of principles to guide the negotiations which are expected to re-open early in 1962.

On the question of outer space, Canada co-sponsored a resolution endorsing the principle that international law, including the United Nations Charter, applies to outer space and celestial bodies and that, while outer space is open for exploration and use by all States, it is not subject to national appropriation. This resolution, which won unanimous approval, also set the stage for international co-operation in the peaceful uses of outer space, particularly in the telecommunications and meteorological fields.

In the economic sphere, Canada secured the adoption of its proposal for a world food bank which had been put forward by the Canadian Prime Minister at the General Assembly in 1960 .

At the second half of the 15th session in the spring of 1961, Canada had taken the initiative to focus Assembly attention on the growing financial difficulties facing the organization. At the 16th session, the Assembly took extraordinary steps to deal with these acute problems, resulting in the main from the heavy costs of the peace-keeping operations. Canada took a lead in securing the adoption of a resolution seeking an advisory opinion from the International Court of Justice on the question of the legal obligations of members to contribute to the costs of United Nations operations in the Middle East and the Congo. Canada also co-sponsored a second resolution authorizing the SecretaryGeneral to issue bonds in the amount of $\$ 200,000,000$ to be repaid from the regular budget over a period of 25 years. The proceeds from the bond issue will be used to meet the growing cash deficit of the United Nations. Canada's attitude on these questions reflects its interest in developing the peace-keeping role of the United Nations and in establishing a sound financial basis whereby the burden carried by Canada and other nations participating in peace-keeping activities will be equitably shared by the whole membership of the United Nations.

Unable to complete all of the items on its agenda, the Assembly adjourned on Dec. 20, after a decision to resume its work on Jan. 15, 1962 with an agenda including Angola, Ruanda Urundi, British Guiana, Southern Rhodesia and the Cuban complaint against the United States.

Canada's membership on subsidiary organs of the General Assembly was, in 1961, augmented by the election to the International Law Commission of Mr. Marcel Cadieux, Deputy Under-Secretary of State for External Affairs. He is the first Canadian to receive this honour, reflecting interest in Canada's distinctive position vis-à-vis two great legal systems of the world.

Although not a member of any of the Councils of the United Nations in 1961, Canada followed their progress with close attention. The Security Council held 68 meetings during the year, of which 27 were devoted to the situation in the Congo. A resolution of Feb. 21 authorized the Secretary-General to use force, if necessary, as a last resort to prevent civil war; it also called for the withdrawal of foreign mercenaries and political advisers. When, after a period of protracted struggle, the Congo was again discussed in November, the Security Council passed a resolution authorizing the use of force, if necessary, to apprehend foreign mercenaries. (Efforts toward conciliation in the Congo were also continued by the Congo Advisory Committee.)

Eleven meetings of the Security Council were devoted to the situation in Angola, six to the Tunisian complaint on Bizerte, four to the complaint of Kuwait and the counter complaint of Iraq, three to the Cuban complaint against the United States, three to the Cuban complaint about "imminent armed intervention" by the United States in the Dominican Republic, three to a Jordanian complaint against Israel, two to the Portuguese complaint against India in connection with Gôa, and one private meeting each to the appointment of an Acting Secretary-General and to the report of the Security Council to the 16th session of the General Assembly.

The Security Council also recommended the admission of Sierra Leone, Mauretania, Outer Mongolia and Tanganyika to the United Nations. With the resumption by Syria of the seat it had vacated to join with Egypt in the United Arab Republic, membership in the United Nations stood at 104 at the end of the year.

During 1961, the membership of the Security Council was as follows: Permanent Members-China, France, Britain, the United States and the Union of Soviet Socialist Republics; Non-permanent Members-Ceylon, Chile, Ecuador, Liberia, Turkey and the United Arab Republic. On Jan. 1, 1962, Ghana, Venezuela and Romania replaced Ceylon, Ecuador and Turkey. In accordance with an agreement reached in 1960, Liberia resigned its seat on Dec. 31, 1961, and was replaced by Ireland.

The Economic and Social Council (ECOSOC) continued its active role in promoting international co-operation in the economic and social fields. Specifically, regional matters were considered in detail by the Economic Commissions for Europe (ECE), for Asia and the Far East (ECAFE), for Latin America (ECLA) and for Africa (ECA). ECOSOC had, moreover, reports from its Social Commission and its other functional commissions on Narcotic Drugs, International Commodity Trade, the Status of Women, Population, Statistics, Transport and Communications, Human Rights and Social Conditions. At the end of 1961 Canada was a member of the first three of these functional bodies.

Canada is also a member of the Governing Council of the United Nations Special Fund, a new international assistance program intended to enlarge the scope of existing United Nations activities in such fields as surveys of water, mineral and potential power resources, the establishment of institutions of public administration, statistics and technology, and the development of centres for agricultural and industrial research.

The Trusteeship Council, of which Canada has never been a member, completed a year of close supervision of the administration of agreements between the United Nations and those member States that have responsibility for trust territories. Intended to comprise administering trust territories and an equal number of non-administering States, including permanent members of the Security Council not represented in the first group, the Council had an unbalanced membership in 1961. With the retirement of Burma, Paraguay and the United Arab Republic, the Council will regain a balanced membership of ten during 1962 (five administering authorities-Australia, Belgium, New Zealand, Britain and the United States; and five non-administering members-China, France, the U.S.S.R., Bolivia and India).

By the end of 1961, only four of the original eleven trust territories remained under the jurisdiction of the Council-New Guinea, Nauru, the Pacific Islands, and Ruanda Urundi. During the course of the year, three trust territories-the British Cameroons, Tanganyika and Western Samoa-achieved their independence. Tanganyika became the

104th member of the United Nations. By plebiscites in the British Cameroons, the Northern and Southern portions voted to join the Federation of Nigeria and the Republic of Cameroun, respectively. It is expected that Ruandi Urundi will achieve independence in 1962; conditions in that territory were of live concern to the Council and the administering authority (Portugal) at the 16th session of the Assembly.

Canadian Financial Contributions to the United Nations.-Canada's assessed share of the costs of United Nations peace-keeping operations in the Congo and the Middle East amounted to approximately $\$ 4,300,000$ in 1961. Canada's share of the remaining expenses of the United Nations in 1961 was 3.1 p.c. of a net budget of $\$ 60,700,000$ or some $\$ 1,900,000$ with an additional amount of approximately $\$ 2,000,000$ going to the regular assessed budgets of the various Specialized Agencies and the International Atomic Energy Agency.

A number of voluntary programs of assistance are carried on by the United Nations and its Specialized Agencies to which Canada contributed the following in 1961:-

|  | \$ |
| :---: | :---: |
| Expanded Programme of Technical Assistance (EPTA) | 2,000,000 (U.S.) |
| United Nations Children's Fund (UNICEF) | 650,000 (Can.) |
| United Nations Relief and Works Agency for Palestine (UNRWA), including $\$ 1,500,000$ worth of wheat flour | 2,000,000 (Can.) |
| United Nations High Commissioner for Refugees (UNHC | 290,000 (Can.) |
| Special Fund. | 2,000,000 (U.S.) |

As a special contribution to World Refugee Year, Canada had by the end of 1961 admitted three groups of tubercular refugees totalling with their families 826 persons of whom 325 were tubercular. By June of 1961 , only 43 of these refugees still remained in sanatoria. Voluntary donations from private citizens to WRY totalled more than $\$ 2,500,000$.

Specialized Agencies.-Canada is a member of each of the twelve Specialized Agencies of the United Nations. These Agencies are bodies with wide international responsibilities established by intergovernmental agreement which act in relationship with the United Nations in order to carry out the terms of the Charter. Co-ordination of the activities of the Specialized Agencies is promoted by the Administrative Committee on Co-ordination established by the Economic and Social Council.

Canada is also a member of the International Atomic Energy Agency which, while not a Specialized Agency, plans its activities with them and co-operates in its work with the Administrative Committee on Co-ordination.

The Food and Agriculture Organization.-The Food and Agriculture Organization (FAO) came into being in 1945, the first Conference being held in that year in Quebec City. The objectives of the organization are to raise the levels of nutrition and living standards of its members and to improve the techniques of the production and distribution of food and agricultural, fisheries and forestry products. To this end, the FAO Secretariat collects, analyses and distributes technical and economic information and encourages appropriate national and international action.

A 25 -member Council, of which Canada has been a member since 1945, meets twice a year to give direction and policy guidance to the Secretariat; the FAO Conference, which is the governing body of the organization, meets every other year. Headquarters are in Rome, Italy, where the 11th Conference took place late in 1961.

Canada has participated actively in FAO activities and is a member of the Council the Committee on Commodity Problems (CCP), the Consultative Sub-Committee on Surplus Disposal, the FAO Group on Grains, the North American Forestry Commission and
other FAO bodies. A number of Canadians are on the staff at Rome headquarters, and many Canadians have undertaken assignments under FAO technical assistance programs. Canadian membership in the organization is provided for by an Act of the Canadian Parliament passed in 1945. A committee of officials from Canadian Government Departments (the Canadian Interdepartmental FAO Committee) has been established to maintain liaison between the FAO Secretariat and the Canadian Government.

The United Nations Educational, Scientific and Cultural Organization.-The United Nations Educational, Scientific and Cultural Organization (UNESCO) was established in 1946 "to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law, for human rights and fundamental freedoms"

Total membership in the Organization includes 101 States and four associate members. The Organization is made up of three principal organs-the General Conference, which is the policy-making body, the Executive Board and the Secretariat. Representatives from member States make up the General Conference which meets every two years to consider applications for membership, elect the Executive Board, plan the program and approve the budget for the ensuing two-year period. The latest General Conference was held at the Headquarters of the Organization in Paris in November and December 1960. (See also Sect. 5 of Part II of the Education and Research Chapter of this volume.)

International Bank for Reconstruction and Development.-The International Bank for Reconstruction and Development (IBRD) was formed at the same time as the International Monetary Fund for three main purposes: (1) to facilitate the investment of capital for productive purposes; (2) to promote private foreign investment by means of guarantees or of participation in loans by private investors; and (3) to make loans where private capital is not available on reasonable terms. From its inception to June 30, 1961, the Bank has made 292 loans in some 57 member countries and territories. The cumulative total of Bank loans, net of cancellations and refundings, was $\$ 5,669,000,000$ as of June 30, 1961, of which $\$ 4,320,000,000$ had been disbursed by that date. Of the latter amount $\$ 1,452,000,000$ had been repaid to the Bank or sold to other investors. The effective loans held by the Bank at June 30 stood at $\$ 3,996,000,000$. Canada's subscription to the Bank was raised from $\$ 375,000,000$ to $\$ 750,000,000$ in 1959.

International Civil Aviation Organization.-The International Civil Aviation Organization (ICAO), with headquarters in Montreal, is the only Specialized Agency of the United Nations with headquarters in Canada. Canada has been a member of the 21-nation Council, which has sat in almost continuous session in Montreal, since ICAO was provisionally established in 1945. At a Special Assembly of ICAO held in June 1961, there was drawn up a Protocol of Amendment to the ICAO Convention which, if ratified by a required number of Member Nations, will raise the size of Council to 27. Canada has already ratified the Protocol.

The International Development Association.-The International Development Association came into being on Sept. 26, 1960 as an affiliate of the IBRD and commenced operations on Nov. 8, 1960. It seeks to promote economic development, increase productivity and raise standards of living in the less-developed areas covered by the Association's membership. It does this by providing loans to the less-developed countries on terms more flexible and bearing less heavily on their balance of payments than those of conventional loans. Canada's share of total subscriptions is $\$ 37,830,000$ (U.S.).

The International Finance Corporation.-The function of the International Finance Corporation, which is an affiliate of the IBRD, is to promote the growth of productive private enterprise by assisting private capital, by acting as a clearing house in bringing together investment opportunities and private capital and by helping to enlist managerial skill and experience when not otherwise available to a project. Canada has subscribed $\$ 3,520,000$ to the capital of the Corporation.

International Labour Organization.-The International Labour Organization was originally associated with the League of Nations and became a Specialized Agency of the United Nations in 1946. It brings together representatives of governments, employers and workers from member States in an attempt to promote social justice by improving working and living conditions in all parts of the world. To further this goal, meetings are held usually on an annual basis, the latest of which took place in Geneva in June of 1961. ILO is responsible for the execution of a number of training projects which are financed by the United Nations Special Fund.

Intergovernmental Maritime Consultative Organization.-Canada as a member of the Intergovernmental Maritime Consultative Organization (IMCO) with headquarters in London, England, was represented at the Second Session of the IMCO Assembly which was held in London in April 1961. In addition, Canada as a member of the IMCO Council attended meetings of the Council held in London during the year.

The International Monetary Fund.-The International Monetary Fund, set up by the Bretton Conference of 1944, came into being in 1945. It provides machinery for international consultation and collaboration on monetary, payments and exchange problems. Included in these purposes are the promotion of exchange stability, the elimination of exchange restrictions, the establishment of a multilateral system of current payments and the expansion and balanced growth of international trade. Also, member countries under certain conditions may draw on the resources of the Fund, which now amounts to some $\$ 14,000,000,000$. Canada has been represented on the Fund's Board of Executive Directors since 1945.

International Telecommunication Union.-Canada is a member of the International Telecommunication Union (ITU), a Specialized Agency of the United Nations, which traces its origin to the International Telegraph Convention of 1865 and the International Radio Telegraph Convention of 1906. The Administrative Council of the ITU met in Geneva in the spring of 1961; Canada was represented at this meeting and at meetings of subsidiary bodies that took place during the year.

Universal Postal Union.-One of the oldest and largest of the Specialized Agencies, the Universal Postal Union (UPU), was founded in Berne in 1874 with the principal aim of improving postal services throughout the world and promoting international collaboration. The Universal Postal Congress is the supreme authority of the UPU and meets every five years to review the Universal Postal Convention and its subsidiary instruments. In the interim, activities of the Union are carried on by an Executive and Liaison Committee, a Consultative Committee on Postal Studies and an International Bureau. At the Congress held in Ottawa in 1958, Canada was elected to the Executive and Liaison Committee. The 15th Congress is scheduled to be held in New Delhi in 1962.

World Health Organization.-The World Health Organization, which came into being in 1948, is one of the largest of the Specialized Agencies of the United Nations with a membership of 104. Functioning through the World Health Assembly, an organization composed of an Executive Board, a Secretariat and six Regional Committees, WHO acts as a directing and co-ordinating authority on international health matters. In addition, it provides advisory and technical services to help countries develop and improve their health services. The 14th World Health Assembly was held in New Delhi in February 1961. (See also the item "International Health" in Subsection 5, Section 1, Part I of the Public Health, Welfare and Social Security Chapter of this volume.)

World Meteorological Organization.-Canada is a member of the World Meteorological Organization (WMO), a Specialized Agency of the United Nations since 1951 but developed from the International Meteorological Organization which was founded in 1878. Mr. P. D. McTaggart-Cowan, Director of Meteorological Services, Department of Transport, an elected member of the Executive Committee of WMO, attended the 12 th session of the

Executive Committee held in WMO's new headquarters building in Geneva in the summer of 1961. Canada was also represented at a number of meetings of subsidiary bodies of WMO.

The International Atomic Energy Agency.-Formed in 1957, the International Atomic Energy Agency (IAEA) is an autonomous international organization under the aegis of the United Nations. The Agency was given a mandate to seek to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world in a variety of ways.

Because Canada is considered to be one of the five members most advanced in nuclear technology, including the production of source materials, this country has served on the Board of Governors since the inception of the Agency. The latest meeting of the IAEA General Conference was held at Headquarters in Vienna in October 1961.

The International Law Commission.-By Article 13 (1) of the Charter of the United Nations, one of the purposes of the UN General Assembly is to encourage the progressive development of international law and its codification. In order to implement and to assist in this function, the International Law Commission was created by General Assembly Resolution dated Nov. 21, 1947. It is composed of 25 members who are elected in individual capacities. They serve for terms of five years and, in general, represent the main forms of civilization and principal legal systems of the world. On Nov. 28, 1961, Mr. Marcel Cadieux, Deputy Under-Secretary of State for External Affairs and Legal Advisor to the Department of External Affairs of Canada, was elected to membership of this Commission. The 25 countries whose nations form, at present, the International Law Commission are: Afghanistan, Austria, Brazil, Cameroun, Canada, China, Dahomey, Ecuador, Finland, France, Britain, India, Iraq, Israel, Italy, Japan, Mexico, Nigeria, Poland, Spain, the Union of Soviet Socialist Republics, the United Arab Republic, the United States of America, Uruguay and Yugoslavia.

## Subsection 3.-Canada and the North Atlantic Treaty Organization*

There were two ministerial meetings during 1961 and meetings of the Permanent Representatives of the North Atlantic Council were held continuously throughout this period. On Apr. 21, 1961, Mr. Dirk U. Stikker of the Netherlands succeeded Mr. PaulHenri Spaak of Belgium as Secretary General of the Organization. The Permanent Representative of Canada continued to be Mr. Jules Léger, former Under-Secretary of State for External Affairs.

From May 8-10, 1961, the annual spring meeting of the Foreign Ministers of the NATO Alliance was held at Oslo, Norway. While re-affirming that the Alliance would never be used for aggression, the members noted that the Soviet threat which drew them together "is now not only military but also has world-wide political, economic, scientific and psychological aspects". In the review of the international situation, the Ministers noted with regret the lack of progress on German re-unification and voiced their determination to maintain the freedom of West Berlin. They declared that disarmament by stages under effective international control remained one of the principal objectives of their governments and they expressed the hope that an effective treaty to suspend nuclear tests would be forthcoming. Serious consideration was given to the importance of developing political consultation among members in the Council. Emphasis was also placed on the task of assisting the less-developed areas of the world and members re-affirmed their determination to increase their efforts to help these areas raise their social and material standards.

The annual ministerial meeting convened in Paris Dec. 13-15, 1961, with the Secretary of State for External Affairs, the Hon. H. C. Green; the Minister of Finance, the Hon.

[^48]D. M. Fleming; and the Minister of National Defence, the Hon. D. S. Harkness, leading the Canadian delegation. The international situation, particularly with regard to the Soviet-provoked crisis in Berlin, was thoroughly reviewed and approval was given for the resumption of diplomatic contacts with the Soviet Union; hope was expressed that a negotiated settlement could be achieved. The Ministers agreed that rights and obligations confirmed by international agreements could not be written off unilaterally by the Soviet Union concluding a "peace treaty" with a régime of its own creation and they re-affirmed the responsibilities which each member State had assumed for the security and welfare of Berlin. They took note of the defensive strength of the Alliance and agreed that so long as the Communist bloc was unwilling to agree to real disarmament, the Alliance had no alternative but to continue to strengthen their forces and modernize equipment in order to deter Communist aggression and to be able to deal with any form of attack. At the same time, Ministers expressed the hope that, despite the Soviet Government's refusal to accept an effective and universally applicable system of international control, disarmament negotiations when resumed would yield useful results.

Permanent representatives of the member countries met between ministerial meetings to consider the international, political, economic and military developments of concern to the Alliance, review the defence plans of members, deal with expenditures on commonly financed military installations (infrastructure), and study the measures required to provide peacetime readiness and civil defence. Military exercises were held to prove the readiness of the army, navy and air forces assigned to NATO Commands.

Canadian Contributions to NATO.-Support for the North Atlantic Treaty Organization during 1961 continued to be one of the foundations of Canadian foreign policy. As its contribution to the military strength of the Alliance, Canada maintains an army brigade and an air division in Europe and supporting forces in Canada. It has assigned a substantial naval force to the Supreme Allied Commander Atlantic (SACLANT) for the defence of the Canada-United States region in case of emergency and participates with the United States in the defence of the North American Continent through the North American Air Defence Command (NORAD).

In June 1961, the Prime Minister announced an agreement between Canada and the United States relating to the defence of the Canada-United States region, an objective of which was to demonstrate the material determination of the two countries to improve the defensive strength of NATO and particularly of NORAD. Under the agreement, Canada, in addition to the stations already under its control, assumed the responsibility for 16 stations of the Pinetree Line which hitherto had rested on the United States. In consideration of these additional responsibilities, the RCAF squadrons allocated to NORAD are being re-equipped with $F-101 B$ interceptor aircraft, the cost of the equipment and armament for which will be shared on the basis of the United States paying two-thirds and Canada paying one-third. The United States agreed to the procurement in Canada of a number of $F-104 G$ aircraft, support equipment and initial spares to the total value of $\$ 200,000,000$, of which the United States' share will be $\$ 150,000,000$ and Canada's share $\$ 50,000,000$. These aircraft will enable Canada and the United States to make a significant contribution to the collective strength of NATO under their respective mutual aid and defence assistance programs.

In September, in the light of the deterioration in the international situation and the increase in tension resulting from Soviet pressures over Berlin, steps were taken to strengthen the army brigade and air division assigned to NATO by an increase in personnel and to increase the personnel complement of the naval forces assigned to SACLANT. In addition, to improve the general military effectiveness of forces in Canada, plans were made to increase the strength of the army and air force. The total increase would amount to approximately 15,000 men.

Since 1950, Canada has contributed more than $\$ 1,750,000,000$ in mutual aid to European members of NATO. The aid program, consisting of contributions to NATO
infrastructure and military costs, transfers of equipment to member countries and aircrew training in Canada of NATO forces, continued throughout 1961. This program, while decreasing in magnitude with the changing conditions and the increasing ability of the European members to meet their individual defence requirements, continues to play a vital role in strengthening NATO forces.

## Subsection 4.-Canadian External Aid Programs

The Colombo Plan.-The Colombo Plan for Co-operative Economic Development in South and Southeast Asia was conceived at the Commonwealth Meeting of Foreign Ministers held at Colombo, Ceylon, Jan. 9-14, 1950. Although the Colombo Plan was initiated by Commonwealth governments, it is not exclusively a Commonwealth program. It is designed to assist in the economic development and raising of living standards of all countries and territories in the general area of south and southeast Asia. Its membership now includes Australia, Burma, Cambodia, Canada, Ceylon, India, Indonesia, Japan, Laos, Malaya, Nepal, New Zealand, North Borneo, Pakistan, the Philippines, Sarawak, Singapore, Thailand, Britain and Viet Nam, as well as the United States which is also engaged in a substantial program of economic aid in the same region.

The Colombo Plan is supervised by a Consultative Committee composed of Ministers of the member countries, who meet once a year to review projects, exchange views on policy matters and prepare an annual report. It is, as its name implies, a 'consultative' body; no collective policy decisions binding member countries are taken at its meetings. A Council for Technical Co-operation, on which Canada is represented, meets regularly in Ceylon to develop the technical co-operation program of the Colombo Plan. Colombo Plan Day was celebrated throughout member countries on July 1, 1961 to commemorate the tenth year of Colombo Plan operations.

From the inception of the Plan in 1950 through April 1961, Canada made available a total of $\$ 331,670,000$ for capital and technical assistance projects in south and southeast Asia. At the Commonwealth Trade and Economic Conference held in Montreal in September 1958, Canada announced an increase from $\$ 35,000,000$ to $\$ 50,000,000$ in its annual contribution to the Colombo Plan over three years beginning in the year 1959-60.

While ten countries are now receiving capital assistance from Canada, the largest contributions have so far been made to India, Pakistan and Ceylon. The Canadian contribution has consisted primarily of direct assistance to various development projects, including equipment for multi-purpose irrigation and hydro-electric projects, powergenerating plants, construction and fisheries projects and resources surveys, as well as educational and laboratory equipment and books. It has also included gifts of raw materials, commodities and foodstuffs such as industrial metals, asbestos, fertilizer, wheat, flour and butter, from the local sale of which recipient governments have been able to raise funds to meet local costs of economic development projects.

Under the Technical Assistance Programme, up to October 1961 more than 1,700 persons from all countries in the area had come to Canada for training in a variety of fields, the major ones being public administration and finance, agriculture, co-operatives, engineering, mining and geology, statistics, health education and social welfare. Nearly 200 Canadian experts had been sent abroad for service in Colombo Plan countries in such fields as fisheries, agriculture, engineering, mining and prospecting, co-operatives, public administration, education and vocational training, and public health. Other Canadians were employed on aerial resources survey teams and in the installation and operation of capital equipment.

The Consultative Committee of the Colombo Plan held annual meetings at Singapore in 1955, at Wellington in 1956, at Saigon in 1957, at Seattle in 1958, at Jogjakarta in 1959, at Tokyo in 1960 and at Kuala Lumpur in 1961. At the Jogjakarta meeting it was
agreed that the Colombo Plan should be extended for another five years from June 1961. Reports of the Committee on progress and future plans are published after each annual meeting; each report also contains sections describing the activities of member countries.

Canada-West Indies Aid Programme.-On the formation of the Federation of the West Indies in 1958, Canada undertook a $\$ 10,000,000$ program of economic and technical assistance over the period from 1958-63. The first major project in this program was the provision of two passenger-cargo ships for inter-island transportation at a cost of approximately $\$ 6,000,000$. The vessels were commissioned in the summer of 1961 and handed over to the West Indies Government. Tools and equipment valued at $\$ 28,000$ have been supplied to a technical school at St. Kitts, a dock costing approximately $\$ 1,000,000$ is under construction at St. Vincent, port equipment valued at $\$ 435,000$ is being supplied to various islands and a residence for students is to be constructed at the University College of the West Indies in Trinidad.

Up to Oct. 31, 1961, training programs had been arranged for 38 individuals from the West Indies in different fields, including public administration, information services, fisheries, etc. The 28 Canadian experts who undertook assignments during this period went to Trinidad, Jamaica, St. Lucia, St. Vincent and St. Kitts. They included soil surveyors and advisers in statistics, legal drafting, housing, education, films, radio broadcasting, postal services and harbour management.

Commonwealth Technical Assistance Programme.-At the Commonwealth Trade and Economic Conference held in Montreal in September 1958, Canada announced a decision to provide funds for technical assistance to Commonwealth countries outside the Colombo Plan area, with particular emphasis on the African territories. By the end of March 1961, Canada had made available \$1,130,000 to this program. Ghana and Nigeria received the greatest amount of aid, although some assistance was extended also to British Guiana, British Honduras, Uganda, Hong Kong and Sierra Leone. The Commonwealth countries in Africa are now eligible for Canadian assistance under a new Special Commonwealth African Aid Programme described below.

By Oct. 31, 1961, 54 training programs had been arranged since the inception of the plan, the chief fields being agriculture, co-operatives, mining, geology, engineering, public and business administration, health and social welfare. Eighteen Canadians had undertaken advisory assignments in Ghana, Nigeria, Uganda, British Guiana and British Honduras in education, public information, public administration, law and agriculture.

Special Commonwealth African Aid Programme.-At a meeting of the Commonwealth Economic Consultative Committee in London in September 1960, it was agreed that a program of economic and technical assistance for Commonwealth countries and territories in Africa should be launched. Canada undertook to provide a contribution of $\$ 10,500,000$ to this program over a period of three years beginning with the year ending Mar. 31, 1962.

By Oct. 31, 1961, training programs had been arranged in Canada for 36 Africans under this plan and 37 Canadian teachers and other advisers had been sent to Commonwealth countries in Africa, including Gambia, Ghana, Kenya, Mauritius, Nigeria, Sierra Leone, Tanganyika and Uganda. In addition, an aerial survey and mapping project had been undertaken in Nigeria at a cost of $\$ 1,350,000$.

Educational Assistance to French-Speaking States in Africa.-In April 1961, the Canadian Government announced that it proposed to offer assistance in the educational field to French-speaking States in Africa, and Parliament subsequently appropriated $\$ 300,000$ for this purpose for the year ending Mar. 31, 1962. By the end of 1961, plans were under way to send some 15 French-speaking Canadian teachers to Africa under this program.

Co-operation with the United Nations and its Specialized Agencies, and with Other International Aid Programs.- In addition to the annual contributions made to the United Nations Expanded Programme of Technical Assistance, Canada also assists by arranging training programs in Canada for individuals studying under the auspices of the different Specialized Agencies. This service is also extended to the technical assistance program of the International Co-operation Administration of the United States as well as to other international aid organizations. Up to Oct. 31, 1961, approximately 1,525 individuals had come to Canada through the various agencies from more than a hundred different countries in all parts of the world. Assistance is also given by recruiting Canadians for service with the Specialized Agencies on specific technical assistance assignments in under-developed countries.

Organization.-As of Nov. 9, 1960, the operation and administration of Canada's external assistance programs became the responsibility of the External Aid Office, established by Order in Council of that date, and placed in charge of an officer known as the Director General of External Aid Programmes. The Director General is directly responsible to the Secretary of State for External Affairs for all matters connected with Canadian external assistance programs, including the Colombo Plan, the Canada-West Indies Aid Programme, the Special Commonwealth African Aid Programme, the Commonwealth Technical Assistance Programme, the Commonwealth Scholarship and Fellowship Plan and the Programme for French-Speaking African States as well as for operational liaison with aid programs administered by the United Nations and other international agencies.

## CHAPTER III.-POPULATION

## CONSPECTUS

The interpretation of the symbols used in the tables throughout the Year Book
will be found facing $p .1$ of this volume.

## Section 1.-Census of Population

This Section normally presents a limited summary of the voluminous data on population recorded by the Census of Canada. Such summary data resulting from the 1961 Census - Canada's tenth decennial census since Confederation-as was available at the time of going to press with this publication (mid-1962) will be found in Appendix II. Detailed census statistics and analyses will be published, as they become available, in census bulletins which are obtainable from the Queen's Printer or the Dominion Bureau of Statistics, Ottawa.

A list of the 1961 Census publications, with their prices and an order form, is available from the Dominion Bureau of Statistics on request. An indication of the type and content of those relating to population, households, families and housing follows; many of them will be published by the end of 1962 and the remainder in 1963.

## PUBLICATIONS OF THE 1961 CENSUS OF CANADA*

## Advance Series

These reports provide summary information on basic topics for which there is wide demand and are published at earlier dates than the regular series of volume reports. They cover: population by electoral districts; population by counties and census divisions; population of urban centres of 5,000 and over; rural farm, non-farm, and urban population; separate reports classifying population for counties and census divisions, and urban centres of 10,000 and over by age groups, marital status, origins, religious denominations, official language and mother tongues; immigrant population by periods of immigration and summary housing characteristics.

[^49]
## Volume Series

Reports in this Series represent the main results of the 1961 Census and may be ordered singly or in volume sets. They are prepared in such a way that they may be combined within a hard-covered binder (provided with the set) to form the complete subject matter of each Volume.

## Volume I (Part 1)—Population: Geographical Distribution

Includes reports showing population totals for geographical areas such as provinces, electoral districts, counties and census divisions, and municipal subdivisions; rural and urban distributions; historical tables on population growth; and reference maps.

## Volume I (Part 2)—Population: General Characteristics

Includes reports showing population classifications by such basic characteristics as sex, age groups, marital status, origin, religion, birthplace, official language, mother tongue, citizenship, period of immigration, school attendance and schooling.

## Volume I (Part 3)-Population: Cross-Classifications of Characteristics

Includes reports showing cross-classifications of population by such characteristics as age groups and sex, ethnic groups and sex, and period of immigration and sex, to show marital status, birthplace, religious denomination, education and language distributions.

## Volume II (Part 1)-Households and Families

Includes reports showing data on size and composition of households and families, and cross-classifications of household and family data by characteristics of head.

## Volume II (Part 2)-Housing Characteristics

Includes reports showing housing data based on a 20 -p.c. sample of dwellings, covering such characteristics as type of dwelling, number of rooms, rent, household facilities; and cross-classifications of dwelling attributes by characteristics of head.

## Special Series

This Series contains some basic materials not included in the regular Volume Series and which relate for the most part to more detailed geographical areas, such as population by specified age groups for census subdivisions; population by specified origins for census subdivisions; population by specified religious denominations for census subdivisions; and population of unincorporated villages and settlements, with guide to locations.

## Census Tract Series

Basic population and housing data will be issued for each of the larger cities (or metropolitan areas) according to census tracts (i.e., areas of approximate uniformity in population size and composition). Some 23 cities are included in the census-tract program: St. John's, Nfld.; Halifax, N.S.; Saint John, N.B.; Quebec, Montreal, Trois Rivières and Sherbrooke, Que.; Ottawa, Toronto, Hamilton, London, Windsor, Oshawa, Sudbury, Kingston and Kitchener, Ont.; Winnipeg, Man.; Regina and Saskatoon, Sask.; Calgary and Edmonton, Alta.; and Vancouver and Victoria, B.C. The publication of these reports will follow, for the most part, the Volume Series of reports on population and housing.

## Section 2.-Intercensal Surveys

Estimates of the total population of Canada and of the population of each province are prepared and appear about June 1 of each intercensal year. Such estimates have many uses. They are necessary to the calculation of costs of certain economic and social legislation. Business, educational and welfare organizations utilize population estimates in planning future development. They constitute a base for vital statistics rates, per capita figures of production and trade, and other analyses. They also have been found useful for estimating labour force and other population characteristics of data collected in sample surveys.

Estimates of population begin with the preceding census counts; births and immigration are added, deaths and emigration are subtracted and, for provincial estimates, interprovincial migration taken into account. When figures become available from a new census, the estimates for the intervening years are adjusted to the newly recorded population figures. Thus the estimates prepared for the years 1957 to 1960, based on the 1956 Census, will be adjusted to the populations recorded by the 1961 Census. Such revisions will be available before this publication goes to press and will be carried in Appendix II.

## Section 3.-The Native Peoples of Canada

## The Indians*

Approximately one of every hundred Canadians is registered as an Indian by the Department of Citizenship and Immigration. This number includes all persons with a paternal ancestor of Indian race who have chosen to remain under Indian legislation. In the aggregate, the Indians are grouped into 562 bands and occupy or have access to 2,217 reserves having a total area of $5,899,890$ acres.

About 26 p.c. of the Indians reside away from reserves, including those in the Northwest Territories and the Yukon for whom reserves have not been set aside. Many Indians, both on and off reserves, have specialized in various professions, trades and agricultural pursuits. Others have fitted into the economy of the areas in which they live in a wide range of occupations. More than 230 Indians are employed by the Indian Affairs Branch of the Department of Citizenship and Immigration, 116 of them as teachers. In the northern and other outlying areas, hunting, fishing and trapping remain an important means of livelihood for Indians.

Subject to special provisions in the Indian Act, all laws of general application are applicable to Indians. Indians are liable for taxation of property held off a reserve as well as of any income they earn off a reserve. They may vote in federal elections on the same basis as other citizens and in provincial elections where the electoral laws of the provinces permit. Indians are free to enter into contractual obligations and may sue and be sued. However, their real and personal property situated on a reserve is exempt from seizure except on suit by another Indian.

- Revised in the Information Division, Department of Citizenship and Immigration, Ottawa.
1.-Indian Land in Reserves and Number of Bands, by Province, as at Mar. 31, 1960

| Province | Reserves |  | Bands | Province or Territory | Reserves |  | Bands |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | Area |  |  | No. | Area |  |
|  |  | acres | No. |  |  | acres | No. |
| Prince Edward Island.... | 4 | 2,741 | 1 | Saskatchewan........... | 120 | 1,205,538 | 67 |
| Nova Scotia.............. | 43 | 25.352 | 11 | Alberta................. | 87 | 1,545,985 | 41 |
| New Brunswick........... | 23 | 37.565 | 15 | British Columbia........ | 1,619 | 818,196 | 195 |
| Quebec. | 26 | 179.016 | 41 | Yukon Territory ......... | 15 | 3,535 | 15 |
| Ontario | 163 | 1,555,797 | 111 | Northwest Territories... | 10 | 1,924 | 15 |
| Manitoba. | 107 | 524,241 |  | Canada | 2,217 | 5,899,890 | 562 |

A Departmental census of Indian population is taken every five years; the numbers recorded at the censuses of 1949, 1954 and 1959 are given in Table 2. The 1960 figures are taken from band membership lists kept for administrative purposes by the Indian Affairs Branch.

## 2.-Indian Population, by Province, Departmental Censuses 1949, 1954 and 1959, and at Dec. 31, 1960 ${ }^{1}$

${ }^{1}$ Figures from Indian Affairs Branch records.
The 1959 Indian population in each province is classified by age group and sex in Table 3. The rapid growth of that population in recent years is indicated by the fact that in 1959 more than 56 p.c. of the Indians were under 21 years of age compared with 42 p.c. of the population of Canada as a whole. Religious denominations of the Indian population are given in Table 4.

Administration.-Pursuant to the British North America Act, the administration of Indian Affairs, which had been under the management of several provinces, came under the jurisdiction of the Government of Canada. Since January 1950, Indian Affairs have been the responsibility of a Branch of the Department of Citizenship and Immigration.

The Indian Affairs Branch is composed of a headquarters staff at Ottawa, nine regional offices, and 89 field agencies. Specialists in such matters as education, economic development, resource management, social welfare, and engineering and construction are attached to headquarters and regional staffs. Liaison is maintained with the Indian and Northern Health Services of the Department of National Health and Welfare, the federal agency concerned with the medical care of Indians.

It is the primary function of the Indian Affairs Branch to administer the affairs of Indians in a manner that will enable them to participate fully in the social and economic life of the country. To this end, the Branch has brought into effect a wide range of programs in the fields of education, economic development, social welfare and community development. Underlying administrative duties of the Branch include the management of Indian reserves and surrendered lands, the administration of band funds, estates management, enfranchisement of Indians and the administration of treaty obligations.

Joint Committee of the Senate and the House of Commons on Indian Affairs.-In the spring of 1959 a Joint Committee of the Senate and the House of Commons was appointed to examine and consider the Indian Act and amendments thereto, and to suggest such amendments as they might deem advisable, with authority to investigate and report upon Indian administration in general and, in particular, on the social and economic status of the Indians. The examination and consideration begun by the Joint Committee in 1959 was continued by similar Joint Committees appointed in 1960 and 1961. Each Committee had the power to call for persons, papers and records and to examine witnesses under oath.

During the three years of deliberation, the Joint Committee received more than a hundred written submissions and heard more than a hundred witnesses. All the Indian associations and many Indian bands presented submissions. In addition, Church authorities, provincial governments, welfare, medical and other voluntary organizations concerned with the well-being and progress of the Indian people gave their views about Indian administration generally and made suggestions to improve the Indians' social and economic status. The Indian Affairs Branch and the Directorate of Indian and Northern Health Services also gave their views.

The Joint Committee presented its final report to Parliament on July 8, 1961, which includes the following general statement:-

#### Abstract

"It became quite evident early in the proceedings, not only from the content of the briefs and submissions made but as well in the quality and manner of presentation, that the winds of change have been blowing through the ranks of Indian people and that there is also a growing awareness and recognition of their problems and needs amongst the non-Indian population. "The time is now fast approaching when the Indian people can assume the responsibility and accept the benefits of full participation as Canadian citizens. Your Committee has kept this in mind in presenting its recommendations which are designed to provide sufficient flexibility to meet the varying stages of development of the Indians during the transition period. "It is the view of the Committee that the Government should direct more authority and responsibility to Band Councils and individual Indians with a consequent limitation of ministerial authority and control, and that the Indians should be encouraged to accept and exercise such authority and responsibility.

> "Your Committee believes that the advancement of the Indians towards full acceptance of the responsibilities and obligations of citizenship must be without prejudice to the retention of the cultural, historical and other economic benefits which they have inherited."

The findings of the Joint Committee, which will shape the course of Indian Affairs in the years ahead, are being thoroughly studied by the federal authorities concerned.

Education.-More than 43,000 Indians are enrolled in schools throughout the country. Nearly one-quarter of these attend provincial and private schools, the cost of tuition being assumed by the Federal Government. As a further encouragement to the integration of Indian children in non-Indian schools, grants are made toward the cost of any new or supplementary construction required by their admission.

There are four types of Indian schools, all operated at the cost of the Government. On most reserves, day schools have been established to provide education for children who live at home. Residential schools are operated to care for orphaned children, children from broken homes, and for those who, because of isolation or other reasons, are unable to attend day schools. Seasonal schools have been established for the children of migratory families, particularly in the Far North. The fourth type of school gives instruction to children confined to hospital.

All standard classroom supplies and authorized textbooks are provided in Indian schools. Financial assistance for pupils attending non-Indian schools varies from payment of tuition fees for some to full maintenance for others. Promising senior students are awarded scholarships to attend university or vocational school and scholarships are given to those who show promise in the arts.

## 5.-Enrolment of Indian Pupils, classified by Type of School and by Grade, School Year 1960-61

| Classification | Grade |  |  |  | Technical | Professional | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

${ }^{1}$ Indians of school age for whom full information is not available．
Economic Development．－With a view to providing for all Indians the opportunity to earn satisfactory incomes，the Indian Affairs Branch has instituted a number of programs in the field of economic development．These programs give special attention to the place－ ment of Indians in employment；the promotion of agriculture and stock－raising on reserves； the fostering of Indian enterprise and the provision of loans；home industries and handi－ crafts；the management of fur，fish and wildlife resources；and assistance to Indians in developing other resources on or within access of the reserves．

The Employment Placement Program has the objective of developing job opportun－ ities for Indians and promoting their employment in a wider range of occupations．Place－ ment Officers are attached to Branch Regional Offices at Vancouver，Edmonton，Saskatoon， Winnipeg，North Bay，Toronto，Quebec，Amherst and Fort Smith，and are also located at The Pas，London，Calgary，Whitehorse and Prince George．In addition，the facilities of the National Employment Service are utilized in placing Indians in both urban and rural employment．

Under the fur resources rehabilitation and management program，which has been carried on for some time in co－operation with various provinces，beaver production in Saskatchewan，Manitoba，Ontario and Quebec has risen steadily．Total Indian income from trapping in the 1960－61 season was approximately $\$ 6,750,000$ ．

Commercial fishing by inland Indians is also growing in economic importance．The 1960 lake catch was valued at over $\$ 1,000,000$ ，coastal fisheries brought in approximately $\$ 4,000,000$ and $\$ 800,000$ was earned by Indians in the packing，canning and processing of fish products．

A special $\$ 1,000,000$ revolving fund has been set aside by the Government as a source of credit for Indians who live on reserves. During the year ended Mar. 31, 1961, 135 loans totalling $\$ 177,029$ were approved. Most of these loans were for agricultural purposes, including the purchase of machinery and cattle.

Welfare.-A public assistance program is provided by the Indian Affairs Branch for Indians who are unable, for various reasons, to maintain themselves and their families. In the field of rehabilitation, handicapped Indians are helped, through training and selected placement, to the fullest utilization of their abilities. Care of neglected children rests for the most part with the Branch but, increasingly, the co-operation and assistance of provincial accredited child-caring agencies are being employed. Housing is another important item of Indian welfare services-more than 10,000 houses were built and thousands of others repaired during the past decade.
7.-Housing on Indian Reserves, by Region, Year Ended Mar. 31, 1961

| Region | Houses |  |  | Expenditures |  |  |  |  |

| Manitoba. | 33 | 126 | 17 | 276,149 | 16,009 | 2,080 | 56,179 | 350,418 |
| Saskatchewan... | 12 | 248 | 31 | 361,899 | 152,729 | - | 66,326 | 580,954 |
| Alberta and Northwest Territories. | 67 | 211 | 41 | 353.247 | 586,869 | - | 29,217 | 969,333 |
| British Columbia and Yukon Territory... | 33 | 158 | 68 | 453,281 | 104,458 | 2,320 | 211,602 | 771.661 |
| Canada....... | 196 | 1,029 | 247 | 2,192,951 | 973,551 | 25,238 | 649,780 | 3,841,520 |

Every effort is made to reach agreement with provincial governments which will make possible the application of normal provincial welfare services and benefits on reserves. Several bands in Ontario now participate in the Ontario General Welfare Assistance Act. Throughout Canada, Indians are paid family allowances, old age security, old age assistance, blind persons' allowances and disabled persons' allowances, and in the Provinces of Ontario and Quebec mothers' allowances are available to needy Indian mothers.

Community Development.-Community development on Indian reserves is progressing at an ever-increasing rate. Leadership training courses are conducted under Indian Affairs Branch auspices to help Indians identify and understand community problems and become familiar with accepted methods of community organization. Indian women are encouraged to form homemakers' clubs patterned after rural women's institutes and the Branch assists the clubs through counselling and material aid. Indian band councils are encouraged to exercise to the fullest extent the powers and duties granted them under the Indian Act.

Through the co-operation and assistance of university extension departments, provincial education authorities and various health and welfare organizations, the Branchsponsored programs for community development have been greatly expanded in recent years. The Extension Department of St. Francis Xavier University has directed an intensive program in community action by Indians on the Sydney and other reserves in Nova Scotia. Leadership training courses for Indians have been held annually under the auspices of the Welfare Council of Greater Winnipeg. Universities are assisting in planning and developing programs for Indian groups in Alberta, British Columbia and Quebec. In Ontario, the Community Programs Branch of the provincial Department of Education has planned and organized a special leadership training course for Indian band chiefs and councillors.

## The Eskimos*

Each year, an increasing number of Canada's 11,500 Eskimos who live on the northern mainland and Arctic islands begin the transition from a nomadic life of hunting to regular wage employment. Growing economic development in the North, coupled with a decrease in some types of game, is attracting the Eskimo people to northern centres of population. More and more of them are finding employment as skilled tradesmen and moving into homes in settled communities. The Government of Canada, through the Department of Northern Affairs and National Resources and other agencies, is helping the Eskimo people through this adjustment period by providing education, family welfare services and technical training.

One of the most encouraging economic developments in the Arctic is the success of Eskimo co-operatives with their basic approach, already traditional with the Eskimos, of pooled labour and shared harvests. During 1961, five Eskimo fishing co-operatives were catching, processing and shipping Arctic char to markets in southern Canada. Soapstone carvings and graphic art, valued at $\$ 78,000$, were produced by the West Baffin Eskimo Co-operative during the year; the work maintained its standard of excellence and continued to bring Eskimos, and Canada too, world-wide recognition in the field of art. The sealskin handicrafts industry produced a variety of high-quality items that were in great demand in southern Canada. By conservative estimate, Eskimo co-operatives brought more than a quarter of a million dollars in cash to northern communities during 1961. An additional $\$ 200,000$ a year is earned by people in the North through participation in rehabilitation projects which produce and market a wide variety of goods and services.

In addition to the Eskimos who are self-employed as co-operative members, skilled Eskimo tradesmen are working in many other special fields. In the nickel mine at Rankin Inlet, some 85 Eskimos are regularly employed; nearly 100 are working on the Distant Early Warning Line; and about 40 are employed by the Hudson's Bay Company. In 1961, the young Eskimo Assistant Chief of the Eskimo Rehabilitation Centre at Frobisher Bay was a key speaker at the Northern Development Conference in Edmonton; and an Eskimo who was previously Manager of the Arts and Crafts Section at the Frobisher Bay Rehabilitation Centre became Manager of the CBC Station at Inuvik. An Eskimo girl employed by the Welfare Division of the Northern Administration Branch edits Inuktitut, Canada's only Eskimo-language magazine, and two Eskimo girls, one in Montreal and one in Frobisher Bay, produce Eskimo-language broadcasts for the CBC Northern Service. In many northern communities, Eskimos work as diesel mechanics, electricians, carpenters and power-plant operators; women are clerks, hospital aides and waitresses. About 40 p.c. of the Eskimos still remain outside of main centres of economic and government activity and continue to live as their fathers lived-by hunting, trapping and fishing.

[^51]For the Eskimo people, on the land and in wage employment, education and vocational training form a vital bridge to future development. New schools have been built in most Arctic communities where the majority of the population is Eskimo, and more than 2,000 Eskimo children were enrolled in 1961. Because of the nomadic way of life of their parents, many children live in pupil residences during the school year. Vocational training and adult education courses are organized to help unskilled Eskimos toward wage employment and to improve the skills of those already employed.

The Eskimo people, as Canadian citizens, receive the same social benefits as those who live farther south-family allowances, old age assistance and disabled persons' allowances. Under a new program of loans and grants initiated by the Department of Northern Affairs and National Resources, more and more Eskimos are owning their own homes. A thousand-dollar subsidy, consistent with aid in related types of programs across Canada, covers part of the cost; the owner borrows the balance from the Eskimo Loan Fund and repays it on terms adjusted to his income opportunities. A man's labour in building his house helps to keep its cost to a minimum and all financial arrangements encourage the Eskimo to remain self-reliant and independent in changing economic conditions. Where game is plentiful, community freezers are being used in a growing number of communities to store game and fish taken during the summer months. With the better use of local food, warm housing and higher cash incomes for many Eskimos, the threats of malnutrition and disease are dwindling. The natural increase of the Eskimo population was 3.3 p.c. in 1960 .

For several thousand years the Eskimos have survived in Canada's northland on comparatively meagre resources. They are a hardy and intelligent people. With their native ability to adapt to changing circumstances, they are learning new skills and trades and proving that they can make an increasing contribution to the development of the North.

## Section 4.-Statistics of World Population

World population figures given in Table 8 are from the United Nations Population and Vital Statistics Report for October 1961 and, except as otherwise noted, are mid-year estimates for 1960. The area figures are from the United Nations Statistical Yearbook, 1960.

Estimated Population of the World by Continents.-The statement below presents adjusted estimates of the 1960 mid-year population of the world by continental divisions. These aggregates do not coincide exactly with the sum of the figures for individual countries and territories because they include, in addition, adjustments for overand under-enumeration, over-estimation, data for categories of population not regularly included in the official figures, and approximations for those countries that have not provided official 1960 data. The estimates are as follows:-

| Continental Division | Number |
| :---: | :---: |
|  | '000 |
| Africa. | 244,000 |
| North America. | 265,000 |
| South America. | 140,000 |
| Asia (includes Syria and Asiatic Turkey). | 1,665,000 |
| Europe (includes European Turkey). | 427,000 |
| Oceania (includes Hawaii).. | 16,400 |
| Union of Soviet Socialist Republics (Asia and Europe). | 214,400 |
| World Total. | 2,971,800 |
| Commonwealth countries (at Jan. 1, 1962). | 717,948 |

## 8.-Areas and Populations of the Countries or Areas of the World, 1969

Nore.-Status of independency or dependency is as at Jan. 1, 1962. Members of the Commonwealth and the Territories for which the British or Commonwealth members are responsible (at Jan. 1, 1962) are indicated with an asterisk (*).

${ }^{17}$ Land area only.

## CHAPTER IV.-IMMIGRATION AND CITIZENSHIP

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

## PART I.-IMMIGRATION AND EMIGRATION*

The history of immigration and the Immigration Act and Regulations is dealt with in detail in a special article entitled "Developments in Canadian Immigration" appearing in the 1957-58 Year Book at pp. 154-176. Supplementing that material is an article on the "Integration of Postwar Immigrants" at pp. 176-178 of the 1959 edition.

## Section 1.-Immigration Policy and Administration

Since the end of the Second World War it has been the policy of the Government of Canada to stimulate the growth of the population by selective immigration. Efforts are made to choose immigrants of prospective adaptability to the Canadian way of life and to admit them at such times and in such numbers as employment conditions warrant.

Federal immigration policy is governed by the provisions of the Immigration Act and Regulations, which permit the admission to Canada of British subjects by birth or naturalization in Britain, Australia, New Zealand or South Africa; citizens of Ireland and of the United States; and French citizens born or naturalized in France or on the islands of St. Pierre and Miquelon. All, however, must be in good health, be of good character, and have sufficient means to maintain themselves until they have secured employment. Other classes of admissible immigrants consist of persons considered to be desirable in the light of social and economic conditions prevailing in Canada at the time, and possessed of qualifications for successful integration. Also admissible are certain categories of close relatives of citizens or legal permanent residents of Canada where the sponsor, in Canada, is in a position to receive and care for the prospective immigrants who must satisfy the requirements of the Immigration Act and Regulations. Agreements are in effect with the governments of India, Pakistan and Ceylon for the admission annually of 300,100 and 50 persons, respectively, from those countries in addition to certain close relatives.

The Immigration Branch of the Department of Citizenship and Immigration administers the Immigration Act and Regulations. Twenty-seven visa offices are located abroad at London, Liverpool, Leeds, Bristol, Glasgow, Belfast, Dublin, Paris, Brussels, Berne,

[^54]The Hague, Copenhagen, Cologne, Berlin, Hamburg, Munich, Stuttgart, Vienna, Oslo, Stockholm, Helsinki, Lisbon, Rome, Athens, Tel Aviv, New Delhi and Hong Kong. Four offices in the United States-at New York, Chicago, San Francisco and Denverfurnish information and counselling but do not issue visas. Personnel at all posts are kept in close touch with economic conditions in Canada and thus are able to advise immigrants regarding prospects for successful settlement. Examination of immigrants and visitors is carried out at 347 ports of entry on the Canadian coasts, at points along the International Boundary, and at certain airports.

A primary objective of administration is satisfactory settlement. The Federal Government assists immigrants in establishing themselves in the Canadian community through the work of the Immigration Branch Settlement Service, the Canadian Citizenship and Canadian Citizenship Registration Branches and other government agencies, and co-operates closely with several voluntary agencies having the same objective.

## Section 2.-Immigration Statistics

Postwar Immigration.-The extent of immigration to Canada in any period is affected both by domestic conditions and by conditions abroad. However, these influences are seldom immediately decisive. News of good economic conditions in Canada predisposes people in favour of this country but, because the immigration process usually takes from six to eighteen months, actual immigration is not always fully coincidental with the economic situation, so that immigration may at times be slight in good years but appear unduly heavy in less buoyant periods. The time-lag caused by selection, medical examination and documentation is unavoidable. Transportation is often another delaying factor and to these considerations must be added the effect of seasonal unemployment in Canada, which tends to discourage immigration during the months from November to April.

Since the end of World War II there have been wide annual fluctuations in immigration to Canada caused mainly by economic and political factors. Many of the persons who arrived in 1946 and 1947 were the wives and children of Canadian service men and their numbers were dictated by the availability of shipping. In 1948, as more shipping became available, the number of immigrants doubled. In addition to the large movement from the British Isles, thousands of displaced persons were admitted and Germans and Italians began to come forward in appreciable numbers after having been removed from the enemy alien category. As the high level of immediate postwar economic activity levelled off, there was a drop of 30,000 in the number of immigrants entering in 1949 compared with 1948 , and a further drop of 20,000 in 1950. Then the outbreak of war in Korea created a new stimulus to industry and caused shortages of labour; at the same time fear of war in Europe made Canada seem a desirable haven. Thus in 1951 immigration increased nearly threefold and remained in excess of 150,000 for the following three years. Very significant numbers of Germans and Italians were admitted and the gap between them and the British Isles group was narrowed. Another minor economic setback in 1954 caused immigration to fall in 1955 by some 45,000 but, with the return of better times in North America and the deterioration of the political situation in Europe, immigration again rose by 55,000 in 1956. The Hungarian revolution and the Suez crisis of 1956 had a sharp impact on Canadian immigration in 1957 when 282,164 persons were admitted, including 31,643 from Hungary and 108,989 from the British Isles. This was the largest number of immigrants to enter Canada since 1913.

The conclusion of the Suez affair and the suppression of the Hungarian revolt restored some measure of calm in Europe. Canada's economy suffered a recession in 1956 and 1957 while Europe's economic position improved, as a result of which only 124,851 immigrants came to Canada in 1958. Britain's recovery from the war and its aftermath was reflected in the fact that for the first time in the postwar years the British Isles group of arrivals was not the largest--persons from Italy were in first place, numbering 27,043 compared
with 24,777 from the British Isles. This situation continued from 1959 through 1961; total arrivals dropped from 106,928 in 1959 to 104,111 in 1960 and to 71,689 in 1961. In each of these years, the number from Italy remained in first place above the number from the British Isles. The main contributing factors to this decline in immigrant arrivals since 1959 have been: (1) the upsurge in the economies of those European countries from which Canada has received the majority of its immigrants and (2) the increasing emphasis placed on selecting the immigrant who has sufficient funds and the necessary know-how to establish himself in a business or industry of his own, as well as on the immigrant with special skills or qualifications which would permit his ready integration into the Canadian labour force.

Immigrants coming from the British Isles during the period 1946-61, inclusive, numbered 592,514 and represented 28.5 p.c. of the total immigration to Canada in that period. Other large groups came from Italy-273,971, representing 13.2 p.c. of the total; Germany $-241,005$, representing 11.1 p.c.; the Netherlands- 149,187 , representing 7.3 p.c.; the United States- 156,641 , representing 7.6 p.c.; and Poland- 92,226 , representing 4.4. p.c.

In each postwar year up to and including 1957, the British Isles group was the largest, ranging from a low of 12,669 in 1950 to a high of 108,989 in 1957. From 1958 to 1961 immigrants from Italy headed all groups. Immigrants from the United States formed the second largest group in 1946 and 1947, from Poland in 1948, 1949 and 1950, from Germany during the years from 1951 to 1954, from Italy in 1955 and 1956, from Hungary in 1957, and from the British Isles in 1958, 1959, 1960 and 1961. During the whole postwar period, immigration from the United States has remained relatively constant, ranging from a high of 11,516 in 1961 to a low of 7,393 in 1948; the annual average for the period was 9,790.

Total immigration to Canada for the years 1946-61, inclusive, was $2,076,919$. The yearly totals for this period are shown in Table 1, together with annual figures back to 1913, the peak year of immigration into Canada.

## 1.-Immigrant Arrivals, 1913-61

Note.-Figures for 1852-93 are given in the 1942 Year Book, p. 153, and for 1894-1912 in the 1948-49 edition, p. 175.

| Year | Arrivals | Year | Arrivals | Year | Arrivals | Year | Arrivals | Year | Arrivals |

| 1919. | 107,698 | 1929. | 164,993 | 1939 | 16,994 | 1949. | 95,217 | 1959 | 106,928 |
| 1920. | 138,824 | 1930.. | 104,806 | 1940 | 11,324 | 1950. | 73,912 | 1960. | 104,111 |
| 1921. | 91,728 | 1931. | 27,530 | 1941 | 9,329 | 1951. | 194,391 | 1961. | 71,689 |
| 1922. | 64,224 | 1932 | 20,591 |  | 7,576 | 1952 | 164,498 |  |  |

Admissions by country of last permanent residence are given in Table 2 for the years 1957-61 only. During that five-year period, 27.8 p.c. of the immigration flow came from Britain and Ireland, 55.7 p.c. from Continental Europe, 8.1 p.c. from the United States and 8.4 p.c. from all other countries.

## 2.-Immigrant Admissions by Country of Last Permanent Residence, 1957-61

Note.-Comparable figures for 1946-49 are given in the 1951 Year Book, p. 143, for 1950-52 in the 1956 edition, p. 182 and for $1953-55$ in the 1959 edition, p. 179; figures in less detail for 1939-45 appear in the 1950 edition, p. 186.

[^55]Other analyses of the content of the immigration movement in recent years are given in Tables 3 to 9 . The numbers of persons deported from Canada for various reasons in the years 1952-61 are shown in Table 10.

Sex, Age and Marital Status.-In the ten-year period 1952-61 adult males comprised 39.0 p.c. of the immigrant arrivals, adult females 35.2 p.c. and children under 18 years of age the remaining 25.8 p.c. Without relation to age, 52.4 p.c. of the newcomers were males.
3.-Sex Distribution of Immigrants as Adult Males, Adult Females and Children, 1952-61

Nore.-Figures from 1930 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

| Year | Adult <br> Males | Adult <br> Females | Under 18 Years |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Males | Females |  |
|  | No. | No. | No. | No. | No. |
| 1952. | 66,083 | 53,443 | 23,766 | 21,206 | 164,498 |
| 1953. | 68,269 | 56,425 | 23,153 | 21,021 | 168,868 |
| 1954. | 64,551 | 51,690 | 19,980 | 18,006 | 154,227 |
| 1955. | 42,425 | 40,120 | 14,403 | 12,998 | 109,946 |
| 1956. | 67,880 | 55,574 | 21,661 | 19,742 | 164,857 |
| 1957. | 115,765 44 | 92,202 | 38,461 | 35,736 15 | 282,164 |
| 1958. | 47,008 | 48,655 41,891 | 16,622 14,366 | 15,566 13,561 | 124,851 106,928 |
| 1960 | 37,653 | 40,241 | 13,365 | 12,852 | 104,111 |
| 1961. | 22,778 | 30,648 | 9,328 | 8,935 | 71,689 |

In 1961, 74.6 p.c. of the males and 80.8 p.c. of the females arriving were 15 years of age or over as compared with 77.2 p.c. and 79.1 p.c., respectively, in 1960 . Of those arriving in 1961 who were 15 years of age or over, 52.4 p.c. were married, 40.7 p.c. were single and 6.4 p.c. were widowed or divorced. The total number of females coming into Canada has been higher than the total number of males in each year since 1957. In 1961 there were 180 more single females than single males, although there was a considerable excess of males in the two younger age groups. Females exceeded males by 4,815 in the married category, by 1,986 in the widowed category and by 496 in the divorced or separated category.
4.-Ser and Marital Status of Immigrant Arrivals, by Age Group, 1961

Birthplace, Nationality and Origin.-Of the immigrant arrivals in 1961, 23.8 p.c. were born in Commonwealth countries or in the Republic of Ireland, compared with 24.6 p.c. in 1960 and 22.4 p.c. in 1959 . Of the 1961 newcomers, 25.3 p.c. were born in Italy or Greece, 13.0 p.c. in Germany, France or the Netherlands, 7.2 p.c. in Poland or Yugoslavia, and 12.6 p.c. in the United States.

## 5.-Birthplaces of Immigrant Arrivals, 1959-61

Note.-Figures from 1942 are given in the corresponding table of previous Year Books beginning with the 1948-49 edition.

${ }^{1}$ Included in Africa. $\quad{ }^{2}$ Excludes Commonwealth countries. ${ }^{3} \mathrm{In}$ both Europe and Asia. ${ }^{4} \mathrm{In}$ cludes 206 not stated. ${ }^{5}$ Includes 4 born at sea and 235 from other countries. ${ }^{6}$ Includes 2 born at sea and 104 from other countries.

Out of every hundred immigrants admitted to Canada during the three-year period 1959-61, 20 were citizens of Italy, 19 were British subjects, 14 were citizens of the United States, 8 of Germany, 5 of Greece and 4 of Portugal; other nationalities made up the remaining 30 .

## 6.-Citizenship of Immigrant Arrivals, 1959-61

Note.-Figures from 1930 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

[^56]Destinations and Occupations.-Upon arrival in Canada, immigrants are asked to state their intended destination. According to these records, Ontario absorbed by far the highest proportion of arrivals in the four-year period $1958-61-51.0$ p.c. of all the males and 52.3 p.c. of all the females. Quebec was the second most important province of destination, receiving 23.4 p.c. of the males and 22.7 p.c. of the females. The proportions intending to settle in British Columbia were 9.9 p.c. and 10.6 p.c., respectively; in the Prairie Provinces 13.0 p.c. and 11.9 p.c., respectively; and in the Atlantic Provinces 2.5 p.c. and 2.3 p.c., respectively. The provincial distribution has changed little from year to year throughout the whole postwar period.
8.-Intended Destinations of Male and Female Immigrants Admitted to Canada, 1958-61

In like manner, immigrant arrivals are asked to record the occupations which they intend to follow in Canada. Approximately 48.5 p.c. of the persons admitted in 1961 declared that they would enter the labour force. The other 51.5 p.c. were wives, children and other dependants or were retired persons. Of the male workers, 21.9 p.c. were classed as professional and managerial, 10.5 p.c. were in agricultural occupations, 5.6 p.c. in service occupations, 32,4 p.c. in manufacturing, mechanical and construction trades, and 17.5 p.c. were general labourers. About 41 p.c. of the female immigrants entering the labour force were intending to follow service occupations. Details are given in Table 9.

Deportations.-Deportations by cause and nationality are shown in Table $\mathbf{1 0}$ for the years 1952-61. Persons who have not yet acquired domicile (five years residence in Canada) may be deported if they fall into prohibited classes at time of entry or within five years of entry, if they have engaged in commercialized vice, have been convicted under the Criminal Code or have become inmates of prisons or mental institutions, or have gained entry by fraudulent means. The causes that may lead to deportation are narrowed after a person has acquired domicile. A person not a citizen may be deported regardless of length of residence if he is found to be a member of a subversive organization or engages in subversive activities, or if he has been convicted of an offence involving disloyalty to the Queen, or if he has, outside of Canada, engaged in activities detrimental to the security of Canada. A Canadian citizen cannot be deported.

## Section 3.-Emigration Statistics

Emigration from Canada is an important factor tending to offset to some extent present and past immigration activities. The major outward movement has always, of course, been to the United States and that movement, both of native-born Canadians and of Europeans who originally migrated to Canada, has attained considerable proportions at certain periods. No Canadian statistics on emigration are available but Table 11 gives figures taken from the annual reports of the Immigration and Naturalization Service of the United States Department of Justice. These figures show the numbers of persons entering the United States from Canada during the years ended June 30, 1952-61 with the expressed intention of establishing permanent residence in that country. They do not include persons travelling for pleasure, even for extended periods of time, holders of bordercrossing cards (normally issued to persons living in border areas of Canada but working in the United States) or casual tourist crossings in these same areas.

# OCCUPATIONAL DISTRIBUTION OF PERSONS MIGRATING FROM CANADA TO UNITED STATES FOR THE YEAR ENDED JUNE 30, 1961 

(SOURCE U S. ANNUAL REPORT OF THE immigration ano naturalization service)

Of the 47,470 persons entering the United States from Canada in the year ended June 30, 1961, 32,038 were native-born Canadians- 15,371 males and 16,667 females. Slightly more than one-quarter, or 8,402 , of the total native-born emigrants were males in the productive age group, 20-59 years. By occupation, the largest group of the total of 32,038 native-born persons was the professional or technical group which numbered 3,541 ; clerical or kindred workers numbered 3,242 , and 1,842 were classed as craftsmen or foremen. On the other hand, 17,658 persons, or 55.1 p.c. of the total, were classed as housewives, children and others with no reported occupation. Altogether, 41.4 p.c. of the total were children under 20 years of age.

## 11.-Persons Entering the United States from Canada, Years Ended June 30, 1952-61

Notr.-Includes only persons who have declared their intention of remaining permanently in the United States when applying for a visa (see text above). Source: Immigration and Naturalization Service, United States Department of Justice.

| Year | CanadianBorn | Total from Canada | Year | CanadianBorn | Total from Canada |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. |  | No. | No. |
| 1952. | 28,141 | 33,354 | 1957. | 33,203 | 46,354 |
| 1953. | 28,967 | 26,283 | 1958. | 30,055 | 45,143 |
| 1954. | 27,055 | 34,873 | 1959. | 23,082 | 34,599 |
| 1955. | 23,091 | 32,435 | 1960 | 30,990 | 46,688 |
| 1956.. | 29,533 | 42,363 |  | 32,038 | 47,470 |

Of the 47,470 persons entering the United States from Canada claiming Canada as country of last permanent residence-which of course includes native-born persons and those born in other countries who have resided in Canada-the Immigration and Naturalization Service, United States Department of Justice, lists 5,562 as professional, technical and kindred workers, 4,744 as clerical and kindred workers and 4,487 as craftsmen, foremen and kindred workers. Housewives, children and others with no reported occupation accounted for 23,338 , or 49.2 p.c. of the total.

## PART II.-CANADIAN CITIZENSHIP*

Naturalization procedures and events leading to the passing of the Canadian Citizenship Act are given in the 1951 Year Book, pp. 153-155.

## Section 1.-The Canadian Citizenship Act

The Canadian Citizenship Act came into force on Jan. 1, 1947, its purpose being to give a clear definition of Canadian citizenship and provide an underlying community of status for all the people of Canada. Since Jan. 18, 1950, the administration of Canadian citizenship has been the responsibility of the Department of Citizenship and Immigration. The provisions of the Act and its several amendments are outlined in some detail in the 1955 Year Book, pp. 177-181. More briefly, they are given in the following paragraphs.

Natural-Born Canadian Citizens, Born before Jan. 1, 1947. The Act conferred natural-born status upon two categories of persons in being on Jan. 1, 1947. These were (1) those born in Canada or on a Canadian ship or aircraft and who were not aliens on Jan. 1, 1947; and (2) those born outside of Canada who were not aliens on Jan. 1, 1947 and who were entitled to claim derivative citizenship in accordance with the provisions of the Act.

The Act provides that a person in the second category who was a minor on Jan. 1, 1947 will automatically cease to be a Canadian citizen on his 24th birthday or on Jan. 1, 1954, whichever is the later date, unless he has his place of domicile in Canada at such date or has, before such date and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship.

Natural-Born Canadian Citizens, Born after Dec. 31, 1946.-A person born outside of Canada subsequent to that date, whose responsible parent is considered a Canadian citizen pursuant to the terms of the Canadian Citizenship Act, is a Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases.

A person who becomes a natural-born Canadian citizen in such a manner will automatically cease to be a Canadian citizen if he fails to file a declaration of retention prior to his 24th birthday or does not have his place of domicile in Canada upon that date.

Canadian Citizens other than Natural-Born.-Before the 1953 amendments to the Citizenship Act, the only persons who acquired Canadian citizenship on Jan. 1, 1947 through the transitional clauses of Sect. 9 were persons who were naturalized in Canada before that date, British subjects who had Canadian domicile at the commencement of the Act and women lawfully admitted to Canada and married prior to Jan. 1, 1947 whose husbands would have qualified as Canadian citizens if the Act had come into force before the date of marriage. Sect. 9 was amended on June 1, 1953, so that a British subject who had his place of domicile in Canada for at least 20 years immediately before Jan. 1, 1947 need not comply with the requirements of Canadian domicile provided he was not under an order of deportation on Jan. 1, 1947.

[^57]Acquisition of Canadian Citizenship by Aliens and British Subjects.-The Act provides a means of acquiring Canadian citizenship. An alien who wishes to become a Canadian citizen must apply through his local court or through one of the special citizenship courts now being established. He must appear before the judge for a hearing and will in due course be granted citizenship if his application is approved by the judge and by the Minister. A British subject may apply for citizenship directly to the Minister. It should be added that a minor child does not automatically acquire Canadian citizenship upon the grant of citizenship to the responsible parent.

Status of Married Women.-The Canadian Citizenship Act places no disabilities upon the married woman. She neither acquires nor does she lose Canadian citizenship by marriage. In order to acquire Canadian citizenship she must apply in exactly the same manner as does a man. There is, however, one advantage granted to her-if she is married to a Canadian citizen she may apply for citizenship after a residence of only one year in Canada.

The Canadian Citizenship Act also enables a woman married to an alien whose nationality she acquired upon marriage to divest herself of Canadian citizenship by the filing of a declaration of renunciation. Finally, it provides a means whereby a woman, who had become an alien through marriage prior to Jan. 1, 1947, may acquire the Canadian status she would otherwise have assumed on that date.

Status of Minor Children.-The minor child of a Canadian citizen other than a natural-born Canadian may receive a certificate of Canadian citizenship upon application therefor by his or her responsible parent, de facto guardian, or mother if she has custody of the child. Provision is also made in the Citizenship Act for the granting of a certificate of citizenship to a minor child in special circumstances. Provision is made for the granting of a certificate to a person who has been adopted or legitimated in Canada and who has been admitted to Canada for permanent residence, if the adopter or the legally recognized father is a Canadian citizen.

Loss of Canadian Citizenship.-Canadian citizenship may be lost in the following manner:-
(1) A Canadian citizen who when outside of Canada and not under disability acquires by a voluntary and formal act other than marriage the nationality or citizenship of a country other than Canada. This does not apply if the country is at war with Canada at the time of acquisition but in such a case the Minister may order that he cease to be a Canadian citizen. The purpose of this is to hold the person, if deemed necessary, to his obligations as a Canadian.
(2) A natural-born Canadian citizen who is a dual national by birth or through naturalization. and any Canadian citizen on marriage, may after attaining the age of 21 cease to be a Canadian citizen through the making of a declaration of renunciation thereof.
(3) A Canadian citizen who under the law of another country is a national or citizen of such country and who serves in the armed forces of such country when it is at war with Canada. This does not apply if the Canadian citizen became a national or citizen of such country when it was at war with Canada.
(4) An other-than-natural-born Canadian citizen, unless he served outside Canada in the Armed Forces of Canada in time of war or other related circumstances, or unless otherwise exempt, loses his citizenship automatically if he has resided outside of Canada for ten consecutive years. The period of absence may however be extended upon request, if the application is filed and granted before loss occurs and if good and sufficient reason exists.
Loss of Citizenship by Revocation-Applicable Only to Naturalized Persons.-The citizenship of a Canadian citizen other than a natural-born Canadian citizen may be revoked by the Governor in Council if, upon a report from the Minister, he is satisfied that such Canadian citizen, having been charged with the offence of treason under the Criminal Code or with an offence under the Official Secrets Act, has failed or refused to return to Canada voluntarily within such time as may be prescribed in a notice sent by the Minister to such person at his last known address and has not appeared at the preliminary inquiry into such offence or at the trial of such offence, or both as the case may be; or has obtained a certificate of naturalization or of Canadian citizenship by false representation or fraud or by concealment of material circumstances.

Doubt as to Loss of Citizenship.-Where in the opinion of the Minister a doubt exists as to whether a person has ceased to be a Canadian citizen, the Minister may refer the question to the Commission referred to in Subsection (4) of Section 19 for a ruling and the decision of the Commission or the Court, as the case may be, shall be final.

Loss of Citizenship by Revocation-Applicable to Both Natural-Born and Naturalized Persons.-The Governor in Council may in his discretion order that any person shall cease to be a Canadian citizen if, upon a report from the Minister of Citizenship and Immigration, he is satisfied that such person has, when not under a disability (1) acquired voluntarily, when in Canada, the citizenship of a foreign country (other than by marriage), (2) taken or made an oath, affirmation, or other declaration of allegiance to a foreign country, or (3) made a declaration renouncing his Canadian citizenship.

## Section 2.-Canadian Citizenship Statistics

Data on countries of allegiance and origins of the population were collected at the 1961 Census and a table giving summary figures will be found in Appendix II of this volume. Results of the 1951 Census, the latest information available on the subject at the time of the preparation of this Chapter, showed that in 195196.9 p.c. of the people of Canada were Canadian citizens; that 0.7 p.c. were citizens of other Commonwealth countries; 1.7 p.c. of European countries; 0.1 p.c. of Asiatic countries; 0.5 p.c. of the United States; and 0.1 p.c. of other countries.

The following statistics show the number of citizenship certificates "issued" and more detailed information on certificates "granted" in recent years. The former, in Table 1, include both certificates granted to new citizens and those issued for various reasons to persons who are already Canadian citizens. Tables 2 to 6 refer only to "grants" which means that the holder became a Canadian citizen by the grant of such certificate.

Citizenship Certificates Issued.-In 1960, 104,406 Canadian citizenship certificates were issued as compared with 115,247 in 1959. During 1960 the Canadian Citizenship Registration Branch recorded 4,904 certificates of registration of births abroad, 422 declarations of intention, 121 declarations of retention of Canadian citizenship and 30 petitions for resumption of Canadian citizenship. Certificates issued free to persons who had had active military service numbered 585, the same as in 1959. Corresponding figures for 1959 were 5,037 registrations of births abroad, 507 declarations of intention, 80 declarations of retention, 15 petitions for resumption and 585 certificates issued free to persons who had had active military service.

## 1.-Citizenship Certificates Issued, by Status of Recipient, 1958-60

Characteristics of Persons Granted Citizenship Certificates in 1960.-Comparable detailed statistics showing the characteristics of persons granted citizenship certificates are available since 1953; such characteristics include age, marital status, occupation, period of immigration, residence and previous nationality.

Of the 62,378 persons granted citizenship in 1960, about 1 p.c. had migrated to Canada before 1921, 3 p.c. in the period 1921-40, 13 p.c. in the period 1941-50 and 83 p.c. since 1950. Regionally, these new citizens were distributed as follows: 1 p.c. in the Atlantic Provinces, 16 p.c. in Quebec, 57 p.c. in Ontario, 15 p.c. in the Prairie Provinces and 11 p.c. in British Columbia. Just under 83 p.c. of them resided in urban centres.

Almost 17 p.c. of the persons naturalized during 1960 had been citizens of Germany, 17 p.c. had been citizens of Italy, 13 p.c. had owed allegiance to a British Commonwealth country, 14 p.c. had been citizens of the Netherlands, 4 p.c. reported former allegiance to countries now parts of the U.S.S.R., and Poland was the country of allegiance for 6 p.c. Most of the persons designated as "stateless" were born in Poland, the U.S.S.R., Yugoslavia, Hungary, Germany, Czechoslovakia and Austria.

Of the males granted citizenship certificates in 1960, 22 p.c. were reported in manufacturing and mechanical occupations, 12 p.c. were employed in construction, 10 p.c. were labourers in other than primary industries, 7 p.c. were in professional occupations, 7 p.c. were in service, 5 p.c. in agriculture, 4 p.c. in transportation and communications and 4 p.c. in proprietary and managerial occupations. Of the females granted certificates, 51 p.c. were homemakers; among those employed outside the home, 30 p.c. were in clerical occupations, 26 p.c. were in manufacturing and mechanical occupations and 24 p.c. in service occupations.

Section 7. International Comparisons of
Vital Statistics ..... 214

The interpretation of the symbols used in the tables throughout the Year Book
will be found facing $p .1$ of this volume.

Vital statistics provide a record of population development-a measure of the pace of growth, marriage and fertility trends, the distribution of people in and entering the various age groups, the relative importance of each of the causes of death, and so on. The continuity of such data gives a constant guide to the planning, operation and evaluation of a variety of national activities, particularly in the fields of public health, education, community planning and various types of business enterprise.

This Chapter gives a fairly detailed coverage of the vital statistics information available, gives life tables for males and females and presents a comparison of the principal Canadian vital statistics rates with those of other countries. In making international and interprovincial comparisons of birth, death and marriage rates, it is important to note that part of the differences observed over a period of years as between countries, provinces or local areas may be caused by differences in the sex and age distribution of the populations involved. Similarly, rates for any one area may be affected by changes in such distribution.

The population data upon which vital statistics rates are computed are given in Appendix II of this volume, in DBS census bulletins, and in reports on intercensal estimates of population. Births and deaths are classified by place of residence (births according to the residence of the mother) and marriages by place of occurrence.

The history of the collection of vital statistics in Canada is covered in the 1948-49 Year Book, pp. 185-188. Detailed information is given in Vital Statistics (Preliminary Report) (Catalogue No. 84-201), Vital Statistics of Canada (Catalogue No. 84-202) and in other regular and special reports; in addition, certain unpublished data are available on request.

## Section 1.-Summary of Vital Statistics

Table 1 gives a summary of the principal vital statistics of the provinces of Canada from 1941 to 1960 and Table 2 shows certain vital statistics for urban centres having at least 10,000 population at the date of the 1956 Census. Corresponding data for 1921 when the collection of national vital statistics was initiated-to 1940 are shown in previous issues of the Canada Year Book.

[^60]
## 1.-Summary of Principal Vital Statistics, by Province, 1941-60

Note.-Figures for the years 1921, when the collection of national statistics was initiated, to 1940 are given in previous editions of the Year Book.

${ }^{1}$ Excess of births over deaths. ${ }^{2}$ Deaths under one year of age. ${ }^{3}$ Per 1,000 population.
4 Per 1,000 live births. $\quad$ Figures for Newfoundland are included from 1949.

## 2.-Summary of Principal Vital Statistics for Incorporated Urban Centres of $\mathbf{1 0 , 0 0 0}$ Population or Over, ${ }^{1}$ Average 1951-55 and 1960

Note.-Urban centres are designated in this table by the following abbreviations: $\mathbf{c} .=\mathrm{city}, \mathrm{t} .=\mathrm{town}, \mathrm{vl}==$ village, s.m. $=$ suburban municipality, and d.m. $=$ district municipality.

| Province and Urban Centre | Live Births |  | Deaths |  | Natural Increase |  | Infant Mortality |  |  | Marriages ${ }^{2}$ |  |

## Section 2.-Births*

The Canadian birth rate in 1921 was 29 per 1,000 population. As a rate of 35 is very high for countries of modern western civilization, the Canadian rate had probably not fallen far, nor for long, before 1921. It fell continuously until 1937 when it reached a low of 20.1 but, as a result of economic recovery and the War, it rose to 21.6 in 1940, 24.3 in 1945 and 28.9 in 1947, the highest since 1921. From 1948 to 1959 it fluctuated between 27.1 and 28.5 but in 1960 stood at 26.9, the lowest since 1946.

The birth rates in most provinces followed similar trends but there were some regional differences in the birth rate pattern in recent years. Although all provinces had record high rates immediately following World War II, average birth rates in Ontario and the western provinces were higher during 1951-55 than for the 1946-50 period, while those for Quebec and the Maritimes were lower. In fact, Ontario, British Columbia and Alberta had record high crude birth rates during the 1956-59 period. However, all provincial birth rates declined or remained stationary between 1959 and 1960.

[^63]

It is often assumed that the Province of Quebec has the highest birth rate in Canada, but Table 1 shows that since the late 1930's or early 1940's Newfoundland and, in some years, New Brunswick have had higher rates than Quebec. In 1960, Newfoundland had a crude rate of 33.1 followed by Alberta with a rate of 30.4 , New Brunswick with 27.2 and Quebec with 27.0; British Columbia and Manitoba had the lowest rates at 25.0 and 25.8, respectively.

It should be noted, however, that these crude rates are based on total population and therefore do not reflect the fertility of the women who are of reproductive age in the different provinces (see pp. 190-191). A more accurate measure of fertility is the rate based on the number of married women in the population in the main reproductive ages, 15 to 44 years. The numbers of children born in 1958, 1959 and 1960 to every 1,000 married women in this age group were as follows:-

| Province | 1958 | 1959 | 1960 | Province | 1958 | 1959 | 1960 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Prince Edward Island.... | 214 | 221 | 223 | Saskatchewan | 188 | 190 | 189 |
| Nova Scotia.............. | 189 | 190 | 191 | Alberta. | 194 | 194 | 194 |
| New Brunswick........... | 216 | 213 | 210 | British Columbia. | 163 | 163 | 162 |
| Quebec.. | ${ }_{166}^{212}$ | 209 167 | 199 167 | Canada ${ }^{1}$ | 184 | 185 | 182 |
| Manitoba | 168 | 175 | 177 |  |  | $\underline{ }$ |  |

[^64]On this basis, Prince Edward Island, New Brunswick and Quebec, in that order, had the highest fertility rates and British Columbia and Ontario the lowest.

Also contrary to popular impression, since 1953 more babies were born each year in Oatario than in the Province of Quebec; in 1960, 159,245 babies were born to Ontario muthers as compared with 137,850 to Quebee mothers. Altogether, 478,551 children were born in Canada in 1960, a slight decline from the record 479,275 born in 1959.

Sex of Live Births.-Wherever birth statistics have been collected they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless it is so much an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada has averaged around 1,057 since the middle 1930's. Provincial sex ratios vary much more widely because of the relatively small number of births involved-the smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year. Another commonly acknowledged fact in many countries-although there is no generally accepted explanation for it-is that the male ratio appears to rise during or shortly after major wars. This seems to have happened in Canada between 1942 and 1945 when the ratio rose to an average of 1,064 during these four years as compared with averages of 1,054 between 1931-41 and 1,057 since 1946.

## 3.-Sex Ratios of Live Births, 1941-60

Hospitalized Births.-In 1960 over 94 p.c. of all Canadian births occurred in hospital as compared with 87 p.c. in 1955. Table 4 shows the rise in hospitalized births in each province since 1931. Before the initiation in 1958 of the federal-provincial hospital insurance programs-in which all provinces except Quebee were participating in 1960there were rather wide variations among the provinces in percentages of hospitalized births. Such variations were caused by the existence of prepaid or provincially sponsored hospital, maternity or medical care plans in some provinces, the unavailability of hospital facilities in others-particularly in remote rural areas-and preference for home delivery in some local areas. Although some variation still exists, the operation of the hospital insurance program has probably been responsible for the noticeable increases in hospitalized births in provinces that previously had lower proportions, for example in New Brunswick where the hospital insurance plan was put into effect on July 1, 1959.
4.-Percentages of Live Births Hospitalized, by Province, 1931-60

${ }^{1}$ Excludes Newfoundland for which data are not available.
Births in Urban Centres.-Table 2, pp. 184-186, shows the number of births in 1960, as compared with the average for 1951-55, to mothers residing in each urban centre of 10,000 population or over.

Illegitimacy.*-In 1960, over 4 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world.

[^66]Multiple Births.-Approximately one confinement in 90 in Canada results in the birth of more than one child as compared with one in 85 several years ago-in other words, the chances of a confinement resulting in the birth of more than one child are fewer now than formerly. However, in 1960 there were two sets of quadruplets born in Canada, the first since 1957. Other facts illustrated by Table 6 are that the proportion of stillbirths is higher among multiple than among single births and is about twice as high for twins and between three and five times as high for triplets.
6.-Single and Multiple Births, Live and Stillborn, 1957-60

Fertility Rates.-The sex and age composition of a population is obviously an important factor in determining crude* birth, marriage and death rates. Since more than 99 p.c. of the children born each year are to women between the ages of 15 and 50 , variations in the proportion of women of these ages to the total population will, of course,

[^67]cause variations in the crude birth rate of different countries-or regions within a country -even though the actual rates of reproduction or 'fertility' of the women in these age groups in each country or region are identical.

In order to eliminate such age-sex differences in populations and to obtain a more accurate measure of actual fertility among women in the reproductive period, it is conventional practice to calculate what are termed age-specific fertility rates, i.e., the number of infants born annually to every 1,000 women in each of the reproductive age periods. Table 7 indicates that in 1960 women in their 20's were the most reproductive; that, on the average, for every 1,000 women between the ages of 20 and 25,229 infants were born in 1960 or, expressed another way, about one woman out of four in that age group gave birth to a live-born infant during the year.

## 2.-Fertility Rates per 1,000 Women, by Age Group, 1941-60

(Exclusive of Newfoundland for all years and the Yukon and Northwest Territories for 1941-49)

| 1960. | 59.9 | 229.2 | 227.1 | 146.9 | 86.4 | 28.1 | 2.4 | 1.896 |

A still more accurate measure of fertility would be portrayed by what are termed age-marital specific rates, i.e., similar rates for married women in each age group. However, these are more difficult to obtain since the number of married women in the population of each age is generally known only at the time of a national census, whereas the numbers of total women can be estimated much more easily between census periods.

Another measure of fertility in a country is obtainable from reproduction rates. The gross reproduction rates shown in Table 7 indicate the average number of female children born each year to each woman living through the child-bearing ages. In other words, this figure represents the average number of females that would be born to each woman who lived to age 50 if the fertility rates of the given year remained unchanged during her child-bearing period. A gross reproduction rate of one indicates that, on the basis of current fertility and without making any allowance for mortality among mothers during their child-bearing years, the present generation of child-bearing women would exactly maintain itself. Canada has always had one of the highest gross reproduction rates among the industrialized countries of the world. Even during the period of low birth rates in the

1930's the rate varied between 1.3 and 1.5 and since World War II has ranged between 1.7 and almost 2.0 ; in 1960 the rate stood at 1.896 , almost double the number required for the population to replace itself. With minor exceptions, provincial reproduction rates are also well above the replacement level.

Age of Parents.-Age of parents is an important variable in any analysis of birth statistics. The distribution of legitimate and illegitimate live births by age of the parents is given in Table 8, as well as the average age of parents.

Over 7 p.c. of the legitimate children born in 1960 were born to mothers under 20 years of age, in over one-third of the births the mother was under 25 years, and in almost two-thirds, under 30 years; in one out of six births the father was under 25 years of age, and in almost 48 p.c. of all births the father was under 30 years. On the other hand, over one-third ( 37.8 p.c.) of the illegitimate infants born were born to mothers under 20 years of age and an additional one-third to mothers under 25 years. The average age of all the married mothers to whom a child was born in 1960 was slightly over 28 , and of the fathers 31.4 years; ten years ago the average ages of the parents were 28.4 and 32.1 , and thirty years ago 29.2 and 33.6 , respectively.

Order of Birth.-Table 9 shows the order of birth of all live-born infants in 1960 according to age of the mother. As would be expected, 28,672 or three out of every four of the 39,089 infants born to mothers under 20 years of age were first children, whereas almost six out of every ten of the children born to mothers of $20-24$ years were second or later children. This is a reflection of the earlier marriages and heavy fertility of recent years. In 1960, 210 infants were born to mothers who had not yet reached their 15th birthday.

Stillbirths.*-The 6,471 stillbirths in 1960 represented a ratio of 13.5 for every 1,000 foetuses born alive. As is evident from Table 11, the stillbirth rate has been decreasing steadily and has been cut by more than half over the past quarter-century. Although the variations between provincial rates have never been wide, rates in some provinces have been reduced more than in others. The stillbirth rate among unmarried mothers has been consistently higher than that among married mothers, but the difference has been narrowing in recent years; in 1959, for example, the rate for unmarried mothers was actually lower than that for married mothers, but this was reversed again in 1960.

${ }^{1}$ Exclusive of Newfoundland for all years and the Yukon and Northwest Territories for 1941-50. ${ }^{2}$ Figures for Newfoundland are included from 1949.

Table 12 illustrates the fact that the risk of having a stillborn child increases with the age of the mother. Although stillbirth rates for mothers of all ages have been declining, they continue to be three times as high among mothers of $40-44$ years and between four and six times as high among those over 45 years as for mothers under 30.

The average age of mothers who bore stillborn children in 1960 was 30.1 years; as shown in Table 8, the average age of mothers who bore legitimate live-born children was 28.1 and of those who bore illegitimate live-born offspring was 23.7.

## Section 3.-Deaths*

The Canadian crude death rate (i.e., per 1,000 total population) has moved downward steadily from 10.2 in 1931 to 8.2 for each of the years 1954 to 1957 and, following a record low of 7.9 in 1958, rose to 8.0 in 1959 and dropped to a new record low of 7.8 in 1960, giving Canada one of the lowest crude death rates in the world. Table 1, pp. 182-183, shows that this trend has been apparent in varying degrees in all provinces. The generally low rates in the Prairie Provinces are partly the result of their younger average population; the uniformly higher rate in British Columbia is mainly attributable to a high proportion of people in the older age groups.

## Subsection 1.-General Mortality

Age and Sex Distribution of Deaths.-During the period of national vital statistics (1921 to date), the mortality pattern at all ages has been steeply downward. Of major significance in lowering the over-all death rate have been reductions in infant mortality, in childhood death rates and in those of young adults. In 1931 over '19 p.c. of all male deaths occurred among persons of five to 45 years of age; in 1960 only a little over 10 p.c. of all male deaths took place in this age group. Among females in the same age group the proportion dropped from just under 22 p.c. to less than 8 p.c. in the same period. While death rates for males up to age 45 have been roughly halved during the past 25 years, those for females under 45 years have been reduced as much as three to four times. In other words, the death rates for females at every age have declined more than those for males; the male rates have almost always been consistently higher than those for females and the differences are widening. The male death rate stood at 9.1 per 1,000 male population in 1960 as compared with only 6.6 for females.

[^69]Despite the very considerable reduction in infant mortality over the past 25 or 30 years, more deaths still occur in the first year of life than in any other single year. Of the 104,517 deaths occurring in 1931, 25,737 or almost one-quarter were of children under five years of age and over three-quarters of those were of children under one year of age. On the other hand, of the 139,693 deaths in $1960,15,144$ or 11 p.c. were of children under five years of age, and of those 13,077 or over 86 p.c. were under one year. Most of the reduction took place among children over the age of one month but there was also a notable decrease in all childhood ages up to five years.

The reductions in the mortality rates in early and middle years of life have had the effect of increasing the number of people in the older age groups and raising the average age at death. In 1931 the average age at death of males was 43.1 years and of females 44.8 years; by 1960 this had advanced to 59.5 years and 62.7 years, respectively. These trends are indicated clearly in Table 13.

Deaths in Urban Centres.-Table 2 on pp. 184-186 shows the number of deaths in 1960 for urban centres of 10,000 population or over. Without a knowledge of the age composition of each centre it is difficult to compare rates for various centres. The migration of young people from rural areas to some urban centres and of older people to other centres creates a favourable situation for a low or high rate as the case may be. However, despite differences in the age factor, some urban areas have very low death rates compared with other centres of the same size and with other areas in the same province.

Causes of Death.-Table 14 shows the deaths and death rates in Canada grouped according to the International Abbreviated List of 50 Causes. About 80 p.c. of the deaths are caused by diseases of the heart and arteries, cancer, accidents, diseases of early infancy, the respiratory diseases-tuberculosis, pneumonia and influenza-and nephritis.

The rise in the average age at death has already been noted (p. 196). Deaths from causes that mainly affect children and young adults have declined. Diphtheria, for example, has been almost wiped out-in fact there were only seven deaths from diphtheria during 1960 and not a single one in 1959-and tuberculosis has been greatly reduced. On the other hand, the aging of the population has increased the proportion of deaths from certain causes that affect older people. Thus, cancer and diseases of the cardiovascularrenal systems now account for a substantially larger proportion of all deaths than formerly.

These trends indicate the remarkable success that has attended the attack by health authorities on the infective and contagious diseases which in the past have constituted such a great hazard in the early and young adult years of life. They have served similarly to emphasize the emergence of the chronic and degenerative conditions of later life as the targets toward which the public health programs of the future will be directed. In effect, Canada has shared the experience of most western nations in exchanging a high mortality in younger life for high morbidity in older age groups.

The Chart on p. 198 shows death rates for the major cause groups from 1935-60.

## MAJOR CAUSES OF DEATH

* INCLUDES: DISEASES OF HEART (INCL. RHEUMATIC FEVER) AND ARTERIES, INTRACRANIAL LESIONS, CHRONIC NEPHRITIS.

## 14.-Deaths and Rates per $\mathbf{1 0 0 , 0 0 0}$ Population, according to the International Abbreviated List of 50 Causes, 1959 and 1960

## LẸADING CAUSES OF INFANT DEATHS

## Subsection 2.-Infant Mortality

Table 1, pp. 182-183, and Table 15 show the striking improvement that has taken place in the rate of infant mortality during the past twenty years. Although 69,766 of the 2,347,776 children born in the years 1956-60 died before reaching their first birthday, 150,925 others lived who would have died at the rate prevailing in the period 1926-30.

Table 15 shows that mortality among male infants is 25 to 30 p.c. higher than that among female infants for Canada as a whole, with wider variations for the individual provinces. For the country as a whole, in 1960, out of every 1,000 infant boys born alive, 31 died before reaching their first birthday, whereas out of every 1,000 infant girls 24 died within one year of their birth. As already pointed out, there are on the average 1,057 males born to every 1,000 females but, because male infant mortality is higher, the excess of males is reduced greatly by the end of the first year. For example, in 1958-60 there were 733,777 male children born compared with 694,167 female children, an excess of 39,610 or 5.7 p.c.; during the same period, 23,551 male children died during their first year compared with 17,299 female children so that the excess of males at one year of age was reduced to 33,358 or under 5 p.c.

As indicated in Tables 1, 2 and 15, infant mortality rates have varied from province to province and from one locality to another. One of the principal causes of these variations appears to have been the different proportions of births taking place in hospital or under proper prenatal and postnatal care (see also p. 188). Many other factors have also been important, particularly the supervision of water supplies, improved sanitation, the pasteurization of milk, the use of antibiotics, more and better pædiatric services, improved obstetrical and hospital nursing services, improved home environment as a result of generally higher living standards and, in recent years, the lower age of mothers.

${ }^{1}$ Excludes Newfoundland and the Yukon and Northwest Territories.
Age at Death.-In 1960 the ages of the 13,077 infants who died within a year of birth were by no means evenly spread over the twelve-month span. In fact, 11,834 or 90 p.c. of the infants were less than six months old and 8,410 or 64 p.c. were less than one month old. There was a sharp drop to 1,063 in the second month with gradual reductions thereafter to the eleventh month. Of the 8,410 deaths during the first month, 7,307 occurred in the first week of life and no less than 4,467 took place in the first day.

Causes of Infant Deaths.-In 1960 more than two-thirds of the infant deaths were caused by immaturity, congenital malformations, pneumonia, postnatal asphyxia and atelectasis, and injury at birth. Immaturity was the underlying cause of 2,261 deaths, followed closely by congenital malformations with 2,076 fatalities. Pneumonia took the lives of 1,869 infants. Postnatal asphyxia accounted for 1,522 deaths and injury at birth for 1,265 .

Infant Mortality in Urban Centres.-Because of the relatively small numbers of infant deaths in individual cities and towns, the rates for these centres usually vary widely from year to year. As is evident from Table 2, pp. 184-186, many cities and towns have maintained consistently low rates as compared with the national rate or the rate for the province in which they are situated.

## Subsection 3.-Maternal Mortality

As indicated in Table 1, pp. 182-183, the number of mothers who die in pregnancy and childbirth has been greatly reduced during the past two decades. Although the number of births has been much greater in recent years, the number of maternal deaths declined steadily from 1930 (when there were 1,215 deaths and a rate of almost 50 deaths for every 10,000 births delivered alive) to 255 in 1957; the slightly higher figure of 263 in both 1958 and 1959 was followed by an all-time low of 215 in 1960 . Since 1945, the rate of maternal mortality has been less than 20 per 10,000 live births delivered and has been under 10 since 1951. In 1959 there was a slight decrease in the rate to 5.5 per 10,000 live births from 5.6 in 1958, and in 1960 the rate dropped below 5 for the first time to 4.5 . Despite this improvement, Canada's maternal death rate is higher than the rates for several other countries such as England and Wales (3.9), the United States (3.6) and Sweden (2.4). Mortality among unmarried mothers is higher than among married mothers.

Age at Death.-Table 17 shows the distribution of maternal deaths by age group and average age at death; the latter is about four years higher than the average age of all mothers at the time of childbirth. Until recent years, the risk of mortality at childbirth was directly related to the age of the mother-in other words, for all mothers of over 20 years the rate rose with increasing age. While death rates for all age groups of mothers have been declining, there have been rather significant changes in the rates. Formerly, the rate for mothers in the age group 30-34 was twice or three times as high as the rate for the $20-24$ group, but recently mortality rates for the four age groups of mothers under 35 years of age have not been far apart, although after age 35 a sharp rise occurs.

Causes of Maternal Deaths.-Table 18 shows the main causes of maternal deaths during the years 1958-60. Until a decade or so ago, sepsis and toxæmia were by far the most important causes of death of mothers at childbirth. The danger of death from sepsis and other infection has been sharply reduced over the past 15 to 20 years through the use of antibiotics and probably also through increased use of medical services. On the other hand, the number of deaths caused by toxæmia arising during pregnancy and other complications of both pregnancy and delivery represent continuing problems. Hæmorrhage during pregnancy or delivery, which has been another important cause of mortality among mothers, has shown some reduction in recent years.

Of the 215 maternal deaths in 1960, 69 resulted from complication arising during pregnancy, more than half of these from some type of toxæmia; 83 resulted from a complication of delivery, 39 from a post-delivery complication and 24 from abortive delivery.

## Section 4.-Natural Increase*

The rate of natural increase in Canada (excess of births over deaths) prior to 1930 was 13 or more per 1,000 population. Partly as a result of the depression, the birth rate declined more than the death rate and the rate of natural increase fell to 9.7 in 1937. Higher birth rates during and after World War II and a gradually declining death rate caused the natural increase rate to rise steadily from 10.9 in 1939 to a record 20.3 in 1954. Since that time there has been a slight drop but the rate stood at 19.1 in 1960-probably the highest among the more industrially developed countries of the world.

[^71]Table 19 shows the rates of natural increase in the provinces and for each sex separately. The high rates in the Prairie Provinces, especially Alberta, are partly accounted for by their relatively younger populations and consequent low death rates. High birth rates and declining death rates, particularly in Quebec, have given Newfoundland, Alberta, Quebec, Saskatchewan and New Brunswick the highest rates of natural increase in Canada in recent years (excluding the Yukon and Northwest Territories).

The rates of natural increase are higher for females than for males in all provinces because of the higher death rates for males. In the western provinces particularly, the ratio of males to females in the total population is higher than in other parts of Canada and this tends to lower the rate of natural increase. In Canada, a country with a fairly young population and where immigration has been on a large scale, an excess of males is to be expected but the higher rate of natural increase for females may gradually reduce this excess. The trend is toward an eventual excess of females in the total populationas there now is in most European countries-unless immigration again raises the male ratio or death rates among males are greatly reduced.

19.-Natural Increase and Rates per 1,000 Population, by Sex and Province, 1941-60-concluded

${ }^{2}$ Figures for Newfoundand are included from 1949 and those for the Yukon and Northwest Territories from 1950.

Natural Increase in Urban Centres.-The classification of births and deaths by place of residence makes it possible to compile the natural increase in the population of urban centres; the figures are presented in Table 2, pp. 184-186.

## Section 5.-Marriages and Divorces

## Subsection 1.-Marriages*

In 1960 Canada's marriage rate was 7.3 per 1,000 population, the lowest in over twenty years. Provincial rates varied from 6.7 per 1,000 population for Prince Edward Island to 8.2 for Alberta. Table 20 shows the number of marriages and the marriage rates per 1,000 population for Canada and the provinces, and percentages of brides and bridegrooms, according to place of birth. For the country as a whole, over 81 p.c. of the grooms of 1960 were born in Canada and 67 p.c. in the province in which they were married; over 85 p.c. of the brides were born in Canada and over 73 p.c. in the province in which they were married. However, as would be expected because of heavy immigration of young persons in the postwar years, an increasing number of marriages are of persons born outside the country. For example, 18.7 p.c. of the grooms married in 1960 were born outside Canada compared with 11.7 p.c. in 1941 ; for brides the proportions were 15.0 p.c. and 8.4 p.c., respectively. However, there are wide variations in this pattern as between provinces; in the older Atlantic Provinces and Quebec there is a greater tendency than in the other provinces to marry native Canadians. In these areas both partners in a marriage are often born in the same province.

* For international comparisons, see Section 7, pp. 214-215.

[^72]Age and Marital Status of Brides and Bridegrooms.-Table 21 shows that over 91 p.c. of the marriages in 1960 were between persons who had not been married previously; 4.9 p.c. of brides and 4.4 p.c. of bridegrooms had been widowed, and almost 4 p.c. of the marriages were of divorced persons. The average age at marriage of bachelors was just under 26 years and that of spinsters 23 years. The average age of widowers and widows at time of remarriage was slightly more than double that of bachelors and spinsters. Over 91 p.c. of the spinsters married in 1960 were under 30 years of age, 35 p.c. were under 20 years and 45 p.c. were between 20 and 25 . Over 84 p.c. of the bachelors were under 30 years of age, 8 p.c. of them under 20 and over 50 p.c. from 20 to 24 years of age.

In recent years, couples have been marrying younger than they did a generation ago. Since 1940 the average age of men at the time of their first marriage has dropped from 28 years to less than 26 ; that of girls from 24 years, 5 months to 23 years exactly.

Religious Denominations of Brides and Bridegrooms.-The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 22 shows the very strong influence that religion has on marriage. About 71 p.c. of all marriages are between persons of the same religious denomination; in 1960 among those of Jewish faith it was about 92 p.c.; among Roman Catholics about 88 p.c.; United Church about 61 p.c.; and Eastern Orthodox about 66 p.c.

## Subsection 2.-Dissolutions of Marriage (Divorces)

Before World War I the number of divorces granted in Canada was very small. There were fewer than 20 divorces each year from Confederation to 1900, 21 in 1903, 51 in 1909 and 60 in 1913. These numbers represent less than one per 1,000 of the yearly number of marriages. At the end of World War I the number of divorces showed a definite increase, advancing to a peak of 8,199 in 1947, then declining gradually to a postwar low of 5,270 in 1951. From 1952 to 1959 the number fluctuated between 5,650 and 6,688 , and rose to 6,980 in 1960.
23.-Dissolutions of Marriage (Divorces), by Province, 1936-60

Note.-Figures for individual years from 1900 to 1950 are given in the 1956 Year Book, p. 230.

## Section 6.-Canadian Life Tables

Four official series of life tables for Canada and the provinces and regions have been published to date, based on deaths in the three-year period around each of the Censuses of 1931, 1941, 1951 and 1956. In addition, tables have been computed for Canada as a whole for the years 1945 and 1947 based on estimated populations by sex and age and the deaths recorded in those years. The life table values for 1956 are given in abbreviated form in Table 24.

Life tables give some measure of the health and general conditions of survival of the population in a conventional, standard form. A hypothetical number $(100,000)$ of births of each sex is assumed as a starting point. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. For example, during the year 1956, of 100,000 males born, 3,472 died in their first year so that 96,528 survived to one year of age; 241 died in their second year so that 96,287 survived to two years of age, and so on. At 100 years of age only 87 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally, the expectation of life is the average number of years which a person might expect to live if the mortality rates in the given years remained constant throughout his lifetime.

Mortality rates at all ages for males have been almost consistently higher than for females. Males have the highest risk of mortality as compared with females during their first year of life, from their late 'teens to early 30's and from age 50 to 65 . For both boys and girls the risk of mortality drops rapidly during childhood and is lowest at about age 10, increases gradually to about age 40 for males and about 50 for females and then rises steeply with advancing age. As an illustration of the information available from study of the life tables, it may be observed that at the mortality rates given in the 1956 life table (see Table 24) about 13,000 males would have died before reaching age 50 as compared with about 8,700 females; only 56,466 of the original group of 100,000 males would have survived to age 70 as compared with 70,327 females.

By 1956, life expectancy at birth in Canada had reached a new high record of 67.6 years for males and 72.9 for females-comparable to the expectancy for other countries of the world with highly developed programs of medical and public health care. Once a child has passed its first year of life, however, its life expectancy increases appreciably. At one year of age a male child at present mortality risks may, on the average, expect to live an additional 69.0 years and a female 74.0 years, representing for an infant boy a gain of 1.4 years over his expectation at birth and for an infant girl a gain of 1.1 years. The expectation of life of a 15 -year-old boy is 55.9 additional years; of a 15 -year-old girl 60.6 years. At 25 years of age the expectation is about 46.6 years for men and almost 51 years for women and at age 70, 10.5 years for men and 12.2 years for women.

Table 25 summarizes the life expectancy figures extracted from the Canadian life tables for 1931, 1941, 1951 and 1956. According to these figures, life expectancy at birth for men increased 1.3 years from 1951 to 1956 compared with 3.4 years from 1941 to 1951 and 2.9 years from 1931 to 1941; females gained 2.1 years from 1951 to 1956 compared with 4.5 years and 4.2 years, respectively, in the preceding decades. Thus, from 1931 to 1956 a total of 7.6 years was added to male life expectancy and 10.8 years to female longevity.

The increases in life expectancy have been predominantly at the younger ages, particularly in infancy, and diminish with advanced age. For example, since 1931, 3.2 years have been added to the life expectancy of a five-year-old male, 2.1 years to a 20 -year-old, nine months to a 40 -year-old and three months to a 60 -year-old as compared with 7.6 years for a newborn male. During this period, life expectancy for a five-year-old female gained 7.2 years, for a 20 -year-old 6.0 years, for a 40 -year-old 3.7 years and for a 60 -year-old 2.2 years as compared with 10.8 years for a newborn female.

Longevity has improved for both sexes, though more so and at all ages for females, but there has been only slight improvement for males beyond middle life. Briefly, the
rapid decline in the death rate for infants of both sexes is continuing but the declines are slower with advancing age, so that relatively stationary death rates have been established from about 50 years onward for males and from about 80 years onward for females.

The fact that such a pattern exists is important in interpreting the results of these life tables. The arbitrary population base of 100,000 of each sex in the 1956 tables, for example, has been subjected to the mortality rates in effect in 1955-57, and the life expectancy computed as if those death rates at each age were to prevail during their lifetime. Actually the theoretical 200,000 infants born in 1955-57 will most probably have a pattern of survival and life expectancy quite different from that of the present life tables as they will spend most of their lives under conditions of public health and medical care which in all likelihood will be superior to those prevailing in 1955-57.

The improvement in life expectancy, particularly among children and adolescents, is caused mainly by the substantial reduction in recent years in mortality from infectious diseases; on the other hand, diseases associated with middle and old age are much less amenable to control. It is therefore unlikely that improvement in life expectancy in the future will be comparable to that of the past quarter-century. As approximately 11 p.c. of deaths in 1955-57 occurred among infants and an additional 75 p.c. among persons over age 50, any additional improvement must come as the result of further declines in mortality from conditions associated with childbirth and early infancy, further control of infectious diseases, prevention of accidents, and advances in combating diseases associated with middle and old age, such as cardiovascular-renal conditions and cancer.

## Section 7.-International Comparisons of Vital Statistics

Table 26 gives a summary of Canada's national and provincial vital statistics rates along with those of several other countries. It will be noted that among the countries listed the low crude death rate in Canada is bettered by only three countries-Japan, the Union of Soviet Socialist Republics and the Netherlands-and that some of the provinces have lower rates than most other countries. The birth rate also helps to give Canada one of the fastest growing populations, currently ranking sixth among those listed. However, 11 countries reported lower rates of infant mortality.

# 26.-Principal Vital Statistics Rates of Selected Countries, 1960 

Norg.-Countries are ranked according to the highest rates for births, marriages and natural increase and according to the lowest for deaths.

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Canada's growth in the past fifteen years has created many new problems in the planning of health and welfare services. Population has increased by one-half in this period. General prosperity, growing urbanization and industrialization, larger numbers of children and old persons in the population, and new concepts and knowledge in health and welfare matters have all contributed to needs for additional services and to a greater interdependence among the different health and welfare professions.

During 1961, attention was focused on the nation's health problems by the appointment of the Royal Commission on Health Services to inquire into the existing health facilities and the future need for health services for the people of Canada, and to recommend measures that would ensure the best possible health care for all Canadians. A series of public hearings was commenced, briefs from interested organizations were received, and a number of independent studies were initiated to explore various aspects of Canada's health needs and resources. Also in 1961, the Province of Saskatchewan attracted nationwide interest by enacting a Medical Care Insurance Act based on the recommendations of its Advisory Planning Committee on Medical Care (to come into force on July 1, 1962).

[^74]Although the possibility of government participation in public medical care, beyond the special provision existing for certain indigent groups, received increasing public attention, insurance for medical care in Canada was still largely based on voluntary prepayment plans with approximately one-half the population enrolled. However, almost 98 p.c. of the insurable population was covered under the nation-wide hospital insurance and diagnostic services program operated by the provinces with federal financial support. During the year more than three million patients were admitted to general hospitals and almost 95 p.c. of the half-million births occurred in hospital.

Development in the sciences related to medicine, improved health services, and better nutritional and other standards are contributing to generally favourable health conditions-to a declining death rate and a longer expectation of life. Substantial progress in the fight against contagious diseases has not yet been paralleled by progress in solving the problems presented by chronic illness and the disabilities of older persons. Heart and hypertensive diseases, arthritis and rheumatism are among the leading causes of disability, although residual disability from stroke, Parkinson's disease, epilepsy and multiple sclerosis also accounts for large numbers of disabled persons. The death rate from lung cancer continues to increase and the disease is the subject of continuing investigation. Interest in mental illness has increased in recent years and new approaches to the solution of this major problem are being explored. Accidents, especially traffic accidents, constitute a steady and tragic problem, particularly as they affect children. Canada shares the world-wide concern for the hazards of radiation from medical and industrial causes as well as from fallout, and has devoted considerable attention to this problem.

Progress in the welfare field also continues to be substantial and efforts are concentrated on remaining problems, some of which are of considerable magnitude. Proposals for contributory old age insurance benefits and for improved general assistance programs are being explored. During 1961, the Federal Government and several provincial governments expressed interest in Ontario's proposed plan for the extension and portability of industrial pensions. In 1961, also, a five-million-dollar program was initiated by the Federal Government for the encouragement of fitness, recreation and amateur sport.

Rapid urbanization, large-scale immigration and increasing numbers of older persons in the population are among the forces requiring new approaches to Canada's welfare problems. At the same time, the growth of the industrial community has been associated with a marked improvement in the general standard of living. Higher real income has permitted better levels of nutrition and better housing in the urban industrial centres. During the past decade, many urban services have been extended to the rural population, so that many of the improvements in the national standard of living are being shared more equally by the urban and rural populations.

The increase that has taken place over the years in the provision of social welfare services has, of course, resulted in greatly increased government expenditures. The financial phase of developments in this field is dealt with in the following special article.

## SOCIAL WELFARE EXPENDITURES IN CANADA*

One of the most significant socio-economic developments in postwar Canada has been the very substantial growth in social welfare expenditures. The more than $\$ 3,300,000,000$ spent under public welfare programs in the form of general welfare payments, social insurance benefits, social assistance and health and welfare services in the year ended Mar. 31, 1961 represented an almost elevenfold increase in such expenditures in about a decade and a half since World War II. Outlays of this magnitude by municipal, provincial and federal governments have had a profound effect on the nature and scope of public welfare programs across Canada and at the same time have had important implications for public finance and fiscal policy and for federal-provincial as well as provincial-municipal relations.

[^75]Any discussion of social welfare expenditures inevitably involves the question of what items should be included. In this review, a broad and commonly used interpretation of social welfare expenditures has been employed. Briefly stated, it covers outlays under municipal, provincial and federal government programs in the form of general welfare payments, social insurance benefits, social assistance payments, health services, welfare services and administrative costs involved in the operation of these measures.

As social welfare expenditures have increased over the years, the proportion financed by each of the three levels of government has changed. In 1874, a few years after Confederation, total outlays amounted to approximately $\$ 1,400,000$, of which about 50 p.c. was borne by the provincial governments, 36 p.c. by municipal governments and 14 p.c. by the Federal Government. By 1913, about four decades later, outlays on social welfare had increased to $\$ 13,700,000$ and the position of the municipalities and provinces had almost reversed, the former paying out 59.8 p.c. of total expenditures and the latter 31.4 p.c.; the Federal Government's share had dropped to 8.8 p.c. After World War I, the amount and proportion of federal expenditures increased dramatically and the position of the Federal Government as the heaviest spender in this field has remained unchanged since that time.

Social welfare expenditures by the three levels of government reached $\$ 99,000,000$ by $1926-27$, which was about $\$ 10.48$ per capita. Of the total, federal expenditures accounted for 50.2 p.c., provincial expenditures for 28.9 p.c. and municipal outlays for 20.9 p.c. Throughout the depression years of the 1930 's, expenditures on social welfare rose substantially. In 1939-40, the total amounted to $\$ 317,200,000$, or $\$ 28.15$ per capita, of which the federal share was 48.6 p.c. During the war years, however, such expenditures declined; in 1942-43, for example, government outlays dropped to $\$ 230,000,000$ and the per capita figure to $\$ 19.73$.

The tremendous expansion of social welfare expenditures that followed World War II was accompanied by a further upward thrust in federal responsibility for such expenditures and by a considerable curtailment of municipal financing of welfare programs. By 1945-46 expenditures had increased to $\$ 573,800,000$, or $\$ 47.52$ per capita; a decade later, in $1955-56$, they had been further augmented to $\$ 1,907,300,000$, or $\$ 121.50$ per capita; and in the next five years they continued to climb so that by 1960-61 total outlays of the three levels of government had reached $\$ 3,347,000,000$, or $\$ 187.89$ per capita.

The share of these expenditures carried through federal programs jumped to 71.6 p.c. in 1945-46, which represented a new plateau of federal participation. During the next decade and a half, the Federal Government's share ranged between 74.6 p.c. and 68.3 p.c., standing at 70.5 p.c. in 1960-61. Municipal expenditures on social welfare continued to decline relative to federal-provincial outlays. The municipal share dropped to 7.4 p.c. in 1945-46, or less than half that of the late 1930's and early 1940's, and this downward trend continued after the War so that in 1960-61 the municipal share of government expenditures on social welfare was only 3.0 p.c., the lowest in Canadian experience. The proportion of expenditures borne by the provinces was also much less in the postwar period than in any previous period since Confederation; it fluctuated between 18.9 p.c. in 1946-47 and 27.0 p.c. in 1950-51 and stood at 26.5 p.c. in 1960-61.

Federal Expenditures.-Expenditures by the Federal Government in the form of cash benefits under various social security programs as well as on the financing of public health and welfare services reached about $\$ 2,538,000,000$ for the year ended Mar. 31, 1962. General welfare payments in the form of family allowances for children under 16 years of age and old age security pensions for persons 70 years of age or over accounted for a very large share of this expenditure. Thus, the magnitude of the outlay involved is resulting in a redistribution of income of sizable proportions in favour of children and senior citizens. Federal expenditures under these two programs will reach $\$ 1,273,000,000$ in the fiscal year 1962-63.

The Federal Government has made provision for social assistance payments under a variety of programs. The first major venture in this area took place in 1927 when the Government introduced a sharing program with respect to the cost of old age assistance. During the 1930's, federal war veterans allowances were introduced and the federalprovincial program of old age pensions was extended to cover blind persons. In the mid-1950's, federal programs were implemented to share with the provinces the cost of allowances for the permanently and totally disabled and general assistance payments. Expenditures under these programs are small in comparison with those for general welfare payments; in 1961-62, war veterans allowances amounted to about $\$ 75,000,000$, and the federal share of provincial payments for old age assistance, allowances for the blind and disabled, and unemployment assistance amounted to $\$ 141,000,000$.

Canada has tended to employ the techniques of general welfare payments and of social assistance in the provision of income maintenance payments rather than to depend to any considerable extent on social insurance programs. Unemployment insurance, the principal federal program utilizing the insurance approach, was introduced early in World War II; insurance benefits under this program reached $\$ 514,000,000$ in $1960-61$. The announcement in the Speech from the Throne in January 1962 of the intention of the Fedoral Government to introduce an old age, survivors and disability insurance program if agreement can be reached with the provinces on a suitable constitutional amendment ensuring constitutional authority for such an undertaking, suggests that in the years ahead the social insurance technique may be utilized as a part of Canada's social security system to a far greater extent than in the past.

The Federal Government is also financially involved in the provision of health and welfare services. Some of these are programs administered by the Federal Government, such as treatment and welfare services for sperial groups; in 1961-62, \$24,400,000 was expended under the Indian and Northern Health Services program and $\$ 49,000,000$ was expended on hospital accommodation and treatment services for veterans. Other measures
provide grants to the provinces to assist in the operation of provincial programs. For example, in 1961-62 federal contributions toward provincial hospital insurance amounted to $\$ 283,700,000$ and grants under the National Health Grant Program reached $\$ 49,000,000$.

It is of interest to note that while federal-provincial cost-sharing programs with respect to both social assistance payments and health and welfare services involve considerable sums, this type of expenditure represents less than 20 p.c. of total federal expenditures in the field of social welfare.

Provincial Expenditures.-In 1874, provincial social welfare expenditures amounted to $\$ 657,000$. Up to the outbreak of World War I, provincial government outlays for this purpose were still very modest, although the amount had increased to $\$ 4,300,000$ by 1913 , and expenditures were principally for institutional care with a meagre contribution being made for health and welfare services and relief. In the largely rural economy of the first few decades after Confederation, most of the health and welfare needs which went beyond the resources of the individual were met through the family, relatives, friends and private charity. In discussing socio-economic development in the period 1874-96, the report of the Royal Commission on Dominion-Provincial Relations suggested that "... this restraint on provincial outlay during a long period of depression was made tolerable by the nature of the economy at the time. The relative self-sufficiency of the family and local communities enabled individuals to weather the depression somehow without reliance on governments. Those who were unable to make adjustments in this way were forced into the stream of migration to the south where they were absorbed by the rapid industrial developments and the expanding frontier of the United States."

During World War I there was considerable industrial growth in Canada and it was at this time that modern workmen's compensation schemes were adopted by several of the provinces. It was in this period also that the first mothers' allowances programs were introduced. During the 1920's these new income maintenance programs began to have an important impact on social welfare expenditures at the provincial level, which by $1926-27$ had reached $\$ 28,600,000$. Nevertheless, the largest item of provincial expenditure continued to be hospital care.

Relief expenditures were the dominant factor during the 1930's. Prior to that decade the provinces had accepted relatively little responsibility in the matter of unemployment relief. Amounts paid out under the mothers' allowances programs during the 1930's were also well above those of the 1920's and hospital care expenditures continued to rise. New expenditures arising out of the matching feature in the federal grant-in-aid scheme for old age pensions introduced in 1927 became an increasingly important expenditure for the provinces and the addition of the federal-provincial program of pensions for the blind in 1937 opened up a new avenue of expenditure although the amounts involved were relatively small. By 1939-40, provincial social welfare expenditures had climbed to $\$ 114,300,000$. Provincial expenditures dropped somewhat during World War II but in the postwar period rose tremendously. A part of this rise was a by-product of the inflationary situation of the time but a considerable amount was also attributable to the extension of services and the introduction of more generous income maintenance payments. Hospital care expenditures increased much more than any other single item, in part the result of an increase in the amount of hospital care provided and of higher costs for such care. It also was the outcome of the establishment of hospital insurance programs in the various provinces throughout Canada, which brought a large share of expenditures for hospital care within the public sector. The entry of Newfoundland as the tenth province in Confederation in 1949 brought about an addition to provincial expenditures in Canada. Compensation payments and expenditures on related rehabilitation services under the workmen's compensation programs, and outlays on old age and blind pensions, mothers' allowances, and general assistance all rose steadily and new programs of allowances for the permanently and totally disabled were introduced. Finally, public health and welfare services were strengthened and extended during this period. From an expenditure of $\$ 109,800,000$ in 1944-45, provincial expenditures rose to an estimated $\$ 1,000,900,000$ in 1961-62.

Municipal Expenditures.-Municipal social welfare expenditures were modest in the early years after Confederation, amounting to about half a million dollars in 1874. They increased to $\$ 8,200,000$ in 1913 and reached higher levels in the 1920's, by 1926 standing at almost $\$ 20,700,000$.

During the depression period of the 1930 's, municipal expenditures on relief rose sharply and social welfare costs climbed to $\$ 57,100,000$ by 1933 . Toward the end of the 1930's and in the war years lower outlays reflected less need for relief expenditures. However, before the end of World War II annual expenditures began to grow again and the increases became more pronounced until in 1957-58 an expenditure level of $\$ 112,600,000$ was reached. Since then, there has been a much lower annual outlay and in the fiscal year 1960-61 municipal social welfare expenditures stood at $\$ 98,600,000$ which included $\$ 52,400,000$ for health services and $\$ 46,200,000$ for welfare payments and services. This lower level in recent years can be attributed to a number of factors. One of the most important was the introduction of the federal unemployment assistance program in 1956 and the later extension of that program. Much of the cost of general assistance formerly carried by municipalities in Canada has been shifted to the federal and provincial governments, although in some provinces a portion of general assistance payments is still the responsibility of local governments. Another factor was the implementation of the federalprovincial hospital insurance program which relieved the municipalities of much of the cost of hospital care for indigents.

Social Welfare Payments in Relation to Personal Income.-Social welfare income maintenance payments have cushioned permanent or temporary loss of personal income in a number of ways. Benefits from programs such as unemployment insurance and assistance, which are specifically related to cyclical changes in business conditions, provide a direct countercyclical effect because of the rise in the total of benefit payments under them during periods of economic downturn. While benefits under other programs are not so directly related to changes in the economic picture, they provide a continuing source of income to beneficiaries and in so doing afford a stabilizing influence during periods of decline in purchasing power. The effect of this influence is indicated by the fact that in 1961 income maintenance or transfer payments to individuals from governments amounted to $\$ 2,400,000,000$ or 8.6 p.c. of all personal income.

Income maintenance payments expressed as a percentage of personal income have greatly increased in the postwar years; in 1947-48 they represented 5.4 p.c. of personal income, in 1952-53 the percentage stood at 6.3 and in 1958-59 it reached 8.3.

The effect of social welfare payments varies in different parts of Canada. In the provinces with comparatively low average incomes these payments have a much greater impact than in others. For example, in the Atlantic Provinces where the per capita personal income was $\$ 947$ in 1958-59, 14.4 p.c. of it was derived from income maintenance payments; in Ontario, on the other hand, where per capita personal income was $\$ 1,695$, the proportion obtained from such payments was 6.7 p.c.

Social Welfare Expenditures in Relation to National Income.-Social welfare expenditures, expressed as a percentage of national income, are at an all-time high in Canada. Back in 1926-27 the percentage was only 2.4 but during the depression years, when welfare expenditures were relatively high and growth of national income adversely affected, the proportion reached as high as 9.7 p.c. Then, during World War II, when national income grew rapidly and government expenditures on social welfare declined in absolute amounts, outlays dropped to 2.8 p.c. of net national income. In the late 1940 's the amounts spent by governments on social welfare programs increased rapidly, mainly because of increased outlays on family allowances, veterans pensions and allowances, and health services and, even though national income was also rising, the rate of increase in welfare expenditures was much greater and by 1949-50 these expenditures reached 8.1 p.c. of the net national income. The introduction of universal old age pension payments in 1952 and the several increases in the benefit rate to $\$ 65$ a month by 1962 , the implementa-
tion of a nation-wide hospital insurance program, the growth of expenditures under the unemployment assistance program and higher unemployment insurance expenditures were among the many factors that advanced welfare expenditures to higher levels at a time when the national income was not showing comparable growth. Thus in 1957-58, social welfare expenditures reached 10.2 p.c. of net national income; in 1958-59 and 1959-60 the percentage was about 11.2 and in 1960-61 it reached 12.3 .

For many years Canada has occupied a middle position between New Zealand and Britain on the one hand and Australia and the United States on the other when social welfare expenditures are expressed as a percentage of national income. For example, in 1949-50 the percentages were as follows: New Zealand 13.2, Britain 11.9, Canada 8.1, Australia 7.3, and United States 5.5. More recently, however, it is apparent that Canada has moved very close to the percentage in Britain and that the gap between Canada's position and that of Australia and the United States has been widened. In 1959-60, the percentages stood at 13.9 for New Zealand, 12.7 for Britain, 11.4 for Canada and 7.6 for the United States; while data for that year are not available for Australia, the percentage was 9.4 for that country in 1958-59.

Whether measured against previous Canadian experience or in terms of comparisons with these other countries, it is evident that the growth in government expenditures on social welfare during the postwar period and particularly during the past several years has been substantial indeed in relation to the rate of national income growth.

## PART I.--PUBLIC HEALTH

Provincial governments bear the major responsibility for health services in Canada, with the municipality often assuming considerable authority over matters delegated to it by provincial legislation. The Federal Government has jurisdiction over a number of health matters of a national character and provides important financial assistance to provincial health and hospital services. All levels of government are aided and supported by a network of voluntary agencies working in different health fields.

## Section 1.-Federal Health Activities

The Department of National Health and Welfare is the chief federal agency in health matters but important treatment programs are also administered by the Departments of Veterans Affairs and National Defence. The Dominion Bureau of Statistics is responsible for collection, analysis and publication of national health statistics, the Medical Research Council and the Defence Research Board administer medical research programs, and the Department of Agriculture has certain health responsibilities connected with food production.

The Department of National Health and Welfare controls food and drugs, including narcotics, operates quarantine and immigration medical services, carries out international health obligations, and provides health services to Indians, Eskimos and other special groups. It advises on the visual eligibility of applicants for blindness allowances and co-operates with the provinces in the provision of surgical or remedial treatment for recipients of the allowances. Under the Public Works Health Act, supervision of health conditions is provided for persons employed on federal public works. Other programs of health or medical supervision and counselling are provided for the federal Civil Service, and also for the Department of Transport in all matters pertaining to the safety, health and comfort of aircrew and passengers.

The Department serves the provinces in an advisory and co-ordinating capacity and administers grants to provincial health and national voluntary agencies. Administration of federal aspects of the Hospital Insurance and National Health Grant Programs has become a major activity during the past decade.

Co-ordination with the provinces on health matters is facilitated by the Dominion Council of Health, the principal advisory agency to the Minister of National Health and Welfare. Its membership includes the Deputy Minister of National Health, who acts as chairman, the chief health officer of each province, and five appointees of the Governor in Council, representing the universities, labour, agriculture and women's organizations. The Council meets semi-annually. Federal-provincial technical advisory committees of the Council deal with specific aspects of public health.

## Subsection 1.-National Health Grant Program

The National Health Grant Program, inaugurated in 1948, initially made ten federal grants available to the provinces for the development and strengthening of public health and hospital services. Nine were continuing grants: the Hospital Construction, Professional Training, General Public Health, Public Health Research, Mental Health, Tuberculosis Control, Cancer Control, Venereal Disease Control, and Crippled Children Grants. A Health Survey Grant lapsed in 1953 following completion of provincial health surveys. In 1953, after a review of the first five years of the Program, three new grants were established: Child and Maternal Health, Medical Rehabilitation, and Laboratory and Radiological Services.

In 1958, federal assistance under the Hospital Construction Grant was increased to $\$ 2,000$ per hospital bed (whether active treatment, chronic, mental or tuberculosis), double the previous grant for active treatment beds. In addition, funds were made available to meet up to one-third of the cost of approved alterations and renovations to existing facilities, with the federal contributions being at least matched by the provinces.

Beginning with the fiscal year 1960-61, a redistribution and merging of certain grants was effected to provide a more flexible measure of assistance and at the same time make larger amounts available for programs where additional aid was necessary. Adjustments were also required for services aided under certain grants, such as laboratory and radiological services and cancer control, now aided under the Hospital Insurance Program. The total allocation remained approximately the same but the number of separate grants was reduced to nine. The General Public Health Grant was increased by almost $\$ 5,500,000$ and projects under two previously separate grants-the Laboratory and Radiological Services Grant and the Venereal Disease Control Grant-were absorbed into it. The Medical Rehabilitation and Crippled Children Grants were merged and the combined allocation increased by more than $\$ 1,000,000$. The Mental Health Grant was increased by more than $\$ 1,500,000$, and the Professional Training and the Public Health Research Grants by about $\$ 1,250,000$ each. The Tuberculosis Control Grant was decreased by nearly $\$ 750,000$ and the Child and Maternal Health and Cancer Control Grants by lesser amounts. The grants for professional training and public health research, previously fixed amounts, were placed on a per capita basis, to increase with expansion of the population.

Up to Mar. 31, 1961, aid for hospital construction had been approved for 90,295 beds, 11,656 bassinets, 17,777 nurses' beds, 542 interns' beds, and space in community health centres and laboratories exceeding 14,558 bed-equivalents. Approximately 30,991 health workers had been trained or were undergoing special training and more than 7,000 health workers were employed with federal grant assistance.

The proportion of the total grants appropriation paid out to the provinces has increased steadily. Payments in $1960-61$ totalled $\$ 47,993,356$, or 87 p.c. of the amount available; the average utilization during the thirteen years of the program was 75 p.c.
1.-Amounts Available and Amounts and Percentages Expended under the National Health Grant Program, by Grant, for the Thirteen-Year Period Ended Mar. 31, 1961, and for the Year Ended Mar. 31, 1961.

[^76]
## Subsection 2.-Hospital Insurance

The federal-provincial hospital insurance program, established in all provinces and both territories, covers nearly 98 p.c. of the insurable population of Canada. The system of federal grants-in-aid to the provinces to help meet the cost of specified hospital services is set out under the federal Hospital Insurance and Diagnostic Services Act of 1957. The methods of financing and administering the provincial plans, as well as the types of service offered above the minimum stipulated in the Act, rest with the provinces.

The range of in-patient benefits provided under the Act includes standard ward accommodation and meals, nursing service, drugs and biologicals, surgical supplies, the use of operating and case room, X-ray and laboratory procedures together with necessary medical interpretations, and the use of radiotherapy and physiotherapy facilities where available. The same benefits for out-patients, although authorized for assistance under the federal legislation, are not mandatory in provincial plans. A few provinces provide various insured services to out-patients, but the majority thus far restrict out-patient benefits to emergency care following an accident.

Federal legislation covers only services provided by active treatment, chronic and convalescent hospitals. Tuberculosis and mental hospitals are excluded from the federalprovincial plan as are institutions providing custodial care, although some provinces cover tuberculosis and mental services under their provincial programs.

There is considerable variation between provinces in the administration and financing of programs. General revenues, provincial sales tax and personal premiums are utilized in different provinces. The Federal Government pays each province 25 p.c. of the per
capita cost of in-patient services in Canada as a whole, together with 25 p.c. of the per capita cost of in-patient services in the province multiplied by the average for the year of the number of insured persons in the province. On a national basis, the federal contribution amounts to about 50 p.c. of shareable costs. However, for individual provinces the proportion of shareable costs met by the Federal Government varies, with a higher proportion of the cost of low-cost programs being met than of high-cost programs. Federal payments to the provinces under the program from July 1, 1958 to Mar. 31, 1961, as shown in Table 2, totalled nearly $\$ 395,000,000$.

## 2.-Federal Payments to Participating Provinces under the Hospital Insurance and Diagnostic Services Act, July 1, 1958-Mar. 31, 1961

[^77]The statistical and financial data appearing in Tables 3 to 7 pertain either to hospitals in the provinces participating during the whole calendar year or (where noted) to hospitals in provinces participating by the end of 1959. It should also be noted that the tables refer to hospitals listed in the hospital insurance agreements. Hospitals participating in hospital insurance programs are designated as "budget review hospitals", which comprise the bulk of hospitals listed in the agreements, and contract hospitals, which are defined in the hospital insurance regulations as private or industrial hospitals with which a province has contracted for the provision of insured services. Federal hospitals, also listed in the agreements, are included in Tables 3 and 4. Budget review hospitals include general hospitals designed for acute or short-term care, special hospitals and chronic hospitals.

On Dec. 31, 1959, nine provinces were participating in the hospital insurance program. The 920 hospitals of all categories reporting showed a total of 81,135 beds and cribs set up at the end of 1959, a rate of 6.5 beds per thousand population; provincial rates ranged from 4.0 in Newfoundland to 8.3 in Saskatchewan. The volume of hospital days per thousand population also varied considerably from province to province; the rate for the seven provinces participating in the hospital insurance program during the whole of the calendar year 1959 was $1,986.6$ days, a rate considerably below the averages in Saskatchewan and Alberta but well above the averages in Newfoundland and Nova Scotia. In these seven provinces, 87.1 p.c. of all days of care in hospital were insured days in 1959.

## 3.-Number of Beds and Cribs in Hospitals Listed in Hospital Insurance Agreements, with Rate per 1,000 Population, by Province, as at Dec. 31, 1959

[^78]The volume of care provided by hospitals may be indicated by the average length of time each patient stays in hospital, as shown in Table 5. In this table, hospitals of the same type and size have been grouped together since it is reasonable to assume that the larger hospitals with more specialized staffs admit the more serious cases with longer average stay. With few exceptions, length of stay increases in proportion to bed-size of hospital. For all budget review general hospitals, with the exception of Newfoundland, the average length of stay varied from 9.1 days to 9.9 days. The average in Newfoundland (11.7) was affected by one general hospital in which the average stay was 26.9 days. Newfoundland has no separate chronic hospitals listed in the agreement. The average length of stay in chronic hospitals ranged from 20.8 days in Nova Scotia to 336.9 days in Alberta. In Ontario, where the highest number of budget review chronic hospitals are situated, the average was 246.3 days. This length of stay is characteristic of chronic hospitals generally.

Average length of stay, of course, gives no indication of variations or extremes in duration of stay. For this reason, the numbers of patients separated from budget review general hospitals in each participating province have been distributed, in Table $\mathbf{6}$, according to actual length of stay in days. In the seven participating provinces, 9.4 p.c. of the patients stayed only one day in hospital, almost 29 p.c. stayed three days or less, 34 p.c. stayed from four to seven days and the remaining 37 p.c. stayed eight days or longer, including 5 p.c. who stayed one month or more.

[^80]The total cost of operating budget review hospitals in the seven participating provinces in 1959, including items of expense not covered under the hospital insurance program, was $\$ 385,000,000$. This total included $\$ 246,700,000$ for salaries and wages, $\$ 31,500,000$ for drugs and medical supplies, $\$ 26,100,000$ for food, $\$ 53,800,000$ for other departmental supplies and expenses, and $\$ 26,900,000$ for other expenses consisting mainly of interest payments and depreciation allowances. Table 7 gives various classifications of these expenditures.

The per patient-day cost of salaries and wages ranged from a low of $\$ 9.36$ for Newfoundland to a high of $\$ 14.72$ for British Columbia, the average for the seven provinces being $\$ 12.67$. A number of hospitals in Newfoundland are operated by the provincial government and the fact that certain services in these hospitals are purchased from the government, the costs for which are reported as "Other Supplies and Expense", probably contributed to the low figure for gross salaries and wages. There was surprisingly little variation among the provinces in cost of drugs and medical supplies. Since raw food cost includes food supplied to staff, in-patients and visitors, the differences in such costs per patient-day probably reflect variations in the proportion of hospital staff taking meals at the hospitals rather than variations in the cost of food per meal served. The main items comprising "Other Supplies and Expense" are fuel, electricity, water, insurance, replacements of bedding and linen, laundry supplies, housekeeping and cleaning supplies, repairs to buildings, repairs to furniture and equipment, maintenance of physical plant, printing, postage, stationery, office supplies and telephone. The high figure of $\$ 5.58$ for Newfoundland as compared with the average of $\$ 2.76$ for the seven provinces is attributable to the inclusion of raw food costs which are not available as a separate item, and the salary component of purchased services.

The total per capita cost of operating hospitals in the seven provinces was $\$ 32.86$, ranging from $\$ 18.24$ in Newfoundland to $\$ 41.35$ in Saskatchewan. The variations in total per capita expenses are more marked than in total per patient-day expenses because of the variation in the number of hospital days of care provided per thousand persons in each province.

The percentage distribution of expenses shows that about 64 p.c. of the operating costs of the hospitals was for wages and salaries, 8 p.c. for drugs and medical supplies, 7 p.c. for food, 14 p.c. for other departmental supplies and expenses and 7 p.c. for depreciation, interest and other departmental expenses. British Columbia hospitals spent almost 68 p.c. of their operating funds on salaries and wages as compared with 53 p.c. in Newfoundland and 55 p.c. in Nova Scotia.

${ }^{1}$ Included with "Other Supplies and Expense". $\quad{ }^{2}$ Excludes food costs for one hospital, for which that item was not segregated. ${ }^{2}$ Based on patient-days during year for adults and children.

4 Based on population estimated as at June 1, 1959.

## Subsection 3.-Food and Drug Control

The Food and Drugs Act is a federal statute with provisions applying to the manufacture, advertising, packaging and sale of foods, drugs, cosmetics and medical devices anywhere in Canada. Wide powers are authorized under this legislation to maintain the safety, purity and quality of food and drug products and to prevent misrepresentation in labelling and advertising. There are prohibitions, for example, on the sale of food or drugs that do not meet prescribed standards, are harmful, adulterated, dirty, improperly stored, or manufactured under unsanitary conditions. The Act also prohibits the advertising of any food, drug, cosmetic or medical device as a preventive or cure for a number of serious diseases and also lists drugs that may be sold only by prescription.

Standards of safety and purity are maintained through constant and widespread inspection and laboratory research. The inspection of food-manufacturing establishments plays a major role in the production of clean, wholesome foods. The sale for human consumption of meat from animals that were not healthy at the time of slaughter or that died from disease is expressly prohibited. With advances in modern food technology, methods of laboratory analysis must be developed to assure the safety of new types of ingredients and packaging materials. In recent years there has been an increase in the number of chemicals used in foods and the safety of the foods to which they are added becomes a matter for special research. Another subject of current importance is the bacteriology of frozen foods in guarding against contamination through improper storage of frozen foods already cooked. Since the Food and Drugs Act is intended for the protection of consumers, a section of the Food and Drug Directorate has been established to obtain consumer opinion and deal with individual consumer complaints as well as to provide sound information on which consumers can base opinions.

Drug standards are subject to continuous review and testing. Stringent licensing controls apply to drugs made for injection into the human body, such as vaccines, sera and antibiotics and, prior to licensing, the safety of the product is verified in federal laboratories. Detailed information on all new drugs must be reviewed by the Directorate before release for sale is permitted. The listing of drugs to be sold only on prescription is determined in co-operation with the medical and pharmaceutical associations. In general, any drug that can be classed as a sedative, hypnotic or tranquillizer goes automatically on the prescription list. To provide more effective control of certain drugs coming mainly under the class of barbiturates and commonly known as 'goof balls', an amendment to the Food and Drugs Act was enacted in 1961. This requires the licensing of persons dealing in these substances, as well as the keeping of special records, and limits the importation, manufacture, distribution and use of such drugs to medical purposes.

The Food and Drug Directorate also administers the Proprietary or Patent Medicine Act which is concerned with the registration before marketing and the annual licensing of secret-formula medicines sold under proprietary or trade names.

Regulation of the supply and use of narcotic drugs is carried out under the Narcotic Control Act. The legislation, as revised in 1961, authorizes more severe penalties for smuggling and trafficking in narcotic drugs, and introduces special provisions relating to the control and custody of narcotic addicts for purposes of treatment. The minimum sentence of six months for illegal possession is removed and the legislation now prescribes a penalty of seven years with no minimum for this offence; the maximum penalty for trafficking is increased from 14 years to life imprisonment; and illegal export and import is established as a special offence for which the minimum and maximum penalties are, respectively, seven years and life imprisonment. Persons convicted of offences under the Act who are found to be drug addicts may be sentenced for treatment, for an indeterminate period, in institutions that will operate under the penitentiaries system and the National Parole Board service.

## Subsection 4.-Other Federal Health Services

Indian and Northern Health Services.-Responsibility for the medical care and general health of the Indian and Eskimo population rests with the Department of National Health and Welfare. Through the Directorate of Indian and Northern Health Services, the Department staffs and operates various facilities for a registered population of about 185,000 Indians and 11,500 Eskimos. Responsibility for the general welfare of Indians and Eskimos in the community is shared with the Indian Affairs Branch of the Department of Citizenship and Immigration and with the Department of Northern Affairs and National Resources.

Hospital care is provided for Indians and Eskimos through provincial and territorial hospital services plans; 23 hospitals, operated by the Department, provide part of the care required, in conjunction with non-departmental hospitals. In addition, a staff of
qualified doctors, nurses and dentists operates 30 clinics, 36 nursing stations and about 80 health centres for the 2,000 small Indian and Eskimo communities throughout the country. During 1960, in the Northwest Territories alone, 32,094 medical care visits were made, divided about equally between Indians, Eskimos and other groups in the community.

Where the Department's health services are not directly available, care is provided through private or community health agencies on a fee-for-service or per-diem basis. Special emphasis is placed on public health services through field surveys, immunization programs and health education, particularly in the areas of tuberculosis and prenatal and infant care.

Immigrants.-The Department of National Health and Welfare advises on the administration of sections of the Immigration Act dealing with health, and conducts in Canada and other countries the medical examination of applicants for immigration. It also provides care for immigrants who become ill en route to their destination or while awaiting employment. Further assistance in the provision of hospital and medical services is available to indigent immigrants during their first year in Canada, either from the Federal Government or from the province with federal sharing of costs.

Quarantine.-Under the Quarantine Act, all vessels, aircraft and other conveyances together with their crew members and passengers arriving in Canada from foreign countries are inspected by quarantine officers to detect and correct conditions that could lead to the entry and spread of quarantinable diseases in Canada. Fully organized quarantine stations are located at all major seaports and airports.

Under the provisions of the Leprosy Act, modern facilities for the diagnosis and treatment of leprosy are provided at Tracadie, N.B., for the small number of persons in Canada suffering from this disease.

Sick Mariners.-Under the authority of Part V of the Canada Shipping Act, the Department of National Health and Welfare provides prepaid health services for crew members of foreign-going ships arriving in Canada and Canadian coastal vessels in interprovincial trade; crew members of Canadian fishing and government vessels may participate on an elective basis. Hospital care of crew members having residence in Canada is the responsibility of the provincial hospital insurance authority concerned.

## Subsection 5.-Health Research and International Health

Health Research.*-Health research in Canada is carried on in universities, hospitals, research institutes and government departments. In the universities, relevant research is done by departments of basic medical sciences, medical and public health schools or faculties and by such departments as genetics and psychology as well as in special departments or institutes of research. Hospitals used for teaching medical students also carry on considerable research, as do some of the larger non-teaching hospitals and mental institutions.

The Department of National Health and Welfare, the Medical Research Council (established in November 1960 to take over the work formerly carried on by the National Research Council Medical Division), the Department of Veterans Affairs and the Defence Research Board support extensive programs of research. Other important research centres include the Connaught Medical Research Laboratories, the Banting Research Foundation, the Charles H. Best Institute, the Institute of Microbiology and Hygiene, the Allan Memorial Institute and the Montreal Neurological Institute. Some non-governmental or voluntary agencies concerned with health generally, or with specific diseases, encourage and support research by various means including financial assistance. Over-all expenditures on health research in Canada cannot be established exactly, but may reach $\$ 7,000,000$ or $\$ 8,000,000$ annually.

[^81]International Health.-Canada actively assists and co-operates with the World Health Organization and the other specialized agencies of the United Nations concerned with health. Capital and technical assistance are provided to under-developed countries through the Colombo Plan and other bilateral aid programs. Health training in Canada is provided for a number of persons coming to Canada each year under the different technical co-operation schemes. (See pp. 137-139 and 142-143.)

During the year 1961, 155 trainees in a variety of health areas were in Canada under the External Aid Program and 22 additional applicants were being processed. Canadian experts in health legislation, biostatistics and occupational health undertook special assignments abroad and a six-member medical team commenced a three-to-five-year program in Malaya. By way of capital assistance, four cobalt beam therapy units were donated during 1961, making, in all, 10 such units that have been provided thus far under the Colombo Plan. The medical textbook program approached its conclusion; most of the 86 medical schools included each received its full quota of $\$ 2,500$ worth of basic medical texts.

To carry out Canada's obligations under the International Sanitary Conventions, the Department of National Health and Welfare maintains quarantine measures for ships and aircraft entering Canadian ports and provides accommodation and necessary medical care for persons arriving in Canada who require quarantine (see p. 231).

The Department is responsible for the enforcement of requirements governing the handling and shipping of shellfish under the International Shellfish Agreement between Canada and the United States and, at the request of the International Joint Commission, participates in studies connected with control of pollution of boundary waters between Canada and the United States as well as with problems caused by atmospheric pollution. Other international health responsibilities include the custody and distribution of biological, vitamin and hormone standards for the World Health Organization and certain duties in connection with the Commission on Narcotic Drugs of the United Nations.

## Section 2.-Provincial and Local Health Services

Provincial and local health services may be grouped into several broad categories: general public health services, primarily of a preventive nature; services for specific diseases or disabilities combining prevention and treatment; services related to general medical and hospital care; and rehabilitation services for disabled persons.

General Public Health Services.-Provincial and local governments co-operate closely in providing community public health services. The autonomy of the provinces and their social, economic and geographic diversity make for some variety in legislative provisions, in financial arrangements, and in the detailed division of functions between provincial health departments and local and voluntary agencies. Each province, however, offers all or nearly all of a basic range of public health services which includes environmental health, occupational health, communicable disease control, maternal and child health, dental health, nutrition, health education, and public health laboratories.

Environmental Health.-The control of factors in the environment that are harmful to physical health is a rapidly expanding area of public health activity. For many years, much of the work in this field was related to inspection duties long associated with community health sanitation, such as maintenance of pure milk, water and food supplies, supervision of plumbing and sewage disposal systems, and provision of general sanitary conditions in public areas. Increasing industrialization, however, has imposed new responsibilities calling for new techniques in public health engineering and sanitary services. Air pollution, water pollution, and radiation are emerging as major environmental health problems, necessitating co-ordinated effort by governments and other agencies in research and in planning effective control measures.

Occupational Health.-Services designed to prevent accidents and occupational diseases and to maintain the health of employees are the common concern of provincial health departments, labour departments, workmen's compensation boards and industry management. Provincial agencies regulate working conditions and offer consulting and educational services to industry. All provinces have legislation (Factory Acts, Shop Acts, Mines Acts, Workmen's Compensation Acts) setting health safety standards for employment.

Communicable Disease Control.-There are separate divisions of epidemiology or communicable disease control in the six larger provinces; in the Atlantic Provinces these functions are handled by provincial medical health officers. Local health authorities undertake case-finding and diagnostic services in co-operation with public health laboratories, carry out epidemiological investigations and often participate in tuberculosis and venereal disease control measures.

Maternal and Child Health.-Services for mothers and children are largely decentralized through local units and departments, but most provinces maintain separate divisions or employ consultants to promote better standards. Public health nurses have a prominent place in this work, which may include prenatal education, provision for delivery and care of the newborn in remote areas, home visits, child health clinics and school health services.

Dental Health.-All provincial health departments have dental health divisions which administer programs, varying under local conditions but directed almost entirely to health education and the care of children. Training of dentists and dental hygienists in public health, the operation of children's preventive and treatment clinics, and health education are being undertaken in all provinces. Water fluoridation projects involving an over-all total of more than a million people are in operation in seven provinces. Three provinces-Alberta, Manitoba and Nova Scotia-are setting up, in conjunction with their dental schools, special courses for dental hygienists. In all ten provinces free clinical care is provided for children in remote rural areas by the use of mobile units. One province uses two railway-coach dental clinics to serve remote areas. A successful locally sponsored plan in which the cost of dental services for children is shared by the local community and the provincial health department is in operation in more than 80 communities in British Columbia; the sponsoring group decides whether registration for treatment may be free or on the payment of a nominal sum.

Nutrition.-Services include technical guidance, education, consultation and research. In some provinces, school lunch programs are also sponsored and dietary supplements distributed. Five provinces have special nutrition divisions; elsewhere, nutritionists serve in other divisions of the health department.

Health Education.-In most provinces experience has demonstrated the need for a professional full-time 'health educator' as a member of the public health team. Nine provinces have separate divisions or units to co-ordinate the dissemination of health information through all available media.

Public Health Laboratories.-The public health laboratory, an essential facility in the protection of community health and the control of infectious diseases, was one of the earliest provincial services developed to assist local public health departments. Work performed includes bacteriological examination of water, milk and food samples, the examination of specimens for diagnosis of communicable disease, and special pathological services. Each province maintains a central public health laboratory and most provinces have established additional branch laboratories. Recent trends in some provinces include efforts to co-ordinate public health and hospital laboratory services, special measures to bring laboratory facilities to rural areas, and devices to reduce the direct cost of clinical laboratory procedures to the individual.

Services for Specific Diseases or Disabilities.-Each province has developed special programs to deal with health problems of particular severity and prevalence, many of which are chronic or long-term in nature. The services and facilities provided are generally similar across the country.

Mental Health.-Major developments in provincial mental health programs have included the expanding and modernizing of mental hospitals, the training of various kinds of psychiatric personnel, and the extension of community mental health services outside mental institutions. Assistance to patients in securing employment and in social adjustment following discharge from mental hospitals-a relatively new field of rehabilitationis being promoted by voluntary groups and government agencies in several provinces.

With the exception of the municipally owned local institutions in Nova Scotia and hospitals in Quebec that operate under religious or lay auspices, most mental institutions are administered by provincial authorities. A great part of the cost is borne by the provincial governments, although a charge, according to ability to contribute, may be made for care in some provinces. Newfoundland and Saskatchewan provide complete free care; Manitoba assumes a minimum maintenance cost for all patients; in Nova Scotia the provincial hospital gives free care to patients requiring active treatment; and in Ontario and Prince Edward Island mental institution treatment is included in the hospital care insurance plan.

Most public mental institutions provide care and treatment for all types of mental illness; as facilities expand, it is becoming possible to segregate those under intensive treatment from those receiving long-term care. Some provinces maintain separate accommodation for certain categories of the mentally ill. For example, in British Columbia and Alberta, homes for the senile aged are an integral part of the mental institution system. Quebec has separate institutions for epileptics. Seven provinces operate schools for residential treatment and education of mentally defective persons and New Brunswick, one of the three other provinces, enacted legislation in 1958 authorizing governmental support of the maintenance of mentally retarded children in approved homes. Increasing numbers of local day classes, usually sponsored by organizations of parents, offer training opportunities for mentally deficient children in the community.

As the needs of patients are more fully understood and better methods of treatment develop, the daily routine of the mental patient is becoming less restrictive, as is shown by the increasing number of persons coming voluntarily for treatment. Custodial care and locked doors are giving way to open wards where patients may have unrestricted access to grounds and to occupational and recreational areas.

One of the greatest changes in the past decade has been in the extension of community mental health services outside mental institutions. General hospitals have expanded their psychiatric services in both in-patient and out-patient departments. About 40 general hospitals have organized units where psychiatric treatment is provided by professional staffs. Out-patient clinics where mental illness may be treated at an early stage and guidance services may be given to children and parents also play an important part in the treatment of mental illness outside mental institutions. In 1959, at least 87 mental health clinics and psychiatric out-patient departments were operated by provincial health departments, municipalities or health units, mental institutions, general and allied special hospitals, school boards and voluntary organizations.

Day and night care centres, another departure from the traditional form of custodial care, were developed first in Montreal more than a decade ago as part of the psychiatric service of two large general hospitals. Similar day care centres, admitting patients on a nine-to-five basis, are conducted in several other hospitals.

Cerebral Palsy.-Children suffering from cerebral palsy in most larger cities are able to attend out-patient and training centres, many of which have been organized by groups of parents. A number of general and children's hospitals have also established assessment and treatment facilities for cerebral-palsied children. In most communities, buses to transport children to day centres and hospital clinics are provided and operated
by local service clubs or provincial societies for crippled children. Attendance fees are usually nominal, with financial support of the centres coming from local voluntary contributions, provincial governments and federal health grants. Training and employment programs for young adults with cerebral palsy are also being developed in a few cities.

Tuberculosis.-Despite greatly reduced mortality from tuberculosis and evidence of some lowering in incidence, the number of cases discovered through provincial detection programs indicates that it is still a public health problem. Case-finding efforts are being focused increasingly on selected groups particularly vulnerable, using tuberculin tests as an aid to detection. The work of case-finding is supported substantially by voluntary campaigns conducted by the Canadian Tuberculosis Association. In most provinces, sanatorium treatment is provided at government expense. Even in those provinces where an individual charge may be made, the amount collected from paying patients is a very small percentage of total costs.

The number of beds set up in sanatoria and in tuberculosis units of general hospitals declined from a peak of 18,977 in 1953 to 13,538 in 1959. This decline in bed use has resulted from such factors as a decrease in the number of admissions, detection of cases in earlier stages of the disease, and improved treatment methods by drugs and surgery. Provision has been made in several provinces to furnish drugs for home treatment. Facilities for the vocational rehabilitation of discharged patients have been developed in all provinces, and increasing numbers are being re-established in suitable employment.

Cancer.-Health departments and lay and professional groups working for the control of cancer have been concerned mainly with four aspects of the problem-diagnosis, treatment, research and public education. In cancer detection and treatment, specialized medicine, hospital services and an expanding public health program are closely related. There are programs operating under health departments in four provinces; four others have provincially supported cancer agencies or commissions. These sponsor the work of diagnosis and treatment in special clinics, located usually within the larger general hospitals. Under the provincial hospital insurance plans, the benefits pertaining to in-patient care in the treatment of cancer are essentially similar in ten provinces and include such special services as diagnostic radiology, laboratory tests and radiotherapy. In at least five provinces these benefits apply also to out-patients. In others, the previous pattern of services to out-patients-that of assessing costs of treatment in relation to ability to pay-is still in effect. Comprehensive free medical programs for cancer patients have long operated in Saskatchewan and Alberta, and similar benefits for cancer in-patients in New Brunswick were introduced in 1961.

Poliomyelitis.-Through agreements with the Federal Government, all provincial health departments have made Sabin vaccine and Salk vaccine available for free immunization of children and adults. During 1959, the incidence of paralytic poliomyelitis rose in all provinces to its highest level since vaccination began, but in 1960 it dropped by more than one-half and in 1961 reached a record low. Very few who had received the prescribed number of inoculations contracted the disease.

Previously existing programs offering free standard-ward hospital care to poliomyelitis patients have been incorporated in the federal-provincial hospital insurance schemes. In the provision of restorative services through remedial surgery, physiotherapy and hydrotherapy and the aid of prosthetic appliances, provincial departments of health and voluntary societies both have a part. Post-poliomyelitic patients may receive vocational training under provincial rehabilitation schemes; boards of education operate special classes for physically handicapped children.

Venereal Disease.-Free diagnostic and treatment services are available in all provinces but the operation of government clinics is being increasingly superseded by the method of supplying free drugs to private physicians who are reimbursed for treatment of indigents on a fee-for-service basis.

Alcoholism.-Ontario, Manitoba, Alberta and British Columbia carry out research and education programs and operate centres for treatment, supported largely by public funds. Ontario, Saskatchewan and Alberta also have rehabilitation programs for alcoholic inmates of reform institutions. Recent legislation in Newfoundland and Nova Scotia authorizes the setting up of similar agencies to initiate research and education studies in those provinces.

Other Diseases or Disabilities.-Services for a number of chronic disabilities, such as heart disease, arthritis, diabetes, visual and auditory impairments and paraplegia have been developed largely by voluntary agencies assisted by federal and provincial funds. A brief description of the programs of some of these agencies is given in Part III, pp. 270273, which deals with national voluntary health and welfare activities.

Public Medical Care.-Public medical care programs for the general population exist in three provinces, but are limited to residents of particular areas. Approximately one-half of Newfoundland's population receive physicians' services at home or in hospital under the provincially administered Cottage Hospital Plan which is financed in part on a premium basis. Medical indigents not under the Plan may also receive care at provincial expense. In addition, all Newfoundland children under the age of 16 years are entitled to free medical and surgical care in hospital. In Manitoba and Saskatchewan, locally operated municipal-doctor programs cover about 28,000 and 158,000 persons, respectively. The Swift Current Health Region in Saskatchewan operates a comprehensive prepaid medical-dental and out-patient hospital care scheme for about 53,000 persons. These latter programs are subsidized to some extent by provincial health departments.

For some years Nova Scotia, Ontario, Saskatchewan, Alberta and British Columbia have provided health service programs for regular social assistance recipients-persons in receipt of means-tested old age security supplements, old age assistance, blindness and disability allowances, and mothers' allowances and, in some provinces, certain child welfare cases. However, Nova Scotia covers only mothers' allowance recipients and their dependants and blindness allowance recipients and, in Saskatchewan, old age assistance recipients are the responsibility of the municipality of residence. Manitoba began a comprehensive program in 1960 covering physicians' services in home and office as well as essential optical, dental and drug services.

Under the Ontario program, the principal medical service covered is physicians' care in the home and office, including certain minor surgical procedures and prenatal and postnatal care. Since Jan. 1, 1959, basic dental care has been available to the children of mothers' allowance recipients. In addition to these medical services, Nova Scotia provides major and minor surgical and obstetrical services and medical attendance in hospital. The programs in Saskatchewan, Alberta and British Columbia give complete medical care in the home, office and hospital, including surgical and obstetrical services, specified prescription drugs (except in Alberta, and with a dollar limitation in Saskatchewan for non-life-saving drugs where financial hardship is not demonstrated), and dental and optical care, sometimes only on special authorization and/or with dollar limits. The Old Age Assistance group in Saskatchewan is entitled to hospital care only. All of these plans are completely provincially financed, except in British Columbia where costs are shared on a $90-10$ basis with the municipalities assuming their 10 -p.c. share on a basis proportionate to population, and in Ontario where per capita contributions toward the cost of medical services for the Old Age Assistance group are shared on an $80-20$ basis with the municipality of residence. Manitoba's program of provincial social assistance includes health care for cases of need among the aged and infirm, including those in nursing homes or institutions, the blind and the physically or mentally disabled, mothers with custody of dependent children, and neglected children. Services provided include medical and surgical care in homes and doctors' offices, optical and dental care, essential drugs, remedial care and treatment including physiotherapy, emergency transportation and chiropractic treatment. Physicians provide care in hospital without charge.

Indigent persons not covered by these programs, as well as indigents in other provinces, may receive necessary care from the municipalities in which they reside. Sometimes, where costs are assumed by the municipality, there is some form of cost-sharing arrangement with the provincial government.

Rehabilitation Services.-Rehabilitation services for persons handicapped by physical or mental defects are organized under governmental and voluntary auspices as part of general health, welfare or education programs, and also by specialized rehabilitation agencies that make available a range of services. Expansion of these services in all provinces indicates growing success in prevention and cure of many disabling conditions and broader understanding of the needs of the handicapped person. Following the earlier rehabilitation programs organized for injured workers, disabled war veterans and such groups as the blind and the tuberculous, there has been increasing emphasis given to extending comprehensive services to all handicapped persons regardless of disability and to strengthening national, provincial and community bodies concerned with planning and co-ordination.

At the 1960-61 session of Parliament, efforts by the Department of Labour to develop a comprehensive and co-ordinated vocational rehabilitation program were given statutory recognition with the enactment of the Vocational Rehabilitation of Disabled Persons Act, proclaimed in force on Dec. 1, 1961. This Act authorizes federal-provincial agreements to share the costs of comprehensive services to disabled persons capable of vocational usefulness either in employment or in the home, the training of rehabilitation counsellors or administrators and the co-ordination of services. The Act also provides for research in vocational rehabilitation, publication of information, and the establishment of a 25member National Advisory Council with representation from the various federal and provincial departments involved and from other interested groups. Administration and co-ordination of the program is carried out by the National Co-ordinator in the Civilian Rehabilitation Branch of the Department of Labour, with the co-operation of the Medical Rehabilitation Division of the Department of National Health and Welfare in matters of mutual concern.

The main elements of the nation-wide rehabilitation program include also the Special Placement Section of the National Employment Service, a joint federal-provincial program for the vocational training of disabled persons, and the National Health Grants designated for the extension of medical rehabilitation and crippled children's services and for rehabilitation of the mentally ill or deficient, the tuberculous and other chronically ill persons. The Federal Government also provides direct services for particular groups through programs administered by the Department of Veterans Affairs for disabled, chronically ill and aging veterans, by the Department of Citizenship and Immigration for physically and socially handicapped Indians, and by the Department of Northern Affairs and National Resources for the training and resettlement of disabled Eskimos and Indians within its jurisdiction.

Provincial vocational rehabilitation programs, supported by matching federal grants, assist disabled persons who can be restored to gainful employment. Other specialized facilities which co-operate with the provincial programs include hospital physical medicine and rehabilitation departments and special clinics for particular disabilities, separate rehabilitation centres, sheltered workshops, vocational counselling, training and job placement agencies and special schools, classes and other combined treatment and educational centres for handicapped children. Home care services, such as nursing, physical and occupational therapy and housekeeping services, employment of the homebound and recreational services have been developed by a few agencies but their coverage is generally limited.

Vocational assessment and counselling of the handicapped is provided by rehabilitation counsellors employed by the provincial rehabilitation programs and some of the other
rehabilitation agencies and centres. Employment counselling is offered by the Special Placement Section of the National Employment Service. The main responsibility for job placement of persons with occupational handicaps is carried by about 250 full-time special placement officers located in 114 local employment service offices across the country and additional part-time officers in other centres. Employment liaison officers who advise on the employability of applicants and employment conditions are appointed to the offices of the provincial co-ordinators of rehabilitation in five provinces. Some rehabilitation agencies also do placement work, especially of the severely handicapped.

In the year ended Mar. 31, 1961, federal-provincial expenditures under the rehabilitation co-ordination agreements, which preceded the new legislation, totalled $\$ 300,802$. A study of the cases on which full details were available shows that the cost of support of 1,614 disabled persons (and their dependants) was $\$ 954,304$ during the year prior to acceptance, as compared with estimated annual earnings of $\$ 2,730,502$ after placement in jobs. Federal expenditures on 58 projects under the Medical Rehabilitation and Crippled Children's Grant (a portion of these funds being on a matching basis) amounted to $\$ 1,159,204$ of the $\$ 2,625,000$ available from federal funds in the year ended Mar. 31 , 1961. The majority of the projects were used to extend personal services to disabled persons through the employment of rehabilitation personnel in hospitals and rehabilitation centres, crippled children's programs and special clinics; 17 projects supported six training schools for physical and occupational therapy and training in speech therapy and audiology as well as student training bursaries in the rehabilitation professions; and the remainder was used for equipment and research. The total federal-provincial vocational training expenditures in 1960-61 under the Special Vocational Training Projects Agreements increased to $\$ 659,134$ for the training of 1,462 disabled persons enrolled in a wide range of vocational courses. Special placements of handicapped persons who required assistance in finding work in 1960 numbered 16,320 .

## Section 3.-Health Services in the Yukon and Northwest Territories

Health services in the two Territories are operated under conditions considerably different from those in the provinces. Extensive sparsely settled areas, severe climatic conditions, lack of local government, and direct federal administration constitute a basic set of conditions under which health services for both native and white populations, outside the few settled areas, are provided by government agencies or religious organizations. The Government of the Yukon Territory, the Council of the Northwest Territories, the Directorate of Indian and Northern Health Services of the Department of National Health and Welfare, the Department of Northern Affairs and National Resources, and the Department of National Defence are all concerned with the provision of services.

Complete health services are supplied to Indians and Eskimos by the Indian and Northern Health Services. Particular emphasis is given to tuberculosis, and mass X-ray programs are carried out annually. The Eastern Arctic is served by the annual Eastern Arctic Patrol as well as by medical health officers. In the Western Arctic, medical officers and nursing stations are located at strategic points and a travelling dentist is employed. Persons who cannot be cared for locally are transferred to hospitals in the provinces.

In the Yukon Territory, services for the white population are administered through the Commissioner for the Yukon and include complete treatment for tuberculosis and poliomyelitis patients, and medical care for indigent residents. Public health services include communicable disease control, public health nursing, sanitary inspection and
tuberculosis case-finding. In the Northwest Territories, health programs for the white population include treatment for tuberculosis and venereal disease as well as dental care for children under 17 years of age and hospital care for the mentally ill. Cancer diagnosis is provided. Indigent residents are eligible for medical, dental and optical treatment as well as for general hospital care.

Hospital insurance plans in both the Yukon and the Northwest Territories came into operation in 1960.

## Section 4.-Hospital and Other Health Statistics

Statistical information on the health of Canadians is at present limited to the well established and highly standardized mortality, communicable disease and institutional statistics series, all of which have been available for a long period, and the recently established series covering operations under the federal-provincial hospital insurance program (pp. 224-229). Other national health statistics are still in an early stage of development. So far, the only source of information on general illness, health services and personal expenditure for health care is the Canadian Sickness Survey of 1950-51. Other projects deal with specific health problems or selected groups of the population, such as Civil Service illness and the activities of the Victorian Order of Nurses. Much statistical information is also available from provincial and other health sources.

Statistics on causes of death are given in the Chapter on Vital Statistics, pp. 197-199; those on hospital statistics in Subsection 1 following; and those on notifiable diseases and illness in the Civil Service in Subsection 2. A brief outline of the scope and methods of the Sickness Survey of 1950-51 is given in the 1955 Year Book and some of the results are published in the 1955, 1956 and 1957-58 editions. Details are available in bulletin form (Catalogue Nos. 82-501 to 82-511).

## Subsection 1.-Hospital Statistics*

There were 1,372 hospitals of all types operating in Canada in 1960, having a rated bed capacity of 189,278 (excluding bassinets for newborn). Of these, 1,040 were general hospitals with 96,925 beds; 81 were mental hospitals with 61,042 beds; 62 were tuberculosis sanatoria with 13,684 beds; and 189 were hospitals providing for special types of patients, with 17,627 beds. As a result of a recent re-evaluation of facilities, a number of institutions providing solely custodial or domiciliary care were removed from the list of "hospitals" for statistical purposes.

Hospitals are classified in two ways in the tables of this Subsection. The first is by ownership, i.e., public, private or federal, and the second by type of service provided, i.e., general, mental, tuberculosis and other. Combinations of the two classifications are used in Tables 8 and 9, which show the number of hospitals of each type and their bed capacities, distributed provincially.

In 1960, three of every four hospitals were general hospitals-devoted to the active treatment of a wide variety of illnesses; among the provinces, only Quebec and Ontario had smaller proportions of general hospitals than the nation as a whole. For every 10,000 persons in Canada in 1960 there were 108.5 beds; the Prairie Provinces, Quebec, Prince Edward Island and the Territories had higher ratios and all other provinces lower ratios.

[^84]Although 1960 information on numbers of hospitals operating in Canada and their bed capacities was available at the time of the preparation of this Chapter, details for that year regarding movement of patients, patient-days, hospital facilities, and finances had not yet been compiled. Tables 10 to 12 give these data for the year 1959.

Table 10 shows the pattern of hospital utilization over the period 1955-59. The number of admissions to all hospitals increased by 19 p.c. during this period while the number of patient-days increased by 9.3 p.c., signifying greater utilization of hospital facilities but shorter average length of stay for in-patients. The number of patients in hospital per 100,000 population at the end of 1959 was 17 fewer than at the end of 1955. Admissions to public tuberculosis hospitals were 5.8 p.c. lower in 1959 than in 1958 and patient-days were down by 8.2 p.c. On the other hand, public mental hospitals experienced an increase in admissions of 9.6 p.c. although the increase in patient-days was only 0.4 p.c., denoting a shorter length of stay for patients in these hospitals.

${ }^{1}$ First admissions and readmissions. $\quad{ }^{2}$ Mental hospitals only; does not include psychiatric or mental units in general hospitals. ${ }^{3}$ Tuberculosis hospitals only; does not include tuberculosis units in general hos pitals. Includes other types not specified.

Radiology, clinical laboratory and physiotherapy facilities in public and federal hospitals are shown distributed by province and type of hospital in Table 11. Almost 90 p.c. of the hospitals reporting had radiology facilities and over 82 p.c. operated clinical laboratories but only 27 p.c. had physiotherapy facilities. Most general hospitals had radiology departments and a high proportion of tuberculosis hospitals operated both radiology departments and clinical laboratories.

## 11.-Facilities Avallable in Reporting Public and Federal Hospitals, by Province, 1959

Note.-Adequate information on the facilities of private and federal hospitals is not available.

${ }^{2}$ Two sanatoria reported as one hospital.

For 1959, 954 hospitals reported expenditures of $\$ 632,000,000$ on operating costs and revenues of $\$ 611,000,000$. The latter included $\$ 473,000,000$ net earnings from services to patients, $\$ 100,000,000$ from government grants and $\$ 38,000,000$ from other sources. Table 12 shows that, while general and allied special hospitals were able to rely to a large extent on their earned income, mental hospitals and tuberculosis sanatoria were dependent mainly on government assistance. In 1959, general and allied special hospitals received $\$ 46$ in patient earnings for every dollar received from governments. Mental hospitals, on the other hand, received $\$ 15$ in the form of government grants for every dollar of other income; this was a substantial increase over 1958 when the ratio was $\$ 9$ to $\$ 1$. There was no significant change in the source of revenues of tuberculosis sanatoria from 1958 to 1959. It should be noted that "government grant" in this context does not include payments made on behalf of individual patients for care received, as these are included in net earnings from patient care.

Operating expenses for the average general hospital amounted to $\$ 20.45$ per patientday in 1959 as compared with $\$ 16.59$ in 1958; the increase of $\$ 3.86$ per patient-day applied almost equally to salaries and wages and other expenses. The highest per diem cost of $\$ 25.47$ was experienced in general hospitals with more than 1,000 beds, which may be explained by the fact that hospitals of this size operate a variety of specialized services for treatment of in-patients and out-patients. Costs of out-patient services were not separable for the calculation of a cost per patient-day. Although costs per patient-day in mental hospitals increased from $\$ 4.08$ in 1958 to $\$ 5.31$ in 1959 , they were still the lowest for all classes of hospitals because of limited services required and high utilization of beds.

12.-Revenues and Expenditures of Reporting Public Hospitals, by Type, 1959

Note.-Financial data for private and federal hospitals not available.

${ }^{1}$ Exclusive of the Territories for which adequate information is not available. does not include psychiatric or mental units in general hospitals. ${ }^{3}$ Tuberculosis hospitals only; does not include tuberculosis units in general hospitals. 'Includes payments for services to patients.

Diagnoses of Patients in Mental Institutions and Tuberculosis Sanatoria.Tables 13 and 14 summarize the most recent data available on diagnoses according to age and sex of patients on the books of mental institutions and tuberculosis sanatoria, including patients in related units located in general hospitals.

Of the 75,617 mentally ill patients under care on Dec. 31, 1959, detailed information is available for 73,047 . Of these, 63.6 p.c. had been diagnosed as psychotic, 32.7 p.c. as mentally defective or otherwise affected by character, behaviour and intelligence disorders, and 2.7 p.c. psychoneurotic. More of the male than the female sex had been institutionalized for disorders of character, behaviour and intelligence, with the largest frequency of both sexes occurring in the $10-19$ age group. Similarly, more male than female cases (except of persons 70 years of age or over) had been diagnosed as psychotic. However, in all age groups, nearly twice as many women as men had required hospitalization for conditions diagnosed as psychoneurotic.

## ${ }^{1}$ Includes age groups not known.

Among patients reported as on the books of tuberculosis institutions at the end of 1960 , the peak frequency for men $(1,199)$ occurred in the 60 years or over age group, and for women (480) in the 20-29 age group. More men than women were listed in each age group except those encompassing ages 10-29. Compared with 1,199 men, only 387 women aged 60 or over were carried on the books of tuberculosis sanatoria and units at Dec. 31, 1960; in contrast, the peak frequency for women aged 20-29 (480) was closely approximated in number by male patients (497).

## 14.-Diagnoses of Patients on the Books of Reporting Tuberculosis Hospitals, by Age and Sex, 1960

Nors.-Figures include patients in 70 tuberculosis hospitals and patients in tuberculosis units in general hospitals but exclude tubercular patients in mental hospitals.

## Subsection 2.-Notifiable Disease and Other Health Statistics*

Health statistics collected nationally-in addition to statistics of hospitals dealt with at pp. 239-249-cover notifiable diseases, illness among federal civil servants, and home nursing services. The first two series are dealt with briefly below; the third series is based on the experience of the Victorian Order of Nurses (see p. 271), which is the major home nursing organization in the country. Results of the latter annual survey are available in bulletin form (Catalogue No. 82-202).

Notifiable Diseases.-During 1960 there were considerable increases in the numbers of cases of infectious hepatitis and dysentery. Compared with an average of 3,885 during the 1955-59 period, 6,476 cases of infectious hepatitis (including serum hepatitis) were reported, the provinces principally affected being Nova Scotia and Ontario. For Canada as a whole there were 36.4 cases per 100,000 population, the highest on record. Dysentery cases, which were nearly three times as numerous as the average for the years 1955-59, occurred at the rate of 18.4 per 100,000 population in 1960 compared with a rate of 8.1 in 1959.

There was an apparent downturn in the cyclical curve of scarlet fever and streptococcal sore throat during 1960. However, although the total number of cases dropped to 21,362 from 23,413 in 1959, the pattern was not uniform provincially and higher frequencies in Nova Scotia, Ontario and Saskatchewan offset to some extent the downward trend observed in the other provinces. Other diseases accounting for significant decreases during 1960 were: tuberculosis (including pulmonary), which has continued to decline steadily since 1949; pertussis, which reached a record low rate of 33.8 per 100,000 population; paralytic poliomyelitis, with 909 cases reported as compared with 1,886 in 1959; and meningococcal infections.

The incidence of venereal diseases in Canada has remained fairly constant since 1951 despite the postwar treatment by antibiotics. It is possible that vigorous case-finding programs may be partially responsible for the undiminished numbers. In 1960 there were 759 more cases than the 16,978 reported in 1959. Gonorrhoea was at a higher level than the average of 14,826 infections reported during the period 1949-59 but the more serious disease (syphilis) showed a reduced incidence.

Table 15 shows the reported cases of certain notifiable diseases during 1960, with totals for 1959.

[^85]
## 15.-Reported Cases of Selected Notifiable Diseases and Rates per $\mathbf{1 0 0}, \mathbf{0 0 0}$ Population, by Province, 1960 with Totals for 1959

${ }^{1}$ Includes the Yukon and Northwest Territories in 1960 and the Yukon in 1959. ${ }^{2}$ Not reportable. ${ }^{3}$ Includes other cases and cases where type not specified. ${ }^{4}$ Less than 0.05 per 100,000 population.

Illness in the Federal Civil Service.-A study of the incidence and duration of illness among federal civil servants is made annually from data supplied by medical certificates, which are required for all absences of more than three days at one time and for absence of any duration after seven days of casual leave have been taken. During the calendar year 1960, of an estimated 143,200 civil servants covered by Civil Service Leave Regulations, 46,763 reported ill by medical certificate. The number of new illnesses, as certified by medical certificate, was 70,243 , somewhat lower than the 75,951 reported for 1959. Similarly, the number of days of completed illnesses decreased to 990,804 in 1960 from the $1,070,084$ reported for 1959. Other relevant statistics for 1960 indicate that, on the average, 7.3 working days were lost through illness by each employee, including 4.7 days of certified and 2.6 days of casual sick leave.

Several indices related to sickness absenteeism were calculated from the 1960 survey, based on the number of certified illnesses that occurred at some time during the year but not necessarily completed during the same year. These illnesses totalled 72,138 . The severity rate or average number of calendar days per illness was 13.5 and the average number of working days was 9.3 . The frequency rate or the average number of illnesses per 100 employees was 50.4 . In addition, for each working day during the year, about two of every 100 civil servants were absent on certified sick leave.

## PART II.-PUBLIC WELFARE AND SOCIAL SECURITY

Responsibility for social welfare is shared by all levels of government. Costly incomemaintenance measures such as old age security and family allowances, and programs such as unemployment insurance and the National Employment Service where nation-wide coordination is required, are administered federally. Substantial federal aid is given to the provinces in meeting the costs of social assistance. The Federal Government also provides services for special groups such as Indians, Eskimos and immigrants.

The Department of National Health and Welfare is the agency generally responsible for federal welfare matters; the Departments of Veterans Affairs, Citizenship and Immi-
gration, and Northern Affairs and National Resources also operate important programs. The Unemployment Insurance Commission is responsible for the operation of unemployment insurance and the National Employment Service.

Administration of welfare services is primarily a responsibility of the province but the provision of services is often assumed by local authorities, generally with financial aid from the province.

## Section 1.-Federal Government Programs

## Subsection 1.-Family Allowances

The Family Allowances Act of 1944 is designed to assist in providing equal opportunity for all Canadian children. The allowances do not involve a means test and are paid entirely from the federal Consolidated Revenue Fund. They do not constitute taxable income but there is a smaller income tax exemption for children eligible for allowances.

Allowances are payable in respect of every child under the age of 16 years who was born in Canada, or who has been a resident of the country for one year, or whose father or mother was domiciled in Canada for three years immediately prior to the birth of the child. Payment is made by cheque each month, normally to the mother, although any person who substantially maintains the child may be paid the allowance on his behalf. Allowances are paid at the monthly rate of $\$ 6$ for each child under 10 years of age and $\$ 8$ for each child aged 10 or over but under 16 years. If the allowances are not spent for the purposes outlined in the Act, payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school regulations or on behalf of a girl who is married and under 16 years of age.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital. A welfare section in each regional office deals with welfare questions arising from administration of the allowances. Issuing of the cheques is the responsibility of the treasury division of each regional office, which reports to the Chief Treasury Officer of the Department of Finance attached to the Department of National Health and Welfare. The Regional Director for the Yukon and Northwest Territories is located at Ottawa.

Through the Department of Citizenship and Immigration, the Federal Government pays family assistance, at the rates applicable for family allowances, for each child under 16 years of age resident in Canada and supported by an immigrant who has landed for permanent residence in Canada, or by a Canadian returned to Canada to reside permanently. The assistance, which is paid quarterly and for a maximum period of one year, is not payable for a child receiving family allowances.

## Subsection 2.-Old Age Security

The Old Age Security Act of 1952, as amended, provides a universal pension of \$65 a month, (increased from $\$ 55$ and effective from Feb. 1, 1962) payable by the Federal Government to all persons aged 70 or over, subject to a residence qualification. To qualify for pension a person must have resided in Canada for ten years immediately preceding its commencement or, if absent during that period, must have been actually present in Canada prior to it for double any period of absence and must have resided in Canada at least one year immediately preceding commencement of pension. Payment of pension may be continued for any period of residence outside Canada if the pensioner has resided in Canada for at least 25 years after attaining the age of 21 or, if he has not, it may be continued for six consecutive months exclusive of the month of departure from Canada.

Until 1959 the pension was financed on a pay-as-you-go method through a 2-p.c. sales tax, a 2-p.c. tax on corporation income and, subject to a limit of $\$ 60$ a year, a 2-p.c. tax on taxable personal income. Effective Jan. 1, 1959, the tax on corporation income and, from Apr. 9, 1959, the sales tax were raised to 3 p.c.; the rate on taxable personal income was raised to 3 p.c. with a maximum of $\$ 75$ for 1959 . Beginning with 1960 , the maximum tax on taxable personal income rose to $\$ 90$ a year. Taxes are paid into the Old Age Security Fund. If they are insufficient to meet the pension payments, temporary loans or grants are made
from the Consolidated Revenue Fund. The pension is paid from the Consolidated Revenue Fund and charged to the Old Age Security Fund. The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital.

Persons in receipt of old age assistance (see p. 255) who reach age 70 are automatically transferred to old age security. Others make application to the regional office. Recipients of old age security who are in need may receive supplementary aid under general assistance programs in the provinces. Where the amount of aid is determined through an individual assessment of need, which takes the recipient's requirements and resources into consideration, the Federal Government may share in it under the Unemployment Assistance Act.

## Subsection 3.-Other Federal Government Programs

Unemployment Insurance and National Employment Service.-In 1940, by an amendment to the British North America Act, the Federal Government was given jurisdiction in the field of unemployment insurance and the Unemployment Insurance Act was passed establishing a national system of unemployment insurance which is outlined in Chapter XVI.

The National Employment Service is operated in conjunction with the unemployment insurance scheme. It is administered through local employment and claims offices and supervised by the Department of Labour. Statistics of positions offered and placements made are given in Chapter XVI.

Prairie Farm Assistance.-The Prairie Farm Assistance Act is administered by the Department of Agriculture; a description of the legislation is given in Chapter IX.

Welfare Services for Indians and Eskimos.-The welfare of Indians and Eskimos is administered by the Department of Citizenship and Immigration and the Department of Northern Affairs and National Resources, respectively; this field is covered in the Population Chapter (pp. 145-160).

# Section 2.-Federal-Provincial Programs 

## Subsection 1.-Old Age Assistance

The Old Age Assistance Act of 1952, as amended, provides for federal reimbursement to the provinces for assistance to persons aged 65 or over who are in need and who have resided in Canada for at least ten years or who, if absent from Canada during this period, have been present in Canada prior to the commencement of the ten-year period for double any period of absence. On reaching age 70 a pensioner is transferred to old age security. The federal contribution may not exceed 50 p.c. of $\$ 65$ a month (increased from $\$ 55$ and effective from Feb. 1, 1962) or of the assistance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of assistance payable, the maximum income allowed and other conditions of eligibility. All provinces use a maximum payment of $\$ 65$ a month and the income limits set out below.

For an unmarried person, total income allowed, including assistance, may not exceed $\$ 1,140$ a year. For a married couple it may not exceed $\$ 1,980$ a year or, when the spouse is blind within the meaning of the Blind Persons Act, $\$ 2,340$ a year. Assistance is not paid to a person receiving an old age security pension or an allowance under the Blind Persons Act, the Disabled Persons Act, or the War Veterans Allowance Act.

Recipients of old age assistance who are in need may receive supplementary aid under general assistance programs in the provinces. Where the amount of aid is determined through an individual assessment of need, which takes the recipient's requirements and resources into consideration, the Federal Government may share in it under the Unemployment Assistance Act.

## Subsection 2.-Allowances for Blind Persons

The Blind Persons Act of 1952, as amended, provides for federal reimbursement to the provinces for allowances to blind persons aged 18 or over who are in need and who have resided in Canada for at least ten years. The federal contribution may not exceed 75 p.c. of $\$ 65$ a month (increased from $\$ 55$ and effective Feb. 1, 1962) or of the allowance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable and the maximum income allowed. All provinces use a maximum payment of $\$ 65$ a month and the income limits set out below.

To qualify for an allowance a person must meet the required definition of blindness and have resided in Canada for ten years immediately preceding commencement of allowance or, if absent from Canada during this period, must have been present in Canada prior to its commencement for a period equal to double any period of absence. For an unmarried person, total income including the allowance may not exceed $\$ 1,380$ a year; for a person with no spouse but with one or more dependent children, $\$ 1,860$; for a married couple, $\$ 2,340$. When the spouse is also blind, income of the couple may not exceed $\$ 2,460$.

Allowances are not payable to a person receiving assistance under the Old Age Assistance Act, an allowance under the Disabled Persons Act or the War Veterans Allowance Act, a pension under the Old Age Security Act or a pension for blindness under the Pensions Act.

Recipients of blindness allowances who are in need may receive supplementary aid under general assistance programs in the provinces. Where the amount of aid is determined through an individual assessment of need, which takes the recipient's requirements and resources into consideration, the Federal Government may share in it under the Unemployment Assistance Act.

## Subsection 3.-Allowances for Disabled Persons

The Disabled Persons Act of 1954, as amended, provides for federal reimbursement to the provinces for allowances paid to permanently and totally disabled persons aged 18 or over who are in need and who have resided in Canada for at least ten years immediately preceding commencement of allowance or, if absent from Canada during this period, have been present in Canada prior to its commencement for a period equal to double any period of absence. To qualify for an allowance a person must meet the definition of permanent and total disability set out in the Regulations to the Act which requires that a person must be suffering from a major physiological, anatomical or psychological impairment, verified by objective medical findings; the impairment must be one that is likely to continue indefinitely without substantial improvement and that will severely limit activities of normal living. The federal contribution may not exceed 50 p.c. of $\$ 65$ a month (increased from $\$ 55$ and effective Feb. 1, 1962) or of the allowance paid, whichever is less. All provinces use a maximum payment of $\$ 65$ a month and the income limits set out below. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable, the maximum income allowed and other conditions of eligibility.

For an unmarried person, total income including the allowance may not exceed $\$ 1,140$ a year. For a married couple the limit is $\$ 1,980$ a year except that if the spouse is blind within the meaning of the Blind Persons Act, income of the couple may not exceed $\$ 2,340$ a year. Allowances are not paid to a person receiving an allowance under the Blind Persons Act or the War Veterans Allowance Act, assistance under the Old Age Assistance Act, a pension under the Old Age Security Act, or a mother's allowance.

The allowance is not payable to a patient in a mental institution or tuberculosis sanatorium. A recipient who is resident in a nursing home, an infirmary, a home for the aged, an institution for the care of incurables, or a private, charitable or public institution is eligible for the allowance only if the major part of the cost of his accommodation is being paid by himself or any other individual. When a recipient is required to enter a public or private hospital, the allowance may be paid for no more than two months of hospitalization in a calendar year, excluding months of admission and release, but for the period that a recipient is in hospital for therapeutic treatment for his disability or rehabilitation, as approved by the provincial authority, the allowance may continue to be paid. The provincial authority must suspend the payment of the allowance when in its opinion the recipient unreasonably neglects or refuses to comply with or to avail himself of training, rehabilitation or treatment facilities provided by or available in the province.

In the year ended Mar. 31, 1961, disabilities in the two medical classes-mental, psychoneurotic and personality disorders, and diseases of the nervous system and sense organs-were again found to be most prevalent among those persons becoming eligible for an allowance. These classes accounted for 53.9 p.c. of the new cases, the same figure as for the previous year. Diseases of the circulatory system, infective and parasitic diseases, and allergic, endocrine system, metabolic and nutritional diseases increased slightly over the previous year. Diseases of the bones and organs of movement declined while diseases of the respiratory system and neoplasms remained constant. Mental deficiency, the most frequently occurring disability, accounted for just over one-quarter of all cases granted an allowance.

Recipients of disability allowances who are in need may receive supplementary aid under general assistance programs in the provinces. Where the amount of aid is determined through an individual assessment of need, which takes the recipient's requirements and resources into consideration, the Federal Government may share in it under the Unemployment Assistance Act.

## Subsection 4.-Unemployment Assistance

Unemployment assistance is a federal grant-in-aid program under which the Federal Government shares with the provinces and their municipalities the costs of general assistance. The general assistance programs in the various provinces are known by different names, such as social allowances, social aid, social assistance and general welfare assistance.

Under the terms of the Unemployment Assistance Act as passed in 1956 and amended with effect from Jan. 1, 1958, the Federal Government may enter an agreement with any province to reimburse it for 50 p.c. of the unemployment assistance expenditures made by the province and its municipalities. All provinces and territories have signed agreements
under the Act. The rates of assistance and the conditions under which assistance is granted are determined by the province or the municipality. Payments to both employable and unemployable persons who are unemployed and in need are shareable under the agreement as are the costs of maintaining persons in "homes for special care", such as nursing homes or homes for the aged. Travelling expenses of persons receiving assistance are shareable when made for purposes specified in the agreement.

The Federal Government shares in additional assistance paid to needy persons in receipt of old age security pensions, old age assistance, blind persons' allowances, disabled persons' allowances and unemployment insurance benefits, where the amount of the assistance paid is determined through an assessment both of the recipient's basic requirements and of his financial resources. The agreement does not cover payments to recipients of mothers' allowances or payments made for medical, hospital, nursing, dental or optical care, drugs or dressings, funeral expenses or costs of administration.

During the year ended Mar. 31, 1961, the Federal Government made payments for unemployment assistance amounting to $\$ 51,520,085$. The figures on the federal share of unemployment assistance costs presented in Table 7, however, are based on payments for the months to which the reimbursement claims under the Act relate, namely, the months in which the assistance was actually given to the recipient by the local welfare office. Since the Act allows the provinces to submit claims at any time within six months after the month to which they relate, the figures shown for a fiscal year include certain reimbursements made to the provinces after the end of that year.

## Subsection 5.-The Fitness and Amateur Sport Program

The federal Fitness and Amateur Sport Act, which was passed on Sept. 25, 1961 and proclaimed on Dec. 15, brings new impetus to the development of fitness in Canada and to efforts to raise the levels of participation and proficiency in competitive and noncompetitive sports. The legislation provides for an annual allocation of $\$ 5,000,000$ "to encourage, promote and develop fitness and amateur sport". The program operates through three main channels: through grants to national organizations to assist national and international aspects of the program; through grants to the provinces to develop and extend community effort; and through federal co-ordinating and developmental work conducted by the new Fitness and Amateur Sport Division of the Department of National Health and Welfare.

The major task to be undertaken is the building up of training courses for leaders, coaches and other professional personnel at the national, provincial and community levels; the new Act bolsters and enlarges the training programs already in operation in some provinces. Also under the Act, research on such matters as the different aspects of physical performance, the effects of activity on different age groups, and physical development resulting from different types of activity may be greatly extended; knowledge of testing processes may be refined; and surveys of resources, facilities and personnel may be assisted. The urgent need for new and much more extensive informational material for both the professional and the public has long been recognized and under the new program, such instructional material suitable to Canadian needs can be developed through the co-operative efforts of experts in the field.

An important provision of the Act makes possible the award of scholarships, fellowships and bursaries to assist persons undertaking professional studies in physical education, recreation and the medical aspects of fitness. This aid should assist the programs that have already been undertaken by some provinces to overcome acute shortages of trained personnel. Provision is also made for the recognition of achievement in fitness and amateur sport activities through awards and citations.

Because of the ease with which they may be implemented, the provisions of the Act dealing with the promotion and development of Canadian participation in national and international sport competitions received early attention. By the end of the program's first fiscal year, fairly substantial aid had been given to assist such participation. Aid had been given also to the application being made to the International Olympic Committee for the holding of the 1968 Winter Olympic Games at Banff, Alta.

Under the Act, aid may be given to the construction of sports and recreational facilities. In view of the high costs involved in such construction and the almost unlimited demand for new facilities, it is possible that this type of assistance, for the most part, will have to be restricted to the building of national or regional training centres serving wide areas of the population.

Administrative responsibility for the program is vested in the Minister of National Health and Welfare who is advised from the point of view of the private citizen by a National Advisory Council on Fitness and Amateur Sport consisting of thirty persons appointed from across Canada, and from the point of view of the governments directly concerned by a federal-provincial committee of persons at the deputy minister level. Committees of experts advise on technical matters. Thus, a partnership of governments, important non-government agencies and the general public has been formed to develop a truly Canadian program of fitness and amateur sport participation which will embody the views of all.

## Section 3.-Provincial Welfare Programs

General assistance and social allowances, including mothers' allowances, with the various welfare services associated with these forms of aid, services for the aged, and child care and protection are major welfare programs governed by provincial welfare legislation.

In most provinces, administrative and financial responsibility for a number of the programs is shared by the provinces and their municipalities. Provincial administration of welfare, as of other provincial assistance, is carried out through the department of public welfare in each province. Several provincial welfare departments have established regional offices for administrative purposes and to provide consultative services to the municipalities.

Significant changes have taken place in provincial programs in the past few years. New or revised legislation or new procedures in a number of provinces have laid the foundation for improved standards of service and administration, and re-appraisal of services is continuing.

In the fields of general assistance or residual aid, a shift has taken place in the administrative and financial responsibility between the provinces and their municipalities. The provinces have assumed a substantial share of the costs and several provinces have broadened the area of social allowances, formerly limited almost entirely to mothers' allowances, in which the municipalities do not share costs. The financial contribution of the Federal Government to the provinces for unemployment assistance (see pp. 259-260) has doubtless been an important contributing factor in these developments.

All provinces are giving some consideration to the need for integrated planning on behalf of older citizens. A number have increased their capital or maintenance grants to municipalities and to voluntary groups for homes for the aged and are also assisting in the construction of low-rental housing projects.

The main efforts in child welfare have been directed toward improvement of standards and greater flexibility of services, with particular emphasis on preventive casework services for children in their own homes, development of specialized children's institutions, and the finding of adoption homes for all children in need of them.

An impressive number of voluntary agencies also contribute to community welfare including the welfare of families and children and of groups with special needs, such as the aged, recent immigrants, youth groups and released prisoners. Family welfare agencies or combined family and child welfare agencies in urban centres, for example, offer casework services to families in need of counselling on such problems as marital relations, parentchild relations and family budgeting. Counselling and recreational services for older or retired people are being developed by many agencies. Child and youth organizations with recreational and character-building programs offer group participation in physical education, camping, the development of special skills and other healthful activity. Welfare councils and community planning councils contribute to the planning and co-ordinating of local welfare services.

Local voluntary agencies and institutions are usually incorporated under provincial law. They may receive public grants, depending on the nature and standard of the services they render, although, with the exception of the semi-public children's aid societies, their main support may be from united funds or community chests, or from sponsoring organizations.

Welfare services, public and private, are hampered by the continued shortage of qualified social workers, although a number of provincial departments and voluntary agencies have granted educational leave with pay or bursaries to enable selected staff to attend schools of social work. Substantial increases in the number of professionally qualified staff may be expected with the development of the five-year program of welfare grants announced by the Federal Government in April 1962. Bursaries, training grants, scholarships and fellowships, and academic and field instruction grants will be available under the General Welfare and Professional Training Grants. Equally important, demon-
stration projects under this Grant and studies under the Welfare Research Grant will be encouraged among the provinces and non-governmental agencies alike, in the organization, co-ordination and staffing of welfare services.

## Subsection 1.-Mothers' Allowances

All provinces make provision for allowances to needy mothers who are deprived of the breadwinner and are unable to maintain their dependent children without assistance. These programs have undergone a number of changes in recent years. Eligibility has been extended and benefits have been liberalized. A number of provinces are combining mothers' allowances in a broadened program of provincial allowances to several categories of persons with long-term need. There is a tendency to incorporate this legislation with general assistance within a single Act, while continuing separate administration. In British Columbia, on the other hand, aid to needy mothers is provided under the general assistance program and in the same way as to other needy persons.

Subject to conditions of eligibility which vary from province to province, mothers' allowances or their equivalents are payable from provincial funds to applicants who are widowed, or whose husbands are mentally incapacitated or are physically disabled and unable to support their families. They are also payable to deserted wives who meet specified conditions; in several provinces to mothers whose husbands are in penal institutions, or who are divorced or legally separated; in some, to unmarried mothers; and in Ontario, Quebec and Nova Scotia to Indian mothers. Foster mothers may be eligible under particular circumstances in most provinces. The number of families and children assisted and amounts of benefits paid as at Mar. 31, 1959, 1960 and 1961 are given in Table 8 and rates of benefit as at December 1961 in Table 9.

The age limit for children is 16 years in most provinces, with provision made to extend payment for a specified period if the child is attending school or if he is physically or mentally handicapped. In all provinces applicants must satisfy conditions of need and residence but the amount of outside income and resources allowed and the length of residence required prior to application vary, the most common period being one year. One province has a citizenship requirement.

In each province the relevant legislation is administered by public welfare authorities. In some provinces a Mothers' Allowances Board or Commission makes the final decision regarding eligibility and the amount of allowances granted, or acts in an advisory capacity.

## Subsection 2.-General Assistance

All provinces make legislative provision for general assistance on a means-test basis to needy persons and their dependants who cannot qualify for other forms of aid, and some provinces include those whose benefits under other programs are not adequate. This
assistance, with some exceptions, is administered by the municipality with substantial financial support from the province. In most provinces assistance is given for food, clothing, shelter and utilities, but it may also include incapacitation or rehabilitation allowances, post-sanatorium allowances, maintenance costs of boarding or nursing-home care, counselling and homemaking services.

The provincial departments of public welfare have regulatory powers over municipal administration of general assistance. Several provinces recommend rates of assistance as a guide to municipalities and some specify rates at which payments must be made if a municipality is to qualify for provincial reimbursement. Specified standards of administration may also be a requirement. The province may take the responsibility for aid in unorganized areas and for the cost of aid to certain categories of persons, such as transients.

With the introduction of reimbursement plans designed to equalize municipal responsibility, British Columbia and Saskatchewan abolished municipal residence requirements. In 1960, Quebec also abolished municipal residence requirements with the reorganization of the assistance program. In other provinces, the residence of the applicant, as defined by statute, determines the financially responsible authority. Under the federal Unemployment Assistance Act, all provinces have agreed that residence shall not be a condition of assistance for applicants who come from other provinces. For persons without the required length of residence (usually one year) in a province, aid may be given by the province or the municipality, for which a chargeback may or may not be made to the municipality or province of residence.

Under the Unemployment Assistance Act, also, the Federal Government shares in the cost of aid to needy unemployed persons to the extent of 50 p.c. of costs as set out in the Act (see pp. 259-260). The federal share is based upon the amount expended for aid by the provinces and their municipalities, with reimbursement being made to the provinces, which make their own arrangements with the municipalities for provincial-municipal sharing of costs. These vary as follows. In Newfoundland, such assistance is the responsibility of the province and is administered by the Department of Public Welfare. In Prince Edward Island, the Department of Welfare and Labour provides direct social assistance in rural areas and assumes 75 p.c. of the cost of assistance granted by the City of Charlottetown and the incorporated towns and villages; the Department also operates a province-wide program of financial aid to families where the breadwinner is suffering from tuberculosis and is unable to support the family. In Nova Scotia, social assistance is administered by the municipality, which receives reimbursement from the Department of Public Welfare for two-thirds of the cost of assistance given and one-half of the cost of administration. In New Brunswick, the province reimburses each municipality to the extent of one dollar per capita of the population plus 70 p.c. of expenditures on general assistance in excess of that amount, and also pays 50 p.c. of the cost of administration.

In Quebec, the province reimburses municipal departments or authorized agencies for the full cost of aid to persons in their own homes and administers aid to persons who are unfit for work for at least 12 months and, since Sept. 1, 1961, gives supplementary allowances to needy recipients of government benefits and allowances to needy widows and spinsters 60-65 years of age. The cost of aid to unemployable persons in homes for special care, including nursing homes, is borne two-thirds by the province and one-third by the institution.

In Ontario, the Department of Public Welfare reimburses municipalities, up to a prescribed maximum, for 80 p.c. of their expenditures on aid to needy persons and on incapacitation allowances for single needy handicapped residents.

The Social Allowances Act of Manitoba, passed in 1959, transferred from the municipalities to the province responsibility for administering and financing aid to mentally or physically incapacitated persons whose disability is likely to last more than 90 days, and to persons unable to work because of their age. Aid to other needy persons, termed 'indigent relief', remains under the municipalities. The Department of Public Welfare reim-
burses the municipalities to the extent of 40 p.c. of the costs, or at a higher rate if costs exceed a specified amount. In Saskatchewan, through the Department of Social Welfare and Rehabilitation, the province reimburses the municipalities for approximately 93 p.c. of the cost of assistance granted to needy persons. The municipalities are assessed annually on a per capita basis for about 7 p.c. of the over-all cost of social aid, and the province reimburses each municipality for all actual expenditures. In Alberta, the province reimburses the municipalities for 80 p.c. of the value of the assistance given. Under Part III of the Public Welfare Act, proclaimed effective June 1, 1961, the province is responsible for allowances for persons who are incapable of supporting themselves because they are mentally or physically handicapped for a period likely to continue for more than 90 days, and for persons who because of their age are not able to be self-supporting. Allowances for needy mothers with dependent children are also now payable under this Act. The Department of Public Welfare maintains two hostels and one welfare centre to care for unemployable single homeless men without municipal domicile.

The Province of British Columbia, through the Department of Social Welfare, reimburses the municipalities on a pooled basis for 90 p.c. of the total cost of social assistance to needy persons. Also, the province shares equally with the municipalities expenditures on salaries of social workers; a municipality with fewer than 15,000 persons may arrange to have the Department undertake social work within the municipality and reimburse it at the rate of 30 cents per capita per year.

## Subsection 3.-Services for the Aged

In all provinces, homes for the aged and infirm are provided under provincial, municipal or voluntary auspices. Voluntary homes generally are provincially inspected in accordance with prescribed standards and in some provinces must be licensed. Most provinces contribute to the maintenance of elderly persons in homes for the aged, either through general assistance or through statutes that relate particularly to these homes. Also, 50 p.c. of the payments on behalf of assistance cases in homes for the aged and infirm (homes for special care) are met by the Federal Government (see pp. 259-260).

Several provinces make capital grants toward the construction of homes, and in four provinces capital grants are also available to municipalities, voluntary organizations, or limited-dividend companies for the construction of low-rental housing.

Newfoundland maintains a home for the aged and infirm at St. John's and also pays, in whole or in part, the cost of maintaining needy old people in homes for the aged and boarding homes. In 1955, a grant of 20 p.c. of costs, to be paid over a ten-year period, was made to a religious organization for the construction of a home, and provision is made for grants to similar projects under other auspices. The province is authorized by the Senior Citizens (Housing) Act, 1960 to guarantee the repayment of loans made under the National Housing Act to limited-dividend companies constructing hostels or housing for the elderly. Payment of the cost of operating hostels or housing projects may also be guaranteed. The aged and infirm in Prince Edward Island are cared for in two institutions operated by the Department of Welfare and Labour. In Nova Scotia, the aged are cared for in municipal or county homes, in homes operated by religious or private organizations and in private boarding homes. The province reimburses the municipalities for two-thirds of their expenditures for the maintenance of needy persons in municipal homes, subject to compliance with specified standards of care and accommodation. Homes for the aged receiving aid from the provincial government are subject to provincial inspection. Homes for the aged in New Brunswick are operated under municipal, religious, fraternal and private auspices and receive no direct financial support from the province. Voluntary and proprietary homes are subject to provincial licensing and inspection and must meet standards contained in regulations under the Health Act. Under the Social Assistance Act, 1960, the province contributes to the maintenance of needy persons in municipal homes.

Institutional care for indigent old people in Quebec is provided through charitable institutions under the Public Charities Act. The Homes for the Aged Act authorizes the province to erect and maintain homes for the aged and housing projects, or to make grants to voluntary organizations for this purpose. Standards in homes are governed by regulations under the Public Health Act.

Under the Ontario Homes for the Aged Act, municipalities must provide institutional or boarding-home care for the aged. The province contributes 50 p.c. of the costs of constructing approved homes and 70 p.c. of their net operating and maintenance costs. It also pays up to 70 p.c. of the costs of maintenance in approved boarding homes. Homes for the aged under voluntary auspices are approved, inspected and assisted under the Charitable Institutions Act, which provides for grants in aid of construction equalling 50 p.c. of costs up to $\$ 2,500$ per bed and maintenance grants of 75 p.c. of the amount spent by the organization up to $\$ 3.40$ per day for each resident. The Elderly Persons Housing Aid Act provides for grants to limited-dividend housing corporations building low-rental housing for elderly persons.

Institutions and boarding homes for the aged and infirm in Manitoba are supervised and licensed by the Department of Health and Public Welfare under public health legislation. Under the Elderly Persons Housing Act, the province makes construction grants to municipalities and charitable organizations equalling one-third of the costs of constructing or acquiring and renovating housing accommodation and homes for the aged. Grants may not exceed $\$ 1,400$ for one-person housing units; $\$ 1,667$ for two-person housing units; $\$ 1,200$ per bed for new homes for the aged; and $\$ 700$ per bed for homes that have been renovated. Under the Social Allowances Act, 1959, the province bears the entire cost of assistance to those who, because of age or incapacity, require care for more than 90 days by another or in a home for the aged.

Aged and infirm persons in Saskatchewan are cared for in four provincial nursing homes and in voluntary homes for the aged. The latter are inspected and licensed under the Housing Act. This Act also empowers the province and municipalities to subscribe to the stock of limited-dividend housing companies building low-rental accommodation for older persons; the province may also make loans to municipalities to assist them in subscribing. Capital grants amounting to 20 p.c. of construction costs and maintenance grants of $\$ 40$ per bed per year may be made to municipalities, churches or charitable organizations sponsoring approved homes or housing projects. Costs of maintaining needy persons in homes for the aged are shared by the province and the municipalities under the Social Assistance Act.

Under what are termed 'master agreements', the Province of Alberta bears the cost of constructing and equipping homes for the aged and housing units on municipal land. Projects are operated by provincially incorporated foundations which include municipal councilmen in their membership; net costs of operation are borne by the municipalities. The province also meets up to 80 p.c. of the cost incurred by municipalities for the maintenance of elderly persons in housing projects and municipal or private homes. Private homes are municipally licensed.

The Province of British Columbia operates a home for elderly homeless men, a provincial infirmary for the chronically ill and, for senile and psychotic patients, three provincial homes for the aged. It also licenses and supervises homes for the aged and boarding homes and, where necessary, shares with the municipalities on a $90-10$ basis the cost of maintaining needy residents. Under the Elderly Persons Housing Aid Act, the province makes grants amounting to one-third of construction costs to municipalities and non-profit corporations, including religious and service organizations, engaged in building homes or low-rental housing units for elderly citizens.

## Subsection 4.-Child Care and Protection

Child welfare services, which include child protection and care, services for unmarried parents and adoption services, are provided in all provinces under provincial legislation and are administered by some central authority, usually a division of child welfare within
the department of welfare. Except in Quebec, where the province does not administer services directly, the program may be administered by the provincial authority itself or the responsibility may be delegated under provincial child welfare Acts to local children's aid societies, that is, to voluntary agencies with boards of directors, operating under charter and under the general supervision of provincial departments. In Quebec, child welfare services are administered by recognized voluntary agencies and institutions, religious and secular. In Newfoundland, Prince Edward Island, Saskatchewan and, to a large extent, in Alberta, they are administered by the province; in the larger urban centres of Alberta there is some delegation of authority to the municipality. In Ontario and New Brunswick, a network of local children's aid societies, operating under statutory authority, is responsible for the services. In Nova Scotia, Manitoba and British Columbia, services are administered by local children's aid societies in the heavily populated areas and by the province in other areas.

Children's aid societies and the recognized agencies in Quebec receive substantial provincial grants and sometimes municipal grants and in many areas they also receive support from private subscriptions or from community chests or united funds. Maintenance costs for children in care of a voluntary or public agency may be borne entirely by the province-as in Alberta, Manitoba, Prince Edward Island and Newfoundland-or partly by the municipality of residence and partly by the province.

The child welfare agencies, whether provincial offices or authorized private agencies, have the authority to investigate cases of alleged neglect and, if necessary, to apprehend a child and to bring the case before a judge upon whom rests the responsibility of deciding whether in fact the child is neglected. When neglect is proven, the court may direct that the child be returned to his parent or parents, under supervision, or be made a ward of the province or a children's aid society or, in Quebec, be placed under the authority of a suitable person or agency. The appropriate agency is then responsible for making arrangements to meet the needs of the child in so far as community resources permit. The services may involve casework with families in their own homes, or care may be provided in foster boarding homes, in adoption homes or, for children who need this form of care, in selected institutions. Children placed for adoption may be wards or they may be placed on the written consent of the parent. Special efforts, which are meeting with considerable success, are being made to find suitable homes for children found difficult to place for adoption because of age, disability or ethnic differences. Adoptions, including those arranged privately, number about 13,000 annually.

Child welfare agencies make use of the small selective institution for placement of children who are forced to be away from their own homes for a short period or who may need preparation for placement in foster homes, and also for teen-age children who may find it easier to fit into a group setting than into a foster home. A growing number of institutions are meeting this demand for special care by a reduction in size or reorganization into small units and by the introduction of training courses for staff and other measures for the improvement of standards. The development of small, highly specialized institutions, which function as treatment centres for emotionally disturbed children, is of particular significance. Institutions for children are governed by provincial child welfare legislation or by special statutes dealing with welfare institutions, and by provincial or municipal public health regulations. The institutions are generally subject to inspection and in some provinces to licensing, and are usually required to make reports to the province on the movement of children under their care. Sources of income may include private subscriptions, provincial grants, and maintenance payments on behalf of children in care, payable by the parents, the placing agency, or the responsible municipal or provincial department.

Services to unmarried parents include casework services to the mother and possibly to the father, legal assistance in obtaining support for the child from the father, and fosterhome care or adoption services for the child. If necessary, support for unmarried mothers may be obtained under general assistance programs. In many centres, homes for unmarried mothers are operated under private or religious auspices.

Day nurseries for the children of working mothers are established only in the larger centres and chiefly under voluntary auspices. Licensing is required in five provinces but Ontario is the only province with a Day Nurseries Act. This sets out standards for operation and licensing to be met by all agencies offering day-care services and provides for provincial reimbursement of one-half of the operating and maintenance costs of municipally sponsored day nurseries, which are established in most of the industrial centres in that province.

## PART III.-NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, planning research and education. These agencies, some of which are described below, supplement the services of the federal and provincial authorities in many fields and play a leading role in stimulating public awareness of health and welfare needs and in promoting action to meet them.

The Canadian Welfare Council.-The Council, established in 1920, is a national voluntary association of English- and French-speaking organizations and individual citizens whose aim is the advancement of social welfare in Canada. Member organizations include community funds and councils, other private social agencies, various federal, provincial and municipal departments, and citizen groups and individuals active in the fields of health, welfare and recreation. It furnishes authoritative information, technical consultation and field service in the main areas of social welfare and provides a means of cooperative planning and action by public and private agencies.

The policies and programs of the Council are determined by its members under the leadership of a nationally representative board of governors. Aided by professional staff, the members work together through Divisions of Family and Child Welfare, Public Welfare, Corrections, and Community Funds and Councils, and through special committees on such subjects as welfare of immigrants, and aging. Services of the Council include public relations and research. The Council publishes periodicals entitled Canadian Welfare, Bien-Être Social Canadien and the Canadian Journal of Corrections, a directory of Canadian welfare services, pamphlets, and division bulletins.

The Canadian Diabetic Association.-Formed in 1953 with headquarters in Toronto, the Association has 25 branches in various parts of the country and a Frenchlanguage affiliate, Association du Diabète, in Quebec. The aims of the organization are to promote public education regarding diabetes, to detect unrecognized cases, to teach diabetics self-care and to conduct research. The branches support various services such as free diet counselling and summer camps for diabetic children and adults, and hold 'model schools' or institutes from time to time in many cities.

The Canadian Red Cross Society.-Established in 1896 in Canada, the Society is affiliated with the International Red Cross and has branches in all ten provinces with national headquarters in Toronto. Its objectives, defined in its Charter, are ". . . in time of peace or war to carry on and assist in work for the improvement of health, the prevention of disease and the mitigation of suffering throughout the world" Red Cross Society activities are very broad, ranging from national and international disaster relief services to the support of local projects. One of the major activities in Canada is the operation of a national blood transfusion service, which includes collecting and supplying free of charge, for hospital use, blood provided by voluntary donors. The Society also maintains outpost hospitals, nursing stations and emergency units in several provinces and provides an arts and crafts program and other welfare services in veterans hospitals. The Junior Red Cross promotes health education through its schoolroom branches across Canada; it supports a special fund to supply treatment to indigent handicapped children in Canada and a fund to promote understanding among school children of different countries.

The Canadian Foundation for Poliomyelitis and Rehabilitation.-The Foundation was formed in 1948 to assist poliomyelitis victims but in 1958, because of the protection against poliomyelitis afforded by Salk vaccine, it broadened its scope to initiate projects for the rehabilitation of persons disabled by other diseases. Through chapters organized in ten provinces the expanded program, financed mainly by the March of Dimes, supports treatment facilities in hospitals and rehabilitation centres and provides direct services to disabled persons in need of treatment, training and other personal aid. Other aims of the Foundation are to carry out public education and research concerning disabling conditions and to assist in the training of professional personnel. Recent projects have included the organization of anti-polio vaccination clinics, transport of iron lungs and the formation of iron lung pools, and case-finding surveys in various provinces. The national office is in Montreal. Close liaison has been developed with the Canadian Council for Crippled Children and Adults.

Victorian Order of Nurses.-Since its inception in 1897, the Victorian Order of Nurses has provided a professional home nursing and health counselling service to patients with any type of illness and regardless of their financial status. In all provinces except Prince Edward Island, the association's nurses carry out bedside nursing and prenatal, postnatal and newborn care under medical direction with emphasis upon chronic conditions. In some provinces they also assist provincial health authorities in tuberculosis and venereal disease programs and conduct child health clinics. In 1961, the Order employed about 650 nurses in 117 branches whose services are available to over one-third of Canada's population. The national office is in Ottawa.

The Canadian National Institute for the Blind.-Since 1918 the Canadian National Institute for the Blind has been the only national agency providing a complete social welfare service to the blind and prevention services to the visually impaired. The national office, located in Toronto, supports the eight regional divisions covering all provinces and the 49 local branches serving 24,131 registered blind persons and 84,066 prevention cases in 1961. Through its Eye Service, free to those in need of assistance, the Institute arranges for eye examinations and pays for medical treatment, glasses and visual aids; it also supports the operation of several Low Vision Aid Clinics and seven Eye Banks in the main cities. Social, vocational, recreational and educational services for the blind are provided at 19 service centres to which workshops and residences are attached. Home teachers visit the newly blinded of all ages including pre-school-age children to teach them independence in daily living and other skills such as Braille, typing and handicrafts. Placement officers furnish vocational counselling and arrange for training and employment. Where possible the blind are placed in jobs in general industry, in the 460 CNIB concession stands and canteens, or in farming and small businesses; others are gainfully employed in the Institute's industrial and sheltered workshops. The National Library circulates Braille magazines, books and recordings and supplies a transcription service to students.

The Health League of Canada.-The Health League of Canada, first established in 1918 as a National Committee for Combating Venereal Disease, now embraces about 75 national member-associations supporting a wide variety of public health education activities to prevent disease and raise health standards. Its standing committees are concerned with various aspects of public health such as immunization, milk pasteurization, fluoridation of water, industrial health, nutrition, gerontology and other fields. The program is administered from a national office in Toronto, usually working through the affiliated organizations. Educational efforts include the provision of speakers for meetings and the preparation of radio scripts, health education films and literature; a magazine Health is published bi-monthly and weekly news bulletins are released to the press. The League also sponsors National Health Week and National Immunization Week.

St. John Ambulance Association.-The Order of the Hospital of St. John of Jerusalem began as a local unit in Montreal in 1884 and was incorporated on a national basis in 1910. The organization is composed of two parts-the St. John Ambulance Association and the St. John Ambulance Brigade. The first is devoted to teaching first aid and home nursing and is used extensively by Civil Defence, Armed Forces, workmen's compensation and industrial personnel, and the latter to directing the emergency corps of trained personnel. The Brigade maintains first aid posts at large public gatherings and operates ambulance services in several provinces. Headquarters of the Association is in Ottawa, with provincial divisions in nine provinces controlling their own programs and financing the operation of their local branches.

The Canadian Tuberculosis Association.-Founded in 1900 to increase treatment facilities for tuberculosis patients, the Association's objective is the control and ultimate eradication of tuberculosis. The national office in Ottawa along with the ten provincial associations and 175 local branches co-operate with the public health agencies in promoting adequate facilities for prevention, diagnosis, treatment and rehabilitation. The provincial associations assist in case-finding by means of mass X-ray and tuberculin testing surveys of specific areas and groups, and carry out extensive health education work; most associations also participate in follow-up and rehabilitation of ex-patients. Publication of educational materials and periodicals and organization of the annual Christmas Seal campaign, the principal source of funds, is centred in the national office, which makes its consultant services available to federal and provincial health departments.

The National Cancer Institute of Canada.-The National Cancer Institute, composed of persons representing professional societies and agencies concerned with cancer research and therapy, was founded in 1947 to develop a nationally co-ordinated research and professional education program. The Institute promotes fundamental research through selected projects in universities, hospitals and research centres, maintains a Canadian Tumour Registry, provides training fellowships and, in co-operation with the Canadian Medical Association and medical schools, promotes professional education on cancer topics. The Institute receives support from federal and provincial grants and from the Canadian Cancer Society; research work on lung cancer is being supported by the Canadian tobacco industry.

The Canadian Hearing Society.-Organized in 1940 as the National Society of the Deaf and the Hard of Hearing, the Society operates chiefly in Toronto and the surrounding area. It is concerned with the preservation of hearing, the treatment of deafness and the provision of rehabilitation services for those with impaired hearing, including war veterans and children. It provides otological examinations, counselling, vocational guidance and job placement services for the deaf or hard-of-hearing, and hearing aids to indigent persons.

The Canadian Mental Health Association.-Since its organization in 1918 as the National Committee for Mental Hygiene, the Association has initiated numerous measures to promote mental health and the best possible care of the mentally ill. Its program of public education, professional and lay training, services to the mentally ill, consultative services and research is carried out by the national office in Toronto, nine provincial divisions and 91 community branches. To develop public understanding of mental health principles, the Association sponsors discussion groups and prepares a variety of educational materials including films for the press, radio and television and for professional personnel. Services to mental patients have grown rapidly as branches have established information and referral centres in 36 communities, volunteer hospital visiting programs, White Cross rehabilitation centres and other personal services for patients and their families. Through various studies of mental health problems and the National Mental Health Research Fund, set up in 1957, the Association has stimulated new approaches to prevention and treatment in this field.

The Canadian Cancer Society.-Organized in 1938 to co-ordinate voluntary activities and disseminate knowledge in the cancer field, the Canadian Cancer Society operates in all provinces and has its national office in Toronto. Its services include a public education program, welfare services such as transportation, home nursing and cancer dressings to needy persons, and fellowships to medical graduates for advanced study in cancer. Voluntary subscriptions to the Society provide the major source of funds for the basic research program of the National Cancer Institute of Canada. The Society also sponsors clinical research projects and supports the establishment of new research facilities.

The Canadian Heart Foundation.-The Canadian Heart Foundation was formed in 1947 by physicians to co-ordinate research and disseminate information. Its membership consists of lay and medical individuals and organizations interested in promoting research on cardiovascular diseases and in both public and professional education. Medical research projects are financed by voluntary donations to the Canadian Heart Fund as well as by federal and provincial grants. The Foundation's national office is in Toronto; provincial divisions have been established in eight provinces.

The Canadian Paraplegic Association.-The Association was formed in 1945 by a group of paraplegic veterans to ensure provision of adequate treatment and rehabilitation facilities for all persons suffering paralysis caused by disease or injury. Through its national office in Toronto and five regional divisions, the Association's program covers medical and vocational services, prosthetic appliances and personal aids and other activities to promote the social well-being of paraplegics. A comprehensive rehabilitation service is provided at Lyndhurst Lodge Retraining Centre in Toronto, owned by the Association, and other care by arrangement with a number of general and veterans hospitals and rehabilitation centres. The Association, in turn, furnishes special services to veterans and workmen's compensation cases on a repayment basis.

The Canadian Council for Crippled Children and Adults.-The Council was established in 1937 to co-ordinate and support activities for the care and rehabilitation of physically handicapped children. The first provincial organization was formed in Ontario in 1922 and similar organizations, which have remained autonomous, now exist in all provinces. In 1954 the scope of the Council's interests was broadened to include the adult handicapped and, with the establishing of a national office in Toronto headed by an executive director of the Council, has since sponsored various projects in the areas of prevention, research and public education. Programs in the provinces vary, ranging from casefinding, establishment of cerebral palsy clinics and children's rehabilitation centres and operation of summer camps to payment for treatment services, prosthetics and other services. In most provinces, service clubs raise funds to support the work of the organization, particularly through the sale of Easter Seals.

The Canadian Arthritis and Rheumatism Society.-Established in 1948 to promote research, professional education and treatment services in the field of rheumatism and arthritis and to disseminate authoritative information, the Society has branches operating in all provinces except Prince Edward Island and Newfoundland; its national office is in Toronto. Medical advisory boards in each of the eight provinces and one at the national level give advice and guidance to the provincial and national directors. The Society sponsors an educational program both for the general public and for physicians and maintains out-patient clinics in general hospitals for the treatment of low-income patients. Its branches have pioneered in the operation of mobile physiotherapy units, numbering 75 , which bring treatment to home-bound patients and in four provinces the branches support a mobile consultative service. All divisions have liaison with employment agencies and vocational training schemes. Nearly 12,000 patients were treated in 1960 free of charge or at a nominal fee. The national body promotes research projects in various universities and institutions and provides clinical fellowships to physicians in all parts of Canada.

Multiple Sclerosis Society of Canada.-The Society has been organized since 1948 to support research in multiple sclerosis and allied diseases and to educate the public on the social problem of multiple sclerosis. Its 20 local chapters located in eight provinces raise funds mainly for research but they also provide welfare services to patients in need of wheel chairs and other personal aids. Grants for eight research projects and fellowships, administered from the national office in Montreal, amounted to over \$46,000 in 1960.

The Canadian Association for Retarded Children.-The Association, incorporated in 1958 to assist and give co-ordinated direction to the work of a growing number of organizations for the mentally retarded, is represented by ten provincial and about 175 local groups. Membership of the local groups exceeds 11,000 , most of whom are parents of mentally retarded children. The Association promotes the establishment of clinics, day schools, institutions, workshops, and recreational programs; it also supports and encourages research into the causes of mental deficiency. Increasing numbers of day classes offer training opportunities within the community for mentally retarded children who are not acceptable for regular school instruction. Financial support comes from local fund-raising campaigns, community chests and, in varying degrees, from provincial departments of education. The national office is in Toronto.

The Muscular Dystrophy Association of Canada.-This Association was organized in 1954 to stimulate and unify research efforts into the cause, nature and treatment of muscular dystrophy and related diseases and to promote the establishment of facilities for diagnostic, consultative and treatment services. Under the direction of a national office in Toronto supported by 19 local chapters, its chief activity is the support of basic and applied research projects in medical schools and other centres across the country. In addition to raising funds for research projects, local chapters provide various patient services including personal aids, appliances and transportation.

Voluntary Medical Insurance.-Almost $8,200,000$ Canadians, or 47 p.c. of the population of Canada, had some protection against the costs of physicians' services at the end of 1959. Their protection was provided by some 63 non-profit plans and at least 46 private companies. Non-profit enrolment was $4,900,000$ while private companies provided surgical coverage to $3,800,000$; overlapping enrolment in the two groups amounted to about 500,000 . The $8,200,000$ net total was $2,300,000$ above the 1955 figure, which represented only 38 p.c. of the population.

The non-profit plans took in $\$ 99,600,000$ in premiums and $\$ 1,600,000$ in other revenue in 1959, paying out $\$ 88,500,000$ in benefits and $\$ 8,800,000$ for administration, leaving a surplus of $\$ 3,800,000$. Thus for every dollar of premiums, 89 cents were paid out in benefits. Benefit payments of non-profit plans amounted to $\$ 18.21$ per person covered in 1959. In 1955 benefit payments were $\$ 41,400,000$, which also represented 89 cents of the premium dollar but amounted to only $\$ 13.17$ per person.

Profit-making private companies offer several classes of health protection-surgical, medical and major medical. Because surgical enrolment is most widespread and because an individual often must take out surgical insurance to be eligible for the other kinds, the surgical enrolment figure is regarded as indicative of total private enrolment. Benefit payments in all classes amounted to $\$ 42,300,000$ in 1959 , or $\$ 11.05$ per person. In 1955 , the total was $\$ 19,300,000$ and the ratio $\$ 6.25$.

## PART IV.-VETERANS SERVICES*

The Department of Veterans Affairs administers most of the legislation making up the Veterans Charter and provides administration facilities for the Canadian Pension Commission which administers the Pension Act and the Civilian War Pensions and Allowances Act; for the War Veterans Allowance Board which is responsible for the administration of the War Veterans Allowance Act; and for the Secretary-General (Canada) of the Commonwealth War Graves Commission.

[^89]The main benefits now provided to veterans consist of medical treatment for those eligible to receive it, land settlement and home construction assistance, educational assistance for children of the war dead, veterans insurance, general welfare services, unused re-establishment credit, disability and widows' pensions, and war veterans allowances.

The work of the Department, excepting the administration of the Veterans' Land Act, is carried out through 17 district offices and five sub-district offices in Canada and one district office in England. There are eight Veterans' Land Act district offices and 32 regional offices established to administer the benefits of the Act.

## Section 1.-Treatment Services

Treatment Activity.-The Department of Veterans Affairs, through its Treatment Services Branch, provides medical, dental and prosthetic services for entitled veterans throughout Canada. Service is also provided for members of the Armed Forces, the Royal Canadian Mounted Police, and the wards of other governments or departments at the request and expense of the authorities concerned.

The primary responsibility of the Branch is to provide examination and treatment to disability pensioners for their pensionable disabilities. Other main groups of veterans receiving treatment are War Veterans Allowance recipients, veterans whose service and need make them eligible for domiciliary care, and veterans whose service and financial circumstances render them eligible for free treatment, or at a cost adjusted to their ability to pay. If beds are available, any veteran may receive treatment in a departmental hospital on a guarantee of payment of the cost of treatment. The pensioner receives treatment regardless of his place of residence, but service to other veterans is available in Canada only. Where departmental facilities are not available, the eligible veteran may receive treatment at the expense of the Department in an outside hospital by a doctor of his own choice.

Under the federal-provincial hospital insurance program, DVA hospitals are recognized for the provision of insured services to veterans. Arrangements have been made for the payment of any necessary premiums on behalf of veterans who are in receipt of War Veterans Allowances. The Veterans Treatment Regulations remain the authority for the treatment of veterans (and others) in DVA institutions and elsewhere under departmental responsibility, regardless of whether or not the hospitalization is at the expense of the insurance plan.

Departmental hospitals provide base-hospital facilities for the treatment of members of the Armed Forces. Ste. Foy Hospital near Quebec City and Sunnybrook Hospital at Toronto have self-contained units but in the other institutions there is a close integration of patients. The units, which are staffed by Armed Forces personnel, utilize the ancillary services of the hospital and also provide training facilities for members of the medical services of the Armed Forces.

Patient load for the year ended Dec. 31, 1961 was as follows:-

| Item | $N o$. |
| :---: | :---: |
| Admissions to departmental hospitals Admissions to other hospitals. | $\begin{aligned} & 53,024 \\ & 17,951 \end{aligned}$ |
| Total Admissions. | 70,975 |
| Patient-days in departmental hospitals. Patient-days in other hospitals. | $\begin{array}{r} 2,577,089 \\ 875,618 \end{array}$ |
| Total Patient-Days. | 3,452,707 |
| Out-patient visits to departmental hospitals.... Out-patient visits to other departmental clinics Out-patient visits to doctor-of-choice............. | $\begin{array}{r} 402,450 \\ 87,751 \\ 320,214 \end{array}$ |
| Total Out-Patient Visits. | 810,415 |
| Number of veterans treated under the Doctor-of-C | 109,505 |

Medical Staff and Training Programs.-Many of the professional staffs of active treatment hospitals are employed on a part-time basis; in the main they are recommended for appointment by the Deans of Medicine of the universities with which the hospitals are affiliated. Most members of the medical staff are engaged in teaching and private practice, and hold appointments on the medical faculties of the various universities.

In its active treatment institutions, the Department maintains medical teaching programs which are considered essential to attract highly qualified professional men and thus ensure the highest quality of medical care. All active treatment hospitals have been approved by the Royal College of Physicians and Surgeons of Canada for postgraduate teaching in medicine and surgery, and the majority are approved also for advanced postgraduate training in the various specialties. An intern-resident program is in effect and, at the end of 1961, 282 residents and interns were in training, together with 141 interns in occupational therapy, physiotherapy, psychology, laboratory, and medical social services.

During 1961, 91 departmental employees attended courses, assisted fully or partly by the research and education vote. In addition, nursing assistants were trained at a school located at Camp Hill Hospital in Halifax. This school has an annual capacity of 70 graduates who are offered employment in departmental hospitals across the country.

Medical Research.-During 1961, there were 85 projects in progress under the Clinical Research Program. The program is varied but in the main deals with conditions affecting aging, which the Department is in a special position to investigate. Self-contained Clinical Investigation Units have been set up in active treatment hospitals located at Montreal, Toronto, London, Winnipeg and Vancouver.

Hospital Facilities.-Treatment is provided in 11 active treatment hospitals located at Halifax, N.S., Saint John, N.B., Quebec City, Montreal and Ste. Anne de Bellevue in Quebec, Toronto and London in Ontario, Winnipeg, Man., Calgary, Alta., and Vancouver and Victoria, B.C.; also in two convalescent centres and two homes maintained for the provision of domiciliary care. The rated capacity of these institutions at Dec. 31, 1961 was 8,918 beds. An additional 662 beds were available in veterans pavilions situated at Ottawa, Regina and Edmonton. Pavilions are owned by the Department but are operated by the parent hospital, and medical staff is provided by the Department.

Progress continues to be made toward the provision of a nation-wide chain of modern fire-resistant institutions through replacement of obsolete accommodation. In October 1944, the Department of Pensions and National Health was reorganized and became the Department of National Health and Welfare and the Department of Veterans Affairs. At that time under the Pensions Branch of the old Department there were the following hospitals: Camp Hill at Halifax, N.S.; Lancaster at Saint John, N.B.; Savard Park at Quebec City and Ste. Anne's at Ste. Anne de Bellevue, Que.; Christie Street at Toronto and Westminster at London, Ont.; Deer Lodge at Winnipeg, Man.; Colonel Belcher at Calgary, Alta.; and Shaughnessy at Vancouver, B.C. Many of these institutions were either older buildings that had been remodelled or buildings of frame construction built toward the end of or immediately after World War I. In the intervening years they had become obsolescent in design and, being constructed of less permanent materials, had deteriorated and required considerable maintenance.

To meet the anticipated needs for World War II veterans and to improve the standard of hospital accommodation under the control of the Department, a program of work was initiated. In addition, because of immediate requirements, some temporary accommodation was constructed and existing buildings in various parts of the country were taken over and adapted to hospital use. The maximum number of beds provided was during the year 1946-47 when there was a total of 13,544 in 48 institutions. Since that time there has been a steady decline in the number of institutions operated and the number of available beds.

During the fiscal years $1944-45$ to $1960-61$, inclusive, some $\$ 72,242,505$ was spent on construction of all kinds. This included not only major construction but alterations and smaller additions to existing institutions. Table 1 shows the principal projects completed and occupied since the Department of Veterans Affairs came into being.

## 1.-Principal Veterans Hospital Projects Completed and Expenditures Thereon, Years Ended Mar. 31, 1945-62

| Fiscal Years | Location | Institution and Project | Amount |

[^90]Dental Services.-Dental treatment is provided for those pensioned veterans whose disability would be alleviated by such treatment, for War Veterans Allowance recipients and for other persons whose health care is the responsibility of the Department; these include Royal Canadian Mounted Police personnel and, on occasion, members of the Canadian Armed Forces. Treatment is also provided at the request of other departments of the Canadian Government, as well as at the request of other governments.

The Department employs 36 dentists on a full-time basis and one on a half-time basis and also utilizes the services of three dental consultants on a part-time basis. Twenty dental clinics are maintained in departmental hospitals or centres across Canada, and elsewhere the services of private dentists on a fee-for-service basis are utilized.

Since 1948, many departmental dental officers have participated in postgraduate and refresher courses in the various specialties of the profession through the auspices of the Department; they have also participated actively in giving clinics and papers at various national and regional dental conventions, and four hold teaching positions on the staffs of Dental Faculties in Canada.

Treatment provided by the Department in 1960-61 continued to show an increase over the preceding year and consisted of some 126,055 operations for approximately 20,000 patients.

Prosthetic Services.*-The Department operates a Prosthetic Service which is responsible for the supply and maintenance of prostheses, orthopaedic appliances and

[^91]sensory aid devices to veterans and other persons eligible for treatment under the Veterans Treatment Regulations. Those appliances are issued only upon departmental medical prescription and are supplied and serviced without charge to eligible patients. The Department also extends prosthetic service upon request, on a repayment basis, to other Federal Government departments, to allied governments, to provincial governments under certain conditions, and to workmen's compensation boards.

The physical establishment consists of a main factory at Toronto and 12 district manufacturing and fitting centres located in Departmental hospitals throughout Canada. District prosthetic technicians extend the service to five sub-districts through regular weekly or monthly visits. The Toronto factory manufactures certain prostheses, appliances and component parts, conducts bulk purchasing of raw materials for distribution to other centres, provides advanced instructional courses for district staff, maintains a research section staffed by engineers and technicians, and accepts, when necessary, referrals of cases for whom routine fitting procedures are considered inadequate.

During 1961 the Research Section conducted field tests on two new prostheses which emanated from the United States National Research Council research and development program, both of which resulted in favourable patient acceptance-the patellar tendon prosthesis for below-knee amputations and the hydraulically controlled prosthesis for above-knee amputations; the former is manufactured by the Department and the latter is commercially available. These prostheses were added to the departmental line for regular supply. Research continued on plastic coatings, colouring of laminated plastic, walking and transfer jigs for manufacturing and fitting purposes, improved processing of cosmetic gloves, functional hand splints, a new cervical brace, an arm abduction brace, an all-laminated plastic above-knee prosthesis, and other items.

During the year, approximately 165,000 basic appliances, accessories and repairs were issued to 86,000 patients.

## Section 2.-Welfare Services

The Welfare Services Branch not only has specific responsibilities with respect to the administration of statutory benefits designed to assist veterans and their dependants, but may be asked for advice and help in any kind of problem that does not come under the jurisdiction of another Branch of the Department. Since the type of assistance that can be rendered directly is limited by statute, Branch personnel are required to maintain close liaison with and have a detailed knowledge of sources of assistance in the community such as welfare departments at all levels of government, private philanthropic agencies, veterans' organizations, etc. These contacts enable the Branch not only to make prompt and accurate referrals when required but to act as a channel through which the Department becomes aware of situations in which it can assist.

The workload of the Branch remains at a high level, although the time limit for some benefits designed to assist with immediate postwar rehabilitation of veterans has almost expired. Among these are the payment of war service gratuities authorized by the War Service Grants Act, which provides cash payments for each veteran of World War II, the amount varying with his length of service and the area in which it was performed. This benefit was discontinued on Dec. 31, 1954, except for veterans with overseas service who may be paid if the Minister is satisfied that there is good reason for delay in making application. A veteran who served outside Canada and the United States with the Korean Special Force has 15 years after discharge from that Force in which to apply for gratuities. During 1961, 24 awards of gratuity were authorized for a total value of $\$ 12,154$.

The Awaiting Returns Allowance is another form of benefit that has almost expired. This is now available only to veterans who have been established in full-time farming under the Veterans' Land Act. Application must be made within 12 months of settlement and allowances are payable for a maximum of 52 weeks within two years of the time of the initial award. During 1961, total payments of this benefit amounted to $\$ 15,873$ and there were 17 active accounts at the end of the year.

Re-establishment Credit.-This benefit is authorized under Part II of the War Service Grants Act. It is equal in each case to the War Service Gratuity, less the supplementary gratuity paid for overseas service. Except for balances of $\$ 50$ or less, it is not paid in cash to the veteran but is released on his behalf for specified purposes. World War II veterans have until Sept. 30, 1962,* and veterans qualified on the basis of service with the Korean Special Force have 15 years from the date of their discharge from that Force to apply for this benefit. At the end of 1961, unused re-establishment credit balances totalled $\$ 11,063,692$. The amounts paid during 1960 and 1961 , with cumulative totals to Dec. 31, 1961, are shown in Table 2.

## 2.-Re-establishment Credits Paid, by Required Purpose, 1960 and 1961, with Cumulative Totals

| Purpose | 1960 | 1961 | Cumulative Totals to Dec. 31, 1961 |

| Totals. | 2,956,902 | 2,181,804 | 313,073,724 |

Casualty Rehabilitation.-The function of the casualty welfare program is outlined in the 1956 Year Book, p. 307. At Dec. 31, 1961, there were 2,537 active cases. The total number of disabled veterans then registered was 48,691 and of these 46,154 were closed cases. New cases opened during 1961 numbered 810 and cases closed numbered 2,359.

* Legislation amended March 1962 to change date to Oct. 31, 1968.

## 3.-Registrations for Casualty Rehabilitation, by Status of Applicant and Type of Disability, to Dec. 31, 1961

| Totals. | 48,239 | 48,691 | Tota | 3,014 | 45,225 | 2,537 | 46,154 |

Social Services.-The Social Service Division of the Department maintains a small corps of trained social workers who are employed in a variety of ways. They act primarily as consultants to other staff in dealing with problems of social adjustment affecting veterans and their dependants, or give direct service in complex cases. They are especially concerned with maintaining liaison, for referral purposes, with welfare departments at all levels of government and with other philanthropic agencies. They assist in the work of the War Veterans Allowance District Authorities and other departmental committees concerned with welfare matters and also supervise Branch services to dependants of members of the Armed Forces. On request by the Department of National Defence, the Division furnishes reports on home circumstances of service personnel who encounter some domestic emergency. When the problem cannot be solved by counselling or referral to a source of help in the community, these reports assist the Department of National Defence in deciding whether compassionate leave, posting or discharge is indicated. During 1960 and 1961, the Social Service Division handled 13,629 and 12,405 requests, respectively, for service from all sources. This reduction was attributable to staff shortages rather than to a decrease in demand for services.

Assistance Fund (WVA).-The Assistance Fund (War Veterans Allowances) Regulations authorize supplementary payments to recipients under the War Veterans Allowance Act (pp. 288-290) who are living in Canada and are in need and whose incomes are lower than the maximum allowed by that statute. Assistance may be given as a continuing monthly grant in accordance with a formula which includes costs of shelter, fuel, food, clothing, personal care and certain health needs, or as single grants to meet emergencies. Amendments to the Act, effective June 1, 1961, required a review of every case in receipt of the continuing monthly Assistance Fund grant. The formula used in determining monthly grant requirements was also reviewed and the dollar value of individual items increased in accordance with price index changes since the previous review in 1957. Certain monthly grants had to be adjusted because basic allowances were increased from $\$ 70$ to $\$ 84$ and from $\$ 120$ to $\$ 144$ for single and married recipients, respectively. However, because of a corresponding increase in income ceilings, more assistance could be provided where need was evident. The maximum annual supplement available was raised from $\$ 240$ to $\$ 288$ for single recipients and from $\$ 300$ to $\$ 360$ for married recipients.

The administration of the Fund is directed by a committee, of which the Deputy Minister is chairman. Applications are dealt with and grants authorized by district authorities in local offices of the Department in accordance with general instructions issued by the Assistance Fund Committee. The following statement summarizes activity of the Fund during 1960 and 1961. Since monthly grants may be continued from year to year, the number of persons assisted in a given period is greater than the number applying.

| Item |  | 1961 | 1960 |
| :---: | :---: | :---: | :---: |

| Proportion of expenditures given in mon | .e. | 92 | 91 |
| Persons | No. | 13,206 | 15,290 |

Older Veterans.-Details of the Department's work on behalf of the aging veteran population are given in the 1961 Year Book, pp. 294-296. During 1961 there were no significant changes in the services and benefits available to older veterans and their dependants. The co-operation and goodwill of industrial and commercial organizations and the hiring policy of government agencies have resulted in the Corps of Commissionaires being able to maintain its position as the largest Canadian employer of older war veterans. Officials of the Welfare Services Branch of the Department continue to participate actively with agencies and committees dealing with the problems of older citizens and veterans.

Training for Veterans.-The period of eligibility for training under the Veterans Rehabilitation Act for World War II veterans and under the Veterans Benefit Act for those who served overseas during the Korean operation has expired except for a few special cases. However, the Pensioners Training Regulations provide a continuing authority for the training of pensioned veterans and of ex-members of the peacetime forces with disabilities attributed to military service. These Regulations enable a pensioner who, because of his disabilities, cannot continue in a former line of work to qualify for another occupation. At Dec. 31, 1961, trainees on strength totalled 43 , of whom 18 were registered in vocational and 25 in university courses.

Educational Assistance to Children of War Dead.-The Children of War Dead (Education Assistance) Act provides, for eligible children, substantial aid to defray the costs of post-secondary school education. Entitlement is limited to four academic years, or 36 months, whichever is the lesser.* This is designed to provide assistance up to a first university degree, or completion of training for occupations such as registered nurse. Fees are limited to a maximum of $\$ 500$ for any one student in any one academic year, which parallels costs payable on behalf of veterans training under the Veterans Rehabilitation Act. Training allowance during actual attendance on course is $\$ 25$ a month up to age 21. If the student is still eligible for training after age 21, when payment of pension ceases, the allowance is increased to $\$ 60$ a month. $\dagger$ All benefits cease at the end of the academic year in which the student attains age $25 . \ddagger$

As early as October 1945, attention was directed to the plight of children made fatherless by World War II, when a brief on the subject was presented by the Dominion Command, Canadian Legion, to the Special Committee on Veterans Affairs. As time passed, interest continued to grow. The Nov. 20, 1948 meeting of the Advisory Committee on University Training for Veterans included in its agenda "ways and means of assuring educational opportunity for sons and daughters of veterans who either lost their lives in the War or who are in receipt of total disability pensions". Canada's sole provision at that time was continuation of pension to age 21, if the child remained in school or university. On Feb. 8, 1951, the Advisory Committee recommended "payment of tuition fees plus an allowance which, added to pension, would provide $\$ 60$ a month while the son or daughter of a veteran who died as a result of war service was in actual attendance in a post-secondary institution of higher learning". Action on this recommendation was deferred pending the report of the Royal Commission on National Development in the Arts, Letters and Sciences (the Massey Commission). It was considered that if this report resulted in a sufficient supply of adequate scholarships to aid all pensioned children who qualified academically, the proposed legislation to be administered by DVA would be unnecessary. This did not occur and by 1952 firm plans were being formulated which resulted in the passage of the Children of War Dead (Education Assistance) Act, effective July 1, 1953.
$=$ Under the Act, the amount payable for each student during an academic year was calculated to approximate the value of the scholarships recommended in the report of the Massey Commission. The original Act limited post-secondary school assistance to students who were eligible for pension because of the war-connected deaths of their fathers. It authorized the payment of fees and costs up to $\$ 500$ for any one academic year and an allowance of $\$ 25$ per month for the lesser of four academic years or 36 months of training. In September 1958 the Act was amended to include some children previously excluded on technical grounds and to increase the allowance to $\$ 60$ a month to eligible students after the cessation of pension at age 21. It also brought in students whose fathers lost their lives as a direct result of peacetime military service. These amendments increased the number of eligible children and extended the life of the Act indefinitely. Children excluded from original calculations are becoming eligible because of the deaths of pensioned veterans.

[^92]Students and mothers or guardians are given full benefit of the counselling and guidance services which the Department developed to help veterans adjust to civilian life after World War II. The object is to ensure, as far as possible, that every student possessing entitlement under the Act will attain maximum educational development consistent with his native ability.

Beneficiaries under this statute have attended or are attending every major university or post-secondary institution in Canada. Many have already repaid the investment of public funds in their education, not only through professional service to the community but through their increased personal contribution to taxation made possible by higher earnings.

When the Act was under consideration it was expected that an over-all total of 1,150 children would benefit at a cost of less than $\$ 2,500,000$ spread over approximately 16 years. However, from July 1, 1953 to Dec. 31, 1961, expenditures totalled \$2,421,115$\$ 1,270,960$ in fees and $\$ 1,150,155$ in allowances. Total applications approved numbered 2,541 , of which 1,226 were for males and 1,315 for females. Of the total of 2,541 approved, 254 were deferred (conserved entitlement for later, more expensive, academic years or held for repetition of failed years), 20 were suspended (for brief absence from training), and 611 were discontinued (training ceased for any reason other than completion). Table 4 shows progress and results of the program to the end of 1961.
4.-Post-Secondary School and University Trainees under the Children of War Dead (Education Assistance) Act, by Sex and Type of Training, as at Dec. 31, 1961

Vetcraft.-A short history of Veteraft is given in the 1959 Year Book, p. 293. Sheltered workshops are now operated at Toronto and Montreal providing full-time employment for a number of veterans and widows and, in addition, small assembly work is done in Winnipeg, Regina and Calgary providing part-time home employment for other workers. Production for the year 1961, which was sold entirely to the Dominion Command of the Royal Canadian Legion, amounted to $6,569,847$ poppies and 67,960 memorial wreaths and crosses.

Returned Soldiers' Insurance.-The Returned Soldiers' Insurance Act (SC 1920, c. 54 as amended) provided eligibility to contract for life insurance at rates comparable with those available commercially, but the medical standard required of applicants was much lower than was otherwise acceptable. Applications were accepted from 1920 to 1923 and from 1928 to 1933. No policies have been issued since Aug. 31, 1933. On Dec. 31, 1961, of the total of 48,319 policies issued, there remained 8,618 policies in force for a face amount of $\$ 18,231,794$.

Veterans Insurance.-The Veterans Insurance Act (RSC 1952, c. 279 as amended) provides eligibility to contract for life insurance* to veterans of World War II, those who served in the action in Korea and certain other groups. The maximum amount of insurance that may be obtained is $\$ 10,000$. This Act makes it possible for veterans unable to meet the required medical standards of the usual commercial life insurance companies to obtain insurance. The intent of the legislation is the protection of the immediate dependants of the veteran. There are no occupational restrictions and the contract provides for a waiver of premiums, without extra cost, where a veteran becomes totally and permanently disabled.

Of the 51,772 applications received to Dec. $31,1961,87$ were declined for medical reasons. Of the 49,960 policies issued to Dec. $31,1961,30,848$ for a face amount of $\$ 96,876,349$ remained in force, 13,147 had been surrendered for their cash values, 2,920 terminated by lapse and extended term insurance expiry and 3,045 terminated by death.
5.-Death Claims Intimated to Dec. 31, 1961

## Section 3.-Land Settlement and Home Construction

The Veterans' Land Act provides for the settlement of veterans of World War II and the Special (Korean) Force under five broad categories: farming as a full-time occupation; part-time farming in rural or semi-rural areas to supplement income from other employment; commercial fishing; land settlement, generally in pioneer areas, under agreements between the Federal Government and the provinces; and home building on citysize lots by veterans who have been approved for a loan under the National Housing Act and who act as their own contractors.

In June 1961 the minimum land requirement for part-time farming establishments was reduced from two acres to one-half an acre. This has had several immediate results. For instance, many veterans have found that they were able to acquire suitable land of the smaller minimum size required and this has led to a heavy increase in the volume of applications for qualification. Another effect, which may be more noticeable in 1962, is that veterans previously established on two or three acres are now able to dispose of some of their land if they so desire. In 1961, 2,172 loans were approved for small holders and commercial fishermen compared with 1,881 in the previous year.

The increased amount of funds available to full-time farmers established under the Act has increased the demand for advisory and supervisory field services. As of Dec. 31, 1961, 1,955 farm accounts were in the category of supervised loans-those where the total debt was in excess of 65 p.c. of the security value of the real property on which credit was

[^93]advanced. In such instances, the veteran is required to file a farm plan acceptable to the Director, keep farm accounts and submit annually a financial statement of his farm operations together with a statement of his net worth, and prepare a budget for the management and operation of his farm. These requirements have necessitated intensive training programs for the veterans and the field staff. Veterans are visited during the growing season, the number of visits varying with individual circumstances. An attempt is made from an analysis of the farm accounts to determine how the farmer can best improve his business -which enterprises are not profitable and which should be expanded.

From the inception of the Act to the end of $1961,89,015$ veterans had received financial assistance and almost $\$ 519,000,000 \mathrm{had}$ been expended for this purpose. Active accounts numbered 52,789 at the end of the period, including accounts of 458 Indian veterans settled on Indian reserves, which are administered by the Indian Affairs Branch of the Department of Citizenship and Immigration. During 1961, exclusive of loans advanced to fulltime farming veterans already settled, financial assistance was approved on behalf of 2,880 veterans, including 320 being settled as full-time farmers, 2,156 as small holders and 331 for home building.

Appraisals numbering 10,583 were completed in 1961. The joint field staff comprising Farm Credit Advisers of the Veterans' Land Administration and the Farm Credit Corporation made 7,730 farm appraisals, of which 1,476 were for loans under the Veterans' Land Act, and the Veterans' Land Act Settlement Officers and dual-role Construction Supervisors made 2,853 appraisals of non-farm properties.

From inception of operations to the end of 1961, 30,443 houses were started and 29,283 completed. Although there was a reduction in the number of houses started during 1961, completions numbered 1,639 compared with 1,607 in 1960 . In addition, 909 veterans received approval to effect additions or improvements to their homes and other buildings.

Veterans continued to maintain a very satisfactory repayment record. The total amount collected and applied to the Consolidated Revenue Fund from current active accounts represented 103.7 p.c. of the total due and owing on 51,000 accounts. Of the $\$ 473,000,000$ expended on behalf of 78,224 veterans established with repayable contracts, 55.8 p.c. had been repaid by Dec. 31 , 1961. This percentage included $\$ 63,649,257$ in conditional grants earned by 35,356 veterans who fulfilled the terms of settlement for the first ten years of their contracts. A major factor contributing to the favourable repayment record is that more than 23,000 veterans have adopted one of the pre-arranged payment plans made available to them. In addition, 837 Share-of-Crop Agreements were in effect in the spring wheat areas of the Prairie Provinces. There have been very few cases where it has been necessary to rescind a contract. The seven occurring in 1961 brought the total since inception of operations to only 215 , representing less than 0.3 p.c. of the repayable contract holders.

## 6.-Summary of Settiement and Expenditures under the Veterans' Land Act, as at Dec. 31, 1961

Note.-This table does not include details relative to sales of reverted or surplus property to civilian purchasers.

## Section 4.-Veterans' Bureau

The Veterans' Bureau, which has completed its thirtieth year of operation, is a branch of the Department of Veterans Affairs administered from Head Office in Ottawa by an officer called the Chief Pensions Advocate. He is assisted by Pensions Advocates who are located in all districts in Canada in which offices of the Department are situated, and at the district office in London, England.

The duties of Pensions Advocates, most of whom are lawyers, are to assist former members of the Armed Forces and their dependants, and former members of the various auxiliary organizations such as merchant seamen, firefighters and others, in preparing and presenting pension claims to the Canadian Pension Commission. The Pensions Advocates also appear as counsel for applicants before the Appeal Boards of the Commission and, in addition, they advise pensioners and applicants upon any provision of the Pension Act or phase of pension law or administration that may have a bearing on the applicant's pension claim. No charge is made for the services of the Veterans' Bureau.

During the year ended Dec. 31, 1961, the Veterans' Bureau submitted a total of 6,852 claims to the Canadian Pension Commission for adjudication. This number included 1,400 claims presented to Appeal Boards of the Canadian Pension Commission, of which 603 were wholly or partially granted. These Appeal Board claims were supported by oral evidence provided by 1,573 witnesses, including approximately 704 medical and 869 lay witnesses.

During the same year, the Veterans' Bureau submitted 1,224 straight entitlement claims to the Canadian Pension Commission, based on service rendered in World War I and peacetime, of which 177 were wholly or partially granted. However, with respect to claims based on service in World War II and Korea, out of a total of 3,226 presented, 1,098 were wholly or partially granted. In addition, the Veterans' Bureau submitted 902 miscellaneous claims to the Canadian Pension Commission (these included applications for leave to re-open, following an Appeal Board hearing, claims for higher degree of aggravation, increased assessment, retroactive awards, compassionate pension awards, etc.) of which 552 were wholly or partially granted.

## Section 5.-Veterans Pensions

Canadian Pension Commission.-The Canadian Pension Commission is a statutory body charged with the administration of the Pension Act and the Civilian War Pensions and Allowances Act. The members of the Commission are appointed by the Governor in Council who may also impose upon the Commission duties in respect of any grants in the nature of pensions, etc., made under any statute other than the Pension Act. It reports to Parliament through the Minister of Veterans Affairs.

It is the responsibility of the Commission to adjudicate on claims for injury or disease, resulting in disability or death, incurred during service with the Canadian Navy, Army or Air Force during war or peacetime. The Commission may also supplement, up to Canadian rates, awards of pension to or in respect of Canadians for disability or death suffered as a result of service in the British or Allied Forces during World War I or World War II, or may pay pension at Canadian rates in such cases where the claim has been rejected by the
government of the country concerned. The Commission's representatives, called Pension Medical Examiners, are located in most of the district offices of the Department of Veterans Affairs across the country.

The Pension Act.-Previous issues of the Year Book contain information on the development of Canadian pension legislation, together with yearly statistics of numbers and liabilities. The Act was amended by SC 1961, c. 10, which became effective Mar. 1, 1961. The principal changes are as follows:-

1. Basic rates of pension for disability and death are increased.
2. Pension on behalf of dependent children continues to the end of the month in which the child reaches the statutory age limit-16 for boys and 17 for girls-instead of being discontinued the day following the child's birthday.
3. When a widow dies, pension at a rate not exceeding that payable for a widow may be paid to any person who is competent to assume and has assumed the care of the child or children for as long as there is a child under 21 years of age in respect of whom pension is payable. Previously this housekeeper's allowance could be paid only to a daughter.
4. Where a veteran who is residing with a woman with whom he is prohibited from celebrating a marriage by reason of a previous marriage either of such woman or himself with another person shows to the satisfaction of the Commission that he has, for seven years or more, continuously maintained and publicly represented such woman as his wife, the Commission may, in its discretion, deem such woman to be his wife for the purposes of the Pension Act. Upon the death of the veteran such a woman may also be deemed to be his widow for the purposes of the Act.
5. Maximum grants for last illness and burial expenses are increased to amounts equal to those available under the Department of Veterans Affairs Veterans Burial Regulations.
6. The maximum pension payable to a parent in cases in which pension has been awarded to a widow or divorced wife or a woman eligible by virtue of Sect. 36(4) of the Act has been increased from $\$ 480$ to $\$ 576$ per annum and if pension on behalf of the widow or other primary dependant referred to is discontinued, a parent may be awarded pension in any amount not exceeding schedule rates.
7. The benefits of the Act are extended to Canadians with the required domiciliary status who served during World War I or World War II with other Commonwealth or Allied Forces and whose claims for pension have been rejected by the governments concerned. These veterans may apply direct to the Commission and have their claims considered under the terms of the Pension Act. If such claims are allowed, pensions are paid at Canadian rates and these pensions, as well as pensions supplementing those granted by other countries, may be paid anywhere in the world as long as the recipient has resided in Canada for at least one year since the date of the disability or death in respect of which the benefits are conferred.

The total estimated increase in annual liability as a result of the increase in basic rates was $\$ 31,121,565$. At Dec. 31,1961 , the annual liability was $\$ 175,178,618$ as compared with $\$ 146,436,306$ at the end of 1960.

The new rates of pension result in the basic scale being the same for all ranks up to and including Colonel and equivalent ranks. Following is a comparison of the new basic rates with those formerly in effect:-

| Item | Annual Rate Formerly in Effect | Annual Rate Effective <br> Mar. 1, 1961 |
| :---: | :---: | :---: |
|  | 8 | \$ |
| Man-100 p.c. disability*...... | 1,800 | 2,160 |
| Additional pension, if married- Wife................. | 600 | 720 |
| One child. | 240 | 324 |
| Two children. | 420 | 564 |
| Wach additional child. | 144 | 192 |
| Widow................... | 1,380 | 1,656 |
| One child..... | 480 | ${ }^{648}$ |
| Two children........̈. | 840 288 | 1,128 384 |
| Dependent parent-maximum awa | + 288 | 1,384 1,296 |
| Two dependent parents-maximum | 1,380 | 1,596 |

[^94]The rates of pension for disability and pensioned widows are statutory and adjustments were made by Treasury Branch without reference to the Commission. The amounts payable to parents, however, are not fixed and a review of some 7,400 cases was necessitated.

Attendance allowance, which is payable to a pensioner who is totally disabled and in need of attendance, and which varies from a minimum of $\$ 480$ to a maximum of $\$ 1,800$ depending on the degree of attendance required, is paid in addition to pension. While a pensioner must be totally disabled, helpless and in need of attendance to receive this allowance, the cause may be non-pensionable. The disability for which pension is in payment may be a minor one and not related to the need of attendance. The rates for the various classifications under which awards are made are set by the Commission. These rates are reviewed from time to time and such changes made as may be considered advisable. In line with this policy, early in the year the rate of attendance allowance for total blindness was increased from $\$ 1,440$ to $\$ 1,680$ per annum, with effect from Apr. 1, 1961, and adjustments made where applicable.

The Civilian War Pensions and Allowances Act provides for the payment of pensions to or on behalf of persons who served in certain civilian groups that were closely associated with the World War II war effort and who suffered injury or death as a result of such service; these include merchant seamen, saltwater fishermen, auxiliary services personnel, ferry pilots of the RAF Transport Command, firefighters who served in Britain, etc.
8.-Pensions in Force under the Pension Act, as at Dec. 31, 1961

| Service | Disability |  | Dependant |  | Disability and Dependant |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Pensions in Force | Liability | Pensions in Force | Liability | Pensions in Force | Liability |
|  | No. | \$ | No. | \$ | No. | 5 |
| World War I. | 43,771 | 41, 141,070 | 14,568 | .23,148,424 | 58,339 | 64, 289, 494 |
| World War II. | 105,848 | 84,573,334 | 17,056 | 22,910,454 | 122,904 | 107, 483,788 |
| Peacetime. | 1,495 | 958,201 | 533 | 1,032,359 | 2,028 | 1,990,560 |
| Special Force. | 1,688 | 1,147,368 | 173 | 267,408 | 1,861 | 1,414,776 |
| Totals. | 152,802 | 127,819,973 | 32,330 | 47,358,645 | 185,132 | 175,178,618 |

## Section 6.-War Veterans Allowances

War Veterans Allowance Board.-The War Veterans Allowance Board is a statutory body responsible to the Minister of Veterans Affairs for the administration of the War Veterans Allowance Act. The Board consists of eight members including a chairman and a deputy chairman. A detailed outline of the Board's functions and responsibilities will be found on p. 302 of the 1961 Year Book.

War Veterans Allowance Act.-The War Veterans Allowance Act provides for allowances to be paid to veterans with service eligibility who are no longer capable of maintaining themselves by reason of age or disability. A male veteran under the age of 60 and
a female veteran under the age of 55 must be declared to be permanently unemployable or incapable of maintenance because of physical or mental incapacity or insufficiency combined with economic handicaps. Service eligibility is any one of the following: service in a theatre of war; receipt of a war disability pension or acceptance of a commuted pension or award of a posthumous pension; service in World War I and World War II provided that both discharges were honourable; service in Britain during World War I for at least 365 days prior to Nov. 12, 1918, including sailing time between Canada and Britain prior to that date. The term "veteran" includes a member of the North West Field Force; a Canadian, British or Allied veteran of World War I or World War II; a Canadian or British veteran of the South African war provided he had embarked for South Africa prior to June 1, 1902; and a Canadian veteran of the Korean operation. A British or Allied veteran who possesses the above qualifications must have been domiciled in Canada at the time of his enlistment or have resided in Canada for ten years.

The War Veterans Allowance Act was amended on the eleventh occasion, effective June 1, 1961. The major change provided for an increase of 20 p.c. in rates of allowances payable and in the income ceilings. The present rates are as follows:-

| Class of Recipient | Monthly | Annual <br> Income <br> Ceiling |
| :---: | :---: | :---: |
|  | \$ | \$ |
| Single. | 84 | 1,296 |
| Married. | 144 | 2,088 |
| One orphan.. | 54 | 900 |
| Two orphans.. | 94 | 1,440 |
| Three or more orphans. | 126 | 1,800 |

The annual income ceiling for a blind veteran was increased by an additional $\$ 120$ per annum. The rate of orphans allowance was increased by more than 20 p.c. to coincide with the rate for orphans in receipt of a pension under the Pension Act. Another amendment indicates that for the purpose of determining the income of a recipient from interest in real property, the value of any premises in which a veteran resides shall be considered only to the extent that it exceeds $\$ 9,000$; the amount was formerly $\$ 8,000$. Personal property limits were increased to $\$ 1,250$ for a recipient of single status and $\$ 2,500$ for a recipient of married status.

Widows and orphans also qualify for an allowance on the basis of entitlement of the veteran. Under certain circumstances, the widow who was prevented from legalizing her irregular union may be deemed to be the widow of a veteran in the event that she had resided with him and been maintained and publicly represented as his wife for seven years immediately prior to his death.

Since Aug. 1, 1960, payment of allowances may be made to recipients who take up residence outside of Canada, provided they were residents in Canada for 12 months immediately prior to their departure. Widows and orphans of veteran recipients who die outside Canada are entitled to allowances without returning to Canada in order to qualify. On Dec. 31, 1961, there were 387 veteran recipients residing in other countries and 300 widow recipients residing in other countries.

Full treatment coverage is provided to all veteran recipients who are residing in Canada but not to those residing outside Canada. Treatment is limited to the veteran and not extended to his dependants.

The number of veterans and others in receipt of allowances at the end of the years 1956-61, together with the amounts of allowances paid, were as follows:-

| As at Dec. S1- | Veterans in Receipt of Allowances | Others in Receipt of Allowances | Total in Receipt of Allowances | Expenditure |
| :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | No. | 8 |
| 1956. | 39,543 | 15, 193 | 54,736 | 40,853,773 |
| 1957. | 41,820 | 16,601 | 58,421 | 45,187,400 |
| 1958. | 45,466 | 18,659 | 64,125 | 53,970,728 |
| 1959. | 47,393 | 20,141 | 67,534 | 56,927,614 |
| 1960.. | 48,521 | 21,421 | 69,942 | 58, 207, 130 |
| 1961. | 51,537 | 23,373 | 74,910 | 69,825,747 |

During 1961, 69,654 cases were reviewed by the 19 District Authorities across Canada so that changes in the financial, physical or domestic circumstances of the recipients concerned might be reflected in the allowance being paid; 14,806 cases were reviewed by the War Veterans Allowance Board at Ottawa to ensure uniformity in the application of the provisions of the legislation in all districts; also, 770 appeals from adjudications were dealt with by the Board.

## Section 7.-The Commonwealth War Graves Commission

The Imperial War Graves Commission was incorporated on May 21, 1917, under the Royal Charter granted by His Majesty in Council on a recommendation made by the Imperial War Conference in April of that year. The name was changed by a supplemental Royal Charter on Apr. 1, 1960, to the Commonwealth War Graves Commission. The Governments of Britain, Canada, Australia, New Zealand, South Africa, India and Pakistan are members of the Commission. South Africa, after becoming a republic, requested and obtained permission from the other Commonwealth Governments to remain a member of the Commission and is represented by an Ambassador in London. The Minister of Veterans Affairs is the Agent of the Commission in Canada and the office of the Secretary-General of the Canadian Agency is in the Veterans Affairs Building, Ottawa.

The Commission is entrusted with the marking and maintenance in perpetuity of the graves of those of the British Empire and Commonwealth Armed Forces who lost their lives between Aug. 4, 1914 and Aug. 31, 1921, and between Sept. 3, 1939 and Dec. 31, 1947, and with the erection of memorials to commemorate those with no known grave. In many of the cemeteries and plots a central feature is the Cross of Sacrifice or the Great Stone of Remembrance.

The area of responsibility of the Canadian Agency is the Continent of North America but it has also certain duties of inspection in Argentina, the Bahamas, Barbados, Bermuda, Brazil, British Guiana, British Honduras, Chile, Costa Rica, Cuba, Falkland Islands, French West Indies, Guatemala, Hawaiian Islands, Jamaica, Leeward Islands, Netherlands Antilles, Panama Canal Zone, Peru, Puerto Rico, Trinidad, Uruguay and Windward Islands.

In North America the Agency has commemorated 18,944 Commonwealth war dead in almost 3,000 cemeteries. Approximately 4,100 servicemen of both Wars, missing in operations while based in North America, are commemorated on memorials erected at Victoria, B.C., Halifax, N.S., and Ottawa, Ont. In Oakwood Cemetery, Montgomery, Alabama, the Agency has erected the only Cross of Sacrifice in the United States.

## PART I.-FORMAL EDUCATION*

## Section 1.-Education in the Provinces and Territories

Canada is committed to the principle of publicly supported, publicly controlled systems of education, with compulsory schooling and free elementary and secondary education operating under provincial school laws. This principle is based on the recognition that a high general education level on a broad front is necessary if Canada is to develop its resources to the full, safeguard its democratic institutions, and play a worthy role as a member of the community of nations.

Organization of Education in the Provinces.-Under the terms of Confederation each Canadian province is responsible for the establishment and administration of its own educational system. This is a right and a responsibility as jealously guarded today as it was at that time. It has resulted in the formation of ten distinct provincial systems with differing policies, organizations and practices. Even so, in some respects a great deal of similarity has developed among the systems as a result of interchange of personnel and ideas, ease of transportation and communication, interprovincial and national education bodies, proximity, co-operation and emulation. Each province has established a department of education (in Quebec it functions under the name "Department of Youth"), and each province except Quebec has a Cabinet Minister as Minister of Education. In Quebec public education is administered by a Superintendent of Education-a nonpolitical appointee-who maintains liaison with the Cabinet through the Minister of the Department of Youth; he is head of the Council of Education, composed of Roman Catholic and Protestant committees which sit separately, each being responsible for the organization and administration of its own public schools and teacher-training institutions, for conducting examinations for school inspectors, and for making recommendations to the Cabinet concerning school grants and certain specified appointments.

[^95]Local School Organization.-Within the framework of each provincial jurisdiction and regulation, public education is administered by local education authorities operating under a school Act. These school boards or boards of education are responsible for establishing and maintaining schools, employing qualified teachers, providing pupil transportation where needed, and budgeting for the money required to operate the schools, which will be raised through local taxation. Local boards may be elected, appointed, or partly elected and partly appointed. They differ in number of members from three in the case of most small rural units to five, seven, or even twelve or more for urban units. Where larger units in rural areas have been established, there are central boards for the units representing the component districts, although there may be local boards retaining some custodial and advisory duties.

The larger unit, replacing rural districts which were usually about four miles in extent, has been introduced by legislation in several provinces and made optional in others in an effort to provide better school facilities and greater equalization of costs and to mitigate the problems caused by a chronic shortage of teachers. Larger units have been established by legislation in Alberta and British Columbia and by Acts with provision for local option in Saskatchewan and the Maritime Provinces. Southern Ontario has been gradually organizing its rural areas into township and county units; Manitoba has recently introduced legislation leading to the formation of larger units of administration for secondary schools; and Protestant Quebec has been essentially organized into larger units. In Roman Catholic Quebec, one board of commissioners administers all Roman Catholic schools in a school municipality, whether rural or urban, while secondary education is being consolidated more and more into larger central secondary schools. In that province there have always been more private residential schools established by religious groups than elsewhere.

Administration of Elementary and Secondary Education.-Each department of education, among its duties, undertakes to provide for the selection, training and certification of teacher candidates; to establish courses of study and prescribe school texts; to provide inspection services and liaison between the local boards and the department; to assist in financing the school through grants and services; and to make rules and regulations for the guidance of trustees and teachers. In return, regular reports are required from the teachers and the districts.

The first government grants were based on such factors as number of teachers, enrolment, days in session and attendance. Later, special grants were introduced in most provinces to meet a variety of expenses such as the erection of the first school and other construction, the organization of special classes, transportation for pupils, and school lunches. More recently, most provinces have made some provision for equalization grants and several have introduced a basic grant for operation, supplemented by a limited number of special grants.

The public school system normally provides 12 or 13 years or grades, depending on the province. Common patterns for elementary and secondary levels are 8-4 or 8-5, $6-3-3$ or $6-3-4$, or $7-5$. The trend is toward six elementary years with six or seven years of secondary schooling, following the practice of doing away with the one-room rural units through consolidation and the consolidation of small high schools. The generally accepted age of entrance to regular classes is now six years, although there has been an increased demand for kindergarten and nursery schools that has not been satisfied in many areas because of pressure for accommodation at the higher levels; the establishment of many private nursery schools and kindergartens has eased the situation to some extent. The amount of supervision for these pre-school establishments varies widely from province to province but is usually minimal.

In several provinces Roman Catholic or Protestant minorities are permitted by law or by 'gentleman's agreement' to organize separate schools under public auspices; and in all provinces religious groups, private organizations and individuals have established private schools at the elementary and secondary levels. Except in Quebec, private schools are small in number and account for only about 5 p.c. of the total elementary and secondary enrolment. Many of these schools are residential and tend to place greater emphasis on
character building and cultural subjects than do the public day schools. Nevertheless, in general they follow the standard curriculum fairly closely and prepare students for university or for entrance into the business world. Private schools in Quebec, most of which are operated by various orders of the Roman Catholic church, are more numerous than in the other provinces. About 25 p.c. of the secondary grade enrolment in this province is in independent schools (those not under school boards), some of them operated by the province and others subsidized by the province.

Although education is, in general, the prerogative of the provincial governments, the Federal Government has the responsibility for the education of Indians and Eskimos, other children in the territories outside the provinces, inmates of penitentiaries, and members of the Armed Forces and their families living on military stations at home or overseas. In carrying out this obligation, the Federal Government utilizes provincial educational facilities whenever possible.

Education of Indian children in Canada is a function of the Indian Affairs Branch of the Department of Citizenship and Immigration. Residential schools are provided for orphans, children from broken homes and children of isolated families. Day schools are available for children living in communities and, where conditions are favourable, Indian children attend non-Indian schools. In addition, vocational and professional training is provided for Indian youths. (See also pp. 150-151.)

The provision of educational facilities for the nomadic Eskimo population, a responsibility of the Northern Administration Branch of the Department of Northern Affairs and National Resources, is a more difficult problem. There are now 56 schools established throughout the vast Northwest Territories at points scattered from the Mackenzie delta to northern Quebec. Some of these are operated by religious missions assisted by government grants. All northerners, regardless of race or religion, attend the same schools. These range from the larger school at Yellowknife, where a variety of vocational courses are given and where students may qualify for university entrance, to single classroom units in remote Eskimo settlements. Vocational training is considered so important for the Eskimo young people in certain areas that specially chosen groups are sent south to secure training in trades in which they may later find employment in their own communities.

Parent-teacher and home and school organizations are numerous and active across Canada, working toward better schooling and giving community leadership in many areas connected with child instruction and welfare.

Special Education.-Each year, increased provision is made for children who need special programs, particularly for those in the cities where numbers warrant such attention. There are in Canada six schools for the blind and eleven schools for the deaf and in a number of centres classes are held for hard-of-hearing pupils and for those with poor vision. Other physically handicapped children for whom instruction is provided include cerebral-palsied, orthopaedic, and hospitalized and home-bound tubercular and delicate children, as well as the mentally retarded and emotionally disturbed. In addition to the special assistance given to the handicapped, a limited number of classes are conducted for mentally gifted children. Special educational services are also provided for the Indian and Eskimo nomads of Northern Canada and for isolated children such as those serviced by railway-car classrooms in northern Ontario and by bus classrooms in British Columbia.

In addition to the provision of special schools or special classrooms for atypical children, there is in some larger urban schools a considerable degree of 'streaming'. Bright pupils are grouped into separate classes where they can be provided with an enriched program of studies; slow learners are also grouped in order that they may be given special attention suitable to their capabilities.

Public School Construction.-The development of larger school units and the consequent decrease in the number of one-room rural schools has more than balanced the increase in the number of new schools erected to accommodate increased enrolment. Thus the total number of elementary and secondary schools has been decreasing slightly for some years although pupil accommodation has greatly increased year by year. Planners
and designers of new school buildings have paid greater attention to functional architecture, to the use of modern light-weight materials, and to equipment possibilities. Gone are basements, towers, expensive trim and waste space but more expensive heating, plumbing and ventilation systems have been incorporated. Flexibility has been introduced through non-bearing interior walls, easily movable desks and other equipment. Well-organized, smartly tailored rooms are common, featuring acoustic and glazed tile, terrazzo flooring, metal partitions, suspended ceilings and fluorescent fixtures. Warm colours are used for north rooms, cool colours for sunny rooms. Special rooms are designed for such courses as home economics, mechanics, music and chemistry.

Teachers and Teachers' Salaries.-Candidates for teaching certificates at the elementary level are generally required to have high school graduation or better, plus one year of professional training. Teacher training is given in provincial teacher-training colleges in courses lasting one school year or occasionally two, or in the universities where the training is usually combined with arts and science classes in a regular three-year or four-year university course. Secondary school teachers must have university graduation plus one year of professional training, or a special four-year university course in education.

In 1961-62 there were 126 normal schools and teachers' colleges preparing teachers, and 28 university faculties of education; together, these institutions expected to graduate more than 18,000 teachers at the end of the school year. In this same school year there were an estimated 175,000 full-time teachers in the elementary and secondary schools of the nation, of whom the majority were between 24 and 45 years of age. Exclusive of Quebec province, about 60 p.c. of these teachers were women, of whom more than half were married.

Teachers are generally employed according to a local salary schedule, belong to a provincial superannuation scheme and are members of a professional organization.

Higher Education.-The jurisdiction of provincial departments of education embraces only the elementary and secondary levels, which provide for the education of youths up to age 17 or 18 . At these levels public education is free in the sense that the costs are met out of general taxation. The extension of general education beyond the secondary to the college or university level is referred to as "higher" education, at which point the student is offered a wide diversity of courses in the arts, sciences, humanities and professions. The organization as well as the financing of higher education is noticeably different from that of elementary and secondary education.

Canadian universities are English-language, French-language or bilingual. The French-language institutions are mostly church-related and have been patterned after those of some European countries. Until recently, they stressed the classics as preparation for the professions but they are changing and an increasing emphasis is being placed on pure and applied science. The older English-language universities stemmed from a variety of needs and desires on the part of the provincial governments, churches, and settlers from England, Scotland and elsewhere who also wished to establish institutions similar to those with which they were familiar.

In Eastern Canada, institutions of higher learning have tended to develop at different periods in response to these needs. The result is that a variety of small and middle-size degree-granting colleges and universities exist today. This is especially true in the Maritime Provinces. In Western Canada, on the other hand, the policy has been to establish one large provincial university with sole degree-granting powers within the province. Whether this policy of one degree-granting institution for the province will suffice in the face of the increasing demand for higher education is a matter of speculation. There is already some pressure in British Columbia for the establishment of a second university with degree-conferring powers. In Alberta and Saskatchewan branch campuses of the provincial universities are in operation, and legislation for the establishment of junior colleges has been passed in British Columbia and Alberta.

The increasing enrolment, resulting partly from an increase in the university-age population and partly from the higher proportion of young persons seeking university training, has resulted in an unprecedented expansion of facilities as well as in an extension of colleges into universities and in the establishment of new institutions. Most of the universities have conducted financial campaigns for expansion at some time during the past ten years and indications are that many more such campaigns must be undertaken in the near future. Despite expansion and modernization, there are still some old and crowded buildings in use which contrast sharply with the new well-planned, roomy, permanent structures on spacious campuses. All Canadian universities are expanding, whether they are located in the cramped heart of a city, have begun again in suburban areas or were fortunate enough to have ample room on their first campus sites.

The Federal Government operates three military colleges-the Royal Military College of Canada, established at Kingston, Ont., in 1876 and authorized to grant degrees in 1959; Royal Roads College near Victoria, B.C.; and Collège Militaire Royal de Saint-Jean, the French-language military college at St. Jean, Que. (See also Chapter XXV on Defence of Canada.)

Vocational Education.-The pattern of vocational education and training in Canada varies from province to province and there are also variations within provinces. Courses listed under the same headings may not be offered at exactly the same level or have the same purpose and courses may have the same names in two provinces but may vary in content, duration and even in purpose.

There are basically three types of institutions offering vocational education-trade schools, high (or secondary) schools, and technical institutes. The courses at the trade level do not usually require high school graduation; the grade level demanded, which

varies according to province or trade, ranges from Grade 8 to Grade 11 or even 12. On the other hand, enrolment in technical institutes presupposes high school graduation or at least high school standing in such relevant subjects as mathematics and the sciences.

Vocational education is also carried out under a system of apprenticeship training. Its main characteristic is the indenture or contract between the apprentice and the employer, who is registered with the provincial department of labour concerned. The training itself is done mainly on the job with concurrent attendance in classes either during the evening or on a full-time basis during the day for periods ranging from three to six weeks a year. Training in schools at the trade level is basically a provincial responsibility. Thus, most of the trade schools across Canada are provincially operated but some municipal school boards operate institutions offering trade training both for students of compulsory school age and for those who have left school.

The Federal Government contributes considerably to the maintenance and development of vocational training facilities, recognizing vocational training as an important part of the economic development of the country. The contribution of the Federal Government affects practically every phase of publicly sponsored vocational training in Canada, although the degree of this contribution varies. Even private vocational schools receive federal aid indirectly when fees for some of their students are paid in part by the Federal Government.

The financial involvement of the Federal Government goes back to the 1920's and the 1930's when the cost of vocational youth training was first shared by the provinces and the Federal Government. During World War II and immediately after, the training of specialists and veterans was also considered a federal responsibility and therefore the Federal Government contributed to its cost. The Vocational Training Co-ordination Act of 1942, together with specific agreements signed by most of the provinces, established federal contributions toward vocational training, for both capital and operational expenditure. That Act was replaced in December 1960 by the Technical and Vocational Training Assistance Act (SC 1960-61, c. 6), the objectives of which are to provide assistance for the training of Canada's labour force, to develop skilled manpower from domestic sources to meet future requirements, to reduce the number of unemployed persons by providing them with a skill required to gain and progress in employment, and to develop manpower efficiently.

The new Act contains fundamental changes in the basic policy of federal financial assistance. Of perhaps greatest immediate impact is the provision that the Federal Government will contribute 75 p.c. of the total amount expended by a province on the building and equipping of vocational training facilities up to Mar. 31, 1963. The Federal Government will contribute 50 p.c. of a provincial government's cost of technical, trade or occupational training for all persons who have left the regular school system, without the limit of a quota allotment based on population or any other factor; will contribute 50 p.c. of the cost of training technicians; will pay 50 p.c. of the cost of training vocational teachers, supervisors and administrators; and will share the expenditure for financial assistance to students in the technological training programs. The new legislation also carries forward a number of the provisions of the former Act, such as those authorizing federal payment of 75 p.c. of the cost of the program for training unemployed and 50 p.c. of the cost of the training of physically disabled persons and apprentices in classes. The importance of the 1960 legislation becomes apparent from the fact that the Federal Government plans to spend an estimated $\$ 75,000,000$ on its implementation during the year ended Mar. 31, 1962.

Financing Education.-During 1958, $\$ 1,234,245,000$ (nearly 5 p.c. of total personal income) was spent on formal education and vocational training in Canada. This amount represented close to 13 p.c. of all government revenue-municipal, provincial and federal; the provinces provided 48 p.c. of such expenditure, the municipalities 43 p.c. and the Federal Government 9 p.c.

The Federal Government finances the education of Indians, Eskimos and the children of members of the Armed Services. It also makes grants to universities through the Canadian Universities Foundation; these are allocated to the provinces on a per capita basis and then distributed among the universities of each province according to full-time enrolment. Scholarships and grants in aid of research are awarded to universities and individuals by the National Research Council, the Defence Research Board, the Canada Council, and other Federal Government departments. The Federal Government is also playing an increasingly important role in the financing of vocational education, paying matching grants to the provinces in respect of their programs and 75 p.c. of the expenditures for buildings and equipment.

The provincial governments make grants to all publicly controlled school boards. The bases of these grants, which account for from 30 p.c. of total school board revenue in Quebec to 86 p.c. in Newfoundland, vary from province to province. Some attempt at equalization is made by all provincial governments so that poorer boards receive a higher proportion of their costs from grants than do wealthy boards. In some provinces, such as Alberta and Nova Scotia, this is achieved through a foundation program which ensures that every board can provide the required minimum standard of education while levying the same tax rate. Most of the other provinces pay grants based on equalization formulas, sometimes in addition to flat grants and incentive grants, but in Newfoundland and Prince Edward Island some measure of equalization is achieved by the province paying a high proportion of the teachers' salaries. The provincial departments of education provide a number of services to school boards, operate teacher-training schools, technical and trade schools and special schools for the blind and deaf, and either operate or make grants to provincial universities.

In all provinces except Newfoundland and Prince Edward Island, municipal governments are responsible for raising, by taxes on real property, the money required by the school boards over and above provincial grants. In Prince Edward Island, the school boards levy and collect the school tax as there is no other form of municipal government outside Charlottetown and Summerside. In Newfoundland, local taxation for school purposes was introduced in 1955 when two communities took advantage of permissive legislation to form School Tax Authorities; a third was authorized in 1961 and a fourth is in the process of formation. These Authorities levy a tax on real property and a poll tax. Elsewhere in the province, funds are raised by the board through fees, social activities, donations in kind and assistance from the religious denominations.

Private schools account for only 4 p.c. of expenditure on elementary and secondary education and their chief sources of revenue are student fees, endowments and gifts from religious organizations or other sponsoring bodies. Universities and colleges receive about 38 p.c. of their current revenue from provincial governments, 21 p.c. from the Federal Government, 27 p.c. from student fees and the remaining 14 p.c. from a variety of sources including endowments and gifts.

Adult Education.-Adult education activities in Canada include organized classes and courses in academic, cultural and technical subjects and such activities as public lectures, documentary film showings, exhibits and performances of various kinds. These are carried on by universities and colleges, government departments and agencies, public libraries and private institutions, organizations and establishments.

Provincial departments of education, health, agriculture, cultural affairs and others operate courses directly or give assistance to sponsors, such as municipal boards of education. The Federal Government operates classes and courses for special groups such as Indians, residents of the Northwest Territories, inmates of federal penitentiaries, members of the Armed Forces and veterans. The Federal Government also provides educational and cultural services to the public through the National Museum, the National Gallery, the National Film Board and the Canadian Broadcasting Corporation.

The work of the various agencies in the adult education field is co-ordinated through membership in such national associations as the Canadian Association for Adult Education, l'Institut canadien d'éducation des adultes, the Canadian Education Association, the Canadian Association of Directors of Extension and Summer Schools, la Fédération des collèges classiques and the Canadian Library Association.

Research in Education.-The many types of research now under way in the field of education are expanding in scope and increasing in variety of method, and involve large numbers of personnel. Historic and other studies, surveys, projects in applied research including action research, and a limited amount of basic or pure research are among the current projects. Most of the pure research is conducted in the universities by individuals or teams of professors and graduate students and the same personnel may conduct applied research. Applied research is also conducted by such organizations as the Canadian Education Association, the Canadian Teachers' Federation, the Education Division of the Dominion Bureau of Statistics, l'Association canadienne des Éducateurs de Langue française, the Industrial Foundation on Education, the Canadian Universities Foundation, etc. In addition, certain departments of education and city school boards have research officers who, for the most part, conduct research into curricula examinations, promotion policies, use of visual aids, and related problems.

One of the most promising portents for the future of research in education is the formation of provincial or regional councils to provide co-ordination of effort, to ensure professional advice, to publicize research findings, and to encourage research into imminent problems. Three such councils are well organized and publish journals. Several national bodies interested in research in education collaborated to form, in 1961, the Canadian

Council for Research in Education as an outgrowth of the earlier National Advisory Committee on Educational Research. This Council provides liaison among its constituent bodies and its objectives are to initiate, encourage and develop research in education, to publish a national journal and to act as a clearing-house for the dissemination of information about research activities in this field.

A number of longitudinal studies covering secondary pupils in one or several provinces are assessing the utilization of student resources related to university graduation. Other extensive studies have been related or are related to school administration, visual aids and school finance. In addition, a limited amount of institutional research is being undertaken by several universities.

During the past decade there have been several provincial Royal Commissions appointed to inquire into education as a whole or into some phase of it. Many of these have made use of research techniques as well as submissions received from interested bodies and individuals. One field of education which is currently the subject of considerable investigation and research is that of programmed learning, that is, the use of teaching machines or similar mechanical, electrical or electronic devices to assist the learning process. One session of the 1961 Conference of the Canadian Education Association was devoted to programmed learning and later in the year the Canadian Teachers' Federation held a three-day seminar on the same subject. The Canadian Association for Adult Education held a similar seminar early in 1962.

In June 1961, an invitational meeting of persons engaged in or interested in research in education was held at Macdonald College, sponsored jointly by the Canadian Education Association and the Canadian Council for Research in Education. Papers presented formed the basis for a booklet published later under the auspices of the Canadian Conference on Education. The second meeting of the Canadian Conference on Education was held in Montreal in March 1962. This Conference touched on all aspects of the educational scene and embraced both professional and lay organizations.

## Section 2.-Statistics of Schools, Universities and Colleges

Elementary and secondary schools may be conveniently classified as publicly controlled, privately controlled, and federal. Municipal and provincial schools, most numerous by far, include elementary and high schools, vocational institutes, trade schools, teachertraining colleges, and schools for the blind and deaf, and provide as well for correspondence courses. Private schools may be academic, business or other vocational schools, or correspondence schools. Federal schools refer to schools for Indians, schools for residents of the Northwest Territories, and overseas schools for children of members of the Armed Forces or for Armed Forces personnel. Higher education is attained at universities and colleges, which may be provincial institutions, church institutions, independent, or federal military colleges. Continuing or adult education takes a variety of forms and reaches all levels from the basic English courses provided for newly arrived immigrants to courses leading to a university degree. Most organized classes for adults function under the auspices of universities, colleges, local school boards, churches and other community organizations.

Table 1 shows the number of schools, teachers and pupils for all types of education institutions, classified by province, for the academic year 1960-61. In all types of schools the number of pupils has been increasing. The increase was first noticed at the elementary level some six years after the birth rate began to rise during the war years. About eight years later the children born during the War were entering high school and four years later they began entering university. The number of teachers is rather closely related to the number of students although the trend is toward larger classes. On the other hand, the number of schools has remained fairly constant, the increase caused by the construction of new and larger schools in urban areas being counterbalanced by the closing of many one-room rural schools.

[^98]An attempt has been made to tabulate total expenditure on education, including formal education at all levels, vocational training of all types and also expenditure on cultural activities related to education such as adult night classes, fine arts and handicraft courses, and libraries, museums and art galleries. Such expenditure for the year 1958 is presented in Table 2, classified by source. Details of income of school boards for publicly controlled elementary and secondary schools for the years 1956-58 are given at p. 307 and financial statistics for universities and colleges at pp. 311-312.

${ }^{1}$ Includes the Yukon and Northwest Territories. - Includes fees paid by Federal Government for Indians and Eskimos in public and private schools for the blind and deaf and for correspondence courses. ${ }_{3}$ Includes $\$ 7,295,000$ held in trust for Quebec universities. Included in "Elementary and Secondary-Public schools".

## Subsection 1.-Elementary and Secondary Schools

Control.-Direct control and operation of public schools is by school boards, which operate under school laws and regulations, and the members of which are elected or appointed usually for terms of two or three years. As stated on p. 292, through amalgamations and consolidations, schools are now operated by boards of larger units, local boards within larger units, independent boards for rural schools, towns or cities, and some by official trustees appointed by the province in lieu of a board. As their designations imply, private schools and federal schools are administered by private organizations and federal authorities, respectively.

Table 3 gives the number of active public school boards in each province in the school year ended in 1961 and indicates the type of board, the number of official trustees and the number of board members elected or appointed to these boards.
3.-Active School Boards and School Trustees, by Province, School Year 1960-61

${ }^{1}$ Boards of Education, members of Toronto Metropolitan Board. ${ }^{2}$ Ten school districts are under an official trustee or trustees. $\quad$ In addition, five school districts are under an official trustee or trustees.

Enrolment.-Total enrolment in publicly controlled day schools increased from $1,092,633$ in the school year ending in 1901 to $2,264,106$ in 1931, but dropped during the 1930's and the early 1940's, when the birth rate was low, to 2,060,718 in 1944. After 1944 it rose slowly for some years and then at an accelerated rate to reach $3,993,125$ in the school year ended in 1961. From 1954 to 1961, enrolment advanced by $1,129,000$ for the country as a whole although the increase varied from province to province, ranging from 21 p.c. for Prince Edward Island to 49 p.c. for Ontario and 53 p.c. for British Columbia.

Enrolment in private schools accounted for 4 p.c. of the total enrolment at the elementary and secondary levels. The number of private school pupils, reported at 103,000 in 1950-51, increased to almost 168,000 in $1960-61$, although about 20,000 of this latter figure resulted from a more inclusive accounting in recent years of all types of private schools in Quebec.

Table 4 shows enrolment of all elementary and secondary pupils in the provinces and territories and in Department of National Defence schools overseas, and classifies them by grade. Private schools and schools for Indian and Eskimo children are included in these figures.

## 4.-Enrolment in Publicly Controlled and Private Schools, by Grade, School Year 1960-61

[^99]Teaching Staffs.-Between the school years ended in 1941 and 1961 the number of teachers in the publicly controlled schools of the ten provinces increased 105 p.c. from 77,723 to 159,282 . The number of men teachers increased 131 p.c. and the number of women 103 p.c.

In 1961, in the nine provinces outside of Quebec, 78.5 p.c. of the teachers had at least senior matriculation and one year of teacher training, and an additional 11.3 p.c. had one year less schooling. Median experience in the eight provinces outside of Quebec and Ontario has slowly increased from 7.0 years in 1941 to 8.5 years in 1961, despite the large number of new teachers each year. Many of these have been recruited by the cities, where the median experience has declined from a high of 16.7 years in 1946 to 13.4 in 1954 and 9.6 years in 1961.

Between 1941 and 1961 the median salaries of all teachers in the nine provinces other than Quebec increased by 382 p.c. from $\$ 881$ to $\$ 4,247$, while that for teachers in oneroom schools increased by 329 p.c. from $\$ 704$ to $\$ 3,021$. The annual rate of increase has naturally fluctuated considerably during that period, ranging from 1.8 p.c. in 1941 to 16.8 p.c. in 1948 . The increase in 1961 over 1960 was 4.7 p.c. as compared with 7.9 p.c. for 1960 over 1959.

1 Fully qualified at the elementary level are teachers with junior matriculation and two or more years, or senior matriculation and one or more years of professional training. At the secondary level they are teachers with junior matriculation and four or more years, or senior matriculation and three or more years of schooling, of which one year was professional training. $\quad{ }^{2}$ Comprises teachers and principals instructing or supervising kindergarten and elementary grades only, and those instructing or supervising both elementary and secondary grades in rural schools with five or fewer classes. Teachers and principals in Ontario are classified as elementary according to the provincial Report of the Minister, 1960.
${ }^{3}$ Comprises teachers and principals instructing or supervising secondary grades only, and those instructing or supervising both elementary and secondary grades in urban centres and in rural schools with six or more classes. Teachers and principals in Ontario are classified as secondary according to the provincial Report of the Minister, 1960.

Financial Support.-Table 6 shows the sources of income of boards operating publicly controlled elementary and secondary schools for the years 1956-58. Their income is derived almost entirely from local taxation and provincial grants. Newfoundland is exceptional in that fees and income from other sources account for nearly 13 p.c. of the total income. Prior to 1961, fees were charged by Quebec school boards but school corporations are now required to provide elementary and secondary education free of charge. Under the new legislation, parents who send their children to private schools
are reimbursed for at least part of the fees charged. In other provinces, elementary and secondary education in the public school system is normally provided without direct charges on the parents.

Usually, school boards requisition the local municipalities for the sums needed to balance their budgets, taking into account provincial grants and other income. The municipal governments levy taxes on land and buildings and, in some cases, on improvements, personal property and business income. Several provinces have taken steps to equalize real property assessment.

Provincial grants accounted for 40 p.c. of the total revenue of school boards in 1958, ranging from 30 p.c. in Quebec to 86 p.c. in Newfoundland.

Only four provinces collect figures for debenture indebtedness although it is the usual practice in all provinces for boards to finance construction of new schools, at least in part, by issuing debentures. Provincial governments help boards to meet capital expenditures by grants of a percentage of the cost of new buildings, by grants of a fixed amount per room built, or by paying grants based on debenture debt charges. Some provinces guarantee debentures issued by the boards and others assist in marketing them.

## 6.-Income of School Boards of Publicly Controlled Elementary and Secondary Schools, by Province, Years Ended Mar. 31, 1956-58

Notr.-The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures as all revenue of this nature must be repaid ultimately with money raised by local taxation. Figures from 1914 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

[^100]
## Subsection 2.-Universities and Colleges

Institutions.-At the beginning of the 1960-61 academic year there were in Canada 354 institutions of higher education offering one or more years of degree-credit courses. Table 7 gives their distribution by province. Of the total, 304 were under the control of religious bodies ( 264 Catholic), 23 under provincial government control, three under Federal Government control, and 24 under private non-denominational control.
7.-Number of Institutions of Higher Education, by Province, Academic Year 1960-61

| Province |  |  |
| :--- | :--- | :--- | :--- | :--- |

Enrolment.-Full-time university-grade enrolment continued at a record high in 1961-62 with 128,894 such students in attendance. Indications are that enrolments may well be double the 1961-62 figure in about ten years. Table 8 gives figures on enrolment, by province, for the academic years ended 1959-62.

## 8.-Full-Time Regular Winter Session University-Grade Enrolment, by Province, Academic Years Ended 1959-62

Note.-Figures to 1960-61 are for enrolment at Dec. 1 of the academic year indicated and comprise actual graduate enrolment reported and estimated figures for total enrolment based on data available from institutions representing about 98 p.c. of the total enrolment.

[^101]Foreign enrolment has risen considerably since the end of World War II, with a larger proportion of students from countries other than the United States and Britain coming to Canadian institutions, as shown in Table 9. In 1960-61 about one of every 16 full-time university students in Canada was a resident of a country other than Canada. Hong Kong, Trinidad and Britain each accounted for over 500 students while France, India and Jamaica contributed from 100 to 300 each. Just over 100 other countries or territories were represented in the figures.

${ }^{1}$ Includes 11 ungraded professors not distributed above.
Finances.-Table 13 gives a historical series of the finances of universities, which by 1958 represented over 90 p.c. of total full-time university enrolment. Institutions omitted are mainly those conducted by religious orders where teachers receive little or no cash salary and whose finances are not, therefore, comparable to those of other institutions. Since 1952, the reporting universities have received more than one-half of their revenue from government grants and a very small amount from municipal councils.

Beginning with the academic year 1951-52, the Federal Government has been providing university grants to help meet current operating costs. These grants were originally paid on the basis of 50 cents per head of population in each province and the eligible institutions receive their share of the provincial allotment according to the number of full-time students in undergraduate and graduate courses. The rate of grant was increased to $\$ 1$ per capita in 1956-57 and to $\$ 1.50$ in 1958-59. The Province of Quebec did not accept this grant for the years up to 1955-56. From 1956-57 to 1959-60 the payments refused by Quebec were held in trust by the Canadian Universities Foundation, which administers the fund. In 1960-61 the Quebec Government and the Federal Government negotiated a new taxsharing agreement under which Quebec provides its own grants from income tax receipts. Table 14 gives details of the federal grants for each of the academic years from 1959-60 to 1961-62. The figures for 1961-62 include an adjustment made to the 1960-61 grants resulting from a revision of the 1960 population estimates made when actual census figures for 1961 became available.

The Federal Government also provides assistance to universities through the University Capital Grants Fund which is administered by the Canada Council. The original amount in the fund was $\$ 50,000,000$, to be granted in amounts not exceeding 50 p.c. of specific building or capital equipment projects, having regard to the population of each province. In the first year of its operation (ended Mar. 31, 1958), grants amounting to $\$ 4,100,000$ were authorized and $\$ 1,300,000$ was actually paid. Up to the end of March 1961, a total of $\$ 25,500,000$ in grants had been authorized and $\$ 19,800,000$ actually paid. Grants are paid in four equal instalments spread over the period of construction so that there is a time lag between approval and payment.

The Canada Council was also endowed with an additional $\$ 50,000,000$ for the provision of scholarships or other assistance in the fields of the arts, humanities and social sciences. (See also pp. 321-323.)

## 13.-Current Income and Expenditure of Universities and Colleges, Academic Years Ended 1919-58

Nore.-Up to 1953, institutions included represent about 80 p.c. of the total full-time university-grade enrolment. For the years 1954-58 figures given are an estimate of the total current revenue and expenditure of universities and colleges.

| Academic Year Ended- | Current Income |  |  |  |  | Total Current Expenditure |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## 14.-Federal Government University Grants, by Province, Academic Years Ended 1950-62

Nots.-Figures for 1952-55 are given in the 1959 Year Book, pp. 356-357; for 1956-58 in the 1960 edition, p. 397; and for 1959 in the 1961 edition, pp. 359-360.

[^104]
## Subsection 3.-Vocational Education

Canadian vocational courses and training below university level are organized either in formal classes and training shops or in the form of informal on-the-job training. However, very often the two methods complement each other so that, for instance, an apprentice having a contract with and working for a private firm may attend a provincial trade school on a part-time or full-time basis.

Most formal vocational education is sponsored by public bodies, either by local school boards at their high schools or directly by provincial governments in trade schools and technical institutes. Private vocational schools supplement the publicly supported training facilities to quite an extent and some industrial firms train their own skilled manpower.

Table 15 summarizes the data on full-time training classes. The duration of these classes may vary from three weeks taken annually by indentured apprentices at provincially operated trade schools, to two-year vocational high school courses or four-year postsecondary courses offered in provincial technical institutes. Numerous skills are taught, ranging from short courses in welding or typing to extended courses for instrument technicians or aircraft maintenance men. Students taking two-year or three-year vocational courses in public secondary schools may, upon completion, enter employment or may continue other formal training in a trade school or a technical institute.

In addition to the full-time vocational courses, a great variety of part-time instruction is offered by both public and private institutions as an alternative to full-time training or as an attraction to the individual interested in a hobby.

## Subsection 4.-Adult Education

Surveys of adult education for the school years ended in 1958, 1959 and 1960 have shown increases in enrolment in classes and courses and in attendance at public lectures and related events.

Data for the year 1959-60 indicate a total enrolment of 664,046 in part-time classes and courses under the auspices of universities and colleges, federal and provincial government departments and agencies, public libraries, teacher-training institutions and private business colleges. Government assisted or operated classes represented 67.0 p.c. of this enrolment and universities and colleges 25.9 p.c. Similar activities are also carried on by private and voluntary associations, employers, churches, and the like. On the basis of a survey of participants in June 1960, it is estimated that the agencies in the regular survey of $1959-60$ represented about 60 p.c. of the total part-time enrolment in classes and courses in Canada.

Enrolment in $1959-60$ was distributed among the following types of courses: 23.5 p.c. in academic subjects leading to a high school diploma or university degree; 42.0 p.c. in vocational, industrial, commercial, agricultural, home economics and applied arts courses, and professional training or refresher courses in medicine, science and executive development; and 34.6 p.c. in informal non-credit courses in social education and cultural subjects, such as family life education, citizenship and public affairs, health education, fine arts, religion, philosophy and languages. About 10 p.c. of the enrolment reported was in correspondence courses. According to the June 1960 participation survey, a typical participant in adult education classes and courses was male, married, about 31 years of age and had completed secondary schooling.

Other adult education activities reported included public lectures, film showings, art exhibits, guided tours, musical and dramatic performances, and radio and TV discussion groups. The total attendance reported for these events was $2,698,034$, just over half by universities and colleges, 39.7 p.c. by government departments and agencies, and the remainder by public libraries.

In addition to the above-mentioned programs, the institutions and agencies surveyed offered a variety of adult education services. Radio and television programs were produced, printed information materials were published, and exhibits, fairs, conferences and workshops were organized. Staff also spent time on advisory services to groups and individuals. The National Film Board and the Canadian Broadcasting Corporation played an important role in adult education through the production of cultural and informational programs for use by groups and individuals (see pp. 318-320).

## PART II.-CULTURAL ACTIVITIES RELATED TO EDUCATION

## Section 1.-Art and Education*

Fine Art Schools, Galleries and Organizations.-Fine art appears as an elective subject of the faculty of arts in a number of universities, where it may be taken as one of five, six or more subjects for a year or two. In Mount Allison University, N.B., and in the Universities of Saskatchewan and Manitoba, there is a sufficient number of courses to allow the taking of a Bachelor degree with specialization in fine art. At the University of Toronto an Honour B.A. in art history and archaeology is offered, as well as graduate work in this field. Departments of fine art were opened by McGill University in 1948-49, by the University of British Columbia in 1949-50 and by the University of Alberta in 1953-54; McMaster University reopened its department in 1951.

[^105]There are also schools of art not requiring any fixed academic standing for admission, as they are more concerned with the technical development of the artist. The most widely known of these are:-

Nova Scotia College of Art, Halifax, N.S.
Ecole des Beaux-Arts, Quebec, Que.
Ecole des Beaux-Arts, Montreal, Que.
School of Art and Design, Montreal Museum of Fine Arts, Montreal, Que.
Ontario College of Art, Toronto, Ont.
University of Manitoba School of Art, Winnipeg, Man.
School of Art, Regina College, Regina, Sask.
Provincial Institute of Technology and Art, Banff School of Fine Arts, Banff, Alta. (affiliated with the University of Alberta, Edmonton)
Vancouver School of Art, Vancouver, B.C.
Courses in these schools vary in length with the requirements of the individual student but may extend over as many as four years. Summer schools of art are sponsored by some of the foregoing institutions, by universities, and by various independent groups.

Public art galleries in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and often concerts are features of the programs of the various galleries. Many of these institutions supply their surrounding areas with travelling exhibitions, and organizations such as the Maritime Art Association, the Western Canada Art Circuit, the Art Institute of Ontario and the Queen's Art Circuit have been founded to carry on the work on a regional basis. The National Gallery of Canada has a nation-wide program of this nature. It is the third largest circulating agency in North America. The principal art galleries are:-

Beaverbrook Art Gallery, Fredericton, N.B.
Montreal Museum of Fine Arts, Montreal, Que.
National Gallery of Canada, Ottawa, Ont.
Public Library and Art Museum, London, Ont.
Art Gallery of Toronto, Toronto, Ont.
Art Gallery of Hamilton, Hamilton, Ont.
Winnipeg Art Gallery, Winnipeg, Man.
Norman Mackenzie Art Gallery, Regina, Sask.
Edmonton Art Gallery, Edmonton, Alta.
Calgary Allied Arts Centre, Calgary, Alta.
Vancouver Art Gallery, Vancouver, B.C.
Art Gallery of Greater Victoria, Victoria, B.C.
Other Art Organizations.-The leading art organizations of national scope, exclusive of museums and art galleries, include the following:-

$$
\begin{aligned}
& \text { Association of Canadian Industrial Designers } \\
& \text { Canadian Arts Council } \\
& \text { Canadian Group of Painters } \\
& \text { Canadian Guild of Potters } \\
& \text { Canadian Handicrafts Guild } \\
& \text { Canadian Museums Association } \\
& \text { Canadian Society of Graphic Art } \\
& \text { Canadian Society of Painter-Etchers and Engravers } \\
& \text { Canadian Society of Painters in Water Colour } \\
& \text { Canadian Society of Landscape Architects and Townplanners } \\
& \text { Community Planning Association of Canada } \\
& \text { Federation of Canadian Artists } \\
& \text { Royal Canadian Academy of Arts } \\
& \text { Royal Architectural Institute of Canada } \\
& \text { Sculptors Society of Canada. }
\end{aligned}
$$

The National Gallery of Canada.-The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquis of Lorne, then Governor General, had recommended and assisted the founding of the Academy and among the tasks he assigned to that institution was the establishment of a National Gallery at the seat of government. The group of pictures that formed the nucleus of the collection was selected by the Marquis. Until 1907 the National Gallery
was under the direct control of a Minister of the Crown but in that year, in response to public demand, an Advisory Arts Council consisting of three laymen was appointed by the government to administer grants to the National Gallery. Three years later, the first professional curator was appointed.

In 1913, the National Gallery was incorporated by Act of Parliament (RSC 1952, c. 186) and was placed under the administration of a Board of Trustees appointed by the Governor General in Council; its function was to encourage public interest in the arts and to promote the interests of art throughout the country. Under such management, the Gallery increased its collections and developed into an art institution worthy of international recognition. Today, the Gallery administration comes under the aegis of the Minister of Citizenship and Immigration. The Board of Trustees, now composed of nine members representing all sections of Canada, meets twice annually.

In 1960, the Gallery entered a new era in its history when the entire national collection and the staff and equipment necessary to its maintenance was transferred to new modern quarters-the Lorne Building in downtown Ottawa-and, for the first time, the Gallery had adequate well-lighted space for hanging its permanent works of art and for displaying travelling exhibitions.

The Gallery's collections are of indisputable taste and quality. They have been built up along international lines and give the people of Canada an indication of the origins from which their national tradition is developing. The collection of Canadian art, the most extensive and important in existence, is continually being augmented by the purchase of works from the Biennials of Canadian Art and other sources. The collections of Old Masters include twelve important works acquired from the Liechtenstein collection; extensive war collections; the Massey collection presented to the Gallery during 1946-50 by the Massey Foundation; a collection of French paintings; prints and drawings; and diploma works of the Royal Canadian Academy. The prints and drawings collection, established in 1921 and the first to be organized in a Canadian art gallery, now consists of more than five thousand items.

The services of the Gallery include the operation of a reference library open to the public which contains more than 10,000 volumes and periodicals on the history of art and other related subjects; the operation of an Exhibition Extension Service which prepares and circulates travelling exhibitions, provides educational services such as lectures offered to the general public across Canada, and organizes guided tours for visitors to the Gallery at Ottawa; produces publications, films, reproductions, didactic exhibitions and other aids to art appreciation; and assists Canadian artists to participate in important international exhibitions such as the Biennials held in Paris, Venice and São Paulo. The Conservation and Scientific Research Division of the Gallery handles requests for technical information, investigations and restoration of paintings and other specialized problems concerning the handling of precious works of art. It is intended that the research laboratories will become the national centre for scientific research in the conservation of works of art.

## Section 2.-Museums and Education

Modern museums, in Canada and elsewhere, are breaking away from the old concept of repositories and are assuming an important role as educational and cultural centres. They have an advantage over other agencies of education in that they are able to show actual, original objects rather than merely offering descriptions or pictures of such objects. Canadian museums of history and science offer many educational services to the public in addition to providing exhibits that are both interesting and informative. The following museums have staff members who are specifically charged with organizing programs in education and providing extension services:-

[^106]Other museums that conduct educational and extension programs using the regular curatorial and administrative staff are:-

The New Brunswick Museum, Saint John, N.B.
Museum of the Province of Quebec, Quebec, Que. The Manitoba Museum, Winnipeg, Man. Provincial Museum of Natural History and Anthropology, Victoria, B.C.
Direct work with schools may involve the holding of classes within the museum or visits of museum lecturers, with exhibits, to the schools. More informal are the guided tours for visiting school classes, the lending of specimens, slides, filmstrips or motion picture films to schools, and the training of student-teachers in the educational use of the museum. A number of museums have special programs for children, not directly associated with school work. These include Saturday lectures and film showings, activity groups, nature clubs, and field excursions.

For adults, museums offer series of lectures or film showings from autumn to spring, and possibly some special showings during the tourist season. Guided tours for adult groups are usually available throughout the year. Staff members may be sent to give lectures to service clubs, church groups, parent-teacher associations, and hobby clubs. The latter, such as naturalists' groups, mineral clubs and astronomy societies, may use the museum as their headquarters. Travelling exhibits are prepared for showing at local fairs, historical celebrations and conventions. At least seven Canadian museums have had regular radio or television programs, and others have made occasional contributions. Some historical museums have annual events during which the arts, crafts or industries represented by the exhibits are demonstrated to the public.

Through such activities and methods, Canadian museums serve as important adjuncts to the educational system and as centres for informal education, both juvenile and adult. Thus, they take their place with public libraries as major auxiliaries in the educational program of Canada.

## Section 3.-The Educational and Cultural Functions of the Canadian Broadcasting Corporation

Many hours of educational or semi-educational programs are broadcast annually by the Canadian Broadcasting Corporation in English and in French. Whether these programs are directed to children or adults, entertainment is combined with information whenever possible. Spoken-word programs, presented as readings, talks, discussions, documentary programs, dramatizations or in forms combined with music, cover a very wide range of interests.

Pre-school Broadcasts.-A number of programs are planned for children from three-and-a-half to six years of age. The aim is to have these at the same time educational and entertaining. Both Playroom (radio) and Nursery School Time (television) base their planning on the advice of kindergarten and nursery school experts. The topics acquaint the child with new and interesting aspects of life about him, in his home and in his community.

The English television network regularly carries the production Chez Helène to introduce the French language to the pre-school child by means of the successful Tan-gau method of instruction. In another television series-The Friendly Giant, a highly popular story-telling program-entertainment is combined with an effort to develop in the child an awareness of social values.

School Broadcasts.-The CBC provides an active schedule of school broadcasts which are planned according to recommendations made to the School Broadcasts Department by a group of educators representing each of the provincial departments of education. This body is known as the National Advisory Council on School Broadcasting. The
programs produced have the aim of enriching the curricula, adding to the students' comprehension and appreciation of a topic through the use of the varied resources of radio and television. For example, in radio, an annual presentation of a Shakespearean play by the best actors in the country gives many students across Canada their only opportunity to hear a dramatization of such a play. The radio schedule each year also contains dramatizations of events in Canadian history, along with many other topics. In television, the number of programs on the national level has been greatly expanded to include, during 1962, two half-hour periods weekly from the middle of October to the end of May. The schedule covers a number of subjects for grades from junior elementary to senior high. Highlights of the present schedule include a dramatization of Macbeth, interviews with outstanding Canadians, current events and a series on the orchestra.

Leisure Programs for Children.-Programs that do not relate to a specific school curriculum but still have a broadly educational or informational purpose are presented for children. The program Junior Magazine for children of nine to fourteen years of age has specific segments depicting Canadian life and the new world of science. Musical concerts are presented by young artists of talent and competence and for these concerts a CBC Youth Choir has been formed. On the French network, programs such as Domino and Les Apprentis fulfil a purpose similar to that of Junior Magazine. Other programs presented for children by the French network include Fon Fon, Coucou, Orientation, Opinions, Images en tête, Pierres vivantes and $\bar{A}$ la pointe de l'exploration.

A number of experiments in programming for both the English and the French networks have begun, such as the natural science program La vie qui bat, which appears in English under the title This Living World.

Adult Education.-Programs of an adult education nature are presented frequently by the CBC on its radio and television services and are planned in co-operation with various educational organizations. The CBC is an active participant in the work of the Joint Planning Commission, a body established by the Canadian Association for Adult Education for exchange of information and co-ordination of plans for adult education in Canada.

Citizens' Forum, a series telecast for the past seven years, uses discussions, public debates and small seminars to describe important issues of the day. It is arranged jointly by the Canadian Association for Adult Education and the CBC. Its French counterpart, Les idées en marche, has been planned in co-operation with La Société canadienne d'education des adultes (later replaced by Place publique). Similar types of programs are prepared specially for rural listeners under National Farm Radio Forum which is arranged by the CBC in co-operation with the Canadian Federation of Agriculture and the Canadian Association for Adult Education. This unique educational program involves listening groups who continue the discussion of the topic at the conclusion of the program and funnel their opinions to provincial and national centres for use and distribution. Other daily service and educational programs are provided for farmers. Country Calendar and Countrytime are weekly half-hour TV programs of a service and educational nature designed to keep farmers and the general public in tune with agricultural conditions and developments. Le reveil rural on radio and Les travaux et les jours on television are French-language counterparts of the English farm programs.

For the past ten summers the evening sessions of the Couchiching Conference have been broadcast. This week-long conference, organized jointly with the Canadian Institute on Public Affairs, examines Canadian and international affairs in open meetings and group discussions. Other radio programs of an educational nature are Soundings, a series of radio documentaries dealing with community and social affairs, human relations and mental health; Science Review, which examines important discoveries in the field of the natural sciences and their branches; Business Barometer, designed to inform listeners of the developments in Canada's economic life; Anthology, a literary program with emphasis on Canadian writers; Time for French, a program designed specially for the woman in
the home; University of the Air, a series varying from four to eight talks prepared and broadcast by distinguished professors in their particular fields; and, on the French radio network, L'université radiophonique internationale, a series of talks exchanged with other countries on cultural and scientific subjects.

On the French network, Les Chansons de la maison presents a series of programs relating to parents and children, and general questions sent in by parents are answered by psychologists. For women listeners, the daytime program Fémina is presented three times a week. The French network also broadcasts a number of weekly programs dealing with fine arts, music, literature, theatrical arts, sciences, religion and philosophy, under the auspices of Le Service des émissions éducatives et d'affaires publiques.

In addition to Citizens' Forum, regular television programs are Close-Up, Premier Plan and The Critical Years. The first two present weekly half-hour interview and documentary programs in which the emphasis is on the programs involved. The latter offers six onehour documentaries on the background of significant issues, events and ideas, both international and domestic. Inquiry is a weekly program on national affairs produced in Ottawa. The Lively Arts is a weekly program of insight into the creative process. The Nature of Things describes the work of scientists and science for an audience whose only preparation may be curiosity about the world around them. Open House, a daily television program for women, presents information on a wide variety of commodities and services, discusses topics such as parent education and mental health, and interviews people of note. Fighting Words gives an opportunity for discussion of controversial issues. Explorations, a series of documentaries and dramatizations, examines questions in the fields of sociology and history. Special programs on the Winter Conference of the Canadian Institute on Public Affairs are also telecast; this three-day conference examines sociological questions in open meetings and group discussions.

In co-operation with universities in Toronto, Montreal and Ottawa, locally broadcast television series are prepared under the title Live and Learn. These programs are designed to give a general appreciation of academic subjects such as physics, chemistry, literature and psychology. Experimentally, the University of Toronto and the CBC have produced Live and Learn Russian, by which viewers could prepare themselves for university course credits. Other experiments in the production of courses for university credit are in progress in Montreal.

Three agencies have worked with the CBC in the preparation of a Toronto series of lessons in basic English. For new Canadians, the series requires only that viewers have literacy in another language, and that they purchase study materials through newspapers published in their native language. The co-operating organizations are the Metropolitan Educational Television Association, the Province of Ontario, the federal Department of Citizenship and Immigration, and Canadian Scene.

## Section 4.-The Educational and Cultural Functions of the National Film Board

The National Film Board, an agency of the Federal Government, was established by Act of Parliament in 1939 and reconstituted by the National Film Act in 1950. In the years since its establishment, the Board has grown from a supervisory body over Canadian Government motion picture activities to a national documentary film-producing and -distributing organization whose films about Canada are seen wherever people may freely assemble. The Board also produces and distributes filmstrips and still photos on Canadian themes in accordance with its primary function outlined in the Act "to initiate and promote the production and distribution of films in the national interest". Films are produced primarily in the English and French languages and, whenever possible, foreign language versions are prepared to increase the usefulness of Board films in foreign countries.

The 16 mm . community film program is based on a nation-wide system of film circuits, film councils and libraries, strongly supported by organizations and individuals engaged in community activities. There are more than 700 national, provincial and community film distribution outlets from which thousands of 16 mm . prints are available for public use throughout the country. These prints are acquired for circulation by purchase or by loan from the Board.

A large part of the 16 mm . community film audience is reached through classroom showings, indicating progress in the development of audio-visual aid programs in Canadian schools and universities. Another noticeable trend is the more selective use of films by community organizations and groups for particular purposes. This is attributed in part to the availability of Board productions which present series of film studies related to central themes, and to the availability of a broad range of topics which include individual films particularly suited to group objectives and programs.

Films produced by the Board are shown in commercial theatres and on television in Canada and abroad and newsreel features are also issued regularly for theatrical and television purposes. Distribution of theatrical subjects is arranged by contract with commercial distributing organizations.

A substantial proportion of the Board's production and distribution program is concerned initially with television at home and abroad. Series of original films are shown regularly over English and French language television networks in Canada. Individual films from the Board's extensive general library are available to CBC and privately operated stations. Abroad, because of expanding television facilities in many countries, Board films are seen by audiences which could not otherwise be reached.

In addition to commercial distribution through theatres and television in other countries, 16 mm . print circulation is carried on through posts of the Departments of External Affairs and Trade and Commerce, through National Film Board territorial offices at London in England. New York and Chicago in the United States, New Delhi in India, and Buenos Aires in Argentina, as well as through libraries operated by various education agencies. Hundreds of prints of National Film Board films are also sold in other countries each year. Exchange agreements are in effect between the Board and government film-producing organizations in other lands; this means that films of various nations are freely exchanged with those of Canada, aiding international understanding.

The National Film Board maintains a library of more than 150,000 still photographs, which are available at nominal cost to magazines, newspapers and other periodicals wishing to present current information about Canada.

## Section 5.-The Canada Council

During the postwar years in Canada it was felt that it would be in the national interest to give encouragement to institutions expressing national feeling, promoting common understanding and adding to the variety and richness of Canadian life. The Royal Commission on National Development in the Arts, Letters and Sciences was accordingly appointed in 1949 to recommend the most effective means of supporting such institutions. The Commission reported that almost alone among the major nations of the world, Canada had no government-supported body to assist the arts, no executive body to deal with the question of Canada's cultural relations abroad, no clearing house or centre of information on the arts and no national commission for UNESCO.

As a result of recommendations made by the Massey Commission, the Canada Council was established in 1957 to promote the study, the enjoyment and the production of works in the arts, humanities and social sciences. A sum of $\$ 100,000,000$ from the public treasury was granted to the Council, one-half of which was placed in a University Capital Grants Fund to assist institutions of higher learning to expand their building facilities in the arts, humanities and social sciences and the remainder set up as an Endowment Fund providing a guaranteed annual income of about $\$ 2,900,000$.

The Council is made up of 19 members appointed by the Prime Minister for terms of three years, plus a chairman and a vice-chairman who are selected for five-year terms. Members are ineligible for reappointment during the 12 months following their second consecutive term on the Council. The organization must meet at least three times a year to consider applications made to it by organizations and individuals across the country. The day-to-day administrative work is carried out by a permanent staff in Ottawa.

University Capital Grants Fund.-One of the principal responsibilities of the Council is toward this country's institutions of higher education. It has been estimated that in the next decade university facilities will have to be doubled. Of some 100 colleges polled by the National Conference of Canadian Universities and Colleges in 1959, only nine reported no immediate plans for expansion. The University Capital Grants Fund was established to help meet this need.

The Fund enables the Council to make grants to universities and other institutions of higher learning by way of capital assistance in respect of building projects, with the following limitations: (1) a grant for any one project may not exceed one-half the total expenditure made in respect of that project; (2) in any province the aggregate of the grants made may not exceed an amount that is in the same proportion to the aggregate amount credited to the University Capital Grants Fund as the population of the province (latest census) is to the aggregate population of the provinces in which there is a university or other similar institution of higher learning. By the end of $1961, \$ 30,000,000$ had been authorized for payment by the Council. A total of 55 institutions had drawn upon the Fund for a wide variety of buildings with libraries, classrooms and residences claiming the major share.

Aid to Individuals.- It has been estimated that, to maintain academic standards at the present level, Canada will have to produce between 8,000 and 10,000 university teachers in the next ten years. In 1957, less than 10 p.c. of the graduate fellowships available in Canada were for studies in the humanities and social sciences. The Canada Council therefore allocated over $\$ 1,000,000$ from the income of the Endowment Fund to the establishment of a scholarship and fellowship program to help remedy this situation. In four years, more than 1,400 scholars have been aided through awards at the master's, doctorate and postdoctorate level. A further stimulus to academic pursuits is provided in other ways by the Council. Grants are made to universities to enable them to bring outstanding lecturers to their campuses. Travel grants are awarded to permit Canadians to attend international conferences and thus maintain contact with scholars from other countries.

Individual assistance is also given in the arts by the Council. By the end of 1961, 541 scholarships had been awarded to enable singers, dancers, painters, writers and other creative artists to continue their studies or perfect their arts. Other artists had benefited from the Council's program of commission grants; such grants enable theatres, orchestras, soloists, art galleries or museums to commission and perform or display original works by Canadian artists.

Aid to Organizations.-The Council's responsibility does not end with its assistance to the individual; it must also seek to create a wider market and a more receptive audience for the works of the country's creative talents. Accordingly, a large proportion of the revenue from the Endowment Fund is devoted to a program of assistance to organizations in the arts and letters. Since income from this source is strictly limited, the Council must decide whether it will support the best, which would involve a very large investment in some of the major population centres, or whether it will attempt to cover all areas of the country-a policy which, if carried to its fullest extent, would rapidly exhaust the funds available.

The Council therefore seeks to strike a balance between the two aims by combining grants for excellent service in local or regional areas with awards to enable organizations to travel to remote parts of the country where the arts are less readily available. It also
seeks to ensure local support by insisting that organizations receiving Council grants find additional revenue from other sources. In the year ended Mar. 31, 1961, the Council gave about $\$ 1,270,000$ to organizations in the arts, humanities and social sciences. Nine symphony orchestras received a total of $\$ 223,500$ and a further $\$ 84,600$ went to other musical organizations including choirs, string orchestras and chamber ensembles. More than $\$ 15,000$ was spent to enable music groups to tour and $\$ 4,000$ was awarded to permit the commissioning of new works. Over $\$ 470,000$ was granted to promote the theatre, opera and ballet; of this amount, some $\$ 162,000$ went to the National Ballet Company of Canada, the Royal Winnipeg Ballet and Les Grands Ballets Canadiens. A total of $\$ 82,000$ went toward helping opera and $\$ 177,500$ was awarded to the theatre. Festivals in Stratford, Vancouver and Montreal received $\$ 102,000$ in assistance from the Council and a sum of $\$ 30,000$ was allocated to the Canada Council Train to introduce more Canadian students to the best Shakespearean drama. The visual arts received about $\$ 142,000$ and $\$ 43,000$ was awarded in aid to publication, bringing to just over $\$ 1,000,000$ the amount spent on the arts.

Considerably less assistance went to organizations in the humanities and social sciences since the bulk of the scholarship program is directed toward these subjects. Aid was given to visiting lecturers, to publications and to several academic projects. Altogether, $\$ 268,700$ was given for these purposes.

UNESCO.-The Act establishing the Canada Council also provided that the organization should undertake certain functions in relation to the United Nations Educational, Scientific and Cultural Organization. The Council accordingly established a National Commission for UNESCO with 26 members and approximately 30 organizations with "co-operating body status", and also provided the secretariat for the Commission. With the assistance of the National Commission, the Council is responsible for the co-ordination of UNESCO program activities in Canada, for Canadian participation in UNESCO program activities abroad, and for proposals for future UNESCO programs. In all these matters the Council works in close association with the Department of External Affairs and serves as the normal channel of communication between the Department and the Commission. In the year ended Mar. 31, 1961, the Council spent close to $\$ 45,000$ in addition to indirect administrative expenses on the UNESCO program.

## Section 6.-Library Services

The National Library.-The National Library of Canada came into existence formally on Jan. 1, 1953 by the proclamation of the National Library Act (RSC 1952, c. 330 ). On the same date it absorbed the Canadian Bibliographic Centre, which had been engaged in preliminary work and planning since 1950. The Act established a National Library Advisory Council, consisting of the National Librarian, who serves as Chairman, the Parliamentary Librarian, and twelve appointed members, at least one of whom must be from each of the ten provinces.

By 1961, although the Library was still housed in temporary quarters and only a limited purchasing program could be undertaken, the book collection consisted of about 250,000 volumes, supplemented by micro-copies of more than 100,000 additional titles. Under the terms of the Copyright Act and the Library's own Book Deposit Regulations, 5,855 titles were received in the year ended Mar. 31, 1962, 3,097 of which were related in some direct way to Canada.

Canadiana, the Library's monthly catalogue of new books and pamphlets relating to Canada, described over 11,000 items in 1961; these included trade and general publications, and official publications of the federal and provincial governments. Canadiana, which has been published since 1950, is cumulated annually and a cumulated index is planned.

The National Union Catalogue lists nearly $8,000,000$ volumes in more than 160 government, university, public and special libraries in all provinces. New accessions are reported regularly by these libraries, and the Union Catalogue thus forms a continuously up-to-date key to the main book resources of the country. During the year ended Mar. 31, 1961, the Reference Division was asked to locate 11,462 titles and it is noteworthy that copies of 75 p.c. of them were found in Canadian libraries. About one-third of the requests were for books in the field of science and technology and 80 p.c. were for books published since 1925.

In addition to Canadiana, the National Library publishes Canadian Selections, a short list of notable books issued in Canada during the past year, and also publishes an annual cumulation of the Canadian Index to Periodicals and Documentary Films.

Public Libraries.-The Dominion Bureau of Statistics has conducted surveys of public libraries since 1921. Over the years a marked trend toward centralization and amalgamation has accompanied increased urbanization. In 1960, municipal and association public libraries served 144 urban centres of 10,000 or more population, and 36 regional and 12 provincial public library organizations served scattered populations in predominantly rural areas. Many of the larger systems have branches and bookmobiles to bring service to those living at a distance from main libraries; in Newfoundland, public library service may reach remote hamlets by boat and in the Northwest Territories by aircraft. In addition, 831 municipal and association libraries in smaller communities served suburban and rural populations. During the 1950's. the number of volumes held by public libraries nearly doubled, circulation more than doubled and payments for all purposes increased nearly threefold; during the same period the population to be served increased by about 22 p.c.

In addition to circulating reading material, public libraries maintain reference collections for study purposes and provide audio-visual materials such as films, filmstrips and sound recordings. Activities for special groups include stories, plays and services to schools for the younger children, club activities and assistance with projects for young adults, and courses, public lectures, displays and film showings for adults.

Public libraries in Canada are supported mainly by public funds-about 90 p.c. by local taxation and 10 p.c. by provincial grants. Payments in 1960 for staff, books and other library materials, new buildings, etc., amounted to $\$ 1.01$ per capita.

## 1.-Summary Statistics for All Public Libraries, 1960

| Province or Territory | Population Served | Libraries | Stock of Books, Periodicals and Pamphlets | Circulation | Current Operating Payments | Full- <br> Time <br> Staff |

University, College and School Libraries.-The 1960 survey covered 35 larger university libraries, serving enrolments of 500 or more full-time students. These institutions represented 87 p.c. of the total full-time enrolment at university level in Canada. They contained 74 volumes per full-time student and their expenditure averaged $\$ 55.72$ per full-time student. In addition, there were 315 smaller universities and colleges with libraries, which together represented the remaining 13 p.c. of the full-time student enrolment.

In the 1960 survey of school libraries in centres of 10,000 or more population, it was found that centralized libraries were organized in 38 p.c. of the schools reporting. Almost 90 p.c. of the secondary schools and about 25 p.c. of the elementary schools had libraries. The average centralized school library contained about 2,500 volumes and served close to 600 pupils. Some of these libraries were operated by fully qualified professional librarians and the others by teachers with some library training.

| Totals. | 35 | 6,562,519 | 88,784 | 1,472 | 3,713,694 | 857,915 |

Special Libraries.-There are many government, business, professional and technical libraries in existence, organized to serve the special interests of the personnel concerned. The most recent survey of these libraries was for 1956-57 in which 84 Federal Government libraries reported a stock of $2,670,454$ books and pamphlets and full-time staff numbering 427; 91 provincial government libraries reported $2,149,158$ books and pamphlets and full-time staff numbering 283; and 154 professional, business and technical libraries reported $1,292,582$ books and pamphlets and full-time staff numbering 377.

Professional Librarians.-Professional librarians, who have been awarded Bachelor of Library Science degrees after a one-year postgraduate course, direct most libraries in Canada; they comprise one-quarter to one-third of all library personnel. Their work includes administration, book selection, reference, readers' advisory, and technical services.

Shortages of professional librarians continue to exist in all types of libraries, with public and school libraries most seriously affected. However, increasing enrolment in Canada's five library schools-at the Universities of McGill, Montreal, Ottawa, Toronto and British Columbia-offers some hope of a better supply. From 1954 to 1957 the number of graduates of all the schools averaged 80 but 111 were graduated in 1960 and 157 in 1961. Enrolment for the academic year 1961-62 was 206, with the opening of a new school at the University of British Columbia. Graduates can expect a choice of positions at salaries that have improved in recent years. The median beginning salary for all 1961 graduates was \$4,600.

## PART III.-SCIENTIFIC AND INDUSTRIAL RESEARCH

## Section 1.-The National Research Council*

History and Organization.-Organized research in Canada on a national basis dates from 1916 when the Government of Canada established the Honorary Advisory Council for Scientific and Industrial Research-now known by the short title "National Research Council" The early Council provided for the planning and integration of research work, organization of co-operative studies, postgraduate training of research workers, and prosecution of research through grants to university professors. This promotion and encouragement of research formed the basis of the Council's work from 1916 to 1924.

The creation of a central research institute, to carry on research in pure science in relation to standards of measurement, quality and composition of material, and in science applied to the industries of Canada, had been urged as early as 1918. A special committee of Parliament endorsed the proposal and in 1924 the Research Council Act was revised to include national research laboratories. Temporary quarters were secured and research on magnesian refractories for steel furnaces was carried out so successfully that a wartime industry, established during World War I, was re-established on a large scale. As a result of this achievement, the Government, in 1929-30, provided funds for new research facilities.

The National Research Building on Sussex Drive, Ottawa, was opened in 1932 and in 1939 construction was begun of an aerodynamics building on a 130-acre site on the Montreal Road, just east of the city. This site now comprises some 400 acres and houses most of the Council's laboratories. A Prairie Regional Laboratory built on the campus of the University of Saskatchewan has been in operation since June 1948, and an Atlantic Regional Laboratory on the campus of Dalhousie University in Halifax, N.S., was opened in June 1952.

Under the terms of the Research Council Act, the National Research Council has charge of all matters affecting scientific and industrial research in Canada that may be assigned to it by the Committee of the Privy Council on Scientific and Industrial Research. In discharging these responsibilities, the Council may undertake, assist or promote research. Its duties include the utilization of Canada's natural resources; the improvement of industrial processes and methods; the discovery of processes and methods likely to expand existing industries or to develop new ones; the utilization of industrial wastes; investigation and determination of physical standards, methods of measurement, and fundamental properties of matter; the standardization and certification of scientific and technical apparatus used by government and industry; the determination of standards of quality for materials used in public works and government supplies; investigation and standardization, at the request of industry, of industrial materials or products; and research intended to improve conditions in agriculture. The Council also has the duty of advising the Privy Council Committee on questions of scientific and technological methods affecting the expansion of Canadian industries or the utilization of the country's natural resources.

[^107]The Council's laboratories are organized in nine divisions and two regional laboratories, each with its own director. Five divisions are engaged in applied and fundamental studies in the natural sciences-applied biology, applied and pure chemistry, and applied and pure physics. Four others are devoted chiefly to engineering work-building research, mechanical engineering, radio and electrical engineering, and the National Aeronautical Establishment. The two regional laboratories carry out research related to the resources of the Prairie and Atlantic regions.

During World War II, the Council was responsible for all research carried out for Canada's three Armed Services. After the War, most of the military work was transferred to the Defence Research Board (see Chapter XXV). Another wartime development, the Atomic Energy Project, was constituted as a separate Crown company, Atomic Energy of Canada Limited, in 1952 (see pp. 333-338).

A Medical Research Council, fully responsible for the support of medical research but functioning under the general administration of the National Research Council, was established in November 1960 (see pp. 344-345).

The National Research Council consists of the President, two Vice-Presidents (Scientific), one Vice-President (Administration) and 17 other members, each of the latter group being appointed for a term of three years and chosen to represent industry, labour, and research in science and engineering. Many of the members are drawn from Canadian universities. The Council reports to Parliament through the Committee of the Privy Council on Scientific and Industrial Research.

The Council's current operating budget is about $\$ 42,000,000$. Approximately $\$ 14,000,000$ is required for foundation work-scholarships and research grants in science and engineering, plus the program of the Medical Research Council-and the remainder is used to operate the laboratories. Of the Council's 2,600 employees, some 730 are scientists and engineers.

Links with Industry.-The application of science to Canadian industry has always been one of the major concerns of the National Research Council. Since 1917, representatives of industry, government and the universities have co-operated, through NRC Associate Committees, in solving pressing industrial and economic problems. There is a constant flow of personnel and information between NRC laboratories and those of industry, and roughly 90 p.c. of the Council's own effort involves applied research intended for industrial use. Contract research on specific projects and a wide variety of testing and standardization work are undertaken. Inventions from NRC laboratories are carried through the patent stage, then made available for manufacture through Canadian Patents and Development Limited (see p. 106).

One of the Council's most important activities is its Technical Information Service. This consists of field engineers who visit manufacturing establishments, and a staff of trained researchers in Ottawa who use the technical literature available through the Council's library. All inquiries are handled but the Service is particularly interested in helping small firms with no research or information facilities. Free advice is given on materials and processing, equipment, plant design and packaging and on such topics as wage incentives and inventory control.

Direct financial assistance for research performed by Canadian industry will be undertaken by the Council during 1962-63. Under an Industrial Advisory Committee of leading Canadian industrialists, awards totalling $\$ 1,000,000$ will be made for long-term applied research and development. Aid will be given on a matching basis, with industry providing at least half the funds for any project. Companies of all sizes, covering a wide range of industrial activity, will be eligible for assistance and the companies will retain all rights arising from the work. By emphasizing studies expected to continue for a number of years, the Council hopes to strengthen existing research groups and encourage the establishment of new ones.

Foundation Aspects.-University research in science and engineering has been supported by the Council since its inception in 1916. This aid has been of considerable help to the universities in building up the excellent graduate schools that now exist in Canada. Awards to individuals make up most of the university support program. Included are research grants to university staff used for employing assistants and purchasing equipment and supplies, postgraduate scholarships, and postdoctorate fellowships. Approximately 975 research grants and 675 scholarships and fellowships were awarded in the year ended Mar. 31, 1962, at a cost of $\$ 8,540,000$.

General promotion and encouragement of university research-the remainder of the program-includes publication of six Canadian journals of research; contributions to scientific organizations and functions, Canadian membership in international scientific unions, and the administrative costs of the program. Expenditures for these activities in 1961-62 were $\$ 860,000$. An annual Report on University Support describes the program in detail.

In 1948 the Council instituted a program of postdoctorate fellowships, open to Canadians and to the nationals of all other countries. Originally these were tenable in the Council's own laboratories but the training and experience brought to the work by the young scientists proved so stimulating that the program has been gradually expanded. Fellowships are now tenable at Canadian universities (these are considered part of the university support program), in the laboratories of Atomic Energy of Canada Limited, and in the federal Departments of Agriculture, Forestry, Mines and Technical Surveys, and National Health and Welfare. More than 200 of these awards are being held at the present time (March 1962), mostly in chemistry, physics and biology.

Applied Biology.-This Division's program covers practical problems related to the national economy and fundamental studies in microbiology, biochemistry and biophysics as a basis for future application in agriculture, medicine and industry.

Apparatus and techniques for preparing, preserving and storing food make up a large part of the work, with particular attention in recent years to food freezing, cold storage and refrigerated transport. Specific studies in 1961-62 involved further tests on a process developed in the Division and now widely used in industry for the immersion freezing of poultry, quality loss in poultry meat during freezing and refrigerated storage, and an improved cooling system for frozen food trucks. The physical and chemical reactions preventing coagulation in evaporated milk during sterilization were also investigated. Microorganisms related to the preparation and preservation of food are studied, particularly those found in salted foods and in cheese, and those that grow at low temperatures. A national culture collection of about 3,000 yeasts, bacteria and fungi is maintained.

Considerable effort is devoted, also, to questions of animal and plant physiology. Studies of the mechanisms by which mammals, birds and man adapt to cold have provided important basic information on cell, muscle and metabolic activity, and also serve to explain practical problems such as the high death rate of newly born caribou. Fundamental plant processes such as translocation are investigated, and an exhaustive study is being carried out on strains of blue-green algae believed responsible for cattle deaths. Plant fibres such as cellulose-the skeletal material of plants-and the structure and function of plant cells are also examined. In collaboration with the pulp and paper industry, a new structure has been established for a material used for synthetic textile fibres.

Other studies involve fermentation mechanisms and enzymology, and the structures of proteins, carbohydrates and fats. One group, among its other projects, is engaged in long-term statistical studies of protein variability in wheat and wheat exports. The work has been expanded recently to include the effects of weather factors on protein content.

Applied Chemistry.-The Division of Applied Chemistry is concerned with supplying new scientific information for the development of Canada's natural resources and chemical
industries. Although formerly much of the work involved solving immediate specific problems, a larger part of the Division's effort is now being devoted to more basic studies. This avoids conflict with industrial laboratories and consultants and, in addition to providing fundamental information, often produces practical results. For instance, a longterm investigation on the contracting of fluids and solids-an operation vital to many chemical engineering procedures-has resulted in a successful commercial operation for drying grain. The same method can be extended easily to chemical reactions and to removing liquids from other materials.

Another long-term project of considerable industrial potential has concerned the factors responsible for the stability, or the destruction, of suspensions of solids in liquids and a method was devised for easily separating almost any suspended solid from the liquid surrounding it. This work was expanded recently to include the separation of dissolved solids. It has been shown that virtually all dissolved salts can be removed from water by filtration through an appropriate medium, and tests with other materials are in progress. Then, too, the study of chemical reactions at very high temperatures-carried on over the past several years-has resulted in the successful preparation of a stable polymer that could not be produced by conventional means.

The eleven sections of the Division are: analytical chemistry, applied catalysis, applied physical chemistry, chemical engineering, colloid chemistry, corrosion, high polymer chemistry, metallurgical chemistry, physical organic chemistry, rubber and textiles. Much of the work falls under the general headings of petroleum or corrosion chemistry, in that several sections work on topics related to one of these fields.

Pure Chemistry.-The Division of Pure Chemistry is organized around a nucleus of outstanding Canadian chemists who direct about 50 young postdoctorate fellows from all over the world. The work consists of long-term fundamental investigations in physical and organic chemistry.

The work in organic chemistry includes investigation of the structures of alkaloids, studies of the infrared spectra of steroids, and the synthesis of porphyrins and of compounds labelled with isotopes. Other sections deal with chemical kinetics and photochemistry, the study of the ionization potentials of free radicals by mass spectrometry, Raman and infrared vibrational spectroscopy, and the application of high resolution proton magnetic resonance techniques to the study of hydrogen bonding and other molecular interactions. Still others study certain aspects of surface chemistry such as the thermal properties of simple solids and imperfections in the bulk and the surface of alkali halide crystals, the heats of micellization by microcalorimetry, and the thermodynamics and stress-strain relationships associated with the absorption of fluids by active carbons. There is also a small group interested in the chemistry of fats and oils, and one engaged in fibre research.

Applied Physics.-The work in Applied Physics is divided between research projects likely to be of practical value and the continual development of the fundamental standards on which measurements generally are based. All the fundamental physical standards for Canada are housed and serviced in this Division, which now has primary standards equal to any in the world in the fields of mass, length, time, electricity, temperature and radiation. The sections of the Division are: acoustics, electricity and mechanics, heat and solid state physics, instrumental optics, interferometry, photogrammetric research, radiation optics, special problems, and X-rays and nuclear radiations. Industrial problems receive considerable attention, particularly calibration work and industrial noise abatement.

Several of the Division's developments are being produced commercially. Noiseexcluding high fidelity earphones developed earlier are finding wide use in high noise areas, as hearing aids in schools for the deaf, and in the field of audiometry. A revolutionary analytical plotter for making maps from aerial photographs is in use by the United States Air Force, and a six-figure potentiometer being manufactured by a Canadian firm
is selling well. A precision direct reading thermometer bridge is in production and tentative arrangements have been made concerning a deepsea temperature-depth recorder. Other investigations include the thermal and electrical properties of ceramics (important in rocketry, nuclear energy and other fields), fundamentals of colour vision and colorimetry, testing and research for improving air-survey photography, and radio chemistry. Work continues on the measurement of line standards of length in terms of wavelengths of light, and on the use of atomic or molecular properties to define time intervals.

Pure Physics.-Investigations are under way on cosmic rays, low-temperature and solid-state physics, spectroscopy, X-ray diffraction, and theoretical physics. The work is on fundamental problems that do not have immediate application but advance the frontiers of knowledge and supply the basis for further progress in the applied fields. Energetic particles approaching the earth from space are being studied from three angles: continuous recordings of cosmic ray particles reaching ground level are compared with data from some twenty stations around the world; primary cosmic rays and their modulation by clouds of particles from the sun are studied by sounding rockets launched from Fort Churchill; the interaction of energetic particles with matter is investigated chiefly by means of photographic emulsions and Wilson cloud chambers.

The low-temperature and solid-state group studies the electrical, thermal and mechanical properties of metals and semi-conductors especially at very low temperatures. In the spectroscopy group, the structures of atoms and molecules are investigated by means of their microwave, visible and ultraviolet spectra. The theoretical physics group is concerned with theoretical problems in atomic, molecular and nuclear physics.

The X-ray diffraction laboratory undertakes fundamental work in molecular and crystal structure and identification problems for government laboratories. X-ray diffraction methods are extremely valuable for identification purposes as they are non-destructive and require only very small amounts of material. Two of the major projects concern narcotics and vanadium minerals.

Building Research.-Technical improvements in housing are the primary concern of the Division. The research program therefore covers all aspects of housing design, building materials and components, and studies in soil, snow and ice mechanics. Regional stations engaged in research and information are maintained in Halifax, Saskatoon, Vancouver and Norman Wells.

Examples of Division projects are the behaviour of cement aggregates and lightweight concretes; the materials and techniques of masonry construction and plastering; atmospheric corrosion of metals; paint and acoustics research; and examination of the performance of walls, windows, chimneys and domestic heating systems. Other studies involve the bearing strength of ice; the fundamental properties of various soil types, including permafrost and muskeg; frost action in soils; avalanche research; and the effects on buildings of ground vibrations caused by blasting or earthquakes. A unique fire research laboratory provides facilities for all types of fire resistance, fire prevention and fire fighting tests.

As the Division concentrates on building problems peculiar to Canada, much of the work concerns the performance of buildings and building materials in cold weather. In this connection, double-glazed windows and lightweight metal and glass curtain walls, used increasingly in modern buildings, have been examined. Special studies have been made to improve winter building techniques and there is a section devoted to problems of building in the Far North.

Many results of the Division's research are expressed in the National Building Code, an advisory document of building standards now used by municipalities accounting for half the total urban population of Canada. The Division also establishes the building regulations for all housing constructed under the National Housing Act.

Mechanical Engineering.-This Division works mainly in the fields of mechanics, hydrodynamics (hydraulic engineering and naval architecture) and thermodynamics. Extensive testing and specification work is undertaken for a variety of industries and for government departments. Much of the work consists of continuing projects related to land, sea and air transportation.

The mechanics activities include mathematical analysis and computation, the development of instruments and servomechanisms, and research on mechanical devices such as gears. One group, working in the field of bio-medical engineering in collaboration with surgeons, has devised a tool for end-to-end joining of blood vessels by a simple stapling operation.

In hydraulics, a number of investigations and models have been made for improving Canadian harbours. A new kind of breakwater has been developed which absorbs waves rather than reflecting them, and a breakwater utilizing this principle is under construction at Baie Comeau. A promising scheme has also been developed for reducing silt accumulation in harbours by wave energy. The ship laboratory has continued its studies on propeller, rudder and hull design and performance.

Railway work is devoted mainly to locomotives and the riding qualities and mechanical behaviour of freight cars. The improvement of braking systems and the use of cheaper fuels are being investigated. A long-term study is being made of the possible use of gas turbines in locomotives. The application of gas turbines to aircraft taking off and landing vertically is also being explored, together with the thermodynamic, aerodynamic and control problems that this type of aircraft involves. Considerable research is also being done on the behaviour of lubricants at high pressures, and that of gases at extremely high temperatures.

National Aeronautical Establishment.-The National Aeronautical Establishment is designed to meet the aeronautical research needs of military and civil aviation, to co-operate with the Canadian aircraft industry, and to carry out its own research program. Its studies therefore centre around problems of aerodynamics, aircraft structures and materials, and flight mechanics.

Aerodynamics research from low speeds up to a Mach number of about 12 is carried out in the Establishment's wind tunnels. Considerable attention is being given at present to low-speed problems of vertical and short take-off aircraft. Other studies include work on the aerodynamic characteristics of high-thrust propellers, on wings with submerged fans and on wings immersed in powerful slip-streams.

The research on structures and materials involves investigation of aircraft accidents, the fatigue and creep of aircraft structures, the determination of flight loads, aircraft design problems, and non-metallic materials. The latter study is part of a research for low density, high strength non-metallic materials resistant to high temperatures that could be used for structural purposes.

The flight mechanics program covers research on flight safety and flying stability and control; the development of a crash position indicator for locating crashed aircraft; atmospheric physics; anti-submarine magnetometry; and the avoidance of aircraft collisions.

A growing and highly diversified program of assistance to smaller industries is developing. Most of the work relates to product development, product improvement, or testing.

Radio and Electrical Engineering.-The work of this Division includes engineering problems of interest to Canadian industry and fundamental research in electrical science. The Division co-operates with the Armed Services and associated industries in designing, producing and evaluating new equipment.

Engineering problems include long-distance transmission of high-voltage direct current, radio remote-control of navigational aids, current and potential transformer calibration, high-frequency standards, and the development of electronic medical instruments and operating-room facilities. Electronic systems have been installed in the Toronto General Hospital for monitoring the condition of patients undergoing cardiovascular surgery and intensive therapy, and a system synchronizing X-ray photography with electrocardiogram has been developed for the Ottawa General Hospital. The Division maintains the best-equipped antenna laboratory in Canada and provides considerable assistance in the development and manufacture of antennas and radomes.

Among other projects are a microwave system for determining precisely the position of vessels engaged in hydrographic surveying, infrared scanning cameras to further Canadian research in cancer detection and treatment, and a creative tape recorder much in demand in electronic music studios. A highly mobile counter-mortar radar designed by the Division went into commercial production in 1961.

Fundamental studies are carried out on radio wave propagation, radio astronomy, upper atmosphere research, and electronic and solid-state research. A new radio observatory is being developed in Algonquin Park, where a 33 -foot diameter radio telescope is in operation. The Canadian rocket program at Churchill has introduced a new trend in upper atmosphere research, and a variety of instruments have been developed to study auroral displays and meteor showers.

Atlantic Regional Laboratory.-The Atlantic Regional Laboratory is engaged in practical and fundamental studies related to the resources and industries of the Atlantic Provinces. The work follows three general lines-chemistry and physiology of plants and microorganisms-especially marine organisms, animal nutrition, and chemical reactions at high temperatures. Specific studies are under way on the formation of slimes in the 'white' water of paper mills, the dietary effects of seaweed components, and the discoloration of New Brunswick potatoes during commercial cooking. At the request of the adhesives industry, a fundamental study is being carried out on the properties of collagena protein in cod skin used as the mother substance for photoengraving glue.

The long-term investigation of the basic chemistry involved in the fabrication of steel has progressed. Magnesia refractories capable of holding molten basic slags were constructed, and current theoretical studies are expected to produce improved methods for measuring and controlling temperature and oxygen concentration during steel-making.

Recent engineering work included the development of a semi-continuous dryer for use on seaweed and other commercially important plant material. This work was carried out in co-operation with industry, and provided a model for mobile dryers to be used throughout the Atlantic Provinces. A portable automatic methane detector for use in mines was also produced; operated off a miner's battery, the instrument continuously samples the air and automatically gives warning of dangerous concentrations of combustible gases.

Prairie Regional Laboratory.-One of the chief aims of the Prairie Regional Laboratory is to develop wider uses for crops grown on the prairies. This is achieved by determining potential uses of crops now in production and by encouraging the production of new crops to meet specific needs. Research is therefore carried out on the properties and reactions of plant components, and on the biological, chemical and engineering processes for turning them into other compounds. The development of oil-seed crops as alternatives to seed crops has received considerable attention.

For some time, the Laboratory has studied major plant constituents such as carbohydrates, protein, starch, lignin and fibres. An example of this work is the definition of the chemical structure of several polysaccharides found in cereal grains and important in
baking, milling and fermentation technology. Attention is also being given to minor plant constituents-such as phenols, flavonoids and terpenes, which are known to have fungicidal and germicidal properties. A laboratory has been set up to systematically study extractives from local plants and shrubs.

The engineering and process development group is engaged in research on continuous fermentation processes, pulping processes on wood and straw fibres, and the effects of glyceride structure of fats and oils on the quality of margarines and shortenings. Largescale processing and pilot-plant-scale operations are carried out. There is also a group working in the field of mycology, which is concerned with the production of new chemicals, antibiotics, alkaloids and amino acids.

Administration.-Administration of the foregoing laboratories is organized as a Division of Administration and Awards, which exists only to serve the scientist. The five service units of this Division are: Awards and Committee Services (Awards, Committees, Publications, Research Journals); Administrative Services (General Services, Purchasing, Personnel); Information Services (Technical Information Service, Library, Public Relations Office, and Liaison Offices in Ottawa, Washington, D.C., and London, England); Plant Engineering Services; and Legal and Patent Services. The Iatter group works closely with Canadian Patents and Development Limited (see p. 106). An expert on economic research acts as special assistant to the Assistant Director, Information Services.

## Section 2.-Research in the Atomic Field*

In the past, the atomic energy activities of many countries have been devoted mainly to uranium mining operations in support of military uses. However, a more durable phase is approaching, when a great proportion of the expanding annual construction of new electricity generating plants will employ nuclear energy. During the transition there is a temporary slowing down in the demand for Canadian uranium.

During the next ten years a large part of the relatively small uranium supply for nuclear power will be directed to the supporting inventory of nuclear fuel; beyond that the make-up to replace consumption is foreseen as rising to match and surpass the current world rate of production. By that time the atomic energy industry as a whole should be supported by the consumers of electric power but at present, in all countries and for a number of years to come, the young industry has the greater part of its costs furnished directly or indirectly through taxation. In an intermediate phase, capital advances made in anticipation of revenues from power consumers will be important.

Three Federal Government organizations have the basic responsibilities for atomic energy in Canada:-
(1) The Atomic Energy Control Board, responsible for all regulatory matters concerning work in the nuclear field.
(2) Eldorado Mining and Refining Limited, with a double function as a producer of uranium and as the Government's agent for the purchase of uranium from private mining companies.
(3) Atomic Energy of Canada Limited, concerned with nuclear research and development, the design and construction of reactors for nuclear power, and the production of radioactive isotopes and associated equipment, such as cobalt-60 Beam Therapy units for the treatment of cancer.

Now that the mine at Great Bear Lake, N.W.T., is closed, three principal uraniumproducing areas in Canada remain: the east end of Lake Athabasca in Saskatchewan,

[^108]and Elliot Lake and Bancroft in Ontario. All four areas resulted from reports made by the Geological Survey. For the greater part, the mining operations themselves are conducted by private companies supported by export contracts that would have terminated in 1962 but have been revised so that some will be stretched out, without increase in total supply, to 1966. The revision of the contracts has also closed down the less economical mines of private companies. Only Eldorado and one other of the original six companies in Beaverlodge are still in operation, four of the original eleven at Elliot Lake, and two of the three at Bancroft. A refinery run by Eldorado is located at Port Hope on the northern shore of Lake Ontario. The Research and Development Division of Eldorado, together with the Mines Branch of the Department of Mines and Technical Surveys, also makes important contributions to the solution of recovery problems, a noteworthy example being the development of the sodium carbonate leaching process for the Beaverlodge uranium oreprocessing plant, which avoided the shipping of large amounts of acid to that remote area.

Atomic Energy of Canada Limited (AECL) has an eleven-man Board of Directors, including individuals from private industry, public and private power companies and the universities. The Company's major plant is near Chalk River, Ont., and its Head Office and Commercial Products Division in Ottawa. During 1960 and 1961, contracts were awarded for the construction of AECL's new research centre at Whiteshell, Man., and site development is under way. Early in 1958, a Nuclear Power Plant Division was established in Toronto, and took over responsibility of directing the NPD-2 project. This project, a nuclear power demonstration plant to produce $20,000 \mathrm{kw}$. of electricity, is now being commissioned at Rolphton near the Chalk River establishment; its design and construction were carried out in collaboration with the Canadian General Electric Company Limited and The Hydro Electric Power Commission of Ontario. The Nuclear Power Plant Division of AECL, with the assistance of Ontario Hydro, is also designing and constructing a fullscale nuclear power plant, known as CANDU, which will supply $200,000 \mathrm{kw}$. of electricity to the Ontario Hydro system. This plant is being built at Douglas Point near Kincardine on Lake Huron. By agreement, Ontario Hydro will purchase the plant when it is in satisfactory operation. An Advisory Committee on Atomic Power Development keeps all other utilities fully informed of the progress being made. This Committee, which was set up by the Government in 1954, meets periodically at Chalk River to assess the economic prospects of nuclear power throughout the country.

Because of the great pace of technological development in nuclear power throughout the world, AECL devotes a major effort to collaboration with many organizations. These include industrial firms and the scientific and engineering departments of universities in Canada and, through foreign government agencies and several international organizations, many technical groups in other countries. For example, the Canadian General Electric Company has been contracted to carry out the design and development of an organic-cooled experimental reactor, and it seems likely that this will be the first reactor to be built at the Whiteshell Nuclear Research Establishment. AMF Atomics Canada Limited and CGE are AECL's chief contractors for fuel element fabrication, and other work related to Canada's nuclear power program is carried out in collaboration with Orenda Engines Limited, Canadian Westinghouse Company Limited, Montreal Locomotive Works Limited and Montreal Engineering Company Limited. In general, AECL's policy is to stimulate the interest of private industry in the development of nuclear power so that these firms can take over construction of power plants when the time arrives, leaving AECL free for fundamental studies and developing new reactor concepts. AECL also lends general support to the nuclear and related studies of Canadian universities and lets contracts to the universities on specific problems

In the international field, close ties are kept with the United States Atomic Energy Commission and the United Kingdom Atomic Energy Authority, both of which have representatives permanently at Chalk River. There is an agreement with the United States for co-operative work on heavy-water-moderated reactors; it provides for the free exchange of all technical data in this field and a commitment by the USAEC to spend $\$ 5,000,000$ in the United States on research and development related to reactors of Canadian design. More or less formal collaboration has also been established with the International Atomic Energy Agency, the Organization for Economic Co-operation and Development, and Euratom, as well as with India, France, Sweden, West Germany, Switzerland, Japan and Pakistan. In India, construction and running-in of the CanadaIndia reactor was completed during 1960, and the reactor was formally inaugurated in January 1961.

Chalk River Project.-The Chalk River Project is a research and development establishment. Basic and applied research is carried on by about 200 professional scientists and engineers supported by 300 technicians devoted to research in nuclear physics, nuclear chemistry, radiobiology, reactor physics, radiation chemistry, environmental radioactivity, physics of solids and liquids, and other subjects, using as their primary facilities the two major reactors, NRX and NRU, the auxiliary reactors, ZEEP, PTR and ZED-2, the tandem Van de Graaff accelerator and analytical facilities such as a precision beta-ray spectrometer, mass spectrometers, electron microscopes, multi-channel pulse analyzers, automatic recorders, analogue and digital electronic computers.

Basic research is carried on in many fields, especially that of the structure of atomic nuclei, and of the interactions of neutrons, not only with individual nuclei but also with liquids and crystalline solids, particularly those involving energy transfer. For nuclear structure studies, the tandem Van de Graaff has made pioneer work possible by providing multiply-charged ions of precisely known energy and direction. It has proved possible to produce nuclei in specific energy states by different routes and to identify and analyse the states, thereby deducing the spin and other characteristics and discovering, for example, a correlated series of rotational states in the nucleus neon-20. Not only is this important to a basic understanding of nuclear structure, but it also finds application in unravelling the complex of nuclear reactions responsible for the genesis of nuclei in the interior of stars.

Studies of neutron interactions with matter are made possible by the intense beams of neutrons available from the NRU reactor. By monitoring the neutrons in cosmic radiation it has been possible to find correlations with the occurrence of solar flares and contribute to the recent advances of knowledge of phenomena in interplanetary space. Isotope techniques have brought about revisions in the basic theory of chemical reactions induced by radiation. This basic research may find a useful early application in the technology of using an organic liquid as coolant in nuclear power reactors.

The research facilities of the NRX and NRU reactors have continued to attract individual scientists as well as teams from other countries. A team of Brookhaven (U.S.A.) and AECL scientists is using a neutron beam with a high-speed chopper and long flight path for nuclear interaction studies. Another team with scientists from Harwell (Br.) and other countries is using another system of choppers for studying details of the slowingdown of neutrons by moderators. Both in NRX and NRU the exceptional facilities for irradiations in high temperature water, steam and organic liquids have brought teams from Britain and the United States to conduct tests important for the design of future power reactors.

CANADIAN NUCLEAR REACTORS IN OPERATION, UNDER CONSTRUCTION OR APPROVED FOR CONSTRUCTION

| Name | Location | Date of Start-up | Power | Fuel | Moderator | Coolant | Use |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Zero Energy Experimental Pile (ZEEP)...... | Chalk River, Ont. | 1945 | 100 w . | Natural uranium metal or oxide | Heavy water | - | Lattice experiments |
| National Research Experimental (NRX)..... | Chalk River, Ont. | 1947 | $42,000 \mathrm{kw}$. | Natural uranium metal | Heavy water | Ordinary water | Research and isotope production |
| National Research Universal (NRU)......... | Chalk River, Ont. | 1957 | $200,000 \mathrm{kw}$. | Natural uranium metal | Heavy water | Heavy water | Research and plutonium and isotope production |
| Pool Test Reactor (PTR) .................. | Chalk River, Ont. | 1957 | 100 w . | Enriched uranium alloy | Ordinary water | Ordinary water | Reactivity and absorption measurements |
| Toronto University Sub-critical Reactor...... | Toronto, Ont. | 1958 | - | Natural uranium metal | Heavy water | - | Research and teaching |
| McMaster Nuclear Reactor (MNR) .......... | Hamilton, Ont. | 1959 | 1,000 kw. | Enriched uranium metal | Ordinary water | Ordinary water | Research |
| ZED-2. | Chalk River, Ont. | 1960 | 100 w . | Natural uranium metal or oxide | Heavy water | - | Lattice experiments |
| Canada-India Reactor (CIR)... | Bombay, India | 1960 | 40,000 kw. | Natural uranium metal | Heavy water | Ordinary water | Research and isotope production |
| Nuclear Power Demonstration (NPD-2)...... | Rolphton, Ont. | 1962 | $\xrightarrow[\text { (electricity) }]{20,000 \mathrm{kw} \text { ) }}$ | Natural uranium oxide | Heavy water | Heavy water | Power demonstration |

Nuclear Power Prospect.-The generation of electricity by nuclear power on a competitive economic basis is expected to be established by the type of reactor now being designed by the Nuclear Power Plant Division of AECL at Toronto. This promise rests on the attainment of very-low-cost fuelling by an extremely simple system tested over many years by experiments in the NRX reactor. The fuel will be uranium dioxide specially prepared from natural uranium entirely in Canada. A wide range of tests in hot channels in the NRX reactor at heat ratings and energy yields in excess of those required has established that this oxide fuel is incomparably more dependable than the uranium metal fuel for which the NRX and NRU reactors were designed. No provision for reprocessing the irradiated fuel is involved, for, by careful attention in the reactor design to minimizing any waste of neutrons, an energy yield of over 9,000 thermal megawatt-days is expected from a ton of uranium before it is discarded. This results in a prospective fuelling cost of about 1 mill ( 0.1 cent) per electric kilowatt-hour, to be compared with about 3 mills from coal at $\$ 8$ per short ton.

Canada has access to such an abundance of coal, oil and natural gas that the competitive cost level for electric power is lower than in many other countries. Nuclear power plants of the types now under construction in Britain and the United States have been assessed as unable to reach a low enough cost level, at least until several successive plants have been built and operated to discover where economies are possible. Plants of the CANDU type do not promise to be significantly cheaper in initial outlay, but the fuelling cost can be so much less that meeting the competitive target is a very real prospect.

The low fuelling cost derives as much from the details of the design proposed as from the general type of reactor chosen. Some of the important features seem worthy of mention. The full-scale plant will generate 220 megawatts with a steam-cycle efficiency of 33.3 p.c., so the reactor has to supply 660 thermal megawatts to the steam-raising plant. The reactor is essentially a tank of heavy water, 20 ft . in diameter and 16.5 ft . long, lying horizontally. It is penetrated by 306 fuel channels parallel to the axis on a 9 -inch-square lattice. Each channel is a zirconium-alloy pressure tube of 3.25 in . inside diameter and about 0.16 in . thick. The fuel consists of bundles of 19 rods, 0.6 in . in diameter and 19.5 in . long, made of dense uranium dioxide in thin zirconium-alloy tubes. Heat is taken from the fuel directly by heavy water that passes at $560^{\circ} \mathrm{F}$. to the steam boiler, where normal water is raised to saturated steam at $483^{\circ} \mathrm{F}$. and 560 psi . The heat developed in the heavy water moderator that is in the tank outside the fuel channels is not directly used and amounts to about 35 thermal megawatts. The over-all net plant efficiency is then 29.1 p.c. These details show that the design represents a very considerable advance over that originally conceived in 1956, and the improvement bears promise that continued progress will lead to costs well below the economic target. As examples of the advance, it may be noted that for the same electric power output, the reactor power has been brought down from 790 to 700 megawatts and the length of fuel rod from 86 to 30 kilometres. The prospective fuelling cost has dropped from $1.85 \mathrm{mill} / \mathrm{kwh}$. to $1.0 \mathrm{mill} / \mathrm{kwh}$. On the other hand, no over-all reduction has been achieved in the capital cost estimates which remain in the range $\$ 300$ to $\$ 400$ per electrical kilowatt for the whole plant. No reduction is expected until manufacturing experience has been gained that can be used in future construction, but thereafter appreciable reductions should be possible. A detailed breakdown of costs for CANDU was published during 1960. The conclusions are summarized in the following statement.

## Power-Cost Estimates for CANDU <br> (mills/kwh.)

| Item | First Unit 200 MW(e) | Twin Unit $400 \mathrm{MW}(\mathrm{e})$ | 2nd Unit <br> Increment <br> $200 \mathrm{MW}(\mathrm{e})$ |
| :---: | :---: | :---: | :---: |
| Fixed charges. | 3.9 to 4.9 | 3.3 to 4.4 | 2.7 to 3.8 |
| Fuelling... | 1.1 " 1.1 | 1.1 " 1.1 | 1.1 " 1.1 |
| Operating. | 1.0 " 1.0 | 0.7 " 0.7 | 0.4 " 0.4 |
| Totals. | 6.0 to 7.0 | 5.1 to 6.2 | 4.2 to 5.3 |

These figures will serve to explain why the first plants seem to find economic application in Canada only in the Ontario system, where annual charges on capital are low and coal has to be imported and costs about $\$ 8$ a short ton. Moreover, the demand for electricity in Ontario is growing at more than 200 megawatts capacity per year. To build reactors for lower powers saves little in the cost, so the cost per kilowatt rises and becomes uneconomical. When confidence has been gained from the early plants, higher powers seem likely to be attempted and 400 electrical megawatts from one reactor may be attained.

Operating experience with the NRX and NRU reactors at Chalk River and with the many other types throughout the world has served to emphasize the great difficulty and costliness of making even minor operating repairs in the presence of the extremely high levels of radiation that are encountered around reactors. Directly and indirectly, this is responsible for the current hesitation to construct a number of large plants that for economic power cost no less than $\$ 40,000,000$ or $\$ 50,000,000$ each. With every new design it is necessary to acquire operating experience before the reliability and availability can be effectively estimated. Experience with defective fuel has been deliberately sought at Chalk River, because this is one of the difficulties most likely to be encountered. Appropriate techniques of locating the defective element, removing it and cleaning up the released radioactive fission products have been established and practised; at the same time fuel designs and ratings which lead to least difficulty in these operations have been studied. Experience of mechanical failures of control rods has lent weight to reactor designs such as NPD-2 where control rods are not needed. Temperature changes are likely to provoke mechanical failures, so design is aimed at keeping the reactor at power for all essential operations including refuelling and complete maintenance testing and readjustment of instruments and working parts of the control system.

These considerations lead to a vicious circle, for the quickest way to achieve reliability is to construct and operate a number of plants following these design principles, but until such plants have operated satisfactorily utilities are unwilling to take the risk of lost time for repairs. The same principles hold throughout the world. For example, Britain is following a program based on the Calder Hall type of reactor developed, not by a utility company, but by the government to serve a military requirement. Italy is purchasing three power reactors-one from Britain, one from the United States based on the Shippingport and Yankee reactors, and one from the United States closely following the Commonwealth Edison Dresden plant. Canada is pioneering another pattern financed by the government, and working at Chalk River to develop technical knowledge and experience that will give confidence to the utilities. The performance of the demonstration reactor (NPD) will tell whether the sought-for reliability has been achieved so that utilities can finance plants unaided.

Because the CANDU type of reactor is suitable only in large units, AECL is undertaking to study another type of reactor proposed by the Canadian General Electric Company that should have a lower capital cost. This is also a heavy-water-moderated reactor, but the heat is taken from the fuel by an organic liquid specially chosen for a high boiling point and minimum decomposition by radiation. This is a hybrid design that should utilize the Chalk River experience with heavy water and uranium oxide fuel and the experience of the organic liquid developed in the United States as a coolant and moderator for a nuclear reactor. Development of metals that are suitable for use in such a reactor is required and may take a few years to effect.

In the longer term, it is expected that heavy-water-moderated reactors would have two-zone cores. In one zone the heat required to evaporate water in the steam cycle would be supplied, and in the second zone the steam would be superheated to achieve a higher efficiency of conversion of heat to electricity. The heat for evaporation may be taken by an organic liquid or directly by evaporating wet steam, or possibly boiling water at high pressure. New materials are required also for this design and their development may be lengthy.

## Section 3.-Space Research in Canada*

Canadian scientific activities in space are limited to the application of new techniques to assist research in fields in which activity has been carried on for years. Canadian capabilities cannot begin to compete with space science activities in countries like the United States and the Union of Soviet Socialist Republics but, on the other hand, there are important things that can be done better in Canada than elsewhere. This is because of the tilt of the earth's magnetic axis toward Northern Canada and the effect of the earth's magnetic field on the interaction of radiation and particles from the sun with the earth's upper atmosphere.

The sun, whose radiations make life on earth possible, discharges streams of particles of matter, sometimes with great energy. These streams of particles are very irregular and occur in bursts associated with disturbances on the surface of the sun. The streams of particles, ultraviolet light and X radiation from the sun cause the outer regions of the earth's atmosphere to be ionized and therefore electrically conducting, forming the wellknown conducting layers in the ionosphere. The streams of particles are mostly protons and electrons; their motion is affected by the earth's magnetic field and if intense enough they, in turn, distort the magnetic field.

The study of magnetic variations and magnetic storms is hundreds of years old. Their relation to aurora has been known for a hundred years or more and during the past few decades the electrical nature of the upper atmosphere is gradually becoming understood.

The understanding of the electrical conductivity of the upper atmosphere is of practical importance as well as of academic interest because a wide range of radio communications depend on the reflection of radio waves from the ionosphere. Without the ionosphere, the range of ordinary radio broadcasting and shortwave communication would be limited to a fraction of that used every day. Occasional radio blackouts follow bursts of unusually intense ionizing radiation from the sun. The awe-inspiring phenomenon of the aurora is associated with blackout of some types of radio communication and therefore, for practical reasons, merits study; there is also a natural desire to understand what causes this phenomenon.

The most interesting and important phases of ionosphere and auroral activity occur at heights of from 30 to 100 miles in the atmosphere and the most interesting and important geographic regions for studying the ionosphere and aurora are in what is known as the aurora belt, a diffuse circle about 20 degrees of co-latitude away from the geomagnetic poles. Churchill in northern Manitoba is in the latitude of maximum auroral activity. Because of the tilt of the magnetic axis of the earth in the western hemisphere, the magnetic pole is in Northern Canada and the only place in the world where accessible land stations extend into and across the auroral belt is in Northern Canada.

Canadian scientists have for many years been very active in studying auroral and ionosphere physics. A number of university research groups led by the Department of Physics in the University of Saskatchewan are well known for such studies. The Defence Research Board's Telecommunications Establishment and the National Research Council have conducted research in this field since World War II. In fact, because of Canada's geographic position, it might be said that ionosphere and aurora research is a Canadian scientific birthright with which goes a considerable responsibility to see that the worldwide need for scientific information in this field is satisfied.

Until the present space age, measurements of the upper atmosphere could be taken only by indirect means such as the reflection of radio waves from the ionosphere, spectroscopy of the aurora and night sky and the absorption of cosmic radio noise. Now, the new rocket technique makes it possible to take direct measurements in the interesting region from 30 miles up and it is natural that Canadian scientists should take advantage of this

[^109]technique and use rockets to carry their instruments into the ionosphere and aurora. The rockets involved in doing so are not too large or difficult for Canadian manufacture. A 17 -inch rocket now being made in Canada will carry about 150 lb . of pay load to a height of about 150 miles and a series of rockets known as Black Brant I, II, III and IV is being developed by Canadian industry jointly with government branches.

The United States led the way in this field and about the time the International Geophysical Year (1957-58) was being planned rockets of the above type, developed primarily with military objectives, became common for scientific purposes. Several types are now available in many countries, besides those being developed in Canada, which have no military significance but will be used solely for scientific purposes. In preparing for the International Geophysical Year the United States established a rocket-launching range at Churchill. This was used jointly after the IGY until fire put it out of action in February 1961.

The first practical applications of space technology in the fields of meteorology and communications are almost within reach. Meteorological satellites that can televise cloud formation and ice formation are being proven to be of immense value in advancing this science. Though meteorology satellites have as yet been launched only by the United States, the project is essentially an international one and co-operative receiving stations in various parts of the world are important to their success. It has also been shown recently that synoptic measurements all over the world are desirable up to heights of about 50 miles and these can be made with relatively small rockets. In world-wide communications the use of satellites will expand available channels by a large factor. The Canadian Department of Transport, which holds the nation's responsibility in both meteorology and communications matters, is undertaking studies which will permit Canadian use of the techniques as they emerge from research to serviceable application.

One of the largest current research projects in Canada is the construction of the Topside Sounder satellite being designed and built in the Defence Research Board laboratories with considerable assistance from industry. The satellite will be launched in the United States in late 1962 and will circle the earth in an almost north-south orbit. It will contain a number of experimental packages mainly to study the upper part of the ionosphere which can be examined at present in no other way. Secondary experiments carried in the satellite are comprehensive cosmic ray measuring instruments being built by the National Research Council and radio receivers for listening to cosmic radio waves. The Topside Sounder got its name from the fact that it will probe the upper side of the ionosphere from above (about 600 miles up) by the same sounding technique that is used on the ground to probe the under side, that is, by studying the reflection of radio waves of varying frequency. For this and other United States satellites, special satellite data recovery stations will be established in Northern Canada.

## Section 4.-Other Scientific and Industrial Research Facilities

Aside from the research facilities and activities covered in Sections 1, 2 and 3, Canadian research is carried on by various federal agencies, provincial organizations, universities and industries. Several provinces in Canada have established provincial Research Councils to stimulate and support research on problems having special provincial significance. The universities, of course, form an extremely important part of the Canadian pattern of research. Much of their work is along fundamental lines but practical problems are not neglected, especially those of regional interest.

All three types of institutions-federal, provincial and university organizationshave an interest in problems of industrial significance; this is part of the current Canadian pattern of research. Though many Canadian industries now possess research facilitiessome of them quite extensive-the major part of industrial research to date has been done under government auspices.

Thus the unique problems of the country, particularly its large area coupled with a small population, have led to a typically Canadian organization of research, of which a very strong associate committee system is perhaps the most distinctive feature.

## Subsection 1.-Federal Organizations

Although research by industrial firms has been slow to develop in Canada, government research has expanded rapidly, at first because of the need for speeding up the production of raw materials, which were for many years the basis of Canada's export trade, and secondly because of the more recent interest in the processing of these raw materials and the necessity of meeting the needs of national defence. Federal agencies involved in research include the Departments of Agriculture, Forestry, Fisheries, Mines and Technical Surveys, National Defence, National Health and Welfare, and Northern Affairs and National Resources as well as the National Research Council and other Crown corporations such as Atomic Energy of Canada Limited. A system of committees, with nation-wide representation, eliminates unnecessary duplication of work from these national research organizations.

The scientific work of the Department of Agriculture is described in Chapter IX of this volume, the specialized work in scientific forest research in Chapter X, scientific services concerned with Canada's mineral resources conducted by the Department of Mines and Technical Surveys in Chapter XI, investigational work of the Department of Fisheries in Chapter XIII, research of the Canadian Wildlife Service of the Department of Northern Affairs and National Resources in Chapter I, the work of the Defence Research Board in Chapter XXV, the work of the National Research Council at pp. 326-333 and atomic research at pp. 333-338. The activities of the other federal agencies engaged in research are described briefly in the following paragraphs.

Department of National Health and Welfare.*-The federal Department of National Health and Welfare supports intramural and extramural research programs which aim to preserve and improve the health of Canadians. Within the Department, research is done in the laboratories or clinic services of the Health Services Branch (particularly its Laboratory of Hygiene and Divisions of Occupational Health, Radiation Protection, Nutrition, and Epidemiology), of the Food and Drug Directorate, and of the Indian and Northern Health Services Directorate. In the Administration Branch, the Research and Statistics Division carries out special studies, including surveys, in social and medical economics. The extramural program consists of grants in aid of medical research sponsored by the provinces and conducted in universities, hospitals and other institutions from funds provided under the National Health Grant Program. The Public Health Research Grant makes available about $\$ 1,700,000$ annually to assist in stimulating and developing public health research; in addition, other grants in the areas of Mental Health, Child and Maternal Health, Cancer Control, General Public Health, Tuberculosis Control, as well as Medical Rehabilitation and Crippled Children amount to an approximate $\$ 2,000,000$. To co-ordinate and advance the extramural program, senior officials of the Department confer with advisory bodies such as its Research Advisory Committee, representatives from the provinces, from other federal agencies (the Medical Research Council, the Defence Research Board and the Department of Veterans Affairs) and from voluntary groups such as the National Cancer Institute.

Grain Research Laboratory.-Rapid development of grain production in Western Canada led to the passing, in 1912, of the Canada Grain Act. This Act is administered by the Board of Grain Commissioners, which reports to Parliament through the Minister

[^110]of Agriculture. The Board is responsible for control of the weighing, grading and warehousing of Canadian grain. Soon after its establishment, the Board encountered problems that required scientific study and a Grain Research Laboratory was established at Winnipeg, Man., in 1913.

The Grain Research Laboratory, with a staff of 60, is the main centre of research on the chemistry of Canadian grains. It is well staffed and equipped to provide the service required to help maintain and expand domestic and foreign markets for all types of grain. The Laboratory collects and tests samples of various crops to obtain information on the current quality of all grains shipped during the crop year and prepares, annually, certain information required by the Board for administering the Canada Grain Act. Fundamental research is also undertaken; the program is directed toward better understanding of what constitutes quality in cereal grains and toward improvement in the methods of assessing quality.

## Subsection 2.-Provincial Organizations

The fact that only a few provincial research organizations exist does not indicate lack of interest in research by the provinces. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems, and many individual departments have facilities for research in their particular fields of endeavour or assist research through the provision of financial aid to students working in those and other scientific fields. Agriculture is particularly well covered because of its importance as an export industry but the provinces are also intensely interested in their other natural resources. Their efforts in the fields of agriculture, forestry, mining and fisheries are outlined in the Chapters dealing with those subjects (see Index).

Nova Scotia Research Foundation.-This body was created by the Government of Nova Scotia in 1946 to give its people additional scientific and technical assistance in finding new and better ways to utilize the resources of the forest, the sea, the farm, the mine and the process industries. To this end it seeks to correlate and further scientific work on local problems and available resources. It assists universities, colleges, research groups, industries, provincial and federal departments and individuals by loans of equipment, grants, scholarships, laboratory and summer assistants, library, cartographic, photogrammetric and translation services, and technical information. It has supported or collaborated in work on breeding new varieties of plants and root nodule bacteria; on antibiotics, poultry, blueberry culture, coal-burning equipment, the constitution and gasification of coal, the non-destructive testing of mine equipment, the utilization of anhydrite, diatomite, fish waste, gypsum, seaweed, slag, slab wood and fertilizing materials. It has conducted geophysical, geological, air pollution, and seaweed surveys as well as forest aphid, forest ecology and genetic studies and has assisted studies on the nutrient cycles of lakes, on X-ray crystallography, and on pressures in underground strata. Its Geophysical Division is equipped to undertake all types of magnetometric, gravimetric, resistivity, seismic and electromagnetic explorations. The Technical Services Division provides free technical information to industries in the province and offers them research and development services and facilities in the fields of physics, chemistry and engineering, including operational engineering.

Saskatchewan Research Council.-The Saskatchewan Research Council carries out research in the physical sciences, both pure and applied, with the aim of improving the provincial economy. The Council is therefore particularly concerned with the commercial exploitation of provincial resources and the scientific aspects of business. Current emphasis is on water and mineral resources, fields of agriculture not covered by other organizations, and technical assistance to industry. Besides being actively engaged in its own projects, the Council, by the granting of funds, supports further research at the University of Saskatchewan. Its buildings, occupied by a permanent staff of 40 persons and additional temporary staff, are situated on the university campus.

Research Council of Alberta.-The Province of Alberta set up a Scientific and Industrial Research Council in 1921, the promotion of mineral development within the province being the chief purpose leading to its establishment. The Council operates under an Act somewhat similar to that which set up the National Research Council and is financed by provincial government appropriations. The present program is directed to the application of basic and applied science toward the development of the natural resources of the province. Investigations in the Council laboratories and pilot plant are organized into two branches-the Earth Sciences Branch which includes all work on groundwater geology, geological surveys and research, and soils, and the Fuels Branch which includes work on coal, petroleum, natural gas, and gasoline and oil testing. There are, in addition, project groups dealing with industrial engineering services, highway research, a co-operative program on cloud physics with reference to the hail problem, and a number of special projects.

The operations of the organization are controlled by a Council of ten individuals representative of the government, the university and industry. The various research projects are under the immediate supervision of advisory committees and the Technical Advisory Committee of the Council; the latter is composed of senior officers of the Council and the government, with certain committee chairmen and university representatives.

The Council laboratories are located beside the University of Alberta campus.
British Columbia Research Council.-The British Columbia Research Council, under the sponsorship of the provincial Department of Industrial Development, Trade, and Commerce, provides a scientific and engineering staff with laboratories on the campus of the University of British Columbia. The objective is to enable even the smallest firms to improve their competitive position in Canadian and world markets by the use of the most up-to-date scientific and technical knowledge. The Council provides three classes of service: a free information service in collaboration with the National Research Council; assistance to specific firms at cost where information cannot be supplied from existing knowledge; and, at the Council's expense, research on problems of general value to the industrial development of the province.

The Ontario Research Foundation.-The Ontario Research Foundation, established in 1928, is an independent research organization financed initially by an endowment fund composed of subscriptions from manufacturers, corporations and private individuals, and a grant from the provincial government. Most of its current income is derived from contract research undertaken for industry, although income is also obtained from the various government departments for research and other work undertaken on a contract basis. The Foundation is concerned primarily with the development of industry and the development of Ontario's natural resources through the application of scientific research. However, Foundation activities are not confined to the province; research contracts are routinely handled for any organization, without reference to location. Being primarily an industrial research institution, the Foundation's main areas of scientific endeavour are chemistry, physies, metallurgy, biochemistry, textiles and engineering. Other Foundation departments, such as parasitology and physiography, are engaged particularly in studies related to Ontario's natural resources and field engineering and technical information is provided free to industry, sponsored by the Ontario Department of Commerce and Development and the National Research Council. It also administers a grant from the provincial government to support postgraduate scholarships and scientific research in the universities of Ontario.

The Hydro-Electric Power Commission of Ontario.-The Research Division of Ontario Hydro, with a staff of 300 , provides services for all technical activities of the utility, in engineering design, construction work, power utilization, and system operation and maintenance. In addition to solving specific problems, the testing, investigation and research work leads to important technical advances, including the development of new
and better equipment. Ontario Hydro is thus enabled both to improve the performance of the power system and to effect economies. Members of the staff maintain close contact with research organizations and other power utilities, and participate in the committee work of major technical societies and of standards associations.

Electrical investigations explore methods of generating, transmitting, distributing and utilizing power, and seek improvement in equipment for these purposes. Some of the main fields of study are transmission at extra-high voltage; electrical insulation; system operation and control, and system protection against lightning; communications and telemetering; illumination; and power metering. Attention is given to the performance and efficiency of power equipment, to improved measuring techniques, and to means of minimizing the hazards of electric shock.

Structural and mechanical studies include the following: soil mechanics as related to foundations, roads, and earth dams and dykes; the physical properties of structural components and of numerous items such as conductor joints and line hardware; the mechanical performance and safety features of equipment and various types of machines; metals and metallurgy; welding materials, techniques and applications; atmospheric and underground corrosion of metals; stresses in materials and structures; noise and vibration conditions; and a variety of problems associated with the design, construction and maintenance of concrete structures, the application of masonry materials, and the production, placement and quality control of all concrete used.

In addition to chemical analyses and tests performed on a wide range of materials and products purchased, chemical research work is conducted with regard to such subjects as wood preservation, plastics applications, protective coatings, both vegetation and insect pest control, lubrication, liquid and gaseous electrical insulants, thermal insulation, air pollution, corrosion prevention and water treatment. Other studies contributory and supplementary to the main branches of work are carried on in the fields of physics, biology, petrology and mathematics. Operations research studies are used in determining optimum policies and procedures in vehicle replacement, inventory control, reserve transformer capacity, economic power dispatch, and schedules for pumped-storage operation.

In the summer of 1961, the Commission's research and testing activities were transferred to a new building, known as the Ontario Hydro W. P. Dobson Research Laboratory, which was designed and constructed for these purposes and provides considerably more space and better facilities than the building formerly occupied. A separate high-voltage test laboratory adjacent to the new building was completed in early 1962.

## Subsection 3.-Medical Research*

Support for research in the medical sciences is provided by the federal and provincial governments, by private foundations, by voluntary agencies and by universities and hospitals. These sources assist in establishing research fellowships for training, in providing salaries to established investigators or in the awarding of grants in aid of research in the various disciplines of the medical sciences.

The Departments of National Health and Welfare and of National Defence maintain well-equipped laboratories in which research is carried out by highly qualified personnel. The Department of Veterans Affairs also encourages its staff to carry out investigations in its own hospitals, mainly in the fields of chronic illness, such as arthritis, atherosclerosis, and metabolic, nutritional, neurological and mental disorders.

A great variety of medical problems are studied in medical school laboratories, hospitals and other medical institutes. In this field, funds from the federal treasury are provided through the Medical Research Council, the Department of National Health and Welfare and the Defence Research Board. The Medical Research Council has an interest in the broad field of the medical sciences; it has recently established its policies with respect to

[^111]the support of scientific personnel and with respect to grants in aid of research. The former category involves awards to Medical Research Fellows who are in training, as well as to Medical Research Associates who are independent scientists. The grants in aid of research involve assistance covering the whole or part of the costs of investigations in the basic medical sciences, such as anatomy, physiology, pharmacology, biochemistry, bacteriology and pathology, as well as of investigations in the clinical sciences, including experimental medicine and surgery. The Department of National Health and Welfare provides funds for research available on the recommendation of provincial departments of health in the following fields: public health research, tuberculosis control, child and maternal health and general public health services. It also gives assistance to the Canadian Arthritis and Rheumatism Society (which obtains other support by public subscription) and to the Ontario Heart Foundation (which derives its other resources from the Ontario Government and through public fund-raising campaigns). In addition, the Department makes available funds for cancer research of benefit to the National Cancer Institute.

The Defence Research Board awards grants for research related to problems of importance for defence such as shock, preservation of blood, use of blood substitutes, effects of low temperature, etc.

Medical schools and hospitals also receive funds for research from provincial branches of the Canadian Cancer Society and from such government foundations as the Ontario Cancer Treatment and Research Foundation, and the Alcoholism and Drug Addiction Research Foundation. Fraternal societies and clubs such as the Rotary Club also show interest in the support of research.

Private foundations like the J. P. Bickell Foundation, the Atkinson Charitable Foundation, the Muscular Dystrophy Association of Canada, the Canadian Life Insurance Officers Association, the Banting Research Foundation, the Multiple Sclerosis Society and pharmaceutical companies also contribute significantly to the support of medical research in Canada. Finally, it should be remembered that granting agencies in the United States provide grants in aid of research to many investigators in several universities in Canada.

## Subsection 4.-University Research

Although there is considerable diversity of purpose in the aims of Canadian universities and colleges, they may be described generally as (1) the diffusion of knowledge through some teaching, extension and evening classes, and written reports; (2) the preservation of knowledge with some reorganization from time to time; and (3) the extension of the boundaries of knowledge essentially through research.

There are, of necessity, differences in emphasis in carrying out these aims. The undergraduate courses are designed to provide broad basic understanding in a variety of subject fields, to be followed by a more extensive and intensive application in one or two of them. Graduate schools provide for a broader and deeper penetration and understanding in one field, supplemented perhaps with more general knowledge in related fields. Seminars, directed study, and individual research usually form a considerable part of advanced study. Most of these courses provide for practice in the research methods of the discipline-whether through experiment, questionnaire, logic or statistics-in order to prepare students capable of adding to present knowledge. This applies to the closely knit professional fields as well as to the more general branches.

For many years research in the universities was directed toward obtaining knowledge for its own sake and was considered pure research. Later it was recognized that the conclusions of such research provided the basic information for applied science and before long the universities, because of their unique position in having trained specialists and equipment, were involved in both basic and applied research. During World War II they were encouraged to undertake emergency and other contractual research and since then the trend toward broadening the field of research, increasing the capacity of universities to educate advanced students, and procuring large-scale costly equipment has
shown rapid advance. This has created new problems but has provided even greater opportunities for undertaking sizable projects which could not have been attempted otherwise and has thereby tended to knit the university into the very warp of industry.

Research conducted in the universities falls into three broad categories: projects undertaken by the student under the guidance of a professor or committee to meet requirements for an advanced degree; research undertaken by the professor, which may be of a more or less continuous nature; and larger research projects undertaken co-operatively on a faculty or interfaculty basis in university laboratories or in such specialized institutions connected with the university as medical research laboratories, institutes of microbiology and hygiene, science service laboratories and faculties of agriculture.

Some idea of the increase in research undertaken by Canadian universities may be obtained from a comparison of the situation in 1919 with that in 1961. In the former year, two universities-Toronto and McGill-offered graduate courses beyond the master's degree and graduated 11 students; in 1961 Ontario had five, Quebec three and six other provinces each had one major university offering graduate courses leading to the Ph.D. degree. They conferred 305 doctorates in course, distributed by fields as follows: biological sciences, including medical and agricultural sciences, 81 ; engineering and applied science, 19; humanities, 59; physical sciences, 101; and social sciences, 45 . Subject matter covered in these courses and other research conducted by university professors and reported in professional journals is encyclopaedic and reflects specialization and variety. Outstanding research in particular fields has become associated with various universities, for example: nuclear research and geophysics in McGill, Queen's, McMaster and Saskatchewan; medical research in such institutions as the Connaught Laboratories and the Montreal Neurological Institute; agricultural research in the western universities; and fisheries research in British Columbia.

Outside financial support for university research comes primarily from four sources: agencies and departments of the Federal Government including the National Research Council and Defence Research Board, which provide grants for approved and contracted government-sponsored research; industry, which supports both basic and applied research; private foundations, which provide grants for approved research, sometimes in selected fields; and provincial governments.

## Subsection 5.-Industrial Research

Industrial research in Canada is changing very rapidly. In the past, industry in general was largely unaware of the value of research to its own development and to that of the country, partly because many Canadian companies were subsidiaries of companies in Britain and the United States and partly because small companies found it impossible to finance their own research. The problem was accentuated by the vast size of the country, the absence of concentration of similar industries and the proximity to the relatively large research facilities of the United States.

However, the emergence of Canada as a highly industrialized society, its entrance into multitudinous fields of production, the rapid growth of many large nation-wide industries, the serving of a discriminating domestic market and the meeting of competition from abroad have had the effect of making Canadian manufacturing establishments research conscious and many of the larger ones now possess competent research organizations.

Industrial Research-Development Expenditures.*-The most recent survey of expenditures on industrial research in Canada was conducted during the first half of 1960 and provided figures for the calendar year 1959 and preliminary estimates for the year 1960. The next survey will be conducted in mid-1962 and data for 1961 and 1962 should be available by the end of 1962. The survey in its present form was started in 1958 when figures for the years 1957 and 1958 were collected.

[^112]The type of industrial research-development covered by these surveys ranges from pure research designed to obtain new knowledge in the physical and life sciences to conceiving and developing new products, new processes, and major changes in products and processes and bringing them to the stage of production. Such activities as market and sales research and process and quality control are excluded. Companies surveyed were asked to report the cost of research-development done within the company in Canada and payments for research done outside the company in Canada; estimates of payments for research-development conducted outside the company and outside of Canada were also requested.

Since data for 1958 and 1960 are only estimates based on companies' intentions, more accurate comparisons may be made between the years 1957 and 1959. Total expenditures on research-development-including activities within companies, payments to outside companies in Canada and payments to organizations in other countries-decreased from $\$ 148,200,000$ in 1957 to $\$ 121,000,000$ in 1959. The decline was almost all accounted for by a substantial reduction in research work done within reporting companies, particularly in the transportation equipment industry which reported a drop in such expenditures of $\$ 39,000,000$. That decrease, however, was partially offset by a gain of $\$ 11,200,000$ in expenditures made on research-development by all other industrial groups.

Research-development expenditures for work done within the reporting companies Canadian facilities in 1959 accounted for 80 p.c. of all outlays and close to 98 p.c. of al expenditures for work done in Canada. Reported expenditures on research-development done outside Canada amounted to $\$ 21,700,000$ in 1959 , most of which was paid to parent or affiliated organizations in the United States. It should be noted, however, that many companies receive the benefits of research done by a parent or affiliate outside Canada without making any direct payment for such service, so that the $\$ 21,700,000$ expenditure may be considered as only a part of the total value of research done outside Canada that benefits companies located here.

The surveys covered all industrial firms in Canada with more than 100 employees, and these numbered about 2,800. In 1959, 471 firms out of this group had research expenditures to report; of the 471 firms, 171 had annual sales of more than $\$ 10,000,000$ and accounted for 85 p.c. of all research expenditures made in Canada.
1.-Total Research-Development Expenditures, 1955-60

| Year | Expenditure on ResearchDevelopment in Canada |  | Expenditure on Research-Development Outside Canada | Total |
| :---: | :---: | :---: | :---: | :---: |
|  | Done Within Reporting Company | Done Outside Reporting Company |  |  |
|  | \$'000,000 | \$'000,000 | \$'000,000 | \$'000,000 |
| 1955. | 51.4 | 1.9 | - | . |
| 1957. | 124.5 | 3.7 | 19.8 | 148.2 |
| 1958 (estimate).. | 132.5 | 1 | 27.0 | 159.5 |
| 1959 | 96.7 | 2.6 | 21.7 | 121.0 |
| 1960 (estimate).. | 81.8 | 1 | 27.3 | 109.1 |

${ }^{1}$ Included with expenditures outaide Canada.
The following information is centred on expenditures on research-development done in Canada, most of which, as stated above, was undertaken within reporting companies with their own facilities. Table 2 shows the magnitude of changes from 1957 to 1959 for major industry groups. The effect on total expenditures of the decline in the transportation equipment industry is quite apparent.

## 2.-Research-Development Expenditures for Work Done in Canada, by Major Industrial Group, 1957 and 1959

| Industrial Group |  |
| ---: | ---: | ---: | ---: | ---: | ---: |

Table 3 indicates trends in research-development expenditures performed within companies, by individual industry. To point up the fact that expenditure in all industries, other than transportation equipment, has increased from year to year and that, omitting transportation equipment, total expenditure has shown steady advance, the transportation equipment industry is given separately at the end of the table. It should be noted that electrical apparatus and supplies and chemical products industries account for more than 40 p.c. of the total outlays, excluding transportation, in all years shown.

## 3.-Research-Development Expenditures Performed Within Reporting Companies, by Industry, 1957-60

| Industry | 1957 | 1958 ${ }^{1}$ | 1959 | 1960 ${ }^{1}$ |

| Transportation equipment | 64,566,901 | 67,613,104 | 25,570,722 | 8,072,106 |
| Totals, All Industries......................... | 124,530,847 | 132,480,800 | 96,690,381 | 81,781,155 |

${ }^{1}$ Estimates based on companies' intentions.
Table 4 gives the distribution of research-development expenditures in 1959 by product field. Of the total of $\$ 96,700,000$, representing outlays in Canada within reporting companies and funds from affiliates, government and other sources, more than 50 p.c. was for research-development expenditures on aircraft and parts, chemicals and electronics. The Federal Government provided the transportation equipment industry with $\$ 13,000,000$ in 1959, most of which was for aircraft and parts.

## 4.-Research-Development Expenditures Performed Within Reporting Companies, by Product Field, 1959

\hline
\end{tabular}

The sources of funds for research-development done within companies also changed substantially from 1957 to 1959 . Table 5 shows that most of the differences were caused by changes in the allocation of government funds for research-development in the transportation equipment industry. Because of this, the total value of research done within companies declined substantially even though reporting companies and their affiliates ncreased their own expenditures significantly.

## 5．－Sources of Funds for Research－Development Performed Within Reporting Companies，by Industry， 1957 and 1959

| Industry | Reporting Company | Parent， <br> Affiliated and／or Subsidiary Companies | Govern－ ment Funds | Other | Tota |

## Section 5.-Federal Government Expenditures on Scientific Activities

During the year ended Mar. 31, 1959, the Federal Government spent $\$ 222,600,000$ on scientific activities. The following year, expenditure declined slightly to $\$ 212,300,000$. Most of this expenditure is made by six departments or agencies of the Federal Government and for the most part each organization provides specialized scientific services in a specific field. The departments and agencies spending most of the funds for scientific activities are as follows, with the expenditure indicated for the fiscal year 1959-60 and for 1958-59 in brackets: Department of Agriculture, $\$ 31,069,000(\$ 27,213,000)$; Atomic Energy of Canada Limited, $\$ 32,130,000$ ( $\$ 27,545,000$ ); Department of Mines and Technical Surveys, $\$ 27,684,000$ ( $\$ 27,055,000$ ); National Research Council, $\$ 32,824,000$ ( $\$ 27,160,000$ ); Department of National Defence, $\$ 34,020,000(\$ 66,229,000)$; and Defence Research Board, $\$ 30,600,000$ ( $\$ 29,300,000$ ). The largest change between the two years occurred in the Department of National Defence expenditures as a result of a decision to substantially readjust the program being carried out in connection with the procurement of military aircraft.

Scientific activities include all activities in the natural sciences concerned with the creation of new knowledge, new applications of knowledge to useful purposes or the furtherance of both the creation of knowledge or new applications. Included in scientific activities are scientific-research development, capital expenditures for research plant and equipment, scientific data collection, scientific information and scholarship and fellowship programs.

Research-development including research done within the facilities of the Federal Government as well as work done by private organizations and financed by the government, amounted to over 70 p.c. of all government expenditures on scientific activities during the fiscal year 1959-60. Costs of the planning and administering of research-development programs as well as grants in aid of research are included as part of the research-development program.

Scientific data collection includes the collection of scientific data on natural phenomena where such data have general use such as for mapping, collection of geologic, hydrologic, geo-magnetic, meteorologic and other physical data; collection of entomological specimens and other biological data. During the year ended Mar. 31, 1960, $\$ 20,600,000$ was spent on this activity, an increase of $\$ 2,500,000$ over the previous year. The Surveys and Mapping Branch of the Department of Mines and Technical Surveys accounted for 75 p.c. of the expenditures for scientific data collection.

Scientific information includes library operations, translation, procurement and publication services in connection with information required in or resulting from scientific activities. In the fiscal year $1959-60, \$ 4,900,000$ was spent on this aspect of scientific activities, with much of the expenditure being made by the Surveys and Mapping Branch of the Department of Mines and Technical Surveys. Scholarship and fellowship programs include grants to government and non-government employees who are or will be engaged in a scientific activity. This program amounted to $\$ 2,000,000$ during the fiscal year 1959-60, most of which was administered by the National Research Council.

Two surveys of expenditure of the Federal Government on scientific activities have been carried out. The first survey requested information based on final expenditure for the fiscal year 1958-59 and for expected expenditure based on departmental estimates for 1959-60. The results of this survey were presented in greater detail in the 1961 Year Book and were published in bulletin form (Catalogue No. 13-515). The second survey has been carried out requesting similar information for the fiscal years 1960-61 and 1961-62; results of this survey will be reviewed in the 1963 Year Book.

## Section 1.-Canadian Criminal Law and Procedure $\dagger$

The system under which justice is administered in a State is never rigid. To have it so would be neither expedient nor indeed possible. A judicial system must grow and adapt itself to the requirements of the people and the exact limits of the powers of different legislative bodies require continued definition.

The criminal law of Canada has as its foundation the criminal common law of England built up through the ages and consisting first of customs and usages, and later expanded by principles enunciated by generations of judges. There is no statutory declaration of the introduction of English criminal law into those parts of Canada that are now the Provinces of New Brunswick, Nova Scotia and Prince Edward Island. Its introduction there depends upon a principle of the common law itself by which English law was declared to be in force in uninhabited territory discovered and planted by British subjects, except in so far as local conditions made it inapplicable. The same may be said of Newfoundland although the colony dealt with the subject in a statute of 1837. In Quebec its reception depends upon a Royal Proclamation of 1763 and the Quebec Act of 1774 . In each of the other provinces and in the Yukon and Northwest Territories the matter has been dealt with by statute.

The judicial systems of the provinces as they exist today are based upon the British North America Act of 1867. Sect. 91 of the Act provides that "The exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters". By Sect. 92 (14), the legislature of the province exclusively may make laws in relation to "the administration of justice in the province, including the constitution, maintenance and organization of provincial courts, both of civil and criminal jurisdiction and including procedure in civil matters in its courts". The Parliament of Canada may, however (Sect. 101), establish any additional courts for the better administration of the laws of Canada. It should be noted that the Statute of Westminster, 1931 effected important changes

[^113]particularly by abrogating the Colonial Laws Validity Act, 1865 (Br.) and confirming the right of a dominion to make laws having extraterritorial operation. Particulars of the federal judiciaries are given in Chapter II, pp. 71-73, and provincial judiciaries are dealt with briefly at pp. 73-74; more detailed information on provincial judiciaries is given in the 1954 Year Book, pp. 47-55.

At the time of Confederation each of the colonies affected had its own body of statutes relating to the criminal law. In 1869, in an endeavour to assimilate them into a uniform system applicable throughout Canada, Parliament passed a series of Acts some of which dealt with offences of special kinds and others with procedure. Most notable of the latter was the Criminal Procedure Act, but other Acts provided for the speedy trial or summary trial of indictable offences, the powers and jurisdiction of justices of the peace in summary conviction matters and otherwise, and the procedure in respect of juvenile offenders.

Codification of the criminal law through a Criminal Code Bill founded on the English draft code of 1878, Stephen's Digest of Criminal Law, Burbidge's Digest of the Canadian Criminal Law, and the relevant Canadian statutes was brought about by the Minister of Justice, Sir John Thompson, in 1892. This Bill became the Criminal Code of Canada and came into force on July 1, 1893. It must be remembered, however, that the Criminal Code was not exhaustive of the criminal law. It was still necessary to refer to English law in certain matters of procedure and it was still possible to prosecute for offences at common law. Moreover, Parliament has declared offences against certain other Acts, e.g., the Opium and Narcotic Drug Act, to be criminal offences and the same was done in the Defence of Canada Regulations and the Wartime Prices and Trade Board Regulations (neither now in force) promulgated under the authority of the War Measures Act.

It is often difficult to distinguish between 'law' and 'procedure'. Procedure may be interpreted to relate simply to the organic working of the courts but, in a wider sense, it may also affect the rights or alter the legal relations arising out of any given state of facts. For present purposes it will be useful to note that writers on jurisprudence describe law as being substantive or adjective. "Substantive law is concerned with the ends which the administration of justice seeks; procedural (adjective) law deals with the means and instruments by which these ends are to be obtained."* With reference to the criminal law, the former may be taken to include the provisions concerning criminal responsibility, the definition of 'offences' and the punishment for those offences, and the latter to include provisions for enforcement, e.g., powers to search and to arrest, for the modes of trial and for the proof of facts. Broadly speaking, the Criminal Code observes the distinction although it might appear that the provisions for preventive detention of habitual criminals and criminal sexual psychopaths partake of the nature of both classes.

An examination and study of the Criminal Code was authorized by Order in Council dated Feb. 3, 1949, and the Commission assigned the task of revising the Code presented its report with a draft Bill in February 1952. After coming before successive sessions of Parliament it was finally enacted on June 15, 1954 and the new Criminal Code (SC 1953-54, c. 51) came into effect on Apr. 1, 1955. A short outline of the system that existed under the repealed Code together with the major revisions effected by the new Code is given in the 1955 Year Book, pp. 295-298.

Since the new Code came into force several amendments have been made, for the most part in relation to procedure. Among the most notable of these, as well in point of procedure as of substance, are: an amendment in 1956 providing that motions for leave to appeal to the Supreme Court of Canada in criminal cases should be heard by a quorum (at least five) of judges of that Court instead of a single judge; amendments effected by SC 1959, c. 41, providing a statutory extension of the definition of "obscenity" and making provision for seizure and condemnation of offending material without a charge necessarily being laid against any person; extensive amendments relating to the allowing of time for payment of fines; amendments dealing with offences committed in aircraft in flight over the high seas; an amendment forbidding the publication in a newspaper or broadcast of

[^114]a report that any admission or confession was tendered in evidence at a preliminary inquiry or a report of the nature of such admission or confession unless the accused has been discharged or, if the accused has been committed for trial, the trial has ended.

The Parole Act (SC 1958, c. 38), brought into force on Feb. 15, 1959, revises the parole system and provides for the establishment of a National Parole Board (see pp. 373-374).

It is most important to notice that in 1960 (SC 1960, c. 44) Parliament enacted what is to be known as the Canadian Bill of Rights. Although the Act sets out further details, its general scope appears in Sect. 1, which reads as follows:-
" 1 . It is hereby recognized and declared that in Canada there have existed and shall continue to exist without discrimination by reason of race, national origin, colour, religion or sex, the following human rights and fundamental freedoms, namely,
(a) the right of the individual to life, liberty, security of the person and enjoyment of property, and the right not to be deprived thereof except by due process of law;
(b) the right of the individual to equality before the law and the protection of the law;
(c) freedom of religion;
(d) freedom of speech;
(e) freedom of assembly and association; and
(f) freedom of the press."

Although the Bill of Rights has been invoked on various occasions during its first year in force, the courts have not held it to affect the operation of the Criminal Code.

There were important changes to the Criminal Code in 1961 (SC 1960-61, cc. 43 and 44). The new classification of murder is best shown by quoting Sects. 202A and 206 of . 44:-
"202A. (1) Murder is capital murder or non-capital murder.
(2) Murder is capital murder, in respect of any person, where
(a) it is planned and deliberate on the part of such person,
(b) it is within section 202 and such person
(i) by his own act caused or assisted in causing the bodily harm from which the death ensued,
(ii) by his own act administered or assisted in administering the stupefying or overpowering thing from which the death ensued,
(iii) by his own act stopped or assisted in the stopping of the breath from which the death ensued,
(iv) himself used, or had upon his person the weapon as a consequence of which the death ensued, or
(v) counselled or procured another person to do any act mentioned in subparagraph (i), (ii) or (iii) or to use any weapon mentioned in subparagraph (iv), or
(c) such person by his own act caused or assisted in causing the death of
(i) a police officer, police constable, constable, sheriff, deputy sheriff, sheriff's officer or other person employed for the preservation and maintenance of the public peace, acting in the course of his duties, or
(ii) a warden, deputy warden, instructor, keeper, gaoler, guard or other officer or permanent employee of a prison, acting in the course of his duties,
or counselled or procured another person to do any act causing or assisting in causing the death.
(3) All murder other than capital murder is non-capital murder."

Sect. 206 of the Act (c. 44) was repealed and the following substituted therefore:-
"206. (1) Every one who commits capital murder is guilty of an indictable offence and shall be sentenced to death.
(2) Every one who commits non-capital murder is guilty of an indictable offence and shall be sentenced to imprisonment for life.
(3) Notwithstanding subsection 1 , a person who appears to the court to have been under the age of eighteen years at the time he committed a capital murder shall not be sentenced to death upon conviction therefor but shall be sentenced to imprisonment for life.
(4) For the purposes of Part XX, the sentence of imprisonment for life prescribed by this section is a minimum punishment."
The Act provides an automatic appeal to the Court of Appeal for a person sentenced to death, and also that a person so sentenced may appeal to the Supreme Court of Canada on any ground of law or fact or mixed law and fact.
C. 44 of the 1960-61 Statutes contains a long list of changes in the Criminal Code. As in previous amendments, most of these changes deal with procedure but it may be useful to mention the change in relation to persons formerly described as "criminal sexual psychopaths", who may become liable to preventive detention. The term criminal sexual psychopaths has been dropped and the relevant definition now reads as follows:-
"...'dangerous sexual offender' means a person who, by his conduct in any sexual matter, has shown a failure to control his sexual impulses, and who is likely to cause injury, pain or other evil to any person, through failure in the future to control his sexual impulses or is likely to commit a further sexual offence."

## Section 2.-Adult Offenders and Convictions

The main interest in adult criminal statistics is concerned with those persons guilty of the more serious crimes. Such offenders are fewer than those who commit summary conviction offences but, from the standpoint of the protection of society, they are more important. The following Subsection 1 deals with adults convicted of indictable offences, Subsection 2 with young adult offenders convicted of indictable offences, Subsection 3 with convictions for summary conviction offences and Subsection 4 with appeals.

A more adequate series of statistics on crime and delinquency is being developed by the Dominion Bureau of Statistics. However, until such time as the new coverage becomes available, the series of tables carried in former editions of the Year Book is being continued with some omissions and with little textual comment.

## Subsection 1.-Adults Convicted of Indictable Offences

Statistics of indictable crimes are based on persons. While individuals may be charged with more than one offence, only one offence is tabulated for each person. This offence is selected according to the following criteria: (1) if the person was tried on several charges, the offence selected is that for which proceedings were carried to the furthest stage-conviction and sentence; (2) if there were several convictions, the offence selected is that for which the heaviest punishment was awarded; (3) if the final result of proceedings on two or more charges was the same, the offence selected is the more serious one, as measured by the maximum penalty allowed by the law; (4) if a person was prosecuted for one offence and convicted of another-for example, charged with murder and convicted of manslaugh-ter-the offence selected is the one of which the person was convicted.

In 1960 there were 39,343 adults charged with 73,411 indictable offences, of whom 35,443 were found guilty of 64,707 offences. In 1959, 34,812 adults were charged with 64,085 indictable offences, of whom 31,092 were found guilty of 56,204 offences.

## Subsection 3.-Convictions for Summary Conviction Offences

Offences punishable on summary conviction are triable by magistrates and justices of the peace under Part XXIV of the Criminal Code (SC 1953-54, c. 51) or under the provincial summary conviction Acts as the case may be. Data relating to these offences are based on convictions. No information is available on either the number of persons involved in these offences or the number of charges.

Subsection 4.-Appeals
Tables 17 and 18 show the disposition of appeals of accused persons, of the Crown, and of informants relating to indictable offences and offences punishable on summary conviction. These appeals include cases that were tried during 1959 as well as those tried during 1960. The results of the new trials ordered by appeal courts in 1960 will be reported for the year in which the case is disposed of.

## Section 3.-Juvenile Delinquents

Juvenile Delinquent, as defined in the Juvenile Delinquents Act, means any child who violates any provision of the Criminal Code or of any federal or provincial statute, or of any by-law or ordinance of any municipality, or who is guilty of sexual immorality or any similar form of vice, or who is liable by reason of any other act to be committed to an industrial school or juvenile reformatory under the provision of any federal or provincial statute. The commission by a child of any of these acts constitutes an offence to be known as a delinquency.

The upper age limit of children brought before the juvenile courts in the provinces varies. The Act defines a child as meaning any boy or girl apparently or actually under the age of 16 years, or such other age as may be directed in any province. In Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta under 16 is the official age; in Newfoundland the official age is under 17; in Quebec, Manitoba and British Columbia the official age is under 18 years. In the interests of uniformity, it has been the practice of the Dominion Bureau of Statistics to publish information about juvenile delinquents 16 years of age or over in the annual report on Statistics of Criminal and Other Offences and to publish data relating to those under 16 years of age in a report entitled Juvenile Delinquents. In 1960, 2,664 juveniles 16 and 17 years of age were found delinquent in those provinces where the upper age limit is under 17 or under 18 years of age.

Included in the statistics of juvenile delinquents are cases (alleged as well as adjudged) which were brought before the courts and dealt with formally. A case was counted separately each time a child appeared before the court for a new delinquency or delinquencies. In instances where multiple delinquencies were dealt with at one court appearance, only one delinquency-the most serious-was selected for tabulation. Delinquencies reported as informal cases by the courts were not included nor were cases of children presenting conduct problems which were not brought to court or which were dealt with by the police, social agencies, schools, or youth-serving agencies. Thus, community facilities for dealing with children's problems may have an influence on the number of cases referred to court and, therefore, an effect on the statistics of juvenile delinquents.

## Section 4．－Adult Correctional Institutions and Training Schools

## Subsection 1．－Statistics of Correctional Institutions and Training Schools

Correctional institutions may be classified under four headings：（1）Penitentiaries－ operated for adult offenders by the Federal Government in which，generally speaking， sentences of over two years are served；（2）Reformatories－operated for adult offenders by the provinces in which individual sentences of up to two years are served；（3）Common Gaols－operated for adult offenders by the provinces or counties in which sentences of up to two years can be served but in which，generally speaking，short－term sentences are served； and（4）Training Schools－operated by the provinces or private organizations under provincial charter for juvenile offenders serving indefinite terms up to the legal age for children in the particular province．

There is a limited amount of statistical information available with respect to these types of institution for the years 1956－60．＂In custody＂figures shown in Table 29 for penitentiaries refer only to those persons under sentence，but the figures for admissions include those received from courts as well as by transfer from other penitentiaries and by cancellation of tickets－of－leave and paroles．Figures for releases include expiry of sentences， transfers between penitentiaries，releases on ticket－of－leave and parole，deaths，pardons and releases on court order．

In custody figures for provincial and county institutions may include, in addition to those serving sentences, persons awaiting trial, on remand for sentence or psychiatric examination, awaiting appeal or deportation, any others not serving sentence and, for training school population, juveniles on placement.

Population figures in Tables 29 and 30 are for a given day of the year, which is Mar. 31 except for Quebec gaols where populations are counted as of Dec. 31. These figures represent, in effect, a yearly census of correctional institutions and as such, are not indicative of the daily average population count. For instance, if an abnormal number of commitments are made to a certain institution on or just prior to Mar. 31, the result will be an unrepresentative population total for the institution in that year.

With regard to the fluctuations that might have occurred during the year between census days, the total population of correctional institutions has shown a general increase since Mar. 31, 1956; totals for training schools and provincial adult institutions have shown a tendency to level off or decline slightly but penitentiary population has increased steadily.
29.-Population in Penitentiaries, Years Ended Mar. 31, 1956-60

|  |  |  |  |  |  |

30.-Populations in Reformatories and Gaols and in Training Schools as at Mar. 31, 1956-60

## Subsection 2.-The Penitentiary Service*

The penitentiaries of Canada are administered by the Commissioner of Penitentiaries, responsible directly to the Minister of Justice. In the year ended Mar. 31, 1962, the federal penitentiaries system consisted of six maximum security, four medium security and nine minimum security institutions, all for males; one prison for women; and two Correctional Staff Colleges.

[^116]The six maximum security institutions receive inmates sentenced by the courts to imprisonment for terms of from two years to life. These are located at New Westminster, B.C., Prince Albert, Sask., Stony Mountain, Man., Kingston, Ont., St. Vincent de Paul, Que., and Dorchester, N.B. Persons sentenced to penitentiary terms in Newfoundland are held in the provincially operated institution at St. John's, under financial arrangements authorized by Sect. 14 of the Penitentiary Act (SC 1960-61, c. 53).

The four medium and the nine minimum security institutions receive inmates transferred from the maximum security (receiving) institutions on the basis of their suitability for special forms of training, including vocational training. Of the medium security institutions, two-Collin's Bay Penitentiary and Joyceville Institution-are within a few miles of Kingston. The other two-the Federal Training Centre and the Leclere Institu-tion-are in close proximity to St. Vincent de Paul.

Seven minimum security Correctional Camps are operated as extensions of a main institution in their respective areas. These are located at William Head and Agassiz, B.C.; Beaver Creek and Landry Crossing near Bracebridge and Petawawa, Ont.; Gatineau (Gatineau Park) and Valleyfield, Que.; and Springhill, N.S. The two minimum security Farm Camps, at St. Vincent de Paul and Collin's Bay, operate as extensions of the two penitentiaries there.

The Prison for Women at Kingston, Ont., receives inmates transferred upon committal to penitentiaries in any part of Canada. Prior to Dec. 1, 1960, it operated as a detached portion of Kingston Penitentiary.

The two Correctional Staff Colleges-one at Kingston, Ont., and one at St. Vincent de Paul, Que.-are for the advanced training of penitentiary officers. The one at Kingston serves English-speaking or bilingual officers and that at St. Vincent de Paul is primarily for French-speaking officers from all parts of Canada.

During the year ended Mar. 31, 1961, there were 6,643 inmates confined in all institutions, of whom 118 were females. This compared with an inmate population for the previous fiscal year of 6,265 , of whom 117 were females. Total disbursements for 1960-61 for the administration, maintenance of inmates and capital expenditures amounted to $\$ 18,362,862$; this was offset by revenue from the sale of land, industries and farm products totalling $\$ 1,203,522$.

During the fiscal year 1962-63, there are planned to be opened five more Correctional Camps-one in the Maritime Provinces, one in Quebec, one in Ontario and two in the Prairie Provinces. In addition, four Farm Camps will be opened-one each at Dorchester Penitentiary, Joyceville Institution, Manitoba Penitentiary and Saskatchewan Penitentiary. A new and enlarged Correctional Staff College at Kingston is also planned for 1962-63 to meet the expanding training needs of English-speaking officers, and a larger Correctional Staff College at St. Vincent de Paul to serve French-speaking officers is planned for a later year. Construction will start in 1962-63 on a drug addiction treatment institution located in the lower mainland area of British Columbia. Institutions for young offenders are planned for the Maritime Provinces and Quebec and medium security institutions are scheduled for Ontario and Quebec. In the same year there will be opened, in the lower mainland of British Columbia, a separate institution for the many Sons of Freedom Sect Doukhobors (male and female) who have been sentenced to long terms of imprisonment.

Many of the recommendations of the Correctional Planning Committee, appointed by the Minister of Justice in 1958 to consider ways in which a more effective and more fully integrated Canadian correctional system could be achieved, were implemented during 1960-61. A major initial step in such implementation was the reorganization of the Penitentiary Service Headquarters into four Divisions-Inmate Training, Organization and Administration, Finance and Services, and Penitentiary Industries. Each Division is headed by a Director with ancillary staff. The Commissioner of Penitentiaries and the Deputy Commissioner of Penitentiaries are the senior members of the Service Headquar-
ters. The Penitentiary Act, 1961 and the Penitentiary Service Regulations, 1962 provide legislative authority for the reorganization. In the decentralization of many penitentiary operations from Headquarters, Regional Directorates were set up for Ontario and Quebec, effective Apr. 1, 1962, and others are scheduled for the 1963-64 fiscal year.

The trend in new institutional construction is toward smaller buildings of 400-500 capacity. Farm Camps are for $80-88$ inmates and other camps of a minimum security nature have a capacity of up to 150 inmates but generally operate at the 80 -inmate level.

## Subsection 3.-The National Parole System*

The progressive correctional system now in operation in Canada places emphasis on reformation rather than on punishment alone for the sake of retribution to society. It is quite obvious from past experience and from the high rate of recidivism among criminals that punishing a person for wrong-doing merely by depriving him of his freedom is not effective in turning that person from crime. It is therefore considered imperative that during his period of incarceration every possible means be taken to reform the inmate through treatment and training and through assistance with his personal problems. Not only is it desirable that the individual be given such assistance and returned to freedom as a useful citizen but it is also undoubtedly preferable for society generally that he be saved from the further resentment and bitterness that would result from imprisonment without assistance. The only way the public can be properly protected is by reforming the offender. Thus the treatment and training program in the institution is a vital part of the whole correctional process and parole is an extension of that training outside the institution.

In January 1959, the National Parole Board, consisting of a chairman and three members, was formed and given absolute jurisdiction over all matters of parole. It operates under authority of the Parole Act (SC 1958, c. 38) which came into force on Feb. 15, 1959, replacing the former Ticket-of-Leave Act administered by the Remission Service of the Department of Justice. A fifth member was appointed on Oct. 1, 1960. The Board has taken over the Remission Service, and the staff of the Board, numbering 100 persons, is known as the National Parole Service.

The basic purpose of parole is to reform and rehabilitate the offender and the function of the National Parole Board is to select those inmates in the various federal and provincial penal institutions who indicate that they sincerely intend to reform, and to assist them in doing so by grant of parole. The Board is not a reviewing authority and is not concerned with the propriety of conviction or the length of sentence but only with the problem of deciding, in each case it considers, whether or not there is a reasonable chance of reformation. Parole should not be confused with clemency and is not granted on humanitarian grounds alone. It is not a matter of shortening sentence, although it has the effect of shortening the time a man spends in gaol. Parole means that an inmate is allowed to serve the remainder of his sentence at large in society but under certain restrictions that will ensure his leading a law-abiding life. These restrictions are designed for the protection of the public and for his own welfare.

The decision of the Board is based on reports it receives from the police, from the trial judge or magistrate and from various people at the institution who deal with the inmate. Reports are also obtained from a psychologist or psychiatrist, when available. Where necessary, a community investigation is conducted to secure as much information as possible about the man's family and background, his work record, and his position in the community. From all these reports, an assessment is made to determine whether or not he has changed his attitude and is likely to lead a law-abiding life. An inmate need not obtain the services of a lawyer to apply for parole. He may apply by sending a letter to the Board and is assisted in preparing such application at the institution, or another person may apply on his behalf. The Board automatically reviews all sentences of over two years. As soon as an application is received, a file is opened and investigation begun,

[^117]the results of which are presented to the Board for decision. All applications and reports are processed by the Parole Board staff at Ottawa. In addition to the headquarters staff, there are 10 Regional Officers stationed across the country. They interview all applicants for parole to give them an opportunity of making verbal representations to a representative of the Board. The Regional Officers also submit to the Board reports of interviews and their assessment of the inmates' suitability for parole. These Regional Officers have authority over the parolees in their various areas, and also give information and counsel to all inmates regarding possibility of parole and preparation for it.

A person on parole is under the care of a supervisor, usually an after-care agency worker or a probation officer, who reports to the Regional Officer. If he violates the conditions of his parole or commits further offence or misbehaves in any manner, the Board may revoke his parole and return him to the institution to serve that part of his sentence outstanding at the time his parole was granted.

The inmate coming out of an institution faces many problems in regaining his place in society. He is assisted as much as possible by the members of the Parole Service, the after-care agencies and the provincial probation officers. But the success of the parole system depends on the public's understanding of the purpose of parole and its sympathy toward the problems of the ex-inmate. If he is unable to get a job or form new associations because of his past, the chances of his being rehabilitated are remote. However, with the increasing efficiency of the system, with greater co-operation and understanding among all people involved in the correction system and with the public generally, recidivism in Canada should be lessened and some of the problems of criminality solved.

In the first 35 months of operation (to Nov. 30, 1961) the Parole Board reviewed 21,400 cases, including applications for parole and automatic parole review, and granted 6,405 paroles. During the same period, the Board revoked 512 paroles, which is a failure rate of about 8 p.c. related to the number of paroles granted.

## Section 5.-Police Forces

The Police Forces of Canada are organized under three groups: (1) the Federal Force, which is the Royal Canadian Mounted Police; (2) Provincial Police Forces-the Provinces of Ontario and Quebec have organized Provincial Police Forces, all other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their borders; and (3) Municipal Police Forces-each urban centre of reasonable size maintains its own police force, or engages the services of the provincial police under contract, to attend to police matters within its boundaries.

A new method of reporting police statistics, known as the Uniform Crime Reporting System, commenced on Jan. 1, 1962 . The system was developed by the Dominion Bureau of Statistics in co-operation with the Canadian Association of Chiefs of Police, working through their committee on the Uniform Recording of Police Activities. The Uniform Crime Reporting System will allow for the eventual publication of more complete and meaningful data. For this reason police statistics are not carried in this edition of the Year Book.

## Subsection 1.-The Royal Canadian Mounted Police

The Royal Canadian Mounted Police is a civil force maintained by the Federal Government and was established in 1873 as the North-West Mounted Police for service in what was then the North-West Territories. In recognition of its services, it was granted the use of the prefix "Royal" by King Edward VII in 1904. Its sphere of operations was expanded in 1918 to include all of Canada west of Port Arthur and Fort William and in 1920 it absorbed the Dominion Police, its headquarters was transferred from Regina to Ottawa and its title was changed to Royal Canadian Mounted Police.

The Force is under the control of the Minister of Justice and is headed by a Commissioner who holds the rank and status of a Deputy Minister. Officers are commissioned by the Crown and are selected from the non-commissioned ranks. The Force has complete jurisdiction in the enforcement of the federal statutes. By arrangement between the federal and provincial governments it enforces the provincial statutes and the Criminal Code in all provinces exclusive of Ontario and Quebec and under special agreement it polices some 119 municipalities. It is the sole police force in the Yukon and Northwest Territories, where it also performs various administrative duties on behalf of certain departments of the Federal Government. It maintains liaison officers in London and Washington and represents Canada in the International Criminal Police Organization which has headquarters in Paris.

Of the Force's 17 divisions, 12 are actively engaged in the work of law enforcement, as are some 41 subdivisions and 639 detachments. The five remaining divisions are "Headquarters", "Depot" and " N ", which are maintained as training centres, and "Marine" and "Air", which support the operations of the land divisions. A teletype system links the widespread divisional headquarters with the administrative centre at Ottawa and a network of fixed and mobile radio units operates within the provinces. Focal point of the Force's criminal identification work is the Headquarters Identification Branch; its services, together with those of the 39 divisional and subdivisional units and the three Crime Detection Laboratories, are available to police forces throughout Canada. The Force operates the Canadian Police College at which Force members and selected representatives of other Canadian and foreign police forces may study the latest advances in the fields of crime prevention and detection.

The uniform strength of the Force at Mar. 31, 1961 was 6,140, including Marine Constables and Special Constables, at which time it maintained some 1,691 motor vehicles, 17 aircraft, 73 ships and boats, 215 sleigh dogs, 33 police service dogs and 231 horses.

## Subsection 2.-Provincial Police Forces

Quebec Provincial Police Force.-This Force is responsible for the maintenance of peace, order and public safety throughout the Province of Quebec and also for the prevention and investigation of criminal offences and of violations of the laws of that province. Headquarters of the Force is located at Montreal.

To facilitate operations, the territory is divided into two parts designated as the Montreal Division and the Quebec Division, each of which is divided into three subdivisions. The subdivisions of the Montreal Division are administered from Montreal, Hull and Granby and the subdivisions of the Quebec Division from Quebec City, Rimouski and Chicoutimi. There are 59 detachments in the Montreal Division and 51 in the Quebec Division.

The Quebec Provincial Police Force has a complement of about 1,600 men under the orders of a Director General who is responsible to the Attorney General of the province. The personnel consists of the Director General; a Deputy Director General; two Assistant Directors, each having charge of a Division; officers holding the position of chief inspector or inspector; non-commissioned officers with the rank of sergeant-major, staff-sergeant, sergeant or corporal; and constables and recruits.

Ontario Provincial Police.-The Ontario Provincial Police Force is maintained by the Ontario Government and administered by the Attorney-General's Department. It is responsible for law enforcement in the rural and unorganized parts of the province and in certain municipalities by contract. The development of the Force from its beginning in the early years of Confederation to the passing of the Police Act in 1946, is outlined in the 1950 Year Book, pp. 332-333.

The Force, with a strength of approximately 1,945 , consists of General Headquarters at Toronto and 17 District Headquarters located at Chatham, London, Burlington, Niagara Falls, Toronto, Mount Forest, Barrie, Peterborough, Belleville, Perth, Long Sault, North Bay, Sudbury, Sault Ste. Marie, Timmins, Port Arthur and Kenora. Each District has detachments adequate to meet local law-enforcement requirements. A Criminal Investigation Branch, under the command of an Assistant Commissioner, is maintained at Toronto to handle crimes of a major nature.

The Force operates one of the largest frequency modulation radio networks in the world, which is a most efficient method of combating every type of lawlessness. The network includes 74 fixed stations: one 300 -watt; eighteen 250 -watt, one of which is dualcontrolled; one 100 -watt; two 75 -watt; three 40 -watt; and forty-nine 60 -watt. It also includes 640 radio-equipped mobile units including five of the launches operating on Lake Temagami, Lake Simcoe, Lake Nipissing, Lake of the Woods and Georgian Bay.

In 1961, the Ontario Provincial Police Force policed 46 municipalities which requested this service under the provisions of the Police Act.

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

Agriculture in Canada, though no longer supreme among the primary industries, is of major importance to the economy of the country as a whole and is still basic to many areas. The area of occupied farm land of 271,756 sq. miles (1956) amounts to only 10.7 p.c. of the total area of the provinces and has shown little increase during the past two decades, but cultivation in this static area has become greatly intensified, producing most of the food products required by a rapidly increasing population and providing surpluses of wheat and other grains, wheat flour, livestock, fruits and vegetables and of many prepared and manufactured agricultural products for world markets. The agricultural economy has been undergoing continual change ever since the pioneer farmer first began to produce more than his requirements and to desire products other than those produced on his own land, but that change has now become extremely marked. The evolution in farming practice under the impact of technological and scientific advances, its commercialization and the development of its greater interdependence on other branches of the economy are outlined in the following special article. Other articles that have appeared in previous Year Books dealing with the historical development of agriculture and with significant features of that progress are listed in Chapter XXVI under the heading "Special Material Published in Former Editions of the Year Book".

## RECENT CHANGES IN CANADIAN AGRICULTURE*

Canada's great industrial growth and increasing population are leading to vigorous expansion in the domestic demand for agricultural products, and thus to a continuing increase in output. However, the productive capacity of the farm has also advanced so rapidly that this necessary increase in output is being achieved despite a decline in the number of people employed in agriculture. In 1941, of a total employed civilian labour force of $4,200,000$ people, $1,200,000$ or 28.6 p.c. were engaged in agricultural pursuits. In 1961 the total labour force had risen to $6,518,000$ people but the agricultural labour force had declined to 674,000 or to 10.3 p.c. of the total.

[^118]Such a shift toward industrial employment is characteristic of expanding economies where more rapid growth in productive resources and income than in population leads to a less rapid increase in demand for food than for manufactured products. The Canadian farmer, like his counterpart in other advanced countries, is faced with a scarcity of farm labour and must pay higher wages to attract or retain the needed farm help. He finds a cure for this difficulty in larger scale farming and in greater reliance on machine power than on farm labour. In other days, when large areas of good land were still available for settlement, increased output would have been achieved by an increase in the number of farms. But today it generally means an increase in the size of existing farms and a decrease in opportunities to become a farm operator. The number of farms declined steadily from 728,623 in 1931 to 575,015 in 1956 but the average size of farm increased from 224 acres to 302 in the same period. The actual increase in size of farm is really more pronounced than is indicated by these figures because the average size is held down by an increased number of specialized poultry and tobacco farms and market gardens which require only a small acreage for operation.

Farm mechanization has been the most important contributor to increased productivity and lower costs per unit of output. The quickening of the tempo of mechanization is clearly illustrated by the rise in sales of farm implements and equipment from $\$ 47,700,000$ in 1940 and $\$ 64,300,000$ in 1945 to a peak of $\$ 250,000,000$ in 1952 and a still high level of $\$ 217,000,000$ in 1960. However, recourse to mechanization is only one indicator of the Canadian farmer's desire to derive full advantage from new techniques and experimental research. He keeps abreast of the findings made by the Research Branch of the federal Department of Agriculture and other agricultural research agencies, knowing full well that research in soil fertility and utilization, the development of improved breeds and strains of animals and plants and the finding of better methods of coping with pests, diseases and other threats to animals and plants are all designed to increase his output and bring larger returns. The increasing use of commercial fertilizers and pesticides are two examples, among many, of the use of more efficient techniques or methods in farming. Sales of commercial fertilizers to farmers rose from 212,479 tons in 1935 to 819,803 tons in 1953, to 870,539 tons in 1958 and to 935,428 tons in 1960. Sales of pesticides rose from a low value of $\$ 5,400,000$ in 1947 to a peak of $\$ 20,200,000$ in 1956 and since then have been maintained at a high level.

The availability and use of electricity is another factor that has contributed at least indirectly to increased productivity. It has made a tremendous change in farm life, lessening the harshness and tediousness of farm chores and giving the farm home all the conveniences of the city home. In 1931, only 10.1 p.c. of Canada's 728,623 farms had electric power; 20 years later 51.3 p.c. of the 623,091 farms and in 1956 as much as 73.5 p.c. of the 575,015 farms enjoyed the use of electric power. There was great variation in farm electrification among the provinces in 1951. Newfoundland, Prince Edward Island and the Prairie Provinces had by far the lowest proportions of farms with electric power. Changes from 1951 to 1956 were slight in Newfoundland where 38.1 p.c. of the farms in 1951 and 44.4 p.c. in 1956 had electricity, but were quite sharp in Prince Edward Island from 22.0 p.c. to 39.7 p.c., in Manitoba from 48.1 p.c. to 84.3 p.c., in Saskatchewan from 16.3 p.c. to 42.3 p.c. and in Alberta from 24.6 p.c. to 51.5 p.c. The over-all increase for the three Prairie Provinces was from 25.8 p.c. to 54.4 p.c. In the other provinces, the proportions in 1951 ranged from 60.3 p.c. in New Brunswick to 73.8 p.c. in Ontario and by $1956,89.1$ p.c. of the farms in Ontario, 88.6 p.c. of the farms in Nova Scotia, 88.1 p.c. of those in Quebec, 87.4 p.c. of those in New Brunswick and 81.9 p.c. of those in British Columbia were electrically operated.

Changes in size and type of demand for farm products, technical and managerial innovations on the farm, the enlargement of urban centres and the entry of industry into rural areas are all factors conducive to changes in land use. The most obvious is the transfer of land from farm to non-farm uses. The construction of highways and airports and the spreading out of residential and industrial areas have cut into the formerly cultivated land close to most urban centres. The extent of the loss from such developments
is not exactly known but there is no doubt that it is of great concern in certain localities. There are other changes in land use that are also of significance, such as the much more intensified use of agricultural land for agricultural production and trends in type of product. For a country the size of Canada, with such varying climates and such a wide variety of types of farming, the patterns and changes in farm land use are equally varied and almost impossible to describe in detail. However, a comparison of the relative contributions of grain crops and of livestock and livestock products to total farm cash income gives a general indication of the changes taking place during the past quarter-century. Livestock's share has increased almost steadily from 43.4 p.c. of the total in the period 1926-30 to 56.5 p.c. in $1941-45$ and 59.8 p.c. in 1956-60. Grain crops, on the other hand, have declined almost steadily from 54.0 p.c. of the total in 1926-30 to 39.5 p.c. in 1941-45 and 37.2 p.c. in 1956-60.

Greater productivity and greater demand for farm products generally have led to a rise in the value of farm land, and the modernization of farms together with the larger size of farm enterprises obviously have been accompanied by a rise in the value of capital invested in land, buildings, machinery and livestock. For Canada as a whole, capital invested in the farm business has risen from $\$ 5,600,000,000$ in 1945 to $\$ 11,600,000,000$ in 1960 -investment in land and buildings has risen from $\$ 3,700,000,000$ to $\$ 7,400,000,000$; investment in machinery from $\$ 827,000,000$ to $\$ 2,200,000,000$; and investment in livestock from $\$ 1,000,000,000$ to $\$ 1,900,000,000$.

Farmers in most areas sell their products in their original form to a nearby local assembler and usually transport them to a local market. The general pattern is to specialize in the production of one or two commodities and to sell to firms that specialize in the processing or marketing of these commodities. The extent to which this pattern is established varies by commodity. The wheat producer of the Prairie Provinces has long delivered his wheat to the country elevator-the practice of taking grain to a local mill for conversion into flour had virtually disappeared twenty years ago. Farmers and city people alike buy baker's bread. Feed grains are fed to a considerable extent on the farm where they are produced. Nevertheless, many livestock farmers in Central and Eastern Canada now purchase most of their feed requirements. In these parts of Canada, there has been a long-term trend toward dependence on ready-mixed feeds, especially for poultry and hogs.

Associated with this trend has been the emergence of vertical integration and contract farming in livestock production, a trend that has probably developed farthest in the production of broilers. Producer, hatcheryman, feed dealer, processor and retailer may all be integrated through a series of contracts. Under these arrangements the farmer is supplied with both feed and chicks. He feeds the chicks according to the instructions of the feed dealer and ships out the broilers at the designated time. He usually buys chicks and feed on credit and is more or less guaranteed a fixed sum per broiler, over these costs, when the chickens are marketed. The producer makes his management decision when he signs the production contract and then works under the direction of others. The advantage of such operation is that it permits the planning of a steady flow of output for hatcheries and processing plants and establishes a steady dependable market for the feed dealer and a source of continuous supply for the retailer, all of which contributes to high production efficiency and low production costs. On the other hand, under this form of operation farmers lose some of their traditional independence and mass production under contract arrangements sometimes leads to over-production. However, regardless of these advantages or disadvantages, such integrated arrangements have become the prevailing plan in the production of chicken and turkey broilers, and are found to a smaller extent in the production of eggs, heavy turkeys and hogs. It is difficult to forecast whether integration of production and marketing will proceed as far with these commodities as with broilers but there were evidences of a strong trend in this direction before the institution of the deficiency-payment method of price support; these payments are available for only a limited amount of production from each farm.

With respect to beef cattle, the trend appears to be for a separation of the calf production and finishing functions, and markets for feeder cattle are well established. Another marked trend has been for an increasing proportion of slaughter steers to be well finished. Good and choice carcasses increased from 17 p.c. to 52 p.c. of all cattle slaughtered in inspected plants between 1950 and 1961. Total meat consumption per person increased from 127.1 lb . to 147.6 lb . in that period, beef accounting for almost all the increase although there was also some advance in lamb and canned meats. Meat prices relative to income levels declined during the period.

Probably the most important trend in fluid milk marketing in recent years has been the replacement of the milk can with the bulk tank. While this has made possible the provision of higher quality fluid milk, especially in hot weather, it has impaired the competitive position of the small-scale fluid milk shipper. There has also been a trend for city dairies to supply small town and village markets at a considerable distance from the dairy. Milk is shipped in cartons several hundred miles and in some provinces local dairies serving small towns have virtually disappeared.

Total consumption of fats per person has remained fairly stable in recent years but there has been a definite trend toward the consumption of less fat in dairy products. Butter consumption per person declined from 20.5 lb . in 1956 to 16.9 lb . in 1960 and there are indications of a further drop of one pound per person in 1961. Fluid whole milk also showed a slight downward trend in consumption during this period. In part, 2-p.c. milk was substituted for whole milk and the consumption of skimmed milk powder increased from 5.1 lb . per person in 1956 to 6.6 lb . in 1960.

In the fruit and vegetable field, probably the most significant development of the past decade has been the expansion of demand for frozen foods. Consumption of frozen fruits packed in consumer packages increased sixfold, on a per capita basis, between 1951 and 1960 and that of frozen vegetables about threefold. At the same time there has been a marked upward trend in the consumption of fruit juice, especially frozen concentrated, and of vegetable juice. Consumption trends for the canned and dried products have been less pronounced except when new products such as instant mashed potatoes have been introduced.

Of significance to the food producer is the trend toward complete integration of wholesaling and retailing functions for many food commodities by corporate chain store organizations. They buy directly from processors, assemblers or sometimes producers. Their share of the Canadian retail food business has increased from 32 p.c. in 1951 to over 45 p.c. in 1961. Meanwhile, the growth of voluntary chains, which effect a somewhat similar integration through contracts, has been almost phenomenal. Their share of the food business increased from 5 p.c. in 1951 to over 25 p.c. in 1961.* Associated with the development of chains, corporate and voluntary, has been the growth of self-service retailing, and associated with the trend toward self-service retailing has been the very greatly increased use of packaging. Many other developments appear to be on the horizon in food marketing. Food discount houses and 'bantam' supermarkets are being built. Vending machines may perform an important role in food distribution in the future. Techniques have been developed for the tenderization of beef before it is sold, and tenderized beef is being market-tested. New or improved processed food products and prepared foods appear on the market quite frequently.

Over the past decade consumers have tended to spend about 23 p.c. of their disposable income on food and agricultural products. With increasing incomes there has been a shift to more expensive foods and associated services. If consumers in 1960 had purchased the same basket of food as they did in 1949 it would have taken only 20 p.c. of their incomes. During the period 1953-60 the farm value as a percentage of the retail value declined from 50 p.c. to about 43 p.c. This decrease in the farm share does not indicate the relative profit or loss to the farmer but rather is largely the result of increasing expenditures for assembly, processing and distribution and the addition of extra services.

[^119]
## Section 1.-Federal Government in Relation to Agriculture*

The federal Department of Agriculture dates from Confederation. It was established in 1867 as an outgrowth of a Bureau of Agriculture set up in 1852 by an Act of the Legislature of the Province of Canada. The Department derives its authority from the British North America Act, 1867, which states in part that "in each province, the legislature may make laws in relation to agriculture in the province" and that "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada".

A Department of Agriculture with a Minister of Agriculture at its head was accordingly established as part of the Government of Canada. Departments of Agriculture headed by provincial Ministers of Agriculture were also set up by the provincial governments, except in the Province of Newfoundland where agricultural affairs are dealt with by the Agricultural Division of the Department of Mines, Agriculture and Resources. The agricultural affairs of the Yukon and Northwest Territories are administered for the Federal Government by the Territorial Division, Northern Administration Branch, Department of Northern Affairs and National Resources.

## Subsection 1.-Services of the Department of Agriculture

Broadly speaking, the activities of the Department of Agriculture may be grouped under three headings: research, promotional and regulatory services, and assistance programs. Research work is aimed at the solution of practical farm problems through the application of fundamental scientific research to all aspects of soil management and crop and animal production. Promotional and regulatory services are directed toward the prevention or eradication of crop and livestock pests, the inspection and grading of agricultural products and the establishment of sound policies for crop and livestock improvement. Assistance programs cover the sphere of soil and water conservation, price stability, provision of credit, rural rehabilitation and development and a degree of crop insurance and income security in the event of crop failure. The Department employs a staff of more than 10,000 persons.

The organization of the Department comprises three branches-Research, Production and Marketing, and Administration. Other activities closely allied with the Department and responsible to the Minister of Agriculture are those of the Farm Credit Corporation, the Board of Grain Commissioners and the Canadian Wheat Board (see p. 384 and Index).

Research Branch.-The Research Branch is the principal research agency of the Department. It conducts a broad program of scientific investigation covering both basic studies and practical attacks on agricultural problems. There are seven Research Institutes at Ottawa; two Research Institutes, nine Regional Research Stations, six Research Laboratories, 23 Experimental Farms, two Forest Nursery Stations and 20 Substations are located throughout the ten provinces and the Yukon and Northwest Territories.

The Research Branch serves all principal agricultural areas in Canada and co-ordinates its efforts with those of the National Research Council, universities and kindred agencies. One staff group is charged with the planning and co-ordination of the program and another with the administration required to carry it out. Four directors, representing divisions of animals, crops, soils, entomology and plant pathology, assist the programming of the work. Three research services-statistics, engineering, and analytical chemistry, located with the administrative and executive group at Ottawa-provide research groups across the country with specialized leadership and service and undertake critical researches or other creative work as required.

[^120]The Research Institutes are organized on a scientific rather than a problem basis and are engaged primarily on basic research of wide application to agriculture. They also carry out related national work such as the identification of plants, insects and pathogens. There are seven Institutes at Ottawa and one each at London and Belleville in Ontario.

The Animal Research Institute covers the fields of genetics and breeding, nutrition, physiology, biochemistry and management, and tackles problems in the production of milk, beef, lamb, pork, poultry, eggs and fur. Plant studies are carried out at the Plant Research Institute in taxonomy, physiology, biochemistry, pathology, agrometeorology, weeds, and fruit and vegetable processing and storage. Cytological and genetic studies on cereal, forage, tobacco and horticultural plants are made by the Genetics and Plant Breeding Research Institute with special reference to problems encountered in the breeding programs and the assessment of quality characteristics. The Soils Research Institute studies genesis and classification, fertility, mineralogy and the organic, physiochemical and physical aspects of soils. This Institute gives leadership to the federal-provincial soil survey program through classification studies and by developing and standardizing analytical methods. It also provides a national soil-mapping service. A major section of the Entomological Research Institute deals with taxonomy, other assignments being in the fields of genetics, physiology, nematology and apiculture. The Institute assembles and maintains the national collection of insects. The Microbiological Research Institute is mainly concerned with metabolism, nutrition and genetics of bacteria of agricultural significance. The Food Research Institute conducts basic research on the characteristics of plant and animal products affecting food quality. The development of new principles of food processing and studies related to dairy technology are of major interest.

The Pesticide Research Institute at London examines chemicals used or intended to be used for insect, disease or weed control and investigates the reason for and the nature of the biological activity of the chemical. The Biological Control Research Institute at Belleville is concerned with efforts to control destructive insect pests and noxious weeds with parasitic and predaceous insects, and with insect disease organisms. It is also the principal importing centre for beneficial insects and for some disease organisms from foreign countries.

The Regional Research Stations and Laboratories cope with primary problems in various regions in all provinces. Other units have undertaken projects assisting in the exploitation of peat bogs, reclamation of marshland for pasture, propagation of shelterbelt trees and prevention of soil erosion, dryland agriculture, the growing of special crops such as tobacco, and livestock breeding.

Production and Marketing Branch.-The Production and Marketing Branch conducts the promotional and regulatory functions of the Department. Its seven Divisions administer legislation and policies in the fields of agricultural production, marketing and control of disease in plants and animals. Three Sections-Markets Information, Consumer, and Transportation, Storage and Retail Inspection-carry on activities in their respective fields.

The Health of Animals Division administers the Animal Contagious Diseases Act, the Humane Slaughter of Food Animals Act and the Meat Inspection Act. The Division also operates laboratories for the study of animal diseases. Besides its responsibility in carrying out various disease prevention measures, the Division conducts programs for the eradication of bovine tuberculosis and brucellosis and issues health certificates for livestock entering export trade. The animal pathology laboratories, in addition to their research function, manufacture diagnostic reagents and biological products and provide analytical and diagnostic services for diseases of domestic and wild animals. District laboratories across the country give routine diagnostic and research services. The Livestock Division administers legislation dealing with the grading of meat, wool and fur, with the registration of livestock pedigrees, with performance testing of cattle and hogs and with the supervision of racetrack betting. Other activities include the promotion of livestock improve-
ment and the compilation of market statistics. The Poultry Division carries out the policies of the national poultry breeding program, including Record of Performance for poultry and hatchery inspection, and administers the regulations for the grading of poultry products.

The Fruit and Vegetable Division administers legislation having to do with the grading of fruits and vegetables in both fresh and processed form, maple products and honey. The Division is responsible for the licensing of interprovincial and international brokers who deal in fresh fruits and vegetables. The Dairy Products Division is responsible for the administration of legislation covering grades and standards for dairy products, including butter, cheese, concentrated milk products and ice cream. The Plant Products Division administers Acts and regulations respecting seeds, feedstuffs, fertilizers and pestcontrol products, conducts field inspections and maintains regional testing laboratories. The Plant Protection Division is responsible, under the Destructive Insect and Pest Act, for safeguarding against the introduction of serious plant insects or diseases into Canada or their spread in Canada; for certifying freedom from disease and pests in plant exports, and for seed potato certification.

The Markets Information Section compiles and distributes market information respecting livestock, meats and wool, dairy products, eggs and poultry, and fruits and vegetables. The Consumer Section helps to promote proper use of Canadian agricultural food products through experimental work, carried on by its home economists, on the cooking of foods and the preserving of perishables. The Transportation, Storage and Retail Inspection Section administers the payment of subsidies for the construction of public cold storage facilities. Cargo inspectors at the main Canadian ports check the handling of goods moving to export. Other inspectors in the principal marketing areas make spot checks on retail outlets to see that food products meet the prescribed standards of quality and grade.

Administration Branch.-In addition to its general responsibility for the business management of the Department, the Administration Branch embraces the Divisions concerned with Economics and Information. Administration of the rehabilitation and assistance programs is also associated with this Branch.

The Economics Division collects, analyses and interprets economic information required to form and administer departmental policies and programs. It conducts economic surveys and research designed to improve agricultural production, marketing, and farm living conditions. The Division acts as an economic and statistical research agency for the Agricultural Stabilization Board, the Prairie Farm Rehabilitation Administration and other bodies, assisting in any economic undertaking with which the Department is concerned.

The Information Division gathers and publishes information arising from research work and the development and regulatory programs of the Department. It employs all the recognized media-printed publications, press and radio releases, motion pictures and television. In addition, the Division operates the central library of the Department and a system of field libraries located at major research centres of the Department across Canada.

## Subsection 2.-Farm Assistance Programs

Basic to the concept of Canada's national agricultural policy is the premise that a stable agriculture is in the interests of the national economy and that farmers as a group are entitled to a fair share of the national income. In pursuit of these objectives, the Department of Agriculture has carried on, over a long period, a program designed to aid agriculture through the application of scientific research and the encouragement of improved methods of production and marketing. Over the years, as conditions have warranted, programs have been initiated to deal with special situations such as the Prairie Farm Rehabilitation Act (see p. 399) to deal with the results of the drought in the 1930's; the Prairie Farm Assistance Act (p. 387) to mitigate the effects of crop failure; and the Maritime Marshland Rehabilitation Act (p. 403) to save valuable soil in the Maritime Provinces.

Although much has been accomplished by these measures, changing conditions have dictated the need for a new approach. In the past two decades agriculture has undergone revolutionary changes. Large-scale mechanization, increasing farm size coupled with declining farm numbers, and shrinking world markets have called for a reappraisal of policy, resulting in a number of recent legislative enactments in the agricultural field. These cover such matters as credit provision, price stability, crop insurance and resource development; they are described individually below. In addition, legislation has been passed from time to time giving assistance to meet temporary or short-term contingencies, such as the Western Grain Producers' Acreage Payment Regulations which, following the drought in 1957, provided for the payment to each grain producer of $\$ 1$ for each acre seeded in 1958 up to an amount of $\$ 200$; and the Prairie Grain Loans Act which provided for short-term credit to grain producers of the Prairie Provinces to meet temporary difficulties encountered during the 1959-60 crop year from inability to thresh their grain.

The Farm Credit Act.*-The object of the Farm Credit Act (SC 1959, c. 43, proclaimed Oct. 5, 1959), to be effected by the Farm Credit Corporation, is to assist Canadian farmers in the voluntary reorganization of their industry into economic family farm units, each of which will be of sufficient size to produce the farm income necessary to pay all operating and maintenance costs; to provide an adequate livelihood for the owneroperator and his dependants; and to retire any required credit, with interest, within an appropriate term.

The Act provides two types of long-term mortgage loans. Under Part II of the Act, the Corporation may lend up to 75 p.c. of the appraised value of the farm land taken as security, or $\$ 20,000$, whichever is the lesser, repayable within a period of up to 30 years. Under Part III of the Act, the Corporation is empowered to make loans of up to 75 p.c. of the value of the farm land and chattels taken as security, or $\$ 27,500$, whichever is the lesser, to young farmers aged 21 to 44, inclusive, who have at least five years of experience in farming; that portion of the loan secured by farm land is repayable within a period of up to 30 years and that portion (if any) based on chattel security must be repaid within the first ten years. A Part III loan is further secured by mandatory insurance upon the life of the borrower, and his farming operations are subject to supervision by the Corporation until the loan has been reduced to 65 p.c. of the appraised value of the farm land. Similar insurance coverage is available to Part II borrowers on an optional basis. The interest rate on all loans is fixed by the Act at 5 p.c.

The Corporation, in co-operation with the Veterans' Land Act Administration, has established 198 local federal Farm Credit offices in agricultural communities throughout the country, each served by a resident Farm Credit Adviser. The Credit Advisers are available to advise and assist local farmers in estimating their credit needs, in planning farm operations, and in making constructive loan applications based on the careful appraisal of agricultural productivity, and to provide counsel and supervision to borrowers.

Funds for lending are borrowed at current interest rates from the Minister of Finance. The aggregate amount of such borrowings at any time outstanding may not exceed 25 times the capital of the Corporation, which has been fixed by the Act at $\$ 12,000,000$.

In the year ended Mar. 31, 1961, the Farm Credit Corporation approved 5,597 loans for a total of $\$ 60,704,050$ as compared with 5,339 loans for a total of $\$ 40,031,250$ in the preceding year; the total amount of principal outstanding on loans was $\$ 158,447,392$ as compared with $\$ 117,233,247$ the previous year. The 1961 amount was secured by 31,054 first mortgages and 213 second mortgages.

${ }^{1}$ Repealed by the Farm Credit Act, proclaimed Oct. 5, 1959.
The Farm Improvement Loans Act.-The Farm Improvement Loans Act (RSC 1952, c. 110), administered by the Department of Finance, is designed to provide credit by way of loans made by the chartered banks to assist in almost every conceivable purchase or project for the improvement or development of a farm and includes the purchase of agricultural implements, the purchase of livestock, the purchase and installation of agricultural equipment or a farm electric system, the erection or construction of fencing or works for drainage on a farm, and the construction, repair or alteration of farm buildings including the family dwelling. Credit is provided on security related to the purchase or project and on terms suited to the individual borrower.

The legislation, originally operative for three years (1945-48), has been continuous by way of extensions usually for three-year periods. The latest extension was for the period commencing Apr. 1, 1959 and ending June 30, 1962. Under that extension, fulltime beekeepers are made eligible for loans and the maximum loan or amount available at any one time to a borrower is increased from $\$ 5,000$ to $\$ 7,500$. The maximum term of a loan and the interest rate remain at ten years and 5 p.c. simple interest, respectively.

The borrower is required to provide from 10 p.c. to 40 p.c. of the cost of his purchase or project, depending on the loan category to which it belongs. The Federal Government guarantees each bank against loss sustained by it up to an amount equal to 10 p.c. of loans granted by it in a lending period. This guarantee does not apply to any loan made after the aggregate of all loans made by all banks in a given period reaches an amount fixed by statute. The current maximum stands at $\$ 400,000,000$. By Dec. 31, 1960, 1,752 claims amounting to $\$ 1,192,594$ had been paid under the guarantee since the inception of the Act, representing a net loss ratio of less than one-tenth of one per cent after recoveries have been taken into account.

By the end of $1960, \$ 836,245,952$ or 82.4 p.c. of the total loans made had been repaid. The position at that time was as follows:-

| Period | Loans Outstanding | P.C. of Total Loans Outstanding |
| :---: | :---: | :---: |
|  | \$ |  |
| 1945-48. | 1,253 | 0.01 |

Prairie Grain Advance Payments Act.-This Act, which came into force on Nov. 25, 1957, provides for an advance payment to producers for threshed grain (wheat, oats and barley) in storage other than in an elevator and prior to delivery to the Canadian Wheat Board, exclusive of grain deliverable under a unit quota. Advance payments of 50 cents per bu. of wheat, 25 cents per bu. of oats and 35 cents per bu. of barley are made, subject to certain restrictions as to quota and acreage. Maximum advance payment per application is $\$ 3,000$. At Dec. 31, 1961, the following advance payments had been made:-

| Period | Applications | Total Advance | Average <br> Advance |
| :---: | :---: | :---: | :---: |
|  | No. | \$ | \$ |
| Aug. 1, 1957-July 31, 1958. | 50,412 | 35, 203,467 | 698 |
| Aug. 1, 1958-July 31, 1959. | 45,341 | 34, 369, 653 | 758 |
| Aug. 1, 1959-July 31, 1960. | 50,047 | 38,492,505 | 769 |
| Aug. 1, 1960-July 31, 1961. | 76,089 | 63,912,550 | 839 |
| Aug. 1, 1961-Dec. 31, 1961. | 20,890 | 15,651,484 | 749 |

Repayment is effected by deducting 50 p.c. of the initial payment for all grain delivered subsequent to the loan, other than for grain delivered under a unit quota. The amounts deducted are paid to the Board until the producer has discharged his advance. At Dec. 31, 1961, refunds had been made as follows:-

| Period | Total Refunded | Total Advance Outstanding | Percentage Refunded |
| :---: | :---: | :---: | :---: |
|  | \$ | \$ |  |
| Aug. 1, 1957-July 31, 1958. | 35, 196,547 | 6,920 | 99.9 |
| Aug. 1, 1958-July 31, 1959. | 34, 347,795 | 21,858 | 99.9 |
| Aug. 1, 1959-July 31, 1960. | 38, 442,753 | 49,752 | 99.8 |
| Aug. 1, 1960-July 31, 1961. | 62,767,045 | 1,145,505 | 98.2 |
| Aug. 1, 1961-Dec. 31, 1961. | 6,545,267 | 9,178,963 | 41.6 |

Prairie Farm Assistance Act.-The Prairie Farm Assistance Act, passed in 1939, provides for direct money payments by the Federal Government on an acreage-and-yield basis to farmers in areas of low crop yield in the Prairie Provinces and in the Peace River area of British Columbia. Its purpose is to assist in dealing with a relief problem which the provinces and municipalities cannot do alone and to enable the farmers to put in a crop the following year. Payments for the 1960 crop, as at July 31, 1961, totalled $\$ 11,004,140$; total payments made under the Act since 1939 amounted to $\$ 260,813,968$.

Payments are made from the Prairie Farm Emergency Fund to which farmers contribute 1 p.c. of the value of all sales of wheat, oats, barley, rye, flaxseed and rapeseed. The additional funds required are provided from the federal treasury. The total collected through the 1-p.c. levy in 1960 was $\$ 6,941,208$. The total amount collected since 1939 was $\$ 127,253,208$.

The average yield of wheat in a township or block of sections is the basis on which payments are made. If the average yield is eight bushels per acre or less, all farmers within that area receive payments except those on the sections having a yield of 12 or more bushels per acre. The smallest isolated block eligible for payment is one-third of a township ( 12 sections), provided such block is rectangular in shape. A block as small as one section within an ineligible township is eligible for payment if a side lies along the boundary of an eligible township.

If an area consisting of one-third or more of the cultivated lands in any six or more adjoining sections could not be seeded or summerfallowed because of flooding or other natural causes beyond the control of the farmers, such area is eligible for award at $\$ 4$ per acre on one-half of the cultivated acreage of each farmer. Only those farmers who make their homes and are ordinarily resident in the spring wheat area are eligible for award and no award can be made with respect to more than 200 acres of the cultivated land of a farmer.

There are three categories of payments: (1) if the average yield of wheat for the township or block of sections, excluding those sections having a yield of 12 or more bushels per acre, is more than five and not more than eight bushels per acre, the payment is $\$ 2$ per acre on one-half of the total cultivated acreage of the farmer; (2) if the average yield of wheat for the township or block of sections, excluding those sections having a yield of 12 or more bushels per acre, is more than three and not more than five bushels per acre, the payment is $\$ 3$ per acre on one-half of the total cultivated acreage of the farmer; (3) if the average yield of wheat for the township or block of sections, excluding those sections having a yield of 12 or more bushels per acre, is three bushels or less per acre, the payment is $\$ 4$ per acre on one-half of the total cultivated acreage of the farmer.

In the zero-to-five-bushel categories the minimum payment is $\$ 200$, although a farm must have at least 25 acres under cultivation other than land that is seeded to grass, or be in the development stage, to qualify for this minimum award.

The Grop Insurance Act.-To assist in making the benefits of insurance protection on crops available in all provinces, the Crop Insurance Act was passed in 1959. This Act does not set up any specific insurance scheme but rather permits the Federal Government to assist the provinces to do so by making direct contributions toward the cost of providing crop insurance. The initiative for establishing schemes to meet their own regional requirements rests with the provinces. Schemes may be organized on the basis of specific crops or areas within the provinces and agreements between the provinces and the Federal Government set out the terms of insurance coverage.

Contributions from the federal treasury are limited to 50 p.c. of the administrative costs incurred by a province and 20 p.c. of the amount of premiums paid in any year. In addition, the Federal Government may make loans to any province equal to 75 p.c. of the amount by which indemnities required to be paid under policies of insurance exceed the aggregate of: the premium receipts for that year; the reserve for the payment of indemnities; and $\$ 200,000$. Those farmers who take advantage of an insurance scheme set up under the Act are not eligible for any payments under the Prairie Farm Assistance Act, nor are they required to pay the 1-p.c. levy on grain sales as provided for under that Act.

Three provinces-Manitoba, Saskatchewan and Prince Edward Island-have passed crop insurance legislation. Manitoba operated a 'test scheme' in both 1960 and 1961; in 1961, 3,675 of an estimated 40,000 farmers in the province participated. Saskatchewan operated a 'test scheme' in 1961 and Prince Edward Island will, it is expected, provide insurance for potato crops in 1962.

The Agricultural Stabilization Act.*-The Agricultural Stabilization Act (SC 1958, c. 22, proclaimed Mar. 3, 1958) established the Agricultural Stabilization Board which is empowered to stabilize the prices of agricultural products in order to assist the agricultural industry in realizing fair returns for its labour and investment, and to maintain a fair relationship between prices received by farmers and the costs of goods and services that they buy.

The Act provides that, for each production year, the Board must support the price of nine named or mandatory commodities (cattle, hogs and sheep; butter, cheese and eggs; and wheat, oats and barley produced outside the prairie areas as defined in the Canadian Wheat Board Act) at not less than 80 p.c. of the previous ten-year average market, or base, price. Other commodities may be supported at such percentage of the base price as may be approved by the Governor in Council. The Board may stabilize the price of any product in one or more of three ways: by an offer-to-purchase; by a deficiency payment; or by making such payment for the benefit of producers as may be authorized.

The price stabilization program in stabilizing prices of certain commodities by means of deficiency payments has been useful in assisting the agriculture industry to make production adjustments from a position of excessive supply to one of more normal relation-

[^122]ship between supply and demand. Examples of this are hogs and eggs. The institution of limited deficiency payments by the Board assisted in a necessary adjustment of production in a relatively short time. During the period of adjustment the Board guaranteed a minimum average return to producers for a limited quantity of product.

The Agricultural Stabilization Board has available a revolving fund of $\$ 250,000,000$. Any losses incurred through the Board's operations are made up by Parliamentary appropriations and any surplus is paid back to the Consolidated Revenue Fund. Assisting the Board in its operations is an Advisory Committee named by the Minister of Agriculture and composed of farmers or representatives of farm organizations.

The Agricultural Rehabilitation and Development Act.-This Act, introduced in 1961, will become an important element in national agricultural policy and national resources management policy. It is designed to increase income in the rural areas of Canada and promote better land use and soil and water conservation. The Act authorizes the Federal Government to enter into agreements with provincial governments for the joint undertaking of: (1) projects for the alternative use of lands classified as marginal or of low productivity; (2) projects for the development of income and employment opportunities for rural agricultural areas; and (3) projects for the development and conservation of the soil and water resources of Canada.

The alternative uses of land contemplated for lands unsuitable for profitable cultivation include programs for tree planting and farm woodlot management, grassing and pasturage, and recreational uses of various types, including public shooting areas and wildlife management areas. The program envisages the creation of new income opportunities for people in rural areas through the use of the rural development concept. It is proposed that studies will be conducted of the economic development factors in local areas, and committees of local people will be involved in proposed development plans for their areas. Through the development plan, government assistance will be focused on helping local people to develop new and expanded income opportunities.

The conservation of soil and water resources for agricultural purposes, the third major objective of the legislation, is not new. For years, activities under the Prairie Farm Rehabilitation Act and the Maritime Marshland Rehabilitation Act have been directed toward this end but these are regional undertakings. Under the Agricultural Rehabilitation and Development Act, soil and water conservation as an aid to agriculture will be extended to cover the whole country so that it will be possible for agriculture throughout Canada to enjoy the benefits of federal assistance on resource conservation.

The Act also authorizes the Federal Government to carry on broad-scale research and it is proposed to carry forward basic research on national land-use needs and rural adjustment trends. Toward the end of 1961, a Director of the Act was appointed and discussions were held with all the provinces on projects and programs leading to federalprovincial agreements.

## Section 2.-Provincial Governments in Relation to Agriculture*

## Subsection 1.-Agricultural Services

Newfoundland.-Government agricultural services in Newfoundland are operated by the Agricultural Division of the Department of Mines, Agriculture and Resources. The Division is in charge of a Director who is assisted by a staff of 21 officers. For purposes of administration, the province is divided into nine districts. A fieldman with permanent headquarters is located in each district except Labrador, where the officer is resident for the summer only. Officers in charge of different phases of agricultural development visit each district on assignments from the St. John's office.

[^123]Departmental policies in support of the agricultural industry include: a bonus of $\$ 125$ an acre on land cleared by privately owned equipment; the distribution of ground limestone at a subsidized rate; the payment of bonuses on purebred sires; and financial assistance to agricultural societies, marketing organizations and exhibition committees. An inspection service is provided for poultry products, vegetables and blueberries, production of the latter being encouraged by the burning of suitable berry areas and the improvement of roads and trails leading to them. Small fruit development is promoted through the distribution of quality foundation stock.

Every encouragement is given to the production of livestock. An experimental sheep flock is maintained. Poultry and beef production have increased with favourable marketing conditions and with departmental assistance and loans under the Provincial Farm Development Loan Act. A veterinary supervises the health of animals program and the joint federal-provincial project for the eradication of bovine tuberculosis.

The Agricultural Division co-operates with the Department of Education in furthering the 4 -H Club movement in the province and accepts responsibility for all projects pertaining to agriculture.

Prince Edward Island.-The activities of the provincial Department of Agriculture are suggested by its staff which includes, in addition to the Minister and Deputy Minister, a Dairy Superintendent and Assistant, two Check Testers, two Dairy Herd Improvement Promoters, a Director of Veterinary Services and nine subsidized practising veterinarians, a Livestock Director, a Marketing Director, a Horticulturist, a Soil Analysis Assistant, a Poultry Fieldman, an Economist, two Agronomists, a Director of $4-\mathrm{H}$ Clubs, three Agricultural Representatives, a Nursery Supervisor, and a Director, an Assistant Director and two Extension Workers of Women's Institutes.

Nova Scotia.-The Department of Agriculture and Marketing endeavours to "help the people to help themselves" through strengthening member interest in such organizations as the Nova Scotia Federation of Agriculture, the Nova Scotia Fruit Growers' Association, various agricultural co-operative organizations, credit unions and producer organizations. The Department is assisted by the Nova Scotia Advisory Committee on Agricultural Services which has been established to promote agricultural policies and projects of the federal and the provincial Departments of Agriculture. The Committee meets quarterly to determine how the work of these Departments may be co-ordinated and directed through integrated agricultural policies and with minimum duplication of services.

New Brunswick.-Provincial government agricultural policy in New Brunswick is directed by the Department of Agriculture. The Department is headed by the Minister of Agriculture who is assisted by a Deputy Minister and the Directors of the following Branches: extension, livestock, dairy, veterinary, poultry, horticulture, field husbandry, potato and plant protection, agricultural engineering, home economics, credit union and co-operative, and agricultural education.

Quebec.-The Department of Agriculture of Quebec comprises 10 services: rural education, rural economy, extension, animal husbandry, horticulture, field husbandry, information and research, home economics, animal health, and drainage. Each service is divided into sections dealing with particular problems.

The Department also includes many other special organizations such as the Research Council, the Dairy Industry Commission, the Dairy School of St. Hyacinthe, the Provincial Extension Farm (Deschambault), the Fur Bearing Animals Extension Farm (St. Louis de Courville). The Farm Credit Bureau, the Quebec Sugar Refinery (St. Hilaire), the Provincial Veterinary School (St. Hyacinthe) and the Office of Rural Electrification are also under the authority of the Minister of Agriculture.

The annual competition for the Agricultural Merit Order, organized in 1890, is held successively in each of five regions. Each contest lasts five years and covers various farm enterprises; its objective is to ascertain the personal merit of the competitors who have most distinguished themselves in the agricultural field and can serve as examples. County Farm Improvement Contests have for 30 years promoted better methods of culture designed to increase farm income and 7,800 competitors have benefited from them.

The Drainage Service deals with soil improvement or land reclamation by renting equipment at very low rates to farmers who wish to improve their crop lands. The Department of Agriculture also gives assistance to such projects in the form of grants. Soil improvement measures include large drainage projects carried out by the Department and smaller projects carried out by groups of farmers with government help.

Various forms of assistance are offered toward improvement of crops and livestock. An artificial insemination station operates at St. Hyacinthe for the benefit of breeders' clubs, and plant breeding stations for cereal and forage crops, vegetables and small fruits are maintained in a number of localities. Trained specialists are employed in the work of controlling plant and animal pests and diseases; the main laboratories are situated at Quebec City and field laboratories are located in other districts.

Agricultural co-operation is widespread in Quebec. There are 481 co-operatives with 70,107 members and 87 agricultural societies with 28,317 members to serve local interests and organize county exhibitions. There are also 713 Cercles de Fermières (rural women's clubs) in operation with a membership of 36,$903 ; 390$ farmer clubs with a membership of 18,457 ; and 167 junior farmer clubs in which 4,042 young boys and girls are working on numerous practical agricultural projects. The Farm Credit Bureau was established in 1936 and, by December 1961, had made 64,934 loans to farmers amounting to a total of \$209,589,095.

An Agricultural Research Council was established by the Department in 1957. It is a consultative body composed of professors from the senior agricultural colleges of the province. It has no laboratories but encourages research in all fields of agriculture by means of subsidies to the faculties of agriculture of the provincial universities, to be carried out under the supervision of the university staffs. The Council also has a scholarship plan to encourage the education of young agricultural scientists. The findings of research projects undertaken under the auspices of the Department of Agriculture are published by the Council in Recherches agronomiques.

Ontario.-The Ontario Department of Agriculture provides financial assistance and administrative services through its Head Office, 11 branches and two Experimental Farms, and through research and extension work conducted under the direction of the Ontario Research Institute as well as that under way at the Ontario Agricultural College, the Ontario Veterinary College, Macdonald Institute, Western Ontario Agricultural School, Kemptville Agricultural School and the Horticultural Experiment Station.

The Department is divided into four main divisions-Administration, Marketing, Production and Extension, and the Research Institute. The Administration Division is under the direction of an Assistant Deputy Minister and the Marketing and Production and Extension Divisions are under the supervision of a Division Chief. The Ontario Agricultural College, the Ontario Veterinary College and Macdonald Institute report to the Minister and Deputy Minister. The Research Institute is the responsibility of the Director of Research.

The Administration Division is charged with the supervision of the agricultural schools, the Ontario Telephone Service Commission, the Accounts Branch and Personnel.

The Marketing Division is responsible for the administration of the Co-operatives Branch, the Dairy Branch, the Market Development Branch, the Farm Products Inspection Service and the Farm Labor Committee. The services of the Co-operatives Branch are designed to encourage and assist co-operatives to operate sound and successful
businesses under the control of their members; it also administers the Co-operatives Loans Act. The Dairy Branch provides an inspection, instruction and supervision service to all dairy factories and promotes the production of clean milk on farms. The Milk Industry Board of Ontario, functioning under the authority of the Milk Industry Act, regulates and supervises the marketing of milk and cream. The Market Development Branch seeks to widen markets for Ontario farm products both domestically and abroad.

The Division of Production and Extension administers the Extension Branch, Live Stock Branch, Farm Economics and Statistics Branch, Agricultural and Horticultural Societies Branch, Demonstration Farms, and the Field Crops Branch. Through a staff of Agricultural Representatives, one of whom is located in each county and district, the Extension Branch carries on an educational and extension service, and gives leadership to 4-H Club work and to the Ontario Junior Farmers' Association. It also provides assistance to farmers and settlers in northern Ontario in connection with land clearing and breaking and improvement of farms and livestock. The Home Economics Service, which is part of the Extension Branch, gives leadership to organized activities of rural women. The Live Stock Branch promotes livestock improvement policies with particular attention to the health of animals, gives support to purebred livestock associations, licenses artificial insemination centres, community sales, wool warehousemen and egg grading stations. The Farm Economics and Statistics Branch carries on research in farm business including cost analysis, marketing and land use; in co-operation with the Dominion Bureau of Statistics it gathers and publishes statistics of agricultural production. The Agricultural and Horticultural Societies Branch provides assistance to agricultural and horticultural fairs and exhibitions, ploughing matches and other competitions and administers the Community Centres Act. Demonstration Farms in northern Ontario, one at New Liskeard and another at Sault Ste. Marie, are operated for the demonstration of methods adaptable to the area concerned, present emphasis being on beef cattle production. The Field Crops Branch assists in the development of good cultural practices, promotes the use of improved strains of seed and works for the improvement of pastures; it also administers the Weed Control Act.

The Research Institute co-ordinates all research activities of the province's agricultural schools and colleges in addition to developing a thorough research program in the interests of agriculture and industry associated with agriculture.

Manitoba.-The Department of Agriculture and Conservation serves Manitoba through the following branches: agricultural extension; livestock; dairy; soils, crops and weeds administration; agricultural publications, statistics and radio and information service; co-operative services; the provincial veterinary laboratory; and water control and conservation.

The Extension Service deals with agricultural economics, horticulture, poultry, agricultural engineering, beekeeping, 4-H Clubs and women's work, and has specialists devoting attention to these subjects. Meetings, field days, and short courses are held. Thirty-seven agricultural representatives and six assistants are located in 35 offices in the province, each serving from one to five municipalities; 14 home economists serve designated areas.

The Live Stock Branch administers the Animal Husbandry Act, develops and administers policies that encourage the improvement and production of livestock, and works in close co-operation with the Veterinary Laboratory Service and the federal Health of Animals Division in the control of livestock diseases.

The Dairy Branch administers the Dairy Act, supervises the grading of cream, inspects creameries and cheese factories, gives instruction in cheese and butter making, issues licences to makers of dairy products and to cream graders and conducts a dairycost study among milk producers. Extension activities include addressing meetings and preparing articles and leaflets on dairy farm problems.

The Soils and Crops Branch deals with grain and forage crops, conservation and fertility and provides liaison between the Government of Manitoba and the Government of Canada in regard to PFRA projects. The Branch develops and administers policies that encourage good field crop husbandry and conservation practices. The Weeds Section is directly concerned with organizing weed control districts which employ full-time weed supervisors. Educational programs for general weed control include demonstrations, literature, farm meetings, etc.

The Agricultural Publications and Statistics Branch publishes and distributes annually approximately 125,000 bulletins, circulars, posters, leaflets, etc. It provides the public with agricultural statistics relating to Manitoba agriculture, and maintains an information service which uses the media of the press, radio and TV.

The Co-operative Services Branch takes care of the registration and supervision of co-operatives and credit unions and the administration of the Acts governing them. It also collects and compiles statistics on co-operative activity throughout the province.

The Veterinary Laboratory operates a diagnostic laboratory for animal diseases, the services of which are available to veterinarians and livestock owners.

The Water Control and Conservation Branch administers, through the Water Rights and the Water Power Acts, the water resources of the province and all works in connection with the control and utilization of those resources. Through the Departmental Act and other associated statutes, provision is made for the construction of works to control and use water, and to provide technical and financial assistance to local governments for the construction, maintenance, and operation of such works. Under the direction of the director and chief engineer, the Floodway Division is responsible for co-ordinating all matters in respect to design and construction of the proposed Red River Floodway.

Saskatchewan.-The Saskatchewan Department of Agriculture is organized in the following branches and services.

The Administration Branch handles general staff records and accounts. Data on crop conditions, production, marketings and income are collected and farm information dispensed daily over seven private radio stations.

The Agricultural Representative Service has a technical staff of 58, comprising a director, an assistant director, 40 agricultural representatives, six assistant agricultural representatives, four area supervisors, five farm management specialists and one audiovisual aids supervisor. This extension field staff serves all branches of the Department as well as the other agencies operating within the Co-operative Agricultural Extension Program. Agricultural representatives are active in all federal, provincial and university farm services; they work through Agricultural Conservation and Improvement Committees in each rural municipality and local improvement district to supply the farmer with scientific and practical information. Committees study local farm problems and initiate improvement programs. District Boards, with representatives from each municipality, assist the agricultural representative in planning and developing a district agricultural improvement program. Through an Earned Assistance Program, the Department pays one-half the cost of local group development projects. In farm labour matters, co-operation is maintained with the federal Department of Labour and the National Employment Service in directing annual movements of farm labour in and out of the province.

The Animal Industry Branch has four divisions: the Dairy Division administers dairy herd improvement programs, assists producers with management and production problems, inspects and licenses dairy manufacturing and frozen-food locker plants, and administers dairy, locker plant and margarine legislation; the Livestock Division encourages the use of suitable animals for breeding purposes by the establishment of purebred sire areas and by assistance in the purchase and distribution of bulls, boars and rams, and registers brands, licenses livestock dealers and agents and promotes programs on insect control, feeding and management; the Poultry Division maintains poultry and turkey
testing and banding services under Saskatchewan Hatchery Supply Flock Policies, licenses produce dealers and poultry buyers, hatcheries and hatchery agents, assists with poultry shows and field days, and otherwise promotes flock improvement; the Veterinary Division assists students in veterinary science under a scholarship plan, administers the Veterinary Service District Act and the calfhood vaccination program, provides a laboratory service for the livestock and poultry industries and co-operates with Federal Government officials and local veterinarians in disease prevention and control.

The Conservation and Development Branch provides engineering services for irrigation development, usually in co-operation with the Federal Government, and for drainage programs and projects. Reclamation of land by drainage, development of misused land and under-utilized land, and construction of provincial community pastures all come within its jurisdiction. The Branch provides engineering assistance to conservation and development areas, water users' districts, and irrigation districts in connection with water control projects. The Water Rights Division of the Branch is responsible for the administration of the ground and surface water of the province and provides for regulated use of water for domestic, municipal, industrial, irrigation, water power, recreation, wildlife and other purposes.

The Lands Branch administers Crown, school and Land Utilization Board lands, except forest reserves and parks in the settled area of the province; classifies it according to the use for which it is best suited; disposes of such lands under long-term leases; secures land control for land utilization projects; supervises new settlement projects; pays for clearing and breaking by farmers on provincial leases; and operates provincial community pastures.

The Plant Industry Branch organizes and administers programs for crop improvement and crop protection, and advises on seed and crop improvement, soil conservation, horticultural problems, and weed and pest control. The improvement of grassland is promoted through a forage crop program. The Seed Plant Division carries on custom cleaning of forage seeds and registered cereals. The Apiary Division advises on beekeeping and honey production and conducts continuous inspection.

The Agricultural Machinery Administration carries out detailed scientific tests on agricultural machines being sold in Saskatchewan to evaluate their structural and functional performance. At the conclusion of tests, reports are compiled on each machine and made available to the public. The Administration is also responsible for the administration of the Agricultural Machinery Act which involves the inspection and licensing of farm implement vendors within the province. Investigations are made into complaints arising out of machinery purchase and use with a view to equitable settlement without the necessity of litigation. Further services direct to the public are provided through an agricultural machinery extension program.

The Family Farm Improvement Branch assists farmers by providing technical services and financial assistance with farmstead development. The Branch specializes in such farmstead problems as buildings. water and sewage works, household problems, vegetation used in the farmyard, and materials handling. A farm water and sewage program is the first major program to be undertaken by the Branch.

Alberta.-The Alberta Department of Agriculture is organized in the following branches and services.

The Field Crops Branch administers programs and policies relating to crop improvement, soil conservation and weed control, crop protection and pest control, horticulture and apiculture. Agricultural Service Boards have been organized in municipal districts to assist with agricultural programs, and the Department of Agriculture is represented on each Board.

The Live Stock Branch aids in maintaining the quality of herds and flocks by assisting farmers in securing purebred herd sires and assists artificial breeding associations in the
breeding of dairy cattle. The Branch also supervises livestock feeder associations and administers legislation relating to stock inspection, brands, domestic animals and the sale of horned cattle.

The Dairy Branch administers the Dairymen's Act and the Frozen Food Locker Act. Grading and purchasing of raw produce by all dairy plants are under regulation, as are standards of construction, manufacture, processing, sanitation, and temperature control for dairies and frozen-food lockers. A regular cow-testing service is available to dairy producers and the Branch laboratory conducts chemical and bacteriological analyses needed for industrial directives. Yearly cost studies and dairy farm management services are in operation in the principal milk-producing areas.

The Poultry Branch carries on programs for the improvement of poultry husbandry and supervises flock approval for the control of pullorum disease. The Branch issues hatchery, wholesale, first receiver and trucker licences for the handling of poultry products.

The Veterinary Services Branch provides scientific diagnoses of livestock and poultry diseases through its laboratory; conducts investigations of disease conditions; lectures in veterinary science at the University of Alberta, Schools of Agriculture, and many meetings; and promotes government policies aimed at reducing losses throughout the province.

The Agricultural Extension Service operates 44 offices and employs the services of 57 district agriculturists and 21 district home economists. The district agriculturists assist farmers with their problems and advance departmental policies designed to improve the standard of agricultural practices. The district home economists provide a similar service for farm women. Bulletins are prepared dealing with agricultural and home economics topics. The Branch is responsible for the supervision of agricultural societies and, in co-operation with the federal Department of Labour, is concerned with recruitment and placement of farm labour.

The Fur Farms Branch administers the licensing and exporting of live animals and pelts, and assists fur farmers in care, management and stock improvement; the Radio and Information Branch conducts five broadcasts a week over seven radio stations and issues weekly bulletins to press and radio; the Water Resources Branch deals with water rights, drainage, irrigation, and water power development; the Lands and Forests Utilization Committee (composed of representatives from the Department of Lands and Forests, Power Commission, Department of Municipal Affairs, University of Alberta and Department of Agriculture) deals with the proper use of submarginal agricultural land; and the Farm Economics Branch, formed Jan. 1, 1961, studies various economic farm problems and advises farmers on management techniques.

Credit is made available to young farmers for the purchase of farm lands under the Farm Purchase Credit Act and the Farm Home Improvement Act. Schools of Agriculture and Home Economics are operated at Olds, Fairview and Vermilion (see p. 398).

British Columbia.-The Department of Agriculture has four main branches. The Administrative Branch is responsible for the general direction of agricultural policies, the administration of legislation affecting agriculture and the compilation of reports and publications. This Branch also maintains direct supervision of the Field Crops, Soil Survey, Plant Pathology, Entomology, Apiary, Markets and Statistics, Farmers' Institutes and Women's Institutes Branches.

The Livestock Branch engages in the promotion and supervision of the livestock industry and provides veterinary services affecting disease control regulations; its work also includes supervision of stock brands, inspection of dairy and fur farm premises, and inspection of beef grading. In addition, the Branch supervises the operations of the Dairy Branch in the inspection of commercial dairy premises. Officials are stationed at 11 centres throughout the province.

The Horticulture Branch supervises fruit, vegetable and seed production, and provides advice on plant diseases and insect pest control. The Branch maintains field offices at 10 points in the southerly section of the province.

The Agricultural Development and Extension Branch offers general information services to farmers through 19 offices which cover all major farming districts. In addition, this Branch provides agricultural engineering service, supervision of the government landclearing program and farm labour services, and promotes junior club projects. The Poultry Branch offers extension services to the poultry industry.

## Subsection 2.-Agricultural Colleges and Schools

All provinces provide facilities or assistance for training in agricultural science at university level. The colleges and schools are administered by either the Department of Agriculture or the Department of Education of the respective province.

Newfoundland.-There are no agricultural colleges in the province but the Agriculture Division of the Department of Mines, Agriculture and Resources provides a number of scholarships annually for young men to attend agricultural colleges in other provinces.

Prince Edward Island.-A two-year course in scientific agriculture offered at Prince of Wales College, Charlottetown, prepares students for third year at Macdonald College, Que. In the Vocational School, short courses provide knowledge and skill in agricultural pursuits and develop in the student a sense of the dignity and importance of agriculture as a calling and an understanding of the value of the industry to the province.

Nova Scotia.-The Nova Scotia Agricultural College at Truro offers two coursesthe first two years of a degree course in agriculture and a two-year course in vocational agriculture. The College assists in conducting short courses at various provincial centres, supports Folk Schools and gives direction to 4-H Club organizations. Tuition is free for Canadian students.

New Brunswick.-The four agricultural schools of New Brunswick are located at Woodstock, Fredericton, St. Joseph and St. Basile. Two-term agricultural courses extending over five months each year are offered at Fredericton, St. Joseph and St. Basile and a three-year course is conducted at Woodstock. The curriculum includes training in all phases of agriculture, shop and general academic work. Ten-month home economics courses are also offered at Woodstock and St. Joseph.

Quebec.-Four-year university courses leading to a degree of Bachelor of Science in Agriculture are available through Laval Faculty of Agriculture (Ste. Anne de la Pocatière), l'Institut Agricole d'Oka (affiliated with the University of Montreal), and McGill Faculty of Agriculture (Macdonald College). The Provincial Veterinary School at St. Hyacinthe (affiliated with the University of Montreal) offers a four-year course leading to a doctorate in veterinary medicine. There are also 15 secondary agricultural schools throughout the province, and five orphanages offer courses in agriculture. About 1,000 students, the great majority of whom are sons of farmers, attend these intermediate or regional schools of agriculture and 230 pupils follow practical agricultural courses in the orphanages. A farm is annexed to each school for practical training and specialists give instruction on the maple-sugar industry, farm mechanics, co-operatives, plant protection, veterinary hygiene, aviculture, marketing and silviculture. School co-operatives and clubs are organized and directed by the pupils under supervision. Household science training for the daughters of farmers and settlers is given in nine of these schools.

Ontario.-A two-year course at the Ontario Agricultural College (for the Associate Diploma in Agriculture) provides basic training for young persons interested in making agriculture their vocation. Study includes the application of science to agricultural practice and training for rural citizenship. A four-year course at the same institution for the degree of Bachelor of Science in Agriculture gives fundamental education in the science of agriculture. Sound training is provided for farming as a profession, for entrance into
all agricultural services, industry and teaching, and for those who wish to proceed to graduate studies for master and doctorate degrees. Graduate courses are offered leading to the degree of Master of Science in Agriculture. Graduate students are enrolled in a department or departments of the Ontario Agricultural College conjointly with a department or departments of the University of Toronto for advanced courses of study and training in experimentation and scientific investigation. M.S.A. graduates may go into teaching, research or postgraduate study.

Macdonald Institute offers two main courses in home economics for young women. The one-year course of practical training in the art and science of homemaking earns a diploma of merit but gives no professional standing. The four-year professional course leads to a Bachelor of Household Science degree granted by the University of Toronto. University matriculation standing (nine papers of grade 13) is necessary to enter the four-year course. At its completion, Food Administration Option graduates are eligible to work in the professional dietetic and food-service fields. These graduates and those of the Clothing and Textiles Option and the Home Management Option are finding increasing employment in many areas, notably in the education, extension, business and research fields.

The Ontario Veterinary College offers a five-year course leading to the degree of Doctor of Veterinary Medicine. In addition to its function as a teaching institution, the College is a research centre for animal diseases and provides free consultation services for veterinary surgeons in practice as well as extension services in the interests of the livestock industry.

The Kemptville Agricultural School offers: a diploma course in agriculture comprised of two six-month terms, giving practical training in modern farming methods and community leadership, and designed primarily for young people who wish to farm but serving also as a preparation for many other occupations closely connected with agriculture; a six-month advanced course in agricultural mechanics for diploma graduates in agriculture; a six-month homemaker course leading to a diploma in homemaking and qualification for positions in home economics fields; a diploma course comprised of two six-month terms for girls wishing to prepare for positions in food services, sewing centres, tourist services and other fields of home economics. In addition, a three-month course is given for dairy apprentices, leading to the Dairy School Diploma required for certified buttermakers, cheesemakers and operators of dairy manufacturing plants. A 450 -acre farm and residence life are features of the Kemptville Agricultural School.

The Western Ontario Agricultural School at Ridgetown offers a two-year diploma course (October to April), which gives practical training in modern farming methods and prepares young men to serve agriculture in allied occupations. The facilities comprise a group of modern buildings, including a residence and dining hall, modern classrooms, laboratories, and athletic facilities. There is a 425 -acre farm with up-to-date equipment, much of which is used for student activity and for practical demonstrations. A full complement of livestock is maintained on this farm for carrying out the school program.

Manitoba.-The Faculty of Agriculture and Home Economics of the University of Manitoba offers degree courses in agriculture and home economics as well as a two-year, sub-collegiate diploma course in agriculture. Practical short courses in agriculture and homemaking are also given at the Agricultural Extension Centre at Brandon.

Saskatchewan.-The University of Saskatchewan offers a degree course in agriculture designed to meet the needs of those who intend to teach agriculture in secondary schools or colleges, to engage in research extension or administrative work, or to farm. Specialization is possible with permission of the faculty. Provision is made for combined courses in agriculture and arts or commerce. Postgraduate courses are available.

The Saskatchewan School of Agriculture offers a practical course intended to give sound training in farm practice and also to train young men in rural leadership.

All courses leading to a degree in home economics require four years. The prescribed course of studies for the first two years is the same for all pupils but in the third and fourth years four types are offered: (1) for teachers, (2) for dietitians, (3) general, and (4) additional specializations. A combined course leading to a degree in arts and science and home economics requires at least five years.

#### Abstract

Alberta.-The University of Alberta offers a four-year degree course in agriculture to students with senior matriculation or its equivalent. Students may elect a general program or major in a wide range of special courses in the fields of animal science, economics, entomology, dairying, plant science, and soils. Graduate work at the master level is offered in all departments and at the doctorate level in some.

The Alberta Schools of Agriculture and Home Economics, located at Olds, Fairview and Vermilion, offer practical courses in agriculture and homemaking. The purpose of the schools is to train young men for farming and young women for homemaking. Students must have grade nine standing for entrance into the regular two-term course. A one-year course is offered to those who have 70 or more high school credits. Living accommodation is provided as well as auditorium and gymnasium facilities.

During the summer months the schools are used for agricultural meetings and conferences of organizations that are connected with agriculture. During the month of July, leadership courses, 4-H Club gatherings, farm camps and other events keep the facilities in constant operation.

British Columbia.-The Faculty of Agriculture at the University of British Columbia offers a four-year general degree course in agriculture and a five-year honours course. In the honours course there are 15 fields in which a student may specialize. Work is also offered by the Faculty of Agriculture in the Faculty of Graduate Studies through which a student may proceed to the degrees of Master of Science in Agriculture and Master of Science; in a limited number of fields, work is offered at the doctorate level. The Faculty also offers a one-year or two-year diploma course in occupational agriculture, adaptable to the needs of individual students.

In co-operation with various branches of the provincial Department of Agriculture and under the auspices of the University Extension Department, the Faculty of Agriculture also offers a number of short courses which vary in length from one or two days to several weeks.

## Section 3.-Land and Water Conservation*

## Subsection 1.-Federal Projects

Twenty-seven years have passed since the inception of the Prairie Farm Rehabilitation program in 1935 to deal with the immediate problems of drought and soil drifting which were then having a severe effect on agriculture on the Canadian prairies. Since that time many policies and projects have been undertaken, varying widely in nature and scope, but basically they have all had one objective-better land utilization and more efficient use of available water resources as a means of providing greater security and stability to prairie agriculture.

In this connection, much progress has been made and much valuable knowledge and experience has been gained on which to base long-range land and water conservation planning in Western Canada. This work has involved the introduction of those systems of farming, land use, and water supply that would provide greater economic security for the agricultural population on the prairies and, more recently, the development of larger and more comprehensive land utilization and water development schemes that will serve entire agricultural districts and prairie communities.

[^124]Cultural improvements have led to an almost completely new approach to the economics and practice of dryland farming. Techniques in soil management and methods of making more efficient use of limited supplies of available soil moisture have been developed and are in common use, helping materially to minimize the drought problem in drier areas. The development of assured farm water supplies throughout the drought region for domestic, stockwatering and irrigation purposes has also contributed greatly to a more stable agriculture over a wide area. In particular, the development of assured feed supplies through irrigation for the winter feeding of livestock and the provision of reserves of feed to carry livestock over periodic dry periods has given much greater stability to the livestock industry and has been a major factor in encouraging agricultural diversification in the plains region.

Finally, the permanent removal from cultivation of lands that have proven submarginal for cereal crop production, the fencing, regrassing and other improvement of such areas for community pasture purposes, and the resettlement and rehabilitation of farmers operating such lands, principally to irrigation projects, have been major factors in bringing about necessary adjustments in the pattern of land use on the prairies.

Where these adjustments have been of considerable benefit to the agricultural economy, new and growing demands for water required by larger municipal and urban centres for domestic and industrial purposes, as well as to support large-scale irrigation, have made necessary the development of larger and more comprehensive water storage and irrigation schemes where more dependable and plentiful water supplies can be obtained. PFRA in more recent years has devoted an increasing amount of its attention to this type of development.

## Prairie Farm Rehabilitation Act

Under the terms of the Prairie Farm Rehabilitation Act, an initial appropriation of $\$ 4,750,000$ was made to cover the cost of rehabilitation activities for a period of five years, and an Advisory Committee was established to give leadership to the program. Rather than establish new services, existing agricultural services were given assistance to expand their operations to handle the work, particularly the Experimental Farms Service. As the PFRA program developed, a separate administration was set up in Regina (in 1936) to direct water development, while the cultural improvement program continued under the direction of the Experimental Farms Service. Then, by amendment to the Act in 1937, the PFRA was extended to include land utilization and resettlement. It was realized, however, that for the development of a sound agricultural economy on the prairies, more long-term measures for rehabilitation would be necessary. In 1939 therefore, additional financial allocations were made and the five-year limitation to the PFRA was removed.

[^125]Community projects utilize the waters of well-defined watersheds and are built to serve the needs of groups of farmers. Each project is justified on the basis of its individual merit and the major share of cost is borne by PFRA.

During the 27 years in which PFRA has been engaged in this work, the program has resulted in the construction of close to 79,000 individual and neighbour projects and about 800 community water storage and development schemes.

Major Projects.-While the immediate needs of farmers are being met by PFRA, attention has also been given in more recent years to the construction of larger irrigation and reclamation projects involving the development of many thousands of acres of land. Such undertakings are in line with the long-range land-use plan to provide for expansion and stability in Canada's growing economy. Of an estimated $3,000,000$ acres of potentially irrigable land in Western Canada, 1,500,000 acres have been or are in process of being developed. The intention is, when conditions warrant, to develop the remainder of this valuable resource.

The development of these large irrigation and reclamation works in Western Canada which, either because of their size or their location, have not been included under the regular PFRA appropriation, have been in recent years under the supervision of the Prairie Farm Rehabilitation Administration. They are undertaken by agreement between the Federal Government and the provincial government concerned, on a cost-sharing basis. Special authorization of Parliament is required for such construction.

St. Mary Project.-To make available for irrigation a larger percentage of the water flowing through southern Alberta in the Waterton, Belly, St. Mary and Milk Rivers, a program to extend the original St. Mary Irrigation Project was undertaken by an agreement between the Government of Canada and the Province of Alberta. The Federal Government agreed to construct the main supply reservoirs and the connecting canals, while the Province of Alberta undertook the responsibility for construction of the irrigation distribution system. When completed, this project will extend irrigation to approximately 510,000 acres of land in the area south of Lethbridge and east beyond Medicine Hat.

Construction of the St. Mary Dam, key structure on the whole project, was completed in 1951. During 1958 the second phase, involving the diversion of the Belly River into the St. Mary Reservoir, was completed. The third step, involving the diversion of the Waterton River into the St. Mary Reservoir by way of the Belly River diversion, is under construction. The present storage and distribution facilities extend irrigation to 296,000 acres of land in the St. Mary Project. With the addition of resources of the Waterton River, a further 214,000 aeres of land can be brought under irrigation.

Bow River Project.-The Bow River Irrigation Project, situated west of Medicine Hat in Alberta and having an irrigation potential of 240,000 acres, was taken over by the Federal Government from the Canada Land and Irrigation Company in 1951; the Company had developed about 57,000 acres before financial difficulties caused work to be suspended. PFRA commenced the orderly rehabilitation of the project works and is proceeding with the development of the remainder of the area. The Federal Government is responsible for settlement of the areas surrounding Vauxhall and Hays. These areas have provided farms for 436 settlers, 162 of whom have now been established in the Hays district.

South Saskatchewan River Development Project.-In July 1958 agreement was reached between the Federal Government and the Province of Saskatchewan to start construction on the South Saskatchewan River Project, a large-scale multi-purpose water conservation project proposed for development in south-central Saskatchewan. The purpose of the project is to make better use of the water resources of the river through irrigation, river control, power, urban water supply and recreation. Control will be achieved by two dams, the major one on the South Saskatchewan River at a point approximately half-way between the towns of Outlook and Elbow and the other at the divide between the valleys of the

MAJOR IRRIGATION AND RECLAMATION PROJECTS EXISTING AND PROPOSED, 1962

## IRRIGATION AND LAND RECLAMATION

 IN THE PRAIRIE PROVINCES

Alberto Government Phologroph
Irrigation ditches bring life to hundreds of thousands of acres of formerly marginal or unurable land in the dey southern prairie region of Conedo. Assured woter supplies have given greater stability to the livestock industry and have encouraged diversification of crops. In Alberto, in addition to grain, hay and other normal dryfarm crops, sugar beets and canning vegetables prosper under irrigation.

South Saskatchewan and the Qu'Appelle Rivers. The agreement provides that Canada and Saskatchewan will share the cost of building the dams and all other works associated with the creation of the reservoir; 75 p.c. will be borne by the Federal Government and 25 p.c. by Saskatchewan, the province's share to be not in excess of $\$ 25,000,000$.

The project, when completed, will provide water for the irrigation of approximately 500,000 acres of land located in central Saskatchewan on both sides of the South Saskatchewan River between the town of Elbow and the city of Saskatoon and in the Qu'Appelle Valley extending east of Elbow to the Manitoba border. Power installations at the damsite will have a potential output of $475,000,000 \mathrm{kwh}$. The reservoir, which will be 140 miles long and will store $8,000,000$ acre-feet of water, will be constructed at an estimated cost of $\$ 96,000,000$. The main dam will be 210 feet high and of earth fill, with an over-all length of 16,700 feet. It will be the largest rolled-earth dam ever built in Canada and one of the largest dams of its kind in the world.

Construction was started in the autumn of 1958 and at Dec. 31, 1961, 26 contracts totalling about $\$ 53,777,312$ had been let. Of these, 19 contracts had been completed, three were in progress on a winter-work basis, two had been suspended until spring, another was waiting for more favourable weather conditions, and one had not yet begun. The value of the completed contracts was $\$ 16,930,000$. Contracts awarded but not yet completed account for a further amount of about $\$ 36,847,000$. Partial payments have been made on these contracts, bringing the total expenditure to the end of 1961 to over $\$ 31,573,200$. In addition to paying 75 p.c. of the cost of construction of the dam, the Federal Government is supplying all engineering, administration and supervisory requirements.

Saskatchewan River Reclamation Project.-The possibility of successfully reclaiming for agricultural purposes $1,500,000$ acres of potentially valuable Saskatchewan River Delta land between Tobin Rapids in Saskatchewan and Cedar Lake in Manitoba has been a subject of speculation and conjecture for many years. With this objective in mind the PFRA began investigations in 1950 and a complete engineering report on the studies conducted has been prepared and submitted to the Federal Government for consideration. In addition, as a result of an agreement reached early in 1953 between the Government of Canada and the Province of Manitoba, work was undertaken on the construction of necessary flood control and drainage works to reclaim about 100,000 acres of arable land in one region of the project referred to as the Pasquia Area, near the town of The Pas in Manitoba. Under the terms of this agreement, the Government of Canada assumed the cost of building the main protective and drainage works and Manitoba the cost of settlement, maintenance of works, and internal drainage. One-quarter of the reclaimed land is to be used for the resettlement of farmers from drought areas and the remainder will be sold. Seventy-five per cent of the proceeds from the sale of the land will go to the Federal Government as partial reimbursement of the costs of building the main protective works. Construction was completed in 1960. Settlement of the area will begin shortly.

North West Escarpment Reclamation Project.-At the request of the Manitoba Government, extensive investigations have been undertaken by PFRA in the Riding, Duck and Porcupine Mountain areas and Whitemud River watershed, where serious flood and erosion problems exist in an area containing over 252,000 acres of valuable agricultural land. The reclamation work, the cost of which is divided equally between the Federal Government and the Province of Manitoba, consists of clearing and dyking stream channels, preventing stream-bank erosion and aligning channels by building cutoffs and diversions. In addition, considerable attention has been given, since 1958, to watershed investigations on the headwaters of Wilson Creek to discover improved methods of controlling floods and erosion problems in the upper and lower reaches of such streams.

Assiniboine River Project.-Along the Assiniboine River between Portage la Prairie and Headingly in Manitoba, a continual problem of flooding has faced farmers and communities over the years, often causing considerable damage to land, buildings and other property in districts adjacent to the river. During the early years, the federal Department of

Public Works looked after most of the flood protection work carried out in the area. In 1950, however, responsibility for the work was transferred to the federal Department of Agriculture under the Prairie Farm Rehabilitation Administration.

Flood control activities carried out by the PFRA along the Assiniboine have mainly involved construction of dykes and channel improvement work. In addition, however, a considerable amount of survey work has been conducted on both the upper and lower reaches of the river, studying potential storage sites that would provide more effective stream-flow regulation throughout the river system.

British Columbia Projects.-The Prairie Farm Rehabilitation Administration has been carrying out irrigation development and land reclamation and providing engineering services in British Columbia since 1944; this work has been undertaken for and in connection with the Veterans' Land Act, the Experimental Farms Service, and at the request of the Province of British Columbia.

Nine irrigation projects have been developed or rehabilitated in the arid central interior of the province. The irrigable land on these projects totals approximately 5,300 acres and provides direct or supplemental living for some 1,400 families engaged mainly in the growing of small fruits and vegetables and in dairying.

Seven of these irrigation projects were constructed for the Veterans' Land Act following the Second World War and benefit approximately 500 veterans. The Johnson Western Canada Ranching Projects, Nos. 1 and 2 (Todd Hill Irrigation District), and the Chase Irrigation Project are located in the South Thompson Valley. The Cawston Benches Project, Westbank Project, Penticton West Bench Project and Bankhead Project are all located in the southern Okanagan Valley and form some of the largest individual developments for veteran settlement in Canada.

The other two developments are located in the Thompson Valley near Kamloops and were constructed in co-operation with the Province of British Columbia. The B.C. Fruitlands Irrigation District includes some 2,000 acres of irrigable land and also some 700 small holdings. This district had been served by a gravity water system from Jamieson Creek for over 40 years which had deteriorated to such an extent that the district could no longer guarantee water to its users. The rehabilitation of this project was undertaken by agreement with the province and the irrigation district concerned, and completed by PFRA in 1958. A pressure irrigation system was also installed by PFRA for the irrigation of 290 acres of the Provincial Sanatorium farm lands at Tranquille.

A major reclamation project was undertaken in the Lillooet Valley upon agreement between the Federal Government, the Government of British Columbia, and the Pemberton Valley Dyking District. This project involved the reclamation of the lower 20 miles of the Lillooet River Valley through dyking, drainage and channel improvement to reclaim some 12,000 acres of agricultural land and to protect an additional 2,000 acres already under cultivation.

Engineering services have been provided by PFRA to the Experimental Farms and to other government agencies as requested. Some of these services have included surveys in the Fraser River Basin for the federal-provincial Fraser River Board, reports on proposed project development and reclamation in British Columbia, and services to the Experimental Farms for the establishment and improvement of farm water supplies and irrigation systems.

Land Utilization and Resettlement.-The 1937 amendment to the Prairie Farm Rehabilitation Act broadened its scope to include land utilization and land settlement, opening the way for a program that has had a far reaching effect on the stability of agricultural production in many areas throughout Western Canada. By agreement with the Provinces of Saskatchewan and Manitoba, lands not considered suitable for cereal crop production may be transferred to the Federal Government for development by PFRA into community pastures. The province concerned selects the area to be developed and
obtains control of the land. The land is then leased to the Government of Canada which in turn agrees to construct, maintain and improve community pasture facilities in the area selected. In this way, land subject to the hazards of soil drifting is removed permanently from cultivation and is again protected by a grass cover.

As these submarginal and marginal lands are converted into productive pastures, livestock production on the surrounding farms is being increased, thus making possible a greater diversity of farm income. Since the community pasture program began in 1937, a total of $2,136,000$ acres of land has been developed into 69 separate pasture units. These pastures, primarily intended for reserve grazing areas to supplement farm and ranch pastures, are now providing controlled spring, summer and fall grazing for 139,000 head of stock annually, belonging to approximately 7,000 farmers and ranchers. In addition, a considerable tonnage of hay and some grass seed has frequently been harvested from these pastures. This program of pasture improvement carried on by PFRA has provided leadership to farmers in the development of their own farm pastures.

The resettlement of farmers from these submarginal areas has been handled jointly by the Federal Government and provincial governments concerned. Where available, the provincial governments provide suitable Crown land on which to resettle farmers. PFRA in turn accepts responsibility for moving the farmers and their effects to the new locations, and for developing the submarginal areas for pasture purposes. Every effort is made to resettle farmers on lands located close to existing or proposed pastures. Where no suitable Crown lands are available, PFRA provides its own through irrigation development. Two such schemes have been built specifically for resettlement purposes in Alberta: a large block of land adjacent to the Eastern Irrigation District, called the Rolling Hills Project, to which have been moved 118 farm families from the drought areas; and the Bow River Irrigation Project where 162 farm families are now settled in an area of approximately 27,000 acres called the Hays District.

On somewhat the same principle, six resettlement and rehabilitation projects have been built in the heart of the drought area in southwestern Saskatchewan. The only difference is that for these projects the purposes and objectives of the resettlement and rehabilitation program have been achieved without necessarily involving the movement of farmers to new locations. The six schemes-the Val Marie, West Val Marie, Eastend, Consul, Maple Creek and Swift Current Irrigation Projects-are subdivided into 40-to-80acre plots which are leased out or sold to farmers in surrounding districts for feed production. On the irrigated land, farmers can be assured of producing adequate and dependable winter feed supplies as well as reserves of feed to carry stock over prolonged drought periods.

In a similar manner hundreds of farmers have been rehabilitated without the necessity of moving from their farms by the development of farm-size and small community irrigation schemes built throughout the prairies with PFRA assistance.

## Maritime Marshland Rehabilitation Act

The MMRA program was instituted by federal legislation in 1948 to provide assistance to the Provinces of Nova Scotia, New Brunswick and Prince Edward Island in preserving and developing tidal marshland areas, most of which are situated adjacent to tributaries of the Bay of Fundy. The areas are subject to flooding by tide water unless protected by systems of dams or dykes and aboiteaux (freshwater control structures). The soils are potentially productive and when properly used yield excellent crops.

Responsibility for the rehabilitation of approved marshland areas is shared by the provincial and federal governments. The latter undertakes the construction of works required to prevent flooding of lands by saltwater, maintains the structures until this responsibility is turned over to the provinces, and provides engineering services required in connection with the program. The provincial governments organize the owners of land and ensure that the marshland areas are adequately drained and that suitable land-use policies are developed and encouraged.

By Mar. 31, 1961, the provinces had requested the protection of some 96,000 acres from saltwater flooding. Structures had been completed to protect 80,203 acres and plans were under way to reclaim an additional 989 acres (Nova Scotia 44,015 acres; New Brunswick 36,902 acres; and Prince Edward Island 275 acres). This acreage forms parts of approximately 3,500 farms having a total area of over 450,000 acres.

Conventional structures for the protection of marshlands are normally considered to be dykes and aboiteaux, supplemented by stream-bank control works. It has been found feasible to construct aboiteaux or dams across some tidal streams which eliminate the need for dykes and aboiteaux upstream of the proposed site and permit more efficient drainage of the land protected. Two of the more important structures of this type are the Annapolis River Dam in Nova Scotia and the Tantramar River Dam in New Brunswick, both in full operation. Each was undertaken on a share basis with a provincial authority, as they serve as river crossings for traffic and eliminate the need to rebuild highway bridges at these locations in the future. The structures consist of rock-fill dams and freshwater discharge control gates; they were constructed on tidal rivers having tide ranges in excess of 30 feet and 40 feet, respectively. The addition of power-generating facilities to harness some of the energy produced by the tide at Annapolis Royal, N.S., was studied and found possible, but the cost was too high to warrant further consideration.

## Canada Water Conservation Assistance Act*

To help municipal and provincial governments with financing major water conservation and control projects, the Canada Water Conservation Assistance Act was passed by Parliament in 1953. Under the Act, the Federal Government may enter into an agreement with any province matching the provincial contribution up to a maximum of 37.5 p.c. of the cost of a major water conservation project that is considered to be beyond the normal financial means of the provincial and municipal governments involved.

During 1961, the Federal Government signed three agreements with the Government of Ontario providing federal financial participation in three major water conservation projects. In each project, the estimated cost was distributed among the federal and provincial governments and a conservation authority, the two governments each contributing 37.5 p.c. of the cost and the conservation authority the remaining 25 p.c.

The first agreement under the Act was signed Jan. 28, 1961, providing federal assistance to a $\$ 9,640,500$ flood control and water conservation project in the Upper Thames River basin. The Upper Thames River Conservation Authority, a grouping of 31 municipalities, will pay 25 p.c. of the cost of construction of five dams and three channel improvement works included in the project and will administer the completed project. Construction of the works will be spaced over a 10 -year period.

Other agreements signed between Canada and Ontario provided for federal costsharing in the construction of the $\$ 825,000$ Parkhill Dam Project in the Ausable River watershed in western Ontario and the $\$ 24,000,000$ flood control and water conservation works that will be built along the Humber and Don Rivers in the Metropolitan Toronto area. The conservation authorities involved in these projects are, respectively, the Ausable River Conservation Authority and the Metropolitan Toronto and Region Conservation Authority. Prior to the passing of this legislation, the Federal Government provided 37.5 p.c. of the cost of building the Shand and Luther Marsh Dams on the Grand River, the Conestogo Dam on the Conestogo River, and the Fanshawe Dam on the Thames River.

To be eligible for federal assistance under the Canada Water Conservation Assistance Act, a project must meet three conditions. The works must be designed primarily for flood control or other beneficial uses. It must be major in character in relation to the financial capability of the province entering into the agreement. It also must be beneficial to a community as a whole. The Act requires that complementary conservation measures be carried out in addition to the primary flood control and water conservation works.

[^126]
## Subsection 2.-Provincial Projects

Saskatchewan.*-The Conservation and Development Branch of the Saskatchewan Department of Agriculture was established in 1949 to administer water rights in the province and to carry on an active program in irrigation, drainage, flood control and land reclamation and development. Program emphasis has varied from year to year; drainage and flood control were of greatest importance during most of the 1950's but, because of the drier weather during the past four years, irrigation and community pasture development have taken precedence. The following is a summary of Branch activities to Mar. 31, 1961.

Water Rights.-Surface and ground water resources of the province are administered by the Water Rights Division of the Branch. At Mar. 31, 1961, 6,204 projects were licensed and 1,636 authorized under the Water Rights Act, involving total storage of 457,584 acre-feet; two hydro-electric developments were licensed and three other licences had been applied for under the Water Power Act; 123 water-well drillers were licensed and 1,293 wells were reported drilled under the Ground Water Conservation Act.

Irrigation Development.-Up to the end of March 1961, 54 irrigation projects had been initiated on which topographic surveys had been conducted on 440,289 acres (approximately one-half on the South Saskatchewan River). In addition, 340 miles of ditch had been constructed and 1,716 water-control structures built. Forty-six Water Users' Districts had been organized (one new district added in 1961) comprising some 203,749 acres.

Drainage and Flood Control.-By the end of March 1961, some work had been done on 461 drainage and flood-control projects. Topographic surveys had been carried out on 196,785 acres, some 682 miles of ditch dug, and 977 control structures built. A total of $8,393,178$ acres had been organized into 79 conservation areas.

Land Development and Pasture Construction.-A total of 154 land-development and community pasture projects had been worked on up to the end of March 1961. Some 73,785 acres of forage had been seeded and 1,166 miles of fence constructed. Approximately 715,460 trees had been planted under the afforestation program.

Community Pastures.-Through the Lands Branch of the provincial Department of Agriculture, the province had transferred title to $1,196,437$ acres and had leased without charge another 356,517 acres of land to PFRA for community pastures. Outside the PFRA program, the province at Mar. 31, 1961 had another 915,946 acres in 136 community pastures operated by co-operative associations, by municipalities or by the provincial Department of Agriculture; during 1961, 26 pastures operated by the province provided grazing for 25,335 head of cattle owned by 1,621 local farmers.

Development of Land for Cultivation.-Crown lands, either under cultivation or suitable for cultivation, are leased for 33 -year periods. The province may reimburse farmers in cash for the cost of clearing and breaking virgin land or the farmers may retain crop shares equivalent in value to costs sustained. To Mar. 31, 1961, the investment of the province for land clearing and breaking amounted to $\$ 8,720,476$, and included work done in six settlement projects involving initial clearing and breaking on about 200 farm units before the land was leased.

Alberta. $\dagger$ - The Alberta Water Resources Act gives the Minister of the Department of Agriculture wide powers to investigate the water resources of the province and extensive surveys have been carried out to determine the distribution and extent of the available water supply in the province and the most beneficial use for irrigation, water power and other purposes. The Water Resources Branch of the provincial Department of Agriculture administers the licensing of water power projects and the construction work in several

[^127]irrigation projects. Irrigation projects are also licensed and water allocated for domestic and irrigation purposes. Other work includes administration of drainage districts and cooperation on the Peace River dug-out project and on river protection projects where flooding occurs. In more recent years much of this work has been carried out by the Federal Government in co-operation with the Government of Alberta.

Stream measurement is being done by the Hydrometric Service of the federal Department of Northern Affairs and National Resources, and irrigation surveys are carried out largely by the water development organization under PFRA (see p. 399).

The figures given in Table 4 of land actually irrigated in Alberta in 1960 are only approximate because, while there are increases resulting from the creation of new pump irrigated areas, there are also decreases caused by soil reclassification and less water use, depending on natural precipitation. Seepage and alkali problems also have an effect on acreage quoted as irrigable. Figures for small private irrigation projects have been omitted because of their uncertain water supply.

Gross cash returns from the irrigable area are estimated at $\$ 30,000,000$, although this figure does not take into account the value of stockwater supplied through irrigation works. Nor does it include many other credit items that are difficult to evaluate such as the recreational use of water which, to these once semi-arid areas, is particularly important, and the value of fish taken from irrigation reservoirs which is known to be quite significant. Several communities receive their entire domestic water supply via irrigation canals.

## 4.-Major Irrigation Districts in Alberta, 1960

| District | Classified <br> Irrigable <br> Area | Area Actually Irrigated in 1960 |
| :---: | :---: | :---: |
|  | acres | acres |

| Totals. | 900,647 | 545,348 |

British Columbia.*-About 20 p.c. of the arable land in British Columbia is under cultivation and nearly all the grazing area is being utilized. The $1,300,000$ acres of improved land give a ratio of approximately one acre per person. Within this arable area there exist an estimated 218,000 acres of irrigated land, and the total additional acreage of irrigable land in British Columbia is estimated at 400,000 acres. About three-quarters of the irrigated area is made up of individual projects and the other quarter is served by the larger irrigation projects listed in Table 5.

## Section 4.-Statistics of Agriculture*

The collection, compilation and publication of statistics relating to agriculture is a responsibility of the Dominion Bureau of Statistics. Valuable information obtained through the Censuses of Canada and partial-coverage surveys may be obtained in reports issued by the Bureau. $\dagger$

The Bureau also collects and publishes primary and secondary statistics of agriculture on an annual and monthly basis. The primary statistics relate mainly to the reporting of crop conditions, crop and livestock estimates, wages of farm labour and prices received by farmers for their products. The secondary statistics relate to farm income and expenditure, per capita food consumption, marketing of grain and livestock, dairying, milling and sugar industries and cold storage holdings. In the collection of annual and monthly statistics, the federal Department of Agriculture and various provincial departments, as well as such agencies as the Board of Grain Commissioners and the Canadian Wheat Board, co-operate with the Bureau. Many thousands of farmers throughout Canada send in reports voluntarily and dealers and processors also provide much valuable data. The figures contained in this Section do not include estimates for Newfoundland. Agriculture plays a relatively minor part in Newfoundland's economy, commercial production of most agricultural products being quite small.

In the following Subsections details are given for 1961 where available at the time of going to press; elsewhere 1960 figures are given. Figures for both years are subject to revision.

The upward trend in Canadian economic activity was resumed in 1961 after the easing in 1960 which occurred as a result of weaknesses in business outlays for new plant and equipment, housing construction, and consumer purchases of durable goods other than automobiles. A reversal of these trends to a large extent in 1961, together with rising exports, a build-up of business inventories and continued government outlays for new goods and services provided a gross national product of $\$ 36,800,000,000$ for 1961 as a whole, 2.5 p.c. above the previous year in value terms, and almost 2 p.c. higher in terms of physical volume of output. These gains were partially offset by a substantial reduction in crop production in the Prairie Provinces, estimated to have been lower than in 1960 by about $\$ 400,000,000$. Trade in agricultural products reached new levels during the year with substantial contributions being made by special sales of wheat to Eastern Europe and mainland China.

[^129]Estimates place farm net income for 1961 at $\$ 1,006,000,000$, about 24 p.c. below the estimate of $\$ 1,358,400,000$ for 1960 , and the lowest since 1957 when total farm net income was estimated at $\$ 1,058,300,000$. Although farm cash income from farm operations reached an all-time high, farm operating expenses continued to rise and farm inventories of grains dropped drastically as a result of the significant decline in crop production in Western Canada.

## Subsection 1.-Cash Income from the Sale of Farm Products, 1960

During 1960, Canadian farmers received $\$ 2,783,000,000$ from the sale of farm products, participation payments on previous years' grain crops, net cash advances on farm-stored grains, and deficiency payments made under the farm prices support program. This was less than 1 p.c. below the figure of $\$ 2,789,300,000$ for 1959.

On a commodity basis, the more important reductions in farm cash income during 1960, relative to 1959, were recorded for barley, flaxseed and hogs. On the other hand, the more important gains were realized from the sale of wheat, potatoes, fruits, vegetables, tobacco, cattle and dairy products, and from a substantial increase in cash advances on farm-stored grains in Western Canada. In addition to the cash returns, farmers in the Prairie Provinces received about $\$ 77,000,000$ under the provisions of the Prairie Farm Assistance Act, the Western Grain Producers' Acreage Payment Regulations and the federal-provincial emergency unthreshed grain assistance policy; in the previous year, farmers received approximately $\$ 22,000,000$, most of it under the provisions of the Prairie Farm Assistance Act. When these payments are added to the cash returns from sales, cash advances on farm-stored grains, and participation and deficiency payments, total cash returns to farmers from their farming operations amounted to $\$ 2,860,200,000$ as compared with $\$ 2,811,400,000$ in 1959.

Field Crops.-Farmers' cash returns from the sale of field crops were estimated at $\$ 1,056,400,000$ for 1960 , slightly more than 3 p.c. above the estimate of $\$ 1,023,500,000$ for 1959. Contributing most to this gain was higher income from the sale of wheat, potatoes, vegetables, fruits, tobacco and a substantial increase in cash advances on farmstored grains in Western Canada. A somewhat smaller contribution was made by oats. Higher marketings of wheat and oats more than offset slightly lower average prices; heavier marketings and a substantial gain in average prices increased the income from the sale of potatoes; and a record crop of tobacco in Ontario was reflected in higher returns to farmers from this crop. Partially offsetting these increases was a significant drop in returns from the sale of barley resulting entirely from reduced marketings. More moderate declines were noted for flaxseed and rye, as well as for the participation payments made by the Canadian Wheat Board.

Livestock and Livestock Products.-Estimated at \$1,681,500,000, farmers' income from the sale of livestock and livestock products during 1960 was about 2.5 p.c. below the 1959 level of $\$ 1,726,500,000$, attributed entirely to reduced returns from the sale of hogs, eggs and poultry. The average price of hogs for the year 1960 was virtually unchanged from that of the previous year but marketings were down substantially; egg prices averaged slightly higher than in 1959 but marketings were smaller; and production of poultry meat declined more than enough to offset fractionally higher prices for fowl and chickens and substantially higher prices for turkeys.

Returns from cattle and calves in 1960 were estimated at $\$ 561.400,000$, nearly $\$ 10,000,000$ more than in 1959; although average prices were below the 1959 levels, marketings were up. Prices of dairy products were down slightly but production was up sufficiently to provide a total cash income from this item of $\$ 518,900,000$ as against $\$ 514,200,000$ for 1959.

| Totals | 2,794,615 | 2,789,348 | 2,782,953 |

Net Income of Farm Operators from Farming Operations.-Two concepts are used in preparing estimates of farm net income from farming operations. One is called realized net income and is obtained by adding together cash income from the sale of farm products, supplementary payments and the value of income in kind, and deducting farm operating expenses and depreciation charges. The other is referred to as total net income and is obtained by adjusting realized net income to take into account changes occurring in inventories of livestock and stocks of grains on farms between the beginnning and end of the year.

Realized Farm Net Income.-For 1960, the realized net income of Canadian farmers from farming operations was estimated at $\$ 1,322,300,000,3.6$ p.c. above the estimate of $\$ 1,275,800,000$ and 6.8 p.c. above the average level of $\$ 1,238,200,000$ established for the five-year period 1955-59. Although cash income was down slightly between 1959 and 1960 and operating expenses and depreciation charges were fractionally higher, this was more than offset by a small gain in income in kind and a substantial increase in supplementary payments to farmers in the Prairie Provinces. Quebec was the only province for which a decline in realized farm net income was recorded. Increases of less than 1 p.c. occurred in Nova Scotia, Manitoba and Saskatchewan and for the other provinces ranged from 3 p.c. in Alberta to about 18 p.c. in New Brunswick.

Total Farm Net Income.-Taking into account changes in farm-held inventories of grains and livestock, total farm net income for 1960 was estimated at $\$ 1,358,400,000$, 12.6 p.c. above the estimate of $\$ 1,206,300,000$ for 1959 and 7.0 p.c. above the average of approximately $\$ 1,270,000,000$ for the 1955-59 period.

## 8.-Net Income of Farm Operators from Farming Operations, 1958-60

(Exclusive of Newfoundland)
Norz.-Includes estimated rental value of farm homes, supplementary payments made under the provisions of the Prairie Farm Assistance Act, payments under the Western Grain Producers' Acreage Payment Regulations and, in 1960, payments under the federal-provincial unthreshed grain assistance policy.

## Subsection 2.-Volume of Agricultural Production

Canada's index of physical volume of agricultural production was estimated at 156.2 $(1935-39=100)$ for 1960 , which was 7.6 p.c. above the index of 145.1 for 1959 and 5 p.c. above the five-year average (1955-59) of 148.8 ; the all-time high of 169.5 was established in 1956. Although the production of livestock in 1960 was below the 1959 level, this decline was more than offset by increased production of grains, potatoes, tobacco and maple products. The output of dairy and poultry products remained almost unchanged.

For the Provinces of Prince Edward Island and Nova Scotia the change in production between 1959 and 1960 was less than 1 p.c., increases of between 2 p.c. and 3 p.c. occurred in New Brunswick, Quebec and British Columbia, and a gain of slightly more than 6 p.c. was recorded for Ontario. Total agricultural output in Saskatchewan increased by nearly 30 p.c., the greatest gain for any of the provinces, but production in Alberta and Manitoba was down by approximately 4 p.c. and 5 p.c., respectively.

## Subsection 3.-Field Crops

There were marked regional contrasts in crop-growing conditions throughout Canada during 1961. Crops in the Prairie Provinces turned out only fair to poor, with many areas experiencing complete failures, while in Eastern Canada outturns were good to excellent with a number of crops in Ontario establishing record high yields per acre. The prairies received enough moisture to produce crops equal to the recent 10 -year average in 1960, but rainfall during the fall months was light. Generally cool spring weather in 1961 accompanied by rain and snow provided adequate moisture to germinate crops but dry conditions and above-average temperatures appeared in early June and continued with little respite during July and August. Conditions generally were the worst in Saskatchewan and Manitoba. Much of the northern half of Alberta and parts of the southwest received rains in time to produce fair to good crops, but in the southeast corner most crops were a failure. As a result, average yields of wheat were reduced to half those of the preceding year.

Growing conditions during the late summer months were nearly ideal over most of Ontario and western Quebec. Ample rainfall and adequate heat caused rank crop development and many farmers experienced difficulty with lodging of small grains, but grass and fodder crops made excellent growth and good crops of corn and soybeans were produced. Summer drought retarded crop development in much of eastern Quebee and the Maritimes resulting in outturns a little below average. Most of British Columbia experienced good growing and harvesting conditions.

After registering declines in the two preceding years, total supplies of the five major grains increased again in 1960-61. Farmers' marketings of wheat, oats, barley, rye and flaxseed amounted to $546,606,000 \mathrm{bu}$. representing a rise of 6 p.c. over the 1959-60 total of $516,695,000 \mathrm{bu}$. The 1960-61 deliveries, however, were considerably short of the record 1952-53 crop year total of $844,855,000 \mathrm{bu}$. and 9 p.c. less than the ten-year (1949-50-1958-59) average of $602,405,000$ bu. Exports of the same five grains, combined with their respective milled and processed products, reached $419,324,000 \mathrm{bu}$., an increase of 15 p.c. over the $1959-60$ total of $364,136,000 \mathrm{bu}$. and 1 p.c. higher than the ten-year average of $414,200,000 \mathrm{bu}$. In addition to exports, disappearance of these grains into domestic channels in 1960-61 was estimated at some $785,687,000 \mathrm{bu}$. compared with $765,964,000 \mathrm{bu}$. in the preceding year. The combined effect of expanded exports and domestic requirements more than offset a larger total supply and, as a result, carryover stocks were down from $763,513,000$ bu. at July 31,1960 to $744,486,000$ bu. at the same date of 1961 . Production of wheat, oats, barley, rye and flaxseed in the 1961 season, reflecting the severe drought conditions of the mid-west, was estimated at $740,304,000$ bu., a decrease of 38 p.c. from the production of the previous year. Thus, with declines recorded for both carryover and production, total domestic supplies of the five grains for 1961-62 declined to $1,484,800,000$ bu. from 1,949,500,000 bu. in 1960-61.

The potato crop totalled $45,300,000 \mathrm{cwt}$. in 1961 compared with $45,500,000 \mathrm{cwt}$. in 1960, a 6-p.c. increase in acreage being nearly offset by a similar decrease in average yield per acre. Ontario became established as the largest potato-growing province and average yields per acre in that province, at a record 188.4 cwt., were the highest in Canada.

The rapeseed crop largely escaped the effects of the drought, being produced mainly in the more favoured areas of northern Alberta and Saskatchewan, and established a new record in 1961 of $558,000,000 \mathrm{lb}$. compared with $556,000,000 \mathrm{lb}$. in the previous year and the 1955-59 average of $275,400,000 \mathrm{lb}$. The soybean crop, most of which is grown in Ontario, established new production and yield-per-acre records in 1961. The total of $8,700,000 \mathrm{bu}$. produced was 53 p.c. higher than the 1960 total of $5,700,000 \mathrm{bu}$. and an average yield per acre of 31.8 bu. compared with 22.1 bu . in 1960 . Production of tame hay and fodder corn at $25,700,000$ tons also reached a new high in 1961 but supplies were distributed unevenly, Eastern Canada harvesting record crops while the prairie region suffered from shortages.

Stocks of Grain in Canada.-Table 14 shows the stocks of Canadian grain on hand in Canada and in the United States on July 31 for the years 1960 and 1961, with averages for the five-year periods 1950-54 and 1955-59. Stocks in Canada are separated into those in commercial positions and those on farms. Stocks on farms and in country elevators in the Prairie Provinces are given separately.

## 14.-Carryover of Canadian Grain as at July 31, 1960 and 1961, with Averages for 1950-54 and 1955-59

Nore.-Figures for individual years before 1960 will be found in the corresponding table of previous editions of the Year Book.

## Subsection 4.-Livestock and Poultry

Livestock.-Greatly increased exports of slaughter and feeder cattle to the United States and an abrupt halt to expansion in hog production were noteworthy features of the livestock situation in 1961. These developments were associated with the change in exchange rates and with the feed supply and price situation resulting from the drought in the Prairie Provinces. The number of cattle in Canada has been increasing quite steadily since 1952 with beef-type cows setting the pace. Further increases of breeding stock took place through 1961 when, particularly in the Prairie Provinces, greater numbers of calves, steers and heifers were sold as a result of drought. Hog production decreased sharply in 1960 from the high output of 1959 but by June of 1961 a marked up-turn in the production cycle was again indicated; numbers on farms were 7 p.c. greater than in 1960 and the spring pig crop was 11 p.c. higher. However, estimated numbers at Dec. 1 and the fall pig crop were only 3 p.c. and 4 p.c. higher, respectively, than in 1960 and sows kept for breeding were so reduced in number that the spring pig crop in 1962 was expected to be about the same as in 1961.

Price movements in 1961 are indicated by the following annual average calculation of prices paid on the Toronto market, with 1960 prices bracketed: good steers, $\$ 22.75$ ( $\$ 22.65$ ); good feeder steers, $\$ 22.70$ ( $\$ 22.90$ ); good lambs, $\$ 20.80$ ( $\$ 21.85$ ); and Grade A hogs, dressed, $\$ 28.30$ ( $\$ 24.75$ ). The numbers of livestock on farms in the different provinces for 1960 and 1961 are given in Table 15 and the average values per head of farm livestock are given, by province, in Table 16.

## 15.-Livestock on Farms, by Province, as at June 1, 1960 and 1961

Nore.-Annual estimates of livestock numbers for 1960 and 1961 are subject to revision based on 1961 census data, which were not available at the time of going to press.

[^131]16.-Average Value per Head of Farm Livestock, by Province, 1960 and 1961
(Exclusive of Newfoundland and the Yukon and Northwest Territories)

${ }^{1}$ Cows and heifers, two years old or over, kept for milk purposes.
The federal Department of Agriculture inspects all livestock in plants designated as inspected establishments under the Meat and Canned Foods Act. A record is kept of these inspections and figures from 1947 are given in Table 17. Local wholesale butcherings and slaughterings carried out by retail butchers and by farmers for their own use are not included. Actually, the slaughtering and meat packing industry is concentrated in a comparatively small number of large establishments to facilitate greater efficiency and utilization of products; thus the figures of Table 17 are fairly inclusive. The slaughtering and meat packing industry is dealt with in its proper relation to all other manufacturing enterprises in Chapter XIV of this volume. On a gross value basis it normally ranks among the four largest manufacturing industries in Canada but it owes its importance to the value of raw products obtained from the farmer and the rancher rather than to the value added by the manufacturing process.

Poultry.-Poultry on farms and their values are given in Table 18; production and consumption of poultry meat are included in Table 19.

## 18.-Numbers and Values of Poultry on Farms, by Province, as at June 1, 1960 and 1961

Nore.-Values for turkeys, geese and ducks for the years 1960 and 1961 are not strictly comparable with values for earlier years published in previous editions of the Year Book because of a change in the method of collecting information.

Subsection 5.-Dairying
Milk production in 1961 reached a new record at $19,245,000,000 \mathrm{lb} ., 4.1$ p.c. higher than in 1960. All provinces contributed to the increase, particularly Quebec and Ontario, and most of it was utilized in the manufacture of creamery butter. Of the total milk produced, 59.4 p.c. was used for factory-made dairy products, 30.2 p.c. was sold in fluid form and 10.4 p.c. was used for all purposes on farms.

${ }^{1}$ Used in farm butter only. ${ }^{2}$ Includes values of skim milk and buttermilk retained on farms.

Butter production in 1961 stood at $363,751,000 \mathrm{lb}$., almost $31,000,000 \mathrm{lb}$. more than in the previous year. The 1961 total included $351,598,000 \mathrm{lb}$. of creamery butter, $8,284,000$ lb . of dairy or farm-made butter and $3,869,000 \mathrm{lb}$. of whey butter. The annual per capita consumption of creamery butter continued its downward trend from 16.27 lb . in 1960 to 15.77 lb . in 1961 . Stocks on hand at the end of the year amounted to $126,786,000 \mathrm{lb}$., the largest carryover on record. Combined with the butter equivalent of butter oil stocks, the carryover was $197,172,000 \mathrm{lb}$.

Factory cheese production in 1961 was estimated at $130,370,000 \mathrm{lb} ., 6.2$ p.c. higher than in 1960. Peak cheese production occurred in 1942 when the output was $207,431,000 \mathrm{lb}$. and peak exports in 1945 when they amounted to $135,409,000 \mathrm{lb}$. Exports of cheese, mostly cheddar, in 1961 amounted to $19,508,000 \mathrm{lb}$. and in 1960 to $18,780,000 \mathrm{lb}$.

[^133]The output of concentrated whole milk, normally only slightly in excess of domestic requirements, was 13.0 p.c. above those requirements in 1961. Exports and per capita consumption decreased 23.8 p.c. and 5.0 p.c., respectively, from 1960 . Skim milk powder production at $213,029,000 \mathrm{lb}$. was $41,060,000 \mathrm{lb}$. above production in 1960 and $27,404,000$ lb. above the previous peak reached in 1958. Exports advanced from $47,992,000 \mathrm{lb}$. in 1960 to about $53,050,000 \mathrm{lb}$. in 1961 and domestic disappearance reached a record high of $152,826,000 \mathrm{lb} ., 24.5$ p.c. above the previous year.

## 24.-Production of Ice Cream Mix, by Province, 1958-61

${ }^{1}$ Previous to 1960, ice cream mix data were doubled and published as ice cream.
The estimated consumption of fluid milk and cream, on a milk basis, amounted to $5,310,091,000 \mathrm{pt}$. in 1961, which amount was $20,231,000 \mathrm{pt}$. higher than the 1960 consumption. The daily average consumption per capita was 0.82 pt . compared to 0.83 pt . in 1960. The estimated consumption of milk and cream is given by province in Table 25 and the domestic disappearance of all dairy products in Table 26.

${ }^{1}$ Includes Newfoundland for all manufactured dairy products
${ }^{2}$ Includes, in addition to the items listed, malted milk, cream powder, partly skimmed evaporated milk, whole milk powder of less than 26 p.c. fat, formula milks, evaporated milk of 2 p.c. fat, and multi-milk. ${ }_{2}$ Includes milk by-products items not listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein, powdered whey, specisl formuls skim milk products and multi-skim milk. Since the quantities used for human consumption and livestock feeding cannot be separated, per capita figures include both. ${ }^{\text {a }}$ Includes ice cream mix in terms of milk.

## Subsection 6.-Fruits and Vegetables

Fruits.-Commercial fruit growing in Canada is confined almost exclusively to rather limited areas in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. Nova Scotia production is centred mainly in the Annapolis Valley and New Brunswick production in the St. John River Valley and Westmorland County. The fruit growing districts of Quebec are the Montreal area, the North Shore area, the Eastern Townships and the Quebec City district. Ontario fruit is grown in all the counties adjacent to the St. Lawrence River and the Great Lakes as far west as Georgian Bay, the Niagara district being the most productive. In British Columbia the four well-defined fruit areas are the Okanagan Valley, the Fraser Valley, the Kootenay and Arrow Lakes district and Vancouver Island. The climate elsewhere in Canada is not generally suitable for commercial tree-fruit culture. In most producing areas, particularly in the Annapolis Valley of Nova Scotia, the Niagara Peninsula of Ontario and the Okanagan Valley of British Columbia, fruit growing is either the principal or one of the most important forms of agriculture and is of paramount importance to the economy of those areas. Apples and small fruits are produced commercially in the provinces named but tender tree fruits and commercial vineyards are limited largely to Ontario and British Columbia.

Strawberries are grown commercially in all provinces for which tree-fruit statistics are prepared, as well as in Prince Edward Island. However, this crop is produced over a somewhat wider area than are tree fruits. In Nova Scotia, for example, considerable quantities of strawberries are grown in Colchester County and farther north, as well as in the apple producing areas of the Annapolis Valley. In British Columbia most of the strawberries are grown in the Fraser Valley rather than in the predominantly tree-fruit producing area of the Okanagan Valley.

Raspberries are grown commercially in Nova Scotia, New Brunswick and Quebec but the bulk of the crop is produced in Ontario and British Columbia. The Fraser Valley of British Columbia is the most important producing area.

Wild blueberries are harvested on a commercial scale in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick and Quebec. This crop is indigenous to certain lands in these areas. Individuals who harvest the wild berries may undertake to burn the land from time to time for weed control and to effect pruning, dusting is often carried out to control insects, and bees are sometimes introduced to achieve better pollination. A large percentage of the crop is frozen and exported. Some blueberries are picked for sale in other provinces but no statistics of this trade are available. There is also some production of cultivated blueberries, particularly in British Columbia.

A marketing system has been developed for distributing fresh fruit from the specialized production areas to all parts of the country and a large proportion of the deciduous fruit consumed in Canada is grown domestically. Considerable quantities of apples, strawberries and blueberries are exported.

Canning and processing industries have developed in the fruit growing districts and, although the importance of the processing market varies with different fruits, it provides a valuable outlet for substantial proportions of most Canadian-grown fruit crops.

Tables 27 and 28 show the estimated commercial production of fruit, by kind and by province, for the years 1958-60. Although details of production for 1961 were not available at the time of the preparation of this material, estimates placed the apple crop at $16,200,000$ bu., 9 p.c. above the 1960 output, and growers picked an estimated $3,100,000 \mathrm{bu}$. of peaches, the largest crop ever produced. Plums and prunes, cherries and loganberries were also harvested in greater quantities.
27.-Estimated Commercial Production and Farm Value of Fruit, 1958-60

| Kind of Fruit and Year | Quantity | Weight | Farm Value | Average Farm Price per Unit of Quantity ${ }^{1}$ | Kind of Fruit and Year | Quantity | Weight | Farm Value | Average Farm Price per Unit of Quantity |

${ }^{1}$ Farm value (to pickers in the case of blueberries) for unpacked fruit.
Vegetables.-Estimates of acreage and production of commercial vegetables in Canada are prepared for all provinces except Newfoundland, Prince Edward Island and Saskatchewan. The Province of Ontario is the largest producer, followed by Quebec and British Columbia. A wide variety of crops is grown in these three provinces and a somewhat smaller range in the Maritimes and in the Prairie Provinces.

Canning, freezing and processing of vegetables are carried on in the important producing areas. The estimates in the following tables cover output of commercial growers only and do not include any acreages or production of vegetables grown for home use on farms or elsewhere.

${ }^{1}$ Estimates apply only to that portion of the crop grown for processing in Quebec, Ontario, Manitoba and Alberta in 1958; in Ontario, Manitoba and Alberta in 1959 and 1960.
${ }^{2}$ Estimates apply only to that portion of the crop grown for processing in all provinces for which estimates are made except British Columbia.

## Subsection 7.-Other Principal Farm Products

Tobacco.-The chief tobacco growing area of Canada is located in southern Ontario in the counties adjacent to Lake Erie; most of the cigarette tobacco comes from this district. In Ontario as a whole, 123,831 acres of flue-cured or Bright Virginia type tobacco were harvested in 1960. This is the most important type grown in Canada although dark air-cured and fire-cured tobacco as well as cigar tobacco are grown on a limited scale. The only other important production comes from Quebec. In 1960, 5,218 acres of flue-cured tobacco, 5,100 acres of cigar tobacco and 1,280 acres of pipe tobacco were harvested in that province. Recently, small acreages have been successfully grown in Prince Edward Island, Nova Scotia and Manitoba.

A study of Department of National Revenue reports on tax-paid withdrawals of tobacco products reveals changes in the smoking habits of Canadians during the past three decades. In 1922, the first year for which comparable figures are available, Canadian annual per capita consumption of cigarettes was 229 ; by 1959 the annual per capita consumption (calculated on the basis of total population) had increased to 1,939 . The figure for 1960 declined slightly to 1,925 .

## 31.-Acreage, Production and Value of the Commercial Crop of Leaf Tobacco, by Province, 1956-60

${ }^{1}$ Includes other types not specified.
Sugar Beets and Beetroot Sugar.-Sugar beets are grown commercially in Quebec, Ontario, Manitoba and Alberta and beet sugar factories are located in these provinces. In Quebec, commercial production is centred in the St. Hilaire area of the Eastern Townships; in Ontario, production is confined largely to the southwestern section of the province. Alberta produces the largest crop and in that province sugar beets are grown under irrigation.
33.-Acreage, Yield and Value of Sugar Beets and Quantity and Value of Refined Beetroot Sugar Produced 1955-61, with Average for 1950-54

| Year | Sugar Beets |  |  |  |  | Refined Beetroot Sugar |  |  |

Eggs.-The net production of eggs in 1961 amounted to $446,533,000$ doz., $4,517,000$ doz. fewer than in 1960; an increase in the rate of lay in the later year was more than offset by a decline in the number of layers. The average farm value of eggs to producers was 35.5 cents in 1961 compared with 34.2 cents in 1960. According to the federal Department of Agriculture, the Canadian hatchery industry in 1961 broke all previous production records. Although only 3.7 p.c. more chicks from egg production stocks were hatched than in the previous year, the production of broiler-type chicks rose by 31.2 p.c. The number of broiler-type turkey poults hatched was 40.2 p.c. above 1960 and the hatch of turkeys for mature weights was 35.2 p.c. higher.
34.-Production, Utilization and Value of Farm Eggs, by Province, 1960 and 1961

${ }^{1}$ Total laid less loss.
Wool.-Canada's wool requirements are met largely by imports which amounted to $49,502,000 \mathrm{lb}$. (greasy basis) in 1960 and $51,492,000 \mathrm{lb}$. in 1959 . Exports amounted to $3,678,000 \mathrm{lb}$. in 1960 and $5,002,000 \mathrm{lb}$. in 1959. The apparent domestic consumption of wool shown in Table 35 is determined on the basis of production, exports and imports but does not take into consideration changes in stocks for which the data are not available. Differences in wool utilization from year to year are therefore probably less marked than is indicated by these figures.

[^138]Honey.-Honey is produced commercially in all provinces of Canada except Newfoundland, Ontario being the largest producer. There is a considerable movement of honey from the Prairie Provinces to other parts of Canada.

Honey statistics have been compiled on an all-Canada basis since 1924 and show that the largest recorded crop was in 1948 when $45,145,000 \mathrm{lb}$. were produced. Production in 1960 was $32,224,000 \mathrm{lb}$. and in $1961,34,476,000 \mathrm{lb}$. The increased quantity in 1961 was brought about by slightly higher yields per colony and a moderate increase in colony numbers. However, the number of active beekeepers, estimated at 11,660 in 1961, was considerably below the 1960 total of 12,570 . Average production per colony in 1961 stood at 102 lb .

In order to facilitate storage, shipment and uniformity of quality, considerable quantities of Canadian honey are pasteurized. Beekeepers' marketing co-operatives are active in several provinces. Bees are kept in some of the fruit growing districts mainly for purposes of pollination.

Maple Sugar and Maple Syrup.-Maple syrup is produced in the Provinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop comes from the Eastern Townships of Quebec, a district famous both in Canada and in the United States as the centre of the maple products industry. Virtually all of the maple products exported are sent to the United States with the larger proportion moving as sugar, although substantial quantities of syrup are also shipped. Much of the syrup sold in Canada is marketed in one-gallon cans direct to the consumer from the producer but a considerable amount of both sugar and syrup is sold each year to processing firms.

Table 38 shows maple sugar and syrup production for 1950-61. Estimated output of the 1961 maple crop, expressed as syrup, was $2,827,000 \mathrm{gal}$.

Nursery Stock.-Statistics concerning the nursery industry in Canada for recent years are presented in Tables 39 and 40. All nurseries were asked to report quantities sold of stock propagated during these years; stock purchased from other nurseries in Canada was excluded to prevent duplication. A total of 336 nurseries reported shipments in 1960, provincially distributed as follows: Ontario 183, British Columbia 54, Quebec 43, Manitoba 23, the Maritime Provinces 13, Alberta 11, and Saskatchewan 9. Wholesale value of nursery stock shipments of fruit trees, etc., amounted to $\$ 463,300$, and of ornamental species to $\$ 3,637,500$ in 1960 ; no comparable figures are available for previous years.

Greenhouse Operations.-Annual surveys have been made of greenhouse operations for 1955 and subsequent years. Data are reported by firms and individuals returning questionnaires, with the exception of that for cucumbers and tomatoes grown in Essex County of Ontario (the most important producing area), which is based on information obtained from the local co-operative marketing agency. Only greenhouses used for the production of items for sale are included in the survey. Of the total of 1,045 firms reporting in 1960, 1,011 reported operating glass commercially. In that year, the industry employed 4,144 persons, 3,015 of them in Ontario.

## Subsection 8.-Prices of Agricultural Products

The monthly index of farm prices of agricultural products was designed to measure changes occurring in the average prices farmers receive at the farm from the sale of farm products. In comparing current index numbers with those before August 1960, certain
points should be considered. Western grain prices used in the construction of the index before Aug. 1, 1960 are final prices for all grains. For the remaining months of 1960, the western grain prices used in the index are initial price plus interim payment for wheat, final price for oats and initial price only for barley. Subsequent participation payments made on the 1960 crops will be added to the prices currently used and the index revised upward accordingly.
42.-Average Index Numbers of Farm Prices of Agricultural Products, by Province, 1951-60, and Monthly Indexes for 1959 and 1960
$(1935-39=100)$
Nore.-A description of this index, its coverage and the methods used will be found in DBS Quarterly Bulletin of Agricultural Statistics (Catalogue No. 21-003) for October-December 1946.

${ }^{1}$ All weights; beginning in 1958 prices for steers are not classified by weight. $\quad{ }^{2}$ No sales reported. ${ }^{2}$ Grade B dressed from October 1959.

## Subsection 9.-Food Consumption

Food consumption figures represent available supplies, including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations are made at the retail stage of distribution, except for meats for which the figures are worked out at the wholesale stage. The amount of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reach the hands of the consumer. It should also be pointed out that there are minor inaccuracies in certain of the figures since statistics of storage stocks in the hands of retailers and consumers are not available.

All basic foods are classified under 13 main commodity groups. The total for each group is computed using a common denominator for the group, for example: milk solids (dry weight) in the dairy products group; fat content for fats and oils; and fresh equivalent for fruits. All foods are included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

The series in Table 45 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1955-59 as an average for comparison with the years 1959 and 1960.

## 45.-Per Capita Supplies of Food Moving into Consumption 1959 and 1960, with Average for 1955-59

## 46.-Supply, Distribution and Disappearance of Meats and Lard 1956-60, with Average for 1951-55-concluded

[^141]
## Section 5.-Agricultural Statistics of the Census

A summary of the agricultural statistics recorded by the Census of Canada is normally presented in this Section. Such summary data resulting from the 1961 Census as was available at the time of going to press with this publication (mid-1962) will be found in Appendix II. A complete list of Census publications, with their prices and an order form, is available from the Dominion Bureau of Statistics on request. It is expected that all reports in the Advance Series will be released by the end of 1962, and that the provincial reports in the Volume Series will be released by mid-1963.

## PUBLICATIONS OF THE 1961 CENSUS OF AGRICULTURE

## Advance Series

Reports in this Series provide published data at earlier dates than the regular series of volume reports and include data relating to the following: areas of field crops; numbers of livestock and poultry on farms; farm machinery and electric power; areas of vegetables, fruits, greenhouses and nurseries; area and use of farm land; a classification of farms by size, economic class and product type; farm woodlots. The Series will also include a bulletin giving a comparison between agricultural data for commercial farms and all farms as defined in the Census.

## Volume Series

Reports in this Series represent the main results of the 1961 Census of Agriculture and may be ordered as separate provincial reports or in volume sets. These provincial reports are prepared in such a way that they may be combined within a hard-covered binder (provided with the set) to form the complete subject matter of each Volume.

Volume V (Part 1)-Census of Agriculture
Includes reports showing complete provincial data for Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick as well as a Canada summary.

## Volume V (Part 2)-Census of Agriculture

Includes reports showing complete provincial data for Quebec and Ontario.

## Volume V (Part 3)-Census of Agriculture

Includes reports showing complete provincial data for Manitoba, Saskatchewan, Alberta and British Columbia.

## Special Series

This Series of 1961 Census reports includes one Census of Agriculture bulletin giving the number and area of farms for counties and census subdivisions.

## Section 6.--International Crop Statistics

Tables 47 and 48 are based on estimates published on Jan. 26, 1961 and Jan. 25, 1962 by the Foreign Agricultural Service, United States Department of Agriculture, and give the acreages and production of wheat and the production of oats and barley for the harvests of 1960 and 1961 with averages for the years 1950-54, in the leading countries of the world.

## 47.-Estimated Acreages and Production of Wheat Harvested in 1960 and 1961 in Specified Countries, with Average for 1950-54

## The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

Canada's extensive forests have been an invaluable asset to the country and its people since the earliest days of settlement. The productive portion of these forests has poured increasing wealth into the stream of national income, contributing to the economy of the country as the producer of raw materials for industry and as the source of livelihood for hundreds of thousands of persons. At the same time, the existence of widespread forest cover, productive or unproductive in the sense of human utilization, remains essential to the maintenance of the balance of nature-in protecting water-catchment areas and assuring supplies of water, in lowering the temperature, reducing the velocity of the wind and protecting the land against drought and erosion, and in providing shelter for birds and animals.

## Section 1.-Forest Regions $\dagger$

The forests of Canada cover a vast area in the north temperate climatic zone. Wide variations in physiographic, soil and climatic conditions cause marked differences in the character of the forests in different parts of the country; hence, eight fairly well defined forest regions may be recognized. These regions, with the relative proportion of the total area of all forest regions occupied by each, are as follows:-

| Region | Percentage of <br> Forested Area | Region | Percentage of Forested Area |
| :---: | :---: | :---: | :---: |
| Boreal. | 82.1 | Acadian. | 2.0 |
| Great Lakes-St. La | 6.5 | Columbia. | 0.8 |
| Subalpine. | 3.7 | Deciduous. | 0.4 |
| Montane. | 2.3 |  |  |
| Coast.. | 2.2 | Total. | 100.0 |

[^143]Boreal Forest Region.-This region comprises the greater part of the forested area of Canada, forming a continuous belt from Newfoundland and the Labrador Coast westward to the Rocky Mountains and northwestward to Alaska. The white and black spruces are characteristic species; other prominent conifers are tamarack, balsam fir and jack pine in the eastern and central portions, and alpine fir and lodgepole pine in the western and northwestern parts. Although the forests are primarily coniferous, broadleaved trees (poplars and birches) form an admixture with the conifers in the central and south-central regions, particularly in the zone of transition to the prairie. To the north, the proportion of spruce and tamarack rises, and with increasingly rigorous climatic conditions the close forest gives way to the open lichen-woodland which in turn merges into tundra. Along the southeastern border of the region there is a considerable intermixture of species from the Great Lakes-St. Lawrence Forest such as the white and the red pines, yellow birch, sugar maple, black ash, and eastern white cedar.

Subalpine Forest Region.-This coniferous forest region is found on the mountain uplands in Western Canada, extending from the United States boundary to the divide separating the drainage of the Skeena, Nass and Peace Rivers from the drainage of the Stikine and Liard Rivers, and from the east slopes of the Rockies to the highlands on Vancouver Island. The dominant species are Engelmann spruce, alpine fir and lodgepole pine, conferring a marked resemblance to the boreal forest. Dominants of the latter-the black and white spruces, and aspen-are intermixed with the subalpine species in many of the eastern and northern parts of the region. There is also some presence of blue Douglas fir at contacts with the Montane forest, of amabalis fir (Coast Forest), of western hemlock and of western red cedar (Coast and Columbia Forests). Other characteristic species are western larch, whitebark pine and limber pine, and on the Coast Mountains the yellow cedar and mountain hemlock.

Montane Forest Region.-This region occupies a large part of the interior uplands of British Columbia, as well as a part of the Kootenay Valley and a small area on the east side of the Rocky Mountains. It is a northern extension of the typical forest of much of the western mountain system in the United States, and comes in contact with the Coast, Columbia and Subalpine Forests. Ponderosa pine is a characteristic species of the southern portions. Blue Douglas fir is found throughout, but more particularly in the central and southern parts; lodgepole pine and aspen are generally present, the latter being particularly well represented in the north-central portions. Engelmann spruce and alpine fir from the Subalpine Region become important constituents in the northern parts, together with white birch. The white spruce, though primarily Boreal in affinity, is also present. Extensive prairie communities of bunch-grasses, sagebrush and foragable herbs are found in many of the river valleys.

Coast Forest Region.-This is part of the Pacific Coast forest of North America. Essentially coniferous, it consists principally of western red cedar and western hemlock, with abundant Douglas fir in the south and Sitka spruce in the north. Amabilis fir and yellow cedar occur widely and, together with mountain hemlock and alpine fir, are common at higher altitudes; western white pine is found in the southern parts. Broadleaved treesthe black cottonwood, red alder and broadleaf maple-are present though of limited distribution. Arbutus and Garry oak occur in Canada only on the southeast coast of Vancouver Island and the adjacent islands and mainland; these species have their centres of population to the south, in the United States.

Columbia Forest Region.-A large part of the Kootenay River Valley, the upper valleys of the Thompson and Fraser Rivers, and the Quesnel Lake area of British Columbia contain a coniferous forest closely resembling that of the Coast Region. Western red cedar and western hemlock are the characteristic species of this "Interior Wet Belt". Associated trees are the blue Douglas fir, which is of general distribution, and, in the southern parts, western white pine, western larch and grand fir. Engelmann s pruce from the Subalpine Region is important in the upper Fraser Valley and is found to some extent at the higher levels of the forest in the remainder of the region. At lower elevations in the west and in parts of the Kootenay Valley the forest grades into the Montane Region and, in a few places, into prairie grasslands.

Deciduous Forest Region.-A small portion of the deciduous forest, widespread in the eastern United States, occurs in southwestern Ontario between Lakes Huron, Erie and Ontario. Here, wi th the broadleaved trees common to the Great Lakes-St. Lawrence Region, such as sugar maple, beech, white elm, basswood, red ash, white oak and butternut, are scattered a number of other broadleaved species which have their northern limits in this locality. Among these are the tulip-tree, cucumber-tree, papaw, red mulberry, Kentucky coffee-tree, redbud, black gum, blue ash, sassafras, mockernut and pignut hickories, and scarlet, black and pin oaks. In addition, black walnut, sycamore and swamp white oak are confined largely to this Region. Conifers are few, and there is only a scattered distribution of white pine, tamarack, red juniper and hemlock.

Great Lakes-St. Lawrence Forest Region.-Along the Great Lakes and the St. Lawrence River Valley lies a forest of a very mixed nature, characterized by the white and the red pines, eastern hemlock and yellow birch. With these are associated certain dominant broadleaved species common to the Deciduous Forest Region, such as sugar maple, red maple, red oak, basswood and white elm. Other species with wide range are the eastern white cedar and large-tooth aspen and, to a lesser extent, beech, white oak, butternut and white ash. Boreal species, such as the white and the black spruces, balsam fir, jack pine, poplars and white birch, are intermixed and in certain central portions, as well as in the east, red spruce is abundant.

Acadian Forest Region.-Over the greater part of the Maritime Provinces, exclusive of Newfoundland, there is a forest closely related to the Great Lakes-St. Lawrence Region and, to a lesser extent, to the Boreal Region. Red spruce is a characteristic though not exclusive species, and associated with it are balsam fir, yellow birch and sugar maple, with some red pine, white pine and hemlock. Beech was formerly a more important forest constituent than at present, for the beech bark disease has drastically reduced its abundance in Nova Scotia, Prince Edward Island and southern New Brunswick. Other species of wide distribution are the black and the white spruces, red oak, white elm, black ash, red maple, white birch, wire birch and the poplars. Eastern white cedar, though present in New Brunswick, is extremely rare elsewhere, and jack pine is apparently absent from the upper St. John Valley and the western half of Nova Scotia.

## Section 2.-Forest Resources

The forested area of Canada is estimated at $1,712,868 \mathrm{sq}$. miles, and about 56 p.c. of that area is capable of producing merchantable timber. Of this productive area, 717,817 sq. miles are now accessible for commercial operations and the remainder, at
present beyond the reach of economical transportation facilities, contains much valuable timber that will be brought progressively into commercial development as demand requires its use and as transportation becomes available. The great areas of forest considered commercially non-productive are nevertheless of significant value to the country in the influence they exert on climate, moisture and soil. Table 1 shows the areas of productive and non-productive forested land in each province and territory. Forested land, classified by type of growth and by province, is given in Chapter I at p. 24.
1.-Productive and Non-productive Forested Land, by Province, 1961

| Province or Territory | Productive Forested Land |  |  | Nonproductive Forested Land | Total Forested Land |

| Totals, Provinces.................... | 691,917 | 192,529 | 884,446 | 552,622 | 1,437,068 |
| Yukon Territory. $\qquad$ <br> Northwest Territories. $\qquad$ | $\begin{aligned} & 14,200 \\ & 11,700 \end{aligned}$ | $\begin{aligned} & 27,900 \\ & 21,900 \end{aligned}$ | $\begin{aligned} & 42,100 \\ & 33,600 \end{aligned}$ | $\begin{array}{r} 39,100 \\ 161,000 \end{array}$ | $\begin{array}{r} 81,200 \\ 194,600 \end{array}$ |
| Canada............................. | 717,817 | 242,329 | 960,146 | 752,722 | 1,712,868 |

There are more than 150 tree species in Canada, of which 31 are conifers, commonly called 'softwoods'. About two-thirds of these softwoods and 10 p.c. of the large number of deciduous or 'hardwood' species are of commercial importance. Approximately 82 p.c. of the volume of merchantable timber is made up of softwood species. The dominant species existing in each forest region are given in Section 1. Detailed information is contained in Department of Forestry Bulletin No. 61, Native Trees of Canada.*

With help from the Federal Government, inventories of the forest resources are made periodically by provincial forest authorities and, with their co-operation, the federal Department of Forestry compiles the National Forest Inventory. The latest estimates of the total stand of timber, by province and region, appear in Table 2. These estimates are subject to constant revision as more accurate and complete inventories are compiled.

The predominant part played by pulp and paper, lumber and other forest product industries in the development of Canada has resulted in a widespread tendency to evaluate the forest in terms of timber alone. However, a growing realization of the economic importance of the forest for its non-commercial values, such as recreation and wildlife and watershed protection, is bringing about increasing recognition of the true value of the forest and is thus developing a broader concept of forestry.

[^144]2.-Estimate of Standing Timber, by Type and Size and by Province and Region, 1961

${ }^{1}$ Ten inches D.B.H. or over (suitable for saw timber).
${ }^{2}$ Four to nine inches D.B.H. (units of 85 cu . (eet).

Tenure of Forest Land.-Corporations and private individuals own 9 p.c. of the productive forest land of Canada and 91 p.c. is in the possession of the Crown in the right of the federal or the provincial governments. Rights to cut Crown timber under lease or licence have been granted on 20 p.c. of the productive forest land; the remainder comprises unalienated productive forest areas and federal lands such as Indian reserves, military reserves, etc.

Woodlots on the 480,903 farms (1961) across the country comprise about 5 p.c. of the total accessible productive forest. These small wooded tracts, ranging in size from three or four acres to 200 or more acres, are among the most accessible forests in Canada. Also, the woodlots of Eastern Canada are, in general, highly productive because they lie in the southern parts of the country and frequently occupy soils that are considerably higher in quality than those typical of the northern forests.

## 3.-Tenure of Occupied Productive Forest Land, by Province, 1961

## Section 3.-Forest Depletion

General information on forest depletion and increment as well as statistics on forest fires and fire losses are presented in this Section. The scientific control of the influences that account for wastage, such as forest fires, insect pests, etc., is dealt with in Section 4.

The average annual rate and cause of depletion of reserves of merchantable timber during the ten years 1950-59, together with annual data for 1959 and 1960, are given in Table 4. Of the total depletion of the forests in the ten-year period, 92 p.c. was utilized and 8 p.c. was destroyed by fire. (Information on the extent of damage caused by agencies other than fire, such as insects, disease and natural mortality, is not available.) The average annual utilization of $3,182,229,000 \mathrm{cu}$. feet comprised 48 p.c. logs and bolts, 40 p.c. pulpwood, 10 p.c. fuelwood, and 2 p.c. miscellaneous products. About 5 p.c. of the total utilization was exported in the form of logs and bolts and pulpwood.

The accessible portion of the productive forests of Canada, covering an area of 717,817 sq. miles, constitutes the reserve from which forest production will be obtained for many years to come. The supply of merchantable timber on this area is estimated at $588,133,000,000 \mathrm{cu}$. feet and the utilization in 1960 of $3,413,500,000 \mathrm{cu}$. feet therefore represented less than 1 p.c. of the accessible productive volume. However, it should be noted that utilization does not occur evenly throughout the accessible productive forest area but is concentrated on the relatively small area of occupied forest land (land under lease, licence or private ownership). Thus, overcutting may occur on many of these occupied areas, emphasizing the need for orderly management of all commercial forests if the forest industries are to maintain a dominant position in the Canadian economy.

The more efficient utilization of cut timber is an important factor related to forest depletion, for there is little doubt that in the past too high a percentage of the sawn log was discarded. However, changes of great significance have taken place recently in the uses of wood, permitting the utilization of sizes, qualities and species previously considered unmerchantable. The development and manufacture of rayon, cellophane and other products of the cellulose industry have extended the use of wood and the increasing production of plastic-wood products, fibre board and laminated wood has resulted in greater use of inferior grades of wood and species of trees and therefore in the more complete utilization of forest resources and the elimination of much waste.

## 4.-Forest Utilization and Depletion, 1959 and 1960, compared with Ten-Year Average 1950-59

| Item | Usable Wood |  |  | Percentage of Total Depletion |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} \text { Average } \\ 1950-59 \end{gathered}$ | 1959 | 1960 | $\begin{gathered} \text { Average } \\ 1950-59 \end{gathered}$ | 1959 | 1960 |

| Totals, Utilization............... | 3,182,229 | 3,186,387 | 3,413,500 | 92.0 | 97.1 | 90.2 |
| Wy forest fires.......................... | 275,005 | 94,444 | 369,600 | 8.0 | 2.9 | 9.8 |
| Totals, Depletion ${ }^{2}$. . . . . . . . . . . | 3,457,234 | 3,280,831 | 3,783,100 | 100.0 | 100.0 | 100.0 |

${ }^{1}$ Includes logs for pulping. $\quad{ }^{2}$ The figure for depletion does not include wastage caused by agencies other than fire, such as insects, disease and natural mortality, for which no reliable estimates are available. It represents an average annual depletion of 8 cu . feet per acre on the accessible productive forest area; a much higher rate of depletion occurs on the more accessible occupied productive forest lands.

Forest Fire Statistics.-Forest fires in Canada during 1960 numbered 8,881 as compared with 5,383 in 1959 and an annual average of 5,651 for the years 1950-59. The area burned was more than double the 1959 figure but was considerably less than the average area destroyed in the 1950-59 period. The volume of timber lost by fire in 1960 was nearly four times that lost in 1959, and the actual cost of combating the fires greatly exceeded both the amount spent in 1959 and the average spent during the period 1950-59. All the provinces except Alberta experienced heavier losses in 1960 than in 1959, with British Columbia, Quebec, Saskatchewan and Ontario sustaining the greatest estimated dollar losses.

[^145]According to the cause-of-fire classification given in Table 7, lightning again caused the largest number of individual fires in 1960, accounting for 25 p.c. of the total compared with 16 p.c. in 1959 and an average of 19 p.c. for the ten-year period 1950-59. Fires caused by railways made up 23 p.c. of the total in 1960 as against 16 p.c. in 1959 and those started by campfires, smokers and settlers together caused 31 p.c. as compared with 38 p.c. in the previous year. The percentage for "Miscellaneous known", which classification includes fires started as a result of such incidents as falling aircraft, broken power lines and motor vehicle mishaps, dropped from 14 p.c. in 1959 to 8 p.c. in 1960, 2 p.c. below the average for the 1950-59 decade.

## 7.-Forest Fires, by Cause, 1959 and 1960, compared with Ten-Year Average 1950-59

| Cause |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: |

## Section 4.-Forest Administration, Research and Conservation

Subsection 1.-Federal Forestry Program

Administration.-The Federal Government is responsible for the protection and administration of the forest resources of the Yukon and Northwest Territories and of other federal lands such as the National Parks, forest experiment stations, military areas and Indian reserves. The Federal Government also administered (until repealed in 1960) the Canada Forestry Act, which provided among other things authority for operation of forest experiment stations and forest products laboratories. The chief responsibility of the Federal Government in the field of forestry is to carry out research in problems affecting the forests and their development, conservation and more effective utilization. Until the passage of new legislation late in 1960, these functions were carried out by the Forestry Branch of the Department of Northern Affairs and National Resources and the Forest Biology Division of the Department of Agriculture. The latter was responsible for all research relating to forest entomology and forest pathology, while the Forestry Branch conducted research in forest economics, in all phases of forestry including silviculture, forest management, forest ecology, tree breeding, forest inventory methods and forest fire protection, and in forest products.

In the summer of 1958, the first representations leading to the formation of a separate Department of Forestry were made by the Canadian Lumbermen's Association, which submitted to the Minister of Northern Affairs and National Resources a brief urging that, an extension service be established to bring the results of forest products research to the attention of small operators. Improved informational services were requested and also additional research in specific fields relating to sawmilling and woodworking industries. In the same year, the Canadian Pulp and Paper Association also presented a brief to the Minister asking that forest research programs of the Federal Government be increased substantially.

The House of Commons Standing Committee on Mines, Forests and Waters studied the forestry situation exhaustively during two sessions of Parliament, hearing evidence from many organizations and individuals from all parts of Canada. Its report in 1959 stressed the importance of the forest industries to the nation and recommended in part that a separate Forestry Department should be established and that the functions of the Forestry Branch of the Department of Northern Affairs and National Resources and those of the Forest Biology Division of the Department of Agriculture should be coordinated in the recommended Forestry Department. The Speech from the Throne on Jan. 14, 1960 asked for authorization for "the establishment of a new department to be concerned with affairs relating to the forests of Canada and their most effective utilization and conservation" The Department of Forestry Act received Royal Assent on Aug. 1, 1960 and became effective upon Proclamation on Oct. 1, 1960.

The Department of Forestry Act (which repealed the Canada Forestry Act of 1949) sets out the duties, powers and functions of the Minister of Forestry as extending to and including "all matters over which the Parliament of Canada has jurisdiction relating to the forests of Canada". The Minister is to consult with and inaugurate conferences of provincial or municipal authorities, universities, representatives of industry or other interested persons. The Act provides for the establishment of forestry experimental areas on federal lands and for regulations for the protection, care and management of such areas. It provides also for the submission to Parliament of an annual report on activities of the Department for each fiscal year and for various operational matters.

The Forest Research Branch conducts both basic and applied research related to forest management and forest fire control. The basic research is to gain an understanding of the natural processes governing the behaviour of forests and forest fires, while the applied research is concerned with the application of such knowledge in the development of methods for the establishment, growing, harvesting and protection of forests.

Forest management research deals with silviculture, ecology and forest mensuration and inventory. Many of the silvicultural studies involve (a) assessing the factors responsible for the success or failure of natural regeneration following various cutting methods and treatment of seed beds, (b) comparing different methods of seeding and planting, and (c) determining the effects of different methods of intermediate cutting on the development of residual trees and stands. Studies are made of growth and yield and of successional changes in most of the important forest types. Techniques used in mensuration are constantly under review and study; new methods are tested and developed. Application of silvicultural techniques as well as research in regulation of cut and in methods of protection are aimed at determining how forests may be maintained at the highest levels of production. The relationships between forest growth and site are being studied with a view to the assessment of long-term productivity. The requirements of light, temperature and moisture that will produce optimum conditions for growth and development are being determined for the seedlings of many important species of trees. The physiological processes of growth and reproduction are under investigation for a limited number of species. In tree breeding, superior strains are selected or developed and there is a continual improvement in propagation and breeding techniques. Research in forest soils is directed toward determining the relation of tree growth and nutrition to chemical and physical properties of the soil.

Research in forest inventory methods is of increasing importance because of the continuing programs of forest inventories being conducted in most provinces and in the northern Territories. Data from air photographs are correlated with field observations to develop new techniques of timber estimating. The use of stand volume tables and various methods of field sampling are being investigated and compared. Research is continuing in methods for measuring tree images and tree shadows to determine heights, crown widths, canopy density and other data from photographs taken in different seasons of the year under various conditions. The use of large-scale photography of sample areas is also being investigated and studies are being made in the identification of species and sub-types.

Adequate protection of forests against fire is of vital importance in Canada. The Forest Research Branch works in full co-operation with provincial forest services in almost all phases of forest fire control. Major contributions of the Branch have been in the fields of fire danger measurement and fire control planning. Methods of classifying forest fuel types, of using prescribed fires in hazard reduction, of determining the efficiency of fire control organizations, and of preparing and analysing individual fire reports are being investigated. Studies are being continued in the use of chemicals for fire suppression and pre-suppression, and of fire fighting equipment and techniques. Another important field of endeavour is the study of lightning and other fire causative agencies.

The Forest Entomology and Pathology Branch conducts research on forest insects and diseases and maintains regional laboratories and field stations in all principal forested regions of Canada. The forest insect and disease survey is a Canada-wide project conducted by the Branch in co-operation with the provincial forest services and forest industries, the primary objective of which is to maintain an annual census of forest insect and disease conditions, and to detect and predict the occurrence of outbreaks. Results of the survey are made immediately available to the owners and operators of forest lands for use in planning salvage programs and directing control operations or other measures to reduce damage. An important secondary objective of the survey is extension of knowledge of the insects and fungi affecting forest trees, including their life histories, ranges of distribution, and host-parasite relationships.

The research programs of the regional laboratories are designed to lead to comprehensive understanding of the biology and ecology of the more destructive forest insects and fungi, and the causes of fluctuations in abundance or severity of damage in time and place. Problems under intensive study include insect defoliators, leaf diseases, sucking insects, dwarf mistletoes, stem cankers, bark- and wood-boring beetles, trunk and root decays, tip- and root-boring insects, and diseases of tree seedlings in forest nurseries. A recent development is the initiation of investigations of virus diseases of forest trees. Laboratory research on development, physiology, nutrition and taxonomy complements the field ecological studies of insects and fungi in the forest environment. Problems of broad national importance in insect pathology, cytology and genetics, bioclimatology and chemical control are investigated by Branch sections, which are appropriately staffed and equipped for research in these special fields.

The Forest Entomology and Pathology Branch also carries out experiments in control, utilizing cultural techniques, chemicals and biological control agents including parasites, predators and insect pathogens. Technical advisory services are provided in evaluating possibilities of eradication or control, or other applications of research results. Recent examples include recommendations for reduction of seedling losses in forest tree nurseries through cultural techniques and chemical applications; the co-operative organization of cull surveys to improve forest inventories; consultation with local authorities on the Dutch elm disease problem in New Brunswick, Quebec and Ontario, designed to limit spread and damage through control of the disease vectors and sanitation procedures; and technical co-operation with provincial governments and industrial agencies in the organization of spraying operations against the spruce budworm in New Brunswick and Quebec, and the black-headed budworm, the saddle-backed looper, and the ambrosia beetle in British Columbia.

The function of the Economics Division is to advise the Department regarding the economic implications of present and proposed policies; to keep the economic position of Canada's forest industries under constant review; to keep in touch with forestry and economic developments in other countries; to conduct economic studies relating to forestry in Canada; and to co-operate in international forestry matters of concern to Canada.

[^146]including the fields of consumption, distribution and processing of the products of the forest. In addition, it provides the information that must be considered to determine the best means of using the forest resources in conjunction with other resources in order to maximize the total net returns to be obtained from the economy. Emphasis is being placed on the economies of production and a greatly expanded program in market research is being developed.

The Economics Division is to be reorganized into five sections: statistical and administrative, forest resources and policy, economics of production, marketing and international forestry. Regional economists will be stationed in selected field offices throughout the country.

The Forest Products Research Branch undertakes research embracing every aspect of forest products except that relating to the paper field. This research is directed toward obtaining the necessary background information and data on the properties of Canadian woods, developing new and better uses for wood products, improving manufacturing processes, and effecting more complete utilization of wood substances available from the forest.

Two laboratories, one located at Ottawa and the other at Vancouver, undertake the research program of the Branch. Several phases of research are concentrated at the larger Ottawa Laboratory while the work at the Vancouver Laboratory is concerned mainly with British Columbia and Alberta species. Close relationship with the forest products industries and the users of timber is maintained to ensure that the research work of the Branch is of optimum national benefit. In this connection, assistance is received from an Advisory Committee comprising members representing various timber manufacturers and wood-using groups, which meets periodically to discuss the research requirements of industry.

Research units of the Laboratories consist of: timber engineering, containers, glues and gluing, veneer and plywood timber physics, wood chemistry, wood preservation, paints and coatings, wood pathology, wood anatomy, logging and manufacture, and seasoning. Research activities include the determination of the physical, mechanical and chemical properties of wood and their relation to adaptability in use; studies of the factors affecting the quality of wood and of manufactured wood products; determination of the factors that cause wood waste in logging and manufacturing; research and investigation into the preservative treatment and painting of wood and the use of wood for the manufacture of cellulose, wallboards, alcohols, organic acids, and extractives; studies to determine possible new economic and more valuable uses for woods; and research aimed at determining methods and means for the practical and economical utilization of all wood substances available from the annual timber harvest.

There is constant co-operation with various government units in the performance of many special research investigations concerned with the use of wood. Research into the use of wood in housing construction and as an engineered material continues as an important activity that is undertaken in co-operation with the Division of Building Research of the National Research Council and the Central Mortgage and Housing Corporation. Of special interest was the compilation and publication of the Forest Products Research Branch Technical Note No. 30, presenting span tables for wood joists and rafters for housing, based on the use of grade-marked lumber. These have been incorporated in the recently published Housing Standards, Canada, 1962.

Additional work includes the application of laboratory findings to the standardization of lumber grades, development and improvement of engineering designs in wood, and the development of timber specifications for the building codes of Canada. Branch personnel serve on such international committees as those of the American Wood Preservers' Association, American Society for Testing Materials, and the Food and Agriculture Organization of the United Nations. Continuous collaboration is maintained with forest products research laboratories in other countries for the dual purpose of exchanging information and avoiding unnecessary duplication of research.

The results of the Branch research are made available to the thousands of plants comprising Canada's timber manufacturing and wood-using industries. By means of numerous technical publications and through other channels, continuous effort is devoted to the widespread dissemination of research results.

The Industrial Liaison Service consists of suitably located field representatives who visit sawmill and other woodworking plants in their respective areas to keep industry aware of research development and technical advances that may assist in the solution of industrial problems. These field representatives also undertake liaison duties to keep the Branch laboratories informed of field problems on which research would be of value.

Federal-Provincial Forestry Agreements.-The passing of the Canada Forestry Act in 1949 was an event of great significance to federal-provincial relations in the field of forestry, as authority was given to the then Minister of Mines and Resources to "enter into agreements with any province for the protection, development or utilization of forest resources" Since that time agreements have been entered into with most of the provinces for federal financial support for programs of forest inventories, reforestation and the purchase of capital assets used in forest fire protection.*

Since 1951, more than $\$ 25,000,000$ in federal funds have been contributed to the provinces under forestry agreements, plus $\$ 5,000,000$ for aerial spraying against budworm infestations in New Brunswick and, on a smaller scale, in British Columbia. The Federal Government has paid $\$ 9,000,000$ for forest access roads built by the provinces since 1958 , and $\$ 5,000,000$ in the past five years to assist the provinces with capital expenditures for fire prevention, detection and suppression equipment, airfields and improvements, and the hiring of aircraft.

Other work accomplished with federal assistance has included the completion of forest inventories by seven provinces. As a result of these inventories, new woods operations have sprung up, particularly in the British Columbia interior, and new pulp and paper mills have been built or are planned in other areas of Canada. The Federal Government has contributed under the agreements to the establishment of 15 new forest nurseries and the planting of $140,000,000$ trees. Reforestation has become more and more geared to, and integrated with, current logging operations. Under a special stand-improvement agreement with the Province of Nova Scotia, designed to provide woods experience for coal miners laid off in the Cape Breton area, the Federal Government is providing $\$ 280,000$. Up to early 1962, about 160 miners had been employed under this program.

The Department of Forestry Act 1960, which repealed the Canada Forestry Act of 1949, contains authority for the continuance of this program of federal assistance. A new forestry agreement was entered into with the provinces for a term of two years starting Apr. 1, 1962. This agreement covers in a "single package" the federal aid formerly available under three separate agreements. The amount of federal aid provided for the period is $\$ 16,000,000$.

The main feature of the new agreement is flexibility. A province may spend its entire allotment for forest access projects, which include construction of access roads and airstrips for forestry purposes. Up to 60 p.c. of the provincial allotment may be claimed for inventory, reforestation, fire protection and, for the first time, for stand-improvement projects. A province, therefore, has wide discretion in allocating federal aid among the specified fields of work.

Federal assistance is based on payment of 50 p.c. of provincial costs, but reforestation is the one exception. The Federal Government pays $\$ 15$ per thousand trees planted, $\$ 2$ per acre seeded and $\$ 4$ per acre seeded with ground preparation. In addition, one-quarter of the cost of establishing new forest nurseries is contributed.

[^147]There are other changes in the new agreement-costs of management-type surveys are included as sharable, and the reforestation of occupied or unoccupied Crown land qualifies for assistance provided it is carried out by the province.

## Subsection 2.-Provincial Forestry Programs

All forested land in provincial territory, with the exception of the minor portions in National Parks, federal forest experiment stations, military areas and Indian reserves (see Table 2, p. 25), is administered by the respective provincial governments. The forestry program of each province is outlined below.

Newfoundland.-Geographically, the Province of Newfoundland has two separate regions-the Island and Labrador on the mainland. The productive forested land of the Island is estimated at 12,998 sq. miles and of Labrador at 20,879 sq. miles, a total of 33,877 sq. miles. Only 578 sq. miles are classified as farm woodlots. Most of Labrador's forests are leased but are as yet virtually untouched.

A large part of the forest land in the interior of the Island is leased, licensed or owned by paper companies, but a three-mile-wide belt along most of the coastline is retained as unoccupied Crown land for the purpose of providing firewood, construction material, fencing material, etc., for the local population. Within this coastal forest belt, every household has legal right to cut $2,000 \mathrm{cu}$. feet of wood a year for domestic use. This form of cutting is generally without intense control or restriction but a policy is being introduced whereby cutting in certain 'management areas' is controlled by forest officers. Approximately one-half of the Crown forests are at present under management.

Commercial timber-cutting on unoccupied Crown lands has been by permit since 1952; permits for amounts up to 120 cords per person are issued by the field staff but permits for larger quantities must be approved by the government. This type of permit is generally preceded by advertising of standing timber for sale by tender, the timber involved usually being over-mature or damaged by fire, insects or storms.

The Island of Newfoundland is divided into three Forest Regions, each under the control of a Forest Supervisor; the regions, in turn, are each divided into five districts. Districts are headed by a Forest Inspector having a staff of wardens and rangers. Twentyeight well-equipped forest fire depots and 21 lookout towers, connected by radio-telephone, are operated by the Newfoundland Government, and many others are operated by the two paper companies, the Newfoundland Forest Protection Association and the Canadian National Railways. Aircraft, equipped with water-dropping tanks, are stationed at Gander throughout the fire season; they patrol forest areas and transport equipment and crews when necessary. Helicopters are used as well. Forest fire protection facilities have also been established in Labrador, the main base being at North West River near Goose Airport, and a sub-depot in the Carol Lake iron ore development area. The permanent forestry staff of the Newfoundland Department of Mines, Agriculture and Resources, numbering 75, is augmented by a like number of seasonal employees during the forest fire season. The two paper companies maintain their own fire protection organizations.

Forest research for Newfoundland is performed by the federal Department of Forestry. No reforestation is done in the province.

Prince Edward Island.-Almost all of Prince Edward Island's woodland is privately owned, so that the Forestry Division of the Department of Industry and Natural Resources is concerned mainly with planting, woodlot management and fire protection. A small nursery, established jointly with the Federal Government, deals with the Island's needs by providing planting stock for the reforestation of waste lands, the cost of which is shared by the Federal Government, and fulfilling the requirements of private individuals at a reasonable cost.

In proportion to its size, Prince Edward Island exports a great deal of pulpwood. This export, combined with the fuelwood and lumber cut each year, led to the inauguration of a program designed to educate the owner in the proper care and management of his woodlot.

Fire protection does not usually constitute too great a problem. Wooded areas are scattered in patches throughout the province and, since a network of roads makes all woodlots accessible, equipment can be brought to the scene of a fire quickly and easily. Research is limited mainly to reforestation and woodlot management problems.

Nova Scotia.-The land area of Nova Scotia is 20,402 sq. miles. Of that area, $16,389 \mathrm{sq}$. miles are classed as forested, 92 p.c. of which is regarded as productive. For Canada as a whole, 91 p.c. of the forested land is held by the Crown in the right of the federal or provincial governments but in Nova Scotia only about 22 p.c. is so held.

The provincial Crown lands are administered by the Department of Lands and Forests through a staff of foresters and rangers. Similarly, trained personnel are associated with the forest industry in the administration of privately owned forest lands. The Department administers the Small Tree Conservation Act on all lands and is responsible for forest fire suppression on all lands, regardless of tenure. Forest fire detection is facilitated by 30 observation towers and an aerial patrol service, all integrated with land vehicles and headquarters by radio and telephone communication systems. Well-equipped fire suppression crews and rangers are stationed throughout the province.

The forest industry is of prime importance to the economy of Nova Scotia. There are some 500 sawmills of all sizes, one newsprint mill and two pulp mills in operation. A new chemical pulp mill was completed to the test-running stage. These mills, along with the pulpwood export trade, pit prop production, boxwood and barrel production, as well as other facets, use $289,000,000 \mathrm{ft}$.b.m. of lumber and 342,000 cords of round products. The lumber industry underwent changes in 1961 when several large, modern and more efficient stationary mills were established. Such installations produced the equivalent of 7,900 cords in chips from sawmill waste.

An active reforestation program has been conducted for many years. Although not as ambitious an undertaking as in some parts of Canada, the program is being expanded in areas where there are less fortunate circumstances relative to natural regeneration. There are six forest nurseries in operation throughout the province. Forest management programs include the construction of access roads into Crown land timber areas and stand improvement under the federal-provincial agreement. Timber, pulpwood and Christmas trees are sold through public tender and cutting is done under the recommendation of the district foresters of the Department of Lands and Forests. Inventory surveys, regeneration studies and experimental cuttings are conducted on Crown lands.

Forest research is carried on by Federal Government agencies and the Nova Scotia Research Foundation (see p. 342). Investigations involve stand improvements, cutting methods, and insect and disease activities. Extension projects include an active fire prevention campaign, a motion picture program for schools, distribution of information on forest and wildlife conservation, promotion of the Christmas tree industry, and preparation of articles for general distribution, for newspapers and for magazines.

New Brunswick.-More than 85 p.c. of the area of New Brunswick is classed as productive forest, of which the Crown, in right of the province, owns about one-half. About 2 p.c. is owned by the Federal Government and the remainder is privately owned. The report of a provincial forest inventory, part of the national forest inventory, was published in 1958. The productive forest area is estimated at 23,808 sq. miles and the total volume of wood in merchantable sizes at $16,900,000,000 \mathrm{cu}$. feet; of the latter, coniferous species make up 71 p.c. and deciduous species the remainder.

Protection from forest fires, the first requirement for forest conservation, is mainly the responsibility of the Department of Lands and Mines which also carries out duties in connection with game management and protection, colonization, parks, campgrounds
and picnic sites, and the administration of provincial Crown lands. A large-scale aerial spraying program to protect balsam fir and spruce from the spruce budworm has been carried on since 1952 by a Crown company sponsored by the federal and provincial governments and representatives of the forest products industries.

Timber licences issued by the province authorize operators to cut and remove forest products in accordance with forest management plans and cutting permits. Stumpage dues are paid to the province when products are cut by the licensees.

New Brunswick does not maintain a forest research organization but co-operates with the federal Department of Forestry in that field. The University of New Brunswick also has undertaken a small number of forest research projects in co-operation with the National Research Council, the provincial government, and other interested organizations. In the autumn of 1960 , the New Brunswick Department of Agriculture employed a forestry engineer as a first step in developing and expanding a provincial tree farm program.

Quebec.-The forested lands of the Province of Quebec cover an area of 378,132 sq. miles extending from its southern borders to latitude $52^{\circ}$ north, between the frontier of Labrador in the east, and the Eastmain River Basin in the west. Of this total, 89,131 sq. miles are classed as occupied productive forest land, 23,175 sq. miles of it privately owned, 227 sq. miles federal Crown forests and the remainder provincial Crown land on which leases and permits have been granted. Thus, approximately $256,000 \mathrm{sq}$. miles of the forest lands of Quebec are inaccessible or vacant. About two-fifths of the annual cut comes from privately owned lands.

The limits reserved for forest industries are administered by the Department of Lands and Forests and the technical work such as inventory, reforestation, supervision of cutting, control of culling, verification of plans for development, collection of stumpage dues, etc., is the responsibility of the Forest Service. These limits are either leased by auction after public notice has been given or assigned under a special law. The price of the licence is fixed by auction or by Order in Council subsequent to specific legislation. The government reserves the right to dispose of the water powers situated on the limits leased.

A tree-felling permit, which is valid for one year, is renewable if the holder has complied with the conditions imposed; it may be transferred with the authorization of the Minister of Lands and Forests. The lessee of a limit must pay a ground rent in addition to the price of licence and must forward, three months before the cutting begins, a plan of operations. Wood cut must be measured by a licensed culler and at the end of the operations the limit holder must produce a sworn statement of quantities cut.

The Forest Service endeavours to promote the use of silvicultural methods among the owners of farm woodlots and small forest areas.

Quebec's forest protective system comprises three organizations-the Protective Service, the protective associations and the non-affiliated lease holders or owners. The Protective Service is a government body established within the Department of Lands and Forests in 1924 to enforce legislation and regulations governing forest fire protection and to protect vacant Crown lands, township reserves and colonization territories. The protective associations, of which there are six, are syndicates of lease holders and of owners who have availed themselves of their right to form an association to satisfy the law which compels them to protect their limits or private forests of 2,000 acres or over. Members assume operating expenses in proportion to the area owned by each but the Department assumes half the costs of fire fighting incurred by the associations. The third group is composed of lease holders and of owners who prefer to discharge their obligations personally as far as forest protection is concerned. They enjoy the same privileges and their obligations are the same as those imposed upon the associations.

To perpetuate the forestry program of the province, the Department has established a number of nurseries, the first at Berthierville in 1908. This nursery has three sections: one wooded with a variety of valuable species of mature age, one serving agricultural
purposes, and another devoted to forestry experiments and the cultivation of trees for reforestation or ornamentation. More recently, the Grandes Piles nursery and the Gaspe nursery were organized and there are also nurseries in the following counties: AbitibiEast, Témiscamingue, Saguenay, iles de la Madeleine, Rimouski, Roberval, Rivière du Loup, Témiscouata and Chicoutimi. Their object is the preparation of plants for reforesting nearby districts. 'Floating' nurseries, supervised by the engineers of the Forest Extension Bureau and intended especially for growing reforestation plants for private properties, are located at Pont Rouge, Sherbrooke, Scott, St. Hyacinthe, Victoriaville, Mont Joli and St. Pascal. The plants are supplied free of charge on request. A dynamic reforestation program is now under way in the province, with an ultimate objective of $10,000,000$ plants yearly on private grounds.

The Bureau of Silviculture and Botany and the Forestry Products Laboratory, both subsidized by the Department, are actively engaged in scientific research work in the forestry field. The Bureau studies the possibilities of utilizing spoil-heaps of gold and asbestos mines, tests the fertility of soils in the spruce groves, classifies forests according to type of vegetation, and studies growth and yields of stands in the timber limits by means of permanent research spots. The Forestry Products Laboratory, located at the Duchesnay Forestry Station, studies developments in the field of chemical conversion of wood and in the use of forestry by-products.

Ontario.-Steady advancement in the management of the province's natural resources continued during 1961 with a progressive revision of the management plans for the forested land under the jurisdiction of the Department of Lands and Forests. The forested land, including 42 agreement forests of 147,297 acres and five nursery forests of 9,000 acres, was divided into 202 areas, each covered by a management plan. This was a decrease of 18 units from the previous year as a result of consolidation. Seventy-six Crown management units, with plans prepared by departmental staff, made up $53,695,819$ acres. Of these, 65 plans were in operation covering $50,219,541$ acres and 11 plans were under revision. Also included were 79 company management units with an area of $62,069,120$ acres, for which plans were prepared by licensees; 64 of these plans were in operation, covering $47,057,280$ acres.

The volume of wood of all species cut from Crown land during the year ended Mar. 31, 1961 showed an increase of approximately $52,500,000$ cu. feet over the volume cut during the previous fiscal year; this represented an increase of 15.4 p.c. in the cut of softwood species and 12.5 p.c. in the cut of hardwoods. The primary pulpwood species (spruce, balsam and jack pine) showed an increase in the volume cut of about $41,200,000 \mathrm{cu}$. feet, which accounted for 78.5 p.c. of the increased production.

During the 1961 fire season, 1,305 forest fires were reported in Ontario. These fires burned a total area of $1,184,998$ acres. The greatest incidence of fires and area burned occurred during the last two weeks of June and the first two weeks of July in the northwestern Ontario fire districts of Sioux Lookout and Kenora where extreme drought conditions were caused by a deficiency of rain and winter snowfall. A succession of lightning storms during this period resulted in a large number of fires which accounted for over 99 p.c. of the area burned. During 1961, lightning caused 34 p.c. of the total number of fires and human causes accounted for the remainder. More than 90 p.c. of the 1961 timber loss was located in the northern portion of the Sioux Lookout district; inaccessibility makes the timber in this area of little economic value at present.

The Department's fleet of 44 aircraft played a major role in fire fighting operations and the use of aircraft for water-dropping very often restricted the losses. This technique was employed on 104 fires during the 1961 season and 843,000 gal. of water were discharged. The fleet was supplemented by the use of five leased helicopters. Over the whole season, Department aircraft logged 12,568 hours of flight time, 5,000 of which were on fire fighting operations. The remainder included flying for fishery, wildlife, timber management, administrative and mercy services.

Manitoba.-The forests of Manitoba are administered by the Forest Service, a Branch of the Department of Mines and Natural Resources. The Service is headed by a Provincial Forester and for purposes of administration the province is divided into eight Forest Regions each in charge of a Regional Supervisor responsible to the Provincial Forester for forest activities within his region. The Forest Service is also responsible for the development, maintenance and operation of parks and recreation on Crown lands throughout the province.

The cutting of timber is governed by timber sale, licensed timber berth, pulpwood lease, or timber permit. Timber sales are disposed of by public auction or sealed tender and cover periods of from one to seven years; timber berths cover certain areas granted before 1930, the date of the transfer of the natural resources from the Federal Government to the province; pulpwood leases are granted over an area of $2,748 \mathrm{sq}$. miles; and timber permits are granted to settlers and small operators at appraised rates for a period of one year or less. On the basis of a forest resources inventory completed in 1956 and other information, working plans with annual allowable cuts on a sustained-yield basis have been brought into operation in the more accessible areas.

Forest fire protection is a most important activity of the Forest Service. Fires are detected by air patrol, lookout tower and road patrol, and rapid communication is maintained within the Service by radio and telephone. The Air Service transports men and equipment to fires in areas beyond the reach of roads. The main air base is at Lac du Bonnet and summer air bases are maintained at The Pas, Norway House and Thicket Portage. The total area under fire protection is about 97,000 sq. miles.

Regeneration of the forest is dependent mainly on natural means although $8,069,000$ trees were planted during the past ten years as part of the federal-provincial agreement (see p. 457). The Pineland Forest Nursery is operated at a point near Hadashville to supply planting stock for denuded areas of Crown land and to furnish farmers with shelterbelt and woodlot seedlings.

The province has no forestry research organization but co-operates with several federal services which maintain two research areas. The Department co-operates fully with federal authorities in investigating and controlling forest damage resulting from insects and diseases. The Forest Service also carries out public education in the fields of fire prevention and forest conservation. Use is made of all usual methods including radio, television, newspapers, signs, talks to school children and club members, film tours, etc.

Saskatchewan.-The forests of Saskatchewan, including watered areas, are located mainly in the northern half of the province and cover 147,360 sq. miles or 58 p.c. of the total area. Provincial forests constitute approximately 92 p.c. of all forest land in the province and are managed and developed by the Forestry Branch of the Department of Natural Resources.

The Forestry Branch, consisting of six divisions-Administration, Fire Control, Forest Management, Forest Research, Inventory and Silviculture-is responsible for developing and evaluating forest policies and management programs based on the findings of inventory and research. The responsibility for carrying out such policies and programs is borne by the Regional Administration Branch. For purposes of resource administration, the province is divided into five regions, each under the supervision of a Regional Superintendent. The regions are subdivided into Conservation Officer Districts which vary in size according to resource base and population to be served. Close liaison is maintained between the Forestry Branch and the Regional Administration Branch.

A major responsibility of the Forestry Branch is the development of techniques in the prevention, detection and suppression of forest fires. A network of 69 lookout towers equipped with two-way radios is maintained throughout the province and is supplemented by three aircraft on regular patrol duty during the high-hazard periods. A group of smoke-jumpers, trained to parachute on remote fires, is in constant readiness during the fire season and takes immediate suppression action which it maintains until relieved by
overland crews. Northern Saskatchewan's communication system, with more than 850 two-way radio sets in operation in towers, vehicles, aircraft and forest camps, plays a vital role in the detection and suppression of forest fires. These activities have been assisted recently by the use of helicopters.

Alberta.-The 159,064 sq. miles of provincial forest in Alberta are administered by the Forests Division of the Department of Lands and Forests at Edmonton. The Division is composed of four forestry branches under a Director of Forestry-Administration, Forest Protection, Forest Management and Forest Surveys.

The Administration Branch supervises all branches, maintains general control over revenue and expenditure, deals with personnel and conducts a Forestry Training School which offers in-service training for forest officers and other employees.

The Forest Protection Branch has charge of the protection of the forests and of all field personnel. For ease of administration the forested area has been divided into seven Divisions, each responsible for the forest within its boundary. These Divisions are composed of Ranger Districts in which all activities are supervised by the district forest officer responsible to his divisional superintendent. The divisional staffs include: forest superintendent, assistant forest superintendent, divisional forester, chief ranger, mechanical foreman, chief check scaler, assistant check scaler, divisional clerk, assistant clerk, radio operator, stenographer, and seasonal help such as standby fire crews, forest lookout men and general labourers and construction crews. These employees are responsible for fire prevention and suppression, supervision of logging and milling operations, timber cruising, and construction and maintenance of forestry projects.

The functions of the Forest Management Branch include the approval and acceptance of management and annual operating plans prepared for other Crown lands, proper land use, proper disposal of Crown timber and the direction of field officers in the administration of all contracts related thereto. This extends to all phases, including acceptance of applications, cruising of timber, drawing up of contracts, periodic inspections of areas to assure proper logging and utilization practices, scaling of products cut, collection of dues and reforestation of areas denuded through cutting, fire, etc.

The Forest Surveys Branch maintains the provincial forest inventory and prepares and maintains detailed inventories by management units; prepares long- and short-term management and protection plans; provides timber application forest-type maps; conducts other work pertaining to photogrammetry and forest-cover maps; and provides technical drafting and mapping services to the Forest Service and general public.

Conservation of 9,000 sq. miles of forest comprising the Rocky Mountains Forest Reserve is administered by a joint provincial-federal agency-the Eastern Rockies Forest Conservation Board with offices at Calgary (see p. 107). The area is composed of three forests which are subdivided into ranger districts. The Superintendent in charge of each forest is responsible to the Director of Forestry; his decisions are based on policies formed by the Board, which comprises one federal and two provincial members. This Reserve includes the headwaters of the main prairie river system.

Research in general is carried out by the federal Department of Forestry, which maintains the Kananaskis Experiment Station.

British Columbia.-The productive forest land of British Columbia in 1958 was inventoried at $208,411 \mathrm{sq}$. miles and, in addition, there were $59,227 \mathrm{sq}$. miles of forest land classed as non-productive. Of the productive area, immature timber occurred on 95,739 sq. miles; 84,275 sq. miles carried matured timber with a total volume of $318,000,000,000$ cu. feet; $28,397 \mathrm{sq}$. miles, including areas of recent burn, cut-over or windfall not yet re-stocked, were unclassified.

For administrative purposes, the province is divided into five Forest Districts with regional headquarters at Vancouver, Prince Rupert, Prince George, Kamloops and Nelson. Further decentralization of authority is effected by subdivision of the Forest Districts
into Ranger Districts. There are approximately 25 Ranger Districts in each Forest District. Twelve directional, servicing or policy-forming divisions constitute the head office of the Forest Service at Victoria.

Vigorous efforts continue to bring British Columbia's forest resources under sustainedyield management and the forest industries are making definite progress toward more complete utilization of their raw materials. The problem is urgent despite the fact that, with a present annual cut of approximately $1,100,000,000 \mathrm{cu}$. feet, the total inventory would appear sufficient to support present needs in perpetuity. One of the more spectacular results of sustained-yield administration has been the swinging of a greater proportion of the annual forest harvest to the interior of the province. For many years, the over-cut coast (wet belt) forests have accounted for from 65 p.c. to 80 p.c. of the total forest cut each year. More recently, however, the interior cut has risen to account for almost 50 p.c. of the total provincial scale. For all practical purposes, the entire interior forest is publicly owned; the great majority of privately owned, leased or licensed forests are on the coast.

Several systems of timber disposal are in effect. The most publicized is the Tree Farm Licence, which constitutes a contract between the government and a company or individual whereby the latter agrees to manage, protect and harvest an area of forest land for the best possible return, in exchange for the right to the timber crop on the area. Tree-farm Licences are subject to re-examination for renewal every 21 years. Provincial Forests, Public Working Circles, and Sustained-Yield Units are the governmental equivalent of the Tree Farm Licence with the timber, when it is ready for cutting, being disposed of by public auction. Management, silviculture, roadbuilding and protection on such areas are the responsibility of the Forest Service. Other tenures of lesser importance are Tree Farms, Farm Woodlot Licences, and those Timber Sales issued outside 'regulated' areas.

The need for a more effective forest fire suppression capability becomes increasingly urgent as the program of planned, sustained-yield management of the resource expands. Improved fire fighting techniques, the use of aircraft for patrol, transportation and fire bombing, employment of helicopters for rapid movement of fire suppression crews, and a gradually expanding system of lookouts are employed. However, the problem of accessibility remains a most serious one. The fire seasons of 1958, 1960 and 1961 were in the disaster class with total fire fighting costs for these three years amounting to $\$ 15,700,000$ plus a loss of potential Crown revenue and the value of unmanufactured logs destroyed by fire over those three years totalling some $\$ 190,500,000$. Close liaison with the federal Department of Forestry, which maintains laboratories in Vernon and Victoria, provides information about insect and fungal enemies of the forest.

## Subsection 3.-The Pulp and Paper Research Institute of Canada*

The Pulp and Paper Research Institute of Canada is a centre of research and learning concerned with virtually every aspect of the production and use of pulp and paper products. It was established in 1913 as a branch of the Dominion Forest Products Laboratories and in 1927 was reorganized under the joint sponsorship of the Canadian Pulp and Paper Association, the Federal Government and McGill University. The Institute staff carries out fundamental research and some applied research in the fields of woodland operations and pulp and paper mill operations. In addition, in co-operation with McGill University, it trains postgraduate students who are working toward master's and doctorate degrees in physical chemistry, wood chemistry, or chemical and mechanical engineering, and whose theses subjects lie in fields of interest to the pulp and paper industry.

The Institute has occupied, since 1927, a building on the McGill campus erected by the pulp and paper industry and in addition since 1958 a new building at Pointe Claire on the western outskirts of Montreal constructed by the Government of Canada in lieu of its former annual financial grant. The new building houses Institute staff and facilities

[^148]formerly located in temporary quarters. The Institute's facilities include: organic and physical chemistry, physics, hydraulics and engineering laboratories; pilot plants for chemical pulping, pulp and chip refining and waste liquor pyrolysis; a greenhouse and other facilities for woodlands research; an extensive library; shops and special facilities for pulp and paper testing and for photographic and microscopic (both light and electron) studies of wood, pulp, and paper. It has a staff of about 160.

The Institute's research activities comprise a basic program in pulp and paper research and in woodlands research, contract research, and technical services. The basic pulp and paper research program is supported by assessments from the Maintaining Membership (some 42 companies, representing more than 100 mills and about 95 p.c. of the total production of the Canadian industry) and by a basic grant from the Canadian Pulp and Paper Association. The woodlands research program is supported by assessments on all member companies of the Canadian Pulp and Paper Association east of the Rockies that use pulpwood. Both programs comprise research of interest to the industry broadly, as distinct from that which is the concern of a single company only.

The projects in the basic programs range from studies of the growing seedling in the forest to the converted pulp and paper product, and fall into seven broad classifications: woodlands, mechanical pulping, chemical pulping, paper making, process control, product quality and waste utilization. The emphasis is primarily on fundamental and exploratory studies. The Institute is regarded as a centre for broad, long-range and uninterrupted studies of basic principles which individual pulp and paper companies would find difficult to justify in terms of immediate applied objectives. Moreover, the Institute is a centre of highly specialized equipment and manpower which individual companies would not normally have.

In addition to its permanent staff, the Institute, in co-operation with McGill University, has some 35 graduate students working on fundamental projects in the background of pulp and paper technology, which also serve as their theses topics. The head of the Institute's Wood Chemistry Division, who is also Chairman of the Chemistry Department and the E. B. Eddy Professor of Industrial and Cellulose Chemistry at McGill, directs graduate student work on such subjects as the behaviour of the materials of which wood is made-cellulose, lignin and hemicelluloses. The head of the Institute's Physical Chemistry Division, also a Research Associate in the McGill Chemistry Department, directs graduate student work in the physical chemistry of fibres, e.g., the forces that cause cellulose fibres in a water suspension to mat together to form paper. The head of the Institute's Chemical Engineering Division, an Associate Professor of Chemical Engineering at McGill, directs graduate students in such chemical studies as the rate of drying of droplets and fibres. These Division Heads are assisted by other members of the Institute's staff who likewise hold concurrent honorary positions at McGill.

The Institute also undertakes contract research projects on a cost-reimbursement basis for individual companies or groups of companies in the pulp and paper or allied fields. The larger of these co-operative contracts have been concerned with problems of particular segments of the Canadian pulp and paper industry, such as the investigation into the causes of corrosion in alkaline pulping equipment and the recent study of the rapid deterioration of paper machine wires.

A further function of the Institute is to provide a broad range of technical information services to the industry and, to some extent, to other industries and the public. It maintains a specialized library for this purpose which stocks bibliographies, abstracts, translations and critical reviews for the use of the scientific staff and the industry.

## Section 5.-Forest and Allied Industries

This Section is concerned with the many industries employed in the felling of timber in the forest and its transformation into the numerous utilitarian shapes and forms required in modern living. The basic industries provide the raw material for sawmills,
pulp and paper mills and for a wide range of secondary industries that convert the products of the basic industries into more highly manufactured goods such as veneers and plywoods, sash and doors, furniture, and a vast range of industries using wood in any form in their processes. These industries, especially the pulp and paper industry and the lumber industry, contribute substantially to the value of the export trade of Canada and thereby provide the exchange necessary to pay for a large share of the imports purchased from other countries, particularly the United States.

Technological changes and market shifts are causing Canada to lose some of the unique advantages it enjoys in the forest products field. In an effort to remain competitive, changes are being brought about in the structure of Canadian forest-based industries and in the technologies employed. Much emphasis is also being placed on better utilization of the forest resources.

In British Columbia there is a continuing development of the pulp and paper industry which, unlike that in Eastern Canada, is integrated to a high degree with the lumber industry. An important feature of this integration is the use of smaller and defective logs uneconomical for the manufacture of lumber, and the use of sawmill and veneer mill residue in the form of pulp chips. In Eastern Canada the most significant developments in the pulp and paper industry have been the increasing use of hardwood species for pulp manufacture and the increase of speeds in paper machines which has improved productive capacity at relatively low costs. There is also continuing construction of new plants, notably in the Maritime Provinces, and this is leading to improved utilization through the use of sawmill residues for pulping material.

Significant changes are also taking place in the lumber industry in Eastern Canada. Sawmills are undergoing a gradual process of concentration into larger and more efficient units and employing modern electric, hydraulic and pneumatic equipment which permits a high degree of mechanization and quality control. There is also a trend toward more complete integration through the acquisition of veneer and plywood mills and board plants. These factors are naturally leading to a higher degree of utilization which is exemplified by the conversion of sawmill residue for pulp chips.

The logging industry has been highly mechanized in Western Canada for a number of years and mechanization is now progressing rapidly in Eastern Canada, raising the output per man-day and leading to stabilization of employment in the woods. Ten years ago mechanical saws were just beginning to find general acceptance, but now they are found in all woods operations and the buck-saw is almost non-existent. Loading and transportation of logs and pulpwood is being done mechanically to an increasing extent with a consequent continuous reduction of the horse population in the woods. New and better logging machines are constantly being developed and experiments with pulpwood harvesting combines promise a high degree of mechanization in the woods wherever terrain conditions permit.

These and other changes are reflected in the following statistical data.

## Subsection 1.-Woods Operations

In connection with operations in the woods, the forests provide not only the raw materials for the sawmills, pulp mills, veneer mills, charcoal, excelsior and other plants, but also the logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products that are finished in the woods ready for use or export. A number of minor forest products help swell the total, such as Christmas trees, cascara bark, balsam gum, resin, etc.

Estimates of woods operations attempt to give actual production figures for all items and are based partly on provincial forest service data for volume. Value, as currently estimated, excludes transportation costs.
8.-Value of Woods Operations, by Product, 1956-60

| Product | 1956 | 1957 | 1958 | 1959 | 1960 |

## Subsection 2.-The Lumber Industry

The manufacture of sawn lumber is the second most important industry in Canada depending on the forest for its raw materials. The total number of sawmills, tie, shingle, lath, stave, heading and hoop mills, reports of which were compiled for 1960 , was 5,312 as compared with 5,684 in 1959. Mills sawing less than $15,000 \mathrm{ft} . \mathrm{b} . \mathrm{m}$. are excluded but account for under one-half of 1 p.c. of the total lumber production. Employees numbered 46,607 and wages and salaries amounted to $\$ 153,084,558$. Logs, bolts and other materials and supplies of the industry were valued at $\$ 329,575,802$, the gross value of production was $\$ 591,607,758$ and net value $\$ 252,150,944$.

## 12.-Quantity and Value of Lumber Production and Value of All Sawmill Products, by Province, 1959 and 1960

Lumber Exports.-Exports of planks, boards and square timber are given in Chapter XX on Foreign Trade.

## Subsection 3.-The Pulp and Paper Industry

The manufacture of pulp and paper has been the leading industry in Canada for many years and the postwar development of the industry has more than kept pace with the vast industrial growth of the nation. Pulp and paper stands first among all industries in net value of shipments, in exports, in total wages paid and in capital invested. It is the largest consumer of electric energy and the largest industrial buyer of goods and services, including transportation, in the land. The industry has a newsprint output more than three times that of any other country and provides about 45 p.c. of the world's newsprint needs.

There are three classes of mills in the industry. In 1960, 26 were making pulp only, 26 were making paper only and 76 were combined pulp and paper mills.

The industry includes several forms of industrial activity: operations in the woods with pulpwood as a product, the manufacture of pulp and paper of all kinds, and the manufacture of paperboards. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a portion of their spruce and balsam logs to pulp mills. Only a small percentage of the pulpwood cut in Canada is exported in raw or unmanufactured form.

${ }^{1}$ Given in terms of rough or unpeeled wood.
Pulp Production.-The manufacture of pulp, the second stage in this industry, is carried on by mills producing pulp only and also by paper manufacturers operating pulp mills in conjunction with paper mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export. Spruce, supplemented by balsam fir in the east and by hemlock in the west, is the most suitable species for the production of all but the best types of paper.

The preliminary preparation of pulpwood is most commonly carried on at the pulp mill although there are a number of rossing mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for export. Pulpwood is commonly measured by the cord ( $4^{\prime}$ by $4^{\prime}$ by $8^{\prime}$ of piled material). One cord of rough pulpwood contains approximately 85 cu . feet of solid wood, and one cord of peeled pulpwood 95 cu . feet.

The manufacture of $11,461,489$ tons of pulp produced in 1960 entailed the use of $14,115,996$ cords of rough pulpwood valued at $\$ 361,858,672$ and the equivalent of $1,786,257$ rough cords of other wood (i.e., sawmill chips, slabs and edgings, sawdust, butts, cores, etc.) valued at $\$ 31,091,512$. The total value of materials used in the manufacture of pulp was $\$ 479,677,329$.

## 16.-Pulp Production, Mechanical and Chemical, 1951-60

Notr.-Figures for earlier years will be found in the corresponding table of previous Year Books.

| Year | Mechanical Pulp |  | Chemical Fibre |  | Total Production ${ }^{1}$ |  |

World Pulp Statistics.-Figures of production, exports and imports of pulp for certain countries of the world are shown for 1959 and 1960 in Table 19. It is estimated that these countries produce over three-quarters of the world supply of pulp.

## 19.-Production, Exports and Imports of Pulp, by Leading Countries, 1959 and 1960

(Source: Canadian Pulp and Paper Association)

| Country | 1959 |  |  | 1960 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Production | Exports | Imports | Production | Exports | Imports |

${ }^{1}$ Production figures differ slightly from DBS figures given in Table 16, because of a different basis of calculation.

Paper Production.-During 1960 there were 102 establishments producing paper and paperboard in Canada. In addition to newsprint, Canadian mills have a highly developed production of fine paper, wrapping paper, tissues, paperboard and other cellulose products.

## 20.-Paper Production, by Type, 1951-60

Note.-Figures for earlier years will be found in the corresponding table of previous Year Books.

| Year | Newsprint Paper |  | Book and Writing Paper |  | Wrapping Paper |  |

World Newsprint Statistics.-Since 1913 Canada had led the world in the export of newsprint. Figures for the leading producing countries for the two latest years available are given in Table 23; 1939 figures are included for comparative purposes. The six countries listed accounted for 79 p.c. of the estimated world production in 1960, Canada contributing about 47 p.c.

[^151]Statistics of the Combined Pulp and Paper Industries.*-The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may, under certain conditions, be treated as three industries for they are frequently carried on in separate plants by entirely independent companies. The manufacture of basic stock and the converting of this paper into stationery and other highly processed paper products are often combined in one plant. This conversion of paper within the pulp and paper industry represents only a small part of Canada's production of converted paper and boards, the bulk of which is still made in special converting mills classified in other industrial groups.

The presence of these different combinations in one mill makes it difficult to separate many of the statistics relating to the manufacture of pulp, basic paper and converted paper products. All converting operations carried on in paper mills in this industry are attributed to the particular industrial group of converting plants to which they properly belong. Including manufacturing operations as far as the basic paper-making stage, there were altogether 128 mills in operation in 1960. Employees numbered 65,642 and their salaries and wages amounted to $\$ 344,409,846$, as against 65,028 employees earning $\$ 322,311,304$ in 1959. If the pulp made for their own use in combined pulp and paper mills is disregarded, the total value of materials and supplies used in the industry as a whole amounted to $\$ 656,877,464$ in 1960 compared with $\$ 628,269,346$ in 1959 ; the selling value of factory shipments to $\$ 1,578,727,108$ in 1960 and $\$ 1,499,585,644$ in 1959 ; and value added by manufacture to $\$ 811,546,844$ in 1960 and $\$ 761,035,456$ in 1959.

In world trade, pulp and paper are generally Canada's main commodities-newsprint alone, over a considerable period, has brought Canada more export dollars than wheat, nickel or any other single commodity. $\dagger$ The United States market absorbs annually over 80 p.c. of all pulpwood exports and the same percentage of the pulp and the paper shipments of Canada.

## Subsection 4.-The Veneer and Plywood Industries

The production of hardwood veneer and plywood in Canada is confined largely to the eastern provinces. Changes in manufacturing methods applied to hardwood plywood resulted in its adaptation to many uses, particularly to interior wall finishes for homes and other buildings.

Softwood veneer and plywood are produced almost entirely in British Columbia. Douglas fir is most commonly utilized because of the availability of large diameter logs of this species from which large sheets of clear veneer can be obtained. The use of synthetic resin adhesives is responsible for this product, which has become almost indispensable to the construction industry-for wall panels, concrete forms, roofing, sheeting and house sub-floors; for construction of silos, cribs and caissons; for box-car linings, bus bodies, trailers, and watercraft; for box panels and crate linings, case goods and core-stock for furniture; and for plywood-faced doors and many other items.

The heating of glued veneers in moulds by high-frequency electric fields (dielectric heating) permits the manufacture of shaped plywood which is now widely used in the manufacture of furniture.

[^152]Veneers of Canadian manufacture are not confined to species native to Canada. A number of imported woods of special decorative value are veneered successfully and provide the furniture industry with a wide choice of materials. Exports of veneer and plywood produced in Canada increased in value from $\$ 969,256$ in 1938 to a high of $\$ 32,717,126$ in 1960.
24.-Veneer and Plywood Produced for Sale, by Type, 1958-60

## Subsection 5.-Other Wood Industries

Based on the revised Standard Industrial Classification, which was introduced in 1960, there are nine separate wood industries other than the sawmills and the veneer and plywood mills. Most of these industries obtain from the sawmills the wood which they transform into planed or matched lumber, doors, windows, laminated structures, prefabricated buildings, boxes, barrels, caskets, etc. Veneer and plywood are also important raw materials used.

The wood industries do not include every industry into which wood enters as a raw material. Wood is an important raw material in the manufacture of furniture, agricultural implements, musical instruments, etc., industries which, as proven by experience, are more correctly classified under other groups.

As shown in Table 25, factory shipments of establishments classed in the wood in-dustries-except sawmills and veneer and plywood mills-were valued at $\$ 340,940,000$ in 1960, an amount 7.4 p.c. below that of the previous year. The most significant declines were shown for the sash, door and planing mills industry and the hardwood flooring industry, both largely dependent upon the residential construction activity which experienced a lull in 1960; during the year, construction was started on 108,858 dwellings, 23 p.c. fewer than in 1959. Average yearly employment in the Other Wood Industries group was reported at 29,791 with a payroll at $\$ 114,214,000$ compared with 30,066 and $\$ 111,403,929$, respectively, in the preceding year.

## 25.-Value of Shipments of Other Wood Industries, 1959 and 1960

| Industry | 19591 | 1960 | $\begin{gathered} \text { Percentage } \\ \text { Change } \\ 1959-60 \end{gathered}$ |

[^153]
## Subsection 6.-The Paper-Using Industries

Starting with 1960, the paper-using group is comprised of five industries* engaged primarily in manufacturing commodities of paper and paperboard. Establishments engaged in printing, publishing, bookbinding and the allied graphic arts also consume large quantities of these materials but are grouped separately (see Subsection 7).

Some paper-using establishments purchase paper as a raw material from the pulp and paper industry and merely subject it to some form of treatment to fit it for further manufacture in another industry; this occurs in the manufacture of coated, sensitized or corrugated paper. Other firms purchase paper and subject it to treatment to fit it for a definite final use such as in the manufacture of asphalt roofing or waxed wrapping paper. Another large group uses paper and paperboard as a raw material for conversion into paper bags, boxes, envelopes and other commodities.

The manufacture of containers and packages of various kinds has grown very rapidly since ways have been found of converting tough and cheap paper stocks into strongly made boxes which are replacing wooden crates and packing cases. Small attractive paper containers for use in the retail trade are now in common use and their manufacture constitutes an important branch of the paper-using industries. Starting with 1960, a number of establishments specializing in the production of plastic bags (cellulose, polyethylene, etc.) previously classed in other industries, are included with the paper bag manufacturers.

Composition roofing and sheathing, consisting of paper felt saturated with asphalt or tar and in some cases coated with a mineral surfacing, is being increasingly used as a substitute for metal roofing, wooden shingles and siding materials. Establishments classed as roofing manufacturers also produce a large proportion of the floor tiles manufactured in this country.

As a whole, the paper-using industries have grown constantly in recent years. In 1949, the 401 establishments in this group employed 24,421 persons, distributed $\$ 50,644,753$ in salaries and wages and shipped products valued at $\$ 256,911,933$; in 1960 these industries comprised 453 establishments, provided employment to 29,791 persons with earnings totalling $\$ 114,204,419$ and reported shipments of commodities valued at a record $\$ 549,380,089$.

[^154]
## Subsection 7.-Printing, Publishing and Allied Industries

The printing, publishing and allied industries group is made up of six closely related industries: printing and bookbinding, including commercial printers and bookbinders; lithographing, comprised of commercial printing plants using principally the offset printing process; engraving, stereotyping and electrotyping, including photo-engraving; trade composition or type setting for printers; printing and publishing, comprised of publishers who operate printing plants; and "publishers only", including establishments primarily engaged in publishing and which do no printing.

The total revenue of all establishments in this group of industries reached $\$ 865,930,729$ in 1960 , an amount 7.5 p.c. higher than the preceeding year's total of $\$ 805,530,111$. It is noteworthy, however, that "publishers only" of books were surveyed for the first time in 1960 ; their revenue from book publishing amounted to $\$ 15,540,436$ for the year. On the other hand, a large number of publishers of "house organs" were eliminated from the 1960 survey, but the revenue accruing from this activity was relatively small. Employment by establishments classed in the printing trades and allied industries reached 73,694 with a payroll of $\$ 322,788,021$, compared with 72,263 in 1959 with a payroll of $\$ 303,888,206$.

The revenue to commercial printing establishments (including lithographers) rose to $\$ 360,352,514$ in 1960 from $\$ 340,739,221$ in the preceding year; plants specializing in trade composition, engraving, stereotyping, etc., had a total revenue of $\$ 51,807,894$, which was 3.1 p.c. higher than the $\$ 50,266,909$ recorded in 1959 ; revenue to the printing and publishing industry increased to $\$ 359,876,447$ from $\$ 347,874,348$ and for "publishers only" to $\$ 93,893,874$ from $\$ 66,649,623$. Revenues from advertising and from subscriptions or sales of Canadian newspapers and periodicals of all kinds rose to $\$ 391,831,545$ in 1960 from $\$ 377,156,873$ in 1959 ; advertising revenue was $\$ 294,823,356$ compared with $\$ 282,953,136$ and sales $\$ 97,008,189$ compared with $\$ 94,203,737$.

## Section 1.-Canada's Mineral Industry 1960-61*

The Canadian mineral industry in 1960 and on into 1961 experienced steady and diversified growth in developing known deposits for production. However, recent growth in mineral output has been comparatively small. The 1960 value of mineral production at $\$ 2,492,509,981$ was only slightly higher than the previous year's record high of $\$ 2,409,020,511$ and another slight increase of 3.2 p.c. to $\$ 2,573,782,838$ was recorded in 1961. Production of mineral fuels registered a significant advance from $\$ 565,851,829$ in 1960 to $\$ 643,425,160$ in 1961 and industrial mineral production advanced to a new high of $\$ 533,343,589$ from $\$ 520,100,091$. On the other hand, metallic minerals recorded the first decline in several years, production decreasing slightly from $\$ 1,406,558,061$ to $\$ 1,397,014,089$. Major increases for petroleum, nickel and natural gas were nearly offset by greatly reduced shipments of uranium $\left(\mathrm{U}_{3} \mathrm{O}_{8}\right)$ and smaller reductions in shipments of several other minerals.

From 1950 to 1960 the value of Canada's mineral production increased nearly two and one-half times from $\$ 1,045,000,000$. Each of the three sectors of the industry registered marked growth-metals increased in value from $\$ 617,000,000$ to $\$ 1,407,000,000$, industrial minerals from $\$ 227,000,000$ to $\$ 520,000,000$ and mineral fuels from $\$ 201,000,000$ to $\$ 566,000,000$. During this period the per capita value of production increased from $\$ 76.21$ to $\$ 139.48$. Compared with the 1950 's, there has been relatively little progress in terms of value of mineral production over the past three years but much has been accomplished during this plateau of output that will result in the broadening of Canada's mineral industry base and in diversification of output in the years ahead. During 1961, some mining projects that had been under development for several years reached production and others continued to be prepared for operation within the next few years. Prospecting and exploration of mineral occurrences were at an increased tempo, significant discoveries were made and property developments of major importance were undertaken.

[^155]

In 1961, for the third consecutive year, nickel production set a new high and again topped the list of metals with a substantial rise in value to $\$ 357,500,000$ from $\$ 295,600,000$ in 1960. Nickel was followed, in order, by copper, uranium, iron ore, gold, zinc, lead and silver. These eight metals accounted for almost 96 p.c. of metallic minerals output which, in turn, accounted for nearly 52 p.c. of the total value of mineral production. The new northern Manitoba Thompson project of The International Nickel Company of Canada, Limited was officially opened on Mar. 25 and reached its productive capacity of $75,000,000$ lb. of electrolytic nickel a year by mid-1961. Canada's total nickel production capacity at the end of the year was nearly $500,000,000 \mathrm{lb}$. with $382,000,000 \mathrm{lb}$. of it being located in the Sudbury area of Ontario. Copper production recorded another all-time high of 445,000 tons, slightly above the previous year's 439,000 tons. Canada retained its position as the fourth largest copper supplier in the Western World following the United States, Northern Rhodesia and Chile. Five copper mines began production in 1961 and 13 others were being developed for production. Uranium production and deliveries continued to decline in 1961 as the industry made further adjustments under a 'stretch-out' plan for deliveries to the United States that was announced by the Federal Government late in 1959. There were eight mines operating at the end of 1961 compared with 10 a year earlier and 19 at the end of 1959.

Iron ore production in 1961 from 13 mines was $18,200,000$ long tons valued at $\$ 180,500,000$, placing Canada in sixth position among world producers. From the resource development point of view, the iron ore industry continued to be one of the strongest individual sectors of the mineral economy. One 8,000,000-ton-a-year project at Gagnon, Que., began production of high-grade concentrates following three years of development and construction; two large mining projects in the Wabush Lake area of Labrador continued to be developed, one for production in 1963 and the other in 1964-65. The principal export markets continued to be the United States, Britain, Western Europe and Japan with about 1,300,000 tons being shipped to the latter market from British Columbia in 1961.

Canada remained the second largest gold producer in the Free World although output at $4,400,000$ oz.t. was more than 4 p.c. below that of 1960 . The industry's outlook improved in mid-1961 because of the reduction in value of the Canadian dollar in relation to the United States dollar. Lead-zinc producers continued to be confronted with over-supply in world markets and with the United States import quotas on unmanufactured lead and zinc that were imposed in September 1958. Despite marketing problems, production of both lead and zinc was sustained. Several large undertakings were announced so that future growth of lead-zinc industries appears assured.

Reflecting Canada's continuing industrial growth and construction activity, the value of industrial minerals output, embracing non-metallic minerals and construction materials, reached a record $\$ 533,400,000,2.5$ p.c. above the previous record of $\$ 520,100,000$ set in 1960. New production records were established for asbestos, elemental sulphur, cement, sodium sulphate and titania $\left(\mathrm{TiO}_{2}\right)$. The industrial minerals sector of Canada's mineral industry contributes over 20 p.c. of the total value of mineral output. This proportion may increase later in the 1960 's as several major developments now under way will greatly increase output of certain commodities, some of which have not yet been produced in significant amounts in Canada. These developments include the production of asbestos from deposits in the Baie Verte area of Newfoundland in 1963; the large-scale recovery of elemental sulphur as a by-product of gas processing plants in Western Canada; renewed production of potash in 1962 from the vast high-grade deposits in Saskatchewan; and greater production of certain other non-metallic minerals, notably titania and salt.

In the domestic manufacturing and construction industries of any country, industrial minerals are generally important as primary raw materials required for further processing, and as the industrial economy grows so grows the need of industrial minerals. Their production is not usually dependent upon exports nor affected by competition in world markets; although notable exceptions for Canada are asbestos, elemental sulphur and potash.

The value of mineral or fossil fuels production in 1961 increased to $\$ 643,000,000$ from $\$ 566,000,000$ in 1960 ; since 1950 this sector of the Canadian mineral industry has shown more rapid growth in value of output than have the other two sectors-the metallic minerals and industrial minerals. Crude oil production rose to $220,000,000$ bbl., an 18 -p.c. increase over 1960. Natural gas production was $646,000,000 \mathrm{Mcf}$. , a 25 -p.c. increase over 1960. Natural gas by-products, which include condensate, natural gasoline, propane, butane, etc., were valued at $\$ 22,500,000$. Coal output declined to $10,400,000$ tons from $11,000,000$ tons in 1960.

Petroleum continued to be the largest single contributor to Canada's mineral output. The industry gained considerable impetus early in 1961 when the Federal Government announced its 'national oil policy' by which, through voluntary means and the co-operation of producers and consumers, it was hoped that an average output of $640,000 \mathrm{bbl}$. a day of crude oil and natural gas liquids would be attained in 1961 and $800,000 \mathrm{bbl}$. a day in 1963. The 1961 objective was reached and considerable progress has been made toward the 1963 goal.

The modern era of petroleum production in Canada commenced with the discovery in 1947 of oil near Leduc, 18 miles south of Edmonton, Alta. Annual output of oil rose from less than $8,000,000 \mathrm{bbl}$. in 1947 to nearly $190,000,000 \mathrm{bbl}$ in 1960 , about 70 p.c. of the production in that year coming from Alberta, 27 p.c. from Saskatchewan and the remainder from Manitoba, British Columbia, Ontario and the Northwest Territories. Natural gas production in the same period rose from $52,000,000 \mathrm{Mcf}$. to $522,972,000 \mathrm{Mcf}$. , about 73 p.c. in 1960 coming from Alberta, 16 p.c. from British Columbia and 7 p.c. from Saskatchewan. Production increases in 1961 are evidence of continuing expansion in the industry. At the same time, resource development provided for reserve increases from the 1960 year-end totals of $4,217,000,000 \mathrm{bbl}$. of crude oil and natural gas liquids and $30,700,000,000 \mathrm{Mcf}$. of natural gas.

A network of oil pipelines carries crude oil from Western Canada to consuming areas from Vancouver to Toronto and to export markets in the State of Washington and the Great Lakes region of the United States. Gas pipelines carry natural gas to markets stretching from Vancouver to Montreal and to connecting pipelines in the United States at Cornwall and Niagara Falls in Ontario, Emerson in Manitoba, Cardston in Alberta, and Kingsgate and Sumas in British Columbia. The Canadian petroleum refining industry is the fourth largest in the world and one of the most modern. It had, at the end of 1960, an aggregate crude oil capacity of over $950,000 \mathrm{bbl}$. a day in 44 plants. Natural gas processing plants had a capacity to process over $2,300,000 \mathrm{Mcf}$. daily from which could be recovered each day some $1,900,000 \mathrm{Mcf}$. of pipeline gas, $55,000 \mathrm{bbl}$. of propane, butane and condensate and over 2,000 tons of sulphur. Natural gas processing capacity was increased by one-fifth in 1961 to supply greatly increased export markets.

The mineral and mineral-based industries are of vital importance in Canada's trade position. The export value of minerals either as raw materials or semi-processed goods reached a record of $\$ 680,000,000$, or 32 p.c. of the value of all exports in 1960 . If fully manufactured goods of mineral origin, valued at $\$ 487,200,000$ in 1960 , are included, the value of mineral-based exports was 41 p.c. of all exports in that year. Approximately the same respective proportions of mineral and mineral-based exports to total exports obtained in 1961.

Notwithstanding conditions of mineral over-supply in the world, increasing activity in the development of Canadian mineral deposits is evidence that a new period of accelerated production has begun. The increased need for mineral raw materials by the industrial nations of the Free World and the mineral resource deficiency in most of those nations have stimulated both domestic and foreign investment in Canada's mineral industry. The future holds much promise for further development and diversification of the Canadian mineral economy.

## Subsection 1.-Metals

Nickel-Production of nickel in Canada during 1961 reached an all-time high of 237,948 tons, an 11-p.c. increase over the previous record of 214,506 tons in 1960 . The 1961 production value at $\$ 357,515,337$ was also an all-time high. Two important events contributing to the record year were the commencement of nickel production in northern Manitoba from the Thompson project of International Nickel and a 10-p.c. increase in the price of nickel, effective July 1.

Little change occurred in world supply. Canada and New Caledonia continued to provide the bulk of the Free World's nickel requirements; Russia and Cuba supplied the bulk of the Soviet bloc requirements. Canadian nickel-producing companies operated at rated mill capacity and supplied over 75 p.c. of the Free World's nickel in 1961. The outlook for nickel markets remains encouraging as markets in the United States, Britain, Western Europe and Japan are firm and growing steadily.

The Thompson project was officially opened on Mar. 25, 1961 and was up to rated annual capacity of $75,000,000 \mathrm{lb}$. of nickel by mid-year. Shipments of electrolytic nickel to European markets commenced during the summer through the port of Churchill, Man.

Most Canadian nickel production, as usual, came from the Sudbury area of Ontario. International Nickel operated its five mines-Frood-Stobie, Creighton, Garson, Levack and Murray-throughout 1961. Production from the Frood open pit was curtailed but the Clarabelle open pit was prepared for mining. Major additions to treatment facilities at Copper Cliff included the construction of a fluid-roast plant and the enlargement of the iron-recovery plant from 300,000 to 900,000 tons of pellets a year, both scheduled for completion in 1963.

Falconbridge Nickel Mines, Limited at Sudbury operated the Falconbridge, East, Hardy and Fecunis mines throughout 1961. The Longvack and McKim mines were closed and the Boundary and Onaping mines commenced production. Development
continued at the large Strathcona deposit in preparation for mining. Work continued at the Falconbridge mill on refinement of operations for the smelting of bulk flotation concentrates of copper-nickel sulphides. At Falconbridge's refinery at Kristiansand in Norway, a pilot plant operated on a modified refinery process which, if successful, will necessitate major refinery adjustments.

Sherritt Gordon Mines, Limited operated at normal levels. Development work at the Lynn Lake, Man., deposit on the 2,000-foot level continued from the Farley shaft. The company's refinery at Fort Saskatchewan in Alberta treated Lynn Lake concentrates and purchased bulk nickel-copper concentrates and nickel for refining on a toll basis. Sherritt Gordon purchased 3,431 tons of 19-p.c. nickel and 13-p.c. cobalt as calcines from the United States General Services Administration stockpile at Fredericktown, Miss., and also purchased an additional 87 tons of nickel-copper-cobalt matte. Powder-rolling facilities for the production of coinage blanks were expanded.

Giant Nickel Mines Limited in British Columbia signed a contract on Mar. 1 with the Japanese Sumitomo Metal Mining Company, Limited covering Giant's entire nickelcopper concentrate production for a further three-year period. As a result of an accelerated exploration program, indicated nickel-copper ore reserves were increased to about $1,000,000$ tons. Daily mill capacity was increased from 900 tons to 1,200 tons. North Rankin Nickel Mines Limited operated its mine on Rankin Inlet on the west coast of Hudson Bay throughout the year and shipped nickel-copper concentrates to Sherritt Gordon's Fort Saskatchewan refinery.

Preparation for nickel production continued at Marbridge Mines Limited in La Motte Township of Quebec. Initial production, at a minimum rate of 300 tons of ore daily, is scheduled for the spring of 1962. Marbridge is owned by Falconbridge and Marchant Mining Company Limited and concentrates will be shipped to Falconbridge for smelting. Nickel Mining and Smelting Corporation announced that it is bringing its Gordon Lake property in northwestern Ontario into production. Shaft-deepening is in progress and regular production is planned for September 1962 at a daily mill rate of 500 tons. Nickelcopper concentrates will be trucked to Lac du Bonnet, Man., and shipped by rail to Sudbury for smelting by International Nickel.

Canadian reserves of nickel ore increased despite the mining and treatment of record tonnages during 1961. Reserves are sufficient for many years to come.

Copper.-Canada's copper production in 1961 reached a record amount of 444,635 tons valued at $\$ 258,582,247$; this was 5,373 tons above the 1960 output, an increase of 1.2 p.c. Although the percentage increase in production was lower than in previous years, exploration and development activity was greater than in any year since 1957five new mines were brought into production, 13 mines were under development, and new discoveries were reported in many parts of Canada from Fort MacKenzie in New Quebec to the Nahanni River valley near the Yukon border.

Six smelters for the reduction of copper and copper-nickel ores and concentrates are operated in Canada. In the Sudbury area of Ontario, International Nickel operates smelters at Copper Cliff and Coniston, and Falconbridge Nickel Mines produces coppernickel matte at its Falconbridge smelter. Hudson Bay Mining and Smelting Company Limited at Flin Flon, Man., smelts concentrates from its mines in Manitoba and Saskatchewan and, since September 1960, has smelted concentrates from Sherritt Gordon's Lynn Lake mine. Ores and concentrates from the copper mines in Ontario, Quebec and Newfoundland are smelted at the Noranda smelter of Noranda Mines, Limited and the Murdochville smelter of Gaspe Copper Mines, Limited, both in Quebec. Copper refineries are operated by International Nickel at Copper Cliff, Ont., and Canadian Copper Refiners Limited at Montreal East, Que. The capacity of the latter company's plant was increased in 1961 to 270,000 tons of copper a year and the combined production of the two refineries totalled 448,000 tons at the end of the year.

In Newfoundland production was started in May 1961 at the Little Bay mine of Atlantic Coast Copper Corporation Limited. Atlantic's mill has the capacity to treat 1,000 tons of ore a day. Concentrate from this plant, added to the concentrate from the Tilt Cove mine of Maritimes Mining Corporation Limited and the Buchans Unit of American Smelting and Refining Company, raised Newfoundland's 1961 copper output to 16,853 tons valued at $\$ 9,838,752$. A number of exploration parties were engaged in the investigation of copper prospects in the Burlington Peninsula-Notre Dame Bay area.

In New Brunswick, The Consolidated Mining and Smelting Company announced plans to start production in 1962 at the Wedge mine, 36 miles southwest of Bathurst; 750 tons of ore a day will be trucked eight miles south to the mill of Heath Steele Mines Limited for concentration. Heath Steele has continued a program of underground exploration and development of the B orebodies and is considering production when the mill is reactivated to treat the Wedge ore. Concentrates produced from the Wedge ore will be shipped to Japan for smelting.

Production of copper in Quebec, at 151,015 tons valued at $\$ 88,162,394$,was 6,455 tons and $\$ 7,232,764$ lower than in 1960, as a result of production cuts at three mines and a strike at the mine of Opemiska Mines (Quebec) Limited at Chapais. Production cuts of 10 p.c. were initiated in 1960 and continued throughout 1961 at the mines of Gaspe Copper Mines, Limited at Murdochville, Waite Amulet Mines, Limited north of Noranda, and the Horne mine of Noranda Mines, Limited at Noranda. Vauze Mines Limited, north of the Waite Amulet property, became Quebec's newest copper producer when production at 350 tons a day started in October 1961. Concentrates are shipped to Noranda for smelting. In the Chibougamau area, stope production was started from Campbell Chibougamau Mines Ltd.'s Henderson mine and the adjoining Portage Island mine of Copper Rand Chibougamau Mines Ltd. Solbec Copper Mines, Ltd. in Wolfe County, about 53 miles northeast of Sherbrooke, completed initial shaft-sinking and underground development programs, and scheduled the mining plant and mill for production in January 1962. Several interesting occurrences are being explored in the same area. Exploration activity was stimulated in the Noranda-Waite Amulet area by the discovery of a significant copper orebody on the property of Lake Dufault Mines Limited. In Joutel Township, north of Amos, underground exploration and development will be started on an orebody discovery by Prospectors Airways Company, Limited. Interesting copper mineralization was discovered in the Duncan Lake and Fort MacKenzie areas of New Quebec. In the Mattagami Lake area of northwestern Quebec, Orchan Mines Limited, Mattagami Lake Mines Limited and New Hosco Mines Limited all started programs of development and plant construction, with production scheduled for late 1962 or early 1963.

Ontario again led the provinces with a record copper output of 211,534 tons valued at $\$ 122,509,392$, a production 5,262 tons higher than the previous record set in 1960. This increase was attributed to higher output from the nickel-copper mines of the Sudbury district and to production from two new copper mines. Kam-Kotia Porcupine Mines, Limited near Timmins started production in April from its open pit mine; mill capacity is 900 tons a day and concentrates are shipped to Noranda for smelting. Early in 1961, Rio Algom Mines Limited started production at 750 tons a day from the Pater mine at Sprague. The ore is concentrated in a modified portion of the Pronto mill and concentrates are sbipped to Rio Tinto, Spain, for smelting. Production was normal at the mines and plants of International Nickel and Falconbridge Nickel in the Sudbury district, and of Geco Mines Limited and Willroy Mines Limited at Manitouwadge. North Coldstream Mines Limited near Kashabowie and Temagami Mining Co. Limited near Temagami continued production and development at their respective mines.

Copper production in Manitoba and Saskatchewan rose to 44,880 tons valued at $\$ 26,201,348$ and exceeded the 1960 total by 302 tons. Hudson Bay Mining and Smelting operated a central mill and smelter on ores from the Schist Lake and Chisel Lake mines in Manitoba, the Coronation mine in Saskatchewan and the Flin Flon mine which straddles
the Manitoba-Saskatchewan boundary. The Stall Lake and Osborne Lake mines near Snow Lake in Manitoba are being explored and developed. Sherritt Gordon shipped copper concentrates, derived from the nickel-copper ore mined at its Lynn Lake property, to Hudson Bay's smelter at Flin Flon. Sherritt's underground exploration was continued from the Farley shaft and, in addition, a company exploration party discovered copper ore at Fox Lake, 30 miles southwest of Lynn Lake.

In 1961, British Columbia had one of its most active periods in recent years. Exploration parties were busy in all parts of the province, one new mine started production in 1961, and three mines were preparing for production by 1962 or 1963. Production of copper in 1961 rose to 19,421 tons valued at $\$ 11,337,869$ and exceeded the 1960 total by 2,862 tons and $\$ 1,355,317$. Craigmont Mines Limited became British Columbia's newest producer in September when ore was shipped to its 4,000 -ton-a-day concentrator. The mine and mill are located in the Promontory Hills near Merritt. Cowichan Copper Co. Ltd., on Vancouver Island, closed its mine at Cowichan Lake and started underground development and mill construction at the Sunro mine near Jordan River; the mill will have a capacity of 1,500 tons a day and only the thickener tanks and filters will be located on the surface. The Consolidated Mining and Smelting Company started mill and plant construction and a program of underground development and exploration at the Benson Lake mine of Coast Copper Company Limited; production at 750 tons a day is scheduled to begin in 1962. Bethlehem Copper Corporation Ltd. completed negotiations to finance its mine to production. The property lies in the Highland Valley east of Ashcroft and production from the East Jersey orebody at 3,000 tons a day is scheduled for 1963. Among the producing mines, Howe Sound Company will increase production at its Britannia mine from 1,200 tons to 1,800 tons a day and Phoenix Copper Company Limited, near Greenwood, will increase production from 1,000 tons to 1,500 tons a day. Consolidated Woodgreen Mines Limited, also near Greenwood, continued operation at 750 tons a day but suspended exploration on the property. Giant Mascot Mines, Limited ships nickelcopper concentrate to Japan from its property near Hope; results obtained from an onproperty exploration program at Giant Mascot have added substantially to ore reserves.

North Rankin Nickel Mines at Rankin Inlet on the west coast of Hudson Bay accounted for all of the 486 tons of copper valued at $\$ 272,000$ that were produced in the Northwest Territories in 1961. Many exploration parties were at work in the western sector of the Northwest Territories and in the Yukon Territory. Interesting high-grade copper-silver mineralization was found in the Nahanni River area, new interest was being shown in the Whitehorse copperbelt and exploration was continuing in the Kathleen Lakes area of southwestern Yukon.

Uranium.-The principal uranium deposits in Canada are found in three geographically and geologically different areas. The deposits in the Elliot Lake-Blind River district of northern Ontario occur in quartz-pebble conglomerates and are by far the largest in Canada. Ore reserves are estimated at $280,000,000$ tons grading 0.12 p.c. $\mathrm{U}_{3} \mathrm{O}_{8}$. The deposits in the Bancroft area of southeastern Ontario are the only pegmatitic granite dykes being worked for uranium in Canada. Some of the orebodies in these dykes are unusually large and persistent in depth, and average about 0.10 p.c. $\mathrm{U}_{3} \mathrm{O}_{8}$. Vein-type deposits, containing pitchblende, are being mined in the Beaverlodge Lake area on the north shore of Lake Athabasca in northern Saskatchewan. The grade of the ore in these deposits, ranging between 0.18 and 0.25 p.c. $\mathrm{U}_{3} \mathrm{O}_{8}$, is relatively high compared with the other two types.

The measured, indicated and inferred uranium ore reserves in Canada as of Dec. 31, 1961 were estimated at $290,000,000$ tons, grading 0.12 p.c. $\mathrm{U}_{3} \mathrm{O}_{8}$ [equivalent to 348,000 tons of uranium oxide $\left(\mathrm{U}_{3} \mathrm{O}_{8}\right)$ ] and are considered to be the largest in the world. The reserves calculated for the Elliot Lake district constitute about 96 p.c. of the total. In 1958, Canada was the world's leading producer of uranium concentrates; in 1959 the value of uranium production climbed to $\$ 331,000,000$ and was, for the second consecutive
year, higher than that of any other Canadian-produced metal. The value declined to $\$ 269,938,192$ in 1960 and again in 1961 when production of uranium oxide $\left(\mathrm{U}_{3} \mathrm{O}_{8}\right)$ amounted to 9,800 tons valued at $\$ 204,138,553$. Production has declined as mines have continued to close following the United States Atomic Energy Commission announcement in November 1959 that it would not continue to purchase uranium from Canada in excess of contract commitments that were to expire in 1962 and 1963. As a result of this decision, arrangements were made to allow Canadian producers to stretch out to the end of 1966 the undelivered portion of uranium under their sales contracts. The stretch-out plan was designed to prevent a severe disruption in the industry that otherwise would have occurred in the 1962-63 period.

Early in 1961, two uranium mines closed-the Quirke mine of Rio Algom Mines Limited and the Stanleigh mine of Preston Mines Limited. In the Elliot Lake district, four mines continued production throughout the year-those of Denison Mines Limited and Stanrock Uranium Mines Limited, and two mines (Milliken and Nordic) owned by Rio Algom. In the Bancroft area, two mines operated by Bicroft Uranium Mines Limited and Faraday Uranium Mines Limited remained in operation. In the Lake Athabasca district, two mines continued to operate - the government-owned mine of Eldorado Mining and Refining Limited and the privately owned mine of Gunnar Mining Limited. At the end of the year only eight mines (seven companies) were producing uranium compared with 23 at the peak period in 1959; only four mines are expected to continue beyond 1963 and only one until 1966. Plans for future production necessitate a reduction, annually, over the next five years so that in 1966 contract deliveries are expected to be about 1,100 tons of $\mathrm{U}_{3} \mathrm{O}_{8}$. The number of mine employees at all mines declined from 11,792 at the beginning of 1960 to about 4,650 at the end of 1961.

As of Dec. 31, 1961, the amount of uranium $\left(\mathrm{U}_{3} \mathrm{O}_{8}\right)$ to be delivered under the stretchout plan ending in November 1966 was approximately 21,000 tons. This figure does not include 12,000 tons of unallotted uranium which, according to "letters-of-intent", are scheduled for delivery to the United Kingdom Atomic Energy Authority (UKAEA) during the period Mar. 31, 1963-Dec. 31, 1966. However, delivery date and price were being renegotiated by the UKAEA during the latter half of 1961 and early 1962.*

The Mines Branch of the federal Department of Mines and Technical Surveys, in collaboration with Eldorado Mining and Refining Limited and the Canadian Uranium Research Foundation, continued its program of research into non-nuclear uses of uranium. This program was undertaken in an effort to find new uses for uranium in the metals field in order to provide an additional outlet for production during the period of declining demand. The new uranium steel alloy, developed by the Mines Branch in 1960, has been undergoing tests on a commercial scale. Although the tests of this new alloy on a laboratory scale have been most promising, further tests and economic studies on a commercial scale will be necessary to determine what benefits uranium holds for the steel industry.

Uranium producers are allowed to sell as much surplus uranium as they can to countries that hold bilateral agreements with Canada for co-operation in the peaceful uses of atomic energy but there have been very few sales of this nature. Apart from the special contract agreements for the sale of uranium to the United States and Britain, Canada holds bilateral agreements with Australia, Japan, Pakistan, Switzerland and EURATOM (Belgium, West Germany, France, Italy, Luxembourg and the Netherlands). For other countries, a Canadian producer may, subject to government approval, sell up to $2,500 \mathrm{lb}$. of uranium.

Iron Ore.-Canadian producers' shipments of iron ore decreased by 5.4 p.c. in 1961 to $20,383,333$ tons; the all-time high was $24,488,325$ tons in 1959 . However, the value of iron ore shipments increased from $\$ 175,082,523$ in 1960 to $\$ 180,457,020$ in 1961. Imports decreased slightly while receipts of domestic ores increased, showing a net increase in consumption. Exports, representing over 85 p.c. of total shipments, declined.

[^156]In the United States, Canada's principal market, relatively large stockpiles and a low ore-consumption rate prevailed throughout most of the year. Shipments by Venezuela, Canada's main competitor in exports to the United States market, declined for the first time since initial production there in 1950. In contrast, Canada experienced declines in 1958, 1960 and 1961. Canadian shipments to Britain and Western Europe decreased slightly in 1961 as most major steel-producing countries operated at lower levels. In addition, the present and near-future availability of iron ore from countries in Asia, South America and Africa, particularly Liberia, has tended to weaken the bargaining position of several traditional suppliers, including Canada. The 1961 softening of the overseas market in Western Europe can be described as a short-term pause in the strong growth pattern that evolved during the 1950's and was forecast to continue well into the 1960's. In Japan, steel producers have been consuming imported iron ore at an exceedingly rapid rate and Canadian ore from the British Columbia coast has found a ready market in that country with the volume of shipments limited only by the companies' ability to produce.

Iron and steel production in Canada reached record levels in 1961. Prior to 1939, most of Canada's iron ore requirements were met by imports from the United States Lake Superior district and from Newfoundland. Since then, Newfoundland has joined Confederation and several new mines have been brought into production in Quebec, Labrador and Ontario. As Canadian ores have become available, the domestic steel industry has consumed increasing quantities.

The availability of Canadian iron ore in increasing quantity and quality continues to affect the pattern of international trade. From 1950 to 1959, world trade in iron ore increased from $43,700,000$ long tons to $130,500,000$ long tons and this trend is continuing. Sweden and France were the major exporters in 1950 but by 1959, Canada, Venezuela and the Soviet Union had become important ore exporters and significant quantities were being derived from several other countries in Africa, Asia and South America. In Canada, three projects recently completed or under construction in Labrador-Quebec will result in a total annual Canadian productive capacity of over $40,000,000$ long tons compared with an estimated $26,500,000$ long tons in 1961; most of this material will be shipped overseas to companies with a financial interest in one or more of the properties. Similarly, there are many projects under construction in such countries as Peru, Chile, India, Malaya, Angola, Mauritania, Swaziland and Australia that will each add at least $1,000,000$ tons of productive capacity for export markets. It is quite clear that the 1960's will be a decade in which quality ores will be abundantly available. As in the past, no one country will have a monopoly of supply.

Not all Canadian producers experienced a decline in shipments during 1961. Those companies producing high-grade concentrates or agglomerates in Ontario and Quebec actually increased shipments as did one producer of medium-grade, direct-shipping ore in Ontario. In general, however, producers of medium-grade ores, whether direct-shipping or beneficiated, shipped smaller amounts than in 1960 . With another producing company making initial shipments in 1961, the number of mining operations reached 13. In addition, the number of companies producing by-product iron ore from the processing of sulphide ores to recover sulphur dioxide and, in some cases, other metals such as nickel and cobalt, increased to three and another company is expected to start by-product production early in 1962. A fifth company mines ilmenite ore for smelting in its electric furnace plant at Sorel, Que.; its products include titania slag for pigment manufacture and pig iron.

Iron Ore Company of Canada, with direct-shipping ore deposits astride the LabradorQuebec border, 360 miles north of the port of Sept iles, Que., is the largest producer, having accounted for over 40 p.c. of 1961 Canadian shipments. Wabana Mines of the Dominion Steel and Coal Corporation, Limited, produces medium-grade concentrate from its underground mines on Bell Island, Nfld., and accounted for about 14 p.c. of the year's shipments. High-grade pellets from Hilton Mines, Ltd. near Shawville, Que., accounted for another 4 p.c. Quebec Cartier Mining Company, a new producer in 1961, contributed 5.5 p.c. by shipping high-grade concentrate from its new mine and beneficiation plant at Gagnon and its port at Port Cartier, Que.

In Ontario, Caland Ore Company Limited, Canadian Charleson, Limited and Steep Rock Iron Mines Limited continued to produce direct-shipping and medium-grade concentrates in the Atikokan area in 1961. Canadian Charleson shipped small amounts from stockpile. Steep Rock, the area's oldest producer, and Caland accounted for 6.7 p.c. and 5.5 p.c., respectively, of the 1961 shipments. In the Michipicoten area, Algoma Ore Properties Division of The Algoma Steel Corporation, Limited operates mines and a sinter plant at Wawa. This company, which accounted for 9 p.c. of the 1961 shipments, opened a new underground mine. Marmoraton Mining Company, Limited produces high-grade pellets from its mine and plant near Marmora, and Lowphos Ore, Limited produces high-grade concentrate from its operations near Capreol. Together, these companies produced 5.6 p.c. of the country's shipments in 1961.

Three British Columbia producers accounted for 6.3 p.c. of total Canadian shipments; Empire Development Company, Limited and Nimpkish Iron Mines Ltd. operate mines on Vancouver Island, and Texada Mines Ltd. produces from mines on Texada Island.

By-product iron ore was produced by The Consolidated Mining and Smelting Company of Canada Limited at Trail, B.C., for the first time in 1961. The International Nickel Company of Canada, Limited and Noranda Mines, Limited continued to produce from their plants at Copper Cliff and Cutler, Ont., respectively. At Sorel, Que., Quebec Iron and Titanium Corporation smelts ilmenite ore from its mine near Havre St. Pierre to produce titania slag and pig iron.

As already stated, properties being developed for production will result in an increase in Canada's productive capacity to over $40,000,000$ long tons by 1965. In the Wabush Lake area of Labrador, Iron Ore Company of Canada and Wabush Iron Co. Limited will commence the production of high-grade concentrate and pellets in 1962 and 1965 at the annual rate of $7,000,000$ and $6,000,000$ long tons, respectively. In Quebec, Quebec Cartier Mining Company will reach its planned capacity production of $8,000,000$ long tons a year in 1962. In Ontario, Jones \& Laughlin Steel Corporation will be producing 1,000,000 long tons of high-grade pellets from new facilities to be erected near Kirkland Lake. The two projects in Labrador and the one in Ontario will require a capital expenditure of approximately $\$ 480,000,000$. In British Columbia, three new producers plan to start shipments in 1962 at a combined rate of $1,300,000$ long tons a year. By that time, two of the present producers will have ceased production, leaving a net productive capacity of about $1,700,000$ long tons.

Gold.-The Royal Canadian Mint price for gold rose above $\$ 35.00$ an oz.t. in Canadian funds in June 1961 for the first time since February 1952. In 1961, average Mint price was $\$ 35.44$ compared with $\$ 33.95$ in 1960 and $\$ 33.57$ in 1959 . Despite the improved price, gold production decreased in 1961 to $4,425,820$ oz.t. from $4,628,911$ oz.t. and value of production at $\$ 156,851,060$ was somewhat lower than the 1960 value of $\$ 157,151,527$. The Minister of Finance announced in Parliament during the Budget Speech of June 20, 1961 that the Federal Government would take action to reduce the value of the Canadian dollar in relation to the United States dollar. As a result of this policy, the Mint price for gold increased to $\$ 36.35 \mathrm{oz}$. .t. in the week of July 3-7. The price remained above $\$ 36.00$ an oz.t. for the remainder of the year and reached the year's highest point of $\$ 36.51$ oz.t. in the week of Dec. 11-15.

Decreased gold production in 1961 was due primarily to the closing of six lode gold mines between August 1960 and August 1961; four of these mines had been in operation for more than thirty years. Three small lode gold mines started producing during the same period. Another factor contributing to lower gold production was a sharp drop in output from Canada's largest lode gold mine, Kerr-Addison Gold Mines Limited in the Larder Lake district of Ontario. Operating costs continued to rise in most gold mining districts, especially in Ontario where the 3-p.c. sales tax introduced in September 1961 resulted in increased cost for equipment and materials.

A total of 53 lode gold mines operated during 1961, one less than in 1960. Forty mines received cost assistance under the terms of the Emergency Gold Mining Assistance Act. The gold mines not eligible for cost assistance had costs less than $\$ 26.50$ oz.t. and these mines sold most of their gold on the open market.

In 1961, the proportion of gold coming from lode gold mines decreased to 84.4 p.c. from 85.9 p.c. and by-product gold recovered from base-metal ores increased to 14.0 p.c. from 13.4 p.c. Placer gold accounted for 1.6 p.c. compared with 1.7 p.c. in 1960 . Gold maintained sixth position in value among minerals produced in Canada, following crude petroleum, nickel, copper, uranium oxide and iron ore. Canada remained the second largest gold-producing country in the Free World, following the Republic of South Africa.

Ontario was the main gold producer, accounting for 58.7 p.c. of the 1961 total output. Production was lower, with an estimated $2,597,289$ oz.t. compared with $2,732,673$ oz.t. in 1960. Only the Red Lake-Patricia and Port Arthur mining divisions showed increases. Thirty lode gold mines operated in the province during 1961; 13 of them in the Porcupine district where the chief producers were Hollinger Consolidated Gold Mines, Limited (Canada's second largest gold producer), McIntyre Porcupine Mines, Limited, Dome Mines Limited and Aunor Gold Mines Limited. Carium Mines Limited (formerly Coniaurum Mines, Limited) ceased operating in July 1961. In the Larder Lake area, only one lode gold mine operated but this was Canada's largest gold producer, Kerr-Addison Gold Mines Limited; production from this mine decreased by 14 p.c. from an all-time high of 592,245 oz.t. in 1960. In the Red Lake-Patricia mining division, seven gold mines operated, the chief producers being Campbell Red Lake Mines Limited, Madsen Red Lake Gold Mines Limited and Dickenson Mines Limited. In the Kirkland Lake district, six mines recorded production but Sylvanite Gold Mines, Limited, closed its mine in August. The main Kirkland Lake producers were Macassa Gold Mines Limited, WrightHargreaves Mines, Limited, and Upper Canada Mines, Limited. In the Port Arthur mining division, MacLeod-Cockshutt Gold Mines Limited and Leitch Gold Mines Limited continued to operate and Consolidated Mosher Mines Limited prepared for shipments to the MacLeod-Cockshutt mill by early 1962. Renabie Mines Limited continued to operate in the Sudbury mining division. Some 64,000 oz.t. of gold were recovered as a by-product from base-metal ores in Ontario, mainly from the copper-nickel mines of the Sudbury district. No placer gold production was reported.

Quebec produced 23.8 p.c. of Canada's total gold production, compared with 22.4 p.c. in 1960. Thirteen lode gold mines operated during 1961 and production totalled $1,052,588$ oz.t. compared with $1,035,914$ oz.t. in 1960 . One small lode gold mine, Marban Gold Mines Limited, started shipping ore to the customs mill of Malartic Gold Fields Limited in July 1961. The largest lode gold producers were Lamaque Mining Company Limited and Sigma Mines (Quebec) Limited at Bourlamaque, and East Malartic Mines, Limited and Barnat Mines Ltd. at Malartic. Gold recovered as a by-product from base-metal ores increased by 4.5 p.c. and represented 39.2 p.c. of the total gold production. Beauce Placer Mining Co. Ltd. commenced dredging for placer gold in the Gilbert River near East Beauceville in the Eastern Townships in August; prior to this operation, there had been no appreciable amount of placer gold recovered in the province since 1899.

The Northwest Territories produced 9.1 p.c. of the gold recovered in Canada during 1961. All production came from lode gold mines in the Yellowknife district and totalled $402,580 \mathrm{oz} . \mathrm{t}$. compared with 418,104 oz.t. in 1960 . Four gold mines operated, with Giant Yellowknife Mines Limited (Canada's third largest lode gold producer) and Consolidated Discovery Yellowknife Mines Limited being the main producers. Several prospective gold mines were under development in the Territories.

British Columbia produced 3.6 p.c. of Canada's gold output in 1961 compared with 4.6 p.c. in 1960; gold recovered decreased to 159,296 oz.t. from 212,859 oz.t. Four lode gold mines operated, Bralorne Division mine of Bralorne Pioneer Mines Limited being the only large producer. French Mines Ltd., at Hedley, ceased operations in May and an old gold mine at Rock Creek was reopened by McKinney Gold Mines Limited, from
which shipments to the Trail smelter of The Consolidated Mining and Smelting Company started in July. Gold recovered as a by-product from base-metal ores accounted for 16.5 p.c. and that recovered from placer operations for 1.5 p.c. of the total gold produced in the province in 1961.

In the Prairie Provinces, Manitoba recovered 56,753 oz.t. compared with 52,762 oz.t. in 1960. Lode gold from San Antonio Gold Mines Limited and Forty-Four Mines Limited amounted to 54.0 p.c. of the provincial total, the remainder being recovered from basemetal mines in the Flin Flon and Lynn Lake areas. Saskatchewan recovered 73,898 oz.t. compared with 84,775 oz.t. in 1960 , with all gold coming from base-metal mines near Flin Flon on the Manitoba-Saskatchewan border. A small amount of placer gold was recovered from the North Saskatchewan River near Edmonton, Alta. In the Yukon Territory, the total recovered was 67,775 oz.t. compared with $78,115 \mathrm{oz}$. t. in 1960 , all of it from placer operations. About 80 p.c. of the gold recovered came from the dredging and hydraulicking operations of The Yukon Consolidated Gold Corporation Limited in the Dawson area. No gold production was reported from the Maritime Provinces but Newfoundland production amounted to 15,470 oz.t. compared with 13,515 oz.t. in 1960.

Lead and Zinc.-In 1961 lead metal production from domestic ores, together with recoverable metal exported in ores and concentrates, was estimated to be 231,197 tons. This was the highest level reached since 1942 when production was 256,071 tons. The 1961 production was valued at $\$ 47,395,393$. In $1960,205,650$ tons were produced, having a value of $\$ 43,926,888$. British Columbia accounted for the largest part of the increase, having produced over 24,000 tons more than in 1960 . The average price of lead for the year was 10.21 cents compared with 10.68 cents in 1960 .

During 1961, exports of lead in ores and concentrates totalled 70,967 tons. Shipments to the United States were 34,525 tons; to Belgium-Luxembourg, 24,001 tons; to West Germany, 12,177 tons; and to other countries, 264 tons. During the same period, 42,538 tons of refined lead were shipped to Britain; 55,947 tons to the United States; 6,676 tons to Japan; 5,749 tons to India; 4,508 tons to the Netherlands; and 2,219 tons to other countries. In 1960, exports of lead concentrates totalled 51,335 tons and exports of refined lead 96,449 tons.

Output of zinc in 1961, including recoverable metal exported in ores and concentrates, at 412,363 tons was slightly higher than the 1960 production of 406,873 tons but, as a result of lower prices, its value was $\$ 103,781,801$ compared with the 1960 value of $\$ 108,635,003$. The average price per pound of Prime Western grade zinc was 11.67 cents in 1961 and 12.71 cents in 1960.

Exports of zinc in ores and concentrates during 1961 totalled 199,322 tons. Shipments to the United States were 131,490 tons; to Belgium-Luxembourg, 22,266 tons; to Britain, 11,582 tons; to West Germany, 21,349 tons; and to France, 5,794 tons. During this period, 208,272 tons of refined zinc were shipped to 23 countries, of which 86,068 tons went to Britain; 70,443 tons to the United States; 15,387 tons to India; and 13,527 tons to Japan. In 1960, a total of 169,894 tons of zinc concentrate and 207,091 tons of refined zine were exported.

Preliminary data for the first nine months of 1961 indicate that consumption of lead during the whole of the year was slightly lower than 1960, and consumption of zinc was somewhat higher. Consumption of primary and secondary lead in 1960 was 72,087 tons; consumption of zinc was 59,143 tons.

British Columbia's importance as a producer of lead and zinc in Canada remained unchanged in 1961; that province continued to supply close to 80 p.c. of the lead production and 50 p.c. of the zinc. The Sullivan mine at Kimberley, the Bluebell mine at Riondel and the H.B. mine at Salmo, all operated by The Consolidated Mining and Smelting Company, are the principal producers. Their combined daily milling capacity is 11,900 tons, the largest mill ( 10,000 tons) being at the Sullivan mine. Concentrates from mines in British Columbia, Yukon Territory and some foreign areas were treated at Consoli-
dated's smelter at Trail. Other important British Columbia producers of lead and/or zinc in 1961 included Canadian Exploration, Limited and Reeves MacDonald Mines Limited, both near Salmo; Sheep Creek Mines Limited, west of Invermere; and Howe Sound Company, Britannia Division, north of Vancouver.

In Manitoba and Saskatchewan, Hudson Bay Mining and Smelting Co., Limitedthe operator of the large Flin Flon mine, the Coronation and Schist Lake mines at Flin Flon, and the Chisel Lake mine at Snow Lake in Manitoba-was the only producer of lead and zinc. Some zinc was recovered along with copper from ores produced at all four mines; lead was recovered only from ore produced at the Chisel Lake mine, which commenced production in September 1960 at about 1,000 tons a day. All ores are concentrated in a central 6,000-ton mill at Flin Flon, to which a lead circuit was added in 1960. Zinc is recovered in the company's electrolytic refining plant, which has an annual productive capacity of 73,000 tons of refined zinc. The lead concentrate is shipped to a custom smelter.

Ontario's only production of zinc concentrates comes from copper-zinc mines operated by Geco Mines Limited and Willroy Mines Limited at Manitouwadge, north of Lake Superior. A small amount of lead concentrates was produced by Willroy. In January 1961, Sherbrooke Metallurgical Company Limited started continuous operation of a 150-ton-per-day zinc roaster at Port Maitland on Lake Erie.

Quebec's main source of zinc was copper-zine ore from mines in the Noranda-Val d'Or area operated by Quemont Mining Corporation, Limited, Manitou-Barvue Mines Limited, Normetal Mining Corporation, Limited, Sullico Mines Limited (East Sullivan mine) and Waite Amulet Mines, Limited. In the same area, Vauze Mines Limited commenced production of copper and zinc concentrates in October 1961. At Bachelor Lake on the Barraute-Chibougamau railway in northwestern Quebec, The Coniagas Mines, Limited started production of lead and zinc concentrates in March. Other lead producers were Manitou-Barvue which produced some lead concentrate in addition to copper and zinc concentrates, and New Calumet Mines Limited whose lead-zinc-silver mine is 70 miles west of Ottawa.

The only large lead-zinc producer in the Atlantic Provinces was American Smelting and Refining Company which operates a mine at Buchans, Nfld. Late in 1961, Magnet Cove Barium Corporation commenced production of a bulk concentrate containing lead, zinc, copper and silver at Walton, N.S.

Exploration and development activities in 1961 were confined mainly to the Noranda and Mattagami Lake areas of northwestern Quebec, Wolfe County in the Eastern Townships of Quebec, and the Bathurst area of New Brunswick. In the Noranda area, Vauze Mines Limited did some underground exploration and development before starting production in October. Late in the year, Lake Dufault Mines Limited commenced diamonddrill exploration on its property adjacent to Vauze Mines. In the Mattagami Lake area, Mattagami Lake Mines Limited did extensive underground development and Orchan Mines Limited started shaft-sinking. Solbec Copper Mines, Ltd. prepared its property in Wolfe County for production of copper, zinc and pyrite concentrates early in 1962. Some exploration was done on lead-zinc properties in the Bathurst area by several companies including Anaconda Company (Canada) Ltd., Anacon Lead Mines Limited, Brunswick Mining and Smelting Corporation Limited, The Consolidated Mining and Smelting Company of Canada Limited, and the New Jersey Zinc Exploration Co. (Canada) Ltd. Preparations were made by Heath Steele Mines Limited to commence milling of copperzinc ores early in 1962; Heath Steele formerly operated its mine for about 12 months during 1957-58.

Silver.-Production of silver in Canada during 1961, estimated at $31,981,210$ oz.t. and valued at $\$ 30,068,733$, was considerably lower than the record output of $34,016,829$ oz.t. in 1960 valued at $\$ 30,244,363$. Ontario, the largest producer, registered a decline of about $2,000,000 \mathrm{oz} . \mathrm{t}$. Ontario, British Columbia and Yukon Territory account for four-
fifths of Canada's production. Nova Scotia produced silver in significant quantities for the first time since 1956; late in the year, Magnet Cove Barium Corporation began to mill sulphide ore at Magnet Cove, near Walton.

World production in 1960 was estimated at $236,500,000$ oz.t., 9 p.c. higher than the 1959 production of $216,800,000 \mathrm{oz} . \mathrm{t}$. Most of the increase was attributable to increased refinery production in the United States where $40,000,000$ oz.t. were produced compared with $23,000,000$ oz.t. in 1959. Contrary to the refinery production trend, mine output of silver in the United States continued the decline which started in 1956 and, as a result, Canada retained its position for the second consecutive year as the world's second largest mine producer of silver, following Mexico.

Silver consumption in Canada in 1960, at the record level of $11,742,064$ oz.t., was considerably higher than the previous record of $10,730,255$ oz.t. attained in 1957 and the consumption in 1959 of $10,202,769$ oz.t. The increase was attributable to larger coinage requirements which amounted to $7,481,617$ oz.t. compared with $5,737,347$ oz.t. in 1959. World consumption (excl. U.S.S.R.) in 1960 was estimated at $319,300,000$ oz.t., a gain of 6 p.c. over 1959.

Base-metal ores treated at domestic and foreign smelters have been Canada's chief source of silver for many years. In 1959 and 1960, about 77 p.c. of the total production was from these ores; the northern Ontario silver-cobalt ores of Cobalt and Gowganda accounted for about 21 p.c. of the total and the remaining 2 p.c. was extracted from gold ores.

Canada's principal producer of refined silver from base-metal ores is The Consolidated Mining and Smelting Company which operates lead and zinc treatment plants at Trail, B.C., and produced $8,690,244 \mathrm{oz}$. t. of silver in 1960, about 26 p.c. of total Canadian production. Other important producers were: Canadian Copper Refiners Limited, the operator of a copper refinery at Montreal East, Que.; Deloro Smelting \& Refining Company, Limited, which until April 1961 operated a silver-cobalt refinery at Deloro, Ont.; International Nickel, the operator of treatment plants for nickel-copper ores at Copper Cliff, Ont.; and Hollinger Consolidated Gold Mines, Limited and the Royal Canadian Mint, which operate gold refineries at Timmins and Ottawa, Ont., respectively. Canada's largest mine producer of silver, as the primary product, is United Keno Hill Mines Limited, which produced $7,231,900$ oz.t. from its three mines in the Mayo district of Yukon Territory during the year ended Sept. 30, 1961. Other leading primary producers were: Mastodon-Highland Bell Mines Limited in British Columbia; Agnico Mines Limited and Langis Silver \& Cobalt Mining Company Limited near Cobalt, Ont.; and McIntyre Porcupine Mines, Limited and Siscoe Metals of Ontario Limited near Gowganda, Ont. These five companies together produced 6,223,702 oz.t. in 1960 .

The average Canadian price of silver in 1961 was 94.39 cents an oz.t. compared with 88.92 cents in 1960. On Nov. 28, 1961, the President of the United States announced that the Treasury Department would no longer sell government-held silver to domestic consumers; as a result, there was an immediate price increase of about 10 p.c.

Cobalt.-Cobalt is derived as a by-product from the smelting and refining of the nickel-copper ores of Sudbury, Ont., and Lynn Lake, Man., and from the nickel ores of Thompson, Man. International Nickel recovers cobalt from its refinery operations at Port Colborne, Ont., and Clydach, Wales, based on its Sudbury and Thompson ores. Falconbridge Nickel recovers cobalt in the refining of its Sudbury nickel-copper matte at its refinery at Kristiansand, Norway. Sherritt Gordon produces refined cobalt powder and briquettes and cobalt metal strip in its refinery at Fort Saskatchewan, Alta., from nickel-copper concentrates shipped from its mine at Lynn Lake in northern Manitoba. Deloro Smelting \& Refining Company, Limited closed its smelter at Deloro, Ont., in April 1961 after a final clean-up run on silver ores from the Cobalt and Gowganda areas of Ontario. In 1961, Canadian cobalt production amounted to $3,236,323 \mathrm{lb}$. valued at $\$ 4,902,657$, compared with $3,568,811 \mathrm{lb}$. valued at $\$ 6,763,016$ in 1960 .

Columbium.-St. Lawrence Columbium and Metals Corporation completed the construction of a 500-ton-a-day mill at Oka, Que., and made its first shipment of pyrochlore concentrate ( $50-55$ p.c. $\mathrm{Cb}_{2} \mathrm{O}_{5}$ ) in October 1961. Two other companies-Quebec Columbium Mines Limited and Columbium Mining Products Ltd.-have carried out extensive research and exploration programs in the same area. Geo-Met Reactors Limited was formed in 1961 and produced for export two grades of ferrocolumbium and a pyrochlore steel-additive that is marketed under the trade name 'Pycol'. Concentrates from Oka constitute the raw material used by Geo-Met.

Molybdenum.-Molybdenite Corporation of Canada Limited continued to be the sole Canadian producer of molybdenite and molybdic oxide in 1961. Shipments during the year from the company's mine at Lacorne, Que., amounted to $765,897 \mathrm{lb}$. of contained molybdenum valued at $\$ 1,085,091$, compared with $767,621 \mathrm{lb}$. valued at $\$ 1,015,380$ in 1960. Preissac Molybdenite Mines Limited, in which Molybdenite Corporation holds a substantial interest, and Anglo-American Molybdenite Mining Corporation continued development and exploration work on their properties in the Lake Preissac area of Quebec. Noranda Mines, Limited commenced a pilot-plant study at the property of Gaspe Copper Mines, Limited (a wholly owned subsidiary) to investigate the economics of by-product molybdenum recovery. In October 1961, Noranda announced plans to examine by underground exploration its Mount Boss property in British Columbia.

Titanium.-Ilmenite, an iron-titanium oxide, is mined in the Allard Lake and St. Urbain areas of Quebec. Ilmenite from St. Urbain is sold as heavy aggregate. Most of the Allard Lake ore is smelted at Sorel, Que., in electric furnaces by Quebec Iron and Titanium Corporation to produce a high titania slag. Most of this product is exported to pigment producers in the United States, Japan and Britain but some goes to Canadian Titanium Pigments Limited at Varennes, Que. In 1961, the value of titanium shipped as ore, heavy aggregate and titanium-bearing slag was $\$ 16,287,293$, an amount $\$ 3,340,293$ above the previous high reached in 1960.

Canadian Titanium Pigments Limited completed a $\$ 6,000,000$ expansion program that increased its annual production capacity from $32,000,000 \mathrm{lb}$. of $\mathrm{TiO}_{2}$ to $50,000,000 \mathrm{lb}$. British Titan Products (Canada) Limited-a wholly owned subsidiary of British Titan Products Company, of Britain-continued the construction of its titanium-pigment manufacturing plant at Tracy, Que. The plant, scheduled for completion in 1962, will have an initial rated capacity of $44,000,000 \mathrm{lb}$. a year.

Selenium and Tellurium. -These metals are recovered from the anode muds produced by the refining of blister copper in the plants of Canadian Copper Refiners Limited at Montreal East, Que., and International Nickel at Copper Cliff, Ont. The Canadian Copper Refiners plant is one of the largest selenium and tellurium metal-andsalts plants in the world. Selenium production in 1961 totalled $469,892 \mathrm{lb}$. valued at $\$ 2,990,595$ compared with $521,638 \mathrm{lb}$. valued at $\$ 3,651,466$ in 1960 . Tellurium production in 1961 amounted to $95,873 \mathrm{lb}$. valued at $\$ 475,545$, an increase of $51,191 \mathrm{lb}$. and $\$ 319,157$ over 1960.

Magnesium.-Dominion Magnesium Limited is the only producer of magnesium metal in Canada. Dolomite of exceptional purity is quarried and reduced to metal by the ferrosilicon method at Haley, Ont. Plant expansion from 8,000 tons to 10,000 tons annual capacity was commenced in 1961. Production for the year was estimated at 7,740 tons compared with 7,289 tons in 1960.

Aluminum.-Canada is second in world production of aluminum. Bauxite and alumina for use by Canadian smelters are imported and for this reason aluminum metal production is classed with manufactures, not with smelter production of metals from minerals of domestic origin. Annual capacity of the six Canadian smelters was 872,000 tons in 1961. Canadian British Aluminium Company Limited will expand the present

90,000 tons annual capacity of its smelter at Baie Comeau in Quebec by 45,000 tons; completion is expected by 1965. All other smelters in Canada are owned and operated by the Aluminum Company of Canada, Limited and are located at Arvida, Shawinigan, Isle Maligne and Beauharnois in Quebec and at Kitimat in British Columbia.

Production of primary aluminum in 1960 was 762,012 tons of which 552,155 tons were exported. The value of these exports at $\$ 243,034,000$ represented 4.6 p.c. of the value of all commodity exports from Canada. Because of difficult marketing conditions, production in 1961 was reduced to 663,000 tons and 487,000 tons were exported.

Platinum Metals.-Production of platinum metals in Canada during 1961 totalled $404,883 \mathrm{oz} . \mathrm{t}$. valued at $\$ 23,829,172$, compared with $483,604 \mathrm{oz} . \mathrm{t}$. valued at $\$ 28,873,508$ in 1960. The metals are obtained as a by-product of the pyrometallurgical treatment of nickel-copper ores and include two groups-platinum-iridium-osmium and palladium-rhodium-ruthenium. Osmium is the only member of the platinum metals group not recovered in Canada. Formerly, all platinum production came from the Sudbury area of Ontario, but the new nickel mine at Thompson in Manitoba, which began operation early in 1961, provides a second source. In the metallurgical treatment of nickel-copper ores the platinum metals go with the nickel and copper through the reverberatory and converter stages to nickel and copper anodes. They are picked up as slimes from tank bottoms in the electrolytic stages. The platinum metal slimes, after separation from other precious metals and impurities, are then refined by a wet process to commercial platinum, palladium, iridium, rhodium and ruthenium.

Major world producers of platinum metals are the Republic of South Africa, Canada and the Soviet Union. World production during 1960 was estimated at $1,190,000$ oz.t., each of the three countries producing approximately one-third. Neither South Africa nor the Soviet Union releases official production figures on the platinum metals.

December prices of platinum metals, per oz.t., in the United States, as reported in E. \& M.J. Metal and Mineral Markets of Dec. 15,1961 were: platinum $\$ 80$ to $\$ 85$; iridium $\$ 70$ to $\$ 75$; palladium $\$ 24$ to $\$ 26$; rhodium $\$ 137$ to $\$ 140$; osmium $\$ 60$ to $\$ 70$; and ruthenium $\$ 55$ to $\$ 60$. The platinum metals are now used principally as catalysts in the chemical industry and as electrical contacts in the electrical industry. Relatively minor amounts are used in jewellery and in dental-medical equipment.

## Subsection 2.-Industrial Minerals

The total value of industrial mineral production increased in 1961 to a record $\$ 527,014,000$. This segment of the mining industry includes non-metallic minerals such as fluorspar, silica, etc., clay and other ceramic products, construction materials such as concrete aggregate and building stone. New production records were established for asbestos, elemental sulphur, sodium sulphate and titania.

Asbestos.-Despite the enormous growth in the production of asbestos in the Soviet Union and competition in European markets, Canada has maintained its position as the major supplier of this important mineral commodity to the world market. During 1961, shipments amounted to $1,171,000$ tons valued at $\$ 131,053,000$.

Chrysotile, the most widely used variety of asbestos, occurs in several places in Newfoundland, Quebec, Ontario, British Columbia and Yukon Territory. However, the main centre of the industry is in the Eastern Townships of Quebec where 12 mines account for more than 90 p.c. of the nation's production. Two other mines are located elsewhere in Canada, one in northern Ontario and one in northern British Columbia, and Newfoundland will soon join them as an asbestos-producing province. Advocate Mines Limited is developing a large deposit at Baie Verte; a contract has been awarded for the construction of tide-water docking facilities, a fibre warehouse and a mechanical services building and it is expected that construction will start in 1962 on the milling
plant which will have a capacity of 5,000 tons per day of the asbestos ore. Murray Mining Corporation continued development of a deposit near Deception Bay in northern Ungava; the year's exploration program added to company ore reserves and engineering studies were under. way for developing the deposit for production.

One of the important developments in 1961 was the establishment of an Asbestos Fibre Standards Laboratory by the Quebec Asbestos Mining Association (representing the asbestos producers in that province) and the University of Sherbrooke. The new Laboratory is intended as an impartial testing unit which will ensure uniformity of grading throughout the Quebec industry. It is housed in the Engineering Division of the University.

Construction Materials.-Portland cement production now ranks ninth in the entire mineral industry in terms of value of output. In the industrial mineral group, it is exceeded only by asbestos, sand and gravel. For several years after World War II, Canada imported considerable cement to supplement production from domestic plants, but the industry has since expanded so rapidly that today this country exports between 3 p.c. and 5 p.c. of its output to the United States. There are 19 plants in operation across Canada, with a combined annual capacity of $8,750,000$ tons; cement is manufactured in every province except Nova Scotia and Prince Edward Island.

The steadily increasing market for cement products, such as ready-mixed concrete (in which form about 30 p.c. of the production is currently marketed), masonry and precast and prestressed shapes, is reflected in the establishment of new plants for their manufacture and also in the establishment of a trend toward more uniformity and improved quality in aggregates. Recently, as a result of this change in the market, several cement manufacturers have partially integrated their operations with companies making cement products and quarrying stone for concrete aggregate.

Lightweight aggregates have experienced rapid growth in recent years and are now important construction materials, especially in multi-storey structures. The use of this product in the construction of a 44 -storey building in Montreal is reported to have replaced 1,200 tons of high quality structural steel. There are in Canada 11 plants making lightweight aggregate by expanding clay and shale, 10 plants processing vermiculite and nine plants expanding perlite.

Potash.-There was no production of potash in 1961 from the extensive deposits in Saskatchewan but it is anticipated that two companies will be mining the mineral during 1962. What is believed to be the world's largest high grade deposit of potash, in the form of the minerals sylvite and carnallite, occurs at depths varying from 2,800 feet to 3,500 feet under a large area of southern Saskatchewan. Reserves have been estimated at more than $6,400,000,000$ tons of recoverable potash grading more than 25 p.c. $\mathrm{K}_{2} \mathrm{O}$.

Attempts to mine potash through shafts encountered technical difficulties caused by high water pressures in the wet and largely unconsolidated Blairmore formation. However, the two major companies pioneering in Canadian potash have applied substantial technical and financial resources in developing a solution to this problem. At the end of 1961, Potash Company of America Limited was completing the strengthening and repair of a 16 -foot diameter concrete shaft installed during 1958; this company has a mining property at Patience Lake near Saskatoon and expects to ship potash to market during 1962. International Minerals and Chemical Corporation (Canada) Limited at Esterhazy used a novel technique, known as tubbing, to sink a shaft through the Blairmore. Seventy five-foot-high, segmented, cast iron rings were placed in a 300 -foot section of the shaft to resist the hydraulic pressures experienced in the formation. The Esterhazy mine also is scheduled for production in 1962. By 1963, the company will have almost tripled the original size of its beneficiation plant needed to treat the crude potash and the $1,200,000-$ ton-a-year plant then will be the largest capacity potash unit on the Continent

Other companies are active in exploring and developing the deposits in Western Canada. Standard Chemical Ltd. is studying the possibility of recovering potash by solution mining near Moose Jaw. Solution mining is commonly used in recovering salt from bedded deposits and has the advantage of not requiring large capital expenditures in shaft construction and underground mine development.

Future markets for Canadian potash are bright. The need for food for an expanding world population is reflected in steadily increasing world consumption of potash, one of the three leading fertilizer constituents. Growth in North American consumption is about equal to the production of one modest-sized mine annually. Although new potash areas are being developed in Jordan, Ethiopia and elsewhere, Canada may be expected to supply an important share of the world market in the future.

Sulphur.-With the development of natural gas fields in the western provinces, Canada has emerged as a major source of elemental sulphur. Until 1952, Canada's requirements for the elemental form were supplied by imports and, while imports are still necessary to meet demands in Eastern Canada, large-scale exports are required to market Western Canada production recovered as a by-product of natural gas processing. Based on estimates of gas reserves, the potential for recovery is between $150,000,000$ and $300,000,000$ tons of sulphur.

During 1961, 910,000 tons (both elemental and sulphur equivalent of smelter gases and pyrite) were shipped to consumers or used by producers in their own processes; 44 p.c. of the total was elemental sulphur. By the end of the year, Canada's exports of elemental sulphur were approaching a balance with imports of this commodity. Late in 1960 final approval was obtained for the export of large quantities of natural gas from Western Canada to the United States. This has made necessary the processing of substantial quantities of sour gas and consequently the recovery of larger quantities of elemental sulphur. As a result, the capacity of plants in Western Canada may be expected to increase from 2,000 tons per day at the end of 1960 to 6,200 tons during 1962. When fully developed, these plants will have an annual productive capacity of some $2,000,000$ tons of sulphur.

Six new sulphur plants were under construction in 1961 and plans for others were being studied. Two of the new plants will have the capacity to recover 1,500 tons per day. In Alberta, Petrogas Processing Limited placed on stream in 1961 near Calgary a plant capable of producing 336,000 tons of sulphur per annum. Other plants were completed by Jefferson Lake Petrochemicals of Canada Limited at Coleman, Western Lease Holds Ltd. at Wildcat Hills, and Home Oil Company Limited at Carstairs. By the end of the year, 15 recovery plants were in operation in British Columbia, Alberta and Saskatchewan, converting sulphur compounds in natural gas into commercial grades of elemental sulphur.

Other Minerals.-Gypsum is mined in Newfoundland, Nova Scotia, New Brunswick, Ontario, Manitoba and British Columbia. The output in 1961 was in excess of $5,000,000$ tons valued at over $\$ 9,000,000$. Much of the Canadian crude gypsum production is exported from the Maritimes to supply United States plants along the Atlantic seaboard. Bestwall Gypsum Company of Ardmore, Pennsylvania, is developing a deposit near River Denys Station, Cape Breton Island, to supply company plants in the United States with crude gypsum. The $\$ 2,900,000$ development will provide for a production of 5,500 tons per day. Flintkote Company of Canada Limited is proceeding with the development of gypsum deposits in the Flat Bay area of Newfoundland. An expenditure of $\$ 2,000,000$ will provide for the construction of a six-mile aerial tramway and deep-water shipping facilities at Turf Point. It is expected to be in operation during the latter half of 1962 and will supply plants at Humbermouth, Nfid., and at points in eastern United States. Gypsum reserves in the area are large and have been stated to be in the neighbourhood of $200,000,000$ tons.

Salt is another important Canadian industrial mineral; more than 3,000,000 tons are produced annually, valued at over $\$ 19,000,000$.

Requirements of the kraft paper industry resulted in record production of 250,000 tons of sodium sulphate in Saskatchewan in 1961. Three of the four producers are using natural gas for the conversion of the natural mineral mirabilite to a commercial product, viz., 'salt cake'. In two of these operations a technique known as submerged combustion is being used and is resulting in improved efficiency. In 1961, Saskatchewan Minerals, Sodium Sulphate Division, reopened the Bishopric plant which had been idle for several years.

Late in 1960, Quebec Lithium Corporation resumed mining and milling of spodumene north of Val d'Or, to provide feed for the new lithium chemical plant and for continuing sales of ceramic-grade spodumene concentrate. By October 1961, the chemical plant was turning out about $6,000 \mathrm{lb}$. of high-purity lithium carbonate daily, a production that will be doubled. Early in 1962, Quebec Lithium will be marketing lithium hydroxide and monohydrate processed from lithium carbonate and is also planning to add lithium halides to the chemicals produced from spodumene.

## Subsection 3.-Petroleum and Natural Gas

As a result of important new developments, 1961 was an exceptionally good year for many segments of the petroleum and natural gas industries. The production and transportation sectors of the petroleum industry benefited greatly from the Federal Government's national oil policy announced on Feb. 1, which was designed to achieve increased domestic production on a voluntary basis. Approximately one-half of Canada's crude-oil-producing capacity has been shut-in in recent years; the oil policy set production targets for Canadian producers so that a more favourable production-to-consumption ratio would be established. Specifically, output goals of crude oil and natural gas liquids were set at $625,000 \mathrm{bbl}$. a day by mid- $1961 ; 640,000 \mathrm{bbl}$. a day for the whole year; and approximately $800,000 \mathrm{bbl}$. a day by the end of 1963 . A change in the pattern of supply and distribution by the industry was under way and this resulted in the 1961 targets being reached. The average daily production of $642,000 \mathrm{bbl}$. surpassed the 1960 record output of 543,000 bbl. by 18 p.c. In Alberta, the large increase in output did not result in a correspondingly large expansion of exploration and development programs during the year since production facilities and oil reserves were more than adequate to meet the increased market demand. In British Columbia, however, the stimulus of a new pipeline being built to make British Columbia oil available to Vancouver refineries caused a sharp increase in oil development drilling and installation of production facilities. The 1961 value of crude petroleum and natural gas liquids production was $\$ 509,834,660$ compared with $\$ 438,978,707$ in 1960.

The natural gas industry had a highly successful year in 1961, both in terms of production and of capital investment. Production, valued at $\$ 63,607,157$, amounted to $646,018,204 \mathrm{Mcf}$. , a 24 -p.c. increase over the 1960 output and an all-time record. Thus, the large annual increases in natural gas production that have prevailed for the past decade continued without slackening, and the year-end completion of the AlbertaCalifornia gas pipeline ensures that the rapid expansion of output will continue through 1962. The Alberta-California gas pipeline, with its lateral feeders, was the largest item of capital expenditure; $\$ 130,000,000$ was spent on the Alberta and British Columbia section of the line. In addition, new natural gas processing plants costing about $\$ 50,000,000$ were built, several of them for the specific purpose of supplying the Alberta-California pipeline.

Table 1 shows production of oil and gas in Western Canada since 1954. The natural gas production figures exclude gas flared in the field, the percentage of which varies from year to year. In 1954, 20 p.c. of gross gas production was flared but in recent years increased demand has made it economical to gather a larger proportion of the gas produced, thereby reducing the percentage flared.

## 1.-Crude Oil and Natural Gas Production in Western Canada, 1954-61

| Year | Crude Oil |  |  |  | Natural Gas |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Man. | Sask. | Alta. | B.C. | Sask. | Alta. | B.C. |
|  | '000 bbl. | '000 bbl. | '000 bbl. | '000 bbl. | Mcf. | Mcf. | Mef. |
| 1954. | 2,148 | 5,423 | 87,714 | - | 3,333,077 | 107,173,777 | - |
| 1955. | 4,146 | 11,317 | 113,025 | - | 6,708,743 | 133,007, 493 | - |
| 1956. | 5,787 | 21,077 | 143,910 | 148 | 9,807,697 | 146, 133, 893 | 187,846 |
| 1957. | 6,090 | 36,861 | 137,492 | 341 | 13,994,347 | 183,140,820 | 8,274,942 |
| 1958. | 5,829 | 44,626 | 113,278 | 512 | 18,819,795 | 239,049, 591 | 63,638,297 |
| 1959. | 5,056 | 47,442 | 129,967 | 866 | 39,612,966 | 297,568,926 | 69,128,708 |
| 1960. | 4,764 | 51,868 | 132,865 | 867 | 36,571,623 | 383,682,986 | 85,592,166 |
| 1961. | 4,485 | 56,000 | 157,650 | 658 | 35,000,000 | 497, 925,000 | 94,482,454 |

The recent trend toward increased drilling in the more northwesterly portions of the Western Canada sedimentary basin continued in 1961. Although there were considerably fewer drilling rigs active during the first eight months of the year than in the same period of 1960 , activity increased during the final four months to a level equal to that of the same period of the previous year. Despite generally fewer active rigs, the total footage drilled in 1961 was slightly higher than in 1960 , reaching more than $13,500,000$ feet. There were 2,840 wells drilled compared with 2,951 in the previous year, 1,577 being oil, 417 gas and 846 dry. Although there were fewer successful oil wells completed, the number of gas-well successes increased mainly as a result of greater concentration on exploring and developing the gas-rich strata of the foothills and northeastern British Columbia; much attention was also given to the development of known gas-producing regions in the southern half of Alberta.

Geophysical activity, in terms of crew-months, has shown a generally downward trend since 1952, which continued despite improved conditions in some other segments of the petroleum and natural gas industries. Nevertheless, even for the normal seasonal year-end upswing in geophysical (predominantly seismic) activity, the geophysical exploration companies found difficulty in getting sufficient skilled technical personnel, the loss of manpower resulting from the long recession suffered by this sector. Inasmuch as a large portion of the Western Canada sedimentary basin has received seismograph coverage, it has become common practice for exploration companies to trade or purchase records from previous operators and apply new evaluation techniques to them, thus avoiding unnecessary re-surveys. Although field work has declined, increasing emphasis is being given to such evaluation studies.

A moderate increase of petroleum reserves was recorded in 1961; year-end reserves of crude oil and natural gas liquids were placed at close to $4,500,000,000 \mathrm{bbl}$. Natural gas reserves were increased to a 1961 year-end total in excess of $35,000,000,000 \mathrm{Mcf}$., mainly through additions in Alberta and British Columbia.

British Columbia.-British Columbia was the only western province to show a substantial increase in drilling in 1961. The total number of wells drilled, including both exploratory and development wells, increased from 150 in 1960 to more than 200 in 1961, and the total footage drilled surpassed $1,000,000$ feet for the first time. All of the increase may be ascribed to development of known oil and gas pools. The heaviest development program was in the Boundary Lake oil field where more than 40 new wells were drilled, and the areal extent of the field was doubled. This drilling program was prompted by the impending completion of a new oil pipeline which would allow the region's oil to be moved to Vancouver refineries. Exploration drilling resulted in several natural gas discoveries that appear important. One significant well drilled 85 miles northwest of Fort St. John produced a large flow of natural gas from strata of Triassic age and extended the known gas-productive region to 30 miles west of the Blueberry field. A very thick natural gas
pay section was found in Beaver River area, immediately south of the Yukon boundary, 16 miles west of the Liard River; preliminary reports suggest that this discovery is one of the most prolific gas wells yet drilled in Western Canada. Several widely spaced middle Devonian gas discoveries were made in a region some 50 miles northeast of Fort Nelson and north of the 1960 Kotcho Lake discovery. To a group of earlier gas wells near Fort Nelson was added the Clarke Lake discovery, 17 miles east-southeast of the town. On the whole, exploration and development drilling in British Columbia in 1961 was quite successful; only about 27 p.c. of the wells drilled were dry holes.

The highlight of British Columbia's petroleum industry in 1961 was the provision for access to the Pacific Coast market through construction of the new line of Western Pacific Products \& Crude Oil Pipelines Ltd. Although the pipeline did not go into fullscale operation until January 1962, testing and filling of the line late in 1961 caused a sharp increase in crude oil and natural gas liquids production from the $5,000 \mathrm{bbl}$. a day output which satisfies local demand. The total yearly production of $2,200,000 \mathrm{bbl}$. exceeded 1960 output by 24 p.c. and the value to producers was $\$ 2,800,000$. The value of natural gas production in British Columbia, in contrast to the other western provinces, is considerably greater than that of liquid hydrocarbons; in 1961, field value of natural gas was $\$ 8,700,000$, and production amounted to $94,462,454 \mathrm{Mcf}$.

Alberta.-In 1961, the total exploratory footage drilled in Alberta for new petroleum and natural gas reserves and the development of known fields amounted to just under $10,000,000$ feet, slightly less than in $1960 ; 1,600$ wells were completed compared with 1,766 in the previous year. There was a greater concentration on the development of natural gas fields, leading to the completion of 342 gas wells compared with 276 in 1960 and to a considerable number of new gas discoveries both in the northwestern and in the betterdeveloped southern portions of the province. The 777 new oil wells completed represented a substantial reduction from the 1960 total, the decrease resulting from the lack of major new oil fields requiring development and the excess productive capacity of existing fields. The advanced state of development of the province's largest oil field-the Pembinacaused a notable slow-down of drilling there; the group of fields in the Swan Hills region and the comparatively small Crossfield field, north of Calgary, continued to be the areas of greatest oil-field activity. In south-central Alberta, a new oil field-the Twining fieldwas designated following its discovery early in the year and subsequent successful drilling. An important oil find was made in the prolific Beaverhill Lake formation four miles east of the Kaybob field, and several significant natural gas discoveries were made near the Kaybob field, mainly to the southwest.

Alberta production of crude oil increased by 20.7 p.c. to $157,650,000 \mathrm{bbl}$. in 1961 and the gross value of crude oil sales was $\$ 354,712,500$. The volume of natural gas produced was $497,925,000 \mathrm{Mcf}$. and the gross value of sales was $\$ 44,315,325$.

Saskatchewan.-The decline of drilling in Saskatchewan which had been in evidence since 1957 halted in 1961, when there was a small increase in both the number of wells completed and the footage drilled. The reversal of trend was caused by a heavy schedule of development drilling, although exploratory drilling continued to decline. No major new fields were located but several interesting oil discoveries were made in the southeast corner of the province near Carievale adjacent to the North Dakota boundary, and also between the Parkman field and the Manitoba boundary. The large development drilling programs, brought about by a strong demand for Saskatchewan crude, were carried out in comparatively few fields, mainly Dodsland, Parkman, Hastings, Weyburn, Midale and Steelman. Well yields in Saskatchewan average less than those of Alberta oil wells, but their location nearer to eastern markets and the lower cost of drilling Saskatchewan's shallower wells help offset this factor. Saskatchewan production of crude oil in 1961 reached a record high of $56,000,000 \mathrm{bbl}$., representing an 8-p.c. increase over the 1960 output. Natural gas net output decreased slightly to $35,000,000 \mathrm{Mcf}$.

Manitoba.-Only 28 wells were drilled in Manitoba in 1961 compared with 67 in 1960, and only one created much interest-a well near Pierson in the southwest corner of the province. Later investigation showed such high water production that that interest soon subsided. Production of crude oil in Manitoba has been declining each year since the peak year of 1957. In 1961, output totalled $4,485,000$ bbl., 6 p.c. less than in 1960 . The province has no commercial production of natural gas.

Yukon and Northwest Territories.-One important gas discovery, in the Netla Arrowhead River well located between the Liard River and Trout Lake, was made in 1961. This yielded a high flow of gas from a section in the Devonian Slave Point formation. At the year-end, a well to a depth of 14,000 feet was being drilled on Melville Island to test one of the numerous structures in the potentially oil-bearing Palæozoic rocks; by the end of 1961 it had reached a depth in excess of 10,000 feet. This was the first well to be drilled in the Arctic islands in the search for oil and gas. For the Territories as a whole, there was a nearly 50 -p.c. decrease in the number of wells drilled following the 33 -well peak reached in 1960.

Eastern Canada.-Exploration and development in Quebec was carried on more actively than heretofore in 1961, because of a drilling program relative to a natural gas reservoir on the north shore of the St. Lawrence River near Trois Rivières. The gas pool is located at a depth of less than 200 feet in unconsolidated sand beneath a clay capping, but the reserves are small compared with those of typical gas pools in Western Canada. In Ontario, drilling was carried on, as in previous years, along the north shore of Lake Erie and also on a pinnacle reef belt south of Goderich around the southeast corner of Lake Huron.

Petroleum Refining and Marketing.-Petroleum refining throughput capacity was expanded only slightly in 1961. At the beginning of the year, capacity was $950,260 \mathrm{bbl}$. per day. In November, the new 8,500-bbl.-per-day plant of Golden Eagle Refining Company of Canada, Limited went on stream near St. John's, Nfld., to become the province's first oil refinery. The plant of Pacific Petroleums Ltd. at Taylor in northeastern British Columbia was expanded to a capacity of $3,500 \mathrm{bbl}$. per day, although operations were suspended at the company's 2,800-bbl.-per-day plant at Dawson Creek. The small refinery of Anglo American Exploration Limited at Hartell, Alta., was closed down after 22 years of operation at its Turner Valley site. The Regina refinery of Consumer's Co-operative Refineries Limited was expanded from 16,000 to $22,500 \mathrm{bbl}$. per day. Construction of new refinery facilities during 1962 and 1963 will increase refinery capacity by at least 56,000 bbl. per day in Ontario, 13,500 in Nova Scotia, and 3,000 in Manitoba. The expanded capacity in Ontario will increase the use of Canadian crude oil in Eastern Canada. The rate of growth of the petroleum refining industry from 1941 to 1961 is indicated by Table 2.
2.-Petroleum Refining Throughput Capacity, by Region, as at Dec. 31, 1941, 1951 and 1961

| Region | 1941 |  | 1951 |  | 1961 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | bbl. per day | p.c. | bbl. per day | p.c. | bbl. per day | p.c. |
| Atlantic Provinces. | 34,250 | 14.7 | 22,300 | 5.3 | 105,300 | 11.0 |
| Quebec........ | 67,000 | 28.8 | 160,000 | 38.0 | 297,000 | 30.9 |
| Ontario.............................. | 68,000 | 29.3 | 79,400 | 18.8 | 260,820 | 27.2 |
| Prairie Provinces and Northwest Territories. | 38,540 | 16.6 | 131,000 | 31.1 | 198,640 | 20.7 |
| British Columbia..................... | 24,500 | 10.6 | 28,850 | 6.8 | 98,700 | 10.2 |
| Canada. | 232,290 | 100.0 | 421,550 | 100.0 | 960,460 | 100.0 |

Consumption of Canadian crude oil and natural gas liquids by Canadian refineries in 1961 averaged $427,000 \mathrm{bbl}$. per day. Although output and consumption increased by a substantial margin in 1961, Canadian refineries used the same proportion of domestic production as in 1960-54 p.c. Much of the increase in output of crude petroleum was attributable to a large increase in exports to the United States, where refineries took an average of $185,000 \mathrm{bbl}$. per day of Canadian crude oil and natural gas liquids, 61 p.c. more than in 1960. About one-half of the exports was delivered to three refineries in the Puget Sound area of the Pacific Coast and the remainder was sold in the United States Great Lakes region. In addition, Canada exported a small amount of refined petroleum products, averaging $5,000 \mathrm{bbl}$. per day. Foreign sources supplied $366,000 \mathrm{bbl}$. per day to Canadian refineries, or 46 p.c. of the average daily receipts of 793,000 bbl. The Atlantic Provinces and Quebec continued to use only foreign crude, mainly from Venezuela and the Middle East. The amount of foreign crude delivered to Ontario diminished by 30 p.c., averaging $7,000 \mathrm{bbl}$. per day, and by the final two months of the year crude imports into the province ceased altogether. This was the result of the national oil policy, and consumption of Canadian crude in Ontario increased by $24,000 \mathrm{bbl}$. per day to $221,000 \mathrm{bbl}$. per day. One effect of this increased use of domestic crude in Ontario was a reduction in the amount of refined petroleum products entering Ontario from Quebec-products which are derived from foreign crude oil.

## 3.-Domestic and Foreign Crude Oil Received at Canadian Refineries, by Region, 1941, 1951 and 1961

| Region | 1941 |  | 1951 |  | 1961 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Natural Gas Processing and Marketing.-Natural gases from Canadian gas fields vary from sweet dry gases to wet sour gases. They are usually processed in the field at natural gas processing plants, the degree of complexity of the plant depending on the composition of the gas. Canada had 66 such plants at the end of 1961, seven of which were built during the year. Two small plants of the comparatively simple dry-desiccant type were constructed in southwestern Ontario to process sweet gas. Several much larger, more complex plants were built in Alberta to process the sour wet gas derived from Mississippian strata. An example of this type of plant is a new plant near Calgary which has a throughput capacity of 125,000 Mcf. of gas per day and, in addition, derives large quantities of condensate and sulphur from the gas. Also completed by the end of the year was an expansion of a plant in the Carstairs area to $200,000 \mathrm{Mcf}$. a day. Several of the large new wet-gas plants will be supplying gas to the recently completed AlbertaCalifornia gas pipeline.

The first full year of operation of the Trans-Canada Pipe Lines Limited pipeline lateral from Emerson in Manitoba to the United States contributed considerably to Canada's increasing natural gas exports. Exports totalled 168,800,000 Mcf., 59,100,000 Mcf. of which went through the Trans-Canada lateral. The largest exporter was Westcoast Transmission Company Limited which moved $84,900,000$ Mcf. across the British Columbia-United States boundary. Gas started to flow through the Alberta-California gas pipeline in December 1961.

Ontario imports moderate quantities of natural gas from the United States, and in 1961 received $5,580,000$ Mcf., nearly the same as in 1960 . In the Canadian market, where total natural gas sales were $358,550,000$ Mcf., Alberta remained the largest consumer with sales of $137,560,000$ Mcf., 38.4 p.c. of total sales in Canada. Ontario has been gaining rapidly in the provincial distribution of total sales; in 1961 Ontario sales were $119,620,000$ Mcf., 33.4 p.c. of the Canadian market. Sales in other provinces, on a percentage basis, were: Saskatchewan 9.5 p.c., British Columbia 7.5 p.c., Quebec 6.9 p.c., and Manitoba 4.3 p.c. New Brunswick has been a very minor producer of natural gas for many years and consumes much less than 1 p.c. of total sales.

## Subsection 4.-Coal ${ }^{*}$

High production and transportation costs and the ever-increasing competition from oil and gas continued to have a depressing effect on Canada's coal mining industry in 1960 despite a small increase in production. An increase in exports took up part of the production increase and continued assistance by governments made it possible for Canadian coals to compete with other fuels in markets where, because of unfavourable geographical locations with respect to energy markets, such competition would not be possible. Nevertheless, the over-all consumption of coal was down more than 5 p.c.

Mechanization of the mines continued to increase in all areas in Canada in an effort to decrease production costs. Of particular significance are the full-scale trials with fully mechanized retreating long walls in Nova Scotia where normally extraction is by long wall advancing; the use of a caterpillar-mounted Borecut mining machine of Canadian design and manufacture and the 3 JCM Joy Room Miner in mining operations under generally unfavourable conditions for mechanization in Western Canada; and the continued experimentation with long wall extraction using a mechanical miner in the thin coal seam of the Minto coalfield of New Brunswick. For strip-mining, larger size earthmoving equipment was put in use and orders placed for draglines with 33 cu . yard buckets which are expected to substantially increase the depth at which profitable strip-mining can be carried on. The increase in mine mechanization with relative absence of selective mining, combined with the tendency of the machines to produce greater quantities of fine coal, increased the problems associated with quality control at the surface.

There was little or no increase in coal cleaning facilities in Eastern Canada. However more extensive use of present cleaning equipment, employment of thermal drying, and increased coal sampling and analyses resulted in greater customer satisfaction with coal from mines of Eastern Canada. In Western Canada, particularly in the Crowsnest area, fine coal cleaning gained particular attention resulting in upgrading of these coals to meet demands of the export market for coking coals.

In 1959, the Federal Government appointed a Royal Commission on Coal to investigate the industry's problems and make recommendations for their solution. The Commission conducted hearings across Canada and published its findings in September 1960. One of the recommendations of the Commission was that subsidies be paid, with certain stipulations, directly to coal mine operators instead of to the carrier in the form of freight subventions, as at present. Recommendations for increased research in production, utilization and marketing were also contained in the report.

Assistance to the coal industry was given by the federal and provincial governments through research programs in co-operation with industrial organizations. The problem of fine coal production and disposal received much attention and research was directed toward improved mining methods and beneficiation by cleaning and briquetting. Development of new and modified combustion equipment was continued with greater efficiency in the use of Canadian coals in view. Through continued programs of sampling and analysis of marketable coal, the governments aided the industry in their efforts to maintain quality control. Surveys were made of the coking properties of coals in relation to their preparation for export markets and their use in prospective stee! industries.

[^157]The Dominion Coal Board, through financial assistance in the acquisition of new equipment and subventions on coal transportation and on coal used in the thermo-electric power plants in the Maritimes, continued to aid the coal industry. Over 27 p.c. of the coal production was moved with the aid of subvention payments, some 260,000 tons more than in 1959. The increase was mainly on subvention-covered exports of British Columbia and Alberta coking coals to Japan. The value of the subvention assistance was more than $\$ 16,300,000$. Through the Atlantic Provinces Power Development Act, which indirectly aids the marketing of coal, the Federal Government made payments totalling about $\$ 1,750,000$.

Production of coal in Canada in 1960 increased by 3.6 p.c. to a little more than $11,000,000$ tons, the first significant increase in ten years. The average value was $\$ 6.781$ per ton or 29.59 cents per million Btu. The number of man-days increased from 2,481,498 in 1959 to $2,552,127$ in 1960 , about 2.8 p.c. Nova Scotia, the major coal-producing province, was most affected by the better coal marketing. The increase in coal mine employment in that province was almost 6 p.c. The major part ( 66.3 p.c.) of the coal produced in Canada was bituminous, valued at $\$ 8.779$ per ton or 33.66 cents per million Btu at the mine. Subbituminous and lignite accounted for 14.0 p.c. and 19.7 p.c., respectively, of the production. The average value of subbituminous coal was $\$ 4.383$ per ton, this being 23.43 cents per million Btu, and the value of lignite was $\$ 1.766$ per ton at 11.43 cents per million Btu. Bituminous coal production increased by 5.1 p.c. and lignite by 11.5 p.c., while subbituminous coal production decreased 11.2 p.c. The proportion of strip-mined coal continued to increase, about 39 p.c. of the output being won by stripping methods in 1960. The output per man-day of coal from strip-mines averaged 15.071 tons in 1960 compared with 2.967 tons for underground mines. This represents an increase of 1.284 tons for strip-mines and a decrease of 0.036 ton for underground mines. The over-all output per man-day increased from 4.282 to 4.314 tons.

The slow-up in the expansion of the Canadian economy continued in 1960 and, combined with increasing competition from oil and gas in most of the markets formerly dominated by coal, resulted in a further decrease of 5.3 p.c. in coal consumption. Some $23,200,000$ tons of coal, of which less than $10,000,000$ tons was Canadian produced, were consumed in 1960. The railways, which ten years ago provided an annual market for $10,500,000$ tons of coal, in 1960 used only 77,000 tons. The consumption of coal for household and commercial-building heating was more than $1,000,000$ tons below the consumption in the previous year. The $9,900,000$ tons used by industrial consumers, including thermoelectric power plants, represented a decrease of 1 p.c. in this market; about 50 p.c. of this coal was Canadian. The consumption of coal in the production of coke decreased by more than 6 p.c. to $5,300,000$ tons, only 16 p.c. of which was Canadian. The quantity of coal imported in 1960 decreased by 9.0 p.c.; imports of anthracite coal declined 19.1 p.c. and imports of bituminous coal from the United States, which makes up the bulk of coal imports, decreased 3.2 p.c. Exports of Canadian coal amounted to 852,921 tons compared with 473,768 tons in 1959. Most of it went to the United States and Japan for blending in the manufacture of metallurgical coke.

Both the production and the consumption of coal briquettes decreased greatly in 1960. In Saskatchewan, the output remained virtually the same owing to the development of a special charcoal-type briquette from lignite. In Alberta and British Columbia the output of briquettes (exclusive of 1,216 tons of char briquettes produced in Alberta) fell, respectively, 55.5 p.c. and 95.5 p.c. below the 1959 level.

Coal is produced in five provinces and a large share of the market for the industry is concentrated in Central Canada where there is no coal production. A small amount of coal is also mined in the Yukon Territory. A review of the provincial activities of the industry follows.

Nova Scotia.-Nova Scotia, with a coal production of $4,570,240$ tons, accounted for 41.5 p.c. of the Canadian coal output in 1960 ; production was 4.1 p.c. higher than in 1959 . The coal is high volatile bituminous coking coal mined in the Sydney, Cumberland and

Pictou areas, and some non-coking bituminous coal in the St. Rose, Inverness and Port Hood areas on the west coast of Cape Breton Island. The over-all value at the mines decreased to $\$ 9.842$ a ton from $\$ 9.957$ a ton in 1959 , the former representing 37.34 cents per million Btu.

All Nova Scotia coal comes from underground mines, most of which are mechanized. Coal-washing plants are operated at two of the collieries preparing about a third of the province's coal production. The output per man-day was 2.67 tons in 1960 compared with 2.72 tons in 1959. Much of the output is used locally for industrial steam-raising, electric power production, household and commercial heating and the manufacture of metallurgical coke. In 1960 about 52 p.c. of the production was shipped to other provinces, mainly Central Canada. Subvention payments were made by the Dominion Coal Board on the movement of $2,048,073$ tons.

New Brunswick.-New Brunswick's production, of which 84.7 p.c. was strip-mined, was entirely high volatile bituminous coal mainly from the Minto area, with a small amount from the Coal Creek area. Production in 1960 again exceeded $1,000,000$ tons, up 2.4 p.c. from the $1,003,387$ tons produced in 1959 , and represented about 9.3 p.c. of Canada's output. Average output per man-day from strip-mines was 6.19 tons and from underground mines 1.768 tons; average value at the mines was $\$ 8.426$ a ton, amounting to 35.14 cents per million Btu.

Modern coal-washing plants, equipped with Baum-type jigs are operated at two of the strip-mining operations. One of these plants also cleans fine coal in a feldspar jig and has facilities for recovery and upgrading of the slurry. The two plants enable the beneficiation of about one-half of New Brunswick's coal output. A large part of the production is used locally for heating, electric power generation and processing; about 15 p.c. is shipped to Central Canada and 7 p.c. exported to the United States. Government subventions aided in the moving of 173,063 tons in 1960.

Saskatchewan.-Production of coal in Saskatchewan was entirely lignite, mined by stripping in the Bienfait, Estevan and Roche Percee areas in the Souris Valley district, and amounted to $2,170,797$ tons in 1960, an increase over the $1,947,380$ tons produced in 1959. The 1960 output represented about 19.7 p.c. of the total Canadian production. It was valued at the mine at an average of $\$ 1.766$ per ton and, at 11.42 cents per million Btu, was the cheapest source of coal in Canada. The average output per man-day was 33.86 tons. About 51 p.c. of the output went to Manitoba and Ontario for industrial, commercial and household use. Subvention assistance was given on 79,377 tons.

Alberta. Several types of coals are produced in Alberta ranging from semi-anthracite, mined in the Cascade area, to subbituminous. Coking bituminous coals are present in the Inner Foothills Belt but, because of market conditions, these are at present mined only in the Cascade and Crowsnest areas. Nearly all of the output of these coals is beneficiated in wet or dry cleaning plants. The coal is used for industrial steam-raising and for commercial and household heating. Increasing quantities of coking coal are exported to the United States and Japan for use in the metallurgical industries. In several areas of the foothills, lower rank bituminous non-coking coals are available but production is mainly confined to the Lethbridge area. The other coal areas produce subbituminous coals used mostly for household and commercial heating and thermal power generation.

Alberta's coal production in 1960 decreased 6.2 p.c. from 1959 to $2,391,699$ tons, this being about 21.7 p.c. of the nation's coal output. The declining trend in this province has been practically uninterrupted since 1949 (when about $8,600,000$ tons were produced) owing to the development of the oil and gas resources. Subbituminous coal accounted for over 64 p.c. of the 1960 output and production of this type decreased 11.2 p.c.; the output of bituminous coal increased 4.3 p.c. to 851,122 tons. Of the total coal production, 48.3 p.c. was won by stripping, the average output per man-day being 15.128 tons compared with 4.326 tons for the underground mines. Bituminous coal was valued at $\$ 5.596$
per ton or 22.64 cents per million Btu at the mine, and the average value of subbituminous coal was $\$ 4.383$ per ton or 23.43 cents per million Btu. About 1.7 p.c. of the production was shipped to Central Canada, over 8 p.c. (mainly subbituminous) to Manitoba and 15 p.c. to both Saskatchewan and British Columbia. Subvention assistance from the Dominion Coal Board applied on the movement of 685,797 tons of Alberta and British Columbia coal.

The output of briquettes, which are made from the semi-anthracite and low volatile bituminous coals of the Cascade area and the medium volatile coals of the Crowsnest area, declined sharply from 99,499 tons in 1959 to 45,453 tons in 1960.

British Columbia and Yukon.-In British Columbia, coal was mined on Vancouver Island and in the Crowsnest Pass (East Kootenay) District with a small output from mines in the inland district. These coals range from high to low volatile bituminous coking coals. Production increased 15.8 p.c. to 843,868 tons, about 7.7 p.c. of the country's output, with an average value of $\$ 6.617$ per ton or 23.94 cents per million Btu. Stripmines accounted for 9.8 p.c. of the output. The average output per man-day was 29.195 tons for strip-mines and 4.218 tons for underground mines.

Beneficiation facilities located at Union Bay (Vancouver Island), Coleman and Michel (East Kootenay) process nearly all of British Columbia's coal production. Of the total production, 17 p.c. was shipped to Manitoba, 1.5 p.c. to Alberta and negligible quantities to Ontario and Saskatchewan. About 78 p.c. of the output was coking coal from the Crowsnest area and 272,729 tons were exported to Japan for metallurgical use. Production of briquettes declined sharply, production being less than 5 p.c. that of 1959 ,

In the Yukon Territory, 6,470 tons of coal were mined from a single underground mine with an average output per man-day of 3.306 tons. This coal was valued at $\$ 15.016$ per ton or 65.57 cents per million Btu.

## Section 2.-Government Aid to the Mineral Industry

## Subsection 1.-Federal Government Aid

The Department of Mines and Technical Surveys.*-The federal Department of Mines and Technical Surveys came into being on Jan. 20, 1950, in the reorganization of the former Department of Mines and Resources. The Department has six branchesSurveys and Mapping Branch, Geological Survey of Canada, Mines Branch, Dominion Observatories, Geographical Branch and, established effective Apr. 1, 1962, the Marine Sciences Branch. The Department's functions include the administration of the Emergency Gold Mining Assistance Act, the Explosives Act and the Canada Lands Act.

Surveys and Mapping Branch.-The Branch provides the base maps required for use in the development of Canada's natural resources, is responsible for legal surveys of federal lands and provides a national system of levelling and precision surveys for use as geodetic control by federal, provincial and private agencies.

The Geodetic Survey provides the original surveys that form the framework or basic control for mapping throughout Canada and for engineering and surveying projects related to natural resources development. Survey stations are established at fairly regular intervals across Canada and are marked by permanent monuments whose latitudes, longitudes and elevations above mean sea level are determined with a high degree of accuracy.

The Topographical Survey provides topographical maps that show all significant natural and artificial features fundamental to the study and economic development of

[^158]mineral and other natural resources. The Field Survey Section is responsible for the field surveys that provide ground control for mapping from aerial photographs, and the Air Surveys Section plots and produces maps from these aerial photographs. The National Air Photographic Library indexes, preserves and distributes prints of all aerial photography done by or for the Federal Government.

The Legal Surveys and Aeronautical Charts Division makes and records legal surveys of federal Crown lands in the Yukon and Northwest Territories, the National Parks and Indian lands and reserves. This Division prepares aeronautical charts and electoral maps and prepares and distributes flight manuals.

The Map Compilation and Reproduction Division prepares, drafts and reproduces maps, charts and plans for lithographic printing in multi-colour. The work includes the preparation and photo-reproduction of air chart bases, the reproduction and printing of air information for aeronautical charts, the preparation and printing of topographic maps and the reproduetion and printing of hydrographic charts.

Marine Sciences Branch.-On Apr. 1, 1962, the Department established a Marine Sciences Branch to combine hydrographic surveys and research in oceanography, marine geology and the geophysical sciences of the seas. The function of the new Branch is to carry out hydrographic and other oceanic surveys and to conduct oceanographic research in the nearby oceans, in Canada's coastal and inland waters, and on the underlying seabeds for the threefold purpose of assisting navigation, with particular reference to Arctic waters; of ascertaining the resource potential of the country's continental shelf; and of undertaking the extensive program of oceanographic research required for military and civilian purposes. The resultant information will also greatly assist the commercial fisheries.

The new Branch takes in the existing departmental personnel and facilities now engaged in hydrography and oceanography, and provides for the necessary expansion to meet new requirements. This will involve additional personnel, modern laboratory accommodation and ancillary facilities, and research ships. It comprises the Canadian Hydrographic Service, the Division of Oceanographic Research, the new Bedford Institute of Oceanography, and a new Ships Division. Headquarters of the Branch is in Ottawa and hydrographic and oceanographic activity on the Atlantic and Pacific Coasts will be centred in oceanographic institutes on those Coasts. On the Atlantic Coast, the new $\$ 4,500,000$ Bedford Institute of Oceanography is scheduled for completion in mid-1962. Oceanographic research in the Arctic will also be carried on from this centre. A similar centre is planned for the Pacific Coast about 1965. Meanwhile, functions on the West Coast are centred in the present hydrographic establishment in Victoria, B.C. The Inland Waters Section of the Canadian Hydrographic Service works out of Ottawa.

The Bedford Institute consists of a modern office and laboratory building, equipment and ships' depot, machine woodworking and electrical shops for minor repairs to the ships and the construction of special equipment, and ships' berthing facilities which comprise a quay wall and a jetty. The docks are planned to accommodate ten ships.

The Marine Sciences Branch will be serviced by a fleet of multi-purpose ships which are designed to be used for either survey or research purposes. The ships are being provided under a long-range shipbuilding program. For the East Coast, three ships are in design or under construction and one ship, the Maxwell, was launched in 1961. The largest of the group, the Hudson, is expected to be commissioned in 1963. It will have a cruising range of 15,000 miles and has been designed for oceanographic studies anywhere in the world.

The Canadian Hydrographic Service is responsible for the charting of the coastal and inland navigable waters of Canada, the analyses of tides and tidal current phenomena and the investigation of water-surface elevations of the St. Lawrence-Great Lakes waterway. The resultant data are published in the form of official navigation charts, volumes of Sailing Directions, Tide Tables and Water Level Bulletins.

The Division of Oceanographic Research was formed in 1960 to take charge of the extensive program of oceanographic research assigned to the Department of Mines and Technical Surveys by the Canadian Committee on Oceanography, an interdepartmental body co-ordinating all oceanographic research in Canada. The Division is responsible for meeting the increasing federal needs for oceanographic information in waters of Canadian interest, mainly for defence, transport, and resource assessment purposes. This includes an intensive study of oceanography in the Arctic and the extension of Canadian studies farther out to sea to examine the special problems of the deep ocean. In addition, the Division will contribute to international oceanographic studies in which Canada will become involved.

Geological Survey of Canada.-The primary function of the Geological Survey is to obtain information on the geology of Canada that will be of assistance in the search for and development of mineral deposits. The results of its activities also provide a basis for the appraisal and conservation of Canada's mineral resources generally (including water supplies), for soil surveys and for the solution of geological problems that frequently arise in construction projects. Reports issued by the Geological Survey include: memoirs with fairly complete descriptive accounts of the geology of particular areas, usually accompanied by geological maps; bulletins dealing with problems rather than areas; papers issued as soon as possible after the close of the field season, treating separately of each area and summarizing the information acquired; and the Economic Geology Series dealing in a comprehensive way with mineral deposits of a particular type. Information circulars, issued in advance of the more detailed reports, contain data of immediate interest to prospectors. Coloured geological maps are issued on various scales from one inch equalling a few hundred feet to one inch equalling eight or more miles, the common standard scales being one inch to one mile and one inch to four miles. Preliminary maps showing the geology are issued shortly after the field season ends for those areas where the search for metals or minerals is active. Metallogenic maps show the Canada-wide distribution of known occurrences of particular metals classified according to the type of deposit.

The Regional Geology Division is responsible for mapping and studying the rocks of the eastern and western segments of the Precambrian shield, and the Appalachian and Cordilleran regions.

The Economic Geology Division investigates the geology of specific mineral deposits, applies and develops geochemical techniques, and maps and studies unconsolidated deposits that mantle much of the country and, in several provinces, carries out surveys of groundwater resources.

The Fuels and Stratigraphic Geology Division includes stratigraphic palaeontology, the geology of fuels (oil, natural gas and coal), subsurface geology, and research on coal. Its function is to establish the character, age, thickness and correlation of both exposed and concealed sedimentary formations and to map the distribution and structure of these formations with the object of determining the economic possibilities of prospective oil, gas and coal bearing areas of Canada.

The Petrological Sciences Division makes mineralogical, petrological, and isotopic studies of Canadian mineral deposits and associated rocks. Laboratories provide mineral identifications for the public, supply officers of the Survey with mineralogical and geochronological data, and permit research on the genesis of ores, fuels and rocks. Systematic mineral collections are maintained and mineral and rock collections are prepared for use by prospectors and educational institutions.

The Geophysics Division gathers, compiles and interprets geophysical data relating to the geology of Canada. Fundamental research is carried out in some phases of geophysical work.

Mines Branch.-Investigations undertaken in Branch laboratories cover a wide range of technical projects of importance to the advance of fundamental research; to the processing of ores, industrial minerals and fuels on a commercial scale; and to the theory and practice of physical metallurgy.

The Mineral Processing Division is concerned primarily with the development of economical methods of mineral dressing and with research toward the improvement of present processing techniques. It is equipped to conduct laboratory and pilot-plant studies involving a variety of procedures: crushing, grinding, gravity concentration, sink and float (heavy media) separation, magnetic and electrostatic concentration, amalgamation, cyanidation, flotation and roasting.

The Extraction Metallurgy Division seeks the development of better hydrometallurgical and pyrometallurgical processes for the treatment of ores and the solution to specific technical problems in this field. A substantial part of its efforts was devoted recently to ores of uranium, iron and other elements and to corrosion problems encountered in certain industrial and governmental projects. The Division accepts samples from operating mines or those under development.

The Mineral Sciences Division applies the principles of chemistry and physics to fundamental and long-term problems in the field of mineral technology and related aspects of metallurgy. It deals with ores, mineral and metal products, inorganic crystalline materials and radioactive substances and its work ranges from relatively simple routine determinations to complex research problems requiring the most modern techniques and equipment.

The Fuels and Mining Practice Division studies the properties of fossil fuels in Canada to determine the most efficient means of utilizing fuel resources. Most of the work on coal is directed to investigations on the immediate problems of the industry and to engineering studies on the most efficient use of coal in combustion applications with particular reference to thermally generated electric power. Such investigations include work on the evaluation of cleaning performance and the beneficiation of coal fines that are difficult to market, the uses of coal in the metallurgical industries and the study of stress phenomena in mining. Research in petroleum is directed mainly to problems in the refining of heavy crudes and high-sulphur bitumens, and to the chemical evaluation of oils and bituminous substances for classification and genetic purposes.

The Physical Metallurgy Division aids the metal industries through the development of new alloys, new manufacturing techniques and new applications and in activities aimed toward improving present practices in metal fabrication. It also conducts fundamental research on the properties and behaviour of metals. The Division serves the Department of National Defence by extensive research and investigative work, concerned broadly with the development of defence materials and prototype equipment and with the metallurgical problems of that Department. It is also operative in the nuclear metallurgy field.

Dominion Observatories.-The two main units of the Dominion Observatories are the Dominion Observatory at Ottawa, Ont., and the Dominion Astrophysical Observatory at Victoria, B.C. Permanent magnetic observatories are maintained at Ottawa and Agincourt, Ont., Meanook, Alta., Victoria, B.C., and at Alert, Mould Bay, Resolute Bay and Baker Lake, N.W.T. Seismic stations for recording earthquakes are operated
at Alert, Mould Bay and Resolute, N.W.T., Victoria and Penticton, B.C., Banff, Alta., Saskatoon, Sask., Ottawa, Ont., Seven Falls and Shawinigan, Que., and Halifax, N.S.

The Dominion Observatory at Ottawa is responsible for the time service of Canada which involves nightly astronomical observations of star positions and radio broadcast services for distributing accurate time to all parts of Canada. Other astronomical activities centred at Ottawa include upper atmospheric studies by means of meteor observations, studies of the sun and its effect on earthly conditions and mathematical studies of the atmospheres of the sun and stars. The geophysical work, also administered from Ottawa, includes the magnetic survey of Canada with emphasis on aids to air and sea navigation, as well as field and observatory work of interest to the geophysical prospector. The methods of seismology are employed to study important aspects of the earth's crust in Canada and to assist in world-wide investigations of the earth's interior. Gravity observations are carried on throughout Canada with a generally similar purpose, special attention being paid to methods of locating mineral deposits.

The Dominion Astrophysical Observatory at Victoria, B.C., is devoted to fundamental research into the physical characteristics of the sun, stars, planets and the material of interstellar space. Its 73 -inch reflecting telescope is one of the largest in the world and through its use many important contributions have been made to astronomical knowledge. A new radio telescope at Penticton, B.C., has given the Branch a valuable instrument for research in radio astronomy.

Geographical Branch.-The function of the Branch is to organize and make available all the geographical data on Canada that might be of use in promoting the country's economic, commercial and social welfare. The work is of two kinds-the compilation of geographical material of national significance, and geographical surveys in the field. Land surface conditions, types of vegetation and the structure of towns and cities are typical subjects of investigation. The Branch also administers the Canadian Board on Geographical Names.

Mineral Resources Division.-The Division provides a mineral information service that is freely used by government departments, mining and allied industries and others interested in mining or its significance in the Canadian economy. A mineral resources index inventory is maintained of all known occurrences and of mines, both active and potential. The Division makes economic studies of different phases of the mining industry. It administers the Emergency Gold Mining Assistance Act, prepares reports on request to aid in the administration of such matters as tax exemptions on new mining properties, and prepares reports and briefs on general legislation, taxation and tariff matters connected with the mineral industry. The Division is widely known for its publications, among the most valuable of which are the annual reviews of production, marketing and other matters concerning 64 minerals. It issues more detailed economic studies of metals and fuels of current interest and prepares annual lists of metallurgical works, metal and industrial mineral mines, milling plants, coal mines and petroleum refineries. Also published are special monographs on mining laws, taxation and subjects of particular interest to the mineral industry.

The Dominion Coal Board.*-The Board was established by the Dominion Coal Board Act (RSC 1952, c. 86) which was proclaimed on Oct. 21, 1947. By this Act the Board was constituted a department of government to advise on all matters relating to the production, importation, distribution and use of coal in Canada. The Board is also charged with the responsibility of administering, in accordance with regulations of the Governor in Council, any coal subventions or subsidies voted by Parliament.

[^159]The Board is empowered to undertake research and investigations with respect to:-
(1) the systems and methods of mining coal;
(2) the problems and techniques of marketing and distributing coal;
(3) the physical and chemical characteristics of coal produced in Canada with a view to developing new uses therefor;
(4) the position of coal in relation to other forms of fuel or energy available for use in Canada;
(5) the cost of production and distribution of coal and the accounting methods adopted or used by persons dealing in coal;
(6) the co-ordination of the activities of government departments relating to coal; and
(7) such other matters as the Minister may request or as the Board may deem necessary for carrying out any of the provisions or purposes of the Act.
In addition, the Dominion Coal Board Act provides authority in the event of a national fuel emergency to ensure that adequate supplies of fuel are made available to meet Canadian requirements.

The Act authorizes a Board membership of seven, including the chairman. The latter is the Chief Executive Officer, has the status of a Deputy Minister, spends full time on the Board's business, receives a salary and is in charge of a civil service staff. The other members, men of long experience and expert knowledge of aspects and regions of the Canadian coal industry, receive per diem payments and travelling expenses while attending Board meetings or while otherwise officially engaged on Board business.

In general, the Board and its staff constitute a central agency through which representations on coal matters are made to the Government from any sector of the industry or the public. Conducting a continuous study of developments and problems within the industry, exchanging information with provincial authorities concerned with coal and with national authorities and agencies in other countries and maintaining the most complete files of Canadian coal information in existence, the Board makes recommendations to the Government and reports to Parliament through the Minister of Mines and Technical Surveys. In view of the growing impact of oil and natural gas on the markets for Canadian coal, the Board and its staff have intensified the study of the relation of the competing sources of energy and of possible new outlets for the solid fuel.

Since its inception, the Board has worked toward the co-ordination of the activities, relating to coal, of various government departments, agencies and other bodies. Its own responsibilities in research on the mining and utilization of coal have been carried out mainly by delegation to the Fuels and Mining Practice Division, Mines Branch, Department of Mines and Technical Surveys. On occasion, the Board has recommended or commissioned specialized types of research by experts outside the government service-for example, the studies resulting in the Christie Reports which became influences leading to the enactment of the Atlantic Provinces Power Development Act (SC 1958, c. 25) and the establishment of a power grid in the Maritimes. As a contribution to the co-ordination of coal research and to the dissemination to the industry of technical information resulting from research, the Board initiated and originally sponsored the now self-sustaining annual Dominion-Provincial Coal Research Conferences. In the field of coal statistics, the Board has a long-standing co-operative arrangement with the Dominion Bureau of Statistics.

Government purchases of fuel, which constitute an important outlet for coal, claim a part of the time of the Board's staff in an advisory capacity. Advice on fuel matters is also continuously available to all government departments and agencies. A senior official of the Coal Board is chairman of the Interdepartmental Fuel Committee, which advises on the supply, purchase and utilization of fuel for the Department of National Defence, and of the Dominion Fuel Committee, which is organized along similar lines as an advisory body to other government departments.

The subvention assistance on the movement of Canadian coals, which the Board administers, is authorized from year to year by votes of moneys by Parliament; payments are in accordance with Regulations established by Order in Council. This assistance, which has been provided in varying degrees for the past 30 years, was designed to further
the marketing of Canadian coals by equalizing as far as possible the laid-down costs of Canadian coals with imported coals. During the year ended Mar. 31, 1961, a total of $2,832,811$ tons of coal was shipped under subvention and $\$ 15,406,057$ was paid in assistance. Costs and conditions of the coal industry being subject to variations, the Board must review from time to time the rates of subvention and the areas where the assistance is required.

Coal subventions of another type, based on the Btu content of coal used in thermal electric power production, were authorized in January 1958 by the provisions of the Atlantic Provinces Power Development Act. The Dominion Coal Board was designated as the Government of Canada's administrative agency for subvention matters in agreements made with the provinces under this Act.

As agent to the Minister of Mines and Technical Surveys, the Board receives applications and administers loans under the Coal Production Assistance Act (RSC 1952, c. 173, as amended by SC 1958, c. 36, and SC 1959, c. 39). The Board also administers payments under the Canadian Coal Equality Act (RSC 1952, c. 34), which provides a subsidy on Canadian coal used in the manufacture of coke for metallurgical purposes. In the year ended Mar. 31, 1961, payments under this Act, totalling $\$ 314,477$, were made on 635,308 tons of coal.

## Subsection 2.-Provincial Government Aid*

Newfoundland.-The Newfoundland Government, through its Mines Branch, provides several valuable services to those interested in prospecting and mining. It publishes, for sale at nominal cost, geological reports, geophysical maps and compilations of general data pertaining to specific areas and makes available, from unclassified files, various other information to interested parties. It identifies specimens sent in from Newfoundland and Labrador and assays by chemical means those that appear to have some mineral content. If good specimens from a known area warrant further investigation, a geologist from the Department of Mines, Agriculture and Resources is available to visit the locality and give advice. Prospecting and mining permits are issued by the Department and claims are registered.

Nova Scotia.-Under the provisions of the Mines Act (RSNS 1954, c. 179), the Government of Nova Scotia may assist a mining company or operator in the sinking of shafts, slopes, deeps and winzes and the driving of adits, tunnels, crosscuts, raises and levels. This assistance may take the form of work performed under contract, the payment of bills for materials and labour, or the guarantee of bank loans. Any such work must be approved by the Department of Mines. The Government is also authorized to assist the mining industry to procure power on the most economical basis and may guarantee the Nova Scotia Power Commission against any loss of revenue incurred on account of capital investments made for that purpose. Mining machinery and equipment that may be used in searching for or testing and mining minerals may be made available through the Government. Such equipment is under the direct supervision of the Chief Mining Engineer.

The Government of Nova Scotia is also empowered to make any regulations considered necessary for increasing the output of coal. Such regulations cover the appropriation, on payment, of unworked coal lands, the operation of coal mines, and loans or guarantees for loans. Close co-operation is maintained with the Federal Government in carrying out federal regulations made to secure increased production and economical distribution of coal from the mines of the province.

New Brunswick.-The Mines Branch of the Department of Lands and Mines has five divisions. The Mineral Lands Division administers the disposition of Crown mineral

[^160]rights including the issuing of prospecting licences, recording of mining claims, issuing of mining licences and leases and other matters pertaining thereto. Detailed and index claim maps are prepared for distribution. The Mine Inspection and Engineering Division administers the safety regulations governing operations under the Mining Act. All mines are regularly inspected, laboratory facilities are maintained and all equipment used in mines must be approved by the Division. The Geological Division carries on general and detailed geological mapping and investigation. Maps and reports are prepared for distribution, mineral and rock specimens are examined for prospectors and preliminary examinations of mineral prospects are made where requested and circumstances warrant. The Mine Assessment Division is responsible for the collection of mining taxes and royalties and the preparation of statistics on mineral production. The Bathurst Division serves as recording office for northeastern New Brunswick. In addition, claim maps as well as topographical, geological and aero-magnetic maps are available for perusal and distribution. The staff is prepared to provide information concerning the Mining Act and the use of various types of maps.

Quebec.-The Mining Act (RSQ 1941, c. 196) authorizes the Department of Natural Resources of the Province of Quebec to build, maintain and improve roads needed for mining development. Such work is done by contract under the supervision of departmental engineers. The Act gives the Department considerable latitude in this respect. Certain major roads have been built to new mining districts and completely paid for; on the other hand, if a particular property requires a branch road from an established highway the owner may be required to contribute a portion of the cost. To prevent the development of uncontrolled settlements in the vicinity of operating mines, the Department regulates the use of land and permits the establishment of well organized communities. The municipal organization of such communities is administered by the Department of Municipal Affairs.

The Department maintains well equipped laboratories for the benefit of prospectors, geologists, engineers and mine operators. The facilities include equipment for mineralogy, petrography, ore dressing, and analysis by wet or dry assay, spectrography or X-ray. Qualitative and mineralogical determinations are made free of charge but quantitative analyses are charged for according to a tariff schedule. The Mining Act provides free coupons to be used by prospectors in paying for such analyses.

The province has authorized the establishment of research laboratories and a pilot plant to assist mining and metallurgical enterprises in the processes and techniques of extracting, transforming and utilizing ores.

The Department undertakes geological mapping and inspection. The work is divided between two branches, one responsible for reconnaissance (areal) mapping, and the other for detailed mapping in mining districts and inspection of individual deposits or properties. Field parties are headed by geologists or mining engineers. The published reports on these investigations are distributed free upon request. During the field season about 55 parties are maintained in different sections of the province. Offices, in charge of resident geologists, are maintained in mining districts to collect, preserve and compile geological information disclosed by mining explorations and individual sheets of the compilations are made available to the public.

The Department employs inspectors whose duties include supervision of the observance of all regulations concerning the safety of workmen in operating mines. Three Mobile Mine Rescue Stations are operated and a mine rescue training program is conducted throughout the province.

In the field of education for prospectors, five-week courses are organized each year at Laval and Montreal Universities. University scholarships are granted each year to deserving undergraduate and postgraduate students in mining, geology and metallurgy, thus contributing to the training of qualified engineers for the benefit of the mining industry. Lectures are given to prospectors at different localities throughout the province.

Ontario.-The Ontario Department of Mines renders a multiplicity of services of direct assistance to the mining industry within the province, as briefly outlined below.

Mining Lands Branch.-This Branch handles all matters dealing with the recording of mining claims, assessment work, etc., and the preparation of title to mining lands. As a service to the mining public, individual township maps are prepared and kept up to date showing lands open for staking and recorded and patented claims therein. District Mining Recorders maintain offices at strategic locations throughout the province.

Geological Branch.-A continuing program of geological mapping and investigation is carried out by the geological staff of the Department. Detailed reports and geological maps of the areas studied are made available to the public. In many of the active areas of the province resident geologists are engaged to gather and make available to the public information concerning geological conditions, exploration and development within their respective districts. A geologist specializing in industrial minerals investigates methods of treatment and recovery of such minerals and compiles data on the uses, specifications and markets for such products. Collection and dissemination of information on groundwater resources is also a function of the Geological Branch. During the winter months, courses of instruction for prospectors are held in various centres throughout the province.

Laboratories Branch.-The Provincial Assay Office at Toronto carries out wet analyses and assays of metal and rock constituents on a custom fee basis and gives the same service free of charge to holders of valid assay coupons issued for the performance of assessment work on mining claims. The Timiskaming Testing Laboratories situated at Cobalt, in addition to performing fire assays and chemical analyses, operate a bulk sampling plant mainly to assist the producers of the area in the marketing of the cobalt-silver ores. A Cable Testing Laboratory, wherein all hoisting ropes in use at the mines are periodically tested, is operated under the supervision of the Inspection Branch.

Inspection Branch.-The main function of this Branch is the regular examination of all operating mines, quarries, sand and gravel pits and certain metallurgical works with a view to ensuring proper conditions of health and safety to the men employed. District offices to serve the local areas are maintained in the major mining centres of the province. Mine rescue stations in the principal mining sections are operated under the supervision of the Branch.

Exhibitions.-The Department each year presents displays pertaining to mining within the province at such exhibitions as the Canadian National at Toronto and at other centres from time to time.

Publications Branch.-All maps and reports of the Department are distributed through the agency of the Publications Branch located at the main office of the Department.

Library.-A mining library for the use of the Department and the public is maintained within the Department. This library stocks mainly publications and maps issued by the federal and provincial governments of Canada as well as numerous periodicals and bulletins published in the United States.

Roads to Resources Program.-An interdepartmental committee was set up in 1955 to decide on matters of policy and to determine the locations and priorities of proposed roads. The Minister of Mines sits on this committee with the Ministers of Lands and Forests, of Treasury, and Highways. The Department of Highways supervises the construction of all access roads. The sum of $\$ 1,500,000$ a year is made available for such projects, provided on a $50-50$ basis by the Ontario Government and the Federal Government.

Manitoba.-The Mines Branch of the Manitoba Department of Mines and Natural Resources offers five main services of assistance to the mining industry: maintenance, by the Mining Recorder's offices at Winnipeg and The Pas, of all records essential to the
granting and retention of titles to every mineral location in Manitoba; compilation, by the geological staff of the Branch, of historical and current information pertinent to mineral occurrences of interest and expansion of this information by a continuing program of geological mapping; enforcement of mine safety regulations and, by collaboration with industry, introduction of new practices such as those concerned with mine ventilation and the training of mine rescue crews which contribute to the health and welfare of mine workers; and maintenance of a chemical and assay laboratory to assist the prospector and the professional man in the classification of rocks and minerals and the evaluation of mineral occurrences.

Manitoba also aids the mining industry by the construction of access roads to mining districts.

Saskatchewan.-Assistance to the mining industry in Saskatchewan is administered by the Mines Branch, Department of Mineral Resources, with its head office at Regina. The Branch is headed by a Director and comprises three divisions.

The Geology Division is directed by the Chief Geologist and maintains resident geologists in or near the principal mining areas. The Division conducts a prospectors' school which gives basic training in geology, mineralogy, prospecting and exploration techniques and administers the Prospectors' Assistance Plan which assists by lending equipment, paying certain transportation costs, paying for a grub-stake, and by providing technical advice. During the summer months, geological crews survey and map areas and prepare reports which are made available to the public.

The Engineering Division administers the Mines Regulation Act, the purpose of which is to ensure safe working conditions in mines. Inspections of mines are carried out by Division officers, a Chief Engineer of Mines stationed at Regina, and an Inspector of Mines stationed at Uranium City. Safety education is also part of the Division's work, taking the form of first aid instruction, mine rescue training, and analysis of accidents.

The Mining Lands Division is responsible for making disposition of all Crown minerals with the exception of petroleum and natural gas, and maintains records respecting areas let out by lease, permit or claim. Recording offices, having the responsibility of assisting the public in determining the lands available and accepting applications, are located at Regina, Prince Albert, La Ronge, Uranium City and Flin Flon.

Alberta.-Alberta Government assistance to the mining industry is diversified in character. The Mines Division of the Department of Mines and Minerals regulates coal mines and quarries and maintains standards of safety by inspection and certification of workers. The Workmen's Compensation Board also maintains safety standards and trains mine rescue crews. The oil and gas industries are served in a similar way by the Oil and Gas Conservation Board. Its regulatory measures, however, are also concerned with preventing the waste of oil and gas resources and with giving each owner of oil and gas rights the opportunity of obtaining a fair share of production. This Board compiles periodic reports and annual records which are of invaluable assistance in oil development in Alberta. The mining industry is also served by the Research Council of Alberta which has made geological surveys of most of the province and has carried forward projects concerned with the uses and development of minerals. The Council has studied the occurrence, uses and analyses of Alberta coals and their particular chemical and physical properties, the use of coals in the generation of power, and the upgrading and cleaning of coal and has also studied briquetting, blending, abrasion loss, shatter and crushing strength, asphalt binders and dust-proofing of coal. Studies have been made of glass sands, salt, fertilizers, cement manufacture and brick and tile manufacture. (See also p. 343.)

The province from time to time has had commissions examine various aspects of the mining industry when it has considered that their findings would be of assistance in developing such industries. The province, together with the Canadian Association of Oil Well Drilling Contractors and the Western Canada Petroleum Association, maintains
a detailed supervisory and safety training program concerned with the drilling of oil and gas wells. Of assistance also to mining companies and oil companies are the special deductions provided for in the Alberta Corporation Income Tax Act. These follow the parallel provisions in the federal Income Tax Act.

British Columbia.-The Department of Mines and Petroleum Resources of British Columbia provides the following services: detailed geological mapping as a supplement to the work of the Geological Survey of Canada; free assaying and analytical work for prospectors registered with the Department; assistance to the prospector in the field by departmental engineers and geologists; grub-stakes, limited to a maximum of $\$ 700$, for prospectors; assistance in the construction of mining roads and trails; and inspection of mines to ensure safe operating conditions.

## Section 3.-Mining Legislation

Federal Mining Laws and Regulations.-The Federal Government administers mining laws in the Yukon Territory, the Northwest Territories, and certain other lands vested in the Crown in the right of Canada. The Yukon Quartz and Placer Mining Acts and the Canada Mining Regulations which are applicable to the Northwest Territories and other Crown lands are administered by the Resources Division, Northern Administration Branch, Department of Northern Affairs and National Resources. Minerals underlying federal land under grants are reserved to the Crown, and mining rights may be acquired by staking mineral claims under the appropriate Acts or Regulations. Twenty-one-year leases of claims may be issued and these leases may be renewed. The disposal of mineral rights underlying Indian reservations is subject to the consent of the Indians occupying the reserve and to the treaties relating thereto.

The Northwest Territories Quartz Mining Regulations were replaced by the Canada Mining Regulations, Mar. 3, 1961. The new Regulations provide for the exploration and development of minerals in the Northwest Territories and for the exploration and development of minerals underlying territorial waters of Canada and lying outside any of the provinces and the Yukon Territory. The revised Regulations require a prospector's licence to enter, locate and prospect on lands subject to the Regulations. However, a prospector's licence is not required to maintain claims in good standing.

Any individual over 18 years of age or any joint stock company incorporated or licensed to do business in Canada may hold a prospector's licence. Claim tenure is limited to ten years from the date of recording. At the end of ten years, the claim owner must apply for a lease or relinquish his rights. No lease will be granted to an individual unless the Minister of Northern Affairs and National Resources is satisfied that the applicant is a Canadian citizen and will be the beneficial owner of any interest acquired under such lease; no lease will be granted to a corporation unless the Minister is satisfied that at least 50 p.c. of the issued shares of the corporation are owned by Canadian citizens or that the shares of the corporation are listed on a recognized Canadian stock exchange and that Canadians will have the opportunity of participating in the financing and ownership of the corporation.

Any new mine beginning production after the Canada Mining Regulations came into force will not be required to pay royalties for a period of 36 months, starting from the day that the mine comes into production.

Oil and Gas Legislation.-The Federal Government administers oil and gas laws and regulations in the Yukon and Northwest Territories, through the Resources Division, Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa. All land in both Territories is, in the first instance, owned by the Federal Government, complete with under-rights. These include oil and gas rights. When title to land
is granted by letters patent, surface rights only are conveyed and under-rights continue to be vested in the Federal Government, which may dispose of them under appropriate legislation. Nine-year to 12-year permits to explore for oil and gas and 21-year oil and gas leases are available.

The Government has set up the Canada Oil and Gas Land Regulations and the Canada Oil and Gas Drilling and Production Regulations, both dated June 6, 1961. They also include provisions for the exploration, development and production of oil and gas from land under all sea-coast waters of Canada which are not within any province.

An oil and gas exploration permit may be issued to any individual over 21 years of age or to any joint stock company incorporated or licensed to do business in Canada, or incorporated in any province of Canada. Permits are issued in periods of nine, 10 or 12 years, depending on the location, by which times the permittee is expected to apply for an oil and gas lease or relinquish his rights. No oil and gas lease will be issued to an individual unless the Minister of Northern Affairs and National Resources is satisfied that the applicant is a Canadian citizen and will be the beneficial owner of any interest acquired under such lease, or to a corporation unless the Minister is satisfied that at least 50 p.c. of the issued shares of the corporation are beneficially owned by persons who are Canadian citizens or that the shares of the corporation are listed on a recognized Canadian stock exchange, and that Canadians will have an opportunity of participating in the financing and ownership of the corporation.

Provincial Mining Laws and Regulations.*-All Crown mineral lands lying within the boundaries of the several provinces (with the exception of those within Indian reserves and National Parks which are under the jurisdiction of the Federal Government) are administered by the respective provincial governments.

The granting of land in any province except Ontario and Nova Scotia no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. In Nova Scotia all minerals belong to the Crown except gypsum, limestone, and building materials, but the Governor in Council may declare deposits of either limestone or building materials to be minerals. Such declaration is to be based on economic value or to serve the public interest. In such case, the initial privilege of acquiring the declared minerals lies with the owner of the surface rights who must then conform with the requirements of the Mines Act. In Newfoundland, mineral and quarry rights are expressly reserved. Some early grants in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick, Quebec and Newfoundland also included certain mineral rights. Otherwise, mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (or veined minerals and bedded minerals), fuels (coal, petroleum and gas) and quarrying. Provincial mining regulations under these divisions are summarized in the following paragraphs.

Placer.-In most provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

General Minerals.-These minerals are sometimes described as quartz, lode, or minerals in place. With the exception of British Columbia the most elaborate laws and regulations apply in this division. In all provinces except Alberta, a prospector's or miner's licence, valid for one year, must be obtained to search for mineral deposits, the licence being general in some areas but limited in others. A claim of promising ground of a specified size may then be staked. This claim must be recorded within a time limit and payment of recording fees made, except in Quebec where no fees are required. Work to a specified

[^161]value per annum must be performed upon the claim for a period of up to ten years. There is no time limit in British Columbia but $\$ 500$ assessment work, of which a survey may represent two-fifths, must be performed and recorded before a lease may be obtained. In Quebec, a specified number of man-days of work must be performed and the excess may be carried forward for renewal of licence; before mining can be commenced, a mining concession must be purchased for which it is necessary to produce an engineer's report indicating the presence of an orebody. The taxation applied most frequently is a percentage of net profits of producing mines or royalties. In Newfoundland, the provincial mining tax was modified after Confederation on Mar. 31, 1949 to conform with the provincial obligations under the Dominion-Provincial Tax Agreement. No other form of taxation or royalty exists.

Fuels.-In provinces where coal occurs the size of holdings is laid down, together with the conditions of work and rental under which they may be held. In Quebec, ordinary mining claims give rights to all mineral substances and to their development, and stakings for combustible natural gas, salt, coal, mineral oil or naphtha, or iron sands may cover 1,280 acres per claim. Provision is sometimes made for royalties. Acts or regulations govern methods of production. In the search for petroleum and natural gas, an exploration permit or reservation is usually required. However, in Manitoba, Saskatchewan, Alberta and British Columbia leases usually follow the exploration reservation whether or not any discovery of oil or gas is made. In Manitoba, Saskatchewan and Alberta, exploration costs are applicable in part on the first year's lease rental. In other provinces, the discovery of oil or gas is usually prerequisite to obtaining a lease or grant of a limited area, subject to carrying out drilling obligations and paying a rental, a fee, or a royalty on production.

Quarrying.- Regulations under this heading define the size of holdings and the terms of lease or grant. On Quebec private lands the quarry belongs to the owner; on Crown lands mineral rights belong to the Crown and may be obtained in accordance with the provisions of the law although the rights to exploit peat or marl must be obtained by special licence. In Saskatchewan, sand and gravel belong to the owner of the surface of the land. In Alberta, sand, gravel, clay and marl recovered by excavating from the surface belong to the owner of the surface of the land.

Copies of mining legislation including regulations and other details may be obtained from the provincial authorities concerned.

## Section 4.-Statistics of Mineral Production

## Subsection 1.-Value and Volume of Mineral Production

Statistics of the annual value of mineral production are available from 1886, total production being shown for five-year intervals from that date to 1945 and annually for subsequent years in Table 4. These figures are not strictly comparable throughout the period because of minor changes in methods of computing metallic content of ores sold and valuations of products but they do serve to show broad trends in the mineral industry.

The increase in the value of mineral production since the end of World War II has been phenomenal, having more than tripled since 1948. Production per head of the population advanced from $\$ 63.97$ in that year to $\$ 141.12$ in 1961. Although part of this increase was accounted for by advanced prices, the index of the volume of output from Canadian mines recorded an advance from $90.0(1949=100)$ to 263.2 in the same comparison.
4.-Value of Mineral Production, 1886-1961

| Year | Total Value | Value per Capita | Year | Total Value | Value per Capita | Year | Total Value | Value per Capita |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

${ }^{1}$ Beginning with 1935, exchange equalization on gold production is included.
${ }^{2}$ Value of Newfoundland production included from 1949.

Current Production.-A detailed review of mineral production during 1961 is given at pp. 478-504. As stated there, the value of mineral commodities produced in 1961 reached a new high, amounting to nearly $\$ 2,574,000,000$; this total, however, was only 3.2 p.c. above the 1960 value of $\$ 2,493,000,000$. Major gains were made by petroleum which increased by $\$ 64,000,000$, and by nickel which advanced by $\$ 62,000,000$; natural gas output increased by $\$ 11,410,000$ asbestos by $\$ 9,700,000$, cement by $\$ 7,400,000$, natural gas by-products by $\$ 6,500,000$ and iron ore by $\$ 5,400,000$. On the other hand, uranium production decreased by $\$ 66,000,000$ and copper by $\$ 6,300,000$.

The value of all metals produced in 1961 amounted to $\$ 1,397.000,000$ compared with $\$ 1,407,000,000$ in 1960 . Nickel was again the leading metal with an output valued at $\$ 357,500,000$, followed by copper valued at $\$ 258,600,000$, uranium at $\$ 204,100,000$, iron ore at $\$ 180,500,000$ and gold at $\$ 156,900,000$. The prices of gold and base metals were increased at mid-year when the exchange rate on the Canadian dollar changed from a premium to a discount.

The value of non-metallic minerals reached $\$ 210,000,000$, the increase over the 1960 total of $\$ 197,500,000$ being mainly accounted for by the asbestos industry which shipped nearly $1,200,000$ tons of fibre valued at $\$ 131,000,000$; this record production was established despite competition from Asian and African producers. Lithia in concentrates, oxides, carbonates and salts was valued at over $\$ 362,000$. Salt production, valued at $\$ 19,000,000$, was only slightly less than in 1960 . Elemental sulphur output was higher as a result of the increased output of sour natural gas. Although the processing plants produced more sulphur than the market demanded, there was an increase in sales.

The value of mineral or fossil fuels increased from $\$ 566,000,000$ in 1960 to $\$ 643,000,000$ in 1961. Crude oil production rose to $220,000,000 \mathrm{bbl}$. valued at $\$ 487,300,000$, and the volume of natural gas amounted to $646,018,000 \mathrm{Mcf}$. valued at $\$ 63,600,000$. The value of natural gas by-products, which include condensate, natural gasoline, propane, butane, etc., obtained by processing natural gas in the vicinity of the gas fields, increased to $\$ 22,500,000$. Coal production, after a mild revival in 1960, resumed the downward trend in evidence for several previous years.

There was little change in the value of structural materials produced, which amounted to $\$ 323,000,000$ in 1961 and $\$ 322,000,000$ in 1960 . Cement shipments exceeded $\$ 100,000,000$ in value for the first time in 1961 but shipments of lime and sand and gravel declined.

${ }^{1}$ Includes minor items not specified.
On the basis of 1949 production levels equalling 100,* the total volume of mineral output had increased by 1961 to 263.2 , which was a 4-p.c. advance over the previous year. The most noteworthy gains during the year were recorded in nickel, asbestos, natural gas and crude petroleum mining. These were partially offset by the continued decline of uranium (not shown) and a drop in iron ore mining.

[^163]

[^164]
## Subsection 2.-Provincial Distribution of Mineral Production

Changes in provincial mineral production in 1961 compared with 1960 varied across Canada. The major increases were shown by Manitoba, as a result of the coming into production of the new Thompson nickel development, and Alberta, where the greatly increased production of crude petroleum, natural gas, natural gas by-products and elemental sulphur brought total output to a high point and moved that province up to second place in value of mineral production, following Ontario. A fairly substantial decrease in total production was recorded by Ontario mainly as a result of the lower output of uranium and of copper, and minor decreases were shown also by Prince Edward Island, Nova Scotia and the Yukon and Northwest Territories.

In 1961 , Ontario produced 36.8 p.c. of the total mineral output compared with 39.4 p.c. in 1960 and 40.3 p.c. in 1959. The value of production within the province decreased by 3.6 p.c. As already stated, Alberta moved to second place in 1961 , producing 18.0 p.c. of the Canadian total compared with 15.9 p.c. in 1960 and 15.6 p.c. in 1959 ; the value for the province was up by 17.3 p.c. Quebec, in third place, recorded only a small advance over 1960, increased asbestos output being largely offset by lower shipments of iron ore and copper. The province produced 17.4 p.c. of the Canadian total compared with 17.9 p.c. in 1960 and 18.3 p.c. in 1959. Saskatchewan and British Columbia followed Quebec in value of mineral output, producing, respectively, 8.5 p.c. and 7.5 p.c. of the Canadian total. The 68.9-p.c. increase recorded by Manitoba resulted in that province displacing Newfoundland in sixth place. Manitoba's share of the Canadian total rose from 2.4 p.c. in 1960 to 3.9 p.c. in 1961 and Newfoundland's share increased slightly from 3.5 p.c. to 3.6 p.c. Newfoundland's output, however, was 7.0 p.c. higher than in 1960 . Lower production of coal and gypsum offset an increase in salt production in Nova Scotia, bringing the value of mineral production in that province down by 9.0 p.c. Its contribution to the Canadian total dropped slightly from 2.6 p.c. in 1960 to 2.3 p.c. in 1961 . Increased production of structural materials brought New Brunswick's total up very slightly but decreased output of the same materials in Prince Edward Island was responsible for a drop in the total for that province. Lower gold and uranium output resulted in lower totals for the Territories.

## 8.-Value of Mineral Production, by Province, 1952-61

Norg.-Figures from 1899 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

${ }^{1}$ Includes $61,050 \mathrm{lb}$. of columbium $\left(\mathrm{Cb}_{2} \mathrm{O}_{5}\right)$ valued at 864,375 .
 production 78,115 oz.t. valued at $32,652,004 ;$ remainder N.W.T. ${ }^{5}$ Not shown to avoid revealing individual company operations. Northwest Yukon production $7,217,361$ oz.t. valued at \$6,416,956; remainder N.W.T. ${ }^{7}$ Includes three tons of graphite valued at $\$ 1,654$ produced in Quebec. ${ }^{8}$ Includes pyrophyllite.

## Subsection 3.-Production of Metallic Minerals

The metallic minerals of greatest dollar value in Canada during 1961 were, in order: nickel, copper, uranium, iron ore, gold, zinc, lead and silver. This order remained unchanged from 1960 although only nickel, iron ore and lead advanced in value of production over the previous year. Developments taking place in metal mining during 1961 are described in detail in Section 1, pp. 481-493. The following statistical information gives a comparison of quantity and value figures for each of the principal metals over the tenyear period 1952-61.

Nickel.-The output of nickel reached an all-time high in 1961, in both quantity and value. A steadily upward trend in production experienced since the end of the War was interrupted in 1958 when a rise in world stocks brought about a decrease in nickel prices. However, 1959 output was again close to the level of 1957 and the increases by 1961 amounted to 27.5 p.c. in quantity and 39.1 p.c. in value.

About 84 p.c. of the 1961 quantity shown in Table 10 came from the Sudbury area of Ontario, about 14 p.c. from the new Thompson and Lynn Lake mines in Manitoba and the remainder about equally from Rankin Inlet on Hudson Bay in the Northwest Territories and from Hope, B.C.

Canada uses only about 5,000 tons of refined nickel (anodes, cathodes and ingots) annually. Exports amounted to 133,504 tons in 1961, mostly to the United States, and exports of nickel in ores, concentrates and matte amounted to 92,938 tons.

## 10.-Quantity and Value of Nickel Produced, 1952-61

Nore.-Figures from 1889 are given in the corresponding table of previous Year Books beginning with the 1929 edition.

| Year | Quantity | Value | Year | Quantity | Value |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | tons | \$ | - | tons | \$ |
| 1952. | 140,559 | 151,349, 438 | 1957. | 187,958 | 258,977,309 |
| 1953. | 143,643 | 160,430,098 | 1958. | 139,559 | 194, 142, 019 |
| 1954. | 166,299 | 180, 173, 392 | 1959. | 186,555 | 257, 008,801 |
| 1955. | 174,928 | 215, 866, 007 | 1960 | 214,506 | 295,640,279 |
| 1956. | 178,515 | 222, 204,860 | 1961 ${ }^{\text {D }}$ | 237,948 | 357,515,337 |

Copper.-Although the quantity of copper produced in Canada reached its peak in 1961, the total value for that year was somewhat lower than in 1960. The 1.2-p.c. increase in total tonnage produced in 1961 over 1960 was contributed by Newfoundland, Ontario, Saskatchewan, British Columbia and Yukon Territory.

## 11.-Copper Production, by Province, and Total Value 1952-61

Note.-Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

Uranium.-Uranium mineralization has been found in Canada at intervals along the western and southern edges of the Canadian Shield but production has been concentrated in four areas within this belt-Great Bear Lake in the Northwest Territories, Beaverlodge in northern Saskatchewan, and Elliot Lake and Bancroft in Ontario. Although output of uranium first began in the Northwest Territories in 1942, figures were not available until 1954 because of government restrictions. However, it was after that time that the large mines and mills of Saskatchewan and Ontario came into production. Peak output amounting to $31,800,000 \mathrm{lb}$. was reached in 1959 from 23 mines, but by the end of 1961, for economic reasons (see p. 485), only eight mines remained in operation and production dropped to about $20,000,000 \mathrm{lb}$. for the year. Of the 1961 quantity, 75.9 p.c. was produced in Ontario, 22.0 p.c. in Saskatchewan and the remainder in the Northwest Territories.
12.-Production and Value of Uranium $\left(\mathrm{U}_{3} \mathrm{O}_{8}\right)$, by Province, 1954-61

${ }^{1}$ Figures for 1956 include radium salts, silver, cobalt and uranium oxides; figures for 1957-61 are for uranium oxide ( $\mathrm{U}_{3} \mathrm{O}_{8}$ ).

Iron Ore.-Shipments of iron ore from Canadian mines, after a considerable setback in 1958 , reached record levels in 1959 and then dropped back in 1960 by 12.0 p.c. in quantity and 9.1 p.c. in value. In 1961 the quantity shipped showed a further reduction of 5.4 p.c. but increased prices resulted in a 3.1-p.c. increase in value. Increases reported by Newfoundland, Ontario and British Columbia were more than offset by lower shipments in Quebec where output was down by 28.5 p.c.

Production of pig iron and of steel ingots and castings were at their highest level in 1961. Exports of iron in the form of crude ore, concentrates, and calcined or roasted ore amounted to $16,652,346$ tons valued at $\$ 142,600,000$, showing little change from the 1960 totals. Of the 1961 tonnage exported, 63 p.c. went to the United States and most of the remainder to Europe, mainly to Britain. Japan received 1,298,485 tons.

Gold.-Over the ten-year period 1952-61, Canada's annual gold production has fluctuated narrowly between $4,000,000$ oz.t. and $4,600,000 \mathrm{oz.t}$., and its value between $\$ 140,000,000$ and $\$ 157,000,000$. Estimates for 1961 show a moderate decrease from the high point of 1960. All producing provinces except Newfoundland, Quebec and Manitoba, as well as the Yukon and Northwest Territories recorded lower production during the year. Ontario produced 58.7 p.c. of Canada's gold output in 1961, Quebec 23.8 p.c., the Northwest Territories 9.1 p.c. and British Columbia 3.6 p.c. Canada produces about 11 p.c. of the world's output and ranks as the second largest producer, following the Union of South Africa.
14.-Quantity and Value of Gold Produced, by Province, 1952-61

Nore.-Values are calculated at world prices in Canadian funds. Figures from 1862 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

${ }^{1}$ Includes 240 oz.t. of gold valued at $\$ 8,052$ produced in New Brunswick.
${ }^{2}$ Includes 52 oz.t. of gold valued at $\$ 1,767$ produced in New Brunswick.

Zinc.-The estimated production of zinc (including refined zinc, zinc ores and concentrates) in 1961 showed considerable improvement over 1960 and the low point of 1959. British Columbia accounts for almost half the Canadian production- 47.1 p.c. in 1961. Ontario was second in that year with 12.7 p.c., followed in order by Quebec, Manitoba, Newfoundland, Saskatchewan and the Yukon Territory. However, the major contribution to the increased production in 1961 was made by Manitoba.

## 15.-Quantity and Value of Zinc Produced, 1952-61

Nots.-Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1939 edition.

| Year | Quantity ${ }^{1}$ | Value | Average Price per lb. | Year | Quantity ${ }^{1}$ | Value | Average Price per lb. |

${ }^{1}$ Estimated foreign smelter recoveries and refined zinc produced in Canada.
Lead.-Lead production in 1961 in the form of refined pig and recoverable lead in ore and concentrates was moderately higher than in 1960. Of the total production, British Columbia accounted for 191,189 tons, or 82.7 p.c. The only lead refinery in Canada is located in that province at Trail. Silver-lead ores are mined at Keno Hill in Yukon Territory and lead also occurs in the complex ores at Buchans in Newfoundland. Small amounts of lead concentrates are produced in Quebec and Ontario.

## 16.-Quantity and Value of Lead Produced from Canadian Ores, 1952-61

Norg.-Figures from 1887 are given in the corresponding table of previous Year Books beginning with the 1929 edition.

Silver.-Silver production in 1961 decreased 6.0 p.c. from the record amount produced in 1960. Nova Scotia, Manitoba and British Columbia produced higher amounts but these were offset by substantial reductions in the other producing provinces and the Territories. Production of this metal is fairly widespread across Canada, being recovered mainly as a by-product in the treatment of gold ores and ores of copper, lead, zinc, cobalt and nickel. A large part of Ontario's production of $9,160,685 \mathrm{oz}$. t. in 1961 originated in the silver-cobalt ores mined at Cobalt, and British Columbia produced 8,867,629 oz.t. from its silver-leadzinc ores. Yukon Territory is the third largest producer, followed by Quebec. Canada's annual output of silver is exceeded only by that of Mexico and the United States.

## 17.-Quantity of Silver Produced, by Province, and Total Value, 1952-61

Nore.-Figures from 1887 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

| Year | Average <br> Price per oz.t. <br> (Canadian funds) | Newfoundland | Nova Scotia | Quebec | Ontario | Manitoba |

[^165]Metals of the Platinum Group.-Production in 1961 showed a substantial drop from the high point of 1960 . The decrease in value amounted to 17.5 p.c. The whole production comes from the nickel-copper ores at Sudbury, Ont., and the metals are recovered in the form of residues in the electrolytic refinery tanks at Port Colborne, Ont., and at the refinery in Norway to which the Falconbridge Nickel Company Limited ships nickel-copper matte.
18.-Quantity and Value of the Platinum Group ${ }^{1}$ Produced, 1952-61

Nore.-Figures from 1921 are given in the corresponding table of previous Year Books beginning with the 1940 edition.

| Year | Quantity | Value | Year | Quantity | Value |

${ }^{1}$ Includes platinum, iridium, rhodium, ruthenium and palladium.

## Subsection 4.-Production of Non-metallic Minerals (excluding Fuels)

Asbestos is by far the most important item in this group in point of value, followed by salt, titanium dioxide, gypsum, peat moss and sulphur. Asbestos, salt, gypsum and sulphur are discussed separately below. Titanium dioxide is produced only in Quebec and peat moss, although included as a non-metallic mineral, consists of the dead fibrous moss produced from peat bogs. Its growing use as a soil conditioner, as poultry and stable litter and as packaging material resulted in shipments valued at nearly $\$ 6,000,000$ in 1961, double the shipments of 1954 . The quantity and value of other non-metallic minerals produced are shown in Table 5, p. 519. See also the review of developments in the industrial mineral field at pp. 493-496.

Asbestos.-In 1961, Canadian asbestos mines shipped a record $1,171,000$ tons valued at $\$ 131,000,000$, representing an increase of 4.7 p.c. in quantity and 8.0 p.c. in value over 1960. Quebec, with 12 producing mines, accounted for 93.8 p.c. of the total tonnage; Ontario's one mine produced 27,200 tons and British Columbia's one mine produced 45,773 tons.
19.-Quantity and Value of Asbestos Produced, 1952-61

Nore.-Figures from 1896 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

| Year | Quantity | Value | Year | Quantity | Value |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | tons | \$ |  | tons | \$ |
| 1952. | 929,339 | 89,254,913 | 1957. | 1,046,086 | 104, 489,431 |
| 1953. | 911,226 | 86,052,895 | 1958. | 925,331 | 92, 276,748 |
| 1954. | 924,116 | 86,409,212 | 1959. | 1,050,429 | 107,433,344 |
| 1955. | 1,063, 802 | 96, 191, 317 | 1960. | 1,118,456 | 121, 4000,015 |
| 1956...... | 1,014,249 | 99,859,969 | 1961D. | 1,171,245 | 131,053,441 |

Salt.-The output of salt in 1961 was slightly below the record amount of $3,314,920$ tons produced in 1960. The decline was more than accounted for by a 174,000 -ton drop in Ontario's output; Ontario produces over 88 p.c. of the total tonnage. Rock salt is mined in Nova Scotia and Ontario only; brine wells are operated in Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta.

## 20.-Quantity of Salt Produced, by Province, and Total Value, 1952-61

Nore.-Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

| Year | Nova Scotia | Ontario | Manitoba | Saskatchewan | Alberta | Canada |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1960 | 163,901 | 3,007,599 | 21,925 | 49,064 | 72,431 | 3,314,920 | 19,355,658 |
| 1961 P. | 220,000 | 2,833,700 | 22,400 | 52,000 | 85,500 | 3,213,600 | 19,121,900 |

Gypsum.-Nova Scotia deposits provided more than 83 p.c. of the total output of gypsum in 1961. The decrease of 6.5 p.c. in the tonnage produced in that province and of 2.7 p.c. in New Brunswick compared with 1960 together with moderate increases in the other producing provinces resulted in a total output of $5,014,905$ tons, down 14.7 p.c. from the record production of 1959. In Canada, gypsum is used in the manufacture of plaster and wallboard and is added to Portland cement to control setting, but the greater part of the output is exported in crude form to United States plants for processing.

## 21.-Quantity of Gypsum Produced, by Province, and Total Value, 1952-61

Nore.-Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

| Year | Newfoundland | Novs Scotia | New <br> Brunswick | Ontario | Manitobs | British Columbia | Canada |  |

${ }^{1}$ Recovered from sour natural gas and nickel sulphide ores. $\quad{ }^{2}$ Does not include sulphur in acid made from roasting zinc sulphide concentrates at Arvida. ${ }^{3}$ Includes sulphur in acid made from roasting zinc sulphide concentrates at Arvida and Port Maitland.
${ }^{4}$ Excludes pyrite and pyrrhotite used to produce iron residue or sinter.

## Subsection 5.-Production of Fuels

Coal. -The downward trend in the production of coal, in evidence for some time, was interrupted in 1960 but resumed again in 1961. All producing provinces with the exception of Saskatchewan and British Columbia showed some decrease in output. Imports continued to decline but exports recorded a considerable increase in 1961.

## 23.-Coal Production, by Province, 1952-61

Nore.-Figures from 1874 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

## 25.-Exports of Domestic Coal, 1952-61

Norg.-Figures from 1868 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

| Year | Quantity | Value | Year | Quantity | Value |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | tons | \$ |  | tons | \$ |
| 1952. | 388,960 | 3,203,522 | 1957. | 396,311 | 3,357,959 |
| 1953. | 255,274 | 1,999,908 | 1958. | 338,544 | 2,907,513 |
| 1954. | 219,346 | 1,716,435 | 1959. | 473,768 | 3,582,313 |
| 1955. | 592,782 | 4,870,598 | 1960. | 852,921 | 6,789,163 |
| 1956. | 594,166 | 4,710,030 | 1961. | 939,360 | 8,541,679 |

The amounts and percentages of domestic and imported coal apparently consumed in Canada in the years $1952-61$ are shown in Table 26. The imports represent amounts taken out of bond for consumption during the respective years, regardless of when received. Thus the totals are exclusive of coal landed at Canadian ports and re-exported or exwarehoused for ships' stores without being taken out of bond. However, since such coal while remaining in bond at the port is available for Canadian consumption if required, the total amount of coal made available for consumption in Canada in 1961 amounted to $21,669,560$ tons, including 985,217 tons of anthracite, $17,114,562$ tons of bituminous, $1,360,930$ tons of subbituminous, and $2,208,851$ tons of lignite.

## 26.-Consumption of Canadian and Imported Coal in Canada, 1952-61

Nors.-Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1921 edition.

[^166]Petroleum.-The upward climb of crude petroleum production in evidence since the discovery of the Leduc field in Alberta in 1947 halted temporarily in 1958 but resumed in 1959 and continued in 1960 and 1961. Production in the latter year reached a record level, 16.3 p.c. above the previous peak in 1960 . The increase in 1961 over 1960 was mainly accounted for by a more than $27,000,000-\mathrm{bbl}$. increase in Alberta.
27.-Quantity and Value of Crude Petroleum Produced, by Province, 1952-61

Natural Gas.-The output of natural gas continued to increase at a rapid rate in Alberta and British Columbia. Total Canadian shipments, which amounted to $150,772,000$ Mcf. in 1955 reached a high of $646,018,000 \mathrm{Mcf}$. in $1961,498,000,000 \mathrm{Mcf}$. of which came from Alberta. A review of developments in the natural gas industry is given at pp. 496-497.

## 28.-Quantities of Natural Gas Produced, by Province, and Total Value, 1952-61

## Subsection 6.-Production of Structural Materials

Active construction throughout Canada has kept production of structural materials at a high level in recent years. After a slight decrease in 1960 the value of such materials produced reached $\$ 323,092,906$ in 1961. In point of value, sand and gravel is the most important of the structural materials, followed by cement, stone, clay products and lime. Developments in certain structural materials industries during 1961 are covered in the review at p. 494.

Sand and Gravel.-Deposits of sand and gravel are numerous throughout Eastern Canada, with the exception of Prince Edward Island where gravels are scarce. The local needs for these materials are usually supplied from the nearest deposits as their cost to the consumer is governed largely by the length of haul. This accounts for the large number of small pits and the small number of large plants in operation. Every province except New Brunswick and Prince Edward Island produces natural bonded sand but some grades particularly suitable for certain industries command much higher prices than ordinary sand. The greater part of the sand and gravel output is used in road improvement, concrete works, or as railway ballast and most of the commercial plants are equipped for producing crushed gravel, a product that can compete with crushed stone.

In 1961 an estimated $178,500,000$ tons of sand and gravel were produced, valued at $\$ 106,413,509$. This represented a decrease of 7.1 p.c. in quantity and 4.3 p.c. in value from 1960. Quebec and Ontario together contributed 67.6 p.c. of the quantity. The breakdown of these totals by purpose was not available at the time of going to press.
29.-Quantity and Value of Sand, and Sand and Gravel Produced, 1958-60

| Material and Purpose | 1958 |  | 1959 |  | 1960 |  |

${ }^{1}$ Included under feldspar and quartz in 1959 and 1960.
Cement.-The production of cement in Canada reached its peak in 1959, output in 1961 being down 2.2 p.c. from that point. However, consumption was up in 1961 by 4.8 p.c., continuing the almost steadily upward trend in evidence throughout the postwar period. Of the Canadian total of $6,145,168$ tons produced in 1961, Ontario contributed 36.1 p.c. and Quebec 32.5 p.c. and all other provinces except Prince Edward Island and Nova Scotia contributed varying amounts; output increases in 1961 took place in Ontario, Quebec, Saskatchewan, British Columbia, Alberta and New Brunswick.

## 30.-Quantity and Value of Production, Imports, Exports and Apparent Consumption of Cement, 1952-61

Note.-Figures from 1910 are given in the corresponding table of previous Year Books beginning with the 1939 edition.
