## PREFACE

The 1963-64 edition of the Canada Year Book continues a series of annual publications giving official statistical and other information on almost every measurable phase of Canada's development. As the economy of the country has expanded, the Dominion Bureau of Statistics has endeavoured to present the story of this development, summarizing a great mass of detailed statistical information concisely within the covers of one volume and supplementing it with data from other Departments of the Federal Government and from the provinces. The 1963-64 edition is so designated because it will be released in the early months of 1964; the cut-off date for each chapter was advanced by about three months from that of the previous edition.

Special feature articles are presented in each edition of the Year Book. Those in the current issue include: "Changes in Canadian Agriculture as Reflected by the Census of 1961", pp. 409-415; "Secondary Manufacturing in Canada", pp. 637-643; "Recent Developments in Public Technical and Vocational Education in Canada", pp. 737-743; "Canadian Merchandise Exports and Imports in 1962-63", pp. 907-911; and "Life Insurance", pp. 1071-1077. In addition, certain standard material is treated in somewhat more detail in this edition, such as the sections on "Main Physical and Economic Features of the Provinces and Territories" and "Provincial Wildlife Conservation Measures".

All chapters include the latest data available at the time of printing. The Population Chapter contains summary population statistics from 1961 Census and the Agriculture Chapter summary agricultural census figures. After the printing of Chapter II on Constitution and Government, changes were made in the administrative functions of several Federal Government Departments and in ministerial responsibility (pp. 104-122). Such changes, up to Nov. 15, 1963, have been included in the Organization Chart inserted facing p. 104. Certain other revisions to the information in this Chapter are given in the Appendix, which also contains a list of the members of the House of Commons as elected at the Twenty-Sixth General Election, Apr. 8, 1963; this was not available in time to be included in Chapter II. Enclosed in the pocket on the inside cover of the volume is a recently completed 140 -mile-to-the-inch political map and a 100 -mile-to-the-inch map showing the distribution of the population of Canada as at the date of the latest Census, June 1, 1961.

The present volume was produced in the Canada Year Book, Handbook and Library Division by Miss Margaret Pink, Associate Editor, and the Year Book staff under the editorship and direction of Dr. C. C. Lingard, Director of the Division. The charts and maps, except where otherwise indicated, were prepared by L. Tessier of the Drafting Unit and the Surveys and Mapping Branch of the Department of Mines and Technical Surveys.

The co-operation of numerous officials of the various Departments of the Federal and Provincial Governments and of this Bureau in the preparation of material for the Year Book is gratefully acknowledged. Credit by means of footnotes is given where possible either to the persons or to the public service concerned.

Dominion Statistician
Dominion Bureau of Statistics, Ottawa, Nov. 15, 1963.

## WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada as a rule the Imperial system of weights and measures is followed; an exception is the ton where, unless otherwise stated, the short ton of $2,000 \mathrm{lb}$. is meant.

## Relative Weights and Measures, Imperial and United States

The following list of coefficients may be used to translate amounts expressed in one unit to the other. Where reference is made to Imperial pint, quart and gallon, their equivalent in ounces is also in Imperial measure; likewise United States designations for these quantities are shown in the U.S. equivalent in ounces. The Imperial (or British) fluid ounce and the U.S. fluid ounce are different measures. One Imperial fluid ounce equals 0.96 U.S. fluid ounce and one Imperial gallon equals 1.2 U.S. gallons.

1 Imperial pint $=20$ fluid ounces
1 U.S. pint=16 fluid ounces
1 Imperial quart $=40$ fluid ounces
1 U.S. quart $=32$ fluid ounces
1 Imperial gallon $=160$ fluid ounces
1 U.S. gallon=128 fluid ounces
1 Imperial proof gallon=1.36 U.S. proof gallon

1 short ton $=2,000 \mathrm{lb}$.
1 long ton $=2,240 \mathrm{lb}$.
1 barrel crude petroleum = 35 Imperial gallons
1 ounce avoirdupois $=0.91146$ ounce troy (oz.t.)
1 statute mile $=5,280$ feet
1 nautical mile $=6,080$ feet

The following weights and measures are used in connection with the principal field crops and fruit; 2.3 bu . of wheat are required to produce 100 lb . of flour.

|  | Pounds per Bushel |  | Pounds per Bushel |
| :---: | :---: | :---: | :---: |
| Grains- |  | Fruits (standard conversions)- |  |

## Fiscal Years of Federal and Provincial Governments

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31. Throughout the Year Book, all figures are for calendar years except where otherwise indicated in text or table headings.

## Miscellaneous

Maritime Provinces = Prince Edward Island, Nova Scotia and New Brunswick
Atlantic Provinces = Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick
Btu. $=$ British thermal unit (coal)
Central Canada $=$ Quebec and Ontario
Prairie Provinces=Manitoba, Saskatchewan and Alberta
Mcf. = thousand cubic feet (gas)
n.e.s. $=$ not elsewhere specified
n.o.p. $=$ not otherwise provided for
psi. (atomic research) =per square inch
D.B.H. (forestry) = diameter at breast height.

## SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:-
. . figures not available.
... figures not appropriate or not applicable.

- nil or zero.
-- amount too small to be expressed or where "a trace" is meant.
${ }^{\mathrm{p}}$ preliminary figures.
${ }^{r}$ revised figures.

## PART I.-GEOGRAPHY AND GEOLOGY*

Canada occupies the northern half of the North American Continent with the exception of Alaska and Greenland, extending in longitude from Cape Spear, Newfoundland, at $52^{\circ} 37^{\prime} \mathrm{W}$, to Mount St. Elias, Yukon Territory, at $141^{\circ} \mathrm{W}$, a distance of $88^{\circ} 23^{\prime}$. In latitude it stretches from Middle-Island in Lake Erie, at $41^{\circ} 41^{\prime} \mathrm{N}$, to the North Pole. The northernmost point of land is Cape Columbia on Ellesmere Island, at $83^{\circ} 07^{\prime} \mathrm{N}$. Canada is thus a western and a northern country, a fact of increasing strategic significance.

In shape, Canada resembles a distorted parallelogram with its four corners making important salients. In the north the salient formed by the Arctic Archipelago, which penetrates deep into the Arctic basin, guards the northern approaches to the Continent from Europe and Asia and makes Canada neighbour to the Union of Soviet Socialist Republics. In the south the salient of peninsular Ontario thrusts far into the heart of the United States. In the east the salient of Labrador and the Island of Newfoundland commands the shortest crossings of the North Atlantic Ocean and links Canada geographically with Britain and France. In the west the broad arc of land between Vancouver in southern British Columbia and Whitehorse in Yukon Territory provides the shortest crossings of the North Pacific Ocean between continental North America and the Far East. Canada thus lies at the crossroads of contact with the principal powers and some of the most populous areas of the world.

| Alberta...... | 248,800 | 6,485 | 255, 285 | 6.6 |
| British Columbia | 359, 279 | 6,976 | 366,255 | 9.5 |
| Yukon Territory. | 205,346 | 1,730 | 207,076 | 5.4 |
| Northwest Territories | 1,253,438 | 51,465 | 1,304,903 | 33.9 |
| Franklin. | 541,753 | 7,500 | 549,253 | 14.9 |
| Keewatin. | 218,460 | 9,700 | 2988, 160 |  |
| Mackenzie | 493,285 | 34,265 | 627, 490 | 18.7 |
| Canada. | 3,560,238 | 291,571 | 3,851,809 | 100.0 |

In size，Canada is the largest country in the Western Hemisphere and the second largest country in the world．Its area of $3,851,809 \mathrm{sq}$ ．miles may be compared with that of the Union of Soviet Socialist Republics，8，649，512 sq．miles，＊the United States of Amer－ ica（including Alaska and Hawaii）， $3,615,214$ sq．miles，＊and Brazil， $3,287,204$ sq．miles．＊ It is more than forty times the size of Britain and eighteen times that of France．The immense size of the country，while encompassing many resources and seeming to afford much scope for settlement，imposes its own burdens and limitations，particularly because much of the land is mountainous and rocky or is under an arctic climate．The developed portion is probably not more than one third of the total；the occupied farm land is less than 8 p．c．and the currently accessible productive forested land 19 p．c．of the total．The population of Canada，estimated at $18,570,000$ on June 1，1962，may be compared with $183,742,000 \dagger$ for the United States（including Alaska and Hawaii）（1961）and with $73,088,000 \dagger$ for Brazil（1961）．

The milages in Table $\mathbf{2}$ are another indication of the size of Canada．They show the length of communication facilities required between the larger cities，between outlying industrial communities built up around large mining or smelting projects and the nearest cities，and between northern outposts and the supplying cities．In this table milage given is for the major means of transport used between the points concerned；air milages are given for most transcontinental distances．

[^1]
## 2．－Travel Distances between Certain Cities and Other Points of Interest in Canada

Nore．－The dash used in this table indicates that the distance concerned is of no particular interest．In each case the milage given is for the type of travel most generally used－road（H），rail（R），air（A）or water（w）；air milages are given for most transcontinental distances．Water routes are given in nautical miles．

## Section 1.-Physical Geography

## Subsection 1.-Main Physical and Economic Features of the Provinces and Territories

Politically, Canada is divided into ten provinces and two territories. Each province is sovereign in its own sphere and administers its own natural resources, and upon such resources, as related to topography, position and climate, is based the economy of the province. The resources of the Yukon and Northwest Territories, because of the remoteness, the great extent and the meagre and scattered populations of these areas, are administered by the Federal Government.

The main physical and economic characteristics of each province and territory are described in the following paragraphs. However, it should be mentioned that the economic development of the country as a whole, based in the first instance on physical features and later on other factors, has formed regions quite distinct from the political divisions. These economic regions are described in an article appearing in the 1962 Year Book at pp. 17-23. It should also perhaps be noted that physical features and natural resources influence economic development only up to a point. In a pioneer area and as long as that area is dependent upon primary resources this is the case but as growth continues and industry develops and diversifies, as the problems of transportation and communication are mitigated and public services become increasingly important, the dependence shifts to demand and markets and large agglomerations of population become magnets drawing unto themselves with less and less relation to the geography of their location. This has become particularly true of the heavily populated areas of southwestern Ontario and southeastern Quebec and to a lesser extent of other urban centres across the land.

Newfoundland.-Newfoundland, Canada's most easterly province, has a total area of 156,185 sq. miles. The larger part of this area, 112,826 sq. miles, known as the Coast of Labrador, is on the mainland and is separated from the Island of Newfoundland at the narrowest point by the Strait of Belle Isle. Labrador is a roughly triangular area bordering the north Atlantic Coast from the Strait of Belle Isle to Ungava Bay, its rounded apex extending inland about 450 miles. The surface of this remote region is mostly a barren mosaic of rocks, swamps and lakes; its rugged coastline has promontories rising up to 3,000 feet directly from the sea and the extreme northern area is dominated by the Torngat Mountains, summits of which rise to over 5,000 feet. Although it lies in the same latitude as Britain, Labrador has an extremely rigorous climate and is usually snow-covered for more than half the year. Many of its river valleys are well forested, the accessible timber stand being estimated at $6,755,000,000$ cu. feet, its rivers, particularly the Hamilton, have numerous falls suitable for the development of hydro power, and its coastal waters abound in fish which, until recently, were its most valuable resource. However, the great mineral potential of its Precambrian rocks is beginning to be exploited and iron ore is now Labrador's greatest source of wealth. The high-grade hematite deposits on the LabradorQuebec boundary near the headwaters of the Hamilton River account for almost half the Canadian shipments of iron ore and the nearby Wabush Lake area, now under development, will greatly increase this production. To serve the latter, the first use of Labrador's hydro-power potential has been made by the installation of a $120,000-\mathrm{hp}$. plant on the Unknown River. Labrador in 1961 had a population of only 13,500, about half of whom were located in the area of Goose Bay, a Royal Canadian Air Force station. Close to 800 were in the new townsite of Labrador City at Wabush Lake and the remainder were scattered along the coast, supporting themselves by fishing and hunting. Indians and Eskimos numbered about 1,200.

The Island of Newfoundland, an area of 43,359 sq. miles, is also triangular in shape, each side being about 320 miles long. Its northwestern point is only a few miles from the mainland of Labrador and the distance from its southwestern tip across Cabot Strait to Cape Breton Island is 70 miles. The topography of the Island is quite rugged but there are no areas of great relief except the Long Range which parallels the western coast and rises to heights of over 2,600 feet. The main physiographic features are determined by a series of very old, worn-down foldridges with axes trending northeast to southwest. As in Labrador, much of the surface is barren and rocky and has innumerable ponds and swamps, the drainage having been deranged in the last glaciation. The climate of
 the Island is marine in character, although the moderating influence of the sea is affected by the cold waters of the Labrador current which sweep along the east and west coasts. Summers are cool and winters relatively mild.

The economy of this portion of the province is also based on forest, fish and mineral resources. Agriculture at present is of only local importance, but it is now considered that Newfoundland's millions of acres of bogland are a potential avenue of expansion for the agricultural industry; with special treatment, these peat lands are capable of producing high yields of most vegetables. The river valleys of the interior and the west coast are thickly forested and support a thriving pulp and paper industry. The deeply indented coastline provides many harbours for hundreds of fishing craft. Modern trawlers and draggers operating out of ports along the southern coast fish the prolific cod banks in all seasons of the year but the summer inshore trap fishery from small boats is equally important. The Island also has extensive mineral deposits, of which iron ore is the most valuable. The huge Wabana deposits of medium-grade ore on Bell Island in Conception Bay account for about 12 p.c. of the Canadian output; substantial quantities of lead-zinccopper ore are mined at Buchans in the interior; and the major part of Canada's production of fluorspar comes from the Burin Peninsula.

The Island in 1961 had a population of 444,319 , close to 40 p.c. of whom resided on the Avalon Peninsula and on the eastern shores of Placentia and Trinity Bays which separate the peninsula from the Island and around Bonavista Bay immediately to the north. The capital city of St. John's, situated on the east coast of the peninsula, had, with its environs, a population of 90,838 and the other important urban areas were Corner Brook on the west coast and Grand Falls in the north, both pulp and paper centres. The remainder of the people live in small groups along the coasts and depend mostly on the sea for their livelihood and for contact with other communities and the outside world.

Nova Scotia.-Nova Scotia may be described as a peninsula, 381 miles in length and from 50 to 105 miles in width-an area of 21,425 sq. miles almost surrounded by the waters of the Bay of Fundy, the Atlantic Ocean, the Gulf of St. Lawrence and Northumberland Strait. Midway along its western boundary it is connected with the Province of New Brunswick by the Isthmus of Chignecto, a neck of land about 15 miles across. The northeastern portion of the province, an area of $3,975 \mathrm{sq}$. miles known as Cape Breton Island, is separated from the mainland by the narrow Strait of Canso, now traversed by a permanent causeway. The Island is itself almost bisected from northeast to southwest by the salt water Bras d'Or Lakes, and consists mainly of a wooded upland rising in the north to a height of 1,747 feet, the highest point in the province. Most of the mainland is of low relief. Ridges not exceeding an altitude of 1,000 feet run through the centre of the province and there is an upland surface known as the Cobequid Mountains running east and west to the north of the Bay of Fundy, this upland being about 900 feet high, from eight to 12 miles wide and 85 miles long; a few low rounded remnants rise to 1,000 or 1,100 feet. Although the climate of Nova Scotia is continental rather than marine, the temperatures both summer and winter are more moderate than in interior continental areas in the same latitude and the seasons somewhat later. Winters are particularly stormy on the Atlantic Coast and fog is prevalent throughout the year. The Atlantic side of the province is generally rocky and deeply indented with bays and inlets providing many excellent harbours. Trawlers and draggers operating from these harbours supply cod and other groundfish to the processing plants in their home ports and smaller vessels fishing the inshore waters, both on the Atlantic Coast and in the Bay of Fundy, harvest large quantities of pelagic and estuarial species. Lobster has become the most valuable of Nova Scotia's sea products; most of the catch is marketed alive or as chilled or frozen lobster meat, and the remainder is canned. There are 42 plants in the province producing frozen fish products.

The slopes of the Bay of Fundy and Northumberland Strait, protected from Atlantic storms, are the main agricultural areas of the province. The climate is suitable for dairy, poultry and mixed farming and, in some sections, fruit growing; strawberries and blueberries are the principal small fruits produced. The Annapolis Valley, along the coast of the Bay of Fundy, is internationally known for its apple orchards and some 44,000 acres of fertile tidal marshland have been added to this area by protection from saltwater flooding. Elsewhere in the province agriculture is patchy and often a part-time occupation.

Mineral resources include coal, gypsum and salt. Nova Scotia is a leading producer of good bituminous coal suitable for the production of coke and excellent for domestic use, although recently the demand for coal has been declining and the coal-producing areas, particularly Springhill and Stellarton, have been hard hit economically. The large steel mills of Glace Bay were established there to make use of the coal available in that area and the iron ore easily transportable by water across the Cabot Strait from the Wabana mines of Newfoundland. Large gypsum deposits in the central area provide over 82 p.c. of Canada's output of this mineral and the construction of the Canso Causeway created an ice-free harbour at Point Tupper and thus facilitated the exploitation of other large gypsum deposits at Denys Station on Cape Breton Island. Quantities of rock salt are mined on the northwest mainland. The forested area of the province is proportionately very large and most of it is regarded as productive. The output of the 500 sawmills of all sizes is most

important, and the province has two pulp mills and two paper mills in operation. On these resources are based the leading manufacturing industries of Nova Scotia, although recently secondary industries are becoming more diversified.

Just over half of the people of Nova Scotia, who number 737,000, are classed by the census as urban dwellers. However, since 40 p.c. of the total live in the two large urban areas of Halifax-Dartmouth and Sydney-Glace Bay, the province has the appearance of being mainly rural, with about 46 p.c. of the population living in small towns and villages or on farms. Halifax, a metropolitan area of 183,946 people, is situated on one of the best land-locked harbours in the world.

New Brunswick.-New Brunswick is nearly rectangular in shape and has an area of 28,354 sq. miles. The Bay of Chaleur cutting about 100 miles inland on the north, the Gulf of St. Lawrence and Northumberland Strait on the east, the Bay of Fundy on the south and Passamaquoddy Bay on the southwest give the province a very extensive seacoast. It adjoins the United States on the west and the Province of Quebec on the north and northwest.

The surface of New Brunswick is mostly undulating. The great Northwestern Plateau, 1,000 to 1,500 feet above sea level, is deeply dissected by valleys tributary to the St. John River which flows generally southward across the whole province to the Bay of Fundy and to the Restigouche River which flows eastward, emptying into the Bay of Chaleur. The Central Highlands consist of a dissected plateau about 2,000 feet above sea level, surmounted by numerous monadnocks, the highest of which is Mount Carleton ( 2,690 feet). Many river valleys have deeply trenched the plateau to a depth of 1,000 or more feet below the summit level. In the south an upland area of widely separated fold ridges provides lesser relief. The valley of the St. John River is the major lowland area. The climate of this province, although typically continental rather than marine, also reflects the moderating influence of the sea. As in Nova Scotia, the seasons are somewhat delayed and temperatures in the interior are more extreme than on the coasts.

The interior of New Brunswick is very heavily forested. In fact, 86 p.c. of the total land area is classed as productive forest land and three quarters of the merchantable wood is made up of coniferous species. It is mainly upon these great stands of timber and the existence of the many fast-flowing rivers providing easy transportation for the logs to the mills or to tide-water that the economy of the province has been built. Four pulp mills, three pulp and paper mills and one paper-converting mill are in operation and their output, together with that of the 300 sawmills, makes up more than a third of the manufacturing production of the province. The rivers provide moderate-sized power sites advantageously situated to meet local requirements and many of these have been developed. The St. John River Valley and the northwestern part of the province are the agricultural areas, the former specializing in potato and livestock production and the latter containing fairly large mixed-produce farms. In the northeast and along the coastal fringe, part-time agriculture is often combined with fishing and/or lumbering for a livelihood. Fishing, too, is well developed, inshore fisheries being of greater importance than offshore. Lobster from Northumberland Strait is the major money-maker, followed by herring from the Bay of Fundy and then cod. The mineral resources of the province are not extensive. They include moderate amounts of coal, natural gas and petroleum. Shipments of ore and concentrates containing copper, lead and zinc have recently been made from base-metal mines in the northern area.

In 1961, 597,936 people lived in New Brunswick, 10 p.c. of them on farms, 43 p.c. in small centres of fewer than 1,000 persons, and the remainder in urban centres. The metropolitan area of Saint John, which is situated at the mouth of the St. John River and is the principal port and industrial centre of the province, had 95,563 residents. Most of the population of the province is located fairly close to the coastal areas, along the St. John River Valley which is near the western boundary, and in the lower-lying eastern portion. The interior is very sparsely inhabited.

Prince Edward Island.-This, the smallest province of Canada, is a separate land mass cradled in the Gulf of St. Lawrence, 10 to 20 miles off the mainland east of New Brunswick and north of Nova Scotia. The waters separating it from these provinces are known as the Northumberland Strait. The Island has an area of $2,184 \mathrm{sq}$. miles, varies greatly in width from about four to 40 miles and is 140 miles long. It has no pronounced upland but attains an altitude of about 450 feet above sea level. The coast is greatly indented and has many bays and inlets running far inland in every direction. In fact, the Island is almost trisected by the indention of Tracadie Bay on the north which almost meets the wide East River flowing into Hillsborough Bay on the south, and by the deep indention of Malpeque Bay on the north curving within two or three miles of Bedeque Bay on the south. Because of the influence of the sea, the climate is quite moderate although occasional extreme lows may be experienced in winter. The Island enjoys a frost-free period of about five months.

The moderate climate combined with fertile soil is very favourable to the pursuit of agriculture, which is the principal occupation of the people. Almost 70 p.c. of the land area is cultivated, the farms producing mixed grain crops and specializing in potato-growing; dairying and stock-raising are also important, and the recent establishment of large freezing plants has encouraged the growing of small fruits and vegetables and provided a new export for the Island. Prince Edward Island fishermen secure their share of lobster from the prolific waters of Northumberland Strait and this catch accounts for something like 70 p.c. of the value of the primary fishery production of the province. Groundfish and oysters, the latter mainly from Malpeque Bay, are next in importance. The major manufacturing industries on the Island are based on these agricultural and fisheries resources. There are perhaps 800 sq. miles of productive forested land, the products from which are used locally. Mineral production consists solely of sand, gravel and stone for structural purposes and there is very little hydro power available.

Prince Edward Island had, in 1961, a population of 104,629 , of whom 70,720 were classed as rural residents. Charlottetown, with 18,318 persons, is the only city; seven towns and 17 villages account for the other urban dwellers.

Quebec.-Quebec is the largest province in Canada, its area of 594,860 sq. miles being approximately 15 p.c. of the total area of the country. It includes all that vast region lying north and west of the St. Lawrence River and Gulf as far as the shores of Hudson Strait and Bay and a line running due south of the tip of James Bay for a distance of 300 miles; it is bounded on the southwest by the Ottawa River and on the northeast by the Coast of Labrador. South of the St. Lawrence is a strip of land approximately 30 to 100 miles in width, known as the Eastern Townships and the Gaspe Peninsula, the former adjoining United States territory and the latter the Province of New Brunswick. Fromits southernmost point on the United States boundary to its northernmost point on Hudson Strait the distance is about 1,200 miles.

Because of its geographical position, large area and
 complex physiographic relations, Quebec has a wide variety of climates. In the lower St. Lawrence Valley the frost-free season is fairly long, extending from early May to late September. Summers are warm with hot humid spells and the average temperature in winter is $15^{\circ} \mathrm{F}$. Moving northward and westward, winter temperatures become more extreme and the summers generally cooler while in the far north the highlands are bitterly cold in winter and practically summerless.

Physiographically, Quebec has three regions. The Canadian Shield occupies the greater part of the area north of the St. Lawrence. These plateau-like highlands, made up of a great mass of very ancient and mainly very hard rocks, present a rough, broken surface strewn with lakes and varying in height from 1,000 to 3,000 feet above sea level, with a few higher peaks. The height of land is in the north-centre of the province and over its broken southern rim tumble the many great rivers tributary to the St. Lawrence. The Appalachian Mountains extend through the area of Quebec south of the St. Lawrence, reaching their greatest width in the Eastern Townships and their greatest heights in the Gaspe Peninsula where the Shickshock Mountains have many summits over 3,500 feet; Mount Jacques Cartier, the highest mountain in Quebec, rises to 4,160 feet. The smallest region of the province is the St. Lawrence Lowlands, a triangular area bounded by the edge of the Canadian Shield on the northwest, the Great Champlain Fault bordering the Appalachian Highlands to the east and the Adirondack Mountains in the United States to the south. This is a low, flat region covered by deep clay deposited when the area was invaded by the Champlain Sea after the melting of Pleistocene ice. It is this fertile agricultural area that provided the basis of the economy of the province. It is here that
the mainly rural people for generations gained their livelihood from the land and it is here that industry became established and prospered, making Quebec the second largest industrial province of Canada. In 1961, of the $5,259,211$ people residing in Quebec, 75 p.c. lived in the St. Lawrence Lowlands and the Eastern Townships; 3,906,404 persons were classed as urban dwellers. Although now far out-ranked by manufacturing as an employer of labour, agriculture is still a fundamental way of life and the production of animal feed crops, potatoes, market garden produce, fluid milk, cheese, hogs, tobacco and maple products is important to the large consumer market.

The great Canadian Shield area, which was long considered an inaccessible wasteland, has become the keystone of industry in Quebec. Its vast forest resources were the first to be utilized and the province is now Canada's major producer of pulp and paper; its paper output amounts to about 45 p.c. of the country's total and the value of its sawmill products is higher than that of any other province except British Columbia. The many rivers rushing down to the St. Lawrence from the edge of the Shield and the St. Lawrence River itself have made Quebec the richest province in terms of water power resources, having more than 30 p.c. of the total recorded for Canada, and its present installation of hydro power represents close to half of the Canadian total. The availability of large quantities of cheap hydro power has encouraged the development of large industrial plants in the Quebec hinterland, notable among them being the huge aluminum smelting and refining plants at Arvida on the Saguenay River and at Baie Comeau at the mouth of the Manicouagan River. The Shield's mineral potential is well known. Quebec has long been a major producer of copper, gold and zinc from the Noranda-Val d'Or area south and east of James Bay and more recently of copper and gold from the Chibougamau area farther east. Copper mineralization has also been discovered in other areas of central Quebec and a number of development programs-have been started. Rapid progress has been made in the development of the huge deposits of hematite and other iron ores on the Quebec-Labrador boundary which are now being transported by rail to the ports of Sept Iles and Port Cartier at the rate of $10,000,000$ tons annually. At Allard Lake about 150 miles east of Sept Iles and fairly close to the coast, large deposits of ilmenite, an ore of titanium and iron, are being mined. Of current interest is a large asbestos orebody recently discovered in the Ungava district, near Deception Bay off Hudson Strait, which is now undergoing detailed engineering and feasibility studies. The Appalachian Highlands also contain minerals which are a valuable source of wealth. Twelve mines in the Eastern Townships account for 90 p.c. of Canada's large output of asbestos, and copper is mined at Murdochville in the Gaspe Peninsula and is in evidence in the Sherbrooke area of the Eastern Townships.

Quebec has experienced great industrial expansion in the past decade and a half, much of it based directly on its own resources, although there are many highly developed industries the raw materials for which are not indigenous to the province, such as the textile and clothing industries, the petrochemical industries and the aluminum smelting industry; Quebec's manufacturing output represents about 30 p.c. of the total for Canada. Montreal, the province's largest city, is also the largest city in Canada and one of the great industrial, commercial and financial centres of the Continent-the metropolitan area had a population of $2,109,509$ in 1961. Quebec, the capital of the province, had 171,979 residents and Sherbrooke, the third largest city, 66,554 residents.

Ontario.-Ontario has an area of 412,582 sq. miles and lies between Quebec on the east and Manitoba on the west. Although usually regarded as an inland province, its southern boundary has a freshwater shoreline of 2,362 miles on the Great Lakes and its northern limits have a saltwater shoreline of 680 miles on Hudson and James Bays.

Geologically, Ontario belongs to two major regions-the rough Canadian Shield in the north and the gentler lowlands of the Great Lakes-St. Lawrence region. Northward from the Great Lakes and westward to the Manitoba boundary are approximately 300,000 sq. miles of typically Canadian Shield terrain-a rugged, rocky plateau, mostly 1,500 feet above sea level, strewn with lakes and muskeg-a difficult surface over which ground
transportation routes have been constructed only with the greatest effort. Although railways have crossed this area for more than half a century, it is only with the recent completion of the TransCanada Highway that it has been possible to cross it by motor vehicle. The highest point in Ontario is 2,120 feet, on the promontory on the northeastern corner of Lake Superior. From the height of land, which lies in a wide crescent north of Lake Superior, extending westward to the Lake of the Woods and eastward to Kirkland Lake, the slope descends very gently to James and Hudson Bays where a large marginal strip (the Hudson Bay Lowlands) is less than 500 feet above sea level. This northern area bears the brunt of severe winter cold waves moving eastward from the prairies or southward from the Arctic
 across Hudson Bay with little or no modification, and thus experiences very cold winters. Although summers are warm they are short. In the districts immediately along the north shores of the Great Lakes and west of the Lakes there are frost-free periods in excess of 100 days but elsewhere seasons free from frost range from 40 to 100 days.

The lowlands region, which extends over the whole of the southern peninsula between Lakes Ontario, Erie and Huron, and eastward to the Ottawa River adjoining the lowlands of Quebec, is about one sixth the size of northern Ontario. Common to this region are such glacial features as rock plains, morainic hills, till plains, clay plains, drumlins and sand plains. The southwestern tip of the province extends farther south than any other part of Canada. This fact, combined with the ameliorating influence of the lower Great Lakes, gives peninsular Ontario a much milder climate than that of the northern districts. Since it lies in one of the major storm tracks of the Continent, wide variations occur in day-to-day weather, especially in winter, but conditions of severe cold or excessive warmth are not prolonged.

This lowlands area of Ontario is the most densely populated and highly industrialized area of Canada. The population of the province numbered $6,236,092$ in 1961, approximately 35 p.c. of the total population of the country, and of that number 5,347,205 lived in the peninsular area. Favourable climatic conditions, fertile soil, ease of travel over relatively unobstructed terrain as well as over the natural transportation routes of the St. Lawrence River and the Great Lakes influenced the populating of this area. Agriculture became well established and continues to be of major importance to the economy of the province. In fact, with the exception of the great wheat-growing areas of the west, it is by far the most highly productive agricultural area in the country. Its produce is very diversified and many specialized areas have developed-fruit in the Niagara district,
tobacco in the counties adjacent to Lake Erie, commercial vegetables north of Toronto and cattle in the Georgian Bay area. However, important as agriculture may still be, the early colonial settlements along the waterways and in the interior of this area have grown rapidly and have become highly industrialized. It may be said that the industries of southern Ontario produce almost every type of product required by the consuming public and the area is now one of the great industrial agglomerations in the world. The focal point of this industrial area is the city of Toronto which is the second largest city in Canada and a major manufacturing, financial, commercial and distribution centre. In 1961, it had, with its environs, a population of $1,824,481$ and the nearby metropolitan area of Hamilton, whose basic industry is steel, had a population of 395,189 .

Although the northern regions of Ontario are thinly inhabited and support only 14 p.c. of the population, their contribution to the industrial output of the province is large. The Ontario portion of the Canadian Shield has long been a producer of many base metals and accounts for close to 40 p.c. of the total mineral output of Canada. About 85 p.c. of Canada's tremendous output of nickel and about half the copper come from the Sudbury area, close to 60 p.c. of the production of gold comes from the Kirkland Lake-Porcupine area and from the Red Lake, Pickle Crow and Little Long Lake areas farther west and about a quarter of the iron ore from the Steep Rock Lake area west of Lake Superior and the Michipicoten area on the northeastern shore of the Lake. Most of the uranium production now comes from the Blind River area north of Lake Huron and Bancroft east of Georgian Bay. The Lowlands area of the province produces quantities of industrial minerals such as salt, asbestos and nepheline syenite and has some natural gas and petroleum output. Production of structural materials such as cement, sand and gravel and stone, which is dependent on construction activity, has been exceptionally high in recent years.

Ontario has about 262,000 sq. miles of forested land which supports a thriving pulp and paper industry. The province produces close to 30 p.c. of the paper output of the country; lumber and other sawmill products are of lesser importance. Ontario follows Quebec and British Columbia in magnitude of water power resources and is second to Quebec in installed hydro-electric capacity. The largest power development, having a capacity of $2,521,000 \mathrm{hp}$., is located on the Niagara River. Recently, the development of water power sites in the province has progressed at a formidable rate and most of those remaining undeveloped are located in areas relatively distant from power markets, so that the province is now increasing its emphasis on thermal power development.

Manitoba.-Manitoba is the most central of Canada's provinces and is the most easterly of what are known as the three Prairie Provinces although by far the largest part of its 251,000 sq. miles is within the Canadian Shield. The province is thus divided into two distinctly topographic forms, the demarcation line beginning close to the southeast boundary and running diagonally northwest through Lake Winnipeg to the Saskatchewan border, at a point a little beyond the 55th parallel of latitude. The larger northern area, with the exception of the lowland south of Hudson Bay, is typically Shield with heavily glaciated topography and deranged drainage, its major rivers, the Churchill and the Nelson, flowing into Hudson Bay. The southwestern portion is the first and lowest of three broad step-like formations across the northern portion of the great central plains of the Continent. It has an elevation of from 600 to 700 feet and is floored by deep fertile clay soils left by glacial lakes that once covered the area. It is separated from the Saskatchewan Plain, the second plain formation, along its western boundary by the Manitoba Escarpment, a narrow belt of hilly terrain with elevations of from 1,600 to 2,727 feet. The highest points are Duck, Porcupine and Riding Mountains with elevations of 2,727, 2700, and 2,000 feet, respectively.

Manitoba, in common with the other Prairie Provinces, has a continental climate. Summers are normally warm and winters long and intensely cold. Consequently, there is a wide range between the temperatures of the warmest and the coldest months, running at about $70^{\circ}$ in southern Manitoba. The growing season in the agricultural area to the southwest extends from late May to mid-September, with a frost-free period of about 100 days. In the Duck and Riding Mountains the frost-free period is under 100 days and in

the extreme north from 60 to 90 days. Manitoba is the most favoured of the Prairie Provinces in amount of rainfall, which averages 22 inches a year in the inter-lake section and comes during the crop season when it can be best utilized.

Manitoba's economy has been built on its agricultural resources. Nearly 80 p.c. of its population lives in the arable area south of Lake Winnipeg and Lake Manitoba and within 100 miles of the southern boundary of the province; 36 p.c. are classed as rural dwellers. Wheat and other grain crops are of major importance but mixed farming operations with emphasis on livestock are more prevalent here than in the other Prairie Provinces. The lowland area also has some mineral deposits and yields moderate amounts of crude petroleum, salt, peat moss and gypsum, but it is the great northern area with its Precambrian rocks that contains most of the mineral wealth of the province. Noteworthy is the production from the large copper-zinc deposits at Flin Flon on the ManitobaSaskatchewan border, from the nickel-copper deposits at Lynn Lake 150 miles farther north, and from the new nickel development at Thompson in the central north, which came into production in mid-1961.

Manitoba has the greatest water power potential of the three Prairie Provinces. The heavily populated southern region is well supplied from hydro installations on the Winnipeg River and the northern resources are being developed gradually as demand for power increases in the mining areas. The northern areas also are well forested but much of the productive forest land is remote so that the forest industries, though important, are not highly developed. There are three moderate-sized pulp and paper mills in the province and several paper-converting establishments. In addition, Manitoba has valuable fisheries resources. The profusion of lakes and streams, particularly Lake Winnipeg, produces many varieties of commercial fish which are in demand on the United States market.

Winnipeg, Manitoba's capital and largest city, is the fourth largest in Canada, having, with its environs, a population of 475,989 in 1961 . In the mid- 1800 's this city, situated at the confluence of the Red and Assiniboine Rivers, was the hub of traffic which converged on it from the east and fanned out westward. Its industries developed around its agricultural resources and its importance as a railway and distribution centre and today,
although it has a wide diversity of manufacturing products, the food processing industries remain in first place and railway rolling-stock and other metal-using establishments rank high among its industries. Outside the metropolitan area of Winnipeg the province has only two cities, with populations of 12,000 and 28,000 , both of which are in the southern area. In the north, Churchill, at the end of rail on Hudson Bay, is a deepsea port from which some wheat is shipped across the Atlantic; Fort Churchill, close by, is perhaps most noted as a military station and a base for Arctic research and has a larger but transient population.

Saskatchewan.-Saskatchewan has an area of 251,700 sq. miles, approximately the same as that of Manitoba. The demarcation line between the lowlands to the south and the Canadian Shield, which crosses into Saskatchewan about the 55th parallel, continues northwest across the province although it becomes less sharply defined. Thus the southern two thirds is prairie lowland. The second step of the prairie formation stretches westward from the Manitoba Escarpment at an average altitude of 2,000 feet, its surface, covered with deep fertile soil, being exceptionally flat in some areas but elsewhere hummocky with innumerable sloughs. Another great scarp occurs about 200 miles to the west, a continuation of the Missouri Coteau which is well-marked south of the border, and west of this extends the highest of the prairie steps with an altitude of from 3,000 to 4,300 feet; in the south the Cypress Hills rise above this level. Cutting across the centre of the lowland area are the great arms of the Saskatchewan River which flow from the Rocky Mountains to Lake Winnipeg.

This prairie lowland is the great grain-producing region of Canada. Throughout most of it the growing season ranges from 80 to 100 days and the average amount of sunshine is particularly high. On the other hand, precipitation amounts to less than 20 inches a year and the area is subject to violent storms, sometimes constituting hazards to the farmer. Saskatchewan nevertheless produces about two thirds of the wheat grown in the country as well as very substantial quantities of oats and other grains. Mixed farming, with emphasis on livestock, is more prevalent in the more northerly settled areas.

Approximately half the net value of production of the province is contributed by agriculture and upon agriculture are based the main manufacturing industries. However, the most important industry in point of value is petroleum refining. The southern plains of this province produce about a quarter of Canada's crude petroleum, moderate amounts of natural gas and large quantities of coal, salt and sodium sulphate, but the greatest mineral wealth in this area will come from what is believed to be the world's largest highgrade deposit of potash which occurs at depths of from 2,800 to 3,500 feet under a large part of southern Saskatchewan. The first shipments from this deposit, which was under development for several years, were made in 1959; shipments then ceased because of production problems but resumed on a continuing basis in 1962. Metal production includes substantial quantities of copper and zinc from the Flin Flon mines straddling the Manitoba-Saskatchewan boundary in the north, which also yield moderate amounts of gold, silver, cadmium, selenium and tellurium. But in recent years the most important of the province's metals in value is the uranium taken from the large vein-type deposits on the north shore of Lake Athabasca, close to the Northwest Territories boundary.

The forests of Saskatchewan are mainly in the northern half of the province and, while they cover an area of $118,000 \mathrm{sq}$. miles, only $41,000 \mathrm{sq}$. miles are considered productive. Lumber output therefore is light and one mill contributes to Canada's production of pulp and paper. Existing hydro-electric plants are also located in the northern areas and their output is used almost exclusively for mining purposes. The major part of the province's power requirements is supplied by thermal-electric plants fuelled with coal, oil and natural gas.

Saskatchewan had a population of 925,181 in 1961 of whom 57 p.c. were rural dwellers. The urban centres, of which Regina and Saskatoon are the largest, are well dispersed over the prairie lands and serve mainly as distributing centres for their surrounding areas. Regina, the capital, in 1961 had a population of 112,141 and Saskatoon 95,526.

Alberta.-Most of Alberta's 255,285 sq. miles lie in the interior plains region. The southern part is dry, treeless prairie changing toward the north into a zone of poplar interspersed with open prairie and giving way to mixed forests.

The boundary of the province follows the 49th parallel as does that of Saskatchewan and Manitoba, but only for a distance of about 180 miles before it strikes northwestward following the ridge of the Rocky Mountains to a point close to the 55th parallel and then turns directly north. From the Saskatchewan border in the southern area the plain rises gradually from about 2,500 feet above sea level to nearly 4,000 feet as it merges into the foothills of the Rocky Mountains. This foothill area is part of the Western Cordilleran Region. The Alberta Rockies have numerous peaks of from 10,000 to 12,294 feet, all of them close to or on the British Columbia boundary.

The southern half of the province is subject in winter to cold dry air masses of continental polar air, moderated from time to time by the Chinook winds. Summers are warm with abundant sunshine but rainfall is meagre, particularly in the southwest, and is extremely variable with periodic droughts. In areas where precipitation is more precarious, large irrigation projects have been developed, taking their water supply from the rivers rising in the mountains to the west. There are altogether over half a million acres of irrigated land in Alberta.

Thus, while the prairie wheat-growing belt extends into central Alberta and this province is the second largest producer of wheat in Canada, its agricultural output is quite diversified. Cattle-raising is more important here than elsewhere on the prairies and is highly developed in the Rocky Mountain foothills, in the Cypress Hills area of the southeast and in the northern prairie region. Feed crops, vegetables and root crops are grown in the irrigated areas. It is noteworthy that permanent agricultural settlement reaches its farthest northern point in Canada in the Peace River Valley of northwestern Alberta. Although the frost-free period in this area is only about 80 days, crops are able to mature because of the long hours of daylight during the growing season.

The prairies of Canada are underlain by fuel-bearing rocks but it is in Alberta that they have become particularly productive. Coal has long been mined in many areas but while these resources continue to be productive, they are becoming less important with the development of the huge oil and gas resources of the central interior. The production from these oil and gas fields has changed the economy of this province in the past 15 years and contributed immeasurably to its activity and growth. Agriculture-based products still rank high among its manufactures but the recent emphasis has been on manufactures connected with the oil and gas industries. Industrial chemicals have made striking gains as have structural materials, the latter in consequence of the tremendous construction that has taken place in the province and elsewhere. Alberta's forests also contribute to its manufacturing output. The province has $52,569,000,000 \mathrm{cu}$. feet of accessible standing timber, almost equal to that of Quebec. The foothills of the Rockies are particularly heavily forested but lumbering is not as yet highly developed. Water power resources exist in the northern areas but are somewhat remote and present demand for electric power is supplied mainly by thermal plants.

The population of Alberta, which numbered $1,331,944$ in 1961, is concentrated in the central southern portion. The metropolitan areas of Edmonton and Calgary, both situated in the oil and gas producing areas, had populations of 337,568 and 279,062 , respectively, and thus contained between them 73 p.c. of the urban population of the province. About 37 p.c. of the total population is classed as rural.

British Columbia.-British Columbia, Canada's third largest and most westerly province, has an area of 366,255 sq. miles. It consists almost completely of a portion of the great Cordilleran system of mountains that border the Pacific Coast of South, Central and North America. Only in the northeastern corner does the interior plain region intrude. This mountainous area is made up of three parallel ranges resulting in a set of parallel linear valleys, and each range has distinctive traits.

The Rocky Mountains form the eastern frontier of the Cordillera. They present a continuous range of high wall-like ridges, cut up by glaciation into sharp peaks, knifelike edges and deep hollows, a range averaging 50 miles in width in the south and 25 miles in the north. Some of the highest peaks and most beautiful scenery on the Continent are to be found in the Canadian Rockies-dazzlingly white crests topping iron-grey or yellowred reaches of bare rock, huge screes below them with salients of dark-green forest pushing up between, narrow forested benches and deep gorges or blue-green lakes at the bottom. Many of the peaks rise to 10,000 feet or more, the highest in British Columbia being Mount Robson with an elevation of 12,972 feet. The Rockies are traversed by few passes, the most noted being Yellowhead (3,700 feet), Kicking Horse ( 5,388 feet) and Crowsnest ( 4,459 feet).

The central section is marked off from the eastern for most of its length by a sharp topographical break known as the Rocky Mountain Trench which contains the headwaters of the Kootenay, Columbia, Fraser, Peace and Liard Rivers and is one of the most remarkable of its kind. It is about 2,500 feet above sea level and averages from two to 10 miles in width for a distance of over 1,000 miles. Westward the character of the land changes considerably. On the whole, relief is lower and broader and the effects of glaciation are not as spectacular. This section consists of several ranges. Between the Cassiar Mountains in the far north and the Skeena Mountains lies the small Stikine plateau and south of the Skeena-Hazelton Ranges there opens out a wide plateau-like upland which sinks in the central part of the province to the lowlands of the Upper Fraser basin. Southward the upland is squeezed out between the Columbia and Cascade Mountains. The Columbias are a series of rather blocky massive ranges-the Cariboo, Purcell, Selkirk and Monashee Mountains-with deep troughs between in which lie the Kootenay and Arrow Lakes.

The western section consists of a triple structure made up of the Coast Range, the Inner Passage and an outer island arc. The Coast Range begins in the St. Elias Mountains of Yukon Territory. Here the loftiest peaks on the Continent, with elevations of from 18,000 to 20,000 feet, thrust up out of glistening icefields. The highest peak in British Columbia is Mount Waddington, 13,260 feet. Southward, the steep slopes of the coastal mountains are clothed with dense green forests contrasting with the steely blue of the deep fiords that pierce the shoreline. The waterways adjacent to the coast--the Georgia, Queen Charlotte and Hecate Straits-comprise the Inner Passage. This is one of the finest natural waterways in the world and provides a relatively sheltered and safe sea route from Vancouver to Alaska. The outer island arc is made up of outlying ridges that have become partially submerged under the sea, forming hilly or mountainous islands of which the Vancouver and the Queen Charlotte group are the most important, Vancouver Island has an area of 12,408 sq. miles, its surface rising steeply from a rocky coastline to heights of 7,200 feet. The Queen Charlotte mountains are lower, with individual ranges separated by deep, narrow valleys.

The climate of British Columbia is as varied as its topography, ranging from nearMediterranean in the southwestern corner to tundra on the mountain tops. As a result of the prevailing westerly winds and the warm waters of the Pacific, the main climatic characteristics of the coastal area are mild winters, warm but not hot summers and a small range of temperature. The longest average frost-free season in Canada occurs in these areas. Inland, continentality of weather increases toward the east, with much greater ranges of temperatures and much less rainfall. In fact, in some of the plateau areas of the interior almost arid conditions occur. In the northern half of the province, the whole area is characterized by long cold winters and short cool ${ }^{2}$ summers with only moderate precipitation.

British Columbia's economy is based primarily on its great forest resources. The mild climate and heavy rainfall of the coastal area encourage luxuriant growth, giving this province by far the greatest amount of accessible standing timber in Canada-estimated at over $320,000,000,000 \mathrm{cu}$. feet. Thus it holds the dominant position among the provinces in the production of wood products; indeed, four of its five leading manufacturing industries
are based on forest resour-ces-sawmills, pulp and paper mills, veneer and plywood mills and sash and door and planing mills.

The mineral resources of the province are quite diversified. The south-central area has long been famous for its large base-metal mines from which comes the country's major output of zinc and lead as well as quantities of gold, silver, antimony, cadmium, bismuth, tin, indium and tungsten. Base-metal mines also exist in the northwest and iron mines on the east coast of Vancouver Island and across the Strait on the mainland. Gypsum and barite are mined in the southcentral interior, asbestos in the northern interior and coal in several areas along the
 eastern boundary. The most recent mineral development in the province has taken place in the Peace River district close to the Alberta boundary from which area natural gas and oil are now being shipped by pipeline to Vancouver refineries. Petroleum refining has become the province's third largest industry, using mainly crude from Alberta's wells.

The prolific waters of the Pacific provide British Columbia's fishermen with large and valuable harvests. The salmon fishery is the most important, although catches of herring are heavy. Halibut, third in importance, is taken mainly farther north. Since three quarters of the annual catch of salmon is canned and herring reaches the market in the form of oil and meal, fish processing is a major industry. Most of the halibut is sent frozen to the United States market.

British Columbia ranks third among the provinces in value of manufacturing production. Its hydro-power potential is the second greatest in Canada and its installed capacity is exceeded only by those of Ontario and Quebec. This availability of power is being instrumental in diversifying the industries of the province and in promoting the establishment of such power-using industries as the large aluminum smelting facilities at Kitimat on the northeast coast and the great smelters at Trail on the southern border.

Less than 2 p.c. of the land area of British Columbia is classed as occupied agricultural land and this occurs in the southern part of Vancouver Island and in the river valleys and plateau areas of the south-central mainland. Thus, although agriculture is not of major significance to the province as a whole, it is of considerable importance in these areas. The Okanagan Valley is world famous for its fruit and the interior plateaus, especially the Cariboo region, for beef cattle. The other farming areas produce mixed crops but specialize in small fruits, vegetables and horticultural products. It is in this arable portion that the greater part of British Columbia's population exists. Of its $1,629,082$ residents in 1961, $1,113,414$ lived in 0.5 p.c. of the total area, in the southwest corner, and 85 p.c. lived across the south, within about a hundred miles of the United States boundary. Vancouver with its environs had a population of 790,165 ; it is the third largest city in Canada and is a rapidly growing industrial complex. Victoria, the capital of the province, located on the southern tip of Vancouver Island, had a population of 154,152.

Yukon Territory.-North and slightly west of British Columbia lies Yukon Territory, a 207,076-sq. mile triangular area of plateaus and mountain ranges, cut off from the Pacific by the Coast and St. Elias Mountains, bounded on the northeast by the Northwest Territories and on the west by the United States State of Alaska, its only seacoast extending for a hundred miles along the Arctic Ocean west of the Mackenzie River delta. Between the Coast Range on the west and the Mackenzie Mountains Range on the east lies a plateau of rough, irregularly rolling upland having an average elevation of 4,000 feet but with higher areas. Cutting through mountains and plateaus are numerous river valleys. The highest points are in the southwestern corner where many peaks of the St. Elias Mountains reach heights of over 10,000 feet. Mount Logan, the highest in Canada, has an elevation of 19,850 feet.

The whole region is north of latitude $60^{\circ}$ and part is beyond the Arctic Circle. In winter, even in the south, the days are short with no effective sunshine but in summer long hours of daylight promote rapid growth where suitable soil is available. Although the area is subject to wide variations in temperature, winters are remarkably mild and periods of intense cold are of short duration.

The major production of this area comes from its mines in the west-central regiongold in the Dawson area and silver, lead, zinc and cadmium in the Mayo district. Nickel and copper are known to exist at Kluane Lake and in the Pelly Mountains, and large iron ore deposits recently discovered in the Snake River area not far from the potentially oil-and-gas-rich Peel Plateau make the Yukon a potentially rich territory. The construction of the Alaska Highway across the southern part of the Territory and its later northward extension now provides a transport route through the central region linked with British Columbia and Alberta distribution centres.

The Yukon is fairly well forested in the valleys of the mountainous areas but cutting is for local use only. There are extensive water power resources on the Yukon River and several small installations are of particular importance in the development of the mining areas.

The population of the Yukon numbered 14,628 in 1961, 5,031 of them living in Whitehorse, the main urban centre, 881 in Dawson and 342 in Mayo.

Northwest Territories.-The Northwest Territories comprise all Canadian territory north of the 60th parallel of latitude with the exception of Yukon Territory and the northwestern tip of Quebec, an area of $1,304,903 \mathrm{sq}$. miles. Politically, the Territories are divided into three Districts-the Mackenzie District, which includes all the mainland from the Mackenzie River valley on the west to a north-south line following the boundary line between Saskatchewan and Manitoba; the Keewatin District, including the remainder of the mainland and the islands at the mouth of Hudson Bay; and the District of Franklin, including all the Arctic Islands north of the mainland. This vast area, which is more than one third of the total area of Canada, is one of contrast and extremes in topographical characteristics, flora and fauna, and climate. East of the mountain fringe along the Yukon Territory boundary, the mainland portion consists of plains, high in the west and sloping gently to Hudson Bay on the east and to the Arctic Archipelago on the northeast. In the Archipelago, a high mountain range lies in a general north-south direction across Baffin, Devon and Ellesmere Islands with peaks rising above 9,000 feet.

The Interior Plains of the central Continent extend northeastward through the Northwest Territories to the Arctic Ocean and beyond throughout the western islands of the Archipelago with scattered remnants eastward. Across the whole of the low-lying mainland area flows the great Mackenzie River, draining Great Slave Lake and emptying into the Arctic Ocean, a distance of 2,635 miles. The northern limit of tree growth follows a line running from the mouth of the Mackenzie River diagonally southeast to Hudson Bay in northern Manitoba so that the whole northeastern portion of the mainland is treeless tundra studded with countless lakes, swamps and muskeg and having no major drainage system.

Only the southern part of the Mackenzie District lies outside the permafrost area and in this region the summers have about three months with temperatures over $50^{\circ} \mathrm{F}$.; throughout the Mackenzie basin the frost-free period varies from 50 to 100 days. Soil and climatic conditions in some areas are suitable to agricultural pursuits but very light precipitation places a check on such operations. Recently, a Federal Government soil survey being conducted to establish the agricultural possibilities of the northern areas has located a large amount of arable land along a 200 -mile stretch of the Liard River which has added almost a million acres to the total arable land of Canada. This land is best suited for livestock farming with some feed production, although garden crops may also be grown.

On the mainland north of the treeline, freezing temperatures may occur during any month of the year and the winters are long and bitterly cold. On the other hand, the climates of the Archipelago are moderated by the sea so that the extremes are not as severe as they would be in a continental area of the same latitude. Temperatures are generally below zero for six months or more but occasional mild periods occur during the winter, particularly in the western Arctic. Summers are short and cool throughout. The Arctic Archipelago is one of the driest regions in the world and snowfall is light. Much of the ground is swept bare all winter but deep drifts are formed in ravines and in the lee of obstacles.

Although this large area is considered to have great mineral potential, the only production at present includes uranium, radium and gold from the east coast of Great Bear Lake, gold from the Yellowknife area north of Great Slave Lake and a small amount of
oil from the Norman Wells area on the Mackenzie River. In the western Arctic islands active exploration for oil and gas is taking place and recently a large deposit of exceptionally high-grade iron ore has been located on northern Baffin Island.

The fur and fisheries resources of the area are the mainstay of the native populations and are exploited commercially to some extent. Great Slave Lake yields a fair amount of whitefish and lake trout which is sent south in fresh form and about 5 p.c. of the fur pelts taken in Canada come from the Northwest Territories.

In 1961 only 22,998 people lived in this vast area, over 14,000 of them in the Mackenzie River district. Yellowknife on the north shore of Great Slave Lake and Hay River on the south shore had populations of 3,245 and 1,338 , respectively. These are the only centres linked by road with Alberta points to the south. In the Eastern Arctic, the best known centre and focal point for operations in the area is Frobisher Bay. Of the total population, 7,977 were Eskimos, most of them scattered along the mainland coast and the west coast of Baffin Island.

## Subsection 2.-Inland Waters

The inland waters of Canada (not including saltwater areas that are a part of Canada) are extensive, constituting about 7.6 p.c. of the total area of the country. Aside from their basic essentiality to the support of life, Canada's fast-flowing rivers and chains of lakes have had a great bearing on the development of the country and on its economic and social wellbeing. In the early days of exploration and settlement, they were the avenues of transportation and often the source of subsistence. These functions have now diminished in importance; with the exception of the St. Lawrence and certain water routes in the interior and the Far North, the rivers and lakes have assumed other roles in the domestic, industrial, agricultural and recreational life of the people. They still serve as efficient carriers of pulpwood from the forests to the mills and their waters are harnessed to provide power for industry or are dammed and diverted to irrigate and bring life to otherwise waste land.

The inland waters of Canada are best studied by segregating the main drainage basins. The Atlantic drainage basin is the most important, being dominated by the Great Lakes-St. Lawrence system which drains an area of approximately 678,000 sq. miles and forms an unequalled navigable inland waterway through a region rich in natural and industrial resources. From Duluth, Minn., at the head of Lake Superior to Belle Isle at the entrance to the Gulf of St. Lawrence the distance is 2,280 miles. The entire drainage area to the north of the St. Lawrence and the Great Lakes is occupied by the southern fringe of the Canadian Shield-a rugged, rocky, plateau region from which tributary rivers tumble over the edge of the Shield. These rivers, as well as the St. Lawrence itself, provide the electric power necessary to operate the great industries of the area. South of the St. Lawrence, the smaller rivers are important locally. The St. John, for instance, drains a fertile area and provides most of New Brunswick's hydro power.

The Hudson Bay drainage basin, though the largest in area, is the least important economically. Only the Nelson and Churchill Rivers have power potential within economical distance of settled areas. The two main branches of the Saskatchewan River, tributary to the Nelson, drain one of Canada's great agricultural regions and are now the bases of important irrigation projects.

The Arctic drainage basin is dominated by the Mackenzie, one of the world's longest rivers, which flows 2,635 miles from the head of the Finlay River to the Arctic Ocean and drains an area in the three westernmost provinces of approximately 700,000 sq. miles. Except for a 16-mile portage in Alberta, it is possible for steamboats to navigate from the end of steel at Waterways on the Athabasca River to the mouth of the Mackenzie, a distance of 1,700 miles.

The rivers of the Pacific basin rise in the mountains of the Cordilleran Region and flow to the Pacific Ocean over tortuous, precipitous courses, rushing through steep canyons and tumbling over innumerable falls and rapids. They provide power for large hydro developments and in season swarm with salmon returning inland to their spawning grounds. The major rivers of the basin are the Fraser which rises in the Rocky Mountains and toward its mouth flows through a rich agricultural area, the Columbia which is an international river with a total fall of 2,650 feet during its course and has thus a tremendous power potential, and the Yukon River which is also an international river but, though the largest on the Pacific slope, is at present relatively unimportant economically.

Table 3 lists the principal rivers of Canada and their tributaries. The tributaries and sub-tributaries are indicated by indention of names; thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.
3.-Lengths of Principal Rivers and Their Tributaries

## 3.-Lengths of Principal Rivers and Their Tributaries-concluded

| Drainage Basin and River | Length | Drainage Basin and River | Length |
| :---: | :---: | :---: | :---: |
|  | miles |  | miles |
| Flowing into the Pacific Ocean-concluded |  | Flowing into the Arctic Ocean |  |
| Yukon (mouth to head of Nisutlin)-concluded |  | Mackenzie (to head of Finlay). | 2,635 |
| Yukon (Int. Boundary to head of Nisutlin)- |  | Peace (to head of Finlay). | 1,195 |
|  |  | Finlay............ | 250 |
| Macmillan | 200 | Smoky Little Smoky | 245 |
| White.... | 185 | Parsnip....... | 185 |
| Columbia (total) | 1,150 | Athabasca. | 765 |
| Columbia (in Canada) | 459 | Pembina. | 210 |

| Stikine........................................... | 335 | Coppermine. | 525 |
| Alsek. | 250 | Anderson. | 430 |
| Nass. | 236 | Horton. | 275 |

The outstanding lakes of Canada are the Great Lakes, although only parts of these are in Canadian territory. The International Boundary between Canada and the United States passes through Lakes Superior, Huron, St. Clair, Erie and Ontario. Details are given in Table 4.

## 4.-Elevations, Areas and Depths of the Great Lakes

| Lake | Elevation Above Sea Level | Length | Breadth | $\underset{\text { Depth }}{\text { Maximum }}$ | Total Area | Area on Canadian Side of Boundary |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | ft. | miles | miles | ft. | sq. miles | sq. miles |
| Superior........... | 602.23 | 383 | 160 | 1,302 | 32,483 | 11,524 |
| Michigan (U.S.A.). | 580.77 | 321 | 118 | 923 | 22,400 | - |
| Huron.. | 580.77 | 247 | 101 | 750 | 23,860 | 15,353 |
| St. Clair.. | 575.30 | 26 | 24 | 23 | 432 | 270 |
| Erie.. | 572.40 | 241 | 57 | 210 | 9,889 | 4,912 |
| Ontario.. | 245.88 | 193 | 53 | 774 | 7,313 | 3,849 |

There are no tides in the Great Lakes although there is considerable variation in water levels caused by strong winds.

Other large lakes of Canada, ranging in area from 9,500 to 12,300 sq. miles, are Lake Winnipeg, Great Slave Lake and Great Bear Lake. Apart from these, notable for size, are innumerable lakes scattered over that major portion of Canada lying within the Canadian Shield. In an area of 6,094 sq. miles, accurately mapped, south and east of Lake Winnipeg, there are 3,000 lakes. In an area of 5,294 sq. miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

## 5.-Elevations and Areas of Principal Lakes, by Province

Nors.-Areas given are for mean water levels. For those reservoirs and lakes for which two elevations are given, HW means high water and LW low water.

| Province and Lake | Elevation | Area | Province and Lake | Elevation | Area |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Subsection 3.-Coastal Waters*

The coastline of Canada, one of the longest of any country in the world, comprises the following estimated milages:-

## Mainland-

Atlantic, 6,110; Pacific, 1,580; Hudson Strait, 1,245; Hudson Bay, 3,155; Arctic, 5,770; total, 17,860 miles.

## Islands-

Atlantic, 8,680; Pacific, 3,980; Hudson Strait, 60; Hudson Bay, 2,305; Arctic, 26,785; total, 41,810 miles.

[^2]A comprehensive description of the coastal waters of Canada would require information from sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea floor, and the scope of the information presented here is therefore restricted to this and a few salient features of the Atlantic, Arctic and Pacific marginal seas surrounding Canada.

Atlantic.-Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged continental shelf, protruding seaward from the shore, effects the transition from continental to oceanic conditions. This shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 120 to 50 miles (at the entrance of Hudson Strait), and northward it merges with that of the Arctic Ocean. The outer edge of the shelf, known as the continental shoulder, is of varying depths of from 100 to 200 fathoms before the shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic continental shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia the 40 -fathom line lies at an average of 12 miles from the shore and constitutes the danger line for coastal shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the shelf.

The main topographical features of the Atlantic marginal sea floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shore banks washes away enormous masses that are deposited over the surrounding sea floor. The topography of the continental sea floor is therefore constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Hudson Bay and Hudson Strait bite deeply into the Continent. Hudson Bay is an inland sea 250,000 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms.

Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea floor are indicated but, except in inshore waters, few navigation hazards have been located.

Arctic.-The submerged plateau extending from the northern coast of North America is a major part of the great continental shelf, surrounding the Arctic Ocean, on which lie all the Arctic islands of Canada, Greenland, and most of the Arctic islands of Europe and Asia. This shelf is most uniformly developed north of Siberia, where it is about 500 miles wide; north of North America it surrounds the western islands of the Archipelago and extends 50 to 300 miles seaward from the outermost islands.

The topography of the floor of the submerged part of this continental margin is only partly explored but sufficient has been charted to indicate, in common with continental shelves throughout the world, an abrupt break at the oceanward edge to the relatively steep declivity of the continental slope. This slope borders the western side of the Queen Elizabeth Islands and, from it, deep well-developed troughs enter between the groups of islands. Sills across Davis Strait, Barrow Strait and other channels, on which the depth is about 200 fathoms, interrupt the network of deep troughs and separate the Arctic basin from the Atlantic.

That part of the continental shelf bordering the Arctic Ocean in the vicinity of the Queen Elizabeth Islands is currently the subject of extensive study. Since 1959 a party
based at the joint Canadian-United States weather station at Isachsen on Ellef Ringnes Island has been investigating the oceanography, hydrography, submarine geology, gravity, geomagnetic features and crustal seismic properties of the continental shelf area, carrying out physiographic, hydrological, permafrost and glaciological studies on the islands of the region, mapping the nature, distribution and movement of the sea ice, and running basic topographic control surveys. This work is continuing, with a party in the field from March to September each year, and should eventually cover all of the unmapped parts of the shelf between Greenland and Alaska. The region between, and offshore from, Meighen Island and Borden Island has received the first detailed study; the work is being extended to the southwest toward Mould Bay on Prince Patrick Island. The investigations should ultimately yield detailed and accurate information on the physical and chemical composition and dynamic characteristics of the Arctic oceanic waters, the bathymetry of the continental shelf and slope and the straits and sounds of the Archipelago; the topography and structure of the shelf and the nature of its sediments, its underlying rocks and possible mineral resources; the structure and physical characteristics of the northern edge of the North American continental platform and its contact with the Arctic Ocean basin; the factors controlling the development of the Arctic landscape and the evolution of the islands; and the behaviour of sea level, glaciers, sea ice and climate in the recent geological past.

Pacific.-The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief-a repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coast for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet-strewn coast, the continental shelf extends from 50 to 100 sea miles to its oceanward limit where depths of about 200 fathoms are found. There the sea floor drops rapidly to the Pacific deeps, parts of the western slopes of Vancouver Island and the Queen Charlotte Islands lying only four miles and one mile, respectively, from the edge of the declivity. These great detached land masses are the dominant features of the Pacific marginal sea. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating cautious navigation.

## Subsection 4.-Islands

The largest islands of Canada are in the north and all experience an Arctic climate. The northern group extends from the islands in James Bay to Ellesmere Island which reaches $83^{\circ} 07^{\prime} \mathrm{N}$. Those in the District of Franklin lie north of the mainland of Canada and are generally referred to as the Canadian Arctic Archipelago; those in the extreme north-lying north of the M'Clure Strait-Viscount Melville Sound-Barrow Strait-Lancaster Sound water passage-are known as the Queen Elizabeth Islands.

On the West Coast, Vancouver Island and the Queen Charlotte Islands are the largest and the most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick, and Anticosti Island and the Magdalen group included in the Province of Quebec are the largest islands off the East Coast.

Notable islands of the inland waters include Manitoulin Island ( 1,068 sq. miles in area) lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

## 6.-Areas of Principal Islands, by Region

## Subsection 5.-Mountains and Other Heights

The predominant geographical feature in Canada is the Great Cordilleran Mountain System which contains many peaks over 10,000 feet in height. The highest peak in Canada is Mount Logan in the St. Elias Mountains of Yukon Territory, which rises 19,850 feet above sea level. The highest elevations in all parts of the country are shown in Table 7 in feet above mean sea level.

## 7.-Principal Heights in each Province and Territory

Note.-Certain peaks, indicated by an asterisk (*), form part of the line of demarcation between political subdivisions. Although their bases technically form part of both areas, they are listed only under one to avoid duplication.

| Province and Height | Elevation | Province and Height | Elevation |

[^3]
## 7.-Principal Heights in each Province and Territory-concluded

[^4]
## Section 2.-Geology

North America comprises six main natural regions: the Canadian Shield, a vast area of ancient rocks that is mainly in Canada; the Interior Plains and Lowlands, the largest of which extends throughout the mid-Continent from the Gulf of Mexico to the Arctic Ocean; the Appalachian Region, mainly in the United States but also forming an important part of Eastern Canada; the Cordilleran Region, extending along the entire west coast of the Continent; the Atlantic Coastal Plain along the eastern seaboard of the United States; and the Innuitian Region, a mountainous belt in the Arctic Archipelago. Canada includes parts of four of these regions and all of the Innuitian Region, but none of the Atlantic Coastal Plain.

These natural regions are physiographic as well as geological because the ages, kinds and structures of the underlying rocks determine the natures of the land surfaces and the type and extent of the resources upon which man relies for his livelihood and utilizes for his economic advancement. This aspect is discussed in Subsection 1 of Section 1 dealing with the main physical and economic features of the provinces and territories. Brief sketches of the individual geological regions together with an outline of geological processes are given in the 1961 Year Book at pp. 5-14; this article is summarized in the 1962 edition at pp. 1-5. Further information is supplied by Geology, and Economic Minerals of Canada ( $\$ 2$, including Map 1045A) and Prospecting in Canada; the latter also contains chapters on the principles of geology and on minerals and rocks. The Geological Map of Canada (1045A, 50 cents) and Canada, Principal Mining Areas (900A) are also recommended. Map 900A is revised annually; one copy is sent free to residents of Canada and additional copies are 25 cents each. These publications may be ordered from the Director, Geological Survey of Canada,* together with lists of reports and maps on specific topics and areas, for each province. Other publications are available from provincial mines departments.

## PART II.-LAND RESOURCES AND PUBLIC LANDS

## Section 1.-Land Resources

Information currently available regarding Canada's vast land resources is shown in Table 1, where the land area is classified as occupied agricultural, forested and 'other' land, the latter including urban land, road allowances, grass and brush land and all waste land such as open muskeg, swamp and rock. Soil surveys now under way by the Department of Agriculture will make it possible in the future to estimate the amount of arable land Canada possesses and, as provincial inventories are completed, more information will be available regarding land now non-forested but not productive in an agricultural sense. The Department of Forestry estimates that about 48 p.c. of the land area of Canada is forested and, according to the Census of 1961, less than 8 p.c. is classed as occupied farm land. A great part of the $1,603,821$ sq. miles of 'other' land is located in the Yukon and Northwest Territories which together have a land area of $1,458,784$ sq. miles. The occupied farm land in these Territories is practically nil and the forested area is estimated at 275,800 sq. miles.

[^5]
## 1.-Land Area classified as Occupied Agricultural or Forested, by Province

Nors.-Figures for occupied agricultural land were obtained from the 1961 Census; areas of forested land were compiled by the Department of Forestry from estimates supplied by the Forestry Service in each province.

${ }^{1}$ Includes Gatineau Park ( 97 sq . miles) and Quebec Battlefields Park ( 0.36 sq. mile) which are under federal jurisdiction but are not technically National Parks. ${ }^{2}$ Less than one square mile a. miles set aside by Order in Council as native game preserves in which only Indian and $\mathrm{F}^{3}$ Includes 952,849 but which are not regarded as National Parks.

4 Includes that part of Wood Buffalo Park in Alberta ( 13,675 sq. miles); this park, although established under the National Parks Act, is administered by the Northern Administration Branch, Department of Northern Affairs and National Resources.
${ }^{5}$ That part of Wood Buffalo Park in N.W.T.
${ }^{6} \mathrm{~A}$ forest experiment area of 25 sq . miles is included in National Parks figure.

Federal Public Lands.-Public lands under the administration of the Federal Government comprise lands in the Northwest Territories including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, Ordnance and Admiralty Lands, National Parks and National Historic Sites, Forest Experiment Stations, Experimental Farms, Indian reserves and, in general, all public lands held by the several departments of the Federal Government for various purposes connected with federal administration (see Table 2). These lands are administered under the Territorial Lands Act (RSC 1952, c. 263) and the Public Lands Grants Act (RSC 1952, c. 224) which became effective June 1, 1950 and replaced previous legislation.

The largest areas under federal jurisdiction are in the Northwest Territories and Yukon Territory where only 80 sq. miles of a total area of $1,511,979$ sq. miles are privately owned. This part of the national domain, with the exception of the islands in Hudson Bay and James Bay, is all north of the 60th parallel of latitude and occupies about 40 p.c. of the surface of Canada. It is under the administration of the Northern Administration Branch of the Department of Northern Affairs and National Resources.

Provincial Public Lands.-Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the provincial governments. In 1930 the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan and Alberta and of sections of British Columbia to the respective governments, and all unalienated lands in the Province of Newfoundland, except those administered by the Federal Government, became provincial public lands under the Terms of Union on Mar. 31, 1949. All land in the Province of Prince Edward Island has been alienated except 126 sq. miles under federal or provincial administration.

Information regarding provincial public lands may be obtained from the respective provinces. (See the Directory of Sources of Official Information, Chapter XXVI, under "Lands".)

## Subsection 1.-National Parks

The National Parks of Canada are areas selected for their natural or historic importance which are to be preserved for all time for the "benefit, education and enjoyment of the people of Canada". Through the wisdom of farsighted legislators more than 75 years ago, Canada has today a system of National Parks that compares favourably with that of any other country. Initially, an area of 10 sq . miles around mineral hot springs on Sulphur Mountain in Alberta was reserved "from sale, or settlement or squatting" for the benefit of the nation. Two years later-in 1887-the Rocky Mountain Park Act established the first National Park (now Banff) and, since then, other areas across the country have been so preserved. These protected areas, which now cover more than 29,000 sq. miles, are administered by the National Parks Branch of the Department of Northern Affairs and Natịonal Resources. They are classified as: National Parks-natural wilderness areas set apart for preservation beqause of the national importance of their flora, fauna and geological features; and National Historic Parks and Sites-sites selected as of national significance in the, colourful history of the nation.

Fine specimens of plains and wood bison, prong-horned antelope and whooping crane survive today because of the protection afforded them within National Parks. Although hunting is prohibited, angling is permitted in all the parks under regulation as to seasons, bag limits and licences. Nature trails have been set out in most parks and the interpretation of the natural features of each park is made available to the visitor through Park

Naturalists. Park Wardens, supervised by Park Superintendents, are responsible for the various districts of each park and maintain constant vigilance for the safety of their areas and of visitors. Various types of accommodation are available ranging from primitive campgrounds to luxury hotels. The camping facilities are provided by the Park Service but private accommodations are operated by lessees of such establishments.

National Historic Parks, declared of importance in the history of Canada upon advice of the Historic Sites and Monuments Board of Canada, include military, fur-trade and Mounted Police forts, houses of historic interest, and examples of outstanding earlyCanadian architecture. Some of the buildings and their surroundings have been partially restored and others have been preserved as they were found; many contain museums. In addition, more than 570 sites have been marked by official tablets commemorating historic events in the life of the nation.

## 3.-Location, Year Established, Area and Characteristics of National Parks and National Historic Parks

| Park | Location | Year Established | Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | sq. miles |  |
| National Parks |  |  |  |  |
| Terra Nova............ | On Bonavista Bay, Newfoundland, 205 miles north of St. John's. | 1957 | 153.0 | Maritime area now under development; rocky headlands, wooded areas with abundant wildlife, off-shore and freshwater fishing. Serviced campground and cabin accommodation. |
| Prince Edward Island.. | North shore of Prince Edward Island. | 1937 | 7.0 | Strip 25 miles long on shores of the Gulf of St. Lawrence. Recreational area, fine bathing beaches. Accessible by highway. Hotel and cabin accommodation. Serviced campgrounds. |
| Cape Breton Highlands. | Northern part of Cape Breton Island, N.S. | 1936 | 367.0 | Rugged Atlantic coastline with mountainous background. Fine seascapes. Recreational opportunities. Hotel and cabin accommodation. Serviced campgrounds. |
| Fundy................ | On Bay of Fundy between Moncton and Saint John in New Brunswick. | 1948 | 79.5 | Delightful recreational area. Forested region, wildlife sanctuary, rugged terrain. Cabin accommodation. Serviced campgrounds. |
| Georgian Bay Islands.. | In Georgian Bay, north of Midland, Ont. | 1929 | 5.4 | Recreational and camping area. Unique pillars on Flowerpot Island. Accessible by boat from nearby mainland points. Serviced and unserviced campgrounds on Beausoleil Island. |
| Point Pelee............. | On Lake Erie in southwestern Ontario. | 1918 | 6.0 | Wildlife sanctuary. Remarkable beaches, southern flora. Resting place for migratory birds. Accessible by highway. Serviced campground. |
| St. Lawrence Islands... | In St. Lawrence River between Brockville and Kingston, Ont. | 1914 | $\underset{\text { (acres) }}{260.0}$ | Mainland area and 14 islands among the Thousand Islands. Recreational and camping area. Accessible by highway; by boat from nearby mainland points. |
| Riding Mountain....... | Southwestern Manitoba, west of Lake Winnipeg. | 1929 | 1,148.0 | Wildlife sanctuary on summit of escarpment. Fine lakes. Accessible by highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds. |
| Prince Albert........... | Central Saskatchewan, north of Prince Albert. | 1927 | 1,496.0 | Forested region dotted with lakes and interlaced with streams. Summer recreational area. Accessible by highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds. |

## 3.-Location, Year Established, Area and Characteristics of National Parks and National Historic Parks-continued

| Park | Location | Year Established | Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
| National Parksconcluded |  |  | sq. miles |  |
| Banff.................. | Western Alberta, on east slope of Rockies. | 1885 | 2,564.0 | Magnificent scenic area; noted resorts, Banff and Lake Louise. Mineral hot springs: summer and winter sports. Accessible by rail and highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds. |
| Elk Island............. | Central Alberta, near Edmonton. | 1913 | 75.0 | Fenced preserve containing large herd of buffalo; also deer, elk and moose. Popular recreational area. Accessible by highway. Cabin accommodation and serviced campground. |
| Jasper.................. | Western Alberta, on east slope of Rockies. | 1907 | 4,200.0 | Mountainous area and noted wildlife sanctuary. Majestic peaks, icefields, beautiful lakes and famous resort, Jasper. Mineral hot springs, summer and winter sports. Accessible by rail and highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds. |
| Waterton Lakes........ | Southern Alberta, adjoining Glacier Park in Montana, U.S.A. | 1895 | 203.0 | Canadian section, Waterton-Glacier International Peace Park. Mountainous area with spectacular peaks and beautiful lakes. Accessible by highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds. |
| Glacier................. | Southeastern British Columbia, on summit of the Selkirk Range. | 1886 | 521.0 | Superb alpine region, towering peaks, glaciers and forests. Climbing, skiing, camping. Visitor accommodation in development stage. |
| Kootenay.............. | Southeastern British Columbia, on west slope of Rockies. | 1920 | 543.0 | Includes Vermilion-Sinclair section of Banff-Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and cabin accommodation. Serviced and unserviced campgrounds. |
| Mount Revelstoke...... | Southeastern British Columbia, on west slope of Selkirks. | 1914 | 100.0 | Rolling mountain-top plateau. Colourful alpine meadows. Accessible by secondary highway. Summer accommodation in Park. Championship ski runs and ski jump. Unserviced campgrounds. |
| Yoho.................. | Eastern British Columbia, on west slope of Rockies. | 1886 | 507.0 | Lofty peaks, magnificent waterfalls, colourful lakes. Yoho and Kicking Horse Valleys. Accessible by rail and highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds. |
| Wood Buffalo'......... | Partly in Alberta and partly in Northwest Territories, between Athabasca and Slave Rivers. | 1922 | 17,300.0 | Immense region of forests and open plains. Home of largest remaining herds of plains bison and wood bison on the Continent. Other wildlife abundant. |
| National Historic Parks |  |  | acres |  |
| Signal Hill............. | St. John's, Nfld............ | 1958 | 243.4 | Location of military installations and site of operations and battles in 1762. Cabot Tower. |
| Fort Amherst.......... | Prince Edward Island, near Rocky Point. | 1959 | 222.0 | Remaining earthworks of British fort built after 1758. |

[^6]
## 3.-Location, Year Established, Area and Characteristics of National Parks and National Historic Parks-concluded

| Park | Location | Year <br> Estab- <br> lished | Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | acres |  |
| National Historic Parks-concluded |  |  |  |  |
| Fort Anne.. | Nova Scotia, at Annapolis Royal. | 1917 | 31.0 | Site of French fort first built about 1635, finally captured and occupied by British in 1710. Museum and well-preserved earthworks. |
| Fortress of Louisbourg. | Cape Breton Island, N.S., 25 miles from Sydney. | 1941 | 13,000.0 | Ruins of walled city erected by the French, 1713-58. Interesting excavations. Museum. |
| Halifax Citadel......... | Halifax, N.S............. | 1956 | 36.9 | Defence post constructed in 1820's and in 1850's. Museums. |
| Port Royal............. | Port Royal, N.S., 8 miles from Annapolis Royal. | 1941 | 20.5 | Restoration of "Habitation"-first fort built in 1605 by Champlain and DeMonts. |
| Alexander Graham Bell | Baddeck, N.S............ | 1955 | 14.0 | Museum contains mechanical and documentary records of research by the inventor. |
| Grand Pre............. | Grand Pré, N.S.......... | 1957 | 14.0 | Commemorates the story of the Acadians and the New England Planters. Museum. |
| Fort Beausejour........ | New Brunswick, near Sackville. | 1926 | 81.3 | Site of French fort erected in mid-1700's. Museum. |
| Fort Chambly......... | Chambly, Que............ | 1941 | 2.5 | Original French fort built on Richelieu River in 1665 was burned. Present fort built by English in 1709-11. Museum. |
| Fort Lennox............ | Île aux Noix, Que., near St. Paul. | 1941 | 210.0 | Original fort, ille aux Noix, built by French in 1759. Fort Lennox built by English in 1820's. |
| Sir Wilfrid Laurier's Birthplace. | St. Lin, Que.............. | 1941 | 1.0 | Original house containing furniture of the period. |
| Fort Malden........... | Amherstburg, Ont......... | 1941 | 8.0 | Site of defence post built 1797-99. Museums. |
| Fort Wellington........ | Prescott, Ont.............. | 1941 | 8.5 | Defence post built 1812-13. Museum. |
| Woodside............. | Kitchener, Ont............ | 1954 | 12.0 | Boyhood home of the Rt. Hon. William Lyon Mackenzie King, former Prime Minister of Canada. |
| Fort Prince of Wales... | Northern Manitoba, near Churchill. | 1941 | 50.0 | Ruins of fort built 1733-71 to secure control of Hudson Bay for England. |
| Lower Fort Garry...... | Manitoba, 20 miles north of Winnipeg. | 1951 | 13.0 | Stone-walled fort built by the Hudson's Bay Company between 1831 and 1839. |
| Batoche Rectory....... | Saskatchewan, near Duck Lake. | 1954 | 1.3 | Scene of Northwest Rebellion, 1885. Ancient rectory and adjoining Middleton's trenches. Museum. |
| Fort Battleford........ | Saskatchewan, 4 miles south of North Battleford. | 1951 | 36.7 | North West Mounted Police post built in 1876. Museum. |
| Fort Langley........... | Fort Langley, B.C........ | 1958 | 9.0 | Partially restored fort. First permanent British settlement in British Columbia. Museum. |
| Fort Rodd Hill........ | Esquimalt, B.C........... | 1962 | 44.4 | Extensive 19th century stone and concrete coastal fortifications. |

Evidence of the increasing attraction of Canada's National Parks and National Historic Parks is the growing numbers of visitors as shown in Table 4.

## 4.-Visitors to National Parks and National Historic Parks, Years Ended Mar. 31, 1960-63

## Subsection 2.-Provincial Parks

Most of the provincial governments of Canada have established parks within their boundaries. Some of these, particularly in Quebec and Ontario, are wilderness areas set aside in order that some portions of the country might be retained in their natural state without change brought about by the hand of man. Most of them, however, are smaller areas of exceptional scenic or other interest which are easily accessible and are equipped
or slated for future development as recreational parks with camping and picnic facilities. The more important parks in each province are mentioned briefly in the following paragraphs.

Newfoundland.-There are 84 sq. miles of provincial parkland in Newfoundland. Fifteen rest parks and camping parks and three regional parks are located along the TransCanada Highway, the rest and camping parks containing about 100 acres each and the regional parks averaging about 8 sq. miles in size. Subject to topographical and other conditions favourable to each location, rest parks are spaced 50 miles apart and camping parks are separated by distances of 100 miles. Two larger areas, 42 sq. miles on the west coast known as Serpentine Park and 16 sq. miles in central Newfoundland known as Pitts Pond Park, are undeveloped.

Prince Edward Island.-Eighteen areas totalling 250 acres have been developed as provincial parks: Strathgartney Park, a 40 -acre tract of land at Churchill on the TransCanada Highway between Charlottetown and Borden, is an excellent picnic site and camping ground with its hardwood groves, fresh spring water and beautiful view over West River and the surrounding country; Lord Selkirk Park, an area of 30 acres at Eldon, is of historic interest in that it contains an old French cemetery and marks the spot on the shoreline where Lord Selkirk landed; Brudenell River Park, comprising 80 acres at Roseneath, has a considerable area of woodland and runs to the shore of the Brudenell River; Jacques Cartier Park, an area of 13 acres under development at Kildare Beach four miles from Alberton, is of historic significance as the place where Jacques Cartier first landed on Prince Edward Island; Green Park, 27 acres of land under development on the Trout River, is an attractive combination of land, trees and water and is also of historic interest as one of the oldest shipbuilding centres in the province. Several small parks have been developed or are under development. The parks are maintained by the Department of Industry and Natural Resources.

Nova Scotia.-The Department of Lands and Forests of Nova Scotia operates 13 small parks scattered throughout the province, some of which are equipped for camping and picnicking and others for picnicking only. The Department also operates the Provincial Wildlife Park at Shubenacadie, a 30 -acre tract of land maintained in its natural state, as far as is consistent with the need for providing food and protection for the animals and birds that are its main attraction.

A master plan has been prepared of theoretically desirable park locations in the province, taking into consideration the need for roadside facilities, regional picnic parks and camping grounds. Geographic location, population density, volume of traffic and aesthetic features are being evaluated for each site. Roadside table sites, formerly administered by the Department of Highways, are being incorporated into this provincial scheme and will be operated according to provincial park standards. Many of the existing sites will be retained and improved, some will be retained on a temporary basis only and unsuitable sites will be discontinued. The provincial parks program will require about five years of development work for completion.

New Brunswick.-The Department of Lands and Mines operates picnic, campground and beach site parks throughout the province, ranging in size from one to 135 acres. There are 54 of these small parks, most of them adjacent to or accessible from main trunk roads. All sites contain such basic facilities as tables, some form of toilet facility and a potable water supply but in the larger camping grounds and trailer parks the facilities are much more elaborate.

Because of the increasing demands for recreational facilities, the Department is carrying out a program of improvement and expansion of established sites and adding new parks in previously undeveloped areas. There is no entrance fee charged for the use of the smaller parks but at ten of the larger sites a daily camping fee of 50 cents or $\$ 1$ is required.

The Department maintains a Game Farm at Magnetic Hill near Moncton where various species of wildlife to be found in the province are displayed.

Quebec.-The Province of Quebec has established six provincial parks and 16 fish and game reserves. Four of the park areas are quite extensive. La Vérendrye Park, 140 miles northwest of Montreal, has an area of 4,953 sq. miles; Laurentide Park, 30 miles north of Quebec City, is 3,613 sq. miles in extent; Mont Tremblant Park, 80 miles north of Montreal, 1,223 sq. miles; and Gaspesian Park, in the Gaspe Peninsula, 514 sq. miles. Mont Orford Park, situated 15 miles west of Sherbrooke, has an area of 16 sq. miles and Deux Montagnes Park, near Oka, 1.5 sq. miles.

Fish and Game Reserves together occupy 41,166 sq. miles.* The Chibougamau Reserve, the Mistassini Reserve and the Assinica Reserve, all northwest of Lake St. John, have areas of $3,400,5,200$ and 3,850 sq. miles, respectively, and farther north is the James Bay Reserve with an area of 25,000 sq. miles. The Aiguebelle Reserve in Abitibi County has an area of 100 sq. miles, the Baie Comeau and Chicoutimi Reserves in the Lake St. John area, 480 and 678 sq. miles, respectively, and the Kipawa Reserve in Témiscamingue County, 1,000 sq. miles. Adjoining Gaspesian Park in the Gaspe Peninsula, the ChicChocs, Matane and Joffre Reserves have, respectively, 325, 450 and 40 sq. miles. Also in Gaspe Peninsula are the Port Daniel, Rivière St. Jean and Rivière Petite Cascapédia Reserves for salmon and trout fishing, occupying 20, 13 and 300 sq. miles, respectively. Horton Reserve in Rimouski County has an area of 310 sq. miles.

These parks and reserves are wilderness areas of great scenic interest and are for the most part mountainous country threaded with many rivers, lakes and streams and abounding in wildlife. In all of them, except Mont Orford Park and Deux Montagnes Park, excellent fishing may be found and most of them have been organized to accommodate sportsmen and tourists in camps, cottages and lodges. Mont Tremblant Park, located close to a famous year-round recreational area, and Deux Montagnes Park are easily reached in summer by highway from Montreal and are very popular for tent or trailer camping and for swimming and picnicking. Mont Orford has an 18-hole golf course and, in winter, is the rendezvous of Canadian and United States skiers and the site of the Canadian Alpine downhill and slalom championship competitions. Hunting is forbidden in the parks and reserves, except Horton, Joffre, Kipawa and James Bay; in the latter only moose are protected.

Ontario.-The provincial parks system in Ontario has been greatly expanded in recent years. There are 81 parks now available for public use and one new park is in process of development. Thirty other areas are reserved for future development. The total area in the Ontario Provincial Parks system is about 5,460 sq. miles.

The four largest provincial parks-Algonquin, Quetico, Lake Superior and Sibleytogether have an area of about 5,200 sq. miles. Algonquin, 180 miles north of Toronto and 105 miles west of Ottawa, has several campgrounds which are accessible by car from Highway 60 and its numerous waterways may be traversed and enjoyed by canoe. There are several commercial children's camps in the Park but the present administration policy is to provide development facilities, such as campgrounds, on the Park fringes and to retain the interior in a natural condition. The interiors of Quetico and Lake Superior Parks are also retained as wilderness areas with only fringe development. Quetico Park is accessible by road at the Dawson Trail Campground on French Lake, and also by water via Basswood Lake in the south. Highway 17 north from Sault Ste. Marie provides access to Lake Superior Park, and Sibley Park may be reached by road from Highway 17 east from Port Arthur. There are small charges for entry of automobiles into provincial parks and for overnight camping.

Under the Wilderness Areas Act, which came into effect in 1959, 36 areas have been established. These tracts of land, widely distributed across the province, vary in size,

[^7]character and significance but all are regarded as important for their historical, scientific, aesthetic or cultural values. The largest is a $225-\mathrm{sq}$. mile area of treeless tundra in the northeastern tip of the province, jutting out at the base of Hudson Bay where it meets James Bay. All the other areas are small and none exceeds 640 acres. Perhaps the most widely known is the Sleeping Giant, a geological formation resembling a recumbent man, in Thunder Bay at the Lakehead.

The parklands of Ontario are administered by the Parks Branch of the Department of Lands and Forests, Parliament Buildings, Toronto, from which detailed information in booklet form is available.

Manitoba.-In Manitoba, four large areas of virgin forest totalling 1,638 sq. miles have been set aside as provincial parks. In addition, numerous recreational areas, camp and picnic grounds, and roadside stopping places have been established. These park areas are administered by the Parks Division of the Forest Service.

Saskatchewan.-Saskatchewan has 14 provincial parks with a total area of 2,255 sq. miles. Cypress Hills, Duck Mountain, Greenwater Lake and Moose Mountain are operated as summer resorts with chalet, lodge, cabin and trailer accommodation as well as camping and picnic facilities. The other parks have trailer sites and camping, picnicking, boating and swimming facilities. Recreational activities include fishing, boating, swimming, golf, tennis, dancing, baseball, hiking, nature study, horseback riding, etc., and the parks are all well fitted with playground and beach equipment for children. In Cypress Hills Park, elk, antelope, deer, sharp-tailed grouse and beaver are plentiful and brook and other trout have been stocked in streams and lakes. Heavy stands of tall, straight lodgepole pine and white spruce provide a unique forest cover in this area. In Duck Mountain, Moose Mountain and Greenwater Lake Parks, moose, elk, deer, bear and beaver are common, as well as several varieties of grouse and many species of water and smaller land birds. Spruce, poplar and white birch provide excellent cover for wildlife. Pickerel, pike and perch are prevalent in most of the lakes. Lake trout are ardently sought by fishermen in the northern lakes. Three wilderness parks-LaRonge, Nipawin and Meadow Lake-offer wilderness-style canoe routes and 'fly-in' commercially operated fishing and hunting camps. Many roadside picnic grounds are located throughout the province and several excellent Trans-Canada Highway campsites are being developed or are in use.

Sites of historic interest are marked throughout the province and include the Touchwood Hills Hudson's Bay Post, where picnic facilities are available.

Alberta.-In Alberta, 42 provincial parks have been established, with a total area of approximately 140 sq . miles and, of these, 38 are under development. Cypress Hills Provincial Park with an area of 77 sq. miles is the largest and is situated in the southeast portion of the province. Other parks under development are: Aspen Beach, Beauvais Lake, Big Hill Springs, Big Knife, Bow Valley, Bragg Creek, Crimson Lake, Cross Lake, Dillberry Lake, Dinosaur, Entrance, Garner Lake, Gooseberry Lake, Hommy, Kinbrook Island, Lac Cardinal, Little Bow, Little Fish Lake, Long Lake, Ma-Me-O Beach, Miquelon Lake, Moonshine Lake, O'Brien, Park Lake, Pembina River, Red Lodge, Rochon Sands, Saskatoon Island, Taber, Thunder Lake, The Vermilion, Wabamun Lake, Williamson, Willow Creek, Winagami Lake, Woolford and Writing-on-Stone. These parks are generally provided with picnic, camping and playground facilities and are maintained by the Department of Lands and Forests primarily for the recreation and enjoyment of the residents of the province. There is a park within easy reach of almost every town. The most northerly park is Lac Cardinal, about 28 miles southwest of Peace River, and the southernmost park is Writing-on-Stone which adjoins the Alberta-Montana border. Alberta's provincial parks were visited by $1,500,000$ tourists and vacationists in 1962.

In addition to the recreational parks, 16 sites have been established to mark and preserve locations of historic interest. They include: Athabasca Landing, Buckingham

House, Coronation Boundary Marker, Early Man Site, Fort DeL'Isle, Fort George, Fort Vermilion, Fort Victoria, Fort White Earth, Frog Lake Massacre, Hay Lakes Telegraph Station, Massacre Butte, Ribstones, Standoff, Stephansson and Twelve Foot Davis.

Provided also for Albertans are the Wilderness Provincial Park, which adjoins Jasper National Park in the north and extends along the British Columbia border, and two wilderness areas established under the Forest Reserves Act in 1961. The Wilderness Provincial Park has an area of 2,149 sq. miles, Siffleur Wilderness 159 sq. miles and White Goat Wilderness 489 sq. miles. These areas have been set aside to preserve as far as possible the natural scene and are not subject to any development or provided with roads.

British Columbia.-There are 200 provincial parks in British Columbia with a total area of 9,964 sq. miles. These parks are classified as A, B and C. Class A parks are reserved solely for recreational purposes; some are highly developed and others are wilderness areas. Class B parks are set aside primarily for recreation, but regulations permit other natural resource use where this is not in conflict with recreation. Class C parks are administered in detail by a Parks Board of local citizens, under the over-all jurisdiction of the Minister of the Department of Recreation and Conservation. British Columbia parks are in many stages of development and dedicated to a variety of recreational uses. There are immense wilderness areas such as Tweedsmuir Park and Wells Gray Park. Outstanding scenic and mountain reserves include Garibaldi, Mount Robson, Manning and Bowron Lakes Parks. The formal gardens of Peace Arch Park are a monument to the goodwill between Canada and the United States. Vancouver Island has a chain of small forested parks that have achieved tremendous popularity with tourists-the best known are Little Qualicum Falls, Miracle Beach and Goldstream. The famous gold town of Barkerville has been restored to become the first Provincial Historic Park. Five marine parks with mooring facilities and campsites have been developed on the islands of the Straits of Georgia for the benefit of water-borne recreationalists. The popularity of the province's parks, with their integrated campsites and picnic areas, is attested by the record number of $3,700,000$ visitors during 1962 . Of these, 840,000 were campers and the remainder were day visitors. Records show that Mount Seymour, Cultus Lake and Alouette Lake Parks were the most popular.

## Subsection 3.-Canada's National Capital*

Ottawa, the city selected by Queen Victoria in 1857 to be the seat of government for the Province of Canada in British North America, was designated the National Capital upon Confederation on July 1, 1867. The community had grown out of the military and construction camp that served as headquarters for the building of the Rideau Canal, a project carried out between 1826 and 1832 to establish a safe navigable waterway between Lake Ontario and the Ottawa River. The building of the Canal was the crowning achievement in the life of a distinguished British military engineer, Lieutenant-Colonel John By, R.E., who gave his name to the new settlement inhabited mainly by stone-masons and discharged soldiers. As time passed, Bytown prospered as a timber centre and was incorporated as a town in 1847. Then, on Dec. 18, 1854, the name of Bytown was changed to Ottawa and under that name the community was incorporated as a city on Jan. 1, 1855.

The city, situated in an area of great natural beauty and surrounded by waterways, has remained a self-governing municipality and, although throughout the years the Federal Government co-operated with the municipal authorities in the development of a system of driveways and parks, the city expanded without the benefit of a comprehensive plan. However, in 1950 a Master Plan was presented to the Government of Canada, designed to guide the development of the Capital's urban area over the following half-century and to protect the beauty of the surrounding National Capital Region. This Region originally covered 900 sq. miles but was increased in 1959 to 1,800 sq. miles-half in the Province of Ontario and half in the Province of Quebec. Although the successful implementation of

[^8]the Plan is dependent upon the co-operation of the cities of Ottawa and Hull-which are treated as a physical, social and economic whole-and of about sixty other autonomous municipalities and the two provincial governments involved, the National Capital Plan is not officially recognized by the Governments of Ontario and Quebec, and the City of Ottawa has as yet no municipal plan to govern its growth and development.

The federal agency responsible for the planning of Canada's Capital is the National Capital Commission, created in 1959 to replace the Federal District Commission which, in turn, was the lineal descendant of the Ottawa Improvement Commission. The National Capital Commission, which reports to Parliament through the Minister of Public Works, is composed of twenty members appointed by the Governor in Council and representing each of Canada's ten provinces. It is headed by a chairman and a general manager and has a personnel of about 650, although this number fluctuates because of the seasonal character of a large part of the work involved. Six committees give advice and direction to the Commission: the Executive Committee consists of the chairman and vice-chairman of the Commission and three other members appointed by the Commission, one of whom is from the Province of Quebec; the Land Committee, composed of several experts in land evaluation, advises the Commission on matters of land purchases and property administration; the Advisory Committee on Design, comprising prominent Canadian architects, town planners and landscape architects, gives advice on the external appearance of government buildings, locations, site plans and landscape designs; the Historical Advisory Committee advises the Commission on matters of preservation, marking and interpretation of buildings and sites having historical significance within the National Capital Region; the Information and Historical Advisory Committee studies and considers the publicity and public relations activities of the Commission, and carries out an extensive program of historical research and preservation; and the Gatineau Park Advisory Committee is concerned with the administration and development of Gatineau Park.

The National Capital Plan, as conceived by the eminent French town planner Jacques Gréber, was dedicated to those who gave their lives for Canada during the Second World War and has since constituted the Commission's planning guide for the Capital of Canada. In accordance with the first proposal of the Master Plan, the principle of "open space" is being applied, a policy beneficial to both residents and visitors. Part of this policy involves the restoration to their natural beauty of the shores of the waterways in and around Ottawa, a program evident in the work of the Commission at Rideau Falls Park opposite the City Hall and in the development of Vincent Massey Park in the heart of the city; the latter is a 75-acre park and playground extension to 50 -acre Hog's Back Park at the foot of Hog's Back Falls. The Commission owns 36 miles of riverfront property in the National Capital and makes these attractive areas accessible to the public. On the Quebec side of the Ottawa River the Commission maintains two parks-the historically interesting Brébeuf Park and Jacques Cartier Park, both on the shores of the Ottawa River. There are at present 40 miles of wide landscaped roadways in Ottawa and Hull, and 30 miles of right-ofway have been acquired for future expansion. The Commission cares for the landscaping of 13 municipal parks in Ottawa-Hull, of which Strathcona Park in Sandy Hill district and Rockcliffe Park are the most extensive and attractive. The acquisition of land along both shores of the Ottawa and Rideau Rivers and the exceptionally wide rights-of-way for parkways have given Ottawa about 7,000 acres of open space.

The program of partial decentralization of new government buildings has been under way for some time and excellent examples of planned sites for government structures now exist at Confederation Heights, at Tunney's Pasture and at the Printing Bureau site in Hull. Other areas, such as the large tract of already serviced land at Pinecrest, are awaiting development. The advantages of decentralization are many-planned government building areas away from centre-town offer some solution to the ever-pressing problem of traffic congestion and, from the humanitarian point of view, workers occupy buildings erected on large landscaped grounds with plenty of parking space and are close
to main traffic arteries and shopping centres, and often to good housing developments. The grounds of more than 140 government buildings in the National Capital Region are cared for by the Commission, which also gives assistance to municipal projects that enhance the attractiveness of the area, such as the provision of land and landscaping for the 12mile Queensway being built under a four-way partnership between the Federal Government, the National Capital Commission, the Province of Ontario and the City of Ottawa.

An important proposal of the Master Plan calls for the establishment of a greenbelt around the National Capital, one of the main objectives of which is to restrain the tentacular growth of the city so that family dwelling projects will be built on lands that can be supplied, at reasonable cost, with water and sewer services. There is also the aesthetic consideration that this belt of green open space and planned building sites will provide the beautified Capital with suitable approaches. The present semicircular greenbelt on the Ontario side occupies 41,000 acres of land and surrounds, to a depth of about two and one half miles, the urban zone at an average distance of nine miles from the Peace Tower. The Commission encourages agricultural activity within this area and at the same time reserves within its boundaries certain tracts of land to be occupied by government buildings, public institutions and some types of industrial development such as research and experimentation establishments requiring considerable space to operate. There are many other factors that help make the Ottawa greenbelt an ideal planning measure: it allows some control over the demographic increase of the Capital; it is an incentive for better urban land use; and it favours the development of satellite communities in the National Capital Region.

The Commission has begun the large-scale program advocated in the Master Plan of removing railway trackage and yards from the urban area with the co-operation of the railway companies. The abandoned rights-of-way are destined to become roadways which will relieve traffic bottlenecks within the heart of the city; the Queensway, now under construction, runs on a former railway bed. This program, which is expected to be completed by 1965, involves the removal of 32 miles of track, the elimination of 72 railway crossings and the consequent acquisition of 449 acres of high-value land for redevelopment.

The Master Plan also includes the establishment and development of the beautiful and impressive Gatineau Park, a 75,000-acre forest and lake area in the shape of a triangle stretching from its apex in the city of Hull northwestward for 35 miles into the Laurentian Hills. The National Capital Commission owns more than 62,000 acres of the projected area and the acquisition of private holdings is continuing. The 22 miles of parkway now traversing this area are to be extended deeper into the wilderness. Camping and pienic sites are being improved by the installation of drinking fountains, barbecues and outdoor ovens, and well-designed restrooms, and by the addition of fishing and swimming facilities. At Lac Philippe and Lac Lapêche, two of the four big lakes in Gatineau Park, the Commission has developed or is planning large-scale public recreation facilities with easy road access.

In addition to these major development projects, the National Capital Commission, through its Historical Advisory Committee, plans to conserve historic buildings and sites as mementoes of the past. Such sites are carefully studied and their preservation and suitable marking is an important part of the over-all program.

Planning aid to municipalities in the National Capital Region is given in the form of grants in special circumstances and advice on establishing areas of subdivision control, preparation of basic plans and maps, master plans for communities and zoning legislation. This advice is available upon request and the Commission, having no planning powers, must seek to persuade rather than impose its proposals.

Estimated expenditures for the Commission projects in the year ended Mar. 31, 1963 total $\$ 27,477,470$, which includes $\$ 3,325,970$ for administration, operation and maintenance, $\$ 11,151,500$ for capital projects and assistance to municipalities, and $\$ 13,000,000$ for property acquisition.

## Section 3.-Wildlife Resources and Conservation*

Wildlife in Canada is considered to be an important renewable natural resource. In the early days, wildlife was, and in large areas still is, a form of sustenance in the hinterland and trade in fur determined the course of exploration and settlement. During the period of the opening up of the country, many species of animals and birds became seriously depleted or completely extinct. The passenger pigeon, the great auk and the Labrador duck were extirpated, the buffalo vanished from the prairies, and wapiti, prong-horn antelope and musk-oxen were reduced to small fractions of their former numbers. The destruction was not limited to the animals and birds but in the areas of settlement their habitat was endangered by the cutting and burning of the forests, the diversion and pollution of streams and the changing of the face of the land.

Since then, it may be said that wildlife has been changed and influenced by man to the degree that he has changed and influenced the environment. The arctic and alpine tundra, one of Canada's major vegetational regions, has been changed hardly at all; the adjacent sub-arctic and sub-alpine non-commercial forest has been changed principally as a result of increased human travel causing more forest fires; the great commercial forest farther south has not lost its real character through being managed; cultivable lands, whether originally forest or grassland, have completely changed but often they and the managed forest are better for many forms of wildlife than the original wilderness. Some creatures thrive on change. There are more moose, deer, grouse and probably more coyotes than in Indian days. Fur species, such as beaver and muskrat, are easily managed and many small mammals and birds thrive better in fields and woodlots than in the virgin forest, provided that they are not poisoned by pesticides. At the present time, the harvestable surplus of game and fur species across Canada is seldom fully utilized and it is quite clear that wildlife will remain abundant in Canada wherever there is suitable habitat and enlightened management.

Thus, Canada today is known throughout the world for the wealth and variety of its wildlife. It maintains most or all the existing stocks of woodland caribou, California bighorn sheep, wolves, grizzly bears and wolverines, to mention a few. And these animals exist not only because of the vastness of their habitat but also because of man's efforts to preserve them. There is evidence of concern about the preservation of wildlife by the early Canadians; there were game laws in force in the original provinces when all but a few thousand acres of land were still the patrimony of the Indians. In 1887 pioneer conservationists were instrumental in establishing Banff Park in Alberta and in setting up a bird sanctuary at Last Mountain Lake in Saskatchewan, the first on the Continent. The same fervour for preservation of Canada's wildlife heritage led to the complete protection of wood bison in 1893 and to the purchase and establishment of a nucleus herd of plains bison at Wainwright in Alberta in 1907. Thus was formed the basis of wildlife conservation efforts which, for a long time, took the form of complete protection of certain species from destruction by man or predator. Better knowledge of nature's operations and the recognition of the fact that many other factors combine to cause fluctuation in wildlife numbers are now being reflected in a loosening of restrictions on hunting and a rescinding of preserves. The science of animal numbers is new and sometimes runs counter to popular prejudice. But it is well understood that any area will support only so many animals, and species that are highly productive must have a quick turnover. Wildlife must never be separated from the consideration of its environment and if the environment is fully stocked the annual increment need only replace the losses. All extra is surplus, only part of which is taken by predators and part, if the animal is a game species, by man.

As a natural resource, wildlife within the provinces comes under the administration of the respective provincial governments; wildlife on federal lands and certain problems of national or international interest are the concern of the Federal Government.

[^9]The Canadian Wildlife Service.-The Canadian Wildlife Service deals with most wildlife problems coming within the jurisdiction of the Federal Government. It was organized in 1947 to meet the growing need for scientific research in wildlife management and is a division of the National Parks Branch of the Department of Northern Affairs and National Resources. The Service conducts scientific research into wildlife problems in the Northwest Territories, Yukon Territory and the National Parks, advises the administrative agencies concerned on wildlife management, and co-operates in the application of such advice. It administers the Migratory Birds Convention Act, provides co-ordination and advice in connection with the administration of the Game Export Act in the provinces, deals with national and international problems relating to wildlife resources, and co-operates with other agencies having similar interests and problems in Canada and elsewhere.

The Migratory Birds Convention Act was passed in 1917 to give effect to the Migratory Birds Treaty signed at Washington in 1916. It provides a measure of protection for numerous species of birds that migrate between the two countries. The Canadian Wildlife Service, in its capacity as administrator of the Act, is responsible for the annual revision of the Migratory Bird Regulations, which govern such matters as open seasons and other waterfowl hunting details, taking and possessing migratory birds for scientific or propagating purposes, eiderdown collecting, etc. The Act and Regulations thereunder are enforced by the Royal Canadian Mounted Police and in both administration and enforcement co-operation is received from provincial authorities. There are 108 migratory bird sanctuaries in Canada, having a total area of 39,688 sq. miles. A sanctuary may be established on the initiative of the Department of Northern Affairs and National Resources or of a provincial or municipal government, or on petition by a private person or organization. Bird banding provides valuable information on the migration of birds and their natural history and is especially useful in waterfowl management. Serially numbered bands supplied by the United States Bureau of Sport Fisheries and Wildlife are used in Canada as well as in the United States.

Many research projects under way were continued during 1962. These included the study, in co-operation with the Government of Manitoba and the Council of the Northwest Territories, of barren-ground caribou and of animals that prey upon caribou-wolves, grizzlies and wolverines. With better understanding of caribou physiology and of the effects of destruction of winter range by fire, factors associated therewith have assumed increasing importance, although human utilization still heads the list of recognized mortality causes. Studies continued of such fur mammals as mink, muskrat and beaver in the Mackenzie District, and of polar bear and white fox in Keewatin and Franklin Districts. Big game mammals in the National Parks were also the object of continued study, special attention being given to mountain sheep and wapiti in the mountain parks of Alberta where large populations of those species facilitate investigations, and to the competition for food between wapiti and the livestock still allowed to graze in Riding Mountain Park in Manitoba. In Wood Buffalo Park, investigations into the problems of disease and low reproductive rates among bison were continued as a long-term project in the hope that some control of each might be achieved. An outbreak of anthrax in bison outside the Park was dealt with and long-term studies initiated to prevent further losses.

Damage to cereal crops by wild ducks and sandhill cranes continued to receive intensive study and much time was devoted to other species greatly reduced in number or in danger of extinction such as the Ross goose, trumpeter swan and whooping crane. Nation-wide investigations of migratory waterfowl included kill surveys in the Provinces of Prince Edward Island, New Brunswick, Quebec and Ontario and a crop-damage survey in Saskatchewan. The mourning dove census and the Arctic bird-banding program were continued.

At the end of 1962 the research staff included 41 wildlife biologists stationed at various centres throughout Canada. Ornithologists were located at Vancouver, B.C., Edmonton, Alta., Saskatoon, Sask., Winnipeg, Man., Ottawa and Aurora, Ont., Quebec, Que., Sackville, N.B., and St. John's, Nfld. Mammalogists were stationed in the Northwest Territories at Fort Smith and Inuvik, at Whitehorse in the Yukon Territory, and at Edmonton
and Ottawa. A limnologist was located at Edmonton and Jasper and a range specialist and two pathologists at Edmonton and Ottawa, respectively. A number of university graduates and undergraduates are engaged annually to assist in summer field work. Ottawa headquarters has an administrative staff of about 30 in addition to supervisory research officers and about 25 part-time migratory bird wardens and sanctuary caretakers are employed.

Provincial Government Wildlife Conservation Measures.-As stated previously, each province has jurisdiction over its own wildlife resources. The measures adopted by the respective provincial governments to conserve these resources are discussed briefly in the following paragraphs.*

Newfoundland.-The geographical separation of the province into a mainland and an island area provides two distinct wildlife regions. The Labrador, or mainland, region differs little in avian, faunal and fish species from any other region of Eastern Canada but the Island has only about one half of the number of mammals found on the neighbouring mainland and also fewer species of birds and fish.

Only 14 mammal species are native to the Island-caribou, black bear, beaver, otter, muskrat, red fox, lynx, ermine, pine marten, meadow mouse, Arctic hare, little brown bat, long-eared bat and wolf (now extinct). The development of these native mammals is of considerable interest to taxonomists; ten species have endemic races on the Island and are regarded as subspecies of the mainland species. Seven mammal species have been introduced to the Island-moose, snowshoe hare, house mouse, Norway rat, mink, cinereous shrew and chipmunk-the last three in recent years. The moose and snowshoe hare are of considerable importance to the economy of the Island as sources of meat. However, the harvest of fur bearers is not large. Trapping of beaver, muskrat and mink is conducted on a small scale but usually as a part-time occupation since the returns are not sufficient to provide a livelihood.

The only upland game bird of importance is the ptarmigan, but the ruffed grouse has been successfully introduced in recent years. Of the waterfowl species, Canada geese, black ducks, green winged teal, eider, scoter and old squaw ducks are most important. Murres, generally regarded as a non-game species, are also taken in large numbers and are of considerable importance as a meat source.

Newfoundland, like other provinces, seeks to make wise use of its wildlife resources and, during the past 12 years, has carried out an extensive research program involving moose, caribou, snowshoe hare, beaver, muskrat, lynx and ptarmigan. Certain phases of the caribou research, including inventory, have been conducted on a co-operative basis with the Canadian Wildlife Service and the Tourism, Game and Fish Department of the Province of Quebec.

The utilization of wildlife as a food source is probably greater in Newfoundland than elsewhere in Canada, but dependence on the source has decreased considerably. Appreciation of the aesthetic values of wildlife is increasing rapidly, and preservation of these values for all time is provided by recent proposals to set up wilderness areas and bird sanctuaries where vital habitat conditions are necessary to the continued propagation of a species.

Nova Scotia.-Hunting in Nova Scotia has gone through several stages since the days when it was a necessity of life to the time when ease of access and mechanization began seriously to affect wildlife numbers. The first provincial game laws which were passed in 1794 made it unlawful to kill partridge and blue-winged ducks in certain periods of the year and from these beginnings has developed the existing framework of legislation for game preservation which is administered by the Department of Lands and Forests and is enforced by officers of that Department and the Royal Canadian Mounted Police.

[^10]The Wildlife Conservation Division of the Department was established in 1958 to manage wildlife in such a way as to give hunters the ultimate in sport and at the same time keep wildlife populations in line with agricultural and forestry requirements. Also concerned with provincial wildlife is a four-member Cabinet Conservation Committee, which meets periodically to review, study and make plans regarding wildlife resources. The Wildlife Conservation Division conducts a biology section, patrols game and bird sanctuaries, aids in law enforcement, carries on a research program in all phases of wildlife and inland fisheries, and makes recommendations for seasons and bag limits of provincial wildlife. The wisdom of sound conservation laws and practices is accepted by most people without question and the opportunities that Nova Scotia offers the hunter and fisherman, year after year, are the result of sound management practices.

Of prime concern to Division biologists is the deer population. The white-tailed or Virginia deer was introduced to the province about the turn of the century and increased very rapidly. By 1954, the annual harvest had reached 47,000 but in subsequent years a gradual decline has resulted in bag limit cuts. It is the aim of the Division to provide a consistent harvest of well-conditioned deer through flexible regulating measures and the maintenance and improvement of winter deer range. The Division is also engaged in studying the beaver with a view to developing a formula that will enable the province to set seasons and bag limits on this lucrative fur bearing animal. Another problem that is receiving attention is the mystery of Nova Scotia's moose population. Despite the fact that the season has been closed since 1937, moose numbers have not materially increased.

The Wildlife Division is also endeavouring to retain Nova Scotia's migratory waterfowl populations and has recently encouraged law enforcement with beneficial results. There are now nine bird sanctuaries where wildfowl may rest and feed. The black duck is the most important and sought-after of the waterfowl species breeding in the province. Studies are being conducted on other game birds such as the ruffed grouse and the ring-necked pheasant. Pheasant shooting preserves are in operation in the province; in the 1959-60 season more than 15,000 pheasant chicks were hatched and released in the fields and valleys in co-operation with game associations.

The Division provides courses of instruction for junior guides in order to increase the number of competent professional guides which are required by law for non-resident hunters. After three years of training, these juniors are recommended for professional guide licences.

Nova Scotia's more than 20,000 sq. miles of forests and clearings hold over 6,000 lakes, rivers and streams. Fish to be found there include salmon, speckled, gray and brown and rainbow trout, small-mouthed black bass, white and yellow perch, landlocked salmon, pickerel and striped bass. Hundreds of thousands of trout and salmon have been put into the waters from rearing ponds and considerable work has been done on improving the rivers for the movement of migrating salmon. In addition, surveys are being conducted to determine fish population and the feeding habits of certain species.

New Brunswick.-In the Province of New Brunswick, the conservation and management of wildlife species is the responsibility of the Fish and Wildlife Branch, Department of Lands and Mines. In 1893 the provincial authorities apparently realized the importance of the wildlife resources and the necessity of sound management when they established a Game Branch or Game Division within the Department of Lands and Mines under the supervision of a Game Commissioner.

The present Fish and Wildlife Branch, headed by a Director, is divided into four sections dealing with administration, enforcement, game management and fish management. The Branch administers the New Brunswick Game Act, advises the respective provincial officials of necessary additions and revisions in the game regulations, and gives advice and co-ordination to the field staff of the Department of Lands and Mines in connection with the enforcement of the Game Act in the province. It carries out investigations of the wildlife
species that are essential in game management, deals with the numerous problems related to the utilization of the wildlife resources, and co-operates with the various private groups of sportsmen, informing them of the results of current investigations.

The Game Act was passed in 1877 in an attempt to provide a certain amount of protection for a limited number of birds and animals. Under the provisions of this Act, a closed season was established for such important game species as moose, deer and caribou. In addition, it provided for a limited season for the following fur bearing animals: mink, otter, fisher, sable and beaver. Partridge and snipe were also protected by this early legislation with a closed season. Hunters could no longer use a punt gun, swivel gun or net for killing ducks, geese, brant or other wild fowl.

Prior to the original Game Act, legislation pertaining to birds and mammals was limited to granting of bounty for wolves in 1792 and bears in 1828. The payment of bounty was established as a means of compensation to settlers for loss of domestic stock and should not be interpreted as an attempt to control predator populations.

The present New Brunswick Game Act provides adequate protection for the numerous species of game birds, game animals and fur bearing animals in the province. Its numerous provisions include such matters as open and closed seasons, length of season, bag limits, etc. The Act is enforced by the staff of the Forest Service, Department of Lands and Mines, with the co-operation of the Royal Canadian Mounted Police.

In 1919, the provincial government passed legislation authorizing the establishment of game refuges as a conservation measure. The first refuge, consisting of 175 sq . miles of forested Crown land, was established in 1921. At present, twelve game refuges are located throughout the province and contain approximately 1,125 sq. miles.

Research in the field of game management is relatively new in New Brunswick. In the past three years, with the addition of two game biologists and a fish biologist, a number of projects have been initiated. These studies include a population analysis and census of the white-tailed deer; a population analysis and census of the moose herd; an appraisal of DDT spraying on ruffed grouse reproduction; a population analysis of ruffed grouse; an analysis of bob-cat stomachs; and an inventory of the freshwater fishery. Censuses of the woodcock and waterfowl population are carried out in co-operation with the federal Canadian Wildlife Service biologists located at Sackville. In addition, a number of wildlife projects are undertaken by the staff of the Northeastern Wildlife Station, Department of Biology, University of New Brunswick. The staff of the Fish and Wildlife Branch is located at Fredericton.

Quebec.-The provincial Department of Tourism, Game and Fish recently instituted a Wildlife Management Service which employs about 30 biologists and maintains five fish hatcheries for the purpose of restocking public waters. The functions of the biologists include the preparation of inventories of the land and water wildlife resources in their particular areas and the recommendation of conservation measures for possible inclusion in provincial game and fish legislation. Their work also includes the management of public hunting and fishing waters. A study of the biological aspects of the fur trade is at present under way.

To permit the study on a regional basis of problems in connection with sport fisheries, freshwater commercial fisheries and salmon rivers, the province is divided into 11 districts, each headed by a chief biologist. However, because of the vast area involved and the limited number of biologists, there has been no division of the province into districts for the study, conservation or management of big game. In connection with the latter, it may be noted that an experiment has been tried recently; for the first time in 30 years, the Department has permitted a controlled moose hunt in Laurentide Park after drawing by lot the names of a specific number of hunters.

For the management of wildlife, the province is divided into 13 protection districts, staffed with fish and game wardens who are either experienced or recent graduates of the Quebec Game Wardens School. This school provides a course of study, both technical and practical, on the special problems of wildlife conservation.

The province has set aside a number of large areas as fish and game reserves, together totalling $41,166 \mathrm{sq}$. miles. The names, locations and areas of these reserves are given on p. 39.

Ontario.-The wildlife resources of Ontario are administered by the Fish and Wildlife Branch of the Ontario Department of Lands and Forests. The Branch operates under the authority of the Game and Fish Act, the Wolf and Bear Bounty Act, the Migratory Birds Convention Act (Canada), and the Game Export Act (Canada) and regulations made under each of these. The wildlife resources of the province, both fur and game species, are of considerable economic importance in that they provide income to trappers and to guides and other persons connected with the tourist industry and also provide recreation to residents and visitors. The annual harvest of game and fur in the province is substantial and is believed to be increasing steadily.

The Fish and Wildlife Branch has established a system for the trapping of fur bearing animals, designed to provide equitable and maximum harvests. There are 3,388 registered trapline areas on Crown lands and approximately 4,000 resident trappers operating on private lands. The harvests of these trappers include mainly muskrat and beaver. Most trappers are organized into Trappers' Councils or local Trappers' Associations; these are represented by the Ontario Trappers' Association which performs important services to the industry, particularly in marketing.

The hunting of game in Ontario has become an important recreation and game hunting regulations are in force, designed to permit the maximum recreational opportunity for harvesting the annual surpluses consistent with sound game management practices. In 1960, more than 21,000 non-residents purchased licences to hunt game in the province and some 500,000 resident licences were issued, producing altogether a provincial revenue of $\$ 1,766,000$.

Each year approximately 120,000 persons hunt deer in the province and, of those, 6,000 are non-residents. Deer numbers fluctuate in relation to weather conditions, especially in areas of marginal range, and the Department is engaged in a program of research and management of deer range in order to maintain habitat for these animals during the winter months. The hunting of moose is becoming increasingly popular. It is estimated that about 40,000 persons each year are interested in this sport, about 6,000 of them nonresidents. Moose have long been abundant in northern Ontario and have recently become prevalent in the southern part of the province where a season has been established. In 1961, the black bear was declared a game animal and a season established. As for small game, each year about 400,000 hunters, particularly in southern Ontario, engage in a considerable amount of hunting for cottontail, jackrabbit, varying hare, squirrel, raccoon and fox.

Game birds are also fairly prevalent in Ontario. Pheasant hunting is confined to the southwestern areas and, although most of the hunting is provided by natural production, two provincial game farms propagate and distribute about 75,000 pheasant chicks, poults or adults annually. In some parts of the province, Hungarian partridge is abundant enough to provide excellent hunting during the early autumn and the ruffed grouse has a wide distribution; it is the main game bird species of northern Ontario and is hunted frequently in woodlots of southern Ontario. Other species, such as the ptarmigan, sharptailed grouse, spruce grouse and bobwhite quail, have limited distribution. Ducks and geese, woodcock and snipe are also important game species. It is estimated that 150,000 of the 400,000 small game hunters are also waterfowl hunters. The Department of Lands and Forests has a considerable interest in the development of areas for waterfowl production and harvest.

A system whereby the number of hunters shooting pheasant, rabbit and fox may be controlled is operative in the southern townships within the pheasant range. The townships may charge fees for hunting which provide revenue for conservation work. Much of the money collected is used in pheasant propagation programs. A number of tracts of
private land in southern Ontario have been acquired for public hunting; six of these are intensively managed for pheasants or waterfowl and hunters using them are charged daily or annual fees.

Much of the research on wildlife is carried on by the Research Branch of the Department of Lands and Forests. Studies are conducted at the Wildlife Research Station in Algonquin Park and there has been an increase in the volume and variety of work being done throughout the province under the supervision of wildlife research biologists at the Southern Research Station at Maple. During 1962, the Wildlife Section carried out 75 research projects, some of them in co-operation with the field staffs of Forest Districts or of other agencies.

Saskatchewan.-Saskatchewan officially lists 308 species of birds and 77 species of mammals within its boundaries. Wildlife management deals mainly with four principal groups-economic fur bearers, upland and big game species, migratory waterfowl, and non-game species (including predators).

A program of conservation in relation to the fur bearers has been carried out since the end of World War II in co-operation with the Indian Affairs Branch of the federal Department of Citizenship and Immigration. This program has involved establishment of a Conservation Area program in the Northern Affairs District wherein steps have been taken to assure maximum optimum levels of the most important fur species, notably beaver and muskrat, to provide the highest possible income for northern citizens engaged in trapping. Early in the postwar period, a beaver trapping and transplanting program re-established beaver populations throughout most of northern Saskatchewan. The fur management program permits trapper participation through trapper councils, fur co-operatives, etc. Several projects involving the construction of dykes and dams to help increase and maintain desirable fur populations have been carried out.

Conservation of big game is effected through harvest control by means of regulations and sometimes by the imposition of closed or restricted seasons. For example, comprehensive aerial surveys of antelope, moose and, to a lesser extent, elk and deer are conducted annually to provide trend information that permits management recommendations to be made with relation to big game populations. Inventories of upland game birds and waterfowl permit similar predictions on which recommendations may be based.

One of the chief concerns with respect to upland game birds has been the continuous loss of habitat as a result of increasing agricultural use of land, a problem intensified by hunting pressure in the past quarter-century. The growth of hunter interest is indicated by the number of licences and game seals sold in the province, which increased from 7,327 in 1938-39 to 44,794 in 1948-49 and 119,096 in 1958-59. During the 1950's a plateau was reached with respect to the sale of game bird licences, but the steady increase in sale of big game licences which began after World War II continues, particularly with respect to moose and deer.

Attempts have been made to develop experimental habitat areas for upland game birds by the provision of improved nesting, brooding and winter feeding areas.

Waterfowl conservation measures have been undertaken by Ducks Unlimited, an organization which is conducting 234 active projects ( 247,380 acres of water and 1,915 miles of shoreline) for the propagation of waterfowl. The Department of Natural Resources is co-operating with these activities. Some attempts have been made to reduce migratory bird depredation problems by providing "lure" crops in limited locations and by the establishment of restricted hunting areas to provide protection in fall resting areas for migratory birds.

The increase in hunting interest is indicated by growth of membership in the province's sportsmen's organizations, and interest in wildlife in general by province-wide membership in various nature study groups such as the Saskatchewan Natural History Society. One of the more dramatic indications is the public attention given to the annual migration
through the province of North America's wild whooping cranes. Through the Saskatchewan Museum of Natural History and publications of the Conservation Information Service, the Department of Natural Resources endeavours to promote public interest in the principles of conservation and resource utilization.

Poisoning control programs have been instituted to replace the bounty system as a means of controlling predators. The objective of the poisoning program is definitely not eradication of certain predatory species, but reduction of populations to more manageable levels. Most hawks and owls are now protected through the game regulations.

Research studies designed to improve management techniques are conducted by five wildlife ecologists employed by the Department of Natural Resources. The province contains 149 game preserves with a total area of approximately 14,000 sq. miles. Last Mountain Lake Bird Sanctuary, reputedly the first established in North America, is located in southern Saskatchewan. Provincial parks in the southern part of the province are utilized as game management areas to permit fuller recreational use by the public.

Alberta.-In Alberta, the management of bird and animal wildlife is a function of the Department of Lands and Forests. In 1961-62, this activity was the incumbency of five permanent wildlife biologists who were assisted in the conduct of their program by many district officers of the provincial Forest Service and the Fish and Wildlife Division. The field officers reported on the distribution, reproductive success, mortality, age and sex structures, and diseases and parasites of game birds and wild ungulate populations and assisted in the accumulation of data on other features of wildlife biology and ecology. Significant contributions to the understanding of ecology and population dynamics were also made by university students and staff at the Alberta Biological Station.

Conservation measures are considered to be synonymous with proper wildlife management. Under these terms of reference, many species of wildlife were intensively studied during the 1961-62 fiscal year. Research projects on blue grouse, ptarmigan, Merriam's turkey, ruffed grouse, pheasant, sharptail, waterfowl, muskrat, pronghorn antelope, elk, moose, whitetail deer, caribou, bison, Rocky Mountain goat and bighorn sheep were conducted with a view to obtaining more usable data on natality, mortality, population dynamics and other biological features. Range condition studies produced information that, when considered with wild ungulate densities, formed the reference level from which season lengths and recommended harvests were established. The prime objective of conservation is the maintenance of game numbers in a compatible position with the abilities of different ranges to support game animals, thus assuring the continuation of wildlife population levels.

British Columbia.-Control over the trapping of fur bearing animals in British Columbia has been in effect since 1926, when a registered trapline system was instituted covering all lands except private property, National Parks, Indian reserves, municipalities and certain other reserved areas. Under this system, trappers are granted exclusive rights over designated areas and are required to submit annual reports of their catch, such returns providing an accurate check of the fur taken from each district. Trapping on private property is permitted, provided the trapper secures a special firearms licence, which must be held by all trappers and entitles the holder to hunt all types of large and small game.

Fur bearers in the province include bear, badger, beaver, fisher, fox, lynx, marten, mink, muskrat, otter, raccoon, skunk, squirrel, weasel and wolverine. Wolf, coyote, cougar and bobcat are classed as predators and there is no closed season on them or on raccoon, skunk and wolverine. Seasons on black or brown bear are generally year round although closed seasons are in effect in certain areas. Foxes have become so numerous in certain parts of the province that they also may be considered as predators, and beavers are so prevalent in some areas that it is necessary to move them to other districts.

Beaver is the most important source of revenue, followed by mink and squirrel. However, the day of the professional trapper seems to be gone. Few people now make their living solely or even mainly through the trapping of fur bearing animals. On the
other hand, there is a steady increase in recreational hunting and fishing, as evidenced by the number of licences issued to residents and non-residents. In 1961 the number of resident firearms licences issued was 115,796, the number of resident angler's licences 139,945, non-resident firearms licences 3,937, and non-resident angler's licences 46,048 , resulting in a provincial revenue of $\$ 1,656,061$. The amount of game taken during the hunting season by resident sportsmen was estimated as follows: deer 67,000 , moose 15,000 , elk 3,500 , mountain goat 1,900 , mountain sheep 1,000 , caribou 1,000 , waterfowl 377,000 , grouse 413,000 , and pheasant 57,000 .

Among the wildlife management programs conducted by the Department of Recreation and Conservation is included the rehabilitation of lakes through the use of toxaphene which kills off all fish species, permitting later planting of desirable species such as rainbow trout. More than 100 lakes have been brought back into trout production in recent years by this technique. Also included is the establishment of longer and more widespread open seasons on antlerless deer and moose. Such seasons are carefully studied to assess their effects upon the stands of game but, when properly applied, they allow a greater harvest of moose and deer. A limited open season on hen pheasants was established for the first time in 1962. Although at first there was some public criticism of the shooting of female birds, the fact that such open seasons are based on sound biological findings is now being realized.

## PART III.-CLIMATE AND TIME ZONES

## Section 1.-Climate*

Just as there are great differences in the weather throughout Canada at any given instant, there are also many climates. These climates are not unique but are similar to those in Europe and Asia extending from the Arctic down to the mid-northern hemispheric latitudes. Because Canada is situated in the northern half of the hemisphere, most of the country loses more heat annually than it receives from the sun. The general atmospheric circulation compensates for this and at the same time produces a general movement of air from west to east. Migrant low pressure areas move across the country in this "westerly zone", producing storms and bad weather. In intervals between storms there prevails the fair weather associated with high pressure areas.

Although the movement of migrant high and low pressure systems within the zone of the westerlies is the most significant climatic control over Canada, the physical geography of North America contributes greatly to the climate. On the West Coast, the western Cordillera limits mild air from the Pacific to a narrow band along the coast, while the prairies to the east of the mountains are dry and have extreme temperatures because they are shielded from the Pacific Ocean and are in the interior of a large land mass. In addition, the prairies are part of a wide north-south corridor open to rapid air flow from either north or south which often brings sudden and drastic weather changes to this interior area. On the other hand, the large water surfaces of Eastern Canada produce a considerable modification to the climate. In southwestern Ontario winters are milder with more snow, and in summer the cooling effect of the lakes is well illustrated by the number of resorts along their shores. On the East Coast, the Atlantic Ocean has considerable effect on the immediate coastal area where temperatures are modified and conditions made more humid when the winds blow inland from the ocean.

[^11]The following table gives temperature and precipitation data for typical stations in the various regions of Canada. Temperatures in this table refer to observations taken in a thermometer shelter which has been placed in a representative location with the thermometer bulbs four feet above the surface of the ground. Mean January and July temperature data are based on records over the 30-year period from 1921 to 1950 except for far northern stations where the available period of record is shorter. After an average temperature is obtained for each day in January over a 30-year period, the mean January temperature may be arrived at by striking a mean of these 930 daily values. The mean July temperatures may be obtained in a similar manner. The highest and lowest temperatures on record refer to the absolute extremes for the entire period of record at each station. Average dates are shown for the last occurrence in spring of a temperature of $32^{\circ} \mathrm{F}$. or lower and for the first occurrence in autumn of freezing temperatures at the fourfoot level in the thermometer shelter.

The official Canadian rain gauge is a small cylinder in which the rain is caught and then measured to one-hundredth of an inch with a simple measuring device. Freshly fallen snow is measured as it lies on the ground and recorded to the tenth of an inch. Total precipitation values as shown in the table are the sum of the total rainfall and one-tenth of the total snowfall. For the purposes of this table, a day with precipitation is one on which at least one-hundredth of an inch of rain or one-tenth of an inch of snow has fallen.

Temperature and Precipitation Data for Typical Stations in the Various Districts

[^14]
## Section 2.-Meteorological Observing Stations in Canada*

In 1962, official meteorological observations were taken and recorded at some 2,133 weather reporting stations in Canada. There are several different classes of stations, ranging from the first-order reporting stations at airports where hourly observations of all aspects of the weather are recorded, to the co-operative precipitation observing stations where a volunteer observer makes daily observations of rainfall and snowfall. While there are vast areas of the country where the weather stations are several hundred miles apart, most of the settled parts of the country are represented by first-order hourly reporting stations every 100 miles or so, and by co-operative climatological observing stations at least every 25 miles.

At most of the 265 first-order synoptic stations complete weather observations are made every six hours and at a large percentage of them only slightly less complete observations for aviation forecasts are made every hour. These weather data, including information on temperature, precipitation, pressure, wind, humidity, cloud and visibility, are sent first by radio and teletype to the different weather offices across the Continent to be used for weather forecasting purposes, and then at each month-end the manuscript

[^15]reports are sent by mail to Meteorological Branch Headquarters for use in compiling climatic statistics. At some 90 of these observing stations, personnel of the Telecommunications Branch of the Department of Transport take weather observations as part of their scheduled duties, and 35 stations are operated in a similar manner by the different Armed Services; 70 stations are operated by Meteorological Branch personnel and the remainder are operated under contract, mainly by various transportation and communications companies.

Twice daily at 34 locations throughout the country, complete upper air observations are made from the surface to altitudes upwards to 100,000 feet. Pressure, temperature and humidity measurements are determined by radiosonde instruments carried aloft by balloons and the information reported by radio to the ground receiving station; winds are determined by observing the drift of the balloon by means of radar or radio direction finding ground equipment. There are also 26 other locations where the winds in the lower layers of the atmosphere are determined by observing free balloon drift by means of a theodolite or by radar. As in the case of the first-order synoptic reporting stations, these upper air weather observations are made available immediately to forecast offices for weather forecasting purposes, and the manuscript reports are collected at Meteorological Branch Headquarters for compilation of climatic statistics.

About 1,153 weather observing stations in Canada are classified as climatological stations where the observers record temperature extremes and precipitation once or twice daily and send in monthly data sheets. Most of these observers serve on a voluntary basis and willingly spend several hours a month on their hobby. In addition, many governmental and industrial organizations such as agricultural experimental farms and power companies have incorporated brief climatological duties into the general work of some of their employees. These climatological stations have contributed much useful information on temperature and precipitation for publication by the Meteorological Branch.

There are about 659 stations classified as precipitation stations where rainfall and snowfall only are observed and recorded. Since precipitation varies more rapidly than temperature over short distances, a dense network of these stations is required, especially in large urban areas. Finally, there are about 45 miscellaneous stations where observations of wind, sunshine and temperature are taken for special purposes. In all, the number of weather stations in Canada has been growing at a rate of more than 50 a year for the past decade and thus a steadily increasing climatic intelligence is assisting Canadians in all economic pursuits.

## Section 3.-Standard Time and Time Zones

Standard time, which was adopted at a World Conference held at Washington, D.C., in 1884, sets the number of time zones in the world at 24 , each zone extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians $15^{\circ}$ longitude apart. The basis of world time is Greenwich time and all other time zones are a definite number of hours behind Greenwich.

Canada has seven time zones, the most easterly being Newfoundland standard time, three hours and thirty minutes behind Greenwich time. In the west, Pacific standard time, used throughout British Columbia and part of the Northwest Territories, is eight hours behind Greenwich, and Yukon standard time, used throughout the Yukon Territory, is nine hours behind Greenwich. Some municipalities adopt the time used by the local railways which, in certain cases, differs from the standard. There are also villages that adopt such time as seems best to suit their convenience but in general the legal boundaries of the different time zones are actually in use.

Legal Authority for the Time Zones.-Most of the regulations made in Canada concerning standard time have been passed by the provincial legislatures and the Northwest Territories Council. Legislation, besides determining the boundaries of zones, regulates such matters as the times of coming into effect or expiration of Acts, ordinances, contracts and agreements, times of opening and closing registration offices, law courts, post offices and other public offices, times of open or close seasons for hunting and fishing, and times of opening and closing business houses and places of amusement.

Daylight Saving Time.-For some years before World War I there was active propaganda, particularly in the cities, for the use during the summer months of an earlier time usually referred to as 'daylight saving time', one hour ahead of standard time. It was considered from the economic as well as from the health point of view that people in industrial towns and cities would gain by having longer periods of sunlight at their disposal for recreation. Canada adopted daylight saving time in 1918 but the Canadian Act lapsed at the end of that year. Since that date, however, most cities and towns have adopted daylight saving for varying periods in the summer months. Several provinces have recently placed legislation on their statute books making daylight saving time mandatory, either throughout the province or in certain areas.

## PART IV.-GEOPHYSICS AND ASTRONOMY

## Section 1.-Geophysics*

Geophysics is the study of the earth, including the oceans and atmosphere, by the methods of physics. Because it extends over such a very wide range of topics, it is generally divided into seven fields, each a well developed science in itself. Of these, one of the oldest is geodesy, the study of the earth's shape, and of variations in the gravitational attraction of the earth, which are related to the shape. Seismology originally was the

[^16]study of earthquakes but it now includes investigations of the earth's interior by means of vibrational waves, which may be produced by explosions as well as by earthquakes. Meteorology deals with the atmosphere, and hydrology deals with the surface waters of the earth, excluding the oceans but including ice and snow. The study of the oceans, their currents and bottom profiles, forms a subject in itself-oceanography. Geomagnetism is involved with the earth's magnetic field and with many related phenomena, such as the ionosphere and the radiation belts that surround the earth. Finally, volcanology is the study not only of existing volcanoes but of volcanoes of the past and of the rocks they produced.

The seven fields all deal with the investigation of some major property of the earth. They may be considered as pure sciences but it is apparent that they all have applications that are vital to modern life. The findings of geodesy on the precise shape of the earth are needed for accurate maps. The search for minerals and oil by scientific methods makes use of the techniques of gravity measurements, seismology and geomagnetism. Meteorology obviously has great practical importance, and the contributions of hydrology to water supply problems and of oceanography to the fisheries are also very large.

An event of particular significance to geophysics in 1962 was the launching of the first Canadian satellite, Alouette. This satellite, constructed by the Defence Research Board, carried instrumentation for the study of the upper part of the region of the atmosphere known as the ionosphere. Information on the ionosphere is important in problems of radio communication and, while its lower boundary can be studied through observations made from the ground, it is only by the use of satellites that the top of it is accessible. It is appropriate, therefore, that the Alouette is known as a topside sounder. A second event of 1962, of particular interest to geophysicists engaged in the exploration for oil and minerals, was the meeting of the International Society of Exploration Geophysicists, held in Calgary, Alta., in September. This was the first meeting of the Society to be held in Canada and the important Canadian contribution to the program indicated the advances that have been made in the science of geophysical prospecting in this country.

The determination of precise positions and elevations, which forms the basis of geodesy, was continued by the Geodetic Survey, Department of Mines and Technical Surveys. Networks of triangulation, to provide the framework for accurate mapping, were extended in the Northwest Territories and in Quebec. An arc of triangulation was completed from Sept Iles to Schefferville in Quebec, and on to Nain in Labrador, to provide the first accurate positions in this remote but developing region. Lines of precise levels were extended in British Columbia, Alberta, Saskatchewan, Manitoba, Ontario and Quebec. One of the problems of the Geodetic Survey has been the designing of permanent bench marks to provide a record of elevations in muskeg areas. A new type, consisting of a tablet clamped to a copper rod, which can be driven to a depth of over 100 feet, is now being used and it appears that it will successfully withstand frost action and other possible disturbance. Measurements of the earth's gravity also provide information on the shape of the earth and on the location of concealed underground structures. The Dominion Observatory, Department of Mines and Technical Surveys, continued its active program of determinations throughout Canada. Readings were taken over a large area of the Gulf of St. Lawrence, using a special gravity meter lowered to the bottom and read from a ship. The Observatory began the distribution of a series of map sheets on which the results of gravity surveys are plotted. These will be of considerable use to groups who wish to use the information for geological interpretations.

The most detailed knowledge on the interior of the earth comes from the study of waves from earthquakes. The Dominion Observatory maintains a network of seismograph stations for recording these waves; eleven stations were in operation during 1962 and five others were under construction. In addition, a station at Montreal was operated by Collège Jean-de-Brébeuf and one near Edmonton was completed by the University of Alberta. In addition to providing information on the earth's interior, the recording of earthquake waves is important for determining the possibility of earthquake damage to structures in different parts of the country. The Department of Mines and Technical

Surveys co-operates with the Division of Building Research, National Research Council, in defining regions of seismic activity throughout the country, in order that building specifications may be adapted to local conditions. As part of the International Upper Mantle Project, a number of studies of the crust and underlying mantle were carried on using seismic waves from large explosions. Groups from the Universities of British Columbia, Alberta, Manitoba and Toronto, and Dalhousie University, in addition to the Polar Continental Shelf Project, Dominion Observatory and Geological Survey, carried out investigations of this kind. Information on the thickness and composition of the crust is becoming available for many parts of Canada as a result of this work. Similar operations, conducted in more detail over limited regions, form the chief geophysical method used in the search for oil and natural gas. Laboratory measurements on the physical properties of rocks under high pressures are important for the understanding of the state of the earth's interior. Although this has been a neglected field in Canada, experimental work is now in progress at the Mines Branch, Department of Mines and Technical Surveys, and at the University of Western Ontario.

In meteorology, the routine operations of the Meteorological Branch, Department of Transport, were continued. The Branch also conducts research in meteorology and supports research projects at universities through a series of grants. The only department of meteorology in a Canadian university is at McGill University, Montreal, but an increase in meteorological research is notable at other universities, such as Toronto, where it is conducted within the Department of Physics. Canada co-operates with other nations in the exchange of weather information and in the standardization of weather reporting, by membership in the World Meteorological Organization.

Measurements and research in hydrology continue to expand, as the need to examine the extent of water resources becomes apparent in many parts of the country. The overall study of water resources is the responsibility of the Water Resources Branch, Department of Northern Affairs and National Resources, but studies in particular areas are conducted by provincial research councils, universities and groups, such as the Prairie Farm Rehabilitation Administration. Research was continued on such topics as estimating run-off from snow cover, evaporation from reservoirs, and the relation between meteorological conditions and floods. The problem of locating ground-water by surface exploration often brings other geophysical methods into play. The Geological Survey continued an investigation of local seismic measurements for the purpose of detecting water-bearing structures, and the Saskatchewan Research Council has had success using electrical measurements on the surface to locate buried river channels.

Perhaps no field of geophysics has grown more rapidly in Canada during recent years than glaciology. Glaciers in the western mountains are important as a source of water for many rivers, while those in the Arctic provide a record of climatic change. In 1962 field parties investigated glaciers in the Rocky, Selkirk, Monashee, Cariboo and Coast Mountains of Western Canada, and on Baffin, Devon, Melville, Axel Heiberg, Meighen and Ellesmere Islands of the Canadian Arctic. These groups represented the Defence Research Board, the Department of Mines and Technical Surveys, several universities, and other organizations such as the Arctic Institute of North America and the American Geographical Society. The work included accurate mapping of existing glaciers, determination of ice thickness, studies of glacial flow, and the breaking up of ice shelves to form ice islands.

Investigations of the earth's magnetism and its changes with time are important for a number of reasons. The use of the compass in navigation is an obvious one but magnetic measurements can also be used to study the earth's interior and to locate mineralized bodies in the earth's crust. Short-period disturbances in the earth's magnetism result from the bombardment of the earth by electrically charged particles from the sun. These disturbances can cause serious disruption of radio communication, particularly in northern regions. The strength of the magnetic field over Canada is determined by measurements, both airborne and ground, conducted by the Dominion Observatory, which also operates observatories to record the changes of the field with time, at Agincourt, Ont., Meanook, Alta., and Baker Lake, Resolute, Alert and Mould Bay, N.W.T. Airborne
magnetometer surveys for geological purposes were continued by the Geological Survey of Canada. The maps that have been prepared from the surveys for many parts of the country have proven to be very valuable in mineral exploration. Research into the magnetic disturbances caused by external influences was continued by several universities and the Defence Research Board. A finding of particular interest was the simultaneous occurrence of aurorae, and associated magnetic disturbance, near the north and south magnetic poles. This resulted from special observations in Northern Canada and in Antarctica.

In the field of upper atmospheric physics, the launching of the Alouette, mentioned on p. 58, was of great significance and important also were the re-openings of the Prince Albert Radar Laboratory and the Churchill rocket launching facility. Both of these had been damaged by fire in 1961. A number of groups in Canada, including the National Research Board, Defence Research Board and several universities, are proceeding with the development of instruments to be used in rockets which will be launched from Churchill. Canadian universities, such as the University of Saskatchewan, have taken advantage of their position in the zone of most frequent auroral displays to specialize in the study of this phenomenon.

The study of the oceans bordering Canada is carried on by the new Marine Services Branch, Department of Mines and Technical Surveys, the Fisheries Research Board, the Defence Research Board, and by university groups such as the Institute of Oceanography at the University of British Columbia and Dalhousie University. The Bedford Institute of Oceanography, under the Marine Services Branch, was opened in October 1962. It will be an important centre for oceanographic work, with docking facilities for 10 ships and large laboratory space. Canadian oceanographic ships continued to extend their operations northward, and the John A. Macdonald of the Canadian Coast Guard reached a point only 500 miles from the north geographic pole.

The interest of Canadian groups in determining the ages of rocks by radioactive methods continued to expand. Because so many of the rocks exposed in Canada are of Precambrian age and carry no fossils, physical methods for determining the ages have become very important in the geological subdivision of the country. These methods are based on the precise measurement of the quantity in the rocks of certain elements formed by radioactive decay. Instruments suitable for this work are now in operation at the Geological Survey and at the following universities: Toronto, British Columbia, Alberta, St. Francis Xavier, McMaster and Carleton.

The increasing diversity of geophysics in Canada, both in the general study of the earth, oceans and atmosphere, and in geophysical exploration, has meant a continued demand for students with degrees in the subject. Nearly all Canadian universities now offer undergraduate training in some branch of geophysics and it will be apparent from the preceding discussions that research in geophysics is also being carried on at most of them. This research is largely supported by a system of grants awarded by the National Research Council and the Defence Research Board, with some support provided by industry and other agencies.

## Section 2.-Astronomy

The modern era of astronomy in Canada may be said to have begun in 1905 with the completion of the Dominion Observatory at Ottawa, the national observatory of Canada. Prior to that time, an astronomical observatory established in 1851 at Fredericton, N.B., was used for a short time to determine the longitude of that centre and for general astronomical purposes; it has been rehabilitated as a historic monument. Other small observatories were established, one at Quebec City in 1854 and one at Kingston in 1875. Astronomical instruments were to be associated with the Magnetic Observatory built by the British Government at Toronto in 1839 but there is no record of their being set up until 1881. A small observatory established at McGill University in 1879 was used for many years for time observations.

Today, an increasing number of universities and other scientific organizations are devoting a substantial part of their efforts to the study of astronomy and astrophysics. The Dominion Observatory at Ottawa, which with its sister institutions is administered by the Department of Mines and Technical Surveys, specializes in the astronomy of position, solar physics, meteoric astronomy and various branches of geophysical work. This Observatory also maintains a subsidiary (the Dominion Radio Astrophysical Observatory) near Penticton, B.C., for the study of radio astronomy. Also associated in the same group is the Dominion Astrophysical Observatory at Victoria, B.C. This Observatory, which operates two large optical reflectors, devotes its efforts to the motions and physical characteristics of the stars and of inter-stellar material. Other Federal Government institutions carrying out meteoric and radio astronomy, including a study of the upper atmosphere by essentially astronomical methods, are the National Research Council and the Defence Research Board. Solar observations at the Algonquin Radio Observatory of the National Research Council, located in Algonquin Park 150 miles west of Ottawa, are now under way. The program is being extended to galactic and extragalactic studies with the addition of several new radio telescopes, including one under construction by the University of Toronto. At Springhill Meteor Observatory, near Ottawa, studies of meteors and the aurora are carried out.

The David Dunlap Observatory of the University of Toronto carries on an active program of astrophysical research as well as the teaching of astronomy. It performs not only the functions of a privately financed and administered research institution, but is also the nucleus of the Department of Astronomy of the University of Toronto. The Physics Department of Queen's University in Kingston, which devotes considerable effort to the teaching of astronomy, has recently installed a new optical telescope and for some time has been carrying on advanced work in the science of radio astronomy. The University of Western Ontario maintains a small but active Department of Astronomy and several other Canadian universities give some instruction in astronomical science.

## PART I.-CONSTITUTION OF CANADA

The Canadian federal state, which today comprises ten provinces and two vast northern territories, had its beginning ninety-six years ago in the enactment (Mar. 29, 1867) by the British Parliament of the British North America Act, 1867. Fashioned largely out of the Seventy-two Resolutions drafted at Quebec (1864) by the Fathers of Confederation, the British North America Act, 1867 provided for the federal union of the three British North American provinces (Canada, New Brunswick and Nova Scotia) in one Dominion under the name of "Canada".

While the new nation that came into being on July 1, 1867 was a federation comprised of four provinces, namely, Ontario, Quebec, New Brunswick and Nova Scotia, Sect. 146 of the Act provided for the admission into the Union of the Crown colonies of Prince Edward Island and Newfoundland on the Atlantic and the united (1866) island and mainland colony of British Columbia on the Pacific, and also of the vast expanse of Hudson's Bay Company territory in the North West known as "Rupert's Land and the North-Western Territory". Following the negotiation of an agreement on terms comprising the Company's surrender of its authority and territories to the Crown (which was

[^17]to transfer them at once to Canada) and the retention of one-twentieth of the land of the fertile belt (the southern territories) with designated blocks of land around its trading posts and a Canadian cash payment of $£ 300,000$, the new nation of Canada was ready to expand westward with considerable momentum across the Continent to the Pacific.

The acquisition by Canada of Rupert's Land and the North-Western Territory enabled the Red River settlement, after a few months of disturbance, to receive limited provincial establishment under the name of "Manitoba" in 1870; provided the Federal Government with the public lands needed to help subsidize a transcontinental railway linking the Pacific with the Canadian East, thereby fulfilling the pledge to British Columbia to begin the Canadian Pacific Railway within two years and to complete it within ten years of the date of union, July 20, 1871; and laid, through the provision of millions of acres of public lands, the land and economic bases for the Federal Government's adoption of a freehomestead policy for the Canadian prairies that, in conjunction with the completion of the Canadian Pacific Railway and the launching of other railway lines, brought wave after wave of settlers into the Northwest Territories in such numbers as to justify the creation of the two Provinces of Saskatchewan and Alberta in 1905 out of the portion of the Northwest Territories south of the 60th parallel of north latitude. Although provision for their entry was included in the British North America Act, 1867, the Province of Prince Edward Island held back from the Union until 1873 and Newfoundland became Canada's tenth province on Mar. 31, 1949.

The Constitution of Canada, which had a corporate beginning in 1867, combines, in a set of rules determining the creation and operation of the machinery or institutions of government, the Cabinet system of responsible government (based on an inheritance from Britain) with a Canadian adaptation of federalism (as then practised in the United States for eighty years). A written document, the British North America Act of 1867, contains a substantial portion of Canada's Constitution and this Act, with its various amendments,* is popularly held to be the Canadian Constitution. There is, however, another and perhaps more important part which appears, through the evolutionary processes of historical growth, in various guises including well-established usages and conventions found in the unwritten provisions of the Constitution.

Thus, the British North America Act is not a comprehensive constitutional document presenting an exhaustive statement of fundamental laws and rules by which Canada is governed. The Constitution of Canada in its broadest sense includes other British statutes (such as the Statute of Westminster, 1931) and Orders in Council (notably those admitting various provinces and territories to the federation), statutes of the Parliament of Canada relating to such matters as the succession to the Throne, the Royal Style and Titles, the Governor General, the Senate, the House of Commons, the creation of courts, the establishment of government departments, the franchise, elections, and also statutes of provincial legislatures relating to provincial constitutional institutions and government matters. Federal and provincial Orders in Council, legally authorized by their respective statutes, provide further constitutional material as do the decisions of the courts which interpret the British North America Act and all ordinary statutes and indeed possess the power to set aside any laws which they hold to be ultra vires or beyond the jurisdiction of the enacting legislative bodies, whether federal or provincial. Moreover, the Canadian Constitution comprises, in addition to the statutory law and its judicial interpretation, substantial sections of the common law, unwritten constitutional usages and conventions and principles of democratic government which were transplanted from Britain over two hundred years ago and since then have been thriving and evolving in the Canadian environment. For example, the Cabinet system of responsible government (see pp. 67-69)

[^18]and its functioning through close identification of the executive and the legislative powers (that is, of the Cabinet and the House of Commons) is not mentioned in the British North America Act but derives from an unwritten convention of the Constitution.

Although the essential principles of Cabinet government are based in custom or constitutional usage, the federal structure of Canadian government rests on the explicit written provisions of the British North America Act. Apart from the creation of the federal union, the dominant feature of the Act and indeed of the Canadian federation was the distribution of powers between the central or federal government on the one hand and the component provincial governments on the other. In brief, the primary purpose was to grant to the Parliament of Canada legislative jurisdiction over all subjects of general or common interest, while giving to the provincial legislatures jurisdiction over all matters of local or particular interest (see p. 72 and p. 80).

Unlike the written constitutions of many nations, the British North America Act lacks comprehensive "bill of rights" clauses, although it does accord specific constitutional protection to the use of the English and French languages (clause 133) and special safeguards with respect to sectarian or denominational schools. Such vital rights as freedom of speech, freedom of assembly, freedom of religion, freedom of the press, trial by jury and similar liberties enjoyed by the individual citizen are not recorded in the British North America Act but rather depend on the statute law and the common law inheritance. Additional security of these rights may be expected to flow from the recent passage of a Canadian Bill of Rights-An Act for the Recognition and Protection of Human Rights and Fundamental Freedoms (SC 1960, c. 44), assented to Aug. 10, 1960.

No provision was made in the British North America Act of 1867 for amendment thereof by any legislative authority in Canada but both the Parliament of Canada and the provincial legislatures were given legislative jurisdiction with respect to some matters relating to government. Thus, for example, the Parliament of Canada was given jurisdiction with respect to the establishment of electoral districts and election laws and the privileges and immunities of Members of the House of Commons and the Senate, and each provincial legislature was empowered to amend the constitution of the province except as regards the office of Lieutenant-Governor. By an amendment to the British North America Act passed in 1949, the authority of the Parliament of Canada to legislate with respect to constitutional matters was considerably enlarged and it may now amend the Constitution of Canada except as regards the legislative authority of the provinces, the rights and privileges of provincial legislatures or governments, schools, the use of the English or the French language, and the duration of the House of Commons other than in time of real or apprehended war, invasion or insurrection.

The question of devising amendment procedure within Canada which satisfies the need to safeguard or entrench such basic provincial and minority rights as are noted immediately above and yet possesses sufficient flexibility to ensure that the Constitution can be altered to meet changing circumstances is one that still engages the attention of the federal and provincial governments and legislatures. The constitutional background to the problem, the present amending procedures, the attempts since 1935 to devise amending procedures, and the complexities inherent in amendment of a federal constitution are all discussed in a special article published in the 1961 Canada Year Book, pp. 51-57, entitled "Amendment of the Canadian Constitution".* The only barrier to Canada's complete control over the amendment of its own written Constitution (i.e., the British North America Act of 1867, a statute of the British Parliament) has been the inability of the Canadian people and their elected representatives in the federal and provincial fields to draft amendment procedures on which they will be in general agreement.

${ }^{1}$ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (SC 1912, c. 40).
${ }^{2}$ Extended by Quebec Boundaries Extension Act, 1912 (SC 1912, c. 45) and diminished Mar. 1, 1927 in consequence of the Award of the Judicial Committee of the British Privy Council whereby approximately 112,000 8q. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.
${ }^{3}$ Extended by the Extension of Boundaries Act of Manitoba, 1881 and the Manitoba Boundaries Extension Act, 1912 (SC 1912, c. 32).

4 Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional districts of Assiniboia, Athabaska, Alberta and Saskatchewan established May 17, 1882 by minute of Canadian Privy Council concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.
${ }^{5}$ By an Imperial Order in Council passed on June 23, 1870 pursuant to the Rupert's Land Act, 1868 (Br. Stat. 1868, c. 105), the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada effective July 15, 1870. These teritories were designated as the North-West Territories by the Act of SC 1869, c. 3 and as the Northwest Territories by RSC 1906, c. 62. By Imperial Order in Council of July 31, 1880 (effective Sept, 1, 1880), all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada and these additional territories were formally included in the NorthWest Territories by SC 1905, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (SC 1870, c. 3) and a further portion was added to Manitoba in 1881 by SC 1881, c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905 and in 1912 other portions were added to Manitoba, Ontario and Quebec.
'By SC 1876, c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed and in 1905 the entire Keewatin District was re-annexed. The Act of 1876 was never proclaimed. By Order in Council of May 8, 1882 the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabaska were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895 the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council dated Mar. 16, 1918 (effective Jan. 1, 1920) the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.
${ }^{7}$ See p. 93.
${ }^{3}$ The provisional district of Yukon established in 1895 was created a judicial district of the North-West Territories by proclamation issued pursuant to Sect. 51 of the North-West Territories Act (RSC 1886, c. 50 ) on Aug. 16, 1897 and by the Yukon Territory Act (SC 1898, c. 6) was declared to be a separate Territory.

# PART II.-MACHINERY OF GOVERNMENT 

Section 1.-The Federal Government

## Subsection 1.-The Executive

The Crown.-The British North America Act of 1867 (Sect. 9) provides that "the Executive Government and authority of and over Canada is . . . vested in the Queen". The functions of the Crown, which are substantially the same as those of the Queen in relation to the British Government, are discharged in Canada by the Governor General in accordance with established principles of responsible government.

The Queen.-The personal participation of the Queen in the functions of the Crown in Canada has been limited to such occasions as the granting of honours and awards, approval of changes in the Table of Precedence, institution of new military awards, or the periodic appointment of a Governor General. On the occasion of a royal visit, the Queen may participate in those ceremonies that otherwise are carried out in her name, such as the opening and dissolution of Parliament, the assent to Bills and the granting of a general amnesty.

Apart from her constitutional position in relation to the various governments of the Commonwealth countries, the Queen is Head of the Commonwealth and symbolizes the association of the member countries. Until 1953 the title of the Queen was the same throughout the Commonwealth. Constitutional developments put the title somewhat out of accord with the facts of the position, and in December 1952 it was decided by the Prime Ministers of the Commonwealth countries meeting at London, England, that new forms of title for each country should be devised. The title for Canada was approved by Parliament and established by a Royal Proclamation on May 29, 1953. The title of the Queen, so far as Canada is concerned, now is:-
"Elizabeth the Second, by the Grace of God of the United Kingdom, Canada and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith'.
1.-Sovereigns of Canada since Confederation, 1867

| Name | Dynasty | $\begin{gathered} \text { Year } \\ \text { of } \\ \text { Birth } \end{gathered}$ | $\begin{gathered} \text { Date } \\ \text { of } \\ \text { Accession } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Victoria. | House of Hanover. | 1819 | June 20, 1837 |
| Edward VII. | House of Saxe-Coburg and Gotha. | 1841 | Jan. 22, 1901 |
| George V. | House of Windsor. | 1865 | May 6, 1910 |
| Edward VIII. | House of Windsor. | 1894 | Jan. 20, 1936 |
| George VI. | House of Windsor. | 1895 | Dec. 11, 1936 |
| Elizabeth II. | House of Windsor. | 1926 | Feb. 6, 1952 |

The Governor General.-The Governor General, appointed by the Queen as her personal representative on the advice of the Prime Minister of Canada, traditionally serves for a term of five years. He exercises the executive authority of the Queen in relation to the Government of Canada under Letters Patent issued under the Great Seal of Canada (revised and re-issued, effective Oct. 1, 1947) and the provisions of the British North America Acts, 1867 to 1960. Acting under the recommendations of his responsible Ministers, in the Queen's name, he summons, prorogues and dissolves Parliament, assents to Bills, and exercises other executive functions.

The Governor General's annual salary and allowances provided by the Parliament of Canada are $\$ 48,666$ and $\$ 100,000$, respectively. In addition, other expenses of office are provided for, including the salary of the Governor General's secretary.

The present Governor General is styled His Excellency Major General The Right Honourable Georges P. Vanier, D.S.O., M.C., C.D.
2.-Governors General of Canada since Confederation, 1867

| Name | $\begin{gathered} \text { Date } \\ \text { of } \\ \text { Appointment } \end{gathered}$ | Date of Assumption of Office |

| The Earl of Bebsborough, G.C.M.G. | Feb. 9, 1931 | Apr. 4, 1931 |
| Lord Tweedsmutr of Elsfeld, G.C.M.G., G.C.V.O., C.H. | Aug. 10, 1935 | Nov. 2, 1935 |
| Major General The Earl of Athlone, K.G., G.C.B., G.C.M.G., G.C.V.o., D.s.O. | Apr. 3, 1940 | June 21, 1940 |
| Field Marshal Viscount Alexander of Tunis, K.G., G.C.B., G.C.m.G., C.S.I., D.S.O., M.C., A.D.C. | Aug. 1, 1945 | Apr. 12, 1946 |
| The Riget Honourable Vincent Masbey, C.H. | Jan. 24, 1952 | Feb. 28, 1952 |
| Major General The Riget Honourable Georges P. Vanier, D.S.O., M.C., C.D. | Aug. 1, 1959 | Sept. 15, 1959 |

The Cabinet.-The Cabinet is a committee of Ministers chosen by the Prime Minister (the leader of the political party forming the Government of the Day) generally from Members of Parliament. By convention, all members of the Cabinet either have seats in Parliament or secure seats within a short time and, again by convention, all Ministers in charge of departments of government are generally Members of the House of Commons although there is nothing in the Constitution to prevent a Minister with Portfolio being a Senator.* However, they generally prefer to have seats in the House of Commons where all crucial legislation, by convention, is introduced and where they can offer explanations necessary to secure passage of their Estimates or legislation with which they are deeply concerned. Ministers without Portfolio (without a department to administer) can be members of either the House of Commons or the Senate. Frequently the Cabinet contains one Minister without Portfolio-usually the Leader of the Government in the Senate-and perhaps one or two others chosen for a variety of reasons such as the desirability of including certain provincial or sectional representation that might otherwise be lacking in the Ministry.

Cabinet members are selected by the Prime Minister in such manner as to ensure, as far as possible, representation of the several geographical and political regions of the country and its principal ethnic, religious and social interests. Each Cabinet Minister generally assumes charge of one of the departments of government, although a Minister may hold more than one portfolio at the same time or he may hold one or more portfolios and one or more acting portfolios, or a Minister without Portfolio may hold one or more acting portfolios. In his acting capacity, the Minister exercises the same authority as if he were the Minister of the department.

[^20]The position of Prime Minister, the keystone of the Cabinet, is one of exceptional authority. He alone makes recommendations on the dissolution and convocation of Parliament, appointment of Privy Councillors, Cabinet Ministers, Lieutenant-Governors, Chief Justices, Senators, Speakers of the Senate and House of Commons, and Deputy Heads of departments. The Cabinet, under his leadership, directs the business of the Commons, initiates nearly all public Bills placed before Parliament, and has complete responsibility for the initiation of taxes and the recommendation of expenditures. Following established precedent or convention, it is always responsible to the Commons. When the Cabinet (the Government) suffers defeat on a Government Bill or a vote of censure or on a motion of want of confidence in the Commons, the existing Government or Cabinet must either resign or request a dissolution from the Governor General. If it resigns, the Governor General may call on the Leader of the Opposition in the Commons to form a new Government. Alternatively, if a Government that has been defeated in the House is granted a dissolution and is defeated in the ensuing general election, then, should no clear majority be indicated, the Government may decide (1) to remain in office and seek a vote of confidence in the House when it meets or (2) to resign immediately with the consequent result that the Governor General will ask the leader of the party with the highest number of members returned to form a new Government. These alternatives may also eventuate as a result of a general election subsequent to the normal dissolution of Parliament at or near the close of its statutory life.

The primary responsibility of the Governor General in either of the above circumstances is to provide the nation with a Cabinet or Ministry capable of conducting Her Majesty's Government with the support of the House of Commons.

The Prime Ministers since Confederation are listed in Table 3 and the members of the Ministry as at Apr. 30, 1963 in Table 4. Sessional and other allowances received by Cabinet Ministers are given at pp. 76-77.

## 3.-Prime Ministers since Confederation, 1867

| Ministry | Prime Minister | Length of Administration |
| :---: | :---: | :---: |
| 1 | Rt. Hon. Sir John Alexander Macdonald....................... | July 1, 1867 - Nov. 5, 1873 |

${ }^{1}$ Any changes occurring between Apr. 30, 1963 and the date of going to press will be carried in an Appendix to this volume.

Parliamentary Secretaries.-As provided by the Parliamentary Secretaries Act (SC 1959, c. 15), assented to June 4, 1959, 15 Parliamentary Secretaries were appointed (one on Aug. 20, 1959 and 14 on Nov. 18, 1959) from among the Members of the House of Commons to assist the respective Ministers in such manner as each Minister may direct. In so doing, the Government revived the system of parliamentary assistantships in practice during the war and postwar years subsequent to 1943, whereby Cabinet Ministers might receive assistance in the performance of their parliamentary functions and promising Members of the House might secure a degree of apprenticeship for higher public office. Parliamentary Secretaries hold office for 12 months.

On May 14, 1963, His Excellency the Governor General in Council, on the recommendation of the Prime Minister, announced the appointment of the following:-

The Privy Council.-The British North America Act of 1867 (Sect. 11) provides for " $a$ Council to aid and advise in the Government of Canada, to be styled the Queen's Privy Council for Canada . . '". At present it consists of about 110 members sworn of the Council by the Governor General on the advice of the Prime Minister. Membership in the Privy Council is for life so that Privy Councillors include both former and present Ministers of the Crown as well as a number of persons who have been, from time to time as an honour, sworn as Privy Councillors; these include members of the Royal Family, past and present Commonwealth Prime Ministers, and former Speakers of the Senate and of the House of Commons of Canada. The Council seldom meets as a body and its constitutional responsibilities as adviser to the Crown in respect to Canada are performed exclusively by a Committee; the membership thereof, with a few historical exceptions, is identical to that of the Cabinet of the Day. A clear distinction between the functions of the Committee of the Privy Council and the Cabinet is rarely made and actually the terms, "Council" and "Cabinet", are commonly employed as synonyms.

## 5.-Members of the Queen's Privy Council for Canada According to Seniority Therein, as at Apr. 30, 1963

| President of the Privy Council | Hon. Maurice Lamontagne |

## 6.-Duration and Sessions of Parliaments, 1945-63

Note.-Similar information for the 1st to the 12th Parliaments, covering the period from Confederation to 1917, is given in the 1940 Year Book, p. 46; that for the 13th to 17th Parliaments in the 1945 edition, p. 53; and for the 18th and 19th Parliaments in the 1957-58 edition, p. 46.

[^21]
## Subsection 2.-The Legislature

The federal legislative authority is vested in the Parliament of Canada consisting of the Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House subject to the provisions of Sect. 53 of the British North America Act, 1867, which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice most public Bills originate in the House of Commons, although there has been a marked increase recently in the introduction of public Bills in the Senate, at the instance of the Government, in order that Bills may be dealt with in the Senate while the Commons is engaged in other matters such as the debate on the Speech from the Throne. Private Bills usually originate in the Senate. The Senate may delay, amend or even refuse to pass Bills sent to it from the Commons, but differences are usually settled without serious conflict. (See Chap. XXVI for current legislation.)

Under Sect. 91 of the British North America Acts, 1867 to 1960, the legislative authority of the Parliament of Canada extends to the following matters: the amendment of the Constitution of Canada (subject to certain exceptions); the public debt and property; the regulation of trade and commerce; unemployment insurance; the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and naval service, and defence; the fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses and Sable Island; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea coast and inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks and the issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by these Acts assigned exclusively to the legislatures of the provinces.

Under Sect. 95, the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures although federal legislation is paramount in the event of conflict. By the British North America Act, 1951 (Br. Stat. 1950-51, c. 32) it is declared that the Parliament of Canada might make laws in relation to old age pensions in Canada but no such law shall affect the operation of any provincial laws in relation to old age pensions.

The Senate.-From an original membership of 72 at Confederation, the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is traced in the 1940 Year Book, pp. 47-49, and is summarized by province in Table 7.

Senators are appointed for life by the Governor General by instrument under the Great Seal of Canada on the recommendation of the Prime Minister. The actual power of appointing Senators resides by constitutional usage in the Prime Minister whose advice the Governor General accepts in this regard. In each of the four main divisions of Canada, except Quebec, Senators represent the whole of the province for which they are appointed; in Quebec one Senator is appointed for each of the 24 electoral divisions of what was formerly Lower Canada. The deliberations of the Senate are presided over by a Speaker appointed by the Governor General in Council (in effect by the Government) and government business in the Senate is sponsored by the Government Leader in the Senate.

## 7.-Representation in the Senate since Confederation, 1867

| Province |  |
| ---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

The Senate is not a competitor of the House of Commons in the field of legislation but, in the main, acts as a second chamber giving further scrutiny to legislation initiated in the House of Commons. Under the Constitution, Bills for appropriating any part of the public revenue or for imposing a tax or impost must originate in the Commons but in every other respect, since both Houses must concur in every piece of legislation, the Senate has an equal voice with the House of Commons.

## 8.-Members of the Senate, by Province, as at Apr. 30, 1963¹

${ }^{1}$ Any changes occurring between Apr. 30, 1963 and the date of going to press will be carried in an Appendix to this volume.

The House of Commons.-The British North America Act, 1867 provided that in respect of representation in the House of Commons the Province of Quebec should have the fixed number of sixty-five members and that there should be assigned to each of the other provinces such a number of members as would bear the same proportion to the number of its population as the number sixty-five bears to the number of the population of Quebec. This Act also provided that on the completion of a census in 1871 and of each subsequent decennial census the representation of the several provinces should be readjusted from time to time provided the proportionate representation of the provinces as prescribed by the Act were not thereby disturbed.

In the session of 1946 the House of Commons adopted a resolution stating that the effect of the provisions of the British North America Act relating to representation had not been satisfactory in that proportionate representation of the provinces according to population had not been maintained and that a more equitable apportionment of members to the various provinces could be effected if readjustments were made on the basis of the population of all the provinces taken as a whole. The Act was amended accordingly in 1946 to provide a new rule to regulate representation in the House of Commons. Generally speaking, representation was fixed as follows:-

The membership assigned to each province shall be computed by dividing the total population of the provinces by two hundred and fifty-four and by dividing the population of each province by the quotient so obtained.

This rule, employed in the redistribution of representation made in 1947, was effective in the General Election of 1949.

After the completion of the 1951 Census it was apparent that as a result of a wartime shift of population a substantial reduction in the representation of the Province of Saskatchewan would ensue under the rules then regulating representation. Accordingly, in an effort to eliminate sharp reductions in provincial representation from one census to another, the British North America Act was again amended to provide representation on the following basis:-
"Sect. 51.-(1) Subject as hereinafter provided, the number of members of the House of Commons shall be two hundred and sixty-three and the representation of the provinces therein shall forthwith upon the coming into force of this section and thereafter on the completion of each decennial census be readjusted by such authority, in such manner, and from such time as the Parliament of Canada from time to time provides, subject and according to the following rules:-
" 1 . There shall be assigned to each of the provinces a number of members computed by dividing the total population of the provinces by two hundred and sixty-one and by dividing the population of each province by the quotient so obtained, disregarding, except as hereinafter in this section provided, the remainder, if any, after the said process of division.
" 2 . If the total number of members assigned to all the provinces pursuant to rule one is less than two hundred and sixty-one, additional members shall be assigned to the provinces (one to a province) having remainders in the computation under rule one commencing with the province having the largest remainder and continuing with the other provinces in the order of the magnitude of their respective remainders until the total number of members assigned is two hundred and sixty-one.
" 3 . Notwithstanding anything in this section, if upon completion of a computation under rules one and two, the number of members to be assigned to a province is less than the number of senators representing the said province, rules one and two shall cease to apply in respect of the said province, and there shall be assigned to the said province a number of members equal to the said number of senators.
"4. In the event that rules one and two cease to apply in respect of a province then, for the purpose of computing the number of members to be assigned to the provinces in respect of which rules one and two continue to apply, the total population of the provinces shall be reduced by the number of the population of the province in respect of which rules one and two have ceased to apply and the number two hundred and sixty-one shall be reduced by the number of members assigned to such province pursuant to rule three.
" 5 . On any such readjustment the number of members for any province shall not be reduced by more than fifteen per cent below the representation to which such province was entitled under rules one to four of this subsection at the last preceding readjustment of the representation of that province, and there shall be no reduction in the representation of any province as a result of which that province would have a smaller number of members than any other province that according to the results of the then last decennial census did not have a larger population; but for the purposes of any subsequent readjustment of representation under this section any increase in the number of members of the House of Commons resulting from the application of this rule shall not be included in the divisor mentioned in rules one to four of this subsection.
" 6 . Such readjustment shall not take effect until the termination of the then existing Parliament.
"(2) The Yukon Territory as constituted by chapter forty-one of the Statutes of Canada, 1901, shall be entitled to one member, and such other part of Canada not comprised within a province as may from time to time be defined by the Parliament of Canada shall be entitled to one member." (RSC 1952, c. 304.)

The principal effect of these latest rules is that the representation of any province shall not be reduced by more than 15 p.c. at any one readjustment, subject however to the qualification that the rule shall not work out in such manner that the representation of a province with a smaller population shall be greater than any province with a larger population.

Subsequently, Parliament enacted a measure, "An Act to readjust the Representation in the House of Commons, 1952", effective in the General Election of 1953, which provided that representation in the House of Commons shall be on the following basis:-
"Sect. 2.-Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members." (RSC 1952, c. 334.)

The number of representatives of each province elected at each of the 26 General Elections since Confederation is given in Table 9.

Under their parliamentary system of representation, based on a "constitution similar in principle to that of the United Kingdom", the people of Canada elect representatives having various political party affiliations. In a general election, the Canadian electorate not only determines what political party leader shall be called on to form the Government of the day, but it also decides which of the parties is to become the Official Opposition. Her Majesty's Loyal Opposition occupies an essential place in constitutions based on the British parliamentary system, in that its function is to oppose or criticize in debate the Government in power-an essential to good government at all times. The Official Opposition is founded, like such institutions as the Cabinet and the Prime Ministership, on unwritten custom that has become firmly established. Although the position of Leader of the Opposition is not recognized in the British North America Act, it received statutory acknowledgment in the Canadian Parliament in 1905 when the Senate and House of Commons Act (SC 1905, c. 43, Sect. 2) provided an additional sessional allowance to "the member occupying the recognized position of Leader of the Opposition in the House of Commons".

The final list of Members of the House of Commons as elected at the Twenty-Sixth General Election of Apr. 8, 1963, was not available at the time of the printing of this Chapter and will be placed in an Appendix to this volume.

Indemnities and Allowances.-Members of the Senate receive a sessional allowance at the rate of $\$ 8,000$ per annum. In addition they receive at the end of each calendar year an annual expense allowance of $\$ 2,000$ which is subject to income tax. The member of the Senate occupying the recognized position of Leader of the Government in the Senate is paid, in addition to his sessional allowance, an annual allowance of $\$ 10,000$, and to the member of the Senate occupying the recognized position of Leader of the Opposition in the Senate there is paid, in addition to his sessional allowance, an annual allowance
of $\$ 6,000$; but if the Leader of the Government is in receipt of a salary under the Salaries Act, the annual allowance is not paid. Members of the House of Commons are paid a sessional allowance at the rate of $\$ 8,000$ per annum. In addition they receive $\$ 2,000$ as an expense allowance paid at the end of each calendar year. This allowance, except that for Ministers of the Crown and for the Leader of the Opposition in the House of Commons, is not subject to income tax. The remuneration of the Prime Minister is $\$ 25,000$ a year and of a Cabinet Minister and the Leader of the Opposition $\$ 15,000$ a year in addition to the sessional allowance and expense allowance each receives as a Member of Parliament. A Cabinet Minister is also entitled to a motor car allowance of $\$ 2,000$. The remuneration of a Minister without Portfolio is $\$ 7,500$ a year in addition to the sessional allowance and expense allowance, the latter taxable. The Speaker of the Senate and the Speaker of the House of Commons each receives, besides the sessional allowance and expense allowance, a salary of $\$ 9,000$ and a motor car allowance of $\$ 1,000$ and each is entitled to $\$ 3,000$ in lieu of a residence. The Deputy Speaker of the House of Commons receives a salary of $\$ 6,000$ and an allowance of $\$ 1,500$ in lieu of a residence. The Deputy Chairman of Committees receives an annual allowance of $\$ 2,000$. Parliamentary Secretaries to the Ministers of the Crown receive $\$ 8,000$ sessional allowance as Members of Parliament, \$4,000 a year as Parliamentary Secretaries and the $\$ 2,000$ expense allowance paid to all Members of Parliament.

The Federal Franchise.-The present federal franchise laws are contained in the Canada Elections Act (SC 1960, c. 39). The franchise is conferred upon all Canadian citizens or British subjects, men and women, who have attained the age of 21 years, are ordinarily resident in the electoral district on the date of the issue of the writ ordering an election and, in the case of British subjects other than Canadian citizens, have been ordinarily resident in Canada for twelve months prior to polling day at such election. Persons denied the right to vote are:-
(1) the Chief Electoral Officer and the Assistant Chief Electoral Officer;
(2) judges appointed by the Governor General in Council;
(3) the returning officer for each electoral district;
(4) persons undergoing punishment as inmates of any penal institution for the commission of any offence;
(5) persons restrained of their liberty or deprived of the management of their property by reason of mental disease; and
(6) persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices.
Prior to July 1, 1960, the list of persons denied the right to vote included "Indians ordinarily resident on an Indian reserve who were not members of His Majesty's Forces in World Wars I or II or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property". Legislation proclaimed on the above-mentioned date confers upon all Indians who have attained the age of 21 years the right to vote at federal elections, without taking from them any of the rights and privileges to which they are entitled under the Indian Act.

The Canadian Forces Voting Rules set out in Schedule II to the Canada Elections Act prescribe voting procedure for members of the Armed Forces of Canada and also for veterans in receipt of treatment or domiciliary care in certain institutions.

## Subsection 3.-The Judiciary

## The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act to provide from time to time for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision, Parliament has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

Supreme Court of Canada.- This Court, first established in 1875 and now governed by the Supreme Court Act (RSC 1952, c. 259), consists of a chief justice, who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or the House of Commons on private Bills referred to the Court under any rules or orders of the Senate or of the House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of $\$ 10,000$. An appeal may be brought from any other final judgment with leave of the highest court of final resort in the province; if such court refuses to grant leave the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgment whether final or not. Appeals in respect of indictable offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts. The judgment of the Supreme Court of Canada in all cases is final and conclusive.

## 10.-Chief Justice and Judges of the Supreme Court of Canada, as at Apr. 30, 1963

(In order of seniority)

| Name | $\begin{gathered} \text { Date } \\ \text { of } \\ \text { Appointment } \end{gathered}$ |
| :---: | :---: |
| Hon. Chief Justice Robert Taschereau. | Apr. 23, 19631 |
| Hon. Justice John R. Cartwright....... | Dec. 23, 1949 |
| Hon. Justice J. H. Gerald Fauteux. | Dec. 23, 1949 |
| Hon. Justice Douglas Charles Abbott | July 1, 1954 |
| Hon. Justice Ronald Martland........ | Jan. 15, 1958 |
| Hon. Justice Wilfred Judson.. | Feb. 5, 1958 |
| Hon. Justice Roland A. Ritchie | May 5, 1959 |
| Hon. Justice Emmett M. Hall. | Nov. 23, 1962 |

${ }^{1}$ First appointed as a Judge of the Supreme Court, Feb. 9, 1940.
Exchequer Court of Canada.-The Exchequer Court was first established in 1875 as part of the Supreme Court of Canada but is now a separate court governed by the Exchequer Court Act (RSC 1952, c. 98). The Court consists of a president and six puisne judges who are appointed by the Governor in Council. The president and the puisne judges hold office during good behaviour but may be removed by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and also at any other place in Canada where sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (RSC 1952, c. 210).

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds $\$ 500$; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed $\$ 500$ or where the judgment is not final.

The Exchequer Court also exercises admiralty jurisdiction in Canada. This was first conferred in 1891 by the Admiralty Act (SC 1891, c. 29) and is now governed by
the Admiralty Act (RSC 1952, c. 1). Under this statute, the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court exercise admiralty jurisdiction throughout the whole of Canada. In addition, Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or direct to the Supreme Court of Canada.

Miscellaneous Courts.-Railway Act.-The Railway Act, 1903 (RSC 1952, c. 234) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (RSC 1952, c. 271) the name was changed to the Board of Transport Commissioners for Canada. This Court exercises jurisdiction with respect to railway matters. The Governor in Council is given jurisdiction to vary any order of the Board and an appeal lies from the Board to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

Bankruptcy Act.-By virtue of Sect. 91(21) of the British North America Act, 1867, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (RSC 1952, c. 14) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

Income Tax Act and Estate Tax Act.-By the Income Tax Act (RSC 1952, c. 148) the Tax Appeal Board is established consisting of a chairman and not fewer than two or more than four members with jurisdiction over appeals against income tax assessments. A further appeal may be taken to the Exchequer Court. Under the Estate Tax Act (SC 1958, c. 29) the Tax Appeal Board also has jurisdiction to hear appeals from assessments under that Act.

## Provincial and Territorial Judiciaries*

Certain provisions of the British North America Act govern to some extent the provincial judiciaries. Under Sect. 92 (14) the legislature of each province exclusively may make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General shall appoint the judges of the superior, district and county courts in each province, except those of the courts of probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (RSC 1952, c. 159 and amendments). Under Sect. 99, the judges of the superior courts hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The tenure of office of district and county court judges is fixed by the Judges Act as being during good behaviour and their residence within the area for which the court is established.

All provinces have minor courts with limited civil and criminal jurisdiction, the judges of which are appointed by provincial authority as, for example, justices of the peace, magistrates and juvenile court judges. Except in Quebec, there are county or district courts of each province with limited jurisdiction varying from $\$ 500$ to $\$ 2,500$ in amount. Each province has a superior court with virtually unlimited jurisdiction variously known as Court of Queen's Bench, Supreme Court, Superior Court, etc. There is also a Court of Appeal in each province.

The Yukon Act and the Northwest Territories Act each provide for a superior court of record in and for the Territory, called the Territorial Court, and consisting of one or

[^22]more judges appointed by the Governor in Council. The judges of the Territorial Court of the Yukon Territory are ex officio judges of the Territorial Court of the Northwest Territories and vice versa. In 1960 the two Acts were amended to provide for a Court of Appeal in each of the Territories. Police magistrates and justices of the peace have jurisdiction in minor civil and criminal cases.

## Section 2.-Provincial and Territorial Governments*

In each of the provinces, the Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council which is responsible to the Legislature and resigns office under circumstances similar to those described on p. 68 concerning the Federal Government.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly, except for the Province of Quebec where there is a Legislative Council as well as a Legislative Assembly.

The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (Br. Stat. 1867, c. 3 and amendments). Under Sect. 92 of the Act the Legislature of each province exclusively may make laws in relation to the following matters: amendment of the constitution of the province except as regards the LieutenantGovernor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, though wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment for enforcing any law of the province relating to any of the aforesaid subjects; generally all matters of a merely local or private nature in the province.

Further, in and for each province the Legislature exclusively may, under Sect. 93, make laws in relation to education subject to certain restrictions relating to the establishment of schools by religious minorities. These powers with similar restrictions were conferred on the more recently admitted provinces on their inclusion in the federation.

The Provincial Legislatures may also make laws under Sect. 95 in relation to agriculture and immigration, subject to any laws of the Parliament of Canada in relation to these subjects.

Provincial Franchise.-Details regarding qualifications and disqualifications of the franchise are contained in the Elections Act of each province. In general, every person, male or female, at the age of 21 years who is a Canadian citizen or other British subject,

[^23]who complies with certain residence requirements in the province and the electoral district of polling and who falls under no statutory disqualifications, is entitled to vote. These qualifications apply with modifications to voters in most provinces. The principal exceptions give voting privileges to persons in Quebec and Saskatchewan at the age of 18 and in Alberta and British Columbia at 19 years.

## Subsection 1.-Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Legislative Assembly has 42 members elected for a term of five years. The Legislature elected Nov. 19, 1962 is the 33rd in the history of Newfoundland and the 5th since Confederation.

Since the date of Confederation, Mar. 31, 1949, the province has had four LieutenantGovernors: the Hon. Sir Albert Joseph Walsh commissioned Apr. 1, 1949; the Hon. Lt.-Col. Sir Leonard Outerbridge commissioned Sept. 5, 1949; the Hon. Campbell Macpherson commissioned Dec. 16, 1957; and the Hon. Fabian O'Dea commissioned Mar. 1, 1963. The first Ministry, formed on July 13, 1949 under the leadership of the Hon. Joseph R. Smallwood, was still in office on Apr. 30, 1963.

The Premier receives a salary of $\$ 10,000$ and the other Cabinet Ministers $\$ 9,000$ per annum, plus a sessional indemnity of $\$ 3,333.33$ and a travelling and expense allowance of $\$ 2,166.66$. Each member of the House of Assembly receives a sessional indemnity of $\$ 3,333.33$ plus a travelling and expense allowance of $\$ 1,666.66$. An additional allowance of $\$ 3,000$ is made to the Leader of the Opposition.

## 11.-First Ministry of Newfoundland, as at Apr. 30, 1963

(Party standing at latest General Election, Nov. 19, 1962: 34 Liberal, 7 Progressive Conservative and 1 Independent.)

| Office | Name | Date of First Appointment | Date of Present Appointment |

| Minister of Education. | Hon. G. A. Frecker | Aug. 26, 1959 | Aug. 26, 1959 |
| Minister of Fisheries. | Hon. C. M. Lane. | June 12, 1961 | Feb. 15, 1963 |

## Subsection 2.-Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Hon. F. W. Hyndman, LieutenantGovernor at Apr. 30, 1963, was commissioned to office Mar. 31, 1958. LieutenantGovernors from Confederation (1873) to 1959 are cited in the 1960 Year Book, p. 105.

The General Assembly elected Dec. 10, 1962 is the 50th in the history of Prince Edward Island Legislatures and the 25th since Confederation. It has 30 members from 15 electoral districts who serve for a statutory term of five years. One half of the members of the Legislative Assembly are elected on a property vote. Each district elects one

Councillor (elected on a property vote) and one Assembly member (elected on a general franchise vote). Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 105.

The annual salary of the Premier is $\$ 8,000$ and that of a Cabinet Minister $\$ 5,000$. Each member of the Assembly is paid $\$ 2,000$ for each session attended by him and an additional $\$ 1,000$ tax free as indemnity for expenses and travelling. The Speaker is paid an additional $\$ 666.60$ and a further additional $\$ 333.40$ tax free as indemnity for expenses and travelling. The Leader of the Opposition is paid an additional $\$ 1,000$ and a further additional $\$ 500$ fax free for expenses and travelling.

## 12.-Legislatures of Prince Edward Island, 1935-62, as at Apr. 30, 1963

Note.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 75, and for 1924-35 in the 1938 edition, p. 110.

| Date of Election |  | Legislature | Number of Sessions | Date of First Opening | Date of Dissolution |
| :---: | :---: | :---: | :---: | :---: | :---: |
| July | 23, 1935 | 18th. | 5 | Sept. 25, 1935 | Apr. 21, 1939 |
| May | 18, 1939 | 19th. | 4 | Mar. 20, 1940 | Aug. 20, 1943 |
| Sept. | 15, 1943 | 20th | 4 | Feb. 15, 1944 | Oct. 27, 1947 |

## Subsection 3.-Nova Scotia

The Government of Nova Scotia consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. The Hon. H. P. MacKeen, Lieutenant-Governor at Apr. 30, 1963, was commissioned to office Mar. 1, 1963. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 106.

The Legislature has 43 members elected for a maximum term of five years. The Legislature elected June 7, 1960 is the 47th in Nova Scotia's history and the 24th since Confederation. Premiers since Confederation are listed in the 1960 Year Book, p. 107.

The Premier of the province receives a salary of $\$ 12,000$ per annum and each Cabinet Minister a salary of $\$ 10,000$ per annum. Each member of the House of Assembly receives
a sessional indemnity of $\$ 3,200$ and an allowance of $\$ 1,600$ for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of $\$ 6,000$ in addition to his sessional indemnity.

## 14.-Legislatures of Nova Scotia, 1933-61, as at Apr. 30, 1963

Nort.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 76, and for 1924-33 in the 1938 edition, p. 111.

## Subsection 4.-New Brunswick

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly. The Hon. J. Leonard O'Brien, Lieutenant-Governor at Apr. 30, 1963, was commissioned to office June 6, 1958. Lieutenant-Governors since Confederation (1867) are cited in the 1960 Year Book, p. 108.

The Legislature elected Apr. 22, 1963 is the 45th in New Brunswick's history and the 18th since Confederation. It has 52 members who are elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 108.

The Premier receives $\$ 7,500$ per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is $\$ 10,000$ and the amount paid as indemnity to each member of the House of Assembly is $\$ 3,400$ plus an additional $\$ 1,700$ allowance for expenses. The Leader of the Opposition receives an additional $\$ 6,000$ and the Speaker receives an allowance of $\$ 4,000$ in addition to the regular indemnity.

## 16.-Legislatures of New Brunswick, 1935-63, as at Apr. 30, 1963

Note.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 77, and for 1924-35 in the 1938 edition, p. 112.

## Subsection 5.-Quebec

The Government of Quebec consists of a Lieutenant-Governor, an Executive Council and a bicameral legislature-the Legislative Council and the Legislative Assembly. The Hon. Paul Comtois, Lieutenant-Governor at Apr. 30, 1963, was commissioned to office Oct. 6, 1961. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 109.

The Legislative Council has 24 members nominated for life by the LieutenantGovernor in Council. The Legislative Assembly has 95 elected members and, like the Legislative Council, has the power to bring forward Bills relating to civil and administrative matters and to the amendment or repeal of existing laws. A Bill to be approved by the Lieutenant-Governor must have received the assent of both Houses. Only the Legislative Assembly can bring forward a Bill requiring the expenditure of public money. The maximum life of a Legislature is five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 110 .

Each member of the Legislative Council and the Legislative Assembly receives a sessional indemnity of $\$ 6,700$, plus an expense allowance of $\$ 3,300$. In addition to this sessional indemnity and allowance, the Premier receives an annual indemnity of $\$ 12,000$, an expense allowance of $\$ 4,000$ and a lodging allowance of $\$ 2,000$; Ministers with Portfolio each receive an annual indemnity of $\$ 10,000$ plus a $\$ 5,000$ expense allowance; Ministers without Portfolio each receive an indemnity of $\$ 5,000$ plus a $\$ 2,000$ expense allowance; the Speaker of the Legislative Assembly receives an indemnity of $\$ 8,000$, an expense allowance of $\$ 1,000$ and a lodging allowance of $\$ 1,000$ and the Deputy Speaker receives an indemnity of $\$ 5,000$ and an expense allowance of $\$ 1,000$; the Leader of the Opposition in the Assembly receives an indemnity of $\$ 8,000$, an expense allowance of $\$ 2,000$ and a lodging allowance of $\$ 2,000$; the Leader of the Government and the Leader of the Opposition in the Legislative Council each receive an additional sessional indemnity of $\$ 2,000$ plus a $\$ 3,000$ expense allowance.

## 18.-Legislatures of Quebec, 1935-63, as at Apr. 30, 1963

Noтe.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 78, and for 1924-35 in the 1938 edition, p. 113.

## Subsection 6.-Ontario

The Government of Ontario consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. The Hon. William Earl Rowe, Lieutenant-Governor at Apr. 30, 1963, was appointed effective Mar. 1, 1963. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 112.

The House of Assembly, the single-chamber Legislature of the province, is composed of 98 members elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 112.

Besides the regular departments of government, the Niagara Parks Commission, the Ontario Municipal Board, The Hydro-Electric Power Commission of Ontario, the Ontario-St. Lawrence Development Commission, the Ontario Northland Transportation Commission, the Liquor Control Board, the Liquor Licence Board, the Hospital Services Commission and The Water Resources Commission have been created.

Under the provisions of the Legislative Assembly Act (RSO 1960, c. 208) each member of the Assembly is paid an annual indemnity of $\$ 5,000$ and an allowance of $\$ 2,000$ for expenses. In addition, the Speaker receives a special indemnity at the annual rate of $\$ 3,000$ and an expense allowance of $\$ 2,000$; the Chairman of the Committee of the Whole a special indemnity at the annual rate of $\$ 2,000$; and the Leader of the Opposition a salary of $\$ 12,000$ per annum. Each member of the Cabinet having charge of a department receives the ordinary indemnity as a member of the Legislature in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Premier is $\$ 16,000$ and for a Cabinet Minister having charge of a department $\$ 12,000$. By the 1956 amendment, every Minister of the Crown in charge of a department, the Minister of the Crown who is a member of The Hydro-Electric Power Commission of Ontario, and the Leader of the Opposition receive a representation allowance of $\$ 2,000$ per annum. Each Minister without Portfolio, other than the Minister who is a member of The Hydro-Electric Power Commission, receives $\$ 2,500$ salary and $\$ 1,000$ representation allowance per annum, by the Executive Council Act and the Legislative Assembly Act, respectively (RSO 1960).

## 21.-Legislatures of Ontario, 1934-60, as at Apr. 30, 1963

Note.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 79, and for 1924-34 in the 1938 edition, p. 114.

## Subsection 7.-Manitoba

In addition to a Lieutenant-Governor, Manitoba has an Executive Council at present composed of 11 members and a Legislative Assembly of 57 members elected for a statutory term of five years. The Hon. Errick F. Willis, Lieutenant-Governor at Apr. 30, 1963, was sworn in on Jan. 15, 1960. Lieutenant-Governors from Confederation (1870) to 1959 are cited in the 1960 Year Book, p. 113. Premiers since Confederation are listed in the 1960 Year Book, p. 114.

The Premier of the province is paid a salary of $\$ 12,000$ per annum and each of the other members of the Cabinet $\$ 10,000$. Members of the Legislature are each paid a sessional indemnity of $\$ 2,667$ and an expense allowance of $\$ 1,333$. The Leader of the Opposition is paid an additional amount of $\$ 3,500$ and the Speaker of the Legislature receives an amount double the indemnity and expense allowance of an individual member.

## 23.-Legislatures of Manitoba, 1936-62, as at Apr. 30, 1963

Nore.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 80, and for 1924-36 in the 1938 edition, p. 115.

## Subsection 8.-Saskatchewan

The Government of Saskatchewan consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Hon. Robert L. Hanbidge, Lieutenant-Governor at Apr. 30, 1963, was commissioned to office Mar. 1, 1963. Lieutenant-Governors from Confederation (1905) to 1959 are cited in the 1960 Year Book, p. 115.

The statutory number of members of the Legislative Assembly is 55, elected for a maximum term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 115.

The Premier receives $\$ 13,000$ and each Cabinet Minister $\$ 10,000$ annually in addition to a sessional indemnity. The Leader of the Opposition receives $\$ 10,000$ plus an office allowance of $\$ 12,000$ per annum, the Speaker $\$ 3,000$ and the Deputy Speaker $\$ 2,000$. The sessional indemnity of a member of the Legislature is $\$ 4,000$ together with an expense allowance of $\$ 2,000$. Each of the members for the three northernmost constituencies of Cumberland, Athabasca and Meadow Lake receives a $\$ 4,335$ sessional indemnity and a $\$ 2,165$ expense allowance.

## 25.-Legislatures of Saskatchewan, 1934-60, as at Apr. 30, 1963

Nors.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 81, and for 1924-34 in the 1938 edition, p. 116.

| Date of Election |  | Legislature | Number of Sessions | Date of First Opening | Date of Dissolution |

## Subsection 9.-Alberta

The Government of Alberta is composed of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. There are $65^{*}$ members in the Legislative Assembly, elected for a maximum period of five years. The Hon. J. Percy Page, Lieutenant-Governor at Apr. 30, 1963, was commissioned to office Dec. 19, 1959. Lieutenant-Governors since Confederation (1905) are listed in the 1960 Year Book, p. 116. Premiers since Confederation are listed in the same edition, p. 117.

Each member of the Legislative Assembly (except the Speaker and the Deputy Speaker) receives a sessional indemnity of $\$ 3,000$ plus $\$ 1,500$ expense allowance plus $\$ 15$ for each day during the session when he is necessarily absent from his ordinary place of residence, both tax free. The Speaker's sessional indemnity is $\$ 4,750$ plus $\$ 2,250$ expense allowance and the Deputy Speaker's sessional indemnity is $\$ 4,000$ plus $\$ 2,000$ expense allowance. Each also receives $\$ 15$ for each day during the session when he is necessarily absent from his ordinary place of residence. The Premier, in addition to the sessional indemnity, receives $\$ 14,000$, each of the other Ministers receives $\$ 11,000$ and each member of the Opposition receives $\$ 625$; there is no Opposition Leader in the present Legislature.

[^24]
## 2\%.-Legislatures of Alberta, 1935-60, as at Apr. 30, 1963

Note.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 82, and for 1924-34 in the 1938 edition, p. 117.

## Subsection 10.-British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Maj.-Gen. the Hon. George Randolph Pearkes, LieutenantGovernor at Apr. 30, 1963, was commissioned to office Oct. 13, 1960. Lieutenant-Governors from Confederation (1871) to 1959 are cited in the 1960 Year Book, p. 118.

The Legislative Assembly, elected for a statutory term of five years, has 52 members. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 118.

Each member of the Executive Council and the Legislative Assembly receives a sessional allowance of $\$ 4,000$ and $\$ 1,000$ for expenses. There is also paid to each member a living allowance of $\$ 25$ for each day's attendance at the session and for each Saturday, Sunday or holiday that intervenes between two sittings of the House; the allowance of $\$ 25$ in any session is not paid in respect of more than 40 days. Each member also receives an allowance of 25 cents per mile of the distance between his place of residence and the city of Victoria, reckoning such distance, going and coming, according to the nearest mail route. Each member also receives an allowance of $\$ 400$ for telegraph and telephone expenses. In addition, the Premier receives a salary of $\$ 17,500$ and each member of the Executive Council $\$ 15,000$. The Leader of the Opposition has a special allowance of $\$ 5,000$ for expenses, the Speaker receives a special allowance of $\$ 5,000$ and the Deputy Speaker an allowance of $\$ 1,500$.

## 29.-Legislatures of British Columbia, 1937-61, as at Apr. 30, 1963

Notz.-Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 83, and for 1924-37 in the 1938 edition, p. 118.

## Subsection 11.-Yukon and Northwest Territories

Yukon Territory.-The Yukon was created a separate Territory in June 1898 (see p. 65). Provision is made for a local government administered by a Commissioner appointed by the Governor in Council. There is an elected Council of seven members (1961) which usually meets twice each year in Whitehorse, the seat of local government; the Council elects its own speaker. The Commissioner administers the government under instructions from the Governor in Council or the Minister of Northern Affairs and National Resources. The Commissioner in Council has power to make ordinances dealing with the imposition of local taxes, sale of liquor, preservation of game, establishment of territorial offices, maintenance of municipal institutions, issue of licences, incorporation of companies, solemnization of marriage, property and civil rights, and generally all matters of a local nature in the Territory. The Commissioner and Council in office on Apr. 30, 1963 were elected in 1961 for a three-year term.

GOVERNMENT OFFTHE YUKON TERRITORY

The Northern Administration Branch, Department of Northern Affairs and National Resources, has the responsibility for the general administration of the natural resources of the Yukon Territory, except game. The Department maintains lands and mining offices at four points in the Territory. Other departments and agencies of the Federal Government, including the Department of Justice, the Royal Canadian Mounted Police, the Departments of National Defence, Citizenship and Immigration, Mines and Technical Surveys, National Revenue, Transport, Post Office, Agriculture, Fisheries, and Public Works and the Unemployment Insurance Commission also maintain offices in the Yukon Territory.*

Northwest Territories.-As reconstituted on Sept. 1, 1905, the Northwest Territories comprise: (1) all that part of Canada north of the 60th parallel of north latitude, except the portions thereof within the Yukon Territory and the Provinces of Quebec and Newfoundland; and (2) the islands in Hudson Bay, James Bay and Ungava Bay, except those islands within the Provinces of Manitoba, Ontario and Quebec.

The Northwest Territories Act (RSC 1952, c. 331) provides for the appointment of a Commissioner to administer the government of the Territories under instructions given from time to time by the Governor in Council or the Minister of Northern Affairs and National Resources. As a matter of practice, the appointment is held by the Deputy Minister

[^26]of Northern Affairs and National Resources. The Northwest Territories Act, as amended, also provides for a Council of nine members, four of whom are elected in the Mackenzie District and five of whom are appointed by the Governor in Council. The Commissioner in Council has legislative powers respecting such matters as direct taxation, establishment and tenure of Territorial offices, municipal institutions, controverted elections, licences, incorporation of companies, property and civil rights, administration of justice, game, education, hospitals and generally all matters of a local or private nature. The Council meets once each year in the Territories and at least once each year in Ottawa, which is the seat of government. The resources, except game, remain under the control of the Federal Government. The administration of legislation passed by the Commissioner in Council and the management of resources under federal legislation are conducted by the Northern Administration Branch of the Department of Northern Affairs and National Resources. Administrative offices are located at a number of centres in the Territories including Fort Smith, Yellowknife, Hay River, Inuvik and Frobisher Bay.

## COUNCIL OF THE NORTHWEST TERRITORIES <br> (as at Apr. 30, 1963)

## Section 3.-Municipal Government*

The British North America Act of 1867 placed municipal government in Canada under the control of the provincial legislatures. The powers and responsibilities of municipalities are those delegated to them by statutes passed by their respective provincial legislatures. Some of these statutes apply to all municipalities within a province, some to a certain type or group and many to one municipality only. The types of municipal organization in existence and the nature of the municipal services provided vary greatly from region to region and are adjusted from time to time to meet changing needs and conditions.

In addition to the well-known types of organized municipalities-cities, towns, villages, counties, etc.-there are various other forms of local government organization. Certain municipal government bodies encompass a number of municipalities or parts of municipalities. For example, special district authorities (greater water and sewerage districts, drainage and irrigation districts and health units) may provide services to a number of municipalities. Similarly, metropolitan government authorities provide certain services to a number of area municipalities. In some provinces, the more sparsely settled areas do not have organized municipalities. Instead, they are divided into local improvement districts, local government districts or special areas in which the local government services are administered by officials appointed by the provincial Departments of Municipal Affairs.

[^27]The major local revenue source available to municipalities is the taxation of real property. It is supplemented in varying degrees by taxation of personal property, business, persons (poll taxes) and tenants. In two provinces municipalities may levy an amusement tax, in four they may impose sales taxes on specific commodities, and in Quebec most cities have been granted the right to levy a general sales tax. Miscellaneous general revenue is derived from licences, permits, rents, concessions, franchises and fines. Most urban municipalities of any size operate utilities for the provision of water and, in many instances, electricity, gas, transportation, telephone and other services. These sometimes provide surplus funds that may become available to help pay for other municipal services. On the other hand, expenditures of municipalities often include provision for the deficits of their utilities and enterprises.

In differing degrees and with varying provincial assistance, municipalities are responsible for the following services: protection to persons and property through police and fire forces, courts and local gaols, and inspection services; roads and streets; sanitation; certain health and welfare services; and some recreation and other community services. In most provinces, municipalities are responsible for levying and collecting local education taxes on property on behalf of the local schools, and often for borrowing capital funds for school construction. Local administrative responsibility for education lies with boards of trustees separate from the councils that govern municipalities (except Alberta; see p. 96).

All provinces give some form of financial assistance to their municipalities. This may be in the form of monetary grants, such as unconditional subsidies which may be spent as the municipalities see fit, or grants in aid of specific services that are the municipal responsibility. The provinces may also make loans to municipalities for capital purposes or guarantee the bonds issued by the municipalities. Other forms of indirect assistance are the resumption by the provincial governments of responsibilities formerly delegated to the municipalities and the extension of municipal taxing privileges into what were formerly considered to be provincial revenue fields. The provinces also provide various technical and consultative services to their municipalities.

The following paragraphs describe municipal organization in each province and in the Territories as at Jan. 1, 1962. In Table 31 (which gives the number of each type of municipality in each province) all fully incorporated cities, towns and villages are regarded as 'urban' municipalities.

Newfoundland.-The Province of Newfoundland has two cities-St. John's and Corner Brook. A number of the province's many settlements have been organized into 39 towns, five rural districts, three local improvement districts and 39 local government communities. The towns, rural districts and local improvement districts operate under the Local Government Act; towns and rural districts have elected councils and local improvement districts have appointed trustees. Local government communities established under the Community Councils Act in the smaller settlements have limited powers and functions. There are no rural municipalities in the usual sense. Only about one fifth of 1 p.c. of the total area is municipally organized. Municipalities are supervised by the Department of Municipal Affairs and Supply.

Prince Edward Island.-In this province, one city and seven towns have been incorporated under special Acts and 17 villages have been established under the Village Services Act. There is no municipal organization for the remainder of the province although it is divided into school sections which have elected school boards.

Nova Scotia.-Municipal organization in Nova Scotia covers the whole of the province. The three cities operate under special charters and special legislation. Thirtynine towns operate under the Town Incorporation Act but there are no municipalities incorporated as villages. Cities and towns are independent of counties. The rural area is divided into 18 counties which, in themselves, do not represent units of local government. However, 12 of these counties each comprise one municipality and the other six each comprise two municipalities, making a total of 24 rural municipalities. Supervision of municipalities is exercised through the Department of Municipal Affairs.

New Brunswick.-This province is divided into 15 counties which are incorporated municipalities and have】direct powers of local self-government as rural municipalities, although certain of their powers often apply in both rural and urban municipalities. The six cities have special charters and the 21 towns operate under the Towns Incorporation Act. There is also one village. There are 62 local improvement districts and 10 commissions within the counties but outside the cities, towns and village; these have been incorporated for the provision of limited municipal services. The Department of Municipal Affairs exercises supervision.

Quebec.-Municipal divisions in Quebec embrace the more thickly settled areas comprising about one third of the province and the remainder is governed by the province as 'territories'. The organized area is divided into 74 county municipalities which are divided again into local municipalities and designated as village, township or parish municipalities or simply as municipalities. The counties as such have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. Parts of some counties are not yet organized into incorporated units of local government, being in outlying areas and having little or no population. There are 334 villages and 1,114 townships and parishes. A small number of these are independent of the counties in which they are located. The Municipal Code governs local municipalities and the 56 cities and 171 towns have special Acts. The supervision and assistance of municipalities is through the Department of Municipal Affairs and the Quebec Municipal Commission, Municipal statistics are gathered by the Quebec Bureau of Statistics.

Because of the assumption by the province, on Apr. 1, 1961, of the Montreal Metropolitan Boulevard, both as to construction cost and maintenance, as a provincial highway, and the ability of the area municipalities to fulfil their own obligations, the active functions of the Montreal Metropolitan Corporation are now considerably decreased. It continues to service borrowings already contracted and to apportion costs incurred in the area municipalities for streets constructed on each side of the Boulevard.

Ontario.-Slightly more than one tenth of the area of Ontario is municipally organized and the remainder is governed entirely by the provincial government. The older settled section of the province is divided into 43 counties, five of which are united with others for administrative purposes. Each county, although it is an incorporated municipality, is comprised of the towns, villages and townships situated within its borders and these provide its revenue. There are 30 cities, 158 towns, 158 villages, 574 townships and 20 improvement districts in the province. Some of each are located in the northern districts which are not organized into counties. Supervisory control of municipalities is exercised by the Department of Municipal Affairs and the Ontario Municipal Board under the Municipal Act and other Acts governing aspects of municipal government.

The Municipality of Metropolitan Toronto, in existence since Jan. 1, 1954, encompasses one city, four towns, three villages and five townships. The Metropolitan Council is composed of the mayor, two senior controllers and the senior alderman of each of the nine wards of the City of Toronto, and the head of the council of each of the 12 suburban municipalities. The chairman is elected by the councillors and need not be a councillor of an area municipality. The Council has jurisdiction over assessments, water supply, sewerage works, metropolitan road systems, transit, municipal housing developments, community planning, parks and recreation areas, the Court House, certain health and welfare services and the correlation of educational facilities in the metropolitan area. It also controls a unified metropolitan police force and a metropolitan licensing commission. Expenditures are financed by a levy apportioned among the area municipalities. All borrowing of the area municipalities for capital purposes is done by the Municipality of Metropolitan Toronto.

Manitoba.-Manitoba has eight cities, which derive their powers from special Acts and do not come under the supervision of the Department of Municipal Affairs. The Department supervises the 34 towns, 37 villages and 111 rural municipalities under the Municipal Act. There are local government districts in settled areas not within municipalities where the province has placed a resident administrator to carry out the functions of a municipal council. The unorganized areas are the direct responsibility of the provincial government.

The Metropolitan Corporation of Greater Winnipeg has been in existence since Nov. 1, 1960. Its council is separate and distinct from those of the 16 area municipalities. The councillors are elected as individuals from ten new districts, each containing approximately the same number of voters. The council has jurisdiction over planning, zoning, land development, assessments, arterial roads, water supply, sewage disposal, transit and other services. It borrows money only for its own undertakings and leaves to its area municipalities the responsibility for welfare, police, fire protection and other services. Expenditures are financed by a proportion of the business and other taxes levied on industrial or commercial property by the area municipalities and by a uniform levy on the equalized assessment of all taxable real property in the area municipalities.

Saskatchewan.-All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are 11 cities, 114 towns, 365 villages and 296 rural municipalities. The area so organized consists of most of the southern two fifths of the province; the remainder of this portion is administered for local purposes by the province in unincorporated local improvement districts. The northern three fifths is sparsely populated and without local government, although some municipal services are provided by the province through operation of the Northern Administrative Area. Municipalities are supervised by the Department of Municipal Affairs.

[^28]towns, 59 villages and 30 districts; the latter are chiefly rural municipalities, except for those adjacent to the principal cities of Victoria and Vancouver which are largely urban in character. It should be emphasized, however, that the application of the name 'city' is somewhat different from the commonly accepted meaning, in that several of them have populations of fewer than 1,000 and perhaps one half or more would not normally be incorporated as cities in another province. Municipalities are supervised by the Department of Municipal Affairs.

Yukon and Northwest Territories.-There are two cities, Whitehorse and Dawson, and one unincorporated town, Mayo, in the Yukon Territory and two municipal districts, Yellowknife and Hay River, in the Northwest Territories, all of which provide some municipal services to their local areas. These are not shown in Table 31.

## Section 4.-Federal and Provincial Royal Commissions

Federal Royal Commissions Established.-Royal Commissions established from Feb. 1, 1962 to Apr. 30, 1963 under Part I of the Federal Inquiries Act are given here in continuation of those previously reported in the Year Books beginning with the 1940 edition, pp. 1108-1110. Any Commission established between Apr. 30, 1963 and the date of going to press will be found in the Register of Official Appointments, Chapter XXVI, Part III.

Nature of Commission

Chief Commissioner

Kenneth LeM. Carter.
Sept. 25, 1962

To inquire into and report upon the incidence and effects of taxation imposed by Parliament, etc., and to make recommendations for improvements in the tax laws and their administration.

To inquire into and report upon the problems relating to marine pilotage provided in Canada, etc., and to recommend the changes, if any, that should be made.

Hon. Yves Bernier. $\qquad$

Reports of Federal Royal Commissions.-Reports of federal Royal Commissions issued during the period Jan. 1, 1962 to Apr. 30, 1963 were as follows.

Royal Commission on Transportation, established May 13, 1959:
Vol. 2, December 1961. 289p. \$2.25. (Cat. No. Z1-1959/3-2).
Vol. 3, July 1962. Ottawa, 1962. 620p. \$7.50. (Cat. No. Z1-1959/3-3).
Royal Commission on Government Organization, established Sept. 16, 1960:
Vol. 1, Management of the Public Service: Plan for management; Financial management; Personnel management; Paperwork and systems management. Ottawa, July 18, 1962. 646p. \$6. (Cat. No. Z1-1960/4-1).
Vol. 1, Abridged edition. Ottawa, July 18, 1962. \$1. (Cat. No. Z1-1960/4-1.1).
Vol. 2, Supporting services for government. October 1962. Ottawa, 1962. 436p. \$6. (Cat. No. Z1-1960/4-2).
Vol. 2, Supporting services for government:
5. Real Property. Ottawa, 1962. Pp. 23-68. 50 cents. (Cat. No. Z1-1960/4-205).
6. Purchasing and Supply. Ottawa, 1962. Pp. 73-142. 50 cents. (Cat. No. Z1-1960/4-206).
7. Transportation. Ottawa, 1962. Pp. 147-207. 50 cents. (Cat. No. Z1-1960/4-207).
8. Telecommunications. Ottawa, 1962. Pp. 213-268. 50 cents. (Cat. No. Z1-1960/4-208).
9. Printing and publishing. Ottawa, 1962. Pp. 273-307. 50 cents. (Cat. No. Z1-1960/4-209).
10. The "make or buy" problem. Ottawa, 1962. Pp. 313-359. 50 cents. (Cat. No. Z1-1960/4-210).
11. Legal services. Ottawa, 1962. Pp. 365-421. 50 cents. (Cat. No. Z1-1960/4-211).
12. Economic and statistical services. Ottawa, 1962. Pp. 17-51. 50 cents. (Cat. No. Z1-1960/4-212).
13. Public information services. Ottawa, 1962. Pp. 57-114. 50 cents. (Cat. No. Z1-1960/4-213).
14. Education services. Ottawa, 1962. Pp. 137-170. 50 cents. (Cat. No. Z1-1960/4-214).
15. Health services. Ottawa, 1962. Pp. 177-241. 50 cents. (Cat. No. Z1-1960/4-215).
16. Lending, guaranteeing and insuring activities. Ottawa, 1962. Pp. 247-297. 50 cents. (Cat. No. Z1-1960/4-216).
17. The post office. Ottawa, 1962. Pp. 303-351. 50 cents. (Cat. No. Z1-1960/4-217).
18. Miscellaneous services. Ottawa, 1962. Pp. 357-384. 50 cents. (Cat. No. Z1-1960/4-218).

Vol. 3, Supporting services for government, cont'd. Ottawa, December 3, 1962. 399p. \$7.75. (Cat. No. Z1-1960/4-3).
Vol. 4, Special areas of administration: Canadian Broadcasting Corporation; Department of National Defence; Department of External Affairs; Northern Affairs; Scientific Research and Development. Ottawa, January 21, 1963. 333p. \$7.75. (Cat. No. Z1-1960/4-4).
19. Canadian Broadcasting Corporation. Ottawa, 1963. Pp. 17-51. 50 cents. (Cat. No. Z1-1960/4419).
20. Department of National Defence. Ottawa, 1963. Pp. 57-92. 50 cents. (Cat. No. Z1-1960/4-420).
21. Department of External Affairs. Ottawa, 1963. Pp. 97-143. 50 cents. (Cat. No. Z1-1960/4-421).
22. Northern Affairs. Ottawa, 1963. Pp. 149-180. 50 cents. (Cat. No. Z1-1960/4-422).
23. Scientific Research and Development. Ottawa, 1963. Pp. 185-322. 50 cents. (Cat. No. Z1-1960) 4-423).
Vol. 5, The Organization of the Government of Canada. Ottawa, Feb. 28, 1963. \$5. (Cat. No. Z1-1960/4-5).
Report of the Committee of inquiry into the Unemployment Insurance Act, established July 17, 1961. Ottawa,
November 1982. 207p. \$2. (Cat. No. Z1-1961/1).

Provincial Royal Commissions.-The following provincial Royal Commissions were established during the period Jan. 1, 1962 to Apr. 30, 1963.

## Province and Nature of Commission

Nova Scoria
To inquire into remuneration of the medical
profession re ward patients at Victoria
General Hospital.
To inquire into municipal boundaries and repre-
sentation.
New Brunswick
To inquire into public or municipal fiscal
matters within New Brunswick.
To inquire into municipal government in the
Municipality of Saint John.

## Quebrec

To inquire into the financial administration of the Corporation du Sanatorium Ross.
To inquire into the financial administration of the Corporation du Sanatorium Bégin.
To inquire into the general administration of l'Institut Albert Prévost.

To inquire into the financial administration of l'Hôpital Général Fleury, Inc., since June 1, 1961.

To inquire into the distribution of natural gas in the province.

## Ontarto

To inquire into and report upon the conduct of and the performance of duties by the members of the Metropolitan Toronto Police Force involved in the interrogation and detention of Dr. Norbert Leiner.

## Mantroba

To inquire into the operation and activities of the Metropolitan Corporation of Greater Winnipeg and the area municipalities thereunder and to report its findings and recommendations to the Lieutenant-Governor in Council.

## Sabkatchewan

To inquire into the Mechanics' Lien Act in light of modern economic conditions with a view to the formulation of recommendations for its amendment or repeal.

To inquire into difficulties certain physicians have encountered in obtaining or retaining membership on the medical staff of hospitals or in the enjoyment of professional privileges in hospitals.

Date
Established

Commissioner or Chairman

Edward G. Byrne
Mar. 8, 1962
H. Carl Goldenberg.

Hon. H. F. Thomson.................. July 19, 1962

## British Columbin

To inquire into and study the Workmen's Compensation Act and its administration.

# PART III.-ADMINISTRATIVE FUNGTIONS OF THE FEDERAL GOVERNMENT 

## Section 1.-Financial Administration*

The financial affairs of the Government of Canada are administered and controlled under the fundamental principles that no tax shall be imposed and no money shall be spent without the authority of Parliament and that expenditures shall be made only for the purposes authorized by Parliament. The most important constitutional provisions relating to Parliament's control of finances are contained in the British North America Act; this Act provides that all taxing and appropriating measures must originate in the House of Commons and all requests for grants must come from the Crown through responsible Ministers, and for such requests the Government is solely responsible. In practice, financial control is exercised through a budgetary system based on the principle that all the financial needs of the Government for each fiscal year be considered at one time so that both the current condition and the prospective condition of the public treasury are clearly in evidence.

Estimates and Appropriations.-In the latter part of the calendar year, at the request of the Minister of Finance, each of the several departments prepares its estimates for the following fiscal year and submits them by a specified date to the Treasury Board. This Board is a Committee of the Queen's Privy Council for Canada and consists of the Minister of Finance as chairman and five other Ministers named by the Governor in Council, with such additional members of the Privy Council as the Governor in Council may nominate to serve as alternates. A senior officer of the Department of Finance acts as secretary to the Board and the necessary staff is provided by that Department. Under the Financial Administration Act, the Board has a statutory duty to advise the Governor in Council on matters relating to finance, estimates, expenditures, financial commitments, establishments, revenues, accounts, terms and conditions of employment of persons in the public service and general administrative policy in the public service.

On receipt, departmental estimates are assembled by officers of the Treasury Board, comparisons are made with the expenditures of previous years and digests of supporting data and other pertinent information are prepared. The Board reviews each departmental submission in the light of probable revenues and of governmental policy generally, usually consulting the appropriate Minister and departmental officials. Expenditure proposals may be rejected or reduced and unresolved differences of opinion may be referred to the Cabinet for decision. When the Board is satisfied with their substance and form, these estimates, known as the Main Estimates, are submitted to the Cabinet and later to the Governor General for approval and are then laid before the House of Commons.

On motion of the Minister of Finance, the estimates are referred for consideration to the Committee of Supply, which is a committee of the whole House. However, the estimates of certain departments may first go to select committees of the House; these, after being reported upon to the House, are referred back to the Committee of Supply. The consideration of the estimates usually extends over a period of several months. Each vote is the subject of a separate resolution and Members of the House may question the Minister on any item but no private member or Minister on his own responsibility can introduce any new expenditure proposal or any amendment to an estimates item that would result in an increased expenditure. When the examination of the individual items has been completed, the estimates are referred to the Committee of Ways and Means, also a committee of the whole House, which is asked to consider a resolution for the introduction of a Bill to appropriate money to meet the requirements as approved in the Committee of Supply. When such resolution is passed, an appropriation Bill is introduced which, when approved by the House of Commons and the Senate, is given Royal Assent and becomes law.

[^30]Grants in the Appropriation Acts are grants to the Crown and funds cannot be disbursed until supply, voted by Parliament to the Crown, is released by a warrant prepared on an Order of the Governor in Council and signed by the Governor General.

As weeks or months may elapse after the commencement of the fiscal year before the main Appropriation Act is passed, funds are made available for the conduct of government functions by the passage of an interim supply Bill granting one twelfth or one sixth of the total of each item in the estimates, equivalent to one or two months' supply, respectively. Additional interim supply Bills may be introduced if required, awaiting Parliament's detailed consideration of the estimates. In addition, to cover any new and unforeseen requirements that might arise during the year, supplementary estimates are usually introduced after some months of the fiscal year have elapsed, and just prior to the end of the fiscal year further supplementary estimates are laid before the House. These supplementary estimates are dealt with in the same manner as the Main Estimates.

In addition to the expenditure items included in the annual Appropriation Acts, there are a number of items, such as interest on the public debt, family allowances and old age assistance payments, which have been authorized under the provisions of other statutes. Although it is not necessary for Parliament to pass annually on these items, they are included in the Main Estimates for purposes of information. Statutory provision is also made for the expenditure of public money in emergencies where no specific parliamentary appropriation is available. Under the Financial Administration Act, the Governor in Council, upon the report of the Minister of Finance that there is no appropriation for the expenditure and upon the report of the appropriate Minister that the expenditure is urgently required, may order the issuance of a special warrant authorizing disbursement of the amount required. Such warrants may be issued only when Parliament is not in session and every warrant is published in the Canada Gazette within thirty days of issue. The Fire Losses Replacement Account Act also provides for emergency expenditures for the urgent repair or replacement of property destroyed or damaged by fire, where there is not sufficient money available in the appropriation for the Service suffering loss. Such amounts must be charged subsequently to an appropriation or included in the estimates for the department or agency concerned.

In addition, disbursements are made for purposes not reflected in the budgetary accounts but recorded in the Government's statement of assets and liabilities, such as loans to and investments in Crown corporations, loans to international organizations and to national, provincial and municipal governments, and loans to veterans. There are also disbursements in connection with deposit and trust and insurance, pension and guaranty accounts which the Government holds or administers, including the old age security fund which is operated as a separate entity. Although these disbursements are excluded from the calculation of the annual budgetary surplus or deficit, they are all subject to appropriation by Parliament either in the annual Appropriation Acts or in other legislation.

The Budget.-Some time after the Main Estimates have been introduced, the Minister of Finance presents his annual Budget Speech in the House of Commons. Budget papers, tabled for the information of Parliament on the previous day, include a general review of economic conditions and a preliminary review of the Government's accounts for the fiscal year then ending. The Budget Speech itself reviews the state of the national economy and the financial operations of the Government for the previous fiscal year and gives a forecast of the probable financial requirements for the year ahead, taking into account the Main Estimates and making allowances for supplementary and further supplementary estimates and probable lapsings. At the close of his address, the Minister tables the formal resolutions for changes in the existing tax rates and customs tariff which, in accordance with parliamentary procedure, must precede the introduction of any money Bills. These resolutions give notice of the amendments which the Government intends to ask Parliament to make in the taxation statutes. However, if a change is proposed in a
commodity tax, such as a sales tax or excise duty on a particular item, it is usually made effective immediately; the legislation, when passed, is made retroactive to the date of the Speech.

The Budget Speech is delivered in support of a motion that the House go into Committee of Ways and Means, the debate on which usually lasts for several weeks. With the passage of the motion, the way is clear for the consideration of the Budget resolutions and, when these have been approved by the Committee, a report to this effect is made to the House and the tax Bills are introduced and thereafter dealt with in the same manner as all other government financial legislation.

Revenues and Expenditures.-The administrative procedures whereby revenues are collected and expenditures are made are, for the most part, contained in the Financial Administration Act.

With respect to revenues, the basic requirement is that all public money shall be paid into the Consolidated Revenue Fund, which is defined as the aggregate of all public money on deposit to the credit of the Receiver General. The Treasury Board has prescribed detailed regulations governing the receipt and deposit of such money. For the actual custody of public money, use is made of the Bank of Canada and the chartered banks. Balances are allocated to the various chartered banks on the basis of a percentage allocation established by agreement among all the banks and communicated to the Department of Finance by the Canadian Bankers' Association. The daily operating account is maintained with the Bank of Canada and the division of funds between it and the chartered banks takes into account the immediate cash requirements of the Government and consideration of monetary policy. The Minister of Finance may purchase and hold securities of, or guaranteed by, Canada and pay for them out of the Consolidated Revenue Fund or may sell such securities and pay the proceeds into the Fund. Thus, if cash balances in the Fund are in excess of requirements for the immediate future they may be invested in interestearning assets. In addition, the Minister of Finance has established a purchase fund to assist in the orderly retirement of the public debt.

The principal agencies exercising control over expenditures are the Treasury Board (previously described) and the Comptroller of the Treasury, who is a senior officer of the Department of Finance, with representatives who act as accounting and disbursing officers stationed in all the principal departments.

The Treasury Board exercises detailed central control over the budgets, programs and staffs of departments and over financial and administrative matters generally. Although the most important part of this control function is exercised during the consideration of the estimates, the Board maintains continuous control over certain types of expenditure to ensure that the scale of activities and commitments for the future is held within approved policies, that departments follow uniform, efficient and economical practices, and that the Government is informed of and approves any major development of policy or significant transaction that might give rise to public or parliamentary criticism.

To ensure that the decisions of Parliament, the Government and Ministers in regard to expenditures are enforced, there is a centralized accounting and disbursing system. The Financial Administration Act provides that no payment shall be made out of the Consolidated Revenue Fund without the authority of Parliament and no charge shall be made against an appropriation except upon the requisition of the appropriate Minister or a person authorized by him in writing. These requisitions, and certificates that the work has been performed, the material supplied or the services rendered and that the price charged is reasonable or according to contract, together with such documents as may be required, are presented to the Comptroller of the Treasury. If the charge is a lawful one against the appropriation and does not exceed the amount of the appropriation or reduce it below the amount necessary to meet other commitments, and does not contravene any applicable legislative or executive requirements, the Comptroller will make the payment.

However, if he declines to make a payment, disallows an item in an account or refuses to give a certificate, the Minister concerned may report the circumstances to the Treasury Board for decision and the Board may confirm or overrule the action of the Comptroller. The Comptroller may transmit to the Board any requisition with respect to which he desires its direction and the Board may order that payment be made or refused.

At the beginning of each fiscal year each department submits to the Treasury Board, through the Comptroller, a division or allotment of each item included in its estimates. Once approved by the Board, these allotments cannot be varied or amended without the approval of the Board and expenditures charged to appropriations are limited to such allotments. To avoid over-expenditures within a fiscal year, the Comptroller records and controls commitments due to come in course of payment within the year for which Parliament has provided or has been asked to provide appropriations. The Government, through the Treasury Board and the Comptroller, also maintains careful control over commitments made under contract that will fall due in succeeding years, since it must be prepared in future to ask Parliament for appropriations to cover them. Any unexpended amounts in the annual appropriations lapse at the end of the year for which they are granted, but for thirty days subsequent to Mar. 31 payments may be made and charged to the previous year's appropriations for debts incurred prior to the end of that fiscal year.

Under the Financial Administration Act, every payment pursuant to an appropriation is made under the control and direction of the Comptroller by cheque drawn on the account of the Receiver General or by such other instrument as the Treasury Board may direct. In practice, the paid Comptroller's cheques are cleared daily by the chartered banks through the Bank of Canada to the Cheque Adjustment Branch of the Comptroller's Office, and reimbursement is made by means of a cheque drawn on the Receiver General's account with the Bank of Canada.

Public Debt.-In addition to the collection and disbursement of public money for budgetary and non-budgetary purposes, the Government receives and disburses substantial sums in connection with its public debt operations. The Minister of Finance is authorized to borrow money by the issue and sale of securities at such rate of interest and subject to such terms and conditions as the Governor in Council may approve. Although the specific authority of Parliament is required for new borrowings, the Financial Administration Act authorizes the Governor in Council to approve the borrowing of such sums of money as are required for the redemption of maturing or called securities and, to ensure that the Consolidated Revenue Fund will be sufficient to meet lawfully authorized disbursements, he may also approve the temporary borrowing of such sums as are necessary for periods not exceeding six months. The Bank of Canada acts as the fiscal agent of the Government in the management of the public debt.

Accounts and Financial Statements.-Under the Financial Administration Act, accounts are kept to show the revenues of Canada, the expenditures made under and the commitments chargeable against each appropriation, the other payments into and out of the Consolidated Revenue Fund, and such of the assets and direct and contingent liabilities as the Minister of Finance believes are required to give a true and fair view of the financial position of Canada. The statement of assets and liabilities is designed to disclose the amount of the net debt, which is determined by offsetting against the gross liabilities only those assets regarded currently as readily realizable or interest- or revenue-producing. Fixed capital assets, such as government buildings and public works, are charged to budgetary expenditures at the time of acquisition or construction and are not recorded on the statement of assets and liabilities.

Annually, on or before Dec. 31 or, if Parliament is not then in session, within fifteen days after the commencement of the ensuing session, the Public Accounts is laid before the House of Commons by the Minister of Finance. The Public Accounts contains a survey of the financial transactions of the fiscal year, statements of the revenues and expenditures for the year and of the assets and direct and contingent liabilities as at the end of the year,
together with such other accounts and information as are necessary to show the financial transactions and financial position of Canada or which are required by law to be reported in the Public Accounts. Monthly financial statements are also published in the Canada Gazette.

The Auditor General.-The Government's accounts are subject to an independent examination by the Auditor General who is an officer of Parliament. With respect to expenditures, this examination is a post-audit for the purposes of reporting whether the accounts have been faithfully and properly kept and whether the money has been expended for the purposes for which it was appropriated by Parliament and the expenditures have been made as authorized; any audit before payment is the responsibility of the Comptroller of the Treasury. With respect to revenues, the Auditor General is required to ascertain that all public money is fully accounted for and that the rules and procedures applied are sufficient to ensure an effective check on the assessment, collection and proper allocation of the revenue. With respect to public property, he is required to satisfy himself that essential records are maintained and that the rules and procedures applied are sufficient to safeguard and control such property. The Auditor General reports to Parliament the results of his examination, calling attention to any case which he considers should be brought to the notice of the House. He also reports to Ministers, the Treasury Board or the Government any matter which in his opinion calls for attention so that remedial action may be taken promptly.

Public Accounts Committee.-It is the usual practice to refer the Public Accounts and the Auditor General's Report to the Public Accounts Committee of the House of Commons, which may review them and report its findings and recommendations to the House of Commons.

## Section 2.-Departments, Boards, Commissions, etc.*

The following paragraphs indicate the functions of the various departments of government and the special boards and commissions in connection with the work of government.

Though it is not possible, owing to the limitations of space, to enumerate in this Section the details of each service or the divisions or sections of all departments, the main branches are given along with those services that differ in some quality from the larger class of subjects handled by a department. The work of many of these departments and boards is given in detail in later Chapters of this volume. The Index will be useful in locating required information.

Department of Agriculture.-This Department was established in 1867 (SC 1868, c. 53) and undertakes work on all phases of agriculture. Research and experimentation are carried out by the Research Branch; the maintenance of standards and protection of products by the Production and Marketing Branch; reclamation and development by the Prairie Farm Rehabilitation Administration, the Maritime Marshland Rehabilitation Administration and the Agricultural Rehabilitation and Development Administration; security and price stability are provided under the Crop Insurance Act, the Prairie Farm Assistance Act and the Agricultural Stabilization Act. The Farm Credit Corporation and the Board of Grain Commissioners are responsible to Parliament through the Minister of Agriculture.

Air Transport Board.-The Air Transport Board was established in 1944 by amendment of the Aeronautics Act. The Board is responsible for the economic regulation of commercial air services in Canada and for advising the Minister in the exercise of his duties and powers under the Act in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad, and to foreign air services operating into Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. The Board reports to Parliament through the Minister of Transport.

* As at Apr. 30, 1963; any major changes taking place between that date and the time of going to press will be carried in an Appendix to this volume.

Auditor General's Office.-This Office originated in 1878 (SC 1878, c. 7) and currently functions under the Financial Administration Act (RSC 1952, c. 116). The Auditor General is responsible for examining accounts relating to the Consolidated Revenue Fund and to public property, and for reporting annually to the House of Commons the results of his examinations. He also audits the accounts of various Crown corporations and other instrumentalities.

Board of Broadcast Governors.-This Board, established under the provisions of the Broadcasting Act which was assented to on Sept. 6, 1958, is given authority to regulate radio and television broadcasting in Canada. The Board has authority to regulate the establishment and operation of both public and private broadcasting stations and networks of stations. Applications for licences to establish new broadcasting stations, for changes in the facilities of existing stations or for changes in the ownership or in the share structure of licensees are referred to the Board by the Minister of Transport for a recommendation before being dealt with. The Board has three full-time and twelve part-time members and reports to Parliament through the Secretary of State.

Board of Grain Commissioners.-Constituted in 1912 under the Canada Grain Act, now the Canada Grain Act, 1930 (RSC 1952, c. 25), the Board of Grain Commissioners provides general supervision over grain handling in Canada by licensing elevator operators, inspecting and weighing grain en route to and shipped from terminal elevators, and other services. The Board, comprising a Chief Commissioner and two Commissioners, has authority to inquire into any matter relating to the grading and weighing of grain, deductions for dockage or shrinkage, deterioration of any grain during storage or treatment, unfair or discriminatory operation of a grain elevator, etc. The Board publishes its regulations in the Canada Gazette and reports to Parliament through the Minister of Agriculture.

Board of Transport Commissioners.-The powers of this Board, which was organized as the Board of Railway Commissioners in 1904, have been extended from time to time until today it has regulatory and judicial functions dealing with almost all aspects of railway activity including location, construction and operation of lines, rates and charges. It is also entrusted with the regulation of other transportation and communication agencies, including express companies, telegraph companies, telephone companies other than those provincially or municipally controlled, international bridges and tunnels and inland shipping. The Board reports to Parliament through the Minister of Transport.

Canadian Government Specifications Board.-This is an interdepartmental body composed of the Deputy Heads of 24 Federal Government departments and agencies. The Board operates under the auspices of the National Research Council through the medium of committees in which government and industry co-operate on a voluntary basis. The Board prepares specifications in commodity fields and for materials, processes and equipment required by government agencies, and arranges for necessary testing and research. An Index of Specifications is available on request to the CGSB Secretary, National Research Council, Ottawa.

Canadian Pension Commission.-This Commission, established in 1933 by amendments to the Pension Act (RSC 1952, c. 207), replaced the Board of Pension Commissioners, the first organization created to deal solely with war pensions for service in Canada's Armed Forces. The Commission's main function is the administration of the Pension Act under which it adjudicates upon all claims for pension in respect of disability or death arising out of service in Canada's Armed Forces; and Parts I to X inclusive of the Civilian War Pensions and Allowances Act, which provide for the payment of pensions in respect of death or disability arising out of civilian service related to the World War II effort. It also adjudicates on claims for pension under various other measures, including the Flying Accidents Compensation Order and the RCMP Continuation Act; authorizes and pays monetary grants accompanying certain gallantry awards bestowed on members of the Armed Forces; and administers various trust funds established by private individuals for the benefit of veterans and their dependants.

It consists of eight to twelve Commissioners and up to five ad hoc Commissioners appointed by the Governor in Council. Its chairman has the rank and powers of a Deputy Head of a department and the Commission reports to Parliament through the Minister of Veterans Affairs.

Chief Electoral Office.-This Office was established in 1920 under the provisions of the Dominion Elections Act, now the Canada Elections Act (RSC 1960, c. 39, and amendments thereto), and is responsible for the conduct of all federal elections as well as the elections of members of the Northwest Territories Council and of the Yukon Territory Council. In addition, it conducts any vote taken under the Canada Temperance Act. The Chief Electoral Officer reports to Parliament through the Secretary of State.

Department of Citizenship and Immigration.-This Department was constituted in December 1949 (RSC 1952, c. 67) and came into existence on Jan. 18, 1950 under the Minister of Citizenship and Immigration. Most departmental work is carried on through four branches. The Canadian Citizenship Branch assists governmental and non-governmental agencies engaged or interested in facilitating the adjustment and integration of newcomers and in making Canadians conscious of their privileges and responsibilities as citizens. The Canadian Citizenship Registration

Branch administers the Canadian Citizenship Act and is the custodian of all records under that Act and all Naturalization Acts previously in force. The Immigration Branch administers the Immigration Act and Regulations and is responsible for the selection, examination and movement of immigrants, the exclusion or deportation of undesirables and the settlement or establishment of immigrants in Canada. The activities of the Indian Affairs Branch include management of all Indian affairs. Its organization consists of a headquarters office at Ottawa, a regional supervisory staff, and 89 local agencies in the field.

Civil Service Commission.-The Civil Service Commission of Canada dates from the Civil Service Act of 1908. Under this Act the Commission was given the responsibility of applying, wherever possible, the principle of appointment by merit in filling permanent positions within departmental headquarters at Ottawa, termed the "inside service". The Civil Service Act of 1918 extended the competitive system of appointments to cover the outside as well as the inside service and temporary as well as permanent appointments. It also gave the Civil Service Commission various other responsibilities in the field of personnel administration including responsibility for promotion, for classification of positions and for recommending rates of pay.

The Civil Service Act of 1961, which came into force on Apr. 1, 1962, has three main features. First, it preserves the independence of the Civil Service Commission and carries forward and strengthens all the fundamental principles of the merit system. Secondly, it clarifies the role of the Civil Service Commission in those other areas of personnel administration with which it is concerned but which do not bear directly upon the merit system. Thirdly, it confers on staff associations the right to be consulted on matters that have to do with remuneration and conditions of employment.

The Act applies to about 130,000 employees in all the departments and certain agencies of government and this constitutes the "civil service" within the legal meaning of that term. The "public service", is defined as those departments and agencies which are listed in Schedule A of the Public Service Superannuation Act and which embrace about 180,000 employees including the 130,000 under the Civil Service Act. This definition of public service does not include certain Crown corporations.

The Civil Service Commission is responsible only to Parliament and not to the executive government and reports to Parliament through the Secretary of State. It consists of three members, one of whom is chairman. Each member of the Commission is appointed by the Governor in Council for a term of ten years and has the rank and standing of a Deputy Minister. The Commission has a staff of more than 700 persons located in its headquarters at Ottawa and in its field offices at St. John's, Nfld., Halifax, N.S., Moncton, N.B., Saint John, N.B., Quebec, Que., Montreal, Que., Toronto, Ont., London, Ont., Winnipeg, Man., Regina, Sask., Saskatoon, Sask., Edmonton, Alta., Calgary, Alta., Vancouver, B.C., and Victoria, B.C.

Department of Defence Production.-This Department was established on Apr. 1, 1951 under the provisions of the Defence Production Act (RSC 1952, c. 62, as amended). Under this Act the Minister is given, with certain exceptions, authority to buy defence supplies and construct defence projects required by the Department of National Defence. The Minister may, if authorized by the Governor General in Council, undertake for an associated government anything he may undertake for the Canadian Government. In addition, all powers, duties and functions that theretofore were vested in the Minister of Trade and Commerce under any contract, agreement, lease or other writing entered into pursuant to the Department of Munitions and Supply Act, 1939, or the Defence Supplies Act, 1950, are vested in the Minister of Defence Production.

Broadly, the Department's functions are to procure military goods, to construct defence installations and to organize industry for defence as required on behalf of the Department of National Defence, other government departments, and associated governments; to promote the expansion of defence production facilities and the development of defence-supporting industries, particularly of strategic resources important for the defence of Canada and its allies; and to ensure adequate supplies of essential materials and services for defence requirements. The main procurement units of the Department are five production branches-Aircraft, Armament, Electronics, Machine Tool and Shipbuilding-and a General Purchasing Branch. Major offices for foreign procurement are located at London, England, and Washington, U.S.A.; the General Purchasing Branch has 14 district purchasing offices located throughout Canada for local or urgent procurement. In addition, there are various service branches which include Administration, Comptroller's, Economics and Statistics, Financial Adviser's, Industrial Security, Legal, and Secretary's. The Emergency Supply Planning Branch is responsible for planning economic controls for a national emergency.

The following Crown companies report to Parliament through the Minister of Defence Production: Canadian Arsenals Limited, Canadian Commercial Corporation, Crown Assets Disposal Corporation, Defence Construction (1951) Limited, and Polymer Corporation Limited. The Minister is at present the Chairman of the Committee of the Privy Council on Scientific and Industrial Research and is responsible to Parliament for the Emergency Measures Organization.

Dominion Bureau of Statistics.-The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (SC 1918, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (RSC 1927, c. 190), was repealed and replaced by the Statistics Act (RSC 1952, c. 257); it was amended by SC 1952-53, c. 18, assented to Mar. 31, 1953.

The function of the Dominion Bureau of Statistics is to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct a census of population and agriculture of Canada as required under the Act.

The Bureau is a major publication agency of the Federal Government; the subjects of its reports cover all aspects of the national economy. The administrative head of the Bureau is the Dominion Statistician who reports to Parliament through the Minister of Trade and Commerce.

Emergency Measures Organization.-This Organization was established in June 1957 for the purpose of co-ordinating civil emergency planning. On Sept. 1, 1959, the Department of National Defence, Health and Welfare, and Justice became responsible for specific civil defence functions and the Emergency Measures Organization for all other aspects of planning civil emergency measures.* The Organization reports to Parliament through the Minister of Defence Production.

Department of External Affairs.-This Department was established in 1909 by "An Act to create a Department of External Affairs" (RSC 1952, c. 68). Its main function is the protection and advancement of Canadian interests abroad. The Minister responsible for the Department is the Secretary of State for External Affairs. The senior permanent officer (Deputy Minister) of the Department, the Under-Secretary of State for External Affairs, is assisted by a Deputy UnderSecretary who is also Legal Adviser and by four Assistant Under-Secretaries and is advised by the officers in charge of the various divisions. The divisional heads are each responsible for a part of the work of the Department and they are assisted by Foreign Service Officers, administrative officers and an administrative staff. Officers serving abroad are formally designated as High Commissioners, Ambassadors, Ministers, Counsellors, First Secretaries, Second Secretaries, Third Secretaries and Attachés at diplomatic posts and Consuls General, Consuls and Vice-Consuls at consular posts. There are 76 diplomatic, consular and other missions maintained abroad by the Department. In 29 additional countries, Canada is represented by non-resident Ambassadors or High Commissioners.

The work of the Department at Ottawa is performed by 25 units, comprising 23 divisions and two sections. The divisions may be grouped into three categories-area, functional and administrative. There are six area divisions-African and Middle Eastern, Commonwealth, European, Far Eastern, Latin American and United States; twelve functional divisions-Communications, Consular, Defence Liaison (1), Defence Liaison (2), Disarmament, Economic, Historical, Information, Legal, Passport, Protocol and United Nations; and five administrative divisions-Administrative Services, Finance, Personnel, Registry, and Supplies and Properties. The two sections are Inspection Service and Liaison Services.

The International Joint Commission reports to the Secretary of State for External Affairs of Canada as well as to the Secretary of State of the United States.

Department of Finance.-This Department was created by Act of Parliament in 1869 and now operates under the Financial Administration Act (RSC 1952, c. 116). The Department is responsible for the financial administration of Canada including the raising of money required for the various governmental activities by way of taxation or borrowing. The Comptroller of the Treasury, an officer of the Department, is responsible for all government disbursements. The work of the Department is organized in five principal divisions: Financial Affairs, Economic Affairs, Taxation, Federal-Provincial-Municipal Relations, and Treasury Board. The Royal Canadian Mint is a branch of the Department and the Inspector General of Banks is an officer of the Department. The Tariff Board and the Bank of Canada report to Parliament through the Minister of Finance.

Department of Fisheries.-The Department of Fisheries was first organized under a Minister of Fisheries in 1930. Prior to that date the federal fisheries services were maintained by the former Department of Marine and Fisheries, established in 1868. The provinces, under various arrangements, have certain administrative responsibilities in the fisheries but the legislative authority for the regulations of coastal and freshwater fisheries is with the federal Department of Fisheries.

The work of the Department includes: conservation and development of the fisheries through the enforcement of fishing regulations, the operation of fish culture establishments, management and improvement of spawning streams and control of predators; inspection of fish products for quality control and the encouragement of industrial development; promotion of the greatest utilization of fishery products and a proper public understanding of the resource and the industry. The Department administers the Fishermen's Indemnity Plan to assist fishermen in the event of loss or serious damage to their fishing vessels or lobster traps.

Agencies connected with the Department are the Fisheries Prices Support Board and the Fisheries Research Board of Canada. The Department is represented on the following international commissions: Pacific Salmon Fisheries, Pacific Halibut. the Northwest Atlantic Fisheries, North Pacific Fisheries, Whaling, Great Lakes Fishery, and North Pacific Fur Seal.

Fisheries Research Board.-The Fisheries Research Board operates under the Fisheries Research Board Act of 1937 (amended in 1947 and 1952-53). It has been active as a fisheries research body since 1898, first as the Board of Management of the Canadian Marine Biological Station and later (1912) as the Biological Board of Canada.

[^31]The Board operates under the Minister of Fisheries and membership consists of a full-time chairman and not more than 18 other members. The majority of Board members are scientists, and other members are representative of the fishing industry and the Department of Fisheries.

The Board operates four biological stations and an Arctic Unit across Canada, also three technological stations with two technological application units and two oceanographic groups. It serves as the scientific arm of the Department of Fisheries and its principal objective is to increase the scope and value of Canadian fisheries through scientific research.

Department of Forestry.-Established in October 1960 from elements of the Departments of Northern Affairs and National Resources and of Agriculture, the Department of Forestry conducts comprehensive programs of research relating to forestry and the utilization of forest products, and carries out economic studies relating to forest resources and the forest industries. Through a developing information program it seeks to promote greater public understanding of the proper management, protection and use of the forest resources. Financial assistance is offered to the provinces under agreements authorized by the Governor in Council in order to expedite progress in specific forestry programs. It carries out forest surveys and provides technical advice and assistance to other agencies of the Federal Government which are responsible for the administration of forest lands. The Department co-operates with international organizations concerned with forestry and in which Canada maintains membership, and the Minister of Forestry reports to Parliament for the Eastern Rockies Forest Conservation Board.

Department of Insurance.-The Minister of Finance is responsible for the Department of Insurance which originated in 1875 as a branch of the Department of Finance but was constituted a separate Department in 1910. It is authorized and governed by the Department of Insurance Act (RSC 1952, c. 70). Under the Superintendent of Insurance, who has the status of a Deputy Head, the Department administers the statutes of Canada applicable to: insurance, loan and trust companies incorporated by the Parliament of Canada; provincially incorporated insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; co-operative credit societies registered under the Cooperative Credit Associations Act; and Civil Service Insurance.

Under the relevant provincial statutes the Department examines trust companies incorporated in the Provinces of Manitoba and New Brunswick and loan and trust companies incorporated in the Province of Nova Scotia.

International Joint Commission.-This Commission was established under a Britain-United States treaty signed Jan. 11, 1909 and ratified by Canada in 1911. The Commission, composed of six members. (three appointed by the President of the United States and three by the Government of Canada) is governed by five specific Articles of the Boundary Waters Treaty of 1909. The Commission's approval is required for any use, obstruction or diversion of boundary waters affecting the natural level or flow of boundary waters in the other country; and for any works in waters flowing from boundary waters or below the boundary in rivers flowing across the boundary which raise the natural level of waters on the other side of the boundary.

Problems arising along the common frontier are also referred to the Commission by either country for examination and report, such report to contain appropriate conclusions and recommendations. In addition, questions or matters of difference between the two countries may be referred to the Commission for decision, provided both countries consent.

The Commission reports to the Secretary of State for External Affairs of Canada and to the Secretary of State of the United States.

Department of Justice.-This Department, established by SC 1868, c. 39, now operates under authority of the Department of Justice Act (RSC 1952, c. 71). It provides legal services to the Government and various government departments including preparing and settling government legislation, settling instruments issued under the Great Seal of Canada, regulating and conducting litigation for or against the Crown, superintending the acquisition of property and prosecutions under federal legislation other than the Criminal Code, administering federal statutes dealing with legal matters and providing administrative services for the Supreme Court of Canada and the Exchequer Court. The Department also superintends the penitentiaries and administers the prison system of Canada and administers the provisions of Canadian anti-combine legislation.

The Commissioner of the Royal Canadian Mounted Police operates under the direction of the Minister of Justice who also reports to Parliament for the National Parole Board and the Restrictive Trade Practices Commission.

Department of Labour.-The Department of Labour was established in 1900 by Act of Parliament (SC 1900, c. 24) and now operates under authority of the Department of Labour Act (RSC 1952, c. 72). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of fair wages and hours of labour; reinstatement in civil employment; female employee equal pay; government annuities; government employee compensation; merchant seamen compensation; technical and vocational training assistance; vocational rehabilitation of disabled persons; annual
vacations with pay. It promotes joint consultation in industry through labour-management committees; organizes manpower utilization programs, e.g., farm labour; and operates a Women's Bureau. The Department publishes the Labour Gazette and other publications, as well as general information on labour-management, employment, manpower and related subjects.

The Canada Labour Relations Board acts on behalf of, and the National Technical and Vocational Training Advisory Council and the National Advisory Council on Rehabilitation of Disabled Persons act in an advisory capacity to the Minister of Labour, and the Merchant Seamen Compensation Board reports to the Minister of Labour. The Department is the official liaison agency between the Canadian Government and the International Labour Organization. The Unemployment Insurance Commission, which maintains the National Employment Service, reports to Parliament through the Minister of Labour. The National Productivity Council reports through the Ministers of Labour and of Trade and Commerce.

Library of Parliament.-The Library of Parliament as such was established in 1871 (SC 1871, c. 21) although it existed earlier. It currently functions under RSC 1952, c. 166 and SC 1955, c. 35. The Library of Parliament keeps all books, maps and other articles that are in the joint possession of the Senate and the House of Commons. The Parliamentary Librarian is also responsible for the House of Commons Reading Room. Persons entitled to borrow books from the Library of Parliament are the Governor General, Members of the Privy Council, Members of the Senate and the House of Commons, Officers of the two Houses, Justices of the Supreme Court of Canada and the Exchequer Court, and members of the Press Gallery. In addition, books are lent to other libraries and government agencies and reference service is given to scholars. The Parliamentary Librarian has the rank of a Deputy Head of a Department and is responsible for the control and management of the Library under the Speaker of the Senate and the Speaker of the House of Commons assisted by a Joint Committee appointed by the two Houses.

Department of Mines and Technical Surveys.-This Department was created by an Act of Parliament (SC 1949, c. 17) which received Royal Assent on Dec. 10, 1949. Its establishment resulted from the reorganization of certain former departments. A primary function of the Department is to provide technological assistance in the development of Canada's mineral resources through investigations and research in the fields of geology, mineral dressing and metallurgy. The Department establishes the framework of surveys throughout the country that provides control for all surveying and mapping in Canada. It produces the base maps used in the development of Canada's natural resources, conducts all the charting of Canada's coastal and inland waters, and issues official sailing directions and Canadian sea and air navigation charts. The Department is under the Minister of Mines and Technical Surveys and is divided into six branches: the Surveys and Mapping Branch, the Marine Sciences Branch, the Geological Survey of Canada, the Mines Branch, the Dominion Observatories and the Geographical Branch. The Mineral Resources Division, a unit of head office, gives its whole attention to matters concerned with the economics of mineral resources development.

Major moves were made recently to implement the oceanography program: (1) the establishment of the Polar Continental Shelf Project to carry out a long-term investigation of the continental shelf lying north and west of the Canadian Arctic Archipelago and of the waters above it, together with the islands of the Archipelago and the straits and sounds between the islands; and (2) the setting up of a $\$ 4,500,000$ oceanographic institute in the Bedford Basin near Halifax with facilities for study in any phase of the science. The Department's Marine Sciences Branch was established in April 1962.

The Department administers the Explosives Act which regulates the manufacture, testing, sale, storage and importation of explosives, and the Emergency Gold Mining Assistance Act which provides cost-aid to the Canadian gold mining industry.

Boards and Commissions are: Canadian Permanent Committee on Geographical Names; Board of Examiners for Dominion Land Surveyors; the International Boundary Commission; and the Interprovincial Boundary Commissions. The Minister of Mines and Technical Surveys reports to Parliament for the Dominion Coal Board.

Department of National Defence.-The Department of National Defence was established on Jan. 1, 1923 by the Department of National Defence Act, 1922, and was an amalgamation of the Department of Militia and Defence, the Naval Service and the Air Board. The Department and the Canadian Forces (the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force) now operate under the National Defence Act, 1950 (RSC 1952, c. 184).

In 1940 additional Ministers for Naval and Air Services were appointed and the Department was organized under a Minister of National Defence and two additional Ministers so that there was a Minister and staff for each of the Armed Services. Upon demobilization of the wartime Forces the appointment of Ministers of National Defence for Naval Services and Air Services ceased, and the Armed Forces were, in 1946, again administered by the Minister of National Defence without additional Ministers. Under the National Defence Act, the Canadian Forces are being administered solely by the Minister of National Defence and the Associate Minister of National Defence.

The Defence Research Board, created in 1947 to carry out research relating to national defence and to advise the Minister on all relevant matters of a scientific or technical nature, now functions under the National Defence Act. The Chairman of the Board has a status equivalent to that of a Chief of Staff of one of the Canadian Forces.

National Energy Board.-This Board was established under the National Energy Board Act, 1959 for the broad purpose of assuring the best use of energy resources in Canada. The Board, composed of five members, is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipelines, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The Board is also required to study and keep under review all matters relating to energy under the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary and advisable on the subject. The Board reports to Parliament through the Minister of Trade and Commerce.

National Film Board.-The National Film Board, established in 1939, operates under the National Film Act (RSC 1952, c. 185) which provides for a Board of Governors of nine membersa Government Film Commissioner, appointed by the Governor in Council, who is Chairman of the Board, three members from the public service of Canada and five members from outside the public service. The Board reports to Parliament through the Secretary of State. The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and, in particular, films "designed to interpret Canada to Canadians and to other nations".

Department of National Health and Welfare.-This Department was established in October 1944 under authority of the Department of National Health and Welfare Act (RSC 1952, c. 74). It was originally formed as the Department of Health in 1919 and later became part of the Department of Pensions and National Health. That Department was replaced in 1944 by the Department of National Health and Welfare and the Department of Veterans Affairs.

The Department, headed by the Minister of National Health and Welfare, is composed of three branches-Administration, Health, and Welfare-and is administered by two Deputy Ministers.

The Department has charge of all matters relating to the promotion or preservation of the health, social security and social welfare of the people of Canada over which the Federal Parliament has jurisdiction. It administers the Acts listed in Sect. 3, pp. 124-125, and is also responsible for: the administration of the National Health Program under which grants are made available to the provinces for the development and extension of health services; the federal aspects of emergency health and welfare services; health and safety in the peaceful uses of atomic energy and other sources of radiation affecting the population; the provision of health, medical and hospital services to Indians and Eskimos and to other elements of the population in the Yukon and Northwest Territories; the provision of assistance and consultative services to the provinces upon request on blindness control, child and maternal health, mental health, dental health, nursing, medical rehabilitation, nutrition and hospital design; the inspection and medical care of immigrants and seamen and the administration of marine hospitals; the supervision of public health facilities on railway, water and other forms of transportation; the enforcement of regulations of the International Joint Commission relating to public health; the promotion and conservation of the health of civil servants and other government employees; the collection, publication and distribution, subject to the provisions of the Statistics Act, of information relating to public health, improved sanitation and social and industrial conditions affecting the health of Canadians. It co-ordinates and assists international welfare activities in which Canada is engaged and administers a system of grants to the provinces for professional welfare training, welfare research and general welfare services.

National Library.-The National Library came formally into existence on Jan. 1, 1953, with the proclamation of the National Library Act (RSC 1952, c. 330). It publishes Canadiana, a monthly catalogue of new publications relating to Canada, with an annual cumulation. The Library also publishes other bibliographies. Its Reference Division maintains the National Union Catalogue, which embodies the author catalogues of the major libraries in the ten provinces and is thus a key to the book collections of the whole country. Its book collection is growing steadily and at the end of 1961 consisted of about 250,000 volumes. The National Librarian reports to Parliament through the Secretary of State.

National Parole Board.-The establishment of the National Parole Board, which was formed in January 1959, is authorized by the Parole Act (SC 1958, c. 38) by which it is given absolute jurisdiction over all matters of parole. It is composed of a chairman and three members appointed by Order in Council for a ten-year period. The Board reports to Parliament through the Minister of Justice.

Department of National Revenue.-From Confederation until May 1918, customs and inland revenue Acts were administered by separate departments; after that date they were amalgamated under one Minister as the Department of Customs and Inland Revenue. In 1921 the name was
changed to the Department of Customs and Excise. In April 1924 collection of income taxes was placed under the Minister of Customs and Excise and, under the Department of National Revenue Act, 1927, the Department became known as the Department of National Revenue.

The Customs and Excise Division of the Department is responsible for the assessment and collection of customs and excise duties as well as sales and excise taxes, by ports and outports. The Taxation Division is responsible for the assessment and collection of income taxes and estate taxes by 29 district offices throughout Canada.

The Minister of National Revenue is responsible to Parliament for the Tax Appeal Board and the Central Mortgage and Housing Corporation.

Department of Northern Affairs and National Resources.-The Department of Northern Affairs and National Resources was established in December 1953, superseding the Department of Resources and Development. In addition to the Administration Branch, which includes common service functions, the Department is divided into four branches: the National Parks Branch, which administers the National Parks and National Historic Parks of Canada, National Historic Sites, and wildlife matters coming within the jurisdiction of the Federal Government; the Water Resources Branch, which is responsible for the investigation of water power resources, for the administration of federal assistance to the provinces under the Canada Water Conservation Assistance Act and for federal interest in certain joint federal-provincial construction projects; the Northern Administration Branch, which is responsible for the administration of various federal Acts, territorial ordinances and regulations pertaining to the government of the Northwest Territories, for the conduct of certain business arising from the general administration of the Yukon Territory, for the administration of natural resources in those Territories and for Eskimo affairs, as well as for certain other lands and mineral rights vested in the Crown in the right of Canada; and the National Museum of Canada, which is responsible for research, publication of scientific studies, and public exhibitions in the natural history and human history fields, as well as the National Aviation Museum and the Canadian War Museum.

The Minister of Northern Affairs and National Resources is also responsible to Parliament for the Northern Canada Power Commission and the National Battlefields Commission. The Historic Sites and Monuments Board of Canada, an honorary body of recognized historians representing the various provinces, and the Advisory Committee on Northern Development and Water Use Policy, act in an advisory capacity to the Minister in their respective fields. The Deputy Minister is Commissioner of the Northwest Territories and Chairman of the Northern Canada Power Commission.

Post Office Department.-Administration and operation of the Canada Post Office, by virtue of the Post Office Act (RSC 1952, c. 212) and under the Postmaster General, includes all phases of postal activity, personnel, mail handling, transportation of mails by land, water, rail and air and the direction and control of financial services including the operation of money order and savings bank business.

Privy Council Office.-For administrative purposes, the Privy Council Office is regarded as a Department of Government under the Prime Minister. The Clerk of the Privy Council, under whose direction its functions are carried out, is considered as a Deputy Head and takes precedence among the chief officers of the Public Service. The authority of the Privy Council Office is to be found in Sects. 11 and 130 of the British North America Act, 1867, which constituted a Council to aid and advise in the government of Canada to be styled the Queen's Privy Council for Canada. In 1940, upon the wartime development of cabinet committees and the consequent need for orderly secretarial procedures such as agenda, explanatory memoranda and minutes, the Principal Secretary in the Prime Minister's Office was designated Clerk of the Privy Council and first Secretary to the Cabinet. Since 1946, the Privy Council Office has been further re-organized, developed and enlarged and certain administrative functions of the Privy Council Office and the Prime Minister's Office closely integrated in the interests of efficiency and economy.

The organization of the Privy Council Office at present consists primarily of the Privy Council Section concerned with the examination of submissions to the Governor in Council, preparation of draft orders and regulations, circulation and filing of approved orders, administration of oaths of office and secrecy, and the duties of editing, registering and publication of federal statutory regulations in Part II of the Canada Gazette; the Cabinet Section dealing with secretarial work for the Cabinet and for Cabinet committees and interdepartmental committees, such as the preparation and circulation of agenda and necessary documents to Ministers and recording and circulating decisions, liaison with departments and agencies of government, and the preparation of material for the Prime Minister; and the Office of the Prime Minister organized as a Secretariat with officers responsible for general secretarial duties, the drafting of letters, the arrangement of appointments to interview the Prime Minister or for his public appearances or for the release of his statements on matters of public interest, and assisting the Prime Minister in his parliamentary duties.

Public Archives.-The Public Archives was founded in 1872 and is administered under the Public Archives Act (RSC 1952, c. 222) by the Dominion Archivist who has the rank of a Deputy Minister and reports to Parliament through the Secretary of State. Its purpose is to assemble and
make available to the public a comprehensive collection of historical source material relating to the history of Canada. Major emphasis is placed on official records of the Government and the personal papers of political leaders and other prominent figures. These are supplemented by copies of many records in the British and French archives that relate to Canada, a fine map collection, a historical library, and many prints, paintings and photographs. In 1956 the Archives opened a large Records Centre, designed to provide economical accommodation for departmental records that are used relatively seldom. The building, equipped with over 50 miles of shelving, also serves as a sorting centre in which papers of long-term interest are picked out of obsolete files, and useless material is segregated for destruction.

Under the terms of the Laurier House Act (RSC 1952, c. 163) the Public Archives is responsible for the administration of Laurier House as a museum and study centre. The Dominion Archivist also administers the Government's Central Microfilm Unit, which is housed in the Records Centre.

Department of Public Printing and Stationery.-This Department, established in 1886, is responsible for supplying all requirements of printing and stationery to Parliament and departments of the Canadian Government; the cataloguing, distribution and sale of government publications; the publication of the Canada Gazette and all departmental reports, papers, etc., required to be published by authority of the Governor General in Council (RSC 1952, c. 226); and the publication of the Statutes of Canada (RSC 1952, c. 230).

The Department of Public Printing and Stationery is under the jurisdiction of the Secretary of State. The Deputy Head is the Queen's Printer and Controller of Stationery.

Department of Public Works.-The Department was constituted in 1867 and operates under the legislative authority of the Public Works Act and other Acts of Parliament. It is responsible for the management and direction of the public works of Canada and, except as specifically provided in other Acts, attends to the construction and maintenance of public buildings, wharves, piers, roads and bridges and the undertaking of dredging and navigable waters protection work. Federal Government interest in the Trans-Canada Highway is also handled by the Department. The Department maintains district offices at key points across the country. The Branches and Divisions of the Department are: Harbours and Rivers Engineering, Building Construction, Development Engineering, Property and Building Management, Purchasing and Stores, Administrative Services, Economic Studies, Financial Services, Fire Prevention, Information Services, Legal Services and Personnel.

The Minister of Public Works is also responsible to Parliament for the National Capital Commission.

Royal Canadian Mounted Police.-The Royal Canadian Mounted Police, a civil force maintained by the Federal Government, was organized in 1873 as the North West Mounted Police. It now operates under the Royal Canadian Mounted Police Act, 1959 and is responsible for enforcing federal laws throughout Canada. By agreement with certain provincial governments, it is also responsible for enforcing provincial laws within those provinces and for policing many district municipalities, cities and towns. The Force is controlled and administered by the Minister of Justice.

Department of the Secretary of State.-The Secretary of State and Registrar General of Canada is the official medium of communication with the Throne through the Governor General, and is the custodian of the Great Seal of Canada and of the Privy Seal of the Governor General. He is responsible for the preparation and tabling of returns in Parliament. He administers legislation relating to patents of invention, trade marks, industrial designs, timber marking, copyright, companjes, boards of trade, the registration of trade unions, public officers, public documents and governmental and parliamentary translations. He is also the Custodian of Enemy Property.

The Secretary of State has certain responsibilities with respect to civilian decorations, precedence and ceremonial. The Committee on the use of Parliament Hill and the National War Memorial falls within his purview. He is the Minister of the Department of Public Printing and Stationery and the spokesman in Cabinet and Parliament for the Civil Service Commission, the Chief Electoral Officer, the Canadian Broadcasting Corporation, the Board of Broadcast Governors, the Atlantic Development Board, the National Film Board, the National Gallery, the National Library and the Public Archives.

Tariff Board.-Constituted in 1931 under the Tariff Board Act (SC 1931, c. 55), the Board derives its duties and powers from three statutes: the Tariff Board Act (RSC 1952, c. 261, as amended); the Customs Act (RSC 1952, c. 58, as amended); and the Excise Tax Act (RSC 1952, c. 100 , as amended).

Under the Tariff Board Act, the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada, are subject to or exempt from duties of customs or excise taxes. Reports of the Board are tabled in Parliament by the Minister of Finance. It is also the duty of the Board to hold an inquiry under Sect. 14 of the Customs Tariff and to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board acts as a court to hear appeals from rulings of the Department of National Revenue, Customs and Excise Division, in respect of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals on questions of fact are final and conclusive but the Acts contain provisions for appeal on questions of law to the Exchequer Court of Canada.

Tax Appeal Board.-The Tax Appeal Board (created in 1946 as the Income Tax Appeal Board) now operates under the Income Tax Act (RSC 1952, c. 148 as amended). The Board is declared by Statute to be a court of record and has jurisdiction to hear and determine appeals by taxpayers against their assessment under the Income Tax Act and also appeals under the Estates Tax Act. An appeal lies from the Board to the Exchequer Court of Canada and a further appeal from that court to the Supreme Court of Canada. The Board consists of a chairman and five other members. Its offices are located at Ottawa and it hears appeals at the principal centres throughout Canada approximately twice a year and at the main centres, such as Montreal and Toronto, six times a year. The Board is under the jurisdiction of the Minister of National Revenue but is completely separate and independent of the Department of National Revenue.

Department of Trade and Commerce.-The Department of Trade and Commerce was established by Act of Parliament on June 23, 1887, but did not function until Dec. 5, 1892, when an Order in Council to this effect was passed. Before the formation of the Department, assistance in the development of Canada's external trade was provided by eight Canadian Commercial Agents-five in the West Indies, two in Great Britain and one in France-who served on a parttime basis and were responsible to the Minister of Finance. A Canadian Commercial Agent was appointed at Sydney, Australia, in 1895, as the first full-time salaried agent of the Department.

The framework of the present Trade Commissioner Service emerged during the next decade or so, the Commercial Agents gradually giving place to career Trade Commissioners. There are now 173 Trade Commissioners serving at Headquarters and abroad in 63 posts (including Assistant Trade Commissioners and agricultural, fisheries and timber specialists). Where a Trade Commissioner is a member of a mission maintained by the Department of External Affairs, he holds diplomatic status and is known as a Minister (Commercial), Commercial Counsellor or Commercial Secretary.

The Department provides a wide range of services to Canadian business men through the Agriculture and Fisheries Branch, the Canadian Government Exhibition Commission, the Canadian Government Travel Bureau, the Commodities Branch, the Trade Services Branch, the International Trade Relations Branch, the Trade Commissioner Service, the Trade Fairs and Missions Branch and the Trade Publicity Branch. The Domestic Commerce Service of the Department assists business men through the facilities provided by the Industrial Promotion Branch, the National Design Branch, the Small Business Branch and the Standards Branch. These four Branches are concerned primarily with co-operating with industry in fostering greater industrial activity in Canada.

The following boards, commissions, Crown corporations and agencies report to Parliament through the Minister of Trade and Commerce: the Dominion Bureau of Statistics, the Export Credits Insurance Corporation, the National Design Council, the National Energy Board, the Canadian Wheat Board, the Northern Ontario Pipe Line Crown Corporation, the Northern Transportation Company Limited, Eldorado Aviation Limited and Eldorado Mining and Refining Limited. The National Productivity Council reports through the Ministers of Trade and Commerce and of Labour.

Department of Transport.-The Department was created on Nov. 2, 1936 from the former Departments of Marine and of Railways and Canals, and the Civil Aviation Branch of the Department of National Defence (RSC 1952, c. 79).

The work of the Department consists of two main Services-Marine and Air. Marine Service operations include aids to navigation, nautical and pilotage services, marine agencies, secondary canals, steamship inspection, floating equipment, and direct supervision over 300 public harbours; 11 other harbours come under supervision of the Department but are administered by commissions. Air Services cover the operation of civil aviation, meteorological and telecommunications branches. The latter includes the administration and regulation of radar, radio marine and radio aeronautical aids to navigation and of communication by wire and by government telegraph and telephone.

Other services of the Department are in connection with the Government-owned companies: the Canadian National Railways, Canadian Government Railways, the Prince Edward Island, Newfoundland, and Yarmouth-Bar Harbour ferry services, and Trans-Canada Air Lines.

The Minister of Transport is responsible to Parliament for the following boards, commissions and Crown companies: the Air Transport Board, Board of Transport Commissioners, the Canadian Maritime Commission, the National Harbours Board, the Park Steamship Company Limited, the St. Lawrence Seaway Authority, and the Canadian Overseas Telecommunication Corporation.

Treasury Board.-The Treasury Board was first established by Order in Council PC 3 of July 2, 1867 and was made statutory in 1869. Its powers and duties are now governed by the Financial Administration Act (RSC 1952, c. 116 as amended). Serving as a committee of the Queen's Privy Council for Canada and consisting of the Minister of Finance as Chairman and five other members
of the Privy Council, it deals with all matters relating to finance, revenues, estimates, expenditures and financial commitments, accounts and personnel establishments, referred to the Board by the Governor in Council or on which the Board considers it necessary to act under the Financial Administration Act or any other Act. The practice of having, a Board of Ministers co-ordinating financial measures and reviewing constantly the Government's spending program is unique.

The administrative staff of the Treasury Board constitutes a main division of the Department of Finance and is directed by an Assistant Deputy Minister of Finance named to be the Secretary of the Treasury Board.

Department of Veterans Affairs.-This Department, established in 1944 (RSC 1952, c. 80), is concerned exclusively with the welfare of veterans and with the dependants of veterans and of those who died on active service. The Department provides treatment services (hospital, medical, dental and prosthetic), welfare services, education assistance, life insurance, and land settlement and home construction assistance. The Veterans' Bureau assists veterans in the preparation and presentation of pension claims.

The Canadian Pension Commission established by the Pension Act (RSC 1952, c. 207), and the War Veterans Allowance Board established by the War Veterans Allowance Act (RSC 1952, c. 340 ) also report to Parliament through the Minister of Veterans Affairs.

The Department has treatment institutions and facilities in a number of urban centres. It also maintains, in large cities across Canada, administrative offices, which are shared with the Canadian Pension Commission and the War Veterans Allowance Board, and an office in London, England.

War Veterans Allowance Board.-This Board, established under the authority of the War Veterans Allowance Act, 1930 (RSC 1952, c. 340), is a statutory body responsible to the Minister of Veterans Affairs for the administration of the Act and for the administration of Part XI of the Civilian War Pensions and Allowances Act, relating to certain groups of civilians who performed meritorious service in either World War I or II. It consists of three to ten members (three to five permanent, up to three temporary, and up to two additional without pay) appointed by the Governor in Council. Its functions include the responsibility of ensuring that all 19 District Authorities located in various regions throughout Canada interpret the legislation in a fair, reasonable and equitable manner. It is also an appeal body and may consider an appeal of an appellant against the decision of a District Authority.

## Section 3.-Crown Corporations

The Crown corporation form of public enterprise is not a new type of organization in Canada but in recent years, as the work of government has become more complex, greater reliance has been placed on it as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial and industrial objectives has led to the adoption of many different forms and formulas of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purposes and sets forth its powers and responsibilities. However, during World War II the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934, or under any provincial Companies Act to which he might delegate any of the powers conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation about 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

In 1946 the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However, it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown
corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment the financial provisions of the Government Companies Operation Act were repealed.

One of the more interesting features of the later legislation is the attempt that has been made to define and classify Crown corporations.* The Act defines a Crown corporation as a corporation that is ultimately accountable, through a Minister, to Parliament for the conduct of its affairs and establishes three classes of corporation-departmental, agency and proprietary.

Departmental Corporations.-A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. Ten departmental corporations are listed in Schedule B to the Act:-

> Agricultural Stabilization Board (formerly Agricultural Prices Support Board)
> Atomic Energy Control Board
> Canadian Maritime Commission
> Director of Soldier Settlement
> The Director, The Veterans' Land Act
> Dominion Coal Board
> Fisheries Prices Support Board
> National Gallery of Canada
> National Research Council
> Unemployment Insurance Commission.

Agency Corporations.-An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of trading or service operations on a quasi-commercial basis or for the management of procurement, construction or disposal activities on behalf of Her Majesty in right of Canada. The following agency corporations are listed in Schedule C to the Financial Administration Act or have been subsequently added to that Schedule by the Governor in Council:-

Atomic Energy of Canada Limited<br>Canadian Arsenals Limited<br>Canadian Commercial Corporation<br>Canadian National (West Indies) Steamships Limited<br>Canadian Patents and Development Limited<br>Crown Assets Disposal Corporation<br>Defence Construction (1951) Limited<br>National Battlefields Commission<br>National Capital Commission (formerly Federal District Commission)<br>National Harbours Board<br>Northern Canada Power Commission (formerly Northwest Territories Power Commission)<br>Park Steamship Company Limited.

Two corporations, Canadian Sugar Stabilization Corporation Limited and Commodity Prices Stabilization Corporation Limited, listed in Schedule C when the Financial Administration Act was proclaimed, have since discontinued operations and surrendered

[^32]their charters. By an Order in Council of June 15, 1955, the name of the Northwest Territories Power Commission (now Northern Canada Power Commission) was deleted from Schedule D and added to Schedule C, effective Apr. 1, 1954.

Proprietary Corporations.-A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or dealing in goods and the supplying of services to the public, and (2) is ordinarily required to conduct its operations without parliamentary appropriations. The following proprietary corporations are listed in Schedule D to the Act or have been subsequently added to that Schedule by the Governor in Council:-

Canadian Broadcasting Corporation<br>Canadian Overseas Telecommunication Corporation<br>Central Mortgage and Housing Corporation<br>Eldorado Aviation Limited<br>Eldorado Mining and Refining Limited<br>Export Credits Insurance Corporation<br>Farm Credit Corporation (formerly Canadian Farm Loan Board)<br>National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933<br>Northern Transportation Company Limited<br>Polymer Corporation Limited<br>St. Lawrence Seaway Authority<br>Cornwall International Bridge Company Limited (subsidiary to the St. Lawrence Seaway Authority)<br>Trans-Canada Air Lines.

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations, however, are subject to the provisions of the Crown corporations Part of the Act although, if there is any inconsistency between the provisions of that Part and those of any other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, limited loans for working-capital purposes, the awarding of contracts and the establishment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission to Parliament through the appropriate Minister.

A further form of control is exercised by Parliament through the power to vote financial assistance. This may take different forms. For some corporations, capital may be provided by parliamentary grants, loans or advances that may subsequently be converted into capital stock or bonds; for others it may be by the issue of capital stock to be subscribed and paid for by the Government; or by the sale of bonds to either the Government or the public. A few corporations have financed all or a portion of their requirements from their own resources or earnings. Under a special financing arrangement, a 15-p.c. excise tax charged on radio and television sets and their parts and accessories was allocated to the revenue of the Canadian Broadcasting Corporation, but this was discontinued under the provisions of the Broadcasting Act, which came into force on Nov. 10, 1958, and since that time the Corporation has received federal financing solely by parliamentary grants.

Prior to 1952, Crown corporations did not pay corporate income taxes. However, the Income Tax Act was later amended so that, in respect of financial years commencing after Jan. 1, 1952, proprietary Crown corporations pay taxes on income earned in the same manner as any privately owned corporation. One desirable result of this amendment is that the financial statements of these Crown companies are now more comparable with those of private industry, with which in some instances they are in competition, and thus it is easier to assess the relative efficiency of their operations.

The functions of the various Crown corporations are given briefly in the following paragraphs. For a number of them, further details are included in the Chapters dealing with the subjects concerned (see Index).

Agricultural Stabilization Board.-The Board was established in 1958 (SC 1957-58, c. 22) to administer the provisions of the Agricultural Stabilization Act, which has replaced the Agricultural Prices Support Act. The Board reports to Parliament through the Minister of Agriculture.

Atlantic Development Board.-The Act establishing this Board (SC 1962-63, c. 10) received Royal Assent on Dec. 20, 1962. The Board is composed of a chairman and four other members appointed by Order in Council and reports to Parliament through the Secretary of State. Its functions are to inquire into and report upon measures and projects for fostering the economic growth and development of the Atlantic Region of Canada and to assess and make recommendations with respect to particular projects referred to it by the Minister.

Atomic Energy Control Board.-By Act of Parliament (RSC 1952, c. 11) proclaimed October 1946, the regulation and control of atomic energy in Canada was placed under the Atomic Energy Control Board. The Board reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Defence Production).

Atomic Energy of Canada Limited.-This Crown company was incorporated in February 1952 under the Atomic Energy Control Act, 1946 (RSC 1952, c. 11) to take over from the National Research Council on Apr. 1, 1952 the operation of the Chalk River project. The main activities of the company are (a) the development of economic nuclear power, (b) scientific research and development in the atomic energy field, (c) the operation of nuclear reactors and (d) the production of radioactive isotopes and associated equipment such as Cobalt-60 beam therapy units for the treatment of cancer. The company reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Defence Production).

Bank of Canada.-Legislation of 1934 (RSC 1952, c. 13) provided for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment so far as may be possible within the scope of monetary action. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a Governor, a Deputy Governor and 12 Directors; the Deputy Minister of Finance is also a member of the Board. The Bank reports to Parliament through the Minister of Finance and is governed by its own Act of incorporation. (See footnote, p. 115.)

The Canada Council.-Established by Order in Council dated Apr. 15, 1957, this corporation of 21 members, a Director and an Associate Director operates under the terms of the Canada Council Act, assented to Mar. 28, 1957. The function of the Council is to encourage the arts, humanities and social sciences in Canada; its work is financed by a $\$ 50,000,000$ University Capital Grants Fund and the earnings from a $\$ 50,000,000$ Endowment Fund. In the making, managing and disposing of investments under the Act, the Council has the advice of an Investment Committee of five, including the Chairman and another member of the Council. The proceedings of the Council are reported each year to Parliament through the Prime Minister. (See footnote, p. 115.)

Canadian Arsenals Limited.-This company was established under the Companies Act by Letters Patent dated Sept. 20, 1945 and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and certain provisions of the Financial Administration Act (RSC 1952, c. 116). The company was set up to take over and operate Crown-owned plant and equipment. Among the items it now manufactures are propellants and explosives, small arms, radar equipment, optical and electronic instruments, and a wide variety of ammunition and components. Its divisions, together with the locations of their plants, are as follows: Dominion Arsenal Division (Quebec and Val Rose, Que.); Explosives Division (Valleyfield, Que.); Filling Division (St. Paul l'Ermite, Que.); Gun Ammunition Division (Lindsay, Ont.); Small Arms Division (Long Branch, Ont.); Instrument and Electronic Division (Scarborough, Ont.). The company is responsible to Parliament through the Minister of Defence Production.

Canadian Broadcasting Corporation.-The new Broadcasting Act, 1958 continues the CBC as a Crown corporation for the purpose of operating a national broadcasting service. It has the authority to maintain and operate broadcasting stations and networks and to originate and secure programs from within and outside Canada. This national radio and television service is financed through annual grants from Parliament and revenues from commercial operations.

The Corporation consists of a board of 11 Directors appointed by the Governor in Council and chosen to give representation to the principal geographical divisions of the country. The Corporation reports to Parliament through a Minister of the Crown (at present the Secretary of State).

The President and Vice President are full-time executives appointed for a period of seven years; the other nine Directors, including a Chairman and Vice Chairman, are appointed for periods of three years and may serve two consecutive terms. The President is the chief executive of the Corporation and, with the Vice President, is responsible to the Board of Directors for the conduct of the affairs of the Corporation. As the chief executive, the President receives, interprets and applies the policies and directives of the Board of Directors and establishes administrative and operating policies to control the activities of all operating units-English Networks, French Networks and Regional Broadcasting (headed by General Managers) and the International Service (headed by a Director) and of corporate staff departments, i.e., Programming, Personnel and Operations, Corporate Affairs (headed by Vice Presidents), Engineering and Technical Services, and Finance (headed by a Director and a Comptroller).

In practice, a general division of work between the President and the Vice President has been arranged whereby the attention of the President is primarily directed at the broader operating and administrative policy fields including reporting on activities to the Board of Directors and the conduct of relations with Parliament, the Board of Broadcast Governors and the public. The Vice President assists the President in his role of chief executive by assuming primary responsibility for the current operations of the Corporation.

The Corporation's Head Office is situated in Ottawa with Headquarters for English Networks in Toronto, for French Networks in Montreal and with Regional Headquarters in St. John's for Newfoundland, Halifax for the Maritime Provinces, Winnipeg for the Prairie Provinces, and Vancouver for British Columbia. Headquarters for the Northern and Armed Forces Services is in Ottawa and for the International Service in Montreal.

Canadian Commercial Corporation.-This Corporation was established on May 1, 1946 by the Canadian Commercial Corporation Act (RSC 1952, c. 35). It purchases goods and commodities in Canada for the governments of other countries. It also acts as their Canadian agent for international agencies such as the United Nations International Children's Emergency Fund and the United Nations Korean Reconstruction Agency. Other functions include arranging production and shipment of Canadian contributions of military stores to NATO countries. The Corporation also serves other departments of the Government of Canada. For instance, it arranges for the purchase and production of supplies and services which the External Aid Office is making available to other countries under the Colombo Plan. In carrying out its functions the Corporation works closely with the Department of Defence Production. It is responsible to Parliament through the Minister of Defence Production.

Canadian Maritime Commission.-This Commission was created in 1947 by the Canadian Maritime Commission Act (RSC 1952, c. 38). It considers and recommends policies and measures necessary for the operation, maintenance, manning and development of a merchant marine and a shipbuilding and ship-repairing industry. The Commission administers the Ship Construction Assistance Regulations established by Order in Council P.C. 1961-1290 passed Sept. 8, 1961 and the Canadian Vessel Construction Assistance Act (RSC 1952, c. 43). It also administers steamship subsidies voted by Parliament. Other functions include advice to other government departments on their shipbuilding requirements, consultation with the Department of National Revenue in the administration of the laws relating to the coasting trade of Canada and the co-ordination of the overseas movement of men and material for the Department of National Defence. It has responsibility in international matters relating to merchant shipping, such as NATO, IMCO and other international bodies. The Chairman has the status of a Deputy Minister and the Commission reports to Parliament through the Minister of Transport.

Canadian National Railways.-The Canadian National Railway Company was incorporated (SC 1919, c. 13) to operate and manage a national system of railways, including the Canadian Northern Railway System, the Canadian Government Railways and all lines entrusted to it by Order in Council. In 1923 the Grand Trunk Railway Company of Canada was amalgamated with the Canadian National Railway Company and since 1923 a number of railway lines acquired by the Government have been entrusted to the Company for operation and management, including the Newfoundland Railway and steamship services in 1949, the Temiscouata Railway in 1950, and the Hudson Bay Railway and the Northwest Communication System in 1958. The Canadian National Railways Act, 1919 was repealed in 1955 and the Canadian National Railways Act (SC 1955, c. 29) substituted therefor.

The Canadian National Railway Company is controlled by a Chairman and Board of Directors appointed by the Governor in Council, who report to Parliament through the Minister of Transport.

Canadian Overseas Telecommunication Corporation.-This Crown company was created on Dec. 10, 1949 by Act of Parliament (RSC 1952, c. 42) to acquire for public operation external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation is responsible to Parliament through the Minister of Transport.

Canadian Patents and Development Limited.-Canadian Patents and Development Limited is

Crown corporation established in 1948, pursuant to authority granted in an amendment to
the Research Council Act which was passed in 1946. The primary purpose of the company is to make available to industry, through licensing arrangements, new processes developed by scientific workers of the National Research Council. Its services are equally available to government departments, publicly supported institutions and universities. The company also has crossagency arrangements with similar government agencies in other Commonwealth countries. The Board of Directors is composed of representatives from the National Research Council, from government departments and from industry and the universities. Any profits that the company may derive from licensing arrangements are available for further research and development. The Corporation reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Canadian Wheat Board.-The Board was incorporated in 1935 under the Canadian Wheat Board Act to market, in an orderly manner, in the interprovincial and export trade, grain grown in Canada. Its powers include authority to buy, take delivery of, store, transfer, sell, ship or otherwise dispose of grain. Except as directed by the Governor in Council, the Board was not originally authorized to buy grain other than wheat but, since Aug. 1, 1949, it may also buy oats and barley if authorized to do so by Regulation approved by the Governor in Council. Only grain produced in the designated area, which includes Manitoba, Saskatchewan, Alberta and parts of British Columbia and Ontario, is purchased by the Board, which controls the delivery of grain into elevators and railway cars in that area as well as the interprovincial movement and export of wheat, oats and barley generally. The Board is governed by its own Act of incorporation (see footnote, p. 115). It reports to Parliament through the Minister of Trade and Commerce.

Central Mortgage and Housing Corporation.-This Corporation was incorporated by Act of Parliament (RSC 1952, c. 46) in December 1945 to administer the National Housing Acts. Under the National Housing Act, 1954 (SC 1953-54 c. 23, as amended by 1956 c. $9,1957-58$ c. 18, 1958 c. $3,1959 \mathrm{c} .6,1960 \mathrm{c} .10$, and $1960-61 \mathrm{cc} .1$ and 61), the Corporation insures mortgage loans made by approved lenders for home ownership and rental housing; insures home improvement loans made by banks; makes direct loans to individual home-owners, to municipalities for construction of sewage treatment projects designed to eliminate pollution in water and soil and to universities for construction of student residences; undertakes jointly with provincial governments the assembly of land and construction of housing projects; provides financial assistance for studies to identify urban areas with blighted and substandard housing; assists municipalities in clearance and rehabilitation of substandard areas; conducts housing research; encourages community planning and owns and manages rental housing units built for war workers and veterans. The Corporation also arranges for and supervises construction of housing projects on behalf of the Department of National Defence and other government departments and agencies. The Corporation is responsible to Parliament through the Minister of National Revenue.

Crown Assets Disposal Corporation.-This Corporation is established under the Surplus Crown Assets Act (RSC 1952, c. 260) and is subject to the Financial Administration Act (RSC 1952, c. 116). In June 1944, War Assets Corporation was established by statute to replace War Assets Corporation Limited which had been incorporated in 1943. In 1949 the name of War Assets Corporation was changed to Crown Assets Disposal Corporation. The Corporation's function is to dispose of surplus Crown assets. It is responsible to Parliament through the Minister of Defence Production.

Defence Construction (1951) Limited.-This company was established by Letters Patent in 1951 to take over the general undertakings of Defence Construction Limited. It is primarily responsible for the calling and review of tenders for all major construction jobs and for the supervision of work in the field. This covers five broad phases or types of work in the following categories: (1) defence projects in Canada for the Department of National Defence; (2) defence projects in France for the Department of National Defence under the NATO agreement (neither (1) nor (2) include housing projects or airfield runways); (3) maintenance and repair contracts at Department of National Defence sites throughout Canada; (4) defence construction for the United States Government in Canada; (5) advice and assistance concerning capital assistance projects of the Department of Defence Production and projects for the External Aid Office of the Department of External Affairs. It is responsible to Parliament through the Minister of Defence Production.

Director of Soldier Settlement and Director of the Veterans' Land Act.-The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, and in each capacity is legally a corporation sole. For administrative purposes, however, the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

Dominion Coal Board.-The Board, established as a department in 1947 by the Dominion Coal Board Act (RSC 1952, c. 86), has the responsibility of studying and recommending to the Government policies concerning the production, import, distribution and use of coal. The Chairman has the status of a Deputy Minister and the Board reports to Parliament through the Minister of Mines and Technical Surveys. The Board administers transportation and other subventions relating to coal, including those under the Atlantic Provinces Power Development Act (SC 1957-58,
c. 25). It also administers loans authorized under the Coal Production Assistance Act (RSC 1952, c. 173, as amended). The Dominion Coal Board Act makes provision for the regulation and control of the production, distribution and use of fuel in times of national emergency.

Eastern Rockies Forest Conservation Board.-The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act which authorized an agreement between the Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that portion of the eastern slope of the Rocky Mountains which gives rise to the major tributaries of the Saskatchewan River. The function of the Board is to determine the policy necessary to obtain the greatest possible flow of water in the Saskatchewan River system. The planning of programs of forest use and conservation is a joint duty of the Board and the provincial Forest Service; the administration of the conservation area is a function of the province. In April 1962, a Technical Co-ordinating Committee for Watershed Research was established to undertake study of the related needs defined by the Board. The Committee's programs, undertaken by seven co-operating agencies of the federal and Alberta governments, are co-ordinated by the Department of Forestry.

Funds for capital expenditures during the first seven years of the agreement were provided by the Federal Government with maintenance expenditures being paid by the Province of Alberta. In 1955 the province undertook the responsibility of financing both capital improvements and maintenance work. Currently, one member of the three-man Board is appointed by the Federal Government and the province has the right to appoint two members. The choice of one of the three members as Board chairman is vested in the province. The Board reports to Parliament through the Minister of Forestry. (See footnote, p. 115.)

Eldorado Aviation Limited.-This company was incorporated Apr. 23, 1953 to carry air traffic, both passenger and freight, for Eldorado Mining and Refining Limited and its wholly owned subsidiary, Northern Transportation Company Limited. It reports to Parliament through the Minister of Trade and Commerce.

Eldorado Mining and Refining Limited.-Set up in 1944 under the name of Eldorado Mining and Refining (1944) Limited (the date was omitted from the name in June 1952), the company's business is the mining and refining of uranium and the production of nuclear fuels in Canada. The company has also entered into contracts for the purchase of uranium concentrates from private producers in Canada. It reports to Parliament through the Minister of Trade and Commerce.

Export Credits Insurance Corporation.-This Corporation commenced operations in 1945 under the Export Credits Insurance Act, 1944 (RSC 1952, c. 105, as amended) and is administered by a Board of Directors (including the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance) with the advice of an Advisory Council. Its function is to insure Canadian exporters against non-payment by foreign buyers arising out of credit and political risks involved in foreign trade. The Corporation is also authorized to provide financing in respect of an export transaction involving extended credit terms. It reports to Parliament through the Minister of Trade and Commerce.

Farm Credit Corporation.-This Corporation was established on Oct. 5, 1959 (SC 1959, c. 43) for the purpose of providing for the extension of long-term mortgage credit to farmers. The Corporation is responsible to Parliament through the Minister of Agriculture.

Fisheries Prices Support Board.-The Board was set up in July 1947 (RSC 1952, c. 120) to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and cooperative firms in the industry. The Board has authority to buy fishery products and to sell or otherwise dispose of them or to pay producers the difference between a price prescribed by the Board and the average price the product actually commands.

Industrial Development Bank.-The Bank, a subsidiary of the Bank of Canada, was incorporated in 1944 to provide loans to industrial enterprises where financing is not available through recognized lending organizations. (See footnote, p. 115.)

National Battlefields Commission.-This Commission was established by Act of Parliament in 1908 to preserve the historic battlefields at Quebec City. The Commission is composed of nine members, seven being appointed by the Federal Government and one each by the Provinces of Ontario and Quebec. The Commission is supported by an annual statutory grant from the Federal Government and is responsible to Parliament through the Minister of Northern Affairs and National Resources.

National Capital Commission.-This Commission is a Crown agency created by the National Capital Act (SC 1958, c. 37), proclaimed Feb. 6, 1959. It is the lineal descendant of the Federal District Commission.

The Commission is served by a full-time paid chairman and comprises a total of twenty members representative of the ten provinces of Canada. There is a staff of seven officials reporting to a general manager, and a permanent work force of about 600.

Co-ordination and development of public lands in the National Capital Region are undertaken by direct planning and construction by the Commission's staff; by co-operation with municipalities; by provision of planning aid or financial assistance in municipal projects; and by advising the Department of Public Works on the siting and appearance of all Federal Government buildings in the 1,800 -sq. mile National Capital Region. The Commission reports to Parliament through the Minister of Public Works.

National Gallery of Canada.--The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquis of Lorne, then Governor General, had recommended and assisted the founding of the Academy. One of the three tasks he assigned to that institution was the establishment of a National Gallery at the seat of government.

By Act of Parliament in 1913, re-enacted in 1951, the National Gallery was placed under the management of a Board of Trustees appointed by the Governor General in Council and now operates under the National Gallery Act (RSC 1952, c. 186). It is responsible to Parliament through the Secretary of State.

The first charge of the National Gallery is the development and care of the national art collections. Through its Exhibition Extension Service, travelling exhibitions, educational services such as lectures and art films, guided tours of the National Gallery collections in Ottawa and other services to the general public are controlled. In addition, the National Gallery publishes art publications and reproductions which are distributed by the Queen's Printer,

National Harbours Board.-The Board was established by Act of Parliament in 1936. It is responsible for the administration of port facilities at the harbours of Halifax, N.S.; Saint John, N.B.; Chicoutimi, Quebec, Trois Rivieres and Montreal, Que.; Vancouver, B.C.; and Churchill, Man.; the Jacques Cartier and Champlain Bridges at Montreal, Que.; and the grain elevators at Prescott and Port Colborne, Ont. The Board reports to Parliament through the Minister of Transport.

National Productivity Council.-Established by Act of Parliament (SC 1960, c. 4), the Council operates under the terms of the National Productivity Council Act assented to Dec. 20, 1960. The Council consists of 25 members, one of whom is designated Chairman, and includes five members from industry and commerce, five from organized labour, five from agriculture and primary industry, five from the general public, four officers or employees of Her Majesty, and an Executive Director.

The function of the Council is to promote and expedite continuing improvement in productive efficiency in the various aspects of Canadian economic activity and in particular to foster and promote (1) the development of improved production and distribution methods; (2) the development of improved management techniques; (3) the maintenance of good human relations in industry; (4) the use of training programs; (5) the use of re-training programs; (6) the extension of industrial research programs; and (7) the dissemination of technical information. The proceedings of the Council, which is not an agent of Her Majesty, are reported to Parliament each year through the Ministers of Trade and Commerce and Labour. (See footnote, p. 115.)

National Research Council.-This is an agency of the Canadian Government established in 1916 to promote scientific and industrial research. The Council operates science and engineering laboratories in Ottawa, Halifax and Saskatoon; gives direct financial support to research carried out in Canadian universities and industries; sponsors Associate Committees co-ordinating research on specific problems of national interest; and develops and maintains the nation's primary physical standards. Other activities include the provision of free technical information to manufacturing concerns; the publication of research journals; and representation of Canada in International Scientific Unions. Patentable inventions developed in the Council's laboratories are made available for manufacture through a subsidiary company, Canadian Patents and Development Limited (see p. 118). The National Research Council consists of a President, three Vice Presidents, and 17 members representing Canadian universities, industry and labour. The Council is incorporated under the Research Council Act (RSC 1952, c. 239, as amended), and reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Defence Production).

Northern Canada Power Commission.-The Commission was established by Act of Parliament in 1948 to provide electric power to points in the Northwest Territories where a need developed and where power could be supplied on a self-sustaining basis; the Act was amended in 1950 to give authority to the Commission to provide similar services in Yukon Territory. The name of the Commission, formerly Northwest Territories Power Commission, was changed in 1956. The Commission is composed of a chairman and two members appointed by the Governor in Council.

The Commission operates four hydro-electric plants, two of which are located in the Northwest Territories on the Snare River near Yellowknife, and two in the Yukon Territory on the Yukon River at Whitehorse and on the Mayo River near Mayo, and diesel electric plants at Fort Smith, Fort Simpson, Fort Resolution, Aklavik and Frobisher Bay, N.W.T., and Field, B.C., and a diesel power and central heating plant and water supply and sewerage systems at Inuvik, N.W.T.; the Commission also operates, on behalf of the Department of Northern Affairs and National Resources, a small diesel electric and heating plant at Fort McPherson, N.W.T., and a central heating plant and domestic water supply system at Fort Simpson, N.W.T.

The Minister of Northern Affairs and National Resources reports to Parliament for the Commission.

Northern Ontario Pipe Line Crown Corporation.- This Corporation was established by the Northern Ontario Pipe Line Crown Corporation Act (SC 1956, c. 10) for the purpose of constructing the northern Ontario section of the all-Canadian natural gas pipeline and of leasing, with an option to purchase, this section to Trans-Canada Pipe Lines Limited. The northern Ontario section, which extends from the Manitoba-Ontario border to the vicinity of Kapuskasing, Ont., was completed on Oct. 22, 1958 and is now under lease to Trans-Canada Pipe Lines Limited. The Corporation is responsible to Parliament through the Minister of Trade and Commerce. (See footnote, p. 115.)

Northern Transportation Company Limited.-This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the date being omitted from the name in 1952. Previously a company chartered under an Alberta statute, it has been a wholly owned subsidiary of Eldorado Mining and Refining Limited since that Crown company was established and carries out the business of a common carrier in the Mackenzie River watershed. The Company is responsible to Parliament through the Minister of Trade and Commerce.

Park Steamship Company Limited.-After World War II this Company acted as an agent for Crown Assets Disposal Corporation in the sale and delivery to purchasers of government warbuilt ships. This work is completed but the Company remains available to carry out any appropriate duties. It has no staff of its own, any necessary work being done by the staff of the Canadian Maritime Commission (see p. 115). The Company reports to Parliament through the Minister of Transport.

Polymer Corporation Limited.-This Corporation was established in 1942 by Letters Patent under the Companies Act and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and the Financial Administration Act (RSC 1952, c. 116). It was set up to construct and operate a synthetic rubber plant which now produces a variety of synthetic rubber products and some chemicals. The Corporation's principal plant is located at Sarnia, Ont., with specialty rubber and butyl plants in France and Belgium, respectively. The Corporation is responsible to Parliament through the Minister of Defence Production.

St. Lawrence Seaway Authority.-The St. Lawrence Seaway Authority was established by Act of Parliament in 1951 (RSC 1952, c. 242) and came into force by proclamation on July 1, 1954. The Authority was incorporated for the purposes of constructing, maintaining and operating all such works as may be necessary to provide and maintain, either wholly in Canada or in conjunction with works undertaken by an appropriate authority in the United States, a deep waterway between the Port of Montreal and Lake Erie. The Authority is composed of a President and a Vice President and reports to Parliament through the Minister of Transport.

Trans-Canada Air Lines.-TCA came into being by Act of Parliament in 1937 (RSC 1952, c. 268) to provide for the development of a publicly owned scheduled transcontinental air service. Transatlantic air services were inaugurated by TCA on behalf of the Canadian Government during World War II and scheduled operations were commenced at the end of the War. TCA now maintains passenger, mail and commodity traffic services over nation-wide routes and also services to the United States, England, Scotland, Ireland, France, Switzerland, West Germany, Austria, Bermuda, the Bahamas, Jamaica, Antigua, Barbados and Trinidad. TCA is responsible to Parliament through the Minister of Transport.

Unemployment Insurance Commission.-The Commission was appointed on Sept. 24, 1940 under the provisions of the Unemployment Insurance Act, 1940 (RSC 1952, c. 273) for the purpose of administering the Act and providing a National Employment Service. It is composed of three Commissioners appointed by the Governor in Council, of whom one is designated Chief Commissioner. One Commissioner, other than the Chief Commissioner, is appointed after consultation with organizations representative of workers and the other after consultation with organizations representative of employers. The Chief Commissioner is appointed to hold office for a period of ten years and each of the other Commissioners to hold office for a period not exceeding ten years. The Commission is responsible to Parliament through the Minister of Labour.

## Section 4.-Acts Administered by Federal Departments*

## List of the Principal Acts of Parliament Administered by Departments of the Government of Canada

Nore.-Copies of individual Acts of Parliament and amendments may be obtained from the Queen's Printer, Ottawa, at prices of from 10 cents to $\$ 1.50$ per copy according to number of pages. Where duplications of certain Acts appear in the list, parts of these Acts are administered under the Departments given.

## PART IV.-FEDERAL GOVERNMENT EMPLOYMENT

The Civil Service Commission.-As the central personnel agency of the Federal Government, the Civil Service Commission is the custodian of the merit system in the Civil Service of Canada. It is also concerned, however, with many other aspects of personnel administration.

The Civil Service Commission was first established in 1908 under the provisions of the Civil Service Amendment Act of that year which introduced the principle of selection by order of merit for positions in Ottawa. Prior to that, a Board of Examiners (established in 1882) held qualifying examinations for appointment to the service but it did not have the power to appoint. In 1918, the Civil Service Amendment Act was superseded by a Civil Service Act which had the effect, among other things, of bringing positions outside of Ottawa, as well as those at headquarters, under the jurisdiction of the Act and consequently the Commission. This Act served Canada and the civil service well for over four decades until with the passage of time it, too, was in need of substantial amendment. This was accomplished through a new Civil Service Act which received Royal Assent in September 1961 and which came into effect on Apr. 1, 1962.

The new Act applies to about 136,000 employees in all the departments and certain agencies of government and this constitutes the 'civil service' within the legal meaning of that term. The 'public service' is defined as those departments and agencies listed in Schedule A of the Public Service Superannuation Act which embrace about 190,000 employees including the 136,000 under the Civil Service Act. This definition of public service does not include certain Crown corporations-for example, the Canadian Broadcasting Corporation, the Central Mortgage and Housing Corporation, the Canadian National Railways and the Trans-Canada Air Lines.: Agencies outside the civil service make their own arrangements, in accordance with various statutes, for the selection and employment of staff.

Recruitment.-The recruitment of civil servants under the Civil Service Act is conducted by means of open competitive examinations through which every citizen has the opportunity to compete for positions in the service of his country. Examinations are held periodically as staff requirements of the civil service dictate. Ordinarily, any Canadian citizen may apply for headquarters positions at Ottawa but applicants for local positions must normally be residents of the locality in which the vacancy occurs. Competitive examinations are announced through the press and through posters displayed on the public notice boards of the larger post offices, offices of the National Employment Service, offices of the Civil Service Commission and elsewhere. The examinations may be written, oral, a demonstration of skill, or any combination of these.

The names of persons successful in civil service examinations, arranged in order of rank, are recorded on eligible lists. Examination results are formally announced by publication in the Canada Gazette and each candidate-successful or unsuccessful-is advised of his standing. Appointments are made as required from the eligible lists which usually remain valid for one year.

The rank of the various successful candidates on eligible lists is influenced by the veterans' preference. The preference is limited largely, in accordance with its definition by law, to members of the Armed Forces who have served overseas in World Wars I or II or in the Korean theatre of operations. The highest order of preference is the disability preference accorded to pensioners of the Armed Forces who, as a result of their war service, have been unable to resume their pre-war civilian occupations.

The operations of the Civil Service Commission are decentralized to a considerable degree and the Commission now has ten district offices and six sub-offices across the country. These offices have a significant measure of autonomy enabling them to give quick and efficient service to the field agencies of departments which comprise over three quarters of the civil service.

Each year the Civil Service Commission conducts about 10,000 competitions, receives about 180,000 applications and makes about 23,000 appointments, mainly to offset the
turnover occasioned by deaths, retirements, resignations and the other forms of attrition. One feature of its recruiting program is the annual selection of 600 or more university graduates. There are some 10,000 university graduates in the civil service and, of course, many more in agencies and corporations not under the Civil Service Act.

Promotion.-It is a prime feature of the Civil Service Act to create a career service. The result is that promotion, like entrance, is based on merit and a sound promotion system is in operation. Promotion competitions are of two kinds, inter-departmental and departmental. The former are open to employees of all departments and agencies and are conducted by the Civil Service Commission. The latter, the departmental competitions, are restricted to employees of one department or a portion of a department and are conducted by the departments themselves subject to audit and approval by the Commission. It is also provided in the Act that persons employed in the public service outside the civil service, and members of the Armed Forces and the Royal Canadian Mounted Police, may also be considered in promotion competitions where it is thought necessary to do so to attract persons with a high level of skill or ability to positions in the civil service. Each year approximately 6,000 promotion competitions are conducted and about $20,000 \mathrm{em}$ ployees are promoted, including 5,500 reclassifications. For those employees who feel that their qualifications have not been properly assessed, appeals are conducted under the jurisdiction of the Commission.

Position Classification.-Provision is made in the Civil Service Act for the classifying of positions in the civil service. A formal system of position classification was first instituted in 1919 and positions with like duties and responsibilities were classified alike and remunerated equally. Each position has a title, a set of tasks or duties which are proper to it in the organization in which it occurs and, arising out of these duties, a set of qualifications appropriate for their performance. Positions with duties of a similar kind are grouped together under a common title to form a class and grades within the class reflect the level of responsibility. There are some 1,800 classes and grades in the civil service and the Commission is constantly reviewing them to ensure that the specifications are accurate. Position classification is a mainspring in the Commission's primary function of recruitment, involving as it does the fixing of standards of qualification for each class of position.

Salary Determination.-It is also a responsibility of the Civil Service Commission to recommend to the Governor in Council rates of pay for each class and grade in the civil service. In order that its recommendations may be soundly based, the Commission has established a Pay Research Bureau which provides objective information on compensation and working conditions for various occupations in government, business and industry. These data are studied in relation to comparable classes in the civil service and in combination with other relevant factors-such as the need to recruit and retain sufficient staff, and in the light of the relationship of one class to another-and after this process is complete a recommendation is submitted to the Governor in Council for consideration. The Governor in Council also fixes the salaries for those employees who are not under the Civil Service Act.

Organization and Methods.-In recent years there has been an increasing awareness of the extent to which economical administration depends on the adoption of modern management techniques and devices. To meet this need the Commission has created a Management Analysis Division and an Organization Division to study problems of management in collaboration with officials directly responsible for major areas of administration. These Divisions afford practical assistance to departments and other agencies of the Government through the systematic examination of structures, operations, procedures and work methods. Their facilities are offered free of charge to all departments.

Staff Training.-In 1947 the Commission set up a Staff Development and Training Division to promote and guide a systematic service-wide training scheme. The training scheme sponsored by the Commission is a joint venture undertaken in co-operation with the various departments, most of which have parallel training divisions. The Commission's Staff Development and Training Division is primarily a co-ordinating agency. It promotes and organizes training activities, trains departmental instructors in the presentation of
courses, prepares and gives certain courses of general application to all departments, publishes booklets and other training aids, assists departments in developing training to meet specialized needs and acts as a general clearing-house for the exchange of information on training matters.

Employee Relations.-The Civil Service Act confers on appropriate staff associations the right to be consulted on matters of remuneration and conditions of employment. This consultation may be initiated by either the official or staff sides and may take three forms. On questions of remuneration, which include certain allowances as well as pay, the consultation takes place between the associations and the Minister of Finance or such members of the public service as he may designate and this may, of course, include members of the Commission. On terms and conditions of employment as enumerated in Sect. 68 (1) of the Civil Service Act (which are mainly those with a fiscal effect, such as leave), the consultation takes place between the associations and the Commission and such members of the public service as the Minister of Finance may designate. On those terms and conditions of employment that come within the exclusive jurisdiction of the Commission, the consultation takes place between the associations and the Commission alone. This form of tripartite consultation was introduced on Apr. 1, 1962 when the new Civil Service Act came into force and is designed to be consistent with the distribution of authority in the Act. It is expected to introduce a more sophisticated employee-employer relationship to the federal civil service.

Statistics of Federal Government Employment.*-The current monthly survey of Federal Government employment, started in 1952, covers all employees of the Government of Canada; employees in this sense exclude the Governor General and LieutenantGovernors, Ministers of the Crown and Members of Parliament, judges, persons under contract and members of the Armed Forces, but include Force members of the Royal Canadian Mounted Police. The survey is divided into two main categories: (1) departmental branches, services and corporations, and (2) agency and proprietary corporations and other agencies. Table 1 combines the two groups; Tables 2 to 6 cover employees in the first category and Table 7 covers employees in the second category.
1.-Total Federal Government Employees, by Province, as at Mar. 31, 1962, and Earnings for the Year Ended Mar. 31, 1962

Departmental Branches, Services and Corporations.-The salaries of employees in this group are paid from the Consolidated Revenue Fund. Definitions of classifications are as follows. "Salaried" employees include all persons paid on the basis of an annual salary rate with the exception of ships' officers who, though paid an annual salary rate, are subject

* Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.
to special treatment under the regulations made pertaining to the Financial Administration Act. The salaried staff are employed in departmental branches, services and corporations which are subject to regulation by the Treasury Board and for which the positions are outlined in the Estimates of Canada, or are established by means of supplementary Treasury Board Minutes. Thus this category of employees includes persons subject to the provisions of the Civil Service Act plus salaried persons employed on the staffs of Cabinet Ministers and appointed by statute or by Order in Council, and also the salaried staffs of certain administrative branches of the Government that do not fall under the jurisdiction of the Civil Service Act.
"Prevailing Rate" employees are those who occupy continuing positions that are subject to prevailing rate regulations and are therefore paid on the basis of standard wage rates for similar work in the area in which the individual is employed. Regulations made under authority of the Financial Administration Act govern the third group entitled "Ships' Officers and Crews".

These three groups comprise what may be called the "regular" employees of the government service. "Casuals and Others" are principally persons employed on a noncontinuing basis.

## 2.-Employees in Departmental Branches, Services and Corporations of the Federal Government, by Province and Sex, as at Mar. 31, 1962

Nore.-Excludes agency and proprietary corporations and other agencies, figures for which are given in Table 7.

Table 5 presents statistics for departmental branches, services and corporations on the basis of a classification by function. The purpose of such classification is to supply a means of studying the operation of government without the complication that results from differences in administrative establishment. This analysis is useful in three ways. First, it permits a detailed study of employment by the Government of Canada according to the main purposes or functions and, since these functions are not subject to the periodic changes that alter the administrative structure of the Government, it is possible to develop a statistical series which, with minor exceptions, is consistent over an extended period of time. Secondly, since differences in administrative establishment are eliminated, it is possible to make meaningful comparisons between Federal Government expenditures on employment and similar expenditures by other levels of government. Thirdly, an analysis of the relationship between expenditures on employment and total expenditures may be made with regard to each function.

Table 6 is an administrative analysis of departmental branches, services and corporations, showing data for these bodies as they were organized at Mar. 31, 1962. Because of periodic changes in the administrative structure of the Government, comparisons over a period of years should be based on the classification by function given in Table 5. Although most salaried staffs fluctuate little during the year, the Taxation Branch of the Department of National Revenue increases its staff considerably in March and April because of the heavy flow of income tax returns during that period, the Legislation branches employ extra staff during each session of Parliament, and several departments employ considerable numbers of students in the summer months. Prevailing rate and other types of employment generally reach a peak in numbers during summer and decline to a lower level in winter.
5.-Federal Government Employees as at Mar. 31, 1962, and Regular Earnings for the Year Ended Mar. 31, 1962, classified by Function

Note.-Excludes agency and proprietary corporations and other agencies, figures for which are given in summary form in Table 7.

## PART V.-CANADA'S EXTERNAL RELATIONS $\ddagger$

Canada's Status in the Commonwealth.-The Imperial Conference held in London in 1926 marked a turning point in the history of the then British Empire and was an important step in the evolution from an Empire to a Commonwealth. At the 1926 Conference the self-governing countries, consisting of Britain and the Dominions, were described as being "autonomous countries within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members

[^35]of the British Commonwealth of Nations". The Governors General of the Dominions were recognized as having in all essential respects the same constitutional position as the Crown in Britain. It was also stated by the Conference that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". Subsequent to this important meeting, Canada's stature and status in the international community continued to grow. It exercised the powers of treaty-making and established its own diplomatic missions overseas. The Statute of Westminster in 1931 provided more explicit recognition of the principles of equality of status by removing the remaining limitations on the legislative autonomy of Commonwealth countries. As a further development of Canada's independent position, all legal cases started in Canada after Dec. 23, 1949 can no longer be appealed to the Privy Council in London. The Supreme Court of Canada has become, therefore, the final court of appeal for all Canadian legal cases. Talks have been held between the federal Minister of Justice and the provincial Attorneys General with a view to planning a program to give Canada the sole right of amending its own Constitution-now an Act of the British Parliament, entitled "The British North America Act of 1867"-and the Government has announced that it intends to place before Parliament in due course a resolution to this end and to invite the concurrence of the provinces therein.

Canada's International Status.-The growth of Canada's international status is reflected in the development of the Department of External Affairs. A review of the organization and development of that Department is given in the 1952-53 Year Book, pp. 101-104; a brief outline is given at p. 107 of this volume.

The following Section 1 covers Canadian diplomatic representation abroad and representation of other countries in Canada. Section 2 deals with Canada's main international activities during 1962 with respect specifically to the Commonwealth, the United Nations, and the North Atlantic Treaty Organization. International economic aid programs are covered separately. Although these fields are considered to be the most significant for the purposes of this publication, it should be noted that Canada's activities in other areas are also of importance. The External Affairs Monthly Bulletin* covers all activities of the Department on a detailed, monthly basis.

* Obtainable from the Queen's Printer, Ottawa, \$1 per year.

## Section 1.-Diplomatic Representation as at Jan. 31, 1963

Nore.-Changes in this listing subsequent to Jan. 31, 1963 and names of current representatives are given in Canadian Representatives Abroad and Representatives of Other Countries in Canada, published thrice yearly and obtainable from the Queen's Printer, Ottawa, price 35 cents per copy.

## Section 2.-International Activities, 1962

## Subsection 1.-Canada and Commonwealth Relations

Membership in the Commonwealth is one of the cornerstones upon which Canadian foreign policy is built, for Canada supports the extension and development of a strong Commonwealth of Nations and believes that no other association throughout the world has a greater influence for good. Commonwealth membership allows Canada to enjoy an especially close, if perhaps undefinable, relationship with a group of important nations which, despite a diversity of ethnic, economic, racial, religious, cultural and political backgrounds, find usefulness in shared ideals and traditions. Exchanges taking place
between Commonwealth countries are characterized by a readiness to understand if not always to agree. Consultations and exchanges of views are the very lifeblood of the Commonwealth; these exchanges are continuous, not only in the capitals of Commonwealth countries but in other capitals, at the United Nations and at international gatherings.

In addition to these continuing consultations at many levels, two special Commonwealth meetings were held in 1962. In January, the Second Commonwealth Educational Conference was convened in New Delhi. Its purpose was to examine in retrospect the general operation of the Commonwealth Education Program inaugurated at the Oxford Conference in July 1959 and to study certain aspects relating to its extension or modification. The Prime Ministers of the Commonwealth met in London in September, the eleventh of a series of Prime Ministers' Meetings which have been held at intervals since the end of the Second World War. While the Prime Ministers held discussions on many important international questions, the central theme at their 1962 meeting was the European Common Market and the economic implications for the Commonwealth should Britain's application for membership in this association be accepted.

During 1962, membership of the Commonwealth increased from 13 to 16 members. Jamaica and the unitary state of Trinidad and Tobago became members when their independence was achieved in August, and the meeting of Commonwealth Prime Ministers agreed that Uganda should be admitted to membership after attaining independence in October. By the end of the year, Canada had High Commissioners accredited to all member countries of the Commonwealth, including the three newly admitted countries.

Canada's overseas aid for developing countries continued to be directed, in the main, to Commonwealth countries through the Colombo Plan, the Canada-West Indies Aid Program and the Special Commonwealth African Aid Program (SCAAP). Canada's total contribution under the Colombo Plan since the Plan's inception exceeds $\$ 380,000,000$; the aid to the West Indies is expected to reach some $\$ 10,000,000$ over the period 1958-63 and Canada has pledged aid to Commonwealth countries in Africa through SCAAP to a total of $\$ 10,500,000$ for the period 1960-63. In 1962, Canada also extended technical assistance to British Guiana and British Honduras amounting to $\$ 120,000$ and to the French-speaking African states in the amount of $\$ 300,000$.

Canada is also an active participant in the Commonwealth Scholarship and Fellowship Plan. At the end of 1962 there were approximately 220 Commonwealth students in Canada under this Plan and many Canadians were studying in other Commonwealth countries. Canada has also played a significant part in the training and provision of teachers for service in Commonwealth countries and has assisted in plans for co-operation in technical education. As of the end of November, 119 Canadian teachers were serving under Canadian Government educational aid programs in the less-developed countries of Southeast Asia, Africa and the Caribbean area.

Any chronicle of Commonwealth events for the year 1962 must include the visits paid to Canada in May and June by H. M. the Queen Mother, H. R. H. Prince Philip, and H. R. H. the Princess Royal. Other Commonwealth visitors during the year were President Mohammed Ayub Khan of Pakistan; the Prime Minister of Britain, the Rt. Hon. Harold Macmillan; the Lord Privy Seal, the Rt. Hon. Edward Heath; the Deputy Prime Minister of Australia, the Rt. Hon. John McEwen; the Premier of the Eastern Region of Nigeria, Dr. M. I. Okpara; the Minister of Justice and Attorney General of Nigeria, Dr. T. O. Elias; the Paramount Chief of Basutoland, H. H. Motoltlehi Moshoeshoe II; the Minister of Finance of India, Mr. Morarji Desai; the Minister of Works and Surveys of Nigeria, the Hon. I. Wada; the Minister of Communications and Works of St. Vincent, the Hon. C. L. Tannis; and the Minister of Health of Nigeria, Dr. M. A. Majekodunmi.

## Subsection 2.-Canada and the United Nations

During 1962, the United Nations contributed significantly to the maintenance of international peace and security. Through the Organization's auspices, an agreement was reached on the political future of West New Guinea which involved the establishment
of a small United Nations force, including a Canadian component, in the territory to facilitate the transition from Netherlands to Indonesian control. The ability of the United Nations to provide a seat for discussion of the Cuban crisis and the part that the Acting Secretary-General played in the negotiations enhanced the prestige of the Organization and encouraged the appointment of U Thant as Secretary-General for a five-year term.

The United Nations General Assembly met three times during the year: at resumed parts of the sixteenth session which were convened in January to discuss Angola, Cuba, the future of Ruanda-Urundi, British Guiana and Southern Rhodesia; in June to approve termination of Belgium trusteeship and Rwanda's and Burundi's accession to independence; and at the commencement of the seventeenth session on Sept. 18. At the seventeenth session, the Canadian Delegation, working with a large representative group of other delegations, helped to maintain the momentum which enabled the Assembly to complete its lengthy agenda consisting of political affairs, economic and social questions, issues of international law and administrative and budgetary matters by Dec. 20, without resort to a resumed session.

For several years, Canada has actively sought a solution to the grave problem of United Nations financing which has resulted from the refusal of certain member states to pay their assessed share of the costs of United Nations peace-keeping operations in the Congo (ONUC) and in the Middle East (UNEF). On July 20, 1962, the International Court of Justice confirmed the view of Canada and other states with its opinion that these peace-keeping costs should be treated as legal expenses of the Organization. At the seventeenth session, on the Canadian Delegation's initiative, the Assembly confirmed the Court's opinion and directed that a working group should meet early in 1963 to endeavour to find an acceptable method for financing United Nations peace-keeping activities.

Colonial issues predominated during the seventeenth session due to the influence of the African-Asian bloc of nations which was fortified by the addition of six new member states-Algeria, Burundi, Rwanda, Uganda, Jamaica and Trinidad and Tobago. During the debate on the report of the Special Committee of Seventeen on Colonialism, the Canadian Delegate, in a firmly worded speech, declared that the Assembly's Declaration on Colonialism should apply universally, including those areas where the Soviet Union dominates subject peoples.

With regard to issues on nuclear tests and disarmament, the Canadian Delegation contributed several constructive suggestions to a resolution which sought to end all nuclear tests by Jan. 1, 1963, and the Delegation participated in the adoption of a resolution on general and complete disarmament which fully reflected Canadian views. On the subject of atomic radiation, the Canadian Delegation continued to focus international attention on the hazards to health resulting from the increasing pollution of the air by radioactivity. A Canadian resolution, co-sponsored by 42 member states, which proposed that efforts to study and report on radioactivity should continue, was adopted by the Assembly. On the issue of outer space, Canada joined with the United States and other delegations in submitting a resolution which was adopted, in a modified form, by the Assembly. The main purpose of this resolution was to ensure that efforts toward promoting technical cooperation in the exploration of outer space would be continued.

At the seventeenth session, the Assembly adopted a number of resolutions on economic questions. The Canadian and Peruvian Delegations were instrumental in reconciling differences among member states regarding the timing of the United Nations Conference on Trade and Development. Canada also initiated a resolution calling on dilatory countries to contribute to the World Food Program which went into effect on Jan. 1, 1963, due to important Canadian initiatives effected at the fifteenth and sixteenth sessions.

Beginning in January 1963, Canada became a member of the United Nations Commission on Human Rights. The Canadian Delegation played an important part in the consideration of questions of human and social rights during the seventeenth session. The Delegation introduced a resolution which resulted in the renewal of the mandate of the

United Nations High Commissioner for Refugees for a period of five years. Canada also co-sponsored resolutions dealing with the United Nations Children's Fund, the Declaration of Human Rights and the Single Convention on Narcotic Drugs.

Through consultations behind the scenes during the seventeenth session, the Canadian Delegation affected important changes which enabled the Assembly to give unanimous approval to a resolution, drafted by India and co-sponsored by Canada and 18 other member states, regarding the proposal to designate a year of international co-operation.

With regard to the issues concerning international law, Canada took the lead in the debate on the important item dealing with the principles of international law concerning friendly relations and co-operation among states. The Canadian Delegation introduced a resolution calling for the affirmation of the rule of law and designating the United Nations Charter as the fundamental statement of principles underlying friendly relations. A compromise resolution, embodying many elements of the Canadian resolution, was adopted unanimously by the General Assembly.

Canadian Financial Contributions to the United Nations.-Canada's assessed share of the costs of United Nations peace-keeping operations in the Congo and the Middle East amounted to approximately $\$ 4,341,000$ in 1962 . Canada's share of the remaining expenses of the United Nations in 1962 was 3.2 p.c. of a net budget of $\$ 68,082,690$ or some $\$ 2,181,000$. During the year, Canada contributed to other programs of the United Nations, to the Specialized Agencies, to the International Atomic Energy Agency and to the United Nations Association in Canada as follows:-

| Special Programs- | \$ |
| :---: | :---: |
| Expanded Program of Technical Assistance. | 2,150,000 |
| Special Fund. | 2,350,000 |
| United Nations High Commissioner for Refugees. | 290,000 |
| United Nations Children's Fund. | 800,000 |
| United Nations Relief and Works Agency. | 1,000,000 |
| Specialized Agencies- |  |
| Food and Agriculture Organization. | 626,000 |
| International Civil Aviation Organization. | 180,000 |
| International Labour Organization. | 394,000 |
| Inter-Governmental Maritime Consultative Organization. | 9,000 |
| United Nations Educational, Scientific and Cultural Organi | 489,000 |
| World Health Organization. | 712,000 |
| Universal Postal Union..... | 18,000 |
| World Meteorological Organization. | 15,000 |
| International Telecommunication Union. | 126,000 |
| Others- |  |
| International Atomic Energy Agency. | 219,000 |
| United Nations Association in* ${ }^{\text {P Canada }}$ | 12,000 |
| Total. | 9,390,000 |

Specialized Agencies.-Canada is a member of each of the 12 Specialized Agencies of the United Nations. These Agencies are bodies with wide international responsibilities established by intergovernmental agreement, which act in relationship with the United Nations in order to carry out the terms of the Charter. Co-ordination of the activities of the Specialized Agencies is promoted by the Administrative Committee on Co-ordination established by the Economic and Social Council. Canada is also a member of the International Atomic Energy Agency which, while not a Specialized Agency, plans its activities with them and co-operates in its work with the Administrative Committee on Co-ordination.

Food and Agriculture Organization.-The Food and Agriculture Organization (FAO) came into being in 1945, the first Conference being held in that year in Quebec City. The objectives of the Organization are to raise the levels of nutrition and living standards of its members and to improve the techniques of the production and distribution of food
and agricultural, fishery and forestry products. To this end, the FAO Secretariat collects, analyses and distributes technical and economic information and encourages appropriate national and international action. A 25 -member Council meets twice a year to give direction and policy guidance to the Secretariat; the FAO Conference, which is the governing body of the Organization, meets every other year. Headquarters are in Rome, Italy.

Canada has participated actively in FAO activities and is a member of the Council, the Committee on Commodity Problems (CCP), the Consultative Sub-Committee on Surplus Disposal, the FAO Group on Grains, the North American Forestry Commission and other FAO bodies. A number of Canadians are on the staff at Rome headquarters, and many Canadians have undertaken assignments under FAO technical assistance programs. Canadian membership in the Organization is provided for by an Act of the Canadian Parliament passed in 1945. A committee of officials from Canadian Government departments (the Canadian Interdepartmental FAO Committee) has been established to maintain liaison between the FAO Secretariat and the Canadian Government.

United Nations Educational, Scientific and Cultural Organization.-The United Nations Educational, Scientific and Cultural Organization (UNESCO) was established in 1946 "to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law, for human rights and fundamental freedoms".

Total membership in the Organization at the end of 1962 was 113 states and three associate members. The Organization is made up of three principal organs-the General Conference, which is the policy-making body, the Executive Board and the Secretariat. Representatives from member states make up the General Conference which meets every two years to consider applications for membership, elect the Executive Board, plan the program and approve the budget for the ensuing two-year period. The latest General Conference was held at the Headquarters of the Organization in Paris in November and December 1962. It approved a budget of $\$ 39,000,000$, nearly one third of which is to be devoted to the educational needs of the developing countries. The Canadian assessment rate is 2.98 p.c. (See also Sect. 5 of Part II of the Education and Research Chapter of this volume.)

International Bank for Reconstruction and Development.-The IBRD or World Bank was founded at the same time as the International Monetary Fund at the Bretton Woods Conference in 1944 to assist the development of productive resources in member countries by extending loans where private capital is not available on reasonable terms and by providing technical assistance. The loans are made from the paid-up subscriptions of member states, from the surplus accumulated by the Bank and from loans raised in the markets of member states. The subscribed capital is $\$ 20,485,000,000$ (U.S.). Paid-up subscriptions amount to $\$ 2,049,000,000$, of which Canada's share is $\$ 75,000,000$. The Bank's first loans were for European postwar reconstruction, but in 1948 the Bank turned to lending for development, and an increasing proportion of its funds has been directed to the less-developed areas of the world. By June 1962 the Bank had made 321 loans totalling over $\$ 6,500,000,000$ to finance about 700 projects in 60 countries or territories. Some $\$ 4,800,000,000$ of this had been disbursed, of which amount $\$ 1,874,000,000$ had been repaid to the Bank or sold to other investors.

International Civil Aviation Organization.-The International Civil Aviation Organization (ICAO), with headquarters in Montreal, is the only Specialized Agency of the United Nations with headquarters in Canada. Canada is a member of the 27-nation Council which meets in almost continuous session in Montreal, and was represented at the fourteenth session of the Assembly held in Rome in August and September 1962.

International Development Association.-The IDA, a new affiliate of the IBRD, was established in September 1960 to meet the situation of a growing number of lessdeveloped countries whose need for and ability to make use of outside capital is greater
than their ability to service conventional loans. Consequently, the terms of IDA development credits are designed to impose far less burden on the balance of payments of borrowing countries than conventional loans. Credits extended to date have each been for a term of 50 years, bearing no interest. As of June 30, 1962, paid-up subscriptions amounted to $\$ 917,000,000$, of which Canada's share was $\$ 37,800,000$ (U.S.). IDA began operations in November 1960 and extended its first development credit in May 1961. By the end of June 1962, it had extended a total of 22 development credits amounting to $\$ 235,000,000$ to 11 countries in Africa, Asia, the Middle East and the Western Hemisphere.

The International Finance Corporation.-The function of the International Finance Corporation, which is an affiliate of the IBRD, is to promote the growth of productive private enterprise by assisting private capital, by acting as a clearing house in bringing together investment opportunities and private capital and by helping to enlist managerial skill and experience when not otherwise available to a project. Canada has subscribed $\$ 3,520,000$ to the capital of the Corporation.

International Labour Organization.-The International Labour Organization (ILO) was originally associated with the League of Nations and became a Specialized Agency of the United Nations in 1946. It brings together representatives of governments, employers and workers from member states in an attempt to promote social justice by improving working and living conditions in all parts of the world. To further this goal, meetings are held usually on an annual basis, the latest of which took place in Geneva in June of 1962. ILO is responsible for the execution of a number of training projects which are financed by the United Nations Special Fund.

Inter-Governmental Maritime Consultative Organization.-Canada, as a member of the Inter-Governmental Maritime Consultative Organization (IMCO) with headquarters in London, England, was represented at the sixth and seventh sessions of the Council held in London during 1962 and at an important Conference for the Prevention of the Pollution of the Sea by Oil held in London under IMCO auspices during March and April of that year.

International Monetary Fund.-The International Monetary Fund, set up by the Bretton Woods Conference in 1944, came into being in 1945. It provides machinery for international consultation and collaboration on monetary, payment and exchange problems. Included in these purposes are the promotion of exchange stability, the elimination of exchange restrictions, the establishment of a multilateral system of current payments and the expansion and balanced growth of international trade. Also, member countries under certain conditions may draw on the resources of the Fund, which now amounts to some $\$ 15,200,000,000$. Canada has been represented on the Fund's Board of Executive Directors since 1945.

International Telecommunication Union.-Canada is a member of the International Telecommunication Union (ITU), a Specialized Agency of the United Nations, which traces its origin to the International Telegraph Convention of 1865 and the International Radio Telegraph Convention of 1906. The Administrative Council of the ITU met in Geneva in the spring of 1962; Canada was represented at that meeting and at meetings of subsidiary bodies which took place during the year.

Universal Postal Union.-One of the oldest and largest of the Specialized Agencies, the Universal Postal Union (UPU), was founded in Berne in 1874 with the principal aim of improving postal services throughout the world and promoting international collaboration. The Universal Postal Congress is the supreme authority of the UPU and meets every five years to review the Universal Postal Convention and its subsidiary instruments. In the interim, activities of the Union are carried on by an Executive and Liaison Committee, a Consultative Committee on Postal Studies and an International Bureau. At the Congress held in Ottawa in 1958, Canada was elected to the Executive and Liaison Committee. The fifteenth Congress was held in New Delhi in 1962.

World Health Organization.-The World Health Organization (WHO) came into being in 1948 and is one of the largest of the Specialized Agencies of the United Nations, having a membership of 108. Functioning through the World Health Assembly (an organization composed of an Executive Board, a Secretariat and six Regional Committees), WHO acts as a directing and co-ordinating authority on international health matters. In addition, it provides advisory and technical services to help countries develop and improve their health services. The fourteenth World Health Assembly was held in Geneva in MayJune 1962. (See also the item "International Health" in Subsection 5, Section 1, Part I of the Public Health, Welfare and Social Security Chapter of this volume.)

World Meteorological Organization.-Canada is a member of the World Meteorological Organization (WMO), a Specialized Agency of the United Nations since 1951 but developed from the International Meteorological Organization, which was founded in 1878. The Director of Meteorological Services, Department of Transport, an elected member of the Executive Committee of WMO, attended the fourteenth session of the Executive Committee held in Geneva in June 1962. Canada acted as host for meetings of one of WMO's important subsidiary bodies, the Commission for Agricultural Meteorology, which held its third session in Toronto in July 1962.

The International Atomic Energy Agency.-Formed in 1957, the International Atomic Energy Agency (IAEA) is an autonomous international organization under the aegis of the United Nations. The Agency was given a mandate to seek to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world in a variety of ways.

Because Canada is considered to be one of the five members most advanced in nuclear technology, including the production of source materials, this country has served on the Board of Governors since the inception of the Agency. The latest meeting of the IAEA General Conference was held at headquarters in Vienna in September-October 1962.

The International Law Commission.-By Article 13 (1) of the Charter of the United Nations, one of the purposes of the UN General Assembly is to encourage the progressive development of international law and its codification. In order to implement and to assist in this function, the International Law Commission was created by a General Assembly resolution dated Nov. 21, 1947. It is composed of 25 members who are elected in individual capacities. They serve for terms of five years and, in general, represent the main forms of civilization and principal legal systems of the world. On Nov. 28, 1961, Mr. Marcel Cadieux, Deputy Under-Secretary of State for External Affairs and Legal Adviser to the Department of External Affairs of Canada, was elected to membership of this Commission. The 25 countries whose nations form, at present, the International Law Commission are: Afghanistan, Austria, Brazil, Cameroun, Canada, China, Dahomey, Ecuador, Finland, France, Britain, India, Iraq, Israel, Italy, Japan, Mexico, Nigeria, Poland, Spain, the Union of Soviet Socialist Republics, the United Arab Republic, the United States of America, Uruguay and Yugoslavia.

## Subsection 3.-Canada and the North Atlantic Treaty Organization*

There were two Ministerial Meetings during 1962 and meetings of the Permanent Representatives of the North Atlantic Council were held continuously throughout the year. Mr. George Ignatieff succeeded Mr. Jules Léger as Permanent Representative, Canada, in July.

The annual spring meeting of Foreign Ministers of the NATO Alliance was held at Athens, Greece, in May and was attended also by Defence Ministers who met separately on May 3. The Ministers discussed the most recent developments in the Berlin situation

[^37]and reaffirmed that general and complete disarmament under effective international control remained the best means of ensuring lasting peace and security. They noted with satisfaction the position taken by the Western powers at the Geneva Disarmament Conference in order to achieve this goal. The Council noted the progress toward closer co-operation in defence policy and welcomed confirmation by the United States that it will continue to make available the nuclear weapons necessary for NATO defence, concerting with its allies on basic plans and arrangements with regard to these weapons. In addition, both the British and United States Governments gave firm assurances that their strategic forces would continue to provide defence against threats to the Alliance beyond the capability of NATO committed forces to deal with. It was also decided to set up special procedures to enable all members of the Alliance to exchange information concerning the role of nuclear weapons in NATO defence. At their separate meeting, the Defence Ministers made a number of recommendations for improving co-operation in sharing within the Alliance the burden of research, development and production of military equipment. The Council reviewed the development of political consultation within the Alliance and noted the steady and encouraging progress made over the previous twelve months in deepening and developing the processes of consultation.

The annual Ministerial Meeting convened in Paris in December, attended by a Canadian Delegation led by the Secretary of State for External Affairs and the Minister of National Defence. In reviewing the international situation, the sound and vigorous state of the alliance was noted. The Ministers agreed that recent attempts by the Soviet Union to tilt the balance of forces against the West by secretly stationing nuclear missiles in Cuba had brought the world to the verge of war and that this peril was only avoided by the firmness and restraint of the United States supported by the alliance and other free nations. The Ministers concluded that constant vigilance of purpose and a spirit of interdependence as well as a readiness to examine any reasonable possibility of reducing international tension must continue to guide the policies of the alliance and that it was a prerequisite of any progress toward equitable settlement of international issues that NATO should maintain its defensive strength. At the same time, the Ministers reaffirmed that general and complete disarmament under effective international control continued to be a question of major concern and they expressed hope that the Soviet attitude which has so far frustrated concrete agreement on any of the key questions at issue would change.

The Ministers agreed that it was necessary to increase the effectiveness of conventional forces. They further agreed that adequate and balanced forces, both nuclear and conventional, were necessary to provide the alliance with the widest possible range of response to whatever threat might be directed against its security. They recognized that a sustained effort will be required to provide and improve these forces. The Ministers invited the Permanent Council to review procedures in order to secure a closer alignment between NATO military requirements and national force plans as well as an equitable sharing of the common defence burden. At the invitation of the Canadian Government it was agreed to hold the next Ministerial Meeting in Ottawa in May 1963.

Permanent representatives of the member countries met between Ministerial Meetings to consider the international, political, economic and military developments of concern to the alliance, review the defence plans of members, deal with expenditures on commonly financed military installations (infrastructure), and study the measures required to provide peacetime readiness and civil defence. Military exercises were held to prove the readiness of the army, naval and air forces assigned to NATO commands.

Canadian Contributions to NATO.-Support for NATO during 1962 continued to be one of the foundations of Canadian foreign policy. As its contribution to the military strength of the alliance, Canada maintains an army brigade and an air division in Europe and supporting forces in Canada. It has assigned a substantial naval force to the Supreme Allied Commander Atlantic (SACLANT) for the defence of the Canada-United States region in case of emergency and participates with the United States in the defence of the North American Continent through the North American Air Defence Command (NORAD).

Since 1950, Canada has contributed approximately $\$ 1,800,000,000$ in mutual aid to European members of NATO. The aid program, consisting of contributions to NATO infrastructure and military costs, transfers of equipment to member countries and aircrew training in Canada of NATO forces, continued throughout 1962. This program, while decreasing in magnitude with the changing conditions and the increasing ability of the European members to meet their individual defence requirements, continues to play a vital role in strengthening NATO forces.

## Subsection 4.-Canadian External Aid Programs

The Colombo Plan.-The Colombo Plan for Co-operative Economic Development in South and Southeast Asia was conceived at the Commonwealth Meeting of Foreign Ministers held at Colombo, Ceylon, Jan. 9-14, 1950. Although the Colombo Plan was initiated by Commonwealth governments, it is not exclusively a Commonwealth program. It is designed to assist in the economic development and raising of living standards of all countries and territories in the general area of South and Southeast Asia. Its membership now includes Australia, Bhutan, Burma, Cambodia, Canada, Ceylon, India, Indonesia, Japan, Laos, Malaya, Nepal, New Zealand, North Borneo, Pakistan, the Philippines, Sarawak, Singapore, South Korea, Thailand, Britain and Viet Nam, as well as the United States, which is also engaged in a substantial program of economic aid in the same region. South Korea and Bhutan were admitted to membership in 1962.

The Colombo Plan is supervised by a Consultative Committee composed of Ministers of the member countries, who meet once a year to review projects, exchange views on policy matters and prepare an annual report. It is, as its name implies, a consultative body; no collective policy decisions binding member countries are taken at its meetings. A Council for Technical Co-operation, on which Canada is represented, meets regularly in Ceylon to develop the technical co-operation program of the Colombo Plan. Colombo Plan Day was celebrated throughout member countries on July 1, 1961 to commemorate the tenth year of Colombo Plan operations.

From the inception of the Plan in 1950 through April 1962, Canada made available a total of $\$ 381,670,000$ for capital and technical assistance projects in South and Southeast Asia. Parliament appropriated $\$ 50,000,000$ for Canadian participation in the Colombo Plan in 1961-62.

While ten countries are now receiving capital assistance from Canada, the largest contributions have so far been made to India, Pakistan and Ceylon. The Canadian contribution has consisted primarily of direct assistance to various development projects, including equipment for multi-purpose irrigation and hydro-electric projects, powergenerating plants, construction and fisheries projects and resources surveys, as well as educational and laboratory equipment and books. It has also included gifts of raw materials, commodities and foodstuffs such as industrial metals, asbestos, fertilizer, wheat, flour and butter, from the local sale of which recipient governments have been able to raise funds to meet local costs of economic development projects.

Under the Technical Assistance Program, up to October 1962 more than 2,000 persons from all countries in the area had come to Canada for training in a variety of fields, the major ones being public administration and finance, agriculture, co-operatives, engineering, mining and geology, statistics, health education and social welfare. Nearly 250 Canadian experts had been sent abroad for service in Colombo Plan countries in such fields as fisheries, agriculture, engineering, mining and prospecting, co-operatives, public administration, education and vocational training, and public health. Other Canadians were employed on aerial resources survey teams and in the installation and operation of capital equipment.

The Consultative Committee of the Colombo Plan held annual meetings at Singapore in 1955, at Wellington in 1956, at Saigon in 1957, at Seattle in 1958, at Jogjakarta in 1959, at Tokyo in 1960, at Kuala Lumpur in 1961 and at Melbourne in 1962. At the

Jogjakarta meeting it was agreed that the Colombo Plan should be extended for another five years from June 1961. Reports of the Committee on progress and future plans are published after each annual meeting; each report also contains sections describing the activities of member countries.

Canada-West Indies Aid Program.-On the formation of the Federation of the West Indies in 1958, Canada undertook a $\$ 10,000,000$ program of economic and technical assistance over the period from 1958-63. The first major project in this program was the provision of two passenger-cargo ships for inter-island transportation at a cost of approximately $\$ 6,000,000$. The vessels were commissioned in the summer of 1961 and handed over to the West Indies Government. Tools and equipment valued at $\$ 28,000$ have been supplied to a technical school at St. Kitts, a dock costing approximately $\$ 1,000,000$ is under construction at St. Vincent, port equipment valued at $\$ 435,000$ is being supplied to various islands, a residence for students is being constructed at the University College of the West Indies in Trinidad, and schools, warehouses and water systems are under construction on several of the smaller islands.

Up to Oct. 31, 1962, training programs had been arranged for 43 individuals from the West Indies in different fields, including public administration, information services, fisheries, etc. The 33 Canadian experts who undertook assignments during this period went to Trinidad, Jamaica, St. Lucia, St. Vincent and St. Kitts. They included teachers, soil surveyors and advisers in statistics, legal drafting, housing, films, radio broadcasting, postal services and harbour management.

Commonwealth Technical Assistance Program.-At the Commonwealth Trade and Economic Conference held in Montreal in September 1958, Canada announced a decision to provide funds for technical assistance to Commonwealth countries outside the Colombo Plan area, with particular emphasis on the African territories. By the end of March 1962, Canada had made available $\$ 1,250,000$ to this program. Ghana and Nigeria received the greatest amount of aid, although some assistance was extended also to British Guiana, British Honduras, Uganda, Hong Kong and Sierra Leone. The Commonwealth countries in Africa are now eligible for Canadian assistance under a new Special Commonwealth African Aid Program described below.

By Oct. 31, 1962, 59 training programs had been arranged since the inception of the plan, the chief fields being agriculture, co-operatives, mining, geology, engineering, public and business administration, health and social welfare. Twenty-five Canadians had undertaken advisory assignments in Ghana, Nigeria, Uganda, British Guiana and British Honduras in education, public information, public administration, law and agriculture.

Special Commonwealth African Aid Program.-At a meeting of the Commonwealth Economic Consultative Committee in London in September 1960, it was agreed that a program of economic and technical assistance for Commonwealth countries and territories in Africa should be launched. Canada undertook to provide a contribution of $\$ 10,500,000$ to this program over a period of three years beginning with the year ended Mar. 31, 1962.

By Oct. 31, 1962, training programs had been arranged in Canada for 103 Africans under this plan and 106 Canadian teachers and other advisers had been sent to Commonwealth countries in Africa, including Gambia, Ghana, Kenya, Mauritius, Nigeria, Sierra Leone, Tanganyika and Uganda. In addition, an aerial survey and mapping project had been undertaken in Nigeria at a cost of $\$ 1,350,000$.

Educational Assistance to French-Speaking States in Africa.-In April 1961, the Canadian Government announced that it proposed to offer assistance in the educational field to French-speaking states in Africa, and Parliament subsequently appropriated $\$ 300,000$ for this purpose for the year ended Mar. 31, 1962. By the end of 1962, some

13 French-speaking Canadian teachers had been sent to Africa under this program, a supply of paper had been provided for a textbook production centre in Cameroun and other projects were under way.

Co-operation with the United Nations and its Specialized Agencies, and with Other International Aid Programs.-In addition to the annual contributions made to the United Nations Expanded Program of Technical Assistance, Canada also assists by arranging training programs in Canada for individuals studying under the auspices of the different Specialized Agencies. This service is also extended to the technical assistance program of the International Co-operation Administration of the United States as well as to other international aid organizations. Up to Oct. 31, 1962, approximately 2,000 individuals had come to Canada through the various agencies from more than 100 different countries in all parts of the world. Assistance is also given by recruiting Canadians for service with the Specialized Agencies on specific technical assistance assignments in underdeveloped countries.

Organization.-As of Nov. 9, 1960, the operation and administration of Canada's external assistance programs became the responsibility of the External Aid Office, established by Order in Council of that date, and placed in charge of an officer known as the Director General of External Aid Programs. The Director General is directly responsible to the Secretary of State for External Affairs for all matters connected with Canadian external assistance programs, including the Colombo Plan, the Canada-West Indies Aid Program, the Special Commonwealth African Aid Program, the Commonwealth Technical Assistance Program, the Commonwealth Scholarship and Fellowship Plan and the Program for French-Speaking African States as well as for operational liaison with aid programs administered by the United Nations and other international agencies.

## Section 1.-Census of Population

This Section presents only a limited summary of the voluminous data on population recorded by the 1961 Census of Canada, with certain comparable data from earlier censuses. More detailed information is published in a series of reports which are obtainable from the Queen's Printer or the Dominion Bureau of Statistics. A list of these publications is available on request from the Information and Public Relations Division of the Dominion Bureau of Statistics.

Additional 1961 Census data on population may be found in the respective subjectmatter chapters of this volume: on immigration and citizenship in Chapter IV; on schooling in Chapter VII; and on the labour force in Chapter XVI. Summary information on housing is given in Chapter XV. (See Index.)

## Subsection 1.-Growth and Movement of Population*

Population Growth.-Canada's population stood at 18,238,000 in 1961 as against $10,377,000$ in 1931 and $5,371,000$ in 1901. In the first decade of the century, the gain of 34 p.c. was greater than in any censal period up to 1961. Growth was associated with the opening up of the West for settlement and massive immigration from overseas. During the 1901-11 period, about 1,760,000 immigrants entered the country and natural increase amounted to an estimated $1,000,000$. As the total increase in population was $1,835,328$, it is evident that there was substantial emigration during the period. In the 1911-21 period, population growth dropped to 22 p.c. Military losses in the First World War and losses during the influenza epidemic, which together amounted to about 120,000 ,

[^38]were a factor in this decline. Although the flow of immigrants was reduced during the war years, it had been very heavy immediately preceding the War, so that the total number for the period $(1,612,000)$ was very close to that for the previous censal period. However, emigration was also extremely high and the increase in population amounted to $1,581,306$, representing 2 p.c. per annum compared with 3 p.c. in the 1901-11 period.

In the decade 1921-31, the rate of increase dropped to 18 p.c. Immigration fell to $1,200,000$ and emigration was estimated at $1,000,000$. Thus the increase in population, which amounted to $1,588,837$, was only 229,000 greater than the natural increase. A feature of this period was the rapid growth of population in Western Canada, partly the result of immigration and partly the result of an influx of people from Eastern Canada. During 1931-41, the population increase was just under 11 p.c. During the depressed conditions of the 1930's, marriage and birth rates were significantly lower and only 150,000 immigrants came to Canada, although, in addition, 75,000 Canadians returned from the United States. Emigration was also much lower than in the previous decades, amounting to an estimated 250,000 . Natural increase was only $1,220,000$, the crude birth rate falling from 27 per thousand of the population in the 1921-25 period to 24 per thousand in the succeeding five-year period and to 20 per thousand during much of the 1931-41 decade. During 1941-51, population growth was restored to pre-depression levels. Excluding Newfoundland which became part of Canada in 1949, it amounted to 19 p.c.; including Newfoundland it was 22 p.c. Much of the increase took place in the second half of the decade, reflecting heavy postwar immigration and a sharp rise in the marriage and birth rates.

In the 1951-61 period, the population growth rate at 30 p.c. came close to approaching the extremely high rate of the first decade of the century. However, the two periods contrast in many ways. In the early period there was a wider dispersal of population increases as whole regions across the Continent were opened up; in the recent period there was a concentration of growth in urban communities although some spreading of population into newly developed northern areas took place. Natural increase accounted for about 75 p.c. of the growth. While there was some decline in the death rate, the trend of natural increase reflected very closely that of the crude birth rate which began to rise during the War and remained high throughout the period. Net immigration accounted for the remainder of the increase; during the decade, $1,542,853$ immigrants entered the country, more than double the estimated emigration. While all provinces gained in population during 1951-61, the rates of increase varied widely. The greatest increases resulted from a combination of natural increase and net migration which in the two large provinces of Central Canada and the two most westerly provinces accounted for over 87 p.c. of the total actual increase. In contrast, increases in the other six provinces were entirely accounted for by natural increase.

## 1.-Numerical Distribution of Population by Province, and Percentage Change from Preceding Census, Decennial Census Years 1901-61

Noтe.-Populations for the decennial census years 1871, 1881 and 1891 are given in the 1956 Year Book, p. 149. The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 will be found in the 1951 edition, p. 131, and census populations for 1956 in the 1961 edition, p. 146.

Table 3 shows the natural increase and the total population increase for Canada and the provinces in the periods 1941-51, 1951-56 and 1956-61. The balance between the total increase in population and the natural increase during a period represents the difference between inward and outward movements, i.e., net migration. The net migration data shown for provinces indicate the net movement of population arising partly from interchange of population between provinces and partly from persons entering and leaving the country.

## 3.-Numerical Changes in the Population of the Provinces through Natural Increase and Migration 1941-51, 1951-56 and 1956-61

| Province | Natural Increase |  |  | Population Increase according to Census |  |  | Net Migration |  |  |

${ }^{1}$ Includes the Yukon and Northwest Territories.
The earlier movement of population in Canada from east to west has not been apparent since the 1920's. Although British Columbia has continued to show population gains from migration since 1931, much of this gain has been at the expense of the Prairie Provinces. While the three Prairie Provinces lost by migration about 267,000 persons between 1941 and 1951, they gained 25,000 in the period 1951-56 and 18,000 in the period 1956-61. Manitoba lost almost 61,000 people between 1941 and 1951 but only 5,000 persons since then. Saskatchewan has been a consistent loser since 1941, losing on the average almost 20,000 a year during the 1940's and around 8,000 a year during the 1950's. Alberta lost only about 7,000 in the decade 1941-51 and gained close to 65,000 in each of the five-year periods 1951-56 and 1956-61. British Columbia gained through migration at the rate of about 23,000 a year during the 1940's, about 27,000 a year in the first half of the 1950's and 21,000 annually in the $1956-61$ period. On an absolute basis, Ontario received more
people through migration than did British Columbia but, in relation to its larger population, the gain was only about one third as important. Most of Ontario's growth through migration was from immigration rather than interprovincial movement of population. Quebec had a slight loss between 1941 and 1951 and a considerable gain in the next ten years, due also to immigration. The Maritimes as a whole lost 175,000 persons over the quarter-century.

## Subsection 2.-Density of Population

Table 4 shows the density of population in the different provinces and territories of Canada in the census years 1951, 1956 and 1961. Omitting the Yukon and Northwest Territories where population density is exceedingly low, there were 8.66 persons per square mile in Canada as a whole in 1961 compared with 6.65 per square mile in 1951. The greatest increase in the ten years was shown by Ontario where there were 4.76 more persons per square mile, followed by Nova Scotia with an increase of 4.62 . However, it should be remembered that all provinces with the exception of the Maritimes have large areas almost devoid of population and that concentrations in other areas are very high. The density of each county and census division is given in DBS Census Report 1.1-11 (Catalogue No. $92-540$ ) and the density in each of the five largest metropolitan areas is shown on the insert facing p. 162.
4.-Land Area and Density of Population, by Province, Census Years 1951, 1956 and 1961

| Province or Territory | Land Area | Population 1951 |  | Population 1956 |  | Population 1961 |  |

## Subsection 3.-Rural and Urban Population

For the 1961 Census, all cities, towns and villages of 1,000 or more population, whether incorporated or not, were classed as urban; also classed as urban were the urbanized fringes of census metropolitan and other large urban areas, and the urbanized fringes of certain smaller cities where the city and fringe totalled 10,000 or more persons. The remainder of the population was classed as rural.

Table 5 classifies the 1961 rural population according to farm and non-farm residence and the urban population by size groups; in the latter classification, each municipality (or part) in an urbanized area is allocated to the same size group as the total urbanized area of which it forms a part. The figures show that, in 1961, almost 70 p.c. of Canada's population were urban dwellers and 53 p.c. lived in or on the fringes of urban centres having a population of 30,000 or more. Only about 12 p.c. lived on farms.

## 5.-Rural Population classified by Farm and Non-farm, and Urban Population classified by Size Group, by Province, Census 1961

| Province or Territory | Rural |  |  | Urban |  |  |  |  |

${ }^{1}$ Excludes 55,615 persons living on farms in localities classed as urban.

## Subsection 4.-Populations of Incorporated Urban Centres and Metropolitan Areas

The population of all incorporated urban centres is classified by size group in Table 6 for the census years 1951, 1956 and 1961. During the ten-year period, the number of such urban centres increased by 178 and the proportion of the total population living in them rose from 56.7 p.c. to 60.7 p.c. Although there was a slight decrease in the number of centres having fewer than 1,000 persons, the number with over 50,000 increased from 19 to 29 and the proportion of the total population in these larger centres went up from 27.5 p.c. to 29.0 p.c.; the proportion in centres of from 1,000 to 50,000 increased from 26.1 p.c. to 29.3 p.c. in the same comparison.

## 6.-Population of Incorporated Urban Centres, classified by Size Group, Census Years 1951, 1956 and 1961

| Size Group | 1951 |  |  | 1956 |  |  | 1961 |  |  |

Census metropolitan areas have been established for groups of urban communities that are in close economic, geographic and social relationship. Table 8 shows the 1961 population of each area with the corresponding 1951 and 1956 figures for the same area as in 1961. As indicated by the last column, most of these metropolitan areas have shown remarkable increases in population during the decade. In 1961 they accounted for 44.8 p.c. of the total population as compared with 40.2 p.c. in 1951.

 LAREGEST METREOPGILTAN AREAS $1951-1961$

MONTREAL

The 922 incorporated urban centres in Canada having a population of 1,000 or more at the time of the 1961 Census are listed alphabetically by province in Table 9 and their populations given for the two census years 1956 and 1961. Each population figure is for the boundary in effect at the time of the respective census.

## 9.-Incorporated Cities, Towns and Villages having Populations of $\mathbf{1 , 0 0 0}$ or Over in 1961, by Province, Census Years 1956 and 1961

Nork.-Population totals are based on areas as incorporated at each of these dates; a change in municipal boundary since the preceding census is indicated by an asterisk (*). Urban centres are designated in this table by the following abbreviations: $c .=$ city, $\mathrm{t} .=$ town, and $\mathrm{v} .=$ village.

a city on Jan. 1, 1963.

[^41] Saskatchewan.

## Subsection 5.-Sex and Age Distribution

The sex and age distributions of a population are basic to most, if not all, other analyses, as they influence employment, marriage, birth and death rates and a multitude of other factors that are of great importance in the national life.

Sex.-The Canadian population has always been characterized by an excess of males, although this excess has been greatly modified in recent years. Since Confederation, the peak sex ratio for Canada as a whole was 113 reached in 1911, a census year that fell within a period of heavy immigration; the 1961 ratio was 102 . In the older settled provinces east
of Manitoba, the ratio varied between 104 in 1911 and 101 in 1961 but in the western provinces which were being opened to settlement in the early years of the century the ratio changed from a high of 146 in 1911 to 105 in 1961.

The sex distributions and variations in ratio among the provinces are given for the census years 1951, 1956 and 1961 in Table 10.

Age.-Recent trends in vital rates and immigration have had a considerable effect on the age composition of the Canadian people. A high birth rate together with a low death rate among children added nearly $2,000,000$ to the number of persons under 15 years of age between 1951 and 1961, an increase of 46 p.c. The proportion of this group to the total population increased from 30.3 p.c. to 34.0 p.c. in the ten-year period. The population of working age-those of 15 to 64 years of age-increased more slowly at 22.9 p.c. in the decade and the relative proportion of this group declined from 61.9 p.c. to 58.4 p.c. Without the influence of immigration in the 1951-61 period, the proportion of this group would have been much lower since a large part of it consisted of persons born in the low birth rate period of the 1930's. The proportion of persons 65 years of age or over in 1961 was 7.6 p.c. compared with 7.8 p.c. in 1951.

Table 11 shows the population of Canada classified by five-year age groups and by sex for the census years 1951, 1956 and 1961. The provincial distribution by specified age group is given for 1961 in Table 12.

## Subsection 6.-Marital Status

After age and sex, marital status analysis is probably next in importance from a vital, economic and social viewpoint. The number of married females between 15 and 45 years of age is a most significant factor in the fertility of a population. If the proportion of females in this group is low, the expected birth rate will be low. In 1961, 62.9 p.c. of all married females were in the $15-44$ age group compared with 64.3 p.c. in 1956, 61.2 p.c. in 1941 and 63.5 p.c. in 1931.

The high birth rate in the 1951-61 period, besides having a notable effect on the general population growth and age composition, has been an influence on the 32.7 -p.c. increase in the single population. During the same period, the married population increased by 28.2 p.c. and widowed by 21.0 p.c. Other striking features are the excess of married males (largely consisting of male immigrants whose wives had not yet joined them) and the great preponderance of widows over widowers.

The marital status of the population in 1961 is shown in Table 13.
13.-Marital Status of the Population, by Age Group and Sex, Census 1961

## Subsection 7.-Ethnic Groups and Birthplaces

Ethnic Group.-A population made up of diverse ethnic groups gives rise to political, social and economic problems quite different in nature from those of one with a more homogeneous ethnic composition. These problems are mitigated, however, to the extent
that certain groups are more easily integrated than others. It is equally true that the different backgrounds of various ethnic groups lend variety and diversity to the national life.

The two basic groups in the Canadian population are the French and British Isles ethnic groups. The influence of the French in Canada covers a longer period and with the exception of the 1921 Census this group has always exceeded in number any of the components of the British Isles ethnic group.

In 1961, each person was asked the question: "To what ethnic or cultural group did you or your ancestor (on the male side) belong on coming to this Continent?'. The language spoken at the time by the person, or his paternal ancestor, was used as an aid in determining the person's ethnic group. The classification is given for 1961 in Table 14 with comparative figures for 1951 and 1941. Information on ethnic group was not collected in the 1956 Census.
14.-Distribution of the Population by Ethnic Group, Census Years 1941, 1951 and 1961

${ }^{1}$ Excludes Newfoundland. ${ }^{2}$ Includes 35,416 half-breeds.
Birthplace.-Table 15 gives the total population of Canada classified by country of birth for the census years 1941, 1951 and 1961, and Table 16 shows the province of birth of Canadian-born persons for the same years. For immigrants, the country of birth was recorded according to boundaries existing at the date of the census. Information on birthplaces was not collected in the 1956 Census.

${ }^{1}$ Includes persons born in Canada whose province of birth was not stated.

## Subsection 8.-Religious Denominations

In the 1961 Census, enumerators were instructed to record the specific religious body, denomination, sect or community reported in answer to the question: "What is your religion?". Thus it should be noted that census figures do not measure church membership or indicate the degree of affiliation with any religious body. As shown by Table 17, close to eight out of ten persons in Canada stated that they belonged to one of the three numerically largest denominations-Roman Catholic, United Church and Anglican-in 1961. The table gives comparative figures for the census years 1941 and 1951; this information was not collected in the 1956 Census.
17.-Principal Religious Denominations of the Population, Census Years 1941, 1951 and 1961

${ }^{1}$ Includes "Hutterites".
${ }^{2}$ Includes "Other Greek Catholic".
${ }^{3}$ Exclusive of Newfoundland.

## Subsection 9.-Languages and Mother Tongues

The term "official language" used by the census refers only to the English and French languages. "Mother tongue" is the language a person first learned in childhood and still understands. It should be noted that persons indicated as speaking "English only" or "French only" with respect to official language may also speak other languages and have a mother tongue other than English or French. Of the two "official languages" in Canada, the proportion speaking English only in 1961 was 67.4 p.c., French only 19.1 p.c., both English and French 12.2 p.c. and neither English nor French 1.3 p.c. Table 18 shows the distribution of official language by province.

## 18.-Population Speaking One, Both or Neither of the Official Languages, by Province, Census 1961

| Province or Territory | English Only | French Only | English and <br> French | Neither <br> English <br> French |
| :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | No. | No. |
| Newfoundland. | 450,945 | 522 | 5,299 | 1,087 |
| Prince Edward Island. | 95,296 | 1,219 | 7,938 | 176 |
| Nova Scotia. | 684,805 | 5,938 | 44,987 | 1,277 |
| New Brunswick | 370,922 | 112,054 | 113,495 | 1,465 |
| Quebec...... | 608,635 | 3,254,850 | 1,338,878 | 56,848 |
| Ontario. | 5,548,766 | 95,236 | 493,270 | 98,820 |

| Canada | 12,284,762 | 3,489,866 | 2,231,172 | 232,447 |

The proportion of the population reporting English as their mother tongue in 1961 was 58.5 p.c. (compared with 59.1 p.c. in 1951), French 28.1 p.c. ( 29.0 p.c. in 1951) and all other mother tongues 13.5 p.c. (11.8 p.c. in 1951). Table 19 shows the numerical and percentage distribution by mother tongue for Canada in 1961.
19.-Mother Tongues of the Population, Census 1961

## Subsection 10.-Households and Families

This Subsection contains a summary of the principal statistics on households and families recorded at the 1961 Census; more detailed information may be found in 1961 Census reports relating to households and families (see also p. 156).

A household, as defined in the census, consists of a person or a group of persons occupying one dwelling.* It usually consists of a family with or without lodgers, employees, etc. However, it may consist of a group of unrelated persons, of two or more families sharing a dwelling, or of one person living alone. Every person is a member of some household and the number of households equals the number of occupied dwellings.

The total number and the average size of households are given by province for the census years 1951, 1956 and 1961 in Table 20. The relatively stable average of persons per household indicates an almost equal rate of increase for the dwelling stock as for the population.

[^42]
## 20.-Households and Persons per Household, by Province, Census Years 1951, 1956 and 1961

| Province or Territory | Households |  |  | Average Persons per Household |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Average Persons per Household.. | 4.0 | 3.9 | 3.9 | ... | .. | ... |

${ }^{1}$ Exclusive of the Yukon and Northwest Territories.
Table 22 gives two classifications of households. The first is by the number of families* they include. While the proportion of one-family households has remained relatively stable since 1951, that of doubled-up families shows a fairly sharp drop from 6.7 p.c. in 1951 to 3.7 p.c. in 1961, a possible indication of an easing in the housing situation. The proportion of non-family households has increased slightly over the ten-year period-from 11.3 p.c. to 13.3 p.c.

The second classification is by number of lodgers. The percentage of households with lodgers has continued to decrease but at a much slower pace between 1956 and 1961 than during the previous five-year period.

[^44]22.-Households classified by Number of Families and by Number of
Lodgers, Census Years 1951,1956 and 1961

The average size of the Canadian family made a further gain between 1956 and 1961, continuing the trend of the 1951-56 period. Every province except Quebec and Saskatchewan participated in this increase, as shown in Table 23.

Closely related to the number of families per household and also an indicator of living conditions, is the type of family. In 1961, 94.3 out of every 100 families in Canada were maintaining their own households as compared with 92.3 in 1956 and 90.2 in 1951, an apparent steady improvement in living conditions. The families not maintaining their own households fell into two main sub-categories-families related to the head of the household and non-related lodging families. The few who did not fit either of these sub-categories were mostly families of employees living in their employer's household. Table 24 shows the 1961 distribution of families according to type.

There were $7,777,137$ children in families in 1961. These are limited by definition to children never married and under 25 years of age who were living with their parents or guardians at the time of the census. In Table 25, the number of children is classified to show the number in each of four separate age groups corresponding roughly to pre-schoolage children, those of elementary school age, those at the secondary school level, and those of college or working age.

In Table 26, families are classified by age of family head and in Table 27 they are divided into two groups-those consisting of a husband and wife with or without children, which included 92 p.c. of all families in 1961, and those consisting of one parent only with one or more children. The latter group is classified further according to the marital status and sex of the family head; widowed heads comprised three fifths of the group.

${ }^{1}$ Includes a few families with heads never married.

## Section 2.-Intercensal Surveys

Intercensal estimates of the populations of Canada and of the provinces have many uses. They are necessary to the calculation of costs of certain economic and social legislation. Business, educational and welfare organizations utilize population estimates in planning future development. They constitute a base for vital statistics rates, per capita figures of production and trade, and other analyses. They also have been found useful for estimating labour force and other population characteristics of data collected in sample surveys.

Estimates are constructed for the total population of Canada and for each province and become available about the date to which they apply-June 1 of each year. Population estimates by province are also available on a quarter-year basis. The estimates of population begin with the preceding census counts, to which are added the births of the intervening census year or years and from which the deaths are subtracted; immigrants are added and emigrants subtracted. No complete information is available on emigration. The DBS receives yearly from the United States the number of persons who gave Canada as country of last permanent residence before entering the United States as immigrants (see Chapter on Immigration and Citizenship, Part I, Section 3) and from the RegistrarGeneral of Britain the number of emigrants from Canada arriving by sea to take up permanent residence in that country. Such data, however, are not available from other countries but, as indicated by partial data from United Nations sources, the proportion of total emigrants to all other countries is small. Family allowance statistics showing the number of migrant families by provinces are used in estimating interprovincial shifts in population (see Table 3, p. 159).

The following statement shows the data used in preparing the revised population estimates for the years 1957 to 1960 and the annual estimate for 1962. The next succeeding census serves as a basis for revision of the annual estimates of each intercensal period.

[^45]
## 28.-Annual Estimates of Population, by Province, as at June 1, 1951-63

Note. - At every census the previous post-censal estimates, made at June 1 each year, are adjusted to the newly recorded population figures. Figures for 1951, 1956 and 1961 are census figures. Figures for 1867-1904 will be found in the 1936 Year Book, p. 141; for 1905-30 in the 1946 edition, p. 127; for 1931-40 in the 1952-53 edition, p. 143; and for 1941-50 in the 1961 edition, p. 165. Figures for 1867-1951 will also be found in Census of Canada 1951, Vol. X, Appendix A-4.

| 1963.... | 481 | 107 | 756 | 614 | 5,468 | 6,448 | 950 | 933 | 1,405 | 1,695 | 15 | 24 | 18,896 |

Because of the growing interest in the expanding population of the larger metropolitan areas of Canada, estimates for these areas have been prepared as of June 1, 1962. These are shown in Table 29 with the census counts for June 1, 1961; the estimates relate to the boundaries established for the 1961 Census. As in the preparation of intercensal population estimates for provinces, the births occurring in the metropolitan areas between June 1, 1961 and June 1, 1962 were added to the population at the census date, and deaths subtracted. Immigrants over this period reporting these metropolitan areas as places of destination were added and allowances were made for losses in population by emigration. Also, the net in-movement or out-movement caused by internal migration was calculated from family allowance and other data.

The falling off in the rate of population growth for the whole of Canada between June 1, 1961 and June 1, 1962, caused by declining immigration and a slight fall in the birth rate, is also reflected in the growth rate for the metropolitan areas.

## 29.-Estimated Population of Major Metropolitan Areas ${ }^{\mathbf{1}}$ as at June 1, 1962, compared with 1961 Census

| Metropolitan Area ${ }^{2}$ | Census <br> June 1, 1961 | Estimate <br> June 1, 1962 | Metropolitan Area ${ }^{2}$ | $\begin{gathered} \text { Census } \\ \text { June } 1,1961 \end{gathered}$ | Estimate June 1, 1962 |

[^46]Table 30 gives estimates of the population of Canada and the provinces by age group and sex as of June 1, 1962. The method followed in preparing these estimates was much the same as that used in calculating the population estimates, described on p. 181. These estimates are subject to revision as soon as data from the next census are available.

## 30.-Estimated Population classified by Age Group and Sex, by Province, as at June 1, 1962

## Section 3.-The Native Peoples of Canada

## The Indians*

Approximately one of every hundred Canadians is registered as an Indian by the Department of Citizenship and Immigration. This number includes all persons with a paternal ancestor of Indian race who have chosen to remain under Indian legislation. In the aggregate, the Indians are grouped into 556 bands and occupy or have access to 2,239 reserves having a total area of 5,918,279 acres.

About 26 p.c. of the Indians reside away from reserves, including those in the Yukon and Northwest Territories for whom reserves have not been set aside. Many Indians, both on and off reserves, have specialized in various professions, trades and agricultural pursuits. Others have fitted into the economy of the areas in which they live in a wide range of occupations. More than 260 Indians are employed by the Indian Affairs Branch of the Department of Citizenship and Immigration, 111 of them as teachers. In the northern and other outlying areas, hunting, fishing and trapping remain an important means of livelihood for Indians.

Subject to special provisions in the Indian Act, all laws of general application are applicable to Indians. Indians are liable for taxation of property held off a reserve as well as of any income they earn off a reserve. They may vote in federal elections on the same basis as other citizens and in provincial elections where the electoral laws of the provinces permit. Indians are free to enter into contractual obligations and may sue and be sued. However, their real and personal property situated on a reserve is exempt from seizure except on suit by another Indian.

[^47]31.-Indian Land in Reserves and Number of Bands, by Province, as at Mar. 31, 1962

## ${ }^{1}$ As at Dec. 31.

The 1959 Indian population in each province is classified by age group and sex in Table 33. The rapid growth of that population in recent years is indicated by the fact that in 1959 more than 56 p.c. of the Indians were under 21 years of age compared with 42 p.c. of the population of Canada as a whole. Religious denominations of the Indian population are given in Table 34.

Administration.-Pursuant to the British North America Act, the administration of Indian Affairs, which had been under the management of several provinces, came under the jurisdiction of the Government of Canada. Since January 1950, Indian affairs have been the responsibility of a Branch of the Department of Citizenship and Immigration.

The Indian Affairs Branch is composed of a headquarters staff at Ottawa, nine regional offices, and 89 field agencies. Specialists in such matters as education, economic development, resource management, social welfare, and engineering and construction are attached to headquarters and regional staffs. Liaison is maintained with the Indian and Northern Health Services of the Department of National Health and Welfare, the federal agency concerned with the medical care of Indians.

It is the primary function of the Indian Affairs Branch to administer the affairs of Indians in a manner that will enable them to participate fully in the social and economic life of the country. To this end, the Branch has brought into effect a wide range of programs in the fields of education, economic development, social welfare and community development. Underlying administrative duties of the Branch include the management of Indian reserves and surrendered lands, the administration of band funds, estates management, enfranchisement of Indians and the administration of treaty obligations.

Education.-Nearly 46,600 Indians are enrolled in schools throughout the country. Approximately one third of these attend provincial and private schools, the cost of tuition being assumed by the Federal Government. As a further encouragement to the integration of Indian children in non-Indian schools, grants are made toward the cost of any new or supplementary construction required by their admission.

There are four types of Indian schools, all operated at the expense of the Government. On most reserves, day schools have been established to provide education for children who live at home. Residential schools are operated to care for orphaned children, children from broken homes, and for those who, because of isolation or other reasons, are unable to attend day schools. Seasonal schools have been established for the children of migratory families, particularly in the Far North. The fourth type of school gives instruction to children confined to hospital.

All standard classroom supplies and authorized textbooks are provided in Indian schools. Financial assistance for pupils attending non-Indian schools varies from payment of tuition fees for some to full maintenance for others. Promising senior students are awarded scholarships to attend university or vocational school and scholarships are given to those who show promise in the arts.

Economic Development．－With a view to providing for all Indians the opportunity to earn satisfactory incomes，the Indian Affairs Branch has instituted a number of programs in the field of economic development．These programs give special attention to the place－ ment of Indians in employment；the promotion of agriculture and stock－raising on reserves； the fostering of Indian enterprise and the provision of loans；home industries and handi－ crafts；the management of fur，fish and wildlife resources；and assistance to Indians in developing other resources on or within access of the reserves．

The Employment Placement Program has the objective of developing job opportun－ ities for Indians and promoting their employment in a wider range of occupations．Place－ ment Officers are attached to Branch Regional Offices at Vancouver，Edmonton，Saskatoon， Winnipeg，North Bay，Toronto，Quebec，Amherst and Fort Smith，and are also located at The Pas，London，Calgary and Whitehorse．In addition，the facilities of the National Employment Service are utilized in placing Indians in both urban and rural employment．

Under the fur resources rehabilitation and management program，which has been carried on for some time in co－operation with various provinces，beaver production in Saskatchewan，Manitoba，Ontario and Quebec has risen steadily．Total Indian income from trapping in the 1961－62 season was approximately $\$ 6,750,000$ ．

Commercial fishing by Indians is also of considerable economic importance．In recent years，the lake catch has been valued at approximately $\$ 1,000,000$ per annum and coastal fishing at about $\$ 4,000,000$ per annum，with further yearly earnings of about $\$ 750,000$ from the packing，canning and processing of fish products．

A $\$ 1,000,000$ revolving fund has been set aside by the Government as a source of credit for reserve Indians. During the year ended Mar. 31, 1962, 120 loans totalling $\$ 177,029$ were approved, most of them for agricultural purposes.

Welfare.-A public assistance program is provided by the Indian Affairs Branch to assist Indians to realize an adequate standard of living. Training and selected placement facilities are available in the field of rehabilitation for the physically and socially handicapped. Indians are technically subject to provincial law which governs all aspects of child welfare but there is wide variation in the extent to which such legislation is enforced. However, the policy followed is designed to take advantage, on an increasing basis, of the co-operation and assistance of accredited provincial child-caring agencies. Housing is another important feature of Indian welfare services. In each of the three years ended Mar. 31, 1960-62, more than 1,200 houses were built on Indian reserves and, in the year ended Mar. 31, 1962, approximately 3,000 houses were repaired.

Every effort is made to reach agreement with provincial governments which will make possible the application of normal provincial welfare services and benefits on reserves. Several bands in Ontario now participate in the Ontario General Welfare Assistance Act. Throughout Canada, Indians are paid family allowances, old age security, old age assistance, blind persons' allowances and disabled persons' allowances, and in the Provinces of Ontario and Quebec mothers' allowances are available to needy Indian mothers.

Community Development.-Community development on Indian reserves is progressing under the auspices of the Indian Affairs Branch. Leadership training courses are conducted to help Indians to identify and understand community problems and to become familiar with accepted methods of community organization. Indian women are encouraged to form Homemakers' Clubs which are patterned after rural women's institutes. Counselling as well as material aid is provided. Indian band councils are encouraged to exercise, to the fullest extent, the powers and responsibilities granted to them under the Indian Act.

In recent years, the Indian Affairs Branch has had the co-operation and assistance of university extension departments, provincial education authorities and various health and welfare organizations in the conduct of community development programs. An intensive program in community action by Indians on all reserves on Cape Breton Island, N.S., and certain reserves in New Brunswick has been directed by the Extension Department of St. Francis Xavier University. Leadership training courses for Indians have been held annually under the auspices of the Community Welfare Planning Council, Winnipeg, Man. Universities are assisting in planning and developing programs for Indian groups in Alberta, British Columbia, the Maritimes, Ontario and Quebec. In Ontario, the Community Programs Branch of the provincial Department of Education has planned and organized a special leadership training course for Indian band chiefs and councillors.

## The Eskimos*

While many still hold to the traditional way of life, an ever-increasing number of Canada's 11,835 Eskimos living in the Northwest Territories, northern Quebec and Labrador are making the change from a nomadic existence to a pattern of regular wage employment. Continued northern development, coupled with a decrease in some types of game, is settling the Eskimo people more and more in modern communities with school, health and transportation facilities, and wage employment opportunities. The Government of Canada, through the Department of Northern Affairs and National Resources and other agencies, is helping in this transition and adjustment by providing such forms of assistance as education, welfare services, vocational training and economic development programs.

One of the prime aids in easing this transitional period and preparing for the future is education. Close to 2,400 Eskimo youngsters now spend the school term at desks; more than half of them live in student residences. In 1958 only 17 p.c. of Eskimo children were in school; now, with the improvement of facilities and despite the increase in population, almost 66 p.c. are in school. Because of the relative newness of the school system the majority of these children are in the junior grades but increasing awareness of the value of education is keeping them in schools longer. A program approved at the January 1963 session of the Northwest Territories Council provides for grants and loans to finance university education for Eskimo, Indian and white children, without distinction.

While a basic education will open doors to employment for many, it is not the only avenue provided. Vocational training classes offer opportunities for employment in carpentry, electronics, mining, automobile and diesel mechanics, and domestic science. On-the-job learning is showing adult members of the Eskimo community how to make a better living in a changing world, and how to better use traditional skills and natural resources.

One of the most encouraging developments in the Arctic has been the steadily improving success of Eskimo co-operatives, formed on the basis of pooled labour and shared harvest, a formula long known to the Eskimos. Sixteen co-operatives in the Northwest Territories and northern Quebec are now engaged in a variety of operations based on commercial fishing, handicraft production, carving and graphic arts, tourism and the operation of retail stores. During 1962, five Eskimo fishing co-operatives were catching, processing and shipping Arctic char to markets in Southern Canada and the United States; the first shipment of char was sent to Britain in mid-year. Soapstone carvings and graphic arts, maintained at a standard of excellence, continued to bring the Eskimos, and Canada too, world-wide recognition. In 1962, approximately $\$ 100,000$ worth of graphic arts was sold by the Cape Dorset Co-operative alone. An increasing number of handicrafts, ranging from small sealskin animals and toys to delicately embroidered duffel coats, were produced to satisfy the growing market in Southern Canada. Although not attracting as much attention as the graphic arts or carvings, co-operatives based on logging, boat building and sealing also provided valuable business experience, employment and wages.

[^49]In addition to providing business experience and work opportunities, vital for a feeling of independence, the co-operatives also brought in more than $\$ 200,000$ cash to northern communities during 1961. This amount was considerably higher, if not doubled, in 1962. Through participation in rehabilitation projects which produce and market a wide variety of goods and services, an additional $\$ 175,000$ was earned by people in the North during 1962.

The increasing number of settled wage earners has created a need for permanent homes. Through a program of loans and grants initiated by the Department of Northern Affairs and National Resources, more and more Eskimos now own their homes. A $\$ 1,000$ subsidy covers part of the cost; the owner may borrow the remainder from the Eskimo Loan Fund and repay it on terms adjusted to his income. A man's labour in constructing his house helps to keep the cost to a minimum. All financial arrangements encourage the Eskimo to remain self-reliant and independent under changing economic conditions. At Frobisher Bay, a group of 15 families has established a co-operative which aims to provide all members with adequate housing. Other housing is provided as a relief measure to help those who, through physical or other disability, cannot afford to pay for their own shelter.

As Canadian citizens, the Eskimos receive the same social benefits as those who live farther south-family allowances, old age security, old age assistance, blind and disabled persons' allowances. The Federal Government also operates family and child welfare services and a rehabilitation and medical social service program designed to strengthen family and community life. Tuberculosis has not been eradicated but the incidence of the disease is rapidly decreasing. While the Eskimo infant mortality rate remains high compared with the all-Canada rate, it, too, is dropping with the improvement of health facilities and housing.

In addition to those Eskimos self-employed as members of co-operatives, there are Eskimos with employment in a variety of fields. They work as civil servants and as DEW-line employees. Eskimos are clergymen, miners, carpenters, mechanics, diesel and tractor operators and oil drillers. An Eskimo is manager of the CBC radio station at Inuvik and an Eskimo girl produces Eskimo-language programs for the CBC Northern Service. Another Eskimo girl, employed by the Welfare Division of the Northern Administration Branch, edits the Eskimo-language publication Inuktitut. Other Eskimo women work as interpreters, waitresses, nursing assistants, secretaries and clerks-in southern as well as northern communities.

With the continuing development of Northern Canada and the many changes it is bringing, more responsibility and opportunity have come to the Eskimos. In June 1962, for the first time, Eskimos of voting age in the Franklin and Keewatin Districts were able to cast their ballots in a federal election and returns showed that a majority of the Eskimos had taken advantage of the opportunity. In connection with the proposed division of the Northwest Territories, the Eskimo and other residents of the Eastern Arctic were asked to select the name of the new territory to be created. Ballots were cast and the name decided-Nunassiaq-The Beautiful Land.

For countless years the Eskimo has survived in a land that many have called harsh and unyielding. Circumstances have changed, however, and both are now on the threshold of even greater change. Adapting to a new environment, learning new trades and skills, Canada's hardy and intelligent Eskimos will play a more important role in the development of the country's last and most challenging frontier.

## Section 4.-Statistics of World Population

World population figures given in Table 38 are from the United Nations Population and Vital Statistics Report for October 1962 and, except as otherwise noted, are mid-year estimates for 1961. The area figures are from the United Nations Statistical Yearbook, 1961.

Estimated Population of the World by Continents.-The statement below presents adjusted estimates of the 1961 mid-year population of the world by continental divisions. These aggregates do not coincide exactly with the sum of the figures for individual countries and territories because they include, in addition, adjustments for overand under-enumeration, over-estimation, data for categories of population not regularly included in the official figures, and approximations for those countries that have not provided official 1961 data. The estimates are as follows:-

| Continental Division | Number |
| :---: | :---: |
|  | '000 |
| Africa. | 261,000 |
| North America. | 273,000 |
| South America. | 148,000 |
| Asia (includes Asiatic Turkey). | 1,714,000 |
| Europe (includes European Turkey). | 430,000 |
| Oceania (includes Hawaii). | 17,000 |
| Union of Soviet Socialist Republics (Asia and | 218,000 |
| World Total. | 3,061,000 |
| Commonwealth countries (at Mar. 15, 1963). | 733,531 |

## 38.-Areas and Populations of the Countries or Areas of the World, 1961

Note.-Status of independency or dependency is as at Mar. 15, 1963. Members of the Commonwealth and the Territories for which the British or Commonwealth members are responsible (at Mar. 15, 1963) are indicated with an asterisk ( ${ }^{*}$ ).

## PART I.-IMMIGRATION AND EMIGRATION*

The history of immigration and the Immigration Act and Regulations is dealt with in detail in a special article entitled "Developments in Canadian Immigration" appearing in the 1957-58 Year Book at pp. 154-176. Supplementing that material is an article on the "Integration of Postwar Immigrants" at pp. 176-178 of the 1959 edition.

## Section 1.-Immigration Policy and Administration

Since the end of the Second World War it has been the policy of the Government of Canada to stimulate the growth of the population by selective immigration. Efforts are made to choose immigrants of prospective adaptability to the Canadian way of life and to admit them at such times and in such numbers as employment conditions warrant.

Federal immigration policy is governed by the provisions of the Immigration Act and Regulations. With effect from Feb. 1, 1962, the Regulations, which include the provision for permanent admission to Canada, were revised to place primary stress on education, training and skills as the main conditions of admissibility, regardless of the nationality or country of origin of the applicant. Persons qualifying on these grounds who have sufficient means to establish themselves in Canada or are coming forward to approved employment, or with suitable plans for self-establishment in Canada, are admissible. This means that any suitably qualified person from any part of the world can be considered for admission to Canada entirely on his own merit, without regard to his race, colour, national origin or the country from which he comes. Similarly, if a person has the requisite skills and potential ability to establish himself in Canada, he or she may also be sponsored by a parent, parent-in-law or fiancé(e) already in Canada, provided the sponsor is a Canadian citizen. The Canadian sponsor must be able to provide care and maintenance for such immigrant until the latter is able to look after himself. The sponsorship at the Canadian end takes the place of the requirement that the immigrant himself must have sufficient means or, alternatively, firm employment or self-employment opportunities. All immigrants must be in good health and of good character and be in possession of such documentation as the Regulations prescribe.

[^51]Other classes of admissible immigrants consist of persons in the close-relative and immediate-dependant category who may be sponsored by Canadian citizens or by persons other than Canadian citizens who have been legally admitted to Canada for permanent residence and wish to bring forward a mother, father, husband, wife, intended wife, grandparent or an unmarried minor child and who are able to receive and care for them. This provision is of universal application; its principal effect is to improve the position of persons from countries which have received less favoured treatment in the past, by including grandparents and fiancées in the admissible categories of dependants and eliminating age limits with respect to fathers and mothers. The special provisions under the former Regulations regarding the admissibility of other classes of relatives, such as brothers and sisters, adult sons and daughters, orphan nieces, etc., which applied to certain countries, remain unchanged. The new Regulations make no reference to special agreements in effect with India, Pakistan and Ceylon. The enlarged provisions of the new Regulations bring directly into the admissible classes those qualified but unsponsored immigrants from these three countries who formerly were covered by the agreements and make it unnecessary to have a special regulation to provide for them.

The Immigration Branch of the Department of Citizenship and Immigration administers the Immigration Act and Regulations. Twenty-eight visa offices are located abroad at London, Liverpool, Leeds, Bristol, Glasgow, Belfast, Dublin, Paris, Brussels, Berne, The Hague, Copenhagen, Cologne, Berlin, Hamburg, Munich, Stuttgart, Vienna, Oslo, Stockholm, Helsinki, Lisbon, Rome, Athens, Cairo, Tel Aviv, New Delhi and Hong Kong. Four offices in the United States-at New York, Chicago, San Francisco and Denverfurnish information and counselling but do not issue visas. Personnel at all posts are kept in close touch with economic conditions in Canada and thus are able to advise immigrants regarding prospects for successful settlement. Examination of immigrants and visitors is carried out at 348 ports of entry on the Canadian coasts, at points along the International Boundary, and at certain airports.

A primary objective of the immigration program is satisfactory settlement. The Federal Government assists immigrants in establishing themselves in the Canadian community through the work of the specialized settlement officers of the Immigration Branch, the Canadian Citizenship and Canadian Citizenship Registration Branches and other government agencies, and co-operates closely with several voluntary agencies having the same objective.

## Section 2.-Immigration Statistics

Postwar Immigration.-The extent of immigration to Canada in any period is affected both by domestic conditions and by conditions abroad. However, these influences are seldom immediately decisive. News of good economic conditions in Canada predisposes people in favour of this country but, because the immigration process usually takes from six to eighteen months, actual immigration is not always fully coincidental with the economic situation, so that immigration may at times be slight in good years but appear unduly heavy in less buoyant periods. The time-lag caused by selection, medical examination and documentation is unavoidable. Transportation is often another delaying factor and to these considerations must be added the effect of seasonal unemployment in Canada, which tends to discourage immigration during the months from November to April.

Since the end of World War II there have been wide annual fluctuations in immigration to Canada caused mainly by economic and political factors. Many of the persons who arrived in 1946 and 1947 were the wives and children of Canadian service men and their numbers were dictated by the availability of shipping. In 1948, as more shipping became available, the number of immigrants doubled. In addition to the large movement
from the British Isles, thousands of displaced persons were admitted and Germans and Italians began to come forward in appreciable numbers after having been removed from the enemy alien category. As the high level of immediate postwar economic activity levelled off, there was a drop of 30,000 in the number of immigrants entering in 1949 compared with 1948, and a further drop of 21,000 in 1950. Then the outbreak of war in Korea created a new stimulus to industry and caused shortages of labour; at the same time fear of war in Europe made Canada seem a desirable haven. Thus in 1951 immigration increased nearly threefold and remained in excess of 150,000 for the following three years. Very significant numbers of Germans and Italians were admitted and the gap between them and the British Isles group was narrowed. Another minor economic setback in 1954 caused immigration to fall in 1955 by some 45,000 but, with the return of better times in North America and the deterioration of the political situation in Europe, immigration again rose by 55,000 in 1956. The Hungarian revolution and the Suez crisis of 1956 had a sharp impact on Canadian immigration in 1957 when 282,164 persons were admitted, including 31,643 from Hungary and 108,989 from the British Isles. This was the largest number of immigrants to enter Canada since 1913.

The conclusion of the Suez affair and the suppression of the Hungarian revolt restored some measure of calm in Europe. Canada's economy suffered a recession in 1956 and 1957 while Europe's economic position improved, as a result of which only 124,851 immigrants came to Canada in 1958. Britain's recovery from the war and its aftermath was reflected in the fact that for the first time in the postwar years the British Isles group of arrivals was not the largest-persons from Italy were in first place, numbering 27,043 compared with 24,777 from the British Isles. Total arrivals dropped from 106,928 in 1959 to 104,111 in 1960 and to 71,689 in 1961 and during these years the numbers from Italy remained in first place. In 1962 the total number of immigrants increased slightly to 74,586 and immigrants from the British Isles again headed all groups. The main contributing factors to the decline in number of immigrant arrivals after 1958 were: (1) the upsurge in the economies of those European countries from which Canada has received the majority of its immigrants and (2) the increasing emphasis placed on selecting the immigrant who has sufficient funds and the necessary knowledge to establish himself in a business or industry of his own, as well as on the immigrant with special skills or qualifications which would permit his ready integration into the Canadian labour force.

Immigrants coming from the British Isles during the period 1946 to 1962, inclusive, numbered 608,117 and represented 28.3 p.c. of the total immigration to Canada in that period. Other large groups came from: Italy, 287,612 representing 13.4 p.c. of the total; Germany, 246,553 representing 11.4 p.c.; the Netherlands, 150,742 representing 7 p.c.; the United States, 168,284 representing 7.8 p.c.; and Poland, 93,827 representing 4.4 p.c.

Thus, in each postwar year up to and including 1957 and in the year 1962, the British Isles group was the largest, ranging from a low of 12,695 in 1950 to a high of 108,989 in 1957 and from 1958 to 1961 immigrants from Italy headed all groups. Immigrants from the United States formed the second largest group in 1946 and 1947, from Poland in 1948, 1949 and 1950, from Germany from 1951 to 1954, from Italy in 1955, 1956 and 1962, from Hungary in 1957, and from the British Isles from 1958 to 1961. During the whole postwar period, immigration from the United States remained relatively constant, ranging from a low of 7,393 in 1948 to a high of 11,643 in 1962; the annual average for the period was 9,899 .

Total immigration to Canada for the years 1946-62, inclusive, was 2,151,505. The yearly totals for this period are shown in Table 1, together with annual figures back to 1913, the peak year of immigration into Canada.

## 1.-Immigrant Arrivals, 1913-62

Note.-Figures for 1852-93 are given in the 1942 Year Book, p. 153, and for 1894-1912 in the 1948-49 edition, p. 175.

${ }^{1}$ Up to the date of the Census, June 1, 1961.
The above table shows that $1,507,116$ immigrants reported that they had come to Canada between Jan. 1, 1946 and June 1, 1961. These postwar immigrants constituted about 75 p.c. of the total immigrant arrivals in Canada during the same period. According to the records of the Department of Citizenship and Immigration, 2,033,598 persons entered Canada as immigrants during this period. The difference between this total and the number of postwar immigrants reported in the 1961 Census, amounting to 526,482 persons, represents the losses due to death and emigration among the postwar immigrant arrivals up to June 1961. Since this difference is arrived at by comparing statistics derived from two different sources, it must be taken as only an approximate measure of these losses. It is estimated that deaths of immigrants arriving since 1946 would not exceed 86,000 by June 1961. Hence it would appear that roughly 440,000 emigrated in the period between January 1946 and June 1961, or slightly more than one fifth of the total arrivals over this period.

The 440,000 postwar immigrants who appear to have emigrated from Canada up to June 1961 would thus constitute a little over half the total estimated emigration from Canada since 1946, according to data on emigration used in the preparation of annual population estimates. In this connection it might be mentioned that a substantial element in total Canadian emigration is the movement of Canadian-born persons to the United States, some 387,000 entering the United States as immigrants between July 1946 and July 1961 according to the United States Immigration Service records (see pp. 209-210).

Analyses of Recent Immigration.-Analyses of the content of the immigration movement during the years 1960, 1961 and 1962 are given in Tables 3 to 10, and the numbers of persons deported from Canada for various reasons for the years 1953-62 in Table 11.

Table 3 classifies immigrant admissions by country of last permanent residence for 1960-62. During the three-year period, 19.5 p.c. of the immigration flow came from Britain and the Republic of Ireland, 55.3 p.c. from Continental Europe, 13.7 p.c. from the United States and 11.5 p.c. from all other countries.

## 3.-Immigrant Arrivals by Country of Last Permanent Residence, 1960-62

Nore.-Comparable figures from 1946 are given in the corresponding table of previous Year Books beginning with the 1951 edition; figures in less detail for 1939-45 appear in the 1950 edition, p. 186.

| Adult. | 40,241 | 30,648 | 30,615 |
| Totals, Immigrants. | 104,111 | 71,689 | 74,586 |

The number of female immigrants coming into Canada has been higher than the number of male immigrants in every year since 1957. In 1962 the excess of females was 5,494 and only in the age group 0-14 years did the number of males exceed that of females. In the single category, males exceeded females in all age groups up to 30 years but in the married category females exceeded males by 3,509 , in the widowed category by 1,995 and in the divorced or separated category by 454 . Of all persons arriving in 1962 who were 15 years of age or over, 51.9 p.c. were married, 41.2 p.c. were single and 6.3 p.c. were widowed or divorced.

Destinations and Occupations.-Upon arrival in Canada, immigrants are asked to state their intended destination. According to these records, Ontario absorbed by far the highest proportion of arrivals in the three-year period $1960-62-50.4$ p.c. of all the males and 52.0 p.c. of all the females. Quebec was the second most important province of destination, receiving 24.3 p.c. of the males and 23.6 p.c. of the females, followed by British Columbia with 9.7 p.c. of the males and 10.2 p.c. of the females. The proportions
intending to settle in the Prairie Provinces were 12.7 p.c. and 11.6 p.c., respectively, and in the Atlantic Provinces 2.8 p.c. and 2.6 p.c., respectively. The provincial distribution has changed little from year to year throughout the whole postwar period.

In like manner, immigrant arrivals are asked to record the occupations which they intend to follow in Canada. Approximately 49.3 p.c. of the persons admitted in 1962 declared that they would enter the labour force. The other 50.7 p.c. were wives, children and other dependants or were retired persons. Of the male workers, 25.4 p.c. were classed as professional and managerial, 7.9 p.c. were in agricultural occupations, 6.1 p.c. in service occupations, 35.9 p.c. in manufacturing, mechanical and construction trades, and 12.6 p.c. were general labourers. About 34 p.c. of the female immigrants entering the labour force were intending to follow service occupations. Details are given in Table 10.

Deportations.-Deportations by cause and nationality are shown in Table 11 for the years 1953-62. Persons who have not yet acquired domicile (five years of residence in Canada) may be deported if they fall into prohibited classes at time of entry or within five years of entry, if they have engaged in commercialized vice, have been convicted under the Criminal Code or have become inmates of prisons or mental institutions, or have gained entry by fraudulent means. The causes that may lead to deportation are narrowed after a person has acquired domicile. A person not a citizen may be deported regardless of length of residence if he is found to be a member of a subversive organization or engages in subversive activities, or if he has been convicted of an offence involving disloyalty to the Queen, or if he has, outside of Canada, engaged in activities detrimental to the security of Canada. A Canadian citizen cannot be deported.

## Section 3.-Emigration Statistics

Emigration from Canada is an important factor tending to offset to some extent present and past immigration activities. The major outward movement has always, of course, been to the United States and that movement, both of native-born Canadians and of Europeans who originally migrated to Canada, has attained considerable proportions at certain periods. No Canadian statistics on emigration are available but Table 12 gives figures taken from the annual reports of the Immigration and Naturalization Service of the United States Department of Justice. These figures show the numbers of persons entering the United States from Canada during the years ended June 30, 1953-62 with the expressed intention of establishing permanent residence in that country. They do not include persons travelling for pleasure, even for extended periods of time, holders of bordercrossing cards (normally issued to persons living in border areas of Canada but working in the United States) or casual tourist crossings in these same areas.

Of the 44,272 persons entering the United States from Canada in the year ended June 30, 1962, 30,377 were native-born Canadians- 14,632 males and 15,745 females. Slightly more than one quarter, or 7,982 , of the total native-born emigrants were males in the productive age group, 20-59 years. By occupation, the largest group of the total of 30,377 native-born persons was the professional or technical group which numbered 3,532 ; clerical or kindred workers numbered 3,062 , and 1,639 were classed as craftsmen or foremen. On the other hand, 16,464 persons, or 54.2 p.c. of the total, were classed as housewives, children and others with no reported occupation. Altogether, 41.2 p.c. of the total were children under 20 years of age.

## 12.-Persons Entering the United States from Canada, Years Ended June 30, 1953-62

Note.-Includes only persons who have declared their intention of remaining permanently in the United States when applying for a visa (see text above). Source: Immigration and Naturalization Service, United States Department of Justice.

| Year | $\underset{\text { Born }}{\text { Canadian- }}$ | Total from Canada | Year | $\underset{\text { Born }}{\text { Canadian- }}$ | Total from Canada |

|  | No. | No. |  | No. | No. |
| 1953... | 28,967 | 36,283 | 1958.. | 30,055 | 45,143 |
| 1954. | 27,055 | 34,873 | 1959. | 23,082 | 34,599 |
| 1955. | 23,091 | 32,435 | 1960. | 30,990 | 46,668 |
| 1956... | 29,533 | 42,363 | 1961. | 32,038 | 47,470 |
| 1957.... | 33,203 | 46,354 | 1962. | 30,377 | 44,272 |

Of the 44,272 persons entering the United States from Canada claiming Canada as country of last permanent residence-which of course includes native-born persons and those born in other countries who have resided in Canada-the Immigration and Naturalization Service, United States Department of Justice, lists 5,561 as professional, technical and kindred workers, 4,394 as clerical and kindred workers and 3,833 as craftsmen, foremen and kindred workers. Housewives, children and others with no reported occupation accounted for 21,376 , or 48.3 p.c. of the total.

## PART II.-CANADIAN CITIZENSHIP*

Naturalization procedures and events leading to the passing of the Canadian Citizenship Act are given in the 1951 Year Book, pp. 153-155.

## Section 1.-The Canadian Citizenship Act

The Canadian Citizenship Act came into force on Jan. 1, 1947, its purpose being to give a clear definition of Canadian citizenship and provide an underlying community of status for all the people of Canada. Since Jan. 18, 1950, the administration of Canadian citizenship has been the responsibility of the Department of Citizenship and Immigration. The provisions of the Act and its several amendments are outlined in some detail in the 1955 Year Book, pp. 177-181. More briefly, they are given in the following paragraphs.

Natural-Born Canadian Citizens, Born before Jan. 1, 1947.-The Act conferred natural-born status upon two categories of persons in being on Jan. 1, 1947. These were (1) those born in Canada or on a Canadian ship or aircraft and who were not aliens on

[^52]Jan. 1, 1947; and (2) those born outside of Canada who were not aliens on Jan. 1, 1947 and who were entitled to claim derivative citizenship in accordance with the provisions of the Act.

The Act provides that a person in the second category who was a minor on Jan. 1, 1947 will automatically cease to be a Canadian citizen on his 24th birthday or on Jan. 1, 1954, whichever is the later date, unless he has his place of domicile in Canada at such date or has, before such date and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship.

Natural-Born Canadian Citizens, Born after Dec. 31, 1946.-A person born outside of Canada subsequent to that date, whose responsible parent is considered a Canadian citizen pursuant to the terms of the Canadian Citizenship Act, is a Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases.

A person who becomes a natural-born Canadian citizen in such a manner will automatically cease to be a Canadian citizen if he fails to file a declaration of retention prior to his 24th birthday or does not have his place of domicile in Canada upon that date.

Canadian Citizens other than Natural-Born.-Before the 1953 amendments to the Citizenship Act, the only persons who acquired Canadian citizenship on Jan. 1, 1947 through the transitional clauses of Sect. 9 were persons who were naturalized in Canada before that date, British subjects who had Canadian domicile at the commencement of the Act and women lawfully admitted to Canada and married prior to Jan. 1, 1947 whose husbands would have qualified as Canadian citizens if the Act had come into force before the date of marriage. Sect. 9 was amended on June 1, 1953, so that a British subject who had his place of domicile in Canada for at least 20 years immediately before Jan. 1, 1947 need not comply with the requirements of Canadian domicile provided he was not under an order of deportation on Jan. 1, 1947.

Acquisition of Canadian Citizenship by Aliens and British Subjects.-The Act provides a means of acquiring Canadian citizenship. An alien who wishes to become a Canadian citizen must apply through his local court or through one of the special citizenship courts now being established. He must appear before the judge for a hearing and will in due course be granted citizenship if his application is approved by the judge and by the Minister. A British subject may apply for citizenship directly to the Minister. It should be added that a minor child does not automatically acquire Canadian citizenship upon the grant of citizenship to the responsible parent.

Status of Married Women.-The Canadian Citizenship Act places no disabilities upon the married woman. She neither acquires nor does she lose Canadian citizenship by marriage. In order to acquire Canadian citizenship she must apply in exactly the same manner as does a man. There is, however, one advantage granted to her-if she is married to a Canadian citizen she may apply for citizenship after a residence of only one year in Canada.

The Canadian Citizenship Act also enables a woman married to an alien whose nationality she acquired upon marriage to divest herself of Canadian citizenship by the filing of a declaration of renunciation. Finally, it provides a means whereby a woman, who had become an alien through marriage prior to Jan. 1, 1947, may acquire the Canadian status she would otherwise have assumed on that date.

Status of Minor Children.-The minor child of a Canadian citizen other than a natural-born Canadian may receive a certificate of Canadian citizenship upon application therefor by his or her responsible parent, de facto guardian, or mother if she has custody of the child. Provision is also made in the Citizenship Act for the granting of a certificate of citizenship to a minor child in special circumstances. Provision is made for the granting
of a certificate to a person who has been adopted or legitimated in Canada and who has been admitted to Canada for permanent residence, if the adopter or the legally recognized father is a Canadian citizen.

Loss of Canadian Citizenship.-Canadian citizenship may be lost in the following manner:-
(1) A Canadian citizen who when outside of Canada and not under disability acquires by a voluntary and formal act other than marriage the nationality or citizenship of a country other than Canada. This does not apply if the country is at war with Canada at the time of acquisition but in such a case the Minister may order that he cease to be a Canadian citizen. The purpose of this is to hold the person, if deemed necessary, to his obligations as a Canadian.
(2) A natural-born Canadian citizen who is a dual national by birth or through naturalization, and any Canadian citizen on marriage, may after attaining the age of 21 cease to be a Canadian citizen through the making of a declaration of renunciation thereof.
(3) A Canadian citizen who under the law of another country is a national or citizen of such country and who serves in the armed forces of such country when it is at war with Canada. This does not apply if the Canadian citizen became a national or citizen of such country when it was at war with Canada.
(4) An other-than-natural-born Canadian citizen, unless he served outside Canada in the Armed Forces of Canada in time of war or other related circumstances, or unless otherwise exempt, loses his citizenship automatically if he has resided outside of Canada for ten consecutive years. The period of absence may however be extended upon request, if the application is filed and granted before loss occurs and if good and sufficient reason exists.
Loss of Citizenship by Revocation-Applicable Only to Naturalized Persons.-In 1958 the Canadian Citizenship Act was amended and limited the provisions regarding loss of Canadian citizenship to the following: the citizenship of a Canadian citizen other than a natural-born Canadian citizen may be revoked by the Governor in Council if, upon a report from the Minister, he is satisfied that such Canadian citizen, having been charged with the offence of treason under the Criminal Code or with an offence under the Official Secrets Act, has failed or refused to return to Canada voluntarily within such time as may be prescribed in a notice sent by the Minister to such person at his last known address and has not appeared at the preliminary inquiry into such offence or at the trial of such offence, or both as the case may be; or has obtained a certificate of naturalization or of Canadian citizenship by false representation or fraud or by concealment of material circumstances.

Doubt as to Loss of Citizenship.-Where in the opinion of the Minister a doubt exists as to whether a person has ceased to be a Canadian citizen, the Minister may refer the question to the Commission referred to in Subsection (4) of Section 19 for a ruling and the decision of the Commission or the Court, as the case may be, shall be final.

Loss of Citizenship by Revocation-Applicable to Both Natural-Born and Naturalized Persons.-The Governor in Council may in his discretion order that any person shall cease to be a Canadian citizen if, upon a report from the Minister of Citizenship and Immigration, he is satisfied that such person has, when not under a disability (1) acquired voluntarily, when in Canada, the citizenship of a foreign country (other than by marriage), (2) taken or made an oath, affirmation, or other declaration of allegiance to a foreign country, or (3) made a declaration renouncing his Canadian citizenship.

## Section 2.-Canadian Citizenship Statistics

According to the 1961 Census, which required that each person state the country to which he owed allegiance and had citizenship rights as at June 1, 1961, less than 6 p.c. of Canada's population reported a country of citizenship other than Canada. Table 1 shows the citizenship of the population by province and Table 2 gives the numerical and percentage distribution of the population by country of citizenship for 1961 compared with the distribution in 1951.

## 1.-Citizenship of the Population, by Province, Census 1961

[^53]Citizenship Certificates Issued.-The following statistics show the number of citizenship certificates "issued" and more detailed information on certificates "granted" in recent years. The former, in Table 3, include both certificates granted to new citizens and those issued for various reasons to persons who are already Canadian citizens. Tables 4 to 8 refer only to "grants" which means that the holder became a Canadian citizen by the grant of such certificate.

In 1961, 96,191 Canadian citizenship certificates were issued as compared with 104,436 in 1960. During 1961 the Canadian Citizenship Registration Branch recorded 5,477 certificates of registration of births abroad, 92 declarations of retention of Canadian citizenship and 36 petitions for resumption of Canadian citizenship. Certificates issued free to persons who had had active military service numbered 547 , as compared with 585 in 1960. Corresponding figures for 1960 were 4,904 registrations of births abroad, 121 declarations of retention, 30 petitions for resumption and 585 certificates issued free to persons who had had active military service.

${ }^{1}$ Exclusive of resumptions of Canadian citizenship, such issues numbering 30 in 1960 and 36 in 1961.
Characteristics of Persons Granted Citizenship Certificates in 1961.-Comparable detailed statistics showing the characteristics of persons granted citizenship certificates are available since 1953; such characteristics include age, marital status, occupation, period of immigration, residence and previous nationality.

Of the 56,476 persons granted citizenship in 1961, 1 p.c. had migrated to Canada before 1921,3 p.c. in the period 1921-40, 12 p.c. in the period 1941-50 and 84 p.c. since 1950. Regionally, these new citizens were distributed as follows: 2 p.c. in the Atlantic Provinces, 16 p.c. in Quebec, 55 p.c. in Ontario, 15 p.c. in the Prairie Provinces and 12 p.c. in British Columbia. Just over 84 p.c. of them resided in urban centres.

About 18 p.c. of the persons naturalized during 1961 had been citizens of Germany, 17 p.c. had been citizens of Italy, 17 p.c. had owed allegiance to a British Commonwealth country, 12 p.c. had been citizens of the Netherlands, 5 p.c. reported former allegiance to countries now parts of the U.S.S.R., and Poland was the country of allegiance for 5 p.c. Most of the persons designated as "stateless" were born in Poland, the U.S.S.R., Yugoslavia, Hungary, Germany, Czechoslovakia or Austria.

Of the males granted citizenship certificates in 1961, 22 p.c. were reported in manufacturing and mechanical occupations, 11 p.c. were employed in construction, 9 p.c. were labourers in other than primary industries, 9 p.c. were in professional occupations, 8 p.c. were in service, 4 p.c. in agriculture, 4 p.c. in clerical occupations and almost 5 p.c. in proprietary and managerial occupations. Of the females granted certificates, 50 p.c. were homemakers and among those employed outside the home, 29 p.c. were in clerical occupations, 26 p.c. were in manufacturing and mechanical occupations and 26 p.c. in service occupations.

## 4.-Persons Granted Citizenship Certificates in 1961, by Province of Residence, Rural and Urban, and Period of Immigration to Canada

Subsection 2. Infant Mortality. ..... 242
Subsection 3. Maternal Mortality. ..... 245
Section 4. Natural Increase ..... 247
Subsection 1. Marriages. ..... 250
Subsection 2. Dissolutions of Marriage(Divorces).253
Section 6. Canadian Life Tables. ..... 254
Section 7. International Comparisons of Vital Statibtics ..... 256

The interpretation of the symbols used in the tables throughout the Year Book
will be found facing $p .1$ of this volume.

Vital statistics provide a record of population development-a measure of the pace of growth, marriage and fertility trends, the distribution of people in and entering the various age groups, the relative importance of each of the causes of death, and so on. The continuity of such data gives a constant guide to the planning, operation and evaluation of a variety of national activities, particularly in the fields of public health, education, community planning and various types of business enterprise.

This Chapter gives a fairly detailed coverage of the vital statistics information available, gives life tables for males and females and presents a comparison of the principal Canadian vital statistics rates with those of other countries. In making international and interprovincial comparisons of birth, death and marriage rates, it is important to note that part of the differences observed over a period of years as between countries, provinces or local areas may be caused by differences in the sex and age distribution of the populations involved. Similarly, rates for any one area may be affected by changes in such distribution.

The population data upon which vital statistics rates are computed are given in Chapter III of this volume. Births and deaths are classified by place of residence (births according to the residence of the mother) and marriages by place of occurrence.

The history of the collection of vital statistics in Canada is covered in the 1948-49 Year Book, pp. 185-188. Detailed information is given in Vital Statistics (Preliminary Report) (Catalogue No. 84-201), Vital Statistics of Canada (Catalogue No. 84-202) and in other regular and special reports; in addition, certain unpublished data are available on request.

## Section 1.-Summary of Vital Statistics

Table 1 gives a summary for reference purposes of the principal vital statistics of the provinces of Canada for five-year periods 1941-60 and for single years 1959-61. Table 2 shows similar data for urban centres having at least 10,000 population at the date of the 1961 Census for the year 1961 with averages for 1956-60. Corresponding data for 1921 -when the collection of national vital statistics was initiated-to 1940 are shown in previous issues of the Canada Year Book.

[^56]
## 1.-Summary of Principal Vital Statistics, by Province, 1941-61

Note.-Figures for the years 1921, when the collection of national statistics was initiated, to 1940 are given in previous editions of the Year Book. Adjustments in intercensal populations on the basis of 1961 Census figures necessitated the revision of many of the 1959 and 1960 birth, death, natural increase and marriage rates that appeared in the 1962 Year Book.

## Section 2.-Births*

No accurate figures on Canadian crude $\dagger$ birth rates are available prior to 1921, when the annual collection of official national figures was initiated. However, the following rough estimates of the average annual crude rates for each ten-year intercensal period between 1851 and 1921 may be inferred from studies of early Canadian census data:-

|  | Estimated |
| :---: | :---: |
|  | Average |
| Intercensal | Annual Crude |
| Period | Birth Rate |
|  | (per 1,000 |
|  | Population) |

1891-1901 ..... 30
1901-11. ..... 31
1911-21 ..... 29

The general trend in the birth rate since 1921 is shown in the chart on p. 227. The annual rates declined gradually but steadily from 29.3 in 1921 to a record low of 20.1 in 1937, recovered sharply in the late 1930's and during World War II to 24.3 in 1945 and in the two years following the War rose to a postwar high of 28.9 in 1947. Between 1948 and 1959 the rate remained remarkably stable at between 27.1 and 28.5 but in 1960 it dropped to 26.8 and in 1961 to 26.1 , a postwar low.

The rates in most provinces followed trends very similar to the national trend but showed some regional differences in recent years. Although all provinces had record high rates immediately following World War II, average birth rates in Ontario and the western provinces were higher during the 1951-55 period than during 1946-50 while those for Quebec and the Maritimes were lower than during 1946-50. In fact, Ontario, Alberta and British Columbia had record high crude birth rates during the 1956-59 period. However, all provinces have had declining or stationary rates since about 1959-60.

It is often erroneously assumed that the Province of Quebec has not only the largest number of births annually but the highest birth rate in Canada. Since the late 1930's or early 1940's Newfoundland, in some years New Brunswick and, since 1953, Alberta have had higher birth rates than Quebec. Table 1, pp. 220-221, shows that five provincesNewfoundland, Alberta, New Brunswick, Prince Edward Island and Nova Scotia in that order-had higher crude rates than Quebec in 1961, followed by Saskatchewan, Ontario and Manitoba, and British Columbia.

It should be noted, however, that since these crude rates are based on the total population they do not reflect the fertility of the women of reproductive age in the different provinces or the number married within these reproductive ages. A more accurate measure of the true birth rate is one based on the number of married women between the ages of 15 and 44 (see pp. 231-234).

Also contrary to popular impression, since 1953 more babies were born each year in Ontario than in the Province of Quebec; in 1961, 157,663 babies were born to Ontario mothers as compared with 137,174 to Quebec mothers. Altogether, 475,700 children were born in Canada in 1961, 3,575 fewer than the record 479,275 born in 1959 and 2,851 fewer than the number born during 1960 .

Sex of Live Births.-Wherever birth statistics have been collected they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless it is so much an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada has averaged around 1,057 since the middle 1930's. Provincial sex ratios vary much more widely because of the relatively small number of births involved-the smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year. Another commonly acknowledged fact in many countries-although there is no generally accepted explanation for it-is that the male ratio appears to rise during or shortly after major wars. This seems to have happened in Canada between 1942 and 1945 when the ratio rose to an average of 1,064 during these four years as compared with averages of 1,054 between 1931-41 and 1,057 since 1946.

## 3.-Sex Ratios of Live Births, 1941-61

Note.-Figures for Newfoundland are included from 1949 and those for the Yukon and Northwest Territories from 1950.

| Year | Males | Females | $\begin{aligned} & \text { Males } \\ & \text { to } 1,000 \\ & \text { Females } \end{aligned}$ Females | Year | Males | Females | Males to 1,000 Females |

Hospitalized Births.-In 1961 over 96 p.c. of all Canadian births occurred in hospital as compared with 88 p.c. five years previously. Table 4 shows the rise in hospitalized births in each province since 1931. Before the initiation in 1958 of the federal-provincial hospital insurance programs-in which all provinces were participating in 1961-there were rather wide variations among the provinces in percentages of hospitalized births. Such variations were caused by the existence of prepaid or provincially sponsored hospital, maternity or medical care plans in some provinces, the unavailability of hospital facilities in others-particularly in remote rural areas-and preference for home delivery in some local areas. Although some variation still exists, the operation of the hospital insurance program has probably been responsible for the noticeable increases in hospitalized births in provinces that previously had lower proportions, for example in New Brunswick where the hospital insurance plan was put into effect on July 1, 1959, and in Quebec where the plan went into effect in 1961.

[^57]Births in Urban Centres.-Table 2, pp. 222-226, shows the number of births in 1961, as compared with the average for 1956-60, to mothers residing in each urban centre of 10,000 population or over. The table also shows crude birth rates for each centre based on the 1961 Census population. However, comparison of such rates as between different centres must be made with caution since, as previously noted, they are influenced by the proportions-and the ages-of the married females in their populations, as well as by the actual fertility of those females. Because populations of urban centres are not available for intercensal years, comparable rates cannot be computed for the 1956-60 period.

Illegitimacy.*-In 1961, over 4 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world.

Fertility Rates.-The sex and age composition of a population is obviously an important factor in determining crude* birth, marriage and death rates. Since almost all children born each year are to women between the ages of 15 and 45 , variations in the proportion of women of these ages to the total population will, of course, cause variations in the crude birth rate of different countries-or of different regions within a country-even though the actual rates of reproduction or fertility of the women in these age groups in each country or region are identical.

A more accurate measure of the fertility of a population would therefore be one based on the number of women of reproductive age, that is those 'able' to bear children, and a still more accurate measure would be one based on the number within this group that are married, that is those 'eligible', as it were, to bear children. Each type of rate has its uses, depending on the comparisons required. The two types-generally referred to as crude fertility rates-are compared in Table 7, and indicate the variations in each type as between provinces and the provincial trends over the five years 1957-61.

${ }^{1}$ Since the number of births to women over 44 is quite small, rates are here restricted to women under 45. ${ }^{2}$ Excludes the Yukon and Northwest Territories.

The number of infants born in relation to every 1,000 women in the population between the ages of 15 and 45 dropped from 134 in 1957 to about 128 in 1961. However, the ratio varied among the provinces from 120 to 190 over the five-year period; Newfoundland, Prince Edward Island, New Brunswick and Alberta had, on the whole, the highest rates and British Columbia, Ontario, Quebec and Manitoba, in that order, the lowest. The average annual number of infants born to every 1,000 married women ranged from 180 to 191 during the same period. According to this measure, the five eastern provinces had, on the whole, the highest rates and the five most western provinces the lowest; provincial rates ranged from 156 to 285 . The provincial rates declined in varying degree during the period, notably in 1960 and 1961.

The rates shown in Table 7 are crude in the sense that they do not take into account differences in fertility in the component age periods within the female reproductive life span, nor the proportions of married women in each age period. It is therefore conventional practice to calculate what are termed age-specific fertility rates, i.e., the number of infants born annually to every 1,000 women in each of the reproductive age periods, again either for all women or for those who are married. Table 8 provides these two sets of rates, the former for 1941-61, the latter for census years only from 1941, since population data are not available for these by detailed age groups for intercensal years.

Another measure of fertility in a country is obtainable from what is conventionally referred to as a gross reproduction rate. The gross reproduction rates shown in Table 8 indicate the average number of female children born each year to each woman living
through the child-bearing ages. In other words, this figure represents the average number of females that would be born to each woman who lived to age 50 if the fertility rates of the given year remained unchanged during the whole of her child-bearing period. A gross reproduction rate of 1.000 indicates that, on the basis of current fertility and without making any allowance for mortality among mothers during their child-bearing years, the present generation of child-bearing women would exactly maintain itself. Canada has always had one of the highest gross reproduction rates among the industrialized countries of the world. Even during the period of low birth rates in the 1930's the rate varied between 1.3 and 1.5 and since World War II has ranged between 1.7 and almost 2.0 ; in 1960 the rate stood at 1.893 and in 1961 at 1.868 , still almost double the number required for the population to replace itself. With minor exceptions, provincial reproduction rates are also well above the replacement level.

## 8.-Fertility Rates per 1,000 Women, by Age Group, 1941-61

| 1941. | 453.1 | 340.2 | 237.8 | 158.3 | 99.1 | 38.9 | 4.5 |  |
| 1951. | 498.5 | 350.4 | 248.1 | 168.7 | 100.6 | 36.6 | 3.7 | ... |
| 1956. | 551.5 | 381.7 | 265.5 | 169.8 | 101.0 | 35.6 | 3.4 | ... |
| 1961. | 541.2 | 374.4 | 255.6 | 161.4 | 89.9 | 32.1 | 2.8 | ... |

Table 8 indicates that in 1961, considering all women whether married or not, women in their 20's were the most reproductive, as might be expected; on the average, for every 1,000 women between the ages of 20 and 25,234 infants were born during that year or, expressed another way, about one woman out of four in that age group gave birth to a live-born infant. This compares with a rate of 219 for women in the age group 25-29, which is closer to one in five. However, among married women, teenage mothers have
consistently had the highest fertility, with one out of two bearing a child each year on the average, while almost four out of every 10 married women in their early 20 's had a child every year as compared with about one in four for women in their late 20's.

During and since World War II, up to 1960 , the fertility rates for young mothersparticularly those under 25-have increased, those for women in their late 20's and in their 30 's have remained relatively stable, and those for women over 40 have declined. Although the fertility rate for the teenage group is highest, over half of the total infants born each year are born to mothers in their 20's (see Table 9).

Age of Parents.-Age of parents is an important variable in any analysis of birth statistics. The distribution of legitimate and illegitimate live births by age of the parents is given in Table 9, as well as the average age of parents.

Over 7 p.c. of the legitimate children born in 1961 were born to mothers under 20 years of age, in over one third of the births the mother was under 25 years, and in almost two thirds, under 30 years; in one out of six births the father was under 25 years of age, and in almost 48 p.c. of all births the father was under 30 years. On the other hand, over one third ( 38.1 p.c.) of the illegitimate infants born were born to mothers under 20 years of age and an additional one third to mothers under 25 years. The average age of all the married mothers to whom a child was born in 1961 was slightly over 28 , and of the fathers 31.4 years; ten years ago the average ages of the parents were 28.4 and 32.1 , and thirty years ago 29.2 and 33.6 , respectively.

Order of Birth.-Table 10 shows the order of birth of all live-born infants in 1961 according to the age of the mother. As would be expected, 29,105 or three out of every four of the 39,628 infants born to mothers under 20 years of age were first children, whereas almost six out of every ten of the children born to mothers of 20-24 years were second or later children. This is a reflection of the earlier marriages and heavy fertility of recent years. In 1961, 230 infants were born to mothers who had not yet reached their 15th birthday.

Stillbirths.*-The 6,019 stillbirths in 1961 represented a ratio of 12.7 for every 1,000 foetuses born alive. As is evident from Table 12, the stillbirth rate has been decreasing steadily and has been cut by more than half over the past quarter-century. Although the variations between provincial rates have never been wide, rates in some provinces have been reduced more than in others.

The stillbirth rate among unmarried mothers has been consistently higher than that among married mothers, but the difference has been narrowing in recent years; in 1959, for example, the rate for unmarried mothers was actually lower than that for married mothers, but this was reversed again in 1960 and 1961.
12.-Stillbirths and Rates per $\mathbf{1 , 0 0 0}$ Live Births, by Province, 1941-61

${ }^{1}$ Exclusive of Newfoundland for all years and the Yukon and Northwest Territories for 1941-50. ${ }^{2}$ Figures for Newfoundland are included from 1949.

Table 13 illustrates the fact that the risk of having a stillborn child increases with the age of the mother. Although stillbirth rates for mothers of all ages have been declining, they continue to be three to four times as high for mothers over 40 years of age as for mothers under 30 .

[^60]The average age of mothers who bore stillborn children in 1961 was 30.2 years; as shown in Table 9, the average age of mothers who bore legitimate live-born children was 28.1 and of those who bore illegitimate live-born offspring was 23.6.

## Section 3.-Deaths*

No official crude $\dagger$ death rates are available prior to 1921, but some indication of these may be gleaned from studies of the early censuses as follows:-

| Intercensal Period | Estimated Average Annual Crude Death Rate (per 1,000 Population) | Intercensal Period | Estimated Average Annual Crude Death Rate (per 1,000 Population) |
| :---: | :---: | :---: | :---: |
| 1851-61.. | 22 | 1891-1901....... | 16 |
| 1861-71. | 21 | 1901-11.. | 13 |
| 1871-81. | 19 | 1911-21.. | 13 |
| 1881-91. | 18 | 1911-21... | 13 |

As is typical of pioneer populations, Canada had a high death rate in the mid-1850's when the country was still in the throes of pioneer settlement. The crude death rate during that period is estimated as between 22 and 25 . Although no data are available, it is assumed that, while mortality at all ages was high, the rate among infants, children and young adults must have been particularly so since even in the 1920's mortality in these ages was still quite high. With the gradual increase in population density and in urbanization and improved sanitation and medical services, the crude rate was gradually halved during the 80 years between 1851 and 1930, dropping from about 22 to 11 . It declined steadily to slightly over 8 in the late 1950 's and dropped to a low of 7.7 in 1961. This is one of the lowest crude rates in the world.

Table 1, pp. 220-221, shows the trends since 1941 in the several provinces. The generally low rates in the Prairie Provinces are partly the result of their younger average population; the uniformly higher rate in British Columbia is mainly attributable to a high proportion of people in the older age groups.

[^61]
## Subsection 1.-General Mortality

Age and Sex Distribution of Deaths.-During the period of national vital statistics (1921 to date), the mortality pattern at all ages was steeply downward. Of major significance in lowering the over-all death rate, referred to on $p .237$, were the reductions in infant mortality, in childhood death rates and in those of young adults. In 1931 over 19 p.c. of all male deaths occurred among persons of five to 45 years of age; in 1961 only a little over 10 p.c. of all male deaths took place in this age group. Among females in the same age group the proportion dropped from just under 22 p.c. to less than 8 p.c. in the same period. While death rates for males up to age 45 were roughly halved during the past 25 years, those for females under 45 years were reduced as much as three to four times. In other words, the death rates for females at every age declined more than those for males; the male rates have almost always been consistently higher than those for females and the differences are widening. The crude male death rate stood at 9.0 per 1,000 total male population in 1961 as compared with only 6.5 for females.

Despite the very considerable reduction in infant mortality over the past 25 or 30 years, more deaths still occur in the first year of life than in any other single year. Of the 104,517 deaths occurring in 1931, 25,737 or almost one quarter were of children under five years of age and over three quarters of those were of children under one year of age. On the other hand, of the 140,985 deaths in 1961, 14,938 or 11 p.c. were of children under five years of age, and of those 12,940 or over 86 p.c. were under one year. Most of the reduction took place among children over the age of one month but there was also a notable decrease in all childhood ages up to five years.

The reductions in the mortality rates in early and middle years of life have had the effect of increasing the number of people in the older age groups and raising the average age at death. In 1931 the average age at death of males was 43.1 years and of females 44.8 years; by 1961 this had advanced to 59.7 years and 63.1 years, respectively.

These trends are indicated clearly in Table 14.

[^62]14.-Distribution of Deaths, by Age and Sex, 1931, 1941, 1951 and 1961-concluded

${ }^{1}$ Excludes the Yukon and Northwest Territories.
Deaths in Urban Centres.-Table 2 on pp. 222-226 shows the number of deaths in 1961 for urban centres of 10,000 population or over. Without a knowledge of the age composition of each centre it is difficult to compare rates for various centres. The migration of young people from rural areas to certain urban centres and of older people to other centres creates a favourable situation for a low or high rate as the case may be. However, despite differences in the age factor, some urban areas have very low death rates compared with other centres of the same size and with other areas in the same province.

Causes of Death.-Table 15 summarizes the most recent figures for deaths and death rates in Canada grouped according to the International Abbreviated List of 50 Causes. About 80 p.c. of the deaths are caused by diseases of the heart and arteries, cancer, accidents, diseases of early infancy, the respiratory diseases-tuberculosis, pneumonia and influenza-and nephritis.

## MAJOR CAUSES OF DEATH

[^63]The rise in the average age at death has already been noted (p. 238). Deaths from causes that mainly affect children and young adults have declined. Diphtheria, for example, has been almost wiped out-in fact there were only 12 deaths from diphtheria during the years 1960 and 1961 and not a single one in 1959-and tuberculosis has been greatly reduced. On the other hand, the aging of the population has increased the proportion of deaths from certain causes that affect older people. Thus, cancer and diseases of the cardiovascular-renal systems now account for a substantially larger proportion of all deaths than formerly.

These trends indicate the remarkable success that has attended the attack by health authorities on the infective and contagious diseases which in the past have constituted such a great hazard in the early and young adult years of life. They have served similarly to emphasize the emergence of the chronic and degenerative conditions of later life as the targets toward which the public health programs of the future will be directed. In effect, Canada has shared the experience of most western nations in exchanging a high mortality in younger life for high morbidity in older age groups.

The chart on p. 240 shows death rates for the major cause groups from 1936-61.

## 15.-Deaths and Rates per 100,000 Population, according to the International Abbreviated List of 50 Causes, 1960 and 1961

${ }^{1}$ Many rates have been revised since the publication of the 1962 Year Book; see headnote to Table 1. ${ }^{2}$ Per 100,000 males. $\quad{ }^{3}$ Per 100,000 live births.

## Subsection 2.-Infant Mortality

Table 1, pp. 220-221, and Table 16 show the striking improvement that has taken place in the rate of infant mortality during the past twenty years. Although 68,307 of the $2,372,737$ children born in the five years 1957-61 died before reaching their first birthday, 154,730 others lived who would have died at the rate prevailing in the period 1926-30. This improvement is attributed to many factors-the higher proportion of births taking place in hospital or under proper prenatal and postnatal care, better supervision of water supplies, improved sanitation, pasteurization of milk, the use of antibiotics, improved pædiatric, obstetrical and hospital nursing services, improved home environment as a result of higher living standards and, in recent years, the generally lower age of mothers.

The variations that exist in infant mortality rates from province to province and from one locality to another may be explained by differences in the extent to which these factors apply provincially or locally.

Table 16 shows that mortality among male infants is 25 to 30 p.c. higher than that among female infants for Canada as a whole, with wider variations for the individual provinces. For the country as a whole, in 1961, out of every 1,000 infant boys born alive, 30 died before reaching their first birthday, whereas out of every 1,000 infant girls born alive, 24 died within one year. As already pointed out, there are on the average 1,057 males born to every 1,000 females but, because male infant mortality is higher, the excess of males is reduced greatly by the end of the first year. For example, in 1959-61 there were 736,505 male children born compared with 697,021 female children, an excess of 39,484 or 5.7 p.c.;
during the same period, 22,846 male children died during their first year compared with 16,766 female children so that the excess of males at one year of age was reduced to 33,404 or under 5 p.c.
16.-Distribution of Infant Deaths by Province and Sex, 1941-61

${ }^{1}$ Excludes Newfoundland and the Yukon and Northwest Territories.
Age at Death.-In 1961 the ages of the 12,940 infants who died within a year of birth were by no means evenly spread over the twelve-month span. In fact, 11,824 or 91 p.c. of the infants were less than six months old and 8,564 or 66 p.c. were less than one month old. There was a sharp drop to 1,071 in the second month with gradual reductions thereafter to the eleventh month. Of the 8,564 deaths during the first month, 7,523 occurred in the first week of life and no less than 4,797 took place in the first day.

Causes of Infant Deaths.-In 1961 more than two thirds of the infant deaths were caused by immaturity, congenital malformations, pneumonia, postnatal asphyxia and atelectasis, and injury at birth. Immaturity was the underlying cause of 2,284 and was an added complication in 3,007 others. Congenital malformations accounted for 2,192 fatalities. Pneumonia took the lives of 1,683 infants. Postnatal asphyxia accounted for 1,502 deaths and injury at birth for 1,264 .

## LEADING CAUSES OF INFANT DEATHS

* due to changes in classification, not strictly comparable over the period; includes all deaths involving IMMATURITY EITHER AS THE UNDERLYING CAUSE OR AS A COMPLICATION.
*     * INCLUDES CATEGQRIES $774-776$, INTERNATIONAL STATISTICAL CLASSIFICATION ( 6 th. 87 th. Rev.) WHERE IMMATURITY REPORTED ALONE AS UNDERLYING CAUSE.

Infant Mortality in Urban Centres.-Because of the relatively small numbers of infant deaths in individual cities and towns, the rates for these centres usually vary widely from year to year. As is evident from Table 2, pp. 222-226, many cities and towns have maintained consistently low rates as compared with the national rate or the rate for the province in which they are situated.

## Subsection 3.-Maternal Mortality

As indicated in Table 1, pp. 220-221, the number of mothers who die in pregnancy and childbirth has been greatly reduced during the past two decades. Although the number of births has been much greater in recent years, the number of maternal deaths declined steadily from 1940 (when there were 978 deaths and a rate of 40 deaths for every 10,000 births delivered alive) to 255 in 1957; the slightly higher figure of 263 in both 1958 and 1959 was followed by all-time lows of 215 in 1960 and 219 in 1961. Since 1945 the rate of maternal mortality has been less than 20 per 10,000 live births, since 1951 it has been under 10, and in both 1960 and 1961 it was under five. Despite this improvement, Canada's maternal death rate ( 4.6 in 1961) is higher than the rates for several other countries such as Sweden (3.7), England and Wales (3.4) and the United States (3.2). Mortality among unmarried mothers is higher than among married mothers.

Age at Death.-Table 18 shows the distribution of maternal deaths by age group and average age at death; the latter is about four years higher than the average age of all mothers at the time of childbirth. Until recent years, the risk of mortality at childbirth was directly related to the age of the mother-in other words, for all mothers of over 20 years the rate rose with increasing age. While death rates for all age groups of mothers have been declining, there have been rather significant changes in the rates. Formerly, the rate for mothers in the age group $30-34$ was twice or three times as high as the rate for the $20-24$ group, but recently mortality rates for the four age groups of mothers under 35 years of age have not been far apart, although after age 35 a sharp rise occurs.

Causes of Maternal Deaths.-Table 19 shows the main causes of maternal deaths during the years 1959-61. Until a decade or so ago, sepsis and toxæmia were by far the most important causes of death of mothers at childbirth. The danger of death from sepsis and other infection has been sharply reduced over the past 15 to 20 years through the use of antibiotics and probably also through increased use of medical services. On the other hand, the number of deaths caused by toxæmia arising during pregnancy and other complications of both pregnancy and delivery represent continuing problems. Hæmorrhage during pregnancy or delivery, which has been another important cause of mortality among mothers, has shown some reduction in recent years.

Of the 219 maternal deaths in 1961, 53 resulted from complication arising during pregnancy, more than half of these from some type of toxæmia; 96 resulted from a complication of delivery, 44 from a post-delivery complication and 26 from abortive delivery.

## Section 4.-Natural Increase*

The excess of births over deaths, commonly referred to as natural increase, is a very important factor in the growth of a population. Although, as previously stated, the collection of Canadian birth and death statistics began only in 1921, some idea of the rate of

[^66]natural increase in the early Canadian population may be learned from the estimates shown at the beginning of Sections 2 and 3, which resulted in the following natural increase rates:-

| Intercensal Period | Estimated <br> Average Annual Natural <br> Increase Rate (per 1,000 <br> Population) | Intercensal Period | Estimated Average Annual Natural <br> Increase Rate (per 1,000 Population) |
| :---: | :---: | :---: | :---: |
| 1851-61. | 23 | 1891-1901. | 14 |
| 1861-71. | 19 | 1901-11 | 18 |
| 1871-81. | 18 | 1901-11 | 18 |
| 1881-91.. | 16 | 1911-21... | 16 |

Because of the combination of high birth rates and declining death rates-despite the fact that death rates were still relatively high-the annual rate of natural increase during the late 1800's and early 1900's varied between 14 and 23 ; in other terms, the population increased at the rate of 1.5 p.c. to 2.5 p.c. each year by natural increase alone, regardless of any increase attributable to immigration. During the 1920's and early 1930's the birth rate declined more than the death rate and the natural increase rate dropped to a record low of 9.7 in 1937. But higher birth rates during and after World War II and a gradually declining death rate caused the natural increase rate to rise steadily from 10.9 in 1939 to a record 20.3 in 1954. Although after that year there was a slight drop because of the declining birth rate, the natural increase rate stood at 19.0 in 1960 and 18.4 in 1961.

Table 20 shows the rates of natural increase in the provinces and for each sex separately for the 20 years 1941-61. The high rates in the Prairie Provinces, especially Alberta, are partly accounted for by their relatively younger populations and consequent low death rates. High birth rates and declining death rates have given Newfoundland, Alberta, Quebec, New Brunswick and Saskatchewan the highest rates of natural increase in Canada in recent years (excluding the Yukon and Northwest Territories).

## 20.-Natural Increase and Rates per 1,000 Population, by Sex and Province, 1941-61

Note.-Adjustments in intercensal populations on the basis of 1961 Census figures necessitated the revision of many of the 1959 and 1960 natural increase rates that appeared in the 1962 Year Book.

20.-Natural Increase and Rates per 1,000 Population, by Sex and Province, 1941-61—concluded

'Figures for Newfoundland are included from 1949 and those for the Yukon and Northwest Territories from 1950.

The rates of natural increase are higher for females than for males in all provinces because of the higher death rates for males. In the western provinces particularly, the ratio of males to females in the total population is higher than in other parts of Canada and this in itself tends to lower the rate of natural increase. In Canada, a country with a fairly young population and where immigration has been on a large scale, an excess of males is to be expected but the higher rate of natural increase for females may gradually reduce this excess. The trend is toward an eventual excess of females in the total populationas there now is in most European countries-unless immigration again raises the male ratio or death rates among males are greatly reduced.

Natural Increase in Urban Centres.-The classification of births and deaths by place of residence makes it possible to compile the natural increase in the population of urban centres; the figures are presented in Table 2, pp. 222-226.

## Section 5.-Marriages and Divorces

## Subsection 1.-Marriages*

In 1961 Canada's crude marriage rate was 7.0 per 1,000 population, the lowest in over 20 years. Provincial rates varied from 6.0 per 1,000 population for Prince Edward Island to 7.9 for Alberta.

Table 21 provides a summary of the number of marriages and the marriage rates per 1,000 population for Canada and the provinces for the years 1941, 1951 and the three consecutive years 1959-61, and percentages of brides and bridegrooms, for the same years according to place of birth. For the country as a whole, over 82 p.c. of the grooms of 1961 were born in Canada and almost 68 p.c. in the province in which they were married; almost 86 p.c. of the brides were born in Canada and over 74 p.c. in the province in which they were married. However, as would be expected because of heavy immigration of young persons in the postwar years, an increasing number of marriages are of persons born outside the country. For example, 17.9 p.c. of the grooms married in 1961 were born outside Canada compared with 11.7 p.c. in 1941 ; for brides the proportions were 14.1 p.c. and 8.4 p.c., respectively. However, there are wide variations in this pattern as between provinces; in the older Atlantic Provinces and Quebec there is a greater tendency than in the other provinces to marry native Canadians. In these areas both partners in a marriage are often born in the same province.

* For international comparisons, see Section 7, pp. 256-257.

${ }^{1}$ Newfoundland included from 1951 and the Yukon and Northwest Territories from 1959.
Age and Marital Status of Brides and Bridegrooms.-Table 22 shows that over 91 p.c. of the marriages in 1961 were between persons who had not been married previously; 5.1 p.c. of the brides and 4.5 p.c. of the bridegrooms had been widowed, and almost 4 p.c. of the marriages were of divorced persons. The average age at marriage of bachelors was just under 26 years and that of spinsters just under 23 years. The average age of widowers and widows at time of remarriage was slightly more than double that of
bachelors and spinsters. Of the spinsters married in 1961, 92 p.c. were under 30 years of age, 35 p.c. were under 20 years and 46 p.c. were between 20 and 25 . Over 84 p.c. of the bachelors were under 30 years of age, 7 p.c. of them under 20 and over 51 p.c. from 20 to 24 years of age.

In recent years, couples have been marrying younger than they did a generation ago. Since 1940 the average age of men at the time of their first marriage has dropped from 28 years to less than 26 ; that of girls from 24 years, 5 months to less than 23 years.

Religious Denominations of Brides and Bridegrooms.-The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 23 shows the very strong influence that religion has on
marriage. About 71 p.c. of all marriages are between persons of the same religious denomination; in 1961 among those of Jewish faith it was about 93 p.c.; among Roman Catholics about 88 p.c.; United Church about 60 p.c.; and Eastern Orthodox about 67 p.c.

## Subsection 2.-Dissolutions of Marriage (Divorces)

Before World War I the number of divorces granted in Canada was very small. There were fewer than 20 divorces each year from Confederation to 1900, 21 in 1903, 51 in 1909 and 60 in 1913. These numbers represent less than one per 1,000 of the yearly number of marriages. At the end of World War I the number of divorces showed a definite increase, advancing to a peak of 8,213 in 1947, then declining gradually to a postwar low of 5,270 in 1951. From 1952 to 1959 the number fluctuated between 5,650 and 6,688 , rose to 6,980 in 1960 and declined to 6,563 in 1961. Preliminary figures show there were 6,709 in 1962, a slight increase over 1961, despite the fact that no divorces were approved by the Canadian Parliament during the year for residents of Quebec and Newfoundland.

## 24.-Dissolutions of Marriage (Divorces), by Province, 1941-62

Nore.-Figures for individual years from 1900 to 1952 are given in the 1956 Year Book, p. 230.

## Section 6.-Canadian Life Tables

Four official series of life tables for Canada and the provinces and regions have been published to date, based on deaths in the three-year period around each of the Censuses of 1931, 1941, 1951 and 1956. In addition, tables have been computed for Canada as a whole for the years 1945 and 1947 but, since these are based on estimated populations by sex and age and the deaths recorded in those years, they are not considered as reliable as those for the census years. The life table values for 1956 are given in abbreviated form in Table 25.

Life tables give some measure of the health and general conditions of survival of an 'artificial' population in a conventional, standard form. A hypothetical number ( 100,000 ) of births of each sex is assumed as a starting point. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. For example, during the year 1956, of 100,000 males born, 3,472 died in their first year so that 96,528 survived to one year of age; 241 died in their second year so that 96,287 survived to two years of age, and so on. At 100 years of age only 87 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally, the expectation of life is the number of years which a person on the average might expect to live if the mortality rates in the given years remained constant throughout his lifetime.

Mortality rates at all ages for males have been almost consistently higher than for females. Males have the highest risk of mortality as compared with females during their first year of life, from their late 'teens to early 30 's and from age 50 to 65 . For both boys and girls the risk of mortality drops rapidly during childhood and is lowest at about age 10, increases gradually to about age 40 for males and about 50 for females and then rises steeply with advancing age. As an illustration of the information available from study of the life tables, it may be observed that at the mortality rates given in the 1956 life table (see Table 25) about 13,000 males would have died before reaching age 50 as compared with about 8,700 females; only 56,466 of the original group of 100,000 males would have survived to age 70 as compared with 70,327 females.

25.-Canadian Life Table, 1956-concluded

By 1956, life expectancy at birth in Canada had reached a new high record of 67.6 years for males and 72.9 for females-comparable to the expectancy for other countries of the world with highly developed programs of medical and public health care. Once a child has passed its first year of life, however, its life expectancy increases appreciably. At one year of age a male child at present mortality risks may, on the average, expect to live an additional 69.0 years and a female 74.0 years, representing for an infant boy a gain of 1.4 years over his expectation at birth and for an infant girl a gain of 1.1 years. The expectation of life of a 15 -year-old boy is 55.9 additional years; of a 15 -year-old girl 60.6 years. At 25 years of age the expectation is about 46.6 years for men and almost 51 years for women and at age 70, 10.5 years for men and 12.2 years for women.

Table 26 summarizes the life expectancy figures extracted from the Canadian life tables for 1931, 1941, 1951 and 1956. According to these figures, life expectancy at birth for men increased 1.3 years from 1951 to 1956 compared with 3.4 years from 1941 to 1951 and 2.9 years from 1931 to 1941; females gained 2.1 years from 1951 to 1956 compared with 4.5 years and 4.2 years, respectively, in the preceding decades. Thus, from 1931 to 1956 a total of 7.6 years was added to male life expectancy and 10.8 years to female longevity.

The increases in life expectancy have been predominantly at the younger ages, particularly in infancy, and diminish with advanced age. For example, since 1931, 3.2 years have been added to the life expectancy of a five-year-old male, 2.1 years to a 20 -year-old, nine months to a 40 -year-old and three months to a 60 -year-old as compared with 7.6 years for a newborn male. During this period, life expectancy for a five-year-old female gained 7.2 years, for a 20 -year-old 6.0 years, for a 40 -year-old 3.7 years and for a 60 -year-old 2.2 years as compared with 10.8 years for a newborn female.

Longevity has improved for both sexes, though more so and at all ages for females, but there has been only slight improvement for males beyond middle life. Briefly, the
rapid decline in the death rate for infants of both sexes is continuing but the declines are slower with advancing age, so that relatively stationary death rates have been established from about 50 years onward for males and from about 80 years onward for females.

The fact that such a pattern exists is important in interpreting the results of these life tables. The arbitrary population base of 100,000 of each sex in the 1956 tables, for example, has been subjected to the mortality rates in effect in 1955-57, and the life expectancy computed as if those death rates at each age were to prevail during their lifetime. Actually the theoretical 200,000 infants born in 1955-57 will most probably have a pattern of survival and life expectancy quite different from that of the present life tables as they will spend most of their lives under conditions of public health and medical care which in all likelihood will be superior to those prevailing in 1955-57.

The improvement in life expectancy, particularly among children and adolescents, is caused mainly by the substantial reduction in recent years in mortality from infectious diseases; on the other hand, diseases associated with middle and old age are much less amenable to control. It is therefore unlikely that improvement in life expectancy in the future will be comparable to that of the past quarter-century. As approximately 11 p.c. of deaths in 1955-57 occurred among infants and an additional 75 p.c. among persons over age 50, any additional improvement must come as the result of further declines in mortality from conditions associated with childbirth and early infancy, further control of infectious diseases, prevention of accidents, and advances in combating diseases associated with middle and old age, such as cardiovascular-renal conditions and cancer.

## Section 7.-International Comparisons of Vital Statistics

Table 27 gives a summary of Canada's national and provincial vital statistics rates along with those of several other countries. It will be noted that among the countries listed the low crude death rate in Canada is bettered by four countries-Venezuela, the Union of Soviet Socialist Republics, Japan and the Netherlands-and that some of the provinces have lower rates than most other countries. The birth rate also helps to give Canada one of the fastest growing populations, currently ranking eighth among those listed. However, 13 countries reported lower rates of infant mortality.
27.-Principal Vital Statistics Rates of Selected Countries, 1961

Note.-Countries are ranked according to the highest rates for births, marriages and natural increase and according to the lowest for deaths.

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

Canada's growth in the past eighteen years has created many new problems in the planning of health and welfare services. Population has increased by one half in this period. General prosperity, growing urbanization and industrialization, larger numbers of children and old persons in the population, and new concepts and knowledge in health and welfare matters have all contributed to needs for additional services and to a greater interdependence among the different health and welfare professions.

During 1962, the Royal Commission on Health Services continued its investigation into the existing health facilities and the future needs for health services for the people of Canada; its report is expected to be made during the summer of 1963. The nation's attention was attracted to health problems by two major events during the year. The tragic

[^68]discovery early in 1962 that a number of babies were born with deformed limbs, presumably because their mothers had taken thalidomide early in pregnancy, focused attention on the legislation controlling the introduction of new drugs. Three amendments to the Food and Drug Act were made in 1962 tightening the control over the distribution of drugs, and the Medical Rehabilitation Grant was increased to provide funds for the care and treatment of children whose deformities were attributable to thalidomide. More than 65 such children had been identified by March 1963. The implementation of the Saskatchewan Medical Care Insurance Plan on July 1, 1962 was accompanied by the withdrawal of normal services by most physicians in the province and the creation of a temporary emergency service operated by the College of Physicians and Surgeons in 29 hospitals; by July 23 agreement was reached on certain amendments in the Plan and normal services were restored. The Ontario and Alberta Legislatures early in 1963 were considering the possibility of introducing provincial medical care insurance plans, but for the most part insurance for medical care in Canada was still based on voluntary prepayment plans with approximately one half the population enrolled. However, over 98 p.c. of the insurable population was covered under the nation-wide hospital insurance and diagnostic services program operated by the provinces with federal financial support. During the year more than three million patients were admitted to general hospitals and almost 95 p.c. of the half-million births occurred in hospital.

Development in the sciences related to medicine, improved health services, and better nutritional and other standards are contributing to generally favourable health conditions-to a declining death rate and a longer expectation of life. Substantial progress in the fight against contagious diseases has not yet been paralleled by progress in solving the problems presented by chronic illness and the disabilities of older persons. Heart and hypertensive diseases, arthritis and rheumatism are among the leading causes of disability, although residual disability from stroke, Parkinson's disease, epilepsy and multiple sclerosis also accounts for large numbers of disabled persons. The death rate from lung cancer continues to increase and the disease is the subject of continuing investigation. Interest in mental illness has increased in recent years and new approaches to the solution of this major problem are being explored. Accidents, especially traffic accidents, constitute a steady and tragic problem, particularly as they affect children. Canada shares the world-wide concern for the hazards of radiation from medical and industrial causes as well as from fallout, and has devoted considerable attention to this problem.

Progress in the welfare field also continues to be substantial and efforts are concentrated on remaining problems, some of which are of considerable magnitude. Ontario in 1962 introduced a Bill to extend and improve private pension plans and to make pension benefits portable; a revised version of the Bill was introduced in March 1963 and was passed by the Legislature early in May. At the same time, the Federal Government continued to develop its plans for a nation-wide contributory old age, survivors' and disability insurance program, and requested provincial approval for a constitutional amendment to give it necessary authority. In November 1962 the Federal Government established a welfare grant program providing grants for general welfare projects, professional training and research; initially $\$ 250,000$ was allocated for this program, with the expectation of a tenfold increase in the next five years. This program takes its place beside the $\$ 5,000,000$ fitness and amateur sport grant program introduced in 1961 and the health grant program introduced in 1948, which now has an annual allocation of $\$ 55,000,000$. Proposals for improved general assistance programs are being explored and Quebec, in December 1961, set up an independent Committee on Public Assistance to study this whole question, including appropriate allowance scales and the co-ordination of public and private efforts.

Rapid urbanization, large-scale immigration and increasing numbers of older persons in the population are among the forces requiring new approaches to Canada's welfare problems. At the same time, the growth of the industrial community has been associated with a marked improvement in the general standard of living. Higher real income has
permitted better levels of nutrition and better housing in the urban industrial centres. During the past decade, many urban services have been extended to the rural population, so that improvements in the national standard of living are being shared more equally by the urban and rural populations.

## PART I.-PUBLIC HEALTH

Provincial governments bear the major responsibility for health services in Canada, with the municipality often assuming considerable authority over matters delegated to it by provincial legislation. The Federal Government has jurisdiction over a number of health matters of a national character and provides important financial assistance to provincial health and hospital services. All levels of government are aided and supported by a network of voluntary agencies working in different health fields.

## Section 1.-Federal Health Activities

The Department of National Health and Welfare is the chief federal agency in health matters but important treatment programs are also administered by the Departments of Veterans Affairs and National Defence. The Dominion Bureau of Statistics is responsible for collection, analysis and publication of national health statistics, the Medical Research Council and the Defence Research Board administer medical research programs, and the Department of Agriculture has certain health responsibilities connected with food production.

The Department of National Health and Welfare controls food and drugs, including narcotics, operates quarantine and immigration medical services, carries out international health obligations, and provides health services to Indians, Eskimos and other special groups. It advises on the visual eligibility of applicants for blindness allowances and co-operates with the provinces in the provision of surgical or remedial treatment for recipients of the allowances. Under the Public Works Health Act, supervision of health conditions is provided for persons employed on federal public works. Health counselling and medical supervision are provided for the federal Civil Service. The Department also administers the civil aviation medical program for the Department of Transport.

The Department serves the provinces in an advisory and co-ordinating capacity and administers grants to provincial health and national voluntary agencies. Administration of federal aspects of the Hospital Insurance and National Health Grant Programs has become a major activity during the past decade.

Co-ordination with the provinces on health matters is facilitated by the Dominion Council of Health, the principal advisory agency to the Minister of National Health and Welfare. Its membership includes the Deputy Minister of National Health, who acts as chairman, the chief health officer of each province, and five appointees of the Governor in Council. The Council meets semi-annually. Federal-provincial technical advisory committees of the Council deal with specific aspects of public health.

## Subsection 1.-National Health Grant Program

The National Health Grant Program, inaugurated in 1948, initially made ten federal grants available to the provinces for the development and strengthening of public health and hospital services. Nine were continuing grants: the Hospital Construction, Professional Training, General Public Health, Public Health Research, Mental Health, Tuberculosis Control, Cancer Control, Venereal Disease Control, and Crippled Children Grants. A Health Survey Grant lapsed in 1953 following completion of provincial health surveys. In 1953, after a review of the first five years of the Program, three new grants were established: Child and Maternal Health, Medical Rehabilitation, and Laboratory and Radiological Services.

In 1958, federal assistance under the Hospital Construction Grant was increased to $\$ 2,000$ per hospital bed (whether active treatment, chronic, mental or tuberculosis), double the previous grant for active treatment beds. In addition, funds were made available to meet up to one third of the cost of approved alterations and renovations to existing facilities, with the federal contributions being at least matched by the provinces.

Beginning with the fiscal year 1960-61, a redistribution and merging of certain grants was effected to provide a more flexible measure of assistance and at the same time make larger amounts available for programs where additional aid was necessary. Adjustments were also required for services aided under certain grants, such as laboratory and radiological services and cancer control, now aided under the Hospital Insurance Program. The total allocation remained approximately the same but the number of separate grants was reduced to nine. The General Public Health Grant was increased by almost $\$ 5,500,000$ and projects under two previously separate grants-the Laboratory and Radiological Services Grant and the Venereal Disease Control Grant-were absorbed into it. The Medical Rehabilitation and Crippled Children Grants were merged and the combined allocation increased by more than $\$ 1,000,000$. The Mental Health Grant was increased by more than $\$ 1,500,000$, and the Professional Training and the Public Health Research Grants by about $\$ 1,250,000$ each. The Tuberculosis Control Grant was decreased by nearly $\$ 750,000$ and the Child and Maternal Health and Cancer Control Grants by lesser amounts. The grants for professional training and public health research, previously fixed amounts, were placed on a per capita basis, to increase with expansion of the population.

Up to Mar. 31, 1962, aid for hospital construction had been approved for 101,322 beds, 12,633 bassinets, 20,495 nurses' beds, 663 interns' beds, and space in community health centres and laboratories. Approximately 33,694 health workers had been trained or were undergoing special training and more than 6,500 health workers were employed with federal grant assistance. The proportion of the total grants appropriation paid out to the provinces has increased steadily. Payments in 1961-62 totalled $\$ 48,999,753$, or 89 p.c. of the amount available; the average utilization during the fourteen years of the program was 76 p.c.

[^69]
## Subsection 2.-Hospital Insurance

The federal-provincial hospital insurance program, established in all provinces and both territories, covers 98.7 p.c. of the insurable population of Canada. The system of federal grants-in-aid to the provinces to help meet the cost of specified hospital services is set out under the federal Hospital Insurance and Diagnostic Services Act of 1957. The methods of financing and administering the provincial plans, as well as the types of service offered above the minimum stipulated in the Act, rest with the provinces.

Federal legislation covers specified hospitals, generally including acute, chronic and convalescent institutions. Tuberculosis and mental hospitals are excluded from the federal-provincial plan, as are institutions providing custodial care. On the other hand, the psychiatric and tuberculosis units of general hospitals are included.

The range of in-patient benefits that, under the Act, is required to be provided includes standard ward accommodation and meals, nursing service, drugs and biologicals, surgical supplies, the use of operating and case rooms, diagnostic procedures (including X-ray and laboratory procedures) together with necessary medical interpretations, and the use of radiotherapy and physiotherapy facilities where available. The same benefits for outpatients, although authorized for assistance under the federal legislation, are not mandatory upon provincial plans. All provinces but one provide insured out-patient services. The pattern varies from province to province, but among the services offered are emergency care following accidents, diagnostic services and therapeutic services including minor surgical and medical procedures. Some provinces provide certain psychiatric out-patient services.

There is considerable variation between provinces in the administration and financing of programs. General revenues, provincial sales taxes and personal premiums are utilized, separately and in combination, in different provinces. The Federal Government pays each province 25 p.c. of the per capita cost of in-patient services in Canada as a whole, together with 25 p.c. of the per capita cost of in-patient services in the province, multiplied by the average for the year of the number of insured persons in the province. On a national basis, the federal contribution amounts to about 50 p.c. of shareable costs. However, for individual provinces the proportion of shareable costs met by the Federal Government varies, with a higher proportion of the cost of low-cost programs being met than of high-cost programs. Federal payments to the provinces under the program from July 1, 1958 to Mar. 31, 1962, as shown in Table 2, totalled nearly $\$ 680,000,000$.

[^70]The data appearing in Tables $\mathbf{3}$ to $\mathbf{5}$ pertain either to hospitals in the provinces participating during the whole calendar year or (where noted) to hospitals in provinces participating by the end of 1960 . The tables refer to hospitals listed in the hospital insurance agreements. Hospitals participating in hospital insurance programs are designated as "budget review hospitals", which comprise the bulk of hospitals listed in the agreements, and contract hospitals, which are defined in the hospital insurance regulations as private or industrial hospitals with which a province has contracted for the provision of insured services. Federal hospitals, also listed in the agreements, are included in Tables 3 and 4. Budget review hospitals include general hospitals designed for acute or short-term care, special hospitals and chronic hospitals.

On Dec. 31, 1960, nine provinces and both territories were participating in the hospital insurance program. The 1,024 hospitals of all categories reporting showed a total of 86,178 beds and cribs set up at the end of 1960, a rate of 6.7 beds per thousand population; provincial rates ranged from 4.3 in Newfoundland to 8.4 in Alberta. The volume of hospital days per thousand population also varied considerably from province to province; the rate for the nine provinces participating in the hospital insurance program during 1960 was $1,980.4$ days, a rate considerably below the averages in Saskatchewan and Alberta but well above the averages in Newfoundland and Prince Edward Island. In these nine provinces, 87.1 p.c. of all days of care in hospital were insured days in 1960.

[^71]The total cost of operating budget review hospitals in the nine participating provinces in 1960, including items of expense not covered under the hospital insurance program, was $\$ 462,400,000$. This total included $\$ 298,800,000$ for salaries and wages, $\$ 15,900,000$ for medical supplies, $\$ 20,100,000$ for drugs, $\$ 30,800,000$ for food, $\$ 63,900,000$ for other departmental supplies and expenses, and $\$ 32,900,000$ for other expenses consisting mainly of interest payments and depreciation allowances. Table 5 gives various classifications of these expenditures.

The per patient-day cost of salaries and wages ranged from a low of $\$ 8.67$ for Prince Edward Island to a high of $\$ 15.34$ for British Columbia, the average for the nine provinces being $\$ 13.88$. There was little variation among the provinces in costs of drugs and of medical supplies. Since raw food cost includes food supplied to staff, in-patients and visitors, the differences in such costs per patient-day probably reflect variations in the proportion of hospital staff taking meals at the hospitals rather than variations in the cost of food per meal served. The main items comprising "Other Supplies and Expense" are fuel, electricity, water, insurance, replacements of bedding and linen, laundry supplies, housekeeping and cleaning supplies, repairs to buildings, repairs to furniture and equipment, maintenance of physical plant, printing, postage, stationery, office supplies and telephone.

The total per capita operating cost of hospitals in the nine provinces was $\$ 36.43$, ranging from $\$ 21.06$ in Newfoundland to $\$ 42.33$ in Saskatchewan. The variations in total per capita expenses are very large, partly because of the variation in the number of hospital days of care provided per thousand persons in each province.

The percentage distribution of expenses shows that about 65 p.c. of the operating costs of the hospitals was for wages and salaries, 3 p.c. for medical supplies, 4 p.c. for drugs, 7 p.c. for food, 14 p.c. for other departmental supplies and expenses and 7 p.c. for depreciation, interest and other non-departmental expenses. British Columbia hospitals spent almost 68 p.c. of their operating funds on salaries and wages as compared with 52 p.c. in Prince Edward Island.

## Subsection 3.-Food and Drug Control

The Food and Drugs Act is a federal statute with provisions applying to the manufacture, advertising, packaging and sale of foods, drugs, cosmetics and medical devices anywhere in Canada. Wide powers are authorized under this legislation to maintain the
safety, purity and quality of food and drug products and to prevent misrepresentation in labelling and advertising. There are prohibitions, for example, on the sale of food or drugs that do not meet prescribed standards, are harmful, adulterated, dirty, improperly stored, or manufactured under unsanitary conditions. The Act also prohibits the advertising of any food, drug, cosmetic or medical device as a preventive or cure for a number of serious diseases and also lists drugs that may be sold only by prescription.

Standards of safety and purity are maintained through constant and widespread inspection and laboratory research. The inspection of food-manufacturing establishments plays a major role in the production of clean, wholesome foods. The sale for human consumption of meat from animals that were not healthy at the time of slaughter or that died from disease is expressly prohibited. With advances in modern food technology, methods of laboratory analysis must be developed to assure the safety of new types of ingredients and packaging materials. In recent years there has been an increase in the number of chemicals used in foods and the safety of the foods to which they are added becomes a matter for special research. Another subject of current importance is the bacteriology of frozen foods in guarding against contamination through improper storage of frozen foods already cooked. Since the Food and Drugs Act is intended for the protection of consumers, a section of the Food and Drug Directorate has been established to obtain consumer opinion and deal with individual consumer complaints as well as to provide sound information on which consumers can base opinions.

Drug standards are subject to continuous review and testing. Stringent licensing controls apply to drugs made for injection into the human body, such as vaccines, sera and antibiotics and, prior to licensing, the safety of the product is verified in federal laboratories. Detailed information on all new drugs must be reviewed by the Directorate before release for sale is permitted. The listing of drugs to be sold only on prescription is determined in co-operation with the medical and pharmaceutical associations. In general, any drug that can be classed as a sedative, hypnotic or tranquillizer goes automatically on the prescription list. To provide more effective control of certain drugs coming mainly under the class of barbiturates and commonly known as 'goof balls', an amendment to the Food and Drugs Act was enacted in 1961. This requires the licensing of persons dealing in these substances, as well as the keeping of special records, and limits the importation, manufacture, distribution and use of such drugs to medical purposes.

The Food and Drug Directorate also administers the Proprietary or Patent Medicine Act which is concerned with the registration before marketing and the annual licensing of secret-formula medicines sold under proprietary or trade names.

Regulation of the supply and use of narcotic drugs is carried out under the Narcotic Control Act. The legislation, as revised in 1961, authorizes more severe penalties for smuggling and trafficking in narcotic drugs, and introduces special provisions relating to the control and custody of narcotic addicts for purposes of treatment. The minimum sentence of six months for illegal possession is removed and the legislation now prescribes a penalty of seven years with no minimum for this offence; the maximum penalty for trafficking is increased from 14 years to life imprisonment; and illegal export and import is established as a special offence for which the minimum and maximum penalties are, respectively, seven years and life imprisonment. Persons convicted of offences under the Act who are found to be drug addicts may be sentenced for treatment, for an indeterminate period, in institutions that will operate under the penitentiaries system and the National Parole Board service.

During 1962 three amendments to the Food and Drug Act were enacted to reinforce certain aspects pertaining to the control of drugs. These were concerned with providing authority (1) to prescribe the conditions respecting the distribution of samples of drugs by pharmaceutical manufacturers to the medical, dental, veterinary and pharmacy professions; (2) to prohibit the sale of certain designated drugs (Schedule H) in the interests of public health; and (3) to define more clearly the requirements regarding the introduction of new drugs for clinical trial and marketing.

## Subsection 4.-Medical Services

Indians and Eskimos.-Through the Directorate of Medical Services, the Department of National Health and Welfare staffs and operates various facilities for a registered population of about 192,000 Indians and 12,000 Eskimos. Responsibility for the general welfare of Indians and Eskimos in the community is shared with the Indian Affairs Branch of the Department of Citizenship and Immigration and with the Department of Northern Affairs and National Resources.

In the provinces, the Department provides medical and public health services to registered Indians or Eskimos who are not included under provincial arrangements and who are unable to afford to provide for themselves. A large volume of the service in treatment and health education is rendered to patients through departmental clinics of the outpatient type which are staffed by medical and other public health personnel. In remote areas, the key facility is frequently the departmental nursing station, a combined emergency treatment and public health unit having two to four beds under the direction of one or two nurses; about 50 of these were operated throughout Canada in 1962. The Department maintains about 20 hospitals at strategic points and co-operates elsewhere with community, mission or company hospitals. General and chronic hospital care is prepaid as part of provincial hospital insurance schemes, and mental and tuberculosis care is met directly by the Federal Government.

The accessibility of essential medical and health services to most of the Indian population and, to a lesser extent the Eskimo, has made possible a steady decline in the incidence of disease, although the rate is still high. Wherever practicable, there has been an increasing integration with provincial and municipal health agencies. Native health workers are being trained to give instruction in health care and sanitation.

Northern Health.-Because of the special problems in developing health services in the Far North, the Directorate has been given the responsibility of co-ordinating federal and territorial health care for all residents. In so doing, it undertakes the functions of a health department for the Council of the Northwest Territories and assists the territorial government of the Yukon in its steps to provide certain health services. A close liaison is maintained with the federal departments directly responsible for administrative matters affecting these groups or geographic areas.

In the Yukon Territory, services for the white population administered through the Commissioner for the Yukon and provided on a cost-sharing basis with the Department of National Health and Welfare include complete treatment for tuberculosis, payment for services rendered at the Alberta cancer clinics, mental hospital care through arrangements with the Province of British Columbia and medical care for indigent patients. Public health nursing services, measures for control of communicable diseases, and administration of the principal public hospital are primarily the responsibility of the Northern Health Service of the Department of National Health and Welfare. In the Northwest Territories similar services are administered through the Northern Health Service, the costs being shared by the Department of Northern Affairs and National Resources and the Department of National Health and Welfare. Indigent residents are eligible for medical, dental and optical services as well as for tuberculosis and mental care.

Hospital insurance plans in both the Yukon and Northwest Territories came into operation in 1960.

Immigrants.-The Department of National Health and Welfare advises on the administration of sections of the Immigration Act dealing with health, and conducts in Canada and other countries the medical examination of applicants for immigration. It also provides care for immigrants who become ill en route to their destination or while awaiting employment. Further assistance in the provision of hospital and medical services is available to indigent immigrants during their first year in Canada, either from the Federal Government or from the province with federal sharing of costs.

Quarantine.-Under the Quarantine Act, all vessels, aircraft and other conveyances together with their crew members and passengers arriving in Canada from foreign countries are inspected by quarantine officers to detect and correct conditions that could lead to the entry and spread of quarantinable diseases in Canada. Fully organized quarantine stations are located at all major seaports and airports.

Under the provisions of the Leprosy Act, modern facilities for the diagnosis and treatment of leprosy are provided at Tracadie, N.B., for the small number of persons in Canada suffering from this disease.

Sick Mariners.-Under the authority of Part V of the Canada Shipping Act, the Department of National Health and Welfare provides prepaid health services for crew members of foreign-going ships arriving in Canada and Canadian coastal vessels in interprovincial trade; crew members of Canadian fishing and government vessels may participate on an elective basis. Hospital care of crew members having residence in Canada is the responsibility of the provincial hospital insurance authority concerned.

Civil Aviation Medical Service.-Medical examiners are responsible for the standard of physical fitness of personnel flying civil aircraft.

Civil Service Health Counselling Service.-Formerly available chiefly to the public service in Ottawa, health counselling is now offered through major medical services units to federal employees throughout the country.

## Subsection 5.-Medical Research and International Health

Medical Research.*-Medical research in Canada is carried on in universities and hospitals and by research institutes and government departments. Financial support for such research, provided by the federal and provincial governments, by private foundations and voluntary agencies and by the universities and hospitals themselves, assists in establishing research fellowships for training, in providing salaries to established investigators and in the awarding of grants in aid of research in the various disciplines of the medical sciences.

The Department of National Health and Welfare conducts intramural research related to its statutory functions and with the object of preserving and improving the health of Canadians. Within the Department, research is done in the laboratories or clinic services of the Health Services Directorate (particularly its Laboratory of Hygiene and Divisions of Occupational Health, Radiation Protection, Nutrition, and Epidemiology), of the Food and Drug Directorate, and of the Medical Services Directorate. In the Administration Branch, the Research and Statistics Division carries out special studies, including surveys, in social and medical economics. The Department of National Defence maintains well-equipped laboratories in which research is carried out concerned chiefly with raising the operating efficiency of the person working in the military environment. The Department of Veterans Affairs encourages research in its own hospitals, mainly in the fields of chronic illness such as arthritis, atherosclerosis, and metabolic, nutritional, neurological and mental disorders.

A great variety of medical problems are studied in medical school laboratories, hospitals and other medical institutes. In this area, funds from the federal treasury are provided through the Medical Research Council, the Department of National Health and Welfare and the Defence Research Board. The Medical Research Council has an interest in the broad field of the medical sciences and has an established policy with respect to the support of scientific personnel and to grants in aid of research. The former category involves awards to Medical Research Fellows who are in training, as well as to Medical Research Scholars and Medical Research Associates who are independent scientists, the first less senior than the second. The grants in aid of research involve assistance

[^73]covering the whole or part of the costs of investigations in the basic medical sciences, such as anatomy, physiology, pharmacology, biochemistry, bacteriology and pathology, as well as of investigations in the clinical sciences, including experimental medicine and surgery.

The Department of National Health and Welfare provides grants in aid of medical research sponsored by the provinces and conducted in universities, hospitals and other institutions from funds established under the National Health Grant Program (see p. 260). The Public Health Research Grant makes available about $\$ 1,800,000$ annually to assist in stimulating and developing public health research including studies on health services and on hospital administration. In addition, other grants in the areas of mental health, child and maternal health, general public health, and medical rehabilitation and crippled children amount to an approximate $\$ 2,000,000$ annually. This grant-providing program is guided by research sub-committees for various subjects, by a Research Advisory Committee of the Dominion Council of Health, and by conferring with representatives from provinces, from other federal agencies (the Medical Research Council, the Defence Research Board, and the Department of Veterans Affairs) and from voluntary groups such as the National Cancer Institute.

The Defence Research Board awards grants for research related to problems of importance for defence such as shock, preservation of blood, use of blood substitutes, effects of low temperature, etc.

Provincial branches of the Canadian Cancer Society and such government foundations as the Ontario Cancer Treatment and Research Foundation, and the Alcoholism and Drug Addiction Research Foundation give financial support for research in their fields in medical schools and hospitals. Fraternal societies and clubs such as the Rotary Club and private foundations like the J. P. Bickell Foundation, the Atkinson Charitable Foundation, the Muscular Dystrophy Association of Canada, the Canadian Life Insurance Officers Association, the Banting Research Foundation, the Multiple Sclerosis Society and pharmaceutical companies also contribute significantly to the support of medical research in Canada and, in addition, it should be mentioned that granting agencies in the United States give funds in aid of research to many investigators working in universities in Canada.

International Health.-Canada actively assists and co-operates with the World Health Organization and the other specialized agencies of the United Nations whose programs have a substantial health component or orientation. Capital and technical assistance are provided to under-developed countries through the Colombo Plan and other bilateral aid programs. Health training is provided for a number of persons coming to Canada each year under the different technical co-operation schemes (see p. 148 and pp. 153-154). In this respect, during the year 1962 a total of 185 scholars and trainees in a wide range of health disciplines were in Canada under the External Aid Program commencing, continuing or completing their respective studies or observation courses. Some 36 additional applications were being processed or placement was pending at the year's end.

Canadian experts in health legislation and public health engineering undertook specific assignments abroad during the year and specialists in anaesthesiology, pathology and medical technology were provided for teaching and service in Ghana. A radiologist together with two additional anaesthesiologists were recruited for the staff of the developing medical school in Nigeria. By way of capital assistance, the provision of cobalt beam therapy units for centres in the Colombo Plan area was continued. By the end of 1962, 11 units had been shipped, five additional were on order, one new source had been shipped and one was on order.

At the sixteenth World Health Assembly in May, Canada was elected to name a person to serve for a three-year term on the Executive Board of the World Health Organization. Having been elected to the Executive Board of UNICEF by ECOSOC during the previous year, Canada's term of office on that body commenced at the beginning of the year and similarly extends over a three-year period.

To carry out Canada's obligations under the International Sanitary Conventions, the Department of National Health and Welfare maintains quarantine measures for ships and aircraft entering Canadian ports and provides accommodation and necessary medical care for persons arriving in Canada who require quarantine (see p. 268).

The Department is responsible for the enforcement of requirements governing the handling and shipping of shellfish under the International Shellish Agreement between Canada and the United States and, at the request of the International Joint Commission, participates in studies connected with control of pollution of boundary waters between Canada and the United States as well as with problems caused by atmospheric pollution. Other international health responsibilities include the custody and distribution of biological, vitamin and hormone standards for the World Health Organization and certain duties in connection with the Commission on Narcotic Drugs of the United Nations.

## Section 2.-Provincial and Local Health Services

Provincial and local health services may be grouped into several broad categories: general public health services, primarily of a preventive nature; services for specific diseases or disabilities combining prevention and treatment; services related to general medical and hospital care; and rehabilitation services for disabled persons.

## Subsection 1.-General Public Health Services

Provincial and local governments co-operate closely in providing community public health services. The autonomy of the provinces and their social, economic and geographic diversity make for some variety in legislative provisions, in financial arrangements and in the detailed division of functions between provincial health departments and local and voluntary agencies. Each province, however, offers all or nearly all of a basic range of public health services which includes environmental health, occupational health, communicable disease control, maternal and child health, dental health, nutrition, health education, and public health laboratories.

Environmental Health.-The control of factors in the environment that are harmful to physical health is a rapidly expanding area of public health activity. For many years, much of the work in this field was related to inspection duties long associated with community health sanitation, such as maintenance of pure milk, water and food supplies, supervision of plumbing and sewage disposal systems, and provision of general sanitary conditions in public areas. Increasing industrialization, however, has imposed new responsibilities calling for new techniques in public health engineering and sanitary services. Air pollution, water pollution and radiation are emerging as major environmental health problems, necessitating co-ordinated effort by governments and other agencies in research and in planning effective control measures.

Occupational Health.-Services designed to prevent accidents and occupational diseases and to maintain the health of employees are the common concern of provincial health departments, labour departments, workmen's compensation boards and industry management. Provincial agencies regulate working conditions and offer consulting and educational services to industry. All provinces have legislation (Factory Acts, Shop Acts, Mines Acts, Workmen's Compensation Acts) setting health safety standards for employment.

Communicable Disease Control.-There are separate divisions of epidemiology or communicable disease control in six provinces; in the other provinces these functions are handled by provincial medical health officers. Local health authorities undertake casefinding and diagnostic services in co-operation with public health laboratories, carry out epidemiological investigations and often participate in tuberculosis and venereal disease control measures.

Through agreements with the Federal Government, all provincial health departments have made Salk vaccine available for free immunization of children and adults; similarly, in 1962, live oral poliovirus (Sabin) vaccine was used extensively in seven provinces. During 1959, the incidence of paralytic poliomyelitis rose in all provinces to its highest level since vaccination began but in 1960 it dropped by more than one half and in 1962 reached a record low. Very few who had received the prescribed number of inoculations contracted the disease.

Maternal and Child Health.-Most provincial health departments have Maternal and Child Health Divisions under medical direction or have made other administrative arrangements to provide consultant services in this field. In addition, six of the provinces have consultant nursing services within these divisions. Provincial divisions provide advisory services to local health departments and to hospitals, conduct studies of local problems and needs, and assist in the training of health personnel and in the administration of National Health Grants, including the Child and Maternal Health Grant.

Local health departments serving a very high proportion of the population carry out generalized public health programs, including the provision of maternal and child health services. The basic staff consists of a medical officer of health, public health nurses and sanitary inspectors. Programs and services for mothers and children may include prenatal education, home visiting, child health conferences and school health services. Other health personnel-dentists, nutritionists, health educators and social workers-share interests in the promotion of family health.

Dental Health.-All provincial health departments have dental health divisions which administer programs, varying under local conditions but directed almost entirely to health education and the care of children. Training of dentists and dental hygienists in public health, the operation of children's preventive and treatment clinics, and health education are being undertaken in all provinces. Water fluoridation projects involving a total of more than $1,780,000$ people are in operation in seven provinces. Four provinces-Alberta, Manitoba, Ontario and Nova Scotia-have set up, in conjunction with their dental schools, special courses for dental hygienists. In all ten provinces clinical care is provided for children in remote rural areas. A successful locally sponsored plan in which the cost of dental services for children is shared by the local community and the provincial health department is in operation in more than 90 communities in British Columbia.

Nutrition.-Services include technical guidance, education, consultation and research. In some provinces, school lunch programs are sponsored and dietary supplements distributed. Five provinces have special nutrition divisions; in other provinces, consultants in nutrition come under a broader grouping of departmental services.

Health Education.-In most provinces a professional full-time 'health educator' is a member of the public health team. A basic concern of provincial health information services is to stimulate public interest in important health needs.

Public Health Laboratories.-The public health laboratory was one of the earliest provincial services developed to assist local public health departments in the protection of community health and the control of infectious diseases. New central and branch laboratories have been set up in recent years and the scope of services expanded beyond the routine, but necessary, bacteriological examination of water, milk and food samples. Clinical bacteriology and special pathological services, including medical testing for physicians and hospitals, are steadily increasing in volume. Efforts to co-ordinate public health and hospital laboratory services, special measures to bring laboratory facilities to rural areas, and devices to reduce the direct cost of clinical laboratory procedures to the individual are notable in the growth of public laboratory services.

## Subsection 2.-Services for Specific Diseases or Disabilities

Each province has developed special programs to deal with health problems of particular severity and prevalence, many of which are chronic or long-term in nature. The services and facilities provided are generally similar across the country.

Mental Health.-Major developments in provincial mental health programs have included the expanding and modernizing of mental hospitals, the training of various kinds of psychiatric personnel, and the extension of community mental health services outside mental institutions. Assistance to patients in securing employment and in social adjustment following discharge from mental hospitals-a relatively new field of rehabilitationis being promoted by voluntary groups and government agencies in several provinces.

With the exception of the municipally owned local institutions in Nova Scotia and hospitals in Quebec that operate under religious or lay auspices, most mental institutions are administered by provincial authorities. A great part of the cost is borne by the provincial governments, although a charge, according to ability to contribute, may be made for care in some provinces. Newfoundland and Saskatchewan provide complete free care; Manitoba assumes a minimum maintenance cost for all patients; in Nova Scotia the provincial hospital gives free care to patients requiring active treatment; and in Ontario mental institution treatment is included in the hospital care insurance plan.

Most public mental institutions provide care and treatment for all types of mental illness; as facilities expand, it is becoming possible to segregate those under intensive treatment from those receiving long-term care. Some provinces maintain separate accommodation for certain categories of the mentally ill. For example, in British Columbia and Alberta, homes for the senile aged are an integral part of the mental institution system. Quebec has separate institutions for epileptics. Eight provinces operate schools for residential treatment and education of mentally defective persons and the maintenance of mentally retarded children in approved boarding or foster homes is receiving government support in a number of provinces. Local day classes, usually sponsored by organizations of parents, offer training opportunities for mentally deficient children in the community.

As the needs of patients are more fully understood and better methods of treatment develop, the daily routine of the mental patient is becoming less restrictive, as is shown by the increasing number of persons coming voluntarily for treatment. Custodial care and locked doors are giving way to open wards where patients may have unrestricted access to grounds and to occupational and recreational areas.

One of the greatest changes in the past decade has been in the extension of community mental health services outside mental institutions. General hospitals have expanded their psychiatric services in both in-patient and out-patient departments. About 50 general hospitals have organized units where psychiatric treatment is provided by professional staffs. Community clinics, where mental disorder may be treated at an early stage and guidance given to children and parents, play an important part in prevention and treatment within the home environment. Fostering this expansion of service are provincial health departments, municipalities or health units, mental institutions, general and allied special hospitals, school boards and voluntary organizations. Day and night care centres form part of the psychiatric service of two large general hospitals in Montreal and day care centres, admitting patients on a nine-to-five basis, are conducted in several other hospitals.

Tuberculosis.-The fight against tuberculosis is one of the major programs of all health departments. Free hospitalization and free drug treatment, both on an in-patient and domiciliary basis, is provided. In two provinces extensive BCG programs are in effect and in the other provinces this prophylactic is provided to groups at special risk. Special case-finding programs in the form of community tuberculin and X-ray surveys, surveys of high risk groups, and the follow-up of all arrested tuberculosis cases are routine. These
activities have resulted in a decline in the Canadian tuberculosis death rate of 82 p.c. since 1951. In 1960 the rate was 4.6 per 100,000. The number of beds set up in sanatoria declined from a peak of 18,977 in 1953 to 11,467 in 1961.

Cancer.-Health departments and lay and professional groups working for the control of cancer have been concerned mainly with four aspects of the problem-diagnosis, treatment, research and public education. In cancer detection and treatment, specialized medicine, hospital services and an expanding public health program are closely related. There are programs operating under health departments in four provinces; four others have provincially supported cancer agencies or commissions. These sponsor the work of diagnosis and treatment in special clinics, located usually within the larger general hospitals. Under the provincial hospital insurance plans, the benefits pertaining to in-patient care in the treatment of cancer are essentially similar in ten provinces and include such special services as diagnostic radiology, laboratory tests and radiotherapy. In at least five provinces these benefits apply also to out-patients. In others, the previous pattern of services to out-patients-that of assessing costs of treatment in relation to ability to pay-is still in effect. Comprehensive free medical programs for cancer patients are in operation in Saskatchewan and Alberta and for cancer in-patients in New Brunswick.

Venereal Disease.-Free diagnostic and treatment services are available in all provinces but the operation of government clinics is being increasingly superseded by the method of supplying free drugs to private physicians who are reimbursed for treatment of indigents on a fee-for-service basis.

Alcoholism.-Ontario, Manitoba, Alberta and British Columbia carry out research and education programs and operate centres for treatment, supported largely by public funds. Ontario, Saskatchewan and Alberta also have rehabilitation programs for alcoholic inmates of reform institutions. Recent legislation in Newfoundland, Nova Scotia and Quebec authorizes the setting up of similar agencies to initiate research and education studies in those provinces.

Other Diseases or Disabilities.-Services for persons with chronic disabilities, such as heart disease, arthritis, diabetes, visual and auditory impairments and paraplegia have been developed largely by voluntary agencies assisted by federal and provincial funds. A brief description of the programs of some of these agencies is given in the 1962 Year Book, pp. 270-274 (not carried in this edition), and in Subsection 4 on Services for the Disabled and Chronically Ill, pp. 275-276.

## Subsection 3.-Public Medical Care

Saskatchewan operates a province-wide medical care insurance program (which came into effect on July 1, 1962), and in two other provinces public medical care programs are established for residents of particular areas. Approximately one half of the population of Newfoundland receives physicians' services at home or in hospital under the provincially administered Cottage Hospital Medical Care Plan which is financed in part on a premium basis. Medical indigents not under the plan may also receive care at provincial expense. In addition, all Newfoundland children under the age of 16 years are entitled to free medical and surgical care in hospital. In Manitoba, locally operated, municipal doctor programs, receiving provincial grants, cover about 28,000 persons. Similar programs covered about 158,000 persons in Saskatchewan prior to July 1962.

For several years the Provinces of Nova Scotia, Ontario, Saskatchewan, Alberta and British Columbia have financed the cost of providing health services for specified categories of persons in need and receiving regular public assistance. Manitoba began a comprehensive program in 1960. In some of these provinces the beneficiaries include persons in
receipt of means-tested old age security supplements, old age assistance, blindness and disability allowances, mothers' allowances and certain child welfare cases, and unemployed employables. Nova Scotia covers only mothers' allowance recipients and their dependants, and blindness allowance recipients. In Saskatchewan, old age assistance recipients (for health services other than hospital and medical care), disabled persons, blind persons not receiving a supplemental allowance, and persons on local relief (social aid) are the responsibility of the municipality of residence in regard to health services. The Manitoba program covers cases of need among the aged and infirm, including those in nursing homes or institutions, the blind and the physically or mentally disabled, mothers with custody of dependent children, and neglected children. Indigent persons not covered by these programs may have necessary care financed by the municipalities in which they reside.

Under the Ontario program, the principal medical service covered is physicians' care in the home and office, including certain minor surgical procedures and prenatal and postnatal care. Emergency drugs are a benefit and basic dental care is available to the children of mothers' allowance recipients. In addition to such medical services, Nova Scotia provides major and minor surgical and obstetrical services and medical attendance in hospital. The programs in Saskatchewan, Alberta and British Columbia give complete medical care in the home, office and hospital, including surgical and obstetrical services, all generally used prescription drugs (except in Alberta, and with a 50-p.c. co-charge limitation in Saskatchewan for non-life-saving drugs where financial hardship is not demonstrated), and dental and optical care, sometimes only on special authorization and/or with dollar limits. Prior to July 1, 1962, beneficiaries among the old age assistance group in Saskatchewan were entitled to insured hospital services only, but since that date they have been included under the medical care insurance plan of that province for insured services although personally exempt from premium payments. Services that are paid for in Manitoba include medical and surgical care in homes and doctors' offices, as well as optical and dental care, basic drugs, diagnostic tests, remedial care, appliances, and treatment including physiotherapy. Chiropody, chiropractic and emergency transportation may also be provided. Physicians are expected to offer care in hospital without charge, as in Ontario.

In Alberta, Saskatchewan, Manitoba and Nova Scotia, health services for eligible provincial public assistance recipients are wholly financed from provincial general revenues. In British Columbia, costs are shared on a $90-10$ basis with the municipalities assuming their 10-p.c. share on a basis proportionate to population; in Ontario per capita contributions toward the cost of medical services for unemployed on relief are shared on an 80-20 basis with the municipality of residence.

Since July 1962, every person who has resided in the Province of Saskatchewan for three months (and is not entitled to receive medical services from the Government of Canada) and has paid, or has had paid on his behalf, any premium he is required to pay under the Saskatchewan Medical Insurance Act, is entitled to have payment made on his behalf from the Medical Care Insurance Fund, for medical, surgical and obstetrical care, without limit, in the office, home or hospital, from his physician of choice (including payment at specialists' rates for referred specialists' services). Out-of-province benefits are also paid, on a patientreimbursement basis. There are no restrictions relating to age or pre-existing conditions, or other factors, except the requirement of three months' residence in the province. Physicians providing insured medical services may elect to receive payment in a number of ways: (1) they may contract for a salary or similar arrangement; (2) they may choose to receive direct payment from the administering public agency, the Medical Care Insurance Commission at 85 p.c. of the 1959 Schedule of Minimum Fees of the College of Physicians and Surgeons of Saskatchewan as payment in full; (3) they may bill their patients directly, the patient in turn being paid by the Commission, on presentation of an itemized account (bill) or receipt, an amount equal to 85 p.c. of the assessed fee; (4) the physician may practise for private fees, whereby the patient assumes all responsibility for payment of the doctor's fee
without any claim on the Commission. In addition, patients may enrol, voluntarily, with an approved health agency upon payment of a fee to cover administration costs. The agency is billed directly by the participating physician and the agency pays the physician, as payment in full, an amount equal to the amount paid to the agency by the Commission in respect of the physician's assessed account.

Municipal doctor plans formerly operating in Saskatchewan were discontinued with the introduction of the province-wide medical care insurance program but arrangements were being completed in the spring of 1963 to continue, under local auspices, insured medical services for some 57,000 residents of the Swift Current Health Region which has operated a prepaid medical-dental program for nearly 17 years.

The Saskatchewan medical care insurance program is financed from personal premiums plus general revenue contributions. No premiums were levied in respect of 1962 but an annual premium of $\$ 12$ per adult or a maximum annual premium of $\$ 24$ per family has been levied for 1963 for medical care coverage. Special corporation and personal income taxes have been introduced to help support the program, along with the use of a portion of revenues from a 5-p.c. retail sales tax.

## Subsection 4.-Services for the Disabled and Chronically Ill

The success of rehabilitation programs for injured workers, war veterans, handicapped children and other disability groups such as the blind and tuberculous has encouraged recent efforts to extend rehabilitation services to all handicapped persons. Examples of the improved services for the disabled and chronically ill are the physical restoration facilities in hospitals and rehabilitation centres, the provincial vocational rehabilitation programs described in Part II, pp. 301-302, and the broader educational and vocational opportunities for handicapped children provided in special schools, classes and training centres. Increasing interest in the social problems created by disability and aging is being taken by the official and voluntary health and welfare agencies, many of which co-operate through social planning bodies at community, provincial and national levels.

Effective rehabilitation depends upon a broad range of services that should be available at the proper time to persons who need them. Based upon a system for case finding, assessment and follow-up, the continuum of organized rehabilitation services encompasses medical care including surgery, restorative services such as physical, occupational and speech therapy and prosthetic services, vocational evaluation, training and counselling, job placement and supportive health and social services.

General and chronic hospitals in the larger cities have set up departments of physical medicine and rehabilitation; many also operate out-patient clinics for various chronic diseases such as arthritis and rheumatism, diabetes, glaucoma, poor vision and deafness, and for orthopaedic and neurological conditions. Separate rehabilitation centres in each province serve the more seriously disabled who require long-term treatment or training to be restored to their usual activities. Among these are a number of special centres for injured workmen and handicapped children, and several for epileptics and paraplegics. Voluntary agencies concerned with specific disability groups including arthritics, the blind, the deaf, children suffering from cystic fibrosis or muscular dystrophy, the mentally ill or retarded, and other categories are also intensifying their rehabilitation efforts. Supportive services such as home care programs that provide therapy and housekeeping services, recreation for the handicapped, sheltered workshops and employment for the home-bound are provided by a growing number of agencies.

Efforts are being made to identify children with congenital anomalies, to develop an adequate system of registration of all handicapped children by locality as well as provincially, and to extend adequate treatment facilities and other services. Several provincial
health departments have set up handicapped children's registries and, in co-operation with the handicapped children's societies, they provide remedial treatment and education at children's hospitals, rehabilitation centres and special schools. The public school systems in the larger cities operate special classes for children with orthopaedic, vision, hearing and mental defects; voluntary agencies also sponsor special classes for the mentally retarded, cerebral palsied, emotionally disturbed and other groups. In addition, there are eight residential schools for the deaf and six for the blind, most of them administered by the provincial education departments.

In addition to its treatment responsibilities carried out on behalf of disabled Indians and Eskimos by the Medical Services Directorate, the Department of National Health and Welfare supports provincial rehabilitation activities through the National Health Grants designated for the extension of medical rehabilitation and crippled children's services and for rehabilitation of the mentally ill or deficient, the tuberculous and other chronically ill persons. In 1961-62, over 75 p.c. of the $\$ 1,614,914$ spent under the Medical Rehabilitation and Crippled Children Grant (see p. 261) was used to extend medical rehabilitation services in hospitals, rehabilitation centres and other facilities. Grant funds were also used for the professional training of medical rehabilitation personnel, for the support of seven schools of physiotherapy, occupational therapy, and audiology and speech therapy, and one school of social work, and for equipment and research.

## Section 3.-Hospital and Other Health Statistics

Statistical information on the health of Canadians is at present limited to the well established and highly standardized mortality, communicable disease and institutional statistics series, all of which have been available for a long period, and the recently established series covering operations under the federal-provincial hospital insurance program (pp. 262-265). Another project deals with Civil Service illness. Much statistical information is also available from provincial and other health sources.

Statistics on causes of death are given in the Chapter on Vital Statistics, pp. 239-242; those on hospital statistics in Subsection 1 following; and those on notifiable diseases and illness in the Civil Service in Subsection 2. A brief outline of the scope and methods of the Sickness Survey of $1950-51$ is given in the 1955 Year Book and some of the results are published in the 1955, 1956 and 1957-58 editions. Details are available in bulletin form (Catalogue Nos. 82-501 to 82-511).

## Subsection 1.-Hospital Statistics*

For statistical purposes, hospitals are classified in two ways-first by ownership, i.e., public, private or federal, and second by type, i.e., general, allied special (including chronic, convalescent, maternity, communicable diseases and orthopaedic hospitals), mental and tuberculosis.

In 1962 there were 1,376 hospitals of all types operating in Canada, having a rated bed capacity of 199,345 (excluding bassinets for newborn). Of the total, 1,027 were general hospitals with 103,551 beds, 217 were allied special hospitals with 17,382 beds, 83 were hospitals for mental patients with 67,739 beds, and 49 were tuberculosis sanatoria with 10,673 beds. It should be noted that a recent re-evaluation of facilities resulted in the removal from the list of "hospitals" of a number of institutions providing mainly custodial or domiciliary care.

[^74]
## 6.-Hospitals (Public, Private and Federal) Operating in Canada, by Province, 1962

${ }^{1}$ Mental hospitals only; does not include psychiatric or mental units in other hospitals.
${ }^{2}$ Tuberculosis hospitals only; does not include tuberculosis units in other hospitals.

[^75]Information on the number of hospitals operating in Canada and their bed capacities (Tables 6 and 7) was available for the year 1962 at the time of preparation of this Chapter, but the most recent figures on movement of patients, patient-days, hospital facilities and hospital finances (Tables 8 to 14) were for 1961.

Admissions to hospitals numbered almost $3,300,000$ in 1961 , or 18,079 per 100,000 population. The average number of patients in hospital on any one day during the year was 175,956 , or one in every 104 persons in Canada.

[^76]Radiology and clinical laboratory facilities were available to patients in about 90 p.c. of the general hospitals in Canada in 1961 and electrocardiography and blood service were available in 76 p.c. and 64 p.c., respectively, of all general hospitals.

## 9.-Percentages of Reporting Public General and Allied Special Hospitals with Facilities Available, by Province, 1961

Average length of stay in general hospitals in 1961 was 10.0 days, slightly longer than in 1960. Length of stay tends to increase with the size of hospital because more specialized treatment is available in larger hospitals and because these hospitals therefore act as major referral centres.
10.-Average Length of Stay of Adults and Children in Public General and Allied Special Hospitals, by Province, 1961

The 987 public hospitals reporting financial data for 1961 spent a total of $\$ 841,245,000$ in that year and had revenues amounting to $\$ 811,427,000$ (see footnote 1 , Table 11). The 987 hospitals represented 92 p.c. of those required to submit financial data and they contained 96 p.c. of the beds in the public hospitals of Canada. Of the total expenditure, salaries and wages accounted for 64.7 p.c. and medical and surgical supplies and drugs for 7.7 p.c. Of the total revenue, 78.2 p.c. was in-patient earnings.

[^78]Patient-day cost in general hospitals in 1961 was $\$ 24.32$, an amount 6.9 p.c. higher than in 1960. In such hospitals, per diem cost usually rises with the size of hospital; in hospitals with one to nine beds the patient-day cost was $\$ 19.94$ compared with $\$ 30.09$ in hospitals with 1,000 or more beds.

## 14.-Revenues and Expenditures of Reporting Public Hospitals per Patient-Day (excluding Newborn), by Province, 1961-concluded

[^80]Diagnoses of Patients in Institutions for Psychiatric Disorders and for Tuber-culosis.-Tables 15 and 16 summarize the most recent data available on diagnosis according to sex and age group of in-patients in psychiatric institutions and tuberculosis hospitals, including those in psychiatric wards and tuberculosis wards of other hospitals.

Of the total of 76,486 psychiatric patients reported at Dec. $31,1961,35$ p.c. suffered from schizophrenia, the most frequent form of psychosis (insanity); 26 p.c. suffered from other forms of psychosis and 29 p.c. were mentally deficient. In most diagnostic classes, males outnumbered females; exceptions were certain psychoses, neuroses and drug addiction.

## 15.-Diagnoses of In-patients on the Books of Psychiatric Institutions, by Age Group and Sex, Dec. 31, 1961

Nore.-Data from 111 institutions, including psychiatric wards of general hospitals; at Dec. 31, 1961, 10 p.c. of the patients on the books were on probation pending official release.

${ }^{2}$ Comprises schizophrenia, manic depressive psychosis, involutional melan${ }^{3}$ Includes other diagnoses not specified below.

Of the 5,387 patients with respiratory tuberculosis on the books of tuberculosis institutions at the end of 1961,63 p.c. were males. Males outnumbered females in all age groups except for the ages from 0 to 19 years. The peak frequency for men $(1,116)$ occurred in the $40-59$ age group, and for women (688) in the 20-39 age group. The male rate rose steadily up to 60 years while the female rate, following somewhat the same pattern, showed a decline in age group 40-59. The over- 40 male rates were much higher than those for the younger male age groups.

16．－Diagnoses of Patients on the Books of Reporting Tuberculosis Hospitals，by Age Group and Sex，as at Dec．31， 1961
Nore．－Figures include patients in 66 tuberculosis hospitals and patients in tuberculosis units in general hospitals but exclude tubercular patients in mental hospitals．

## Subsection 2．－Notifiable Diseases and Other Health Statistics＊

In addition to the administrative，or non－morbidity，type of hospital statistics dealt with on pp．276－287，health statistics collected nationally include series on notifiable diseases and illness among federal civil servants；these are dealt with briefly below．

Notifiable Diseases．－In terms of number of new cases，the major infectious diseases reportable on a national basis were，in 1961，the venereal diseases，scarlet fever and strep－ tococcal sore throat，and infectious and serum hepatitis．

Higher incidence of the reportable venereal diseases（combined）occurred in the Yukon and the Northwest Territories and in all provinces except Newfoundland，Nova Scotia

[^81]and New Brunswick. In Newfoundland the level of venereal infections was the lowest since that province entered Confederation-283 cases, or a case-rate of 61.8 per 100,000 population. The largest number of cases $(3,880)$ occurred in British Columbia, but the rate per 100,000 population in that province (238.2) was lower than those of the Yukon, the Northwest Territories and Manitoba. Among the reportable types of venereal disease, gonorrhoea accounted for 87.7 p.c. of total cases nationally, and for 94.5 p.c. of cases in British Columbia.

Although the incidence of scarlet fever and streptococcal sore throat continued at a high level relative to other notifiable diseases, the 12,765 cases reported in 1961 represented a 40.0 -p.c. decline from the 1960 total. The decrease in cases was common to all provinces and most marked, in percentage terms, in Quebec. Provincially, the highest case-rate was Prince Edward Island's 1,284.8, which was more than 17 times the national average of 70.0 cases per 100,000 population.

The number of cases of infectious and serum hepatitis increased from 6,314 in 1960 to 12,381 in 1961. Higher incidence in comparison with the previous year was recorded in every four-week period of 1961, and all provinces were affected to a greater or lesser degree.

From a 1960 record high of 3,279 cases, the incidence of dysentery declined in 1961 by 6.9 p.c. to 3,053 cases. The latter were fairly evenly divided between bacillary dysentery and the miscellaneous classification, which covers such conditions as dysenteric diarrhoea and haemorrhagic dysentery. Only 12 cases of amoebic dysentery, a fairly uncommon form, were reported.

A nation-wide decline in the incidence of paralytic poliomyelitis was also noted in 1961. The numbers of cases (189) and the rate per 100,000 population (1.0) approximated the previous low levels established in 1957.

## 18.-Reported Cases of Selected Notifiable Diseases and Rates per $\mathbf{1 0 0 , 0 0 0}$ Population, by Province, 1961

[^83]Illness in the Federal Civil Service.-A study of the incidence and duration of illness among federal civil servants is made annually from data supplied by medical certificates, which are required for all absences of more than three days at one time and for absence of any duration after seven days of casual leave have been taken. During the calendar year 1961, of an estimated 145,300 civil servants covered by Civil Service Leave Regulations,

48,263 reported ill by medical certificate. The number of new illnesses, as certified by medical certificate, was 74,542 , somewhat higher than the 70,243 reported for 1960 . Similarly, the number of days of completed illnesses increased to $1,034,593$ in 1961 from the 990,804 reported for 1960. Other relevant statistics for 1961 indicate that, on the average, 7.5 working days were lost through illness by each employee, including 4.9 days of certified and 2.6 days of casual sick leave.

Several rates related to sickness absenteeism were calculated from the 1961 survey, based on the number of certified illnesses that occurred at some time during the year but not necessarily completed during the same year. These illnesses totalled 76,505 . The severity rate or average number of calendar days per illness was 13.5 and the average number of working days was 9.3 . The frequency rate or the average number of illnesses per 100 employees was 52.7. In addition, for each working day during the year, about two of every 100 civil servants were absent on certified sick leave.

## PART II.-PUBLIC WELFARE AND SOCIAL SECURITY

Responsibility for social welfare is shared by all levels of government. Comprehensive income-maintenance measures such as old age security and family allowances, and programs such as unemployment insurance and the National Employment Service where nation-wide co-ordination is required, are administered federally. Substantial federal aid is given to the provinces in meeting the costs of public assistance. The Federal Government also provides services for special groups such as veterans, Indians, Eskimos and immigrants.

The Department of National Health and Welfare is generally responsible for federal welfare matters; the Departments of Veterans Affairs, Citizenship and Immigration, and Northern Affairs and National Resources also operate programs for specific groups. The Unemployment Insurance Commission is responsible for the operation of unemployment insurance and the National Employment Service.

Administration of welfare services is primarily the responsibility of the provinces but the provision of services is often assumed by local authorities, generally with financial aid from the province.

## Section 1.-Federal Government Programs

## Subsection 1.-Family Allowances

The Family Allowances Act of 1944 is designed to assist in providing equal opportunity for all Canadian children. The allowances do not involve a means test and are paid from the federal Consolidated Revenue Fund. They do not constitute taxable income but there is a smaller income tax exemption for children eligible for allowances.

Allowances are payable in respect of every child under the age of 16 years who was born in Canada, or who has been a resident of the country for one year, or whose father or mother was domiciled in Canada for three years immediately prior to the birth of the child. Payment is made by cheque each month, normally to the mother, although any person who substantially maintains the child may be paid the allowance on his behalf. Allowances are paid at the monthly rate of $\$ 6$ for each child under 10 years of age and $\$ 8$ for each child aged 10 or over but under 16 years. If the allowances are not spent for the purposes outlined in the Act, payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school regulations or on behalf of a girl who is married and under 16 years of age. The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital. A Regional Director for the Yukon and Northwest Territories is located at Ottawa.

The Federal Government pays family assistance, at the rates applicable for family allowances, for each child under 16 years of age resident in Canada and supported by an immigrant who has landed for permanent residence in Canada, or by a Canadian returned to Canada to reside permanently. The assistance, which is payable monthly and for a maximum period of one year, is not payable for a child eligible for family allowances.
1.-Family Allowances Statistics, by Province, Year Ended Mar. 31, 1962 with Totals for 1958-62
Nors.-Provincial figures for each year from the inception of the Act to 1961 are given in the corresponding table of previous Year Books, beginning with the 1947 edition.

## Subsection 2.-Old Age Security

The Old Age Security Act of 1951, as amended, provides a universal pension of $\$ 65$ a month payable by the Federal Government to all persons aged 70 or over, subject to a residence qualification. To qualify for pension a person must have resided in Canada for ten years immediately preceding its commencement or, if absent during that period, must have been actually present in Canada prior to it for double any period of absence and must have resided in Canada at least one year immediately preceding commencement of pension. Payment of pension may be continued for any period of residence outside Canada if the pensioner has resided in Canada for at least 25 years after attaining the age of 21 or, if he has not, it may be continued for six consecutive months exclusive of the month of departure from Canada. The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital.

The pension is financed on the pay-as-you-go method through a 3-p.c. sales tax, a 3p.c. tax on corporation income and, subject to a limit of $\$ 90$ a year, a 3-p.c. tax on taxable personal income. Yields from these taxes are paid into the Old Age Security Fund; if they are insufficient to meet the pension payments, temporary loans or grants are made from the Consolidated Revenue Fund.

## Subsection 3.-Other Federal Government Programs

Unemployment Insurance and National Employment Service.-In 1940, by an amendment to the British North America Act, the Federal Government was given jurisdiction in the field of unemployment insurance and the Unemployment Insurance Act was passed establishing a national system of unemployment insurance which is outlined in Chapter XVI.

The National Employment Service is operated in conjunction with the unemployment insurance scheme. Statistics of positions offered and placements made are given in Chapter XVI.

Prairie Farm Assistance.-The Prairie Farm Assistance Act is administered by the Department of Agriculture; a description of the legislation is given in Chapter IX.

Welfare Services for Indians and Eskimos.-Indians and Eskimos benefit as other Canadians under the federal income maintenance programs, but welfare services are administered by the Department of Citizenship and Immigration and the Department of Northern Affairs and National Resources, respectively, with some provincial participation. This topic is covered in the Population Chapter (pp. 189-191).

## Section 2.-Federal-Provincial Programs

## Subsection 1.-Old Age Assistance

The Old Age Assistance Act of 1951, as amended, provides for federal reimbursement to the provinces for assistance to persons aged 65 or over who are in need and who have resided in Canada for at least ten years or who, if absent from Canada during this period, have been present in Canada prior to the commencement of the ten-year period for double any period of absence. On reaching age 70 a pensioner is transferred to old age security. The federal contribution may not exceed 50 p.c. of $\$ 65$ a month or of the assistance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of assistance payable, the maximum income allowed and other conditions of eligibility. All provinces use a maximum payment of $\$ 65 \mathrm{a}$ month and the income limits set out below.

For an unmarried person, total income allowed, including assistance, may not exceed $\$ 1,140$ a year. For a married couple it may not exceed $\$ 1.980$ a year or, when the spouse is
blind within the meaning of the Blind Persons Act, $\$ 2,340$ a year. Assistance is not paid to a person receiving an old age security pension or an allowance under the Blind Persons Act, the Disabled Persons Act, or the War Veterans Allowance Act.

Recipients of old age assistance who are in need may receive supplementary aid under general assistance programs in the provinces. Where the amount of aid is determined through an individual assessment of need, which takes the recipient's requirements and resources into consideration, the Federal Government may share in it under the Unemployment Assistance Act.

## 4.-Old Age Assistance Statistics, by Province, Year Ended Mar. 31, 1962 with Totals for 1958-62

Nore.-Provincial figures for each year from the inception of the Act to 1961 are given in the corresponding table of previous Year Books, beginning with the 1952-53 edition.

| 1958 | 92,484 | 52.19 | 19.78 | 24,961,383 |

[^86]
## Subsection 2.-Allowances for Blind Persons

The Blind Persons Act of 1951, as amended, provides for federal reimbursement to the provinces for allowances to blind persons aged 18 or over who are in need and who have resided in Canada for at least ten years. The federal contribution may not exceed 75 p.c. of $\$ 65$ a month or of the allowance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable and the maximum income allowed. All provinces use a maximum payment of $\$ 65$ a month and the income limits set out below.

To qualify for an allowance a person must meet the required definition of blindness and have resided in Canada for ten years immediately preceding commencement of allowance or, if absent from Canada during this period, must have been present in Canada prior to its commencement for a period equal to double any period of absence. For an unmarried person, total income including the allowance may not exceed $\$ 1,380$ a year; for a person with no spouse but with one or more dependent children, $\$ 1,860$; for a married couple, $\$ 2,340$. When the spouse is also blind, income of the couple may not exceed $\$ 2,460$. Allowances are not payable to a person receiving assistance under the Old Age Assistance

Act, an allowance under the Disabled Persons Act or the War Veterans Allowance Act, a pension under the Old Age Security Act or a pension for blindness under the Pensions Act.

Recipients of blindness allowances who are in need may receive supplementary aid under general assistance programs in the provinces. Where the amount of aid is determined through an individual assessment of need, which takes the recipient's requirements and resources into consideration, the Federal Government may share in it under the Unemployment Assistance Act.
5.-Statistics of Allowances for the Blind, by Province, Year Ended Mar. 31, 1962 with Totals for 1958-62
Nore.-Provincial figures for each year from the inception of the Act to 1961 are given in the corresponding table of previous Year Books beginning with the 1952-53 edition.

| Canada...................................... . . 1962 | 8,573 | 56.784 | 0.087 | 4,129,852 |
| 1961 | 8,642 | 52.97 | 0.089 | 4,161,833 |
| 1960 | 8,671 | 53.05 | 0.090 | 4,197,087 |
| 1959 | 8,747 | 53.15 | 0.092 | 4,235,131 |
| 1958 | 8,400 | 54.02 | 0.090 | 3,575,724 |

${ }^{1}$ The increase in the maximum rate of allowance from $\$ 55$ to $\$ 65$ a month was effective in these provinces from Apr. 1, 1962. 2 The effective date for the increase from $\$ 55$ to $\$ 65$ a month in the maximum rate of allowance was Feb. 1, 1962 in these jurisdictions but not all of them had made the adjustments by Mar. 31, 1962.
${ }^{3}$ The effective date of the increase from $\$ 55$ to $\$ 65$ a month in the maximum rate of allowance was July 1,1962 . . The average monthly allowance was $\$ 62.65$ for June 1962, the first month for which an average based on the maximum of $\$ 65$ a month was computed.

## Subsection 3.-Allowances for Disabled Persons

The Disabled Persons Act of 1954, as amended, provides for federal reimbursement to the provinces for allowances paid to permanently and totally disabled persons aged 18 or over who are in need and who have resided in Canada for at least ten years immediately preceding commencement of allowance or, if absent from Canada during this period, have been present in Canada prior to its commencement for a period equal to double any period of absence. To qualify for an allowance a person must meet the definition of permanent and total disability set out in the Regulations to the Act which requires that a person must be suffering from a major physiological, anatomical or psychological impairment, verified by objective medical findings; the impairment must be one that is likely to continue indefinitely without substantial improvement and that will severely limit activities of normal living. The federal contribution may not exceed 50 p.c. of $\$ 65$ a month or of the allowance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable, the maximum income allowed and other conditions of eligibility. All provinces use a maximum payment of $\$ 65$ a month and the income limits set out in the following paragraph.

For an unmarried person, total income including the allowance may not exceed $\$ 1,140$ a year. For a married couple the limit is $\$ 1,980$ a year except that if the spouse is blind within the meaning of the Blind Persons Act, income of the couple may not exceed $\$ 2,340$ a year. Allowances are not paid to a person receiving an allowance under the Blind Persons Act or the War Veterans Allowance Act, assistance under the Old Age Assistance Act, a pension under the Old Age Security Act, or a mother's allowance.

The allowance is not payable to a patient in a mental institution or tuberculosis sanatorium. A recipient who is resident in a nursing home, an infirmary, a home for the aged, an institution for the care of incurables, or a private, charitable or public institution is eligible for the allowance only if the major part of the cost of his accommodation is being paid by himself or another individual. When a recipient is required to enter a public or private hospital, the allowance may be paid for no more than two months of hospitalization in a calendar year, excluding months of admission and release, but for the period that a recipient is in hospital for therapeutic treatment for his disability or rehabilitation, the allowance may continue to be paid.

As in previous years, disabilities in the two medical classes-mental, psychoneurotic and personality disorders, and diseases of the nervous system and sense organs-were found to be the most prevalent among the persons becoming eligible for allowance in the year ended Mar. 31, 1962; diseases of the circulatory system was the third largest class. Mental deficiency, the most frequently occurring disability, accounted for over one quarter of all cases granted an allowance.

Recipients of disability allowances who are in need may receive supplementary aid under general assistance programs in the province. Where the amount of aid is determined through an individual assessment of need, which takes the recipient's requirements and resources into consideration, the Federal Government may share in it under the Unemployment Assistance Act.

## 6.-Statistics of Allowances for Disabled Persons, by Province, Year Ended Mar. 31, 1962 with Totals for 1958-62

[^87]
## Subsection 4.-Unemployment Assistance

Unemployment assistance is a federal grant-in-aid program under which the Federal Government shares with the provinces and their municipalities the costs of general assistance. The general assistance programs in the various provinces are known by different names, such as social allowances, social aid, social assistance and general welfare assistance.

Under the Unemployment Assistance Act 1956, as amended, the Federal Government may enter an agreement with any province to reimburse it for 50 p.c. of the unemployment assistance expenditures made by the province and its municipalities. All provinces and the two territories have signed agreements under the Act. The rates and conditions of assistance are determined by the province or municipality. Payments to both employable and unemployable persons who are unemployed and in need are shareable under the agreement as are the costs of maintaining persons in homes for special care (nursing homes or homes for the aged). The Federal Government shares in additional assistance paid to needy persons in receipt of old age security pensions, old age assistance, blind persons' allowances, disabled persons' allowances and unemployment insurance benefits, where the amount of the assistance paid is determined through an assessment both of the recipient's basic requirements and of his financial resources.

During the year ended Mar. 31, 1962, the Federal Government made payments for unemployment assistance amounting to $\$ 92,044,244$. The federal share of assistance costs shown in Table 7, however, is based on payments for the months in which the assistance was actually given and, since claims may be submitted at any time within six months after the month to which they relate, the figures for each fiscal year include certain reimbursements made to the provinces after the end of that year.

## 7.-Unemployment Assistance, by Province, Year Ended Mar. 31, 1962 with Totals for 1958-62

Nore.-Provincial figures for each year from the inception of the Act to 1961 are given in the corresponding table of previous Year Books beginning with the 1957-58 edition.

## Subsection 5.-Fitness and Amateur Sport Program

The Fitness and Amateur Sport Act, passed Sept. 25 and proclaimed Dec. 15, 1961, brought a new focus and impetus to the development of fitness in Canada and to efforts to raise levels of participation and proficiency in both competitive and non-competitive sports. The Act is administered by the Fitness and Amateur Sport Directorate in the Welfare Branch of the Department of National Health and Welfare.

The new legislation provides for an annual $\$ 5,000,000$ allocation "to encourage, promote and develop fitness and amateur sport'". The program operates through three main channels. Grants are made to national organizations to assist national and international
aspects of the program, and to the provinces to develop and extend community effort. In addition, federal co-ordinating and developmental work is carried on by the department which works in close co-operation with other federal agencies concerned with different aspects of fitness and amateur sport.

A 30-member National Advisory Council on Fitness and Amateur Sport was appointed in 1962 and, in addition, a federal-provincial committee, at the deputy minister level, is concerned with the federal-provincial aspects of the program. Through these two groups the Minister of National Health and Welfare is advised, both from the point of view of the private citizens of Canada and from that of the governments directly concerned with the program. Specialist committees of experts advise on technical aspects of the program as required.

One of the main tasks to be undertaken under the new program is the building up of training courses for leaders, coaches and other professional personnel at the community level. The new Act bolsters and enlarges the emphasis already being given to this work by programs in operation in a number of provinces. Awards of scholarships, fellowships and bursaries will assist persons in undertaking professional studies in physical education, recreation and the medical aspects of fitness, which should do much to overcome acute shortages of trained personnel.

The Act provides for aid to research on aspects of physical performance, such as the effects of activity on different age groups and the effects of different kinds of activity on physical development. Surveys of resources, of facilities and of personnel may also be assisted. The urgent need for new and greatly expanded informational material for both the expert and the public has long been recognized; through the new program, instructional material suitable to Canadian needs can be developed with the co-operative efforts of experts from across Canada.

Provision is made for recognition of achievement in fitness and amateur sport activities through awards or citations. Also, the promotion and development of participation in national and international sport competitions will be assisted. Because of the ease with which it could be implemented, this aspect of the Act could receive early attention. In view of the high costs involved and the practically unlimited demand for new sports and recreational facilities, this type of assistance is restricted to the construction of national or provincial training centres serving large areas. The major vehicle for federal aid to construction of local sports and recreational facilities is the municipal winter works program administered by the Department of Labour.

The groundwork of the program was laid during the first year of operation when $\$ 230,000$ was expended on grants to organizations. During the second year, expenditure amounted to $\$ 1,000,000$ on projects which included research, scholarships, bursaries and fellowships, educational and information services, grants to the provinces for the development of services at the community level and grants to national agencies to assist international and national competition and for organizational and instructional purposes.

## Subsection 6.-National Welfare Grant Program

In November 1962, the Federal Government established a national welfare grant program consisting of general welfare and professional training grants and welfare research grants; an amount of $\$ 250,000$ was allocated for the first fiscal year (1962-63) of its operation. The program provides funds for demonstration and other projects designed to improve welfare administration, to develop provincial consultative and co-ordinating services, and to strengthen and extend public and voluntary welfare services in child welfare, aging, general assistance and other welfare fields. Costs are shared by the federal and provincial governments.

Also on a cost-sharing basis, funds are available for bursaries for graduate study at Canadian Schools of Social Work to students who have just completed their undergraduate studies, to persons who have left employment in welfare and related fields to start or
complete their training, and to persons employed in public and voluntary welfare agencies in Canada who have been granted educational leave as part of agency staff-development plans. Funds are also available for a variety of short-term staff-training programs for graduate social workers and non-graduate welfare personnel employed by public or voluntary welfare agencies on direct service, supervisory or administrative work, where this can be justified as a means of achieving more effective and efficient administration.

Teaching and field instruction grants are available to Canadian Schools of Social Work to assist in the employment of additional faculty members and field instructors required as a result of the welfare grant program.

Funds are available to public and voluntary agencies for a variety of surveys, studies and research projects. Priority is given to those projects holding promise of making significant steps forward in the organization, co-ordination and staffing of existing welfare services and in the development of new services focused on the prevention of welfare problems and dependency.

Each year scholarships for graduate study in social work will be awarded from federal funds to those persons who have completed their undergraduate studies with high academic standing. Fellowships for study at Canadian and foreign universities will also be awarded to persons who have demonstrated leadership qualities and ability of high order in the fields of administration, teaching and research in welfare.

## Subsection 7.-Vocational Rehabilitation

The nation-wide vocational rehabilitation program, started in 1952, has been consolidated and extended since the enactment of the Vocational Rehabilitation of Disabled Persons Act, 1961. Under federal-provincial agreements to share equally the costs of co-ordination, assessment and provision of services to disabled individuals, of training personnel, and of research, the provinces have developed comprehensive programs in cooperation with existing services. Services, which may be either provided directly or obtained from other agencies or individuals by provincial rehabilitation authorities, include medical, social and vocational assessment, counselling, restorative services, vocational training and employment placement. They are designed to assist individuals having a substantial physical or mental disability to become vocationally useful in gainful employment or in the home. A provincial Co-ordinator or Director of Rehabilitation, placed in the health or welfare department, is responsible for the co-ordination and administration of vocational rehabilitation services to disabled individuals.

The National Co-ordinator in the Civilian Rehabilitation Branch, Department of Labour, administers the federal aspects of this program including the co-ordination of federal activities in vocational rehabilitation and the provision of consultative services. A National Advisory Council composed of representatives of the provinces, employers, labour, the medical profession, national voluntary agencies and the universities has been established under the Act. A federal Interdepartmental Committee on Vocational Rehabilitation and the Co-ordination of Rehabilitation Services has also been formed. In the fiscal year 1961-62, prior to the new legislation becoming effective, federal-provincial expenditures under the old program (exclusive of vocational training) totalled $\$ 364,850$. Full reports were received of 1,669 disabled persons rehabilitated during the year; before rehabilitation the majority of these persons and their dependants relied on relatives or public assistance for support at an estimated annual cost of $\$ 900,000$, whereas following rehabilitation the estimated total annual earnings of those gainfully employed was estimated to be $\$ 3,200,000$.

Although administered separately, medical rehabilitation, vocational training and special employment services for the handicapped are available as integral parts of the federal-provincial rehabilitation program. The provincial co-ordinators seek out disabled persons for assessment and referral to appropriate services. Suitable training where required is supplied through the federal-provincial agreements made under the Technical and Vocational Training Assistance Act administered by the Department of Labour.

#### Abstract

"Program 6", Training of the Disabled of the Canadian Vocational Training Program, provides for equal sharing by Canada and the provinces of the cost of approved programs for the training of disabled persons who require such training to fit them for gainful employment. The training costs cover vocational assessment, pre-vocational preparation, tuition, books and supplies, maintenance allowances, travel expenses and extra costs necessitated by disability. Disabled persons approved by provincial training selection committees may attend regular provincial or municipal vocational schools, private trade schools, universities, special classes, or be trained on the job. During 1961-62 there were 2,765 disabled persons enrolled in various courses at a total cost of $\$ 736,372 ; 1,457$ of these persons completed their training within the year.

The National Employment Service continues its responsibility for job placement of disabled persons with occupational handicaps. Employment liaison officers of the Special Services Section, who advise on employment conditions and the working capabilities of disabled persons, have been seconded to the offices of the provincial co-ordinators of rehabilitation in five provinces. Referrals for job placement are made to some 350 Special Services Officers in the local employment offices. Special placements of handicapped persons who required assistance in finding work in 1962 (including those referred from provincial rehabilitation authorities) numbered 20,403.

The Federal Government also provides direct services for particular groups through programs administered by the Department of Veterans Affairs for disabled, chronically ill, and aging veterans, by the Department of Citizenship and Immigration for physically and socially handicapped Indians, and by the Department of Northern Affairs and National Resources for the training and resettlement of disabled Eskimos and Indians within its jurisdiction.

## Section 3.-Provincial Welfare Programs

Major welfare programs governed by provincial legislation include general assistance and social allowances, mothers' allowances, services for the aged, and child care and protection. In most provinces responsibility for a number of the programs is shared by the provinces and their municipalities. Provincial administration of welfare services is carried out through the department of public welfare in each province; several departments have established regional offices to facilitate administration and to provide consultative services to the municipalities.

In recent years, the provinces have assumed a substantial share of the costs of general assistance or residual aid, and some have broadened the area of social allowances, formerly limited almost entirely to mothers' allowances, in which the municipalities do not share costs. The financial contributions of the Federal Government to the provinces for unemployment assistance (see p. 299) has doubtless been an important contributing factor in these developments.

All provinces continue to give consideration to the need for planning on behalf of older citizens. A number have increased their capital or maintenance grants to municipalities and to voluntary groups for homes for the aged and are also assisting in the construction of low-rental housing projects.

The main efforts in child welfare have been directed toward improvement of standards and greater flexibility of services, with particular emphasis on preventive casework services for children in their own homes, development of specialized children's institutions, and the finding of adoption homes for all children in need of them.

The public services are supplemented by an impressive number of voluntary agencies which also contribute to community welfare, including the welfare of families and children and of groups with special needs, such as the aged, recent immigrants, youth groups and released prisoners. Welfare councils and social planning councils contribute to the planning and co-ordinating of local welfare services. Local voluntary agencies and institutions may
receive public grants, depending on the nature and standard of the services they render, although, with the exception of the semi-public children's aid societies, their main support may be from united funds or community chests, or from sponsoring organizations.

## Subsection 1.-Mothers' Allowances

All provinces make provision for allowances to needy mothers who are deprived of the breadwinner and are unable to maintain their dependent children without assistance. A number of provinces include mothers' allowances in a broadened program of provincial allowances to several categories of persons with long-term need. There is a tendency to incorporate this legislation with general assistance within a single Act, while continuing separate administration. In British Columbia, on the other hand, aid is provided to needy mothers under the general assistance program and in the same way as to other needy persons.

Subject to conditions of eligibility which vary from province to province, mothers' allowances or their equivalents are payable from provincial funds to applicants who are widowed, or whose husbands are mentally incapacitated or are physically disabled and unable to support their families. They are also payable to deserted wives who meet specified conditions; in several provinces to mothers whose husbands are in penal institutions, or who are divorced or legally separated; in some, to unmarried mothers; and in Ontario, Quebec and Nova Scotia to Indian mothers. Foster mothers may be eligible under particular circumstances in most provinces.

The age limit for children is 16 years in most provinces, with provision made to extend payment for a specified period if the child is attending school or if he is physically or mentally handicapped. In all provinces applicants must satisfy conditions of need and residence but the amount of outside income and resources allowed and the length of residence required prior to application vary, the most common period being one year. One province has a citizenship requirement.

The numbers of families and children assisted in each province as at Mar. 31, 1962, together with the amounts of benefits paid during the year are given in Table 8 and rates of benefit as at December 1962 in Table 9.

## 8.-Mothers' Allowances, by Province, as at Mar. 31, 1962 with Totals for 1958-62

Nort.-Provincial figures for each year from the inception of the allowance to 1961 are given in the corresponding table of previous Year Books.

| B.C. | Allowances to needy mothers provided under the Social Assistance Act and not separable. |  |  |  |  |

## Subsection 2.-General Assistance

All provinces make legislative provision for general assistance on a means or needs test basis to needy persons and their dependants who cannot qualify for other forms of aid, and some provinces include those whose benefits under other programs are not adequate. Where necessary the aid may be for maintenance in homes for special care. Besides financial aid for the basic needs of food, clothing, shelter and utilities, a number of provinces also provide incapacitation or rehabilitation allowances, counselling and homemaking services, and post-sanatorium care. This assistance, with some exceptions, is administered by the municipality with substantial financial support from the province, which, in turn, is reimbursed by the Federal Government under the Unemployment Assistance Act for 50 p.c. of the provincial and municipal assistance given (see p. 299).

The provincial departments of public welfare have regulatory and supervisory powers over municipal administration of general assistance and may require certain standards as a condition of provincial aid. Length of residence is not a condition of aid in any province, but the residence of the applicant as defined by statute determines which municipality may be financially responsible for his aid. This rule does not apply in three provinces; British Columbia and Saskatchewan have equalized municipal payments and Quebec does not require its municipalities to contribute to general assistance costs. Provinces with unorganized areas take responsibility for aid in these districts. Under the federal Unemployment Assistance Act, all provinces have agreed that residence shall not be a condition of assistance for applicants who move from one province to another. For persons without provincial residence (usually a period of one year), aid may be given by the province or the municipality and a charge-back may or may not be made to the province or municipality of residence.

The formula for provincial-municipal sharing of costs is determined by the province. In Newfoundland, general assistance is the responsibility of the province and is administered by the Department of Public Welfare. In Prince Edward Island, the Department of Welfare and Labour provides direct social assistance in rural areas and assumes 75 p.c. of the cost of assistance granted by the City of Charlottetown and the incorporated towns and villages; aid to needy families where the breadwinner is suffering from tuberculosis is borne entirely by the province. In Nova Scotia, assistance is administered by the municipality, which receives reimbursement from the Department of Public Welfare for two thirds of the cost of the aid provided and one half of the cost of administration; allowances for
certain disabled persons are administered by the province. In New Brunswick, the province reimburses each municipality to the extent of one dollar per capita of the population plus 70 p.c. of expenditures on general assistance in excess of that amount, and also pays 50 p.c. of the cost of administration.

In Quebec, the Department of Family and Social Welfare reimburses authorized agencies and municipal departments for the full cost of aid to persons in their own homes. It takes full responsibility for aid to persons who are unfit for work for at least 12 months, for supplementary allowances and allowances to needy widows and spinsters 60-65 years of age. The cost of aid to unemployable persons in homes for special care, including nursing homes, is borne two thirds by the province and one third by the institution. In Ontario, the municipalities administer all forms of aid available under the General Welfare Assistance Act. The Department of Public Welfare reimburses them up to a prescribed maximum for 80 p.c. of their expenditures, and for 90 p.c. of expenditures for aid to persons in excess of a given proportion of the population in the municipality. Aid for rehabilitation services and aid on behalf of foster children, for which the municipalities are reimbursed 50 p.c., are excluded in these calculations.

In Manitoba, the province administers aid to mentally or physically incapacitated persons whose disability is likely to last more than 90 days, and to persons unable to work because of their age. Aid to other needy persons, termed indigent relief, is the responsibility of the municipalities which are reimbursed through the provincial Department of Welfare to the extent of 40 p.c. of the costs, or at a higher rate if costs exceed a specified amount. In Saskatchewan, through the Department of Social Welfare and Rehabilitation, the province reimburses the municipalities for approximately 93 p.c. of the cost of assistance granted to needy persons. In Alberta, the province reimburses the municipalities for 80 p.c. of the value of the assistance given. The provincial Department of Public Welfare has full responsibility for allowances payable to persons who are mentally or physically handicapped for a period likely to last for more than 90 days, and to persons who because of their age are not able to be self-supporting. The Department maintains two hostels and one welfare centre to care for unemployable single homeless men without municipal domicile.

British Columbia, through its Department of Social Welfare, reimburses the municipalities on a pooled basis for 90 p.c. of the total cost of social assistance to needy persons. Also, the province shares equally with the municipalities expenditures on salaries of social workers; a municipality with fewer than 15,000 persons may arrange to have the Department undertake social work within the municipality and reimburse it at the rate of 30 cents per capita per year.

## Subsection 3.-Services for the Aged

In all provinces, homes for the aged and infirm are provided under provincial, municipal or voluntary auspices. Voluntary homes generally are provincially inspected in accordance with prescribed standards and in some provinces must be licensed. Most provinces contribute to the maintenance of elderly persons in homes for the aged, either through general assistance or through statutes that relate particularly to these homes. Also, 50 p.c. of the payments on behalf of assistance cases in homes for the aged and infirm (homes for special care) are met by the Federal Government (see p. 305).

Several provinces make capital grants toward the construction of homes, and in five provinces capital grants are also available to municipalities, voluntary organizations, or limited-dividend companies for the construction of low-rental housing.

Newfoundland maintains a home for the aged and infirm at St. John's and pays part or all of the cost of maintaining needy old people in homes for the aged and boarding homes. In 1955, a grant of 20 p.c. of costs, to be paid over a ten-year period, was made to a religious organization for the construction of a home, and provision is made for grants to similar projects under other auspices. The province is authorized by the Senior Citizens (Housing) Act, 1960 to guarantee the repayment of loans made under the National Housing Act to limited-dividend companies constructing hostels or housing for the elderly and to guarantee
the cost of operating such projects. The aged and infirm in Prince Edward Island are cared for in two institutions operated by the Department of Welfare and Labour. In Nova Scotia, the aged are cared for in municipal or county homes, in homes operated by religious or private organizations and in private boarding homes. The province reimburses the municipalities for two thirds of their expenditures for the maintenance of needy persons in municipal homes, subject to compliance with specified standards of care and accommodation. Homes for the aged receiving aid from the provincial government are subject to provincial inspection. Homes for the aged in New Brunswick are operated under municipal, religious, fraternal and private auspices and receive no direct financial support from the province. Voluntary and proprietary homes are subject to provincial licensing and inspection and must meet standards contained in regulations under the Health Act. Under the Social Assistance Act, 1960, the province contributes to the maintenance of needy persons in municipal homes.

Institutional care for indigent old people in Quebec is provided through charitable institutions under the Public Charities Act. The Homes for the Aged Act authorizes the province to erect and maintain homes for the aged and housing projects, or to make grants to voluntary organizations for this purpose. Standards in homes are governed by regulations under the Public Health Act.

Under the Ontario Homes for the Aged Act, municipalities must provide institutional or boarding-home care for the aged. The province contributes 50 p.c. of the costs of constructing approved homes and 70 p.c. of their net operating and maintenance costs. It also pays up to 70 p.c. of the costs of maintenance in approved boarding homes. Homes for the aged under voluntary auspices are approved, inspected and assisted under the Charitable Institutions Act, which provides for grants in aid of construction equalling 50 p.c. of costs up to $\$ 2,500$ per bed and maintenance grants of 75 p.c. of the amount spent by the organization up to $\$ 3.40$ per day for each resident. The Elderly Persons Housing Aid Act provides for grants to limited-dividend housing corporations building low-rental housing for elderly persons. In 1962 Ontario passed the Elderly Persons Social and Recreational Centres Act, the first of its kind in Canada. This Act enables groups of interested citizens to provide social and recreational centres for elderly residents of a community. The province will meet up to 30 p.c. of the cost of constructing or buying a building for such a centre if the local municipality contributes 20 p.c.

Institutions and boarding homes for the aged and infirm in Manitoba are supervised and licensed by the Department of Health and Public Welfare under public health legislation. Under the Elderly Persons Housing Act, the province makes construction grants to municipalities and charitable organizations equalling one third of the costs of constructing or acquiring and renovating housing accommodation and homes for the aged. Grants may not exceed $\$ 1,400$ for one-person housing units, $\$ 1,667$ for two-person housing units, $\$ 1,200$ per bed for new homes for the aged, and $\$ 700$ per bed for homes that have been renovated. Under the Social Allowances Act, 1959, the province bears the entire cost of assistance to those who, because of age or incapacity, require care for more than 90 days by another or in a home for the aged.

Aged and infirm persons in Saskatchewan are cared for in four provincial nursing homes and in voluntary homes for the aged. The latter are inspected and licensed under the Housing Act. This Act also empowers the province and municipalities to subscribe to the stock of limited-dividend housing companies building low-rental accommodation for older persons; the province may also make loans to municipalities to assist them in subscribing. Capital grants amounting to 20 p.c. of construction costs and maintenance grants of $\$ 40$ per bed per year may be made to municipalities, churches or charitable organizations sponsoring approved homes or housing projects. Costs of maintaining needy persons in homes for the aged are shared by the province and the municipalities under the Social Assistance Act.

Under what are termed 'master agreements', the Province of Alberta bears the cost of constructing and equipping homes for the aged and housing units on municipal land. Projects are operated by provincially incorporated foundations which include municipal
councilmen in their membership; net costs of operation are borne by the municipalities. The province also meets up to 80 p.c. of the cost incurred by municipalities for the maintenance of elderly persons in housing projects and municipal or private homes. Private homes are municipally licensed.

The Province of British Columbia operates a home for elderly homeless men, a provincial infirmary for the chronically ill and, for senile and psychotic patients, three provincial homes for the aged. It also licenses and supervises homes for the aged and boarding homes and, where necessary, shares with the municipalities on a $90-10$ basis the cost of maintaining needy residents. Under the Elderly Persons Housing Aid Act, the province makes grants amounting to one third of construction costs to municipalities and non-profit corporations, including religious and service organizations, engaged in building homes or low-rental housing units for elderly citizens.

## Subsection 4.-Child Care and Protection

Child welfare services, which include child protection and care, services for unmarried parents and adoption services, are provided in all provinces under provincial legislation and are administered by a division of child welfare within the provincial department of welfare. The program may be administered by the provincial authority or the responsibility may be delegated to local children's aid societies, that is, to voluntary agencies with boards of directors, operating under charter and under the general supervision of provincial departments; in Quebec, child welfare services are administered by recognized voluntary agencies and institutions, religious and secular. In Newfoundland, Prince Edward Island, Saskatchewan and, to a large extent, in Alberta, they are administered by the province; in the larger urban centres of Alberta there is some delegation of authority to the municipality. In Ontario and New Brunswick, a network of local children's aid societies, operating under statutory authority, is responsible for the services. In Nova Scotia, Manitoba and British Columbia, services are administered by local children's aid societies in the heavily populated areas and by the province in other areas.

Children's aid societies and the recognized agencies in Quebec receive substantial provincial grants and sometimes municipal grants and in many areas they also receive support from private subscriptions or from community chests or united funds. Maintenance costs for children in care of a voluntary or public agency may be borne entirely by the province-as in Alberta, Manitoba, Prince Edward Island and Newfoundland-or partly by the municipality of residence and partly by the province.

The child welfare agencies, provincial or private, have the authority to investigate cases of alleged neglect and, if necessary, to apprehend a child and to bring the case before a judge upon whom rests the responsibility of deciding whether in fact the child is neglected. When neglect is proven, the court may direct that the child be returned to his parent or parents, under supervision, or be made a ward of the province or a children's aid society or, in Quebec, be placed under the authority of a suitable person or agency. The appropriate agency is then responsible for making arrangements to meet the needs of the child in so far as community resources permit. The services may involve casework with families in their own homes, or care may be provided in foster boarding homes, in adoption homes or, for children who need this form of care, in selected institutions. Children placed for adoption may be wards or they may be placed on the written consent of the parent. Adoptions, including those arranged privately, number about 13,000 annually.

Child welfare agencies make use of the small selective institution for placement of children who are forced to be away from their own homes for a short period or who may need preparation for placement in foster homes, and also for teenage children who may find it easier to fit into a group setting than into a foster home. The development of small,
highly specialized institutions, which function as treatment centres for emotionally disturbed children, is of particular significance. Institutions for children are governed by provincial child welfare legislation or by special statutes dealing with welfare institutions, and by provincial or municipal public health regulations. The institutions are generally subject to inspection and in some provinces to licensing, and are usually required to make reports to the province on the movement of children under their care. Sources of income may include private subscriptions, provincial grants, and maintenance payments on behalf of children in care, payable by the parents, the placing agency, or the responsible municipal or provincial department.

Services to unmarried parents include casework services to the mother and possibly to the father, legal assistance in obtaining support for the child from the father, and fosterhome care or adoption services for the child. Support for unmarried mothers may be obtained under general assistance programs. In many centres, homes for unmarried mothers are operated under private or religious auspices.

Day nurseries for the children of working mothers are established only in the larger centres and chiefly under voluntary auspices. Licensing is required in five provinces but Ontario is the only province with a Day Nurseries Act. This Act sets out standards for operation and licensing and provides for provincial reimbursement of one half of the operating and maintenance costs of municipally sponsored day nurseries, which are established in most of the industrial centres in that province.

## PART III.-HEALTH AND SOCIAL WELFARE EXPENDITURES

## Section 1.-Government Expenditures on Health and Social Welfare

In the six fiscal years 1956-57 to 1961-62, total annual expenditures of all levels of government on health and social welfare increased from $\$ 2,004,000,000$ to $\$ 3,679,000,000$, or over 80 p.c. When the growth of population is taken into account, the increase was somewhat less-per capita expenditure advanced from $\$ 125$ to $\$ 202$, or about 60 p.c. Government expenditures may also be measured in relation to the national accounts; on this basis, government expenditures on health and social welfare rose over the period under review from 8.5 p.c. to 12.9 p.c. of the national income and from 6.5 p.c. to 9.8 p.c. of the gross national product.

The federal share of health and social welfare expenditures increased from 70.0 p.c. in 1956-57 to a peak of 73.9 p.c. in 1958-59 and, conversely, the provincial and municipal shares fell, respectively, from 24.8 to 22.2 p.c. and from 5.2 to 3.9 p.c. However, since 1958-59, provincial expenditures increased more rapidly than federal expenditures mainly because of hospital insurance outlays which, although divided almost equally between the federal and provincial governments, form a relatively larger part of provincial expenditures on health and social welfare than they do of federal expenditures. As a result, the federal share dropped to 70.0 p.c. in 1961-62 and the provincial share rose to 27.0 p.c. The steady decline in municipal expenditures, in percentage terms, during the six years was attributable mainly to the introduction of hospital insurance which relieved the municipalities of much of the cost of hospital care for indigents.

Of considerable interest is the growing proportion of government expenditures on health and social welfare taken up by health programs. In 1956-57, health programs accounted for $\$ 470,000,000$ or 23 p.c.; by $1961-62$, the outlays amounted to $\$ 1,108,000,000$ or 30 p.c.

An analysis of the principal components for the year ended Mar. 31, 1962 indicates the magnitude of the major programs and services. Family allowances payments amounted to $\$ 521,000,000$, old age security payments to $\$ 625,000,000$ and unemployment insurance benefits to $\$ 455,000,000$. Veterans pensions and allowances accounted for $\$ 178,000,000$ and $\$ 75,000,000$, respectively, and payments from the Prairie Farm Emergency Fund totalled $\$ 54,000,000$. These income maintenance programs were entirely the responsibility of the Federal Government. Federal-provincial income maintenance programs required expenditures of $\$ 61,000,000$ for old age assistance, $\$ 5,000,000$ for blindness allowances,

$\$ 33,000,000$ for disabled persons allowances and nearly $\$ 200,000,000$ for unemployment assistance, the latter figure including some municipal expenditure. Workmen's Compensation Boards spent $\$ 94,000,000$ on cash benefits for pensions and compensation and the provincial governments about $\$ 48,000,000$ on mothers' allowances.

Welfare services for Indians and for veterans and the national employment service accounted for $\$ 36,000,000$ at the federal level while child welfare services required an expenditure of almost $\$ 34,000,000$ by provincial governments.

In the field of health, federal grants to the provinces under the Hospital Insurance and Diagnostic Services Act totalled $\$ 284,000,000$ and grants for hospital construction and general health grants to the provinces and municipalities amounted to $\$ 49,000,000$. The Federal Government spent $\$ 24,000,000$ on the Indian and Northern Health Service and $\$ 47,000,000$ on hospital and treatment services for veterans. Provincial expenditures on hospital care amounted to an estimated $\$ 524,000,000$ and $\$ 60,000,000$ was spent on other health services. Workmen's Compensation Boards paid $\$ 38,000,000$ for medical aid and hospitalization. Municipal governments spent $\$ 65,000,000$ on health.

Altogether, these items accounted for expenditures of $\$ 3,500,000,000$ in the year ended Mar. 31, 1962.
1.-Total, per Capita and Percentage Distribution of Government Expenditures on Health and Social Welfare, by Level of Government, Years Ended Mar. 31, 1957-62

## Section 2.-Expenditures on Personal Health Care

Expenditures made on personal health care services, for the purposes of this Section, include the amounts spent by hospitals and the amounts received by physicians, dentists, pharmacists for prescription services, and by other paramedical professionals in the provision of health care and treatment directly to individuals. No attempt is made to include expenditures on public health, or public or private capital expenditures such as the building or extension of hospitals or other health facilities. Also excluded are the cost of administration of public health programs and other technical services as well as the cost of administering voluntary profit or non-profit health insurance plans. On the other hand, expenditures by the three levels of government on behalf of individuals are included.

In 1961, Canadians spent an estimated $\$ 1,652,000,000$ on personal health care, an amount two and one quarter times the $\$ 735,000,000$ so spent in 1953 . The rate of increase averaged 10.8 p.c. during the period, varying from a minimum of 8.2 p.c. between 1954 and 1955 to a maximum of 13.6 p.c. between 1955 and 1956. Although the Canadian population rose during these years by 22.9 p.c., the expenditure figure increased even more rapidly so that the per capita expenditure on personal health care, which was $\$ 49.50$ in 1953 reached $\$ 84.27$ in 1960 and an estimated $\$ 90.57$ in 1961.

The proportion of the gross national production represented by expenditures on personal health care varied from 2.9 p.c. in 1953 to 4.5 p.c. in 1961, with a slight reduction between 1954 and 1955. In other words, one dollar in every $\$ 22$ of production in Canada in 1961 was for personal health care goods and services as compared with one dollar in $\$ 34$ for the year 1953.

## 2.-Expenditures on Personal Health Care, 1953-61

Note.-Figures exclude expenditures on public health and expenditures for capital purposes.

${ }^{1}$ Includes gross expenditures of public and private acute, chronic and convalescent hospitals in 1953-57 and, in non-participating provinces, in 1958-60; includes gross expenditures of budget review and contract hospitals in 1961 and, in participating provinces, in 1958-60; excludes expenditures of mental, tuberculosis, and federal hospitals. ${ }^{2}$ Includes gross expenditures of public and private hospitals; excludes expenditures of federal hospitals. ${ }^{3}$ Includes acute, chronic, convalescent, mental and tuberculosis hospitals of the Department of National Health and Welfare and the Department of Veterans Affairs; excludes hospitals of the Department of National Defence. ${ }^{4}$ Sold by retail drugstores only. ${ }_{5}$ Estimated. ${ }^{6}$ Includes estimated expenditures for private duty nurses, and chiropractors, osteopaths, and optometrists; excludes all employees of hospitals.

## PART IV.-NATIONAL VOLUNTARY HEALTH AND WELFARE AGTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, planning research and education, supplementing the services of the federal and provincial authorities in many fields and playing a leading role in stimulating public awareness of health and welfare needs and in promoting action to meet them. The functions of twenty important voluntary agencies are described in the 1962 Year Book at pp. 270-274.

Voluntary Medical Insurance.-About $8,800,000$ Canadians, or 49 p.c. of the population of Canada, had some protection against the costs of physicians' services at the end of 1960. Their protection was provided by some 64 non-profit plans and at least 43 private companies. Non-profit enrolment was $5,100,000$ while private companies provided surgical coverage to $4,250,000$; overlapping enrolment in the two groups amounted to about 600,000 . The $8,800,000$ net total was $2,900,000$ above the 1955 figure, which represented only 38 p.c. of the population.

The non-profit plans took in $\$ 113,900,000$ in premiums and $\$ 2,200,000$ in other revenue in 1960 , paying out $\$ 100,600,000$ in benefits and $\$ 9,600,000$ for administration, leaving a surplus of $\$ 5,900,000$. Thus for every dollar of premiums, 88 cents were paid out in benefits. Benefit payments of non-profit plans amounted to $\$ 19.76$ per person covered in 1960. In 1955 benefit payments were $\$ 41,400,000$, which represented 89 cents of the premium dollar but amounted to only $\$ 13.17$ per person.

Profit-making private companies offer several classes of health protection-surgical, medical and major medical. Because surgical enrolment is most widespread and because an individual often must take out surgical insurance to be eligible for the other kinds, the surgical enrolment figure is regarded as indicative of total private enrolment. Benefit payments in all classes amounted to $\$ 48,200,000$ in 1960 , or $\$ 11.35$ per person. In 1955 , the total was $\$ 19,300,000$ and the ratio $\$ 6.25$.

## PART V.-VETERANS SERVICES*

The Department of Veterans Affairs administers most of the legislation comprising the Veterans Charter and provides administration facilities for the Canadian Pension Commission, which administers the Pension Act and Parts I to X of the Civilian War Pensions and Allowances Act; for the War Veterans Allowance Board, which administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act; and for the Secretary-General (Canada) of the Commonwealth War Graves Commission.

The main benefits now available to veterans consist of medical treatment for those eligible to receive it, land settlement and home construction assistance, educational assistance for children of the war dead, veterans insurance, general welfare services, unused reestablishment credit, disability and widows' pensions and war veterans allowances. The work of the Department, excepting the administration of the Veterans' Land Act, is carried out through 17 district offices and five sub-district offices in Canada and one district office in England. There are seven Veterans' Land Act district offices and 25 regional offices established to administer the benefits of the Act.

Noteworthy during 1962 were the ceremonies held in Ottawa and in several provincial capitals to mark the 60th anniversary of the signing of the Peace of Vereeniging, which ended the South African War. At one of these ceremonies, the Book of Remembrance containing the names of 267 Canadians who gave their lives in that war and of 16 Canadians who died in the Nile Expedition in 1885 was dedicated by His Excellency the Governor General. At a similar ceremony held on Nov. 11, the Book of Remembrance honouring the 516 Canadians who died in the United Nations operations to restore peace in Korea was dedicated. These Books are displayed temporarily in the Memorial Chamber of the Parliament Buildings at Ottawa.

## Section 1.-Treatment Services

Treatment Activity.-The Department of Veterans Affairs, through its Treatment Services Branch, provides medical, dental, and prosthetic services for entitled veterans throughout Canada. Service is also provided for members of the Armed Forces, the Royal Canadian Mounted Police, and the wards of other governments or departments at the request and expense of the authorities concerned.

The primary responsibility of the Branch is to provide examination and treatment to disabled pensioners for their pensionable disabilities. Other main groups of veterans receiving treatment are war veterans allowance recipients, veterans whose service and need make them eligible for domiciliary care, and veterans whose service and financial circumstances render them eligible for free treatment, or at a cost adjusted to their ability to pay. If beds are available, any veteran may receive treatment in a Departmental hospital on a guarantee of payment of the cost of treatment. The pensioner receives treatment regardless of his place of residence, but service to other veterans is available in Canada only. Where Departmental facilities are not available, the eligible veteran may receive treatment at the expense of the Department in an outside hospital by a doctor of his own choice.

Under the federal-provincial hospital insurance program, DVA hospitals are recognized for the provision of insured services to veterans. Arrangements have been made for the payment of any necessary premiums on behalf of veterans who are in receipt of War Veterans Allowance. The Veterans Treatment Regulations remain the authority for the treatment of veterans (and others) in DVA institutions and elsewhere under Departmental responsibility, regardless of whether or not the hospitalization is at the expense of the insurance plan.

[^90]Departmental hospitals provide base-hospital facilities for the treatment of members of the Armed Forces. Ste. Foy Hospital near Quebec City and Sunnybrook Hospital at Toronto have segregated units, fully staffed by Armed Forces personnel but utilizing all the ancillary facilities of the hospital. In other institutions the military personnel and patients are completely integrated throughout. Most DVA hospitals provide training facilities for members of the Canadian Forces Medical Service.

Patient load for the year ended Dec. 31, 1962, was as follows:-

| Item | No. |
| :---: | :---: |
| Admissions to Departmental hospitals. | 53,859 |
| Admissions to other hospitals. | 24,676 |
| Total Admissions. | 78,535 |
| Patient-days in Departmental hospitals Patient-days in other hospitals. | $\begin{aligned} & 2,550,186 \\ & 845,092 \end{aligned}$ |
| Total Patient-Days. | 3,395,278 |
| Out-patient visits to Departmental hospitals. | 435,754 |
| Out-patient visits to other Departmental clinics | 91,737 |
| Out-patient visits to doctor-of-choice. | 334, 827 |
| Total Out-Patient Visits. | 862,318 |
| Number of veterans treated under the Doctor-o | 207,049 |

Medical Staff and Training Programs.-Many of the professional staffs of active treatment hospitals are employed on a part-time basis; in the main they are recommended for appointment by the Deans of Medicine of the universities with which the hospitals are affiliated. Most members of the medical staff are engaged in teaching and private practice, and hold appointments on the medical faculties of the various universities.

In its active treatment institutions, the Department maintains medical teaching programs which are considered essential to attract highly qualified professional men and thus ensure the highest quality of medical care. All active treatment hospitals have been approved by the Royal College of Physicians and Surgeons of Canada for postgraduate teaching in medicine and surgery, and the majority are approved also for advanced postgraduate training in the various specialties. An intern-resident training program is in effect and, at the end of 1962 , there were 270 residents and interns in the medical specialties as well as 157 interns in occupational therapy, physiotherapy, psychology, laboratory, and medical social services.

During 1962, 83 Departmental employees attended courses, assisted fully or partly by the research and education vote. In addition, nursing assistants were trained at a school located at Camp Hill Hospital in Halifax. This school has an annual capacity of 70 graduates who are offered employment in Departmental hospitals across the country.

Medical Research.-During 1962, there were 89 projects in progress under the Clinical Research Program. The program is varied but in the main deals with conditions affecting aging, which the Department is in a special position to investigate. Self-contained Clinical Investigation Units have been set up in active treatment hospitals located at Montreal, Toronto, London, Winnipeg and Vancouver. (See also pp. 268-269.)

Hospital Facilities.-Treatment is provided in 11 active treatment hospitals located at Halifax, N.S., Saint John, N.B., Quebec City, Montreal and Ste. Anne de Bellevue in Quebec, Toronto and London in Ontario, Winnipeg, Man., Calgary, Alta., and Vancouver and Victoria, B.C.; also in a health and occupational centre at Ottawa, Ont., and in two domiciliary care homes located at Saskatoon, Sask., and Edmonton, Alta. The rated bed capacity of these institutions at Dec. 31,1962 was 8,918 beds. It should also be noted that in Ottawa both acute and chronic cases that require definitive treatment are admitted to the National Defence Medical Centre. An additional 504 beds were available in veterans pavilions situated at Regina and Edmonton. Pavilions are owned by the Department but are operated by the parent hospital, and medical staff is provided by the Department.

A construction program for hospital rehabilitation continued throughout the year. A newly constructed 300 -bed wing for Westminster Hospital in London, Ont., was opened in late summer; construction was completed of a DVA pavilion in the form of a 67 -bed wing attached to the General Hospital at St. John's, Nfld.; and architectural plans were completed for a new Veterans Home at Saskatoon, Sask. A comprehensive report of the principal veterans' hospital projects completed and expenditures thereon during the years 1945-62 is given in the 1962 Year Book, pp. 276-278.

Dental Services.-Dental treatment supplied under Departmental auspices for the year 1962 consisted of 128,730 operations for 20,701 patients. Of this treatment, approximately 76 p.c. was provided in Departmental hospitals and clinics and the remainder by dentists-of-choice on a fee-for-service basis, in areas where Departmental facilities were not available. During 1962, the Department employed 36 dentists on a full-time basis and one on a half-time basis, and utilized the services of three dental consultants on a part-time basis. One-year dental internships were approved and inaugurated during the year.

Prosthetic Services.-The Department operates a Prosthetic Service which is responsible for the supply and maintenance of prostheses, orthopaedic appliances and sensory aid devices to veterans and other persons eligible for treatment under the Veterans Treatment Regulations; these appliances are issued only upon Departmental medical prescription and are supplied and serviced without charge. The Department also extends prosthetic service, upon request, on a repayment basis, to other Federal Government departments, to allied governments, to provincial governments under certain conditions and to workmen's compensation boards. During 1962, approximately 168,000 basic appliances, accessories and repairs were issued to 86,000 patients.

The physical establishment consists of a main factory at Toronto and 12 district manufacturing and fitting centres located in Departmental hospitals throughout Canada. District prosthetic technicians further extend service to five sub-districts by regular weekly or monthly visits. The Toronto factory manufactures certain prostheses, appliances and component parts, provides bulk purchasing of raw materials for distribution to other centres, provides advanced instructional courses for district staff, maintains a research section staffed by engineers and technicians and accepts, when necessary, referrals of cases for whom routine fitting procedures are considered inadequate.

A more comprehensive explanation of the operation of Prosthetic Services is contained in the 1961 Year Book, pp. 291-292.

## Section 2.-Welfare Services

The Welfare Services Branch has specific responsibilities with respect to the administration of statutory benefits designed to assist veterans and their dependants and is equipped to give advice and help in any kind of problem that does not come under the jurisdiction of another branch of the Department. Branch personnel maintain close liaison with and have a detailed knowledge of sources of assistance in the community such as welfare departments at all levels of government, private philanthropic agencies, veterans organizations, etc. These contacts enable the Branch to make prompt and accurate referrals when required and to act as a channel through which the Department becomes aware of situations in which it can assist.

Activities under legislation designed to assist with immediate postwar rehabilitation of veterans lessen year by year. War service gratuities authorized under the War Service Grants Act (cash payments to each veteran of World War II, the amount varying with length of service and area in which it was performed) are now payable only in certain cases where delay of application is acceptable; 20 awards were authorized during 1962 for a total value of $\$ 10,313$. The awaiting returns allowance is now available only to veterans established in full-time farming under the Veterans' Land Act; during 1962 payments amounted to $\$ 17,962$ and there were 21 active accounts at the end of the year. The period of eligibility for training for veterans of World War II and for those who served in Korea has expired except for a few special cases. However, the Pensioners Training Regulations
provide a continuing authority for the training of pensioned veterans and of ex-members of the peacetime forces with disabilities attributed to military service. These regulations enable a pensioner who, because of his disabilities, cannot continue in a former line of work to qualify for another occupation. At the end of 1962 there were 28 trainees on strength, 16 of whom were registered in vocational courses and 12 in university courses.

Legislative changes made in 1962 mainly concern the deferment of the application date for benefits under several rehabilitation and assistance measures to Oct. 31, 1968. Amendments to the Children of War Dead (Education Assistance) Act provide for increased allowances to students when they reach the age of 21 and for certain extensions in the groups eligible for this assistance and in the periods during which it may be provided (see pp. 317-318).

Assistance measures still active are discussed in the following paragraphs. Veterans insurance and educational assistance to children of war dead are covered fairly fully; for other items more detail is given in previous editions of the Year Book.

Re-establishment Credit.-This benefit, authorized under Part II of the War Service Grants Act, is equal in each case to the war service gratuity, less the supplementary gratuity paid for overseas service. Except for balances of $\$ 50$ or less, it is not paid in cash to the veteran but is released on his behalf for specified purposes. From the coming into force of this benefit to the end of 1962 , a total of $\$ 314,276,145$ has been paid out in reestablishment credits; unused balances totalled $\$ 9,454,654$ at the end of 1962. Eligible veterans may apply for this benefit up to Oct. 31, 1968.
1.-Re-establishment Credits Paid, by Required Purposes, 1961 and 1962

| Purpose | 1961 | 1962 | Purpose | 1961 | 1962 |

|  |  |  | Total | 2,181,804 | 1,202,421 |

Casualty Rehabilitation.-The function of the casualty welfare program is outlined in the 1956 Year Book, p. 307. At Dec. 31, 1962, there were 1,408 active cases. The total number of disabled veterans then registered was 48,807 and of these 47,399 were closed cases. New cases opened during 1962 numbered 440 and cases closed numbered 1,829 .

Social Services.-The Social Service Division of the Department maintains a small corps of trained social workers who act primarily as consultants to other staff in dealing with problems of social adjustment affecting veterans and their dependants, but may give direct service in complex cases. They are especially concerned with maintaining liaison, for referral purposes, with welfare departments at all levels of government and with other philanthropic agencies. They assist in the work of the War Veterans Allowance District Authorities and other Departmental committees concerned with welfare matters and also supervise Branch services to dependants of members of the Armed Forces. On request by the Department of National Defence, the Branch furnishes reports on home circumstances of service personnel who encounter some domestic emergency. When the problem cannot be solved by counselling or referral to a source of help in the community, these reports assist the Department of National Defence in deciding whether compassionate leave, posting or discharge is indicated. During 1961 and 1962, the Social Service Division handled 12,405 and 9,160 requests, respectively, for service from all sources.

Assistance Fund (WVA). -The Assistance Fund (War Veterans Allowances) Regulations authorize supplementary payments to recipients under the War Veterans Allowance Act (pp.325-326) who are living in Canada and are in need and whose incomes are lower than the maximum allowed by that statute. Assistance may be given as a continuing monthly grant in accordance with a formula which includes costs of shelter, fuel, food, clothing, personal care and certain health needs, or as single grants to meet emergencies. The maximum annual supplement available is $\$ 288$ for single recipients and $\$ 360$ for recipients at the married rate of allowance.

The administration of the Fund is directed by the Assistance Fund Committee of which the Deputy Minister is chairman. Applications are dealt with and grants authorized by district authorities in local offices of the Department in accordance with general instructions issued by the Committee. The following statement summarizes activity of the Fund during 1961 and 1962. Since monthly grants may be continued from year to year, the number of persons assisted in a given period is greater than the number applying.

Older Veterans.-Details of the Department's work on behalf of the aging veteran population are given in the 1961 Year Book, pp. 294-296. Services and benefits for older veterans and their dependants are an increasing activity of the Department. The co-operation and goodwill of industrial and commercial organizations and the hiring policy of government agencies have resulted in the Corps of Commissionaires being able to maintain its position as the largest Canadian employer of older war veterans. Officials of the Welfare Services Branch of the Department continue to participate actively with agencies and committees dealing with the problems of older citizens and veterans.

Educational Assistance to Children of War Dead.-The Children of War Dead (Education Assistance) Act* is designed to help with the cost of post-secondary education for the children of those whose deaths have been attributed to military service. Eligible children may be assisted with the cost of training in Canada at any educational institution which requires high school graduation, matriculation or equivalent standing for admission. This includes not only universities and colleges, but also such facilities as hospital nursing schools and provincial technological institutes.

[^91]The maximum length of training is normally four academic years or 36 months whichever is the lesser. However, this may be extended if the required preparation for an occupation, such as medicine or law, takes longer and the student maintains a high academic standard. Assistance cannot be continued beyond the end of the academic year in which the student reaches age 25 except when training is extended beyond the normal four-year limit, in which case it can be continued, if necessary, to the end of the academic year in which the student reaches age 30 . Training must commence within 15 months after the student completes secondary school, except in special cases, but assisted training cannot commence after the student reaches age 25 . Fees are limited to $\$ 500$ per student for each academic year. An allowance of $\$ 25$ per month while in training is paid up to age 21. After that age, when payment under the Pension Act ceases, the allowance is increased to $\$ 79$ per month.

From its inception in July 1953 to Dec. 31, 1962, expenditures under this program totalled $\$ 2,998,994$ of which $\$ 1,451,360$ was spent in allowances and $\$ 1,547,634$ in fees. Applications approved totalled 2,923-1,440 for males and 1,483 for females. In addition to those who have completed or are in training as shown by Table 3, 323 had benefits deferred, 58 cases were suspended and 727 were discontinued for reasons other than the completion of training.
3.-Post-Secondary School and University Trainees under the Children of War Dead (Education Assistance) Act, by Sex and Type of Training, as at Dec. 31, 1962

Vetcraft.-A short history of Vetcraft is given in the 1959 Year Book, p. 293. Sheltered workshops are now operated at Toronto and Montreal, providing full-time employment for a number of veterans and widows; in addition, small assembly work is done in Winnipeg, Regina and Calgary, providing part-time home employment for other workers. Production for the year 1962, which was sold entirely to the Dominion Command of the Royal Canadian Legion, amounted to $6,909,077$ poppies and 68,830 memorial wreaths and crosses.

Veterans Insurance.-The Returned Soldiers' Insurance Act (SC 1920, c. 54, as amended) provided eligibility to contract for life insurance with the Federal Government up to a maximum of $\$ 5,000$ to any one veteran of World War I. The low medical standard enabled many veterans unable to meet the medical requirements of commercial life insurance companies to secure protection for their immediate dependants. This insurance was on life plans with no provision for endowment or term insurance. Applications were accepted from 1920 to 1923 and from 1928 to 1933. No policies have been issued since Aug. 31, 1933. The following statement is a summary of operations as at the end of 1962:-

| Item | Policies | Amount |
| :---: | :---: | :---: |
|  | No. | \$ |
| Policies Issued. | 48,319 | 109, 299, 500 |

| Other terminations................ | 234 | 1,252,852 |
| Insurance in force Dec. 31, 1962. | 8,102 | 17, 196, 310 |

The Veterans Insurance Act (RSC 1952, c. 279, as amended) is the World War II counterpart of Returned Soldiers' Insurance and enabled veterans following their discharge and widows of those who died during service to contract with the Federal Government for a maximum of $\$ 10,000$ life insurance. Also eligible were certain other groups of persons, such as merchant seamen eligible to receive a war service or a special bonus, firefighters, auxiliary service supervisors, special operators, members of the Women's Royal Naval Services and the South African Military Nursing Service and persons receiving pensions relating to the War. Those qualifying by active Korean service are eligible to apply for veterans insurance until Oct. 31, 1968.

This Act makes it possible for veterans, unable to meet the required medical standards of commercial life insurance companies, to obtain insurance at standard rates for the protection of their immediate dependants. A medical examination, at no expense to the veteran, is required only in special cases. There have been 98 applications declined out of a total of 53,216 received.

The first policy was issued on Apr. 1, 1945 and in the immediate postwar years an average of over 5,000 policies a year were issued, attaining a peak of 8,825 in the year ended Mar. 31, 1948; in subsequent years the average has been 2,500 .

The period of eligibility was originally limited to three years, i.e., to Feb. 20, 1948, and later increased to six years. In 1951 the period was again extended for an additional four years to Dec. 31, 1954, or ten years from discharge whichever was the later date. Section 12(3) of the War Service Grants Act provided that if a veteran of World War II had unused re-establishment credit sufficient to pay the initial premium, he or she might apply for Veterans Insurance up to Jan. 1, 1960, or fifteen years after discharge whichever was the later date. Purchase of veterans insurance through use of re-establishment credit was virtually the only way in which veterans residing outside of Canada used their credit benefits.

As a result of the termination of eligibility on Dec. 31, 1954, the only new applications for Veterans Insurance received from that date to Sept. 6, 1958 were those where premiums were being paid by the use of re-establishment credit. On Sept. 6, 1958 a further amendment to both the Veterans Insurance Act and the War Service Grants Act set a common cut-off date for the benefits of these Acts at Sept. 30, 1962. Also at this time, Sect. 10 of the Veterans Insurance Act was repealed. This Section limited the payment of the proceeds of a policy to a widow or child of the insured in the event of a pension under the Pension Act being paid to such persons on the insured's death. By the repeal of this Section, the
award of a pension under the Pension Act on the death of a policyholder would have no bearing on the amount of the policy proceeds. The effect of the repeal was a sharp increase in the number of applications. In the following six months, approximately 2,000 were received as compared with 300 for the preceding six months; since then applications have been received at the average rate of 150 a month to the end of 1962.

The most recent change in legislation was made on Feb. 15, 1962 when Royal Assent was given to a common cut-off date of Oct. 31, 1968 for eligibility under the Veterans Insurance Act, the War Service Grants Act and the Veterans Benefit Act (1954).

The amount of insurance on the life of any one person may not exceed $\$ 10,000$, issued in multiples of $\$ 500$. The insurance, which is non-participating and with no endowment feature, may be obtained on a 10 - 15- or 20-year payment life plan or provides for premium payments until the policy anniversary nearest the insured's age of 65 or 85 . Premiums may be paid in cash from a pension under the Pension Act, from Civil Service or Armed Forces salaries or from re-establishment credit. There is a disability provision under the policy which provides for a waiver of premiums to a policyholder in the event of a total and permanent non-pensionable disability; some 70 policies are being carried on this waiver-ofpremium basis.

There is a cash surrender value available to a policyholder who has kept premium payments up to date on a policy that has been in force for at least two years. No loans are permitted on a policy and the contract is not subject to liens or attachment by creditors. There is also an alternative reduced paid-up value and automatic extended term provision included in each policy contract.

A married veteran is required to name his spouse or child as beneficiary. Parents, brothers, sisters, grandchildren, etc., form a contingent beneficiary class. If the veteran is unmarried or a widower without children, a future spouse is named as preferred beneficiary with the same class of contingent beneficiaries required as those for a married person. In the event of the death of the insured without a spouse or child surviving and no named contingent beneficiary survives, the policy proceeds will be paid to the estate of the insured. In general, the amount payable to a beneficiary as an immediate death benefit may not exceed $\$ 2,000$, the remainder being paid as an annuity. There are several types of annuities available from a minimum of five years to a life annuity.

The following statement is a summary of operations as at Dec. 31, 1962.

| Item | Policies | Amount |
| :---: | :---: | :---: |

## Section 3.-Land Settlement and Home Construction

The Veterans' Land Act provides for the settlement of veterans of World War II and the Special (Korean) Force under five broad categories: farming as a full-time occupation; part-time farming in rural or semi-rural areas to supplement income from other employment; commercial fishing; land settlement, generally in pioneer areas, under agreements between the Federal Government and the provinces; and home building on city-size lots by veterans who have been approved for a loan under the National Housing Act and who act as their own contractors.

To keep pace with increases in the cost of land and house construction, and to provide a source of credit to veterans settled on small family farms, a number of important amendments of a financial nature were made to the Act in April 1962. These included provisions which increased the total assistance available, authorized additional loans under Part III to part-time farmers already settled, and extended the maximum repayment period to a uniform term of 30 years. Another major amendment provided authority for the Director to enter into a group life insurance contract on behalf of veterans desiring mortgage insurance coverage relative to their indebtedness to the Director.

The financial assistance available under Part II to veterans for the construction of their own homes on city-size lots was increased from $\$ 10,000$ to $\$ 12,000$ and the minimum initial equity required of each veteran was raised from $\$ 800$ to $\$ 1,000$. The ceiling on loans under Part III to veterans being settled as part-time farmers was increased from $\$ 3,000$ to $\$ 4,800$. To obtain a loan of this amount, a veteran must contribute in cash or equity, or both, the sum of $\$ 1,200$ calculated on the basis of $\$ 1$ for each $\$ 4$ borrowed; previously, the ratio was $\$ 1$ to $\$ 3$. These two changes provide a maximum expenditure under Parts I and III of $\$ 12,000$, an increase of $\$ 2,000$ over the former limit.

Prior to the amendments, Part III loans to part-time farming veterans were available only at the time of their establishment. It was found that this prohibition against the approval of additional financial assistance, for home improvement purposes subsequent to settlement, created problems for both the veterans and the Administration. As a result of the legislative change made in this connection, Part III loans of up to $\$ 4,800$ can now be made to part-time farming veterans on the same basis and terms as apply to such loans made to veterans being established.

The major amendments to the Act in 1959 provided that additional loans under Part III to full-time farming veterans could be made only where the funds were required for the development and proper operation of an economic farm unit. Although this provision was sound in principle, and a substantial number of loans have been made, it nevertheless served to preclude the extension of credit to veterans settled on small family farms. Such a unit is considered to be one which provides the owner and his family with an acceptable standard of living but which is not capable of producing a large enough gross and net income to be classed as an economic or commercial farm unit.

In recognition of the place which small family farms have in the agricultural industry of the country, and of the financial requirements of their operators, one of the amendments made in 1962 provided for fully repayable, 5 -p.c. loans under Part III of up to $\$ 6,000$. The total assistance available to veterans established on this type of unit is now $\$ 12,000$, or 75 p.c. of the market value of the land, whichever is the lesser. This additional credit may be used for the purpose of acquiring land, effecting permanent improvements to land and buildings, the purchase of basic herd livestock, and the payment of debts that relate to or were reasonably incurred in the operation of the farm.

As a result of the above-mentioned financial changes and the reduction effected in 1961 of the minimum acreage requirement for part-time farming settlement down to one half of an acre, there was a further substantial increase in loaning operations during 1962. Financial assistance approved on behalf of veterans during the year totalled $\$ 41,070,549$ as compared with $\$ 32,712,389$ in 1961 . There were 5,892 loans made during 1962, an increase of 1,842 over the number made in the preceding year.

From the inception of the Act to the end of 1962, 92,421 veterans have received financial assistance and more than $\$ 558,000,000$ expended for this purpose. There were 52,649 active accounts under administration at the end of 1962, including accounts of 375 Indian veterans settled on Indian reserves which are administered by the Indian Affairs Branch of the Department of Citizenship and Immigration. A total of 43,524 veterans, including 1,234 Indian veterans, have earned their ten-year conditional grants amounting to more than $\$ 80,000,000$. Over $\$ 250,000,000$ has been repaid. In addition to the principal repayments, more than $\$ 70,000,000$ has been received in interest, of which almost $\$ 6,000,000$ was received in 1962. The active accounts under administration have a remaining indebtedness of nearly $\$ 225,000,000$.

To the end of 1962 , there were 30,500 houses completed and a further 1,200 were in the process of construction. There were 1,256 houses started during the year and 1,216 completed. A further 2,181 veterans received approval to effect additions or improvements to their homes and other buildings in 1962 as compared with 909 in 1961.

During the year, veterans continued to maintain a very favourable repayment record. The amount collected and applied to the Consolidated Revenue Fund from current active accounts represented 103.9 p.c. of the total due and owing on 51,280 repayable contracts. There have been very few instances where it has been necessary to rescind a contract; during 1962 there were 15 such cases bringing the total since inception of operations to only 230.

A major factor contributing to the favourable repayment record of VLA settlers is that more than 24,000 veterans have adopted one of the various pre-arranged payment plans made available to them. In addition, 1,030 Share-of-Crop Agreements were in effect in the Prairie Provinces in 1962, almost 200 more than in 1961. This increase was the result of an amendment made during the year to the Veterans Land Regulations, extending the previous provisions, which related only to the delivery of wheat by veterans settled in the spring wheat areas of the Prairie Provinces, to the delivery of oats, barley, flax, rye and rapeseed.

## 5.-Summary of Settlement and Expenditures under the Veterans' Land Act, as at Dec. 31, 1962

| Item | Full-Time Farming | Small Holdings | Commercial Fishing | Provincial Lands | Federal Lands | Indian Reserves | CitySize Lots | Total |

## Section 4.-Veterans' Bureau

The main duties of the Veterans' Bureau, which is a branch of the Department of Veterans Affairs, are to assist former members of the Armed Forces and their dependants, and former members of the various auxiliary organizations, such as merchant seamen, firefighters and others, in preparing and presenting pension claims to the Canadian Pension Commission.

Now in its thirty-second year of operation, the Veterans' Bureau is headed at Ottawa by an officer known as the Chief Pensions Advocate, who is assisted by pensions advocates, most of whom are lawyers, located in all districts in Canada in which offices of the Department are maintained, and at the district office in London, England.

The pensions advocates also appear as counsel for applicants before the Appeal Boards of the Commission, and, in addition, they advise pensioners and applicants upon any provision of the Pension Act or phase of pension law or administration that may have a bearing on the applicant's pension claim. No charge is made for the services of the Bureau.

During the year ended Dec. 31, 1962, the Veterans' Bureau submitted a total of 7,095 claims to the Canadian Pension Commission for adjudication. This number included 1,322 claims presented to Appeal Boards of the Canadian Pension Commission of which 51 p.c. were wholly or partially granted. During the same year, the Bureau submitted 1,298 straight entitlement claims to the Canadian Pension Commission, based on service in World War I and peacetime, of which 192 were wholly or partially granted. However, with respect to claims based on service in World War II and Korea, out of a total of 3,357 presented, 1,153 were wholly or partially granted. In addition, 1,118 miscellaneous claims were submitted to the Canadian Pension Commission (including applications for leave to re-open following an Appeal Board hearing, claims for higher degree of aggravation, increased assessment, retroactive awards, compassionate pension awards, etc.), of which 493 were wholly or partially granted.

## Section 5.-Veterans Pensions

Canadian Pension Commission.-The Canadian Pension Commission is a statutory body charged with the administration of the Pension Act and the Civilian War Pensions and Allowances Act. The members of the Commission are appointed by the Governor in Council who may also impose upon the Commission duties in respect of any grants in the nature of pensions, etc., made under any statute other than the Pension Act. It reports to Parliament through the Minister of Veterans Affairs.

It is the responsibility of the Commission to adjudicate on claims for injury or disease resulting in disability or death, incurred during service with the Canadian Navy, Army or Air Force during war or peacetime. The Commission may also supplement, up to Canadian rates, awards of pension to or in respect of Canadians for disability or death suffered as a result of service in the British or Allied Forces during World War I or World War II, or may pay pension at Canadian rates in such cases where the claim has been rejected by the government of the country concerned. The Commission's representatives, called pension medical examiners, are located in most of the district offices of the Department of Veterans Affairs across the country.

The Pension Act.-Previous issues of the Year Book contain information on the development of Canadian pension legislation together with yearly statistics of numbers and liabilities. The Pension Act has not been amended since 1961. The major amendments at that time, which resulted in increased benefits, are summarized in the 1962 Year Book, p. 287.

Disability pension is payable to former members of the Armed Forces who suffered "the loss or lessening of the power to will and to do any normal mental or physical act" as a result of military service in the Canadian Navy, Army or Air Force since the com-
mencement of World War I. The place of residence and economic circumstances of the recipient have no bearing on the amount of pension that may be paid, pension being payable in accordance with the degree of disability found to exist on medical examination from time to time. Similarly, pension to a widow whose husband's death was incurred on or attributable to service is not affected by her place of residence or economic situation.

The annual rates for a 100-p.c. disability for all ranks up to and including that of Colonel and equivalent rank are:-

| Pensioner. | 2,160 |
| :---: | :---: |
| Wife. | 720 |
| One child.. | 324 |
| Two childr | 564 |
| Each addit | 192 |

For assessments lower than 100 p.c., the awards are proportionately less. The rate of personal pension is higher if the pensioner held a rank higher than Colonel or equivalent rank at the time the disability was incurred, but the additional pension for wives and children remains the same for all ranks.

Attendance allowance, which is payable to a pensioner who is totally disabled, helpless and in need of attendance, and which varies from a minimum of $\$ 480$ to a maximum of $\$ 1,800$ depending on the degree of attendance required, is paid in addition to pension. While a pensioner must be totally disabled to receive this allowance, the disability resulting in the need of attendance may be non-pensionable.

The annual rates of pension for widows and children of all ranks up to and including that of Colonel and equivalent rank are:-
\$
Widow....................................................................................... 1,656
One child.................................................................................... 648
Two children...................................................................................... 1,128
Each additional child........................................................................ 384
Rates for widows are higher if the deceased veteran held a rank higher than that of Colonel or equivalent rank, but those for children remain the same for all ranks.

The Civilian War Pensions and Allowances Act, Parts I to X, provides for the payment of pensions to or on behalf of persons who served in certain civilian groups that were closely associated with the World War II war effort and who suffered injury or death as a result of such service; these include merchant seamen, saltwater fishermen, auxiliary services personnel, ferry pilots of the RAF Transport Command, firefighters who served in Britain, etc.
7.-Pensions in Force under the Pension Act, as at Dec. 31, 1962

| Service | Disability |  | Dependant |  | Disability and Dependant |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Pensions in Force | Liability | Pensions in Force | Liability | Pensions in Force | Liability |
|  | No. | \$ | No. | \$ | No. | \$ |
| World War I. . | 41,485 | 38,876,610 | 14,465 | 23,084,552 | 55,950 | 61,961,162 |
| World War II. | 106,361 | 85,006,464 | 16,773 | 22,841,631 | 123,134 | 107,848, 095 |
| Peacetime.. | 1,628 | 1,035,295 | 545 | 1,048,521 | 2,173 | 2,083,816 |
| Special Force.... | 1,738 | 1,191,275 | 179 | 274,248 | 1,917 | 1,465,523 |
| Totals.. | 151,212 | 126,109,644 | 31,962 | 47,248,952 | 183,174 | 173,358,596 |

Over 91 p.c. of the amount paid in pensions is distributed in Canada and the balance to pensioners residing in other parts of the world. While the total number of awards in force is 183,174 , the number of persons on whose behalf pension is payable under the Pension Act is approximately one-half million. These include disability pensioners, their wives and children, and their dependent parents; widows and their children; orphan children; and dependent parents of deceased members of the Forces.

The total number of World War I disability and dependant pensions in force at Dec. 31, 1961 was 58,339 and for World War II, 122,904. During 1962, World War I pensions decreased by 2,389 and World War II pensions increased by 230; 203 new awards of disability pension were authorized in respect of World War I veterans and 2,251 in respect of World War II veterans.

## Section 6.-War Veterans Allowances and Civilian War Allowances

War Veterans Allowance Board.-The War Veterans Allowance Board is a statutory body that administers the War Veterans Allowance Act and reports to Parliament through the Minister of Veterans Affairs.* The Board, consisting of eight members, including a chairman and a deputy chairman, appointed by the Governor in Council, is a quasi-judicial body and is independent as far as its decisions are concerned. The Minister of Veterans Affairs is charged with the administration of the Act.

During the past year, the Board was given the responsibility for administering Part XI of the Civilian War Pensions and Allowances Act, which authorizes payment of allowances to certain groups of civilians who performed meritorious service in a theatre of actual war during either World War I or World War II. The provisions of this Part are similar to those of the War Veterans Allowance Act.

War Veterans Allowance Act.-The War Veterans Allowance Act came into force on Sept. 1, 1930, its purpose being to aid war veterans who, because of the hardships of service, had become pre-aged and no longer able to hold their places on the labour market. The administration of the Act was entrusted to what was then the War Veterans Allowance Committee, later re-designated the War Veterans Allowance Board.

The Act has been amended 11 times since 1930, its scope broadened and the allowance rates and income ceilings increased from time to time. By the amendments of 1950, the Act established District Authorities in the regional districts of the Department of Veterans Affairs, granting to them the full and unrestricted power and authority and exclusive jurisdiction to deal with and adjudicate upon all matters and questions arising under the Act relating to the award, increase, decrease, suspension or cancellation of any allowance awarded or paid under the Act. The members of a District Authority are employees of the Department of Veterans Affairs, appointed by the Minister with the approval of the Governor in Council. A District Authority consists of not less than four and not more than seven persons, its strength being related to the size of district and the volume of matters to be handled. There are 19 District Authorities, including the Foreign Countries District Authority located in Ottawa. An application for an allowance must be made to the District Authority of the regional district in which the applicant resides.

The War Veterans Allowance Board acts as an appeal court for applicants and recipients aggrieved by the decision of the District Authority, and the Board may, on its own motion, review and alter or reverse any adjudication of a District Authority. The Board is also responsible for guiding and instructing the District Authorities in the interpretation of policy, and for advising the Minister with respect to regulations governing the procedure to be followed in matters coming before District Authorities for adjudication.

During 1962, the Board reviewed 7,305 recipients' cases, comprising referrals by District Authorities and Treasury Officers, rulings on service eligibility and guidance on policy interpretation. The Board conceded service eligibility for 433 applicants under the

[^92]War Veterans Allowance Act from allied veterans and for 745 applicants under the Civilian War Pensions and Allowances Act, Part XI. The Board also adjudicated 871 appeals during the year, of which 587 were disallowed and 242 allowed, the remainder being deferred or withdrawn by the appellants. The Board must also adjudicate each case where the widow was not residing with her spouse at the time of his death. Of these applications, 132 were approved and 37 declined.

The number of veterans and others in receipt of allowances at the end of the years 1956-62, together with the amounts paid, were:-

| At Dec. 31- | Veterans in Receipt of Allowances | Dependants in Receipt of Allowances | Total in Receipt of Allowances | Expenditure |
| :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | No. | \$ |
| 1956. | 39,543 | 15,193 | 54,736 | 40,853,773 |
| 1957. | 41,820 | 16,601 | 58,421 | 45, 187,400 |
| 1958. | 45,466 | 18,659 | 64,125 | 53, 970,728 |
| 1959. | 47,393 | 20,141 | 67,534 | 56,927, 614 |
| 1960. | 48,521 | 21,421 | 69,942 | 58, 207, 130 |
| 1961. | 51,537 | 23,373 | 74,910 | 69, 825, 747 |
| 1962. | 54,168 | 25,302 | 79,470 | 81,176,162 |

During 1962, the War Veterans Allowance District Authorities considered 13,520 applications, approving 9,602 and declining 3,918. To ensure continued eligibility of existing War Veterans Allowance recipients, 37,918 recipients were interviewed and their circumstances checked. A further 35,407 cases were reviewed by checking their declared assets and income.

Part XI of the Civilian War Pensions and Allowances Act.-Part XI of the Civilian War Pensions and Allowances Act, which became effective on Feb. 23, 1962, provides allowances to certain civilians with service in a theatre of actual war during either World War I or World War II. These civilians include Canadian merchant seamen of either war who served at least six months at sea with one trip through dangerous waters; non-Canadians with similar service on Canadian merchant vessels in either war; Canadian members of the Voluntary Aid Detachment of the British Red Cross of World War I with service on the Continent of Europe or service in Britain for at least 365 days prior to Nov. 12, 1918; and the following civilians of World War II with six months overseas serviceCanadian welfare workers, Canadian firefighters, Canadian transatlantic air crew and personnel of the Newfoundland Overseas Forestry Unit. A pensioner under Parts I to X of the Act is also eligible.

The number of recipients under this Act at Dec. 31, 1962 was 420 , which included 334 civilians, 85 widows and one orphan, with an annual liability of $\$ 461,679$. The restrictions governing income, personal property limits and real property and the monthly rates of allowances are the same as those provided in the War Veterans Allowance Act (see p. 289 of the 1962 Year Book).

## Section 7.-Commonwealth War Graves Commission

The Imperial War Graves Commission was incorporated on May 21, 1917, under the Royal Charter granted by His Majesty in Council on a recommendation made by the Imperial War Conference in April of that year. The name was changed by a supplemental Royal Charter on Apr. 1, 1960, to the Commonwealth War Graves Commission. The Governments of Britain, Canada, Australia, New Zealand, South Africa, India and Pakistan are members of the Commission. South Africa, after becoming a republic, requested and obtained permission from the other Commonwealth Governments to remain a member of the Commission and is represented by an Ambassador in London. The Minister of Veterans Affairs is the Agent of the Commission in Canada and the office of the Secretary-General of the Canadian Agency is in the Veterans Affairs Building, Ottawa.

The Commission is entrusted with the marking and maintenance in perpetuity of the graves of those of the British Empire and Commonwealth Armed Forces who lost their lives between Aug. 4, 1914 and Aug. 31, 1921, and between Sept. 3, 1939 and Dec. 31, 1947, and with the erection of memorials to commemorate those with no known grave. In many of the cemeteries and plots a central feature is the Cross of Sacrifice or the Great Stone of Remembrance.

The area of responsibility of the Canadian Agency is the Continent of North America but it has also certain duties of inspection in Argentina, the Bahamas, Barbados, Bermuda, Brazil, British Guiana, British Honduras, Chile, Costa Rica, Cuba, Falkland Islands, French West Indies, Guatemala, Hawaiian Islands, Jamaica, Leeward Islands, Netherlands Antilles, Panama Canal Zone, Peru, Puerto Rico, Trinidad, Uruguay and Windward Islands.

In North America the Agency has commemorated 18,944 Commonwealth war dead in almost 3,000 cemeteries. Approximately 4,100 servicemen of both Wars, missing in operations while based in North America, are commemorated on memorials erected at Victoria, B.C., Halifax, N.S., and Ottawa, Ont. In Oakwood Cemetery, Montgomery, Alabama, the Agency has erected the only Cross of Sacrifice in the United States.

The Agency was instrumental in bringing together officials of the Netherlands War Graves Committee, the Royal Canadian Legion and the Department of Veterans Affairs for the purpose of planning a pilgrimage to enable relatives from Canada to visit the graves of Canadian war dead in the Netherlands.

## PART I.-FORMAL EDUCATION*

Formal education has become one of the major concerns of government and society in Canada and is now recognized as the key to both individual and national prosperity. Machines and automated programs are performing an ever-increasing number of routine, repetitive tasks, thus reducing the job opportunities for untrained workers and at the same time opening up whole new fields for highly skilled personnel. As a result, education authorities face the dual task of building and staffing schools and universities at a hitherto unprecedented rate and of adjusting curricula to fit in with a rapidly changing state of society.

The absolute and relative growth of formal education in Canada is indicated by the fact that between 1948 and 1961 average daily attendance at public elementary and secondary schools doubled while the country's population increased by only 42.5 p.c. during the same period. Over this period, total expenditure on formal and vocational education and training increased by 382 p.c. and its proportion of the gross national product increased from 2.5 p.c. to 4.9 p.c. University enrolments increased from 86,800 in 1957 to over 141,400 in 1962 and the sharpest increases are still to come as the population bulge resulting from the great increase in births in the immediate postwar years is beginning to reach university-age level.

[^93]
## Section 1.-Administration and Organization of Education in Canada

With certain exceptions, laws relating to formal education in Canada are a provincial, rather than a federal, prerogative. As a result, each province has organized a system of education to meet its own needs and, although they have much in common, no two systems are identical. Quebec and Newfoundland exhibit the greatest divergence from the general pattern, the former because of its French and Roman Catholic background and the latter because of the continuance of a system developed when the province was an independent British Colony.

To meet their responsibilities in the field of education each of the ten provinces has a government Department of Education; the first was organized in Quebec in 1846 and the last in Newfoundland in 1920. Except in the Province of Quebec, the Department is headed by a provincial Cabinet member who serves as Minister of Education. The Minister is appointed by the Lieutenant-Governor on the recommendation of the Premier from among elected members of the Provincial Legislature. In Quebec, the senior professional educationist, the Superintendent of Education, is appointed by the LieutenantGovernor in Council and remains in office during good behaviour or unless the Legislative Council and Legislative Assembly both request his withdrawal. He is President of the Council of Public Instruction, which is composed of a Roman Catholic Committee and a Protestant Committee. The Department of Education deals with matters of administration, finance and inspection and the Lieutenant-Governor in Council has authority to approve or disallow regulations prepared by the two Committees. A Quebec Royal Commission has recommended a reorganization of the administration of education to more closely resemble that in the other provinces.

Elementary and Secondary Schools.-Formal education at the elementary and secondary levels is administered from the provincial Departments of Education which operate under provincial school law or laws, issue regulations, and provide services to public schools throughout the province (including separate schools in those provinces where such schools exist). In addition to administering various grants, the provincial departments, among other things: operate teacher-training colleges or arrange for the universities to offer preparatory education courses; issue teachers' certificates; issue courses of study for the elementary-secondary schools; prescribe textbooks or lists of books; employ school inspectors or superintendents; conduct end-of-the-year examinations for the final year or two of high school; and issue certificates to successful candidates. In some provinces other departments of government may have responsibilities for special schools or courses. For example, in Quebec the Department of Education, its services and financial contributions come under the jurisdiction of the Department of Youth and a few schools are maintained by other departments, such as Schools of Agriculture, a School of Fisheries and a Forestry Station which operates three schools.

Provision for separate schools for Roman Catholics is handled differently in different provinces. In Ontario, Saskatchewan and Alberta (as well as in the Yukon and Northwest Territories), the first school established in a community is known as the public school, which is open to all children in the community. The school law provides, however, that a religious minority (which in these provinces is usually Roman Catholic) may establish its own school board and school. Such schools are referred to as separate schools. Local residents may elect which school they choose to support through taxes, their choice generally being deter mined by their religion. Both public and separate schools come under the jurisdiction of
the provincial Department of Education and both receive provincial grants. In Ontario, but not in the other two provinces, legal provision for separate schools does not extend beyond Grade 10.

In the three Maritime Provinces and Manitoba there is no legal provision for separate schools. However, within the public school systems of these provinces, there are Englishlanguage and French-language Roman Catholic schools in areas that have large English or French Roman Catholic populations, such as St. Boniface in Manitoba and Edmundston in New Brunswick. On the other hand, the public school system of British Columbia makes no provision for any type of denominational schools. Any such schools in this province must operate as parochial or private schools.

In Quebec, public elementary and secondary schools are controlled by the Roman Catholic and Protestant Committees of the Council of Public Instruction. In this province, Catholic and Protestant school systems exist side by side from the Department down, each relatively independent of the other. To some extent, the Catholic system follows the French tradition of education while the Protestant system follows the English tradition and is very similar to the Ontario system. Private or independent schools play a much more prominent role in Quebec than in other provinces. Chief among these are the classical colleges, which number nearly a hundred. Affiliated to the French-language universities (Laval, Montreal and Sherbrooke), they offer an eight-year course, entered after completion of elementary school and leading in two four-year stages, secondary and college, to the baccalaureate degree.

Newfoundland might be said to have a public denominational school system, Each of the five major religious denominations in the province-Roman Catholic, Anglican, United Church, Salvation Army and Pentecostal Assemblies-operates its own schools under a superintendent of education who is responsible to the Deputy Minister of Education. The Minister of Education, the Deputy Minister and the five superintendents form a Council of Education which decides on policy and co-ordinates the various parts of the system. One curriculum serves the schools of all denominations. Teachers receive common training in the Memorial University of Newfoundland, a provincial institution.

Local School Organization.-Within the framework of each provincial jurisdiction and regulation, public education is administered by local education authorities operating under a school Act. These school boards or boards of education are responsible for establishing and maintaining schools, employing qualified teachers, providing pupil transportation where needed, and budgeting for the money required to operate the schools, which is raised through local taxation. Local boards may be elected, appointed, or partly elected and partly appointed. They differ in number of members from three in the case of most small rural units to five, seven, or even twelve or more for urban units. Where larger units in rural areas have been established, there are central boards for the units representing the component districts, although there may be local boards retaining some custodial and advisory duties.

The larger unit, replacing rural districts which were usually about four miles in extent, has been introduced by legislation in several provinces and made optional in others in an effort to provide better school facilities and greater equalization of costs and to mitigate the problems caused by a chronic shortage of teachers. Larger units have been established by legislation in Alberta and British Columbia and by Acts with provision for local option in Saskatchewan and the Maritime Provinces. Southern Ontario has been gradually organizing its rural areas into township and county units; Manitoba has recently introduced legislation leading to the formation of larger units of administration for secondary schools;
and Protestant Quebec has been essentially organized into larger units. In Roman Catholic Quebec, one board of commissioners administers all Roman Catholic schools in a school municipality, whether rural or urban, while secondary education is being consolidated more and more into larger central secondary schools. In that province, there have always been more private residential schools established by religious groups than elsewhere.

Higher Education.-The jurisdiction of provincial Departments of Education embraces only the elementary and secondary levels, which provide for the education of youths up to age 17 or 18 . The extension of general education beyond the secondary to the college or university level is referred to as "higher" education, at which point the student is offered a wide diversity of courses in the arts, sciences, humanities and professions. The organization as well as the financing of higher education is noticeably different from that of elementary and secondary education.

Canadian universities are English-language, French-language or bilingual. The French-language institutions are mostly church-related and have been patterned after those of some European countries. Until recently, they stressed the classics as preparation for the professions but they are changing and an increasing emphasis is being placed on pure and applied science. The older English-language universities stemmed from a variety of needs and desires on the part of the provincial governments, churches, and settlers from England, Scotland and elsewhere who also wished to establish institutions similar to those with which they were familiar.

In Eastern Canada, institutions of higher learning have tended to develop at different periods in response to these needs. The result is that a variety of small and middle-size degree-granting colleges and universities exist today. This is especially true in the Maritime Provinces. In Western Canada, on the other hand, the policy has been to establish one large provincial university with sole degree-granting powers within the province. Whether this policy of one degree-granting institution for the province will suffice in the face of the increasing demand for higher education is a matter of speculation. There is already some pressure in British Columbia for the establishment of a second university with degree-conferring powers. In Alberta and Saskatchewan, branch campuses of the provincial universities are in operation, and legislation for the establishment of junior colleges has been passed in British Columbia and Alberta.

The increasing enrolment, resulting partly from an increase in the university-age population and partly from the higher proportion of young persons seeking university training, has caused an unprecedented expansion of facilities as well as an extension of colleges into universities and the establishment of new institutions. Most of the universities have conducted financial campaigns for expansion at some time during the past ten years and indications are that many more such campaigns must be undertaken in the near future. Despite expansion and modernization, there are still some old and crowded buildings in use which contrast sharply with the new well-planned, roomy, permanent structures on spacious campuses. All Canadian universities are expanding, whether they are located in the cramped heart of a city, have begun again in suburban areas or were fortunate enough to have ample room on their first campus sites.

Federal Involvement in Education.-Although formal education at the elementary and secondary levels is the prerogative of the provinces, the Federal Government is responsible for the education of: Indians on reservations within the provinces; Indians, Eskimos and whites in the Yukon and Northwest Territories; families of members of the Armed Services in Canada and overseas; and inmates of the penitentiaries. Teachers in
these schools and institutions are members of the Civil Service. They teach under a school law and regulations similar to those in effect in the province concerned and the Federal Government utilizes provincial facilities whenever possible.

The Government of Canada contributes to the construction and maintenance of vocational training facilities, recognizing vocational training as an important factor in the economic development of the country. Such contributions affect practically every phase of publicly sponsored vocational training in Canada, although the degree of the contribution varies. A great impetus to such training has resulted from the passing of the Technical and Vocational Training Assistance Act (SC 1960-61, c. 6) which, among other things, provides for direct federal financial contribution of 75 p.c. of the total amount expended by a province on the building and equipping of vocational training facilities up to the fall of 1963.*

Higher education, to a far greater extent than elementary and secondary education, is free from government regulation or control, although the Federal Government through its Department of National Defence does operate three service colleges for the training of officers for Canada's Armed Services. The Federal Government contributes to higher education by means of direct grants to universities for current operating expenditures and capital projects through its agency, the Canada Council, and by providing scholarships and grants in aid of research to universities and individuals through such federal departments and agencies as the Canada Council, the National Research Council, the Defence Research Board, the Department of National Health and Welfare and the Department of Agriculture. In 1959-60 the Federal Government contributed 24 p.c. of the universities' current operating income (including research) and, over the four-year period 1956-59, about 8 p.c. of the universities' income for capital purposes.

## Section 2.-Interesting Aspects of Education

New Techniques in Education.-Rapid growth in school enrolments, and difficulty in meeting staff requirements and in financing school construction and upkeep, has stimulated a searching inquiry into traditional methods of school administration and teaching. Research is being undertaken to determine whether new techniques may not effect economies in the operation of schools and at the same time speed up the learning process. In particular, standard classroom size and a rigid grade system of promotion are under close scrutiny. Experimental work continues in pupil streaming, in the elimination or grouping of certain grades with more opportunity for pupils to progress at their own speeds, in the building of schools with flexible classrooms, and in team teaching, which may involve such a hierarchy of staff as head teacher to co-ordinate the whole effort, subject specialists, junior or assistant teachers, and clerical or technical assistants to keep attendance and other records, set up laboratory equipment, operate projectors and generally look after the various forms of visual aid, etc.

This experimentation in new techniques is stimulated by new media for teaching, such as educational television, language laboratories, and teaching machines, which are just beginning to have a significant impact on education in Canada. Some schools have been experimenting with television for spot lessons in certain classes for several years, but the first province-wide application of television for instructional purposes in a public school system occurred in 1962 when Nova Scotia introduced a series of television lessons throughout the full school year in Grade 11 mathematics and science. Plans are to extend the program to include French in the school year 1963-64. About the same time two universities in Montreal introduced a number of television courses for credit, some in English and some in French. Television has the advantage of bringing expert instruction to a much wider range of students and to larger classes.

[^94]The laboratory method of individual instruction in foreign languages, using electronic equipment, is used in a number of universities and in several of the larger secondary school systems. Its extension on a wider scale is limited in part by the relatively high initial cost of the equipment. The advent of programmed instruction, using programmed texts or "teaching machines", is one of the most recent innovations in teaching techniques. Programmed instruction lends itself to individual progress according to the pupil's ability and many informed observers believe that this method of instruction will relieve the teacher of some of the mechanical aspects of teaching and free him for much more constructive work.

Education Costs to Students.-In all provinces educational systems are based on the legal doctrine that schooling shall be free and compulsory during the child's formative years. With minor provincial differences, all children must attend school between the ages of six or seven and fifteen or sixteen. With few exceptions, no fees are charged for attendance at a public elementary or secondary school in the locality where the child resides. The cost of education at these levels is met mainly through taxation levied by the municipalities on property holders, and through provincial grants.

At the university level, however, students are charged an annual fee varying from $\$ 200$ to $\$ 700$ depending upon the institution and the faculty. The cost of text books and students' supplies must be added to tuition fees, so that total education costs, quite apart from living costs, impose a considerable financial burden on many students. Scholarships, fellowships and bursaries help to offset these costs for many students and the number of these is being increased annually.

A survey was made of university and college students enrolled in selected faculties for the academic year 1961-62, to analyse expenditures and sources of income. For single male undergraduates living at home, total expenditure during the college year ranged from $\$ 1,060$ to $\$ 1,652$, depending on the faculty; those who were not living at home spent between $\$ 1,406$ and $\$ 2,231$. Expenditures for single female undergraduates were slightly lower than those for males, and married undergraduates had expenditures ranging from $\$ 2,758$ for those in Education to $\$ 3,929$ for those in Dentistry. Male unmarried students at the graduate level had average expenditures of $\$ 1,598$ for those living at home and $\$ 2,035$ for those away from home, with the corresponding figures for females again slightly lower. Married male graduate students spent on the average $\$ 3,968$ during the college year.

National Organizations in Canadian Education.-A number of national organizations are active in the field of education.

The Canadian Education Association (CEA) is an organization through which the provincial Departments of Education can make known official education policy. It was founded in 1892 as the Dominion Educational Association, later became the Canadian Education Association, the Canada and Newfoundland Education Association, and in 1946 again became the Canadian Education Association. The present constitution provides for a majority representation of the executive from the provincial Departments, with membership open to many other educators. The CEA employs several full-time officials, including an Executive Secretary and a Research Officer. It issues a Newsletter monthly throughout the school year and publishes Canadian Education and Research Digest. Annual conventions are held in different cities each year.

The Canadian Teachers' Federation (CTF) was founded in 1919 as a federation of the provincial teachers' associations. It has a full-time staff and engages in many activities related not only to the welfare of teachers but to the betterment of education in general at the elementary and secondary levels. It undertakes research projects related to teaching methods and the learning process, and encourages and co-ordinates research projects initiated by the provincial associations. It publishes regular bulletins and separate articles dealing with various aspects of education.

The Canadian Universities Foundation (CUF), as the executive arm of the National Conference of Canadian Universities and Colleges, is a national organization which serves higher education in Canada in much the same way as the Canadian Education Association serves education at the elementary and secondary levels. With a growing full-time staff, which includes an Executive Director, a Director of Research and a librarian, it produces the bilingual quarterly bulletin University Affairs, as well as individual reports and series of reports dealing with higher education in this country. It administers Federal Government grants to universities and represents the universities generally in all dealings with government.

Other groups serving education at the national level are: the Canadian Association for Adult Education; the Canadian School Trustees' Association; the Canadian Association of School Superintendents and Inspectors; the Canadian Association of University Teachers; the Canadian College of Teachers; L'Association Canadienne des Educateurs de Langue française; the Canadian Home and School and Parent-Teacher Federation; the Canadian Vocational Education Association; le Fédération des collèges classiques; the Canadian Council for Research in Education; the Social Science Research Council of Canada; and the Humanities Research Council of Canada. This list is not exhaustive but is indicative of the types of organizations whose primary concern is education. In addition, many other national organizations, such as the Boy Scouts Association and the Canadian Junior Red Cross may be said to have a peripheral interest in formal education.

International Activities in Education.-Besides expanding its own educational resources, Canada is providing some assistance to under-developed countries which are attempting to expand their educational facilities. This takes two forms: welcoming scholars from abroad to Canadian universities (some 8,000 were enrolled in the academic year 1961-62); and making it possible for Canadian teachers and other educators to accept assignments in the newly emerging countries as advisers for periods ranging from a few months to one or more years.

Several organizations are facilitating this inflow of students from all over the world into Canadian universities, as well as the increasing outflow of Canadian educators who are serving in countries of Asia, Africa and the West Indies. At the Federal Government level, the operation and administration of Canada's external assistance programs is the responsibility of the External Aid Office (see p. 153). At the non-government level, the Canadian University Service Overseas (CUSO) promotes and co-ordinates opportunities for overseas service for Canadian university graduates. The National Committee for Friendly Relations with Overseas Students (FROS) is one of a number of groups set up to welcome to Canada students from other countries, to assist them in various ways during their stay in this country and to provide opportunities for mutual understanding and appreciation. Other such groups providing scholarships and other services for overseas students include the World University Service of Canada, the Overseas Institute of Canada, the African Students' Foundation, the Canadian Federation of University Women, the Canadian Friends' Service Committee, the Imperial Order of Daughters of the Empire, and several church organizations. Services, including hospitality, are provided by the local Kiwanis groups, the YMCA and YWCA, Pax Romano through its affiliates, the Student Christian Movement, the United Nations societies, the Canadian Council of Churches and the Co-operative Union of Canada. Other organizations, such as the Canadian Citizenship Council and the National Federation of Canadian University Students, assist the work of aiding overseas students in many ways.

## Section 3.-Statistics of Schools, Universities and Colleges

Elementary and secondary schools may be conveniently classified as publicly controlled, privately controlled, and federal. Municipal and provincial schools, most numerous by far, include elementary and high schools, vocational institutes, trade schools, teacher-training colleges, and schools for the blind and deaf, and provide as well for correspondence courses. Private schools may be academic, business or other vocational schools, or correspondence schools. Federal schools refer to schools for Indians, schools for residents of the Northwest Territories, and overseas schools for children of members of the Armed Forces or for Armed Forces personnel. Higher education is attained at universities and colleges, which may be provincial institutions, church institutions, independent, or federal military colleges. Continuing or adult education takes a variety of forms and reaches all levels from the basic English courses provided for newly arrived immigrants to courses leading to a university degree. Most organized classes for adults function under the auspices of universities, colleges, local school boards, churches and other community organizations.
Table 1 shows full-time enrolment at all levels each year for the period 1951-52 to 1962-63 and Table 2 shows the number of schools, teachers and pupils for all types of education institutions, classified by province, for the school year 1961-62. In all types of schools the number of pupils has been increasing. The increase was first noticed at the elementary level some six years after the birth rate began to rise during the war years. About eight years later the children born during the War were entering high school and four years later they began entering university. The number of teachers is rather closely related to the number of students although the trend is toward larger classes. On the other hand, the number of schools has remained fairly constant, the increase caused by the construction of new and larger schools in urban areas being counterbalanced by the closing of many one-room rural schools.

## STUDENT RETENTION FROM SECONDARY SCHOOL TO UNIVERSITY

${ }^{1}$ Day, residential and hospital schools administered by the Federal Government. ${ }^{2}$ Also included with "Higher Education". ${ }^{3}$ Includes indentured apprentices taking full-time, part-time and correspondence courses.
${ }^{4}$ Included under "Trade courses(pre-employment)".
${ }^{5}$ Included with Nova Scotia. ${ }^{6}$ School year 1960-61. ${ }^{7}$ Includes only students being trained under Federal-Provincial agreements. ${ }^{8}$ Includes enrolment in courses sponsored by public libraries, business colleges, teacher-training institutions, and Federal Government departments not distributed by province.

An attempt has been made to tabulate total expenditure on education, including formal education at all levels, vocational training of all types and also expenditure on cultural activities related to education such as adult night classes, fine arts and handicraft courses, and libraries, museums and art galleries. Such expenditure for the year 1959 is presented in Table 3, classified by source. Details of income of school boards for publicly controlled elementary and secondary schools for the years 1957-59 are given at p. 343 and financial statistics for universities and colleges at pp. 347-348.

## Subsection 1.-Elementary and Secondary Schools

Control.-Direct control and operation of public schools is by school boards, which operate under school laws and regulations, and the members of which are elected or appointed usually for terms of two or three years. Through amalgamations and consolidations, schools are now operated by boards of larger units, local boards within larger units, independent boards for rural schools, towns or cities, and some by official trustees appointed by the province in lieu of a board. As their designations imply, private schools are administered by private organizations and federal schools by federal authorities.

Table 4 gives the number of active public school boards in each province in the school year ended in 1962 and indicates the type of board, the number of official trustees and the number of board members elected or appointed to these boards.
4.-Active School Boards and School Trustees, by Province, School Year 1961-62

${ }^{1}$ Boards of Education, members of Toronto Metropolitan Board. ${ }^{2}$ Ten school districts are under an official trustee or trustees.

3 In addition, five school districts are under an official trustee or trustees.
Enrolment.-Table 5 shows enrolment of all elementary and secondary pupils in Canada and in Department of National Defence schools overseas, and classifies them by grade. Private schools and schools for Indian and Eskimo children are included in these figures. Enrolment in private schools accounted for 4 p.c. of the total 1961-62 enrolment at the elementary and secondary levels. Schools operated by Federal Government departments, that is, schools for Indian children, schools in the Territories and overseas schools for children of Service personnel, accounted for about 1 p.c. of the total.

School enrolment has been increasing in recent years much more rapidly than the general population. Annual rates of increase in total school enrolment for the four most recent years ranged from 4.7 p.c. to 4.9 p.c., while the country's population during the same period increased annually by amounts varying from 1.8 p.c. to 2.2 p.c.

${ }^{1}$ Includes Ungava District of Quebec. ${ }^{2}$ Total for the Yukon 2,893 pupils.
Teaching Staffs.-Between the school years ended in 1942 and 1962 the number of teachers in the publicly controlled schools of the ten provinces increased 116 p.c. from 76,069 to 164,311 . The number of men teachers increased 174 p.c. and the number of women 98 p.c.

In 1962, in the nine provinces outside of Quebec, 81.3 p.c. of the teachers had at least senior matriculation and one year of teacher-training, and an additional 10.6 p.c. had one year less schooling. Median experience in the eight provinces outside of Quebec and Ontario has slowly increased from 6.8 years in 1942 to 8.4 years in 1962, despite the large number of new teachers each year. Many of these have been recruited by the cities, where the median experience has declined from a high of 16.7 years in 1946 to 13.4 in 1954 and 9.6 years in 1962.

Between 1942 and 1962 the median salaries of all teachers in the nine provinces other than Quebec increased by 382 p.c. from $\$ 915$ to $\$ 4,414$, while that for teachers in one-room schools increased by 322 p.c. from $\$ 739$ to $\$ 3,117$. The annual rate of increase has naturally fluctuated considerably during that period, ranging from 1.8 p.c. in 1941 to 16.8 p.c. in 1948. The increase in 1962 over 1961 was 3.9 p.c. as compared with 4.7 p.c. for 1961 over 1960.

## 6.-Teachers and Principals in Publicly Controlled Elementary and Secondary Schools, School Year 1961-62

[^96]Financial Support.-Table 7 shows the sources of income of boards operating publicly controlled elementary and secondary schools for the years 1957-59. Their inco me is derived almost entirely from local taxation and provincial grants. Newfoundland is exceptional in that fees and income from other sources account for nearly 13 p.c. of the total income. Prior to 1961, fees were charged by Quebec school boards but school corporations are now required to provide elementary and secondary education free of
charge. Under the new legislation, parents who send their children to private schools are reimbursed for at least part of the fees charged. In other provinces, elementary and secondary education in the public school system is normally provided without direct charges on the parents.

Usually, school boards requisition the local municipalities for the sums needed to balance their budgets, taking into account provincial grants and other income. The municipal governments levy taxes on land and buildings and, in some cases, on improvements, personal property and business income. Several provinces have taken steps to equalize real property assessment.

Provincial grants accounted for nearly 40 p.c. of the total revenue of school boards in 1959, ranging from 30 p.c. in Quebec to 86 p.c. in Newfoundland.

Only four provinces collect figures for debenture indebtedness although it is the usual practice in all provinces, except Newfoundland, for boards to finance construction of new schools, at least in part, by issuing debentures. Provincial governments help boards to meet capital expenditures by grants of a percentage of the cost of new buildings, by grants of a fixed amount per room built, or by paying grants based on debenture debt charges. Some provinces guarantee debentures issued by the boards and others assist in marketing them.

## 7.-Income of School Boards of Publicly Controlled Elementary and Secondary Schools, by Province, Years Ended Mar. 31, 1957-59

Nore.-The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures as all revenue of this nature must be repaid ultimately with money raised by local taxation. Figures from 1914 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

${ }^{1}$ Net figures, after deduction of sinking funds.

## Subsection 2.-Universities and Colleges

Institutions.-According to the latest information available (1960-61) at the time of going to press, there were in Canada 354 institutions of higher education offering one or more years of degree-credit courses-304 under the control of religious bodies ( 264 Roman Catholic), 23 under provincial government control, three under Federal Government control, and 24 under private non-denominational control. These institutions were distributed, by province, as follows:-

| Province | Active DegreeGranting Institutions | Other Institutions | Total |
| :---: | :---: | :---: | :---: |
|  | No. | No. | No. |
| Newfoundland.... | 1 | 2 | 3 |

| British Columbia. | 3 | 5 | 8 |
| Totals... | $\underline{59}$ | $\stackrel{295}{\underline{=}}$ | 354 |

Enrolment.-Full-time university-grade enrolment continues to increase year by year and indications are that enrolments may well be double the 1962-63 figure of 141,388 in about ten years. Table 8 shows full-time enrolment by province for the academic years ended 1960-63. In the latest year, in addition to full-time students, there were 44,048 part-time university-grade students (including 5,351 graduate students) in attendance during the regular 1962-63 winter session and 7,522 students taking university-grade correspondence courses.

## 8.-Full-Time Regular Winter Session University-Grade Enrolment, by Province, Academic Years Ended 1960-63

[^98]Foreign enrolment has risen considerably since the end of World War II, with a larger proportion of students from countries other than the United States and Britain coming to Canadian institutions, as shown in Table 9. In 1961-62 about one of every 16 full-time university students in Canada was a resident of a country other than Canada. Hong Kong, Trinidad and Tobago, and Britain each accounted for over 500 students while France, Pakistan, India and Jamaica contributed from 100 to 400 each. Over 100 other countries or territories were represented in the figures.
9.-Students from Other Countries in Canadian Universities, and Canadian Students in Universities in the United States and Britain, Selected Academic Years Ended 1931-62

Finances.-Table 13 gives a historical series of the finances of Canadian universities. Since 1952 they have received more than one half of their revenue from government grants and a very small amount from municipal councils. Beginning with the academic year 1951-52, the Federal Government has provided university grants to help meet current operating costs. These grants were originally paid on the basis of 50 cents per head of population in each province and the eligible institutions received their share of the provincial allotment according to the number of full-time students in undergraduate and graduate courses. The rate of grant was increased to $\$ 1.00$ per capita in $1956-57$, to $\$ 1.50$ in 195859 and to $\$ 2.00$ in 1962-63. The Province of Quebec did not accept this grant for the years up to 1955-56. From 1956-57 to 1959-60 the payments refused by Quebec were held in trust by the Canadian Universities Foundation, which administers the fund. In 196061 the Quebec Government and the Federal Government negotiated a new tax-sharing agreement under which Quebec provides its own grants and is reimbursed by an abatement of corporation tax. Table 14 gives details of the federal grants for each of the academic years from 1960-61 to 1962-63. The figures for 1961-62 include an adjustment made to the 1960-61 grants resulting from a revision of the 1960 population estimates made when actual census figures for 1961 became available.

The Federal Government also provides assistance to universities through the University Capital Grants Fund which is administered by the Canada Council. The original amount in the fund was $\$ 50,000,000$, to be granted in amounts not exceeding 50 p.c. of specific building or capital equipment projects, having regard to the population of each province. In the first year of its operation (ended Mar. 31, 1958), grants amounting to $\$ 4,100,000$ were authorized and $\$ 1,300,000$ was actually paid. Up to the end of March 1963, a total of over $\$ 30,000,000$ had been paid. Grants are paid in four equal instalments spread over the period of construction so that there is a time lag between approval and payment.

The Canada Council was also endowed with an additional $\$ 50,000,000$ for the provision of scholarships or other assistance in the fields of the arts, humanities and social sciences (see also pp. 357-359).

## Subsection 3.-Vocational Education*

Canadian vocational courses and training below university level are organized either in formal classes and training shops or in the form of informal on-the-job training. However, very often the two methods complement each other so that, for instance, an apprentice having a contract with and working for a private firm may attend a provincial trade school on a part-time or full-time basis.

Most formal vocational education is sponsored by public bodies, either by local school boards at their high schools or directly by provincial governments in trade schools and technical institutes. Private vocational schools supplement the publicly supported training facilities to quite an extent and some industrial firms train their own skilled manpower.

Table 15 summarizes the data on full-time training classes. The duration of these classes may vary from three weeks taken annually by indentured apprentices at provincially operated trade schools, to two-year vocational high school courses or three-year postsecondary courses offered in provincial technical institutes. Numerous skills are taught, ranging from short courses in welding or typing to extended courses for instrument technicians or aircraft maintenance men. Students taking two-year or three-year vocational courses in public secondary schools may, upon completion, enter employment or may continue other formal training in a trade school or a technical institute.

In addition to the full-time vocational courses, a great variety of part-time instruction is offered by both public and private institutions as an alternative to full-time training or as an attraction to the individual interested in a hobby.

## Subsection 4.-Adult Education

Adult education in Canada, under university, government and private auspices, offers a variety of opportunities to persons who are not attending school full-time to raise their academic qualifications, secure vocational training, and engage in other social and cultural learning experiences. Annual surveys from 1957 to 1961 show steady increases in adult education enrolment, from a total of 522,207 in 1957-58 to 908,812 in 1960-61, under university, government and business college sponsorship. Attendance at public lectures, film showings, exhibits, lectures, tours, etc., under similar auspices more than doubled during the same period. In addition, private academic, trade and technical schools, employers, churches, and other voluntary organizations and agencies, not included in annual surveys, sponsor many less-formal courses in the field of adult education.

In 1960-61, universities and colleges sponsored more than one quarter of the enrolment reported in the annual survey, and government departments and agencies were responsible for more than two thirds. Academic subjects for credit toward a high school diploma or university degree represented 18.6 p.c. of the total enrolment and vocational, industrial, commercial, agricultural, home economics and applied arts courses, and professional training and refresher courses in medicine, science and executive development for 31.8 p.c.; the remainder were in informal, non-credit courses in social education and cultural subjects, such as family life education, citizenship and public affairs, health education, fine arts, religion, philosophy and languages.

In a survey of participants in adult education under all auspices conducted in June 1960, it was found that, in general, persons taking adult education courses were younger than the average adult and better educated. More men than women reported taking courses and vocational courses were the most popular.

In addition to these programs, the institutions and agencies surveyed offered a variety of adult education services. Radio and television programs were produced, printed information materials were published, and exhibits, fairs, conferences and workshops were organized. Advisory services were also made available to groups and individuals. The National Film Board and the Canadian Broadcasting Corporation played an important role in adult education through the production of cultural and informational programs for use by groups and individuals.

## PART II.-GULTURAL AGTIVITIES RELATED TO EDUGATION Section 1.-Art and Education

Fine Art Schools, Galleries and Organizations.-Fine art appears as an elective subject of the faculty of arts in a number of universities, where it may be taken as one of five, six or more subjects for a year or two. In Mount Allison University, N.B., and in the Universities of Saskatchewan and Manitoba, there is a sufficient number of courses to allow the taking of a Bachelor degree with specialization in fine art. At the University of Toronto an Honour B.A. in art history and archaeology is offered, as well as graduate work in this field. Departments of fine art were opened by McGill University in 1948-49, by the University of British Columbia in 1949-50 and by the University of Alberta in 1953-54; McMaster University reopened its department in 1951.

There are also schools of art not requiring any fixed academic standing for admission, as they are more concerned with the technical development of the artist. The most widely known of these are:-

Nova Scotia College of Art, Halifax, N.S.
Ecole des Beaux-Arts, Quebec, Que.
Ecole des Beaux-Arts, Montreal, Que.
School of Art and Design, Montreal Museum of Fine Arts, Montreal, Que.
Ontario College of Art, Toronto, Ont.
University of Manitoba School of Art, Winnipeg, Man.
School of Art, Regina College, Regina, Sask.
Provincial Institute of Technology and Art, Banff School of Fine Arts, Banff, Alta. (affiliated with the University of Alberta, Edmonton)
Vancouver School of Art, Vancouver, B.C.

Courses in these schools vary in length with the requirements of the individual student but may extend over as many as four years. Summer schools of art are sponsored by some of the foregoing institutions, by universities, and by various independent groups.

Public art galleries in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and often concerts are features of the programs of the various galleries. Many of these institutions supply their surrounding areas with travelling exhibitions, and organizations such as the Maritime Art Association, the Western Canada Art Circuit, the Art Institute of Ontario and the Queen's Art Circuit have been founded to carry on the work on a regional basis. The National Gallery of Canada has a nation-wide program of this nature. It is the third largest circulating agency in North America. The principal art galleries are:-

Beaverbrook Art Gallery, Fredericton, N.B.
Montreal Museum of Fine Arts, Montreal, Que.
National Gallery of Canada, Ottawa, Ont.
Public Library and Art Museum, London, Ont.
Art Gallery of Toronto, Toronto, Ont.
Art Gallery of Hamilton, Hamilton, Ont. Winnipeg Art Gallery, Winnipeg, Man. Norman Mackenzie Art Gallery, Regina, Sask. Edmonton Art Gallery, Edmonton, Alta. Calgary Allied Arts Centre, Calgary, Alta. Vancouver Art Gallery, Vancouver, B.C. Art Gallery of Greater Victoria, Victoria, B.C.

Other Art Organizations.-The leading art organizations of national scope, exclusive of museums and art galleries, include the following:-

Association of Canadian Industrial Designers
Canadian Arts Council
Canadian Group of Painters
Canadian Guild of Potters
Canadian Handicrafts Guild
Canadian Museums Association
Canadian Society of Graphic Art
Canadian Society of Painter-Etchers and Engravers
Canadian Society of Painters in Water Colour
Canadian Society of Landscape Architects and Townplanners
Community Planning Associationo of Canada
Federation of Canadian Artists
Royal Canadian Academy of Arts
Royal Architectural Institute of Canada
Sculptors Society of Canada.
The National Gallery of Canada.-The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquis of Lorne, then Governor General, had recommended and assisted the founding of the Academy and among the tasks he assigned to that institution was the establishment of a National Gallery at the seat of government. The group of pictures that formed the nucleus of the collection was selected by the Marquis. Until 1907 the National Gallery was under the direct control of a Minister of the Crown but in that year, in response to public demand, an Advisory Arts Council consisting of three laymen was appointed by the government to administer grants to the National Gallery. Three years later, the first professional curator was appointed.

In 1913, the National Gallery was incorporated by Act of Parliament (RSC 1952, c. 186) and was placed under the administration of a Board of Trustees appointed by the Governor General in Council; its function was to encourage public interest in the arts and to promote the interests of art throughout the country. Under such management, the Gallery increased its collections and developed into an art institution worthy of international recognition. Today, the Gallery administration comes under the aegis of the Minister of Citizenship and Immigration. The Board of Trustees, now composed of nine members representing all sections of Canada, meets twice annually.

In 1960, the Gallery entered a new era in its history when the entire national collection and the staff and equipment necessary to its maintenance were transferred to new modern quarters-the Lorne Building in downtown Ottawa-and, for the first time, the Gallery had adequate well-lighted space for hanging its permanent works of art and for displaying travelling exhibitions.

The Gallery's collections are of indisputable taste and quality. They have been built up along international lines and give the people of Canada an indication of the origins from which their national tradition is developing. The collection of Canadian art, the most extensive and important in existence, is continually being augmented by the purchase of works from the Biennials of Canadian Art and other sources. The collections of Old Masters include twelve important works acquired from the Liechtenstein collection; extensive war collections; the Massey collection presented to the Gallery during 1946-50 by the Massey Foundation; a collection of French paintings; prints and drawings; and diploma works of the Royal Canadian Academy. The prints and drawings collection, established in 1921 and the first to be organized in a Canadian art gallery, now consists of more than five thousand items.

The services of the Gallery include the operation of a reference library open to the public which contains more than 10,000 volumes and periodicals on the history of art and other related subjects; the operation of an Exhibition Extension Service which prepares and circulates travelling exhibitions, provides educational services such as lectures offered to the general public across Canada, and organizes guided tours for visitors to the Gallery at Ottawa; the production of publications, films, reproductions, didactic exhibitions and other aids to art appreciation; and assistance to Canadian artists participating in important international exhibitions such as the Biennials held in Paris, Venice and São Paulo. The Conservation and Scientific Research Division of the Gallery handles requests for technical information, investigations and restoration of paintings and other specialized problems concerning the handling of precious works of art. It is intended that the research laboratories will become the national centre for scientific research in the conservation of works of art.

## Section 2.-Museums and Education

Modern museums, in Canada and elsewhere, are breaking away from the old concept of repositories and are assuming an important role as educational and cultural centres. They have an advantage over other agencies of education in that they are able to show actual, original objects rather than merely offering descriptions or pictures of such objects. Canadian museums of history and science offer many educational services to the public in addition to providing exhibits that are both interesting and informative. The following museums have staff members who are specifically charged with organizing programs in education and providing extension services:-

> Nova Scotia Museum, Halifax, N.S.
> McGill University Museum, Montreal, Que.
> National Museum of Canada, Ottawa, Ont.
> Royal Ontario Museum, Toronto, Ont.
> Saskatchewan Museum of Natural History, Regina, Sask.

Other museums that conduct educational and extension programs using the regular curatorial and administrative staff are:-

The New Brunswick Museum, Saint John, N.B.
Museum of the Province of Quebec, Quebec, Que.
The Manitoba Museum, Winnipeg, Man.
Provincial Museum of Natural History and Anthropology, Victoria, B.C.
Direct work with schools may involve the holding of classes within the museum or visits of museum lecturers, with exhibits, to the schools. More informal are the guided tours for visiting school classes, the lending of specimens, slides, filmstrips or motion picture
films to schools, and the training of student-teachers in the educational use of the museum. A number of museums have special programs for children, not directly associated with school work. These include Saturday lectures and film showings, activity groups, nature clubs, and field excursions.

For adults, museums offer series of lectures or film showings from autumn to spring, and possibly some special showings during the tourist season. Guided tours for adult groups are usually available throughout the year. Staff members may be sent to give lectures to service clubs, church groups, parent-teacher associations, and hobby clubs. The latter, such as naturalists' groups, mineral clubs and astronomy societies, may use the museum as their headquarters. Travelling exhibits are prepared for showing at local fairs, historical celebrations and conventions. At least seven Canadian museums have had regular radio or television programs, and others have made occasional contributions. Some historical museums have annual events during which the arts, crafts or industries represented by the exhibits are demonstrated to the public.

Through such activities and methods, Canadian museums serve as important adjuncts to the educational system and as centres for informal education, both juvenile and adult. Thus, they take their place with public libraries as major auxiliaries in the educational program of Canada.

## Section 3.-The Educational and Cultural Functions of the Canadian Broadcasting Corporation

Many hours of educational or semi-educational programs are broadcast annually by the Canadian Broadcasting Corporation in English and in French. Whether these programs are directed to children or adults, entertainment is combined with information whenever possible. Spoken-word programs, presented as readings, talks, discussions, documentary programs, dramatizations or in forms combined with music, cover a very wide range of interests. The fiscal year 1962-63 was a busy one for the CBC programmers involved in educational, cultural and youth programs.

Pre-school Broadcasts.-A number of programs are planned for children from three-and-a-half to six years of age. The aim is to have these at the same time educational and entertaining. Both Playroom (radio) and Nursery School Time (television) base their planning on the advice of kindergarten and nursery school experts. The topics acquaint the child with new and interesting aspects of life about him, in his home and in his community.

The English television network regularly carries the production Chez Helène to introduce the French language to the pre-school child by means of the successful Tan-gau method of instruction. In another television series-The Friendly Giant, a highly popular story-telling program-entertainment is combined with an effort to develop in the child an awareness of social values.

For the first time since CBC television began operating, regular morning network programming was scheduled for October 1963. Chez Helène, Nursery School Time, the national school broadcasts and other educational programs are being telecast in the 10-11 a.m. period across Canada.

School Broadcasts.-The CBC provides an active schedule of school broadcasts which are planned according to recommendations made to the School Broadcasts Department by a group of educators representing each of the provincial Departments of Education. This body is known as the National Advisory Council on School Broadcasting. The programs produced have the aim of enriching the curricula, adding to the students' comprehension and appreciation of a topic through the use of the varied resources of radio and television. For example, in radio, an annual presentation of a Shakespearean play by the best actors in the country gives many students across Canada their only opportunity
to hear a dramatization of such a play. The radio schedule each year also contains dramatizations of events in Canadian history, along with many other topics. In co-operation with the Quebec Department of Youth, the CBC in 1962-63 started a service of school broadcasts in that province, thus providing school broadcasts in all ten provinces. While most of these broadcasts are presented on a regional or provincial basis, a number of informational programs were offered on the English radio and television networks covering a wide range of school subjects from literature to folklore, from physics to physical education. On the French networks the subjects covered a similar range for students at both primary and secondary levels.

Leisure Programs for Children.-Programs that do not relate to a specific school curriculum but still have a broadly educational or informational purpose are presented for children. The program Time of Your Life for children of ten to fifteen years of age presents four types of shows-the magazine type, feature films, dramas and music specials. On the French network, programs such as Pirouette and $A m$-stram-gram fulfil a purpose similar to that of Time of Your Life. Other programs presented for children by the French network include Coucou, Orientation, Images en tête, Pierres vivantes and À la pointe de l'exploration.

A number of experiments in programming for both the English and the French networks have begun, such as the natural science program La vie qui bat, which appears in English under the title This Living World.

Adult Education.-Programs of an adult education nature are presented frequently by the CBC on its radio and television services and are planned in co-operation with various educational organizations. The CBC is an active participant in the work of the Joint Planning Commission, a body established by the Canadian Association for Adult Education for exchange of information and co-ordination of plans for adult education in Canada.

Citizens' Forum, a series telecast for the past eight years, uses discussions, public debates and small seminars to describe important issues of the day. It is arranged jointly by the Canadian Association for Adult Education and the CBC. Its French counterpart, Place publique, has been planned in co-operation with La Société canadienne d'éducation des adultes. Similar types of programs are prepared specially for rural listeners under National Farm Radio Forum which is arranged by the CBC in co-operation with the Canadian Federation of Agriculture and the Canadian Association for Adult Education. This unique educational program involves listening groups who continue the discussion of the topic at the conclusion of the program and funnel their opinions to provincial and national centres for use and distribution. Other daily service and educational programs are provided for farmers. Country Calendar and Country-time are weekly half-hour TV programs of a service and educational nature designed to keep farmers and the general public in tune with agricultural conditions and developments. Le reveil rural on radio and Les travaux et les jours on television are French-language counterparts of the English farm programs.

For more than a decade the summer evening sessions of the Couchiching Conference have been broadcast. This week-long conference, organized jointly with the Canadian Institute on Public Affairs, examines Canadian and international affairs in open meetings and group discussions. Other radio programs of an educational nature are Science Review, which examines important discoveries in the field of the natural sciences and their branches; life; University of the Air, a series varying from four to eight talks prepared and broadcast by distinguished professors in their particular fields; and, on the French radio network, L'université radiophonique internationale, a series of talks exchanged with other countries on cultural and scientific subjects.

On the French network, Les Chansons de la maison presents a series of programs relating to parents and children, and general questions sent in by parents are answered
by psychologists. For women listeners, the daytime program Fémina is presented five times a week. The French network also broadcasts a number of weekly programs dealing with fine arts, music, literature, theatrical arts, sciences, religion and philosophy, under the auspices of Le Service des émissions éducatives et d'affaires publiques.

In addition to Citizens' Forum, regular television programs are Close-Up, Premier Plan and Background. The first two present weekly half-hour interview and documentary programs in which the emphasis is on the programs involved. The latter offers six onehour documentaries on the background of significant issues, events and ideas, both international and domestic. Inquiry is a weekly program on national affairs produced in Ottawa. The Lively Arts is a weekly program of insight into the creative process. The Nature of Things describes the work of scientists and science for an audience whose only preparation may be curiosity about the world around them. Take Thirty, a new week-day show for women, has a different 'flavour' on each program: entertainment and interviews of performers; travel topics and features on events in Canada and abroad; cooking, child care and household management; discussions on social problems; interviews of men and women from the sporting world. The closest radio counterpart of Take Thirty is TransCanada Matinee. In View examines the arts and North American attitudes toward them, calling for comments from guests who are closely associated with the field under discussion. Explorations, a series of documentaries and dramatizations, examines questions in the fields of sociology and history. Special programs on the Winter Conference of the Canadian Institute on Public Affairs are also telecast; this three-day conference examines sociological questions in open meetings and group discussions.

Since the consolidation of the CBC's English-language radio networks, radio station CJBC in Toronto has had to alter its role significantly. The most striking result has been the scheduling of a comprehensive two hours of adult-educational programming nightly, Monday through Friday, under the general title of The Learning Stage. The program deals with literature, sociology, science, music, labour relations, philosophy, ecology, creative processes, theatre, arts, ethics, political science and French.

In co-operation with universities in Toronto, Montreal and Ottawa, locally broadcast television series are prepared under the title Live and Learn. These programs are designed to give a general appreciation of academic subjects such as physics, chemistry, literature and psychology. Experiments in the production of courses for university credit are in progress in Montreal.

## Section 4.-The Educational and Cultural Functions of the National Film Board

The National Film Board, an agency of the Federal Government, was established by Act of Parliament in 1939 and reconstituted by the National Film Act in 1950. In the years since its establishment, the Board has grown from a supervisory body over Canadian Government motion picture activities to a national documentary film-producing and -distributing organization whose films about Canada are seen wherever people may freely assemble. The Board also produces and distributes filmstrips and still photos on Canadian themes in accordance with its primary function outlined in the Act "to initiate and promote the production and distribution of films in the national interest'". Films are produced primarily in the English and French languages and, whenever possible, foreign language versions are prepared to increase the usefulness of Board films in foreign countries.

The 16 mm . community film program is based on a nation-wide system of film circuits, film councils and libraries, strongly supported by organizations and individuals engaged in community activities. There are more than 700 national, provincial and community film distribution outlets from which thousands of 16 mm . prints are available for public use throughout the country. These prints are acquired for circulation by purchase or by loan from the Board.

A large part of the 16 mm . community film audience is reached through classroom showings, indicating progress in the development of audio-visual aid programs in Canadian schools and universities. Another noticeable trend is the more selective use of films by community organizations and groups for particular purposes. This is attributed in part to the availability of Board productions which present series of film studies related to central themes, and to the availability of a broad range of topics which include individual films particularly suited to group objectives and programs.

Films produced by the Board are shown in commercial theatres and on television in Canada and abroad and newsreel features are also issued regularly for theatrical and television purposes. Distribution of theatrical subjects is arranged by contract with commercial distributing organizations.

A substantial proportion of the Board's production and distribution program is concerned initially with television at home and abroad. Series of original films are shown regularly over English and French language television networks in Canada. Individual films from the Board's extensive general library are available to CBC and privately operated stations. Abroad, because of expanding television facilities in many countries, Board films are seen by audiences which could not otherwise be reached.

In addition to commercial distribution through theatres and television in other countries, 16 mm . print circulation is carried on through posts of the Departments of External Affairs and Trade and Commerce, through National Film Board territorial offices at London in England, New York and Chicago in the United States, New Delhi in India, and Buenos Aires in Argentina, as well as through libraries operated by various education agencies. Hundreds of prints of National Film Board films are also sold in other countries each year. Exchange agreements are in effect between the Board and government film-producing organizations in other lands; this means that films of various nations are freely exchanged with those of Canada, aiding international understanding.

The National Film Board maintains a library of more than 150,000 still photographs, which are available at nominal cost to magazines, newspapers and other periodicals wishing to present current information about Canada.

## Section 5.-The Canada Council

As a result of recommendations made by the Royal Commission on National Development in the Arts, Letters and Sciences, appointed in 1949, the Canada Council was established in 1957 to promote the study and the enjoyment of, and the production of works in the arts, humanities and social sciences. A sum of $\$ 100,000,000$ from the public treasury was granted to the Council, one half of which was placed in a University Capital Grants Fund to assist institutions of higher learning to expand their building facilities in the arts, humanities and social sciences, and the remainder set up as an Endowment Fund, the current annual income from which is approximately $\$ 3,000,000$.

The Council is made up of 19 members appointed by the Prime Minister for terms of three years, plus a chairman and a vice-chairman who are selected for five-year terms. Members are ineligible for reappointment during the 12 months following their second consecutive term on the Council. The organization must meet at least three times a year to consider applications made to it by organizations and individuals across the country. The day-to-day administrative work is carried out by a permanent staff in Ottawa.

University Capital Grants Fund.-One of the principal responsibilities of the Council is toward Canada's institutions of higher education. The Fund enables the Council to make grants to universities and other institutions of higher learning by way of capital assistance in respect of building projects, with the following limitations: (1) a grant for any one project may not exceed one half the total expenditure made in respect of that project; (2) in any province the aggregate of the grants made may not exceed an amount that is in the same proportion to the aggregate amount credited to the University Capital

Grants Fund as the population of the province (latest census) is to the aggregate population of the provinces in which there is a university or other similar institution of higher learning. By the end of $1962, \$ 35,000,000$ had been authorized for payment by the Council and more than 70 institutions had drawn upon the Fund for a wide variety of buildings; libraries, classrooms and residences claimed the major share.

Aid to Individuals.-Because in 1957 less than 10 p.c. of the graduate fellowships available in Canada were for studies in the humanities and social sciences, the Canada Council allocated over $\$ 1,000,000$ from the income of the Endowment Fund to the establishment of a scholarship and fellowship program to assist in meeting the rapidly growing needs of the future for university teachers. In five years, more than 2,200 scholars have been aided through awards at the master's, doctorate and postdoctorate level. As a further stimulus to academic pursuits, grants are made to universities to enable them to bring outstanding lecturers to their campuses and travel grants are awarded to permit Canadians to attend international conferences and thus maintain contact with scholars from other countries.

Individual assistance is also given in the arts. By the end of 1962 , nearly 700 scholarships had been awarded to enable singers, dancers, painters, writers and other performing and creative artists to continue their studies or perfect their arts. Other artists had benefited from the Council's program of commission grants; such grants enable theatres, orchestras, soloists, art galleries or museums to commission and perform or display original works by Canadian artists.

Aid to Organizations.-A large proportion of the revenue from the Endowment Fund is devoted to a program of assistance to organizations in the arts and letters. Since income from this source is strictly limited, the Council seeks to support the best talent, which involves a very large investment in some of the major population centres and at the same time covers all areas of the country. This it does by combining grants for excellent service in local or regional areas with awards to enable organizations to travel to remote parts of the country where the arts are less readily available. It also seeks to ensure local support by insisting that organizations receiving grants find additional revenue from other sources. In the year ended Mar. 31, 1962, the Council gave about $\$ 1,571,000$ to organizations in the arts, humanities and social sciences. Nine symphony orchestras received a total of $\$ 245,000$ and $\$ 174,000$ went to other musical organizations including choirs, string orchestras and chamber ensembles. More than $\$ 7,000$ was spent to enable music groups to tour and $\$ 9,000$ was awarded to permit the commissioning of new works. About $\$ 482,000$ was granted to promote the theatre, opera and ballet; of this amount, some $\$ 170,000$ went to the National Ballet Company of Canada, the Royal Winnipeg Ballet and Les Grands Ballets Canadiens. A total of $\$ 88,000$ over two fiscal years went toward helping opera in its 1962 season, and $\$ 140,000$ was awarded to the theatre. Festivals in Stratford, Vancouver and Montreal received $\$ 75,000$ in assistance from the Council, and a sum of $\$ 27,000$ was allocated to the Canada Council Train to introduce more Canadian students to the best Shakespearean drama. The visual arts received about $\$ 117,000$ and $\$ 51,000$ was awarded in aid to publication, bringing to just over $\$ 1,157,000$ the amount spent on the arts.

Considerably less assistance went to organizations in the humanities and social sciences since the bulk of the scholarship program is directed toward these subjects. Aid was given to visiting lecturers, to publications and to several academic projects. Altogether, $\$ 414,000$ was given for these purposes.

UNESCO.-The Act establishing the Canada Council also provided that the organization should undertake certain functions in relation to the United Nations Educational, Scientific and Cultural Organization. The Council accordingly established a National Commission for UNESCO with 26 members and approximately 30 organizations with "co-operating body status", and also provided the secretariat for the Commission. With
the assistance of the National Commission, the Council is responsible for the co-ordination of UNESCO program activities in Canada, for Canadian participation in UNESCO program activities abroad, and for proposals for future UNESCO programs. In all these matters the Council works in close association with the Department of External Affairs and serves as the normal channel of communication between the Department and the Commission. In the year ended Mar. 31, 1962, the Council spent close to $\$ 50,000$ in addition to indirect administrative expenses on the UNESCO program.

## Section 6.-Library Services

The National Library.-The National Library of Canada came into existence formally on Jan. 1, 1953 by the proclamation of the National Library Act (RSC 1952, c. 330). On the same date it absorbed the Canadian Bibliographic Centre, which had been engaged in preliminary work and planning since 1950. The Act established a National Library Advisory Council, consisting of the National Librarian, who serves as Chairman, the Parliamentary Librarian, and twelve appointed members, at least one of whom must be from each of the ten provinces.

By 1961, although the Library was still housed in temporary quarters and only a limited purchasing program could be undertaken, the book collection consisted of about 250,000 volumes, supplemented by micro-copies of more than 100,000 additional titles. Under the terms of the Copyright Act and the Library's own Book Deposit Regulations, 5,855 titles were received in the year ended Mar. 31, 1962, 3,097 of which were related in some direct way to Canada.

Canadiana, the Library's monthly catalogue of new books and pamphlets relating to Canada, described over 11,000 items in 1961; these included trade and general publications, and official publications of the federal and provincial governments. Canadiana, which has been published since 1950, is cumulated annually and a cumulated index is planned.

The National Union Catalogue lists nearly $8,000,000$ volumes in more than 175 government, university, public and special libraries in all provinces. New accessions are reported regularly by these libraries, and the Union Catalogue thus forms a continuously up-to-date key to the main book resources of the country. During the year ended Mar. 31, 1961, the Reference Division was asked to locate 14,409 titles and it is noteworthy that copies of 75 p.c. of them were found in Canadian libraries. About one third of the requests were for books in the field of science and technology and 80 p.c. were for books published since 1925.

In addition to Canadiana, the National Library publishes Canadiana Selections, a short list of notable books issued in Canada during the past year, and also publishes an annual cumulation of the Canadian Index to Periodicals and Documentary Films.

Public Libraries.-Public libraries in Canada are organized under provincial public library legislation and direction, and are operated and regulated by municipal and regional boards. In 1961, there were 825 public libraries serving cities, towns and villages, and 50 regional and provincial public library systems. The total stock of all public libraries in Canada was almost $15,500,000$ volumes, just over one volume per person served and somewhat less than one volume per capita of the total population. Circulation was over $60,000,000$, or about four volumes per capita. Almost half of this circulation was to boys and girls in the age group of 5-14 years.

In addition to circulating books, periodicals and pamphlets, large public libraries maintain reference collections for use in the library, and provide audio-visual materials, such as films, filmstrips and sound recordings, for loan or use in the library. Other special activities include bookmobile service to schools and other community depots, story telling, plays and projects for juvenile readers, club activities, adult education groups and programs, and service to hospitals, reform institutions and camps.

Local funds accounted for about 85 p.c. of the support of public libraries in 1961, and provincial grants for the remainder. The current operating payments of all public libraries were the equivalent of $\$ 1.06$ per year per capita in 1961.

University, College and School Libraries.-In 1960-61, the 34 larger Canadian institutions of higher education had almost $7,000,000$ volumes in their collections to serve over 100,000 students, representing 87.7 p.c. of all full-time university enrolment in Canada. Their expenditures averaged almost $\$ 60$ per full-time student and they had 946 full-time employees, almost one third of whom were professional librarians.

According to school board reports, almost half of the public elementary and secondary schools in centres of over 10,000 population had centralized libraries in 1961. The 1,613 libraries served almost $1,000,000$ pupils, and averaged 2,700 volumes for 588 pupils. Average expenditure for books and other library materials was $\$ 2.36$ per pupil served.

Special Libraries.-More than 300 government, business, technical and professional ibraries exist in Canada, chiefly in Montreal, Ottawa and provincial capitals. These
libraries are designed chiefly to serve the personnel employed in their respective establishments. The most recent available data (for 1956-57) show 84 Federal Government libraries with more than 2,500,000 books and pamphlets; 91 provincial government libraries with a total stock of over $2,000,000$; and 154 private business, professional and technical libraries with almost $1,500,000$ volumes. These special libraries employed more than 1,000 full-time staff in 1956-57.

Professional Librarians.-Canada has five Library Schools-at the Universities of Montreal, McGill, Ottawa, Toronto and British Columbia-which award a Bachelor of Library Science degree upon completion of a one-year postgraduate training course. In 1962, 201 persons graduated, joining the ranks of the more than 2,000 professional librarians in all types of libraries in Canada. The median beginning salary for the 1962 graduates was $\$ 4,800$.

## PART III.-SCIENTIFIC AND INDUSTRIAL RESEARCH

## Section 1.-The National Research Council*

History and Organization.-Organized research in Canada on a national basis dates from 1916 when the Government of Canada established the Honorary Advisory Council for Scientific and Industrial Research-now known by the short title "National Research Council". The early Council provided for the planning and integration of research work, organization of co-operative studies, postgraduate training of research workers, and prosecution of research through grants to university professors. This promotion and encouragement of research formed the basis of the Council's work from 1916 to 1924.

The creation of a central research institute, to carry on research in pure science in relation to standards of measurement, quality and composition of material, and in science applied to the industries of Canada, had been urged as early as 1918. A special committee of Parliament endorsed the proposal and in 1924 the Research Council Act was revised to include national research laboratories. Temporary quarters were secured and research on magnesian refractories for steel furnaces was carried out so successfully that a wartime industry, established during World War I, was re-established on a large scale. As a result of this achievement, the Government, in 1929-30, provided funds for new research facilities.

The National Research Building on Sussex Drive, Ottawa, was opened in 1932 and in 1939 construction was begun of an aerodynamics building on a 130-acre site on the Montreal Road, just east of the city. This site now comprises some 400 acres and houses most of the Council's laboratories. A Prairie Regional Laboratory built on the campus of the University of Saskatchewan has been in operation since June 1948, and an Atlantic Regional Laboratory on the campus of Dalhousie University in Halifax, N.S., was opened in June 1952.

[^104]Under the terms of the Research Council Act, the National Research Council has charge of all matters affecting scientific and industrial research in Canada that may be assigned to it by the Committee of the Privy Council on Scientific and Industrial Research. In discharging these responsibilities, the Council may undertake, assist or promote research. Its duties include the utilization of Canada's natural resources; the improvement of industrial processes and methods; the discovery of processes and methods likely to expand existing industries or to develop new ones; the utilization of industrial wastes; investigation and determination of physical standards, methods of measurement, and fundamental properties of matter; the standardization and certification of scientific and technical apparatus used by government and industry; the determination of standards of quality for materials used in public works and government supplies; investigation and standardization, at the request of industry, of industrial materials or products; and research intended to improve conditions in agriculture. The Council also has the duty of advising the Privy Council Committee on questions of scientific and technological methods affecting the expansion of Canadian industries or the utilization of the country's natural resources.

The Council's laboratories are organized in nine divisions and two regional laboratories, each with its own director. Five divisions are engaged in applied and fundamental studies in the natural sciences-applied biology, applied and pure chemistry, and applied and pure physics. Four others are devoted chiefly to engineering work-building research, mechanical engineering, radio and electrical engineering, and the National Aeronautical Establishment. The two regional laboratories carry out research related to the resources of the Prairie and Atlantic regions.

During World War II, the Council was responsible for all research carried out for Canada's three Armed Services. After the War, most of the military work was transferred to the Defence Research Board (see Chapter XXV). Another wartime development, the Atomic Energy Project, was constituted as a separate Crown company, Atomic Energy of Canada Limited, in 1952 (see pp. 368-373).

A Medical Research Council, fully responsible for the support of medical research but functioning under the general administration of the National Research Council, was established in November 1960 (see pp. 268-270).

The National Research Council consists of the President, two Vice-Presidents (Scientific), one Vice-President (Administration) and 17 other members, each of the latter group being appointed for a term of three years and chosen to represent industry, labour, and research in science and engineering. Many of the members are drawn from Canadian universities. The Council reports to Parliament through the Committee of the Privy Council on Scientific and Industrial Research.

The Council's current operating budget is about $\$ 46,000,000$. Approximately $\$ 17,000,000$ is required for foundation work-scholarships and research grants in science and engineering, plus the activities of the Medical Research Council-and the remainder is used to operate the laboratories and to provide for the Council's Industrial Research Assistance Program. Of the Council's 2,600 employees, some 730 are scientists and engineers.

Links with Industry.-The application of science to Canadian industry has always been one of the major concerns of the National Research Council. Since 1917, representatives of industry, government and the universities have co-operated, through NRC Associate Committees, in solving pressing industrial and economic problems. There is a constant flow of personnel and information between NRC laboratories and those of industry, and roughly 90 p.c. of the Council's own effort involves applied research intended for industrial use. Contract research on specific projects and a wide variety of testing and standardization work are undertaken. Inventions from NRC laboratories are carried through the patent stage, then made available for manufacture through Canadian Patents and Development Limited (see pp. 118-119).

One of the Council's most important activities is its Technical Information Service. This consists of field engineers who visit manufacturing establishments, and a staff of trained researchers in Ottawa who use the technical literature available through the Council's library. All inquiries are handled but the Service is particularly interested in helping small firms with no research or information facilities. Free advice is given on materials and processing, equipment, plant design and packaging and on such topics as wage incentives and inventory control.

Direct financial assistance for research performed by Canadian industry was begun by the Council during 1962. Under this arrangement the Council makes grants supporting long-term applied research and development work proposed and carried out by industry. Aid is given on a shared-cost basis, with industry supplying at least half the funds for any one project. Companies of all sizes, representing a wide range of industrial activity, are eligible for assistance, and the companies retain all rights arising from the work. Operating in the last six months of 1962-63 (October to March, inclusive) the program resulted in 62 new research projects involving 44 Canadian companies. With a dollar value for the sixmonth period of $\$ 1,700,000$, the work created more than 260 new research positions.

Foundation Aspects.-University research in science and engineering has been supported by the Council since its inception in 1916. This aid has been of considerable help to the universities in building up the excellent graduate schools that now exist in Canada. Awards to individuals make up most of the university support program. Included are research grants to university staff used for employing assistants and purchasing equipment and supplies, postgraduate scholarships, and postdoctorate fellowships. Approximately 1,200 research grants and 720 scholarships and fellowships were awarded in the year ended Mar. 31, 1963 at a cost of $\$ 10,395,000$.

General promotion and encouragement of university research-the remainder of the program-includes publication of six Canadian journals of research; contributions to scientific organizations and functions, Canadian membership in international scientific unions, and the administrative costs of the program. Expenditures for these activities in 1962-63 were $\$ 1,103,000$. An Annual Report on University Support describes the foundation program in detail.

In 1948 the Council instituted a program of postdoctorate fellowships, open to Canadians and to the nationals of all other countries. Originally these were tenable in the Council's own laboratories but the training and experience brought to the work by the young scientists proved so stimulating that the program has been gradually expanded. Fellowships are now tenable at Canadian universities (these are considered part of the university support program), in the laboratories of Atomic Energy of Canada Limited, and in the federal Departments of Agriculture, Forestry, Mines and Technical Surveys, and National Health and Welfare. More than 250 of these awards are being held at the present time (March 1963), mostly in chemistry, physics and biology.

Applied Biology.-This Division's program covers practical problems related to the national economy and fundamental studies in microbiology, biochemistry and biophysics as a basis for future application in agriculture, medicine and industry.

Apparatus and techniques for preparing, preserving and storing food make up a large part of the work, with particular attention in recent years to food freezing, cold storage and refrigerated transport. Recent studies have involved further tests on a process developed in the Division and now widely used in industry for the immersion freezing of poultry, quality loss in poultry meat during freezing and refrigerated storage, and an improved cooling system for frozen food trucks. The physical and chemical reactions preventing coagulation in evaporated milk during sterilization were also investigated. Microorganisms related to the preparation and preservation of food are studied, particularly those found in salted foods and in cheese, and those that grow at low temperatures. A national culture collection of about 3,000 yeasts, bacteria and fungi is maintained.

Considerable effort is devoted, also, to questions of animal and plant physiology. Studies of the mechanisms by which mammals, birds and man adapt to cold have provided important basic information on cell, muscle and metabolic activity, and also serve to explain practical problems such as the high death rate of newly born caribou. Fundamental plant processes such as translocation are investigated, and an exhaustive study is being carried out on strains of blue-green algae believed responsible for cattle deaths. Plant fibres such as cellulose-the skeletal material of plants-and the structure and function of plant cells are also examined.

Other studies involve fermentation mechanisms and enzymology, and the structures of proteins, carbohydrates and fats. One group, among its other projects, is engaged in long-term statistical studies of protein variability in wheat and wheat exports. The work has been expanded recently to include the effects of weather factors on protein content.

Applied Chemistry.-The Division of Applied Chemistry is concerned with supplying new scientific information for the development of Canada's natural resources and chemical industries. Although formerly much of the work involved solving immediate specific problems, a larger part of the Division's effort is now being devoted to more basic studies. This avoids conflict with industrial laboratories and consultants and, in addition to providing fundamental information, often produces practical results. For instance, a longterm investigation on the contacting of fluids and solids-an operation vital to many chemical engineering procedures-has resulted in a successful commercial operation for drying grain. The same method can be extended easily to chemical reactions and to removing liquids from other materials.

Another long-term project of considerable industrial potential has concerned the factors responsible for the stability, or the destruction, of suspensions of solids in liquids and a method was devised for easily separating almost any suspended solid from the liquid surrounding it. This work was expanded recently to include the separation of dissolved solids. It has been shown that virtually all dissolved salts can be removed from water by filtration through an appropriate medium, and tests with other materials are in progress. Then, too, the study of chemical reactions at very high temperatures-carried on over the past several years-has resulted in the successful preparation of a stable polymer that could not be produced by conventional means.

The twelve sections of the Division are: analytical chemistry, chemical engineering, colloid chemistry, kinetics and catalysis, metallic corrosion and oxidation, metallurgical chemistry, applied physical chemistry, physical organic chemistry, high polymer chemistry, high pressure, rubber and textiles. Much of the work falls under the general headings of petroleum or corrosion chemistry, in that several sections work on topics related to one of these fields.

Pure Chemistry.-The Division of Pure Chemistry is organized around a nucleus of outstanding Canadian chemists who direct about 50 young postdoctorate fellows from all over the world. The work consists of long-term fundamental investigations in physical and organic chemistry.

The work in organic chemistry includes investigation of the structures of alkaloids, studies of the infrared spectra of steroids, and the synthesis of porphyrins and of compounds labelled with isotopes. Other sections deal with chemical kinetics and photochemistry, the study of the ionization potentials of free radicals by mass spectrometry, Raman and infrared vibrational spectroscopy, and the application of high resolution proton magnetic resonance techniques to the study of hydrogen bonding and other molecular interactions. Still others study certain aspects of surface chemistry such as the thermal properties of simple solids and imperfections in the bulk and the surface of alkali halide crystals, the heats of micellization by microcalorimetry, and the thermodynamics and stress-strain relationships associated with the absorption of fluids by active carbons. There is also a small group interested in the chemistry of fats and oils, and one engaged in fibre research.

Applied Physics.-The work in Applied Physics is divided between research projects likely to be of practical value and the continual development of the fundamental standards on which measurements generally are based. All the fundamental physical standards for Canada are housed and serviced in this Division, which now has primary standards equal to any in the world in the fields of mass, length, time, electricity, temperature and radiation. The sections of the Division are: acoustics, electricity and mechanics, heat and solid state physics, instrumental optics, interferometry, photogrammetric research, radiation optics, special problems, and X-rays and nuclear radiations. Industrial problems receive considerable attention, particularly calibration work and industrial noise abatement.

Examples of specific projects now under way include a study of colour tolerances in the production of coloured materials, a special type of lighting unit expected to be particularly useful at airports, the thermal and electrical properties of ceramics (important in rocketry, nuclear energy and other fields), and the establishment of an international standard neutron source. Work has continued on the measurement of line standards of length in terms of wave-lengths of light, and on the use of atomic or molecular properties to define time intervals. Several of the Division's developments are now being produced commercially. Among these are noise-excluding high fidelity earphones, a revolutionary analytical plotter for making maps from aerial photographs, a six-figure potentiometer, and a precision direct reading thermometer bridge.

Pure Physics.-Investigations are under way on cosmic rays and high energy particle physics, low-temperature and solid-state physics, spectroscopy, X-ray diffraction, and theoretical physics. The work is on fundamental problems that do not have immediate application but advance the frontiers of knowledge and supply the basis for further progress in the applied fields. Important advances in the study of cosmic rays and energetic particles have been made recently by means of a specially designed instrument package operating aboard the Canadian earth satellite Alouette. The package is sending back vital new information about the Van Allen radiation belts and about the artificial belts created by atomic explosions.

The low-temperature and solid-state group studies the electrical, thermal and mechanical properties of metals and semi-conductors especially at very low temperatures. The plasma physics group, only recently established, is expected to make basic contributions to a field which may, in the long run, prove to be of importance in problems of controlled nuclear fusion. In the spectroscopy group, the structures of atoms and molecules are investigated by means of their microwave, visible and ultraviolet spectra. The theoretical physics group is concerned with theoretical problems in atomic, molecular and nuclear physics.

The X-ray diffraction laboratory undertakes fundamental work in molecular and crystal structure and identification problems for government laboratories. X-ray diffraction methods are extremely valuable for identification purposes as they are non-destructive and require only very small amounts of material. Two of the major projects concern narcotics and vanadium minerals.

Building Research.-Technical improvements in housing are the primary concern of this Division. The research program therefore covers all aspects of housing design, building materials and components, and studies in soil, snow and ice mechanics. Regional stations engaged in research and information are maintained in Halifax, Saskatoon, Vancouver and Norman Wells.

Examples of Division projects are the behaviour of cement aggregates and lightweight concretes; the materials and techniques of masonry construction and plastering; atmospheric corrosion of metals; paint and acoustics research; and examination of the performance of walls, windows, chimneys and domestic heating systems. Other studies involve the bearing strength of ice; the fundamental properties of various soil types, including permafrost and muskeg; frost action in soils; avalanche research; and the effects
on buildings of ground vibrations caused by blasting or earthquakes. A unique fire research laboratory provides facilities for all types of fire resistance, fire prevention and fire fighting tests.

As the Division concentrates on building problems peculiar to Canada, much of the work concerns the performance of buildings and building materials in cold weather. In this connection, double-glazed windows and lightweight metal and glass curtain walls, used increasingly in modern buildings, have been examined. Special studies have been made to improve winter building techniques and there is a section devoted to problems of building in the Far North.

Many results of the Division's research are expressed in the National Building Code, an advisory document of building standards now used by municipalities accounting for half the total urban population of Canada. The Associate Committee on the National Building Code, whose secretariat forms one section of the Division, also establishes the building regulations for all housing constructed under the National Housing Act.

Mechanical Engineering.-This Division works mainly in the fields of mechanics, hydrodynamics (hydraulic engineering and naval architecture) and thermodynamics. Extensive testing and specification work is undertaken for a variety of industries and for government departments. Much of the work consists of continuing projects related to land, sea and air transportation.

The mechanics activities include mathematical analysis and computation, the development of instruments and servomechanisms, and research on mechanical devices such as gears. One group, working in the field of bio-medical engineering in collaboration with surgeons, has devised a tool for end-to-end joining of blood vessels by a simple stapling operation.

In hydraulics, a number of investigations and models have been made for improving Canadian harbours. A new kind of breakwater has been developed which absorbs waves rather than reflecting them, and a breakwater utilizing this principle has been constructed at Baie Comeau. A promising scheme has also been developed for reducing silt accumulation in harbours by wave energy. The ship laboratory has continued its studies on propeller, rudder and hull design and performance.

Railway work is devoted mainly to locomotives and the riding qualities and mechanical behaviour of freight cars. Improved braking systems and cheaper fuels, lubricants and injectors have been developed. A long-term study is being made of the possible use of gas turbines in locomotives. The application of gas turbines to aircraft taking off and landing vertically is also being explored, together with the thermodynamic, aerodynamic and control problems that this type of aircraft involves. Considerable research is also being done on the behaviour of lubricants at high pressures, and that of gases at extremely high temperatures.

National Aeronautical Establishment.-The National Aeronautical Establishment is designed to meet the aeronautical research needs of military and civil aviation, to co-operate with the Canadian aircraft industry, and to carry out its own research program. Its studies therefore centre around problems of aerodynamics, aircraft structures and materials, and flight mechanics.

Aerodynamics research from low speeds up to about $4 \frac{1}{2}$ times the speed of sound is carried out in the Establishment's wind tunnels. Considerable attention is being given at present to low-speed problems of vertical and short take-off aircraft. Other studies include work on the aerodynamic characteristics of high-thrust propellers, on wings with submerged fans and on wings immersed in powerful slip-streams. The research on structures and materials involves investigation of aircraft accidents, the fatigue and creep of aircraft structures, the determination of flight loads, aircraft design problems, and non-metallic materials. The latter study is part of a research for low density, high strength non-metallic materials resistant to high temperatures that could be used for structural purposes. The
flight mechanics program covers research on flight safety and flying stability and control; the development of a crash position indicator for locating crashed aircraft; atmospheric physics; anti-submarine magnetometry; and the avoidance of aircraft collisions.

A growing and highly diversified program of assistance to smaller industries is developing. Most of the work relates to product development, product improvement, or testing.

Radio and Electrical Engineering.-The work of this Division includes engineering problems of interest to Canadian industry and fundamental research in electrical science. The Division co-operates with the Armed Services and associated industries in designing, producing and evaluating new equipment.

Engineering problems include long-distance transmission of high-voltage direct current, radio remote-control of navigational aids, current and potential transformer calibration, high-frequency standards, and the development of electronic medical instruments and operating-room facilities. The Division maintains the best-equipped antenna laboratory in Canada and provides considerable assistance in the development and manufacture of antennas and radomes.

Examples of recent developments by the Division are a radar-data transmission system which provides air traffic controllers with a continuous display of activity at two or more adjacent airports, a simple marine distress beacon operating in the frequency band used by RCAF Search and Rescue craft, and a creative tape recorder much in demand in electronic music studios. A highly mobile counter-mortar radar designed by the Division went into commercial production in 1961.

Fundamental studies are carried out on radio wave propagation, radio astronomy, upper atmosphere research, and electronic and solid-state research. A new radio observatory is being developed in Algonquin Park, where a 33 -foot diameter radio telescope is in operation. The Division also provides engineering support for Canada's upper atmosphere rocket-sounding program, and undertakes research in space electronics.

Atlantic Regional Laboratory.-The Atlantic Regional Laboratory is engaged in practical and fundamental studies related to the resources and industries of the Atlantic Provinces. The work follows three general lines: chemical reactions at high temperatures; structures and reactions of naturally occurring organic compounds; and the biochemistry and physiology of fungi, marine algae, mosses, lichens, ferns and higher plants. Examples of specific projects are studies on the collagenous proteins in cod tissues; the loss of ascorbic acid (Vitamin C) in potatoes during storage; and the dietary effects of seaweed components. The work on nutrition is related not only to food industries of the Atlantic Region but to the wider field of public health in general. The high temperature studies are aimed at providing basic information of use in steel-making and related industries. A certain amount of engineering work is also undertaken. Recent studies have centred around the development and use of a semi-continuous dryer for commercially important plant materials.

A recent development of considerable significance is the establishment of a close working relationship with Dalhousie University, Halifax. Under the new arrangement, students acceptable to the University's Faculty of Graduate Studies may now carry out research in the Atlantic Regional Laboratory, directed by Laboratory staff members holding unpaid appointments in the Faculty. The immediate aim of the scheme is to expand the facilities for graduate studies in the Atlantic Region. In the long run, the objective is to help create a strong scientific background conducive to large-scale development by industry.

Prairie Regional Laboratory.-One of the chief aims of the Prairie Regional Laboratory is to develop wider uses for crops grown on the prairies. This is achieved by determining potential uses of crops now in production and by encouraging the production of new crops to meet specific needs. Research is therefore carried out on the properties and
reactions of plant components, and on the biological, chemical and engineering processes for turning them into other compounds. The development of oil-seed crops as alternatives to seed crops has received considerable attention.

For some time, the Laboratory has studied major plant constituents such as carbohydrates, protein, starch, lignin and fibres. An example of this work is the definition of the chemical structure of several polysaccharides found in cereal grains and important in baking, milling and fermentation technology. Attention is also being given to minor plant constituents-such as phenols, flavonoids and terpenes, which are known to have fungicidal and germicidal properties. A laboratory has been set up to systematically study extractives from local plants and shrubs.

The engineering and process development group is engaged in research on continuous fermentation processes, pulping processes on wood and straw fibres, and the effects of glyceride structure of fats and oils on the quality of margarines and shortenings. Largescale processing and pilot-plant-scale operations are carried out. There is also a group working in the field of mycology, which is concerned with the production of new chemicals, antibiotics, alkaloids and amino acids.

Administration.-Administration of the foregoing laboratories is organized as a Division of Administration and Awards, which exists only to serve the scientist. The five service units of this Division are: Awards and Committee Services (Awards, Committees, Publications, Research Journals); Administrative Services (General Services, Purchasing, Personnel); Information Services (Technical Information Service, Library, Public Relations Office, and Liaison Offices in Ottawa, Washington, London, and Paris); Plant Engineering Services; and Legal and Patent Services. The latter group works closely with Canadian Patents and Development Limited (see pp. 118-119). An expert on economic research acts as special assistant to the Assistant Director, Information Services.

## Section 2.-Research in the Atomic Energy Field*

The high energy yield from the fission of uranium is the key to the prospect of economic nuclear electric power. The yield is so high that the cost of the raw uranium is a very minor component of the cost of electric power. It will be about 5 p.c. of the total and may be contrasted with 50 p.c. or more paid for coal in some large conventional generating stations. The largest component in the over-all economy of nuclear power systems is reactor plant construction and a minor ( 10 p.c. to 20 p.c.) component is fuel fabrication.

For a few more years the major atomic energy activity in Canada is likely to be uranium mining and refining for export in support of military uses. A major transition, however, is taking place in which uranium production will give place to engineering and construction of nuclear electric generating stations. This phase will last until nuclear plants are established in such numbers and capacity throughout the world that the market for uranium revives and overtakes its former peak. There is some prospect that the economic advantages of the heavy-water reactors designed in Canada will lead to the adoption of this type in many other countries with the creation of a market for heavy water that could be produced competitively in Canada. The possible export of nuclear generating stations, heavy water, and uranium fuel is appearing as a new near-term prospect on a small but significant scale.

In Canada plans are already taking account of a revolutionary increase in the size of electricity-generating stations. The full-scale $200,000-\mathrm{kw}$. reactor at present under construction has come to seem small. Steam turbines and conventional stations are now appearing in larger capacities and the prospects of long-distance high-voltage transmission to interconnect centres of load, together with the lower unit power costs that result from operating on a larger scale, cause utilities to plan large generating stations of $2,000,000 \mathrm{kw}$.

[^105]and more. The Canadian design of nuclear power reactor appears capable of expansion to keep pace, and will yield even more benefit than the conventional plant in the resulting reduction of unit power cost.

It is also significant that since lower unit power costs result from larger stations there is a new incentive for large utilities to export power from their systems and Canadian policy is changing to allow such export from Canada. Since the planning and construction of major power plants takes many years, these trends are not expected to be extensively realized before the 1970's. However, the prospect has already had its effect on atomic energy research and development.

Three Federal Government organizations have the basic responsibilities for atomic energy in Canada:-
(1) The Atomic Energy Control Board, responsible for all regulatory matters concerning work in the nuclear field.
(2) Eldorado Mining and Refining Limited, with a double function as a producer of uranium and as the Government's agent for the purchase of uranium from private mining companies.
(3) Atomic Energy of Canada Limited, concerned with nuclear research and development, the design and construction of reactors for nuclear power, and the production of radioactive isotopes and associated equipment, such as cobalt-60 Beam Therapy units for the treatment of cancer.

The Atomic Energy Control Board does not itself conduct research, but it gives substantial grants to universities to further independent studies and to provide the equipment without which the universities would find it difficult to train the nuclear research workers of tomorrow. In the 1961-62 financial year its grants totalled $\$ 700,000$.

Eldorado operates research and development laboratories in Ottawa and uses them to support its uranium mining and processing at Beaverlodge in northern Saskatchewan and its refining plant at Port Hope, Ont. Eldorado co-operates with the Department of Mines and Technical Surveys, which carries out background research on the production and use of uranium, and with the Canadian Uranium Research Foundation, an organization which is supported by the industry and which is particularly interested in developing the nonnuclear uses of this metal.

Atomic Energy of Canada Limited (AECL) has an eleven-man Board of Directors, including individuals from private industry, public and private power companies and the universities. The Company's major plant is near Chalk River, Ont., and its Head Office and Commercial Products Division in Ottawa. A new research centre is under construction at Whiteshell, Man. The Nuclear Power Plant Division in Toronto directs the engineering of power reactors and nuclear generating stations. The first project was NPD, a nuclear power demonstration plant to produce $20,000 \mathrm{kw}$. of electricity, now in operation at Rolphton near the Chalk River establishment; its design and construction were carried out in collaboration with the Canadian General Electric Company Limited and The Hydro Electric Power Commission of Ontario. The Nuclear Power Plant Division of AECL, with the assistance of Ontario Hydro, is also designing and constructing a full-scale nuclear power plant, known as CANDU, which will supply $200,000 \mathrm{kw}$. of electricity to the Ontario Hydro system. This plant is being built at Douglas Point near Kincardine on Lake Huron. By agreement, Ontario Hydro will purchase the plant when it is in satisfactory operation. An Advisory Committee on Atomic Power Development keeps all other utilities fully informed of the progress being made. This Committee, which was set up by the Federal Government in 1954, meets periodically at Chalk River to assess the economic prospects of nuclear power throughout the country.

Because of the great pace of technological development in nuclear power throughout the world, AECL devotes a major effort to collaboration with many organizations. These include industrial firms and the scientific and engineering departments of universities in Canada and, through foreign government agencies and several international organizations, many technical groups in other countries. For example, the Canadian General Electric Company is under contract to design and construct WR-1, an organic-cooled experimental reactor, for the Whiteshell Nuclear Research Establishment. AMF Atomics Division of

AMF Canada Limited and CGE are AECL's chief contractors for fuel element fabrication, and other work related to Canada's nuclear power program is carried out in collaboration with Shawinigan Engineering, Orenda Engines Division of Hawker Siddley Canada Limited, Canadian Westinghouse Company Limited, Montreal Locomotive Works Limited and Montreal Engineering Company Limited. In general, AECL's policy is to stimulate the interest of private industry in the development of nuclear power so that these firms can take over construction of power plants when the time arrives, leaving AECL free for fundamental studies and developing new reactor concepts. AECL also lends general support to the nuclear and related studies of Canadian universities and lets contracts to the universities on specific problems.

In the international field, close ties are kept with the United States Atomic Energy Commission and the United Kingdom Atomic Energy Authority, both of which have representatives permanently at Chalk River. There is an agreement with the United States for co-operative work on heavy-water-moderated reactors; it provides for the free exchange of all technical data in this field and a commitment by the USAEC to spend $\$ 5,000,000$ in the United States on research and development related to reactors of Canadian design. Collaboration has also been established with the International Atomic Energy Agency, the Organization for Economic Co-operation and Development, and Euratom, as well as with Australia, Japan, Pakistan, Sweden, Switzerland, West Germany and, less formally, with Denmark, France, India and Norway. In India, a major experimental reactor-the Canada-India Reactor-similar to NRX at Chalk River was constructed and was formally inaugurated in January 1961.

Chalk River Nuclear Laboratories.-At this research and development establishment basic and applied research is carried on by about 200 professional scientists and engineers supported by 300 technicians devoted to research in nuclear physics, nuclear chemistry, radiobiology, reactor physics, radiation chemistry, environmental radioactivity, physics of solids and liquids, and other subjects, using as their primary facilities the two major reactors, NRX and NRU, the auxiliary reactors, ZEEP, PTR and ZED-2, the tandem Van de Graaff accelerator and analytical facilities such as a precision beta-ray spectrometer, mass spectrometers, electron microscopes, multi-channel pulse analysers, automatic recorders, and analogue and digital electronic computers.

Basic research is carried on in many fields, especially that of the structure of atomic nuclei, and of the interactions of neutrons, not only with individual nuclei but also with liquids and crystalline solids, particularly those involving energy transfer. For nuclear structure studies, the tandem Van de Graaff has made pioneer work possible by providing multiply-charged ions of precisely known energy and direction. It has proved possible to produce nuclei in specific energy states by different routes and to identify and analyse the states, thereby deducing the spin and other characteristics and discovering, for example, a correlated series of rotational states in the nucleus neon-20. Not only is this important to a basic understanding of nuclear structure, but it also finds application in unravelling the complex of nuclear reactions responsible for the genesis of nuclei in the interior of stars.

Studies of neutron interactions with matter are made possible by the intense beams of neutrons available from the NRU reactor. By monitoring the neutrons in cosmic radiation it has been possible to find correlations with the occurrence of solar flares and contribute to the recent advances of knowledge of phenomena in interplanetary space. Isotope techniques have brought about revisions in the basic theory of chemical reactions induced by radiation. This basic research may find a useful early application in the technology of using an organic liquid as coolant in nuclear power reactors.

Since extracted plutonium is no longer required, the fuel in the NRX reactor has been changed from natural uranium metal to a combination of natural uranium oxide and a uranium- 235 aluminum alloy. The available neutron flux has been increased thereby while keeping the power at 42 megawatts. It is planned to revise the fuelling of NRU similarly at the end of 1963.

CANADIAN NUCLEAR REACTORS IN OPERATION, UNDER CONSTRUCTION OR APPROVED FOR CONSTRUCTION

| Name | Location |  | Power | Fuel | Moderator | Coolant | Use |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Zero Energy Experimental Pile (ZEEP)...... | Chalk River, Ont. | 1945 | 100 w . | Natural uranium metal or oxide | Heavy water | - | Lattice experiments |
| National Research Experimental (NRX)..... | Chalk River, Ont. | 1947 | $42,000 \mathrm{kw}$. | Natural uranium oxide and enriched uranium alloy | Heavy water | Ordinary water | Research and isotope production |
| National Research Universal (NRU)......... | Chalk River, Ont. | 1957 | $200,000 \mathrm{kw}$. | Natural uranium metal | Heavy water | Heavy water | Research and plutonium and isotope production |
| Pool Test Reactor (PTR).................. | Chalk River, Ont. | 1957 | 100 w. | Enriched uranium alloy | Ordinary water | Ordinary water | Reactivity and absorption measurements |
| Toronto University Sub-critical Reactor...... | Toronto, Ont. | 1958 | - | Natural uranium metal | Heavy water | - | Research and teaching |
| McMaster Nuclear Reactor (MNR).......... | Hamilton, Ont. | 1959 | $1,000 \mathrm{kw}$. | Enriched uranium metal | Ordinary water | Ordinary water | Research |
| ZED-2. | Chalk River, Ont. | 1960 | 100 w. | Natural uranium metal or oxide | Heavy water | - | Lattice experiments |
| Canada-India Reactor (CIR)................. | Bombay, India | 1960 | $40,000 \mathrm{kw}$. | Natural uranium metal | Heavy water | Ordinary water | Research and isotope production |
| Nuclear Power Demonstration (NPD)....... | Rolphton, Ont. | 1962 | $\stackrel{20,000 \mathrm{kw}}{\text { (electricity) }}$ | Natural uranium oxide | Heavy water | Heavy water | Power demonstration |
| Canadian Deuterium-Uranium (CANDU).... | Douglas Point, Ont. | 1964-65 | $200,000 \mathrm{kw}$. (electricity) | Natural uranium oxide | Heavy water | Heavy water | Power |

The research facilities of the NRX and NRU reactors have continued to attract individual scientists as well as teams from other countries. A team of Brookhaven (U.S.A.) and AECL scientists is using a neutron beam with a high-speed chopper and long flight path for nuclear interaction studies. Another team with scientists from Harwell (Br.) and other countries is using another system of choppers for studying details of the slowing-down of neutrons by moderators. Both in NRX and NRU the exceptional facilities for irradiations in high temperature water, steam and organic liquids have brought teams from Britain and the United States and individuals from West Germany and Sweden to conduct tests important for the design of future power reactors.

Nuclear Power Prospect.-The generation of electricity by nuclear power on a competitive economic basis is expected to be established by the type of reactor now under construction by the Nuclear Power Plant Division of AECL. This promise rests on the attainment of very-low-cost fuelling by an extremely simple system that has proved satisfactory in the Nuclear Power Demonstration Station reactor where there has been no fuel failure in the first year of operation. The fuel is uranium dioxide specially prepared from natural uranium entirely in Canada. A wide range of tests in hot channels in the NRX and NRU reactors at heat ratings and energy yields in excess of those required has established that this oxide fuel is incomparably more dependable than the uranium metal fuel for which the NRX and NRU reactors were designed. No provision for reprocessing the irradiated fuel is involved, for, by careful attention in the reactor design to minimizing any waste of neutrons, an energy yield of over 9,000 thermal megawatt-days is expected from a ton of uranium before it is discarded. This results in a prospective fuelling cost of about one mill ( 0.1 cent) per electric kilowatt-hour, to be compared with about three mills from coal at $\$ 8$ per short ton.

Canada has access to such an abundance of coal, oil and natural gas that the competitive cost level for electric power is lower than in many other countries. Nuclear power plants of the types now under construction in Britain and the United States have been assessed as unable to reach a low enough cost level, at least until several successive plants have been built and operated to discover where economies are possible. Plants of the CANDU type do not promise to be significantly cheaper in total initial outlay, but the fuelling cost can be so much less that meeting the competitive target is a very real prospect.

The low fuelling cost derives as much from the details of the design proposed as from the general type of reactor chosen. Some of the important features seem worthy of mention. The full-scale plant will generate 220 megawatts with a steam-cycle efficiency of 33.3 p.c., so the reactor has to supply 660 thermal megawatts to the steam-raising plant. The reactor is essentially a tank of heavy water, 20 feet in diameter and 16.5 feet long, lying horizontally. It is penetrated by 306 fuel channels parallel to the axis on a 9 -inch-square lattice. Each channel is a zirconium-alloy pressure tube of 3.25 in . inside diameter and about 0.16 in . thick. The fuel consists of bundles of $19 \mathrm{rods}, 0.6 \mathrm{in}$. in diameter and 19.5 in. long, made of dense uranium dioxide in thin zirconium-alloy tubes. Heat is taken from the fuel directly by heavy water that passes at $560^{\circ} \mathrm{F}$ to the steam boiler, where normal water is raised to saturated steam at $483^{\circ} \mathrm{F}$ and 38 atmospheres. The heat developed in the heavy water moderator that is in the tank outside the fuel channels is not directly used and amounts to about 35 thermal megawatts. The over-all net plant efficiency is then 29.1 p.c. These details show that the design represents a very considerable advance over that originally conceived in 1956, and the improvement bears promise that continued progress will lead to costs well below the economic target. As examples of the advance, it may be noted that, for the same electric power output, the reactor power has been brought down from 790 to 700 megawatts and the length of fuel rod from 86 to 30 kilometres. The prospective fuelling cost has dropped from $1.85 \mathrm{mill} / \mathrm{kwh}$. to $1.0 \mathrm{mill} / \mathrm{kwh}$. On the other hand, no over-all reduction has been achieved in the capital cost estimates which remain in the range of $\$ 300$ to $\$ 400$ per electrical kilowatt for the whole plant. No reduction is expected until manufacturing experience has been gained that can be used in future construction, but thereafter appreciable reductions should be possible. A detailed breakdown of costs for CANDU was published during 1960. The conclusions are summarized in the following statement.

These figures will serve to explain why the first plants seem to find economic application in Canada only in the Ontario system, where annual charges on capital are low and coal has to be imported and costs about $\$ 8$ a short ton. Moreover, the demand for electricity in Ontario is growing at more than 200 megawatts capacity per year. To build reactors for lower powers saves little in the cost, so the cost per kilowatt rises and becomes uneconomical. Now that confidence has been gained from the early plants, higher powers seem possible and designs up to 750 electrical megawatts from one reactor are being studied.

Operating experience with the NRX and NRU reactors at Chalk River and with the many other types throughout the world has served to emphasize the great difficulty and costliness of making even minor operating repairs in the presence of the extremely high levels of radiation that are encountered around reactors. Directly and indirectly, this is responsible for the current hesitation to construct a number of large plants that for economic power cost no less than $\$ 40,000,000$ or $\$ 50,000,000$ each. With every new design it is necessary to acquire operating experience before the reliability and availability can be effectively estimated. Experience with defective fuel has been deliberately sought at Chalk River, because this is one of the difficulties most likely to be encountered. Appropriate techniques of locating the defective element, removing it and cleaning up the released radioactive fission products have been established and practised; at the same time fuel designs and ratings which lead to least difficulty in these operations have been studied. Experience of mechanical failures of control rods has lent weight to reactor designs such as NPD where control rods are not needed. Temperature changes are likely to provoke mechanical failures, so design is aimed at keeping the reactor at power for all essential operations including refuelling and complete maintenance testing and readjustment of instruments and working parts of the control system.

A study is in progress of the relative merits of four types of large power reactor for which development work is active. All are heavy-water-moderated and would not require any reprocessing of spent fuel. The fuel could be natural uranium or slightly enriched in the form of uranium dioxide or uranium carbide. The differences lie in the coolant and steam cycle. The four coolants are pressurized (perhaps partly boiling) heavy water (as in CANDU), fog or wet steam, ordinary boiling water, and an organic liquid. The fog and boiling water reactors would pass steam directly to the turbine; the heavy water and organic liquid would raise steam via a heat exchanger. It is apparent that in large sizes construction costs would be comparable but the small differences may be significant. A larger difference is in prospect from fuel fabrication costs. The cost of development of each type although high may be justifiable economically by the cost savings in appropriate circumstances. All appear competitive with conventional plants except locally where fuel is abundant at low cost.

## Section 3.-Space Research in Canada*

The most important event in Canadian space research during 1962 was the launching of the satellite 1962 Beta Alpha (Alouette). This satellite was designed and built in Canada and launched into orbit by the United States National Aeronautics and Space Administration on Sept. 29. The satellite carried a number of scientific experiments, but its main objective was the sounding of the ionosphere from above. The ionosphere is a diffuse layer of highly conducting gas lying between heights of about 60 to 300 miles.

[^106]It reflects radio waves over a wide band of frequencies and has a great practical importance in communications. The underside of the ionosphere has been studied for many years by the technique of sending a short pulse of radio wave up from the ground and measuring the time delay when the reflected pulse is received and the band of frequencies that are reflected. From the results of such studies the diurnal, seasonal and storm effects in the ionosphere are well known and this knowledge is of considerable value in making the maximum use of radio communication channels. However, the satellite Alouette was the first attempt to get a continuous sounding of the ionosphere from above. The satellite travels in a nearly circular orbit at about 600 miles above the earth's surface and, on command, will transmit radio pulses of varying frequency to the ionosphere and observe the reflected pulse from the top side of the ionosphere. This type of measurement is often referred to as the topside sounder.

Other experiments carried by the satellite include experiments on radio frequency waves from the sky and very low frequency electromagnetic waves whose propagation is influenced by the earth's magnetic field. Also included are a number of detectors to study cosmic rays, energetic particles in the Van Allen radiation belt and the artificial radiation belts introduced by high altitude nuclear explosions.

The over-all design of the satellite was carried out by the Defence Research Telecommunications Establishment. Some components were developed by Canadian industry and the cosmic ray instruments were the responsibility of the National Research Council. The cost of the launching vehicles, the actual launching and data recovery were undertaken by the United States (NASA) as part of its international co-operation program.

Data are transmitted from the satellite to ground stations. Stations in several countries are receiving them and sending the magnetic tape records to Ottawa for analysis. Most of the ground stations are part of the United States Minitrack satellite-tracking organization but three data-recovery stations were built in Canada specifically for Alouette and future ionosphere monitoring satellites. These are at Ottawa, Ont., Prince Albert, Sask., and Resolute, N.W.T. The orbit of Alouette is almost in a north-south direction, the plane of the orbit being tilted only $10^{\circ}$ from the earth's axis.

The satellite, though a striking space experiment, did not represent all of Canadian space activities during 1962. There is an important region of the upper atmosphere that is too low for practical satellite orbits and too high to be reached by balloons or aircraftthe region between heights of about 25 miles and 200 miles. This region is interesting in that it contains the absorbing layer in the lower ionosphere that causes radio blackouts and also includes the lower limit of aurora. While radio propagation through the regions tells a great deal about density of electrons, it gives little information on the chemical constitution of that very tenuous part of the upper atmosphere, or its state of ionization, or about the nature of the radiation or high energy particles that cause the ionosphere. And it is of particular importance to Canadian scientists to study the upper atmosphere at these levels in Northern Canada because the axis of the geomagnetic field is tilted toward Northern Canada and the production of the aurora and ionosphere disturbances that cause radio blackouts is closely associated with magnetic disturbances in polar regions.

To study these, direct measurements are necessary; that is, instruments must be carried up to the regions where the measurements are required and a practical way of doing this is to use rockets that are much smaller and cheaper than those needed for launching satellites. This technique, of course, preceded the launching of satellites and is still of great importance. A series of rockets (Black Brant) is being developed in Canada: Black Brant I, an experimental rocket, is now obsolete; Black Brant II is a 17-inch diameter rocket capable of carrying 150 lb . of payload to over 100 miles; Black Brant III is a smaller rocket 10 inches in diameter and has a design capability of carrying 40 lb . to 100 miles; Black Brant IV is a tandem combination of $I I$ and $I I I$; and Black Brant $V$ is an optimum design of Black Brant II. Black Brant II is being used extensively for scientific measurements and Black Brant III and IV will be ready during 1963. These rockets were developed for scientific purposes by Canadian industry with some government support.

Another method is to shoot a projectile containing the instruments out of a smoothbore gun, a method being tried by a group in the Engineering Faculty of McGill University with considerable support from the United States Defence Department. An old 16-inch gun has been adapted for this purpose and mounted at a site in Barbados. This is an interesting experiment but the shock of firing the gun introduces problems in design of the instruments being carried.

Space research activities are carried out by several Canadian universities as well as in government laboratories. In fact, upper atmosphere research is a field in which some university research workers have long been active. The National Research Council gives grants to university research workers in space research and, for advice in this field, the Council has formed an Associate Committee on Space Research whose membership includes representation from universities, government laboratories and government departments holding operating responsibilities relating to space technology. Because university space research experiments are usually carried out with the upper atmosphere sounding rockets of the Black Brant series, part of the Council's assistance is in supplying the rockets and co-ordinating arrangements for their launching at the Fort Churchill, Man., rocket-launching facility.

Another function of the NRC interest in space research is that of holding membership in the International Council of Scientific Unions' Special Committee on Space Research (COSPAR). This Committee consists of members representing ten international scientific unions and representatives of the National Academies or National Research Councils of countries that are active in space research. This Committee, though non-government in its organization (it represents academic and scientific interests not normally under the direct control of the governments of the countries concerned), has had considerable success in organizing international symposia on space science and has had a great influence in supporting international co-operation. This has been recognized in many references to COSPAR in the Proceedings of the United Nations Committee on the Peaceful Uses of Outer Space.

In addition to the scientific research activities, the construction of a satellite and the development of a series of sounding rockets, Canadian Government departments are taking part in many applications of space technology that affect their normal responsibilities. The first to come into common use are satellite applications to meteorology and communications. Meteorological satellites already have had a considerable influence in advancing the understanding of the world-wide weather pattern. The spread of Canadian territory across the northern hemisphere is such that a data read-out station in Eastern Canada will expand the coverage of transmission from meteorological satellites, particularly in closing the gap between ground stations in North America and Europe. The problem has been studied by the Meteorological Branch of the Department of Transport and an inter-government agreement has been reached for the building of a meteorological satellite data recovery station on Cape Breton Island.

In communications, the use of satellites has already been shown to have an extensive practical future in expanding the now overcrowded communication channels. The Telecommunications and Electronics Branch of the Department of Transport has the major responsibility in this field and an experimental ground station is being planned in cooperation with the United States.

In the organization of space research and practical application, Canada has not yet followed the United States plan of centring all non-military applications in one government organization. Canadian activities are considerable, however, and various groups in government and industry are taking advantage of developments in space research and technology to be consistent with their responsibilities and to meet the needs of Canadian industrial development.

## Section 4.-Other Scientific and Industrial Research Facilities

Aside from the research facilities and activities covered in Sections 1, 2 and 3, Canadian research is carried on by various federal agencies, provincial organizations, universities and industries. Several provinces in Canada have established provincial Research Councils to stimulate and support research on problems having special provincial significance. The universities, of course, form an extremely important part of the Canadian pattern of research. Much of their work is along fundamental lines but practical problems are not neglected, especially those of regional interest.

All three types of institutions-federal, provincial and university organizationshave an interest in problems of industrial significance; this is part of the current Canadian pattern of research. Though many Canadian industries now possess research facilitiessome of them quite extensive-the major part of industrial research to date has been done under government auspices.

Thus the unique problems of the country, particularly its large area coupled with a small population, have led to a typically Canadian organization of research, of which a very strong associate committee system is perhaps the most distinctive feature.

## Subsection 1.-Federal Organizations

Although research by industrial firms has been slow to develop in Canada, government research has expanded rapidly, at first because of the need for speeding up the production of raw materials, which were for many years the basis of Canada's export trade, and later because of increasing interest in the processing of raw materials, the necessity of meeting the needs of national defence and the developing consideration for many human and resource requirements. Federal agencies involved in research include the Departments of Agriculture, Forestry, Fisheries, Mines and Technical Surveys, National Defence, National Health and Welfare, and Northern Affairs and National Resources as well as the National Research Council and other Crown corporations such as Atomic Energy of Canada Limited. A system of committees, with nation-wide representation, eliminates unnecessary duplication of work from these national research organizations.

The scientific work of the Department of Agriculture is described in Chapter IX of this volume, the investigations conducted by the Board of Grain Commissioners in Chapter XIX, the specialized work in scientific forest research in Chapter X, scientific services concerned with Canada's mineral resources conducted by the Department of Mines and Technical Surveys in Chapter XI, investigational work of the Department of Fisheries in Chapter XIII, research of the Canadian Wildlife Service of the Department of Northern Affairs and National Resources in Chapter I, health and other research conducted by the Department of National Health and Welfare and other agencies in Chapter VI, work of the Defence Research Board in Chapter XXV, the work of the National Research Council at pp. 361-368 and atomic research at pp. 368-373.

## Subsection 2.-Provincial Organizations

The fact that only a few provincial research organizations exist does not indicate lack of interest in research by the provinces. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems, and many individual departments have facilities for research in their particular fields of endeavour or assist research through the provision of financial aid to students working in those and other scientific fields. Agriculture is particularly well covered because of its importance as an export industry but the provinces are also intensely interested in their other natural resources. Their efforts in the fields of agriculture, forestry, mining and fisheries are outlined in the Chapters dealing with those subjects (see Index).

Nova Scotia Research Foundation.-This body was created by the Government of Nova Scotia in 1946 to give its people scientific and technical assistance in finding new and better ways to utilize the resources of the forest, the sea, the farm, the mine and the process industries. To this end it seeks to correlate and further scientific work on local problems and available resources. It assists universities, colleges, research groups, industries, provincial and federal departments and individuals by loans of equipment, grants, scholarships, laboratory and summer assistants, library, cartographic, photogrammetric and translation services, and technical information. It has supported or collaborated in work on breeding new varieties of plants and root nodule bacteria; on antibiotics, poultry, blueberry culture, coal-burning equipment, the constitution and gasification of coal, the non-destructive testing of mine equipment, the utilization of anhydrite, diatomite, fish waste, gypsum, seaweed, slag, slab wood and fertilizing materials. It has conducted geophysical, geological, air pollution, and seaweed surveys as well as forest aphid, forest ecology and genetic studies and has assisted studies on the nutrient cycles of lakes, on X-ray crystallography, and on pressures in underground strata. Its Geophysical Division is equipped to undertake all types of magnetometric, gravimetric, resistivity, seismic and electromagnetic explorations. The Technical Services Division provides free technical information to industries in the province and offers them research and development services and facilities in the fields of physics, chemistry and engineering, including operational engineering.

Saskatchewan Research Council.-The Saskatchewan Research Council carries out research in the physical sciences, both pure and applied, with the aim of improving the provincial economy. The Council is therefore particularly concerned with the commercial exploitation of provincial resources and the scientific aspects of business. Current emphasis is on water and mineral resources, fields of agriculture not covered by other organizations, and technical assistance to industry. Besides being actively engaged in its own projects, the Council, by the granting of funds, supports further research at the University of Saskatchewan. Its buildings, occupied by a permanent staff of about 45 persons and additional temporary staff, are situated on the university campus.

Research Council of Alberta.-The Province of Alberta set up a Scientific and Industrial Research Council in 1921, the promotion of mineral development within the province being the chief purpose leading to its establishment. The Council operates under an Act somewhat similar to that which set up the National Research Council and is financed by provincial government appropriations. The present program is directed to the application of basic and applied science toward the development of the natural resources of the province. Investigations in the Council laboratories and pilot plant are organized into two branches-the Earth Sciences Branch which includes all work on groundwater geology, geological surveys and research, and soils, and the Fuels Branch which includes work on coal, petroleum, natural gas, and gasoline and oil testing. There are, in addition, project groups dealing with industrial engineering services, highway research, a co-operative program on cloud physics with reference to the hail problem, and a number of special projects.

The operations of the organization are controlled by a Council of ten individuals representative of the government, the university and industry. The various research projects are under the immediate supervision of advisory committees and the Technical Advisory Committee of the Council; the latter is composed of senior officers of the Council and the government, with certain committee chairmen and university representatives.

The Council laboratories are located beside the University of Alberta campus.
British Columbia Research Council.-The British Columbia Research Council, under the sponsorship of the provincial Department of Industrial Development, Trade, and Commerce, provides a scientific and engineering staff with laboratories on the campus of the University of British Columbia. The objective is to enable even the smallest firms
to improve their competitive position in Canadian and world markets by the use of the most up-to-date scientific and technical knowledge. The Council provides three classes of service: a free information service in collaboration with the National Research Council; assistance to specific firms at cost where information cannot be supplied from existing knowledge; and, at the Council's expense, research on problems of general value to the industrial development of the province.

The Ontario Research Foundation.-The Ontario Research Foundation, established in 1928, operates as an independent corporation, deriving its powers from a special Act of the Legislature and governed by a Board of Governors appointed by the LieutenantGovernor in Council of Ontario. The organization was financed initially by an endowment fund composed of subscriptions from commercial and industrial corporations, from private individuals, and a grant from the provincial government. However, most of its current income is derived from contract research undertaken for industry, although income is also obtained from the various government departments for research and other work undertaken on a contract basis. The Foundation is concerned primarily with the development of industry and the development of Ontario's natural resources through the application of scientific research. However, Foundation activities are not confined to the province; research contracts are routinely handled for any organization, without reference to location. Being primarily an industrial research institution, the Foundation's main areas of scientific endeavour are chemistry, physics, metallurgy, biochemistry, textiles and engineering. Other Foundation departments, such as parasitology and physiography, are engaged particularly in studies related to Ontario's natural resources. A field engineering and technical information service is provided free to industry, sponsored by the Ontario Department of Economics and Development and by the National Research Council.

The Hydro-Electric Power Commission of Ontario.-The Research Division of Ontario Hydro, with a staff of 300 , provides services for all technical activities of the utility, in engineering design, construction work, power utilization, and system operation and maintenance. In addition to solving specific problems, the testing, investigation and research work leads to important technical advances, including the development of new and better equipment. Ontario Hydro is thus enabled both to improve the performance of the power system and to effect economies. Members of the staff maintain close contact with research organizations and other power utilities, and participate in the committee work of major technical societies and of standards associations.

Electrical investigations explore methods of generating, transmitting, controlling, distributing and utilizing power, and seek improvement in equipment for these purposes. Some of the main fields of study are transmission at extra-high voltage; electrical insulation; system operation and control, and system protection against lightning; communications and telemetering; illumination; and power metering. Attention is given to the performance and efficiency of power equipment, to improved measuring techniques, and to means of minimizing the hazards of electric shock.

Structural and mechanical studies include the following: soil mechanics as related to foundations, roads, and earth dams and dykes; the physical properties of structural components and of numerous items such as conductor joints and line hardware; the mechanical performance and safety features of equipment and various types of machines; metals and metallurgy; welding materials, techniques and applications; atmospheric and underground corrosion of metals; stresses in materials and structures; noise and vibration conditions; and a variety of problems associated with the design, construction and maintenance of concrete structures, the application of masonry materials, and the production, placement and quality control of all concrete used.

In addition to chemical analyses and tests performed on a wide range of materials and products purchased, chemical research work is conducted with regard to such subjects as wood preservation, plastics applications, protective coatings, both vegetation and insect pest control, lubrication, liquid and gaseous electrical insulants, thermal insulation, air
pollution, corrosion prevention, and water treatment. Other studies contributory and supplementary to the main branches of work are carried on in the fields of physics, biology, petrology, statistics and mathematics. Operations research studies are used in determining optimum policies and procedures in vehicle replacement, inventory control, reserve transformer capacity, economic power dispatch of hydro-thermal systems, and time-series forecasting of power demands and lake levels.

## Subsection 3.-University Research

For many years research in the universities was directed toward obtaining knowledge for its own sake and was considered pure research. Later it was recognized that the conclusions of such research provided the basic information for applied science and before long the universities, because of their unique position in having trained specialists and equipment, were involved in both basic and applied research. During World War II they were encouraged to undertake emergency and other contractual research and since then the trend toward broadening the field of research, increasing the capacity of universities to educate advanced students, and procuring large-scale costly equipment has shown rapid advance. This has created new problems but has provided even greater opportunities for undertaking sizable projects which could not have been attempted otherwise, and has thereby tended to knit the university into the very warp of industry.

Research conducted in the universities falls into three broad categories: projects undertaken by the student under the guidance of a professor or committee to meet requirements for an advanced degree; research undertaken by the professor, which may be of a more or less continuous nature; and larger research projects undertaken co-operatively on a faculty or inter-faculty basis in university laboratories or in such specialized institutions connected with the university as medical research laboratories, institutes of microbiology and hygiene, science service laboratories and faculties of agriculture.

At the turn of the century only two universities in Canada were offering graduate work (Toronto and McGill) and few students proceeded to advanced studies. Growth was slow and uneven until after the Second World War, but then accelerated sharply. By 1960 there were 14 schools of graduate studies and at least ten other universities, some rather large, carrying on graduate work in one or more fields. Most of the graduate schools register several hundred students and the rate of increase in enrolment in these schools in recent years has been greater than that at the undergraduate level.

Not only is there a continuing increase in the number of graduate students and staff members engaged in research at universities, but both the scope and magnitude of current projects are vastly different from those undertaken during the early years of the century. At that time many of the experiments could be carried out with equipment such as glass tubing and dry cell batteries but now universities require for some of their research projects equipment costing hundreds or thousands of dollars, such as electron microscopes, mass spectrometers, cyclotrons, cobalt bombs, and electronic computers. The total range of individual or group projects is encyclopaedic. A few of the exciting new developments include: high altitude research (one project involves the projection of test materials and instrumentation 600,000 feet into space), an intensive study of ocean depths, further investigation into the cause and cure of cancer, and the unfolding of Canada's past through historical and archaeological research.

This increasing volume and cost of research places a heavy strain on the universities. The amount and kinds of research are limited by the availability of trained research specialists, the difficulty of providing adequate space and equipment, and the problem of securing necessary financial backing. Just under 15 p.c. of the total income of universities is spent on research, and the dollar value of research undertakings has increased from $\$ 5,000,000$ in $1952-53$ to $\$ 14,000,000$ in 1959-60.

Outside financial support comes primarily from four sources: agencies and departments of the Federal Government, provincial government departments, industry and private foundations. The contributions from these sources, of course, vary widely from university to university, but for all Canadian institutions the approximate division of contributions to research at the present time is as follows:-

|  | p.c. |
| :---: | :---: |
| Federal Government departments. | 22 |
| National Research Council. | 22 |
| Defence Research Board. | 13 |
| Provincial government departments. | 13 |
| Universities. | 9 |
| Industry.. | 7 |
| Other (including private foundations) | 14 |

## Subsection 4.-Industrial Research

Industrial research in Canada is changing very rapidly. In the past, industry in general was largely unaware of the value of research to its own development and to that of the country, partly because many Canadian companies were subsidiaries of companies in Britain and the United States and partly because small companies found it impossible to finance their own research. The problem was accentuated by the vast size of the country, the absence of concentration of similar industries and the proximity to the relatively large research facilities of the United States.

However, the emergence of Canada as a highly industrialized society, its entrance into multitudinous fields of production, the rapid growth of many large nation-wide industries, the serving of a discriminating domestic market and the meeting of competition from abroad have had the effect of making Canadian manufacturing establishments research conscious and many of the larger ones now possess competent research organizations.

The latest DBS survey of expenditures on industrial research in Canada was conducted during the first half of 1960 and provided figures for the calendar year 1959 and estimates for the year 1960. These are summarized in the 1962 Year Book at pp. 346-350 and may be found in detail in DBS publication Industrial Research-Development Expenditures in Canada, 1959 (Catalogue No. 13-516).

## Section 5.-Federal Government Expenditures on Scientific Activities

Two surveys of expenditure of the Federal Government on scientific activities have been carried out by the DBS. The first survey requested information based on final expenditure for the year ended Mar. 31, 1959 and for expected expenditure based on departmental estimates for the year ended Mar. 31, 1960; the second survey requested similar information for the years ended Mar. 31, 1961 and 1962.

For the purposes of these surveys, scientific activities include all activities in the natural sciences concerned with the creation of new knowledge, new applications of knowledge to useful purposes or the furtherance of both the creation of knowledge and new applications. Included in scientific activities are scientific-research development, capital expenditures for research plant and equipment, scientific data collection, scientific information, and scholarship and fellowship programs.

The year ended Mar. 31, 1960 was one of readjustment in government scientific research, following a major change in Canada's aircraft development program, and expenditure dropped from $\$ 222,600,000$ in the previous year to $\$ 212,300,000$, or by 4.6 p.c.

However, research activity increased in 1960-61 and expenditure reached $\$ 228,800,000$, an increase of 7.8 p.c., and the budgeted outlay for $1961-62$ was reported at $\$ 258,900,000$, a further increase of 13.2 p.c.

## 4.-Summary Statistics of Federal Expenditures on Scientific Activities, Years Ended Mar. 31, 1959-62

Nots.-Data for the years ended Mar. 31, 1959 and 1961 are actual expenditures and those for the years ended Mar. 31, 1960 and 1962 are based on the annual departmental estimates presented to Parliament and are therefore subject to reduction as a result of postponements, cancellations or other changes of program plans.

| Other departments. | 17.7 | 23.3 | 31.5 | 39.7 |
| Totals, All Departments or Agencies | 222.6 | 212.3 | 228.8 | 258.9 |

The six departments or agencies listed in Table 4 continue to account for a large part of all scientific activity in the Federal Government, although the 85 p.c. accounted for by these agencies in 1961-62 was a decrease from the 92 p.c. for which they accounted in 1958-59; the drop indicates growth in scientific activities in departments less active in past years. In the period under review, Atomic Energy of Canada Limited, the Department of Mines and Technical Surveys and the National Research Council each increased expenditures by close to 50 p.c., the Department of Agriculture by 17 p.c., and the Defence Research Board by 18 p.c. Expenditures by the Department of National Defence dropped by 52 p.c.

Approximately three quarters of Federal Government funds for scientific activity is directed to the conduct of research-development and, of that expenditure in 1961-62, 80.1 p.c. was performed within government facilities and the remainder was contracted to private organizations or used in universities as grants-in-aid of research. The fact that only 66 p.c. was performed within government facilities in 1958-59 indicates that the importance of private research-development work for the Federal Government has declined recently.

Expenditures on scientific activities by the civilian branches of government (excluding the Armed Forces and the Defence Research Board) rose from $\$ 127,000,000$ in 1958-59 to $\$ 192,100,000$ in 1961-62, an increase of 51.3 p.c. Over the same period, expenditures by the Armed Forces and the Defence Research Board dropped from $\$ 95,600,000$ to $\$ 66,800,000$. In 1961-62, the civilian branches of government accounted for 74.2 p.c. of all research-development expenditures of Federal Government departments and agencies, compared with 72.5 p.c., 69.6 p.c. and 57.1 p.c., respectively, for the three previous fiscal years.

## 5.-Federal Expenditures on Scientific Activities by Civilian and Defence Branches of Government, Years Ended Mar. 31, 1959-62

Note.-See headnote to Table 4, p. 381.
(Millions of dollars)

Federal Government expenditures (exclusive of those by the Armed Forces and the Defence Research Board) on research-development are classified according to scientific field for the four fiscal years in Table 6. Such expenditures for the physical sciences have increased over this period at the rate of approximately $\$ 10,000,000$ each year. In the life sciences, expenditures have increased in proportion to total increase in expenditures on research-development.

## Section 1.-Canadian Criminal Law and Procedure $\dagger$

The system under which justice is administered in a State is never rigid. To have it so would be neither expedient nor indeed possible. A judicial system must grow and adapt itself to the requirements of the people and the exact limits of the powers of different legislative bodies require continued definition.

The criminal law of Canada has as its foundation the criminal common law of England built up through the ages and consisting first of customs and usages, and later expanded by principles enunciated by generations of judges. There is no statutory declaration of the introduction of English criminal law into those parts of Canada that are now the Provinces of New Brunswick, Nova Scotia and Prince Edward Island. Its introduction there depends upon a principle of the common law itself by which English law was declared to be in force in uninhabited territory discovered and planted by British subjects, except in so far as local conditions made it inapplicable. The same may be said of Newfoundland although the colony dealt with the subject in a statute of 1837. In Quebec its reception depends upon a Royal Proclamation of 1763 and the Quebec Act of 1774 . In each of the other provinces and in the Yukon and Northwest Territories the matter has been dealt with by statute.

The judicial systems of the provinces as they exist today are based upon the British North America Act of 1867. Sect. 91 of the Act provides that "The exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters". By Sect. 92 (14), the legislature of the province exclusively may make laws in relation to "the administration of justice in the province, including the constitution, maintenance and organization of provincial courts, both of civil and criminal jurisdiction and including procedure in civil matters in its courts'. The Parliament of Canada may, however (Sect.

[^108]101), establish any additional courts for the better administration of the laws of Canada. It should be noted that the Statute of Westminster, 1931 effected important changes particularly by abrogating the Colonial Laws Validity Act, 1865 (Br.) and confirming the right of a dominion to make laws having extraterritorial operation. Particulars of the federal judiciaries are given in Chapter II, pp. 77-79, and provincial judiciaries are dealt with briefly at pp. 79-80; more detailed information on provincial judiciaries is given in the 1954 Year Book, pp. 47-55.

At the time of Confederation each of the colonies affected had its own body of statutes relating to the criminal law. In 1869, in an endeavour to assimilate them into a uniform system applicable throughout Canada, Parliament passed a series of Acts some of which dealt with offences of special kinds and others with procedure. Most notable of the latter was the Criminal Procedure Act, but other Acts provided for the speedy trial or summary trial of indictable offences, the powers and jurisdiction of justices of the peace in summary conviction matters and otherwise, and the procedure in respect of juvenile offenders.

Codification of the criminal law through a Criminal Code Bill founded on the English draft code of 1878, Stephen's Digest of Criminal Law, Burbidge's Digest of the Canadian Criminal Law, and the relevant Canadian statutes was brought about by the Minister of Justice, Sir John Thompson, in 1892. This Bill became the Criminal Code of Canada and came into force on July 1, 1893. It must be remembered, however, that the Criminal Code was not exhaustive of the criminal law. It was still necessary to refer to English law in certain matters of procedure and it was still possible to prosecute for offences at common law. Moreover, Parliament has declared offences against certain other Acts, e.g., the Narcotic Control Act, to be criminal offences and the same was done in the Defence of Canada Regulations and the Wartime Prices and Trade Board Regulations (neither now in force) promulgated under the authority of the War Measures Act.

It is often difficult to distinguish between 'law' and 'procedure'. Procedure may be interpreted to relate simply to the organic working of the courts but, in a wider sense, it may also affect the rights or alter the legal relations arising out of any given state of facts. For present purposes it will be useful to note that writers on jurisprudence describe law as being substantive or adjective. "Substantive law is concerned with the ends which the administration of justice seeks; procedural (adjective) law deals with the means and instruments by which these ends are to be obtained."* With reference to the criminal law, the former may be taken to include the provisions concerning criminal responsibility, the definition of 'offences' and the punishment for those offences, and the latter to include provisions for enforcement, e.g., powers to search and to arrest, for the modes of trial and for the proof of facts. Broadly speaking, the Criminal Code observes the distinction although it might appear that the provisions for preventive detention of habitual criminals and dangerous sexual offenders partake of the nature of both classes.

An examination and study of the Criminal Code was authorized by Order in Council dated Feb. 3, 1949, and the Commission assigned the task of revising the Code presented its report with a draft Bill in February 1952. After coming before successive sessions of Parliament it was finally enacted on June 15, 1954 and the new Criminal Code (SC 1953-54, c. 51) came into effect on Apr. 1, 1955. A short outline of the system that existed under the repealed Code together with the major revisions effected by the new Code is given in the 1955 Year Book, pp. 295-298.

Since the new Code came into force several amendments have been made, for the most part in relation to procedure. Among the most notable of these, as well in point of procedure as of substance, are: an amendment in 1956 providing that motions for leave to

[^109]appeal to the Supreme Court of Canada in criminal cases should be heard by a quorum (at least five) of judges of that Court instead of a single judge; amendments effected by SC 1959, c. 41, providing a statutory extension of the definition of "obscenity" and making provision for seizure and condemnation of offending material without a charge necessarily being laid against any person; extensive amendments relating to the allowing of time for payment of fines; amendments dealing with offences committed in aircraft in flight over the high seas; an amendment forbidding the publication in a newspaper or broadcast of a report that any admission or confession was tendered in evidence at a preliminary inquiry or a report of the nature of such admission or confession unless the accused has been discharged or, if the accused has been committed for trial, the trial has ended.

The Parole Act (SC 1958, c. 38), brought into force on Feb. 15, 1959, revises the parole system and provides for the establishment of a National Parole Board (see pp. 406-408).

It is most important to notice that in 1960 (SC 1960, c. 44) Parliament enacted what is known as the Canadian Bill of Rights. Although the Act sets out further details, its general scope appears in Sect. 1, which reads as follows:-
" 1 . It is hereby recognized and declared that in Canada there have existed and shall continue to exist without discrimination by reason of race, national origin, colour, religion or sex, the following human rights and fundamental freedoms, namely,
(a) the right of the individual to life, liberty, security of the person and enjoyment of property, and the right not to be deprived thereof except by due process of law;
(b) the right of the individual to equality before the law and the protection of the law;
(c) freedom of religion;
(d) freedom of speech;
(e) freedom of assembly and association; and
$(f)$ freedom of the press."
Although the Bill of Rights has been invoked on various occasions, the courts have not held it to affect the operation of the Criminal Code.

In 1961 (SC 1960-61, cc. 43-44) the offence of murder was divided into capital and noncapital. The death penalty was abolished in relation to the offence of non-capital murder. More detailed information on this classification is given in the 1962 Year Book, pp. 354-355. Also in 1961 the term criminal sexual psychopath was dropped and the term dangerous sexual offender substituted. More detailed information is available in the 1962 Year Book, p. 355.

## Section 2.-Adult Offenders and Convictions

Offences may be classified under two headings, "indictable offences" and "offences punishable on summary conviction". Indictable offences are grouped in two main categories: (1) offences that violate the Criminal Code and (2) offences against federal statutes. These include the graver crimes. Offences punishable on summary conviction-those not expressly made indictable-include offences against the Criminal Code, provincial statutes and municipal by-laws. It is debatable how far some summary conviction offences are of a criminal nature and whether their increase indicates an increase in crime. Many are breaches of municipal by-laws and contrary to public safety, health and comfort, as, for example, parking violations or practising trades without licence but, on the other hand, summary conviction offences may include such serious charges as assault and contributing to juvenile delinquency.

The following Subsection 1 deals with adults convicted of indictable offences, Subsection 2 with young adult offenders convicted of indictable offences, Subsection 3 with convictions for summary conviction offences and Subsection 4 with appeals.

## Subsection 1.-Adults Convicted of Indictable Offences

Statistics of indictable crimes are based on persons, one purpose being in order to evaluate the population engaged in prohibited activities and another to help in the treatment of anti-social behaviour in terms of subject-centred action. In the present counting system, while individuals may be charged with more than one offence, only one offence is tabulated for each person. This offence is selected according to the following criteria: (1) if the person were tried on several charges, the offence selected is that for which proceedings were carried to the farthest stage-conviction and sentence; (2) if there were several convictions, the offence selected is that for which the heaviest punishment was awarded; (3) if the final result of proceedings on two or more charges were the same, the offence selected is the more serious one, as measured by the maximum penalty allowed by the law; (4) if a person were prosecuted for one offence and convicted of another-for example, charged with murder and convicted of manslaughter-the offence selected is the one for which the person was convicted.

In 1961 there were 43,161 adults charged with 81,867 indictable offences, of whom 38,679 were found guilty of 71,262 offences. In the previous year there were 39,343 adults charged with 73,411 indictable offences, of whom 35,443 were found guilty of 64,707 offences.

| Canada. | 35,443 | 38,679 | 307 | 330 |

Indictable offences are classified according to the main sources of the criminal lawthe Criminal Code and federal statutes. Indictable offences under the Criminal Code are grouped into six classes as shown in Table 2. Class I covers offences against the person and in 1961 there were 5,234 males and 299 females convicted in this category, mostly for assaults of various kinds. Classes II to IV deal with offences against property. Thefts predominate among the offences in these classes, and breaking and entering and robbery, serious crimes which involve acts of violence, are the next most numerous. Class V deals with offences relating to currency and Class VI with miscellaneous offences; among the latter, the most numerous convictions are for offences connected with gaming, betting and lotteries. In 1961 there were 315 men and 171 women convicted under federal statutes of whom 290 men and 170 women were offenders under the Narcotic Control Act.

## 2.-Persons Charged and Convicted of Indictable Offences, by Class of Offence, 1960 and 1961

Female Offenders.-There were 3,163 female offenders convicted of indictable offences in 1961 compared with 2,552 in 1960. Of these offenders, Ontario accounted for 1,255 , British Columbia 528 and Quebec 493. The ratio of female offenders convicted to total convictions moved upward from 7.2 p.c. in 1960 to 8.2 p.c. in 1961 with a provincial range from 2.4 p.c. in Prince Edward Island to more than 10 p.c. in Manitoba and British Columbia.

## 4.-Females Convicted of Indictable Offences, by Province, 1960 and 1961

| Province or Territory | Females Convicted |  | Females Convicted to Total Convictions |  |
| :---: | :---: | :---: | :---: | :---: |

Sentences, Method of Trial and Court Proceedings.-Table 8 summarizes sentences given for indictable offences, Table 9 illustrates the method of trial and disposition of cases, and Table 10 shows persons charged and convicted of indictable crimes according to trial court.

Two kinds of sentences maintain for a certain period of time a relationship between the person dealt with by the court and the legal institutions of a community-probation and commitment to an institution. The institutions to which a person can be committed are of many kinds, including penitentiaries, reformatories, gaols and industrial farms. Theoretically, every institution has a specific purpose which is supposed to be taken into account when arriving at a legal decision. In practice, however, the availability of an institution in a given community is a factor in determining the decision rendered by the court.

## Subsection 2．－Young Adult Offenders（16－24 Years）Convicted of Indictable Offences

Attention has been focused in recent years on the needs of the young adult offenders of from 16－24 years of age who constitute a promising field for modern reception and diagnostic facilities equipped with educational，trade training and other formative dis－ ciplines．While young men and women in this age group account for under 15 p．c．of the total population 16 years of age or over，they form over half the criminal population com－ mitting indictable offences．The group includes a wide range，from some of the most daring offenders who already may be experienced criminals to first offenders likely to be turned from crime by further education and training．

There were 19，659 young adult offenders in 1961 compared with 18,707 in 1960；of the former， 5,787 or 29.4 p．c．were 16 or 17 years of age， 5,391 or 27.4 p．c．were 18 or 19 years of age and 8,481 or 43.2 p．c．were between 20 and 24 years．In 1961 there were 18,425 male and 1,234 female young adult offenders convicted of indictable offences compared with 17,649 and 1,058 ，respectively，in 1960.

## Subsection 3.-Convictions for Summary Conviction Offences

Offences punishable on summary conviction are triable by magistrates and justices of the peace under Part XXIV of the Criminal Code (SC 1953-54, c. 51) or under the provincial summary conviction Acts as the case may be. Data relating to these offences are based on convictions; no information is available on either the number of persons involved in these offences or the number of charges. In these cases, following arrest or summons to appear in court, the accused person must be tried by a magistrate or justice of the peace without the intervention of jury. Such cases are heard in police court with the minimum of delay.
14.-Convictions for Summary Conviction Offences, by Type, 1960 and 1961

## Subsection 4.-Appeals

Appeal is an important safeguard in Canada's legal system and the conviction of a jury or judge may be appealed on the grounds that the verdict was unreasonable, that there was a wrong decision on some question of law or that there was a miscarriage of justice. In 1961 there were 2,247 appeals in indictable cases disposed of by the courts, of which 56 were Crown appeals and 2,191 appeals of the accused. Of the Crown appeals, 34 were from acquittal and 22 from sentence while of the appeals of the accused 700 were from conviction and 1,491 from sentence. Appeals in summary conviction cases disposed of by the courts reached 1,569 in 1961. Of these, 252 were appeals of the informant and 1,317 appeals of the accused. The informant appeals comprised 217 from acquittal and 35 from sentence. The appeals of the accused were divided between 1,103 from conviction and 214 from sentence.

## Section 3.-Juvenile Delinquents

Juvenile Delinquent, as defined in the Juvenile Delinquents Act, means any child who violates any provision of the Criminal Code or of any federal or provincial statute, or of any by-law or ordinance of any municipality, or who is guilty of sexual immorality or any similar form of vice, or who is liable by reason of any other act to be committed to an industrial school or juvenile reformatory under the provision of any federal or provincial statute. The commission by a child of any of these acts constitutes an offence known as a delinquency.

The upper age limit of children brought before the juvenile courts in the provinces varies. The Act defines a child as meaning any boy or girl apparently or actually under the age of 16 years, or such other age as may be directed in any province. In Prince Edward Island, Nova Scotia, New Brunswick, Ontario and Saskatchewan under 16 is the official age; in Alberta under 16 for boys and under 18 for girls; in Newfoundland under 17; in Quebec, Manitoba and British Columbia under 18 years. In the interests of uniformity, it has been the practice of the Dominion Bureau of Statistics to publish information about juvenile delinquents 16 years of age or over in the annual report on Statistics of Criminal and Other

Offences and to publish data relating to those under 16 years of age in a report entitled Juvenile Delinquents. In 1961, 2,588 juveniles 16 and 17 years of age were found delinquent in those provinces where the upper age limit is under 17 or under 18 years of age.

Included in the statistics of juvenile delinquents are cases (alleged as well as adjudged) which were brought before the courts and dealt with formally. A case was counted separately each time a child appeared before the court for a new delinquency or delinquencies. In instances where multiple delinquencies were dealt with at one court appearance, only one delinquency-the most serious-was selected for tabulation. Delinquencies reported as informal cases by the courts were not included nor were cases of children presenting conduct problems which were not brought to court or which were dealt with by the police, social agencies, schools, or youth-serving agencies. Thus, community facilities for dealing with children's problems may have an influence on the number of cases referred to court and, therefore, an effect on the statistics of juvenile delinquents.

## Section 4.-Adult Correctional Institutions and Training Schools

## Subsection 1.-Statistics of Correctional Institutions and Training Schools

Correctional institutions may be classified under four headings: (1) Penitentiariesoperated for adult offenders by the Federal Government in which, generally speaking, sentences of over two years are served; (2) Reformatories-operated for adult offenders by the provinces in which individual sentences of up to two years are served; (3) Common Gaols-operated for adult offenders by the provinces or counties in which sentences of up to two years can be served but in which, generally speaking, short-term sentences are served; and (4) Training Schools-operated by the provinces or private organizations under provincial charter for juvenile offenders serving indefinite terms up to the legal age for children in the particular province.

There is a limited amount of statistical information available with respect to these types of institution. "In custody" figures shown in Table 24 for penitentiaries refer only to those persons under sentence, but the figures for admissions include those received from courts as well as by transfer from other penitentiaries and by cancellation of tickets-of-leave and paroles. Figures for releases include expiry of sentences, transfers between penitentiaries, releases on ticket-of-leave and parole, deaths, pardons and releases on court order. In custody figures for provincial and county institutions may include, in addition to those serving sentences, persons awaiting trial, on remand for sentence or psychiatric examination, awaiting appeal or deportation, any others not serving sentence and, for training school population, juveniles on placement.

Population figures in Tables 24 and 25 are for a given day of the year, which is Mar. 31 except for Quebec gaols where populations are counted as of Dec. 31. These figures represent, in effect, a yearly census of correctional institutions and, as such, are not indicative of the daily average population count. For instance, if an abnormal number of commitments are made to a certain institution on or just prior to Mar. 31, the result will be an unrepresentative population total for the institution in that year.

With regard to the fluctuations that might have occurred during the year between census days, the total population of correctional institutions has shown a general increase since Mar. 31, 1957; totals for training schools and provincial adult institutions have shown a tendency to level off or decline slightly but penitentiary population has increased steadily.
24.-Population in Penitentiaries, Years Ended Mar. 31, 195\%-61

| Item | 1957 | 1958 | 1959 | 1960 | 1961 |

## Subsection 2.-The Canadian Penitentiary Service*

The penitentiaries of Canada are administered by the Commissioner of Penitentiaries, responsible directly to the Minister of Justice. In the year ended Mar. 31, 1963, the federal penitentiaries system consisted of six maximum security, four medium security and thirteen minimum security institutions, all for males; one prison for women; one maximum security prison camp for males and females of the Freedomite Doukhobor Sect; and two Correctional Staff Colleges.

The six maximum security institutions receive inmates sentenced by the courts to imprisonment for terms of from two years to life. These are located at New Westminster, B.C., Prince Albert, Sask., Stony Mountain, Man., Kingston, Ont., St. Vincent de Paul, Que., and Dorchester, N.B. Persons sentenced to penitentiary terms in Newfoundland are held in the provincially operated institution at St. John's, under financial arrangements authorized by Sect. 14 of the Penitentiary Act (SC 1960-61, c. 53).

The medium and minimum security institutions and the camps receive inmates transferred from the maximum security (receiving) institutions on the basis of their suitability for special forms of training, including vocational training. Of the medium security institutions, two-Collin's Bay Penitentiary and Joyceville Institution-are within a few miles of Kingston. The other two-the Federal Training Centre and the Leclerc Institu-tion-are in close proximity to St. Vincent de Paul.

Seven minimum security correctional camps are operated as extensions of a main institution in their respective areas. These are located at William Head and Agassiz, B.C.; Beaver Creek and Landry Crossing near Bracebridge and Petawawa, Ont.; Gatineau (Gatineau Park) and Valleyfield, Que.; and Springhill, N.S. Five minimum security farm camps operate as extensions of the penitentiary at Dorchester, St. Vincent de Paul, Collin's Bay, Stony Mountain and Prince Albert, respectively.

The Prison for Women at Kingston, Ont., receives inmates transferred upon committal to penitentiaries in any part of Canada. Prior to Dec. 1, 1960, it operated as a detached portion of Kingston Penitentiary.

The special security Prison Camp for Freedomites of both sexes who have been sentenced to imprisonment in penitentiary is located near Agassiz, B.C., and is called Mountain Prison.

The two Correctional Staff Colleges-one at Kingston, Ont., and one at St. Vincent de Paul, Que.-are for the advanced training of penitentiary officers. The one at Kingston serves English-speaking or bilingual officers and that at St. Vincent de Paul is primarily for French-speaking officers from all parts of Canada. Both Staff Colleges provide excellent facilities for Service-wide conferences of institutional heads and other special groups of officers.

The Headquarters of the Service is located in Ottawa. During 1962, regional directorates were established at Kingston and St. Vincent de Paul for the Ontario and Quebec areas, respectively.

## Subsection 3.-The National Parole System $\dagger$

Parole is a means by which an inmate in any institution in Canada, if he gives definite indication of his intention to reform, can be released from prison. The purpose of parole is the protection of society, through the rehabilitation of the inmate. The Parole Board is as much concerned with the protection of society as with the reformation of the inmate and the welfare of an individual inmate must not be allowed to impair the success of the parole system, or the protection of the public.

[^111]The function of the Parole Board is to select those inmates in the various institutions in Canada who show some indication of a sincere intention to reform and to assist them in doing so by a grant of parole. The inmate then is allowed to serve the balance of his sentence in society, but under supervision and subject to restrictions and conditions as to his conduct and behaviour, which are designed for his welfare and for the protection of society. The Board is not a reviewing authority and is not concerned with the propriety of the conviction or the length of the sentence, but only with the problem of deciding in each case whether or not there is a reasonable chance of reformation. Parole is not a matter of clemency and is not granted on compassionate or humanitarian grounds but only if it appears that there is at least a reasonable chance the inmate will lead a law-abiding life.

The National Parole Board is composed of a Chairman and four Members (one woman) and was formed in January 1959. It operates under the authority of the Parole Act (SC 1958, c. 38) which came into force on Feb. 15, 1959 replacing the former Ticket-ofLeave Act. It has jurisdiction over any adult inmate in any prison in Canada convicted of an offence against an Act of the Parliament of Canada. It also has jurisdiction to revoke or suspend any sentence of whipping or any order made under the Criminal Code prohibiting any person from operating a motor vehicle.

The decision of the Board is based on reports it receives from the police, from the trial judge or magistrate and from various people at the institution who deal with the inmate. Reports are also obtained from a psychologist or psychiatrist, when available. Where necessary, a community investigation is conducted to secure as much information as possible about the man's family and background, his work record, and his position in the community. From all these reports, an assessment is made to determine whether or not he has changed his attitude and is likely to lead a law-abiding life. An inmate need not obtain the services of a lawyer to apply for parole. He may apply by sending a letter to the Board and is assisted in preparing such an application at the institution, or another person may apply on his behalf. The Board automatically reviews all sentences of over two years. As soon as an application is received, a file is opened and investigation begun, the results of which are presented to the Board for decision.

All applications and reports are processed by the Parole Board staff at Ottawa. In addition to the headquarters staff, there are 24 regional officers stationed in ten regional offices across the country. They interview all applicants for parole to give them an opportunity of making verbal representations to a representative of the Board. The Regional Officers also submit to the Board reports of interviews and their assessment of the inmates' suitability for parole. These men have authority over the parolees in their respective areas and also give information and counsel to all inmates regarding possibility of parole and preparation for it. They may also issue a Warrant of Suspension and have a parolee arrested and placed in custody if it is necessary to prevent a breach of any term or condition of the parole. They are thus able to exercise effective and adequate control over all parolees in their respective areas.

A person on parole is under the care of a supervisor, usually an after-care agency worker or a probation officer, who reports to the regional officer. If he violates the conditions of his parole or commits a further offence or misbehaves in any manner, the Board may revoke his parole and return him to the institution to serve that part of his sentence outstanding at the time his parole was granted. If a parolee commits an indictable offence while on parole, his parole is automatically forfeited and he is returned to the institution to serve the unexpired balance of his sentence, plus any new term to which he was sentenced for the commission of the new offence.

It is essential that the general public should understand that the true purpose of punishment should be the reformation of the offender and not just vengeance or retribution. The treatment and training program in the institutions is a vital part of the correctional process and parole is an extension of this training outside the institution. It is not a matter of pampering prisoners but of trying to reform as many as possible and of giving prisoners a chance to rehabilitate if they seem to deserve it.

From the date of its establishment to Nov. 30, 1962, the Parole Board reviewed 30,619 cases, including applications for parole and automatic parole review, and granted 8,190 paroles. During the same period, the Board revoked 754 paroles, which is a failure rate of about 9 p.c. related to the number of paroles granted.

## Section 5.-Police Forces

The Police Forces of Canada are organized under three groups: (1) the Federal Force, which is the Royal Canadian Mounted Police; (2) Provincial Police Forces-the Provinces of Ontario and Quebec have organized Provincial Police Forces but all other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their borders; and (3) Municipal Police Forces-each urban centre of reasonable size maintains its own police force, or engages the services of the provincial police, under contract, to attend to police matters within its boundaries.

A new method of reporting police statistics, known as the Uniform Crime Reporting System, commenced on Jan. 1, 1962. The system was developed by the Dominion Bureau of Statistics in co-operation with the Canadian Association of Chiefs of Police, working through their committee on the Uniform Recording of Police Activities. The Uniform Crime Reporting System will allow for the eventual publication of more complete and meaningful data. For this reason police statistics are not carried in this edition of the Year Book.

## Subsection 1.-The Royal Canadian Mounted Police

The Royal Canadian Mounted Police is a civil force maintained by the Federal Government and was established in 1873 as the North-West Mounted Police for service in what was then the North-West Territories. In recognition of its services, it was granted the use of the prefix "Royal" by King Edward VII in 1904. Its sphere of operations was expanded in 1918 to include all of Canada west of Port Arthur and Fort William and in 1920 it absorbed the Dominion Police, its headquarters was transferred from Regina to Ottawa and its title was changed to Royal Canadian Mounted Police.

The Force is under the control of the Minister of Justice and is headed by a Commissioner who holds the rank and status of a Deputy Minister. Officers are commissioned by the Crown and are selected from the non-commissioned ranks. The Force has complete jurisdiction in the enforcement of the federal statutes. By arrangement between the federal and provincial governments it enforces the provincial statutes and the Criminal Code in all provinces exclusive of Ontario and Quebec and under special agreement it polices some 120 municipalities. It is the sole police force in the Yukon and Northwest Territories, where it also performs various administrative duties on behalf of certain departments of the Federal Government. It maintains liaison officers in London and Washington and represents Canada in the International Criminal Police Organization which has headquarters in Paris.

Of the Force's 17 divisions, 12 are actively engaged in the work of law enforcement, as are some 41 subdivisions and 625 detachments. The five remaining divisions are "Headquarters", "Depot" and " N ", which are maintained as training centres, and "Marine" and "Air", which support the operations of the land divisions. A teletype system links the widespread divisional headquarters with the administrative centre at Ottawa and a network of fixed and mobile radio units operates within the provinces. Focal point of the Force's criminal identification work is the Headquarters Identification Branch; its services, together with those of the 40 divisional and subdivisional units and the three Crime Detection Laboratories, are available to police forces throughout Canada. The Force operates the Canadian Police College at which Force members and selected representatives of other Canadian and foreign police forces may study the latest advances in the fields of crime prevention and detection.

The uniform strength of the Force at Mar. 31, 1962 was 6,461, including Marine Constables and Special Constables, at which time it maintained some 1,762 motor vehicles, 18 aircraft, 71 ships and boats, 221 sleigh dogs, 25 police service dogs and 241 horses.

## Subsection 2.-Provincial Police Forces

Quebec Provincial Police Force.-The Quebec Provincial Police Force is responsible for the maintenance of peace, order and public safety in the province, and for the prevention and investigation of criminal offences and of violation of the laws of the province.

The province is divided into two almost equal parts known as the Montreal Division and the Quebec Division. Each division is in turn subdivided into two sections comprising a variable number of detachments. There are 103 detachments throughout the province.

The Quebec Provincial Police Force is under the command of a Director General who is assisted by an officer holding the rank of Deputy Director General. Each division is headed by an Assistant Director. A commissioned officer is in command of each subdivision. The strength of the Force at the end of 1962 was 1,582 regular members.

Ontario Provincial Police Force.-The Ontario Provincial Police Force is administered by the Commissioner who has the rank and status of a deputy minister under the Attorney General. Its jurisdiction for law enforcement extends generally to all parts of Ontario outside of substantial urban areas.

With a total complement of about 2,500 (at present being increased), the Force has General Headquarters at Toronto, with 17 District Headquarters located at Chatham, London, Burlington, Niagara Falls, Toronto, Mount Forest, Barrie, Peterborough, Belleville, Perth, Long Sault, North Bay, Sudbury, Sault Ste. Marie, Timmins, Port Arthur and Kenora. District Headquarters operates through local detachments numbering 235 throughout the province.

In the plan of reorganization established in 1963, under a Commissioner and Deputy Commissioner, the Force has five administrative divisions-Administration, Staff Services, Special Services, Field, and Traffic-under Assistant Commissioners. Special Services branches operating out of General Headquarters include Criminal Investigation, Liquor Control, Anti-Highgrade, Anti-Gambling, and Anti-Rackets.

The Force operates one of the largest frequency-modulation radio networks in the world, with 74 fixed stations and 724 radio-equipped mobile units, including 687 motorcars, 30 motorcycles and seven mobile marine units.

History relates that in July 1875 John Wilson Murray was appointed to act as "Detective for the Provincial Government of Ontario" to pursue criminals and "run them down" in their havens of refuge. Murray performed his varied duties under the direction of Sir Oliver Mowat, the Attorney General of the province. At the time of Confederation and the first session of the first Parliament of Ontario in December 1867, there were a number of rural or provincial police. These officers were unpaid and if any remuneration was received for their services it was derived through the fee system. In 1877 a major reform occurred when, under the Constables Act (RSO 1877, c. 72), the necessity for giving certain constables jurisdiction throughout the province was recognized. County judges were authorized to allocate provincial constables to every county and district in Ontario.

Later, the opening up of the mining areas in the north of the province and the accompanying lawlessness brought to the fore the realization that more adequate law enforcement measures were a necessity. Consequently, an Order in Council dated Oct. 13, 1909 (confirmed by 10 Edw. VII, c. 39) was passed providing for the establishment of the Ontario Provincial Police Force, to be composed of a Superintendent and such inspectors and constables as were deemed necessary. The officers were stationed throughout the northern portion of the province and at all border points in southern Ontario. The Force was
completely reorganized in 1921 under the authority of the Ontario Provincial Police Act, the appointment of a Commissioner of Police for Ontario was made and the strength of the Force considerably increased.

The Constables Act was amended in 1929 with a view to establishing closer relationship and co-operation between the Provincial Police Force and county constabularies. Twentyeight counties took advantage of this legislation and a member of the Ontario Provincial Police was appointed as Acting High Constable in each. In March 1930, the control and administration of the officers who had been enforcing the Highway Traffic Act under the supervision of the Department of Public Highways was transferred to the Department of the Attorney General under the Commissioner of the Ontario Provincial Police. By the Police Act, 1946, proclaimed Feb. 1, 1947, all former legislation dealing with constables was repealed and the duties and responsibilities of police forces, for the first time in the history of the province, were clearly defined. Current legislation governing the Force is contained in Part IV of the Police Act.

## CHANGES IN CANADIAN AGRICULTURE AS REFLEGTED BY THE CENSUS OF 1961*

Canadian agriculture has experienced considerable technological change in recent years, particularly since the end of the Second World War. As in most other industries, the trend has been to increased mechanization and specialization. The effects of these renovations are reflected in the revenue derived from agricultural production, although it must be kept in mind that climatic conditions have always been an important determinant of farm output.

In general, agricultural production, as measured in value terms, increased fairly consistently for the two decades following the early 1930's, after which time there was a tapering off of the value of farm output. Agriculture's "gross domestic product at factor cost", which represents accrued net farm income plus payments to hired labour and an allowance for capital consumption, averaged $\$ 389,000,000$ a year for the $1930-34$ period. The annual average rose to $\$ 488,000,000$ for the period $1935-39, \$ 966,000,000$ for $1940-44$ and $\$ 1,444,000,000$ for $1945-49$ and reached a peak of $\$ 2,010,000,000$ for $1950-54$. In the subsequent five-year period, the value of agricultural output declined to an annual average of $\$ 1,737,000,000$, followed by a slight increase to $\$ 1,755,000,000$ in the $1960-62$ period.

Although total agricultural production in value terms has shown a large increase in the past three decades, its rate of increase appears to have been less than that of other industries. This slower relative increase is shown by the proportion represented by agriculture of the "gross domestic product at factor cost" for all industries. The proportion represented by the value of farm output averaged 15.9 p.c. for the 1926-29 period, declined

[^112]to 11.6 p.c. in 1930, and during the 1931-53 period fluctuated from a low of 8.0 p.c. in 1931 to a high of 12.5 p.c. in 1948 and 1951. Since 1953, agriculture's share has been less than 7.5 p.c., reaching a low of 4.6 p.c. in 1961 but recovering to 5.5 p.c. in 1962.

Upon examination of the agriculture industry itself, an indication of the technological change that has occurred in Canadian agriculture is reflected in the decrease in the number of farms and the corresponding increase in the average size of farm. These changes are tied in with increased farm mechanization which has enabled the farm operator to operate a larger farm with the same amount of labour or less. Also, the larger farm area reduces per-acre machine costs and is one of the ways that the farmer can offset the steady increase in the cost of farm machinery.

Number and Size of Farms.-The declining trend in the number of farms in Canada, which was first evident in the 1941-51 decade, continued in the latest intercensal period, 1956-61. A total of 480,903 farms was recorded in the 1961 Census for all Canada, 16.4 p.c. fewer than the corresponding total of 575,015 farms in 1956 and 22.8 p.c. fewer than the 1951 total of 623,091 farms. A peak total of 732,832 farms was recorded in the 1941 Census. Part of the reduction in the number of farms between 1956 and 1961 was attributable to a change in farm definition. (In 1961, a farm was defined as a holding of one acre or more with sales of agricultural products during the past 12 months of $\$ 50$ or more.)* It is estimated that 40,731 holdings were not classified as farms in 1961 for this reason. Thus, without the change in farm definition, there would have been a reduction of 9.3 p.c. in the number of farms from 1956 to 1961. Including the effect of the change in farm definition, the greatest decrease in number of farms took place in the Atlantic Region where the 33,391 farms in 1961 represented a decrease of 47.6 p.c. from the number recorded in 1951. In the other regions, however, the percentage reductions were much less. In the Central Region the decrease was 23.6 p.c. to a total of 217,110 farms in 1961, in the Prairie Region it was 15.4 p.c. to 210,442 farms, and in British Columbia, 24.5 p.c. to 19,934 farms.

Historically, large increases in farm area were recorded from 1911 to 1941, during which period the total rose from $108,968,715$ acres to $173,563,282$ acres. This increase was attributable mainly to the agricultural development of the Prairie Region and since 1941 the total farm area of the country has changed little. In 1961 it amounted to 172,551,051 acres, slightly less than the record high of $174,046,654$ acres recorded in 1951. During the 1911-61 period, some regional differences prevailed. In the Atlantic Region (excluding Newfoundland), the total farm area gradually declined each census year from $11,000,808$ acres in 1911 to $5,444,788$ acres in 1961. The experience in this region was that large areas of land brought under cultivation at the turn of the century proved to be submarginal for agricultural purposes and were later abandoned as farm land. In the Provinces of Quebec and Ontario, the farm area increased from 37,785,052 acres in 1911 to a high of $40,450,545$ acres in 1941, after which it declined to $32,776,999$ acres in 1961. In the Prairie Provinces, the farm area of $57,642,844$ acres in 1911 rose to $129,814,122$ acres in 1961; while the largest increases occurred during the 1911-41 period, those recorded in recent census years for the Prairie Region have largely offset the acreage decreases recorded in the Eastern Provinces. The amount of farm land in British Columbia, reported as $2,540,011$ acres in 1911, increased steadily to $4,702,274$ acres in 1951 but dropped back to $4,506,552$ acres in 1961 .

As already stated, relatively large increases occurred in average size of farm (in terms of acreage) during the 1951-61 decade, although again it should be noted that a contributing factor for this particular period was the change in farm definition which resulted in fewer farms in 1961. The average size of farm for the Atlantic Region in 1961 was 163 acres compared with 123 acres in 1951; for the Central Region, the average size was 151 acres in 1961 and 133 acres in 1951; for the Prairie Provinces it was 617 acres, 119 acres above the 1951 figure; and for British Columbia 226 acres compared with 178 acres. Another indication of the increasing size of farm was the value of sales reported for the farms. In 1961,

[^113]

49,841 farms or 10.4 p.c. of all the farms of Canada reported sales valued at $\$ 10,000$ or more; the comparable figures in 1951 were 21,243 farms or 3.4 p.c. of all farms. In 1961, 18.8 p.c. of the farms were included in the $\$ 5,000-\$ 9,999$ sales group compared with 11.1 p.c. in 1951 ; the actual numbers were 90,419 farms and 69,019 farms, respectively.

Land Use.-The proportion of farm land classed as improved has moved slightly upward during the past two decades. In 1961, 59.9 p.c. of the total farm area was included in this category compared with 55.6 p.c. in 1951 and 52.8 p.c. in 1941. The proportions of farm land classed as improved in the Atlantic Region and British Columbia in 1961 were much below the average for Canada- 33.6 p.c. and 28.9 p.c., respectively-and the proportions in the Central Region and the Prairie Region, at 60.7 p.c. and 61.9 p.c., were higher.

Slightly over one in every three acres ( 36.2 p.c.) of Canadian farm land in 1961 was planted to crops, the proportions ranging from a high of 40.3 p.c. in the Central Region to a low of 17.5 p.c. in British Columbia. Improved pasture as a proportion of total farm area was highest in the Central Provinces where it amounted to 17.1 p.c. For all other regions, the ratio was less than one in every ten acres. Most of the summerfallow acreage was concentrated in the Prairie Provinces, one fifth of the farm area ( 21.5 p.c.) in the region being reported in that category in 1961. For Canada as a whole, 10 p.c. of the farm area was reported in woodland although there was considerable variation between regions; the range was from a high of 53.5 p.c. in the Atlantic Region to a low of 4.5 p.c. in the Prairies.

Tenure of Farm Operator.-The trend toward fewer and larger farms has been accompanied by an increase in the proportion of farms operated by part owner-part tenant operators, particularly in the Prairie Region. This trend has been evident during the past two decades and reflects a preference to acquiring additional land through renting or leasing rather than buying when capital is limited. For all Canada, one in every five farms (20.9 p.c.) was included in the part owner-part tenant group in 1961 compared with 14.3 p.c. in 1951 and 11.6 p.c. in 1941. The owner-operated group (including managed farms) was by far the largest although some decline took place-from 78.5 p.c. of all farms in 1951 to 73.4 p.c. in 1961 . The remaining group, tenant farms, made up only 5.7 p.c. of the total in 1961 and 7.2 p.c. in 1951.

The largest number of owner-operated farms (including managed farms) was in the Central Region, where the 185,847 farms in that category constituted 85.6 p.c. of all the farms in the region. In the Prairie Region 120,747 farms or 57.4 p.c. of all the farms were in that group and corresponding proportions for the Atlantic Region and British Columbia were 89.1 p.c. and 82.6 p.c., respectively. The part owner-part tenant group included 33.2 p.c. of the Prairie Region farms in 1961 compared with 26.0 p.c. in 1951; also in that group in 1961 were 10.0 p.c. of the Atlantic Region farms, 11.2 p.c. of the Central Region farms and 13.2 p.c. of the British Columbia farms. Traditionally, tenantoperated farms have been most prevalent in the Prairie Region where the 19,703 farms included in that group in 1961 represented 71.1 p.c. of the group total for Canada and 9.4 p.c. of all the farms in the region.

The proportion of the total farm area owned by the farm operator changed little from 1951 to 1961 -in the former year it was 74.5 p.c. and in the latter 74.2 p.c. The proportions in the different regions in 1961 ranged from 96.2 p.c. in the Atlantic Region to 68.9 p.c. in the Prairie Region.

Farm Machinery.-The latest census gives a positive picture of the mechanization of agricultural operations. The value of farm machinery and equipment on Canadian farms in 1961 was placed at approximately $\$ 2,600,000,000$, almost 40 p.c. higher than the value of such equipment in 1951.

In 1961, there were 549,789 tractors reported on farms across the country, which was an average of 114 tractors for every 100 farms. Ten years earlier, there were 64 tractors for every 100 farms and twenty years earlier there were 22 for every 100 farms. In the Prairie Region where the farms are larger in size, there were 290,700 tractors, which represented 138 per 100 farms.

As would be expected, motor trucks were also much more prevalent on farms. The 302,012 trucks reported on farms across the country in 1961 represented an average of 63 per 100 farms, a considerable increase over the 31 trucks for every 100 farms in 1951. In the Prairie Provinces, the 1961 average was 88 trucks per 100 farms.

The coming into common use of the combine in place of the binder and threshing machine, particularly in the great grain-growing areas of the mid-west, is also reflected by the census. In 1961 there were 155,611 grain combines on the farms of Canada, 81.8 p.c. of them located in the Prairie Provinces where there were 65 for every 100 farms; in 1951 there were 32 combines for every 100 farms in the Prairie Region and in 1941 only 6 . Conversely, the number of grain binders dropped from 303,374 in 1951 to 160,575 in 1961 and the number of threshing machines from 96,691 to 66,057 .

Farm Electrification.-The extent of the electrification of farms is also indicated by the census results. In 1961, 85.2 p.c. of Canadian farms had electricity, a considerable increase over the 73.5 p.c. in 1956 and the 51.3 p.c. in 1951. The farms in the two central provinces reported a high incidence of electrification in 1961-97.3 p.c. in Quebec and 95.2 p.c. in Ontario. In the Atlantic Region, New Brunswick reported 96.5 p.c. of its farms as electrified, Nova Scotia 95.5 p.c. and Newfoundland 65.8 p.c.; extensive electrification took place in Prince Edward Island during the decade, the proportion rising from

22.0 p.c. in 1951 to 78.1 p.c. in 1961. In the Prairie Region, Manitoba reported 90.2 p.c. of its farms with electric power, Alberta 72.3 p.c. and Saskatchewan 65.6 p.e., the latter proportion rising from only 16.3 p.c. in 1951. In British Columbia, 87.1 p.c. of the farms in 1961 reported electric power compared with 68.8 p.c. ten years previously.

Another indication of the growth in farm electrification is the extent to which electrical appliances are being used in farm homes. In 1961, 359,757 or 80.0 p.c. of all Canadian farm homes were equipped with a mechanical refrigerator (gas or electric), a proportion that rose from 21.9 p.c. in 1951 . Also, 40.7 p.c. of the 449,553 farm homes reported a home freezer and 67.3 p.c. reported a television set.

Farm Capital.-Much has been said in recent years of the increasing capital requirements in agriculture and the correspondingly greater difficulty experienced by the beginner-farmer to become established on a farm of his own. This is borne out by the 1961 census data on capital values and, of course, reflects the trend toward larger farms. The capital value of all farms in Canada in 1961 totalled approximately $\$ 13,200,000,000$, an amount 39.1 p.c. higher than the 1951 value of $\$ 9,500,000,000$. The average capital value per farm was $\$ 27,389$ in 1961 compared with $\$ 15,200$ ten years earlier and the average value of farm land per acre was \$76 in 1961 as against \$54 in 1951.

The capital farm value for the Prairie Region was $\$ 6,700,000,000$ in 1961 which was the highest for any region in the country; the Central Region was second with a value of $\$ 5,400,000,000$. However, British Columbia had the highest average capital value per farm, amounting to $\$ 32,967$; this was followed in order by the Prairie Provinces at $\$ 32,009$, the Central Region at $\$ 24,718$ and the Atlantic Region at $\$ 12,314$ per farm.

For Canada as a whole, the proportion of capital value made up of real estate (land and buildings) increased during the 1951-61 decade from 58.4 p.c. to 65.5 p.c. The relative importance of livestock and poultry declined from 21.2 p.c. to 15.0 p.c. and that of machinery and equipment declined only fractionally to 19.5 p.c. British Columbia had the highest average real estate value in 1961, amounting to $\$ 24,733$ per farm, and the Prairie Provinces followed with $\$ 20,393$ per farm. The highest average value for machinery and equipment was reported by the Prairie Region at $\$ 7,174$, and also for livestock and poultry at $\$ 4,442$ per farm. The predominance of the Prairie Provinces in average capital values per farm reflects the large size of farms in this region. On the other hand, capital value per acre of farm land was lower for the Prairie Region than for the other regions.

Age and Residence of Farm Operator.-Some shifting in the relative importance of the various age groups for farm operators was shown during the 1951-61 period. In $1961,16.7$ p.c. of the farm operators were under 35 years of age compared with 21.7 p.c. in 1951. For the age group 45-59 years an opposite trend was shown- 38.0 p.c. of the operators were in this group in 1961 compared with 33.3 p.c. in 1951. For the other age groups-35-44 years and 60 years or over-little change was shown, the 1961 proportions being 24.7 p.c. and 20.5 p.c., respectively.

In 1961, 88.3 p.c. of the farm operators reported that they lived on the farm the year round; the proportion was highest in the Atlantic Region ( 95.7 p.c.) and lowest in the Prairie Region ( 80.4 p.c.). Also, the proportion of operators classed as non-resident was highest on the Prairies, being 14.0 p.c. of all farms compared with a Canada average of 7.7 p.c. Included in this group in the Prairie Provinces were 29,359 farms, which represented 79.1 p.c. of all non-resident farms in Canada. In Saskatchewan, almost one in every five farms (19.2 p.c.) had a non-resident operator in 1961. This predominance of non-residency in the Prairie Provinces is associated with the type of farming that prevails in the region. Grain farming does not require as much close supervision as most other types with the result that a substantial number of the operators live in adjoining towns and villages and commute to the farm.

Farm Population and Labour Force.-The decreasing number of farms in Canada and the continuing substitution of farm labour by machines has resulted in a declining farm population and a smaller agricultural labour force. The total population on Canadian farms was reported at $2,128,400$ persons in 1961 compared with $2,911,996$ in 1951. The farm population represented 11.7 p.c. of the total population in 1961, down considerably from 20.8 p.c. in 1951. All provinces recorded decreases in farm population during the decade. In the Atlantic Provinces, the farm population made up 8.8 p.c. of the total population in 1961, ranging from a high of 33.2 p.c. in Prince Edward Island to a low of 2.4 p.c. in Newfoundland; in the Central Region, 9.7 p.c. of the total population was classified as farm population in 1961; in the Prairie Provinces, 24.1 p.c. with a high of 33.0 p.c. for Saskatchewan; and in British Columbia, 5.2 p.c.

A similar trend was shown for the agricultural labour force in relation to the total civilian labour force. For all Canada, the 1961 agricultural labour force totalled 648,966 persons and was 10.0 p.c. of the civilian labour force; the corresponding proportion in 1951 was 15.7 p.c. In 1961, the proportion for the three Prairie Provinces and Prince Edward Island exceeded the national average, whereas for the other provinces it was below the Canada average; Saskatchewan with 36.7 p.c. had the highest proportion. In all provinces the agricultural labour force was smaller in 1961 than it had been in 1951. However, the combined effect of the declining agricultural labour force, improved agricultural technology and increasing mechanization has resulted in a steadily upward trend in output per farm
worker. This is strikingly shown by the number of persons supported by one farm worker. It was estimated that 11 persons were supported by one farm worker in 1941, 15 persons in 1951, and 22 persons in 1956. By 1962, the estimate had increased to a high of 30 persons. As time goes on, output per farm worker is likely to continue to increase as improvements in technology and farm management practices together with greater mechanization and specialization displace more labour and as the output for each labour unit remaining in the industry increases. Thus, while the relative contribution of agriculture to the national economy can be expected to decrease and the number of farm operators to decline, the labour output of Canada's farms will rise and a better living standard will result for the smaller farm population.

## Section 1.-Federal Government in Relation to Agriculture*

The federal Department of Agriculture dates from Confederation. It was established in 1867 as an outgrowth of a Bureau of Agriculture set up in 1852 by an Act of the Legislature of the Province of Canada. The Department derives its authority from the British North America Act, 1867, which states in part that "in each province, the legislature may make laws in relation to agriculture in the province" and that "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada".

A Department of Agriculture with a Minister of Agriculture at its head was accordingly established as part of the Government of Canada. Departments of Agriculture headed by provincial Ministers of Agriculture were also set up by the provincial governments, except in the Province of Newfoundland where agricultural affairs are dealt with by the Agricultural Division of the Department of Mines, Agriculture and Resources. The agricultural affairs of the Yukon and Northwest Territories are administered for the Federal Government by the Territorial Division, Northern Administration Branch, Department of Northern Affairs and National Resources.

## Subsection 1.-Services of the Department of Agriculture

Broadly speaking, the activities of the Department of Agriculture may be grouped under three headings: research, promotional and regulatory services, and assistance programs. Research work is aimed at the solution of practical farm problems through the application of fundamental scientific research to all aspects of soil management and crop and animal production. Promotional and regulatory services are directed toward the prevention or eradication of crop and livestock pests, the inspection and grading of agricultural products and the establishment of sound policies for crop and livestock improvement. Assistance programs cover the sphere of soil and water conservation, price stability, provision of credit, rural rehabilitation and development and a degree of crop insurance and income security in the event of crop failure. The Department employs a staff of more than 10,000 persons.

The organization of the Department comprises three branches-Research, Production and Marketing, and Administration. Agencies closely allied with the Department and responsible to the Minister of Agriculture are the Farm Credit Corporation, the Board of Grain Commissioners and the Canadian Wheat Board (see p. 418 and Index).

Research Branch.-The Research Branch is the principal research agency of the Department. It conducts a broad program of scientific investigation covering both basic studies and practical attacks on agricultural problems. There are seven Research Institutes

[^114]at Ottawa; two Research Institutes, ten Regional Research Stations, four Research Laboratories, 26 Experimental Farms and 20 Substations are located throughout the ten provinces and the Yukon and Northwest Territories.

The Research Branch serves all principal agricultural areas in Canada and co-ordinates its efforts with those of the National Research Council, universities and kindred agencies. One staff group is charged with the planning and co-ordination of the program and another with the administration required to carry it out. Four directors, representing divisions of animals, crops, soils, entomology and plant pathology, assist the programming of the work. Three research services-statistics, engineering, and analytical chemistry, located with the administrative and executive group at Ottawa-provide research groups across the country with specialized leadership and service and undertake critical researches or other creative work as required.

The Research Institutes are organized on a scientific rather than a problem basis and are engaged primarily on basic research of wide application to agriculture. They also carry out related national work such as the identification of plants, insects and pathogens. There are seven Institutes at Ottawa and one each at London and Belleville in Ontario.

The Animal Research Institute covers the fields of genetics and breeding, nutrition, physiology, biochemistry and management, and tackles problems in the production of milk, beef, lamb, pork, poultry, eggs, wool and fur. Studies are carried out at the Plant Research Institute in taxonomy, physiology, biochemistry, pathology, agrometeorology, weeds, and fruit and vegetable processing and storage. Cytological and genetic studies on cereal, forage, tobacco and horticultural plants are made by the Genetics and Plant Breeding Research Institute with special reference to problems encountered in the breeding programs and the assessment of quality characteristics. The Soils Research Institute studies genesis and classification, fertility, mineralogy and the organic, physiochemical and physical aspects of soils. This Institute gives leadership to the federal-provincial soil survey program through classification studies and by developing and standardizing analytical methods. It also provides a national soil-mapping service. A major section of the Entomological Research Institute deals with taxonomy, other assignments being in the fields of genetics, physiology, nematology and apiculture. The Institute assembles and maintains the national collection of insects. The Microbiological Research Institute is concerned mainly with metabolism, nutrition and genetics of bacteria of agricultural significance. The Food Research Institute conducts basic research on the characteristics of plant and animal products affecting food quality. The development of new principles of food processing and studies related to dairy technology are of major interest.

The Pesticide Research Institute at London examines chemicals used or intended to be used for insect, disease or weed control and investigates the reason for and the nature of the biological activity of the chemical. The Biological Control Research Institute at Belleville is concerned with efforts to control destructive insect pests and noxious weeds with parasitic and predaceous insects, and with insect disease organisms. It is also the principal importing centre for beneficial insects and for some disease organisms from foreign countries.

The Regional Research Stations and Laboratories cope with primary problems in various regions in all provinces. Other units have undertaken projects assisting in the exploitation of peat bogs, reclamation of marshland for pasture, prevention of soil erosion, dryland agriculture, the growing of special crops such as tobacco, and livestock breeding.

Production and Marketing Branch.-The Production and Marketing Branch conducts the promotional and regulatory functions of the Department. Its seven Divisions administer legislation and policies in the fields of agricultural production, marketing and control of disease in plants and animals. Three Sections-Markets Information, Consumer, and Transportation, Storage and Retail Inspection-carry on activities in their respective fields.

The Health of Animals Division administers the Animal Contagious Diseases Act, the Humane Slaughter of Food Animals Act and the Meat Inspection Act. The Division also operates laboratories for the study of animal diseases. Besides its responsibility in carrying out various disease prevention measures, the Division conducts programs for the eradication of bovine tuberculosis and brucellosis and issues health certificates for livestock entering export trade. The animal pathology laboratories, in addition to their research function, manufacture diagnostic reagents and biological products and provide analytical and diagnostic services for diseases of domestic and wild animals. District laboratories across the country give routine diagnostic and research services. The Livestock Division administers legislation dealing with the grading of meat, wool and fur, with the registration of livestock pedigrees, with performance testing of cattle and hogs and with the supervision of racetrack betting. Other activities include the promotion of livestock improvement and the compilation of market statistics. The Poultry Division carries out the policies of the national poultry breeding program, including Record of Performance for poultry and hatchery inspection, and administers the regulations for the grading of poultry products.

The Fruit and Vegetable Division administers legislation having to do with the grading of fruits and vegetables in both fresh and processed form, maple products and honey. The Division is responsible for the licensing of interprovincial and international brokers who deal in fresh fruits and vegetables. The Dairy Products Division is responsible for the administration of legislation covering grades and standards for dairy products, including butter, cheese, concentrated milk products and ice cream. The Plant Products Division administers Acts and regulations respecting seeds, feedstuffs, fertilizers and pestcontrol products, conducts field inspections and maintains regional testing laboratories. The Plant Protection Division is responsible, under the Destructive Insect and Pest Act, for safeguarding against the introduction of serious plant insects or diseases into Canada or their spread in Canada, for certifying freedom from disease and pests in plant exports, and for seed potato certification.

The Markets Information Section compiles and distributes market information respecting livestock, meats and wool, dairy products, eggs and poultry, and fruits and vegetables: The Consumer Section.helps to promote proper use of Canadian agricultural food products through experimental work, carried on by its home economists, on the cooking of foods and the preserving of perishables. The Transportation, Storage and Retail Inspection Section administers the payment of sübsidiès for the construction of public cold storage facilities. Cargo inspectors at the main Canadian ports check the handling of goods moving to export:- Other inspectors in the principal marketing areas make spot checks on retail outlets to see that food products meet the prescribed standards of quality and grade.

Administration Branch.-In addition to its general responsibility for the business management of the Department, the Administration Branch embraces the Divisions concerned with Economics and Informátion. Administration of the rehabilitation and assistance programs is also associated with this Branch.

The Economics Division collects, analyses and interprets economic information required to form and administer departmental policies and programs. It conducts economic surveys and research designed to improve agricultural production, marketing, and farm living conditions. The Division acts as an economic and statistical research agency for the Agricultural Stabilization Board, the Prairie Farm Rehabilitation Administration and other bodies, assisting in any economic undertaking with which the Department is concerned.

The Information Division gathers and publishes information arising from research work and the development and regulatory programs of the Department. ${ }^{\text {It }}$ employs all the recognized media-printed publications, press and radio releases, motion pictures and television. In addition, the Division operates the central library of the Department and a system of field libraries located at major research centres of the Department across Canada.

## Subsection 2.-Farm Assistance Programs

Basic to the concept of Canada's national agricultural policy is the premise that a stable agriculture is in the interests of the national economy and that farmers as a group are entitled to a fair share of the national income. In pursuit of these objectives, the Department of Agriculture has carried on, over a long period, a program designed to aid agriculture through the application of scientific research and the encouragement of improved methods of production and marketing. Over the years, as conditions have warranted, programs have been initiated to deal with special situations such as the Prairie Farm Rehabilitation Act (see p. 433) to deal with the results of the drought in the 1930's; the Prairie Farm Assistance Act (p. 421) to mitigate the effects of crop failure; and the Maritime Marshland Rehabilitation Act (p. 437) to save valuable soil in the Maritime Provinces.

Although much has been accomplished by these measures, changing conditions have dictated the need for a new approach. In the past two decades agriculture has undergone revolutionary changes. Large-scale mechanization, increasing farm size coupled with declining farm numbers, and shrinking world markets have called for a reappraisal of policy, resulting in a number of legislative enactments in the agricultural field. These cover such matters as credit provision, price stability, crop insurance, resource development, and policies to assist regional groups to catch up with the national level of progress; they are described individually below. In addition, legislation has been passed from time to time giving assistance to meet temporary or short-term contingencies, such as the Western Grain Producers' Acreage Payment Regulations which, following the drought in 1957, provided for the payment to each grain producer of $\$ 1$ for each acre seeded in 1958 up to an amount of $\$ 200$; and the Prairie Grain Loans Act which provided for shortterm credit to grain producers of the Prairie Provinces to meet temporary difficulties encountered during the 1959-60 crop year from inability to thresh their grain.

The Farm Credit Act.-The Farm Credit Act (SC 1959, c. 43, proclaimed on Oct. 5, 1959) established the Farm Credit Corporation as successor to the Canadian Farm Loan Board. The Corporation, which is a self-supporting Crown corporation, reports to Parliament through the Minister of Agriculture.

The Act provides two types of long-term mortgage loans. Under Part II of the Act, the Corporation may lend up to 75 p.c. of the appraised value of the farm land taken as security, or $\$ 20,000$, whichever is the lesser, repayable within a period of up to 30 years. Under Part III of the Act, the Corporation is empowered to make loans of up to 75 p.c. of the value of the farm land and chattels taken as security, or $\$ 27,500$, whichever is the lesser, to young farmers aged 21 to 44 , inclusive, who have at least five years of experience in farming; that portion of the loan secured by farm land is repayable within a period of up to 30 years and that portion (if any) based on chattel security must be repaid within the first ten years. A Part III loan is further secured by mandatory insurance upon the life of the borrower, and his farming operations are subject to supervision by the Corporation until the loan has been reduced to 75 p.c. of the appraised value of the farm land. Similar insurance coverage is available to Part II borrowers on an optional basis. The interest rate on all loans is fixed by the Act at 5 p.c. In 1962, after three years of operation under the terms of the original Farm Credit Act, amendments were made to the Act and Regulations to provide a greater measure of flexibility in meeting the bona fide credit needs of Canadian farmers.

The Corporation has 127 field areas administered by 164 credit advisers who are responsible for informing local farmers about the services available for pre-loan counselling on credit use, farm planning and farm management, for accepting applications and for making farm appraisals.

Funds for lending are borrowed at current interest rates from the Minister of Finance. The aggregate amount of such borrowings outstanding at any time may not exceed 25 times the capital of the Corporation, which has been fixed by the Act at $\$ 16,000,000$.

In the year ended Mar. 31, 1963, the Farm Credit Corporation approved 7,438 loans for a total of $\$ 90,924,300$ as compared with 5,885 loans for a total of $\$ 68,574,850$ in the preceding year; the total amount of principal outstanding on loans was $\$ 270,277,265$ (secured by 37,462 first mortgages and 13 second mortgages) as compared with $\$ 212,138,307$ the previous year.

[^115]The Farm Improvement Loans Act.-The Farm Improvement Loans Act (RSC 1952, c. 110), administered by the Department of Finance, is designed to provide credit by way of loans made by the chartered banks to assist in almost every conceivable purchase or project for the improvement or development of a farm and includes the purchase of agricultural implements, the purchase of livestock, the purchase and installation of agricultural equipment or a farm electric system, the erection or construction of fencing or works for drainage on a farm, and the construction, repair or alteration of farm buildings including the family dwelling. Credit is provided on security related to the purchase or project and on terms suited to the individual borrower.

The legislation, originally operative for three years (1945-48), has been continuous by way of extensions usually for three-year periods. The latest extension was for the period commencing July 1, 1962 and ending June 30, 1965. Under that extension, fulltime beekeepers are made eligible for loans and the maximum loan or amount available at any one time to a borrower is $\$ 7,500$. The maximum term of a loan and the interest rate remain at ten years and 5 p.c. simple interest, respectively. The borrower is required to provide from 10 p.c. to 40 p.c. of the cost of his purchase or project, depending on the
loan category to which it belongs. The Federal Government guarantees each bank against loss sustained by it up to an amount equal to 10 p.c. of loans granted by it in a lending period. This guarantee does not apply to any loan made after the aggregate of all loans made by all banks in a given period reaches an amount fixed by statute. The current maximum stands at $\$ 400,000,000$. By Dec. $31,1961,1,984$ claims amounting to $\$ 1,356,196$ had been paid under the guarantee since the inception of the Act, representing a net loss ratio of less than one-tenth of one per cent after recoveries have been taken into account.

By the end of $1961, \$ 928,088,913$ or 82.7 p.c. of the total loans made had been repaid. The position at that time was as follows:-

| Period | Loans Outstanding | P.C. of Total Loans Outstanding |
| :---: | :---: | :---: |
|  | $\$$ |  |
| 1945-48. | 449 | 0.01 |
| 1948-51. | 59,781 | 0.05 |
| 1951-53. | 306, 895 | 0.17 |
| 1953-56. | 1,336,139 | 0.60 |
| 1956-59. | 13,902,386 | 5.82 |
| 1959-62 (current period) | 178, 234,964 | 60.70 |
| Totals. | 193,840,614 | 17.30 |

## 3.-Loans Made under the Farm Improvement Loans Act, by Purpose and Province, 1960 and 1961, with Cumulative Totals from 1945

Prairie Grain Advance Payments Act.-This Act, which came into force on Nov. 25, 1957, provides for an advance payment to producers for threshed grain (wheat, oats and barley) in storage other than in an elevator and prior to delivery to the Canadian Wheat Board, exclusive of grain deliverable under a unit quota. Advance payments of 50 cents per bu. of wheat, 20 cents per bu. of oats and 35 cents per bu. of barley are made, subject to certain restrictions as to quota and acreage. Maximum advance payment per application is $\$ 3,000$. At Dec. 31, 1961, the following advance payments had been made:-

| Period | Applications | Total Advance | Average <br> Advance |
| :---: | :---: | :---: | :---: |
|  | No. | \$ | \$ |
| Aug. 1, 1957-July 31, 1958. | 50,412 | 35,203,467 | 698 |
| Aug. 1, 1958-July 31, 1959. | 45,341 | 34,369,653 | 758 |
| Aug. 1, 1959-July 31, 1960 | 50,047 | 38,492,505 | 769 |
| Aug. 1, 1960-July 31, 1961. | 76,089 | 63,912,550 | 839 |
| Aug. 1, 1961-July 31, 1962 | 22,342 | 16,656,713 | 745 |
| Aug. 1, 1962-Dec. 28, 1962. | 36,789 | 27,764,402 | 754 |

Repayment is effected by deducting 50 p.c. of the initial payment for all grain delivered subsequent to the loan, other than for grain delivered under a unit quota. The amounts deducted are paid to the Board until the producer has discharged his advance. At Dec. 31, 1962, refunds had been made as follows:-

| Period | Total Refunded | Total Advance Outstanding | Percentage Refunded |
| :---: | :---: | :---: | :---: |
|  | \$ | \$ |  |
| Aug. 1, 1957-July 31, 1958. | 35,197,943 | 5,524 | 99.9 |
| Aug. 1, 1958-July 31, 1959. | 34, 358, 066 | 11,587 | 99.9 |
| Aug. 1, 1959-July 31, 1960. | 38,473, 908 | 18,597 | 99.9 |
| Aug. 1, 1960-July 31, 1961. | 63,784,910 | 127,640 | 99.8 |
| Aug. 1, 1961-July 31, 1962. | 16,156,093 | 500,620 | 96.9 |
| Aug. 1, 1962-Dec. 28, 1962 | 11,586,868 | 16,177,534 | 41.7 |

Prairie Farm Assistance Act.-The Prairie Farm Assistance Act, passed in 1939, provides for direct money payments by the Federal Government on an acreage-and-yield basis to farmers in areas of low crop yield in the Prairie Provinces and in the Peace River area of British Columbia. Its purpose is to assist in dealing with a relief problem which the provinces and municipalities cannot do alone and to enable the farmers to put in a crop the following year. Payments for the 1961 crop, as at July 31, 1962, totalled $\$ 53,988,705$; total payments made under the Act since 1939 amounted to $\$ 314,829,673$.

Payments are made from the Prairie Farm Emergency Fund to which farmers contribute 1 p.c. of the value of all sales of wheat, oats, barley, rye, flaxseed and rapeseed. The additional funds required are provided from the federal treasury. The total collected through the 1-p.c. levy in 1961 was $\$ 6,839,498$. The total amount collected since 1939 was $\$ 139,092,707$.

The average yield of wheat in a township or block of sections is the basis on which payments are made. If the average yield is eight bushels per acre or less, all farmers within that area receive payments except those on the sections having a yield of 12 or more bushels per acre. The smallest isolated block eligible for payment is one third of a township ( 12 sections), provided such block is rectangular in shape. A block as small as one section within an ineligible township is eligible for payment if a side lies along the boundary of an eligible township.

If an area consisting of one third or more of the cultivated lands in any six or more adjoining sections could not be seeded or summerfallowed because of flooding or other natural causes beyond the control of the farmers, such area is eligible for award at $\$ 4$ per acre on one half of the cultivated acreage of each farmer. Only those farmers who make
their homes and are ordinarily resident in the spring wheat area are eligible for award and no award can be made with respect to more than 200 acres of the cultivated land of a farmer.

There are three categories of payments: (1) if the average yield of wheat for the township or block of sections, excluding those sections having a yield of 12 or more bushels per acre, is more than five and not more than eight bushels per acre, the payment is $\$ 2$ per acre on one half of the total cultivated acreage of the farmer; (2) if the average yield of wheat for the township or block of sections, excluding those sections having a yield of 12 or more bushels per acre, is more than three and not more than five bushels per acre, the payment is $\$ 3$ per acre on one half of the total cultivated acreage of the farmer; (3) if the average yield of wheat for the township or block of sections, excluding those sections having a yield of 12 or more bushels per acre, is three bushels or less per acre, the payment is $\$ 4$ per acre on one half of the total cultivated acreage of the farmer.

In the zero-to-five-bushel categories the minimum payment is $\$ 200$, although a farm must have at least 25 acres under cultivation other than land that is seeded to grass, or be in the development stage, to qualify for this minimum award.

The Grop Insurance Act.-To assist in making the benefits of insurance protection on crops available in all provinces, the Crop Insurance Act was passed in 1959. This Act does not set up any specific insurance scheme but rather permits the Federal Government to assist the provinces to do so by making direct contributions toward the cost of providing crop insurance. The initiative for establishing schemes to meet their own regional requirements rests with the provinces. Schemes may be organized on the basis of specific crops or areas within the provinces and agreements between the provinces and the Federal Government set out the terms of insurance coverage.

Contributions from the federal treasury are limited to 50 p.c. of the administrative costs incurred by a province and 20 p.c. of the amount of premiums paid in any year. In addition, the Federal Government may make loans to any province equal to 75 p.c. of the amount by which indemnities required to be paid under policies of insurance exceed the aggregate of: the premium receipts for that year; the reserve for the payment of indemnities; and $\$ 200,000$. Those farmers who take advantage of an insurance scheme set up under the Act are not eligible for any payments under the Prairie Farm Assistance Act, nor are they required to pay the 1-p.c. levy on grain sales as provided for under that Act.

As at Dec. 31, 1962, three provinces-Manitoba, Saskatchewan and Prince Edward Island-had passed crop insurance legislation. Manitoba operated a test area scheme in 1960, 1961 and 1962; in 1962 some 4,500 farmers in the province purchased insurance with a total liability of $\$ 10,000,000$. Saskatchewan operated a test scheme in 1961 and 1962; in 1962, 1,350 farmers participated in the scheme and provision was made for the Provincial Crop Insurance Board to accept liability for $\$ 5,000,000$ coverage in 1963. Prince Edward Island operated an insurance scheme for potato crops in 1962 and planned to extend the scheme in 1963 to provide coverage for grain crops.

The Agricultural Stabilization Act.*-The Agricultural Stabilization Act (SC 1958, c. 22, proclaimed Mar. 3, 1958) established the Agricultural Stabilization Board which is empowered to stabilize the prices of agricultural products in order to assist the agricultural industry in realizing fair returns for its labour and investment, and to maintain a fair relationship between prices received by farmers and the costs of goods and services that they buy.

The Act provides that, for each production year, the Board must support the price of nine named or mandatory commodities (cattle, hogs and sheep; butter, cheese and eggs; and wheat, oats and barley produced outside the prairie areas as defined in the Canadian Wheat Board Act) at not less than 80 p.c. of the previous ten-year average market, or base, price. Other commodities may be supported at such percentage of the base price

[^116]as may be approved by the Governor in Council. The Board may stabilize the price of any product in one or more of three ways: by an offer-to-purchase; by a deficiency payment; or by making such payment for the benefit of producers as may be authorized.

The price stabilization program in stabilizing prices of certain commodities by means of deficiency payments has been useful in assisting the agriculture industry to make production adjustments from a position of excessive supply to one of more normal relationship between supply and demand. Examples of this are hogs and eggs. The institution of limited deficiency payments by the Board assisted in a necessary adjustment of production in a relatively short time. During the period of adjustment the Board guaranteed a minimum average return to producers for a limited quantity of product.

The Agricultural Stabilization Board has available a revolving fund of $\$ 250,000,000$. Any losses incurred through the Board's operations are made up by Parliamentary appropriations and any surplus is paid back to the Consolidated Revenue Fund. Assisting the Board in its operations is an Advisory Committee named by the Minister of Agriculture and composed of farmers or representatives of farm organizations.

The Agricultural Rehabilitation and Development Act.-This Act, introduced in 1961, is an important element in national agricultural policy and national resources management policy. It is designed to increase income in the rural areas of Canada and promote better land use and soil and water conservation. The Act authorizes the Federal Government to enter into agreements with provincial governments for the joint undertaking of: (1) projects for the alternative use of lands classified as marginal or of low productivity; (2) projects for the development of income and employment opportunities for rural agricultural areas; and (3) projects for the development and conservation of soil and water resources of Canada.

The alternative uses of land contemplated for lands unsuitable for profitable cultivation include programs for tree planting and farm woodlot management, grassing and pasturage, and recreational uses of various types, including public shooting areas and wildlife management areas. The program envisages the creation of new income opportunities for people in rural areas through the use of the rural development concept. It is proposed that studies be conducted of the economic development factors in local areas, and committees of local people will be involved in proposed development plans for their areas. Through the development plan, government assistance will be focused on helping local people to develop new and expanded income opportunities.

The conservation of soil and water resources for agricultural purposes, the third major objective of the legislation, is not new. For years, activities under the Prairie Farm Rehabilitation Act and the Maritime Marshland Rehabilitation Act have been directed toward this end but these are regional undertakings. Under the Agricultural Rehabilitation and Development Act, soil and water conservation as an aid to agriculture will be extended to cover the whole country so that it will be possible for agriculture throughout Canada to enjoy the benefits of federal assistance on resource conservation.

The Act also authorizes the Federal Government to carry on broad-scale research and it is proposed to conduct basic research on national land-use needs and rural adjustment trends. Toward the end of 1961, a Director of the Act was appointed and discussions were held with all the provinces on projects and programs leading to federalprovincial agreements.

By October 1962, the general ARDA agreement had been signed by all ten provinces and by mid-1963, with ARDA in its first full season of operation, 163 projects were under way in rural areas across the country, at a total cost of about $\$ 7,000,000$. An example of the type of project launched is a detailed land-use survey in Newfoundland. At present, arable land is too scarce to supply local demands for vegetables and the survey will provide an inventory of available farm and garden land. Other ARDA projects include: a community pasture at Wanham, Alta.; a major research program in Saskatchewan to discover sound principles for broad rural development programs; a rural development research
program in Manitoba's interlake region; research around Burlington, Ont., on the problem of urban expansion in farming regions; stream development projects in Quebec for land reclamation and a scheme for setting up an experimental maple grove to demonstrate syrup and sugar production techniques; advisory services for woodlot management in New Brunswick and a resettlement project in the Bay of Chaleur area; a large program of surface ditching, land clearing and rural pond construction in Nova Scotia; and development of recreational areas on submarginal land in Prince Edward Island. Discussions were being held with British Columbia officials on a number of soil and water conservation projects for flood control and land reclamation in river valleys.

## Section 2.-Provincial Governments in Relation to Agriculture*

## Subsection 1.-Agricultural Services

Newfoundland.-Government agricultural services in Newfoundland are operated by the Agricultural Division of the Department of Mines, Agriculture and Resources. The Division is in charge of a Director who is assisted by a staff of 21 officers. For purposes of administration, the province is divided into nine districts. A fieldman with permanent headquarters is located in each district except Labrador, where the officer is resident for the summer only. Officers in charge of different phases of agricultural development visit each district on assignments from the St. John's office.

Departmental policies in support of the agricultural industry include: a bonus of $\$ 125$ an acre on land cleared by privately owned equipment; the distribution of ground limestone at a subsidized rate; the payment of bonuses on purebred sires; and financial assistance to agricultural societies, marketing organizations and exhibition committees. An inspection service is provided for poultry products, vegetables and blueberries, production of the latter being encouraged by the burning of suitable berry areas and the improvement of roads and trails leading to them. Small fruit development is promoted through the distribution of quality foundation stock.

Every encouragement is given to the production of livestock. An experimental sheep flock is maintained. Poultry and beef production have increased with favourable marketing conditions and with departmental assistance and loans under the Provincial Farm Development Loan Act. A veterinary supervises the health of animals program and the joint federal-provincial project for the eradication of bovine tuberculosis.

The Agricultural Division co-operates with the Department of Education in furthering the $4-\mathrm{H}$ Club movement in the province and accepts responsibility for all projects pertaining to agriculture.

Prince Edward Island.-The activities of the provincial Department of Agriculture are suggested by its staff which includes, in addition to the Minister and Deputy Minister, a Dairy Superintendent and Assistant, two Check Testers, three Dairy Herd Improvement Promoters, a Director of Veterinary Services and ten subsidized practising veterinarians, a Livestock Director, a Marketing Director, a Horticulturist, a Soil Analysis Assistant, a Poultry Fieldman, an Economist, two Agronomists, a Director of 4-H Clubs, three Agricultural Representatives, a Nursery Supervisor, and a Director, an Assistant Director and two Extension Workers of Women's Institutes.

Nova Scotia.-The Department of Agriculture and Marketing endeavours to "help the people to help themselves" through strengthening member interest in such organizations as the Nova Scotia Federation of Agriculture, the Nova Scotia Fruit Growers' Association, various agricultural co-operative organizations, credit unions and producer organizations. The Department is assisted by the Nova Scotia Advisory Committee on Agricultural Services which has been established to promote agricultural policies and projects of the

[^117]federal and provincial Departments of Agriculture. The Committee meets quarterly to determine how the work of these Departments may be co-ordinated and directed through integrated agricultural policies and with minimum duplication of services.

New Brunswick.-Provincial government agricultural policy in New Brunswick is directed by the Department of Agriculture. The Department is headed by the Minister of Agriculture who is assisted by a Deputy Minister and the Directors of the following Branches: extension, livestock, dairy, veterinary, poultry, horticulture, field husbandry, potato and plant protection, agricultural engineering, home economics, credit union and co-operative, and agricultural education.

Quebec.-The Quebec Department of Agriculture and Colonization comprises seven large services: production and marketing; farm management; research, education and information; rural engineering; colonization; administration; and rural planning (ARDA). Each service has divisions and sections, each dealing with particular problems.

In addition, various special organizations are under the jurisdiction of the Department: the Agricultural Marketing Board, the Farm Credit Bureau, the Rural Electrification Bureau, the Veterinary Science School, the Quebec Sugar Refining (St. Hilaire), the Deschambault Farm School, the Artificial Insemination Centre for Cattle (St. Hyacinthe), the Provincial Dairy School (St. Hyacinthe), the Dairy Industry Commission and the Agricultural Research Council. The latter is an advisory body composed of representatives of the agricultural institutions, of the federal and provincial Departments of Agriculture and of agricultural organizations. It does not operate laboratories but promotes research in all fields of agriculture through grants paid to agricultural faculties in the province; such research projects are supervised by university personnel. The Council also conducts a program of bursaries to induce graduates in scientific agriculture to pursue specialized studies. The findings of research projects sponsored by the Department are published in Recherches agronomiques.

The agricultural co-operative movement is very extensive in Quebec: 467 co-operatives have 70,769 members, 87 agricultural societies have 28,078 members, and 369 agricultural clubs have 17,247 members; 754 farm women's clubs have a total membership of 40,000 women and young girls; and there are 145 young farmers' clubs with a membership of 3,300 boys and 1,315 girls.

Every year a competition is held for the Agricultural Merit Order to ascertain the personal merit of the farmers who have most distinguished themselves in the agricultural field and can serve as examples. The annual competition is held successively in the five regions into which the province is divided. Each contest lasts five years and covers the various farm enterprises of the competitor. County Farm Improvement Contests have also been held for 30 years at the county and parish level; they tend to promote better methods of culture and farm management and to increase farm income. By early 1963, 8,500 farmers had benefited from them.

Ontario.-The Ontario Department of Agriculture provides financial assistance and administrative services through its Head Office, 11 branches and two Experimental Farms, and through research and extension work conducted under the direction of the Ontario Research Institute as well as that under way at the Ontario Agricultural College, the Ontario Veterinary College, Macdonald Institute, Western Ontario Agricultural School, Kemptville Agricultural School and the Horticultural Experiment Station.

The administration of the Department is under the supervision of a Deputy Minister with the assistance of two Assistant Deputy Ministers. The Ontario Agricultural College, the Ontario Veterinary College and Macdonald Institute (the Federated Colleges of Ontario) report to the Minister and Deputy Minister. The Research Institute is the responsibility of the Director of Research who, in turn, reports to the Deputy Minister. During 1962 a new office was established to develop programs under the Agricultural

Rehabilitation and Development Act of Canada. The Department is charged with the supervision of the agricultural schools, the Ontario Telephone Service Commission, the Accounts Branch and Personnel.

The Marketing Division is responsible for the administration of the Co-operatives Branch, the Dairy Branch, the Market Development Branch, the Farm Products Inspection Service and the Farm Labour Committee. The services of the Co-operatives Branch are designed to encourage and assist co-operatives to operate sound and successful businesses under the control of their members; it also administers the Co-operatives Loans Act. The Dairy Branch provides an inspection, instruction and supervision service to all dairy factories and promotes the production of clean milk on farms. The Milk Industry Board of Ontario, functioning under the authority of the Milk Industry Act, regulates and supervises the marketing of milk and cream. The Market Development Branch seeks to widen markets for Ontario farm products both domestically and abroad.

The Division of Production and Extension administers the Extension Branch, Live Stock Branch, Farm Economics and Statistics Branch, Agricultural and Horticultural Societies Branch, Demonstration Farms, and the Field Crops Branch. Through a staff of Agricultural Representatives, one of whom is located in each county and district, the Extension Branch carries on an educational and extension service, and gives leadership to 4-H Club work and to the Ontario Junior Farmers' Association. It also provides assistance to farmers and settlers in northern Ontario in connection with land clearing and breaking and improvement of farms and livestock. The Home Economics Service, which is part of the Extension Branch, gives leadership to organized activities of rural women. The Live Stock Branch promotes livestock improvement policies with particular attention to the health of animals, gives support to purebred livestock associations, licenses artificial insemination centres, community sales, wool warehousemen and egg grading stations. The Farm Economics and Statistics Branch carries on research in farm business including cost analysis, marketing and land use; in co-operation with the Dominion Bureau of Statistics it gathers and publishes statistics of agricultural production. The Agricultural and Horticultural Societies Branch provides assistance to agricultural and horticultural fairs and exhibitions, ploughing matches and other competitions and administers the Community Centres Act. Demonstration Farms in northern Ontario, one at New Liskeard and another at Sault Ste. Marie, are operated for the demonstration of methods adaptable to the area concerned, present emphasis being on beef cattle production. The Field Crops Branch assists in the development of good cultural practices, promotes the use of improved strains of seed and works for the improvement of pastures; it also administers the Weed Control Act.

The Research Institute co-ordinates all research activities of the province's agricultural schools and colleges in addition to developing a thorough research program in the interests of agriculture and industry associated with agriculture.

Manitoba.-The Department of Agriculture and Conservation serves Manitoba through the following branches: agricultural extension; livestock; dairy; soils, crops and weeds administration; agricultural publications, statistics and radio and information service; co-operative services; the provincial veterinary laboratory; and water control and conservation.

The Extension Service deals with agricultural economics, horticulture, poultry, agricultural engineering, entomology and beekeeping, 4-H Clubs and women's work, and has specialists devoting attention to these subjects. Meetings, field days, and short courses are held. Thirty-seven agricultural representatives and six assistants are located in 35 offices in the province, each serving from one to five municipalities; 14 home economists serve designated areas.

The Live Stock Branch administers the Animal Husbandry Act, develops and administers policies that encourage the improvement and production of livestock, and works in close co-operation with the Veterinary Laboratory Service and the federal Health of Animals Division in the control of livestock diseases.

The Dairy Branch administers the Dairy Act, supervises the grading of cream, inspects creameries and cheese factories, gives instruction in cheese and butter making, issues licences to makers of dairy products and to cream graders and conducts a dairycost study among milk producers. Extension activities include addressing meetings and preparing articles and leaflets on dairy farm problems.

The Soils and Crops Branch encourages the development, production and improvement of cereal, forage and special crops, and promotes proper land use through soil conservation programs. Also, weed control is co-ordinated through administration of the Noxious Weeds Act. The Branch develops and administers policies that encourage good field crop husbandry, soil conservation and weed control, and co-operates with other agencies toward this end.

The Agricultural Publications and Statistics Branch publishes and distributes annually approximately 125,000 bulletins, circulars, posters, leaflets, etc. It provides the public with agricultural statistics relating to Manitoba agriculture, and maintains an information service which uses the media of the press, radio and TV.

The Co-operative Services Branch takes care of the registration and supervision of co-operatives and credit unions and the administration of the Acts governing them. It also collects and compiles statistics on co-operative activity throughout the province.

The Veterinary Laboratory operates a diagnostic laboratory for animal diseases, the services of which are available to veterinarians and livestock owners.

The Water Control and Conservation Branch administers, through the Water Rights and the Water Power Acts, the water resources of the province and all works in connection with the control and utilization of those resources. Through the Departmental Act and other associated statutes, provision is made for the construction of works to control and use water, and to provide technical and financial assistance to local governments for the construction, maintenance, and operation of such works. Under the direction of the director and chief engineer, the Floodway Division is responsible for co-ordinating all matters in respect to design and construction of the proposed Red River Floodway.

Saskatchewan.-The Saskatchewan Department of Agriculture is organized in the following branches and services.

The Secretary of Statistics collects data on crop conditions, production, marketings and income. Farm information is dispensed daily over private radio stations, over TV stations and to the press by the Radio and Information Division. The Agricultural Representative Service has a technical staff comprising a director, an assistant director, 40 agricultural representatives and three assistants, four area supervisors, five farm management specialists and one audio-visual aids supervisor. This extension field staff serves all branches of the Department as well as the other agencies operating within the Co-operative Agricultural Extension Program. Agricultural representatives are active in all federal, provincial and university farm services; they work through Agricultural Conservation and Improvement Committees in each rural municipality and local improvement district to supply the farmer with scientific and practical information. District Boards with representatives from each Committee assist the agricultural representative in planning and developing a district agricultural improvement program. Through an Earned Assistant Program, the Department pays one half the cost of local group development projects. In farm labour matters, co-operation is maintained with the federal Department of Labour and the National Employment Service in directing annual movements of farm labour in and out of the province.

The Animal Industry Branch employs livestock specialists who provide technical information through Agricultural Representatives, press, radio and directly to producers and who administer the ROP program for beef cattle. For administrative purposes, the Branch has four divisions: the Dairy Division administers dairy herd improvement programs, assists producers with management and production problems, inspects and licenses dairy manufacturing and frozen-food locker plants, and administers dairy, locker plant
and margarine legislation; the Livestock Division encourages the use of suitable animals for breeding purposes by the establishment of purebred sire areas and by assistance in the purchase and distribution of bulls, boars and rams, and registers brands, licenses livestock dealers and agents and promotes programs on insect control, feeding and management; the Poultry Division maintains poultry and turkey testing and banding services under Saskatchewan Hatchery Supply Flock Policies, licenses produce dealers and poultry buyers, hatcheries and hatchery agents, assists with poultry shows and field days, and otherwise promotes flock improvement; the Veterinary Division assists students in veterinary science under a scholarship plan, administers the Veterinary Service District Act and the calfhood vaccination program, provides a laboratory service for the livestock and poultry industries and co-operates with Federal Government officials and local veterinarians in disease prevention and control.

The Conservation and Development Branch provides engineering services for irrigation development, usually in co-operation with the Federal Government, and for drainage programs and projects. Reclamation of land by drainage, development of misused land and under-utilized land, and construction of provincial community pastures all come within its jurisdiction. The Branch provides engineering assistance to conservation and development areas, water users' districts, and irrigation districts in connection with water control projects. The Water Rights Division of the Branch is responsible for the administration of the ground and surface water of the province and provides for regulated use of water for domestic, municipal, industrial, irrigation, water power, recreation, wildlife and other purposes.

The Lands Branch administers Crown and Land Utilization Board lands, except forest reserves and parks in the settled area of the province; classifies it according to the use for which it is best suited; disposes of such lands under long-term leases; secures land control for land utilization projects; supervises new settlement projects; pays for clearing and breaking by farmers on provincial leases; and operates provincial community pastures. Cultivated Crown lands may be purchased by lessees.

The Plant Industry Branch organizes and administers programs for crop improvement and crop protection, and advises on seed and crop improvement, soil conservation, horticultural problems, and weed and pest control. The improvement of grassland is promoted through a forage crop program. The Seed Plant Division carries on custom cleaning of forage seeds and registered cereals. The Apiary Division advises on beekeeping and honey production and conducts continuous inspection.

The Agricultural Machinery Administration carries out detailed tests on agricultural machines being sold in Saskatchewan to evaluate their structural and functional performance; results are made available to the public. The Administration is also responsible for the inspection and licensing of farm implement vendors within the province. Investigations are made into complaints arising out of machinery purchase and use with a view to equitable settlement without the necessity of litigation. Further services direct to the public are provided through an agricultural machinery extension program.

The Family Farm Improvement Branch assists farmers by providing technical services, materials, construction services, and financial assistance with farmstead development. The Branch specializes in such farmstead problems as buildings, water and sewage works, household problems, and materials handling.

Alberta.-The Alberta Department of Agriculture is organized in the following branches and services.

The Field Crops Branch administers programs and policies relating to crop improvement, soil conservation and weed control, crop protection and pest control, horticulture and apiculture. Agricultural Service Boards have been organized in municipal districts to assist with agricultural programs, and the Department of Agriculture is represented on each Board.

The Live Stock Branch aids in maintaining the quality of herds and flocks by assisting farmers in securing purebred herd sires and assists artificial breeding associations in the breeding of dairy cattle. The Branch also supervises livestock feeder associations and administers legislation relating to stock inspection, brands, domestic animals and the sale of horned cattle.

The Dairy Branch administers the Dairymen's Act and the Frozen Food Locker Act. Grading and purchasing of raw produce by all dairy plants are under regulation, as are standards of construction, manufacture, processing, sanitation, and temperature control for dairies and frozen-food lockers. A regular cow-testing service is available to dairy producers and the Branch laboratory conducts chemical and bacteriological analyses needed for industrial directives. Yearly cost studies and dairy farm management services are in operation in the principal milk-producing areas.

The Poultry Branch carries on programs for the improvement of poultry husbandry and supervises flock approval for the control of pullorum disease. The Branch issues hatchery, wholesale, first receiver and trucker licences for the handling of poultry products.

The Veterinary Services Branch provides scientific diagnoses of livestock and poultry diseases through its laboratory; conducts investigations of disease conditions; lectures in veterinary science at the University of Alberta, Schools of Agriculture, and many meetings; and promotes government policies aimed at reducing losses throughout the province.

The Agricultural Extension Service operates 44 offices and employs the services of 61 district agriculturists and 21 district home economists. The district agriculturists assist farmers with their problems and advance departmental policies designed to improve the standard of agricultural practices. The district home economists provide a similar service for farm women. Bulletins are prepared dealing with agricultural and home economics topics. The Branch is responsible for the supervision of agricultural societies and, in co-operation with the federal Department of Labour, is concerned with recruitment and placement of farm labour.

The Fur Farms Branch administers the licensing and exporting of live animals and pelts, and assists fur farmers in care, management and stock improvement; the Radio and Information Branch conducts five broadcasts a week over seven radio stations and issues weekly bulletins to press and radio; the Water Resources Branch deals with water rights, drainage, irrigation, and water power development; the Lands and Forests Utilization Committee (composed of representatives from the Department of Lands and Forests, Power Commission, Department of Municipal Affairs, University of Alberta and Department of Agriculture) deals with the proper use of submarginal agricultural land; and the Farm Economics Branch, formed Jan. 1, 1961, studies various economic farm problems and advises farmers on management techniques.

Credit is made available to young farmers for the purchase of farm lands under the Farm Purchase Credit Act and the Farm Home Improvement Act. Schools of Agriculture and Home Economics are operated at Olds, Fairview and Vermilion (see p. 432).

British Columbia.-The Department of Agriculture has four main branches. The Administrative Branch is responsible for the general direction of agricultural policies, the administration of legislation affecting agriculture and the compilation of reports and publications. This Branch also maintains direct supervision of the Field Crops, Soil Survey, Plant Pathology, Entomology, Apiary, Markets and Statistics, Farmers' Institutes and Women's Institutes Branches.

The Livestock Branch engages in the promotion and supervision of the livestock industry and provides veterinary services affecting disease control regulations; its work also includes supervision of stock brands, inspection of dairy and fur farm premises, and inspection of beef grading. In addition, the Branch supervises the operations of the Dairy Branch in the inspection of commercial dairy premises. Officials are stationed at 11 centres throughout the province.

The Horticulture Branch supervises fruit, vegetable and seed production, and provides advice on plant diseases and insect pest control. The Branch maintains field offices at 10 points in the southerly section of the province.

The Agricultural Development and Extension Branch offers general information services to farmers through 19 offices which cover all major farming districts. In addition, this Branch provides agricultural engineering service, supervision of the government landclearing program and farm labour services, and promotes junior club projects. The Poultry Branch offers extension services to the poultry industry.

## Subsection 2.-Agricultural Colleges and Schools

All provinces provide facilities or assistance for training in agricultural science at university level. The colleges and schools are administered by either the Department of Agriculture or the Department of Education of the respective province.

Newfoundland.-There are no agricultural colleges in the province but the Agriculture Division of the Department of Mines, Agriculture and Resources provides a number of scholarships annually for young men to attend agricultural colleges in other provinces.

Prince Edward Island.-A two-year course in scientific agriculture offered at Prince of Wales College, Charlottetown, prepares students for third year at Macdonald College, Que. In the Vocational School, short courses provide knowledge and skill in agricultural pursuits and develop in the student a sense of the dignity and importance of agriculture as a calling and an understanding of the value of the industry to the province.

Nova Scotia.-The Nova Scotia Agricultural College at Truro offers two coursesthe first two years of a degree course in agriculture and a two-year course in vocational agriculture. The College assists in conducting short courses at various provincial centres, supports Folk Schools and gives direction to $4-\mathrm{H}$ Clubs, Women's Institutes and other junior and senior production and marketing organizations. Tuition is free for Canadian students.

New Brunswick.-The three agricultural schools of New Brunswick are located at Woodstock, St. Joseph and St. Basile, each offering a two-term agricultural course extending over five months in the year. The curriculum includes training in all phases of agriculture, shop and general academic work. Ten-month home economics courses are also offered at Woodstock and St. Joseph.

Quebec.-Laval University (at Quebec) and McGill University (Macdonald College at Ste. Anne de Bellevue) offer courses leading to a degree of Bachelor, Licentiate, Master or Doctor of Science in Agriculture and the Provincial Veterinary School (at St. Hyacinthe), affiliated with the University of Montreal, offers a course leading to a doctorate in veterinary medicine. Two agricultural technological institutes (at Ste. Anne de la Pocatière and St. Hyacinthe), opened in 1962, give training in modern farming techniques and in the handling and processing of farm products.

There are also 15 secondary agricultural schools located throughout the province, and five orphanages offer courses in agriculture. About 1,000 students, the great majority of whom are sons of farmers, attend these intermediate or regional schools of agriculture and 230 pupils follow practical agricultural courses in the orphanages. A farm is annexed to each school for practical training and specialists give instruction on the maple sugar industry, farm mechanics, co-operatives, plant protection, veterinary hygiene, aviculture, marketing, silviculture, etc. School co-operatives and clubs are organized and directed by the pupils under supervision. Household training for the daughters of farmers and settlers is given in nine of these schools.

Ontario.-A two-year course at the Ontario Agricultural College (for the Associate Diploma in Agriculture) provides basic training for young persons interested in making agriculture their vocation. Study includes the application of science to agricultural practice and training for rural citizenship. A four-year course at the same institution for the degree of Bachelor of Science in Agriculture gives fundamental education in the science of agriculture. Sound training is provided for farming as a profession, for entrance into all agricultural services, industry and teaching, and for those who wish to proceed to graduate studies for master and doctorate degrees. Graduate courses are offered leading to the degree of Master of Science in Agriculture. Graduate students are enrolled in a department or departments of the Ontario Agricultural College conjointly with a department or departments of the University of Toronto for advanced courses of study and training in experimentation and scientific investigation. M.S.A. graduates may go into teaching, research or postgraduate study.

Macdonald Institute offers two main courses in home economics for young women. The one-year course of practical training in the art and science of homemaking earns a diploma of merit but gives no professional standing. The four-year professional course leads to a Bachelor of Household Science degree granted by the University of Toronto. University matriculation standing (nine papers of grade 13) is necessary to enter the four-year course. At its completion, Food Administration Option graduates are eligible to work in the professional dietetic and food-service fields. These graduates and those of the Clothing and Textiles Option and the Home Management Option are finding increasing employment in many areas, notably in the education, extension, business and research fields.

The Ontario Veterinary College offers a five-year course leading to the degree of Doctor of Veterinary Medicine. In addition to its function as a teaching institution, the College is a research centre for animal diseases and provides free consultation services for veterinary surgeons in practice as well as extension services in the interests of the livestock industry.

The Kemptville Agricultural School offers: a diploma course in agriculture comprised of two six-month terms, giving practical training in modern farming methods and community leadership, and designed primarily for young people who wish to farm but serving also as a preparation for many other occupations closely connected with agriculture; a six-month advanced course in agricultural mechanics for diploma graduates in agriculture; a six-month homemaker course leading to a diploma in homemaking and qualification for positions in home economics fields; a diploma course comprised of two six-month terms for girls wishing to prepare for positions in food services, sewing centres, tourist services and other fields of home economics. In addition, a three-month course is given for dairy apprentices, leading to the Dairy School Diploma required for certified buttermakers, cheesemakers and operators of dairy manufacturing plants. A 450-acre farm and residence life are features of the Kemptville Agricultural School.

The Western Ontario Agricultural School at Ridgetown offers a two-year diploma course (October to April), which gives practical training in modern farming methods and prepares young men to serve agriculture in allied occupations. The facilities comprise a group of modern buildings, including a residence and dining hall, modern classrooms, laboratories, and athletic facilities. There is a 425 -acre farm with up-to-date equipment, much of which is used for student activity and for practical demonstrations. A full complement of livestock is maintained on this farm for carrying out the school program.

Manitoba.-The Faculty of Agriculture and Home Economics of the University of Manitoba offers degree courses in agriculture and home economics as well as a two-year, sub-collegiate diploma course in agriculture. Practical short courses in agriculture and homemaking are also given at the Agricultural Extension Centre at Brandon.

Saskatchewan.-The University of Saskatchewan offers a degree course in agriculture designed to meet the needs of those who intend to teach agriculture in secondary
schools or colleges, to engage in research extension or administrative work, or to farm. Specialization is possible with permission of the faculty. Provision is made for combined courses in agriculture and arts or commerce. Postgraduate courses are available.

The Saskatchewan School of Agriculture offers a practical course intended to give sound training in farm practice and also to train young men in rural leadership.

All courses leading to a degree in home economics require four years. The prescribed course of studies for the first two years is the same for all pupils but in the third and fourth years four types are offered: (1) for teachers, (2) for dietitians, (3) general, and (4) additional specializations. A combined course leading to a degree in arts and science and home economics requires at least five years.

Alberta.-The University of Alberta offers a four-year degree course in agriculture to students with senior matriculation or its equivalent. Students may elect a general program or major in a wide range of special courses in the fields of animal science, economics, entomology, dairying, plant science, and soils. Graduate work at the master level is offered in all departments and at the doctorate level in some.

The Alberta Schools of Agriculture and Home Economics located at Olds, Vermilion and Fairview will, commencing in the autumn of 1963, plan new programs designed primarily for rural young people. To give greater flexibility and allow for specialization, courses will be offered in terminal three-month sessions. Three sessions will be held at Olds and two at both Vermilion and Fairview. Students with grade 9 standing will require successful completion of four sessions. Those with 70 or more high school credits can secure a diploma after three sessions. Boys can take general-specialized work in agriculture and girls can choose commercial, general home economics (Vermilion only), and clothing or foods specialties at Olds and Fairview.

British Columbia.-The Faculty of Agriculture at the University of British Columbia offers a four-year general degree course in agriculture and a five-year honours course. In the honours course there are 15 fields in which a student may specialize. Work is also offered by the Faculty of Agriculture in the Faculty of Graduate Studies through which a student may proceed to the degrees of Master of Science in Agriculture and Master of Science; in a limited number of fields, work is offered at the doctorate level. The Faculty also offers a one-year or two-year diploma course in occupational agriculture, adaptable to the needs of individual students.

In co-operation with various branches of the provincial Department of Agriculture and under the auspices of the University Extension Department, the Faculty of Agriculture also offers a number of short courses which vary in length from one or two days to several weeks.

## Section 3.-Land and Water Conservation*

## Subsection 1.-Federal Projects

Federal participation in programs designed to aid in the conservation of Canada's land and water resources began before the turn of the present century. Starting in 1877, this included the work of the now disbanded Department of the Interior in the field of engineering survey and development of water resources in Western Canada; later, such programs included those conducted by the Prairie Farm Rehabilitation Administration in the fields of soil and water conservation on the prairies, the work of the Marshlands Reclamation Service on the eastern seaboard, water development projects undertaken by the Department of Northern Affairs and National Resources under the terms of the Canada Water Conservation Assistance Act and, most recently, the broad and comprehensive resource development program for all of Canada envisaged under the new Agricultural

[^118]Rehabilitation and Development Act (see p. 423). Over this period, many policies and projects were undertaken, varying widely in nature and scope but all having as their basic objective the better utilization of Canada's land and water resources as a means of providing greater security and stability for Canadian agriculture.

For the most part centred in Western Canada, this work has involved the introduction of systems of farming, land use and water supply that would provide greater economic security for the agricultural population on the prairies and, more recently, the development of larger and more comprehensive land utilization and water development schemes to serve entire agricultural districts and prairie communities. Cultural improvements have led to an almost completely new approach to the economics and practice of dry-land farming. Techniques in soil management and methods of making more efficient use of limited supplies of soil moisture have been developed and are in common use, helping materially to minimize the drought problems in certain areas. The provision of adequate farm water supplies for domestic, stockwatering and crop-growing purposes has also been of great advantage throughout the drought region; in particular, the provision, through irrigation, of assured feed supplies to carry livestock through the winter and through periodic dry periods has given much greater stability to the livestock industry and has encouraged agricultural diversification in the plains region.

Other major projects bringing about adjustments in the pattern of land use on the prairies have been the permanent removal from cultivation of lands that have proven submarginal for cereal crop production, the fencing, regrassing and other improvement of such areas for community pasture purposes, and the resettlement and rehabilitation of farmers operating such lands, principally to irrigation projects.

While such adjustments have been of considerable benefit to the agricultural economy in the prairie region, new and growing demands on Canada's land and water resources, from agricultural and urban centres alike, have made necessary an entirely new and comprehensive approach to the resource development problem. This has included the construction of larger and more extensive multi-purpose water conservation schemes to support greater urban and industrial growth and to supply water for large-scale irrigation, etc.; the implementation of appropriate alternative land-use projects to make more efficient utilization of Canada's land resources; and the introduction of new and more imaginative programs in local rural development, designed to raise the general standard of living of people within such areas. In the light of these objectives, an increasing amount of attention has been directed recently by federal agencies to this type of development.

## Prairie Farm Rehabilitation Act

The Prairie Farm Rehabilitation Act was passed by the Parliament of Canada in April 1935 to provide for the rehabilitation of drought and soil drifting areas in the Provinces of Manitoba, Saskatchewan and Alberta. An initial appropriation of $\$ 4,750,000$ was made to cover the cost of rehabilitation activities for a period of five years, and an Advisory Committee was established by the Act to give leadership to the program. The Experimental Farms of the federal Department of Agriculture played an important role. As the PFRA developed, however, a separate administration was set up in Regina in 1936 to direct water development, while the cultural improvement program continued under the direction of the Experimental Farms. Then, by amendment to the Act in 1937, PFRA was extended to include land utilization and resettlement. It was realized, however, that for the development of a sound agricultural economy on the prairies, more long-term measures for rehabilitation would be necessary. In 1939, therefore, additional financial allocations were made and the five-year limitation to the PFRA was removed.

The PFRA has completed its 28th year of operation and throughout these years a broad and varied program of rehabilitation has been conducted. A résumé of the current activities being carried out by PFRA follows.

Water Development.-Projects constructed under the water-development program under the supervision of the Water Development Services Branch are divided into two categories according to size of project, number of people benefiting, and cost of construction: (1) individual and neighbour projects and (2) community projects.

Individual and neighbour projects are works serving the needs of one or two farmers and are generally in the form of small dams and dugouts that supply water for stockwatering and domestic use and/or for irrigation purposes. PFRA provides all engineering services required to plan and design such projects and a portion of the construction costs. The rate of assistance paid on individual projects is based on yardage of earth moved and amounts to seven cents per cubic yard up to a maximum of $\$ 250$ for dugouts, $\$ 300$ for stockwatering dams and $\$ 600$ for irrigation projects. Where two or more farmers pool their water resources to build neighbour projects, assistance is paid up to a maximum of $\$ 1,000$. Responsibility for the actual construction is left to the farmer who either contracts the work out or builds the project himself. Community projects utilize the waters of well-defined watersheds and are built to serve the needs of groups of farmers. Each project is justified on the basis of its individual merit and the major share of cost is borne by PFRA.

During the 28 years in which PFRA has been engaged in this work, the program has resulted in the construction of more than 85,000 individual and neighbour projects and approximately 900 community water-storage and development schemes.

Major Projects.-While the immediate needs of farmers are being met by PFRA under the water-development program, attention has been given recently to the construction of larger irrigation and reclamation projects involving the development of many thousands of acres of land. Such undertakings are in line with the long-range land-use plan to provide for expansion and stability in Canada's growing economy. Of an estimated $3,000,000$ acres of potentially irrigable land in Western Canada, $1,500,000$ acres have been developed or are in process of being developed. The construction of these large irrigation and reclamation works, which, because of their size or their location, are undertaken by agreement between the Federal Government and the provincial government concerned, is financed through special vote of Parliament.

St. Mary Project.-To make available for irrigation a larger percentage of the water flowing through southern Alberta in the Waterton, Belly, St. Mary and Milk Rivers, a program to extend the original St. Mary Irrigation Project was undertaken jointly by the Government of Canada and the Province of Alberta. The Federal Government agreed to construct the main supply reservoirs and the connecting canals and the Province of Alberta agreed to construct the irrigation distribution system. Construction of the St. Mary dam, key structure on the whole project, was finished in 1951. In 1958, the second phase, involving the diversion of the Belly River into the St. Mary Reservoir, was completed. The third step, involving the diversion of the Waterton River into the St. Mary Reservoir by way of the Belly River diversion, is under construction. The present storage and distribution facilities extend irrigation to 296,000 acres of land in the St. Mary Project. With the addition of resources of the Waterton River, a further 214,000 acres will be brought under irrigation, making a total of 510,000 acres.

Bow River Project.-The Bow River Irrigation Project, situated west of Medicine Hat in Alberta and having an irrigation potential of 240,000 acres, was taken over by the Federal Government from the Canada Land and Irrigation Company in 1951; the Company had developed about 57,000 acres before financial difficulties caused suspension of work. PFRA commenced the orderly rehabilitation of the project works and is proceeding with the development of the remainder of the area. The Federal Government is responsible for settlement of the areas surrounding Vauxhall and Hays where farms have been provided for 436 settlers; 152 have now been established in the Hays district.

South Saskatchewan River Development Project.-In July 1958 agreement was reached between the Federal Government and the Province of Saskatchewan to start construction
on the South Saskatchewan River Development Project, a large-scale multi-purpose water conservation development in south-central Saskatchewan being undertaken for the purpose of making better use of the water resources of the river through irrigation, river control, power development, urban water supply and recreation facilities. Control will be achieved by two dams, the major one on the South Saskatchewan River at a point approximately half-way between the towns of Outlook and Elbow and the other at the divide between the valleys of the South Saskatchewan and the Qu'Appelle Rivers. The two governments will share the cost of building the dams and all other works associated with the creation of the reservoir; 75 p.c. will be borne by the Federal Government and 25 p.c. by Saskatchewan, the provincial share being not more than $\$ 25,000,000$.

The completed project will provide water for the irrigation of about 500,000 acres of land in central Saskatchewan on both sides of the South Saskatchewan River between the town of Elbow and the city of Saskatoon, and in the Qu'Appelle Valley extending east of Elbow to the Manitoba border. Power installations at the damsite will have a potential output of $475,000 \mathrm{kwh}$. The reservoir- 140 miles long with a capacity of $8,000,000$ acre-feet of water-will be constructed at an estimated cost of $\$ 96,000,000$. The main dam-210 feet high and of earth fill with an over-all length of 16,700 feet-will be the largest rolled-earth dam to be built in Canada and one of the largest of its kind in the world.

Construction started in the autumn of 1958 and by July 31, 1963, 34 contracts, with a total value of $\$ 68,000,000$, had been awarded. Of these, 28 were completed and total expenditures, including progress payments on contracts currently active, amounted to approximately $\$ 54,000,000$. The latest activities have been associated mainly with the construction of the five river diversion tunnels and appurtenant works. In addition to paying 75 p.c. of the cost of construction of the dam, the Federal Government is supplying all engineering, administration and supervisory requirements.

Saskatchewan River Reclamation Project.-The possibility of successfully reclaiming for agricultural purposes $1,500,000$ acres of Saskatchewan River Delta land between Tobin Rapids in Saskatchewan and Cedar Lake in Manitoba has long been under consideration. As a result of an agreement made in early 1953 between the Government of Canada and the Manitoba Government, work was begun on the construction of flood control and drainage works to reclaim about 100,000 acres in one region of the project referred to as the Pasquia Area, near The Pas. The Federal Government assumed the cost of building the main protective and drainage works and the provincial government assumed the cost of settlement, maintenance of works and internal drainage. One quarter of the reclaimed land will be used for the resettlement of farmers from drought areas and the remainder sold, with 75 p.c. of the proceeds going to the Federal Government as partial reimbursement of expenditure on the project. Construction was completed in 1960 and the project has been officially transferred to the Province of Manitoba for internal development and settlement.

Northwest Escarpment and Interlake Reclamation Project.-Under the terms of an agreement between the Governments of Canada and Manitoba, mutually acceptable projects for flood control and land reclamation within the Northwest Escarpment and Interlake regions of Manitoba may be undertaken on a cost-sharing basis, with PFRA providing engineering services as required. Initially, projects under this agreement included extensive investigations and reclamation work in the Riding, Duck and Porcupine Mountain areas and Whitemud River watershed, where flooding and erosion seriously affected 252,000 acres of valuable agricultural land. The reclamation work consisted of clearing and dyking stream channels, preventing stream-bank erosion and aligning channels by building cutoffs and diversions. Since 1958, work in this area has been confined mainly to watershed investigations on the headwaters of Wilson Creek. In the Interlake region, reclamation has been concerned with projects on the Fairford and Icelandic Rivers, which have been completed.

Assiniboine River Project.-Along the Assiniboine River between Portage la Prairie and Headingly in Manitoba, the problem of flooding has faced farmers and communities over the years, often resulting in considerable damage to land, buildings and other property. Responsibility for flood protection work carried out in the area by the federal Department of Public Works was, in 1950, transferred to the Canada Department of Agriculture under PFRA and activities have, since then, involved mainly construction of dykes and channel improvement. However, as a result of recent surveys, an agreement was signed between the Federal and Manitoba Governments during 1962 for the construction of a major flood control and water conservation dam on the Assiniboine River near its confluence with the Shell River. This dam will be 75 feet high and will create a reservoir 40 miles long with a storage capacity of 430,000 acre-feet of water.

Buffalo Pound Water Supply Project.-Buffalo Pound Lake in Saskatchewan was developed to supply water for agricultural purposes downstream in the Qu'Appelle Valley and also to supply urban water for the cities of Regina and Moose Jaw. Local water supplies in the Lake, however, are not always adequate to meet these needs and must be supplemented with water drawn from the South Saskatchewan River. For this purpose, the Government of Canada constructed a pumping system on the river near Elbow to raise water over a height of land into the Qu'Appelle Valley where it may be carried through a series of canals and improved river channel to Buffalo Pound Lake, a distance of 55 miles. Construction of these works was completed in 1960 and more than 50,000 acre-feet of water have been delivered to the reservoir since pumping operations commenced.

British Columbia Projects.-The PFRA has been carrying out irrigation development and land reclamation and providing engineering services in British Columbia since 1944; this work has been undertaken for and in connection with the Veterans' Land Act, the Experimental Farms Service, and at the request of the Province of British Columbia.

Nine irrigation projects have been developed or rehabilitated in the arid central interior of the province. The irrigable land on these projects totals approximately 5,300 acres and provides direct or supplemental living for some 1,400 families engaged mainly in the growing of small fruits and vegetables and in dairying. Seven of the projects were constructed for the Veterans' Land Act following the Second World War and benefit approximately 500 veterans. The Johnson Western Canada Ranching Projects, Nos. 1 and 2 (Todd Hill Irrigation District), and the Chase Irrigation Project are located in the South Thompson Valley. The Cawston Benches Project, Westbank Project, Penticton West Bench Project and Bankhead Project are all located in the southern Okanagan Valley and form some of the largest individual developments for veteran settlement in Canada.

The other two developments are located in the Thompson Valley near Kamloops and were constructed in co-operation with the Province of British Columbia. The B.C. Fruitlands Irrigation District includes some 2,000 acres of irrigable land and also about 700 small holdings. This district had been served by a gravity water system from Jamieson Creek for over 40 years but the system deteriorated to such an extent that the district could no longer guarantee water to its users. Rehabilitation of the project was undertaken by agreement with the province and the irrigation district concerned, and completed by PFRA in 1958. A pressure irrigation system was also installed by PFRA for the irrigation of 290 acres of the Provincial Sanatorium farm lands at Tranquille.

A major reclamation project was undertaken in the Lillooet Valley upon agreement between the Federal Government, the Government of British Columbia, and the Pemberton Valley Dyking District. This involved the reclamation of the lower 20 miles of the Lillooet River Valley through dyking, drainage and channel improvement to reclaim some 12,000 acres of agricultural land and to protect an additional 2,000 acres already under cultivation.

Engineering services have been provided by PFRA to the Experimental Farms and to other government agencies as requested. Some of these services have included surveys in the Fraser River Basin for the federal-provincial Fraser River Board, reports on proposed
project development and reclamation in British Columbia, and services to the Experimental Farms for the establishment and improvement of farm water supplies and irrigation systems.

Land Utilization and Resettlement.-The 1937 amendment to the Prairie Farm Rehabilitation Act broadened its scope to include land utilization and land settlement, opening the way for a program that has had a far-reaching effect on the stability of agricultural production in many areas throughout Western Canada. By agreement with the Provinces of Saskatchewan and Manitoba, lands not considered suitable for cereal crop production may be transferred to the Federal Government for development by PFRA into community pastures. The province concerned selects the area to be developed and obtains control of the land. The land is then leased to the Government of Canada which in turn agrees to construct, maintain and improve community pasture facilities in the area selected. In this way, land subject to the hazards of soil drifting is removed permanently from cultivation and is again protected by grass cover.

As these submarginal and marginal lands are converted into productive pastures, livestock production on the surrounding farms is being increased, thus making possible a greater diversity of farm income. Since the community pasture program began in 1937, approximately $2,092,754$ acres of land have been developed into 72 separate pasture units. These pastures, intended primarily for reserve grazing areas to supplement farm and ranch pastures, are providing controlled spring, summer and fall grazing for over 140,000 head of stock annually, belonging to approximately 7,000 farmers and ranchers. In addition, a considerable tonnage of hay and some grass seed have been harvested from these pastures. This program of pasture improvement carried on by PFRA has provided leadership to farmers in the development of their own farm pastures.

The resettlement of farmers from these submarginal areas has been handled jointly by the Federal Government and provincial governments concerned. Where available, the provincial governments provide suitable Crown land on which to resettle farmers. PFRA in turn accepts responsibility for moving the farmers and their effects to the new locations, and for developing the submarginal areas for pasture purposes. Every effort has been made to resettle farmers on lands located close to existing or proposed pastures. Where no suitable Crown lands are available, PFRA provides its own through irrigation development. Two such schemes have been built specifically for resettlement purposes in Alberta: a large block of land adjacent to the Eastern Irrigation District called the Rolling Hills Project, to which 118 farm families have been moved from drought areas; and the Bow River Irrigation Project where 152 farm families are settled in an area of approximately 27,000 acres called the Hays District.

On somewhat the same principle, six resettlement and rehabilitation projects have been built in the heart of the drought area in southwestern Saskatchewan. The only difference is that for these projects the purposes and objectives of the resettlement and rehabilitation program have been achieved without necessarily involving the movement of farmers to new locations. The six schemes-the Val Marie, West Val Marie, Eastend, Consul, Maple Creek and Swift Current Irrigation Projects-are subdivided into 40-to-80acre plots which are leased out or sold to farmers in surrounding districts for feed production. On the irrigated land, farmers can be assured of producing adequate and dependable winter feed supplies as well as reserves of feed to carry stock over prolonged drought periods.

In a similar manner, hundreds of farmers have been rehabilitated without the necessity of moving from their farms by the development of farm-size and small community irrigation schemes built throughout the prairies with PFRA assistance.

## Maritime Marshland Rehabilitation Act

The MMRA program was instituted by federal legislation in 1948 to provide assistance to the Provinces of Nova Scotia, New Brunswick and Prince Edward Island in preserving and developing tidal marshland areas, most of which are situated adjacent to
tributaries of the Bay of Fundy. The areas are subject to flooding by tide water unless protected by systems of dams or dykes and aboiteaux (freshwater-control structures). The soils are potentially productive and when properly used yield excellent crops.

Responsibility for the rehabilitation of approved marshland areas is shared by the provincial and federal governments. The latter undertakes the construction of works required to prevent flooding of lands by saltwater, maintains the structures until this responsibility is turned over to the provinces, and provides engineering services required in connection with the program. The provincial governments organize the owners of land and ensure that the marshland areas are adequately drained and that suitable land-use policies are developed and encouraged.

By Mar. 31, 1962, the provinces had requested the protection of some 96,000 acres from saltwater flooding. Structures had been completed to protect 81,265 acres (Nova Scotia 44,054 acres, New Brunswick 36,936 acres, and Prince Edward Island 275 acres). This acreage forms parts of approximately 3,500 farms having a total area of over 450,000 acres. Protection of most of the unprotected acreage is being postponed, or is undecided, either because of the high cost of the required works, or until a more economic use of the land is found.

Conventional structures for the protection of marshlands are normally considered to be dykes and aboiteaux, supplemented by stream-bank control works. It has been found feasible to construct aboiteaux or dams across some tidal streams which eliminate the need for dykes and aboiteaux upstream of the proposed site and permit more efficient drainage of the land protected. Two of the more important structures of this type are the Annapolis River Dam in Nova Scotia and the Tantramar River Dam in New Brunswick, both in full operation. Each was undertaken on a share basis with a provincial authority, as they serve as river crossings for traffic and eliminate the need to rebuild highway bridges at these locations in the future. The structures consist of rock-fill dams and freshwater discharge control gates; they were constructed on tidal rivers having tide ranges in excess of 30 feet and 40 feet, respectively. The addition of power-generating facilities to harness some of the energy produced by the tide at Annapolis Royal, N.S., was studied and found possible, but the cost was too high to warrant further consideration.

## Canada Water Conservation Assistance Act*

To help municipal and provincial governments with financing major water conservation and control projects, the Canada Water Conservation Assistance Act was passed by Parliament in 1953. Under the Act, the Federal Government may enter into an agreement with any province matching the provincial contribution up to a maximum of 37.5 p.c. of the cost of a major water conservation project that is considered to be beyond the normal financial means of the provincial and municipal governments involved.

The Federal Government has signed three agreements with the Government of Ontario providing federal financial participation in three major water conservation projects. In each project, the estimated cost is to be distributed among the federal and provincial governments and a conservation authority, the two governments each contributing 37.5 p.c. of the cost and the conservation authority the remaining 25 p.c.

The first agreement under the Act was signed Jan. 28, 1961, providing federal assistance to a $\$ 9,640,500$ flood control and water conservation project in the Upper Thames

[^119]River basin. The Upper Thames River Conservation Authority, a grouping of 31 municipalities, will pay 25 p.c. of the cost of construction of five dams and three channel improvement works included in the project and will administer the completed project. Construction of the works is to be completed within ten years of the date of signing.

Other agreements signed between Canada and Ontario provided for federal costsharing in the construction of the $\$ 825,000$ Parkhill Dam Project in the Ausable River watershed in western Ontario and the $\$ 24,000,000$ flood control and water conservation works that will be built along the Humber and Don Rivers in the Metropolitan Toronto area. The conservation authorities involved in these projects are, respectively, the Ausable River Conservation Authority and the Metropolitan Toronto and Region Conservation Authority. Prior to the passing of this legislation, the Federal Government provided 37.5 p.c. of the cost of building the Shand and Luther Marsh Dams on the Grand River, the Conestogo Dam on the Conestogo River, and the Fanshawe Dam on the Thames River.

To be eligible for federal assistance under the Canada Water Conservation Assistance Act, a project must meet three conditions. The works must be designed primarily for flood control or other beneficial uses. It must be major in character in relation to the financial capability of the province entering into the agreement. It also must be beneficial to a community as a whole. The Act requires that complementary conservation measures be carried out in addition to the primary flood control and water conservation works.

## Subsection 2.-Provincial Projects

Saskatchewan.*-The Conservation and Development Branch of the Saskatchewan Department of Agriculture was established in 1949 to administer water rights in the province and to carry on an active program in irrigation, drainage, flood control and land reclamation and development. Program emphasis has varied from year to year; drainage and flood control were of greatest importance during most of the 1950's but, because of the drier weather during the past four years, irrigation and community pasture development have taken precedence. The following is a summary of Branch activities to Mar. 31, 1962.

Water Rights.-Surface and ground water resources of the province are administered by the Water Rights Division of the Branch. At Mar. 31, 1962, 6,678 projects were licensed and 1,615 authorized under the Water Rights Act, involving total storage of 461,017 acre-feet; three hydro-electric developments were licensed and two other licences had been applied for under the Water Power Act; 180 water-well drillers were licensed and 2,529 wells were reported drilled under the Ground Water Conservation Act.

Irrigation Development.-Up to the end of March 1962, 54 irrigation projects had been initiated on which topographic surveys had been conducted on 467,114 acres (approximately one half on the South Saskatchewan River). In addition, 368 miles of ditch had been constructed and 1,950 water-control structures built. Forty-six Water Users' Districts had been organized comprising some 209,443 acres.

Drainage and Flood Control.-By the end of March 1962, some work had been done on 461 drainage and floud-control projects. Topographic surveys had been carried out on 200,027 acres, some 707 miles of ditch dug, and 1,038 control structures built. A total of $7,500,000$ acres have been organized into 69 conservation areas.

[^120]Land Development and Pasture Construction.-A total of 159 land-development and community pasture projects had been worked on up to the end of March 1962. Some 85,626 acres of forage had been seeded and 1,263 miles of fence constructed. Approximately 715,460 trees had been planted under the afforestation program.

Community Pastures.-Through the Lands Branch of the provincial Department of Agriculture, the province had transferred title to $1,196,963$ acres and had leased without charge another 374,319 acres of land to PFRA for community pastures. Outside the PFRA program, the province at Mar. 31, 1962 had another 921,884 acres in 138 community pastures operated by co-operative associations, by municipalities or by the provincial Department of Agriculture; during 1962, 26 pastures operated by the province provided grazing for 28,461 head of cattle owned by 1,876 local farmers.

Development of Land for Cultivation.-Crown lands, either under cultivation or suitable for cultivation, are leased for 33 -year periods. The province may reimburse farmers in cash for the cost of clearing and breaking virgin land or the farmers may retain crop shares equivalent in value to costs sustained. To Mar. 31, 1962, the investment of the province for land clearing and breaking amounted to $\$ 9,490,230$, and included work done in six settlement projects involving initial clearing and breaking on about 200 farm units before the land was leased.

Alberta.*-The Alberta Water Resources Act gives the Minister of the Department of Agriculture wide powers to investigate the water resources of the province and extensive surveys have been carried out to determine the distribution and extent of the available water supply in the province and the most beneficial use for irrigation, water power and other purposes. The Water Resources Branch of the provincial Department of Agriculture administers the licensing of water power projects and the construction work in several irrigation projects. Irrigation projects are also licensed and water allocated for domestic and irrigation purposes. Other work includes administration of drainage districts and cooperation on the Peace River dug-out project and on river protection projects where flooding occurs. In more recent years much of this work has been carried out by the Federal Government in co-operation with the Government of Alberta.

Stream measurement is being done by the Hydrometric Service of the federal Department of Northern Affairs and National Resources, and irrigation surveys are carried out largely by the water development organization under PFRA (see pp. 433-434).

The figures given in Table 4 of land actually irrigated in Alberta in 1961 are only approximate because, while there are increases resulting from the creation of new pump irrigated areas, there are also decreases caused by soil reclassification and less water use, depending on natural precipitation. Seepage and alkali problems also have an effect on acreage quoted as irrigable. Figures for small private irrigation projects have been omitted because of their uncertain water supply.

Gross cash returns from the irrigable area are estimated at $\$ 30,000,000$, although this figure does not take into account the value of stockwater supplied through irrigation works. Nor does it include many other credit items that are difficult to evaluate such as the recreational use of water which, to these once semi-arid areas, is particularly important, and the value of fish taken from irrigation reservoirs which is known to be quite significant. Several communities receive their entire domestic water supply via irrigation canals.

[^121]
## 4.-Major Irrigation Districts in Alberta, 1961

| District | $\begin{gathered} \text { Classified } \\ \text { Irrigable } \\ \text { Area } \end{gathered}$ | Area Actually Irrigated in 1961 |
| :---: | :---: | :---: |
|  | acres | acres |

| United Irrigation District. | 34,005 | 23,095 |
| Lethbridge Northern Irrigation District | 96,135 | 73,637 |
| Ross Creek Irrigation District. | 2,069 | 200 |
| Macleod Irrigation District. | 3,000 | - |
| Totals | 900,647 | 592,104 |

British Columbia.-About 20 p.c. of the arable land in British Columbia is under cultivation, and nearly all of the grazing area is being utilized. The $1,300,000$ acres of improved land give a ratio of approximately one acre per person. Within this arable area there exists an estimated 220,000 acres of irrigated land, and the total additional acreage of irrigable land in British Columbia is estimated at 400,000 acres. About three quarters of the irrigated area is made up of individual projects and the remainder is served by the larger irrigation projects listed in Table 5.

## Section 4.-Statistics of Agriculture*

The collection, compilation and publication of statistics relating to agriculture is a responsibility of the Dominion Bureau of Statistics. Valuable information is obtained through the Censuses of Canada and through partial-coverage surveys. Results of the 1961 Census are summarized in Section 5 of this Chapter and are available in greater detail in Census publications issued by the Bureau. $\dagger$ A list of such publications is available on request.

The Bureau also collects and publishes primary and secondary statistics of agriculture on an annual and monthly basis. The primary statistics relate mainly to the reporting of crop conditions, crop and livestock estimates, wages of farm labour and prices received by farmers for their products. The secondary statistics relate to farm income and expenditure,

[^122]per capita food consumption, marketing of grain and livestock, dairying, milling and sugar industries and cold storage holdings. In the collection of annual and monthly statistics, the federal Department of Agriculture and various provincial departments, as well as such agencies as the Board of Grain Commissioners and the Canadian Wheat Board, co-operate with the Bureau. Many thousands of farmers throughout Canada send in reports voluntarily and dealers and processors also provide much valuable data. The figures contained in this Section do not include estimates for Newfoundland. Agriculture plays a relatively minor part in Newfoundland's economy, commercial production of most agricultural products being quite small. In the following Subsections details are given for 1962; figures are subject to revision.

Economic Activity in 1962 Related to Agriculture.-The continued upward trend in Canadian economic activity during 1962 is reflected in the gross national product which rose to $\$ 40,401,000,000,8$ p.c. higher than in 1961 . This expansion represented the largest year-to-year gain since 1956 when the economy was stimulated by an exceptionally high level of capital expenditure. Price increases were moderate in 1962; they accounted for less than 2 p.c. of the increase in gross national product, leaving a gain in volume of a little more than 6 p.c.

All the main components of gross national expenditure contributed to the increase in the aggregate. Consumer spending, which rose more than 5 p.c., was a major expansionary influence. Investment in fixed capital resumed its upward course with the bulk of the increased outlays being for machinery and equipment. With a near record crop in 1962, in contrast to a poor crop in 1961, there was a considerable accumulation of farm grain inventories in place of the liquidation of a year earlier. An increase in exports of nearly 8 p.c. reflected, in part, the lower exchange value of the Canadian dollar; imports also rose but not to the same extent. Government expenditure was up substantially, largely as a result of outlays at the provincial municipal level.

The salient developments on the income side were a 7-p.c. rise in labour income, an 11-p.c. increase in corporate profits and a sharp expansion in farm income largely as a result of the near record crop. Personal income rose at about the same rate as national income.

It is estimated that, for the year 1962, realized net income of farmers from farming operations, which includes inventory changes, amounted to $\$ 1,453,000,000,9.7$ p.c. above the estimate of $\$ 1,324,600,000$ for 1961 and 12 p.c. higher than the average of $\$ 1,297,100,000$ for the five-year period 1957-61. Total farm net income, which takes into account changes in inventories of grains and livestock, amounted to $\$ 1,630,300,000$. This is in contrast with the estimate of $\$ 1,044,000,000$ for 1961 and the average of $\$ 1,195,900,000$ for the 1957-61 period.

## Subsection 1.-Cash Income from the Sale of Farm Products, 1962

During 1962, cash income to Canadian farmers from farming operations reached an all-time high of $\$ 3,149,400,000$, an amount 6.6 p.c. above the previous record of $\$ 2,954,000,000$ established a year earlier and 13.4 p.c. above the 1960 estimate of $\$ 2,776,700,000$. These estimates include cash income from the sale of farm products, Canadian Wheat Board participation payments on previous years' grain crops, net cash advances on farm-stored grains in Western Canada, and deficiency payments made under the provisions of the Agricultural Stabilization Act.

The more important contributions to the gain in 1962 were made by increased returns from the deliveries of wheat, oats, cattle, calves, hogs and poultry products, larger participation payments on previous years' grain crops, and increased net advances on farmstored grains in Western Canada. Lesser contributions were made by rye, vegetables and dairy products and the main items for which income was lower were barley, rapeseed and tobacco. All provinces shared in the increase. On a percentage basis, the provincial gains amounted to: less than 1 p.c. for Nova Scotia; nearly 2 p.c. for New Brunswick; between 4 p.c. and 5 p.c. for Prince Edward Island, Quebec, Ontario, Manitoba and Alberta; 10 p.c. for British Columbia; and 14 p.c. for Saskatchewan.

In addition to cash income from farming operations, farmers received, during 1962, $\$ 70,300,000$ in the form of supplementary payments paid out under the provisions of the Prairie Farm Assistance Act and the Western Grain Producers' Acreage Payment Plan. This compared with approximately $\$ 35,800,000$ paid out under these legislative measures in 1961, most of it under the Prairie Farm Assistance Act. Thus, total farmers' income from farming operations and supplementary payments amounted to $\$ 3,219,700,000$ for 1962 compared with $\$ 2,989,700,000$ for 1961 , an increase of 7.7 p.c. over the latter year and an all-time high.

Field Crops.-Cash income to farmers from field crops, including Canadian Wheat Board payments and cash advances on farm-stored grain, amounted to $\$ 1,229,900,000$ in $1962,10.7$ p.c. above the $\$ 1,110,700,000$ estimated for 1961 , and accounted for 39.1 p.c. of the total farm cash income for the year, excluding supplementary payments. The gain in 1962 reflected higher income from sales of wheat and oats, larger participation payments on previous years' grain crops, and increased net advances on farm-stored grains in Western Canada.

During 1962, the Canadian Wheat Board paid out $\$ 181,100,000$ in participation payments on previous years' grains, 36 p.c. more than in the previous year. These payments arise out of the system of grain marketings in Western Canada whereby farmers, at the time of delivery, are given initial payments and certificates stating the quantities and grades delivered. The certificates entitle farmers to share any surpluses accumulated by the Board through subsequent sales of these grains and the farmers' share of these accumulated surpluses represents the Canadian Wheat Board payments included in estimates of farm income.

Marketings of wheat for the first nine months of 1962 lagged behind those for the first nine months of a year earlier as a result of the small 1961 crop. However, the large crop of 1962 and the availability of elevator space permitted farmers to deliver sufficient grain during the last quarter of 1962 to offset the earlier reduction in marketings and provide a total delivery figure for the year slightly above that for 1961. This, together with an increase on Mar. 1, 1962 of 10 cents per bushel in the initial delivery payment, resulted in a total income from wheat marketings of $\$ 530,800,000$, an amount 8.6 p.c. above that for 1961. An increase in oats marketings of nearly 50 p.c. during the year was reflected in cash income from this source of $\$ 35,300,000$ as against $\$ 24,700,000$ in 1961.

Another important contribution to income from field crops during 1962 was the net advances on farm-stored grains amounting to nearly $\$ 6,000,000$. This was a reverse of the situation in 1961 when repayments exceeded advances by $\$ 34,500,000$. Of those crops for which lower income was estimated in 1962, the most important were barley, rapeseed and tobacco. A substantial reduction in marketings accounted for most of the decline in cash receipts for barley and rapeseed, and reduced income from tobacco reflected very slow or entirely halted sales at Ontario auctions in the autumn.

Livestock and Animal Products.-During 1962, farmers in Canada received a record high return from the sale of livestock and animal products of an estimated $\$ 1,883,200,000$, an amount 4.2 p.c. above the previous all-time high of $\$ 1,807,800,000$ received in 1961. Income from this source represented 59.8 p.c. of the total farm cash income for the year, excluding supplementary payments.

Income in 1962 was higher for cattle, calves, hogs, and poultry and dairy products but lower for sheep and lambs. That from cattle and calves reached an all-time high of $\$ 677,900,000$, an amount 7.8 p.c. above the previous high of $\$ 628,800,000$ established in 1961. However, since marketings were practically unchanged from those of 1961, the increase in returns from this source was attributable entirely to higher prices. The increase in income from sales of hogs-from $\$ 317,700,000$ in 1961 to $\$ 329,000,000$ in 1962-resulted from increased prices and slightly higher marketings. Higher prices of poultry meat were responsible for much of the gain in income from poultry products-from $\$ 283,000,000$ to $\$ 294,800,000$ - and slight increases in both marketings and prices of dairy products brought income from this source to $\$ 538,800,000$, nearly $\$ 5,000,000$ over the 1961 level.

## 6.-Cash Income from the Sale of Farm Products, 1959-62

## 7.-Cash Income from the Sale of Farm Products, by Province, 1959-62

Net Income of Farm Operators from Farming Operations.-Two different estimates of farm net income from farming operations are prepared by the Agriculture Division. One is called realized net income and is obtained by adding together farm cash income from farming operations, supplementary payments and the value of income in kind, and deducting farm operating expenses and depreciation charges. This estimate of farm net income represents the amount of income from farming that operators have left for family living or investment after provision has been made for operating expenses and depreciation charges. The second estimate is referred to as total net income and is obtained by adjusting realized net income to take into account changes occurring in inventories of livestock and stocks of grains on farms between the beginning and end of the year. The latter estimate is the one used to calculate the contribution of agriculture to national income.*

It is estimated that for 1962 realized net income of farmers from farming operations amounted to $\$ 1,453,000,000$, a figure 9.7 p.c. above the estimate of $\$ 1,324,600,000$ for 1961 , and 12 p.c. higher than the average of $\$ 1,297,100,000$ for the five-year period 1957-61. The record high cash income from farm products and the substantial gain in supplementary payments in 1962 more than offset the continued rise in farm operating expenses and depreciation charges; income in kind remained practically unchanged. Increases were estimated for all provinces except Nova Scotia and New Brunswick. On a percentage basis, the provincial gains amounted to: less than 1 p.c. for Quebec; between 6 p.c. and 7 p.c. for Manitoba and Alberta; approximately 9 p.c. for Prince Edward Island and Ontario; and 18 p.c. and 19 p.c. for British Columbia and Saskatchewan, respectively.

For 1962, total farm net income was estimated at $\$ 1,630,300,000$ compared with the estimate of $\$ 1,044,000,000$ for 1961 , and an average of $\$ 1,195,900,000$ for the five-year period 1957-61. Although cash income from farm products and supplementary payments contributed substantially to the higher total farm net income in 1962, most of the gain can be attributed to a significant increase in farm-held inventories of grains in Western Canada between the beginning and the end of the year, as a result of high production. Although that part of farm net income which is represented by inventories is not readily available for spending, it forms the basis of cash advances in Western Canada and it is part of total production for which estimated total expenses were incurred during the year.

Farm cash income, the most important component of farm net income, and supplementary payments are discussed above. Income in kind, which includes the value of agricultural products consumed in homes on farms where produced and the imputed rental value of farm dwellings, was estimated at $\$ 342,600,000$ for 1962, a figure practically unchanged from that of a year earlier. Increases in the imputed rental value of farm dwellings and the value of the consumption of meat almost entirely offset the reduction in the value of other products consumed.

The value of inventory change is obtained by calculating the change in the quantity of grain and the numbers of livestock on farms between the beginning and the end of the year and valuing the differences at average annual prices. The value of inventory change at the end of 1962 was estimated at $\$ 177,300,000$ as compared with minus $\$ 280,700,000$ at the end of the previous year. The estimate for 1962 reflects an increase in the numbers of cattle and calves on farms and a significant rise in the amount of farm-stored grains resulting from the large crops harvested in that year. Although the livestock population increased between the beginning and end of 1961, the gain was far more than offset by the small 1961 crop and the resulting depletion of farm-held grain inventories.

Farm operating expenses and depreciation charges include farm business costs incurred by farmers regardless of whether they are paid for in cash or accumulated as new debt. As far as possible they exclude outlays for goods and services obtained directly from other

[^123]farmers. All subsidy payments are taken into account so that the estimates represent only the net amounts paid by farmers. During 1962 the total of these expenses and depreciation charges reached a high of $\$ 2,109,300,000,5$ p.c. above the $\$ 2,007,800,000$ estimated for 1961. With few exceptions, higher expenditures were recorded for each of the items of goods and services included in the estimates of farm operating expenses. The item for which the greatest increase in expenditure in absolute terms occurred was feed and seed; from $\$ 370,000,000$ in 1961 this outlay rose to $\$ 393,900,000$ in 1962 , largely as a result of higher prices of feed. The next most important increase in expenditure was estimated for farm rent which rose from $\$ 54,900,000$ to $\$ 78,800,000$, reflecting the substantially larger grain crops produced in Western Canada in 1962 and the consequent higher share-rent payments made in this area.

## 8.-Net Income of Farm Operators from Farming Operations, 1959-62

(Exclusive of Newfoundland)
Note.-Includes estimated rental value of farm homes, supplementary payments made under the provisions of the Prairie Farm Assistance Act, payments under the Western Grain Producers' Acreage Payment Regulations and, in 1960, payments under the federal-provincial unthreshed grain assistance policy.

## Subsection 2.-Volume of Agricultural Production

This Subsection presents the results of the first large-scale revision of the index of farm production since it was published in August 1949 on the time and weight base of $1935-39=100$. The construction of the new index was started in 1948 to measure the change taking place in the total annual physical production of agriculture in each of the
provinces (excluding Newfoundland) and Canada; it is intended that the revised index will continue to serve this purpose. The revisions just completed include: a change to a weight base of $1947-51=100$ and a time base of $1949=100$; the introduction of all revised data available since the establishment of the index; and an increase in the number of commodities included.

During the period 1935-62, the output of agricultural products has moved upward. Farm production during the past ten years has averaged nearly 30 p.c. above that for the base year 1949 and between 45 p.c. and 50 p.c. above the average for the pre-war period 1935-39 inclusive. The importance of the items included in the index has gradually changed. Livestock production has increased in importance until its percentage contribution to total production is now only slightly below that of grains, the long-time leading contributor. Although dairy production has increased over the years, the rate of increase has been less than that for many other important products with the result that its contribution to total production in percentage terms is less than it was during the pre-war period. Production of poultry products has risen quite significantly in recent years and this is reflected in the greater proportional contribution of these commodities to total agricultural output.

The index for 1962 is estimated at 151.4, the highest recorded for the new series; this compares with the previous high point of 141.4 reached in 1942 and the high peaks of 140.8 in 1952 and 140.3 in 1956. The record established in 1962 can be attributed to the coincidence of large grain crops in Western Canada and high-level outputs of livestock, poultry products and dairy products.

## 10.-Index Numbers of Physical Volume of Agricultural Production, by Province, 1935-62

( $1949=100$. Exclusive of Newfoundland)
Note.-For a description of the revised index, methods and coverage, see DBS publication Index of Farm Production 1962 (Catalogue No. 21-203).

## Subsection 3.-Field Crops

A wide range of growing conditions occurred throughout Canada during the 1962 season. At planting time, soil moisture reserves were extremely low over most areas of the Prairie Provinces, with the principal exceptions of eastern Manitoba and northern Alberta where excessive rainfall delayed seeding operations and continued throughout the season. In contrast, a large area of Saskatchewan and parts of southern Alberta remained dry. However, in most areas rainfall was frequent, temperatures were below average and crop outturns better than anticipated. Many crops were slow in maturing and much unfavourable weather between mid-August and mid-September resulted in some reduction in quality but the loss caused by early frosts was small. This spell of adverse weather was followed by exceptionally favourable harvesting conditions and late crops ripened well. Most of the harvest was taken off in dry condition.

Ontario and Quebec experienced hot spring weather followed by near drought conditions but these, in turn, were followed by timely rains. With the exception of first-cut hay, most crop yields were excellent. In the Maritimes, excessive moisture during the growing and harvesting season resulted in late maturity of crops and caused much difficulty and loss at harvest time, especially of hay. In British Columbia, generally cool weather prevailed during the spring months, crops developed well and most yields were above those of the previous season.

Substantial declines in production more than offset larger opening stocks of each grain except barley, so that total estimated domestic supplies of the five major grains were 22 p.c. lower in 1961-62 than in 1960-61, amounting to $1,556,900,000$ bu. compared with $1,983,600,000$ bu. Farmers' marketings of wheat, oats, barley, rye and flaxseed amounted to $408,232,000 \mathrm{bu}$. in 1961-62, a decrease of 25 p.c. from the comparable total of $545,703,000 \mathrm{bu}$. in 1960-61. Larger clearances of wheat and increased exports of oats and rye were reflected in total shipments of the five major grains and their products in 1961-62 amounting to $420,735,000 \mathrm{bu}$. of grain equivalent, a figure relatively unchanged from both the 1960-61 total of $419,324,000 \mathrm{bu}$. and the ten-year average (1950-51-1959-60) of $422,641,000 \mathrm{bu}$.

Disappearance of these grains into domestic channels in 1961-62 was estimated at $599,166,000 \mathrm{bu}$. as against $713,691,000 \mathrm{bu}$. in 1960-61. Despite this reduction, while exports were relatively unchanged, the effect of substantially reduced domestic supplies was reflected in a $37-$ p.c. decline in carryover stocks-from 850,548,000 bu. at July 31, 1961 to $537,006,000$ bu. at the same date in 1962. During the season, however, total production of the five major grains was estimated at $1,245,000,000 \mathrm{bu}$. and, as a result, total domestic supplies for the $1962-63$ crop year were placed at $1,782,000,000$ bu., 14 p.c. higher than the 1961-62 total of $1,557,000,000 \mathrm{bu}$.

The 1962 potato crop amounted to $45,064,000 \mathrm{cwt}$. compared with $44,108,000 \mathrm{cwt}$. in 1961; a 6-p.c. decrease in acreage more than offset a record average yield per acre of 157.5 cwt. New Brunswick retained its position as the largest potato-growing province, the average yield per acre in that province reaching an all-time high of 206.0 cwt . Production of corn for grain, the bulk of which is grown in Ontario, amounted to a next-to-record $32,025,000$ bu. in 1962, both acreage and average yield per acre exceeding its 1961 level. Production of tame hay and fodder corn at $26,945,000$ tons reached an all-time high in 1962, resulting mainly from a record outturn of hay well distributed across the country. The soybean crop, all of which is grown in Ontario, amounted to $6,608,000 \mathrm{bu}$. compared with $6,631,000 \mathrm{bu}$. in the previous season, a 4-p.c. increase in seeded acreage generally offsetting a 4-p.c. decline in the average yield per acre. Rapeseed production, primarily reflecting a $43-$ p.c. decline in acreage, dropped from the record 1961 level of $561,000,000 \mathrm{lb}$. to $318,000,000 \mathrm{lb}$. in 1962.

Stocks of Grain in Canada.-Table 14 shows the stocks of Canadian grain on hand in Canada and in the United States on July 31 for the years 1960-62, with averages for the five-year periods $1950-54$ and 1955-59. Stocks in Canada are separated into those in commercial positions and those on farms. Stocks on farms and in country elevators in the Prairie Provinces are given separately.

## 14.-Carryover of Canadian Grain as at July 31, 1960-62, with Averages for 1959-54 and 1955-59

Nore.-Figures for individual years before 1960 will be found in the corresponding table of previous editions of the Year Book.

## Subsection 4.-Livestock and Poultry

Livestock.-Two main features of the livestock industry in 1962 as compared to 1961 were higher prices, especially for cattle and hogs, and larger domestic supplies of feed because of a better grain crop in Western Canada. As a result, there was a substantial increase in the value of livestock marketed through commercial channels. The estimated value of total sales to public stockyards, direct shipments to packing plants and direct on export amounted to $\$ 910,400,000$, an increase of $\$ 76,900,000$ or 9 p.c. over 1961. The higher prices more than offset the reduction in marketings of cattle, sheep and lambs.

Cattle and calves on farms at June 1, 1962 were estimated at 12,075,000, an increase of 1.2 p.c. over the 1961 Census total of $11,933,700$ and an all-time high. There was an increase of 3.4 p.c. in Eastern Canada but a decrease of 0.7 p.c. in the west. Beef cow numbers continued their advance as did steers and calves but other classes decreased slightly. Between 1955 and 1961 total cattle numbers increased about 9 p.c., beef cows increased 24 p.c. and milk cows decreased slightly. Total sheep and lambs at June 1, 1962 were estimated at $1,433,000$ head, down 7.4 p.c. from the June 1961 Census total of $1,548,200$. In the five years between censuses, sheep numbers decreased by 25.7 p.c. in Eastern Canada but increased by 23.1 p.c. in the western provinces. Hog numbers in Canada at June 1, 1962 at 4,973,000 were down 6.7 p.c. from the June 1961 Census total of $5,331,200$; a decrease of 22.5 p.c. in Western Canada was partly compensated for by an increase of 8.1 p.c. in the eastern provinces. Horse numbers continued to decline and were estimated at 477,200 at June 1, 1962, 6.5 p.c. below the year-earlier Census total of 510,600 . These comparisons relate only to nine provinces, being exclusive of Newfoundland and the Territories.

${ }^{1}$ Cows and heifers, two years old or over, kept for milk purposes.
The federal Department of Agriculture inspects all livestock in plants designated as inspected establishments under the Meat and Canned Foods Act. A record is kept of these inspections and figures from 1953 are given in Table 17. Local wholesale butcherings and slaughterings carried out by retail butchers and by farmers for their own use are not included. Actually, the slaughtering and meat packing industry is concentrated in a comparatively small number of large establishments to facilitate greater efficiency and utilization of products; thus the figures of Table 17 are fairly inclusive. The slaughtering and meat packing industry is dealt with in its proper relation to all other manufacturing enterprises in Chapter XIV of this volume. On a gross value basis it normally ranks among the four largest manufacturing industries in Canada but it owes its importance to the value of raw products obtained from the farmer and the rancher rather than to the value added by the manufacturing process.

There were slightly fewer cattle slaughtered in inspected establishments in 1962 than in 1961, the number being down by 0.7 p.c. Slaughterings of calves, on the other hand, were up 2.8 p.c. and of hogs 3.1 p.c., but sheep and lambs registered the considerable decline of 10.5 p.c.

Price movements in 1962 are indicated by the annual average calculation of prices on the Toronto, Montreal, Winnipeg and Edmonton markets as shown in Table 44, p. 472.

## 17.-Livestock Slaughtered at Inspected Establishments 1953-62, and by Month 1961 and 1962

(Exclusive of Newfoundland)

Poultry.-Poultry on farms and their values are given in Table 18; production and consumption of poultry meat are included in Table 19.

## 18.-Numbers and Values of Poultry on Farms, by Province, as at June 1, 1960-62

Note.-Figures given in this table for 1960 and 1961 have been revised since the publication of the 1962 Year Book; figures on a comparable basis are available from DBS for the years 1957-59.

## Subsection 5.-Dairying

Milk production in 1962 reached a new record at $19,303,000,000 \mathrm{lb} ., 0.3$ p.c. higher than in 1961. Only three provinces contributed to the increase-Quebec, Ontario and Manitoba -and most of it was utilized for fluid consumption. Of the total milk produced, 58.9 p.c. was used for factory-made dairy products, 30.8 p.c. was sold in fluid form and 10.3 p.c. was used for all purposes on farms.

${ }^{1}$ Used in farm butter only.
${ }^{2}$ Includes values of skim milk and buttermilk retained on farms.
Butter production in 1962 amounted to $372,201,000 \mathrm{lb}$., almost $8,000,000 \mathrm{lb}$. more than in the previous year. The 1962 total included $361,498,000 \mathrm{lb}$. of creamery butter, $6,751,000$ lb . of dairy or farm-made butter and $3,952,000 \mathrm{lb}$. of whey butter. The annual per capita consumption of creamery butter increased for the first time since 1956, moving from 15.81 lb . in 1961 to 17.26 lb . in 1962. Stocks on hand at the end of the year totalled $135,538,000$ lb., the largest carryover on record; combined with the butter equivalent of butter oil stocks, the carryover was $238,138,000 \mathrm{lb}$.

Factory cheese production in 1962 was estimated at $130,178,000 \mathrm{lb}$., 0.9 p.c. lower than in 1961. Peak cheese production occurred in 1942 when the output was $207,431,000 \mathrm{lb}$. and peak exports in 1945 when they amounted to $135,409,000 \mathrm{lb}$. Exports of cheese, mostly cheddar, in 1962 amounted to $27,252,000 \mathrm{lb}$. compared with $19,508,000 \mathrm{lb}$. in 1961.

${ }^{1}$ Factory-made cheese includes cheddar and other cheese made from whole milk and cream.
${ }^{2}$ Amounts for "other cheese" are included in Quebec, Ontario and Alberta figures but, as fewer than three firms reported in the other provinces, data cannot be included except in the Canada total.

The output of concentrated whole milk, normally only slightly in excess of domestic requirements, was 1.4 p.c. above those requirements in 1962 . Exports dropped off 13.8 p.c. from the 1961 total and per capita consumption increased 2.5 p.c. Skim milk powder production at $192,389,000 \mathrm{lb}$. was $20,640,000 \mathrm{lb}$. below the peak production in 1961. Exports declined from $53,090,000 \mathrm{lb}$. in 1961 to about $35,689,000 \mathrm{lb}$. in 1962 and domestic disappearance at $133,422,000 \mathrm{lb}$. in 1962, was 13.0 p.c. below the record high established the previous year.

The estimated consumption of fluid milk and cream, on a milk basis, amounted to $5,397,413,000$ pt. in 1962 , which was $87,322,000$ pt. higher than the 1961 estimate. Daily average consumption per capita was 0.82 pt., the same as in 1961. The estimated consumption of milk and cream is given by province in Table 25 and the domestic disappearance of all dairy products in Table 26.

## Subsection 6.-Fruits and Vegetables

Fruits.-Commercial fruit growing in Canada is confined almost exclusively to rather limited areas in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. Nova Scotia production is centred mainly in the Annapolis Valley and New Brunswick production in the St. John River Valley and Westmorland County. The fruit growing districts of Quebec are the Montreal area, the North Shore area, the Eastern Townships and the Quebec City district. Ontario fruit is grown in all the counties adjacent to the St. Lawrence River and the Great Lakes as far west as Georgian Bay, the Niagara district being the most productive. In British Columbia the four well-defined fruit areas are the Okanagan Valley, the Fraser Valley, the Kootenay and Arrow Lakes district and Vancouver Island. The climate elsewhere in Canada is not generally suitable for commercial tree fruit culture. In most producing areas, particularly in the Annapolis Valley of Nova Scotia, the Niagara Peninsula of Ontario and the Okanagan Valley of British Columbia, fruit growing is either the principal or one of the most important forms of agriculture and is very important to the economy of those areas. Apples and small fruits are produced commercially in the provinces named but tender tree fruits and commercial vineyards are limited largely to Ontario and British Columbia.

Strawberries are grown commercially in all provinces for which tree-fruit statistics are prepared, as well as in Prince Edward Island. However, this crop is produced_over a
somewhat wider area than are tree fruits. In Nova Scotia, for example, considerable quantities of strawberries are grown in Colchester County and farther north, as well as in the apple producing areas of the Annapolis Valley. In British Columbia most of the strawberries are grown in the Fraser Valley rather than in the predominantly tree-fruit producing area of the Okanagan Valley.

Raspberries are grown commercially in Nova Scotia, New Brunswick and Quebec but the bulk of the crop is produced in Ontario and British Columbia. The Fraser Valley of British Columbia is the most important producing area.

Wild blueberries are harvested on a commercial scale in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick and Quebec. This crop is indigenous to certain lands in these areas. Individuals who harvest the wild berries may undertake to burn the land from time to time for weed control and to effect pruning, dusting is often carried out to control insects, and bees are sometimes introduced to achieve better pollination. A large percentage of the crop is frozen and exported. Some blueberries are picked for sale in other provinces but no statistics of this trade are available. There is also some production of cultivated blueberries, particularly in British Columbia.

A marketing system has been developed for distributing fresh fruit from the specialized production areas to all parts of the country and a large proportion of the deciduous fruit consumed in Canada is grown domestically. Considerable quantities of apples, strawberries and blueberries are exported.

Canning and processing industries have developed in the fruit growing districts and, although the importance of the processing market varies with different fruits, it provides a valuable outlet for substantial proportions of most Canadian-grown fruit crops.

Tables 27 and 28 show the estimated commercial production of fruit, by kind, for the years 1960-62 and by province for 1957-62.

Vegetables.-Estimates of acreage and production of commercial vegetables in Canada are prepared for all provinces except Newfoundland, Prince Edward Island and Saskatchewan. The Province of Ontario is the largest producer, followed by Quebec and British Columbia. A wide variety of crops is grown in these three provinces and a somewhat smaller range in the Maritimes and in the Prairie Provinces.

Canning, freezing and processing of vegetables are carried on in the important producing areas. The estimates in the following tables cover output of commercial growers for processing and for sale on the fresh market but do not include acreages or production of vegetables grown for home use on farms or elsewhere.

${ }^{1}$ Estimates apply only to that portion of the crop grown for processing in Quebec, Ontario, Manitoba and Alberta in 1958; in Ontario, Manitoba and Alberta in 1959, 1960 and 1961.

2 Estimates apply only to that portion of the crop grown for processing in all provinces for which estimates are made except British Columbia.

## Subsection 7.-Other Principal Farm Products

Tobacco.-The chief tobacco growing area of Canada is located in southern Ontario in the counties adjacent to Lake Erie; most of the cigarette tobacco comes from this district. In Ontario as a whole, 122,287 acres of flue-cured or Bright Virginia type tobacco were harvested in 1961. This is the most important type grown in Canada although dark air-cured and fire-cured tobacco as well as cigar tobacco are grown on a limited scale. The only other important production comes from Quebec. In 1961, 5,439 acres of flue-cured tobacco, 4,418 acres of cigar tobacco and 1,224 acres of pipe tobacco were harvested in that province. Recently, small acreages have been successfully grown in Prince Edward Island, Nova Scotia and Manitoba.

A study of Department of National Revenue reports on tax-paid withdrawals of tobacco products reveals changes in the smoking habits of Canadians during the past three decades. In 1922, the first year for which comparable figures are available, Canadian annual per capita consumption of cigarettes was 229 ; by 1959 the annual per capita consumption (calculated on the basis of total population) had increased to 1,939 . The figure for 1961 was 2,012.

31.-Acreage, Production and Value of the Commercial Crop of Leaf Tobacco, by Province, 1957-61

| Year | Quebec |  |  | Ontario |  |  | Other Provinces |  |  |

## 32.-Acreage, Production and Value of the Commercial Crop of Leaf Tobacco, by Main Type, 1957-61

${ }^{1}$ Includes other types not specified.
Sugar Beets and Beet Sugar.-Sugar beets are grown commercially in Quebec, Ontario, Manitoba and Alberta and beet sugar factories are located in these provinces. In Quebec, commercial production is centred in the St. Hilaire area of the Eastern Townships; in Ontario, production is confined largely to the southwestern section of the province. Alberta produces the largest crop and in that province sugar beets are grown under irrigation.

## 33.-Acreage, Yield and Value of Sugar Beets and Quantity and Value of Beet Sugar Shipments 1955-62

| Year | Sugar Beets |  |  |  |  | Beet Sugar <br> (All Types) |  |

| 1962..... | 85,019 | 12.69 | 1,078,563 | . |  | . | . |

Eggs.-The net production of eggs in 1962 amounted to $434,200,000$ doz., $4,277,000$ doz. more than in 1961. The number of layers was about the same in both years but the rate of lay was 197 eggs per layer in 1961 and 199 per layer in 1962. The farm value of eggs to producers was slightly lower in 1962 than in the previous year, being 35.2 cents compared with 35.7 cents. According to hatchery statistics compiled by the Canada Department of Agriculture, 7.1 p.c. fewer egg-production type chicks were hatched in 1962 than in 1961 and the broiler chick hatch was 4.8 p.c. lower; this was the first time in the history of the broiler industry that there was a year-to-year decrease in the hatch of broiler chicks. On the other hand, the number of broiler-type turkey poults hatched was 14.1 p.c. higher than in 1961, although the hatch of turkeys for mature weights was 9.4 p.c. lower.

## 34.-Production, Utilization and Value of Farm Eggs, by Province, 1961 and 1962

${ }^{1}$ Total laid less loss.
Wool.-Canada's wool requirements are met largely by imports which amounted to $54,308,000 \mathrm{lb}$. (greasy basis) in 1962 and $54,430,000 \mathrm{lb}$. in 1961 . Exports amounted to $3,972,000 \mathrm{lb}$. in 1962 and $5,067,000 \mathrm{lb}$. in 1961. The apparent domestic consumption of wool shown in Table 35 is determined on the basis of production, exports and imports but does not take into consideration changes in stocks for which the data are not available. Differences in wool utilization from year to year are therefore probably less marked than is indicated by these figures.

[^131]Honey.-Honey statistics have been compiled on an all-Canada basis since 1924; the $45,145,000-\mathrm{lb}$. production of 1948 was the largest recorded crop. Output in 1961 was $35,030,000 \mathrm{lb}$. and in $1962,30,491,000 \mathrm{lb}$. The decrease in 1962 was attributed to unfavourable weather conditions in the Maritimes and in Western Canada. The number of active beekeepers was considerably below the 1961 total. Bees are kept in some of the fruit growing districts mainly for purposes of pollination.

Honey is produced commercially in all provinces except Newfoundland, about 35 p.c. of the output being accounted for by Ontario.

To facilitate storage, shipment and uniformity of quality, considerable quantities of Canadian honey are pasteurized. Beekeepers' marketing co-operatives are active in several provinces.

Maple Sugar and Maple Syrup.-Maple syrup is produced in the Provinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop comes from the Eastern Townships of Quebec, a district famous both in Canada and in the United States as the centre of the maple products industry. Virtually all of the maple products exported are sent to the United States with the larger proportion moving as sugar, although substantial quantities of syrup are also shipped. Much of the syrup sold in Canada is marketed in one-gallon cans direct to the consumer from the producer but a considerable amount of both sugar and syrup is sold each year to processing firms.

Nursery Stock.-Statistics concerning the nursery industry in Canada for recent years are presented in Tables 39 and 40. All nurseries were asked to report quantities sold of stock propagated during these years; stock purchased from other nurseries in Canada was excluded to prevent duplication. A total of 300 nurseries reported shipments in 1961. Wholesale value of nursery stock shipments of fruit trees, etc., amounted to $\$ 549,288$ in 1961 compared with $\$ 463,289$ in 1960 , and of ornamental species to $\$ 3,927,979$ in 1961 and $\$ 3,637,535$ in the previous year.

${ }^{1}$ Includes the Maritime Provinces for which insufficient information was reported.
Greenhouse Operations.-Annual surveys have been made of greenhouse operations for 1955 and subsequent years. Data are reported by firms and individuals returning questionnaires, with the exception of that for cucumbers and tomatoes grown in Essex County of Ontario (the most important producing area), which is based on information obtained from the local co-operative marketing agency. Only greenhouses used for the production of items for sale are included in the survey.

## Subsection 8.-Prices of Agricultural Products

The monthly index of farm prices of agricultural products was designed to measure changes occurring in the average prices farmers receive at the farm from the sale of farm products. In comparing current index numbers with those before August 1962, certain
points should be considered. Western grain prices used in the construction of the index before Aug. 1, 1962 are final prices for all grains. For the remaining months of 1962, the western grain prices used in the index are initial prices. Subsequent participation payments made on the 1962 crops will be added to the prices currently used and the index revised upward accordingly.

## 42.-Average Index Numbers of Farm Prices of Agricultural Products, by Province, 1956-62, and Monthly Indexes for 1961 and 1962

( $1935-39=100$ )
Nots.-A description of this index, its coverage and the methods used will be found in DBS Quarterly Bulletin of Agricultural Statistics (Catalogue No. 21-003) for October-December 1946.

Monthly prices of grain and monthly prices of livestock are shown in DBS Quarterly Bulletin of Agricultural Statistics (Catalogue No. 21-003).

## Subsection 9.-Food Consumption

Food consumption figures represent available supplies, including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations are made at the retail stage of distribution, except for meats for which the figures are worked out at the wholesale stage. The amount of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reach the hands of the consumer. It should also be pointed out that there are minor inaccuracies in certain of the figures since statistics of storage stocks in the hands of retailers and consumers are not available.

All basic foods are classified under 13 main commodity groups. The total for each group is computed using a common denominator for the group, for example: milk solids (dry weight) in the dairy products group; fat content for fats and oils; and fresh equivalent for fruits. All foods are included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

The series in Table 45 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1956-60 as an average for comparison with the years 1960 and 1961.

${ }^{1}$ Quantity small; included with beef. ${ }^{2}$ Trimmed of larding fat and excluding offal. ${ }^{3}$ Includes commercial lard production and estimated lard equivalent of renderable pork fat available from all uninspected slaughter.

## Section 5.-Agricultural Statistics of the Census

This Section presents a limited amount of information from the 1961 Census of Agriculture. Details are contained in Vol. V of the 1961 Census of Canada and in a number of special and advance census reports. A list of these publications and their prices is available from the DBS on request.

Number of Farms.-There were 16 p.c. fewer farms in Canada in 1961 than in 1956, the year of the immediately preceding census. The number dropped from 575,015 in the earlier year to 480,903 in the later. However, part of this decrease was attributable to a change in the census definition of a farm. In the 1956 (and 1951) Census, a farm was defined as a holding on which agricultural operations were carried out and which was (a) three acres or more in size, or (b) from one to three acres in size and with agricultural production during the previous year valued at $\$ 250$ or more. In the 1961 Census, a farm was defined as a holding of one acre or more with the sales of agricultural products during the previous year valued at $\$ 50$ or more. On the basis of the 1956 definition, the decrease in the number of farms was from 575,015 to 521,634 in 1961 , or about 9 p.c.

${ }^{1}$ See text immediately preceding table.
Farm Areas.-The total area of farms as defined in the 1961 Census was 172,551,051 acres, only slightly less than the $173,923,691$ acres recorded in 1956. Improved farm land for the country as a whole was up 3 p.c. from $100,326,243$ acres to $103,403,426$ acres and unimproved farm land, which includes woodland and rough pasture, was down about 6 p.c. from $73,597,448$ acres to $69,147,625$ acres. Decreases in total farm area in the six eastern provinces and in British Columbia offset by almost 1,400,000 acres the increases in total farm area in the Prairie Provinces and the Territories. As Table 48 shows, only Manitoba, Alberta and British Columbia reported more farm land under crops in 1961 and in 1956 but the total increase in these provinces was somewhat less than the total decrease in the other provinces. On the other hand, the total increase in improved pasture in the four western provinces was somewhat greater than the total decrease in the eastern provinces and there was a substantial increase in the acreage under summer fallow for Canada as a whole.

${ }^{1}$ Includes field, vegetable, fruit and nursery crop land.
Economic Classification of Farms.-Value of sales was the main criterion used for the economic classification of farms. Commercial farms were defined as farms reporting sales of agricultural products valued at $\$ 1,200$ or more for a 12 -month period (excluding institutional-type farms); these were subdivided into seven classes based on the value of agricultural products sold.

Small-scale farms were divided into two groups: part-time farms included those with sales of agricultural products of $\$ 250$ to $\$ 1,199$ and for which the operator reported (a) 100 days or more of off-farm work (excluding exchange work) or (b) income received by the operator and his family from all other sources (excluding income from investments) greater than the income received from the sale of agricultural products; other small-scale farms were farms with reported agricultural sales of $\$ 250$ to $\$ 1,199$ and the farm operator (a) worked off the farm less than 100 days and (b) reported the value of agricultural sales greater than the income received from other sources. Residential and other small farms included those with value of agricultural products sold of less than $\$ 250$, and institutional farms, etc. included experimental farms, community pastures, Indian reserve farms and institutional-type farms, regardless of the amount of sales of agricultural products.

Type of Commercial Farms.-Commercial farms in the 1961 Census (farms reporting $\$ 1,200$ or more sales of agricultural products) are classified by product type in Table 50. A criterion of 51 p.c. or more of total sales was used for this classification; for example, a farm was typed as a poultry farm if 51 p.c. or more of the total agricultural sales for the farm was obtained from the sale of poultry products, and a farm was classed as a dairy farm if 40 p.c. to 50 p.c. of total sales was obtained from dairy products, provided the sale of dairy products together with the sale of cattle and calves amounted to 51 p.c. or more of total sales.

Size of Farms.-Farms are classified by size and by province in Table 51. More than 56 p.c. of the farms of Canada contain less than 240 acres. Size, of course, varies greatly among the provinces; in Newfoundland almost 90 p.c. of the farms are under 70 acres; in the Maritime Provinces 80 p.c. are under 240 acres; in Quebec and Ontario 67 p.c. are between 70 and 240 acres; in the Prairie Provinces 43 p.c. contain from 70 to 399 acres and 54 p.c. 400 or more acres; and in British Columbia 88 p.c. are between 3 and 400 acres in size.

Tenure and Age of Farm Operators.-The proportion of farm operators owning all or part of their land increased from 93 p.c. in 1951 to 94 p.c. in 1961, the highest proportion since the turn of the century. As a consequence, the percentage of farms operated entirely on a rented basis continued to decrease.

There was also a decrease in the proportion of farm operators in the younger age groups. Those under 35 years of age decreased from 22 p.c. in 1951 to 17 p.c. in 1961 and, conversely, the proportion of operators of from 45 to 54 years of age increased from 23 p.c. to 27 p.c. and the proportion of those 55 years of age or older increased from 30 p.c. to 32 p.c. in the same comparison.

[^135]Farm Machinery and Electrification.-The numbers of most types of machinery on farms increased considerably between 1951 and 1961 as shown in Table 53. However, technological changes were reflected in a reduction in the numbers of such items as threshing machines and grain binders since these types of harvesting equipment are rapidly being replaced by combines.

The proportion of farms reporting electric power increased in all provinces during the same period, although the fact that there were fewer farms resulted in a decrease in the number reporting electric power in certain provinces. The most important increases occurred in Prince Edward Island where the proportion of farms reporting electric power was 22 p.c. in 1951, 40 p.c. in 1956 and 78 p.c. in 1961; in Newfoundland where the increase was from 38 p.c. in 1951 to 44 p.c. in 1956 and 66 p.c. in 1961; in Saskatchewan where the increase was from 16 p.c. in 1951 to 42 p.c. in 1956 and 66 p.c. in 1961; and in Alberta where it was from 25 p.c. to 52 p.c. and 72 p.c. for the same years.

Farm Capita1.-While the value of farm land and buildings in Canada increased by more than one half between 1951 and 1961 and the value of farm machinery and equipment increased by about one third, there was a slight decrease in the value of livestock and poultry on farms. Table 55 gives the value of farm capital by province for 1951 and 1961.
55.-Farm Capital, by Province, Censuses of 1951 and 1961

## Section 6.-International Crop Statistics

Tables 56 and 57 are based on estimates published in February and May 1963 by the Foreign Agricultural Service, United States Department of Agriculture, and give the acreages and production of wheat and the production of oats and barley for the harvests of 1961 and 1962 with average for the years 1955-59, in the leading countries of the world.

## 56.-Estimated Acreages and Production of Wheat Harvested in 1961 and 1962 in Specified Countries, with Average for 1955-59

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

Canada's extensive forests have been an invaluable asset to the country and its people since the earliest days of settlement. The productive portion of these forests has poured increasing wealth into the stream of national income, contributing to the economy of the country as the producer of raw materials for industry and as the source of livelihood for hundreds of thousands of persons. At the same time, the existence of widespread forest cover, productive or unproductive in the sense of human utilization, remains essential to the maintenance of the balance of nature-in protecting water-catchment areas and assuring supplies of water, in lowering the temperature, reducing the velocity of the wind and protecting the land against drought and erosion, and in providing shelter for birds and animals.

Perhaps in no other country is the national wealth so dependent upon its forest resources and the success of its forest industries as in Canada. The annual forest harvest of some $3,200,000,000 \mathrm{cu}$. feet supports a highly complex and diversified export and domestic industry directly employing more than 300,000 persons and paying out $\$ 1,200,000,000$ annually in salaries and wages. The forests support 8,000 sawmills and 4,000 wood-using plants, many of them small units contributing appreciably to the income of local economies. The pulp and paper industry alone stands first among Canadian manufactures in terms of employment, wages paid, new investment and net value of output, and the sale of forest products abroad represents about 30 p.c. of the value of Canada's export trade.

## Section 1.-Forest Regions $\dagger$

The forests of Canada cover a vast area in the north temperate climatic zone. Wide variations in physiographic, soil and climatic conditions cause marked differences in the

[^138]character of the forests in different parts of the country; hence, eight fairly well defined forest regions may be recognized. These regions, with the relative proportion of the total area of all forest regions occupied by each, are as follows:-

Boreal Forest Region.-This Region comprises the greater part of the forested area of Canada, forming a continuous belt from Newfoundland and the Labrador coast westward to the Rocky Mountains and northwestward to Alaska. The white and the black spruces are characteristic species; other prominent conifers are tamarack which ranges throughout, balsam fir and jack pine in the eastern and central portions, and alpine fir and lodgepole pine in the western and northwestern parts. Although the forests are primarily coniferous, there is a general admixture of broadleaved trees such as the white birches and poplars; these are important in the central and south-central portions, particularly in the zone of transition to the prairie. In turn, the proportion of spruce and tamarack rises northward and, with increasingly rigorous climatic conditions, the close forest gives way to the open lichen-woodland which finally merges into tundra. In the east there is, along the southern border of the Region, a considerable intermixture of species from the Great Lakes-St. Lawrence Forest such as the white and the red pines, yellow birch, sugar maple, black ash and eastern white cedar.

Great Lakes-St. Lawrence Forest Region.-Along the Great Lakes and the St. Lawrence River Valley lies a forest of a very mixed nature, characterized by the white and the red pines, eastern hemlock and yellow birch. With these are associated certain dominant broadleaved species common to the Deciduous Forest Region, such as sugar maple, red maple, red oak, basswood and white elm. Other species with wide range are the eastern white cedar and largetooth aspen and, to a lesser extent, beech, white oak, butternut and white ash. Boreal species, such as the white and the black spruces, balsam fir, jack pine, poplars, and white birch, are intermixed and, in certain central portions as well as in the east, red spruce is abundant.

Subalpine Forest Region.-This is a coniferous forest found on the mountain uplands in Western Canada. It extends northward to the major divide separating the drainage of the Skeena, Nass and Peace Rivers on the south and to that of the Stikine and Liard Rivers on the north. The characteristic species are Engelmann spruce, alpine fir and lodgepole pine. There is a close relationship with the Boreal Region, from which the black and the white spruces and aspen intrude. There is also some entry of blue Douglas fir from the Montane Forest and western hemlock, western red cedar and amabilis fir from the Coast Forest. Other species found are western larch, whitebark pine, limber pine and, on the coastal mountains, yellow cedar and mountain hemlock.

Montane Forest Region.-The Region occupies a large part of the interior uplands of British Columbia as well as a part of the Kootenay Valley and a small area on the east side of the Rocky Mountains. It is a northern extension of the typical forest of much of the western mountain system in the United States and comes in contact with the Coast, Columbia, and Subalpine Forests. Ponderosa pine is a characteristic species of the southern portions. Blue Douglas fir is found throughout but more particularly in the
central and southern parts; lodgepole pine and aspen are generally present, the latter being particularly well represented in the north-central portions. Engelmann spruce and alpine fir from the Subalpine Region together with white birch are important constituents in the northern parts. The white spruce, though primarily boreal in affinity, is also present here. Extensive prairie communities of bunch-grasses and forbs are found in many of the river valleys.

Coast Forest Region.-This is part of the Pacific Coast forest of North America. Essentially coniferous, it consists principally of western red cedar and western hemlock, with abundant sitka spruce in the north and with the addition of Douglas fir in the south. Amabilis fir and yellow cedar occur widely and, together with mountain hemlock and alpine fir, are common toward the timber-line. Western white pine is found in the southern parts and western yew is scattered throughout. Broadleaved trees, such as black cottonwood, red alder and broadleaf maple, have a limited distribution. Arbutus and Garry oak occur in Canada only on the southeast coast of Vancouver Island and the adjacent islands and mainland. These are species whose centres of population lie southward in the United States.

Acadian Forest Region.-Over the greater part of the Maritime Provinces, exclusive of Newfoundland, there is a forest closely related to the Great Lakes-St. Lawrence Region and, to a lesser extent, to the Boreal Region. Red spruce is a characteristic though not exclusive species and associated with it are balsam fir, yellow birch and sugar maple, with some red pine, white pine and hemlock. Beech was formerly a more important forest constituent than at present, for the beech bark disease has drastically reduced its abundance in Nova Scotia, Prince Edward Island and southern New Brunswick. Other species of wide distribution are the black and the white spruces, red oak, white elm, black ash, red maple, white birch, wire birch and the poplars. Eastern white cedar, though present in New Brunswick, is extremely rare elsewhere and jack pine is apparently absent from the upper St. John Valley and the western half of Nova Scotia.

Columbia Forest Region.-A large part of the Kootenay River Valley, the upper valleys of the Thompson and Fraser Rivers and the Quesnel Lake area of British Columbia contain a coniferous forest closely resembling that of the Coast Region. Western red cedar and western hemlock are the characteristic species in this interior "wet belt". Associated trees are the blue Douglas fir which is of general distribution and, in the southern parts, western white pine, western larch, grand fir and western yew. Engelmann spruce from the Subalpine Region is important in the upper Fraser Valley and is found to some extent at the upper levels of the forest in the remainder of the Region. At lower elevations in the west and in parts of the Kootenay Valley the forest grades into the Montane Region and, in a few places, into prairie grasslands.

Deciduous Forest Region.-A small portion of the deciduous forest, widespread in the eastern United States, occurs in southwestern Ontario between Lakes Huron, Erie and Ontario. Here, with the broadleaved trees common to the Great Lakes-St. Lawrence Region, such as sugar maple, beech, white elm, basswood, red ash, white oak and butternut, are scattered a number of other broadleaved species which have their northern limits in this locality. Among these are the tulip-tree, cucumber-tree, papaw, red mulberry, Kentucky coffee-tree, redbud, black gum, blue ash, sassafras, mockernut and pignut hickories, and scarlet, black and pin oaks. In addition, black walnut, sycamore and swamp white oak are confined largely to this Region. Conifers are few and there is only a scattered distribution of white pine, tamarack, red juniper and hemlock.

## Section 2.-Forest Resources

The forested area of Canada is estimated at $1,713,755$ sq. miles, and about 56 p.c. of that area is capable of producing merchantable timber. Of this productive area, 719,919 sq. miles are now accessible for commercial operations and the remainder, at present beyond the reach of economical transportation facilities, contains much valuable timber that will be brought progressively into commercial development as demand requires its use and as transportation becomes available. The great areas of forest considered commercially non-productive are nevertheless of significant value to the country in the influence they exert on climate, moisture and soil. Table 1 shows the areas of productive and non-productive forest land in each province and territory. Forested land, classified by type of growth and by province, is given in Chapter I at p. 31.
1.-Productive and Non-productive Forest Land, by Province, 1962

| Province or Territory | Productive Forested Land |  |  | Nonproductive Forested Land | Total Forested Land |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Accessible | Potentially Accessible | Total |  |  |
|  | sq. miles | sq. miles | sq. miles | sq. miles | sq. miles |

| Alberta | 115,574 | 3,809 | 119,383 | 41,056 | 160,439 |
| British Columbia | 183,500 | 24,911 | 208,411 | 59,227 | 267,638 |
| Totals, Provinces.. | 694,019 | 192,608 | 886,627 | 551,328 | 1,437,955 |
| Yukon Territory . | 14,200 | 27,900 | 42,100 | 39,100 | 81,200 |
| Northwest Territories | 11,700 | 21,900 | 33,600 | 161,000 | 194,600 |
| Canada | 719,919 | 242,408 | 962,327 | 751,428 | 1,713,755 |

There are more than 150 tree species in Canada, of which 31 are conifers, commonly called 'softwoods'. About two thirds of these softwoods and 10 p.c. of the large number of deciduous or 'hardwood' species are of commercial importance. Approximately 82 p.c. of the volume of merchantable timber is made up of softwood species. The dominant species existing in each forest region are given in Section 1. Detailed information is contained in Department of Forestry Bulletin No. 61, Native Trees of Canada.*

With help from the Federal Government, inventories of the forest resources are made periodically by provincial forest authorities and, with their co-operation, the federal Department of Forestry compiles the National Forest Inventory. The latest estimates of the total stand of timber, by province and region, appear in Table 2. These estimates are subject to constant revision as more accurate and complete inventories are compiled.

The predominant part played by pulp and paper, lumber and other forest product industries in the development of Canada has resulted in a widespread tendency to evaluate the forest in terms of timber alone. However, a growing realization of the economic importance of the forest for its non-commercial values, such as recreation and wildlife and watershed protection, is bringing about increasing recognition of the true value of the forest and is thus developing a broader concept of forestry.

${ }^{1}$ Ten inches D.B.H. or over (suitable for saw timber).
${ }^{2}$ Four to nine inches D.B.H. (units of 85 cu . feet).

Tenure of Forest Land.-Corporations and private individuals own 9 p.c. of the productive forest land of Canada and 91 p.c. is in the possession of the Crown in the right of the federal or the provincial governments. Rights to cut Crown timber under lease or licence have been granted on 22 p.c. of the productive forest land; the remainder comprises unalienated productive forest areas and federal lands such as Indian reserves, military reserves, etc.

Woodlots on the 480,903 farms (1961) across the country comprise about 4 p.c. of the total accessible productive forest. These small wooded tracts, ranging in size from three or four acres to 200 or more acres, are among the most accessible forests in Canada. Also, the woodlots of Eastern Canada are, in general, highly productive because they lie in the southern part of the country and frequently occupy soils that are considerably higher in quality than those typical of the northern forests.
3.-Tenure of Occupied Productive Forest Land, by Province, 1962
(Net area in sq. miles)

## Section 3.-Forest Depletion

General information on forest depletion and increment as well as statistics on forest fires and fire losses are presented in this Section. The scientific control of the influences that account for wastage, such as forest fires, insect pests, etc., is dealt with in Section 4.

The average annual rate and cause of depletion of reserves of merchantable timber during the ten years 1951-60, together with annual data for 1960 and 1961, are given in Table 4. Of the total depletion of the forests in the ten-year period, 92 p.c. was utilized and 8 p.c. was destroyed by fire. (Information on the extent of damage caused by agencies other than fire, such as insects, disease and natural mortality, is not available.) The average annual utilization of $3,223,029,000 \mathrm{cu}$. feet comprised 48 p.c. logs and bolts, 40 p.c. pulpwood, 10 p.c. fuelwood, and 2 p.c. miscellaneous products. About 5 p.c. of the total utilization was exported in the form of logs and bolts and pulpwood.

The accessible portion of the productive forests of Canada, covering an area of 719,919 sq. miles, constitutes the reserve from which forest production will be obtained for many years to come. The supply of merchantable timber on this area is estimated at $587,459,000,000 \mathrm{cu}$. feet and the utilization in 1961 of $3,303,289,000 \mathrm{cu}$. feet therefore represented less than 1 p.c. of the accessible productive volume. However, it should be noted that utilization does not occur evenly throughout the accessible productive forest area but is concentrated on the relatively small area of occupied forest land (land under lease, licence or private ownership). Thus, overcutting may occur on many of these occupied areas, emphasizing the need for orderly management of all commercial forests if the forest industries are to maintain a dominant position in the Canadian economy.

The more efficient utilization of cut timber is an important factor related to forest depletion, for there is little doubt that in the past too high a percentage of the sawn log was discarded. However, changes of great significance have taken place recently in the uses of wood, permitting the utilization of sizes, qualities and species previously considered unmerchantable. The development and manufacture of rayon, cellophane and other products of the cellulose industry have extended the use of wood and the increasing production of plastic-wood products, fibre board and laminated wood has resulted in greater use of inferior grades of wood and species of trees and therefore in the more complete utilization of forest resources and the elimination of much waste.

Forest Fire Statistics.-A record 8,655 forest fires burned in Canada during 1961. The area burned was nearly five times the annual average for the previous ten years. Volumes of timber lost in 1961 were about seven times greater than in 1960 and nine times more than average losses experienced between 1951 and 1960. Monetary losses were estimated at a record level of $\$ 69,000,000$ but this figure should be considered an approximation only since large portions of the area burned and timber damaged were in areas currently inaccessible for logging. Among the provinces, only Nova Scotia suffered less than average dollar losses and only Nova Scotia, Quebec and Alberta experienced smaller than average areas burned over.

[^141]As shown in Table 7, lightning caused 34 p.c. of the forest fires in 1961. Although of record proportions, this figure does not convey the full importance of lightning as a fire cause. In Ontario and New Brunswick, lightning-caused fires accounted for 99 p.c. and 90 p.c., respectively, of the areas burned. For Canada as a whole, more than 50 p.c. of the area burned resulted from lightning fires. Human carelessness remained a major cause of forest fires, smokers and campers being the worst offenders.

# Section 4.-Forest Administration, Research and Conservation 

Subsection 1.-Federal Forestry Program

Administration.-The Federal Government is responsible through several departments and agencies for the protection and administration of the forest resources of the Yukon and Northwest Territories and of other federal lands such as the National Parks, Indian reserves, military areas, and forest experiment stations. Prior to Oct. 1, 1960, when the Department of Forestry Act became effective, research in forestry and forest products and certain other forestry activities was carried out by the Forestry Branch of the Department of Northern Affairs and National Resources under the authority of the Canada Forestry Act of 1949. Research in forest insects and diseases was conducted by the Forest Biology Division of the Department of Agriculture. These organizations were combined in the Department of Forestry.

The Department of Forestry Act (which repealed the Canada Forestry Act) sets out the duties, powers and functions of the Minister of Forestry as extending to and including "all matters over which the Parliament of Canada has jurisdiction relating to the forest resources of Canada". The main functions of the Department include: (1) provision for the conduct of research relating to the protection, management and utilization of the forest resources of Canada and the better utilization of forest products; (2) undertaking, promoting or recommending measures for the encouragement of public co-operation in the protection and wise use of the forest resources of Canada; (3) co-operating with provincial governments and others by means of agreements relating to forestry matters; (4) provision of forest surveys and advice relating to the protection and management of federally administered forest lands; and (5) assuming responsibility for forest protection and management on federal lands at the request of the department or agency concerned. The Minister may consult with and inaugurate conferences of provincial or municipal authorities, universities, representatives of industry or other interested persons. The Act provides for the establishment of laboratories and other necessary research facilities, and of forest experimental areas on federal lands and for regulations for the protection, care and management of such areas.

To carry out its responsibilities, the Department maintains an Administration Branch, three Research Branches and an Economics Division. The Administration Branch includes those units of the Department not engaged in scientific research or economic studies. It is composed of five Divisions: Provincial Agreements, Forest Management, Information and Technical Services, Personnel Services and Administrative Services. The Provincial Agreements Division is concerned with the administration of federal-provincial cost-sharing agreements (see p. 500). The Forest Management Division conducts forest surveys on federal lands throughout Canada and provides advice and assistance regarding forest management to the administering agencies. It also provides for the management of forests including timber disposal in certain areas on behalf of other government departments, the most important of these being the military training area, Camp Gagetown, in New Brunswick. Co-operation is extended to the External Aid Office in administering technical assistance programs involving forest surveys in other countries. The Information and Technical Services Division includes both operating and servicing functions in that it provides a program of public information on forestry as well as library, editorial and technical services. A comprehensive public relations and information program, in course of development, will include the production and distribution of a number of lay publications designed to increase public awareness of the importance of Canada's forest resources and the need of conserving them; the distribution of scientific publications and the interpretation of the scientific work of the Department to the general public; the use of press, radio, and television facilities; the production of exhibits, displays and posters; and the maintenance of a photographic library dealing with forestry subjects. The Personnel Services and Administrative Services Divisions are servicing elements for the Department as a whole.

The functions of the three Research Branches and the Economics Division are described in the following paragraphs.

Forest Research Branch.-The functions of this Branch are (1) to provide basic information on the characteristic occurrence, growth, development and behaviour of forest tree species throughout the wide range of forest types and environmental conditions of Canada and (2) to develop and test new or improved methods for use in forest management and forest fire control. The program is conducted through seven district offices across Canada and often in co-operation with other federal departments, provincial forest authorities, other research agencies, universities and industry.

Forest management research deals with silviculture, tree biology, forest land and forest mensuration. Many of the silvicultural studies involve (a) assessing the factors responsible for the success or failure of natural regeneration following various cutting methods and treatment of seed beds, (b) comparing different methods of seeding and planting, and (c) determining the effects of different methods of intermediate cutting on the development of residual trees and stands. Studies are made of successional changes in most of the important forest types. Application of silvicultural techniques as well as research in regulation of cut and in methods of protection are aimed at determining how forests may be maintained at the highest levels of production. The relationships between forest growth and site are being studied with a view to the assessment of long-term productivity. The requirements of light, temperature and moisture that will produce optimum conditions for growth and development are being determined for the seedlings of many important species of trees. The physiological processes of growth and reproduction are under investigation for a limited number of species. In tree breeding, superior strains are selected or developed and there is a continual improvement in propagation and breeding techniques. Research in forest land encompasses forest geography and land classification. Research in soils is directed toward determining the relation of tree growth and nutrition to chemical and physical properties of the soil.

Techniques used in mensuration are constantly under review and study; new methods are tested and developed. Research in forest inventory methods is of increasing importance because of the continuing programs of forest inventories being conducted in most provinces
and in the northern Territories. Data from air photographs are correlated with field observations to develop new techniques for estimating timber. The use of stand volume tables and various methods of field sampling are being investigated and compared. Research is continuing in methods for measuring tree images and tree shadows to determine heights, crown widths, canopy density and other data from photographs taken in different seasons of the year under various conditions. The use of large-scale photography of sample areas is also being investigated and studies are being made in the identification of species and sub-types.

Adequate protection of forests against fire is of vital importance in Canada. The Forest Research Branch works in full co-operation with provincial forest services in almost all phases of forest fire control. Major contributions of the Branch have been in the fields of fire danger measurement and fire control planning. Investigations are being made of forest fire behaviour, of the use of prescribed fire for hazard reduction and seed bed preparation, of how to improve the reporting of forest fires, and of fire damage appraisal and related factors in forest protection standards. Studies are being continued in the use of chemicals for fire suppression and pre-suppression, of fire fighting equipment and techniques, and of the use of aircraft in forest fire control. Another important field of endeavour is the study of lightning and other fire causative agencies.

Forest Products Research Branch.-The work of this Branch is directed toward obtaining the necessary background information and data on the properties of Canadian woods, developing new and better uses for wood products, improving manufacturing processes, and effecting more complete utilization of wood substances available from the forest. Its activities, covering every aspect of forest products except that relating to paper, include the determination of the physical, mechanical and chemical properties of wood and their relation to adaptability in use; studies of the factors affecting the quality of wood and of manufactured wood products; determination of the factors that cause wood waste in logging and manufacturing; research and investigation into fire retardant treatments, the preservative treatment and painting of wood and the use of wood for the manufacture of cellulose, wallboards, alcohols, organic acids, and extractives; studies to determine possible new economic and more valuable uses for woods; and research aimed at determining methods and means for the practical and economical utilization of all wood substances available from the annual timber harvest.

The program is conducted at two laboratories-one at Ottawa and the other at Vancouver-with units consisting of timber engineering, containers, glues and gluing, veneer and plywood, timber physics, wood chemistry, wood preservation, paints and coatings, wood pathology, wood anatomy, logging, lumber manufacture and lumber seasoning. The results of Branch Research are made available to the thousands of plants comprising Canada's timber manufacturing and wood-using industries. By means of numerous technical publications and through other channels, continuous effort is devoted to the widespread dissemination of research results.

Close liaison is maintained with the forest products industries and the users of timber to ensure that the work of the Branch is of optimum national benefit. Assistance is received from a National Advisory Committee comprising members representing lumber manufacturers and other wood-using groups. There is constant co-operation with various government units in the performance of many special research investigations concerned with the use of wood. Research into the use of wood in housing construction and as an engineered material continues as an important activity that is undertaken in co-operation with the National Research Council and the Central Mortgage and Housing Corporation.

Officers of the Industrial Liaison Service of the Branch visit sawmills and other woodworking plants in their respective regions to keep industry aware of research developments and technical advances which may assist in the solution of industrial problems. The field representatives also keep the laboratories informed of field problems on which research would be of value.

Branch personnel serve on many national technical committees such as those of the Canadian Standards Association, as well as on such international committees as those of the American Wood Preservers' Association, the American Society for Testing Materials, the International Union of Forest Research Organizations, and the Food and Agriculture Organization of the United Nations. Continuous collaboration is maintained with forest products laboratories in other countries for the dual purpose of exchanging information and avoiding unnecessary duplication of research.

Forest Entomology and Pathology Branch.-This Branch conducts research on forest insects and diseases and maintains regional laboratories and field stations in all principal forested regions of Canada. The forest insect and disease survey is a Canadawide project conducted by the Branch in co-operation with the provincial forest services and forest industries, the primary objective of which is to maintain an annual census of forest insect and disease conditions, and to detect and predict the occurrence of outbreaks. Results of the survey are made immediately available to the owners and operators of forest lands for use in planning salvage programs and directing control operations or other measures to reduce damage. An important secondary objective of the survey is extension of knowledge of the insects and fungi affecting forest trees, including their life histories, ranges of distribution, and host-parasite relationships.

The research programs of the regional laboratories are designed to lead to comprehensive understanding of the biology and ecology of the more destructive forest insects and fungi, and the causes of fluctuations in abundance or severity of damage in time and place. Problems under intensive study include insect defoliators, leaf diseases, sucking insects, dwarf mistletoes, stem cankers, bark- and wood-boring beetles, trunk and root decays, tip- and root-boring insects, and diseases of tree seedlings in forest nurseries. A recent development is the initiation of investigations of virus diseases of forest trees. Laboratory research on development, physiology, nutrition and taxonomy complements the field ecological studies of insects and fungi in the forest environment. Problems of broad national importance in insect pathology, cytology and genetics, bioclimatology and chemical control are investigated by Branch sections, which are appropriately staffed and equipped for research in these special fields.

The Forest Entomology and Pathology Branch also carries out experiments in control, utilizing cultural techniques, chemicals and biological control agents including parasites, predators and insect pathogens. Technical advisory services are provided in evaluating possibilities of eradication or control, or other applications of research results. Recent examples include recommendations for reduction of seedling losses in forest tree nurseries through cultural techniques and chemical applications; the co-operative organization of cull surveys to improve forest inventories; consultation with local authorities on the Dutch elm disease problem in New Brunswick, Quebec and Ontario, designed to limit spread and damage through control of the disease vectors and sanitation procedures; and technical co-operation with provincial governments and industrial agencies in the organization of spraying operations against the spruce budworm in New Brunswick and Quebec, and the black-headed budworm, the saddle-backed looper and the ambrosia beetle in British Columbia.

Economics Division.-The functions of the Economics Division are to advise the Department regarding the economic implications of present and proposed policies; to keep the economic position of Canada's forest industries under review; to keep in touch with forestry and international developments in other countries; and to contact economic studies relating to forestry in Canada. Co-operation with international organizations concerned with forestry and in which Canada maintains membership includes the preparation of quarterly and annual statistical reports to the Food and Agriculture Organization of the United Nations and to the Organization for Economic Co-operation and

Development. A National Forest Inventory is compiled annually from information supplied by provincial governments and published by the Dominion Bureau of Statistics in a series entitled Canadian Forestry Statistics. This information is also included in Canada's submission to FAO for use in compiling the World Forest Inventory every five years.

Federal-Provincial Forestry Agreements.-The passing of the Canada Forestry Act in 1949 was an event of great significance to federal-provincial relations in the field of forestry, as authority was given to the then Minister of Mines and Resources to "enter into agreements with any province for the protection, development or utilization of forest resources". Subsequently this Act was repealed and replaced by the Department of Forestry Act, 1960. Since the beginning, agreements have been entered into with most provinces; these now provide for federal financial support for programs of forest inventories and reforestation, for the purchase of capital assets to be used in forest fire protection and for forest access and stand improvement projects.

Under the Department of Forestry Act, a new forestry agreement was entered into with the provinces for a term of two years starting Apr. 1, 1962, covering in a "single package" the federal aid formerly available under three separate agreements. The amount of federal aid provided for the period is $\$ 16,000,000$.

The main feature of the new agreement is flexibility. A province may spend its entire allotment for forest access projects, which include construction of access roads and airstrips for forestry purposes. Up to 60 p.c. of the provincial allotment may be claimed for inventory, reforestation, fire protection and, for the first time, stand improvement projects. A province, therefore, has wide discretion in allocating federal aid among the specified fields of work. Federal assistance is based on payment of 50 p.c. of provincial costs, but reforestation is the one exception. The Federal Government pays $\$ 15$ per thousand trees planted, $\$ 2$ per acre seeded and $\$ 4$ per acre seeded with ground preparation. In addition, 25 p.c. of the cost of establishing new forest nurseries is contributed.

Costs of management-type surveys are included in the new agreement as sharable, and the reforestation of occupied or unoccupied Crown land qualifies for assistance provided it is carried out by the province.

Since 1951, more than $\$ 32,000,000$ in federal funds have been contributed to the provinces under the main forestry agreements, plus $\$ 5,000,000$ for aerial spraying against budworm infestations in New Brunswick and, on a smaller scale, in British Columbia, and $\$ 472,000$ under a special stand improvement agreement with the Province of Nova Scotia, designed to provide woods experience for coal miners laid off in the Cape Breton area.

Work accomplished with federal assistance has included the completion of forest inventories by seven provinces. Most of the provinces have instituted programs concerned with management-type inventories and at the same time are maintaining their initial inventories in a reliable state. As a result of these inventories, new woods operations have sprung up, particularly in the British Columbia interior, and new pulp and paper mills have been built or are planned in other areas of Canada. The Federal Government has contributed under the agreements to the establishment of 15 new forest nurseries and the planting of $178,000,000$ trees. Federal contributions of more than $\$ 7,000,000$ have been used for the purchase of fire towers, radios, motor vehicles, bulldozers, muskeg tractors, power pumps, hand pumps, hose, aircraft, and the construction of buildings required for the prevention, detection and suppression of forest fires and for the charter of aircraft for patrol, transportation and water-dropping purposes. Several hundred access projects designed to improve protection and permit the management of undeveloped forest areas have been undertaken, with the Federal Government contributing more than $\$ 12,000,000$.

## Subsection 2.-Provincial Forestry Programs

All forested land in provincial territory, with the exception of the minor portions in National Parks, federal forest experiment stations, military areas and Indian reserves (see Table 2, p. 32), is administered by the respective provincial governments. The forestry program of each province is outlined below.

Newfoundland.-Geographically, the Province of Newfoundland has two separate regions-the Island and Labrador on the mainland. The productive forested land of the Island is estimated at 12,998 sq. miles and of Labrador at 20,879 sq. miles, a total of 33,877 sq. miles. Only 578 sq. miles are classified as farm woodlots. Most of Labrador's forests are leased but are as yet virtually untouched.

A large part of the forest land in the interior of the Island is leased, licensed or owned by paper companies, but a three-mile-wide belt along most of the coastline is retained as unoccupied Crown land for the purpose of providing firewood, construction material, fencing material, etc., for the local population. Within this coastal forest belt, every household has legal right to cut $2,000 \mathrm{cu}$. feet of wood a year for domestic use. This form of cutting is generally without intense control or restriction but a policy is being introduced whereby cutting in certain 'management areas' is controlled by forest officers. Approximately one half of the Crown forests are at present under management.

Commercial timber-cutting on unoccupied Crown lands has been by permit since 1952; permits for amounts up to 120 cords per person are issued by the field staff but permits for larger quantities must be approved by the government. This type of permit is generally preceded by advertising of standing timber for sale by tender, the timber involved usually being over-mature or damaged by fire, insects or storms.

The Island of Newfoundland is divided into three Forest Regions, each under the control of a Forest Supervisor; the regions, in turn, are each divided into five districts. Districts are headed by a Forest Inspector having a staff of wardens and rangers. Twentyeight well-equipped forest fire depots and 21 lookout towers, connected by radio-telephone, are operated by the Newfoundland Government, and many others are operated by the two paper companies, the Newfoundland Forest Protection Association and the Canadian National Railways. Aircraft, equipped with water-dropping tanks, are stationed at Gander throughout the fire season; they patrol forest areas and transport equipment and crews when necessary. Helicopters are used as well. Forest fire protection facilities have also been established in Labrador, the main base being at North West River near Goose Airport, and a sub-depot in the Carol Lake iron ore development area. The permanent forestry staff of the Newfoundland Department of Mines, Agriculture and Resources, numbering 75, is augmented by a like number of seasonal employees during the forest fire season. The two paper companies maintain their own fire protection organizations.

Forest research for Newfoundland is performed by the federal Department of Forestry. No reforestation is done in the province.

Prince Edward Island.-Almost all of Prince Edward Island's woodland is privately owned, so that the Forestry Division of the Department of Industry and Natural Resources is concerned mainly with planting, woodlot management and fire protection. A small nursery, established jointly with the Federal Government, deals with the Island's needs by providing planting stock for the reforestation of waste lands, the cost of which is shared by the Federal Government, and fulfilling the requirements of private individuals at a reasonable cost.

In proportion to its size, Prince Edward Island exports a great deal of pulpwood. This export, combined with the fuelwood and lumber cut each year, led to the inauguration of a program designed to educate the owner in the proper care and management of his woodlot.

Fire protection does not usually constitute too great a problem. Wooded areas are scattered in patches throughout the province and, since a network of roads makes all woodlots accessible, equipment can be brought to the scene of a fire quickly and easily. Research is limited mainly to reforestation and woodlot management problems.

Nova Scotia.-The land area of Nova Scotia is 20,402 sq. miles. Of that area, $16,389 \mathrm{sq}$. miles are classed as forested, 92 p.c. of which is regarded as productive. For Canada as a whole, 91 p.c. of the forested land is held by the Crown in the right of the federal or provincial governments but in Nova Scotia only about 22 p.c. is so held.

The provincial Crown lands are administered by the Department of Lands and Forests through a staff of foresters and rangers. Similarly, trained personnel are associated with the forest industry in the administration of privately owned forest lands. The Department administers the Lands and Forests Act as it pertains to all lands and is responsible for forest fire suppression on all lands, regardless of tenure. Forest fire detection is facilitated by 30 observation towers and an aerial patrol service, all integrated with land vehicles and headquarters by radio and telephone communication systems. Well-equipped fire suppression crews and rangers are stationed throughout the province.

The forest industry is of prime importance to the economy of Nova Scotia. There are in operation some 500 sawmills of all sizes, one newsprint mill, two groundwood pulpmills and a chemical pulpmill. These mills, along with the pulpwood export trade, pit prop production, boxwood and barrel production, as well as other facets, produced about $245,000,000 \mathrm{ft}$.b.m. of lumber and about 450,000 cords of round products in 1962. Recently, several large, more efficient stationary lumber mills have been established, equipped for the production of pulp chips from sawmill residue. Tremendous strides have been made in the utilization of slabs, edgings and trim for this purpose and a profitable increase of 30 p.c. has been achieved in utilization of the total wood fibre of the sawlog.

An active reforestation program has been conducted for many years. Although not as ambitious an undertaking as in some parts of Canada, the program is being expanded in areas where there are less fortunate circumstances relative to natural regeneration. There are six forest nurseries in operation throughout the province. Forest management programs include the construction of access roads into Crown land timber areas and stand improvement under the federal-provincial agreement. Timber, pulpwood and Christmas trees are sold through public tender and cutting is done under the recommendation of the district foresters of the Department of Lands and Forests. Management cruises, regeneration studies and experimental cuttings are conducted on Crown lands.

Forest research is carried on by Federal Government agencies and the Nova Scotia Research Foundation (see p. 377). Investigations involve stand improvements, cutting methods, and insect and disease activities. Extension projects include an active fire prevention campaign, a motion picture program for schools, distribution of information on forest and wildlife conservation, promotion of the Christmas tree industry, and preparation of articles for general distribution, for newspapers and for magazines.

New Brunswick.-Of the total area of New Brunswick ( 28,354 sq. miles), approximately 85 p.c. is classed as productive forest, of which the Crown, in right of the province, owns about one half. About 2 p.c. is owned by the Federal Government and the remainder is privately owned. The report of a provincial forest inventory, part of the national forest inventory, was published in 1958. The total volume of wood in merchantable sizes is estimated at $16,900,000,000 \mathrm{cu}$. feet; coniferous species make up 71 p.c. and deciduous species the remainder.

Protection from forest fires, the first requirement for forest conservation, is mainly the responsibility of the Department of Lands and Mines which also carries out duties in connection with game management and protection, colonization, provincial parks, and the administration of provincial Crown lands. A large-scale aerial spraying program to protect balsam fir and spruce from the spruce budworm has been carried on since 1952
by a Crown company sponsored by the federal and provincial governments and by representatives of the forest products industries. Forest Management licences issued by the province authorize operators to cut and remove forest products in accordance with forest management plans and cutting permits. Stumpage dues are paid to the province when products are cut by the licensees.

New Brunswick does not maintain a forest research organization but co-operates with the federal Department of Forestry in that field. The University of New Brunswick has also undertaken a small number of forest research projects in co-operation with the National Research Council, the provincial government, and other interested organizations.

In the field of education, the University of New Brunswick offers undergraduate and graduate courses in Forestry leading to B. Sc.F. and M. Sc.F. degrees. It is also responsible for the administration of the Maritime Forest Ranger School in conjunction with the governments of New Brunswick and Nova Scotia and private industry. The forest extension services of the University assist both government and private agencies in the direction and planning of various forestry extension programs. The Provincial Department of Agriculture also provides an expanding extension service to the owners of farm woodlots.

Quebec.-The forested lands of the Province of Quebec cover an area of 378,132 sq. miles extending from its southern borders to latitude $52^{\circ}$ north, between the frontier of Labrador in the east, and the Eastmain River Basin in the west. Of this total, 89,131 sq. miles are classed as occupied productive forest land, 23,175 sq. miles of it privately owned, 227 sq. miles federal Crown forests and the remainder provincial Crown land on which leases and permits have been granted. Thus, approximately 256,000 sq. miles of the forest lands of Quebec are inaccessible or vacant. About two fifths of the annual cut comes from privately owned lands.

The limits reserved for forest industries are administered by the Department of Lands and Forests and the technical work such as inventory, reforestation, supervision of cutting, control of culling, verification of plans for development, collection of stumpage dues, etc., is the responsibility of the Forest Service. These limits are either leased by auction after public notice has been given or assigned under a special law. The price of the licence is fixed by auction or by Order in Council subsequent to specific legislation. The government reserves the right to dispose of the water powers situated on the limits leased.

A tree-felling permit, which is valid for one year, is renewable if the holder has complied with the conditions imposed; it may be transferred with the authorization of the Minister of Lands and Forests. The lessee of a limit must pay a ground rent in addition to the price of licence and must forward, three months before the cutting begins, a plan of operations. Wood cut must be measured by a licensed culler and at the end of the operations the limit holder must produce a sworn statement of quantities cut.

The Forest Service endeavours to promote the use of silvicultural methods among the owners of farm woodlots and small forest areas.

Quebec's forest protective system comprises three organizations-the Protective Service, the protective associations and the non-affiliated lease holders or owners. The Protective Service is a government body established within the Department of Lands and Forests in 1924 to enforce legislation and regulations governing forest fire protection and to protect vacant Crown lands, township reserves and colonization territories. The protective associations, of which there are six, are syndicates of lease holders and of owners who have availed themselves of their right to form an association to satisfy the law which compels them to protect their limits or private forests of 2,000 acres or over. Members assume operating expenses in proportion to the area owned by each but the Department assumes half the costs of fire fighting incurred by the associations. The third group is composed of lease holders and of owners who prefer to discharge their obligations personally as far as forest protection is concerned. They enjoy the same privileges and their obligations are the same as those imposed upon the associations.

To perpetuate the forestry program of the province, the Department has established a number of nurseries, the first at Berthierville in 1908. This nursery has three sections: one wooded with a variety of valuable species of mature age, one serving agricultural purposes, and another devoted to forestry experiments and the cultivation of trees for reforestation or ornamentation. More recently, the Grandes Piles nursery and the Gaspe nursery were organized and there are also nurseries in the following counties: AbitibiEast, Témiscamingue, Saguenay, Îles de la Madeleine, Rimouski, Roberval, Rivière du Loup, Témiscouata and Chicoutimi. Their object is the preparation of plants for reforesting nearby districts. 'Floating' nurseries, supervised by the engineers of the Forest Extension Bureau and intended especially for growing reforestation plants for private properties, are located at Pont Rouge, Sherbrooke, Scott, St. Hyacinthe, Victoriaville, Mont Joli and St. Pascal. The plants are supplied free of charge on request. A dynamic reforestation program is now under way in the province, with an ultimate objective of $10,000,000$ plants yearly on private grounds.

The Bureau of Silviculture and Botany and the Forestry Products Laboratory, both subsidized by the Department, are actively engaged in scientific research work in the forestry field. The Bureau studies the possibilities of utilizing spoil-heaps of gold and asbestos mines, tests the fertility of soils in the spruce groves, classifies forests according to type of vegetation, and studies growth and yields of stands in the timber limits by means of permanent research spots. The Forestry Products Laboratory, located at the Duchesnay Forestry Station, studies developments in the field of chemical conversion of wood and in the use of forestry by-products.

Ontario.-The management of the forest resources of this province is based upon the Crown Timber Act and the management unit is used as the basic administrative area. For each management unit a plan is prepared according to the Manual of Management Plan Requirements and is submitted to the Minister of Lands and Forests for analysis and approval. All forest activities contemplated during the operating period-cutting, re-establishment and tending-are listed in detail in the operating plan, which is part of and carries out the intent of the management plan. Management plans are revised every 20 years on the up-to-date data of new aerial photographs and a forest re-inventory. The number of management units is subject to change at the time of plan revision, owing to abandonment or acquisition of timber licences and to division or consolidation of management units. During 1962, 204 management units, classified by ownership and the rights to timber, were recognized: 78 Crown management units, 79 company units, 42 agreement forest units, and five nursery forest units. The 78 Crown management units, for which the plans are prepared by Department staff, occupy $53,829,120$ acres; of these units, one is operating under a revised plan, 14 are undergoing scheduled plan revision and 63 are operating under the initial plans. The 79 company management units, for which the management plans are prepared by the licensees, occupy $63,991,680$ acres; of these units, 67 are operating under approved management plans and 12 are either in the process of revision or initial preparation. The plans for the 42 agreement forest units are scheduled for preparation by Department staff over an eight-year period. The plans for the five forests, adjacent to the forest tree nurseries operated by the Department, cover approximately 9,000 acres and will be prepared by the Department staff upon completion of the inventory program.

On Crown lands during 1962, 90 stand improvement projects were carried out on a gross area of 23,218 acres. These projects were designed to secure adequate regeneration following cutting operations or to improve growth and quality of young stands of timber. In addition, 23 stand improvement projects, covering 1,304 acres, were carried out by junior rangers during the course of their summer training. During the year, on Crown lands and agreement forests $30,932,000$ trees were planted on 49,303 acres and two helicopter seeding projects on 255 acres were undertaken. Stand improvement work was carried out on 7,759 acres of 37 agreement forests including harvest cutting, cleaning,
pruning, thinning and girdling. In addition to normal woods labour, over 6,000 man-days of inmate labour from three minimum security camps (see p. 404) were used on stand improvement projects in Crown and agreement forests units.

The volume of wood of all species cut from Crown land during the year ended Mar. 31, 1962 was lower by approximately $1,000,000$ cu. feet than that cut during the previous fiscal year, representing a decrease of 4.0 p.c. in the cut of softwood species and 1.4 p.c. in the cut of hardwoods. The volume of primary pulpwood species cut (spruce, balsam, and jack pine) increased by about $4,400,000 \mathrm{cu}$. feet. An over-all decrease in the pulpwood cut is accounted for by a reduced cut in other softwood species.

Forest research was continued in 1962 on the growth characteristics and relationships in their stands of the principal tree species, with the object of developing cultural practices to ensure maximum production. The site research program continued to provide a framework for forest management by classifying and mapping combinations of land form, soil and climate, and rating the various combinations for tree growth. The applicability of this classification to land use was tested. Tree breeding was continued in the development of disease-resistant white pine and poplars of rapid growth and good form. Experimental work was pursued toward the improvement of nursery and planting techniques. Mensurational studies involving growth and yield, and possible substitutions for log scaling were carried on. Testing of pumps and other forest fire protection equipment continued. A special study was made of airborne infrared heat sensory equipment for fire detection.

During the 1962 forest fire season, 1,510 fires occurred in Ontario, burning an estimated total of 13,700 acres. Although the number of fires was about 15 p.c. above the annual average for the previous decade, the area burned was the third lowest on record. Lightning accounted for 20 p.c. of the fires reported. The Department's fire-fighting fleet consisted of 33 Beaver aircraft, 10 Otter aircraft and one Super Widgeon and operated out of 28 air bases during the fire season, logging 14,485 hours of flight time; 11 of these bases were operated throughout the year. In addition, five leased Bell Super-G type helicopters were used between May 1 and Sept. 30 and a large Vertol H21 with a 200-gal. water tank was employed on fires in the Kapuskasing and Sudbury areas.

Manitoba.-The forests of Manitoba are administered by the Forest Service, a Branch of the Department of Mines and Natural Resources. The Service is headed by a Provincial Forester and for purposes of administration the province is divided into eight Forest Regions each in charge of a Regional Supervisor responsible to the Provincial Forester for forest activities within his region. The Forest Service is also responsible for the development, maintenance and operation of parks and recreation on Crown lands throughout the province (see p. 40).

The cutting of timber is governed by timber sale, licensed timber berth, pulpwood lease, or timber permit. Timber sales are disposed of by public auction or sealed tender and cover periods of from one to seven years; timber berths cover certain areas granted before 1930, the date of the transfer of the natural resources from the Federal Government to the province; pulpwood leases are granted over an area of $2,748 \mathrm{sq}$. miles; and timber permits are granted to settlers and small operators at appraised rates for a period of one year or less. On the basis of a forest resources inventory completed in 1956 and other information, working plans with annual allowable cuts on a sustained-yield basis have been brought into operation in the more accessible areas.

Forest fire protection is a most important activity of the Forest Service. Fires are detected by air patrol, lookout tower and road patrol, and rapid communication is maintained within the Service by radio and telephone. The Air Service transports men and equipment to fires in areas beyond the reach of roads. The main air base is at Lac du Bonnet and summer air bases are maintained at The Pas, Norway House and Thicket Portage. The total area under fire protection is about $97,000 \mathrm{sq}$. miles.

Regeneration of the forest is dependent mainly on natural means although over $10,000,000$ trees were planted during the past ten years as part of the federal-provincial
agreement (see p. 500). The Pineland Forest Nursery is operated at a point near Hadashville to supply planting stock for denuded areas of Crown land and to furnish farmers with shelterbelt and woodlot seedlings.

The province has no forestry research organization but co-operates with several federal services which maintain two research areas. The Department co-operates fully with federal authorities in investigating and controlling forest damage resulting from insects and diseases. The Forest Service also carries out public education in the fields of fire prevention and forest conservation. Use is made of all usual methods including radio, television, newspapers, signs, talks to school children and club members, film tours, etc.

Saskatchewan.-The forests of Saskatchewan are located mainly in the northern half of the province and cover 147,360 sq. miles, including watered areas, or 58 p.c. of the total area. Provincial forests constitute approximately 92 p.c. of all forest land in the province and are managed and developed by the Forestry Branch of the Department of Natural Resources.

The Forestry Branch, consisting of six divisions-Administration, Fire Control, Forest Management, Forest Research, Inventory and Silviculture--is responsible for developing and evaluating forest policies and management programs based on the findings of inventory and research. The responsibility for carrying out such policies and programs is borne by the Regional Administration Branch. For purposes of resource administration, the province is divided into five regions, each under the supervision of a Regional Superintendent. The regions are subdivided into Conservation Officer Districts which vary in size according to resource base and population to be served. Close liaison is maintained between the Forestry Branch and the Regional Administration Branch.

A major responsibility of the Forestry Branch is the development of techniques in the prevention, detection and suppression of forest fires. A network of 70 lookout towers equipped with two-way radios is maintained throughout the province and is supplemented by three aircraft on regular patrol duty during the high-hazard periods. A group of smokejumpers, trained to parachute on remote fires, is in constant readiness during the fire season and takes immediate suppression action which it maintains until relieved by overland crews. Northern Saskatchewan's communication system, with more than 850 two-way radio sets in operation in towers, vehicles, aircraft and forest camps, plays a vital role in the detection and suppression of forest fires. These activities have been assisted recently by the use of helicopters.

Alberta.-The 159,064 sq. miles of provincial forest in Alberta are administered by the Alberta Forest Service of the Department of Lands and Forests at Edmonton. The Service is composed of four forestry branches under a Director of Forestry-Administration, Forest Protection, Forest Management and Forest Surveys.

The Administration Branch supervises all branches, maintains general control over revenue and expenditure, deals with personnel and conducts a Forestry Training School which offers in-service training for forest officers and other employees.

The Forest Protection Branch has charge of the protection of the forests. For ease of administration the forested area has been divided into seven Divisions, each responsible for the forest within its boundary. These Divisions are composed of Ranger Districts in which all activities are supervised by the district forest officer responsible to his divisional superintendent. The divisional staffs include: forest superintendent, assistant forest superintendent, divisional forester, chief ranger, mechanical foreman, chief check scaler, assistant check scaler, divisional clerk, assistant clerk, radio operator, stenographer, and seasonal help such as standby fire crews, forest lookout men and general labourers and construction crews. These employees are responsible for fire prevention and suppression, supervision of logging and milling operations, timber cruising, and construction and maintenance of forestry projects.

The functions of the Forest Management Branch include the approval and acceptance of management and annual operating plans prepared for Crown lands, proper land
use and proper disposal of Crown timber. This extends to all phases, including acceptance of applications, cruising of timber, drawing up of contracts, periodic inspections of areas to assure proper logging and utilization practices, scaling of products cut, collection of dues and reforestation of areas denuded through cutting, fire, etc.

The Forest Surveys Branch maintains the provincial forest inventory and prepares and maintains detailed inventories by management units; prepares long- and short-term management and protection plans; provides timber application forest-type maps; conducts other work pertaining to photogrammetry and forest-cover maps; and provides technical drafting and mapping services to the Forest Service and general public.

Conservation of 9,000 sq. miles of forest comprising the Rocky Mountains Forest Reserve is administered by the Alberta Forest Service. The area is composed of three forests which are subdivided into ranger districts. The Superintendent in charge of each forest is responsible to the Director of Forestry; his decisions are based on policies formed by the Board, which comprises one federal and two provincial members. This Reserve includes the headwaters of the main prairie river system.

Research in general is carried out by the federal Department of Forestry, which maintains the Kananaskis Experiment Station.

British Columbia.-The productive forest land of British Columbia in 1958 was inventoried at $208,411 \mathrm{sq}$. miles and, in addition, there were $59,227 \mathrm{sq}$. miles of forest land classed as non-productive. Of the productive area, immature timber occurred on 95,739 sq. miles; 84,275 sq. miles carried matured timber with a total volume of $251,000,000,000$ cu. feet; $28,397 \mathrm{sq}$. miles, including areas of recent burn, cut-over or windfall not yet re-stocked, were unclassified.

For administrative purposes, the province is divided into five Forest Districts with regional headquarters at Vancouver, Prince Rupert, Prince George, Kamloops and Nelson. Further decentralization of authority is effected by subdivision of the Forest Districts into Ranger Districts. There are approximately 25 Ranger Districts in each Forest District. Twelve directional, servicing or policy-forming divisions constitute the head office of the Forest Service at Victoria.

Efforts continue to bring British Columbia's forest resources under sustained-yield management and the forest industries are making progress toward more complete utilization of their raw materials. The problem is urgent despite the fact that, with a present annual cut of approximately $1,340,000,000 \mathrm{cu}$. feet, the total inventory would appear sufficient to support present needs in perpetuity. One of the more spectacular results of sustained-yield administration has been the swinging of a greater proportion of the annual forest harvest to the interior of the province. The over-cut coast (wet belt) forests now account for about 58 p.c. of the total forest cut each year and the interior cut for almost 42 p.c. For all practical purposes, the entire interior forest is publicly owned; the great majority of privately owned, leased or licensed forests are on the coast.

Several systems of timber disposal are in effect. The most publicized is the Tree Farm Licence, which constitutes a contract between the government and a company or individual whereby the latter agrees to manage, protect and harvest an area of forest land for the best possible return, in exchange for the right to the timber crop on the area. Tree Farm Licences are subject to re-examination for renewal every 21 years. Provincial Forests, Public Working Circles, and Sustained-Yield Units are the governmental equivalent of the Tree Farm Licence with the timber, when it is ready for cutting, being disposed of by public auction. Of major interest is the establishment of the first "pulp harvesting" area in the vicinity of Prince George. This plan is unique in North America, calling for the integration of a "saw-log" economy with a new pulp industry. Management, silviculture, roadbuilding and protection on such areas are the responsibility of the Forest Service. Other tenures of lesser importance are Tree Farms, Farm Woodlot Licences, and those Timber Sales issued outside 'regulated' areas.

The need for a more effective forest fire suppression capability becomes increasingly urgent as the program of planned, sustained-yield management of the resource expands. Improved fire fighting techniques, the use of aircraft for patrol, transportation and fire bombing, employment of helicopters for rapid movement of fire suppression crews, and a gradually expanding system of lookouts are employed. However, the problem of accessibility remains serious. Close liaison with the federal Department of Forestry, which maintains laboratories in Vernon and Victoria, provides information about insect and fungal enemies of the forest.

## Subsection 3.-The Pulp and Paper Research Institute of Canada*

The Pulp and Paper Research Institute of Canada is a centre of research and learning concerned with virtually every aspect of the production and use of pulp and paper products. It was established in 1913 as a branch of the Dominion Forest Products Laboratories and in 1927 was reorganized under the joint sponsorship of the Canadian Pulp and Paper Association, the Federal Government and McGill University. The Institute staff carries out fundamental research and some applied research in the fields of woodland operations and pulp and paper mill operations. In addition, in co-operation with McGill University, it trains postgraduate students who are working toward master's and doctorate degrees in physical chemistry, wood chemistry, or chemical and mechanical engineering, and whose theses subjects lie in fields of interest to the pulp and paper industry.

The Institute occupies a building on the McGill campus erected by the pulp and paper industry and a building at Pointe Claire on the western outskirts of Montreal constructed by the Government of Canada. The Institute's facilities include: organic and physical chemistry, physics, hydraulics and engineering laboratories; pilot plants for chemical pulping, pulp and chip refining and waste liquor pyrolysis; a greenhouse and other facilities for woodlands research; an extensive library; shops and special facilities for pulp and paper testing and for photographic and microscopic (both light and electron) studies of wood, pulp, and paper. It has a staff of about 180.

The Institute's research activities comprise a basic program in pulp and paper research and in woodlands research, contract research, and technical services. The basic pulp and paper research program is supported by assessments from the Maintaining Membership (some 42 companies, representing more than 100 mills and about 95 p.c. of the total production of the Canadian industry) and by a grant from the Canadian Pulp and Paper Association. The woodlands research program is supported by assessments on all member companies of the Canadian Pulp and Paper Association east of the Rockies that use pulpwood and by a grant from the Association. Both programs comprise research of interest to the industry broadly, as distinct from that which is the concern of a single company only.

The projects in the basic programs range from studies of the growing seedling in the forest to the converted pulp and paper product, and fall into seven broad classifications: woodlands, mechanical pulping, chemical pulping, paper making, process control, product quality and waste utilization. The Institute is regarded as a centre for broad, long-range and uninterrupted studies of basic principles and for major engineering research and development projects which individual pulp and paper companies would find difficult to justify if the costs were not shared. Moreover, the Institute is a centre of highly specialized equipment and manpower which individual companies would not normally have.

In addition to its permanent staff, the Institute, in co-operation with McGill University, has some 35 graduate students working on fundamental projects in the background of pulp and paper technology, which also serve as their theses topics. The head of the Institute's Wood Chemistry Division, who is also Chairman of the Chemistry Department

[^142]and the E. B. Eddy Professor of Industrial and Cellulose Chemistry at McGill, directs graduate student work on such subjects as the behaviour of the materials of which wood is made-cellulose, lignin and hemicelluloses. The head of the Institute's Physical Chemistry Division, also a Research Associate in the McGill Chemistry Department, directs graduate student work in the physical chemistry of fibres, e.g., the forces that cause cellulose fibres in a water suspension to mat together to form paper. An Associate Professor of Chemical Engineering at McGill, who is a consultant to the Institute, directs graduate students in such chemical studies as the rate of drying of droplets and fibres. In addition, other members of the Institute's staff who likewise hold concurrent honorary positions at McGill assist in this student training program.

The Institute also undertakes contract research projects on a cost-reimbursement basis for individual companies or groups of companies in the pulp and paper or allied fields. The larger of these co-operative contracts have been concerned with problems of particular segments of the Canadian pulp and paper industry, such as the investigation into the causes of corrosion in alkaline pulping equipment and the study of the rapid deterioration of paper machine wires.

A further function of the Institute is to provide a broad range of technical information services to the industry and, to some extent, to other industries and the public. It maintains a specialized library for this purpose which stocks bibliographies, abstracts, translations and critical reviews for the use of the scientific staff and the industry.

## Section 5.-Forest and Allied Industries

This Section is concerned with the many industries employed in the felling of timber in the forest and its transformation into the numerous utilitarian shapes and forms required in modern living. The basic industries provide the raw materials for sawmills, pulp and paper mills and for a wide range of secondary industries that convert the products of the basic industries into more highly manufactured goods such as veneers and plywoods, sash and doors, furniture, and a vast range of industries using wood in any form in their processes. These industries, especially the pulp and paper industry and the lumber industry, contribute substantially to the value of the export trade of Canada and thereby provide the exchange necessary to pay for a large share of the imports purchased from other countries, particularly the United States.

Technological changes and market shifts are causing Canada to lose some of the unique advantages it has enjoyed in the forest products field. In an effort to remain competitive, changes are being brought about in the structure of Canadian forest-based industries and in the technologies employed. Much emphasis is also being placed on better utilization of the forest resources.

In British Columbia there is a continuing development of the pulp and paper industry which, unlike that in Eastern Canada, is integrated to a high degree with the lumber industry. An important feature of this integration is the use of smaller and defective logs uneconomical for the manufacture of lumber, and the use of sawmill and veneer mill residue in the form of pulp chips. In Eastern Canada the most significant developments in the pulp and paper industry have been the increasing use of hardwood species for pulp manufacture and the increase of speeds in paper machines which has improved productive capacity at relatively low costs. There is also continuing construction of new plants, notably in the Maritime Provinces, and this is leading to improved utilization through the use of sawmill residues for pulping material.

Significant changes are also taking place in the lumber industry in Eastern Canada. Sawmills are undergoing a gradual process of concentration into larger and more efficient units and employing modern electric, hydraulic and pneumatic equipment which permits
a high degree of mechanization and quality control. There is also a trend toward more complete integration through the acquisition of veneer and plywood mills and board plants. These factors are naturally leading to a higher degree of utilization which is exemplified by the conversion of sawmill residue for pulp chips.

The logging industry has been highly mechanized in Western Canada for a number of years and mechanization is now progressing rapidly in Eastern Canada, raising the output per man-day and leading to stabilization of employment in the woods. Ten years ago mechanical saws were just beginning to find general acceptance, but now they are found in all woods operations and the bucksaw is almost non-existent. Loading and transportation of logs and pulpwood is being done mechanically to an increasing extent with a consequent continuous reduction of the horse population in the woods. New and better logging machines are constantly being developed and experiments with pulpwood harvesting combines promise a high degree of mechanization in the woods wherever terrain conditions permit.

These and other changes are reflected in the following statistical data.

## Subsection 1.-Woods Operations

In connection with operations in the woods, the forests provide not only the raw materials for the sawmills, pulp mills, veneer mills, charcoal, excelsior and other plants, but also the logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products that are finished in the woods ready for use or export. A number of minor forest products help swell the total, such as Christmas trees, cascara bark, balsam gum, resin, etc.

Estimates of woods operations attempt to give actual production figures for all items and are based partly on provincial forest service data for volume. Value, as currently estimated, excludes transportation costs up to and including 1960. In 1961, transportation costs are included to conform with the total activity concept.

## 8.-Value of Woods Operations, by Product, 1957-61

| Product | 1957 | 1958 | 1959 | 1960 | $1961{ }^{1}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Subsection 2.-Sawmills and Shingle Mills

The sawmill and shingle mill industry includes sawmills, tie, shingle, lath, stave, heading and hoopmills. In 1961, reports were compiled from 3,260 establishments. Many small mills previously included, which together produce less than 1 p.c. of the total, were excluded in the latest year as a result of the implementation of the revised Standard Industrial Classification. Also, beginning with 1961, in keeping with the conceptual approach in other industries, the formerly reported "value of products" was changed to "value of shipments and work done". The change affected mainly custom sawing; previously the lumber produced by custom sawing was actually valued but under the new approach only the value of work done, which is considerably lower, was taken into account. This difference should be noted when comparing 1961 figures with those for previous years.

Because of lack of comparable data, production and value figures for lumber and all sawmill products are given in Tables $\mathbf{1 2}$ and $\mathbf{1 3}$ for 1961 only. Principal statistics of the industry, given in Table 14, have been adjusted on a comparable basis back to 1957.
12.-Quantity and Value of Lumber Shipments and Value of Shipments of All Sawmill Products (Sawmill and Shingle Mill Industry only), by Province, 1961

| Province or Territory | Lumber Shipments |  | Value of Shipments of All Sawmill Products and Byproducts (incl. shingle mills) |
| :---: | :---: | :---: | :---: |
|  | Quantity | Value |  |
|  | M ft. b.m. | \$'000 | \$'000 |
| Newfoundland......... | 22,112 | 1,530 | 1,766 |

Exports.-Exports of lumber, shingles and shakes, and other sawmill products are given in Chapter XX on Foreign Trade, Part II, Table 11.

## Subsection 3.-The Pulp and Paper Industry

The manufacture of pulp and paper has been the leading industry in Canada for many years and the postwar development of the industry has more than kept pace with the vast industrial growth of the nation. Pulp and paper stands first among all industries in net value of shipments, in exports, in total wages paid and in capital invested. It is the largest consumer of electric energy and the largest industrial buyer of goods and services, including transportation, in the land. The industry has a newsprint output more than three times that of any other country and provides about $42 \mathrm{p} . \mathrm{c}$. of the world's newsprint needs.

There are three classes of mills in the industry. In 1961, 30 were making pulp only, 24 were making paper only and 71 were combined pulp and paper mills.

The industry includes several forms of industrial activity: operations in the woods with pulpwood as a product, the manufacture of pulp and paper of all kinds, and the manufacture of paperboards. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a portion of their spruce and balsam logs to pulp mills. Only a small percentage of the pulpwood cut in Canada is exported in raw or unmanufactured form.
15.-Production, Consumption, Exports and Imports of Pulpwood, 1952-61

| Year | Production of Pulpwood in Canada ${ }^{1}$ |  |  | Canadian <br> Pulpwood Used in Canadian Mills ${ }^{1}$ | Canadian <br> Pulpwood <br> Exported <br> Unmanu- <br> factured | Imported <br> Pulpwood Used in <br> Canada |

${ }^{1}$ Given in terms of rough or unpeeled wood.
Pulp Production.-The manufacture of pulp, the second stage in this industry, is carried on by mills producing pulp only and also by paper manufacturers operating pulp mills in conjunction with paper mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export. Spruce, supplemented by balsam fir in the east and by hemlock in the west, is the most suitable species for the production of all but the best types of paper.

The preliminary preparation of pulpwood is most commonly carried on at the pulp mill although there are a number of rossing mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for export. Pulpwood is commonly measured by the cord ( $4^{\prime}$ by $4^{\prime}$ by $8^{\prime}$ of piled material). One cord of rough pulpwood contains approximately 85 cu . feet of solid wood, and one cord of peeled pulpwood 95 cu . feet.

The manufacture of $11,779,165$ tons of pulp produced in 1961 entailed the use of $14,437,456$ cords of rough pulpwood valued at $\$ 365,330,191$ and the equivalent of $2,102,563$ rough cords of other wood (i.e., sawmill chips, slabs and edgings, sawdust, butts, cores, etc.) valued at $\$ 36,181,817$. The total value of materials used in the manufacture of pulp was $\$ 492,902,883$.
16.-Pulp Production, Mechanical and Chemical, 1952-61

Note.-Figures for earlier years will be found in the corresponding table of previous Year Books.

| Year | Mechanical Pulp |  | Chemical Fibre |  | Total Production ${ }^{1}$ |  |

[^147]Pulp Exports.-The main market for Canadian pulp is the United States. For many years this market alone has absorbed between 75 and 90 p.c. of such exports.
18.-Exports of Pulp to Britain, United States and All Countries, 1952-61

| Year | Britain |  | United States |  | All Countries |  |

World Pulp Statistics.-Figures of production, exports and imports of pulp for certain countries of the world are shown for 1960 and 1961 in Table 19. It is estimated that these countries produce over three quarters of the world supply of pulp.
19.-Production, Exports and Imports of Pulp, by Leading Countries, 1960 and 1961
(Source: Canadian Pulp and Paper Association)

[^148]Paper Production.-During 1961 there were 95 establishments producing paper and paperboard in Canada. In addition to newsprint, Canadian mills have a highly developed production of fine paper, wrapping paper, tissues, paperboard and other cellulose products.
20.-Paper Production, by Type, 1952-61

Note.-Figures for earlier years will be found in the corresponding table of previous Year Books.

World Newsprint Statistics.-Since 1913 Canada has led the world in the export of newsprint. Figures for the leading producing countries for the two latest years available are given in Table 23; 1939 figures are included for comparative purposes. The six countries listed accounted for 73 p.c. of the estimated world production in 1961, Canada contributing about 42 p.c.

## 23.-Estimated World Newsprint Production and Exports, by Leading Countries, 1939, 1960 and 1961

${ }^{1}$ Figures differ slightly from DBS figures given in Tables 20 and 22, because of different bases of calculation.
Statistics of the Combined Pulp and Paper Industries.*-The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may, under certain conditions, be treated as three industries for they are frequently carried on in separate plants by entirely independent companies. The manufacture of basic stock and the converting of this paper into stationery and other highly processed paper products are often combined in one plant. This conversion of paper within the pulp and paper industry represents only a small part of Canada's production of converted paper and boards, the bulk of which is still made in special converting mills classified in other industrial groups.

The presence of these different combinations in one mill makes it difficult to separate many of the statistics relating to the manufacture of pulp, basic paper and converted paper products. All converting operations carried on in paper mills in this industry are attributed to the particular industrial group of converting plants to which they properly belong. Including manufacturing operations as far as the basic paper-making stage, there

[^149]were altogether 125 mills in operation in 1961. Employees numbered 65,799 and their salaries and wages amounted to $\$ 355,171,060$, as against 65,642 employees earning $\$ 344,409,846$ in 1960 . If the pulp made for their own use in combined pulp and paper mills is disregarded, the total value of materials and supplies used in the industry as a whole amounted to $\$ 680,167,806$ in 1961 compared with $\$ 656,877,464$ in 1960 ; the selling value of factory shipments to $\$ 1,634,606,001$ in 1961 and $\$ 1,578,727,108$ in 1960 ; and value added by manufacture to $\$ 842,419,885$ in 1961 and $\$ 811,546,844$ in 1960.

In world trade, pulp and paper are generally Canada's main commodities-newsprint alone, over a considerable period, has brought Canada more export dollars than wheat, nickel or any other single commodity.* The United States market absorbs annually over 80 p.c. of all pulpwood exports and the same percentage of the pulp and the paper shipments of Canada.

## Subsection 4.-The Veneer and Plywood Industries

The production of hardwood veneer and plywood in Canada is confined largely to the eastern provinces. Changes in manufacturing methods applied to hardwood plywood resulted in its adaptation to many uses, particularly to interior wall finishes for homes and other buildings.

Softwood veneer and plywood are produced almost entirely in British Columbia. Douglas fir is most commonly utilized because of the availability of large diameter logs of this species from which large sheets of clear veneer can be obtained. The use of synthetic resin adhesives is responsible for this product, which has become almost indispensable to the construction industry-for wall panels, concrete forms, roofing, sheeting and house sub-floors; for construction of silos, cribs and caissons; for box-car linings, bus bodies, trailers, and watercraft; for box panels and crate linings, case goods and core-stock for furniture; and for plywood-faced doors and many other items. The heating of glued veneers in moulds by high-frequency electric fields (dielectric heating) permits the manufacture of shaped plywood which is now widely used in the manufacture of furniture.

Veneers of Canadian manufacture are not confined to species native to Canada. A number of imported woods of special decorative value are veneered successfully and provide the furniture industry with a wide choice of materials. Exports of veneer and plywood produced in Canada increased in value from $\$ 969,256$ in 1938 to a high of $\$ 34,191,000$ in 1961.

[^151]
## Subsection 5.-Other Wood Industries

Based on the revised Standard Industrial Classification, which was introduced in 1960, there are nine separate wood industries other than the sawmills and the veneer and plywood mills. Most of these industries obtain from the sawmills the wood which they transform into planed or matched lumber, doors, windows, laminated structures, prefabricated buildings, boxes, barrels, caskets, etc. Veneer and plywood are also important raw materials used.

The wood industries do not include every industry into which wood enters as a raw material. Wood is an important raw material in the manufacture of furniture, agricultural implements, musical instruments, etc., industries which, as proven by experience, are more correctly classified under other groups.

As shown in Table 25, factory shipments of the establishments classed in the wood industries-except sawmills and veneer and plywood mills-were valued at $\$ 340,705,629$ in 1961, an amount 5.4 p.c. above that of the previous year. Compared with 1960, the value of factory shipments climbed substantially for the sash, door and planing mills industry and a moderate increase also materialized in the hardwood flooring industry. These two industries are closely dependent upon the residential construction activity which was significantly improved in 1961; compared with the preceding year there was a slight decline in the number of dwellings completed, but this was more than counterbalanced by the increase in new starts which numbered 125,577 for the year, 15.4 p.c. higher than in 1960. Average yearly employment in the Other Wood Industries group was reported at 26,403 , with a payroll at $\$ 87,079,304$ compared with 26,423 and $\$ 84,902,014$, respectively, in the preceding year.
25.-Value of Shipments of Other Wood Industries, 1959-61

${ }^{1}$ Basis: Revised Standard Industrial Classification (1960) and New Establishment Concept (1961). $\quad 2$ Includes wood preservation industry and miscellaneous wood industries.

## Subsection 6.-The Paper-Using Industries

Starting with 1960, the paper-using group is comprised of five industries* engaged primarily in manufacturing commodities of paper and paperboard. Establishments engaged in printing, publishing, bookbinding and the allied graphic arts also consume large quantities of these materials but are grouped separately (see Subsection 7).

Some paper-using establishments purchase paper as a raw material from the pulp and paper industry and merely subject it to some form of treatment to fit it for further manufacture in another industry; this occurs in the manufacture of coated, sensitized or corrugated paper. Other firms purchase paper and subject it to treatment to fit it for a definite final use such as in the manufacture of asphalt roofing or waxed wrapping paper. Another large group uses paper and paperboard as a raw material for conversion into paper bags, boxes, envelopes and other commodities.

[^152]The manufacture of containers and packages of various kinds has grown very rapidly since ways have been found of converting tough and cheap paper stocks into strongly made boxes which are replacing wooden crates and packing cases. Small attractive paper containers for use in the retail trade are now in common use and their manufacture constitutes an important branch of the paper-using industries. Starting with 1960, a number of establishments specializing in the production of plastic bags (cellulose, polyethylene, etc.) previously classed in other industries, are included with the paper bag manufacturers.

Composition roofing and sheathing, consisting of paper felt saturated with asphalt or tar and in some cases coated with a mineral surfacing, is being increasingly used as a substitute for metal roofing, wooden shingles and siding materials. Establishments classed as roofing manufacturers also produce a large proportion of the floor tiles manufactured in this country.

As a whole, the paper using industries have grown considerably in recent years. The same trend generally applied in 1961 compared with the preceding year; except for a small decline in the reported number of employees, statistics show a satisfactory increase. Shipments climbed to $\$ 571,128,054$ from $\$ 542,785,569$ in 1960 ; earnings were up to $\$ 115,966,105$ from $\$ 113,130,561$, despite a decline in the number of employees to 29,063 from 29,509; and plants numbered 444 compared with 439.

## Subsection 7.-Printing, Publishing and Allied Industries

The printing, publishing and allied industries group is made up of six closely related industries: printing and bookbinding, including commercial printers and bookbinders; lithographing, comprised of commercial printing plants using principally the offset printing process; engraving, stereotyping and electrotyping, including photo-engraving; trade composition or type setting for printers; printing and publishing, comprised of publishers who operate printing plants; and "publishers only", including establishments primarily engaged in publishing and which do no printing.

The total revenue of all establishments in this group of industries reached $\$ 871,902,450$ in 1961 , an amount 3.1 p.c. higher than the 1960 total of $\$ 845,946,370$. The payroll was up to $\$ 327,880,120$ from $\$ 320,280,912$ despite a small decline in the reported number of employees to 72,770 from 73,049 ; the plants numbered 3,427 compared with 3,410 in the preceding year.

The revenue to commercial printing establishments (including lithographers) rose to $\$ 370,472,076$ in 1961 from $\$ 357,601,668$ in 1960 ; plants specializing in trade composition, engraving, stereotyping, etc., had a total revenue of $\$ 52,074,200$ compared with $\$ 51,800,688$; the revenue to the printing and publishing industry increased to $\$ 370,327,715$ from $\$ 358,524,761$ and for "publishers only" to $\$ 79,028,459$ from $\$ 78,019,253$. Revenues from advertising and from subscriptions or sales of Canadian newspapers and periodicals of all kinds rose to $\$ 398,736,452$ in 1961 from $\$ 391,946,462$ in 1960; advertising revenues were $\$ 298,677,860$ compared with $\$ 294,883,240$ and sales $\$ 100,058,592$ compared with $\$ 97,063,222$.

## Section 1.-Canada's Mineral Industry 1961-62*

Following the 1959-61 period of comparatively slow production growth, the Canadian mineral industry recorded a favourable gain in output to $\$ 2,842,984,195$ in 1962 from the 1961 level of $\$ 2,582,300,387$. The mineral fuels sector accounted for about one half of the year's gain in production value and the metallic minerals for one third. The structural materials component of the industrial minerals sector accounted for most of the remaining gain, the increase for the non-metallic minerals being comparatively minor. As a result of these advances, production values of metallic minerals, industrial minerals and mineral fuels were $\$ 1,480,282,362$, $\$ 565,850,747$ and $\$ 796,851,086$, respectively, compared with $\$ 1,387,159,036, \$ 541,813,549$ and $\$ 653,327,802$ in 1961 . A considerable decline in the production value of uranium and smaller declines for several other minerals were more than offset by major gains for crude petroleum, nickel, natural gas and copper.

The extent of mineral industry growth in recent years is readily apparent from a comparison of key statistics for 1952 and 1962; in the earlier year, production value was $\$ 1,285,342,353$, less than one half the 1962 output. The index of physical volume of mineral production, on a 1949 base, rose from 131.0 to 287.0 and per capita output from $\$ 89$ to $\$ 153$. Although the rate of production growth was greatest in the earlier years of this period, exploration and property development, particularly in the metallic minerals sector, have proceeded at a rapid pace during the past two years. This activity has demonstrated further the great mineral potential of Canada.

Nickel, for the fourth consecutive year, was the leading metal in 1962 with a value of $\$ 385,200,000$, although the volume of output was down slightly. Following nickel

[^153]in output value were copper, iron ore, gold, uranium, zinc, lead and silver, in that order. These eight metals accounted for 96 p.c. of the value of metallic minerals output and 50 p.c. of the total value of mineral production. Compared with 1961, there were declines in uranium, gold and lead production, with uranium dropping from third to fifth place among the metals. The most outstanding gain was in iron ore production which advanced to $\$ 264,600,000$ from $\$ 187,900,000$ and to third place in value. Copper, with a value of $\$ 283,100,000$, retained second place.

The Thompson nickel project in northern Manitoba had its first full year of production in 1962 and two new nickel operations-one in Quebec and one in northwestern Ontariobegan initial production during the year. Canada produces almost two thirds of the world's nickel. It is the fifth largest copper producer, following the United States, Northern Rhodesia, Chile and the Soviet Union. Canadian mine output of copper reached an all-time high in 1962. Refined copper production was down slightly from 1961 because of increased exports in the form of concentrates but over four fifths of mine output was refined in Canada. The copper industry has been particularly active in recent years and in 1962 eight mines started production and seven were being developed while exploration parties were active in all copper-producing provinces and in the territories.

The iron ore industry was one of the most buoyant parts of the mineral economy in 1962. Quebec-Labrador producers, integrated with United States steel companies, were able to increase considerably their shipments to the United States and, as a result, total exports to that market advanced by 80 p.c. British Columbia mine development benefited from growth in shipments to Japan but this gain was more than offset by the weaker competitive position of Eastern Canada producers in Britain and other European markets. One of the most significant resource developments of 1962 was the commencement of iron ore shipments, in the form of high-grade concentrate, by Iron Ore Company of Canada from its new operation at Labrador City.

Canada is the world's third largest gold producer, after the Republic of South Africa and the Soviet Union. Despite the increase in the Royal Canadian Mint price for gold to $\$ 37.41$ an oz.t. from the 1961 price of $\$ 35.46$, Canada's output declined by 7 p.c. Increasing mining depths, lower grade ores, higher labour and material costs and lower mine tonnages are all working toward higher operating costs in the gold industry.

The uranium industry continued to make adjustments under a stretch-out plan for deliveries to the United States as instituted by the Federal Government late in 1959. At the end of 1962, eight mines were in production compared with 23 at the peak period in 1959. The value of production in that year was $\$ 331,000,000$, subsequently declining to $\$ 270,000,000, \$ 195,700,000$ and $\$ 151,000,000$ in 1960,1961 and 1962 , respectively. Although lead production declined, zinc producers increased their shipments and the capacity of the zinc industry will be enlarged considerably over the next four to five years. New mines in Quebec accounted for a large part of the 1962 increase. Silver production dropped about 5 p.c. as a result of the decline in British Columbia lead production from which silver is derived as a by-product.

In the industrial minerals sector, a new production record was established for the fourth consecutive year and individual highs were recorded for magnesium minerals, nepheline syenite, salt, elemental sulphur and cement. The most notable development was the establishment of potash production on a regular basis after several years of delays with mining problems. Elemental sulphur production from natural gas fields in Western Canada also shows much promise and in 1962 shipments exceeded half a million tons for the first time. By the end of 1963, the Canadian potash industry should be capable of supplying 15 p.c. of the world market; the elemental sulphur industry achieved this status in 1962. Elsewhere in the industrial minerals sector, salt mining capacity was being enlarged, gypsum production facilities increased for shipments to the United States market, and cement processing and distribution facilities expanded. Major engineering projects, such as the large hydro-electric power development north of Baie Comeau in Quebec, contributed to the high level of activity in the construction industry in 1962 and the resultant demand for cement and other construction materials.

The leading commodity in the industrial minerals group is asbestos, followed by sand and gravel, and cement. With a value of $\$ 132,100,000$ in 1962 , asbestos accounted for 61 p.c. of the total value of the 26 non-metallics produced, and sand and gravel and cement accounted for 66 p.c. of the value of structural materials. In recent years, structural materials have been accounting for about three fifths of the value of industrial minerals production, and non-metallics for about two fifths.

In the fuels sector, with over one quarter of Canada's total mineral value, crude petroleum accounted for almost three quarters of the 1962 fuels output. Petroleum has been the leading mineral in point of value since 1953 and in 1962 it exceeded nickel, in second place, by almost $\$ 200,000,000$. Output of all liquid hydrocarbons in 1962 averaged $734,000 \mathrm{bbl}$. daily and during the early months of 1963 , production exceeded $800,000 \mathrm{bbl}$. daily. Natural gas production increased by a record amount as a result of the first full year's operation of the Alberta-to-California pipeline and a favourable demand growth in the domestic market. Alberta accounted for four fifths of Canada's production. The search for oil and gas continued and renewed interest was shown in opening up the Athabasca oil sands for large-scale production as a number of oil companies proceeded actively with various plans to improve mining and processing techniques.

Canada's petroleum refining capacity in 1962 was $979,660 \mathrm{bbl}$. a day, more than double the 1952 rate. Quebec and Ontario had almost 60 p.c. of this capacity. Domestic oil accounted for almost 56 p.c. of all crude used in Canadian refineries in 1962 even though all refineries in Quebec and the Maritime Provinces run entirely on imported crude. There were 74 natural gas processing plants in Canada with a capacity of $3,400,000 \mathrm{Mcf}$. daily.

Export trade is of vital importance to the Canadian mineral industry. The value of mineral exports as raw materials and semi-processed products in 1962 was $\$ 1,935,433,000$. The leading export commodities were nickel, the mineral fuels, aluminum and iron ore which accounted for 16.7 p.c., 16.2 p.c., 14.9 p.c. and 14.7 p.c., respectively, of all mineral exports. About three quarters of the production value of the metallic minerals is accounted for by exports; for the mineral fuels and for industrial minerals the proportion is one quarter. Notwithstanding conditions of mineral over-supply in the world, there was a $\$ 177,000,000$ increase in Canada's mineral exports in 1962, representing a 10-p.c. gain over 1961. Although the Canadian mineral industry must face such restrictions in international trade as quotas and tariffs, the increasing need for mineral materials in the industrial nations of the world offers much promise for continuing growth and diversification of the Canadian mineral economy.

## Subsection 1.-Metals

Nickel.-Production of nickel in Canada in 1962 amounted to 232,068 tons valued at $\$ 385,224,707$. The quantity was slightly under the 1961 production but the production value was considerably higher. Ontario produced 165,440 tons valued at $\$ 274,492,739$ and Manitoba produced 62,099 tons valued at $\$ 103,169,771$. The aggregate production from Quebec, British Columbia and the Northwest Territories was 4,528 tons. Marketing was characterized by keen competition. Supply was greater than demand for the first time in many years because of increased production and the cessation of nickel deliveries to the United States stockpiles. Increased supply resulted in a $2 \frac{1}{4}$ cents-per-pound reduction in the price of nickel, initiated by Falconbridge Nickel Mines, Limited and followed by other companies, and then a 13-p.c. reduction in production in the fourth quarter by The International Nickel Company of Canada, Limited. Further, Société Le Nickel of France began marketing small amounts of nickel of New Caledonian origin in the United States.

On the world market, there was little change in the source of nickel. Canada and New Caledonia supplied most of the Free World's nickel; Russia and Cuba met the bulk of the Soviet bloc requirements. Production from new sources commenced in East Germany, Czechoslovakia and Brazil but these were all minor suppliers.

Sudbury continued to be the main source of Canadian nickel. International Nickel operated seven mines in the area: Creighton, Frood-Stobie, Garson, Levack and Murray as underground mines and the new Clarabelle and Ellen mines as open pits. The Crean Hill mine, although ready for production, was maintained on a standby basis. In September, International Nickel announced a fourth-quarter cutback from $92,000,000 \mathrm{lb}$. to $80,000,000$ lb . of nickel, necessitating the lay-off of some 2,500 employees, mostly in the Sudbury area. The reduced production did not indicate a lowering of demand but was due to surplus production over and above demand and inventory requirement. The company continued construction work on its Copper Cliff, Ont., iron ore recovery plant to enlarge its capacity from 300,000 to 900,000 tons of pellets a year. The project is scheduled for completion in 1963. Falconbridge Nickel Mines, Limited operated the Falconbridge and East mines in the Falconbridge, Ont., area and the Boundary, Onaping and Fecunis mines on the north rim of the Sudbury Basin. Development work continued at the Strathcona deposit.

Elsewhere in Eastern Canada, Marbridge Mines Limited and Nickel Mining and Smelting Corporation were brought into production. Marbridge, in LaMotte township adjacent to Malartic, is Quebec's first nickel producer. Production is at a minimum rate of 300 tons of ore daily; the bulk nickel-copper concentrates are trucked to Falconbridge

Nickel at Falconbridge for smelting. Nickel Mining and Smelting is milling at a rate of 500 tons daily and its bulk nickel-copper concentrates are trucked to Lac du Bonnet, Man., and then rail-shipped to Copper Cliff for smelting.

In Manitoba, production of the Thompson property of International Nickel, which experienced its first full year of production, plus that of Sherritt Gordon Mines, Limited totalled 62,099 tons. Manitoba now accounts for approximately 26 p.c. of Canadian nickel production. Sherritt Gordon's Fort Saskatchewan refinery near Edmonton, Alta., continued to treat Lynn Lake concentrates and to purchase concentrates from North Rankin, N.W.T. At the Lynn Lake mine of Sherritt Gordon, the Farley shaft is to be deepened to reach expected ore in the block of ground below the present working levels. At the Fort Saskatchewan refinery, construction work was completed on the urea plant and on the addition to the ammonia plant. North Rankin closed in October when minable grade ore was exhausted; the mining and milling plants were dismantled and the townsite sold.

Giant Nickel Mines Limited in British Columbia, a wholly-owned subsidiary of Giant Mascot Mines, Limited, completed its expansion to 1,200 tons daily. Concentrates are exported to Japan.

Copper.-Mine production of copper in Canada in 1962 reached a record high of 458,590 tons valued at $\$ 283,133,249$, a tonnage increase of 4.4 p.c. and a value increase of $\$ 27,975,623$ over 1961. Reductions in Ontario, Manitoba and Saskatchewan were more than offset by increased production in Newfoundland, New Brunswick, Quebec and British Columbia. Across Canada three mines were closed, eight mines started production and seven were under development. Exploration parties were active in all copper-producing provinces and in the territories.

Six smelters for the reduction of copper and copper-nickel ores and concentrates are operated in Canada. In the Sudbury district of Ontario, International Nickel operates smelters at Copper Cliff and Coniston, and Falconbridge Nickel Mines produces coppernickel matte at its Falconbridge smelter. Hudson Bay Mining and Smelting Co., Limited at Flin Flon, Man., smelts concentrates from its mines in Manitoba and Saskatchewan and, since September 1960, has smelted copper concentrates from Sherritt Gordon's Lynn Lake mine. Ores and concentrates from most of the copper mines in Ontario, Quebec and Newfoundland are smelted at the Noranda smelter of Noranda Mines, Limited and the Murdochville smelter of Gaspé Copper Mines, Limited, both in Quebec. Copper refineries are operated by International Nickel at Copper Cliff, Ont., and Canadian Copper Refiners Limited at Montreal East, Que. Production of refined copper in 1962 totalled about 383,000 tons.

Production from the three copper-producing mines in Newfoundland in 1962 totalled 18,342 tons valued at $\$ 11,372,350$. In the Burlington Peninsula area two copper properties were being explored by diamond drilling and underground development.

New Brunswick rejoined the ranks of copper-producing provinces in January 1962 when ore was shipped from the Wedge mine of The Consolidated Mining and Smelting Company of Canada Limited to the mill of Heath Steele Mines Limited; 750 tons of ore a day were trucked to the mill over a ten-mile road that was built under the federalprovincial roads-to-resources program. Heath Steele continued exploration and development of its zinc-copper orebody some 35 miles north of Newcastle. Near Bathurst, Brunswick Mining and Smelting Corporation Limited started rehabilitation of the mine plant and construction of a 3,000-ton-a-day mill at its No. 12 mine. The Canadian National Railways will construct a 15 -mile branch line from Nepisiguit Junction to the property and production at 3,000 tons a day will start early in 1964. Concentrates from this operation will be shipped to Belgium from Dalhousie. New Brunswick's copper production in 1962 totalled 6,629 tons valued at $\$ 4,109,856$.

There were 18 copper-producing mines in Quebec in 1962 with a combined output of 151,390 tons of copper valued at $\$ 93,861,854$. Production cuts of 5 p.c. were maintained
at the mines of Noranda Mines, Limited (Horne mine), Waite Amulet Mines, Limited and Gaspé Copper Mines, Limited. Solbec Copper Mines, Ltd. started production of copper and zinc concentrates in January at its 1,000-ton-a-day mill about 53 miles northeast of Sherbrooke in the Eastern Townships. Cupra Mines Ltd. started shaft-sinking at its property approximately $2 \frac{1}{2}$ miles south of the Solbec mine; mining will start in 1964 and the ore will be trucked to the Solbec plant for milling. In the Chibougamau district, Campbell Chibougamau Mines Ltd. started development of a new ore occurrence on four levels below the previously mined orebody. Merrill Island Mining Corporation, Ltd. deepened its main shaft and started exploration and development on three levels of a recently discovered orebody. In the Noranda-Val d'Or-Normetal area of northwestern Quebec, production was maintained at the established mines and underground exploration and development started at several prospects. Lake Dufault Mines, Limited started shaft-sinking at its property adjoining Waite Amulet Mines, on the east. In Joutel Township north of Amos, Joutel Copper Mines Limited started sinking a three-compartment shaft on its property, and Rio Algom Mines Limited announced plans to start sinking on its claims in the same area. Mine plant construction and underground development was proceeding at the mines of Mattagami Lake Mines Limited, New Hosco Mines Limited and Orchan Mines Limited in the Mattagami Lake area; production from these properties is scheduled to begin in the latter part of 1963. Exploration parties were active in all parts of Quebec, particularly in the Belleterre, Noranda and Joutel areas in the northwest and in Ungava where interest was centred around Romanet Lake.

Copper production in Ontario declined in 1962 to 184,684 tons valued at $\$ 113,481,766$ from the 211,647 tons valued at $\$ 122,421,860$ produced in 1961, a result of the cut in production by International Nickel at its Sudbury mines. This company operated seven mines, three mills, two smelters and a copper refinery in the Sudbury district. Falconbridge Nickel Mines, Limited, the other large nickel-copper producer in the area, operated six mines, three mills and a smelter and shipped nickel-copper matte to its refinery in Norway. The copper-zinc mines in the Manitouwadge area produced steadily all year as did North Coldstream mine near Kashabowie and Rio Algom's Pater mine at Spragge. Kam-Kotia Porcupine Mines, Limited, west of Timmins, discovered a new orebody close to its 900 -ton-a-day open-pit mine and preparations were made to sink a shaft and explore the mineralized zone by lateral development. McIntyre-Porcupine Mines, Limited at Timmins modified a portion of its mill in preparation for the treatment of low-grade copper ore to be produced from a section of the McIntyre mine in 1963.

In Manitoba-Saskatchewan, Hudson Bay Mining and Smelting Co., Limited, Sherritt Gordon Mines, Limited and Stall Lake Mines Limited had a combined copper output of 43,061 tons valued at $\$ 26,527,365$, a decrease of 2,872 tons and $\$ 288,906$ from 1961. Stall Lake Mines started production of copper-zinc ore late in 1962 from a property four miles southwest of Snow Lake, Man. The ore is sold to Hudson Bay for smelting. Hudson Bay operated a central mill and smelter on ores from the Schist Lake and Chisel Lake mines in Manitoba, the Coronation mine in Saskatchewan and the Flin Flon mine that straddles the Manitoba-Saskatchewan boundary. Development of the Stall Lake and Osborne mines near Snow Lake, Man., was continued by Hudson Bay. Sherritt Gordon produced copper concentrate at its nickel-copper mine and mill at Lynn Lake, which was smelted at Flin Flon.

Copper production in British Columbia continued the spectacular rise that started in 1960. The 1962 production of 53,709 tons valued at $\$ 33,299,715$ exceeded that of 1961 by 37,864 tons and $\$ 24,093,777$. Craigmont Mines Limited, near Merritt, is now Canada's third largest copper mine and produced approximately three quarters of British Columbia's 1962 copper production. Bethlehem Copper Corporation Ltd. started production in December 1962 at its open-pit mine in Highland Valley, approximately 26 miles southeast of Ashcroft: output will be at the rate of 3,300 tons of ore a day and concentrates will be shipped to Japan. Howe Sound Company's mine at Britannia Beach continued production at 1,500 tons of ore a day and concentrates were shipped to Tacoma, Washington. Phoenix Copper Company Limited, near Greenwood, increased its mill capacity to 1,500 tons a day
and shipped copper concentrates to Tacoma; its 1963 copper concentrates will go to Japan. Consolidated Woodgreen Mines Limited suspended operations in April. On Vancouver Island, Cowichan Copper Co. Ltd. brought the Sunro mine at Jordan River into production in March. Concentrates from the 1,500-ton-a-day underground concentrator were shipped to Japan. The Consolidated Mining and Smelting Company of Canada Limited started production in September at the Benson Lake property of Coast Copper Company Limited. The Benson Lake mill will treat 750 tons of ore a day and concentrates will be shipped to Japan. Exploration parties were active in many parts of British Columbia; the greatest activity was in the Buttle Lake and Duncan areas of Vancouver Island, the Highland Valley-Merritt-Princeton area of south-central British Columbia and the Unuk River section of the northwestern part of the province.

Copper production in the Northwest Territories and the Yukon Territory totalled 534 tons valued at $\$ 330,961$. Production ceased with the closure in October of North Rankin Nickel Mines Limited's nickel-copper mine at Rankin Inlet on Hudson Bay and the suspension of operations at the Johobo mine of Dominion Explorers Limited at Kathleen Lake in the Yukon.

Iron Ore.-The decreasing level of iron ore shipments, evident since 1959, was sharply reversed in 1962 when total shipments reached an all-time high of $27,898,713$ tons, up 37 p.c. from 1961. Output of all producing provinces was higher. At the same time, some companies experienced a continuation of the former trend toward lower shipments and softer prices as a result of increased competition and a generally stagnant, increasingly captive, international market. Most companies intensified their ore-research programs during the year and the trend toward producing a beneficiated product for marketing rather than direct-shipping ore continued.

There are five main market areas for Canadian iron ore-the United States, Britain, Western Europe, Japan and Canada. The United States is the principal market and the level of ore consumption there rose slightly during 1962. The increase in exports from Canada exceeded considerably the increase in supply from other foreign sources and from domestic mines. The main reason for this was a high level of operation by Canada's three largest iron ore producers which are integrated with United States steel companies. On the other hand, non-captive ore sales by these and other Canadian producers, except those in British Columbia, tended to weaken.

In Western Europe, steel production in most countries levelled off or declined slightly after a decade of continuous growth. Exports from Canada in 1962 to customers in Europe decreased except for relatively small increases to Italy and France. A large portion of the net decrease in exports was experienced by one company whose ore is particularly subject to rigorous competition from new, higher-grade sources in Africa, Asia and South America.

In Japan, the rapidly increasing ore-consumption rate levelled off unexpectedly early in 1962. As a consequence, the planned imports for the year were reduced by about 20 p.c. and Canadian producers were accordingly affected. Despite the cutbacks, there was a substantial increase in exports from British Columbia, the sole Canadian supplier to Japan, because of previously negotiated contracts.

Developments in the Canadian iron and steel industry have increased the ratio of Canadian to foreign ore consumed in recent years, a trend that can be expected to continue, particularly after 1965, despite a decline in 1962. By 1965, a new project will come into production in Labrador that will provide nearly $2,000,000$ tons of captive ore to the Canadian industry. However, domestic consumption of Canadian iron ore decreased slightly in 1962 although steel production reached a record level approximately 10 p.c. above that of 1961. Imports from the United States and other foreign sources increased. The reason for these opposing trends is that during the period before Canadian iron ore became abundantly available in the 1950's, Canadian steel producers obtained most of their ore requirements from United States iron ore mining firms in which they had a financial interest and/or traditional commercial links.

The decrease and stabilization of the external value of the Canadian dollar at a rate below that of the United States on May 2, 1962, was of net benefit to Canadian iron ore exporters. Increased revenue from export sales more than offset the additional capital charges that several operators must repay in foreign currency. The net benefit to several producers, however, was largely dissipated because the base selling price of direct-shipping ore in North America was lowered. In addition, competition from other exporting countries increased the pressure on prices received for Canadian direct-shipping as well as high-grade beneficiated ore in the European markets.

Iron Ore Company of Canada, with direct-shipping ore deposits astride the LabradorQuebec border 360 miles north of the port of Sept Illes, Que., is the largest producer, and accounted for 41 p.c. of 1962 Canadian shipments. Initial shipments of high-grade concentrate were made from the company's new operation at Labrador City. Wabana Mines of the Dominion Steel and Coal Corporation, Limited, produces medium-grade concentrate from its underground mines on Bell Island, Nfld., and accounted for about 5.2 p.c. of the year's shipments. High-grade pellets from Hilton Mines, Ltd. near Shawville, Que., accounted for another 3.1 p.c. Quebec Cartier Mining Company, a new producer in 1961, contributed 18.5 p.c. by shipping high-grade concentrate from its new mine and beneficiation plant at Gagnon and its port at Port Cartier, Que.

In Ontario, Caland Ore Company Limited, Canadian Charleson, Limited and Steep Rock Iron Mines Limited continued to produce direct-shipping and medium-grade concentrates in the Atikokan area. Steep Rock, the area's oldest producer, and Caland accounted for 8.0 p.c. and 4.0 p.c., respectively, of the 1962 shipments. In the Michipicoten area, Algoma Ore Properties Division of The Algoma Steel Corporation, Limited operates mines and a sinter plant at Wawa and accounted for 6.5 p.c. of the 1962 shipments. Marmoraton Mining Company, Ltd. produces high-grade pellets from its mine and plant near Marmora, and Lowphos Ore, Limited produces high-grade concentrate from its operations near Capreol. Together, these companies produced 3.8 p.c. of the country's shipments in 1962.

Six British Columbia producers accounted for 6.5 p.c. of Canadian shipments. Empire Development Company, Limited and Nimpkish Iron Mines Ltd. operate mines on Vancouver Island, and Texada Mines Ltd. produces from mines on Texada Island. Initial shipments were made in 1962 by Brynnor Mines Limited and Zeballos Iron Mines Limited from properties on Vancouver Island, and by Jedway Iron Ore Limited from the Queen Charlotte Islands.

By-product iron ore was produced by The Consolidated Mining and Smelting Company of Canada Limited at Trail, B.C., and by The International Nickel Company of Canada, Limited and Noranda Mines, Limited from plants at Copper Cliff and Cutler, Ont. At Sorel, Que., Quebec Iron and Titanium Corporation smelts ilmenite ore from its mine near Havre St. Pierre to produce titania slag and pig iron. Falconbridge Nickel Mines, Limited commenced production from a new plant near Sudbury, Ont.

Properties being developed for production will result in an increase in Canada's productive capacity to over $40,000,000$ long tons by 1965 . In the Wabush Lake area of Labrador, Wabush Iron Co. Limited will commence the production of high-grade concentrate and pellets in 1965 at the annual rate of $6,000,000$ long tons. In Ontario, Jones \& Laughlin Steel Corporation will be producing $1,000,000$ long tons of high-grade pellets from new facilities to be erected near Kirkland Lake by 1964.

Gold.-The average Royal Canadian Mint price for gold rose to $\$ 37.41$ an oz.t. in Canadian funds in 1962 from $\$ 35.46$ in 1961. Despite the higher price, gold production decreased in 1962 to $4,155,210 \mathrm{oz}$.t. from 4,473,699 oz.t. and production value at $\$ 155,446,407$ was considerably lower than the 1961 value of $\$ 158,637,366$. The Canadian dollar had been selling at a premium over the United States dollar ever since February 1952. In his Budget Speech to Parliament on June 20, 1961, the Minister of Finance announced that the resources of the Exchange Stabilization Fund would be used to reduce the value of the Canadian dollar in relation to the U.S. dollar. This government policy resulted in a decline in the Canadian dollar and a corresponding rise in the Mint price of gold. The dollar continued to decline and on May 2, 1962 it was announced that, effective immediately, the Canadian dollar would be stabilized at $92 \frac{1}{2}$ cents in terms of the U.S. dollar. The new exchange rate was formally established with the concurrence of the International Monetary Fund and the Government of Canada agreed to maintain the Canadian exchange rate within the normal margin of 1 p.c. either side of the fixed value. The range in value for the Canadian dollar was thus set at from $\$ 0.916$ to $\$ 0.934$ in relation to the U.S. dollar and the corresponding Mint price for gold between $\$ 38.22$ and $\$ 37.46$ per oz.t.

Decreased production in 1962 was attributed to a number of factors. Two old gold mines in Ontario closed late in 1961; Kerr-Addison Gold Mines Limited in the Larder Lake area of Ontario, Canada's largest single producer, had a 20-p.c. drop in output; and the value of gold ore available for milling was lower in many Ontario and Quebec mines. Extensive underground exploration and development programs, including deepening of existing shafts and changes in mining methods due to increased depth of mining also resulted in fewer tons of ore being milled and increased operating costs in some of the larger mines. However, mines were able to continue operating because of the cost assistance received under the terms of the Emergency Gold Mining Assistance Act and the higher Mint price for gold.

A total of 52 lode gold mines operated during 1962, one fewer than in 1961. Fortytwo mines received cost assistance under the terms of the Emergency Gold Mining Assistance Act. Mines not eligible for cost assistance had total costs of less than $\$ 26.50$ per oz.t. and sold most of their gold on the open market. During the year, the proportion of gold coming from lode gold mines decreased to 83.4 p.c. from 84.4 p.c. and by-product gold recovered from base-metal ores increased to 15.3 p.c. from 14.1 p.c. Placer gold accounted for 1.3 p.c. compared with 1.5 p.c. in 1962.

Ontario was again the main producer, accounting for 57.6 p.c. of the 1962 total gold output compared with 59.0 p.c. in 1961, but production was lower at an estimated $2,393,817$ oz.t. compared with $2,637,720$ oz.t. in 1961 . Only the Port Arthur mining division showed an increase. Twenty-nine lode mines operated in the province compared with 30 in the previous year. Twelve mines operated in the Porcupine district, the chief producers being Hollinger Consolidated Gold Mines, Limited (Canada's second largest gold producer), McIntyre-Porcupine Mines, Limited and Dome Mines Limited. In the Red Lake-Patricia mining divisions, seven mines operated, the chief producers being Campbell Red Lake Mines Limited, Madsen Red Lake Gold Mines Limited and Dickenson Mines Limited. Kerr-Addison Gold Mines Limited in the Larder Lake area had a drop in output of more than 20 p.c. In the Kirkland Lake area, five mines operated, the main producers being Macassa Gold Mines Limited, Upper Canada Mines, Limited and Wright-Hargreaves Mines, Limited. In the Port Arthur mining division, Consolidated Mosher Mines Limited started shipping ore to the adjoining MacLeod-Cockshutt Gold Mines Limited in January 1962, and Leitch Gold Mines Limited continued to operate. Renabie Mines Limited continued operations in the Sudbury mining division. Some 66,000 oz.t. of gold were recovered as a by-product from base-metal ores in Ontario, mainly from the nickel-copper mines of the Sudbury district. No placer production was reported.

Quebec produced 24.0 p.c. of Canada's gold production compared with 23.6 p.c. in 1961. Fourteen mines operated and production totalled 998,502 oz.t. compared with $1,054,029$ oz.t. One small mine, Malartic Hygrade Gold Mines Limited, commenced trucking ore to the custom mill of Malartic Gold Fields Limited in March 1962. The largest lode gold producers were Lamaque Mining Company Limited and Sigma Mines (Quebec) Limited at Bourlamaque and East Malartic Mines, Limited at Malartic. Gold recovered as a by-product from base-metal ores was lower but represented 41.2 p.c. of the total production. No placer production was reported in Quebec.

The Northwest Territories produced 9.5 p.c. of the gold recovered compared with 9.1 p.c. in 1961. All production came from lode mines in the Yellowknife district and totalled 393,433 oz.t. compared with 404,474 oz.t. in 1961. Four mines operated, Giant Yellowknife Mines Limited (Canada's third largest producer) being the main producer.

British Columbia produced 4.1 p.c. of Canada's output compared with 3.7 p.c. in 1961; recovery increased to $169,683 \mathrm{oz} . \mathrm{t}$. from $164,467 \mathrm{oz} . \mathrm{t}$. Three lode gold mines operated but McKinney Gold Mines Limited ceased shipping ore in May 1962. The only large producer was Bralorne Pioneer Mines Limited in the Bridge River area. By-product gold from base-metal mines increased by nearly 40 p.c. and accounted for 22.1 p.c. of the provincial total. Placer recovery accounted for 1.4 p.c. of the total.

In the Prairie Provinces, Manitoba recovered 61,124 oz.t. in 1962 compared with 57,747 oz.t. in 1961. Lode gold from San Antonio Gold Mines Limited and Forty-Four Mines, Limited at Bissett accounted for almost half of the total, the remainder coming as a by-product from base-metal mines in the Flin Flon and Lynn Lake areas. Saskatchewan recovered 67,783 oz.t. from base-metal mines near Flin Flon on the Manitoba-Saskatchewan border and a small amount of placer gold was recovered from the North Saskatchewan River near Edmonton in Alberta.

In the Yukon Territory, the total recovered in 1962 was 54,086 oz.t. compared with 66,878 oz.t. in 1961, all coming from placer operations. About 80 p.c. of Canada's placer gold production comes from dredging and hydraulicking operations of The Yukon Consolidated Gold Corporation, Limited in the Dawson area.

The only gold production in the Maritime Provinces was 299 oz.t. recovered from base-metal ores in New Brunswick. Newfoundland's 1962 production was 16,375 oz.t. compared with 14,429 oz.t. in 1961, all of it coming as a by-product from copper and leadzinc mines.

Uranium.-The principal uranium deposits in Canada are found in three geographically and geologically different areas. The deposits in the Elliot Lake-Blind River district of northern Ontario occur in quartz-pebble conglomerates and are by far the largest in Canada; ore reserves are estimated at $290,000,000$ tons grading 0.12 p.c. $\mathrm{U}_{3} \mathrm{O}_{8}$. The deposits in the Bancroft area of southeastern Ontario are the only pegmatitic granite dykes being worked for uranium in Canada. Some of the orebodies in these dykes are unusually large and persistent in depth, and average about 0.10 p.c. $\mathrm{U}_{3} \mathrm{O}_{8}$. Vein-type deposits, containing pitchblende, are being mined in the Beaverlodge Lake area on the north shore of Lake Athabasca in northern Saskatchewan. The grade of the ore in these deposits, ranging between 0.18 and 0.25 p.c. $\mathrm{U}_{3} \mathrm{O}_{8}$, is relatively high compared with the other two types. The measured, indicated and inferred uranium ore reserves in Canada as of Jan. 1, 1962 were estimated at $300,000,000$ tons, grading 0.12 p.c. $\mathrm{U}_{3} \mathrm{O}_{8}$ [equivalent to 360,000 tons of uranium oxide $\left(\mathrm{U}_{3} \mathrm{O}_{8}\right)$ ] and are considered to be the largest in the world. The reserves calculated for the Elliot Lake district constitute about 98 p.c. of the total.

In 1958, Canada was the world's leading producer of uranium concentrates. In 1959 the value of uranium production amounted to $\$ 331,000,000$ and was, for the second consecutive year, higher than the value of any other mineral produced in the country with the exception of petroleum. In 1960 the value of output declined to approximately $\$ 270,000,000$ and in 1961 production of uranium oxide ( $\mathrm{U}_{3} \mathrm{O}_{8}$ ) amounted to 9,641 tons valued at $\$ 195,700,000$. Preliminary estimates for 1962 were 8,400 tons valued at $\$ 151,425,000$. Production has declined as mines have continued to close following the announcement of the United States Atomic Energy Commission in November 1959 that it would not continue to purchase uranium from Canada in excess of contract commitments that were to expire in 1962 and 1963. As a result of this decision, arrangements were made to allow Canadian producers to stretch out to the end of 1966 the undelivered portion of uranium under their sales contracts. At the end of 1962, eight mines (seven companies) were producing uranium compared with 23 at the peak period in 1959. In the Elliot Lake district, four mines operated throughout the year-Denison Mines Limited, Stanrock Uranium Mines Limited, and two mines (Milliken and Nordic) owned by Rio Algom Mines Limited; in the Bancroft area, two mines, operated by Macassa Gold Mines Limited (Bicroft) and Faraday Uranium Mines Limited, remained in operation; and in the Lake Athabasca district, two mines continued to operate - the government-owned mine of Eldorado Mining and Refining Limited and the privately owned mine of Gunnar Mining Limited. In 1962, a contract was signed with the United Kingdom Atomic Energy Authority for the delivery of 12,000 tons of uranium oxide ( $\mathrm{U}_{3} \mathrm{O}_{8}$ ) over a period extending until early in 1970. This contract will permit each of the seven producers to extend its period of operations approximately $16 \frac{1}{2}$ months past the completion date of existing contracts with the United States Atomic Energy Commission.

The Mines Branch of the federal Department of Mines and Technical Surveys, in collaboration with Eldorado Mining and Refining Limited and the Canadian Uranium Research Foundation, continued its program of research into non-nuclear uses of uranium. This program was undertaken in an effort to find new uses for uranium and thereby to provide an additional outlet for production during a period of otherwise declining demand. As part of this program, a new uranium steel alloy, developed by the Mines Branch in 1960, has been undergoing tests on a commercial scale.

Uranium producers are allowed to sell as much surplus uranium as they can to countries that hold bilateral agreements with Canada for co-operation in the peaceful uses of atomic energy, but there have been very few sales of this nature. Apart from the special contract agreements for the sale of uranium to the United States and Britain, Canada holds bilateral agreements with Australia, Japan, Pakistan, Sweden, Switzerland, West Germany and EURATOM (Belgium, West Germany, France, Italy, Luxembourg and the Netherlands). For other countries, a Canadian producer may, subject to government approval, sell up to $2,500 \mathrm{lb}$. of uranium.

Lead and Zinc.-On the basis of lead produced from domestic ores and the recoverable lead content of ores and concentrates exported, Canada's output in 1962, estimated at 190,609 tons, was substantially lower than the 1961 output of 230,435 tons. A large part of this reduction was accounted for by lower metal production at the Trail smelter in British Columbia operated by The Consolidated Mining and Smelting Company of Canada Limited. Output at Trail in 1962 was 152,217 tons compared with 171,833 tons in 1961. The average price of lead was 9.93 cents a pound; in 1961 it was 10.21 cents. Exports of lead in all forms during 1962 totalled 185,297 tons, most of it going as metal to Britain ( 48,082 tons) and to the United States ( 89,424 tons). Five countries imported lead in concentrates from Canada: Britain, 4,227 tons; Belgium and Luxembourg, 16,018 tons; West Germany, 10,020 tons; and the United States, 29,230 tons. Domestic consumption of primary and secondary lead in 1962 amounted to 77,286 tons.

Unlike lead, estimated production of zinc in all forms, including that from zinc plant residues, at 457,144 tons was considerably higher than the 416,004 tons produced in 1961. Quebec mines completing their first full year of production accounted for a large part of the increase and the remainder was accounted for by production increases at longestablished mines, most of them in British Columbia and Ontario. Production of refined zinc from Canada's two refineries-at Trail, B.C., and at Flin Flon, Man.-was 280,158 tons in 1962 compared with 268,007 tons in 1961. The average price of Prime Western grade zinc was 11.50 cents a pound in 1962 and 11.97 cents in 1961. Zinc exports during 1962 totalled 453,180 tons-242,457 tons in ores and concentrates and 210,723 tons as metal. Most of ores and concentrates (194,743 tons) went to the United States and the largest sales of zinc metal were made to Britain, the United States and India which imported 92,338 tons, 74,733 tons and 20,266 tons, respectively. Domestic consumption of primary and secondary zinc in 1962 amounted to 68,074 tons.

Five companies, operating six lead-zinc mines and one copper-zinc mine in the southern part of British Columbia produced nearly all of that province's lead and zinc. By far the largest portion was produced by The Consolidated Mining and Smelting Company of Canada Limited which concentrates about 11,900 tons of lead-zinc ore a day10,000 tons at the Sullivan mine at Kimberley, 1,200 tons at the H.B. mine at Salmo, and 700 tons at the Bluebell mine at Riondel. Other producers in this part of the province include Sheep Creek Mines Limited at Toby Creek, Canadian Exploration, Limited at Salmo, and Reeves MacDonald Mines Limited at Remac. At Britannia, 20 miles north of Vancouver, Howe Sound Company was the province's only producer of copper-zinc ore. Among the smaller lead and zinc producers were Mastodon-Highland Bell Mines Limited at Beaverdell in the south-central part of the province, Silbak Premier Mines, Limited at Stewart north of Prince Rupert, and several others in the Slocan district. Most of the concentrates from these mines, and some Yukon Territory and foreign concentrates were treated at the Trail smelter.

All the lead and nearly all the zinc produced in Saskatchewan and Manitoba came from the large Flin Flon mine, the Coronation and Schist Lake mines at Flin Flon and the Chisel Lake mine at Snow Lake, Man. Stall Lake Mines Limited at Snow Lake produced, in the latter part of 1962, some copper-zinc ore which it shipped to Hudson Bay's 6,000-ton-a-day mill at Flin Flon. Copper and zinc concentrates produced in this mill were treated in Hudson Bay's copper-zinc smelter and electrolytic zinc refinery at Flin Flon. The lead concentrate was sold to a custom smelter.

In Ontario, Geco Mines Limited and Willroy Mines Limited at Manitouwadge, north of Lake Superior, were Ontario's only producers of lead and zinc concentrates in 1962. Sherbrooke Metallurgical Company Limited continued to operate its zinc roaster at Port Maitland on Lake Erie. The concentrates came from Ontario and Quebec mines.

Quebec's lead and zinc production was somewhat higher than in 1961, due in part to production by The Coniagas Mines, Limited from its lead-zinc-silver mine at Bachelor Lake north of Senneterre, and by Vauze Mines Limited from its copper-zinc mine at Noranda, each of which completed its first full year of operation. Solbec Copper Mines, Ltd., which commenced production of copper, zinc and lead concentrates early in 1962 at its mine in the Eastern Townships, added a substantial amount of zinc and a smaller amount of lead to the province's production. Producers in northwestern Quebec continued to be Quemont Mining Corporation, Limited and Waite Amulet Mines, Limited at Noranda; Normetal Mining Corporation, Limited at Normetal; and Manitou-Barvue Mines Limited and Sullico Mines Limited near Val d'Or. Of these companies, ManitouBarvue was the only producer of a lead concentrate in addition to copper and zinc concentrates. New Calumet Mines Limited, on Grand Calumet Island in the Ottawa River some 55 miles west of Ottawa, produced lead and zinc concentrates.

In the Atlantic Provinces, the largest producer was American Smelting and Refining Company which operates a zinc-lead-copper mine at Buchans, Nfld. Other producers were Magnet Cove Barium Corporation, which completed its first year of production at Walton, N.S., and Heath Steele Mines Limited which re-commenced milling in mid-year at its mine in the Bathurst area of New Brunswick. In Yukon Territory, the principal sources of lead-zinc ores were the Calumet, Elsa and Hector mines in the Mayo district, operated by United Keno Hill Mines Limited. These ores were treated in the 500 -ton-a-day mill at Elsa.

In 1962, important exploration and development took place in the Bathurst area of New Brunswick, in the Mattagami area of northwestern Quebec and at Buttle Lake on Vancouver Island. Following completion of financial arrangements, Brunswick Mining and Smelting Corporation Limited at Bathurst in mid-year began to make preparations to place its mine properties in production late in 1963 or early in 1964. Mattagami Lake Mines Limited and Orchan Mines Limited announced their intentions of commencing production of zinc concentrates at their Mattagami Lake properties toward the end of 1963. Considerable underground development and surface construction was done by these three companies in 1962. Western Mines Limited completed some below surface exploration and development on its Buttle Lake base-metal property. Also of importance to lead and zinc mining in Canada was the commencement in February 1962 of a 438 -mile Canadian National Railways line from Grimshaw, Alta., to Hay River on the south shore of Great Slave Lake in the Northwest Territories. A branch line from this line will serve the important lead-zinc deposits at Pine Point on Great Slave Lake. Construction was started on a 200 -ton-a-day electrolytic zinc reduction plant at Valleyfield, Que., which will treat concentrates from some Ontario and Quebec mines.

Silver.-Although production of silver in substantial amounts started at two mines in 1962 and several producers completed their first full year of operation, Canada's silver production at $29,955,465$ oz.t. was somewhat below the 1961 output of $31,381,977$ oz.t. The decline was largely attributable to a drop in British Columbia lead production, with which silver is produced as a by-product. However, silver prices in world markets during 1962 reflected increasing demands for available silver and the Canadian price reached its highest level in 43 years on Oct. 19 at $\$ 1.3175$ per oz.t. At the beginning of the year the price was $\$ 1.1012$; at the year-end it was $\$ 1.3037$. Thus, although production was lower in 1962 its value amounted to $\$ 34,897,604$ compared with the value of the 1961 production at $\$ 29,580,651$.

Lead-zinc and silver-lead-zinc ores, which are mostly mined in British Columbia, are by far the most important of the various sources of silver in Canada, accounting annually for about 58 p.c. of the total output. Other major sources, from which about

25 p.c. of the production is derived, are copper, copper-nickel and copper-zinc ores, especially those mined in Ontario and Quebec. The silver-cobalt ores mined near Cobalt and Gowganda in northern Ontario account for about 15 p.c. of the output and small amounts are derived from lode- and placer-gold ores.

Canada's principal producer of refined silver is The Consolidated Mining and Smelting Company of Canada Limited which recovers silver from silver-lead-zinc ores treated at Trail, B.C. Other producers were Canadian Copper Refiners Limited at Montreal East, Que. (from blister copper), The International Nickel Company of Canada, Limited at Copper Cliff, Ont. (from blister copper), Hollinger Consolidated Gold Mines, Limited at Timmins, Ont. (from gold precipitates), the Royal Canadian Mint at Ottawa (from gold bullion), and Cobalt Refinery Limited at Cobalt, Ont. (from silver concentrates). The last company was formed in mid-1962 to operate a refinery which was erected in 1949 but had never produced on a permanent basis.

United Keno Hill Mines Limited is Canada's largest mine producer of primaryproduct silver. During the year ended on Sept. 30, 1962, this company produced $7,000,837$ oz.t. from its three mines in the Mayo district of Yukon Territory. Other leading primary producers in 1962 were: Glen Lake Silver Mines Limited which commenced operations in mid-1962; Agnico Mines Limited; Langis Silver and Cobalt Mining Company Limited; McIntyre Porcupine Mines, Limited; and Siscoe Metals of Ontario Limited, all in the Cobalt and Gowganda areas of Ontario. Mastodon-Highland Bell Mines Limited in British Columbia is also a leading producer.

Platinum Metals.-Production of platinum metals-including platinum, iridium, rhodium, ruthenium and palladium-amounted to 453,526 oz.t. valued at $\$ 28,085,528$ in 1962 , compared with a 1961 production of 418,278 oz.t. valued at $\$ 24,534,349$. These metals are derived as by-products of the treatment of nickel-copper ores and the entire output, except for an occasional ounce of placer production from British Columbia or the Yukon, comes from the International Nickel and Falconbridge mines in the Sudbury district of Ontario. The precious metal content of bulk nickel-copper concentrates smelted by International Nickel at Copper Cliff, consisting chiefly of platinum, has been estimated at $\$ 3$ a ton. The Thompson nickel project in northern Manitoba and the two new nickel-copper mines in Quebec and Ontario (see p. 522) are potential producers of platinum metals.

Canada, the Republic of South Africa and the Soviet Union supply the bulk of world output of platinum metals which, in 1961, amounted to $1,190,000$ oz.t. Of that amount Canada contributed 418,278 oz.t., South Africa an estimated $357,000 \mathrm{oz} . \mathrm{t}$. and the Soviet Union an estimated 350,000 oz.t.

The use of platinum metals in industry is becoming more diverse as research progresses. Palladium-silver alloys are now being used as membranes in diffusion cells in hydrogen purification; members of the platinum group are being increasingly used in fuel cells during research; platinum metals, either as catalysts or as electrode materials, are being considered for many auto smog control units; and the lesser known platinum metals-rhodium, ruthenium and osmium-show increasing desirability as polymerization and hydrogenation catalysts.

Cobalt.-Cobalt is derived as a by-product from the smelting and refining of the nickel-copper ores of Sudbury, Ont., and Lynn Lake, Man., and from the nickel ores of Thompson, Man. International Nickel recovers cobalt from its refinery operations at Port Colborne, Ont., and Clydach, Wales, based on its Sudbury and Thompson ores. Falconbridge Nickel recovers cobalt in the refining of its Sudbury nickel-copper matte at its refinery at Kristiansand, Norway. Sherritt Gordon produces refined cobalt powder and briquettes, and cobalt metal strip, in its refinery at Fort Saskatchewan, Alta., using nickel concentrates shipped from its mine at Lynn Lake in northern Manitoba. In 1962, Canadian cobalt production amounted to $3,441,746 \mathrm{lb}$. valued at $\$ 6,382,502$, compared with $3,182,897 \mathrm{lb}$. valued at $\$ 4,751,543$ in 1961.

Columbium.-St. Lawrence Columbium and Metals Corporation, the only Canadian producer of columbium concentrates, in 1962 shipped pyrochlore concentrates containing $967,000 \mathrm{lb}$. of columbium pentoxide from its mine and mill at Oka, Que., about 30 miles west of Montreal. Two other companies have carried out extensive research and exploration programs in the same area. Geo-Met Reactors Limited produced ferrocolumbium and a pyrochlore steel additive at its Ottawa, Ont., plant for domestic consumption and for export.

Molybdenum.-Molybdenite Corporation of Canada Limited was the principal Canadian producer of molybdenite in 1962 and the only producer of molybdic oxide; its mine and plant are at La Corne, Que. Pax International Mines Limited shipped trial lots of molybdenite from a property near Matachewan, Ont. In 1962, Canadian shipments of molybdenum contained in molybdenite amounted to $797,452 \mathrm{lb}$. valued at $\$ 1,228,672$. Preissac Molybdenite Mines Limited and Anglo-American Molybdenite Mining Corporation continued exploration and development work in the Lake Preissac area of Quebec. Gaspé Copper Mines, Limited successfully completed a pilot-plant study of the feasibility of recovering molybdenite as a by-product of its copper milling operations and will begin recovering molybdenite in 1963.

Titanium.-Ilmenite, an iron-titanium oxide, is mined in the Allard Lake and St. Urbain areas of Quebec; ilmenite from St. Urbain is sold as heavy aggregate and most of the ilmenite from Allard Lake is melted at Sorel, Que., in electric furnaces by Quebec Iron and Titanium Corporation to produce a high titania slag and pig iron. The slag is used by pigment producers in the manufacture of titanium-base pigments. Exports go mainly to the United States, Britain and Japan.

Domestic consumers of titania slag are Canadian Titanium Pigments Limited at Varennes, Que., and British Titan Products (Canada) Limited at Tracy, Que. The plant at Varennes has a capacity of $50,000,000 \mathrm{lb}$. of titanium dioxide pigment a year; the plant at Tracy, completed late in 1962, has a capacity of $44,000,000 \mathrm{lb}$. a year. Atlas Titanium Limited produced ferrotitanium from scrap metal at Welland, Ont., and Geo-Met Reactors Limited made trial lots of low-carbon ferrotitanium using titania slag from Sorel.

Selenium and Tellurium.-These metals are recovered from the anode muds produced by the refining of blister copper in the plants of Canadian Copper Refiners Limited at Montreal East, Que., and International Nickel at Copper Cliff, Ont. The principal use of selenium is in the manufacture of dry-plate rectifiers for electronic use; small quantities are used in the manufacture of glass, rubber and pigments. Tellurium is finding increasing use in the electronics fields for the manufacture of modules for the direct conversion of heat into electricity and the conversion of electric energy in a heat-sink for refrigeration purposes; small quantities are used in stainless steel castings, synthetic rubber and glass manufacture. Selenium production in 1962 totalled $506,015 \mathrm{lb}$. valued at $\$ 2,799,929$, an increase of $75,403 \mathrm{lb}$. and $\$ 951$ over 1961 output; tellurium production in 1962 was $61,211 \mathrm{lb}$. valued at $\$ 367,466$, compared with $77,609 \mathrm{lb}$. valued at $\$ 376,404$ in 1961.

Magnesium.-Production of magnesium metal in Canada was estimated at 8,235 tons in 1962 compared with 7,635 in 1961. Dominion Magnesium Limited is the only producer and most of the output is exported. Dolomite of exceptional purity is quarried and reduced to metal by the ferrosilicon method at Haley, Ont. Plant expansion from 8,000 to 10,000 tons annual capacity was completed in 1962 . The company is also the only Canadian source for the metals calcium, thorium, strontium and zirconium.

Aluminum.-Canada is second, after the United States, in Free World aluminum production and has an annual capacity at six smelters of 872,000 tons. There are two companies operating. Aluminum Company of Canada, Limited has smelters at Arvida, Isle Maligne, Shawinigan and Beauharnois in Quebec and at Kitimat in British Columbia.

Canadian British Aluminium Company Limited operates a 90,000 -ton smelter at Baie Comeau, Que., the capacity of which is to be expanded to 135,000 tons by 1965. As all bauxite or alumina for use by the aluminum smelters is imported, mainly from the Caribbean area, metal production is classed in official statistical data with manufactures and not with smelter production of metals from ores of domestic origin. Production of primary aluminum in 1962 was estimated at 690,000 tons compared with 663,000 tons in 1961 ; of the latter, 487,000 tons were exported and domestic consumption amounted to 127,000 tons.

## Subsection 2.-Industrial Minerals

The value of Canada's production of industrial minerals in 1962 increased by 4.4 p.c. to $\$ 558,181,000$ compared with 1961 , establishing a new record for the fourth successive year. This segment of the mining industry, which accounts for 20 p.c. of the nation's mineral production, includes the many non-metallic minerals and structural materials listed in Table 5, p. 559. The most important recent developments taking place among them are discussed below.

Asbestos.-Canada is the world's leading asbestos-producing nation and the major supplier of this mineral to the Free World market. During 1962 shipments of asbestos fibre from producing mines amounted to $1,223,509$ tons valued at $\$ 132,061,000$, a record high output which made up approximately 45 p.c. of world production.

Chrysotile, the most widely used variety of asbestos, occurs in several places in Newfoundland, Quebec, Ontario, British Columbia and Yukon Territory but the main centre of the industry is in the Eastern Townships of Quebec where 12 mines account for more than 90 p.c. of the nation's production. Two mines are in production in other parts of Canada-one in northern Ontario and one in northern British Columbia-and a large deposit at Baie Verte in Newfoundland is being developed, scheduled for production in mid-1963. Canadian Johns-Manville Company, Limited will operate the property and is constructing a 5,000 -ton-per-day mill.

Exploration and engineering studies of an asbestos deposit in Ungava are under way. Early in 1962, Murray Mining Corporation announced that an asbestos orebody, 3,600 feet in length and ranging in width from 150 feet to 200 feet, had been delineated at Asbestos Hill, 40 miles southeast of Deception Bay off Hudson Strait. The main ore zone was reported to have a reserve of at least $15,230,000$ tons containing 11.3 p.c. of recoverable fibre and the west-end ore zone a reserve of $2,480,000$ tons. The fibre from this deposit is semi-harsh and fast-filtering and consequently should find application in the asbestoscement industry. In May, Asbestos Corporation acquired an option on the property and began detailed engineering and feasibility studies. Development will require not only mining and milling plants but also power-generating facilities, a townsite, a transportation route to the coast and dock facilities for ocean transport.

Another development of interest to the industry during 1962 was the acquisition by the Eternit group of a $10-$ p.c. interest in Asbestos Corporation. This group embraces asbestos manufacturing firms in Europe.

Cement.-It is significant to note that Portland cement production in Canada now ranks ninth in the entire mineral industry in value of output. Production in 1962 reached an all-time high at an estimated $6,786,000$ tons valued at $\$ 113,864,000$. The many major engineering projects that have been constructed in recent years throughout the country have contributed to the growth of this industry. At the same time, concrete and concrete products have become leading building materials in contemporary construction, with precast and prestressed structural shapes replacing structural steel on an increasing scale. To serve the construction industry in the Montreal area, Francon Limited has entered the field of precast and prestressed concrete products with a modern plant at St. Michel, which contains the Continent's largest tension beds for prestressed beams and girders.

The first all-lightweight concrete multi-storey building in Canada, the National Trust Office, was completed in Toronto in 1962. More than $13,000 \mathrm{cu}$. yards of lightweight concrete, with a specified 28 -day compressive strength of $4,000 \mathrm{psi}$. and a unit weight of 115 lb . per cu. foot, were cast in the 22 -storey concrete frame. In addition, about 75,000 lightweight blocks were used in masonry. Precast concrete curtain walls with exposed aggregate finish emphasize a modern trend in architectural application.

Potash.-Nineteen years after potash salts were discovered at depth in Western Canada, this important natural resource was brought into successful production. Bulk concentrates of muriate of potash began moving to the market from the Esterhazy, Sask., plant of International Minerals and Chemical Corporation (Canada) Limited on Sept. 1, 1962. The project reached full production a few months later. With a capacity of $1,200,000$ tons $\mathrm{K}_{2} \mathrm{O}$ equivalent per annum, Esterhazy is the largest capacity potash unit in North America if not in the world. The mine shaft, 18 feet in diameter, was bottomed at 3,380 feet to provide access to the potash horizon at about 3,150 feet. Using the room-and-pillar method, potash is excavated by electrically operated, continuous-mining machines with twin cutting heads operating in a vertical plane and cutting a $7 \frac{1}{2}$-foot by 13 -foot oval opening.

The Potash Company of America Ltd. completed a 16 -foot concrete-lined shaft at Patience Lake near Saskatoon in 1958 and limited production was sustained for a tenmonth period in 1958-59. However, technical difficulties in maintaining a dry shaft caused the mine to cease operation for extensive repairs. The company plans to resume production at an annual rate of 350,000 tons $\mathrm{K}_{2} \mathrm{O}$ equivalent during 1963.

The emphasis being placed on Canadian potash is demonstrated by the fact that, at the end of 1962, 15 companies had under their control more than $2,000,000$ acres underlain by potash and had invested an estimated $\$ 100,000,000$ in Saskatchewan. World demand for potash is increasing by more than 500,000 tons $K_{2} \mathrm{O}$ equivalent per annum. Since, depending on the grade, several times this amount of ore is needed, a new mine each year is required to satisfy this demand. By the end of 1963 the Canadian potash industry should be in a position to supply 15 p.c. of the world market and will contribute $\$ 40,000,000$ annually to the country's mineral economy. Almost all the output will be exported, mainly to the United States but also to overseas markets, particularly to Asia.

Sulphur.-The large-scale development of natural gas resources of western Alberta and northwestern British Columbia has brought about a dramatic change in Canada's sulphur position. A few years ago, this country was entirely dependent upon foreign elemental sulphur to supplement the sulphur dioxide and sulphuric acid recovered from smelter gases and from the roasting of pyrite; today, it stands as a major source of that product. As a direct result of the expanded demand for western natural gas, the 1962 production of refined elemental sulphur was 668,000 tons, almost double the 1961 output, having a value of nearly $\$ 9,000,000$.

Canada ranks second to the United States among the elemental sulphur producers of the world and is capable of supplying 15 p.c. of the present world market. As a consequence, the Canadian industry is becoming a dominant factor in global markets. In 1962 shipments entered the northern United States and bulk cargoes moved from West Coast ports to the Republic of South Africa, Formosa, Australia and Britain.

Gypsum.-Although gypsum is mined in Newfoundland, Nova Scotia, New Brunswick, Ontario, Manitoba and British Columbia, 83.0 p.c. of the Canadian output comes from Nova Scotian mines and much of it is exported to the United States in crude form. Total shipments in 1962 amounted to over $5,000,000$ tons valued at $\$ 9,033,000$. The quantity increase over 1961 was 5 p.c., accounted for by increased demand in the United States. The year was an active one for the industry. Of particular note was the commencement of shipments by the Flintkote Company of Canada Limited from its deposit in the Flat Bay area of Newfoundland where gypsum reserves are estimated to
be $200,000,000$ tons. The provision of deepwater shipping facilities and an aerial transportation system made it possible to ship the crude product to the parent company's board plants in eastern United States and to the company-operated board plant at Humbermouth, Nfld. In September, Bestwall Gypsum Company began shipping from the River Denys deposit on Cape Breton Island to company plants in eastern United States. Storage and shipping facilities were installed at Point Tupper on the Strait of Canso.

Salt.-Shipments by the salt industry in 1962 reached an all-time high, exceeding $3,600,000$ tons with a value of over $\$ 23,000,000$. Approximately one half of the Canadian production is rock salt mined at Pugwash in Nova Scotia and at Ojibway and Goderich in Ontario, mainly for use on roads and in chemical plants. Although the Canadian salt industry is facing growing competition from United States producers, it exports about one third of its production.

Silica.-A major development in the silica industry during 1962 was the $\$ 1,000,000$ expansion of the Canadian Silica Corporation plant at St. Canut, Que. Capacity was increased threefold to 300,000 tons annually and wet-processing stages were added. The company is quarrying a sandstone from the Potsdam formation and processing it into sand products for industry. A premium-quality sand is finding ready acceptance in the manufacture of flint-glass containers and glass sand is processed for the manufacture of coloured containers and sheet glass. The main market for high-quality silica sand is in the Montreal and Trois Rivières area where it is used by the glass industry and also in the manufacture of silicon carbide. Until recently, most of the requirements were imported from the United States.

## Subsection 3.-Petroleum and Natural Gas

One of the best ways of measuring a resource industry's progress is to examine its production trend. On this basis, it may be said that the oil and natural gas industries had a successful year in 1962 and, further, circumstances at the year-end were such as to foretell a good year for 1963. Crude oil production averaged $668,000 \mathrm{bbl}$. daily during 1962. In addition, output of liquid hydrocarbons from natural gas was also at record levels and added an average of $66,000 \mathrm{bbl}$. daily to bring total production of all liquid hydrocarbons (crude oil, condensate, natural gasoline, butane and propane) to 734,000 bbl. daily. The rates of production at the year-end and during the early months of 1963 were at record highs, and by February output had exceeded the national oil policy goal of $800,000 \mathrm{bbl}$. daily of all liquid hydrocarbons, as set for the end of 1963.

All western provinces except Manitoba shared in the increased production. Manitoba's output since 1957 has been declining steadily and the absence of new oil discoveries indicates a continuation of this trend. Exploration and development of British Columbia oil resources continued at a high level as a result of the completion of a new oil pipeline in 1962. This new line permits oil from northeastern British Columbia to be delivered to the Trans Mountain pipeline at Kamloops which in turn serves refineries near Vancouver and in the State of Washington. A further inducement to exploratory industry activity in British Columbia arises from the fact that considerable land remains to be tested for oil and gas resources. In Alberta production increased by 4 p.c. and established an annual record. Saskatchewan output rose by 15 p.c.

Production of natural gas liquids is adding significant quantities to the over-all production of liquid hydrocarbons. Production in 1962 was as follows: Alberta 21,700,000 bbl., British Columbia $1,400,000 \mathrm{bbl}$. and Saskatchewan $1,100,000 \mathrm{bbl}$. Natural gas production reached a record level in 1962, 46 p.c. greater than 1961 . The newly acquired export market in the United States, served by the Alberta-to-California pipeline completed in December 1961, and increased domestic demand gave the gas industry its best year in both export and domestic markets.

The number of wells drilled annually in Western Canada in each of the past five years has been fairly constant, ranging from 2,450 to 2,650 . In 1962, the number completed (excluding service wells) was 2,460, about the same as in 1961. A sharp increase in drilling in British Columbia counterbalanced declines in the other western provinces and the territories. The generally greater depth of wells brought about a small increase in the total footage; nearly $13,600,000$ feet were drilled compared with $13,470,000$ feet in 1961. There was a notable increase in the proportion of exploratory drilling in 1962; of the total drilled footage, 36 p.c. was exploratory, compared with 29 p.c. in 1961 and 31 p.c. in 1960, partly accounting for the significantly greater number of dry holes, of which there were 879. Gas well completions totalled 344 and there were 1,237 new oil wells.

The decline in geophysical activity, in terms of crew-months, which had been evident since 1952, was arrested. A month-by-month comparison of 1961 and 1962 shows geophysical work approximately the same for both years. In Alberta, where seismic survey crews were more active in 1962 than in the previous year, much ground was being resurveyed. Oil companies realized that small- and medium-sized oil pools could have been overlooked by earlier surveys because of less advanced methods of field work and interpretation and also because of a preoccupation with finding large reef fields.

Alberta.-In 1962, the total footage drilled in the search for and development of petroleum and natural gas reserves amounted to $9,100,000$ feet, a decrease of more than 800,000 feet compared with 1961. Despite this total decrease, exploratory drilling increased by 200,000 feet to nearly $3,200,000$ feet. Development of known pools and fields decreased very sharply as a consequence of a lack of large new fields. No major fields have been found since the Swan Hills discoveries of 1957, and the fields of that region are now almost fully developed. The 684 oil wells completed in 1962 represent a decrease of 100 wells from the preceding year. Gas-well completions decreased sharply for the first time in several years, with 272 gas wells drilled. The net result of 1962 drilling was to increase the province's total of new oil wells capable of production from 10,529 to 10,796 , and gas wells from 1,088 to 1,240 . These figures take into account abandonments and some conversions to service wells.

Although oil and gas finds in 1962 did not indicate the discovery of any major fields, several appear likely to lead to the development of some medium-sized fields. The most interesting exploratory activities took place late in the year at Snipe Lake, 35 miles southwest of Lesser Slave Lake. An oil discovery in reef formation led to an important land play involving several large oil companies. Although several subsequent wells found oil and much ground remains to be tested, the field does not appear to be in the size category of such fields as Swan Hills. High prices were paid for land in the Edson region, 125 miles west of Edmonton, following discovery of significant amounts of gas in Mississippian strata and of oil in the Cardium formation. In March 1962, a very productive oil well was drilled at Loon Lake near the Red Earth oil field, 80 miles north of Lesser Slave Lake. At Panther River, 70 miles northwest of Calgary, large reserves of sulphur were indicated by a gas well which had a high content of hydrogen sulphide in its output. A good natural gas discovery was made 13 miles to the southwest of this sulphur well. In the more settled regions in the southern half of Alberta, various small- and medium-sized oil and gas discoveries were made, one of the more notable locales being at Sylvan Lake near Red Deer, where both oil and gas were found in several geological horizons in a series of wells.

A major step toward the eventual large-scale production of crude oil from the Athabasca oil sands was taken in 1962 when the Alberta Oil and Gas Conservation Board gave approval to a project which is to extract crude oil from the sands at a rate of 31,500 bbl. a day. This will be the first commercial extraction of oil from the sands, and actual production of marketable crude is scheduled for the end of 1966. Although this is only a moderate-sized project, two applications for large projects are before the Board, each of which calls for the extraction of $100,000 \mathrm{bbl}$. daily from the oil sands.

British Columbia.-A very substantial increase in the amount of drilling in British Columbia in 1962 brought the total for the year to nearly $2,000,000$ feet. The 1961 total, an all-time record at that time, was slightly more than $1,000,000$ feet. Drilling in 1962 was divided almost equally between exploration and development. The province had a high success ratio in drilling, with 159 new oil wells and 62 gas wells compared with 93 dry holes. The large number of oil wells was mostly the result of intense development of the Boundary Lake field, where the number of oil wells capable of production was increased from 130 at the end of 1961 to 250 in December 1962. Considerable development was also carried out in several smaller fields, especially Milligan Creek, Peejay, Wildmint and Blueberry. In exploration, the most important results of the drilling were several large gas discoveries. Near Fort Nelson, the Slave Point formation yielded two particularly good gas producers known as the Yoyo and Junior wells. Nearer to Fort St. John, the Pink Mountain and Moberly Lake gas discoveries, producing from Mississippian and Triassic formations, respectively, were among the more noteworthy results of exploration work.

Saskatchewan.-Drilling in Saskatchewan has been declining since 1957, except for a brief upturn in 1961. In 1962, 580 wells (excluding service wells) were completed compared with 643 in 1961. However, a renewal of exploration interest in the province was reflected in a slight increase in footage drilled-which amounted to $2,350,000$ feet-and a considerable increase in the number of deep exploratory holes. Several recent deep oil discoveries in the Williston basin in Montana and North Dakota have resulted in new attempts to find oil in lower Palæozoic rocks in the portion of the basin underlying southeastern Saskatchewan. The most important oil discovery in the province was probably one made near the Willmar field, 12 miles northeast of the Steelman field. The well was followed up with nearly a dozen wells in the same pool. The most active area in terms of development was once again the Dodsland field in the Coleville-Smiley region, although drilling there has decreased since 1961.

Manitoba.-Twenty-one wells were drilled in Manitoba in 1962 compared with 27 in 1961. A measure of the decline of oil exploration and development is obtained by comparing these figures with the peak period 1954-57 when more than 200 wells were drilled annually. Well footage in 1962 totalled 57,393 feet of which 40 p.c. was of an exploratory nature. Two oil discoveries were made in the southeastern corner of the province.

Yukon and Northwest Territories.-The eight wells completed in the territories, all exploratory, aggregated 54,000 feet, about three quarters of the 1961 footage. No important discoveries were announced. Three deep wells were being drilled in Yukon Territory in early 1963. The well-known Melville Island dry well was abandoned early in 1962 at a depth of 12,543 feet. Despite this failure, oil-company interest in the Arctic islands has remained strong, especially since mapping has revealed outcrops of oil-saturated sands on northwestern Melville Island, a discovery which removes doubt as to whether oil-forming conditions existed during the geological history of the region.

Eastern Canada.-In Ontario, more deep-well exploration and less shallow-well field development resulted in an increase in footage drilled, despite a pronounced decrease in the number of wells drilled; a total footage of 360,629 feet and 205 wells (excluding service wells) in 1962 compared with 344,816 and 253 wells in the preceding year. Exploratory drilling comprised 46 p.c. of the footage. Since the discovery of the Gobles field in Cambrian strata in 1960, greater emphasis has been placed on testing the lowest Palæozoic formations. In the field development sector, a pilot waterflood project was started in the province's most productive oil field, the Rodney field.

In Quebec, activity declined in the region around the Pointe du Lac gas field where a large number of shallow wells had been drilled in 1961. However, a deep hole of proposed depth of 4,500 feet was started late in 1962, and at about the same time a hole of similar anticipated depth was started on Anticosti Island. Two deep diamond drill holes, both dry,
were put down in search of oil on the Gaspe peninsula. In New Brunswick, equipment was ordered in preparation for a waterflood scheme in the small and aging Stoney Creek oil and gas field.

Petroleum Refining and Marketing.-Two new refineries were being built at the close of 1962; one near Toronto, Ont., will have a capacity of $30,000 \mathrm{bbl}$. daily and one near Dartmouth, N.S., will have a capacity of $13,500 \mathrm{bbl}$. daily. Also, three refineries were modified during the year to increase total capacity by $17,900 \mathrm{bbl}$. daily. The BP Refinery Canada Ltd. plant at Montreal, Que., was enlarged to $30,000 \mathrm{bbl}$. daily, an increase of 4,000 bbl.; the Regent Refining Limited plant at Port Credit, west of Toronto, increased its capacity by $9,000 \mathrm{bbl}$. to $35,000 \mathrm{bbl}$. daily; and the British American Oil Company Limited in Edmonton, Alta., added a unit to increase capacity from 7,700 to $12,600 \mathrm{bbl}$. daily. The rate of growth of the petroleum refining industry from 1942 to 1962 is indicated in Table 1.
1.-Petroleum Refining Throughput Capacity, by Region, as at Dec. 31, 1942, 1952 and 1962

| Region | 1942 |  | 1952 |  | 1962 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| British Columbia..................... | 24,500 | 10.4 | 28,350 | 6.1 | 97,300 | 9.9 |
| Canada. | 233,615 | 100.0 | 458,400 | 100.0 | 979,660 | 100.0 |

Consumption of Canadian crude oil by domestic refineries in 1962 averaged 464,000 bbl. daily, an increase of 9 p.c. over 1961. Foreign oil received by plants in Canada averaged $370,000 \mathrm{bbl}$. daily, bringing total crude oil received by refineries in Canada to an average of 834,000 bbl. daily for the year. Domestic oil thus accounted for almost 56 p.c. of all crude received in 1962 compared with 54 p.c. in 1961. Refineries in the United States, Canada's only market for crude oil and petroleum products, received an average of $235,000 \mathrm{bbl}$. of crude oil daily from Canada, an increase of 30 p.c. over 1961. Refineries in the United States Puget Sound region, served by the Trans Mountain pipeline, received an average of $125,000 \mathrm{bbl}$. daily in 1962 and exports via the Interprovincial pipeline to the Great Lakes region averaged $110,000 \mathrm{bbl}$. daily. In this region, $40,000 \mathrm{bbl}$. a day went to plants near Lake Erie and the remainder of $70,000 \mathrm{bbl}$. a day went to plants west of Lake Erie but east of the Rocky Mountains. Imported oil continued to come chiefly from Venezuela and Middle East countries. Table 2 gives the regional demand for domestic and foreign crudes.

## 2.-Domestic and Foreign Crude Oil Received at Canadian Refineries, by Region, 1951, 1961 and 1962

Natural Gas Processing and Marketing.-During the past decade, Canadian reserves of natural gas have become sufficient to supply not only an expanded Canadian market but also several areas in the United States. Much of the gas for these markets requires processing to remove constituents, such as sulphur, which add further to the mineral output of Canada. Propane, butane and other liquid hydrocarbons valuable to the petroleum refining and petrochemical industries are also recovered. The extent to which the natural gas processing industry has developed is apparent from a comparison of gas plant capacities. In 1952 there were five plants having a combined raw-gas treating capacity of 380,000 Mcf. daily. By 1962 there were 66 plants in Alberta, five in Saskatchewan, two in British Columbia and one in Ontario, a total of 74 plants having a raw-gas capacity of $3,400,000 \mathrm{Mcf}$. daily. The gas from these plants and from several fields which produce dry gas provided over $750,000,000 \mathrm{Mcf}$. of gas for all markets in 1962. Exports amounted to over $900,000 \mathrm{Mcf}$. daily and domestic sales to $1,125,000 \mathrm{Mcf}$. daily.

There were small quantities of gas imported into Canada, mostly into southwestern Ontario; in 1962 imports were only about 5,500,000 Mcf.

## Subsection 4.-Coal*

The small increase in coal production noted in 1960 was, unfortunately for the industry, short-lived and further decline was experienced in 1961, the industry becoming more and more the victim of competition from other fuels. Closure of high-operating-cost mines, although improving the financial situation of the individual companies, increased productivity per man-day, and more and improved coal cleaning and quality control were not sufficient to halt the decline in demand. Production in 1961 was about $8,000,000$ tons lower than in 1951 and consumption about $22,500,000$ tons lower. Imports were reduced to less than half-from $26,000,000$ tons to $12,000,000$ tons. The one bright spot was the increase in exports of western bituminous coking coal to the United States and Japan which resulted in a 1961 export total double that of 1951. Mechanization of production, underground and surface coal preparation, particularly of slack and fine sizes, and efforts to control quality through coal sampling and analysis have all been increased to enable the industry to supply higher quality products at reduced costs. On the bases of costs per ton and per million Btu some improvement was noted in 1961.

Assistance to the coal industry was given by the federal and provincial governments through continued research programs. The problem of fine coal production received attention with research directed toward improved methods of mining, beneficiation and combustion. Technical assistance rendered in the field of quality control through sampling and analyses, and studies of the coking properties of coals in relation to their preparation for export markets and their use in prospective steel industries are other means by which assistance is given.

Financially, the Federal Government continued assistance to the coal industry through the Dominion Coal Board (see p. 549) with aid in the acquisition of new equipment and subventions on coal transportation. More than 32 p.c. of the coal production was moved with the aid of subvention payments, the total tonnage to which this applied, $3,300,000$, being 11.6 p.c. more than in 1960. The value of this assistance, which in 1960 amounted to $\$ 16,344,196$, rose in 1961 to $\$ 17,854,456$. The Federal Government also made payments in 1961 totalling about $\$ 1,570,000$ under the Atlantic Provinces Power Development Act, 1958, which indirectly aids the marketing of coal.

Production and Value.-Production of coal in Canada in 1961 decreased 5.6 p.c. to $10,400,000$ tons, only about 54 p.c. of the record production of $19,139,112$ tons in 1950 . The average value for all coal was $\$ 6.737$ per ton or 29.42 cents per million Btu. This declining production and accompanying mine closures were reflected in the employment at the mines, where the number of man-days dropped from 2,552,127 in 1960 to 2,291,933 in

[^154]1961 -more than 10 p.c. In Nova Scotia, the major coal-producing province and most affected by declining coal markets, the decrease in coal-mine employment was 10.3 p.c. from $1,711,150$ man-days in 1960 to $1,535,176$ man-days in 1961. Employment in Alberta and Saskatchewan coal mines dropped 21.4 p.c. and 18.4 p.c., respectively, but in British Columbia it increased by more than 4 p.c.

The major part ( 65.7 p.c.) of the coal produced was bituminous, valued at $\$ 8.990$ per ton or 33.46 cents per million Btu at the mine. Subbituminous accounted for 13.1 p.c. of production and lignite for 21.2 p.c. The average value of subbituminous coal was $\$ 4$ per ton, this being 23.39 cents per million Btu, and the value of lignite was $\$ 1.706$ per ton at 11.53 cents per million Btu. Bituminous coal production decreased 10.4 p.c. and subbituminous 12.8 p.c., but lignite increased 1.9 p.c. as a result of the demand by thermal power plants in Saskatchewan.

The proportion of the output won by stripping methods was more than 38 p.c. The output per man-day of coal from Canada's strip mines was 15.4 tons in 1961 compared with 3.149 tons from underground mines. This represented an increase of 0.3 tons for strip mines and an increase of 0.182 tons for underground mines. The over-all output per manday increased from 4.326 to 4.536 tons.

Consumption, Imports and Exports.-The consumption of coal in Canada decreased 7 p.c. in 1961 to about $21,600,000$ tons. About 56 p.c. of the coal consumed was imported, more than 91 p.c. of it being bituminous coal used mainly in Ontario and Quebec. Total imports of coal were about 10 p.c. lower than in 1960. The production of coke used more than $5,300,000$ tons of coal, of which about 88 p.c. was imported. The sale of coal by retail fuel dealers to the commercial and household heating markets decreased more than 600,000 tons. Use of coal by industrial consumers, including thermal-electric power plants, decreased slightly to $9,850,000$ tons in 1961 compared with $9,890,000$ in 1960. Railway locomotives are no longer a significant market for coal with only 11,000 tons being used in 1961 compared with the $9,800,000$ tons used for this purpose in 1952.

Exports of Canadian coal in 1961 amounted to 939,360 tons compared with 852,921 tons in 1960. Most of this went to the United States and Japan for blending in the manufacture of metallurgical coke. The manufacture of briquettes decreased from 81,182 tons in 1960 to 67,327 tons in 1961.

Provincial Activities of the Industry.-Coal is produced in five provinces and a large share of the market for the industry is concentrated in Central Canada where there is no coal production. A small amount of coal is also mined in the Yukon Territory.

Nova Scotia.-Nova Scotia, with a coal production of 4,300,758 tons, accounted for more than 41 p.c. of the Canadian coal output in 1961. Production was 5.9 p.c. lower than in 1960. The coal is high volatile bituminous coking coal mined in the Sydney, Cumberland and Pictou areas, and some non-coking bituminous coal in the Ste. Rose, Inverness and Port Hood areas on the west coast of Cape Breton Island. The over-all value at the mines decreased to $\$ 9.700$ a ton from $\$ 9.842$ a ton in 1960 , representing about 36.06 cents per million Btu. The output per man-day was 2.801 tons in 1961 compared with 2.671 tons in 1960.

All Nova Scotia coal comes from underground mines, most of which are mechanized. Coal-washing plants are operated at two of the collieries and prepare about 27 p.c. of the province's coal production. Much of the output is used locally for industrial steam-raising, electric power production, household and commercial heating and the manufacture of metallurgical coke. In 1961 more than 62 p.c. of the production was shipped to other provinces, mainly Central Canada. Subvention payments were made by the Dominion Coal Board on the movement of $2,323,684$ tons.

New Brunswick.-New Brunswick's production, of which 82.1 p.c. was strip-mined, was entirely high volatile bituminous coal from the Minto area, with a small amount from the Chipman and Coal Creek areas. The production of 887,903 tons in 1961, about 8.5 p.c.
of Canada's output, represented a decrease of about 13.6 p.c. Average output per man-day from strip mines was 5.26 tons and from underground mines 1.79 tons. New Brunswick coals had an average value at the mines of $\$ 8.477$ a ton, amounting to about 35.62 cents per million Btu.

Modern coal-washing plants equipped with Baum-type and feldspar jigs are operated at two of the strip-mining operations, thus making it possible to mechanically clean 47 p.c. of the province's coal output. A large part of the production is used locally for heating, electric power generation, and processing; more than 15 p.c. is shipped to Central Canada and about 12 p.c. is exported to the United States. Government subventions aided in the moving of 146,201 tons during 1961.

Saskatchewan.-Coal produced in this province was entirely lignite, mined by stripping in the Bienfait and Estevan areas in the Souris Valley. Production in 1961 amounted to $2,208,851$ tons, a 1.8 -p.c. increase over 1960 , and represented about 21.2 p.c. of the Canadian production. It was valued at the mine at an average of $\$ 1.706$ per ton, and at 11.53 cents per million Btu was the cheapest source of coal in Canada. The Estevan area serves the provincially owned thermal-electric generating stations, which in 1961 used about 32 p.c. more lignite than in 1960 and consumed about 43 p.c. of the total output. The average output per man-day was 42.247 tons. Almost 35 p.c. of the 1961 output was shipped to Manitoba and about 4 p.c. to Ontario for industrial, commercial and household use. Subvention assistance was given on 104,807 tons.

The production of briquettes, manufactured from carbonized lignite and used entirely for commercial and household purposes, decreased 7.9 p.c. to 32,132 tons.

Alberta.-Several types of coal are available in Alberta, ranging from semi-anthracite mined in the Cascade area, to subbituminous. Coking bituminous coals are present in the Inner Foothills Belt but, owing to market conditions, they are at present mined mainly in the Cascade and Crowsnest areas. The coal is used for industrial steam-raising and for commercial and household heating. Increasing quantities of coking coal are exported to the United States and Japan for use in the metallurgical industries. In several areas of the foothills, lower rank bituminous non-coking coals are available but production is confined mainly to the Lethbridge area. The other coal areas produce subbituminous coals, used mainly for household and commercial heating and thermal power generation. The three largest producing areas for subbituminous coals are Castor, Drumheller and Sheerness.

Coal production in Alberta decreased 15.2 p.c. in 1961 to 2,027,826 tons, this being about 19.5 p.c. of the nation's coal output. Production has been declining sharply since 1947 when the Leduc oil field was discovered and with the subsequent expansion of the natural gas industry. The 1961 production was about 25 p.c. of that of 1947. Subbituminous coal accounted for about 67 p.c. of the 1961 output and production decreased by 11.6 p.c. The output of bituminous coal decreased 21.7 p.c. to 666,226 tons. Of the total coal production, 47.9 p.c. was won by stripping, the average output per man-day being 14.874 tons compared with 4.826 tons for the underground mines. Bituminous coal was valued at $\$ 7.115$ per ton and 27.47 cents per million Btu at the mine, and the average value of subbituminous coal was $\$ 4.210$ per ton and 23.39 cents per million Btu.

Of the provincial production, 1.7 p.c. was shipped to Central Canada, nearly 8 p.c. (mainly subbituminous) to Manitoba, 11.5 p.c. to Saskatchewan and 15.9 p.c. to British Columbia. Subvention assistance from the Dominion Coal Board applied on the movement of 758,011 tons of Alberta and British Columbia coal.

The output of briquettes, which are made from the semi-anthracite and low volatile bituminous coals of the Cascade area and the medium volatile coals of the Crowsnest area, decreased from 45,453 tons in 1960 to 35,195 tons in 1961.

British Columbia and Yukon Territory.-In British Columbia coal was mined in 1961 mainly in the Vancouver Island and Crowsnest Pass (East Kootenay) districts with a small output from the mines in the Nicola-Princeton and Northern districts. These coals
range from high to low volatile bituminous coking coals. Production increased to 964,663 tons, about 9.3 p.c. of the country's output, with an average value of $\$ 6.690$ per ton and 24.24 cents per million Btu. About 9 p.c. of the output was from strip mines. The average output per man-day was 28.215 tons for strip mines and 4.678 tons for underground mines.

Beneficiation facilities located at Union Bay (Vancouver Island) and Michel (East Kootenay) process nearly all of British Columbia's coal production. Of the 1961 output, 15 p.c. was shipped to Manitoba, 1.3 p.c. to Ontario, and negligible quantities to Alberta and Saskatchewan. Almost 44 p.c. of the output of coking coal from the Crowsnest area was exported to southwestern United States and Japan for blending in the manufacture of metallurgical coke.

In the Yukon Territory, 7,703 tons of coal were taken from a single underground mine with an average output per man-day of 3.231 tons. This coal was valued at $\$ 14.830$ per ton and 64.76 cents per million Btu.

## Section 2.-Government Aid to the Mineral Industry

## Subsection 1.-Federal Government Aid

The Department of Mines and Technical Surveys.*-The federal Department of Mines and Technical Surveys came into being on Jan. 20, 1950, in the reorganization of the former Department of Mines and Resources. The Department has six branchesSurveys and Mapping Branch, Geological Survey of Canada, Mines Branch, Dominion Observatories, Geographical Branch and, established effective Apr. 1, 1962, the Marine Sciences Branch. The Department's functions include the administration of the Emergency Gold Mining Assistance Act, the Explosives Act and the Canada Lands Act.

Surveys and Mapping Branch.-This Branch provides the base maps required for use in the development of Canada's natural resources, is responsible for legal surveys of federal lands and provides a national system of levelling and precision surveys for use as geodetic control by federal, provincial and private agencies.
