The Geodetic Survey provides the original surveys that form the framework or basic control for mapping throughout Canada and for engineering and surveying projects related to natural resources development. Survey stations are established at fairly regular intervals across Canada and are marked by permanent monuments whose latitudes, longitudes and elevations above mean sea level are determined with a high degree of accuracy.

The Topographical Survey provides topographical maps that show all significant natural and artificial features fundamental to the study and economic development of mineral and other natural resources. The Field Survey Section is responsible for the field surveys that provide ground control for mapping from aerial photographs, and the Air Surveys Section plots and produces maps from these aerial photographs. The National Air Photographic Library indexes, preserves and distributes prints of all aerial photography done by or for the Federal Government.

The Legal Surveys and Aeronautical Charts Division makes and records legal surveys of federal Crown lands in the Yukon and Northwest Territories, the National Parks and Indian lands and reserves. This Division prepares aeronautical charts and electoral maps and prepares and distributes flight manuals.

The Map Compilation and Reproduction Division prepares, drafts and reproduces maps, charts and plans for lithographic printing in multi-colour. The work includes the preparation and photo-reproduction of air chart bases, the reproduction and printing of air information for aeronautical charts, the preparation and printing of topographic maps and the reproduction and printing of hydrographic charts.

[^155]Marine Sciences Branch.-On Apr. 1, 1962, the Department established a Marine Sciences Branch to combine hydrographic surveys and research in oceanography, marine geology and the geophysical sciences of the seas. The function of the Branch is to carry out hydrographic and other oceanic surveys and to conduct oceanographic research in the nearby oceans, in Canada's coastal and inland waters, and on the underlying seabeds for the threefold purpose of assisting navigation, with particular reference to Arctic waters; of ascertaining the resource potential of the country's continental shelf; and of undertaking the extensive program of oceanographic research required for military and civilian purposes. The resultant information will also greatly assist the commercial fisheries.

The Branch comprises the Canadian Hydrographic Service, the Division of Oceanographic Research and a Ship Division. The Canadian Hydrographic Service is responsible for the charting of the coastal and inland navigable waters of Canada, the analyses of tides and tidal current phenomena and the investigation of water-surface elevations of the St. Lawrence-Great Lakes waterway. The resultant data are published in the form of official navigation charts, volumes of Sailing Directions, Tide Tables and Water Level Bulletins.

The Division of Oceanographic Research has charge of the extensive program of oceanographic research assigned to the Department in 1960 by the Canadian Committee on Oceanography, an interdepartmental body co-ordinating all oceanographic research in Canada. The Division is responsible for meeting the increasing federal needs for oceanographic information in waters of Canadian interest, mainly for defence, transport and resource assessment purposes. This includes an intensive study of oceanography in the Arctic and the extension of Canadian studies farther out to sea to examine the special problems of the deep ocean. In addition, the Division contributes to international oceanographic studies in which Canada is involved. Hydrographic and oceanographic activity on the Atlantic Coast and in the Arctic is centred in the recently completed Bedford Institute of Oceanography located on the Atlantic Coast near Halifax, N.S. The Institute comprises a modern office and laboratory building, equipment and ships' depot, machine woodworking and electrical shops for minor repairs to the ships and the construction of special equipment, and ships' berthing facilities capable of accommodating ten ships. A similar centre is planned for 1965 on the Pacific Coast but, meanwhile, functions on the West Coast are centred in a hydrographic establishment at Victoria, B.C. The Inland Waters Section works out of Ottawa.

The Ship Division was organized in 1962 to be responsible for the management of the fleet of ships and launches which the Branch uses in its work. The majority of these craft are for hydrographic survey; others are multi-purpose ships which are also employed on oceanographic research. Replacement of old and obsolete craft is being provided under a long-range shipbuilding program. The most recent addition to the fleet, CSS Hudson, was accepted from the builder in 1963. She is an icebreaker of 4,600 tons displacement with the capability for oceanographic research in any waters of the world, as well as for the latest methods of hydrographic surveying.

Geological Survey of Canada.-The primary function of the Geological Survey is to obtain information on the geology of Canada that will be of assistance in the search for and development of mineral deposits. The results of its activities also provide a basis for the appraisal and conservation of Canada's mineral resources generally (including water supplies), for soil surveys and for the solution of geological problems that frequently arise in construction projects. Reports issued by the Geological Survey include: memoirs with fairly complete descriptive accounts of the geology of particular areas, usually accompanied by geological maps; bulletins dealing with problems rather than areas; papers issued as soon as possible after the close of the field season, treating separately of each area and summarizing the information acquired; and the Economic Geology Series dealing in a comprehensive way with mineral deposits of a particular type. Information circulars, issued in advance of the more detailed reports, contain data of immediate interest to prospectors. Coloured geological maps are issued on various scales from one inch equalling
a few hundred feet to one inch equalling eight or more miles, the common standard scales being one inch to one mile and one inch to four miles. Preliminary maps showing the geology are issued shortly after the field season ends for those areas where the search for metals or minerals is active. Metallogenic maps show the Canada-wide distribution of known occurrences of particular metals classified according to type of deposit.

The Regional Geology Division is responsible for mapping and studying the rocks of the eastern and western segments of the Precambrian shield, and the Appalachian and Cordilleran regions.

The Economic Geology Division investigates the geology of specific mineral deposits, applies and develops geochemical techniques, and maps and studies unconsolidated deposits that mantle much of the country and, in several provinces, carries out surveys of groundwater resources.

The Fuels and Stratigraphic Geology Division includes stratigraphic palaeontology, the geology of fuels (oil, natural gas and coal), subsurface geology, and research on coal. Its function is to establish the character, age, thickness and correlation of both exposed and concealed sedimentary formations and to map the distribution and structure of these formations with the object of determining the economic possibilities of prospective oil, gas and coal bearing areas of Canada.

The Petrological Sciences Division makes mineralogical, petrological, and isotopic studies of Canadian mineral deposits and associated rocks. Laboratories provide mineral identifications for the public, supply officers of the Survey with mineralogical and geochronological data, and permit research on the genesis of ores, fuels and rocks. Systematic mineral collections are maintained and mineral and rock collections are prepared for use by prospectors and educational institutions.

The Geophysics Division gathers, compiles and interprets geophysical data relating to the geology of Canada. Fundamental research is carried out in some phases of geophysical work.

Mines Branch.-Investigations undertaken in Branch laboratories cover a wide range of technical projects of importance to the advance of fundamental research; to the processing of ores, industrial minerals and fuels on a commercial scale; and to the theory and practice of physical metallurgy.

The Mineral Processing Division is concerned primarily with the development of economical methods of mineral dressing and with research toward the improvement of present processing techniques. It is equipped to conduct laboratory and pilot-plant studies involving a variety of procedures: crushing, grinding, gravity concentration, sink and float (heavy media) separation, magnetic and electrostatic concentration, amalgamation, cyanidation, flotation and roasting.

The Extraction Metallurgy Division seeks the development of better hydrometallurgical and pyrometallurgical processes for the treatment of ores and the solution to specific technical problems in this field. A substantial part of its efforts was devoted recently to ores of uranium, iron and other elements and to corrosion problems encountered in certain industrial and governmental projects. The Division accepts samples from operating mines or those under development.

The Mineral Sciences Division applies the principles of chemistry and physics to fundamental and long-term problems in the field of mineral technology and related aspects of metallurgy. It deals with ores, mineral and metal products, inorganic crystalline materials and radioactive substances, and its work ranges from relatively simple routine determinations to complex research problems requiring the most modern techniques and equipment.

The Fuels and Mining Practice Division studies the properties of fossil fuels in Canada to determine the most efficient means of utilizing fuel resources. Most of the work on coal is directed to investigations on the immediate problems of the industry and to engineering studies on the most efficient use of coal in combustion applications with
particular reference to thermally generated electric power. Such investigations include work on the evaluation of cleaning performance and the beneficiation of coal fines that are difficult to market, the uses of coal in the metallurgical industries and the study of stress phenomena in mining. Research in petroleum is directed mainly to problems in the refining of heavy crudes and high-sulphur bitumens, and to the chemical evaluation of oils and bituminous substances for classification and genetic purposes.

The Physical Metallurgy Division aids the metal industries through the development of new alloys, new manufacturing techniques and new applications and in activities aimed toward improving present practices in metal fabrication. It also conducts fundamental research on the properties and behaviour of metals. The Division serves the Department of National Defence by extensive research and investigative work, concerned broadly with the development of defence materials and prototype equipment and with the metallurgical problems of that Department. It is also operative in the nuclear metallurgy field.

Dominion Observatories.-The two main units of the Dominion Observatories are the Dominion Observatory at Ottawa, Ont., and the Dominion Astrophysical Observatory at Victoria, B.C. Permanent magnetic observatories are maintained at Ottawa and Agincourt, Ont., Meanook, Alta., Victoria, B.C., and at Alert, Mould Bay, Resolute and Baker Lake, N.W.T. Seismic stations for recording earthquakes are operated at Alert, Mould Bay and Resolute, N.W.T., Victoria and Penticton, B.C., Banff, Alta., Saskatoon, Sask., Ottawa, Ont., Seven Falls and Shawinigan, Que., and Halifax, N.S.

The Dominion Observatory at Ottawa is responsible for the time service of Canada which involves nightly astronomical observations of star positions and radio broadcast services for distributing accurate time to all parts of Canada. Other astronomical activities centred at Ottawa include upper atmospheric studies by means of meteor observations, studies of the sun and its effect on earthly conditions and mathematical studies of the atmospheres of the sun and stars. The geophysical work, also administered from Ottawa, includes the magnetic survey of Canada with emphasis on aids to air and sea navigation, as well as field and observatory work of interest to the geophysical prospector. The methods of seismology are employed to study important aspects of the earth's crust in Canada and to assist in world-wide investigations of the earth's interior. Gravity observations are carried on throughout Canada with a generally similar purpose, special attention being paid to methods of locating mineral deposits.

The Dominion Astrophysical Observatory at Victoria, B.C., is devoted to fundamental research into the physical characteristics of the sun, stars, planets and the material of interstellar space. Its 73 -inch reflecting telescope is one of the largest in the world and through its use many important contributions have been made to astronomical knowledge. A new radio telescope at Penticton, B.C., has given the Branch a valuable instrument for research in radio astronomy.

Geographical Branch.-The function of the Branch is to organize and make available all the geographical data on Canada that might be of use in promoting the country's economic, commercial and social welfare. The work is of two kinds-the compilation of geographical material of national significance, and geographical surveys in the field. Land surface conditions, types of vegetation and the structure of towns and cities are typical subjects of investigation. The Branch also administers the Canadian Permanent Committee on Geographical Names.

Mineral Resources Division.-The Division provides a mineral information service that is freely used by government departments, mining and allied industries and others interested in mining or its significance in the Canadian economy. A mineral resources index inventory is maintained of all known occurrences and of mines, both active and potential. The Division makes economic studies of different phases of the mining industry. It administers the Emergency Gold Mining Assistance Act, prepares reports on request to aid in the administration of such matters as tax exemptions on new mining properties, and prepares reports and briefs on general legislation, taxation and tariff matters connected
with the mineral industry. The Division is widely known for its publications, among the most valuable of which are the annual reviews of production, marketing and other matters concerning 64 minerals. It issues more detailed economic studies of metals and fuels of current interest and prepares annual lists of metallurgical works, metal and industrial mineral mines, milling plants, coal mines and petroleum refineries. Also published are special monographs on mining laws, taxation and subjects of particular interest to the mineral industry.

The Dominion Coal Board.*-The Board was established by the Dominion Coal Board Act (RSC 1952, c. 86) which was proclaimed on Oct. 21, 1947. By this Act the Board was constituted a department of government to advise on all matters relating to the production, importation, distribution and use of coal in Canada. The Board is also charged with the responsibility of administering, in accordance with regulations of the Governor in Council, any coal subventions or subsidies voted by Parliament.

The Board is empowered to undertake research and investigations with respect to:-
(1) the systems and methods of mining coal;
(2) the problems and techniques of marketing and distributing coal;
(3) the physical and chemical characteristics of coal produced in Canada with a view to developing new uses therefor;
(4) the position of coal in relation to other forms of fuel or energy available for use in Canada;
(5) the cost of production and distribution of coal and the accounting methods adopted or used by persons dealing in coal;
(6) the co-ordination of the activities of government departments relating to coal; and
(7) such other matters as the Minister may request or as the Board may deem necessary for carrying out any of the provisions or purposes of the Act.

In addition, the Dominion Coal Board Act provides authority in the event of a national fuel emergency to ensure that adequate supplies of fuel are made available to meet Canadian requirements.

The Act authorizes a Board membership of seven, including the chairman. The latter is the Chief Executive Officer, has the status of a Deputy Minister, spends full time on the Board's business, receives a salary and is in charge of a civil service staff. The other members, men of long experience and expert knowledge of aspects and regions of the Canadian coal industry, receive per diem payments and travelling expenses while attending Board meetings or while otherwise officially engaged on Board business.

In general, the Board and its staff constitute a central agency through which representations on coal matters are made to the Government from any sector of the industry or the public. Conducting a continuous study of developments and problems within the industry, exchanging information with provincial authorities concerned with coal and with national authorities and agencies in other countries and maintaining the most complete files of Canadian coal information in existence, the Board makes recommendations to the Government and reports to Parliament through the Minister of Mines and Technical Surveys. In view of the growing impact of oil and natural gas on the markets for Canadian coal, the Board and its staff have intensified the study of the relation of the competing sources of energy and of possible new outlets for the solid fuel.

Since its inception, the Board has worked toward the co-ordination of the activities, relating to coal, of various government departments, agencies and other bodies. Its own responsibilities in research on the mining and utilization of coal have been carried out mainly by delegation to the Fuels and Mining Practice Division, Mines Branch, Department of Mines and Technical Surveys. On occasion, the Board has recommended or commissioned specialized types of research by experts outside the government service-for example, the studies resulting in the Christie Reports which became influences leading to the enactment of the Atlantic Provinces Power Development Act (SC 1958, c. 25) and the establishment of a power grid in the Maritimes. As a contribution to the co-ordination

[^156]of coal research and to the dissemination to the industry of technical information resulting from research, the Board initiated the now annual Dominion-Provincial Conferences on Coal. In the field of coal statistics, the Board has a long-standing co-operative arrangement with the Dominion Bureau of Statistics under which the Bureau collects most of the statistical information required by the Board.

Government purchases of fuel, which constitute an important outlet for coal, claim a part of the time of the Board's staff in an advisory capacity. Advice on fuel matters is also continuously available to all government departments and agencies. A senior official of the Coal Board is chairman of the Interdepartmental Fuel Committee, which advises on the supply, purchase and utilization of fuel for the Department of National Defence, and of the Dominion Fuel Committee, which is organized along similar lines as an advisory body to other government departments.

The subvention assistance on the movement of Canadian coals, which the Board administers, is authorized from year to year by votes of moneys by Parliament; payments are in accordance with Regulations established by Order in Council. This assistance, which has been provided in varying degrees for the past 30 years, was designed to further the marketing of Canadian coals by equalizing as far as possible the laid-down costs of Canadian coals with imported coals. During the year ended Mar. 31, 1962, a total of $3,274,482$ tons of coal was shipped under subvention and $\$ 16,781,253$ was paid in assistance. Costs and conditions of the coal industry being subject to variations, the Board must review from time to time the rates of subvention and the areas where the assistance is required.

Coal subventions of another type, based on the Btu content of coal used in thermalelectric power production, were authorized in January 1958 by the provisions of the Atlantic Provinces Power Development Act. The Dominion Coal Board was designated as the Government of Canada's administrative agency for subvention matters in agreements made with the provinces under this Act.

As agent to the Minister of Mines and Technical Surveys, the Board receives applications and administers loans under the Coal Production Assistance Act (RSC 1952, c. 173, as amended by SC 1958, c. 36 ; SC 1959, c. 39; SC 1960-61, c. 20; and SC 1962-63, c. 13). The Board also administers payments under the Canadian Coal Equity Act (RSC 1952, c. 34), which provides a subsidy on Canadian coal used in the manufacture of coke for metallurgical purposes. In the year ended Mar. 31, 1962, payments under this Act, totalling $\$ 192,927$, were made on 389,751 tons of coal.

## Subsection 2.-Provincial Government Aid*

Newfoundland.-The Newfoundland Government, through its Mines Branch, provides several valuable services to those interested in prospecting and mining. It publishes, for sale at nominal cost, geological reports, geophysical maps and compilations of general data pertaining to specific areas and makes available, from unclassified files, various other information to interested parties. It identifies specimens sent in from Newfoundland and Labrador and assays by chemical means those that appear to have some mineral content. If good specimens from a known area warrant further investigation, a geologist from the Department of Mines, Agriculture and Resources is available to visit the locality and give advice. Prospecting and mining permits are issued by the Department and claims are registered.

Nova Scotia.-Under the provisions of the Mines Act (RSNS 1954, c. 179), the Government of Nova Scotia may assist a mining company or operator in the sinking of shafts, slopes, deeps and winzes and the driving of adits, tunnels, crosscuts, raises and

[^157]levels. This assistance may take the form of work performed under contract, the payment of bills for materials and labour, or the guarantee of bank loans. Any such work must be approved by the Department of Mines. The Government is also authorized to assist the mining industry to procure power on the most economical basis and may guarantee the Nova Scotia Power Commission against any loss of revenue incurred on account of capital investments made for that purpose. Mining machinery and equipment to be used in searching for or testing and mining minerals may be made available through the Government. Such equipment is under the direct supervision of the Chief Mining Engineer.

The Government of Nova Scotia is also empowered to make any regulations considered necessary for increasing the output of coal. Such regulations cover the appropriation, on payment, of unworked coal lands, the operation of coal mines, and loans or guarantees for loans. Close co-operation is maintained with the Federal Government in carrying out federal regulations made to secure increased production and economical distribution of coal from the mines of the province.

New Brunswick.-The Mines Branch of the Department of Lands and Mines has five divisions. The Mineral Lands Division administers the disposition of Crown mineral rights including the issuing of prospecting licences, recording of mining claims, issuing of mining licences and leases and other matters pertaining thereto. Detailed and index claim maps are prepared for distribution. The Mine Inspection and Engineering Division administers the safety regulations governing operations under the Mining Act. All mines are regularly inspected, laboratory facilities are maintained and all equipment used in mines must be approved by the Division. The Geological Division carries on general and detailed geological mapping and investigation. Maps and reports are prepared for distribution, mineral and rock specimens are examined for prospectors and preliminary examinations of mineral prospects are made when requested and circumstances warrant. The Mine Assessment Division is responsible for the collection of mining taxes and royalties and the preparation of statistics on mineral production. The Bathurst Division serves as recording office for northeastern New Brunswick. In addition, claim maps as well as topographical, geological and aero-magnetic maps are available for perusal and distribution. The staff is prepared to provide information concerning the Mining Act and the use of various types of maps.

Quebec.-The Mining Act (RSQ 1941, c. 196) authorizes the Department of Natural Resources of the Province of Quebec to build, maintain and improve roads needed for mining development. Such work is done by contract under the supervision of departmental engineers. The Act gives the Department considerable latitude in this respect. Certain major roads have been built to new mining districts and completely paid for; on the other hand, if a particular property requires a branch road from an established highway the owner may be required to contribute a portion of the cost. To prevent the development of uncontrolled settlements in the vicinity of operating mines, the Department regulates the use of land and permits the establishment of well organized communities.

The Department maintains well equipped laboratories for the benefit of prospectors, geologists, engineers and mine operators. The facilities include equipment for mineralogy, petrography, ore dressing, and analysis by wet or dry assay, spectrography or X-ray. Qualitative and mineralogical determinations are made free of charge but quantitative analyses are charged for according to a tariff schedule. The Mining Act provides free coupons to be used by prospectors in paying for such analyses. The province has authorized the establishment of research laboratories and a pilot plant to assist mining and metallurgical enterprises in the processes and techniques of extracting, transforming and utilizing ores.

Two branches of the Department undertake geological mapping and inspection-one responsible for reconnaissance (areal) mapping, and the other for detailed mapping in
mining districts and inspection of individual deposits or properties. The published reports on these investigations are available on request. When weather permits, about 40 crews, headed by geologists or mining engineers, work in different regions of the province. In five mining areas, offices managed by resident geologists are maintained where geological information obtained from mining explorations is gathered and compiled and from which free copies of such documentation may be obtained by the public. Furthermore, four other crews are engaged in hydrogeological surveying, mainly for the purpose of assisting municipalities in resolving their water supply problems.

Departmental inspectors supervise the observance of all regulations concerning the safety of workmen in operating mines. Three Mobile Mine Rescue Stations are operated and a mine rescue training program conducted.

Five-week courses for the training of prospectors are conducted by Laval and Montreal Universities, and lectures are given at different localities throughout the province. University scholarships are granted each year to deserving undergraduate and postgraduate students in mining, geology and metallurgy, thus contributing to the training of qualified engineers for the benefit of the mining industry.

Ontario.-The Ontario Department of Mines renders a multiplicity of services of direct assistance to the mining industry within the province, as briefly outlined below.

Mining Lands Branch.-This Branch handles all matters dealing with the recording of mining claims, assessment work, etc., and the preparation of title to mining lands. As a service to the mining public, individual township maps are prepared and kept up to date showing lands open for staking and recorded and patented claims therein. District Mining Recorders maintain offices at strategic locations throughout the province.

Geological Branch.-A continuing program of geological mapping and investigation is carried out by the geological staff of the Department. Detailed reports and geological maps of the areas studied are made available to the public. In many of the active areas of the province resident geologists are engaged to gather and make available to the public information concerning geological conditions, exploration and development within their respective districts. A geologist specializing in industrial minerals investigates methods of treatment and recovery of such minerals and compiles data on the uses, specifications and markets for such products. Collection and dissemination of information on groundwater resources is also a function of the Geological Branch. During the winter months, courses of instruction for prospectors are held in various centres throughout the province.

Laboratories Branch.-The Provincial Assay Office at Toronto carries out wet analyses and assays of metal and rock constituents on a custom fee basis and gives the same service free of charge to holders of valid assay coupons issued for the performance of assessment work on mining claims. The Timiskaming Testing Laboratories situated at Cobalt, in addition to performing fire assays and chemical analyses, operate a bulk sampling plant mainly to assist the producers of the area in the marketing of the cobalt-silver ores. A Cable Testing Laboratory, wherein all hoisting ropes in use at the mines are periodically tested, is operated under the supervision of the Inspection Branch.

Inspection Branch.-The main function of this Branch is the regular examination of all operating mines, quarries, sand and gravel pits and certain metallurgical works with a view to ensuring proper conditions of health and safety to the men employed. District offices to serve the local areas are maintained in the major mining centres of the province. Mine rescue stations in the principal mining sections are operated under the supervision of the Branch.

Exhibitions.-The Department each year presents displays pertaining to mining within the province at such exhibitions as the Canadian National at Toronto and at other centres from time to time.

Publications Branch.-All maps and reports of the Department are distributed through the agency of the Publications Branch located at the main office of the Department.

Library.-A mining library for the use of the Department and the public is maintained within the Department. This library stocks mainly publications and maps issued by the federal and provincial governments of Canada as well as numerous periodicals and bulletins published in the United States.

Roads to Resources Program.-An interdepartmental committee was set up in 1955 to decide on matters of policy and to determine the locations and priorities of proposed roads. The Minister of Mines sits on this committee with the Provincial Treasurer and the Ministers of Lands and Forests and of Highways. The Department of Highways supervises the construction of all access roads. The sum of $\$ 1,500,000$ a year is made available for such projects, provided on a $50-50$ basis by the Ontario Government and the Federal Government.

Manitoba.-The Mines Branch of the Manitoba Department of Mines and Natural Resources offers five main services of assistance to the mining industry: maintenance, by the Mining Recorder's offices at Winnipeg and The Pas, of all records essential to the granting and retention of titles to every mineral location in Manitoba; compilation, by the geological staff of the Branch, of historical and current information pertinent to mineral occurrences of interest and expansion of this information by a continuing program of geological mapping; enforcement of mine safety regulations and, by collaboration with industry, introduction of new practices such as those concerned with mine ventilation and the training of mine rescue crews which contribute to the health and welfare of mine workers; and maintenance of a chemical and assay laboratory to assist the prospector and the professional man in the classification of rocks and minerals and the evaluation of mineral occurrences.

Manitoba also aids the mining industry by the construction of access roads to mining districts.

Saskatchewan.-Assistance to the mining industry in Saskatchewan is administered by the Mines Branch, Department of Mineral Resources, with its head office at Regina. The Branch is headed by a Director and comprises three divisions.

The Geology Division is directed by the Chief Geologist and maintains resident geologists in or near the principal mining areas. The Division conducts a prospectors' school which gives basic training in geology, mineralogy, prospecting and exploration techniques and administers the Prospectors' Assistance Plan which assists by lending equipment, paying certain transportation costs, paying for a grub-stake, and by providing technical advice. During the summer months, geological crews survey and map areas and prepare reports which are made available to the public.

The Engineering Division administers the Mines Regulation Act, the purpose of which is to ensure safe working conditions in mines. Inspections of mines are carried out by Division officers, a Chief Engineer of Mines stationed at Regina, and an Inspector of Mines stationed at Uranium City. Safety education is also part of the Division's work, taking the form of first aid instruction, mine rescue training, and analysis of accidents.

The Mining Lands Division is responsible for making disposition of all Crown minerals with the exception of petroleum, natural gas and helium, and maintains records respecting areas let out by lease, permit or claim. Recording offices, having the responsibility of assisting the public in determining the lands available and accepting applications, are located at Regina, Prince Albert, La Ronge, Uranium City and Flin Flon.

Alberta.-Alberta Government assistance to the mining industry is diversified in character. The Mines Division of the Department of Mines and Minerals regulates coal mines and quarries and maintains standards of safety by inspection and certification of workers. The Workmen's Compensation Board also maintains safety standards and trains mine rescue crews. The oil and gas industries are served in a similar way by the Oil and Gas Conservation Board. Its regulatory measures, however, are also concerned with preventing the waste of oil and gas resources and with giving each owner of oil and gas rights the opportunity of obtaining a fair share of production. This Board compiles periodic reports and annual records which are of invaluable assistance in oil development in Alberta. The mining industry is also served by the Research Council of Alberta which has made geological surveys of most of the province and has carried forward projects concerned with the uses and development of minerals. The Council has studied the occurrence, uses and analyses of Alberta coals and their particular chemical and physical properties, the use of coals in the generation of power, and the upgrading and cleaning of coal and has also studied briquetting, blending, abrasion loss, shatter and crushing strength, asphalt binders and dust-proofing of coal. Studies have been made of glass sands, salt, fertilizers, cement manufacture and brick and tile manufacture. (See also p. 377.)

The province from time to time has had commissions examine various aspects of the mining industry when it has considered that their findings would be of assistance in developing such industries. The province, together with the Canadian Association of Oil Well Drilling Contractors and the Western Canada Petroleum Association, maintains a detailed supervisory and safety training program concerned with the drilling of oil and gas wells. Of assistance also to mining companies and oil companies are the special deductions provided for in the Alberta Corporation Income Tax Act. These follow the parallel provisions in the federal Income Tax Act.

British Columbia.-The Department of Mines and Petroleum Resources of British Columbia provides the following services: detailed geological mapping as a supplement to the work of the Geological Survey of Canada; free assaying and analytical work for prospectors registered with the Department; assistance to the prospector in the field by departmental engineers and geologists; grub-stakes, limited to a maximum of $\$ 700$, for prospectors; assistance in the construction of mining roads and trails; and inspection of mines to ensure safe operating conditions.

## Section 3.-Mining Legislation

Federal Mining Laws and Regulations.-The Federal Government administers mining laws in the Yukon Territory, the Northwest Territories, and certain other lands vested in the Crown in the right of Canada. The Yukon Quartz and Placer Mining Acts and the Canada Mining Regulations which are applicable to the Northwest Territories and other Crown lands are administered by the Resources Division, Northern Administration Branch, Department of Northern Affairs and National Resources. Minerals underlying federal land under grants are reserved to the Crown, and mining rights may be acquired by staking mineral claims under the appropriate Acts or Regulations. Twenty-one-year leases of claims may be issued and these leases may be renewed. The disposal of mineral rights underlying Indian reservations is subject to the consent of the Indians occupying the reserve and to the treaties relating thereto.

The Northwest Territories Quartz Mining Regulations were replaced by the Canada Mining Regulations, Mar. 3, 1961. The new Regulations provide for the exploration and development of minerals in the Northwest Territories and for the exploration and development of minerals underlying territorial waters of Canada and lying outside any of the
provinces and the Yukon Territory. The revised Regulations require a prospector's licence to enter, locate and prospect on lands subject to the Regulations. However, a prospector's licence is not required to maintain claims in good standing.

Any individual over 18 years of age or any joint stock company incorporated or licensed to do business in Canada may hold a prospector's licence. Claim tenure is limited to ten years from the date of recording. At the end of ten years, the claim owner must apply for a lease or relinquish his rights. No lease will be granted to an individual unless the Minister of Northern Affairs and National Resources is satisfied that the applicant is a Canadian citizen and will be the beneficial owner of any interest acquired under such lease; no lease will be granted to a corporation unless the Minister is satisfied that at least 50 p.c. of the issued shares of the corporation are owned by Canadian citizens or that the shares of the corporation are listed on a recognized Canadian stock exchange and that Canadians will have the opportunity of participating in the financing and ownership of the corporation.

Any new mine beginning production after the Canada Mining Regulations came into force will not be required to pay royalties for a period of 36 months, starting from the day the mine comes into production.

Oil and Gas Legislation.-The Federal Government administers oil and gas laws and regulations in the Yukon and Northwest Territories, through the Resources Division, Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa. All land in both Territories is, in the first instance, owned by the Federal Government, complete with under-rights. These include oil and gas rights. When title to land is granted by letters patent, surface rights only are conveyed and under-rights continue to be vested in the Federal Government, which may dispose of them under appropriate legislation. Nine-year to 12-year permits to explore for oil and gas and 21-year oil and gas leases are available.

The Government has set up the Canada Oil and Gas Land Regulations and the Canada Oil and Gas Drilling and Production Regulations, both dated June 6, 1961. They also include provisions for the exploration, development and production of oil and gas from land under all sea-coast waters of Canada which are not within any province.

An oil and gas exploration permit may be issued to any individual over 21 years of age or to any joint stock company incorporated or licensed to do business in Canada, or incorporated in any province of Canada. Permits are issued in periods of nine, 10 or 12 years, depending on the location, by which times the permittee is expected to apply for an oil and gas lease or relinquish his rights. No oil and gas lease will be issued to an individual unless the Minister of Northern Affairs and National Resources is satisfied that the applicant is a Canadian citizen and will be the beneficial owner of any interest acquired under such lease, or to a corporation unless the Minister is satisfied that at least 50 p.c. of the issued shares of the corporation are beneficially owned by persons who are Canadian citizens or that the shares of the corporation are listed on a recognized Canadian stock exchange, and that Canadians will have an opportunity of participating in the financing and ownership of the corporation.

Provincial Mining Laws and Regulations.*-All Crown mineral lands lying within the boundaries of the several provinces (with the exception of those within Indian reserves and National Parks which are under the jurisdiction of the Federal Government) are administered by the respective provincial governments.

The granting of land in any province except Ontario and Nova Scotia no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. In Nova Scotia no mineral rights belong to the owner of the land except those pertaining to gypsum, limestone, and building materials, and the Governor in Council may declare deposits of either limestone or building

[^158]materials to be minerals. Such declaration is to be based on economic value or to serve the public interest. In such case, the initial privilege of acquiring the declared minerals lies with the owner of the surface rights who must then conform with the requirements of the Mines Act. In Newfoundland, mineral and quarry rights are expressly reserved. Some early grants in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick, Quebec and Newfoundland also included certain mineral rights. Otherwise, mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (or veined minerals and bedded minerals), fuels (coal, petroleum and gas) and quarrying. Provincial mining regulations under these divisions are summarized in the following paragraphs.

Placer.-In most provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

General Minerals.-These minerals are sometimes described as quartz, lode, or minerals in place. With the exception of British Columbia the most elaborate laws and regulations apply in this division. In all provinces except Alberta and Saskatchewan, a prospector's or miner's licence, valid for one year, must be obtained to search for mineral deposits, the licence being general in some areas but limited in others; a claim of promising ground of a specified size may then be staked. In Saskatchewan, a licence is required only for staking and any number of dispositions may be staked under one licence. A claim must be recorded within a time limit and payment of recording fees made, except in Quebec where no fees are required. Work to a specified value per annum must be performed upon the claim for a period of up to ten years; in Saskatchewan there is no work commitment in the first year of the claim. There is no time limit in British Columbia but $\$ 500$ assessment work, of which a survey may represent two fifths, must be performed and recorded before a lease may be obtained. In Quebec, a specified number of man-days of work must be performed and the excess may be carried forward for renewal of licence; before mining can be commenced, a mining concession must be purchased for which it is necessary to produce an engineer's report indicating the presence of an orebody. The taxation applied most frequently is a percentage of net profits of producing mines or royalties. In Newfoundland, the provincial mining tax was modified after Confederation on Mar. 31, 1949 to conform with the provincial obligations under the Dominion-Provincial Tax Agreement. No other form of taxation or royalty exists. In Saskatchewan, subsurface mineral regulations covering non-metallics stipulate the size and type of dispositions that may be made in order to maintain the disposition in good standing, provide for fees, rentals and royalties, and set out generally the rights and obligations of the disposition holder.

Fuels.-In provinces where coal occurs the size of holdings is laid down, together with the conditions of work and rental under which they may be held. In Quebec, ordinary mining claims give rights to all mineral substances and to their development, and stakings for combustible natural gas, salt, coal, mineral oil or naphtha, or iron sands may cover 1,280 acres per claim. In Nova Scotia, mining rights to certain minerals, including petroleum, occurring under differing conditions may be held by different licensees. Provision is sometimes made for royalties. Acts or regulations govern methods of production. In the search for petroleum and natural gas, an exploration permit or reservation is usually required; however, in Manitoba, Saskatchewan, Alberta and British Columbia leases usually follow the exploration reservation whether or not any discovery of oil or gas is made. In Manitoba, Saskatchewan and Alberta, exploration costs are applicable in part on the first year's lease rental. In other provinces, the discovery of oil or gas is usually prerequisite to obtaining a lease or grant of a limited area, subject to carrying out drilling obligations and paying a rental, a fee, or a royalty on production.

Quarrying.-Regulations under this heading define the size of holdings and the terms of lease or grant. On Quebec private lands the quarry belongs to the owner; on Crown lands mineral rights belong to the Crown and may be obtained in accordance with the provisions of the law although the rights to exploit peat or marl must be obtained by special licence. In Saskatchewan, sand and gravel belong to the owner of the surface of the land. In Alberta, sand, gravel, clay and marl recovered by excavating from the surface belong to the owner of the surface of the land.

Copies of mining legislation including regulations and other details may be obtained from the provincial authorities concerned.

## Section 4.-Statistics of Mineral Production

## Subsection 1.-Value and Volume of Mineral Production

Statistics of the annual value of mineral production are available from 1886, total production being shown for five-year intervals from that date to 1945 and annually for subsequent years in Table 3. These figures are not strictly comparable throughout the period because of minor changes in methods of computing metallic content of ores sold and valuations of products but they do serve to show broad trends in the mineral industry.

The increase in the value of mineral production since the end of World War II has been phenomenal, having more than tripled since 1949. Production per head of the population advanced from $\$ 67.01$ in that year to $\$ 153.10$ in 1962 . Although part of this increase was accounted for by advanced prices, the index of the volume of output from Canadian mines recorded an advance from $90.0(1949=100)$ to 286.5 in the same comparison.

[^159]
## 3.-Value of Mineral Production, 1886-1962

| Year | Total Value | Value per Capita | Year | Total Value | Value per Capita | Year | Total Value | Value per Capita |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1961. | 1,387,159,036 | 210,467,786 | 653,327,802 | 331,345,763 | 2,582,300,387 |
| 1962p. | 1,480,282, 362 | 215,584, 368 | 796,851,086 | 350,266,379 | 2,842,984,195 |

Current Production.-A detailed review of developments in mining during 1962 is given at pp. 521-545. As stated there, the value of mineral commodities produced in that year reached a new high, amounting to nearly $\$ 2,843,000,000$, a total more than 10 p.c. above the 1961 value. Major gains continued to be made by petroleum, nickel, natural gas and natural gas by-products, increases amounting to $\$ 96,033,000, \$ 33,963,000$, $\$ 29,491,000$ and $\$ 19,525,000$, respectively. The value of iron ore produced, which increased by $\$ 12,868,000$ in 1961 , rose by $\$ 76,658,000$ in 1962 . Copper output, which had dropped by $\$ 9,689,000$ in 1961 , showed an increase of $\$ 27,976,000$ in 1962 . The value of cement produced in 1962 was $\$ 9,940,000$ higher than in the previous year, that of zinc $\$ 5,879,000$ higher and that of asbestos $\$ 3,105,000$ higher. Also, the first of a continuing output of potash added $\$ 2,121,000$ to the total value of mineral production. The greatest decline was recorded by uranium which dropped $\$ 44,000,000$ below its 1961 level.

The value of all metals produced had shown a slight drop in 1961 mainly as a result of decreases in copper, zinc and uranium but in 1962 reached an all-time high, increasing 7 p.c. over the previous year. The total values of other sectors were also at record levels, non-metallics increasing 2 p.c., fuels 22 p.c. and structural materials 6 p.c.

## 5.-Quantity and Value of Mineral Production, 1960-62

Analysis of Current Value and Volume.-To present a clearer and simpler interpretation of the trends in mineral production in Canada over the ten years 1953-62, the percentage of the total value contributed by each principal mineral in each year is given in Table 6.

## 6.-Percentage of the Total Value Contributed by Principal Minerals, 1953-62

| Mineral | 1953 | 1954 | 1955 | 1956 | 1957 | 1958 | 1959 | 1960 | 1961 | 1962p |

[^160]With 1949 production levels equalling 100,* the total quantity of mineral output had reached an all-time high of 286.5 in 1962, an increase of 7.3 p.c. over the previous year. The most significant gains were recorded in the iron ore, asbestos, natural gas and crude petroleum industries, with lesser gains in copper and nickel. Declines occurred in gold, coal and uranium (not shown).

[^162]
## Subsection 2.-Provincial Distribution of Mineral Production

Changes in provincial mineral production in 1962 compared with 1961 varied across Canada. The major advance was shown by Alberta where large increases in the output of natural gas, natural gas by-products and petroleum as well as a substantial increase in the output of sulphur were mainly responsible for an increase of $\$ 105,300,000$ in total value of production. Quebec's total advanced by $\$ 63,600,000$ as a result of much greater shipments of iron ore and higher production of other base metals. Larger shipments of nickel from the new Thompson development were mainly responsible for the increase of $\$ 58,500,000$ experienced by Manitoba. In British Columbia, substantial increases in the value of output of copper, iron ore, natural gas and crude petroleum more than counterbalanced decreases in other minerals, resulting in an advance of some $\$ 41,000,000$. Saskatchewan's first production of potash and an increased output of crude petroleum advanced the value of its total output to the extent of about $\$ 20,600,000$. Only Ontario among the provinces showed a reduction in value of output, the decrease amounting to about $\$ 41,500,000$. This was more than accounted for by lower shipments of nickel as a result of a production cutback in the latter part of the year and by the expected drop in the output of uranium. Increases in the Atlantic Provinces and the Yukon Territory were moderate but the Northwest Territories recorded a slight decrease as a result of the closing of the Rankin nickel mine.

In 1962, Ontario produced 31.7 p.c. of the total value of the mineral output of the country compared with 36.5 p.c. in 1961 and 39.4 p.c. in 1960 . Total value of production in the province dropped by nearly 9 p.c. in the two latest years. Alberta, which moved to second place in 1961 , produced 20.4 p.c. of the nation's output in 1962 compared with 18.3 p.c. and 15.9 p.c., respectively, in the two preceding years. Quebec, in third place, recorded an advance of over 11 p.c. in value of output in 1962 and produced 18.3 p.c. of the nation's total compared with 17.6 p.c. in 1961 and 17.9 p.c. in 1960. Saskatchewan, British Columbia and Manitoba followed Quebec in value of mineral output in 1962, producing, respectively, 8.3 p.c., 8.1 p.c. and 5.6 p.c. of the Canadian total; Manitoba's share increased from 3.9 p.c. in 1961 and 2.4 p.c. in 1960 . In 1962, Newfoundland produced 3.5 p.c. of the Canadian total and the Maritime Provinces together produced 3.1 p.c., not greatly changed from previous years.
8.-Value of Mineral Production, by Province, 1953-62

Nors.-Figures from 1899 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

| Year | Newfoundland | Prince Edward Island | Nova Scotia | New Brunswick | Quebec |  | Ontario | Manitoba |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Subsection 3.-Production of Metallic Minerals

The metallic minerals of greatest dollar value in Canada during 1962 were, in order: nickel, copper, iron ore, gold, uranium, zinc, lead and silver. Except for uranium, which dropped from third place to fifth, this order remained unchanged from 1961. Developments taking place in metal mining during 1962 are described in detail in Section 1, pp. 524-536. The following statistical information gives a comparison of quantity and value figures for each of the principal metals over the ten-year period 1953-62.

Nickel.-The value of nickel output reached an all-time high in 1962, although the quantity produced was slightly less than in the previous year. A steadily upward trend in production experienced after the end of the War was interrupted in 1958 when a rise in world stocks brought about a decrease in nickel prices. However, 1959 output was again close to the level of 1957 and increases were recorded in the next two years. As stated on p. 524, satiation of requirements resulted in a cutback in production in the latter part of 1962 which, with a lower output from the Northwest Territories, counterbalanced a considerable increase in Manitoba's output and a new production from Quebec.

Canada uses only about 5,000 tons of refined nickel (anodes, cathodes and ingots) annually. Exports amounted to 121,712 tons in 1962, mostly to the United States and Britain, and exports of nickel in ores, concentrates and matte, mostly to Britain, amounted to 77,409 tons.
10.-Nickel Production, by Province, and Total Value 1953-62

| Year | Que. | Ont. | Man. | B.C. | N.W.T. | Canada |  |

Copper.-Production of copper in Canada reached its peak in 1962 in both quantity and value. Increases in British Columbia, Quebec and Newfoundland, together with new contributions from Nova Scotia and New Brunswick, offset decreased output in the otber provinces and the territories.

## 11.-Copper Production, by Province, and Total Value 1953-62

Nort.-Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

Iron Ore.-Shipments of iron ore from Canadian mines, which have fluctuated considerably over the past ten years, reached a record level in 1962. The quantity shipped by each producing province was higher than in 1961, but the major increase was contributed by Quebec which accounted for 42 p.c. of the country's output.

Production of pig iron and of steel ingots and castings was also at its highest level in 1962. Exports of iron ore-direct shipping grade, concentrated, agglomerated and other forms-amounted to $24,243,249$ tons valued at $\$ 220,522,000$, a considerable increase over the 1961 totals. Of the 1962 tonnage exported, 78 p.c. went to the United States and most of the remainder to Europe, mainly to Britain. Japan received 1,729,866 tons.

## 12.-Iron Ore Shipments and Production of Pig Iron and Steel Ingots and Castings, 1953-62

| 1962p.. | 7,744,524 | 11,584,497 | 6,652,331 | 1,917,361 | 27,898,713 | 264,608,450 | 5,288,933 | 7,173,475 |

Gold.-Over the ten-year period 1953-62, Canada's annual gold production fluctuated narrowly between $4,000,000$ oz.t. and $4,600,000$ oz.t. and its value between $\$ 140,000,000$ and $\$ 159,000,000$; the high point was reached in 1961. Output in 1962 was down by 318,489 oz.t. compared with 1961 and, despite the establishment of a higher price per oz.t. (see p. 529), the value was $\$ 3,191,000$ lower. All provinces except Newfoundland, Manitoba and British Columbia, as well as the Yukon and Northwest Territories, reported decreased output in 1962, the major producers-Ontario and Quebec-declining by 9.2 p.c. and 5.3 p.c., respectively. Ontario produced 57.6 p.c. of Canada's gold output in 1962, Quebec 24.0 p.c., the Northwest Territories 9.5 p.c. and British Columbia 4.1 p.c.

## 13.-Quantity and Value of Gold Produced, by Province, 1953-62

Note.-Values are calculated at world prices in Canadian funds. Figures from 1862 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

[^163]Uranium.-Uranium mineralization has been found in Canada at intervals along the western and southern edges of the Canadian Shield but production has been concentrated in four areas within this belt-Great Bear Lake in the Northwest Territories, Beaverlodge in northern Saskatchewan, and Elliot Lake and Bancroft in Ontario. Although output of uranium first began in the Northwest Territories in 1942, figures were not available until 1954 because of government restrictions. However, it was after that time that the large mines and mills of Saskatchewan and Ontario came into production. Peak output amounting to $31,800,000 \mathrm{lb}$. was reached in 1959 from 23 mines, but by the end of

1962, for economic reasons (see p. 531), eight mines (seven companies) remained in operation and production dropped to about $17,000,000 \mathrm{lb}$. for the year. Of the 1962 quantity, 76.1 p.c. was produced in Ontario and the remainder in Saskatchewan.
14.-Production and Value of Uranium $\left(\mathrm{U}_{3} \mathrm{O}_{8}\right)$, by Province, 1954-62

${ }^{1}$ Figures for 1956 include radium salts, silver, cobalt and uranium oxides; figures for 1957-62 are for uranium
oxide $\left(\mathrm{U}_{3} \mathrm{O}_{8}\right)$.
Zinc.-The estimated production of zinc (including refined zinc, zinc ores and concentrates) showed considerable improvement in 1962 over 1961. British Columbia accounted for 43.8 p.c. of the quantity produced, Quebec for 15.1 p.c., Ontario 13.6 p.c. and Manitoba 11.2 p.c., followed in order by Newfoundland, Saskatchewan, Yukon Territory, New Brunswick and Nova Scotia. Large increases were reported by Manitoba, Quebec and Ontario, new production was shown by New Brunswick and Nova Scotia, Newfoundland's output remained approximately the same as in 1961 and slight increases were reported by the other producers.

## 15.-Quantity and Value of Zinc Produced, 1953-62

Note.-Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1939 edition.

| Year | Quantity ${ }^{1}$ | Value | Average Price per lb | Year | Quantity ${ }^{1}$ | Value | Average Price per lb. |

${ }^{1}$ Estimated foreign smelter recoveries and refined zinc produced in Canada.
Lead.-Lead production in 1962 in the form of refined pig and recoverable lead in ore and concentrates was somewhat lower than the record output of 1961. As stated on p. 532, most of the decrease resulted from lower production at Canada's only lead refinery, located at Trail, B.C. British Columbia produced about 76 p.c. of the total 1962 output. Lead occurs in the complex ores at Buchans in Newfoundland and in the silver-lead ore mined in the Mayo district of Yukon Territory, and smaller amounts are produced in Quebec, Manitoba and Ontario. In 1962, Nova Scotia recorded its first output from a new mine and New Brunswick renewed production in the Bathurst area.

## 16.-Quantity and Value of Lead Produced from Canadian Ores, 1953-62

Nort.-Figures from 1887 are given in the corresponding table of previous Year Books beginning with the 1929 edition.

| Year | Quantity | Value | Year | Quantity | Value |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | tons | \$ |  | tons | \$ |
| 1953.. | 193,705 | 50, 076, 822 | 1958. | 186,680 | 42,413,805 |

| 1956.. | 188, 854 | 58,582,651 | 1961. | 230,435 | 47,054,765 |
| 1957.... | 181,484 | 50,670,407 |  | 190,609 | 37,816,785 |

Silver.-Production of silver is fairly widespread across Canada, being recovered mainly as a by-product in the treatment of gold ores and ores of copper, lead, zinc, cobalt and nickel. Output is therefore often affected by changes in the production of these metals. Thus, the drop in the amount of lead produced at the Trail refinery in 1962 caused a reduction in the output of silver in British Columbia. This reduction, together with decreases recorded by Ontario, Saskatchewan and the Territories, was only partially offset by increases in the other producing provinces. However, an increase in the price of silver (see p. 533) brought the value of the 1962 production to an all-time high.

## 17.-Quantity of Silver Produced, by Province, and Total Value, 1953-62

Notz.-Figures from 1887 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

| Year | Average <br> Price per oz.t. <br> (Canadian funds) | Newfoundland | Nova Scotia | Quebec | Ontario | Manitoba |

[^164]
## Subsection 4.-Production of Non-metallic Minerals (excluding Fuels)

Asbestos is by far the most important item in this group in point of value, followed by salt, sulphur and gypsum. These four items are discussed separately below. Next in importance is peat moss which, although included as a non-metallic mineral, consists of the dead fibrous moss produced from peat bogs; its growing use as a soil conditioner, as poultry and stable litter and as packaging material resulted in shipments valued at nearly $\$ 7,700,000$ in 1962 , double the shipments of 1956. Quantities and values of other non-metallic minerals produced are shown in Table 5, p. 559, and a review of recent developments in the industrial mineral field is given at pp. 536-538.

Asbestos.-In 1962, Canadian asbestos mines shipped a record 1,223,509 tons valued at $\$ 132,060,710$, representing an increase of 4.2 p.c. in quantity and 2.4 p.c. in value over 1961. Quebec, with 12 producing mines, accounted for over 92 p.c. of the total tonnage; Ontario's one mine produced 35,000 tons and British Columbia's one mine produced 55,700 tons.
18.-Quantity and Value of Asbestos Produced, 1953-62

Nore.-Figures from 1896 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

| Year | Quantity | Value | Year | Quantity | Value |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | tons | \$ |  | tons | \$ |
| 1953. | 911,226 | 86, 052, 895 | 1958. | 925,331 | 92,276,748 |

| 1955. | 1,063,802 | $96,191,317$ | 1960. | 1,118, 456 | 121, 400, 015 |
| 1956. | 1,014,249 | 99, 859,969 | 1961. | 1,173, 695 | 128, 955, 000 |
| 1957.. | 1,046,086 | 104,489,431 | 1962p | 1,223,509 | 132,060,710 |

Salt.-The output of salt reached a high point in both quantity and value in 1962, with all producing provinces contributing to the increase over 1961. Ontario produced almost 87 p.c. of the total tonnage. Rock salt is mined in Nova Scotia and Ontario only; brine wells are operated in Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta.

## 19.-Quantity of Salt Produced, by Province, and Total Value, 1953-62

Nore.-Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

| Year | Nova Scotia | Ontario | Manitoba | Saskatchewan | Alberta | Canada |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Sulphur.-The figures in Table 20 represent the quantity and value of sulphur contained in derivatives from smelter gases such as sulphur dioxide, sulphuric acid, etc., and in pyrite and pyrrhotite shipments, as well as the quantity and value of sulphur
refined from natural gas production. The increase in the latter over the past five years has been quite remarkable. In Canada, sulphur is used in the treatment of sulphite pulps and in the manufacture of rayon, explosives, rubber goods, petroleum refining, matches and insecticides.
20.-Quantity and Value of Sulphur Produced from Smelter Gases and in Pyrite and Pyrrhotite Shipments, and Quantity of Elemental Sulphur Sales, 1953-62

[^165] residue or sinter.

Gypsum.-Nova Scotia deposits provided 83 p.c. of the total output of gypsum in 1962. Only British Columbia among the producing provinces failed to show an increase in output in 1962 over 1961. The over-all increase in quantity was about 5 p.c. and in value about 17 p.c. Both quantity and value were only slightly below their peak production in 1960. In Canada, gypsum is used in the manufacture of plaster and wallboard and is added to Portland cement to control setting, but the greater part of the output is exported in crude form to United States plants for processing.

## 21.-Quantity of Gypsum Produced, by Province, and Total Value, 1953-62

Note.-Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

| Year | Newfoundland | Nova Scotia | New <br> Brunswick | Ontario | Manitoba | British Columbia | Canada |  |

## Subsection 5.-Production of Fuels

Coal.-The downward trend in the production of coal, in evidence for some time, was interrupted in 1960 but resumed again in 1961. In 1962, all producing provinces with the exception of Saskatchewan and Alberta showed some decrease in output compared with the previous year. Imports also declined and the quantity of exports was down slightly although their value remained about the same.

## 22.-Coal Production, by Province, 1953-62

Note.-Figures from 1874 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

| Year | Nova Scotia | New Brunswick | Saskatchewan | Alberta | British Columbia | Yukon Territory | Canada |  |

23.-Imports of Anthracite, Bituminous and Lignite Coal and Briquettes, 1953-62

Note.-Figures from 1868 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

## 24.-Exports of Domestic Coal, 1953-62

Notr.-Figures from 1868 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

| Year | Quantity | Value | Year | Quantity | Value |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | tons | \$ |  | tons | \$ |
| 1953.. | 255, 274 | 1,999,908 | 1958. | 338,544 | 2,907,513 |
| 1954. | 219,346 | 1,716,435 | 1959.. | 473,768 | 3,582.313 |
| 1955. | 592,782 | 4,870,598 | 1960. | 852,921 | 6,789,163 |
| 1956. | 594,166 | 4,710,030 | 1961. | 939,360 | 8,541,679 |
| 1957. | 396,311 | 3,357,959 | 1962. | 901,560 | 8,590,693 |

The amounts and percentages of domestic and imported coal apparently consumed in Canada in the years 1953-62 are shown in Table 25. The imports represent amounts taken out of bond for consumption during the respective years, regardless of when received. Thus the totals are exclusive of coal landed at Canadian ports and re-exported or exwarehoused for ships' stores without being taken out of bond. However, since such coal while remaining in bond at the port is available for Canadian consumption if required, the total amount of coal made available for consumption in Canada in 1962 amounted to $21,824,538$ tons, including 851,668 tons of anthracite, $17,220,149$ tons of bituminous, $1,496,661$ tons of subbituminous, and $2,256,060$ tons of lignite.

## 25.-Consumption of Canadian and Imported Coal in Canada, 1953-62

Note.-Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1921 edition.

| Year | Canadian Coal ${ }^{1}$ |  | Imported Coal 'Entered for Consumption'2 |  |  |  | GrandTotal | Con-sumption per Capita |

[^166]Petroleum.-The upward climb of crude petroleum production which started with the discovery of the Leduc field in Alberta in 1947 halted temporarily in 1958 but resumed in 1959 and continued in subsequent years. Quantity production in 1962 reached a record level, about $23,000,000 \mathrm{bbl}$. higher than in 1961. This increase was contributed almost equally by Alberta, Saskatchewan and British Columbia.

## 26.-Quantity and Value of Crude Petroleum Produced, by Province, 1953-62

Natural Gas.- The output of natural gas continued to increase at a rapid rate in Alberta and British Columbia. Total Canadian shipments, which amounted to $150,772,000$ Mcf. in 1955 reached a high of $955,526,000 \mathrm{Mcf}$. in $1962,781,000,000 \mathrm{Mcf}$. of which came from Alberta. A review of developments in the natural gas industry is given at pp. 538-542.

## 27.-Quantities of Natural Gas Produced, by Province, and Total Value, 1953-62

## Subsection 6.-Production of Structural Materials

Active construction throughout Canada has kept production of structural materials at a high level in recent years. The value of such materials produced reached the record total of $\$ 350,266,000$ in 1962. In point of value, sand and gravel is the most important of the structural materials, followed by cement, stone, clay products and lime. Developments in the cement and silica industries during 1962 are covered in the review at pp. 536-538.

Sand and Gravel.-Deposits of sand and gravel are numerous throughout Eastern Canada, with the exception of Prince Edward Island where gravels are scarce. The local needs for these materials are usually supplied from the nearest deposits as their cost to the consumer is governed largely by the length of haul. This accounts for the large number of small pits and the small number of large plants in operation. Every province except New Brunswick and Prince Edward Island produces natural bonded sand but some grades particularly suitable for certain industries command much higher prices than ordinary sand. The greater part of the sand and gravel output is used in road improvement, concrete works, or as railway ballast and most of the commercial plants are equipped for producing crushed gravel, a product that can compete with crushed stone.

In 1962 an estimated $167,328,000$ tons of sand and gravel were produced, valued at $\$ 118,228,000$. This represented a decrease of 2 p.c. in quantity and an increase of 13 p.c. in value compared with 1961. Quebec and Ontario together contributed 66 p.c. of the quantity.

Cement.-The production of cement in Canada reached an all-time high in 1962, output in that year being 8 p.c. above the previous peak reached in 1959. Consumption, continuing the almost steadily upward trend in evidence throughout the postwar period, also attained a record in 1962. Of the Canadian total of $6,786,000$ tons produced in that year, Ontario contributed 36 p.c. and Quebec 33 p.c.; all other provinces except Prince Edward Island and Nova Scotia contributed to the remainder, and all producing provinces except British Columbia showed increased production.

## 29.-Quantity and Value of Production, Imports, Exports and Apparent Consumption of Cement, 1953-62

Note.-Figures from 1910 are given in the corresponding table of previous Year Books beginning with the 1939 edition.

| Year | Shipments (sold or used) |  | Imports | Exports | Apparent Consumption ${ }^{1}$ |

[^167]${ }^{2}$ Includes imported clinker, other than white.

Stone.-The stone industry in Canada has two main divisions-stone quarrying and the stone products industry. The granite, limestone, marble, sandstone and slate quarries yield high-grade structural and decorative materials and also supply requirements for chemical and other allied industries but the major part of the tonnage produced is crushed stone.

${ }^{1}$ Excludes limestone used to make lime or cement.
Clay Products.-The sales value of clay products produced in 1962 was slightly higher than in 1961. Common clays suitable for the production of building bricks and tile are found in all the provinces; production is greatest in Ontario and Quebec. Stoneware clays are produced largely from the Eastend and Willows areas in Saskatchewan and shipped to Medicine Hat, Alta., where, utilizing the cheap gas fuel, they are manufactured into stoneware, sewer pipe, pottery, tableware, etc. Stoneware clay also occurs in Nova Scotia and, although it has not been developed extensively for ceramic use, some is used for pottery. Two large plants and a few small plants manufacture fireclay refractories from domestic clay in British Columbia, Saskatchewan and Nova Scotia. Deposits of high-grade, plastic, white burning clays occur in northern Ontario and deposits yielding high-grade china clay have been found along the Fraser River in British Columbia but these have not been used on a commercial scale, nor have the ball clays of high bond strength occurring in the white mud beds of southern Saskatchewan been developed to any extent.

## 31.-Value (Total Sales) of Clay Products Produced, by Province, 1953-62

Nore.-Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

## Section 5.-Industrial Statistics of the Mineral Industry

The scope of the annual statistics on mineral production published by the Dóminion Bureau of Statistics includes a general review of the principal mineral industries such as the copper-gold, silver-lead-zinc, and nickel-copper industries as well as a section on metallurgical works. Additional data published at irregular intervals include such features as numbers of employees, salaries and wages paid and net value added by processing.

The figures for 'net value added by processing' of industries given in Tables 32 and 33 are, in each table, the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada, less the cost of materials, fuel, etc. The totals indicate more nearly the actual returns to the different industries than do the values for the minerals in Table 5, p. 559 where, with respect to copper, lead, zinc and silver, values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity and other supplies consumed in the production process.

Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminum, where imported ore only is used, and of cobalt which is derived mainly from African ores. The net shipments of these plants include, therefore, the net value of the metals recovered from these imported ores and to this extent the net values added shown in Tables 32 and 33 include products of other than Canadian origin.

## 32.-Summary Statistics of the Mineral Industry, by Province, 1961

Note.- The figures in this table are not comparable with those given for earlier years in previous editions of the Year Book.

## Section 6．－World Production of Certain Metallic Minerals and Fuels

Table 34 shows the production of certain metallic minerals and fuels in the different countries of the world for the year 1961．These figures are taken from the United Nations Statistical Yearbook 1962 which presents production figures for a much more extensive list of mining and quarrying industries．The 1961 figures are provisional and have been con－ verted from kilograms to ounces troy for gold，from metric tons to ounces troy for silver， and from metric tons to short tons for the other metals and fuels shown．

34．－World Production of Certain Metallic Minerals and Fuels， 1961
Nors．－Where dashes occur throughout this table they indicate that no figures were given in the United Nations Statistical Yearbook either because there was no production or because the quantity was not available．

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

## Section 1.-Water Power Resources-Available and Developed

Canada, a land of many large lakes and fast-flowing rivers, is richly endowed with immense water power resources. With the exception of the prairies of the mid-west, these resources are found in considerable magnitude in almost every part of the country.

British Columbia, traversed by three distinct mountain ranges and with, generally speaking, a high rate of precipitation, has many mountain rivers which offer abundant opportunity for the development of hydro-electric power. Notable for their power potential are such rivers as the Columbia, the Fraser, the Peace and the Stikine. Up to the present time, however, hydro-electric developments on smaller rivers in the southern part of British Columbia have supplied the province's major load requirements. The immense power resources of the larger rivers have gone unused, chiefly because of remoteness from present demand areas or because of conflicts of interest between fisheries and power development. The water power resources of British Columbia, in total magnitude the second greatest in Canada, have played and will continue to play a very important part in the development of the province.

Important water power sites await development on the Yukon River in the Yukon Territory and on the South Nahanni River in the Northwest Territories. Indications are that the rivers draining the District of Keewatin, north of Manitoba, will also contribute materially to the total power potential of the Northwest Territories. In view of the lack of developed native fuel sources and difficulties in transportation, water power is of special importance in the development of mining areas such as those at Yellowknife in the Northwest Territories and at Mayo in the Yukon Territory.

Of the three Prairie Provinces, Manitoba has the greatest water power potential. For many years, the more heavily populated southern region of the province has been supplied from hydro-electric developments on the Winnipeg River. With the advent of high-voltage, long-distance transmission, however, power from hydro-electric stations on northern rivers will flow south to help meet the constantly growing demands of industrial, urban and rural users. In both Alberta and Saskatchewan, abundant reserves of coal, oil and natural gas are used to fuel the thermal-electric plants which satisfy much of the demand for power in these provinces. In Alberta, the principal existing hydro-electric developments are located on the Bow River and its tributaries, but there are substantial
power resources in northern regions of the province, too remote from urban centres to warrant development at the present time. In Saskatchewan, existing hydro-electric plants are located in northern areas and their output is used almost exclusively for mining purposes. Water power sites of considerable importance remain to be developed in the central and northern parts of the province. Thermal-electric power feeding the transmission network serving the more settled areas will be augmented in 1963 by hydroelectric power from new developments on the Saskatchewan River.

The pace of industrial expansion in Ontario since the turn of the present century has made heavy demands on the province's substantial water power potential, to the extent that hydro-electric installed capacity in Ontario is exceeded in total magnitude only by that of Quebec. The largest hydro-electric development in the province is located on the Niagara River at Queenston, where the Sir Adam Beck-Niagara Generating Stations Nos. 1 and 2 and the associated pumping-generating station have a combined capacity of $2,521,000 \mathrm{hp}$. Completion of development of most of Ontario's water power sites located within economic reach of demand areas has led, within the past few years, to an increasing dependence upon electric energy generated in thermal plants. An important contributing factor is the growing recognition of the benefits offered by integrating the operation of hydro and thermal plants. Despite this growing emphasis on thermal power, development of a number of the province's more remote hydro sites is now considered economically feasible, largely as a result of recent marked advances in extra-high-voltage, long-distance transmission techniques. Several of these sites are under construction.

With more than 30 p.c. of the national recorded total, Quebec's water power resources are the most extensive in the country. Quebec leads the other provinces also in terms of installed turbine capacity with a total installation of $12,816,845 \mathrm{hp}$.-more than 47 p.c. of the total for all of Canada. The greatest concentration of hydro-electric capacity in one plant in Canada is installed in the $2,145,000-\mathrm{hp}$. Beauharnois development on the St. Lawrence River. Notable also are the Bersimis I development on the Bersimis River and the Shipshaw plant on the Saguenay River, each with an installed capacity of $1,200,000$ hp. A major power scheme involving the harnessing of the headwaters of the Manicouagan and Outardes Rivers is under construction. The completed project will make available nearly $6,000,000 \mathrm{hp}$. of additional capacity at new and existing developments on the two rivers.

The water power resources of New Brunswick and Nova Scotia, although small in comparison with those of other provinces, are a valuable source of energy. Numerous rivers in both provinces provide moderate-sized power sites advantageously situated for urban or rural use. In Prince Edward Island, there are no large streams and, consequently, water power plants are limited in size to those used for small mills. Topography and runoff conditions on the Island of Newfoundland are favourable for the development of power, even though river drainage areas are generally not large. Considerable power development has taken place on the Island, mainly to serve the pulp and paper industry. Labrador has what is considered to be one of the largest sources of water power in Canada in the Hamilton River and its tributaries.

An accurate comparison of the magnitude and state of development of Canada's water power resources with those of other countries is not possible because world statistics are incomplete and are not tabulated on the same basis. Available information would indicate, however, that Canada is exceeded only by the United States in the total amount of hydraulic turbine capacity actually installed. In terms of installed water power capacity per thousand population, Canada is second only to Norway. It is interesting to note that, with the exception of those of the United States, Canada's water power resources, fifth in order of magnitude, are more readily available to prospective markets than is the case in any of the countries that have greater power potential.

Table 1 gives, by province or territory, the estimated total water power resources of Canada and the total existing capacity of all water power plants.
1.-Available and Developed Water Power, by Province, as at Jan. 1, 1963

${ }^{1}$ Reflects the effect of possible stream-flow regulation based on known storage potentials.
The figures in the first and second columns of Table 1 represent continuous 24-hour power based on available data on stream flow and hydraulic head at individual sites. The hydraulic head used is the feasible concentration of head, which has been measured or at least estimated at existing falls, rapids and known power sites. No consideration has been given to possible economic concentrations of head on rivers and streams of gradual gradient, except at those locations where the available head has been definitely established by field investigations.

It should be emphasized that the figures of available power represent only the minimum water power possibilities of Canada. Many unrecorded power sites exist on rivers and streams throughout the country, particularly in the less-explored northerly districts. As power surveys are extended, detailed information on new sites will become available and, undoubtedly, substantial additions to present figures of available power will result. With the exception of British Columbia, Yukon Territory and the Northwest Territories, estimates of available power are based upon existing river flows and do not take into account the benefits of stream-flow regulation that would result from the development of storage potential. In addition, the figures of available power do not include the power potential of major river diversions that have been investigated but not developed.

The figures in the third column of Table 1 are the totals of plant capacities based upon the manufacturer's rating as indicated on the name-plate of each unit. In a few cases where, subsequent to installation of the unit, a change in the normal operating head has been effected, a rating based on the new normal operating head is used. The maximum economic turbine installation at any power site can be determined only by careful consideration of all the conditions and circumstances pertinent to its individual development. It is the usual practice, however, to install turbines with a total capacity in excess of the power equivalent of the ordinary six-month flow at the site. This additional capacity may be installed for use at peak-load hours or to facilitate plant or system maintenance, or to take advantage of high river flow.

The extent to which the installed capacity exceeds the power equivalent of the ordinary six-month flow depends upon the factors that govern the system of power-plant operation, and varies widely in different parts of the country. In some developments, the difference
may amount to as much as several hundred per cent. For this reason, the figures in the third column of Table 1 are not directly comparable with those in column two. For the same reason, it is not feasible to forecast future capacity installation on the basis of estimates of available water power.

The steady growth of hydraulic turbine capacity is shown in Table 2. The average annual growth of $56,000 \mathrm{hp}$. in the period $1900-05$ increased sharply to about $150,000 \mathrm{hp}$. per annum in the 1906-22 period, largely as a result of improvements in electric power transmission and of the construction of large hydro-electric stations. Because of the heavier demand for electricity during the prosperous 1920's, the rate of installation increased appreciably in 1923 and continued at a nearly uniform rate of $377,000 \mathrm{hp}$. per annum until 1935. Conditions resulting from the economic depression of the early 1930's were responsible for a decrease in construction starts and the comparatively low rate of installation during the period 1936-39. The wartime demand for power accelerated the installation rate to an average of $481,000 \mathrm{hp}$. per annum for the period $1940-43$. Few new developments were started in the later war years or in the immediate postwar period so that from 1944 to 1947 only a small amount of new capacity came into operation. However, the program of construction of hydro-electric power plants gained momentum soon after the War and the results are apparent in the substantial growth in new capacity brought into service during the period 1948-60, when the average annual rate of installation exceeded $1,200,000 \mathrm{hp}$. In sharp contrast to this high average rate are the comparatively moderate net totals of $294,650 \mathrm{hp} .{ }^{*}$ and $415,468 \mathrm{hp}$. of new capacity put into service in 1961 and 1962, respectively. A return to the former high rate of installation can be expected in 1963, however, when a number of new hydro-electric projects will be completed.

The availability of large amounts of low-cost hydro-electric energy has been an essential factor in the development of Canadian industry. Power from hydro-electric plants ranging in capacity from a few hundred horsepower to more than a million horsepower is carried via transmission line networks to urban centres and rural districts. The ability to transmit power over relatively long distances has facilitated the decentralization of industry and has enabled manufacturers to carry on operations in many of the smaller centres of population.

* Does not reflect an increase of $60,000 \mathrm{hp}$. brought about by the re-rating of an existing plant in Quebec.

## 2.-Hydraulic Turbine Horsepower Installed, by Province, as at Dec. 31, Decennially 1900-50 and Annually 1951-62

Note.-Figures for the years 1900-30 are given in the 1939 Year Book, p. 362; for 1931-39 in the 1946 edition, p. 362 ; and for 1940-49 in the 1954 edition, pp. 556-557.

Table 3 indicates the respective amounts of water power developed by utilities and by industrial establishments. For the purposes of this tabulation, utilities are defined as companies, municipalities or individuals who sell most of the power they develop. In some cases, they include also certain subsidiary companies whose main purpose is to develop and sell power to a parent company for industrial purposes. The total of $21,012,661 \mathrm{hp}$. of turbine capacity installed in plants operated by utilities on Jan. 1, 1963 represented 78 p.c. of Canada's total installed capacity.

Industries are defined as companies or individuals who develop power mainly for their own use. The total installed capacity of plants operated by industrial establishments on Jan. 1, 1963 was $6,090,901 \mathrm{hp}$. In addition to the power generated in their own plants, industries purchase a considerable amount from utilities.

The total hydraulic installation at the beginning of $1963(27,103,562 \mathrm{hp}$.) is the total of all existing installations of water wheels and hydraulic turbines in Canada.
3.-Installed Water Power Capacity, by Province, as at Jan. 1, 1963

| Province or Territory | Turbine Installation |  | Total |

## Section 2.-Power Generating Capability and Load Requirements*

Power generating capability, as covered in this Section, is the measurement of the available generating resources of all hydro and thermal facilities at the time of the one-hour firm peak load for each reporting company, and is not equal to the capacity of such generating facilities. For example, a hydro plant may have a capacity of $100,000 \mathrm{kw}$. but if, at the time of peak-load, the water available for generation is only 80 p.c. of the plant capacity requirements, then its capability is $80,000 \mathrm{kw}$.

Total generating capability has grown at a rapid rate since 1950. The annual rate of increase was 8.2 p.c. in the eleven-year period 1951-62 and 6.4 p.c. in the period 1958-62. In comparison, the forecast rate of growth for the years $1963-66$ is only 4.8 p.c.; thermal generating capability is expected to grow at the average rate of 9.8 p.c. a year in the forecast period compared with 15.7 p.c. in the period 1951-62, but hydro-electric capability is expected to increase at only 3.5 p.c. a year compared with 6.8 p.c. in the 1951-62 period.

Among the provinces, Quebec has the largest generating capability, followed by Ontario, British Columbia and Alberta. Quebec also has the largest hydro-electric generating capability, followed by Ontario and British Columbia, but Ontario has the largest thermal capability, followed by Alberta and British Columbia. The first nuclear capability is scheduled for 1965.

The largest absolute growth in generating capability for the forecast years is indicated for Ontario, amounting to $1,985,000 \mathrm{kw}$., followed by Quebec $1,427,000 \mathrm{kw}$., Alberta $498,000 \mathrm{kw}$., and British Columbia $379,000 \mathrm{kw}$. Quebec will meet most of its increased generating capability by adding over $1,127,000 \mathrm{kw}$. in hydro capability and $300,000 \mathrm{kw}$. in thermal capability. Ontario will add $1,478,000 \mathrm{kw}$. thermal, including $200,000 \mathrm{kw}$. nuclear, and $508,000 \mathrm{kw}$. hydro, and Alberta will add $300,000 \mathrm{kw}$. hydro and $228,000 \mathrm{kw}$. thermal. Thus, it is apparent that thermal capability is becoming of greater importance, partly because of decreasing availability of hydro resources in provinces such as Ontario and partly because technological advances have made possible much more efficient use of thermal fuels in the operation of thermal base load plants.

Firm power peak load is the measure of the maximum average net kilowatt demand of one-hour duration from all loads, including commercial, residential, farm and industrial consumers as well as the line losses. Such load demand increased at the rate of 7.0 p.c. a year from 1951 to 1962 but only 5.0 p.c. a year from 1958 to 1962; peak load demand is forecast to increase at the average rate of 6.5 p.c. a year in the period 1962-66. As a result of the rapid increase in generating capability and the somewhat slower but steady increase in the peak loads, together with the slight reduction in deliveries of firm power to the United States, the indicated reserve on net generating capability increased each year from 1951 to 1962, with the exception of 1961. The forecast is for increases in 1963 and 1964 and declines in 1965 and 1966. The reserve ratio as a percentage of firm power peak load, which reached a high of 28.2 p.c. in 1960 , is expected to decrease to 18.8 p.c. in 1966 , approximately the same as in 1958.

## Section 3.-Electric Power Statistics

Electric power statistics presented in this Section are based on reports of all electrical utilities and all industrial establishments that generate energy regardless of whether or not any is sold and therefore show the total production and distribution of electric energy in Canada. Utilities are defined as companies, commissions, municipalities or individuals whose primary function is to sell most of the electric energy that they have either generated or purchased. Industrial establishments are defined as companies or individuals that generate electricity mainly for use in their own plants.

The current series of electric power statistics dates back to 1956. Earlier reports, entitled Central Electric Stations, were concerned solely with the electrical utility industry and hence excluded statistics relating to power produced by industrial establishments for their own use, although power sold by such establishments was included.

The figures of total water and thermal power generated for the years 1945-55 shown in Table 6 are compiled on the old basis, figures for 1956 are shown on both bases for comparative purposes, and those for later years are on the new basis.

## 6.-Electric Energy Generated, by Type of Station 1945-61, and by Province 1960 and 1961

| Year and Province or Territory | Generated by- |  | Total | Year and Province or Territory | Generated by- |  | Total |

${ }^{1}$ New series, see immediately preceding text.
Of the total generation in 1961 of $113,713,318,000 \mathrm{kwh} ., 91.4$ p.c. was produced from water power and 8.6 p.c. was generated thermally; the proportions differed somewhat among provinces as shown in the following statement.

| Province | Hydro | Thermal | Province or Territory | Hydro | Thermal |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | p.c. | p.c. |  | p.c. | p.c. |
| Newfoundland | 90.6 | 9.4 | Manitoba. | 93.3 | 6.7 |
| Prince Edward Island | 0.5 | 99.5 | Saskatchewan | 25.9 | 74.1 |
| Nova Scotia... | 29.2 53.4 | 70.8 46.6 | Alberta....... | 27.0 | 73.0 |
| New Brunswick | 59.4 | 40.6 0.6 | British Columbia. | 93.1 | 6.9 |
| Ontario............ | 96.5 | 3.5 | Yukon and N.W.T. | 83.5 | 16.5 |

Table 7 gives summary figures of power production and distribution classified by province, and Tables 8 and 9 give figures classified by type of production establishment. Total installed capacity in Canada amounted to $24,091,368 \mathrm{kw}$. in 1961, an increase of $1,056,366 \mathrm{kw}$. over 1960 . Of the 1961 total, $15,180,154 \mathrm{kw}$. were accounted for by utilities and the remainder by industrial establishments. During 1960 and 1961 total sales to ultimate customers amounted to $76,829,969,000 \mathrm{kwh}$. and $79,874,233,000 \mathrm{kwh}$., respectively, of which 99.7 p.c. was sold each year by utilities.

Sales to power customers made up 61.1 p.c. of the total in 1960 and 60.7 p.c. in 1961, sales to domestic and farm customers were 26.5 p.c. and 27.5 p.c., and commercial sales 11.5 p.c. and 10.9 p.c. in the respective years. Exports to the United States in 1961 amounted to $4,139,686,000 \mathrm{kwh}$. compared with $5,495,572,000 \mathrm{kwh}$. in 1960.

Average domestic and farm consumption rose from $4,489 \mathrm{kwh}$. in 1960 to $4,660 \mathrm{kwh}$. in 1961. Among the provinces, the averages in 1961 varied from a low of $1,332 \mathrm{kwh}$. in

Nova Scotia to a high of $9,169 \mathrm{kwh}$. in British Columbia. For domestic and farm customers the average annual bill was $\$ 73.53$ in 1961 as against $\$ 71.75$ in 1960, an increase of 2.5 p.c.

Although many utilities do not keep records on farm customers separate from other domestic customers, the data reported on farm service indicate that the average consumption rose from $4,345 \mathrm{kwh}$. per customer in 1960 to $4,654 \mathrm{kwh}$. in 1961 and the average bill from $\$ 96.49$ to $\$ 99.52$.

## Section 4.-Progress in the Development of Hydro-Electric and Thermal-Electric Facilities, 1962

During 1962, Canada's total electric power production capacity was expanded by the addition of $415,468 \mathrm{hp}$. of new hydro capacity and $713,210 \mathrm{kw}$. of new thermal capacity. This was the second consecutive year that thermal capacity put into service exceeded hydro capacity installed but this trend will be reversed in 1963 when approximately $1,200,000 \mathrm{hp}$. of hydro capacity and $660,000 \mathrm{kw}$. of thermal capacity will be added. Subsequent to 1963, power production facilities at present under construction or in the planning stage will yield almost $8,000,000 \mathrm{hp}$. of new hydro capacity and over $2,000,000 \mathrm{kw}$. of new thermal capacity.

Progress in construction of hydro-electric and thermal-electric plants during 1962 is outlined below, by province and territory.

Atlantic Provinces.-In Newfoundland, new power production facilities brought into service during 1962 consisted of $120,000 \mathrm{hp}$. of hydro capacity and $4,100 \mathrm{kw}$. of thermal capacity. Twin Falls Power Corporation Limited completed the initial stage, comprising two $60,000-\mathrm{hp}$. units, at the Twin Falls development on the Unknown River in Labrador and two other units of the same capacity will be added in 1963. The ultimate capacity of the site is expected to total $300,000 \mathrm{hp}$. in five units. Construction was started at the Newfoundland Light and Power Company Limited hydro development on Sandy Brook; the plant, scheduled to commence operation in 1963, will consist initially of a single $8,000-\mathrm{hp}$. unit. Southern Newfoundland Power and Development Limited is planning to construct a hydro-electric station on the Salmon River at Head Bay d'Espoir with an initial installation of $77,000 \mathrm{hp}$. in two units and an ultimate capacity of $350,000 \mathrm{hp}$. and Bowater Power Company Limited proposes to install a $54,000-\mathrm{hp}$. hydro-electric plant on Hinds Brook. Addition of a $1,000-\mathrm{kw}$. diesel unit at the Wabush Lake plant of Wabush Mines brought the capacity of that plant to $2,000 \mathrm{kw}$.; two additional $1,000-\mathrm{kw}$. units will be installed in 1963. United Towns Electric Company Limited added $1,240 \mathrm{kw}$. of diesel equipment at the St . George's plant and a total of $1,850 \mathrm{kw}$. of new diesel generating equipment was put into service by the Newfoundland Power Commission.

In Prince Edward Island, the capacity of the Summerside thermal plant was increased by the installation of a $2,200-\mathrm{kw}$. unit, bringing the total generating capacity of the plant to $7,281 \mathrm{kw}$. in nine units.

There was no increase in either hydro or thermal capacity in Nova Scotia in 1962, but the Nova Scotia Power Commission is actively considering the construction of two hydro-electric developments-a $10,800-\mathrm{hp}$. one-unit plant at Riverdale on the Sissiboo River, and a plant at Wreck Cove on Wreck Cove Brook with a possible ultimate capacity of $90,000 \mathrm{hp}$. Under consideration by Nova Scotia Light and Power Company Limited are a $7,500-\mathrm{hp}$. plant at Lequille on the Allain (Lequille) River and a $6,500-\mathrm{hp}$. Alpena plant on the Nictaux River.

In New Brunswick, the New Brunswick Electric Power Commission installed the third and final unit at Beechwood on the St. John River, the addition of this 55,000-hp. unit bringing the total capacity of the Beechwood plant to $145,000 \mathrm{hp}$. Capacity of the Commission's Milltown plant on the St. Croix River was raised to $4,200 \mathrm{hp}$. by the installation of a $468-\mathrm{hp}$. unit. Engineering studies were continued on the proposed $600,000-\mathrm{hp}$. Mactaquac development on the St. John River near Fredericton and attention was being given to the possibility of extending the $80,000-\mathrm{hp}$. Grand Falls development. A $47,500-\mathrm{kw}$. steam unit went into service at the Courtenay Bay Station in East Saint John, the ultimate generating capacity of which will be $300,000 \mathrm{kw}$. The addition of a $240-\mathrm{kw}$. unit increased total installation at the Grand Manan thermal plant to 990 kw . and, at Newcastle Creek on Grand Lake, work progressed on the installing of a $60,000-\mathrm{kw}$. unit for service in 1964.

Quebec.-In 1962, the pace of development of hydro-electric power resources in Quebec accelerated with a total of $240,000 \mathrm{hp}$. of new capacity put into service; in contrast, the province's total thermal capacity increased by only 80 kw . Estimates for 1963 indicate a total of $480,000 \mathrm{hp}$. of new hydro capacity and in subsequent years an additional $5,200,000 \mathrm{hp}$., exclusive of an estimated $627,000 \mathrm{hp}$. that could be added at two existing developments when construction of storage reservoirs associated with the Manicouagan scheme are completed. Thermal plants under construction or in the planning stage will make available $310,000 \mathrm{kw}$. of additional generating capacity within the next few years.

Quebec Hydro-Electric Commission's Carillon hydro development on the Ottawa River began initial service with $240,000 \mathrm{hp}$. in four units; Carillon should be complete in 1964 with a total capacity of $840,000 \mathrm{hp}$. in 14 units. Studies continued relating to a proposed increase in generating facilities at the Commission's Rapid II plant on the upper Ottawa River, involving installation of a $16,000-\mathrm{hp}$. unit to bring the plant to an ultimate capacity of $64,000 \mathrm{hp}$. in four units. Construction progressed on the Commission's huge Manicouagan-Outardes development, which will make available some $3,650,000 \mathrm{hp}$. at three sites on the Manicouagan River and $1,440,000 \mathrm{hp}$. at two sites on the Outardes River. In addition, regulation from upstream reservoirs will permit the installation of as much as $627,000 \mathrm{hp}$. of new capacity at existing plants on the two rivers. At one of the sites on the Manicouagan River, a start was made on what will be one of the highest and most massive dams in the world. The structure, expected to take eight years to complete, will create a reservoir containing $115,000,000$ acre-feet of water, covering a surface area of 800 sq . miles. Preliminary construction was begun at a second site on the Manicouagan River.

The Shawinigan Water and Power Company postponed indefinitely the construction of a $210,000-\mathrm{hp}$. development at Rapide des Coeurs on the St. Maurice River. Construction of a $300,000-\mathrm{kw}$. thermal plant at Tracy near Sorel progressed, with the first of two $150,000-\mathrm{kw}$. steam turbines scheduled to go into service in mid-1964.

Asbestos Corporation Limited announced tentative plans to build a $10,000-\mathrm{kw}$. diesel plant at Asbestos Hill in the Ungava region.

Ontario.-In 1962, a total of $320,000 \mathrm{kw}$. of new thermal capacity went into operation in Ontario; estimates for 1963 indicate a further $400,000 \mathrm{kw}$. and, for subsequent years, an increase of $1,100,000 \mathrm{kw}$. is forecast. For the first time in 17 years, the province's total hydro-electric capacity remained unchanged. On the basis of present information, however, new hydro capacity to go into service during the next few years will amount to as much as $1,496,000 \mathrm{hp}$., $288,000 \mathrm{hp}$. of which is scheduled for 1963 .

The Hydro-Electric Power Commission of Ontario estimates that, over the next five years, power loads will increase at a compound rate of approximately 6 p.c. per annum. To meet these increasing loads, the Commission, during 1962, was engaged in the construction or planning of eight generating stations-four hydro-electric, two conventional thermalelectric, and two nuclear-electric. In addition, extensive engineering investigations were being carried out at a number of potential power sites on rivers in the James Bay watershed. Studies of the Madawaska River, to be completed in 1963, may indicate the possibility of developing another site on this river. Other potential sites within reach of present demand areas are located on the Montreal, English and Mississagi Rivers.

There is considerable interest in Ontario in the development of pumped-storage installations such as the pumping-generating station at Niagara Falls. The units at this station can be used either as pumps or generators. Operating as pumps in off-peak periods, the units use surplus power from the Sir Adam Beck plant to raise water to a reservoir at a higher level. The process is reversed during periods of peak power demand and the units, operating as generators, are driven by water from the reservoir. Plans are being made to build a station of this type near Collingwood, where the storage reservoir would be filled by the use of off-peak power from the Douglas Point Nuclear Station. In this way, the best use would be made of the power produced in the nuclear station, which is designed to operate continuously at or near full capacity.

The hydro-electric stations under construction or in the planning stage during 1962 were the Otter Rapids station on the Abitibi River and the Little Long, Harmon and Kipling stations on the Mattagami River. The Otter Rapids station, with two $60,000-\mathrm{hp}$. units already in service, is being expanded by the addition of two similar units scheduled for service in 1963. The construction program for the Little Long station calls for installation of two 84,000-hp. units in 1963 and of two additional units at a later date. Two units of $94,000 \mathrm{hp}$. each are scheduled for installation at Harmon by 1965 with provision for two additional units, and at Kipling, two $94,000-\mathrm{hp}$. units should be in service in 1966 , with provision for two additional units.

The two conventional thermal plants under construction in 1962 were the Commission's Lakeview station near Toronto and its Thunder Bay station at Fort William. A second $300,000-\mathrm{kw}$. unit was installed at Lakeview, bringing the total generating capacity to $600,000 \mathrm{kw}$.; unit 3 is scheduled to go into service in 1963, unit 4 in 1964, unit 5 in 1966 and unit 6 in 1967 or later. Ultimate capacity of the station will be $1,800,000 \mathrm{kw}$. At Thunder Bay, the $100,000-\mathrm{kw}$. unit is scheduled to go into service in 1963, after a number of modifications have been carried out.

The $20,000-\mathrm{kw}$. Nuclear Power Demonstration Station near Rolphton, Ont., was built as a joint undertaking by The Hydro-Electric Power Commission of Ontario, Atomic Energy of Canada Limited and the Canadian General Electric Company Limited. The station produced its first commercial electric power in June 1962 and since that time has performed satisfactorily. The success of its operation is a matter of widespread interest in many parts of the world. The Douglas Point Nuclear Station, now under construction on the shore of Lake Huron, is scheduled to go into service in 1965 with a generating capacity of $200,000 \mathrm{kw}$.

The Great Lakes Power Company is considering the development of a hydro-electric power site on the Montreal River. Installation at the plant would consist of a single $20,000-\mathrm{hp}$. unit, for operation in 1964. Also being considered by the Company is the addition of a third unit at the Lower Falls station on the Montreal River. Addition of this unit, rated at $21,000 \mathrm{kw}$., would raise the generating capacity of the plant to $37,200 \mathrm{kw}$.

Prairie Provinces.-In Manitoba, construction progressed at the site of Manitoba Hydro's Grand Rapids development on the Saskatchewan River; two 150,000-hp. units will go into service in 1964 and a third in 1965 and provision is being made for the eventual addition of a fourth unit. Engineering studies of potential sites on the Nelson River between Lake Winnipeg and Sipiwesk Lake were continued during the year. The addition of a $1,100-\mathrm{kw}$. diesel unit at The Pas generating station brought its total capacity to $5,250 \mathrm{kw}$. in five units and a thermal station housing two $40-\mathrm{kw}$. diesel units was built at Baker's Narrows, 20 miles south of Flin Flon, to serve the nearby airport.

In Saskatchewan, construction continued at Saskatchewan Power Corporation's Squaw Rapids development on the Saskatchewan River, the ultimate capacity of which will be $375,200 \mathrm{hp}$. in eight units. The first four units will be commissioned in 1963, two others in 1964 and two in 1966. The Prairie Farm Rehabilitation Administration of the Canada Department of Agriculture continued construction of the Saskatchewan River dam and reservoir at Coteau Creek. These are being provided primarily for irrigation purposes but hydro-electric generating facilities will be incorporated in the project by the Saskatchewan Power Corporation which plans an initial installation of three units and an ultimate installation of five units, each of approximately $60,000 \mathrm{hp}$. Two of the initial units are expected to be commissioned in 1967 and the third in 1968.

In Alberta, Calgary Power Limited continued construction at the Big Bend hydro site on the Brazeau River. The storage dam, creating a reservoir of 350,000 acre-feet, was completed and construction of the powerhouse eight miles downstream was well under way. A single 200,000 -hp. unit is expected to be in service in 1964. It will be necessary to increase the height of the storage dam before additional units can be installed.

The company completed the installation of a $150,000-\mathrm{kw}$. gas turbine at the Wabamun plant, raising the installed capacity to $282,000 \mathrm{kw}$. in three units. The total generating capacity of the City of Edmonton's municipal thermal station will be increased to $330,000 \mathrm{kw}$. in May 1963 when a new $75,000-\mathrm{kw}$. steam unit goes into operation.

British Columbia.-In March 1962, as a result of legislation enacted by the Government of British Columbia, the British Columbia Power Commission and the British Columbia Electric Company Limited were amalgamated to form the provincial government agency known as the British Columbia Hydro and Power Authority.

Two contracts for preliminary projects associated with future development of the Peace River were completed in 1962, one involving construction of a 500 -foot steel-arch access bridge near the Portage Mountain site and the other the driving of a pilot tunnel to obtain information for subsequent construction. First power from the Portage Mountain site is scheduled for 1968 and estimates indicate a feasible installation of approximately $4,200,000 \mathrm{hp}$. at two sites on the river.

The Power Authority continued its studies of the Duncan Lake, High Arrow and Nica developments. These three developments, which constitute the basis of the Columbia River Treaty signed on behalf of Canada and the United States in 1961, would be capable of controlling approximately $20,000,000$ acre-feet of usable storage in Canada. The Treaty provides that Canada would receive half of the power benefits which result in the United States from the regulation of $15,500,000$ acre-feet of this storage and half the value of the estimated flood damage prevented in the United States through operation of the projects for flood control. The Treaty had not yet been ratified by Canada by the end of 1962.

The Power Authority's Burrard thermal station near Vancouver went into operation in 1962 with one $150,000-\mathrm{kw}$. unit. A second unit with the same rating is scheduled for operation in 1963 and a third in 1964; ultimate capacity will be $900,000 \mathrm{kw}$. in six units. Increases in the capacities of a number of smaller thermal plants were reported in 1962: at Prince George, the addition of two units with a combined capacity of $2,000 \mathrm{kw}$. raised the total plant capacity to $23,000 \mathrm{kw}$.; at Chetwynd, two units totalling $1,800 \mathrm{kw}$. were added, bringing the total capacity of the plant to $3,000 \mathrm{kw}$.; and the capacity of the Alert Bay station on Vancouver Island was increased to $1,200 \mathrm{kw}$. by the addition of a $150-\mathrm{kw}$. unit. A new $1,200-\mathrm{kw}$. station went into service at Sandspit on the Queen Charlotte Islands.

Installation of the third unit at the Consolidated Mining and Smelting Company Limited Waneta hydro station on the Pend d'Oreille River, rated at $120,000 \mathrm{hp}$., will be in service in 1963 and will boost the total capacity of the plant to $360,000 \mathrm{hp}$. MacMillan, Bloedel and Powell River Limited completed the installation of a $25,000-\mathrm{kw}$. steam unit at the Port Alberni plant, raising the total capacity to $27,000 \mathrm{kw}$. The generating capacity of the Harmac plant at Nanaimo was raised to $5,250 \mathrm{kw}$. with the installation of a $4,000-\mathrm{kw}$. unit, and a $30,000-\mathrm{kw}$. unit will be installed at that plant in 1963. Bamfield Light and Power Company began initial service to the Bamfield area in the southwestern part of Vancouver Island with power from two $125-\mathrm{kw}$. generators. The City of Revelstoke carried out a survey in the Cranberry Creek watershed for the purpose of finding additional storage which would permit an increase in the capacity of the Cranberry Creek plant.

The Yukon and Northwest Territories.-In 1962, the net total of $3,100 \mathrm{kw}$. of thermal generating capacity put into service was confined to the Northwest Territories. The Northern Canada Power Commission installed a $600-\mathrm{kw}$. diesel unit at Fort Simpson and a $400-\mathrm{kw}$. unit at Fort Smith, bringing the total capacities of these plants to $1,075 \mathrm{kw}$. and $2,275 \mathrm{kw}$., respectively. Construction of a new power and central-heating plant was begun at Frobisher Bay in 1962; two new 1,000-kw. thermal units are being installed and two similar units transferred from the existing Frobisher Bay plant to give the new plant a generating capacity of $4,000 \mathrm{kw}$. Four $250-\mathrm{kw}$. units remaining at the existing plant
will be operated by the Department of Transport for its own use. The Commission plans to install a $1,500-\mathrm{kw}$. diesel unit at the Inuvik plant in 1963, increasing its total capacity to $3,960 \mathrm{kw}$.

During the summer of 1962, an investigation was carried out of a hydro-electric power site on the Taltson River about 35 miles northeast of Fort Smith to determine the feasibility and the cost of developing the site as a source of power for the Fort Smith and Pine Point mines area. On the basis of this investigation, the Commission considers that an initial installation of $25,000 \mathrm{hp}$. is feasible.

Canada Tungsten Mining Corporation installed four diesel units with a total capacity of $1,600 \mathrm{kw}$. at its Flat River mining operation. At Hay River, Northland Utilities Limited installed a $652-\mathrm{kw}$. diesel unit and removed two units totalling 152 kw . from the plant.

## Section 5.-Public Ownership and Regulation of Electrical Utilities*

Federal Government regulation of electrical utilities, particularly with respect to the export of electric power and the construction of lines over which such power is exported, falls within the jurisdiction of the National Energy Board established in November 1959 and concerned with all matters relating to energy resources within the jurisdiction of the Parliament of Canada (see Domestic Trade Chapter XIX, Part II, Section 4 for a brief survey of the functions and operations of the National Energy Board).

Power is generated in Canada by publicly and privately operated utilities and by industrial establishments. Table 9, p. 590, giving statistics by type of establishment, shows that 53 p.c. of the total electric power generated in 1961 was produced by publicly operated utilities, 26 p.c. by privately operated utilities and 21 p.c. by industrial establishments. However, ownership differs greatly in different areas of the country. Quebec output until recently was predominantly from privately owned plants while in Ontario almost all electric power is produced by a publicly owned utility. Figures for 1962 and subsequent years will show a much greater proportion of publicly operated electrical utilities since they will reflect the recent provincial take-over of privately owned facilities in both British Columbia and Quebec.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. Neither Newfoundland nor Prince Edward Island has a provincially operated electric power system, although in the former province a Commission, known as the Newfoundland Power Commission, was established by the provincial government in 1954 for the purpose of supplying electric power wherever needed throughout the province, particularly to rural areas. In Prince Edward Island, the town of Summerside and surrounding area is served by the municipally operated Town of Summerside Electric Light Department. The functions and activities of provincially operated electric power commissions in the other provinces are summarized in the following paragraphs.

Nova Scotia.-The Nova Scotia Power Commission was created under the Power Commission Act of 1919 with the function of supplying electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service by providing financial assistance to equalize cost and revenue of extensions approved by the Governor in Council. In 1941 an amendment to the Power Commission Act authorized the Commission, subject to the approval of the Governor in Council, to regulate and control the generation, transmission, distribution, supply and use of power in the province. Certain investigatory work is carried on in the province by the Federal Government in close association with the Commission, but the control of water resources is vested in the Crown and administered under the provisions of the Nova Scotia Water Act, 1919. The Commission pays regular fees for water rights.

[^169]Financially, the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30, 1962 showed total fixed assets of $\$ 67,223,873$ including work in progress amounting to $\$ 1,892,735$. Current assets amounted to $\$ 1,206,905$ and liabilities were as follows: fixed $\$ 56,433,139$; current $\$ 2,994,818$; contingency and renewal reserves $\$ 6,581,012$; sinking fund reserves $\$ 10,996,461$; and general and special reserves $\$ 3,007,507$.

The initial development of the Commission was an $800-\mathrm{hp}$. installation on the Mushamush River which went into operation in 1921 and delivered $208,752 \mathrm{kwh}$. in the first complete year of operation. Succeeding years showed a marked growth in installed capacity, which at Nov. 30, 1961 reached $132,650 \mathrm{hp}$. in hydraulic turbines, 700 kw . in diesel units and $60,000 \mathrm{kw}$. in steam turbines.

The territory of the Commission extends over the entire province and embraces six systems which include 24 generating stations and more than 4,500 miles of transmission and distribution lines. No new power plant construction was undertaken in Nova Scotia during 1962.
12.-Capacity and Output of the Nova Scotia Power Commission, Year Ended Nov. 30, 1962

| System ${ }^{1}$ and First Year of Operation | Present Installed Capacity | Output | System ${ }^{1}$ and First Year of Operation | Present Installed Capacity | Output |

${ }^{1}$ Hydro unless otherwise noted.
New Brunswick.-The New Brunswick Electric Power Commission was incorporated under the Electric Power Act, 1920. Generating stations owned by the Commission at Mar. 31, 1963 were as follows:-

| Plant | Type | Capacity | Plant | Type | Capacity |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | hp. |  |  | hp. |
| Grand Falls. | Hydro. | 80,000 | Courtenay Ba | Steam. | 63,800 ${ }^{1}$ |
| Musquash. | Hydro. | 9,320 | Saint John (D) | Steam | 21,500 ${ }^{1}$ |
| Tobique. | Hydro. | 27,000 | Chatham. | Steam. | 43,600 ${ }^{1}$ |
| Beechwood | Hydro. | 145,000 | Grand Manan. | Diesel. | 1,3301 |
| Milltown. | Hydro | 4,200 |  |  |  |
| Grand Lake. | Steam. | 58,7001 | Total | Y..... | 454,450 |

${ }^{1}$ Capacity rating of generators in kw . converted to hp .
All the above generating units with the exception of Grand Manan were interconnected in a province-wide grid system. The statistical information given in Table 13 shows the growth of the Commission's undertakings since 1959. Power plant construction completed or under way in New Brunswick during 1962 is outlined at p. 592.

Quebec.-The Quebec Streams Commission.-Created by SQ 1910, c. 5, and given additional powers in 1912 (RSQ 1925, c. 46) and SQ 1930, c. 34, the Quebec Streams Commission was authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct and operate certain storage dams to regulate the flow of streams. On Apr. 1, 1955, the Commission was abolished and its powers and attributions transferred to the provincial Hydraulic Resources Department. The rivers controlled by the Commission at the time of transfer, either by means of dams on the rivers or by regulating the outflow of lakes at the headwaters, were: the St. Maurice, the Gatineau, the Lièvre, the St. Francis, the Chicoutimi, the Au Sable, and the Métis. The Commission also operated nine reservoirs on North River, two in the watershed of the Ste. Anne de Beaupré River, and one at the outlet of Lake Morin on Rivière du Loup (lower).

Other Reservoir Control.-Storage reservoirs otherwise controlled or operated are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River, and the Onatchiway on the Shipshaw River; Témiscouata Lake on the Madawaska River, controlled by the Gatineau Power Company; Memphremagog Lake on the Magog River, controlled by the Dominion Textile Company; Témiscamingue and Quinze Lakes on the Ottawa River, controlled by the federal Department of Public Works; Kipawa Lake on the Ottawa River, controlled by the Gatineau Power Company; and Lac Dozois on the upper Ottawa River, Lac Cassé in the Bersimis River watershed and Lac Ste. Anne on the Toulnustouc River, a tributary of the Manicouagan River, controlled by the Quebec Hydro-Electric Commission.

Power developments on the Saguenay River, benefiting from the Peribonca and Lake St. John reservoirs, have a total capacity of $1,950,000 \mathrm{hp}$.

The Quebec Hydro-Electric Commission.-The Quebec Hydro-Electric Commission was established by SQ 1944, c. 22, with the object of supplying power to the municipalities, to industrial and commercial undertakings and to citizens of the Province of Quebec at the lowest rates consistent with sound financial administration. The Commission at the end of 1962 controlled, among other assets, the following hydro-electric plants:*-

The Commission operates three systems. The Southwestern Quebec system is the most important. In addition to supplying all types of customers in the Metropolitan

[^170]Montreal area, it supplies power to customers in the Beauharnois-Valleyfield area, plus contracts for large deliveries to The Hydro-Electric Power Commission of Ontario, the Aluminum Company of America at Massena, N.Y., the Gatineau Power Company and the Shawinigan Water \& Power Company. The Northeastern Quebec system is composed of three regional areas-Bersimis, Gaspe and Chibougamau. The Bersimis and Gaspe areas are interconnected with the Southwestern Quebec system. Chibougamau is isolated and is served by the Commission through a purchase power contract. Gaspe region is supplied by a transmission line linking Les Boules with system resources near Quebec. The Bersimis and Gaspe regions normally receive their power supply from Bersimis plants 1 and 2 which furnish large blocks of power to the Southwestern Quebec system for use in the Montreal area and to the Shawinigan Water \& Power Company near Quebec City. These plants also supply the requirements of customers on the north shore of the lower St. Lawrence River.

## 14.-Growth of the Hydro-Quebec System, 1953-62

Nots.- Figures for the years 1935-46 will be found in the 1950 Year Book, p. 572, and for the years 1947-52 in the 1957-58 edition, p. 579.

Power plant construction completed or under way in Quebec during 1962 is outlined at p. 593.

Nationalization of Utilities.-In November 1962, the Quebec Government proposed to nationalize 11 private power companies. Nationalization became effective May 1, 1963.

Ontario.-The Hydro-Electric Power Commission of Ontario is a corporate entity, a self-sustaining public enterprise endowed with broad powers with respect to the supply of electricity throughout the Province of Ontario. Its authority is derived from an Act of the Provincial Legislature passed in 1906 to give effect to recommendations of earlier advisory commissions that the water powers of Ontario should be conserved and developed
for the benefit of the people of the province. It now operates under the Power Commission Act (SO 1907, c. 19) passed in 1907 as an amplification of the Act of 1906 and subsequently modified from time to time (RSO 1960, c. 300, as amended). The Commission may have from three to six members, all of whom are appointed by the LieutenantGovernor in Council. Two commissioners may be members of the Executive Council of the Province of Ontario.

The basic principle governing the financial operations of the Commission and its associated municipal utilities is that electrical service is provided at cost. The Commission interprets cost as including payments for power purchased, charges for operating and maintaining the power supply facilities, and related fixed charges. The fixed charges represent interest on debt, provisions for depreciation, allocations to reserves for contingencies and rate stabilization, and the further provision of a sinking fund reserve for retiring the Commission's capital debt. While the enterprise from its inception has been self-sustaining, the province guarantees the payment of principal and interest on all bonds issued by the Commission and held by the public. In addition, the province has materially assisted the development of agriculture by contributing under the Hydro-Electric Distribution Act toward the capital cost of extending rural distribution facilities.

With the enactment of legislation effective Jan. 1, 1962, the Commission achieved the ultimate in what has been over a period of several decades a series of system amalgamations that has brought the entire provincial area served into a financial and administrative unit. Service is provided for the most part on a co-operative basis, and predominantly for the benefit of more than 350 municipalities supplied by the Commission with power at cost. Since there is no electrical connection between the Commission's facilities in northwestern Ontario and those serving customers in the remainder of the province, statistics are presented for two operating systems called the East System and the West System. The first includes the former Southern Ontario System and the former Northeastern Division, and the second coincides with the former Northwestern Division.

In addition to administering the enterprise over which it has direct control, the Commission, under the Power Commission Act and the Public Utilities Act, exercises certain regulatory functions, particularly with respect to the group of municipal electrical utilities which it serves. In order to provide convenient and expeditious service in this dual function of regulation and supply, the Commission subdivides its province-wide operations into eight regions with regional offices located in eight major municipalities.

The Commission is primarily concerned with the provision of electric power by generation or purchase, and its delivery to the electrical utilities for resale in the more than 350 municipalities having cost contracts with the Commission. The Commission supplies power in bulk, though not under cost contract, to approximately 200 direct customers, some located within the areas of the municipalities already referred to and some outside these areas. These direct customers include industrial customers whose requirements are so large or so unusual as to make service by the local municipal utilities impracticable. They also include mines, industries in unorganized territories, and certain interconnected systems, including a number of independent municipal utilities. These interconnected systems purchase power for resale either within or beyond the boundaries of the province.

In addition to these operations, which represent about 90 p.c. of its energy sales, the Commission delivers electric power to retail customers in rural areas and in a small group of about 30 municipalities served by Commission-owned local distribution facilities. A much larger part of retail service throughout the province is provided, however, by the municipal electrical utilities, who supply ultimate customers in most cities and towns, in many villages, and in certain populous township areas. The municipal electrical utilities are owned and operated by local commissions.

During 1962, the Commission's investment in fixed assets at cost increased by $\$ 105,405,379$ and at the end of the year amounted to $\$ 2,567,014,636$. Total assets after deducting accumulated depreciation were $\$ 2,702,226,836$ (exclusive of pension and insurance funds amounting to $\$ 141,643,845$ ).

In 1962 a total of 355 associated municipal electrical utilities engaged in the retail distribution of electricity purchased power from the Commission. The total assets of these utilities, after deducting accumulated depreciation, amounted to $\$ 751,930,873$, of which $\$ 305,826,987$ represented the equity acquired in the Commission's systems by the utilities operating under cost contracts.

The Commission's power development program as at Dec. 31, 1962 is given in Table 16 and is also outlined at pp. 593-594.

## 16.-Current Power Development Program of The Hydro-Electric Power Commission of Ontario, as at Dec. 31, 1962

[^173]Manitoba.-Manitoba Hydro is the primary developing, generating and distributing power agency in the Province of Manitoba. The corporation came into being Apr. 1, 1961, following the amalgamation of the two former provincial government electrical utilities engaged in the generation and distribution of electric power. It operates five hydro-electric generating stations, two thermal type plants and a limited number of diesel generating installations. The combined generating capability of the corporation is $829,200 \mathrm{kw}$. which will be increased by $330,000 \mathrm{kw}$. in 1965 following the completion of the Grand Rapids hydro-electric development on the Saskatchewan River.

Hydro installations account for $580,000 \mathrm{kw}$. of the total generating capability, thermal for $244,000 \mathrm{kw}$., and diesel for $5,200 \mathrm{kw}$. Of the hydro stations, four are located on the Winnipeg River and, like the thermal installations, produce power for the southern section of the province; the fifth hydro station, rated at $160,000 \mathrm{kw}$., is situated on the Nelson River 425 miles north of Winnipeg and supplies power for The International Nickel Company of Canada, Limited, development and the townsite at Thompson in northern Manitoba. Diesel installations are used to provide power in three northern areas.

In serving its 193,622 urban, rural, commercial and industrial customers, the corporation maintains some 33,931 miles of primary transmission and farm distribution lines. Approximately 95 p.c. of the total resident-occupied farms in the province are electrified, and 532 cities, towns and villages are provided with power service. While Manitoba Hydro supplies power for most of the province, including the cities and municipalities adjoining
the city of Winnipeg and comprising part of Metropolitan Winnipeg, it does not distribute power within the corporate limits of the city, although it does supply a portion of the city's basic power requirements.

Power plant construction in Manitoba in 1962 is outlined at p. 594.
Saskatchewan.-The Saskatchewan Power Corporation was established on Feb. 1, 1949, and operates under the provisions of the Power Corporation Act (SS 1950, c. 10, as amended). It succeeded the Saskatchewan Power Commission which had operated from Feb. 11, 1929. The original functions of the Corporation included the generation, transmission, distribution, sale and supply of hydro and steam electric energy. Since 1952, the Corporation has been authorized to produce or purchase and to transmit, distribute, sell and supply natural or manufactured gas.

In 1962, the Corporation served 957 urban communities (with six or more customers) in retail sales, and served the cities of Saskatoon and Swift Current, the town of Battleford and the hamlet of Waskesiu in bulk sales. Some bulk power was also sold to the City of Regina and to the Manitoba Hydro Electric Board on an exchange basis. Activities of the Corporation cover the entire province with the exception of the city of Regina, which owns and operates municipal plants and a distribution system.

At the end of 1962, the Corporation served 235,386 customers, 197,811 of whom were retail customers and 37,575 of whom were located in communities supplied with power through bulk sales. The retail customers included 133,903 urban customers and 63,908 classified as rural, predominantly farmers. During $1962,1,645,862,278 \mathrm{kwh}$. were made available to customers, of which $1,624,482,258 \mathrm{kwh}$. were generated in Corporation plants and $21,380,020 \mathrm{kwh}$. were purchased in bulk, primarily from Manitoba. At the end of the year, the Corporation had invested, at cost, a total of $\$ 375,428,535$ in electric and natural gas plant in service ( $\$ 255,432,044$ in electric only).

During 1962, the Corporation owned and operated six steam generating plants-one at Prince Albert, two each at Saskatoon and Estevan, and a sixth plant at Moose Jaw. These plants supplied 93 p.c. of total system requirements and two internal combustion gas dual fuel plants at Kindersley and Swift Current supplied most of the remainder; a third plant at Unity was retired early in 1962. System capability in operation at the end of 1962 was assessed at $540,150 \mathrm{kw}$. with $499,000 \mathrm{kw}$. in steam plants, and $41,150 \mathrm{kw}$. in gas dual fuel units and diesel plants. At the end of 1962, the Corporation owned and operated 69,453 miles of transmission and rural lines (excluding urban distribution and hi-lines).

Power plant construction in Saskatchewan in 1962 is outlined at p. 594.
20.-Growth of the Saskatchewan Power Corporation, 1953-62

| Year | Communities Served in Bulk and Retail Sales | Individual Meters in Communities Served | Power Distributed | Revenue |

| 1962 | $961{ }^{1}$ | 235,386 | 1,645, 862,278 | 33,106,018 |

[^174]Alberta.-The generation and distribution of electric power in Alberta is handled by a combination of several municipally-owned urban systems and three investor-owned companies serving the greater part of the province. The regulatory authority over the investor-owned systems is the Public Utilities Board, which has jurisdiction over the distribution and sale of electricity. The Board, which controls franchises and rates, has power to hold investigation upon complaint either by a municipality or by a utility company, and following such investigation may fix just and reasonable rates. The Alberta Power Commission controls all phases of system development, including the provincial grid system.

Plant additions completed or under way in Alberta during 1962 are outlined at pp. 594-595.

British Columbia.-British Columbia Hydro and Power Authority was created on Mar. 30, 1962 under the provisions of the British Columbia Hydro and Power Authority Act which amalgamated British Columbia Electric Company Limited with British Columbia Power Commission. The new organization provides electric service for most of British Columbia.

## 21.-Summary Statistics of the British Columbia Hydro and Power Authority, Year Ended Mar. 31, 1963

| Item | Amount | Item | Amount |
| :---: | :---: | :---: | :---: |
| Customers (electric).......... No. | $\begin{array}{r} 459,098 \\ 1,865,000 \end{array}$ | Annual revenue (electric).......... \$'000 | 92,457 |
| Installed plant capacity........ kw. |  |  |  |
| Transmission (high voltage). miles | 3,211 | Capital Investment (plant in operation)-Generation plant.............................Transmission plant..........Distribution and general plants.... \& | 417,651, 296 |
| Distribution primaries....... " | 11,393 |  | 144, 122,363 |
| Power Requirements-Generated................ 000 kwh.Purchased................... | $\begin{array}{r} 6,568,000 \\ 229,000 \end{array}$ |  | 283, 943,027 |
|  |  | Total, Capital Investment (plant in operation). |  |
| Total, Power Requirements. '000 kwh. | 6,797,000 |  | 845,716,686 |

Of the Authority's total power requirements of $6,797,000,000 \mathrm{kwh}$. for the year ended Mar. 31, 1963, $6,209,000,000 \mathrm{kwh}$. or 91.3 p.c. was produced by hydro-electric plant, $359,000,000 \mathrm{kwh}$. or 5.3 p.c. was produced by thermal plant and the remainder, amounting to $229,000,000 \mathrm{kwh}$., was purchased.

Power plant construction in British Columbia in 1962 is outlined at p. 595.
Northwest Territories and Yukon Territory.-The Northern Canada Power Commission, formerly Northwest Territories Power Commission, was created by Act of Parliament in 1948 to bring electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. By legislation passed in 1950, the Act was extended to include Yukon Territory. The Commission has authority to construct and operate power plants as required in the Territories and, subject to approval of the Governor in Council, in any other parts of Canada.

The Commission has hydro-electric power developments on the Yukon River near Whitehorse, Y.T., the Mayo River near Mayo Landing, Y.T., and the Snare River northwest of Yellowknife, N.W.T. Diesel-electric plants are operated at Fort Simpson, Fort Smith, Fort Resolution, Frobisher Bay and Inuvik, N.W.T., and at Field, B.C.

The Whitehorse Rapids power development, which has been in service since November 1958, supplies the power for the Department of National Defence at Whitehorse, most of the power for the city of Whitehorse, and the power for heating systems of the Department of National Health and Welfare Hospital and two hostels operated by the Department of Citizenship and Immigration.

The Snare River hydro developments supply power to the mines in the Yellowknife area and, with the Bluefish hydro-electric plant of the Consolidated Mining and Smelting Company of Canada Limited, supply the town of Yellowknife. The original Snare Rapids plant has been in operation since September 1948 and the Snare Falls plant, situated on the same river about 10 miles downstream from the original plant and remotely controlled from Snare Rapids, was placed in service in November 1960.

The Mayo River plant has supplied power to mining properties in the Elsa and Keno areas and to the Mayo Landing and Keno City communities since 1952.

The diesel-electric plants supply the needs of Federal Government departments and the general public in the communities in which they are located. In addition to these plants the Commission operates a power and heating plant at the Fort McPherson residential school for the Department of Northern Affairs and National Resources, and the municipal water system and central heating plant supplying the hostel and school premises at Fort Simpson, N.W.T. Details of construction completed or under way in the Territories during 1962 are outlined at pp. 595-596.

## PART I.-FISHERIES

## Section 1.-Commercial Fishing and Marketing*

Canadian fishermen reap the harvests of two mighty oceans-the Atlantic and the Pacific-and the most extensive system of inland rivers and lakes in the world. The annual catch of some $2,000,000,000 \mathrm{lb}$. of fish and shellish has a marketed value of more than $\$ 200,000,000$. Canada is surpassed only by Norway and Japan as an exporter of fish products, retaining about one third of its catch and shipping the remainder abroad in fresh, frozen, canned, salted, dried or otherwise preserved form. There are over 79,000 commercial fishermen in Canada and many more thousands of people are employed in the fish processing industry.

Canadian fisheries were more prosperous in 1962 than at any previous time in their history. Records were achieved in every major sector; the effects of the expansion reached as far as the construction and boat-building industries, adding impetus to their activities. The Maritime Provinces reported the most productive period ever experienced. Fishermen there earned a record gross income of over $\$ 43,000,000$; the value of each of the two major catches, lobster and cod, increased by about $\$ 1,000,000$; scallops, until recently a minor fishery, moved up to third place; and a marginal enterprise, the harvesting of Irish moss from the sea, showed signs of sudden expansion to importance. Newfoundland established new levels in both the landed value of its catch $(\$ 17,000,000)$ and the output of its rapidly growing frozen fish industry, and the volume of its traditional product, light-salted cod, showed an upturn for the first time since 1959. In Quebec both quantity and value of the seafish catch ran from 20 p.c. to 25 p.c. ahead of 1961 in almost every month of the year. British Columbia set a new mark for the number of salmon taken in one season; produced the largest pack of pink salmon ever canned in one year; received a higher value for its halibut catch than ever before; and made its first serious venture into the world-wide tuna fishery. The freshwater operations, which now contribute about 10 p.c. of the annual marketed value of all Canadian fish products, made more than proportionate advances.

[^175]Atlantic Fisheries.-The major elements of prosperity in the Atlantic industry during 1962 were the very steady high level of market demand and the return of normal quantities of cod to the fishing banks after a two-year scarcity. Figures indicating world per capita consumption of fish showed an upward trend in 1962 and, of more immediate import, per capita consumption of frozen groundfish rose in the United States. Saltfish prospects also improved. The biggest buyers of salt cod are the British West Indies and the general level of trade with this area has risen in the past two or three years.

The Maritime Provinces.-Nowhere was there more optimism than in the Maritimes. At the end of 1962 four large steel draggers for the offshore fleet were being built to the most modern specifications and at least five more were on order. In the inshore fleet there was notable expansion in two new methods of groundfishing, Danish seining by the larger boats and gillnetting by the smaller ones. These two types of gear were tried out a few years ago, almost as a last resort, in an effort to revive the then languishing fishery on the Gulf side of Cape Breton Island. They both proved extremely successful. Plants in the area were adding extensions in 1962 and the gear was being proved on other fishing grounds.

Output of frozen fresh seafish in the Maritimes exceeded $87,000,000 \mathrm{lb}$., an increase of $12,000,000 \mathrm{lb}$. over the 1961 production. Even so, at the end of December stocks were only $1,000,000 \mathrm{lb}$. higher than at the end of 1961 ; the market had absorbed the remainder. Production gains were mainly in fillets, blocks of cod and blocks of flounders although output of raw breaded fish portions also expanded sharply.

Lobsters provide about one third of the fishermen's gross income in the Maritimes. In 1962 lobster landings were a little smaller than in the previous year but, with much higher prices, landed value increased by $\$ 1,000,000$ to a total of $\$ 19,000,000$. Even during the latter part of the year when the traps are usually brought ashore, fishing was so profitable that the gear was left in the water, the lobstermen feeling that their gains would be more than sufficient to cover normal storm losses. At the same time, the largest holding pool in the Maritimes began an expansion to double its capacity of $125,000 \mathrm{lb}$. of live lobsters.

Third largest money-maker for the fishermen in 1962 was the scallop catch. Landings increased again in that year and production of shucked meats reached a record $14,000,000$ lb., having an estimated value of $\$ 4,500,000$. Over 90 p.c. was taken by the mobile offshore fleet, fishing almost exclusively on Georges Bank.

Herring were scarce everywhere until after midsummer and off Nova Scotia throughout the year. Heavy runs came briefly into the Gulf of St. Lawrence in the late summer and, later and for longer, into the Bay of Fundy in the fall. Fishing was pushed and, especially in New Brunswick, landings were heavy. The sardine canneries, pickling plants and smoke houses were all anxious for supplies and further large quantities were frozen for bait, which was in acute demand in Newfoundland because of failure of the squid fishery there. Mackerel were more plentiful than in 1961. Prince Edward Island had a surplus after filling its orders for the fresh market and, as it has no large pickling industry, salted the excess for bait.

The expansion of Irish moss facilities at three points in Nova Scotia, planned in 1962, is expected to add several million pounds to the province's output and a million dollars in job opportunities. The moss is gathered from the sea, dried and shipped to United States manufacturers of colloids.

Newfoundland.-Newfoundland fishermen increased their gross earnings by $\$ 2,000,000$ in 1962 when the industry established several new records: the annual output of frozen fish reached its highest point at $74,000,000 \mathrm{lb}$.; the landed value of the catch reached a record $\$ 17,000,000$; unit landed prices for cod, haddock and redfish were higher than they had ever been; and fishermen received more per quintal for their light salted cod than ever before. The year was characterized by a very strong market for the blocks of frozen cod which account for most of the output of the freezing plants and are sold mainly to United States manufacturers of fish sticks. Ten years ago in Newfoundland, the freezing industry took only 15 p.c. of the cod landings but the proportion has grown steadily and in 1962
reached nearly 40 p.c. This included the entire catch of the offshore fleet and as much of the inshore catch as a greatly expanded transport service could collect from the fishermen and bring to the plants.

Newfoundland's catch of cod from the banks returned to normal after two lean years, and heavy runs of cod arrived on the trap fishing grounds. However, there were also a few disappointments. After only a brief stay, cod left the trap grounds as suddenly as they had come, and Newfoundland's usual runs of squid failed to appear, so that bait for the autumn trawl fishery presented a problem.

In $1962,32,000,000 \mathrm{lb}$. of cod blocks were frozen, $10,000,000 \mathrm{lb}$. of other groundfish blocks and $30,000,000 \mathrm{lb}$. of groundfish fillets, altogether an increase of $8,000,000 \mathrm{lb}$. over the previous record. At the end of the year, as a measure of market demand, stocks on hand were smaller than at the beginning. Mainly because of difficulties besetting fresh fish transport, 60 p.c. of the expanded cod catch remained for salting and total saltfish production rose by 16 p.c. With a successful Labrador floater fishery contributing, output of light salted fish increased for the first time in several years. Shipments of heavy salted fish to Nova Scotia drying plants were also considerably higher.

Expansion of the inshore fisheries was foreseen in a heavy schedule of small boat building. About 350 craft were completed during 1962 and 500 more planned for 1963.

Pacific Fisheries.-In 1958, the year of the great sockeye bonanza, British Columbia fishermen sold their salmon catch for a record $\$ 37,000,000$ and the canneries produced a pack of $1,900,000$ cases. In 1962, which will go down in history as the "year of the pinks", the salmon fishermen received over $\$ 30,000,000$ for their catch, making it the second-best year, and the canneries put up $1,800,000$ cases. The total number of salmon caught was $33,000,000$, by far the greatest since the record was started in 1951. The catch weighed $164,000,000 \mathrm{lb}$., of which $93,000,000 \mathrm{lb}$. and $23,000,000$ fish were pink salmon, the largest pink catch ever taken in one year in the province. The previous record of $22,000,000$ pinks had stood since 1930. Even by working around the clock, plants could not cope with such landings and were obliged to put catch limits on their boats. The pink pack of $1,188,000$ cases broke a record which had been unchallenged for 32 years.

The sockeye catch was small because of near failure of the Adams River run to the Fraser River. This was the run that provided the bonanza of 1958 and returned for the first time in 1962, as sockeye have a four-year life cycle. However, the Fraser River was low in 1960 when the yearlings moved down river and out to sea and few of them survived this migration. On the other hand, the coho catch was the second heaviest on record and, as much of it is frozen rather than canned, it accounted for an increase of $3,500,000 \mathrm{lb}$. in the year's sales of frozen salmon. The catch of springs, low in 1961, failed to improve in 1962. Chum landings were high, partly because several runs came in with the pinks when the fishing effort was at its height.

When the halibut season closed on Oct. 15, the men had landed more fish and received higher unit prices for them than ever before. The catch totalled $35,000,000 \mathrm{lb}$., exceeding the record of $33,700,000 \mathrm{lb}$. established in 1960. The Canadian and United States catches together added up to $75,300,000 \mathrm{lb}$., compared with the $44,000,000 \mathrm{lb}$. which was all the depleted stocks could produce when international management was initiated as a recovery measure in 1931. The halibut industry moved from third to second position of importance among British Columbia fisheries, and it was significant that most of the big keels laid during the year were for the halibut fleet.

A summer herring fishery yielded a record 41,000 tons and, although the main fleet was tied up by price negotiations for six weeks in the fall, the total catch of 223,000 tons about equalled that of the previous year. The market for herring meal strengthened during 1962 and herring oil prices, rather depressed for several years, showed signs of improving late in the year.

Two converted salmon seiners fished tuna off California about five days sailing from Vancouver. They came back convinced that the new Canadian brine spray system provides the world's finest shipboard refrigeration, eager for more experience in detecting and catching tuna fish, and making plans for expanding operations in 1963.

In the shellfisheries the oyster industry expanded and shrimp landings rose but crab production was the lowest in ten years.

Inland Fisheries.-Ontario's output of frozen lake fish increased to $6,800,000 \mathrm{lb}$. from $5,700,000 \mathrm{lb}$. in 1961, with emphasis on whole smelts and perch fillets. Markets were strong and warehouse stocks at the end of the year were 20 p.c. lower than at the beginning.

In the Prairie Provinces and the Northwest Territories, freezings increased from under $9,000,000 \mathrm{lb}$. to over $11,000,000 \mathrm{lb}$., with major increases in the output of pickerel fillets and dressed whitefish; stocks declined by $1,000,000 \mathrm{lb}$. during the year.

Exports of lake fish increased in value by about $\$ 700,000$. Most of the shipments went to the United States but they did include small-volume amounts of eels for Europe, marking the beginning of a hoped-for revival in this trade, which flourished until the beginning of World War II.

## Section 2.-Governments and the Fisheries

The British North America Act gave the Federal Government full legislative jurisdiction for the coastal and the inland fisheries of Canada and under this Act laws are made for the protection, conservation and development of the fisheries throughout the country. However, the provinces have, by agreement, assumed administrative responsibilities in varying degree. Consequently, though all the regulations governing fishing are made by the Federal Government, the work of administering the fisheries (enforcing the different laws and regulations, inspecting fish products, issuing licences, etc.) is done without duplication of staff either by federal or by provincial officers, according to arrangement.

Specifically, all tidal or sea fisheries except those of the Province of Quebec are administered by the federal Department of Fisheries, and the freshwater or non-tidal fisheries, with some exceptions, are administered by the provincial departments. Quebec takes responsibility for all its fisheries including those in salt waters. Ontario, Manitoba, Saskatchewan and Alberta administer their freshwater species. In British Columbia, provincial government control extends to the freshwater forms and the Federal Government is responsible for marine and anadromous species. In Prince Edward Island, Nova Scotia, New Brunswick, Newfoundland and the Yukon and Northwest Territories, the Federal Government maintains complete control; administration of the fisheries of the National Park areas throughout Canada is the responsibility of the Canadian Wildlife Service, Department of Northern Affairs and National Resources.

## Subsection 1.-The Federal Government

The work of the Federal Government in the conservation, development and general regulation of the nation's coastal and freshwater fisheries is performed by three agencies under the Minister of Fisheries:-
(1) The Department of Fisheries proper with headquarters at Ottawa, Ont., and area offices under Area Directors at Vancouver, B.C., Winnipeg, Man., Halifax, N.S., and St. John's, Nfld.
(2) The Fisheries Research Board of Canada with headquarters at Ottawa and eight stations across Canada.
(3) The Fisheries Prices Support Board with headquarters at Ottawa.

A brief outline of the functions of these agencies is given in this Subsection.

The Department of Fisheries.-The chief responsibilities of the Department of Fisheries throughout Canada are, in brief: to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the optimum utilization of the resource; and to develop a proper public understanding of the resource and the industry.

The larger part of the staff of the Department is stationed in the field and is composed mainly of protection and inspection officers. The protection officers, including those on the Department's 82 patrol and protection vessels, are concerned with the enforcement of the conservation regulations under the Fisheries Act and other Acts designed to ensure a continuing maximum yield of fish, and are also responsible for the inspection of fish products and processing plants under the Fish Inspection Act and relevant section of the Meat and Canned Foods Act.

A conservation program is carried out by the Conservation and Development Service of the Department. Protection officers enforce regulations pertaining to restricted areas, close seasons, limitations in location and types of gear, and also inspect spawning streams and keep them clear of obstructions. Biologists investigate such problems as pollution and water supply, and engineers construct fishways to enable fish to bypass obstructions of all kinds. Hatcheries are maintained to restock waters where the fisheries are under federal administration.

For the past few years a bounty has been paid for the killing of the parasite-carrying harbour seals along the Atlantic and Pacific Coasts at a rate of $\$ 10$ for adult and $\$ 5$ for young seals. Total payments for the year ended Mar. 31, 1963 amounted to $\$ 20,620$.

Inspection of fish and fish products to ensure a high standard of quality is carried out by the Inspection Service, and fish inspection laboratories are maintained on the Atlantic and Pacific Coasts and in Toronto and Winnipeg. A staff of home economists operates test kitchens in Ottawa, Toronto, Vancouver, Montreal, Halifax, Edmonton and Winnipeg, and conducts demonstrations and lectures on methods of preparing and cooking fish and fish products.

Through the medium of printed material, films, radio, television and exhibitions, the Information and Consumer Service of the Department informs the public on the various aspects of the industry and the work of the fisheries services, with the object of developing a better understanding of the resource and those engaged in its exploitation. This Service works closely with the Conservation and Development Service in matters concerning the conservation of fisheries and with the Inspection Service toward encouraging increased consumption of Canadian fish products in the domestic, United States and other markets.

The Economics Service has two related fields of responsibility: (1) to provide the government and the commercial fishing industry with current information, including statistical data, under the general heading of trade intelligence, and (2) to carry out studies and investigations in the primary fisheries and in the processing and distribution of fish products. In the first field, the Service works in close co-operation with the Dominion Bureau of Statistics and the Foreign Trade Division of the Economics Branch of the Department of Trade and Commerce; in the second, there is similar collaboration with the Fisheries Research Board. In both, a necessary contribution is made to the formulation of policy for fisheries management, industrial development and market services.

In addition to these regular services, the Department assists the commercial fishing industry in several special ways. To promote efficient primary fishing operations and improve the marketing of fishery products, assistance is provided for the construction of draggers and longliners and for bait-freezing and storage facilities on the Atlantic Coast. The Fishermen's Indemnity Plan affords low-cost protection from losses of boats and lobster traps through storms and other causes. The Plan, in operation since 1953, meets a long-standing need on the part of small-scale individual fishermen. Vessels valued at from $\$ 250$ to $\$ 10,000$ may be insured with payment of a premium of 1 p.c. of the appraised
value per annum. Up to Dec. 31, 1962, a total of 6,468 vessels with an appraised value of approximately $\$ 21,578,000$ had been insured under the Plan. In response to considerable demand for a similar type of protection against unusual losses of fishing gear and equipment other than vessels, a first step was taken by the introduction of regulations giving a measure of compensation to the lobster fisherman suffering abnormal losses of lobster traps, provided that a small premium has been paid by the fisherman. The premium rate varies in accordance with conditions in the different fishing areas but has been kept low. The Department also provides financial assistance to educational institutions agreeing to carry out specialized educational work among fishermen.

International Fisheries Conservation.-Conservation of the resources of the high seas can be effected only through regulation, and for this purpose international treaties have had to be made. Canada's obligations under such treaties with the United States and other countries are administered by the Department of Fisheries.

Canada and the United States have led the world in joint fisheries conservation development. Major examples of this joint effort are the International Pacific Halibut Convention, concerned with the preservation of the halibut stocks of the north Pacific and the Bering Sea, and the International Pacific Salmon Fisheries Convention, concerned with the conservation and development of the sockeye and pink salmon of the Fraser River. Investigations carried out under the auspices of Commissions appointed under these conventions, subsequent regulation and limitation of catches, and the construction of salmon fishways appear to have been successful in arresting and reversing an earlier trend toward depletion of these fisheries. Another example of restoring a depleted marine resource by international agreement and action is that of the fur seals of the Pribilof Islands in the Bering Sea. Under a treaty signed in 1911, known as the (North Pacific) Sealing Convention, pelagic sealing was prohibited while the animals were migrating to and from the Pribilofs where most of them breed. This treaty had been signed by the United States, Canada, Russia and Japan, and was one of the earliest conventions on resources of the sea. In 1941 Japan abrogated the treaty and the following year Canada and the United States signed a Provisional Fur Seal Agreement under which Canada, in return for abstaining from pelagic sealing, received 20 p.c. of the annual catch, which was supervised by the United States. A conference to re-negotiate the original convention was begun in Washington in November 1955 and a new settlement was signed by the original four countries on Feb. 9, 1957.

In 1949 the Government of Canada became a signatory, along with nine other countries, to the International Northwest Atlantic Fisheries Convention which came into force in 1950. The Commission established under this Convention, with headquarters at Halifax, N.S., makes scientific investigations of the fishery resources of the northwest Atlantic. The Commission has no regulatory powers but can make recommendations to the respective governments regarding measures that may be necessary for maintaining the stocks of fish that support the international fisheries in the Convention area. Treaty signatories now are: Canada, Denmark, Iceland, the United States, Britain, France, Italy, Norway, Poland, Portugal, Spain, the Federal Republic of Germany and the Union of Soviet Socialist Republics.

A step toward international action in regulating the high seas fisheries of the northern Pacific Ocean was achieved in December 1951 when Canada, the United States and Japan conferred at Tokyo. The resulting Convention was ratified by the three contracting governments and instruments of ratification were deposited at Tokyo in June 1953. The treaty is known as the International Convention for the High Seas Fisheries of the North Pacific Ocean and aims at providing the maximum sustained yield of the fishery resources of the northern Pacific non-territorial waters with each of the parties assuming obligations to encourage conservation measures. The Commission established under this Convention is studying the northern Pacific fisheries and will determine the application of the treaty principles and promote and co-ordinate the necessary scientific studies.

The seventh, and latest, international fisheries agreement to which Canada is a signatory is the Great Lakes Fisheries Convention, which provides for joint action by Canada and the United States in Great Lakes fishery research and in a program for the control of the predator lamprey in these waters. This Convention came into force in October 1955.

Canada is a member of the International Whaling Commission and is obligated to collect biological data on whales caught by Canadian vessels. Whaling operations are conducted in some years off the coasts of Newfoundland and British Columbia.

The Fisheries Research Board of Canada.-The Fisheries Research Board is a research organization established by Act of Parliament for the purpose of conducting basic and applied research on Canada's living aquatic resources, their environment and their utilization. It is the only Canadian federal research agency in this broad field. The antecedents of the present Board go back to 1898 when a Board of Management of the Canadian Marine Biological Station, consisting of eight university professors and the Commissioner of Fisheries, was created in the Department of Marine and Fisheries. This early organization was formalized by Parliament in 1912 when by special Act it established the Biological Board of Canada. Later, in 1937, as the scope and the research responsibilities of the Board were increased the Act was revised and the Board renamed the Fisheries Research Board of Canada. The Act was revised again in 1952-53, further broadening its scope. Thus, the present Fisheries Research Board is a lineal descendant of one of the oldest scientific organizations in Canada and one of the oldest government-supported research organizations under the supervision of an independent scientific board in North America.

By its Act, the Board is placed under the control of the Minister of Fisheries. The Board proper consists of a permanent chairman, who is appointed by the Governor in Council and who is a member of the Public Service of Canada, and "not more than eighteen other members" holding honorary appointments from the Minister of Fisheries for fiveyear terms. The composition of the Board is further defined by the Act to require that "a majority of the members of the Board, not including the chairman, shall be scientists, and the remaining members of the Board shall be representative of the Department [of Fisheries] and the fishing industry". The scientific members are drawn principally from universities and research foundations across Canada, to include specialists in disciplines related to the Board's work. The industry members are selected from among Canada's leading businessmen with an intimate knowledge of fishing and the fishing industry and the Department of Fisheries representative is usually a senior staff member in Ottawa. Board members have both advisory and executive functions. The advisory functions are delegated in the first instance to regional Advisory Committees who conduct on-thespot regional reviews and report to the Board on the operations and scientific programs with a view to their improvement. The executive functions are delegated to an Executive Committee elected from Board members and approved by the Minister.

The operations of the Board are highly decentralized, there being only a small administrative, supervisory and publications staff in Ottawa. The Board carries out biological research through five centres across Canada, oceanographic research at two locations and technological research at five others. The Board employs approximately 800 persons, of whom about 200 are scientists.

Biology.-The biological program of the Board is designed to add to fundamental knowledge concerning Canada's vast living marine and freshwater resources. Included here are life history, population and behaviour studies leading to a sound scientific basis for the conservation and management of the commercially important fisheries including those for lobsters, crabs, shrimps, oysters, scallops, clams, marine mammals and other well known economically important aquatic species of animals, such as salmon, cod, herring and halibut, as well as some marine plants, such as phytoplankton and seaweeds. Also included are studies in fish and shellish diseases, fish enemies including the ill effects of water pollution, and such basic studies as fish genetics, physiology and behaviour,
the latter with a view to improving fish cultural and farming methods and also to improving fish farm and hatchery stocks. Besides these basic studies, new fishing grounds and new species for exploitation are sought and experiments in improving fishing methods are undertaken.

The biological work on the Atlantic Coast is conducted out of research stations located at St. Andrews, N.B., and St. John's, Nfld.; work on Arctic fisheries and on sea mammals is directed from a laboratory situated in Montreal, Que.; freshwater work is carried out from a station in London, Ont.; and work on the Pacific Coast is directed from research laboratories situated at Nanaimo, B.C. The Board operates 15 research vessels for its biological studies. These vary from small inshore and lake craft to large seagoing ships specially built for this purpose. The Board also acts as Canada's research agent for three international fisheries commissions and two international sea-mammal commissions to which Canada is party.

Oceanography.-Oceanography includes the study of the marine (and freshwater) environment in which aquatic organisms live. This is under continuing study to further knowledge in primary and secondary productivity and the occurrence of ocean and freshwater life of importance to man. Encompassed here also are investigations into the distribution and physical and chemical characteristics of major ocean currents and the physical and biological structure of large ocean areas including the ocean bottom where concentrations of fish and other aquatic life occur. Ocean climate and ocean weather as they affect the distribution of fish and other living organisms as well as the vertical and horizontal distribution of nutrient matter and the cycle of energy and life in the seas are regularly observed and correlated. These studies, as well as special studies of interest to the Royal Canadian Navy, the Department of Transport and the international fishery commissions, are carried out by the Board's two oceanographic groups operating from Halifax, N.S., and Nanaimo, B.C., with strong ship support from the Navy and the Department of Transport.

Technology.-Technological studies in general are aimed at making the best possible use of Canada's fish catches. Investigations are conducted toward improving methods of preserving, processing, storing and distributing fish products, as well as of utilizing all parts of the fish including parts now wasted. These include developments in refrigeration and the use of antibiotics as fish preservatives, of improved refrigerated rail cars for fish distribution, improvements in canning, smoking and salting of fish as well as the development of new products such as protein concentrates (fish flour) and new uses such as the development of wieners for the utilization of abundant species that are not now used for food. Fundamental studies of the structure and composition of fish proteins, fish oils, fish hormones, the energy expenditure of migrating salmon and the nutrition of marine bacteria are also under way. In recent years handling and processing techniques have been investigated for the purpose of increasing over-all production efficiency and improving the product.

Technological investigations on the Atlantic Coast are carried out at research laboratories situated at Halifax, N.S., and Grande Rivière, Que., and applied work for Newfoundland is carried out at a Technological Unit at St. John's. For inland areas there is a Technological Unit in London, Ont., and a Technological Research Laboratory in Vancouver, B.C., undertakes investigation of Pacific Coast problems.

The Fisheries Prices Support Board.-Under the Fisheries Prices Support Act passed in 1944, this Board was set up in July 1947 to recommend to the Government pricesupport measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry, representative of the various fish-producing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices nor has it any jurisdiction over operations in the fishing industry or the fish trade. Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum amount of $\$ 25,000,000$ but only on recommendation of the federal Treasury Board and authorization of the Governor in Council.

The Board maintains a small staff for administrative activities. The work is closely integrated with that of the Department's Economics Service and, where possible, services required by the Board are carried out by Department personnel. The Board has carried out field surveys on market conditions and possibilities and on factors affecting the income of fishermen in the various producing areas. The financial position of fishermen is kept under continuous review and recommendations are made to the Government on the basis of the findings. Special investigations are made when serious problems arise in particular areas.

## Subsection 2.-The Provincial Governments*

An outline of the work undertaken by each of the provincial governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

Newfoundland.-The provincial Department of Fisheries in conjunction with the Newfoundland Fisheries Development Authority, a Crown corporation established in 1953, is concerned mainly with the improvement and development of fishing and production methods. It conducts experiments and demonstrations in longlining, Danish seining and otter trawling, in the construction of multi-purpose fishing craft, and in the exploration of potential fishing grounds.

Loans are made to processors for the establishment and expansion of fish processing plants and for deepsea draggers and also to fishermen for the construction and purchase of modern vessels capable of a greater variety of fishing operations and larger production. Fishermen receive further aid through bounty payments at the rate of $\$ 160$ per ton for newly constructed vessels under the Fishing Ships (Bounties) Act, 1955. The Fishing and Coastal Vessels Rebuilding and Repairs (Bounties) Act, 1958 authorizes the government to assist financially in maintaining and prolonging the life of the existing fleet. The Coasting Vessels (Bounties) Act, 1959 authorizes the granting, for locally built ships, of a maximum bounty of $\$ 300$ per ton for vessels measuring from 15 to less than 100 gross tons, and $\$ 150$ per ton for vessels of between 100 and 400 gross tons. An Inshore Fisheries Assistance Programme provides a maximum bounty of $\$ 10$ per foot on boats measuring from 24 to 35 feet and bounties are paid to fishermen on certain types of nylon and other synthetic fibre fishing nets and lines.

Other services include the operation of fisheries training schools in navigation and engineering; advisory services to fishermen on gear and equipment, industrial research, plant construction, plant engineering and economics; assistance to fishermen's unions; weather and ice reports; and search and rescue. The Fisheries Salt Act, 1957 implements more rigid control over the use of fisheries salt.

Sport Fisheries.-The inland waters of Newfoundland, although they provide excellent sport fishing, are not commercially exploited. The lakes and ponds actually remain under the authority of the Natural Resources Branch of the provincial Department of Mines, Agriculture and Resources but, under federal-provincial agreement, these waters, including rivers and streams, are under federal control in matters of conservation and guardianship.

[^176]Prince Edward Island.-The sea and inland fisheries of Prince Edward Island are administered by the Federal Government. The provincial Department of Fisheries supplements federal activity and is concerned mainly with development of the fisheries industry. The Department provides technical assistance and, in conjunction with the Fisheries Research Board of Canada and branches of the federal Department of Fisheries, engages in some experimental work.

Financial assistance is made available to fishermen through the Fishermen's Loan Board of Prince Edward Island, a body corporate operating under the provincial Department. The Fishermen's Loan Board operates under authority given by the Re-establishment Assistance Act and regulations thereunder, approved by the Lieutenant-Governor in Council, Jan. 7, 1949, with amendments. Loans are made to fishermen and companies for the purchase of boats, engines and other deck machinery at an interest rate of 4 p.c. From its reorganization in 1949 until the end of March 1962, the Board has lent approximately $\$ 1,804,000$ for the modernization of the inshore and offshore fleets. Loans for the construction or expansion of processing plants are available through the Industrial Establishments Promotion Act under which loans may be made for facilities handling agricultural, horticultural or fishery products.

Game fisheries are the responsibility of the Department of Industry and Natural Resources. The streams of the province, mostly spring-fed and fairly constant in flow, provide very favourable conditions for the reproduction of game fish, of which speckled trout is the most important variety. Investigations concerning the production of trout of a size attractive to anglers are being conducted by the Fisheries Research Board of Canada at sites provided by the provincial Department. Unfortunately, many of the formerly fertile and highly productive ponds of the province have disappeared, and the provincial Department is actively concerned with damming and restoring these for the enjoyment of the public.

Nova Scotia.-Although the Federal Government has exclusive jurisdiction over the marine and inland fisheries of Nova Scotia and attends to all phases of administration related thereto, the Nova Scotia Government operates in several fields where provincial initiative is found to be necessary and appropriate, having regard for the importance of the fishery resources in terms of employment, industry, trade and recreation.

In the commercial fisheries, provincial government interests are the concern of the Fisheries Division of the Department of Trade and Industry. The Fishermen's Loan Board and the Industrial Loan Board are administered within this Department; the first makes loans to fishermen for the purchase of boats and engines, and the second makes loans for the construction or improvement of fish processing plants. A staff of fisheries engineers performs inspection and survey duties for the Loan Boards and provides technical assistance and advice to loan applicants and others in the fisheries and allied industries, notably the boatbuilding industry. A staff of instructors conducts training courses for fishermen in the care and maintenance of marine engines, in basic navigation and in the design, construction and maintenance of nets and other gear. This program receives substantial assistance from the Vocational Training Branch of the federal Department of Labour. The on-course instruction is supplemented frequently by informal on-the-spot assistance to smaller groups who find themselves in need of technical help with particular problems. The Fisheries Division, with financial and/or technical assistance provided by the Industrial Development Service of the federal Department of Fisheries, also organizes and conducts demonstrations of fishing methods and gear of types untried in some or all of the several fishing areas of the province.

Sport Fisheries.-In recent years, Nova Scotia, through the Wildlife Division of its Department of Lands and Forests, has spent a considerable amount of money on the improvement of certain streams in the province with a view to aiding salmon migration. A system of salmon-rearing ponds has been established on the Medway River in Queens

County, capable of producing 500,000 smolts each year, as well as a system of troutrearing ponds on the Moser River in Halifax County with an annual capacity of $1,000,000$ fingerlings. A full-time fisheries biologist is employed by the Division.

New Brunswick.-Commercial fishing is one of the most important basic industries of New Brunswick, employing more than 6,500 fishermen with annual earnings of over $\$ 9,000,000$, as well as about 2,800 plant workers. The annual marketed value of fish products is about $\$ 32,000,000$.

The fisheries of New Brunswick, both tidal and inland, are under the jurisdiction of the federal Department of Fisheries and angling in Crown waters is under the jurisdiction of the provincial Department of Lands and Mines. To supplement the activities of the federal Department of Fisheries and to establish closer liaison between the fishing industry and various government departments and agencies, both federal and provincial, the New Brunswick Government created in 1946 a Fisheries Branch and a Fishermen's Loan Board within its Department of Industry and Development.

Since its inception, the Fishermen's Loan Board has disbursed more than $\$ 7,500,000$ for the construction of fishing vessels and the purchase of modern equipment and diesel motors for fishermen of the province. Loans of $\$ 1,500$ to $\$ 2,500$ are made available to inshore fishermen for the purchase of lobster boats and engines, and amounts of $\$ 10,000$ to $\$ 60,000$ to offshore fishermen for the building and equipping of modern longliners, Danish seiners and draggers. These amounts represent the net amount lent to fishermen, which is about 70 p.c. of the total cost of the vessels after deducting the required downpayment and the Federal Government subsidy of $\$ 225$ per gross ton. New Brunswick now has a fleet of 92 groundfish draggers and 25 longliners and Danish seiners.

New designs of fishing vessels are under continuing study by the technical staff of the Fisheries Branch in co-operation with the federal Department of Fisheries, naval architects, boatbuilders and fishermen. A certain pattern of standardization is followed to keep building and maintenance costs at the lowest level, because fishing in New Brunswick is generally a marginal operation. Multi-purpose types have been successfully introduced in the inshore fisheries of the Gulf of St. Lawrence area. Modified versions of the 65 -foot groundfish dragger, equipped with more powerful diesel engines and bigger equipment have proven to be more efficient than the original type. A prototype 84 -foot steel stern trawler of Norwegian design, with a reinforced hull permitting winter operation in ice, was launched at Bathurst in June 1962 and two larger units of Dutch design were built at Saint John. A second unit of the same design as the prototype was put in service later in the year and contracts were awarded for the construction of two 92 -foot steel stern trawler/purse seiners, basically of the same design, which will operate as tuna seiners during the summer months on the first commercial tuna fishing operation in Eastern Canada. All these vessels are eligible for the 50-p.c. subsidy on trawlers granted by the Canadian Maritime Commission.

Exploratory projects aimed at improving fishing boats and gear are carried out by the Fisheries Branch with the financial and technical assistance of the federal Department of Fisheries. After a few years of experimental fishing and demonstrations with cod gillnets, Danish seines, mid-water trawls, mechanical clam diggers, etc., these new types of gear are being used by commercial fishermen along the New Brunswick coast. Practical training is made available by the Fisheries Branch to dragger operators and inshore fishermen during the winter season in various parts of the province. A permanent school of fisheries has been in operation at Caraquet since 1959 which conducts a three-year course (November to April). More than 30 young fishermen from 17 to 30 years of age attend each year.

Quebec.-The Quebec Government, through its Department of Industry and Commerce, gives much consideration to the administration of the commercial fisheries of the province. For the benefit of producers and fishermen, it operates a network of cold storage plants for the freezing and preservation of fish. The network comprises 60 plants, together having a daily freezing capacity of 500 tons and a storage capacity of $25,000,000 \mathrm{lb}$. of fish.

These plants also perform a valuable service to fishermen by providing them with frozen bait and ice. In addition, the Department owns and maintains 123 stations in small fishing ports where fish is kept under proper conditions while awaiting collecting trucks or boats, and also operates an artificial drying plant with a processing capacity of $3,000,000 \mathrm{lb}$. of fish annually. A staff of fish wardens, technicians and technologists administers fishery legislation and assists in the application of new techniques for the expansion of the industry. The central administration is located at Quebec City with an office at Gaspe for the administration of cold storage plants. Fish inspection is carried out by federal inspectors who are vested with additional powers by the provincial government with respect to local sales.

Educational work among the fishermen and producers is conducted by the Department to teach the latest methods of fish preparation and of obtaining high-quality products. The Fisheries Training School at Grande Rivière gives to fishermen of all ages the opportunity of taking free theoretical and practical courses in fishery, and the Superior School of Fisheries at Ste. Anne de la Pocatière conducts a four-year course for technologists. Encouragement is given to the co-operative associations of fishermen through the Social Economic Service of the latter institution. Under a maritime credit system, fishermen may obtain loans from credit unions for the purchase of boats and gear. The fish trade is promoted through advertising campaigns in newspapers and magazines, cooking demonstrations, educational films and the free distribution of fish recipes and publicity leaflets as well as through exhibits at fairs.

The Department adheres to the federal-provincial agreement on the building of draggers and longliners and assumes the building costs on a capital refunding plan. At the end of 1962, the fishing fleet of Quebec consisted of 65 draggers, 10 longliners and 49 Gaspésiennes or small longliners, and four Danish seiners, representing an investment of over $\$ 4,000,000$. After deduction of the federal subsidy of $\$ 165$ per gross ton, the cost to the fishermen was approximately $\$ 3,400,000$.

Biological and hydrographical research in the Gulf of St. Lawrence is directed by the Marine Biology Station at Grande Rivière. The Department also operates a Limnological Laboratory at Quebec City for studying the biology of the freshwater fish of the St. Lawrence River and its tributaries. The Quebec Aquarium at Quebec City exhibits freshwater and saltwater fish in 30 large tanks.

Sport Fisheries.-The Department of Tourism, Game and Fish exercises jurisdiction over the inland waters; it employs 350 full-time wardens. Licences are required for sport fishing and hunting, the revenue from which is applied to the improvement of fishing and hunting conditions. Five hatcheries are maintained at strategic points throughout the province-St. Faustin, Lachine, Lac Lyster, Tadoussac and Gaspe. These establishments distribute speckled trout, Atlantic salmon and grey trout fry, maskinonge fingerlings and older fish.

The Department administers five parks and 13 reserves in all of which, except for Mount Orford Park, excellent fishing may be found. Gaspesian and Laurentide Parks are renowned for their trout fishing. Chibougamau Reserve and La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips in search of pickerel, pike and grey or speckled trout. Five salmon streams are open to anglers-the Romaine River, the St. Jean River, the Petite Cascapédia River, the Matane River and the Port Daniel River. A joint committee composed of departmental officials and the directors of the larger fish and game associations studies the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the province.

Ontario.-The fishery resources of Ontario are administered by the Fish and Wildlife Branch, Department of Lands and Forests. The Branch operates under the authority of the federal Fisheries Act, the Special Fishery Regulations for the Province of Ontario, the Ontario Game and Fish Act and the Regulations connected therewith.

Commercial Fisheries.-The commercial fishing industry in Ontario provides employment for about 3,200 persons directly and for many more indirectly, and produces an annual yield of from $35,000,000 \mathrm{lb}$. to $45,000,000 \mathrm{lb}$. of fish. The landings of fish in 1962 amounted to over $62,000,000 \mathrm{lb}$. This figure exceeds by more than $2,000,000 \mathrm{lb}$. the previous record catch of 1956. Very heavy catches of smelt and of yellow perch accounted largely for the greater than average catch. The industry, although widely scattered throughout the province, is centred chiefly on the Great Lakes, particularly Lake Erie which is the most productive of these lakes. The principal species of fish taken commercially are perch, smelt, whitefish, pickerel, lake trout, white bass, pike, herring, chub, sheepshead, carp, catfish and bullheads, sturgeon, eels, goldeyes, rock bass, sunfish and suckers. Over one hundred smaller inland lakes are commercially fished, principally those in the northwestern portion of the province, and careful management of these lakes is essential to ensure continued production.

The types of fishing boats in use vary from small craft to 60 -foot tugs, and types of gear vary from the most common gillnets, pound-nets and trap-nets, seines and baited hooks to small hand-operated seines and dip-nets. Fishing methods and equipment have been modernized extensively during the past few years. Diesel-driven steel-hull tugs have replaced steam-driven wooden tugs, such aids as depth-sounding devices, radar, ship-toshore and ship-to-ship communications have been developed and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods are in use as well as new types of fishing gear. Trawling for smelt is being carried out experimentally in Lake Erie. This fishing technique is new in the Ontario fishery but has been proven very efficient in harvesting smelt on a year-round basis in this lake.

Most Ontario fishermen are organized into various local associations. Many of these associations are, in turn, represented by the Ontario Council of Commercial Fisheries which performs important services to the industry. The Ontario Fishermen's Co-operative and its member groups are of interest also in the organization of the fishery in the province.

Sport Fisheries.-Angling in Ontario is rapidly becoming one of the major industries of the province. With an estimated freshwater area of some $68,490 \mathrm{sq}$. miles, the province is one of the most attractive fishing areas on the Continent. Excellent angling opportunities are available for such prized fish as brook, rainbow, lake and brown trout, walleye, smallmouth and largemouth bass, pike and maskinonge. It is difficult to measure the total value of the sports fishing industry to the province but the annual revenue from the sale of angling licences alone (mainly to non-residents, as residents require a licence for provincial parks only) is in the neighbourhood of $\$ 2,500,000$. The management of this valuable resource is administered by a well-trained field staff of conservation officers and biologists located in the 22 forestry districts of the province.

Provincial Hatcheries.-Ontario operates 17 hatcheries and rearing stations and excellent results have been produced in the culture and distribution of various species of game fish. The primary species reared in these operations include brook trout, rainbow trout, lake trout, smallmouth and largemouth bass, and maskinonge. Four of the finest troutrearing stations on the Continent are located in this province-at Dorion near Port Arthur, Sault Ste. Marie, Hills Lake near Englehart, and Chatsworth.

Fisheries Research.-Research in Ontario is carried on in the Great Lakes and in inland waters. At the South Bay Mouth Station on Manitoulin Island in Lake Huron, Wheatley on Lake Erie, and Glenora on the Bay of Quinte on Lake Ontario, fishery biological stations are operated for the investigation and study of the commercial and sport fisheries on the respective lakes. In Algonquin Park, detailed studies concerning lake trout, smallmouth bass and brook trout are in progress and management techniques are being tested against the background of a creel census which has been continuous since 1936. Studies of fish parasites have been initiated.

A selective breeding experiment concerning the hybrid between lake trout and speckled trout is progressing favourably. The deep-swimming character of the lake trout and the character of maturity at early age of the speckled trout are those being selected for combination in the hybrid.

Co-operation by Ontario in the field of gear development is being extended through the Federal-Provincial Committee for Ontario Fisheries and in the field of sea lamprey control through the Great Lakes Fishery Commission.

Manitoba.-The Province of Manitoba possesses a very extensive and valuable freshwater fishing industry. Its fishing waters extend from the international boundary to the far northern reaches of the province and include approximately $39,000 \mathrm{sq}$. miles of lake and stream. In 1962 the commercial industry produced $30,661,500 \mathrm{lb}$. of fish valued at $\$ 5,663,000$ and provided full- or part-time employment for 5,018 fishermen and for at least 6,000 persons engaged in fish processing, transportation, boat-building and other related industries.

Some 1,600 commercial fishing boats are in operation throughout the province, varying in size from diesel lake freighters to small skiffs powered by outboard motors. The value of these boats together with nets and other equipment is estimated to be $\$ 3,285,000$. The largest single item is gillnets; 113,472 , having an estimated value of $\$ 1,826,000$, were in use. New types of gear are continually being tested to determine their efficiency and cost under Manitoba's fishing conditions.

The freshwater fisheries of the province are administered by the Fisheries Branch of the Department of Mines and Natural Resources. Fishery regulations are enforced by the use of a fleet of modern patrol boats during the open-water season and a fleet of bombardiers and light trucks during the winter season, and remote operations are supervised by the use of departmental aircraft. All patrol units are equipped with two-way communication systems. In the management of the fisheries resources, fish culture plays an important role. Four main hatcheries are in operation, three of them to provide stock for commercial fishing waters. In addition, two seasonal spawn camps are operated to provide lake trout, whitefish and pickerel eggs which are subsequently reared and planted. Biological research and investigations include pollution studies, analysis of fishing success, spawning habits, sampling of catch to determine year, class, abundance and fish growth, tagging to chart migratory patterns and fish mortality, and the collecting of other data necessary for sound management of the fishery resources. To ensure quality fish products, the Fisheries Branch, in co-operation with the Department of Health, maintains a continuing program of inspection and plant improvement to meet the sanitation standards set out under the Public Health Act.

Sport Fisheries.-Angling is becoming increasingly popular in Manitoba both in summer and winter; in the 1961-62 season more than 100,000 licences were issued, 13,731 of them to non-residents. The Department has a program under which certain lakes are selected each year for fish eradication after which they are re-stocked with rainbow and speckled trout. In 1962 two new species were introduced to the province-Kokanee, a landlocked sockeye salmon, and the maskinonge, a prized species of sport fish. This program has diversified fishing in southern Manitoba where these species did not formerly occur. One of the province's four hatcheries is operated expressly for the production of sport fish.

Saskatchewan.-Almost 32,000 sq. miles of fresh water, about one eighth of Saskatchewan's surface area, provide the basis for the province's fishing industry. The administration of the fisheries, which includes the planning of policies and the development of programs to insure their proper management and utilization, is the responsibility of the Fisheries Branch of the Department of Natural Resources, with head office at Prince Albert. The Branch has three main divisions-Fish Management (Commercial and Sport Fisheries Sections), Fish Research and Fish Culture.

During the year ended Mar. 31, 1962, Saskatchewan became the highest Canadian producer of whitefish and lake trout; $7,596,806 \mathrm{lb}$. of whitefish were harvested and $2,161,846$
lb. of lake trout. Approximately 1,500 commercial fishermen harvested a record of $14,515,030 \mathrm{lb}$. of fish (all species) with a market value of $\$ 3,165,696$. The value of this production to the primary producer was $\$ 1,385,423$. The 14 processing plants operating in the province produced $2,682,149 \mathrm{lb}$. of fillets. There has been noted improvement in handling and processing methods. A program for the development of improved harvesting techniques and production equipment is being undertaken to assist the commercial fisherman to increase his efficiency as a producer. Interest has been expressed by the fishermen in a boat-building program, which has been facilitated by the Fisheries Branch providing the blue prints and assisting in the construction of boats in a number of fishing areas.

During the 1961-62 fiscal year, 1,256 domestic fishing licences were issued and an estimated $1,256,000 \mathrm{lb}$. of fish harvested; 276 free Indian permits were issued and 73 fur farm fishing licences. Mink ranchers utilized $5,610,310 \mathrm{lb}$. of coarse fish (mainly burbot, suckers and cisco). Sport fishing continues to be the main outdoor recreational attraction in the province; in 1961-62, 96,623 angling licences were sold, 87,777 of them to residents.

During the past 15 years, biological and fisheries investigations have been carried out on major water bodies ranging from the Precambrian Shield to southern agricultural areas. Study projects are conducted by the Fish Research Division to: (1) determine productivity of water bodies; (2) secure information on relationship of fish species; (3) investigate ecology and assess factors which may affect environment of fish; (t) develop techniques to achieve maximum harvest of fish populations without prejudice to continued production. Among the 11 major projects carried out during 1962 was the examination of saline lakes reported to contain brine shrimp (Artemia salina); observations suggest that populations of brine shrimp exist in most of the major sodium sulphate lakes of Saskatchewan. Basic limnological and fisheries surveys were continued on lakes in the Precambrian area, along the highway from Lac la Ronge to the Churchill River and the Hanson Lake road and on provincial park lakes. The creel census project on Lac la Ronge was carried out for the twelfth consecutive year.

Lake trout, northern pike, pickerel (walleye), rainbow and eastern brook trout eggs were incubated and hatched at the Fish Culture Station located at Fort Qu'Appelle. In addition, 215,000 Kokanee fingerling were stocked in Madge Lake on an experimental basis and whitefish fry were stocked in four water bodies. In all, 71 lakes were stocked with 29,827,000 fry, 576,550 fingerling and 3,157 yearling and adults.

Alberta.-Commercial and game fishing is administered by the Fish and Wildlife Division of the Department of Lands and Forests under authority of the Fisheries Act (Canada) and the Fishery Act (Alberta).

Commercial production of fish from Alberta waters in 1962 amounted to $9,263,000 \mathrm{lb}$. which had a market value of $\$ 1,416,000$. This represented a considerable decrease from the production of the previous year, the result of a 50-p.c. reduction in the catch from Lesser Slave Lake which usually amounts to about one half the provincial total. Whitefish accounted for about one third of the catch and 60 p.c. of the market value; other fish taken in order of market value were pickerel (walleye), tullibee-a low-priced animal food fish-northern pike, lake trout, yellow perch, burbot, sucker and goldeye.

Fisheries research at the Alberta Biological Station at Gorge Creek during 1962 involved a study of the relationship between stocking rates and the mortality of hatchery trout stocked in streams. Biological studies and investigations included sampling of populations to determine growth and abundance, analysis of basic lake productivity, and comprehensive continuing studies of major commercial lakes. In connection with sport fisheries, eleven lakes and a number of streams in the North Saskatchewan, Athabasca and Churchill drainages were examined and coarse fish removed with the use of chemicals in seven lakes and three streams in preparation for trout stocking. Study of the recovery by anglers of hatchery-reared trout was continued on Carbondale River and Jumping Pound Creek and evaluation of trout-stocking practices in lakes was conducted by creel census at two locations in the province.

British Columbia.-A Fisheries Office, which was organized in 1901-02 and became very active in fish culture work, building and operating fish hatcheries and instituting scientific research into various fishery problems, was superseded in 1947 by the Department of Fisheries which in turn was superseded in 1957 by the Department of Recreation and Conservation. Commercial fisheries are represented today as the Commercial Fisheries Branch of the Department of Recreation and Conservation. Broadly speaking, the administrative and regulative jurisdiction over the fisheries of British Columbia rests with the federal authority. The ownership of the fisheries in the non-tidal waters is vested in the Crown in the right of the province, as are the shell fisheries such as oyster fishing and clam fishing in tidal waters. The province administers these fisheries although the regulations covering them are made under federal Order in Council on the advice and recommendation of the province.

The provincial Fisheries Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish processing plants under a system of licensing. Provision is also made for arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations.

Regulation and administration of net fishing in the non-tidal waters of the province, including commercial fishing and authority for regulation of the game fisheries in non-tidal waters, is vested in the Fish and Game Branch which operates a number of trout hatcheries and egg-taking stations for restocking purposes.

The Branch co-operates closely with the Fisheries Research Board of Canada. The biological research into those species of shellfish over which the province has control, principally oysters and clams as well as marine plants, is conducted by the Fisheries Research Board of Canada at the Pacific Biological Station, Nanaimo, B.C., under agreement with the federal and provincial authorities. The object of this research is to encourage the industry to produce better products more economically and to enable the Commercial Fisheries Branch to regulate the various species so that maximum exploitation may be obtained on a sustained-yield basis.

## Section 3.-Fishery Statistics

The review of commercial fishing and marketing given in Section 1, pp. 606-609, covers the situation in 1962 and contains estimated figures for that year. However, at the time of the preparation of this Chapter, the latest statistics available in detail for both the primary industry and the fish products industry were those for 1961 contained in the following Subsections.

## Subsection 1.-Primary Production

Atlantic Coast fishermen had a better-than-average year in 1961. Although the quantity of all fish landed was down 10 p.c., higher unit prices for most species brought the value received by fishermen up to $\$ 59,004,000$ compared with $\$ 59,763,000$ in 1960 . Lobster, the major money-maker for the third consecutive year, had a landed value of $\$ 18,054,000$, followed by cod at $\$ 15,646,000$, haddock $\$ 4,647,000$, flounder and sole $\$ 3,311,000$ and scallops $\$ 3,082,000$.

The Newfoundland catch amounted to $503,079,000 \mathrm{lb}$. valued at $\$ 14,922,000$, compared with the record $573,771,000 \mathrm{lb}$. valued at $\$ 15,856,000$ landed in 1960 . Strong competition for supplies by freezing plants to meet an expanded export demand for frozen groundfish gave fishermen higher returns for their catch. The cod fishery, with landings of $328,052,000$ lb. valued at $\$ 9,028,000$ in 1961, remains the top fishery for Newfoundland.

The 1961 Nova Scotia catch of $439,662,000 \mathrm{lb}$. valued at $\$ 27,741,300$ was up 2.5 p.c. over the 1960 quantity but down slightly from the 1956-60 average. Heavier landings of haddock, herring and scallops and higher unit prices for most species gave the fishermen of that province their highest recorded return. Lobster, cod, haddock and scallops, in that order, were the main species. The fact that the annual herring run chose to come up the

Nova Scotia side of the Bay of Fundy instead of the New Brunswick side was mainly responsible for a 37 -p.c. drop in New Brunswick landings in 1961; they amounted to $144,464,000 \mathrm{lb}$. compared with $228,121,000 \mathrm{lb}$. in 1960 and their value was $\$ 7,624,800$ compared with $\$ 9,206,100$. Smaller landings of lobster and smelts also added to the decline. In Prince Edward Island declines were reported in landings of most species, the total quantity dropping from $42,283,000 \mathrm{lb}$. in 1960 to $36,664,000 \mathrm{lb}$. and the value from $\$ 4,639,600$ to $\$ 4,489,100$.

Quebec fishermen landed $109,174,000 \mathrm{lb}$. of fish in 1961 valued at $\$ 1,710,000$, an increase of 10 p.c. in quantity and 5 p.c. in value over 1960. Cod with a landed value of $\$ 1,810,100$ and lobster at $\$ 1,086,500$ remained the major species taken.

The British Columbia fishery was above normal in 1961, recording total landings of $635,550,000 \mathrm{lb}$. valued at $\$ 38,778,000$ compared with $335,040,000 \mathrm{lb}$. valued at $\$ 27,961,000$ in 1960; this was a $90-$ p.c. gain in quantity and a 39-p.c. gain in value. Increased landings of coho, pinks and sockeye brought the total salmon landings up to $121,634,000 \mathrm{lb}$. against $75,153,000 \mathrm{lb}$. for the previous year. The herring fishery, with good markets for meal, more than doubled its 1960 catch, landing $448,433,000 \mathrm{lb}$. valued at $\$ 4,589,000$. Halibut landings, on the other hand, were down 8 p.c. to $24,951,000 \mathrm{lb}$. but the value rose 21 p.c. from $\$ 4,379,000$ in 1960 to $\$ 5,316,000$. The groundfishery as a whole was down from the previous year because trawlers found it more profitable to transport salmon from the seiner to the cannery than to fish.

The 1961 inland fishery had landings of $123,073,000 \mathrm{lb}$. valued at $\$ 12,450,000$, little changed from 1960.

## 1.-Quantity and Value of Sea and Inland Fish Landed, by Province, 1957-61

Note.-Figures for the years 1918-56 are given in the corresponding table of previous Year Books, beginning with the 1947 edition.

| Province or Territory | 1957 | 1958 | 1959 | 1960 | 1961 |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Subsection 2.-The Fish Products Industry

The Census of Industry survey of the fish products industry covers establishments engaged in the processing of fish at the secondary industrial level. Some fishermen process the fish they land to a certain degree but their operations are not included nor are the minor amounts of processing done in the inland areas (Ontario, the Prairie Provinces, and the Northwest Territories). In 1961, products of fish processing establishments had a selling value of $\$ 169,825,300$, slightly higher than in 1960 . The East Coast fish plants contributed $\$ 96,838,200$ compared with $\$ 101,319,900$ in the previous year and those of British Columbia $\$ 72,987,100$ compared with $\$ 67,564,000$.

## 4.-Summary Statistics of the Fish Products Industry, 195\%-61

Note.-Based on revised Standard Industrial Classification and New Establishment Concept. Figures for 1957-60 have been revised since publication of the 1962 Year Book in order to maintain comparability.

${ }^{1}$ Not available because of lack of inventory data.
The most important products of the fish products industry are canned salmon in British Columbia and frozen groundfish fillets on the Atlantic Coast. With the Pacific salmon catch back to normal in 1961, production of canned salmon at $1,405,159$ cases was more than double the 1960 figure of 631,150 cases; value increased by 103 p.c. to $\$ 46,151,000$.

Increased demand for Atlantic Coast frozen groundfish fillets and blocks resulted in a 12-p.c. increase in production over 1960. The quantity produced amounted to $153,961,000$ lb . in 1961 compared with $137,500,000 \mathrm{lb}$. in 1960 and the value increased 14 p.c. to $\$ 35,224,000$. Other important items included lobster products, dried salted fish, pickled fish and canned sardines.

The value of all sea and inland fishery products processed or handled by processors, handlers and fishermen during 1961 amounted to $\$ 222,879,000$, which was 4 p.c. below the record year of 1958 when $\$ 231,540,000$ was realized but 13 p.c. above the 1960 figure of $\$ 198,005,000$. The value of Atlantic Coast seafish products was down slightly from that of the previous year but the value of British Columbia fishery products was 46 p.c. higher.

## 7.-Value of All Products of the Fisheries, by Province, 1957-61

Nore.-Figures for the years 1917-56 are given in the corresponding table of previous Year Books beginning with the 1922-23 edition. Totals for five-year intervals from 1870 are given in the 1956 edition, p. 597.

| Province or Territory | 1957 | 1958 | 1959 | 1960 | 1961 |

${ }^{1}$ Totals differ from the sum of provincial totals because salted groundfish (except boneless) are based on sales rather than production; duplications for bloaters are also removed.

## PART II.-FURS

## Section 1.-The Fur Industry*

Fur Trapping.-Without furs the history of Canada might well have been very different. It was with tales of a country teeming with fur bearers that Groseilliers and Radisson interested Charles II in 1665, leading directly to the formation of the Hudson's Bay Company, and it was with furs that the early French colonists in their settlements along the St. Lawrence River purchased their necessities from France. The early settlers soon found that although their new homeland contained boundless resources, markets were lacking for the produce of farm and woodlot, and in most cases fur trapping was the sole activity that could be counted upon to produce immediate revenue. The furs from the New World met with a ready market in Europe and, from the advent of settlement right up to the commencement of the nineteenth century, trapping remained the most important industry in Canada.

Although the relative importance of the fur industry in the Canadian economy has declined through the years, fur trapping continues to contribute substantially to the national income. Despite almost unbroken trapping activity over a period of many years, the production of wild fur bearers has been well maintained and, even in the settled areas, some varieties are still taken in large numbers. However, in most cases the wildlife has retreated before the advance of settlement so that the principal trapping areas now lie in the northern portions of the provinces and in the Northwest Territories.

Conservation measures, including the establishment of natural preserves and the protection of scarce types by limiting the catch or closing the season completely for a time, have been of material assistance in maintaining the numbers of wild fur bearers. Also, in many fur-producing areas, provincial and territorial authorities have instituted a registration system in accordance with which trapping areas are assigned to individuals on a constant basis. This system puts the responsibility on the trapper for the conservation of fur bearers in his own area, and encourages him to trap less intensively any species that show signs of becoming scarce. Prior to the allotment of individual areas, each trapper

[^178]tended to take every skin possible, with the knowledge that if he attempted to practise conservation someone else would probably come along and trap the area out completely.

In recent years, realizations for most types of wild furs have not kept pace with rising commodity prices. As a result, returns from the trapping enterprise have not been sufficiently attractive to keep trappers on their traplines on a full-time basis. Some have abandoned trapping completely, while in areas where other forms of employment are available many trappers have become full-time or part-time wage-earners, carrying on their trapping activities on week-ends or off days. This situation applies generally throughout the central and southern portion of the country, and one of the undesirable results of this part-time approach has been the failure to cover the trapping grounds adequately. Many of the less accessible areas tend to be neglected, with consequent wastage of the fur resource. However, in the northern regions trapping still plays an important part in the lives of the native Indians and Eskimos, providing an independent means of livelihood in these remote areas.

Mink Farming.-Mink farming originated in Canada in the early 1900's and has since grown to be the most important branch of fur farming. The industry apparently had its beginnings in Eastern Canada around 1910 but, being completely overshadowed at that time by the thriving silver fox business, very little in the way of records is available for the early years. Originally most ranched mink were raised on farms where the main business was the production of silver foxes and, since ranched mink pelt realizations were far from attractive at that time, it must be assumed that the raising of this species was adopted as a precaution against the recurring threat of an over-production of fox pelts. The following figures indicate the growth of the industry since 1935:-

| Year | Pelt Production | Average Realization | Year | Pelt Production | Average Realization |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | \$ |  | No. | \$ |
| 1935. | 30,558 | 10.58 | 1955. | 786,760 | 20.07 |
| 1940. | 229, 202 | 9.64 | 1960. | 1,204,077 | 14.03 |
| 1945. | 255, 968 | 21.51 | 1961.. | 1,269,050 | 14.50 |

Through the years, large numbers of live mink were exported from this country to stock farms in many parts of the world. The results of this expansion in other countries were soon apparent in the increasing quantities of mink pelts marketed each year and, as early as 1939, concern was expressed by the trade concerning the ability of the market to absorb these quantities. Perhaps fortunately for the future of the industry, the rising production coincided with the appearance on the market of the first colour mutation. Initially, all ranch mink were brown or dark brown in colour, produced through crosses of various strains of wild mink. However, around 1936 the first mutation occurred-the Silverblu or Platinum, produced from conventional dark brown parents. This mutation was quickly followed by others and breeders soon learned to produce new exciting colours, so that today there exist more than 200 types, including variations of basic shades.

The appearance on the market of this wide range of natural coloured mink supplied an enormous fillip to the industry. In addition to the popularity gained through the many natural advantages of mink, the merits of owning a mink piece have been most effectively advanced through vigorous promotional campaigns. As a result, mink has achieved a popularity far surpassing that of any other fur or, indeed, of all the remainder of the world's furs combined. It is estimated that, in 1962, of a total world trade in raw furs amounting to $\$ 350,000,000$, mink accounted for $\$ 240,000,000$ and Persian lamb for $\$ 65,000,000$.

Canada Mink Breeders' Association, the national association of Canadian mink producers, was formed in 1952 through the amalgamation of several bodies. This Association is responsible for the promotion of Canadian mink in both the domestic and overseas markets and also works closely with fur auction outlets in formulating plans for marketing the annual pelt crop. In addition, the Association assists financially the undertaking by
universities and colleges of extensive research on diseases of mink, studies of mink nutrition, genetics and general ranching practices. Funds for these undertakings are obtained by a deduction at the auction level (currently 1.5 p.c. of the sales price) made from all members' pelts sold. The better quality portion of Canada Mink Breeders' pelt crop is marketed under the name Canada Majestic, followed by the generic name of the mink type; thus, Canada Majestic Sapphire or Canada Majestic Pastel. The Canada Department of Agriculture works closely with the Association in many phases of the mink farming industry, including the dissemination of information concerning results of research on mink diseases and nutrition, undertaken at the Experimental Fur Farm, Summerside, P.E.I.

The quantities offered and average prices realized in auctions sponsored by Canada Mink Breeders' Association during the 1961-62 season were as follows:-

| Type | Quantity | Average Price | Type | Quantity | Average Price |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | \$ |  | No. | \$ |
| Dark. | 181,969 | 17.15 | Violet | 4,290 | 24.65 |
| White. | 54,537 | 13.26 | Lavender | 3,858 | 22.74 |
| Pastel... | 346.270 | 14.80 | Taupe. | 3,991 | 15.43 |
| Gunmetal | 54,834 | 17.02 | Hope.. | 2,384 | 23.36 |
| Pearl. | 56,873 | 21.17 | Sapphire. | 147,870 | 18.34 |
| Palomino. | 17,711 | 15.36 | Miscellaneous mutations. | 16,747 | 14.20 |
| Silverblu. | 25,668 1,753 | 15.45 14.83 | All Mink Pelts...... | 918,755 | 16.26 |

Fox Farming.-In 1961 there were 1,815 fox pelts produced on Canadian farms, the average realization being estimated at $\$ 10$. No improvement in the demand for ranched fox pelts has been evidenced recently, and although the fur trimmings industry is currently using large numbers of fox pelts for dyeing and trimming purposes, there has been no indication of a revival of interest in the use of fox furs for capes or garments. Prices now being realized for ranch-raised fox pelts do not cover the cost of production and those breeders who remain in the industry doubtless do so with the hope that some day a reversal of fashion will once more bring their product into demand.

Chinchilla Farming.-The production of chinchilla pelts in Canada in 1961 totalled 10,559 , an increase of some 16 p.c. over the 1960 output. In addition to the animals pelted, substantial numbers of live animals for breeding purposes were exported to various European countries where chinchilla raising is becoming increasingly popular. Currently, the bulk of the Canadian chinchilla pelt crop is "lotted" together with the United States production and sold in New York, the larger quantities resulting from this combination making it possible to produce attractive, well-matched bundles.

This luxury fur has met with an excellent market recently and an outstanding feature has been the demand from Europe, especially Italy, for finest quality chinchilla pelts. In the earlier stages of the industry, efforts of the many beginners were hampered by the low quality of much of the breeding stock that was available. However, the emphasis placed by marketing outlets on quality, together with the obvious benefits accruing to a producer marketing better grade pelts, has encouraged breeders to concentrate on herd improvement and a noticeable upgrading of much of the breeding stock has taken place.

Nutria, the only other fur bearing animal reported on Canadian farms, is raised in limited numbers.

Fur Marketing.-Up to the end of World War I, most of Canada's fur production was marketed in London, England, and in New York. In 1920, the first Canadian fur auction was held in Montreal, and shortly afterwards fur auction houses were established in Winnipeg, Edmonton and Vancouver. Today, the bulk of Canadian furs is sold through eight fur auction houses located in Montreal, North Bay, Winnipeg, Regina, Edmonton and Vancouver. At the auction sales, furs are purchased through competitive bidding by buyers who may be purchasing for their own accounts or who may represent major
firms in any part of the world; Canadian pelts are traditionally sold in the raw or unprocessed state, facilitating entry into the many countries which maintain tariffs on imports of processed furs. The fur industry contributes about $\$ 25,000,000$ annually to Canada's export trade, approximately two thirds of the annual production going outside the country.

Most Canadian ranched mink pelts are shipped directly from farm to auction house where they are sold for the account of the producer, the fur auction house charging a commission for its services based on a percentage of the selling price. A small percentage of the total catch of wild furs goes direct from the trapper to the auction house. However, because most trappers require an outlet close at hand where they can dispose of their pelts immediately in exchange for needed supplies, the bulk of Canadian wild furs passes initially from the trapper to the local dealer who is often the operator of a small country store. Here, furs from many trappers are assembled and may then be shipped to the fur auction house or may await the arrival of a travelling buyer who will add them to his larger collection before shipping.

The selling season commences in December with large offerings of fresh ranched mink pelts, and later in the same month initial quantities of the new season's wild furs become available. Trapping in the northern regions gets under way around the same time as the pelting of ranch-raised mink, but because of the slower process involved in passing from trapper to country dealer to fur auction house, major quantities of wild furs are not generally available until January. In this and succeeding months, offerings of ranched mink continue, along with quantities of the world-famed Canadian wild mink, beaver and many other varieties.

Canada's production of ranched mink pelts currently constitutes approximately one twelfth of the total value of world production of ranched mink, while the value of the wild furs produced in this country amounts to approximately one quarter of the total value of the world's production of furs in this category. The Canadian production is therefore of major importance in the world's fur industry and in recent years it has been gratifying to note that, in addition to the competition provided by Canadian and United States buyers, fur auction offerings in this country have also benefited through participation of a substantial attendance of European buyers. During the 1961-62 selling season, these people set the pace at many Canadian auction sales and their determination to take home with them the top quality merchandise contributed materially to the success of these events.

## Section 2.-Provincial and Territorial Fur Resource Management

Most of the fur resources of the provinces of Canada are under the administration of the respective provincial governments. Exceptions include those resources within the boundaries of the National Parks and the Indian reserves, and the fur resources of the Yukon and Northwest Territories, all of which are under the administration of the Federal Government. The Canadian Wildlife Service of the Department of Northern Affairs and National Resources is responsible for all Federal Government interests in wildlife resources except for those related to Indian affairs. The Canadian Wildlife Service co-operates with provincial governments and other agencies concerned and handles federal interests in relevant national and international problems. The functions of the Canadian Wildlife Service together with provincial information on wildlife resources and conservation measures are covered in Chapter I of this volume at pp. 44-52.

## Section 3.-Fur Statistics

Subsection 1.-Fur Production and Trade*

Total Fur Production.-Early records of raw fur production were confined to the decennial censuses when account was taken of the number and value of pelts obtained by

[^179]trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of raw fur production. For a number of years the statistics were based on information supplied by the licensed fur trappers. More recently, annual statements based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are used in the preparation of the statistics issued annually by the Bureau. Figures for Prince Edward Island are based on returns supplied to the Dominion Bureau of Statistics by fur dealers in that province.

Fur Farm Production.-Fur bearing animals were first raised in Canada on farms in Prince Edward Island about 1887 and in Quebec in 1898; today fur farming is carried on in all the provinces. There was a slow but steady increase in the number of farms until 1920 when 587 were reported, followed by a period of more rapid growth to 1938 when the number reached 10,454 with a production value of $\$ 6,500,000$. During the war years many fur farms went out of business and although prices rose considerably after the War, operating costs increased and the number of fur farms, particularly those conducted in conjunction with other farming operations, continued to decrease. By 1961 only 2,173 farms reported but the value of their production continued to increase, reaching $\$ 18,580,000$. Although there were 158 fewer farms in 1961 than in 1960, the number of animals on such farms at Dec. 31 was nearly 12,000 higher than at the same date of the previous year and the number of fur farm pelts taken during the year íncreased from $1,218,100$ to $1,285,406$. Mink accounted for 99.1 p.c. of the value of fur farm production and fur farm production accounted for 64.2 p.c. of total production.

Exports and Imports.-The Canadian fur trade, both export and import, is mostly in undressed furs, the value of dressed and manufactured furs going out of or coming into Canada being a comparatively small proportion of the total. Canadian fur exports consist largely of those produced in greatest abundance, mink being by far the most valuable followed by beaver, fox, squirrel and muskrat. Furs such as Persian lamb, mink, muskrat, fox, raccoon, Kolinsky, and sheep and lamb make up the major portion of the imports. Exports and imports of furs, undressed, dressed and manufactured, from and to the United States, Britain and all countries, are given for the years 1961 and 1962 in Table 7.

## Subsection 2.-The Fur Processing Industry*

The rather general term 'fur processing' includes the fur dressing and dyeing industry and the fur goods industry. The former is concerned with the dressing or dyeing of pelts on a custom basis and the latter is a manufacturing industry that makes up fur goods such as coats, scarves and gloves.

In 1961 the number of skins treated was $6,740,325$, of which muskrat comprised 39 p.c., mink 19 p.c., Persian and other types of lamb 16 p.c., squirrel 5 p.c. and raccoon 5 p.c.
8.-Principal Statistics of the Fur Dressing Industry, 195\%-61

The implementation of the new "establishment" concept for the 1961 survey brought about marked changes in the statistics of the fur goods industry. The figures for 1957-60, given in Table 9, have been revised on the new basis. Shipments of ladies' fur coats, including boleros and jackets, by all industries in 1961 numbered 168,214 and were valued at $\$ 41,129,186$.

* Prepared in the Industry Division, Dominion Bureau of Statistics.
9.-Principal Statistics of the Fur Goods Industry, 1957-61

Nore.-Figures for 1957-60 have been revised on the basis of the revised Standard Industrial Classification.

## GHAPTER XIV.-MANUFACTURES

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

This Chapter deals with manufacturing in Canada in four Parts. Part I contains a specially prepared treatment of secondary manufacturing in Canada, followed by an outline of the manufacturing situation in 1961. Part II provides general statistical analyses including manufacturing statistics from 1917; detailed treatment of production under various groupings and individual industries; and principal factors in manufacturing production such as capital expenditures and size of establishment. Part III deals with the provincial and local distribution of manufacturing production and Part IV with the functions of the new Department of Industry.

Figures for 1961 were available at the time of going to press for most of the tables of Part II, although certain analyses, such as principal commodities produced and manufactures classified by origin and type of ownership, were not yet complete and 1960 is given as the latest year. Similarly, 1960 is the latest year for certain of the provincial and municipal analyses contained in Part III.

## PART I.-REVIEW OF MANUFACTURING

In each edition of the Year Book, this Part contains a general review of the current manufacturing situation, supplemented by additional information, sometimes historical in nature and sometimes dealing in detail with the development of an individual industry. The 1962 edition included, at pp. 600-608, a review of manufacturing production during the period 1945-59 and also, at pp. 609-615, a treatise on the petrochemical industry of Canada. The special articles appearing in previous editions are listed in Chapter XXVI, Part II, Special Articles Published in Former Editions of the Year Book, under the heading of "Manufactures".

The following article deals with a subject of much current interest-the growth and importance of the secondary sector of the manufacturing industries of Canada.

## SECONDARY MANUFAGTURING IN CANADA*

The economic growth of any nation is characterized by profound changes in the distribution of available resources among the various sectors making up total economic activity. This has been true of the Canadian economy. In the early stages of development, manpower and capital in Canada were concentrated primarily in agriculture, fishing and forestry. With the growing world need for various metals and minerals found in Canada, an increasing proportion of the available manpower and capital resources was shifted to mining. Lacking a sufficient domestic market for the finished goods using these raw materials, manufacturing operations in Canada consisted mainly of primary processing operations producing for export markets. Gradually, however, a growing population with greater purchasing power, concentrated in urban areas, created conditions favourable to the development of secondary manufacturing in Canada.

## 1.-Summary Statistics of Secondary Manufacturing in Canada, 1925-60

| Year | Estab- lish- ments | Employees | Total Salaries and Wages | Cost of Fuel and Electricity Purchased | Cost at Plant of Materials Used | Value of Net Production | Value of Gross Production |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Secondary manufacturing $\dagger$ consists mainly of those industrial activities which transform the products of the primary processing industries into intermediate and final consumer products. Secondary manufacturing in Canada, so defined, has expanded rapidly since the mid-1920's. Comparing averages for the periods 1925-29 and 1956-60, the value of goods produced increased more than seven times, employment more than two and a half times, wages and salaries eight times, imports and exports each about six times, and the domestic market about seven times. In addition, the industrial composition of secondary manufacturing has changed significantly. Industries producing consumer semidurable goods, such as rubber and leather products, have generally become less important in secondary manufacturing. On the other hand, industries producing capital goods, construction goods and supporting intermediate goods have become substantially more

[^181]important. Associated with this structural change is the greater sophistication of Canadian secondary manufacturing, turning out many highly complex and advanced products such as electronic computers, thermal turbines and generators, diesel engines and reaperthresher combines. The structural changes in secondary manufacturing reflect the changing pattern of demand in the Canadian economy. A larger proportion of consumer expenditures is directed toward durable goods such as automobiles and appliances and a lesser proportion toward semi-durables, while capital expenditures for buildings and equipment have accounted for an increasing percentage of national income. Moreover, the remarkable technological developments in such areas as electronics and organic chemistry have also substantially influenced the growth of Canadian secondary manufacturing.

In relation to total Canadian economic activity, secondary manufacturing in Canada has grown in importance. From 1956 to 1960 this sector employed an average of 16 p.c. of the employed civilian labour force and produced almost 19 p.c. of the value of gross national production, compared with 10 p.c. and 15 p.c., respectively, for the period 1925-29. In terms of production and employment, secondary manufacturing in Canada has grown even more rapidly than that in the United States. However, despite its less rapid rate of growth, secondary manufacturing in the United States continues to be more significant to the national economy than its Canadian counterpart, accounting in 1960 for 21 p.c. of the labour force and 26 p.c. of gross national production. This difference signifies not so much that secondary manufacturing in Canada is less mature, as the presence of a number of adverse factors inherent to the Canadian economy. Perhaps the most outstanding of these is the relatively small size of the domestic market. This has limited the extent to which Canadian manufacturers could reduce costs by employing mass production techniques. In a small market, too, the production of a wide range of items is not warranted and, as a result, a substantial share of the domestic market accrues to foreign producers. In addition, production costs in Canadian secondary manufacturing have, in many lines, tended to be higher than those of foreign competitors, so that exports account for only a small portion of its total output. Thus, secondary manufacturing in Canada is oriented mainly toward the domestic market. Despite these disadvantages, it is apparent from the development of Canadian secondary manufacturing during the past three or four decades that Canada's stature as an industrial nation has been considerably enhanced.

Production.-From 1925 to 1929 secondary manufacturing in Canada, comprising an average of 8,935 establishments and employing 383,000 people, produced goods valued at $\$ 1,490,000,000$. After a sharp decline in the early 1930 's, a strong upward trend developed with the industry averaging, over the $1956-60$ period, 20,602 establishments and 928,000 employees, and turning out goods valued at $\$ 13,200,000,000$. The value of net production, i.e., the value of all goods produced minus the cost of raw materials and fuel and electricity, averaged $\$ 885,000,000$ over the years $1925-29$ and increased to $\$ 6,230,000,000$ in 1956-60. This was a more rapid rate of growth than that shown for the economy as a whole as measured by gross national production. In relation to the gross national product, secondary manufacturing increased its relative position, although there has been a decline since 1950. The value of net production of secondary manufacturing accounted for an average of 18.9 p.c. of the gross national product during 1956-60 compared with 15.5 p.c. for $1925-$ 29; the proportion in 1950 was 20.5 p.c. The relative decline since 1950 is not surprising because, as a nation develops economically, a stage is reached where a growing proportion of national expenditures is allocated to services rather than to goods. It would seem that the Canadian economy attained that particular phase of economic development during the early 1950 's.

The growth of secondary manufacturing has been marked by significant changes in the importance of individual industries. The impact of the growth of the Canadian market, technological advancement, shifts in the allocation of consumer expenditures, the rapid expansion of capital expenditures and import competition has affected some industries more than others. The value of gross production of the textile, the knitting and hosiery and the clothing industries, as a proportion of total secondary manufacturing, dropped from
an average of 22.3 p.c. during the years $1925-29$ to 13.6 p.c. in 1959 . The percentage accounted for by the leather products and the rubber products industries declined from 8.9 p.c. to 4.3 p.c. over the same period. On the other hand, the greatest relative growth was realized by the chemical, the electrical apparatus and the transportation equipment industries, whose combined share rose from a little more than 25 p.c. during the 1925-29 period to about 33 p.c. in 1959. The share represented by the non-ferrous metal products industry and the non-metallic mineral products industry rose from 5.5 p.c. to 7.7 p.c., and that by the iron and steel industry from 19.2 p.c. to 23.9 p.c. The secondary manufacturing activities related to wood and paper, including printing and publishing, retained their relative position, accounting for one seventh or about 14 p.c. of total secondary manufacturing in both 1925-29 and 1959. In general, the industries producing consumer semi-durables have declined in relative terms while those turning out consumer durables, capital equipment and construction goods have increased their contribution to over-all output.

Foreign Trade. -Imports and exports of commodities produced by secondary manufacturing have risen more than sevenfold during the past thirty-five years, the former from $\$ 632,000,000$ to $\$ 4,690,000,000$ and the latter from $\$ 154,000,000$ to $\$ 1,100,000,000$. Imports of secondary manufactures have consistently exceeded exports, so that Canada's foreign trade in these commodities has resulted in a deficit. This imbalance has increased from an average of $\$ 478,000,000$ during the $1926-29$ period to $\$ 3,560,000,000$ in 1962 .
2.-Foreign Trade in Goods Produced by Secondary Manufacturing, 1926-62

Imports of secondary manufactured goods have accounted for a growing proportion of total Canadian imports. Over the $1926-29$ period this proportion averaged 54.8 p.c., but dropped to an average of 51.7 p.c. during $1935-38$ as a result of the additional protection granted domestic secondary manufacturing during the depression years. However, it rose thereafter, reaching 61.7 p.c. in 1946 and 74.9 p.c. in 1962. Thus imports of goods produced by secondary manufacturing currently represent three quarters of all of Canada's imports.

In value terms, iron and steel products are the largest group of secondary manufactured imports, comprising 32.8 p.c. of the 1962 total. Imports of transportation equipment accounted for 17.3 p.c., rubber, leather and miscellaneous products for 16.7 p.c., textiles and clothing for 8.2 p.c., electrical apparatus 7.9 p.c., non-ferrous metal and non-metallic mineral products 5.6 p.c., and wood and paper products 4.3 p.c. Import groups that
have increased in relative as well as absolute terms since 1926 include transportation equipment, which rose from an average of 12.6 p.c. for $1926-29$ to 17.3 p.c. in 1962, electrical apparatus from 4.2 p.c. to 7.9 p.c. and rubber, leather and other miscellaneous commodities from 11.3 p.c. to 16.5 p.c. Imports of textiles and clothing have shown the greatest stability of any group over the 1926-62 period, and have become much less significant in relative terms, their proportion of the total declining from an average of 22.9 p.c. in the 1926-29 period to only 8.2 p.c. in 1962.

Exports of commodities produced by secondary manufacturing have become more important than in 1926 , rising from an average of $\$ 154,000,000$ or 12.5 p.c. of all exports in $1926-29$ to $\$ 1,120,000,000$ or 18.2 p.c. of the total in 1962 . This growth has been accompanied by substantial changes in composition. In 1926-29, exports of transportation equipment accounted for 25.2 p.c. of the total compared with 9.8 p.c. in 1960 , while the share of rubber, leather and miscellaneous commodities has fallen from 30.3 p.c. to 7.3 p.c. Groups gaining in relative importance over the period include iron and steel products which rose from 22.6 p.c. of the $1926-29$ total to 43.3 p.c. of the 1962 total, chemicals and allied products from 8.4 p.c. to 20.9 p.c., electrical apparatus from 2.4 p.c. to 5.6 p.c., and non-ferrous metal and non-metallic mineral products from 4.1 p.c. to 6.4 p.c.

Despite the rapid growth and development of domestic secondary manufacturing, Canadian imports have continued to be mainly products of secondary manufacturers and exports mainly raw materials and commodities produced by primary processing industries. Nevertheless, it is significant that since 1926, and especially during the past three years, secondary manufacturing in Canada has contributed an increasing proportion to Canadian exports.

The Domestic Market.-The domestic market for goods produced by secondary manufacturing has expanded rapidly and Canadian secondary manufacturing has become more dependent for its growth on this market. The growth of the domestic market has been the result of an expanding population with larger incomes and a propensity for spending an increasing proportion of its income on durables. In addition, the growth in the proportion of the national income expended on capital investment has meant increased demands for construction goods and capital equipment. Consequently, the domestic market for consumer durables, construction goods, and capital equipment has risen more rapidly than has the demand for consumer semi-durables.

The domestic market for secondary manufactures increased from an average of $\$ 2,300,000,000$ in the $1925-29$ period to $\$ 16,000,000,000$ in 1960 . Of this growing market, Canadian secondary manufacturing held a larger share in the postwar years than in 192629, despite the great expansion in imports. On the other hand, while exports of secondary manufactures have become a more significant part of total Canadian exports, their share of total output has actually declined. Over the years 1926-29, an average of 27.7 p.c. of the domestic market for secondary manufactures was supplied by foreign producers. This proportion dropped to an average of 19.0 p.c. during the period $1935-38$, because of the low level of investment and the higher level of tariff protection that resulted from the Imperial Economic Conference of 1932. By 1947 the proportion of the Canadian market accruing to foreign producers had again risen to 25.1 p.c., and this level was generally maintained during the postwar period, with the exception of 1948 and 1949 when foreign exchange controls restrained imports. The domestic market took 93.9 p.c. of the output of Canadian secondary manufacturing in 1960 compared with an average of 91.5 p.c. in the 1926-29 period. Exports by secondary manufacturing declined over this period from an average of 8.5 p.c. of total output to 6.1 p.c. In summary, secondary manufacturing has become more and more oriented toward the domestic market.

The share of the domestic market for secondary manufactures obtained by foreign producers rose most significantly for rubber and leather products and for clothing and textiles. On the other hand, the wood products industry, the paper products industry
and the non-metallic mineral products industry-resource-based secondary industrieswere successful in reducing import competition. In respect to foreign markets, each secondary manufacturing industry, except the chemicals and allied products industry and the iron and steel products industry, has exported a declining proportion of its total output and has consequently become more dependent on domestic sales. This trend was most marked for the transportation industry, which exported an average of 13.6 p.c. of its value of production in the $1926-29$ period and only 3.7 p.c. of its 1959 output, the knitting industry where exports fell from 5.6 p.c. to 0.1 p.c., and the rubber products industry which exported 31.4 p.c. in 1926-29 and 3.3 p.c. in 1959.

In the more recent years the incidence of imports on the domestic market has been greatest for iron and steel products, with Canadian manufacturers supplying 60 p.c. to 65 p.c. and foreign producers the remainder. For chemicals and allied products, transportation equipment, electrical apparatus and supplies, non-metallic mineral products, textiles and non-ferrous metal products, Canadian manufacturers have been supplying about 75 p.c. to 80 p.c. of the domestic market, and for the remaining secondary manufactured commodities 90 p.c. or more. With regard to producing for export markets, the chemicals and allied products industry ranks first among the other secondary industries, shipping 13 p.c. of its output abroad; the iron and steel products industry ranks second with 10 p.c. of output going to export markets. The other secondary manufacturing industries produce almost their entire output for the domestic market. Thus, neither the net replacement of imports, encouraging though this has been, nor production for foreign markets has contributed significantly to the development and growth of secondary manufacturing in Canada which, since 1925, has been attributable almost entirely to the expansion of the domestic market.

Employment and Earnings.-Employment in secondary manufacturing has expanded more than two and a half times from an annual average of 383,000,000 for 1925-29 to $928,000,000$ in 1956-60. Such manufacturing has comprised a growing segment of the Canadian labour market, and today accounts for about one sixth of the total employed civilian labour force, compared with one tenth in 1925-29. During the early 1950's, employment in secondary manufacturing reached a peak of 18 p.c. of total employment, and has since declined somewhat in relative terms. As stated previously, the rise and fall in the relative importance of secondary manufacturing in the Canadian economy are phenomena associated with the process of economic growth and in part indicate that Canadian economic development has reached the stage where an increasing proportion of available resources is directed to the service-producing sector rather than to the goodsproducing sector.

In terms of employment, the significance of the individual secondary industries has changed substantially. The durable goods producing industries, particularly the electrical apparatus and supplies, the iron and steel products, and the non-metallic mineral products industries, have become much more important as sources of employment, while the industries manufacturing semi-durables, notably the rubber, leather and textile products industries, have receded in importance. At present, the iron and steel products industry is the largest employer in secondary manufacturing, accounting for more than 20 p.c. of the total for this sector, and is followed by the transportation equipment industry which provides around 14 p.c. of the job total. Industries with 10 p.c. to 15 p.c. of total employment in secondary manufacturing are, in order of relative importance, the clothing industry, the electrical apparatus and supplies industry, the publishing and printing industry, the textiles industry and the chemical and allied products industry. Employment in each of the remaining industries ranges from 2 p.c. to 5 p.c. of the total.

Wages and salaries paid out by secondary manufacturing have increased about eightfold during the past thirty-five years, from an average of $\$ 452,000,000$ during 1925-29 to $\$ 3,600,000,000$ in 1960 . Average annual earnings per employee more than tripled during that period, rising from $\$ 1,179$ to $\$ 3,916$, and have been consistently greater than average
earnings in all manufacturing, although the difference has been small. At present, average earnings range from about $\$ 2,500$ in the knitting and hosiery industry to $\$ 4,700$ in the transportation equipment industry, which is a wider range than in 1925. Throughout the period under study, the growth industries have had average earnings exceeding those for secondary manufacturing as a whole, while those in the declining industries have tended to be below the industry average.

The salaries and wages paid out by secondary manufacturing amounted to an average 51 p.c. of the value of net production from 1925 to 1929 but by 1946, with most of the increase having occurred during the prewar years, the proportion had risen to 56 p.c. During the postwar years it dropped initially to 52.2 p.c. in 1950 and has subsequently fluctuated between 54 p.c. and 55 p.c. By comparison, United States salaries and wages in secondary manufacturing increased from 51.7 p.c. of net production in 1925 to 58.2 p.c. in 1960. The secondary industries in Canada with the highest relative labour cost in 1960 were the leather products industry, 64.0 p.c., the wood products industry, 62.8 p.c., and the clothing industry, 62.0 p.c. The Canadian industries in secondary manufacturing with the lowest labour costs in relation to the net value of production were the chemicals and allied products industry, 35.5 p.c., and the rubber products industry, 46.2 p.c. The most rapid advances in wages and salaries relative to net production have occurred in the rubber products industry, from an average of 37.4 p.c. in 1925-29 to 46.2 p.c. in 1959, and in the electrical apparatus industry, from 44.5 p.c. to 56.0 p.c. Only the transportation equipment industry has shown a reduction in its labour cost relative to net production, from 65.4 p.c. to 58.2 p.c., although a substantial increase has occurred since 1950 at which time the percentage was 52.4 . Thus, over the past thirty-five years or so, labour's share of net production in secondary manufacturing has grown both in the sector as a whole and in most individual industries.

The volume of net production per man-year in Canadian secondary manufacturing was almost 50 p.c. higher in the period 1956-59 than in 1925-38. Technological progress, requiring more complex machinery and equipment and people with greater technical skills, was the most influential factor contributing to the greater annual real output per employee. Production per man-hour in volume terms, making allowance for an approximate $15-$ p.c. reduction in annual man-hours, was almost 63 p.c. greater in 1956-59 than in 1935-38. Performances by individual secondary industries in this regard varied widely. The paper products, the non-metallic mineral products and the chemical industries showed the greatest gains in net production per man-year, with increases of 99.4 p.c., 99.2 p.c. and 96.5 p.c., respectively. The smallest gains were 9.7 p.c. for the clothing industry and 11.2 p.c. for the wood products industry. Between these two extremes were the rubber products industry with an increase of 52.1 p.c. in the volume of net production per man-year, the leather products industry 28.5 p.c., the textiles industry 56.7 p.c., the knitting and hosiery industry 86.7 p.c., the printing and publishing industry 28.0 p.c., the iron and steel products industry 41.2 p.c., the transportation equipment industry 32.5 p.c., the nonferrous metal products industry 47.0 p.c., and the electrical apparatus industry 61.6 p.c.

In summary, Canadian secondary manufacturing has provided employment for an increasing number of people, and these workers have produced more and have earned more than ever before in history. Thus, secondary manufacturing has been able to make a greater contribution to Canada's economic growth and the rising living standards of its people.

Capital Expenditures.-The growth of secondary manufacturing in Canada could not have been realized without a simultaneous expansion of production capacity, by both the addition of new facilities and the modernizing of old ones. Over the 1948-62 period, capital expenditures in secondary manufacturing totalled $\$ 6,760,000,000$ and rose from an annual average of $\$ 318,000,000$ in 1948-52 to $\$ 534,000,000$ in 1958-62.
3.-Capital Expenditures in Secondary Manufacturing, 1948-62

| Year | Amount | Year | Amount |
| :---: | :---: | :---: | :---: |
|  | \$'000 |  | \$'000 |
| 1948. | 251,778 | 1956. | 585,042 |
| 1949. | 250,232 | 1957. | 657,488 |
| 1950. | 216,427 | 1958. | 471,518 |
| 1951. | 376,584 | 1959. | 540,307 |
| 1952. | 494,852 502,435 | 1960. | 574,020 |
| 1954. | 370,639 | 1961. | 518,394 |
| 1955. | 381,217 | 1962. | 567,140 |

The importance of the individual secondary industries as areas for investment has changed substantially during this fifteen-year period. Investment in the iron and steel products industry rose from an average of $\$ 77,000,000$, or 24.3 p.c. of the $1948-52$ total, to $\$ 159,000,000$, or 29.7 p.c. of the $1958-62$ aggregate. The chemicals and allied products industry, which accounted for an average of 17.3 p.c. in 1958-62, also attracted a growing proportion of the total investment in secondary manufacturing. Capital expenditures in the textile and clothing industries declined absolutely as well as relatively from an average of $\$ 46,000,000$ or 14.4 p.c. in $1948-52$ to $\$ 39,000,000$ or 7.4 p.c. in $1958-62$. The electrical apparatus industry and the transportation equipment industry also declined as areas for investment over this period. Capital expenditures in the rubber and leather products industries, the wood and paper products industries, the non-ferrous metal products and the non-metallic mineral products industries remained unchanged in relation to total investment in secondary manufacturing. The available data also indicate that a declining proportion of total Canadian capital expenditures is being devoted to secondary manufacturing. This trend appears to have developed after 1952 , when 9.0 p.c. of that year's total investment was allocated to secondary manufacturing compared with 6.5 p.c. in 1962. This decline reflects the growing emphasis being placed on service facilities.

During the past thirty-five years the Canadian economy has become more industrialized. This is evident in the relative as well as the absolute growth of Canadian secondary manufacturing. The most important factor contributing to the development of Canadian secondary manufacturing since 1925 has been the rapidly expanding domestic market. Import replacement and production for export accounted for only a small portion of the progress achieved in this sector. For the future, Canadian secondary manufacturing can be expected to continue to expand at a rate at least in line with the growth of the domestic market. An even more rapid growth rate can be anticipated in the event of a substantial net replacement of imports and a higher level of production for export.

## The Manufacturing Situation in 1961

The recovery in manufacturing production that took place during 1959 and was maintained more or less in 1960 was followed by a year of increased activity. In 1961, the value of factory shipments amounted to $\$ 24,243,294,949$ and the value added by manufacture to $\$ 10,682,137,680$, both the highest on record. Salaries and wages paid, at $\$ 5,231,446,969$, were slighty higher than in 1960 and were also the highest on record. The index of the physical volume of production stood at 153.0, 2.5 p.c. higher than in 1960 and 2.1 p.c. above the previous high attained in 1959 . Despite the increase in volume of production, the number of employees, at $1,265,302$, was a little lower than in 1960, following the trend in recent years for the same volume of goods to be produced with fewer employees. In the 1949-61 period, the volume of manufactures produced increased by 53 p.c. and the number of persons employed by only 8 p.c. The higher salaries and wages paid in 1961 reflected the continuing advance in earnings, a trend common to all sectors of the economy.

It should be noted also that the addition of about 368,000 persons to the population in 1961 supplemented labour income and had a stimulating influence on the output of the consumer goods industries.

Of tremendous importance in sustaining the level of production in 1961 was the continued high spending on capital goods. Although the total investment in capital goods, amounting to $\$ 8,172,000,000$, was $\$ 90,000,000$ lower than the total for 1960 , the $\$ 5,518,000,000$ spent for construction was $\$ 65,000,000$ higher. Thus the decrease in the total was more than accounted for by the decrease in the portion spent for machinery and equipment which, at $\$ 2,654,000,000$, was down by $\$ 155,000,000$ compared with 1960 . The high level of construction activity and an increase in exports of timber and lumber was reflected in increases of 4.4 p.c. in the volume of output of the non-metallic mineral products group and of 2.6 p.c. in the volume of output of the wood industries group.

Export demand for Canadian manufactured products was also a strong factor in stimulating production in 1961. Exports of fabricated materials advanced from $\$ 2,874,300,000$ in 1960 to $\$ 2,916,400,000$, an increase of 1.5 p.c., and substantial improvements were shown in the amounts of timber and lumber, wood pulp, newsprint, whisky, nickel, fertilizers, aircraft, lead and lead products, non-farm machinery and synthetic plastics going abroad. At the same time declines occurred in such major export items as shingles, veneer and plywood, wheat flour, farm implements and machinery, aluminum and its products, copper and its products, zinc, automobiles and parts, artificial abrasives, synthetic rubber and plastics and uranium ores and concentrates.

As already mentioned, the index of the physical volume of production for manufacturing as a whole reached an all-time high of 153.0 in 1961. During 1960 and 1961 the volume of non-durable or consumer goods produced increased 3.4 p.c. and the volume of durable goods advanced 1.4 p.c. Since the end of World War II, production of the nondurable goods industries experienced an almost uninterrupted expansion but recorded an increase in volume of only 54 p.c. between 1946 and 1956, while durable goods increased 92 p.c. in the same period. The gap between the two sectors was narrowed in the years 1957-61, so that for the whole period 1946-61 durable goods expanded 86 p.e. and nondurable goods 75 p.c.

All industries producing non-durable goods, with the exception of the clothing and knitting mills group, reported increased volume in 1961. The miscellaneous industries group increased by 11.2 p.c., followed by leather products with an increase of 10.7 p.c., textiles 9.9 p.c., tobacco and tobacco products 6.4 p.c., paper products 3.4 p.c., products of petroleum and coal 3.3 p.c., foods 2.8 p.c., beverages 2.1 p.c., rubber and rubber products 1.7 p.c., printing, publishing and allied industries 1.1 p.c. and chemicals and allied products 1.1 p.c. Volume output of clothing factories and knitting mills declined 0.7 p.c. The significant feature was the upsurge in the output of leather products and textiles. These two groups, which had been operating for some years at comparatively low levels, materially bettered their positions during 1961. The clothing and knitting industries, however, still had the smallest increase in volume since 1949 in both the non-durable and durable goods sectors.

In the durable goods sector the trend in 1961 was mixed; four groups increased and two declined. The non-metallic mineral products group reported the highest increase of 4.4 p.c., followed by wood products with 2.6 p.c., iron and steel products 1.5 p.c. and electrical apparatus and supplies 1.3 p.c. The output of non-ferrous metal products dropped 0.5 p.c. and transportation equipment 0.2 p.c.

The level of manufacturing activity in 1961, as measured by the number of persons employed, was lower in all provinces except Newfoundland and New Brunswick; these provinces recorded increases of 6.1 p.c. and 1.2 p.c., respectively. The greatest loss in employment was suffered by Nova Scotia with a drop of 4.8 p.c. This was followed by Saskatchewan with a decrease of 3.9 p.c., British Columbia 2.3 p.c., Alberta and Quebec 1.8 p.c., Manitoba 1.6 p.c., Ontario 1.2 p.c. and Prince Edward Island 0.3 p.c. Perhaps the most outstanding feature was the reversal in the trend of manufacturing employment in Saskatchewan which, after three successive years of increases, reported the second largest decline.

## PART II.-STATISTICS OF MANUFACTURING

## Section 1.-Growth of Manufacturing

It is impossible to give absolutely comparable statistics of manufacturing over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, though numerous changes have since been made in the information collected and in the treatment of the data, an effort has been made to carry all major revisions back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

The Bureau of Statistics in 1952 changed its policy with regard to the collection of statistics on the production of manufactured goods. Firms in several industries where year-end inventory changes were known to be insignificant were requested to report value of shipments f.o.b. plant instead of gross value of products. The changeover was made in order to ease the burden of reporting for the majority of manufacturing establishments. The value of shipments concept for small and medium sized establishments is more realistic and more readily obtainable from their accounting records. From 1957 on, the figures are based on the revised Standard Industrial Classification, as explained on p. 651 .

Because of a change in the definition of the reporting unit (establishment) in the 1961 Census of Manufactures, the statistics for 1961 are not directly comparable with those of previous years. On the revised basis, the total value of shipments in 1960 was $\$ 23,279,804,128$, lower by $\$ 467,652,955$ than the 1960 figure compiled on the old basis. Revisions back to 1957 will be published in the 1961 reports of the Industry Division of DBS and will appear in the next issue of the Year Book.

## 1.-Summary Statistics of Manufactures, 1917-61

Note.-Figures for alternate years from 1918 to 1940 are given in the 1962 Year Book, p. 616. Statistics of manufacturing from 1870 have been published but between that year and 1917 figures are not on a basis comparable to the series given below; statistics for significant years appear in the 1943-44 Year Book, p. 363 . Figures of the non-ferrous metal smelting industries were first included with manufactures in 1925.

| Year | Estab-lishments | Employees | Salaries and Wages | Cost at Plant of Materials Used | Value Added by Manufacture ${ }^{1}$ | Gross Value of Products ${ }^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | \$ | \$ | \$ | \$ |
| 1917. | 21,845 | 606,523 | 497, 801, 844 | 1,539,678,811 | 1,281,131,980 | 2,820,810,791 |

Based on Revised Standard Industrial Classifications

| 1957 | 36,578 | 1,355,313 | 4,809,218,401 | 11,846, 064,933 | 9,702,351,523 | 22,090,916,094 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1958 | 35,501 | 1,286,758 | 4,796, 102,682 | 11,770, 562,428 | 9, 857,742,613 | 22,064, 460,808 |
| 1959 | 35,075 | 1,300,765 | 5,062,744,615 | 12,496, 864,441 | 10,306, 282, 267 | 23, 204, 208, 671 |
| $1960{ }^{6}$ | 36,682 | 1,294,629 | 5, 207, 167, 393 | 12,705, 070, 820 | 10,533, 208, 994 | 23,747, 457,083 |
| $1961{ }^{7}$. | 32,415 | 1,265,032 | 5,231,446,969 | 13,127,707, 976 | 10,682,137,680 | 24, $243,294,949$ |

${ }^{1}$ For 1924-51, inclusive, the value added by manufacture is computed by subtracting cost of fuel, electricity and materials from gross value of products; for 1952 and 1953 the deduction is made from value of factory shipments and for 1954 and subsequent years from the calculated value of production. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available. ${ }_{2}$ In 1952 gross value of products was replaced by selling value of factory shipments; see text immediately preceding this table.
${ }^{3} \mathrm{~A}$ change in the method of computing the number of employees in the years 1925 to 1930 , inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. $\quad{ }^{4}$ Newfoundland is included from 1949 but figures for the fish processing industry for 1949 and 1950 are not available for that province and are not included. ${ }_{5}$ See text on p. 651.
${ }^{6}$ Includes two industries not covered in previous years; poultry processors in the food and beverage group and dental laboratories in the miscellaneous industries group. ${ }^{7}$ Notstrictly comparable with previous years; see third paragraph, p. 645.

## 2.-Summary Statistics of Manufactures, by Province, 195\%-61

Note.-Based on the revised Standard Industrial Classification and not comparable with statistics for significant years back to 1917 published in previous editions of the Year Book. See text on p. 645.

## p. 645 .

${ }^{2}$ Not strictly comparable with previous years; see third paragraph,
The figures in Table 3 trace the tendencies in manufacturing industries as clearly as possible from 1917 to 1961 . In analysing statistics of production and materials used, price changes should be borne in mind, particularly the inflation of values in the years immediately following World War I, the drop in prices of commodities during the depressions following 1921 and 1930, and the increases again in World War II and the postwar period.

[^184]Value and Volume of Manufactured Production.-In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind. In recent years, owing to great changes in prices, unadjusted value series used in
isolation have become increasingly inadequate as indicators of economic trends. Consequently, interest has shifted to measures of volume. The range of prices since 1917, on the base period 1935-39 $=100$, was as follows:-

| Year | General Wholesale Price Index | Price Index <br> of Fully and Chiefly <br> Manufactured Products | Year | General <br> Wholesale Price Index | Price Index of Fully and Chiefly <br> Manufactured Products |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1917....... | 148.9 | 150.9 | 1949. | 198.3 | 199.2 |
| 1920.. | 203.2 | 208.2 | 1953. | 220.7 | 228.8 |
| 1929. | 124.6 | 123.7 | 1957. | 227.4 | 237.9 |
| 1933. | 87.4 | 93.3 | 1958. | 227.8 | 238.3 |
| 1939. | 99.2 | 101.9 | 1959. | 230.6 | 241.6 |
| 1944. | 130.6 | 129.1 | 1960. | 230.9 | 242.2 |
| 1946. | 138.9 | 138.0 | 1961. | 233.3 | 244.5 |

Real income is ultimately measured in goods and services so that the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services and not whether they are expending more dollars and cents.

The Dominion Bureau of Statistics has published an index of industrial production* since 1926, which through the years has been subjected to several major revisions. The latest reconstruction was made possible by the availability of a great deal of basic data. Annual statistics valuable for this project have been collected by the Bureau from the end of World War I to the present and the scope of the monthly information has been greatly expanded. Applying methods developed through the experience of the past quartercentury, it has been possible to compute an index with a fair measure of accuracy from 1935 to the present.

The manufacturing sector is divided at the major group level into durable manufactures and non-durable manufactures. The movement of durable goods normally varies from that of non-durables; there tends to be greater fluctuation in durables from prosperity to depression and the demand for non-durables is more constant.

Table 4 shows the fluctuations in the volume indexes of durable, non-durable and total manufactured goods produced during the years 1946-60, and Tables 5 and 6 show the fluctuations in the groups comprised within the durable and non-durable classifications during the same period.

## Section 2.-Manufactured Production Variously Classified

Beginning with the publication of 1960 statistics of manufacturing, industries and groups of industries follow the revised Standard Industrial Classification,* which has been established to take into account the changes in the structure of Canadian industry that have occurred during the past decade. In the past, commodity terms have been used in describing industries, so that the tables in previous editions of the Year Book (and in certain tables of this volume which have not yet been brought into line) contain industry titles such as pulp and paper, petroleum products, aircraft and parts, etc. In revising the Standard Industrial Classification, it was considered advisable to assign to each industry its most descriptive title, a title to be used whenever the industry was mentioned. Some industries are associated with particular processes (such as knitting mills and foundries) and others have traditional titles (such as machine shops and commercial printing). Some are best described in terms of the principal commodities they produce and it is necessary to distinguish these manufacturing industries from industries engaged in wholesale trade or retail trade in the same commodities. Therefore, many new titles of manufacturing industries contain such terms as "manufacturers", "industry", "plants", "mills" and "factories". These terms are applied, as far as possible, according to the usage in the industries concerned because it was felt that this terminology would be widely understood and clarity is more desirable than consistency in industry"titles.

## Subsection 1.-Manufactures classified by Industrial Groups and Individual Industries

The tables of this Subsection give detailed statistics showing the trends of production by industrial groups and individual industries. Table 7 gives summary statistics for the industrial groups for the period 1957-61; the figures for 1961 are not strictly comparable with those of the previous years because of a change in the definition of "establishment" (see also p. 645). Table 8 contains details of establishments, employment and output for the individual industries within the major groups for 1961; Table 9 lists the forty leading industries in 1961, ranked according to selling value of factory shipments; and Table 10 gives quantities and values of principal commodities produced in 1960-figures for 1961 were not available at the time of going to press.

[^186]
## 7.-Summary Statistics of Manufactures, by Industrial Group, 195\%-61

Note.-Based on the revised Standard Industrial Classification; see text on p. 651.

## Subsection 2.-Manufactures classified by Origin of Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials. Figures for 1960 were the latest available for this classification at the time of going to press.

## 11.-Principal Statistics of Manufacturing Industries classified according to Origin of Materials Used, by Main Group, 1960

| Origin of Materials Used | Estab-lishments | $\underset{\text { ployees }}{\text { Em- }}$ | Salaries and Wages | Cost at Plant of Materials Used | Value <br> Added by Manufacture | Selling Value of Factory Shipments |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Subsection 3.-Manufactures classified by Type of Ownership

Figures showing the classification of the type of ownership under which Canadian manufacturers operate are available from 1946. Although the first survey did not include the fish curing and packing industry, its inclusion in subsequent years has not materially altered the percentage distribution of individual ownership, incorporated companies, etc.

As is to be expected, the smaller establishments, regardless of the type of products manufactured, are carried on mainly under individual ownership or partnerships. Industries conducted on a small scale usually contain a large number of establishments in these categories, the percentage decreasing as the scale of operation increases, as shown for 1960 in Table 12.
12.-Percentage Distribution of Manufacturing Establishments, Employees and Shipments, by Type of Ownership and Size of Establishment, 1960

| Item and Type of Ownership | Under $\$ 25,000$ | $\begin{gathered} \$ 25,000 \text { to } \\ \$ 99,999 \end{gathered}$ | $\begin{gathered} \$ 100,000 \text { to } \\ \$ 499,999 \end{gathered}$ | 8500,000 and Over |
| :---: | :---: | :---: | :---: | :---: |
|  | p.c. | p.c. | p.c. | p.c. |
| Establishments- |  |  |  |  |
| Individual ownership. | 73.4 | 43.0 | 10.4 | 0.7 |
| Partnerships.. | 13.8 | 15.3 | 6.5 | 0.9 |
| Incorporated companies | 12.2 | 39.4 | 78.1 | 96.0 |
| Co-operatives. | 0.6 | 2.3 | 5.0 | 2.4 |
| Totals. | 100.0 | 100.0 | 100.0 | 100.0 |
| Employees- |  |  |  |  |
| Individual ownership. | 66.7 | 37.3 | 6.2 | 0.2 |
| Partnerships........... | 15.9 16.7 | 15.1 46.4 | 5.4 8.4 | 0.3 98.7 |
| Co-operatives.......... | 0.7 | 1.2 | 2.0 | 0.8 |
| Totals. | 100.0 | 100.0 | 100.0 | 100.0 |
| Factory Shipments- |  |  |  |  |
| Individual ownership. | 68.7 14.7 | 38.9 14.9 | 7.5 | 0.2 |
| Incorporated companies. | 15.8 | 43.5 | 82.4 | 98.3 |
| Co-operatives........... | 0.8 | 2.7 | 4.8 | 1.2 |
| Totals | 100.0 | 100.0 | 100.0 | 100.0 |

Of the 36,682 establishments operating in 1960, individual ownership numbered 13,840 establishments, partnerships 3,793, incorporated companies 18,148 , and co-operatives 901 . The percentage distribution of the four categories of ownership is given in Table 13 for the years 1951-60 and by province and industrial group for 1960. It is interesting to note that incorporated companies are becoming increasingly important, the percentage of the total number of establishments rising from 36.9 in 1951 to 49.5 in 1960.

## 13.-Percentage Distribution of Manufacturing Establishments classified by Type of

 Ownership, 1951-60, and by Province and Industrial Group, 1960| Year | Individual Ownership | Partnerships | Incorporated Companies | Co-operatives | Total |

| Miscellaneous manufacturing industries | 41.5 | 10.0 | 48.5 | - | 100.0 |

${ }^{1}$ Included with individual ownership. $\quad{ }^{2}$ Included with incorporated companies.
The establishments operating under individual ownership are not as important from the point of view of employment provided as their large numbers would indicate. According to Tables 14 and 15, these establishments, which comprise 37.7 p.c. of the total number, had only 4.1 p.c. of the total employees. Partnerships accounted for 10.3 p.c. of the number of establishments and 2.0 p.c. of the total employees. Incorporated companies with 49.5 p.c. of the number of establishments had 92.9 p.c. of the employees. Co-operatives with 2.5 p.c. of the number had 1 p.c. of the employees.

Thus on the basis of employment provided, incorporated companies are, by a wide margin, the most important factor in the employment field. Such companies had more than 99 p.c. of the employees in the rubber, paper, primary metal, transportation equipment and electrical products groups; over 98 p.c. of the employees in the tobacco products, machinery, and chemicals and chemical products groups; over 97 p.c. in the petroleum and coal products group; 96 p.c. in the textiles and knitting mills groups; and 95 p.c. in the metal fabricating group. The lowest proportion was 80.7 p.c. in the wood group.
14.-Percentage Distribution of Employment in the Manufacturing Industries classified by Type of Ownership, 1951-60, and by Province and Industrial Group, 1960

## Section 3.-Principal Factors in Manufacturing Production

In addition to the factors dealt with in the following Subsections 1 and 2, one of the principal indicators of growth in manufacturing production is the amount paid as salaries and wages to various groups of employees within those industries. The latest information available on employment, earnings and hours worked in manufacturing industries at the time of going to press was that for 1960, summarized in the 1962 Year Book at pp. 722-727.

## Subsection 1.-Capital and Repair Expenditures

The current series of statistics covering expenditures on fixed capital and repairs by manufacturing industries commences with the year 1944. Capital expenditures by manufacturers in 1960 totalled $\$ 334,700,000$ for construction, a figure slightly lower than the $\$ 373,900,000$ so spent in 1959 ; the $\$ 842,700,000$ spent for machinery and equipment in 1960, however, was higher than the comparable expenditure in 1959, resulting in a total of $\$ 1,177,400,000$ as against $\$ 1,143,800,000$ in the previous year. Repair expenditure amounted to $\$ 671,600,000$ in 1960 and $\$ 662,500,000$ in 1959. Of the total capital expenditures in 1960, 16.5 p.c. was reported by primary metal industries, 14.1 p.c. by the paper and allied industries, 12.9 p.c. by foods and beverages and 9.1 p.c. by chemicals and chemical products.
15.-Capital and Repair Expenditures by the Manufacturing Industries, 1951-60, and by Province and Industrial Group, 1960

## Subsection 2.-Size of Manufacturing Establishments

The size of a manufacturing establishment is generally measured either by the value of factory shipments or by the number of employees but each of these methods has its limitations. The former measure has to be adjusted for changes in the price level and, as between industries, it makes those in which the cost of raw materials is relatively high appear to operate on a larger scale. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery may lead to an increase in production concurrently with a decrease in number of employees. Also, in measuring size on the basis of employment, industries with a high capital investment in machinery and equipment are underrated as compared with industries lacking such equipment and consequently employing a relatively larger labour force.

Size as Measured by Selling Value of Factory Shipments.-In 1946, after heavy wartime production had ceased and reconversion had barely begun, there were 1,442 manufacturing establishments, each with an output of $\$ 1,000,000$ or over. Their combined production was valued at $\$ 5,377,870,217$ and accounted for 66.9 p.c. of the total for all manufacturing plants. By 1949, the number of factories in that category had increased to 1,926 and the proportion of their production to the total was 74.4 p.c. As a result of the tremendous industrial expansion and the increase in prices of the 1950's, the number of plants with shipments valued at over $\$ 1,000,000$ increased to 3,498 in 1960 . These plants contributed 81.2 p.c. of the total output in that year.
16.-Manufacturing Establishments and Total and Average Production classified by Value of Product Group, 1949, 1955, 1959 and 1960

${ }^{1}$ In 1952 gross value of products was replaced by selling value of factory shipments. 2 Newfoundland included from 1955.

Size as Measured by Number of Employees.-In 1946, the 311 establishments employing 500 or more persons accounted for 32.3 p.c. of the total number of employees engaged in manufacturing. In 1960 there were 350 plants with more than 500 employees, 55 of them with over 1,500 . The 350 plants employed 31.5 p.c. of the total workers in all manufacturing establishments.
17.-Establishments and Employees in Manufactures classified by Number of Employees per Establishment, 1949, 1955, 1959 and 1960

| Canada. | 36,332 | 182 | 56 | 57 | 55 | 36,682 |

Table 19 summarizes the degree of concentration in some of the leading manufacturing industries of Canada. Concentration is extremely marked in the motor vehicle, smelting and refining, pulp and paper mills, iron and steel mills, and aircraft and parts industries. On the other hand, the degree of concentration is low in such industries as women's clothing factories, printing and publishing, sawmills, miscellaneous foods, pasteurizing plants, bakeries, men's clothing factories, fruit and vegetable canners and preservers.

## 19.-Percentage Importance of Establishments, each Employing $\mathbf{2 0 0}$ or more Persons, in the 25 Leading Industries, 1960

|  | Industry | Number of Establishments Employing Persons | Percentage Establishments Industry | $\begin{gathered} \text { Percentage } \\ \text { of } \\ \text { Total } \\ \text { Shipments } \\ \text { in the } \\ \text { Industry } \end{gathered}$ |

## PART III.-PROVINGIAL AND LOGAL DISTRIBUTION OF MANUFAGTURING PRODUCTION

## Section 1.-Provincial Distribution of Manufacturing Production

This Section shows the distribution and concentration of the manufacturing industries in each province. Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1961 amounted to $\$ 19,284,587,215$ or 79.5 p.c. of the total factory shipments of manufactured products.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. In 1961, Quebec led in the manufacture of tobacco products, leather goods, textiles, knitting mills, clothing and products of petroleum and coal and had a very slight margin over Ontario in output of paper. In each of the other groups, except wood products, Ontario had the greater production of the two provinces. In the production of wood products, British Columbia, with 54 p.c. of the total, held the dominant position, outranking both Quebec and Ontario which accounted for 18 p.c. and 17 p.c., respectively, of the total. In each of the other groups Ontario and Quebec led by a wide margin.

This Section normally carries details of leading industries in each province. However, since there were no later figures available at the time of printing than those given in the 1962 edition, the reader is referred for such data to pp. 652-662 of that issue.

## 1.-Summary Statistics of Manufactures of each Province classified by Industrial Group, 1961

Note.-Based on the revised Standard Industrial Classification (see p. 651) and new establishment concept (see third paragraph, p. 645).

| Province and Industrial Group | Estab-lishments | Employees | Salaries and Wages | Cost at Plant of Materials Used | Value Added by Manufacture | Selling Value of Factory Shipments |

## Section 2.-Manufacturing Industries in Urban Centres

Table 2 indicates the extent to which the manufacturing industries are concentrated in urban centres and shows, by province, the proportion of the selling value of factory shipments contributed by cities and towns having shipments of over $\$ 1,000,000$ each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns accounted for 80 p.c. and 94 p.c., respectively, of the total manufactures of those provinces in 1960 , compared with 82 p.c. and 94 p.c., respectively, in 1959. In the Atlantic Provinces and British Columbia, where sawmilling, fish products and dairying are leading industries, the proportions were 69 p.c. and 47 p.c., respectively in 1960, showing little change compared with the previous year. In the Prairie Provinces, manufacturing is confined largely to a few urban centres. Although there has been some recent tendency to establish new industry
in smaller urban centres, for Canada as a whole the percentage of manufactures accounted for by urban centres having shipments of over $\$ 1,000,000$ was 80.5 in 1955 and 81.1 in 1960.
2.-Urban Centres, Each with Selling Value of Factory Shipments of Over $\mathbf{\$ 1 , 0 0 0 , 0 0 0}$, Number of Establishments and Total Shipments in these Centres as a Percentage of the Provincial Total, by Province, 1960.

## PART IV.-FEDERAL AIDS TO DOMESTIC INDUSTRY

The Department of Industry.-In 1963 legislation was introduced into Parliament to establish the Department of Industry. On July 22, 1963, Royal Assent was given to the Department of Industry Act and, with the proclamation on July 25, 1963, the new Department came into existence. Under the Act, the duties, powers and functions of the Minister of Industry are "to include all matters relating to manufacturing industries in Canada over which the Parliament of Canada has jurisdiction, not by law assigned to any other branch or agency of the Government of Canada". The Department is responsible for promoting the establishment, growth, efficiency and improvement of manufacturing industries in Canada through the development and implementation of programs to assist manufacturers to adjust to changing market conditions, to help them develop new lines of production and enter new markets, and to promote greater industrial research and the utilization of technological advances within Canadian industry.

The Area Development Agency-part of the Department of Industry-is responsible for undertaking research and investigations into the means of increasing employment and income in designated areas, and the development and carrying out of programs to this end. The Agency administers the various Federal Government incentive measures intended to foster the economic growth of the designated areas.

In October 1963, branches of the Domestic Commerce Service of the Department of Trade and Commerce were incorporated into the Department of Industry. The functions of the Industrial Promotion Branch and the Industrial Design Branch were continued as part of the program of the new Department. The functions of the Small Business Branch were absorbed elsewhere and the special capital cost allowance program for new products came to an end on Dec. 31, 1962, eliminating the need for its administration.

Industrial Promotion.-The industrial promotion activities of the Department of Industry are designed to assist manufacturers and processors to expand operations in Canada. In pursuit of this objective, close liaison is maintained with other federal agencies, with provincial, regional and municipal bodies, and with private development agencies and business organizations and associations. Information on production and market
opportunities within the domestic market is made available to Canadian manufacturers; areas of opportunity for industrial expansion are investigated and import surveys undertaken to obtain information about Canadian market possibilities. In addition, businessmen are provided with information on such matters as licensing arrangement, taxation, tariffs, financing and government rules and regulations.

Product Design.-The National Design Branch of the Department of Industry is the administrative arm of the National Design Council. Jointly, the Council and the Branch have formulated a program and initiated various projects to assist Canadian industry in all areas of design and to create throughout the business community and among the general public a greater awareness of the importance of design in the successful making, marketing and, particularly, export of goods. A national design index illustrating and describing products of superior Canadian design is maintained. This index is a reference catalogue for buyers and the general public and is available in Canada and various centres abroad. National and regional exhibitions are held in co-operation with industry to display products from the index. A design centre, as a permanent place of exhibition and reference, will be opened in the winter of 1963-64.

The Branch organizes seminars and workshops where manufacturers and designers may meet to discuss design and its relevance to particular products and industries. Scholarships and grants for institutional and specialized training in design and for research in industrial design are awarded on a competitive basis and are tenable in Canada and abroad. Studies are conducted to ascertain the present and emergent needs of industry in the design field and the facilities, processes and techniques available to the manufacturer. A national register of practising designers and design consultants has been installed by the Branch so that manufacturers seeking assistance in product development and in packaging may receive expert help. A reference centre, a visual aids library and an information service are being established to cover the whole field of industrial design.

The Economic Council of Canada.-This corporation, in course of being established during the autumn of 1963, by Act of Parliament (SC 1963, c. 11) assented to on Aug. 2, 1963, will consist of a full-time chairman and two full-time directors to hold office for a term not exceeding seven years and not more than 25 other members to be appointed by the Governor in Council for a term of three years and to serve without remuneration except for travelling and living expenses.

The duties of the Council are: "to advise and recommend to the Minister" (President of the Queen's Privy Council for Canada) "how Canada can achieve the highest possible levels of employment and efficient production in order that the country may enjoy a high and consistent rate of economic growth and that all Canadians may share in rising living standards; . . . conduct such studies, inquiries and other undertakings as may be necessary with respect [thereto] ., and .. report to, advise or make recommendations to the Minister with respect thereto, as the circumstances require". In addition, the Council is required under its Act to assume the duties of the former National Productivity Council (whose Act, SC 1960-61, c. 4, is thereby repealed) having to do with "promoting and expediting advances in efficiency of production in all sectors of the economy, [particularly] ... the development of improved production and distribution methods, improved management techniques, the maintenance of good human relations in industry, the use of training programs at all levels of industry, and . retraining programs to meet changing manpower requirements, the extension of industrial research programs in plants and industries
, the dissemination of technical information. .".
For appointments to the Economic Council, up to Nov. 15, 1963, see Register of Official Appointments, Chapter XXVI.

# CHAPTER XV.-GAPITAL EXPENDITURES, CONSTRUCTION AND HOUSING*

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

This Chapter provides data on the capital expenditures made by all sectors of the Canadian economy on construction and on machinery and equipment, together with summaries of other available statistics for the construction industry. Section 1 shows the amounts spent by each of the various industrial or economic sectors. Section 2 brings together a number of summaries of related series on construction activity-value of work performed by type of structure, value of materials used, salaries and wages paid and numbers employed, contracts awarded and building permits issued. Government aid to house-building, construction of dwelling units and housing statistics of the 1961 Census are covered in Section 3.

## Section 1.-Capital Expenditures on Construction and on Machinery and Equipment

Capital expenditures $\dagger$ in all sectors of the economy amounted to $\$ 8,738,000,000$ in 1962 , an increase of 6.9 p.c. over the 1961 total of $\$ 8,172,000,000$. The over-all increase resulted from a 9.1-p.c. rise in the purchase of machinery and equipment and a 5.9-p.c. increase in construction expenditures.

Capital outlays in Canada increased each year throughout most of the period after 1946 and reached a peak in 1957. In subsequent years the level of capital spending kept declining slightly until 1962 when it exceeded the previous record of 1957. However, in constant (1957) dollars, the total 1962 capital program was still 7 p.c. below the level of 1957, declines having occurred in volume each year following 1957. A high proportion of Canada's gross national product is still being devoted to the expansion, modernization ${ }^{\circ}$ or renewal of the nation's production facilities, although this proportion has been declining in recent years.

[^196]
## 1.-Capital Expenditures on Construction and on Machinery and Equipment, in Current and Constant (1957) Dollars, 1953-62

Note.-Actual expenditures 1953-61; preliminary actual 1962.

| Year | Capital Expenditures |  |  |  |  |  | Total Expenditure as Percentage of Gross National Product |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1959. | 5,709 | 5,557 | 2,708 | 2,590 | 8,417 | 8,147 | 24.1 r | 24.4 r |
| 1960. | 5,453 | 5,248 | 2,809 | 2,636 | 8,262 | 7,884 | 22.8 r | 23.1 : |
| 1961. | 5,518 | 5,353 | 2,654 | 2,454 | 8,172 | 7,807 | 21.8 | 22.3 |
| 1962. | 5,842 | 5,506 | 2,896 | 2,607 | 8,738 | 8,113 | 21.6 | 21.8 |

Table 2 shows the extent of the emphasis on housing and non-residential construction in 1962 as compared with the two previous years.

## 2.-Capital Expenditures and Percentage Distribution, by Type, 1960-62

Nore.-Actual expenditures 1960 and 1961; preliminary actual 1962.

| Type | Capital Expenditures |  |  | Distribution |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1960 | 1961 | 1962 | 1960 | 1961 | 1962 |
|  | \$'000,000 | \$'000,000 | \$'000,000 | p.c. | p.c. | p.c. |
| Construction. | 5,453 | 5,518 | 5,842 | 66.0 | 67.5 | 66.9 |
| Housing. ${ }^{\text {a }}$. | 1,456 | 1,467 4,051 | 1,587 4,255 | 17.6 48.4 | 17.9 49.6 | 18.2 48.7 |
| Machinery and Equipment | 2,809 | 2,654 | 2,896 | 34.0 | 32.5 | 33.1 |
| Totals. | 8,262 | 8,172 | 8,738 | 109.0 | 100.0 | 100.0 |

In 1962, capital outlays in the mining industry totalled $\$ 478,000,000$, an increase of $\$ 29,000,000$ over the previous year. A considerable increase in outlays in iron mining facilities in the Quebec-Labrador area only partially offset the substantial decline in expenditure on natural gas processing plants as a result of the near completion in 1961 of the capital program associated with the Alberta-California project for the export of gas.

Expenditures on new manufacturing facilities rose to $\$ 1,231,000,000$, the increase of $\$ 146,000,000$ over 1961 being accounted for mainly by increased outlays by the primary metals industry which rose from $\$ 126,500,000$ to $\$ 212,700,000$. Expenditures by the petroleum and coal products industry were also considerably higher but reduction was experienced by the chemical products industry.

Capital expenditures for utilities-including transportation, communication and storage facilities, and public utilities such as gas, water and electricity-declined from $\$ 1,698,000,000$ in 1961 to $\$ 1,632,700,000$ in 1962. This decrease reflects the completion of major oil and gas pipeline projects in Alberta and British Columbia, only partially offset by higher outlays on telephone systems.

The trade sector of the economy-consisting of wholesale and retail firms and automobile service stations owned by Canada's integrated petroleum companies-made capital outlays of $\$ 304,400,000$ in 1962 , slightly less than in the previous year. A substantial decline among wholesale firms was offset by an increase recorded by department stores; the main strength in the latter originated in increased activities in "discount" department stores, a recent development in retail merchandising.

Institutional services-including hospitals, schools, universities, churches and welfare institutions-recorded an advance of $\$ 191,400,000$ in capital outlays in 1962 over the $\$ 616,400,000$ expended in 1961. Most of the increase was spent on additional school facilities, mainly as a result of the large program of technical school construction being assisted by the Federal Government.

Capital outlays by government departments at all levels increased slightly from $\$ 1,247,100,000$ in 1961 to $\$ 1,309,700,000$ in 1962 . Government departments as defined for capital expenditures purposes include that part of government activity (excluding institutions) generally dependent on tax revenue for financial support as opposed to activities directly producing revenues on a service-rendered basis; one of the major activities of government involving expenditures by federal, provincial and municipal governments is
the road, highway and bridge program. Spending by provincial governments reached $\$ 552,200,000$, an increase of $\$ 60,000,000$ over 1961 , and spending by municipal governments increased by $\$ 21,800,000$ to total $\$ 407,200,400$. On the other hand, the Federal Government spent $\$ 19,300,000$ less than the 1961 total of $\$ 369,600,000$, reflecting in part the implementation of the austerity program.

Capital spending in Canada as a whole in 1962 was 6.9 p.c. higher than in 1961 but there was considerable variation in the spending of the different provinces. Newfoundland experienced an increase of 48.4 p.c. as a result of heavier expenditures by iron mining companies in Labrador; Prince Edward Island, Saskatchewan, Ontario and Quebec recorded increases above the national rate at 13.2 p.c., 12.1 p.c., 9.2 p.c. and 7.9 p.c., respectively; in Manitoba, British Columbia and New Brunswick the increases were more modest at 6.0 p.c., 2.6 p.c. and 0.6 p.c.; and Nova Scotia and Alberta showed declines of 2.7 p.c. and 4.3 p.c., respectively.

## 3.-Summary of Capital and Repair Expenditures, by Economic Sector, 1961 and 1962

${ }^{1}$ Estimates for agriculture have been revised on the basis of the 1958 Farm Income and Expenditure Survey and the 1961 Census of Agriculture, and are not comparable with data for years prior to 1961.

Details of some of the above economic sectors are given in Table 4. The value of construction work performed, together with statistics of contracts awarded and building permits issued in recent years, is covered in Section 2 of this Chapter. Housing is treated separately in Section 3.

4.-Capital and Repair Expenditures for Certain Economic Sectors, 1961 and 1962-continued

4.-Capital and Repair Expenditures for Certain Economic Sectors, 1961 and 1962-concluded

A summary of the capital expenditures in each province for the years 1961 and 1962 is given in Table 5. Such expenditures represent gross additions to the capital stocks of the province and are a reflection of economic activity in the area, although the actual production of these assets may generate major employment and income-giving effects in other regions. For example, the spending of millions of dollars on oil refineries and pipelines in Western Canada means activity in the steel industries of Ontario as well as construction activity in the western provinces.

## Section 2.-Construction Statistics

## Subsection 1.-Value of Construction Work Performed

Statistics of the construction industry are based largely on information received at the same time and from the same sources as the data on capital expenditures which appear in Section 1.* The data represent the estimated total value of all new and repair construction performed by contractors; by labour forces of utility, manufacturing, mining and logging firms; and by government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry.

Canada's construction program for 1962 is estimated at $\$ 7,329,000,000$, an increase of 5.1 p.c. over 1961. Repair construction is estimated to be about $\$ 32,000,000$ higher than in 1961, and the value of new construction higher by about $\$ 323,000,000$.
6.-Value of New and Repair Construction Work Performed, 1953-62

Noтe.-Actual expenditures 1953-61; preliminary actual 1962.

| Year | New | Repair | Total | Total Construction as Percentage of Gross National Product |
| :---: | :---: | :---: | :---: | :---: |
|  | \$'000,000 | \$'000,000 | \$'000,000 | p.c. |
| 1953. | 3,756 | 1,070 | 4,826 | 19.3 |
| 1954. | 3,737 | 1,105 | 4,842 | 19.5 |
| 1955. | 4,167 | 1,141 | 5,308 | 19.6 |
| 1956 | 5,272 | 1,182 | 6,454 | 21.1 |
| 1957. | 5,785 | 1,238 | 7,023 | 22.0 |
| 1958.. | 5,831 | 1,261 | 7,092 | 21.6 |
| 1959. | 5,710 | 1,367 | 7,077 | 20.3 |
| 1960 | 5,454 | 1,432 | 6,886 | 19.0 ${ }^{\text {r }}$ |
| 1961 | 5,518 | 1,456 | 6,974 | 18.6 |
| 1962 | 5,841 | 1,488 | 7,329 | 18.1 |

Table 7, which compares contract construction with other construction, shows that contractors account for from 74 p.c. to 77 p.c. of the work performed each year.

Principal statistics of the construction industry are shown by province and for contractors, utilities, governments and others in Table 10. The statistics given for Canada as a whole may be considered as relatively accurate but those for individual provinces and by class of builder are approximations only. All estimates given for cost of materials used are based on ratios of this item to total value of work performed, derived from annual surveys of construction work and applied to the total value-of-work figures. Estimates of labour content are similarly based but, in addition, are adjusted to include working owners and partners and their withdrawals. Although the ratios were calculated in some detail by type of industry, still further refinements are required. There are also some difficulties in obtaining the precise location of projects undertaken or to be undertaken by large companies operating in a number of provinces. However, if used with these qualifications in mind, the table provides useful estimates.

## 10.-Labour Content, Cost of Materials and Value of Work Performed in Construction, by Province and by Employer, 1961 and 1962 with Totals for 1958-62

Noтe.-Actual expenditures 1958-61; preliminary actual 1962. Comparable figures from 1953 are given in the corresponding table of previous Year Books beginning with the 1957-58 edition.

## Subsection 2.-Contracts Awarded and Building Permits Issued

In this Subsection, statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the capital expenditure surveys. Further, values of contracts awarded, and especially of building permits, are estimates (more often under-estimates) of work to be done.

## 11.-Value of Construction Contracts Awarded, 1939-62

(Sovrce: MacLean Building Guide)
Note.-Figures for the years 1926-38 are given in the corresponding table of the 1962 Year Book, p. 682.

Building Permits.-The estimated value of proposed construction is indicated by the value of building permits issued. Figures of building permits issued are collected for more than 1,000 municipalities across the country and are available for the individual municipalities, for metropolitan areas, for provinces and for economic areas in Quebec, Ontario and Manitoba.

During 1962, building permits issued in Canada for construction work exceeded $\$ 2,500,000,000$ in value. This was the highest figure on record and represented an increase of 12.1 p.c. over 1961. New residential construction increased 3.3 p.c., industrial construction 10.1 p.c., commercial construction 7.2 p.c. and institutional and government construction 43.8 p.c. On a regional basis, increases in the total value of building permits were recorded in all the western provinces except Manitoba and in the central provinces of Ontario and Quebec. On the other hand, declines were experienced in all the Atlantic Provinces except Nova Scotia.

Table 13 shows the value of building permits issued in each of 50 municipalities for the years 1961 and 1962.

## 13.-Estimated Value of Proposed Construction as Indicated by Building Permits Issued in 50 Municipalities, 1961 and 1962

Note.-Comparable figures for 1956-60 are given in the 1962 Year Book, p. 684.

| Kitchener | 36,562 | 36,059 | Victoria. | 23,726 | 30,924 |

${ }^{1}$ Although this is a metropolitan area, only St. John's proper is included in the building permits survey.
Table 15 shows the value of building permits, by province, for the years 1961 and 1962 and Table 16 the number of dwelling units covered by building permits in each province for the same years. The relative material was compiled from municipal figures and therefore varies with the terms of individual by-laws, with the methods of estimating the value of local construction and with other factors that may differ from area to area. Information is not available on the permits allowed to lapse without the relative construction being undertaken.
15.-Value of Building Permits Issued, by Province, 1961 and 1962 with Totals for 1958-62

Note.-Comparable figures from 1952 are given in the corresponding table of previous Year Books beginning with the 1957-58 edition.

## 16.-Number of Dwelling Units Covered by Building Permits, by Province, 1961 and 1962 with Totals for 1958-62

| Ontario................. ${ }_{1962}^{1961}$ | 17,826 19,965 | ${ }_{25,136}^{23,145}$ | 45,981 45,101 | 1961 1962 | 36,712 48,111 | 76,894 | 113,606 |
|  |  |  |  |  |  | 7,302 | 121,413 |

The indexes given in Table 17 show as far as possible the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied.

## 17.-Index Numbers of Prices of Building Materials, and Wage Rates and Employment in Construction Industries, 1953-62 <br> (Av. 1949=100)

## Section 3.-Housing*

## Subsection 1.-Government Aid to House-Building

Federal Assistance.-The role of the Federal Government in housing has expanded progressively since the introduction of the first continuing statute in 1935. Although the Government originally entered the housing field in 1918, when it made money available to the provinces for re-lending to municipalities for housing purposes, the first general piece of federal housing legislation was the Dominion Housing Act passed in 1935. This

[^200]was followed by the National Housing Acts of 1938 and 1944, culminating in 1954 with the present National Housing Act, defined as "an Act to promote the construction of new houses, the repair and modernization of existing houses and the improvement of housing and living conditions". Central Mortgage and Housing Corporation, a Crown agency incorporated by Act of Parliament in 1945, administers the National Housing Act and coordinates the activities of the Federal Government in housing. The Corporation has the authority and responsibility for a variety of functions affecting housing in its long-term outlook as well as in its immediate requirements. It is empowered to act as an insurer of mortgage loans, as a lender or investor of public funds, as a guarantor and as an owner of property and other assets. It also acts as a research agency in fields associated with housing and enters into partnership with both provincial and municipal governments to assist in housing. (See also p. 119.)

In general, the Government, through the successive Housing Acts, has attempted to stimulate and supplement the market for housing rather than assume direct responsibilities that rightfully belong to other levels of government or that could be borne more effectively by private enterprise. In each case the aim has been to increase the flow of mortgage money and to encourage lenders to make loans on more favourable terms to prospective owners.

The volume of house-building in Canada since 1935 has been spectacular. Close to half of the country's present stock of more than $4,851,000$ houses have been built since the first covering legislation was enacted; about one third of these were financed in one way or another under the Housing Acts.

The terms of the National Housing Act, 1954 and its subsequent amendments, with the exception of that passed late in 1962, are described in some detail at pp. 688-691 of the 1962 Year Book. The 1962 amendment (SC 1962-63, c. 17) extends the deadline for partial forgiveness of municipal indebtedness in connection with sewage treatment project loans to Mar. 31, 1965. A consolidation of the Act and its amendments to 1960-61 is available from the Queen's Printer (Catalogue No. YX79-221/23, 35 cents).

## Subsection 2.-Housing Activities in 1962

There was a levelling off in the amount of new residential construction undertaken in 1962. The total of 130,095 starts of all types of housing was only slightly above the 1961 total of 125,577 , although it represented a substantial gain over the 108,858 reported in 1960. Construction was maintained at a comparatively high level throughout the year, partly because of a large carryover of houses started but not completed in 1961. The value of residential construction work put in place was $\$ 1,587,000,000$ compared with $\$ 1,467,000,000$ in the previous year.

A shift in the composition of housing starts marked one of the more significant variations in the 1962 housing pattern. There was a considerable gain in rental dwelling starts, rental housing accounting for 41 p.c. of all starts during the year. This trend was not restricted to any one sector. Nearly all metropolitan centres experienced a strong revival in apartment construction. On the other hand, home-owner dwelling starts declined to 77,236 units from 79,477 in 1961.

During 1962, 48,151 units were built with National Housing Act financing, a reduction from the 1961 total of 59,870 , and units financed by funds other than NHA numbered 81,938 , a considerable increase over the 65,707 units so financed in the previous year. Mortgage money from NHA approved lenders was easily accessible during the first six months of 1962 but during the second half the flow from this source was considerably curtailed. The 32,437 units financed by approved lenders in 1962 represented a 12-p.c. drop from 1961. Meanwhile, conventional mortgage loans were in good supply, increasing from 41,465 in 1961 to 56,365 in 1962.

Demand for new housing in 1962 prevented any large-scale vacancy rate from developing and most of the completed dwellings were absorbed.
18.-Dwelling Units Started and Completed, by Type of Financing, 1953-62 and by Region, 1961 and 1962

19.-Dwelling Units Started in Metropolitan and Major Urban Areas, 1961 and 1962

[^201]19.-Dwelling Units Started in Metropolitan and Major Urban Areas, 1961 and 1962
-concluded

[^202]Operations under the National Housing Act.-In 1962, 47,689 dwelling units were financed under the Act compared with 61,353 in 1961. Of these, 47,142 were built with mortgage loans ( 32,437 by approved lenders and 14,705 by the Corporation) and federalprovincial partnership arrangements accounted for 547. The approved lenders provided NHA mortgage financing in an amount of $\$ 383,900,000$ while the Central Mortgage and Housing Corporation provided $\$ 163,300,000$ from public funds.

The volume of insured mortgage lending by the life insurance and trust and loan companies was 12 p.c. lower than in 1961. Loans by all approved lenders financed 32,437 units compared with 36,810 in 1961. Although the life insurance companies were the main source of NHA mortgage funds and financed 18,582 dwellings, the trust companies were responsible for 11,956 units. Loan companies made loans for 1,895 units.

The decline in NHA lending during 1962 took place largely in insured rental loans; approved lenders made loans for 7,824 units of rental accommodation compared with 10,612 in 1961. More than 75 p.c. of the dwellings financed by approved lenders in 1962 were for owner occupancy- 21,324 to be built by merchant builders for sale to owners and 3,289 by owner-applicants who made their own construction arrangements. Comparable figures for 1961 were 22,704 units and 3,494 units, respectively.

Although policy governing lending by the Corporation was virtually unchanged from 1961, the number and value of loans approved declined appreciably during 1962. During
the year, the Corporation made mortgage loans for 14,705 units- 13,223 to be occupied by home owners and 1,482 in limited-dividend projects. In 1961, the Corporation made loans for 20,298 dwellings for owner-occupancy and 3,326 for rental in limited-dividend projects.

During 1962, Corporation loans were available to eligible owner-applicants in any part of Canada, and to merchant builders provided the houses to be financed had been pre-sold to qualified purchasers. In both instances, applicants were required to submit written evidence that they had been unable to obtain loans from an approved lender. To assist in financing the construction of display houses, the Corporation was authorized in November to make to each qualifying builder two loans without the pre-sale requirement and loans for the construction of 794 such prototypes were approved. The Government also directed the Corporation near the year-end to make direct loans for privately sponsored rental housing projects, particularly in smaller communities where loans cannot be obtained from approved lenders.

## 20.-Mortgage Loans Approved by Lending Institutions, by Type of Property and of

 Loan, 1953-62| Year | New Housing |  | Existing | Other <br> Property | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | NHA <br> Loans | Conventional Loans | Conventional Loans | Conventional Loans |  |
|  | \$'000,000 | \$'000,000 | \$'000,000 | \$'000,000 | \$'000,000 |
| 1953. | 256 | 119 | 117 | 89 | 581 |
| 1954. | 464 | 180 | 145 | 115 | 904 |

| 1957. | 278 | 239 | 150 | 104 | 771 |
| 1958... | 519 | 291 | 208 | 174 | 1,192 |
| 1959. | 308 | 343 | 216 | ${ }_{216}$ | 1,083 |
| 1960 | 242 | 307 | 221 | 263 | 1,033 |
| 1961. | 453 | 333 | 300 | 298 | 1,384 |
| 1962. | 412 | 450 | 358 | 311 | 1,531 |

Loans to Limited-Dividend Housing Companies.-Developments approved in 1962 provided 342 units for lower-income families in projects sponsored by entrepreneurs and 1,140 units for elderly persons, all by non-profit organizations or municipalities. The number of dwellings financed at 1,482 was substantially below the 3,326 reported for 1961, the decrease reflecting lack of interest in the limited-dividend field by companies sponsored by entrepreneurs, whose projects are subject to more restrictive terms. Loans to limiteddividend companies may be made for the purchase and conversion of existing buildings into low-rental developments. The first loan of this kind was made in 1962-to Metropolitan Toronto Housing Company Limited in an amount of $\$ 847,170$ for the purchase of an apartment house and its conversion into 154 low-rental units for elderly persons.

Borrower and House Characteristics.--The average size of families borrowing under NHA continued to rise in 1962, following the trend of the 1950's. The proportion of families with three or more children represented 29.6 p.c. of NHA borrowers compared with 29.0 p.c. in 1961 and 12.5 p.c. in 1950. Almost half of the borrowers were in the $29-34$-year age group, the average age of borrower being $3+.5$ years. Nearly 75 p.c. of NHA borrowers in 1962 were buying a home for the first time.

The average income of NHA home-owner borrowers was $\$ 6,015$, compared with $\$ 5,810$ in $1961 ; 27.5$ p.c. had an income of $\$ 5,000$ or less. The average down-payment was $\$ 2,421$ on a house costing $\$ 14,815$. Borrowers paid out, on the average, 21.4 p.c. of their income in monthly payments on mortgage principal, interest and property taxes combined.

The size of the average house increased to 1,189 sq. feet from 1,154 sq. feet in 1961 ; smaller houses-of less than $1,000 \mathrm{sq}$. feet-decreased from 12.6 p.c. of the total to 10.8 p.c.

There were more homes with four or more bedrooms. Bungalows represented almost 75 p.c. of all single-detached dwellings financed under NHA in 1962, split-level houses for 20 p.c. and two-storey houses for about 5 p.c.

Home Improvement Loans.-There was a moderate drop in the volume of NHA guaranteed bank loans for home improvements. The banks approved 23,895 such loans in an amount of $\$ 38,000,000$, compared with 28,097 loans for a value of $\$ 42,600,000$ in 1961. At the year-end, the banks reported $\$ 69,900,000$ outstanding on such loans compared with $\$ 65,900,000$ at the end of the previous year. The Home Improvement Loan Insurance Fund, comprised of fees received from borrowers, stood at $\$ 2,500,000$ compared with $\$ 2,200,000$ a year previously.

Loans for University Housing Projects.-In 1962, NHA loans for a total amount of $\$ 21,200,000$ were made to 19 universities and colleges for the construction of resident housing accommodation for more than 4,400 students. These loans were provincially distributed as follows:-

| Province | Loans | Amount | $\begin{gathered} \text { Students } \\ \text { to be } \\ \text { Accommodated } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
|  | No. | \$'000 | No. |
| Newfoundland. | - | - | - |
| Prince Edward Island. | - | - | - |
| Nova Scotia. | 2 | 1,097 | 241 |
| New Brunswick. |  |  | - |
| Quebec.......... | 5 | 4,321 | 957 |
| Ontario... | 5 | 3,953 | 804 |
| Manitoba...... | 3 | 4,161 | 744 |
| Saskatchewan. | 1 | 2,357 | 349 |
| Alberta........... | 1 | 4,976 | 1,218 |
| British Columbia. |  | 371 | 53 |

The average loan per student was $\$ 4,864$. Thirteen other universities or colleges submitted preliminary applications for loans which, if approved, would result in loans of $\$ 10,100,000$ to provide dormitories for an additional 2,400 students. The total amount of loans that can be advanced by the Corporation for university housing is set by statute at $\$ 100,000,000$. From the enactment of the legislation in December 1960 to December 1962, 41 loans totalling $\$ 41,500,000$ were approved for residences to accommodate some 8,700 students.

Loans for Municipal Sewage Treatment Projects.-During 1962, 223 NHA loans amounting to $\$ 45,000,000$ were made to assist municipalities in financing sewage treatment projects, provincially distributed as follows:-

| Province | Loans | Amount | Province | Loans | Amount |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | \$'000 |  | No. | \$'000 |
| Newfoundland......... | 3 | 894 | Ontario. | 86 | 35,231 |
| Prince Edward Island... | 2 | 35 | Manitoba | 14 | 640 |
| Nova Scotia. | 2 | 1,127 | Saskatchewan. | 52 | 1,049 |
| New Brunswick | 5 | 133 | Alberta. | 21 | 563 |
| Quebec.................. | 18 | 3,628 | British Columbia | 20 | 1,759 |

A further 220 preliminary applications or inquiries were received. From enactment of the legislation for these loans in December 1960 to December 1962, 367 loans with an aggregate value of $\$ 85,000,000$ were approved for 297 municipalities. Although close to one half of all the municipalities receiving such aid had a population of fewer than 1,000 persons, the over-all population of communities receiving assistance exceeded $6,000,000$. Loans were made in each of the ten provinces, with Ontario, Saskatchewan and British Columbia the most active. Many villages and small towns receiving federal assistance for sewerage works are installing complete systems for the first time, in contrast with the larger municipalities where such loans are used to improve or extend existing facilities. Thus, the per capita loan is usually higher in the smaller community.

The Act initially provided that one quarter of the loan and interest thereon be forgiven for work put in place on or before Mar. 31, 1963; late in 1962, Parliament approved an extension of two years to Mar. 31, 1965.

Mortgage Marketing.-The Corporation continued its efforts to encourage development of a market for National Housing Act insured mortgages. Three offerings were made during the year to members of the Investment Dealers' Association of Canada, NHA approved lenders and their NHA approved correspondents. The total amount offered to investors was $\$ 83,500,000$, but sales were limited to $\$ 60,000,000$, the excess providing prospective investors with more opportunities for selection. Since June 1961, approximately $\$ 85,000,000$ of the Corporation's mortgage portfolio has been sold. Of this amount, sales of $\$ 47,000,000$ were effected in 1962 . On Dec. 6,1962 , the Corporation was authorized to make short-term lending facilities available to NHA approved lenders as an added stimulus to the development of an active mortgage market in Canada.

Urban Redevelopment.-The redevelopment of blighted areas in Canadian cities was again substantially assisted by federal contributions in 1962. An estimated $\$ 2,600,000$ was approved to help the City of Montreal acquire and clear 17.6 acres of a 27 -acre redevelopment area in the east end of the city. Some 72 acres of waterfront in Hamilton have been marked for clearance and redevelopment as a public park and recreational area with a $\$ 600,000$ federal contribution. Two separate projects were under way in Halifax-one a 17 -acre site to be put to commercial, residential and light industrial use and the other a long-term redevelopment program designed to revitalize an older part of the city. Saint John invited proposals for the private development of industrial, commercial and highdensity residential land on 12 acres of the 57 -acre slum clearance project undertaken prior to 1962. A federal-provincial housing project has also been approved for the cleared area.

Federal-Provincial Projects.-During 1962, the Government approved rental housing projects under federal-provincial arrangements in Saint John, Montreal, Galt, Winnipeg, Saskatoon and Weyburn and to the extension of an Ottawa project. These will provide a total of 547 dwellings for rent to tenants of low income. Requests for projects were received from the County of Halifax, Moncton and North Battleford and investigation of proposed projects was under way in 38 municipalities in Ontario. Since 1950 when the first project was approved until the end of 1962, 11,167 dwelling units in 93 projects were approved. Of these, 9,035 units were finished and turned over to local housing authorities for administration.

During 1962, approval was given to service 1,469 lots in four land assembly projects. Preliminary investigations for such projects were under way in three Ontario municipalities and an additional 569 lots were offered for sale. The total number of lots serviced and sold under federal-provincial arrangements up to the end of 1962 was 9,503 .

Housing Research and Community Planning.-Under the NHA, the Corporation is responsible for investigating housing conditions and for distributing information leading to the improvement of housing and community planning. The Corporation also assists other organizations engaged in housing and community planning studies. During 1962, approximately $\$ 1,000,000$ was expended for this purpose, both on its own account and through arrangements with outside agencies.

Federal grants were made to the Ontario Research Foundation, the National House Builders' Association, the Community Planning Association, the Ontario Association of Housing Authorities, the Royal Architectural Institute of Canada and the Province of Ontario, as well as to the Canadian Council on Urban and Regional Research. Educational grants were also made to students in architecture and community planning, including 15 fellowships of $\$ 1,500$ each to students attending planning courses at Canadian universities, and five bursaries of $\$ 1,200$ each to university students attending graduate courses in the fields of housing, urban redevelopment and estate management.

## Subsection 3.-Housing Statistics of the 1961 Census*

The tremendous upsurge in building construction in the 1951-61 decade is reflected in the 1961 Housing Census results $\dagger$ which recorded $1,145,198$ more occupied dwellings in 1961 than in 1951, the total for Canada in the later year being 4,554,493. The rate of increase in occupied dwellings of 33.6 p.c. exceeded the population increase of 30.2 p.c. in the same period.

Table 21 gives a summary of housing characteristics for Canada in 1951 and 1961. In this period both owned and rented dwellings increased by about one third and single detached dwellings and apartments and flats increased at about the same proportionate rate. The median value of homes was $\$ 11,021$ in 1961 and the median monthly cash rent \$62. Almost two out of five dwellings were constructed in the postwar period, a fact reflected in part in the proportion of dwellings in need of repair, which dropped from 13.4 p.c. in 1951 to 5.6 p.c. in 1961.

[^203]Table 22 gives certain 1961 housing characteristics by province. Among the provinces, Alberta had the largest proportionate gain over 1951, recording an increase of 39.5 p.c. and 99,059 dwellings; Ontario was first numerically with 459,625 more dwellings in 1961 than in 1951, an increase of 38.9 p.c. Saskatchewan had the largest proportion of the single detached type in 1961, 85.7 p.c. of its occupied dwellings being in that category. On the other hand, 49 p.c. of Quebec's dwellings were apartments or flats, the highest

[^204]among the provinces. The largest homes were in Prince Edward Island where they had an average of 6.4 rooms and 3.3 bedrooms. The smallest were in British Columbia and the Prairie Provinces where they averaged 4.9 rooms and 2.4 bedrooms ( 2.5 bedrooms in Saskatchewan). Crowded homes (those in which the number of persons exceeded the number of rooms) were most in evidence in Newfoundland where about three out of ten were thus classified. The proportion of such homes was lowest in Ontario at 11.8 p.c.

## 22.-Housing Characteristics, by Province, Census 1961

${ }^{1}$ Dwellings in which the number of persons exceeded the number of rooms.
As shown in Table 23, Newfoundland had the largest proportion of owner-occupied dwellings in 1961 with 87.2 p.c., followed by Prince Edward Island with 79.2 p.c.; Quebec had the smallest proportion with 49.0 p.c. However, of owner-occupied, single detached, non-farm dwellings with mortgage, Ontario had the highest percentage (53.5) and Newfoundland the lowest (7.9).

The median value of homes ranged from $\$ 4,311$ in Newfoundland to $\$ 12,952$ in Ontario and the average cash rent from $\$ 48$ in Prince Edward Island and New Brunswick to $\$ 76$ in Ontario. Average gross rent, including amounts paid monthly for services such as water, electricity, gas or fuel, ranged from $\$ 66$ in New Brunswick to $\$ 87$ in Ontario.

## CHAPTER XVI.-LABOUR*

## CONSPEGTUS

The interpretation of the symbols used in the tables throughout the Year Book
will be found facing p. 1 of this volume.

## Section 1.-The Government in Relation to Labour

## Subsection 1.-The Federal Department of Labour and Federal Labour Legislation

The Department of Labour.-The federal Department of Labour was established in 1900 under the Conciliation Act which provided machinery to aid in preventing and settling labour disputes and required the Department to collect, compile and publish statistical and other relevant information. The Department also assumed the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds. Since that time the Department has been charged with the administration of new legislation and has taken on new functions. Its work today falls very broadly into two main areas-industrial relations and manpower supply.

The legislation it administers in the industrial relations area applies to employers, workers and trade unions under federal jurisdiction. The Department is responsible for conciliation procedures in industrial disputes, the investigation of complaints of unfair labour practices, refusals to bargain and violations of legislation, the processing of applications for the certification and decertification of trade unions and the conducting of representation votes. It determines wage rates and hours of work in Federal Government contracts for construction or supplies, and promotes joint labour-management consultation. It also administers legislation to prevent discrimination in employment based on race, religion, colour or national origin, to provide for equal pay for female employees and to provide for annual vacations with pay.

[^205]In the manpower supply area the Department has been increasingly concerned with promoting the best use of all available manpower resources. Under federal-provincial agreements, assistance is provided to the provinces for the construction and equipping of technical and vocational schools and for the operation of a variety of training programs, including training for the unemployed in provincially organized courses. The Department is responsible for the co-ordination of the national program for the vocational rehabilitation of the civilian disabled, and provides financial assistance, also under federal-provincial agreements, to provincial rehabilitation programs.

To stimulate winter activity and so increase winter employment it organizes, in cooperation with the National Employment Service, the annual nation-wide, "Do It Now" winter employment campaign to persuade home and business owners to plan inside renovation and repair work for the cold months. It is also responsible for the Municipal Winter Works Incentive Program, through which the Federal Government contributes toward winter works projects undertaken by municipalities.

Research, involving regular surveys and analyses of economic and social trends affecting the labour force, is an important part of its work. It studies wages and working conditions, employment and unemployment, particular occupations, the training and utilization of manpower, union organization and collective bargaining.

Through the Women's Bureau and the Division on Older Workers, it investigates the problems of women and of older persons in the labour force. It assists in the movement of farm workers between provinces and between Canada and the United States, under federal-provincial agreements. It operates a plan of workmen's compensation for seamen on Canadian ships, and arranges workmen's. compensation for Federal Government employees.

The Department publishes the monthly Labour Gazette, maintains records of labour legislation in the provinces and in other countries and operates a labour lending library. It provides liaison between the International Labour Organization and the federal and provincial governments, and is responsible for the sale and administration of Canadian Government annuities.

Federal Labour Legislation.-Fair Wages Policy.-The Fair Wages Policy applying to all Federal Government contracts was first set forth in a Resolution of the House of Commons (1900) and later incorporated in an Order in Council and amended from time to time. Wages and hours on contracts for construction are now regulated by the Fair Wages and Hours of Labour Act and Order in Council P.C. 2029 of Dec. 22, 1954. Hours of work on construction contracts are limited to eight per day and 44 per week, except in an emergency or in special circumstances where exemption is granted by Order in Council; wages to be paid are those current for the type of work in the district or, if there are no current rates, fair and reasonable rates as determined by the Minister of Labour.

Wages and hours of work on contracts for equipment and supplies are also regulated by Order in Council P.C. 2029. The hours of such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed. This Order in Council contains a clause prohibiting discrimination against any person in matters of employment because of that person's race, national origin, colour or religion, or because he has made a complaint or given information with respect to such alleged discrimination.

Government Prevailing Rate Employees.*-Many departments and agencies of government employ non-office workers in public buildings, defence establishments, parks and

[^206]forests, experimental farms, canal operation, airports and government vessels, survey parties, special projects, etc. Such positions are exempt from the operations of the Civil Service Act and rates of pay are fixed by the Treasury Board in consultation with the Department of Labour on the basis of prevailing private industry rates for comparable work in the appropriate area. Data used in the determination of these pay rates are secured from wage surveys made by Industrial Relations Officers of the Department of Labour, from wage research conducted by the Economics and Research Branch, and from collective agreements and wage rates established under the legislation of some provinces.

The Fair Wages and Prevailing Rates Division of the Industrial Relations Branch also recommends rates of pay for 4,000 commissionaires employed by various government departments and agencies throughout Canada, provides wage data to assist certain Crown corporations in the preparation of their wage schedules, and gives assistance in the establishment of class titles, job descriptions and the application of job evaluation techniques.

Three sets of comprehensive Regulations have been established by the Treasury Board governing hours of work, overtime, vacations, statutory holidays, sick leave, pensions, etc., for (1) prevailing rate workers generally employed, (2) ships' officers and (3) ships' crews.

The Industrial Relations and Disputes Investigation Act.-This legislation came into effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regulations in effect since March 1944 and repealing the Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries, both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or of two or more provinces. However, the Act provides that provincial authorities if they so desire may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively and that trade unions may be certified as bargaining agents for employee groups. Trade unions and employers are required, upon notice, to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act, which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such provision is lacking application may be made for its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade union activity. The conditions that must be observed prior to strike and lockout action are set down in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards, industrial inquiry commissions, consent to prosecute, and complaints that the Act has been violated or that a party has failed to bargain in good faith.

The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents, the writing of a procedure into a collective agreement for the
final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister that a party has failed to bargain collectively.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Department of Labour. In brief, from Sept. 1, 1948 to Dec. 31, 1962, the Canada Labour Relations Board received 1,390 applications for certification, 819 of which were granted, 289 rejected, 276 withdrawn and six were pending at the end of the period. Of the 903 industrial disputes dealt with under the conciliation provisions of the Act, 799 were settled by conciliation officers and conciliation boards, 55 were not settled, 25 lapsed and 24 were pending at Dec. 31, 1962.

Labour-Management Co-operation Service.-During World War II, production committees based on the principle of joint consultation between labour and management were established in many vital industries. Since 1947 the establishment of labour-management committees in industry has been encouraged and assisted by the Labour-Management Co-operation Service, a division of the Industrial Relations Branch of the Department of Labour. The number of active committees has grown from 526 in 1947 to 1,754 at Dec. 31, 1962. Their activities are directed toward such objects as better understanding between management and labour, improved production efficiency, improved quality, reduction of waste, accident prevention, good housekeeping and reduction of absenteeism.

Reinstatement in Civil Employment Act.-This Act provides for the reinstatement in their civil employment of discharged members of the Armed Forces and other designated persons. It was originally passed in 1942, revised in 1946, and broadened in its application in 1954. The Act is administered by the Minister of Labour through the National Employment Service (see p. 736).

Canada Fair Employment Practices Act.-This Act, which came into effect on July 1, 1953, prohibits discrimination in employment based on race, colour, religion or national origin. It applies only to industries within federal jurisdiction-those covered by the Industrial Relations and Disputes Investigation Act (see p. 705). This law prohibits acts of discrimination by employers; discrimination by trade unions in regard to membership or employment; the use by employers of employment agencies that practise discrimination; and the use of advertisements or inquiries in connection with employment that express, directly or indirectly, any limitation, specification or preference as to race, colour, religion or national origin.

Female Employees Equal Pay Act.-This Act came into effect on Oct. 1, 1956, and applies to employers and employees engaged in works, undertakings or businesses coming within federal jurisdiction. The Act, in its principal provision, prohibits an employer from employing a female for any work at a rate of pay that is less than the rate at which a male is employed by that employer for identical or substantially identical work.

Annual Vacations Act.-This Act was passed in January 1958 and became effective by proclamation on Oct. 1, 1958. It provides a one-week vacation with pay for the first year of employment and a two-week vacation for subsequent years. Vacation pay is computed at 2 p.c. of wages, as defined in the Act, for a vacation of one week and 4 p.c. for a vacation of two weeks.

## Subsection 2.-Provincial Labour Legislation

Because of the authority given by the British North America Act to the provincial legislatures to make laws in relation to local works and undertakings and in relation to property and civil rights in the province, power to enact labour legislation is largely the
prerogative of the provinces. Since it imposes conditions on the rights of the employer and employee to enter into a contract of employment, labour legislation is, generally speaking, law in relation to civil rights. Under this authority, the provincial legislatures have enacted a large body of legislation affecting the employment relationship in such fields as working hours, minimum wages, the physical conditions of workplaces, apprenticeship and training, wage payment and wage collection, labour-management relations, workmen's compensation and other matters. In each province a Department of Labour is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines. The workmen's compensation law in each province is administered by a Workmen's Compensation Board appointed by the Lieutenant-Governor in Council.

As a means of ensuring adequate living standards for workers, all provinces have enacted minimum wage legislation. These laws vest in a minimum-wage-fixing board authority to set minimum wages for employees. Five provinces have general hours-of-work laws, which either limit daily and weekly working hours or require the payment of an overtime rate if work is continued beyond specified daily and weekly hours.

Hours of work are also restricted and minimum wages established for certain types of employment under industrial standards legislation in Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta, under the Manitoba Fair Wage Act and under the Quebec Collective Agreement Act. Industrial standards legislation establishes a procedure whereby a schedule of minimum wages and maximum hours of labour may be put into effect for a trade or industry in a given area. Under these laws a conference is convened by the Minister of Labour on the request of employer or employee representatives in an industry. If at such conference "a proper and sufficient representation" of the employers and employees affected agree on wages and hours conditions, the government may declare them legally binding on the entire industry in the district concerned. In Manitoba, the Fair Wage Act provides similar machinery for fixing wages and hours. Although the Act may be applied in other industries, its application has been confined to the construction industry. The Quebec Collective Agreement Act enables the wages, hours, vacations, apprenticeship and social security benefit provisions of a collective agreement to be made applicable by decree to all employers and employees in the industry throughout the province or in a defined area, provided the parties to the agreement represent a sufficient proportion of the industry. As with industrial standards schedules, the standards made binding by the decree are minimum standards.

Eight provinces have passed annual vacations laws. In four provinces employees have a right to an annual vacation with pay of one week after a year of employment, and in the remaining four a two-week vacation must be granted after one year of service. In most provinces there is legislation setting a minimum age for the employment of young workers in various industries and occupations. A weekly day of rest is provided for by law in most provinces. In two provinces there are statutory requirements regarding the observance of certain public holidays.

Factory Acts in eight provinces establish safeguards for the protection of the health and safety of workers in factories with respect to such matters as sanitation, heating, lighting, ventilation and the guarding of dangerous machinery. Long-established laws regulating the design, construction, installation and operation of mechanical equipment such as boilers and pressure vessels, elevators and lifts and electrical installations, have been revised in recent years in line with technological changes, and legal standards have been set in new fields involving hazards to workers and the public, such as the use of gasand oil-burning equipment. This legislation also prescribes standards of qualification for workers who install, operate or service such equipment. Laws requiring measures to be taken to eliminate accidents in construction and excavation work are in force in a number of jurisdictions.

All provinces have apprenticeship laws providing for an organized procedure of on-the-job training and school instruction in designated skilled trades, and statutory provision is made in most provinces for the issue of certificates of qualification, on application, to qualified tradesmen in certain trades. In some provinces legislation is in effect making it mandatory for certain classes of tradesmen to hold a certificate of competency.

In all provinces there is legislation similar in principle to the federal Industrial Relations and Disputes Investigation Act, designed to establish equitable relations between employers and employees and to facilitate the settlement of industrial disputes. These laws guarantee freedom of association and the right to organize, establish machinery (labour relations boards) for the certification of a trade union as the exclusive bargaining agent of an appropriate unit of employees, and make compulsory collective bargaining between an employer and the certified trade union representing his employees. Except in Saskatchewan, they provide for compulsory conciliation, that is, they require the parties to comply with the conciliation procedures laid down in the Act before a strike or lockout may legally take place. A two-stage conciliation process is provided for-the intervention of a conciliation officer at the first stage of a dispute and, failing settlement, the establishment of a conciliation board. The Acts also provide for the compulsory settlement of any dispute that arises out of a collective agreement, and prohibit strike action while an agreement is in force. All prescribe and provide penalties for unfair labour practices. In some provinces certain classes of employees who are engaged in essential services, such as policemen and firemen, are forbidden to strike and, in lieu of the right to strike, have recourse to final and binding arbitration.

Six provinces have adopted fair employment practices laws forbidding discrimination in hiring and conditions of employment and in trade union membership on grounds of race, colour, religion or national origin. The same six provinces have laws providing that places to which the public is customarily admitted must be open to all without regard to race, colour, religion or national origin. Eight provinces have equal pay laws, which forbid discrimination in rates of pay solely on the basis of sex. The Ontario anti-discriminatory legislation has been consolidated in the Ontario Human Rights Code, 1961-62, which is administered by the Ontario Human Rights Commission.

Workmen's compensation legislation providing a system of collective liability on the part of employers for accidents occurring to employees in the course of their employment are in force in all provinces. Workmen's compensation laws are described in greater detail on pp. 744-745.

Changes in 1962.-In 1962 there were a number of important changes in provincial labour laws.

In British Columbia, a new Payment of Wages Act was passed to give workmen greater assurance of payment of wages. In addition to requiring wages to be paid not less often than twice a month, a new wages recovery procedure, to be administered by the Board of Industrial Relations, made it an offence for an employer to issue an NSF cheque in payment of wages, and gave the Board authority to order employers to be bonded. In Manitoba, provision was made, by amendment to the Employment Standards Act, for the bonding of the employer to provide security for the payment of wages.

Major amendments were made to the labour relations laws of Ontario, Manitoba and Prince Edward Island. The Ontario amendments dealt in large part with labour relations in the construction industry, and were designed to expedite certification and conciliation proceedings in view of the usual short-term employment in the industry. In Manitoba, trade unions and employers' organizations were declared to be legal entities, liable in damages for a breach of a collective agreement or for a violation of the Labour Relations Act. Provision was also made for the appointment of a mediator, to be selected and paid
by the parties, as an alternative to the regular conciliation procedure, and for the enforcement of the Act through Crown prosecutions. Previously, only prosecutions instituted by the aggrieved party were provided for. Another amendment requires all strike votes to be conducted by the Manitoba Labour Board. The Prince Edward Island Act was replaced by a new statute which follows more closely the general pattern of labour relations laws in Canada.

A new Construction Safety Act in Ontario, to be enforced by municipal inspectors, and a revised Act with the same title in Manitoba are designed to promote safe practices in all phases of construction work, by prescribing minimum standards as to equipment and precautions to be observed by employers and workmen. The scope of the New Brunswick Factory Act was extended to cover the construction industry and, because of its wider application, the name of the Act was changed to the Industrial Safety Act. In Alberta, the Factories Act was repealed and factory inspection services were assigned to the Workmen's Compensation Board and a new Elevators and Fixed Conveyances Act was passed, applicable to lifting devices in all parts of the province. In Manitoba, the provisions of the Employment Standards Act having to do with the safety of employees in factories were extended to cover all types of employment. The Labour Safety Council of Ontario, created by an amendment to the Department of Labour Act, is to act in an advisory capacity to the Minister of Labour on matters affecting the safety of workers. The New Brunswick Industrial Safety Council was set up to promote and co-ordinate industrial safety activities in that province.

Workmen's compensation Acts were amended in five provinces. Important changes in New Brunswick were the upgrading of existing pensions to disabled workmen and the raising of the age limit to which children's allowances are payable, if they continue to attend school, from 18 to 21 years. In Newfoundland and Prince Edward Island, a one-day waiting period was adopted. Widows' and children's compensation payments were increased in Nova Scotia, New Brunswick and Saskatchewan. The maximum annual earnings on which compensation may be paid were raised from $\$ 3,600$ to $\$ 4,200$ in Nova Scotia and from $\$ 4,000$ to $\$ 5,000$ in Prince Edward Island.

Further information about legislative changes in 1962 may be found in the Labour Gazette, September and November issues, 1962.

Regulation of Hours and Annual Vacations.-The Provinces of Ontario, Manitoba, Saskatchewan, Alberta and British Columbia have statutes of general application limiting working hours. The Acts are of two types. Those of Ontario, Alberta and British Columbia set actual limits on daily and weekly hours, and provide that work may not be carried on beyond those limits except with the permission of the administrative authority. The Manitoba and Saskatchewan Acts regulate hours through the requirement that one and one half times the regular rate must be paid if work is continued after specified limits. Hours are also regulated under the Industrial Standards Acts, the Manitoba Fair Wage Act and the Quebec Collective Agreement Act (see p. 712) and there is, in addition, some regulation of hours under other legislation, such as factories Acts, mines Acts and, in Newfoundland, legislation governing shops.

In Ontario, working hours are limited to eight in a day and 48 in a week. In Alberta, the maximum daily and weekly hours permitted to be worked in all centres with a population of over 5,000 are eight and 44 , and in the remainder of the province they are eight and 48. In British Columbia, hours are limited to eight in a day and 44 in a week. Under the Saskatchewan law, one and one half times the regular rate must be paid for work done after eight hours in a day and 44 hours in a week, except in workplaces (other than factories) in the smaller centres, where the overtime rate must be paid after a 48 -hour week. In addition to the above, the Lieutenant-Governor in Council has authority to limit daily hours in any class of employment in order to prevent the working of excessive hours;
this authority has been used to limit daily hours to 12 in highway construction and maintenance. The Manitoba Act, which applies to the chief industrial areas of the province, requires one and one half times the regular rate to be paid after eight hours in a day and after 48 hours in a week for men and 44 hours for women. The Manitoba and British Columbia Acts cover specified industries but the other three Acts apply to most industries in the province concerned.

Seven provinces-Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia-have annual vacations legislation applicable to most industries, and the New Brunswick Vacation Pay Act applies to construction, mining, including the peat-moss industry, and the canning and packing of fish, vegetables and fruit. In Nova Scotia, New Brunswick, Quebec and Ontario, workers are entitled to a vacation with pay of one week after a year of service; in the four western provinces, a vacation of two weeks with pay must be granted after a year of employment. In Saskatchewan, a worker becomes eligible for a vacation of three weeks after five years of service with the same employer. A worker employed for less than a year is entitled, in Quebec, to a half-day for each month of employment and, in Saskatchewan, to one day for every month. Coal miners in Alberta are entitled to a vacation of one day for every 20 days worked in a month but not more than two weeks in a year.

A stamp system of vacation pay credits is in effect for the construction industry in Alberta and Nova Scotia. In Ontario, the stamp system is used in any industry (including construction) in which employment is terminated during a working year. In Manitoba, vacation pay of transitory construction workers in Greater Winnipeg is deposited by employers with the Department of Labour and disbursed to employees by cheque after the first day of July in each year.

Farm workers are excluded from the vacation provisions in all provinces, and domestic servants in all but Manitoba and Saskatchewan. In addition, Quebec exempts employees of municipal and school corporations, janitors and caretakers, salesmen with less than three months experience and certain part-time workers; Ontario exempts professional workers, flower, fruit and vegetable growers, and funeral directors and embalmers; Nova Scotia excludes workers engaged in lumbering and commercial fishing; Alberta exempts salesmen; Manitoba and Saskatchewan exclude ranch and market garden employees; and British Columbia exempts professional workers and horticultural workers. Workers covered by decrees under the Quebec Collective Agreement Act are excluded from the vacation order and are subject to the annual vacation provided for in the decree concerned.

Minimum Wage Regulations.-All provinces have minimum wage legislation but in Nova Scotia the law applies only to women workers, and in Ontario, although the Act applies to both sexes, minimum wage rates have been set for women only. In Prince Edward Island, no minimum rates are in effect under the law applying to male workers; under the Women's Minimum Wage Act rates have been set for only one group of employees -waitresses and other restaurant workers in Charlottetown and Summerside. In New Brunswick, minimum rates have been established for most women workers; they have been fixed for men in certain industries only-logging, sawmilling, the garment industry and the canning or processing of fish, vegetables or fruit. With these exceptions, minimum wage laws and orders apply to both sexes and, except in Newfoundland, set the same rates for male and female workers. In Newfoundland, New Brunswick and British Columbia, minimum rates apply throughout the province. Elsewhere (excluding Prince Edward Island) there are regional differentials in minimum rates. Weekly rates are set in some provinces, hourly rates in others.

Table 1 shows the minimum rates in effect on Jan. 1, 1963, for several classes of establishment in the principal cities.
1.-Minimum Wage Rates for Experienced Workers in Certain Cities, by Sex, Jan 1, 1963

[^207]Regulation of Wages and Hours of Work under Industrial Standards Legislation and the Quebec Collective Agreement Act.-Industrial Standards Acts are in effect in Nova Scotia, New Brunswick, Ontario and Saskatchewan and there are similar provisions in the Alberta Labour Act (Part IV). These provide that a schedule of wage rates and hours of work agreed upon by a representative group of employees and employers in an industry may, upon approval by the government, be given statutory effect by Order in Council, to become the minimum terms of employment for the entire industry in the area. This legislation applies only to certain trades and areas in the province concerned. It has been used fairly extensively in the building trades, the clothing industries, barbering and a few other industries. An advisory committee, usually equally representative of employers and employees, is established to assist in enforcing a schedule.

The Nova Scotia Act applies only to construction work in Halifax, Dartmouth and Sydney; 12 schedules of wages and hours for individual building trades were in force during the year ended Mar. 31, 1962. In New Brunswick, four schedules covering an individual building trade or group of such trades were in effect in the same period.

At the end of March 1962, there were 148 schedules in force under the Ontario Industrial Standards Act. Of these 71 applied to the building trades, 67 to barbering, and four to the retail gasoline service industry. Five schedules for the garment industries and one for hard furniture applied throughout the province. During the year the fur industry and hairdressing were designated as industries under the Act.

In Saskatchewan, 16 schedules were in effect on Mar. 31, 1962, covering barbering, beauty culture, baking, carpentry, painting and the electrical trade. The schedule for barbering covered the whole province except the cities of Regina and Saskatoon, for each of which a separate schedule was in effect. Each of the other schedules applied to a zone consisting of a city and its environs. In Alberta, 15 schedules were in force at the end of
the year 1962. These governed, in one or more areas, certain building trades, dairy employees, garage and service station workers, and bakers and bakery salesmen. In Manitoba, the Fair Wage Schedule issued annually under the Fair Wage Act for the construction industry sets a regular work week and hourly rates of wages for various classifications of workers. The schedule applies to private construction work in the larger centres of population as well as to public construction work throughout the province.

In the Province of Quebec, 105 decrees under the Collective Agreement Act were in force on Mar. 31, 1962, governing 34,387 employers and 240,924 employees. Of the 105 decrees, 18 applied to barbers and hairdressers, 21 to commercial establishments, 16 to the construction industry, 26 to manufacturing, and 24 to other industries and services. Fifteen of the decrees had province-wide jurisdiction, governing the manufacture of women's coats and suits, dresses, hats and handbags, men's and boys' clothing, hats and caps and shirts, the manufacture of shoes, leather gloves, furniture, paint, corrugated paper boxes and caskets, the tanning industry and the building materials industry. The remaining decrees regulated an industry in a particular urban centre or region of the province. Each decree is enforced by a parity committee which has power to levy an assessment on employers and employees to obtain funds for the enforcement of the decree.

## Section 2.-The Labour Force*

A current and periodic analysis of the state of employment in Canada was organized in 1945 to provide up-to-date and reliable information concerning the Canadian labour force. A labour force survey, on a sample basis, was conducted in November 1945 and quarterly surveys were carried out thereafter until November 1952, when the survey was placed on a monthly basis. A multi-stage area sample was used involving the selection of progressively smaller sample areas and ultimately of households. Random methods of choice were used at every stage of selection so that all members of the population had an equal chance of inclusion. The present sample covers more than 36,000 households in about 170 different areas of Canada. The estimates of the labour force are restricted to the civilian labour force. In addition to members of the Armed Forces, inmates of institutions and Indians living on reservations are excluded.

The labour force surveys provide a classification of persons 14 years of age or over on the basis of their activity during the week preceding the beginning of interviewing for the survey. The main divisions of the population are defined as follows:-

Labour Force.-The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age or over who, during the survey week, were employed or unemployed.

Employed.-The employed include all persons who, during the survey week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job but were not at work because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the survey week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed.-The unemployed include all persons who, through the survey week: (a) were without work and seeking work, i.e., did no work during the survey week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force.-Those not in the labour force include all civilians 14 years of age or over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those going to school, keeping house, too old or otherwise unable to work, and voluntarily idle or retired. Housewives, students and others who worked part time are classified as employed. If they looked for work they are classified as unemployed.

[^208]The estimates derived from the labour force surveys are subject to sampling error. In general, the percentage of error tends to decrease as the size of the estimate increases. The chances are about 19 out of 20 that the difference between the estimate and the figure which would have been obtained from a complete count is less than shown below. The sampling variabilities indicated are averages, since sampling error differs from characteristic to characteristic; in particular, for the unemployed the sampling variability is about 40 p.c. higher than the general average.

|  | Size of Estimate | Sampling Variability |
| :---: | :---: | :---: |
| 10,000.. |  | 3,500 |
| 50,000.. |  | 8,000 |
| 100,000.. |  | 11,000 |
| 500,000.. |  | 24,000 |
| 1,000,000.. |  | 33,000 |
| 5,000,000.. |  | 58,000 |
| 6,000,000.. |  | 60,000 |

## 2.-Estimates of the Civilian Labour Force and its Main Components, Annual Averages, 1946 and 1953-62

Notr.-Comparable figures for 1947-52 are given in the 1962 Year Book, p. 708. Figures do not include inmates of institutions and Indians on reservations. Newfoundland is included from 1950 only.

| Year | Civilian <br> Population (14 years of age or over) | Civilian Labour Force (14 years of age or over) |  |  |  |  |  |  | Persons not in the Labour Force (14 years of age or over) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Employed |  |  |  |  | $\underset{\text { Un- }}{\text { Unployed }}$ | Total <br> Labour <br> Force |  |
|  |  | Non-agriculture |  |  | Agriculture | Total (employed) |  |  |  |

| 1955. | 10,597 | 4,027 | 519 | 4,546 | 819 | 5,364 | 245 | 5,610 | 4,987 |
| 1956. | 10,805 | 4,286 | 523 | 4,809 | 776 | 5,585 | 197 | 5,782 | 5,023 |
| 1957. | 11,108 | 4,440 | 542 | 4,981 | 744 | 5,725 | 278 | 6,003 | 5,105 |
| 1958. | 11,357 | 4,454 | 529 | 4,983 | 712 | 5,695 | 432 | 6,127 | 5,230 |
| 1959. | 11,562 | 4,615 | 548 | 5,163 | 692 | 5,856 | 373 | 6,228 | 5,334 |
| 1960. | 11,789 | 4,727 | 553 | 5,280 | 675 | 5,955 | 448 | 6,403 | 5,386 |
| 1961. | 12,010 | 4,798 | 577 | 5,375 | 674 | 6,049 | 469 | 6,518 | 5,492 |
| 1962. | 12,224 | 4,978 | 587 | 5,564 | 653 | 6,217 | 391 | 6,608 | 5,616 |

Characteristics of the Civilian Labour Force, 1946-62.-The civilian noninstitutional population averaged $12,224,000$ in 1962 compared with $8,779,000$ in 1946, an increase of 39.2 p.c., and during the same period the labour force rose by only 37.1 p.c. to $6,608,000$. Thus, the proportion of the population 14 years of age or over in the labour force, which was 55.0 p.c. in 1946, dropped to 54.1 p.c. in 1962 . Contributing to this decrease were such factors as shifts in the age composition of the population, the tendency for young people to remain in school until they are a little older and the tendency for older persons to retire at an earlier age. The effect of these factors was greater among men, whose rate of labour force participation dropped from 85.2 p.c. in 1946 to 79.3 p.c. in 1962. Although the growth in the female labour force was also affected by these factors, there was an offsetting development. From 1953 there was a rapid increase in job opportunities for women, particularly married women. The female participation rate dropped slightly
from 24.7 p.c. in 1946 to 23.4 p.c. in 1953 and then rose to 29.1 p.c. in 1962 . During the 1953-62 period, the participation rate for the female group 25-44 years of age rose from 23.1 p.c. to 29.7 p.c. and for the $45-64$ age group from 17.2 p.c. to 29.4 p.c. In 1962, women in the labour force numbered $1,789,000$, about half of whom were married (excluding widowed, divorced and separated). Total employment in that year averaged $6,217,000$, an increase of 33.2 p.c. over 1946. The number of men employed ( $4,487,000$ ) was 24.3 p.c. higher and the number of women employed $(1,730,000)$ was 63.7 p.c. higher.

Between 1946 and 1962, employment in agriculture dropped from 1,186,000 to 653,000, a decline of 44.9 p.c. On the other hand, employment in non-agricultural industries increased by 59.9 p.c. from $3,480,000$ to $5,564,000$ and the number of paid workers employed in non-agricultural industries rose by 66.5 p.c. from $2,990,000$ to $4,978,000$. Important changes also occurred in the distribution of employment among industries. In 1962, the goods-producing industries accounted for 45 p.c. and the service-producing industries for 55 p.c. of total employment compared with 60 p.c. and 40 p.c., respectively, in 1946. The most notable shift was in agriculture. In 1946, about one in four employed persons worked in agriculture whereas in 1962 the proportion was one in ten. In other primary industries the proportion employed also declined substantially but in manufacturing it remained about the same. In all other industry groups the proportion employed was higher in 1962 than in 1946. In the later year, almost one out of every two employed women worked in service industries as compared with one out of every three in 1946.

On an annual average basis, unemployment as a percentage of the labour force fluctuated widely during the period, ranging between 2.2 p.c. in 1947 and 7.2 p.c. in 1961; it averaged 5.9 p.c. in 1962. Throughout the period, unemployment rates were substantially lower for women than for men.

The number of persons 14 years of age or over not in the labour force averaged $5,616,000$ in 1962 compared with $3,950,000$ in 1946, an increase of 42 p.c. Housewives and students together constituted more than 80 p.c. of the total in the later year; the number of women keeping house increased by almost one third during the period and the number of students more than doubled.

## 3.-Percentage Distribution of the Population 14 Years of Age or Over in the Labour Force and Non-labour Force Categories, by Sex, 1946 and 1953-62

Note.-Comparable figures for 1947-52 are given in the 1962 Year Book, pp. 710-711. Newfoundland included from 1950 only.

| Year | Population (14 years of age or over) | Percentage Distribution of the Population 14 Years of Age or Over |  |  |  |  |  |  |  |

| 1961. | 6,030 | 0.9 | 26.8 | 1.1 | 28.8 | 59.8 | 7.0 | 4.4 | 71.2 |
| 1962. | 6,147 | 1.0 | 27.1 | 1.0 | 29.1 | 59.0 | 7.4 | 4.5 | 70.9 |

4.-Percentage Distribution of the Employed by Industrial Group, 1946 and 1953-62

Note.-Comparable figures for 1947-52 are given in the 1962 Year Book, p. 711.

| Year | Total Employed | Percentage Distribution |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Agriculture | Other Primary Industries | Manufacturing | Construction | Transportation and Other Utilities | Trade | Finance, Insurance and Real Estate | Service |
|  | '000 | p.c. | p.c. | p.c. | p.c. | p.c. | p.c. | p.c. | p.c. |
| 1946...... | 4,666 | 25.4 | 4.0 | 26.0 | 4.8 | 8.1 | 12.3 | 2.6 | 16.8 |
| 1953. | 5,235 | 16.4 | 3.8 | 26.4 | 6.6 | 9.2 | 15.6 | 3.2 | 18.8 |
| 1954. | 5,243 | 16.8 | 4.1 | 25.3 | 6.4 | 8.7 | 15.8 | 3.2 | 19.7 |
| 1955. | 5,364 | 15.3 | 4.5 | 25.6 | 6.9 | 8.7 | 15.7 | 3.3 | 20.0 |
| 1956. | 5,585 | 13.9 | 4.6 | 25.7 | 7.4 | 8.9 | 15.8 | 3.5 | 20.2 |
| 1957. | 5,725 | 13.0 | 4.3 | 26.1 | 7.6 | 8.9 | 15.7 | 3.6 | 20.8 |
| 1958. | 5,695 | 12.5 | 3.7 | 25.6 | 7.5 | 8.9 | 16.0 |  |  |
| 1959. | 5,856 | 11.8 | 3.4 | 25.5 | 7.5 | 8.9 | 16.2 | 3.7 | 23.0 |
| 1960. | 5,955 | 11.3 | 3.5 | 24.7 | 7.0 | 8.6 | 16.5 | 3.8 | 24.6 |
| 1962.. | 6,049 6,217 | 11.1 | 3.0 2.8 | 25.0 | 6.7 | 8.4 | 16.3 | 4.0 | 25.5 |
| 1962. | 6,217 | 10.5 | 2.8 | 25.2 | 6.9 | 8.5 | 16.1 | 4.0 | 26.0 |

Employment was substantially higher in 1962 than in 1946 in all regions. British Columbia experienced the largest increase of 43.1 p.c. followed by Ontario with 39.5 p.c., Quebec with 32.7 p.c., the Prairie region with 17.3 p.c. and the Atlantic region (excl. Newfoundland) with 10.2 p.c. In all regions, however, the increase in employment was not as great as the growth of the labour force and, as a consequence, there was a rise in unemployment. Unemployment in Canada averaged 391,000 in 1962, 5.9 p.c. of the labour force. The unemployed were distributed regionally as follows: Quebec 35.3 p.c., Ontario 26.6 p.c., Atlantic 16.4 p.c., Prairie 11.5 p.c. and British Columbia 10.2 p.c. In 1946 the unemployed were distributed among the regions in just about the same proportions.

Similarly, unemployment rates were higher in 1962 than in 1946. In the later year, the unemployed as a percentage of the labour force in each of the five regions was as follows: Atlantic 10.7 p.c., Quebec 7.5 p.c., Ontario 4.3 p.c., Prairie 3.9 p.c. and British Columbia 6.7 p.c. From 1946 on, unemployment rates for the Atlantic region and Quebec were consistently higher than the national average and for Ontario and the Prairie region they were consistently lower. The British Columbia rate was above the national average in every year except 1955 and 1956.

## 5.-Estimates of Employment and Unemployment, by Region, 1946 and 1953-62

Note.-Comparable figures for 1947-52 are given in the 1962 Year Book, p. 712.

## Section 3.-Employment, Earnings and Hours*

Monthly records of employment have been collected from larger business establishments since 1921. At that time a survey was instituted to provide employment index numbers which would serve as current economic indicators. In 1941 the survey was extended to provide information on payrolls and per capita wages and salaries and in 1944 it was further extended to provide data on hours of work and hourly and weekly wages. During the war period also, separate records for men and women employees were established.

The survey covers firms that usually employ 15 persons or more in all sectors of the following major industrial divisions: forestry; mining; manufacturing; construction; transportation, storage and communication; public utility operation; trade; finance, insurance and real estate. Also included are certain branches of the service industry, mainly hotels and restaurants, laundries and dry-cleaning plants, recreational and business services. The survey excludes agriculture, public administration and community services such as health and education. The coverage corresponds closely, therefore, to the business sector of the economy. Since the survey does not cover small firms and excludes several industries, the employment records are published in the form of index numbers $(1949=100)$.

The monthly employment statistics relate to the number of employees drawing pay in the last pay period in the month. Data are requested for all classes of employees with the exception of homeworkers and casual employees working less than one day in the pay period. Owners and firm members are also excluded. The respondents report the gross wages and salaries paid in the last pay period in the month, before deductions are made for income tax, unemployment insurance, etc. The reported payrolls represent gross remuneration for services rendered and paid absences in the period specified, including salaries, commissions, piecework and time work payments, and such items as shift premiums, and regularly paid production, incentive and cost-of-living bonuses. The statistics on hours relate to the straight and overtime hours worked by those wage-earners for whom records of hours are maintained, and also to hours credited to wage-earners absent on paid leave during the reported period. If the reported period exceeds one week, the payroll and hours data are reduced to weekly equivalents.

## Subsection 1.-Employment and Weekly Wages and Salaries

During the interwar period, the composite employment index $(1949=100)$ rose steadily from a postwar recession level of 46.9 in 1921 to a high of 62.8 in the boom year of 1929, but the severe depression that followed reduced the annual figure to a low of 44.0

[^209]in 1933. Slow recovery in the next six years left the index slightly lower in 1939 than in 1929. With the outbreak of World War II, employment began to increase under the stimulus of production for military requirements. In 1943, a wartime peak of 93.0 was reached, more than 50 p.c. above the 1939 level. A declining tendency that became evident in 1944 persisted after the end of the War. However, the impact of cutbacks in wartime production was cushioned by public demand for goods and services that had been largely unavailable during the war years, so that the over-all loss recorded in 1946 was small. The index showed successive gains from 1947 until a peak of 113.1 was reached in 1953. A slight decline in 1954 was followed by further advances that brought the index to 122.6 in 1957. During the next four years the industrial composite index did not vary greatly, fluctuating around levels some 3 p.c. to 4 p.c. below the 1957 peak.

A general recovery in employment commenced in the second quarter of 1961 and continued through 1962. Employment rose substantially in all the goods-producing industries. Because of the low levels early in 1961, however, the annual averages of employment for that year were lower than in 1960, except in non-durable goods manufacturing. In forestry and mining there have been long-term trends toward reduced levels of employment in particular areas or segments within the divisions, and the gains of early 1961 were not maintained in 1962. Construction was at a fairly low level early in 1961; an upward trend beginning in the second quarter continued into 1962. All service-producing industrial divisions showed employment gains in 1961 and 1962 except transportation, storage and communication. The percentage gains were largest in finance, insurance and real estate and in service.
6.-Annual Average Index Numbers of Employment by Industrial Division, Significant Years 1921-62, and Monthly Indexes 1962
Nore.-These indexes are calculated as at the last pay period of each month, on the base $1949=100$.

${ }^{1}$ Includes New Westminster from 1956.

Average weekly wages and salaries have increased substantially in the years for which current payroll statistics have been collected, rising from $\$ 23.44$ in 1939 to $\$ 80.55$ in 1962 . Approximately 15 p.c. of this advance was recorded during the abnormal conditions of the war years. Wartime gains resulted from substantial amounts of overtime work and a concentration of employment in war industries where earnings were relatively high; however, these gains were offset to a degree by wartime regulation of pay rates (as of prices) and dilution of labour through the employment of unskilled and part-time workers, including many inexperienced women. Following the relaxation of wage restrictions in December 1949 and the progressive lifting of price controls, the upward movement in per capita earnings gained momentum. The average annual increases from 1947 to 1962 were more than twice as great as those between 1939 and 1945 . Variations over the years in the occupational and industry mix within the heterogeneous group of industries covered have had, on the whole, a buoyant effect on the per capita earning figures. More recently, year-to-year percentage changes have tended to level, those for 1961 and 1962 approximating 3 p.c.

11.-Annual Average Weekly Wages and Salaries, by Industrial Division, Significant Years 1939-62, and Monthly Averages 1962

[^211]
## Subsection 2.-Hours and Earnings of Hourly Rated Wage-Earners

Toward the end of 1944, the monthly survey of employment and payrolls was extended to cover statistics of hours of work and paid absence of those wage-earners for whom records of hours are maintained, together with the corresponding totals of gross wages paid. These wage-earners are mainly hourly rated production workers; information on hours is frequently not kept by employers for ancillary workers, nor in many industries and establishments, for any wage-earners. Salaried employees are excluded by definition from the series. As a result of these exclusions, data are available for fewer industries and workers than are covered in the employment and average weekly wage and salary statistics.

In the 18 years of the record, average hours have fallen in nearly all the industries and areas covered by the survey, reflecting widespread reductions in the standard work week and in the overtime work that was still prevalent in many industries in the final year of the War. The smallest decline in hours since 1945 (less than 1 p.c.) has taken place in building and structures; this group had been severely affected by wartime shortages of labour and materials and during the War generally curtailed operations. The 18-year decrease in hours of work in manufacturing approximated 8 p.c.

During this period, average hourly and weekly wages have risen substantially. Upward wage-rate revisions have been the main cause of these advances, but other factors have contributed. Important among these, especially in the earlier postwar years, were progressive increases in cost-of-living allowances, now largely absorbed in wage rates. Technological changes, frequently involving the employment of more highly skilled workers at the expense of lower paid jobs, have also tended to raise wage levels, as has the relatively greater expansion over the years in industries in which pay rates usually exceed the general level. From 1945 to 1962 , average weekly wages rose 151 p.c. in manufacturing, 138 p.c. in mining and 191 p.c. in construction. Average hourly earnings increased 172 p.c. in manufacturing, 156 p.c. in mining and 178 p.c. in construction. In manufacturing the 1962 average hourly earnings stood at $\$ 1.88$, 2.7 p.c. above the 1961 average, while the average weekly wage at $\$ 76.55$ was 3.1 p.c. higher than in 1961. This difference in percentage changes was attributable mainly to a slight increase in average weekly hours in durable goods manufacturing in 1962.

## Section 4.-Wage Rates, Hours of Labour and Other Working Conditions

Statistics on occupational wage rates by industry and region or city and on standard weekly hours of labour are compiled by the federal Department of Labour and published in the annual report Wage Rates, Salaries and Hours of Labour. The statistics published are based on an annual survey covering some 27,500 establishments in most industries and apply to the last normal pay period preceding Oct. 1.

Average wage rates of time workers and average straight-time earnings of piece workers and other incentive workers in a given occupation are shown separately but are combined in the calculation of index numbers. Predominant ranges of rates for each occupation used are also given. Overtime pay is excluded.

The industry index numbers shown in Table 14 measure changes in wage rates for non-office employees below the rank of foreman. They do not, however, provide a basis for comparing the level of wages in one industry with that in another. More detailed information on concepts and methods of developing these statistics is given in the annual report.

## 14.-Index Numbers of Average Wage Rates for Certain Main Industrial Groups, 1953-62 (1949=100)

Nore.-Indexes back to 1901 may be obtained from the Department of Labour publication Wage Rates, Salaries and Hours of Labour 1962.

[^213]Table 16 gives summary data on working conditions of plant and office employees in manufacturing industries for the years 1958 to 1962. The percentages in this table denote the proportions which employees-plant or office-of establishments reporting specific items bear to the total number of all such employees in all establishments replying to the survey; they are not necessarily the proportions of employees actually covered by the various items.

It will be noted that for the year 1958 the number of establishments shown as having plant employees is identical with the number having office employees, while for 1959 and subsequent years these numbers differ. The explanation is that in 1959 and subsequent years separate counts of establishments having plant workers and establishments having office employees were made, while in previous years counts of establishments were obtained without distinguishing between those with both plant and office employees and those with either one or the other only.

Further details and additional information may be seen in the annual report Working Conditions in Canadian Industry, compiled and published by the Department of Labour and based on a survey at May 1 each year of some 30,000 establishments.

[^214]Wages of Farm Labour.-The information on farm wages is provided by volunteer farm correspondents located in all provinces except Newfoundland. The rates presented in Table 17 are average wages paid to all farm help regardless of age and skill. Because the rates reported may cover a wide range of skills, of types of work and of ages of hired workers, the value of the resulting data is considered to be an indicator of trends rather than a measure of absolute wage levels. No attempt has been made to have the wage rates reflect such perquisites as separate housing accommodation, fuel, electricity and food which, under some conditions of hiring, are supplied by employers to their hired farm help.

## 17.-Average Daily and Monthly Wages of Male Farm Help as at Jan. 15, May 15 and Aug. 15, 1960-62

Note.-Figures from 1940 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

## Section 5.-Unemployment Insurance*

During the depression of the 1930's the need for a nation-wide scheme of unemployment insurance became recognized. In 1935 the Employment and Social Insurance Act was passed by the Federal Parliament but was subsequently declared invalid by the Privy Council. Later, by consent of the provinces, an amendment to the British North America Act was obtained empowering the Federal Parliament to legislate on unemployment insurance and in 1940 the Unemployment Insurance Act was passed, making provision for a compulsory contributory unemployment insurance scheme and also for the establishment of a national employment service to operate in conjunction with and ancillary to the unemployment insurance operations carried on under the Act. The Act, which came into effect on July 1, 1941, was later amended on several occasions and was replaced by a new Unemployment Insurance Act passed on July 1, 1955 and effective Oct. 2, 1955.

Legislation provides for compulsory coverage of some four fifths of all non-agricultural employees under an insurance program administered by the Federal Government, and requires employers to join with their insurable employees and the Government in building up a fund. This fund is held in trust by the Unemployment Insurance Commission for the payment of benefits to unemployed insured persons. The Act is administered by a Commission of three persons appointed by the Governor in Council, of whom one is the Chief Commissioner; one Commissioner, other than the Chief Commissioner, is appointed after consultation with employer organizations and the other after consultation with employee organizations.

The Unemployment Insurance Act applies to all persons employed under a contract of service, except the following: employment in specified industries or occupations such as agriculture, horticulture and forestry (effective Jan. 1, 1956, coverage was also extended to certain employments in these three industries); the Canadian Armed Forces; the permanent public service of the Federal Government; provincial government employees except where insured with the concurrence of the government of the province; certified permanent employees of municipal or public authorities; private domestic service; privateduty nursing; teaching; certain director-officers of corporations; workers on other than an hourly, daily or piece rate earning more than $\$ 5,460$ a year effective Sept. 27, 1959, unless they elect to continue as insured persons; employees in a charitable institution or in a hospital not carried on for purpose of gain except where the institution or hospital consents to insure certain groups or classes of persons with the concurrence of the Commission. All persons paid by the hour, day, or at a piece rate (including a milage rate) are insured regardless of amount of earnings, together with all employees who receive $\$ 5,460$ or less at weekly, monthly, yearly or commission rates.

Under the Canadian Unemployment Insurance Act, benefit payments are made out of a Fund derived from moneys provided by Parliament and from contributions by insured employed persons and their employers. The amount of the employee contribution is determined by his weekly earnings and, since 1950, an equal contribution is required from the employer. Federal Government participation amounts to one fifth of the aggregate employer-employee contribution. In addition, administrative costs are assumed by the Federal Government. Contributions became payable on July 1, 1941 and by Mar. 31, 1962 a total of $\$ 3,501,000,000$ had been provided from these three sources; accruals from investment over the period brought the net revenue to $\$ 3,772,000,000$. Investment transactions, as authorized by an Investment Committee, are carried out by the Bank of Canada.

Benefits became payable on Jan. 27, 1942 and by Mar. 31, 1962 a total of $\$ 3,706,000,000$ had been paid, the balance in the fund at that date being $\$ 66,600,000$.

[^215]Statistics on the Operation of the Act. - In order to assess the impact of changing economic conditions on the insurance program, provision is made for collection of current operational data, such as claims filed and processed and payments made. This information is published monthly in the Statistical Report on the Operation of the Unemployment Insurance Act (Catalogue No. 73-001). Current claims and payment data are useful for administrative purposes and are also a source of information to the public regarding financial and other aspects of the program.

Persons wishing to draw benefit must file either an initial or a renewal claim. Where it is necessary to compute entitlement to benefit, an initial claim is taken, otherwise a renewal. In the main, initial and renewal claims combined are an approximation of recorded separations from employment during a month. However, if a claimant exhausts his benefit and wishes to be reconsidered for further benefit, an initial claim is required. Such claims, accounting for 15 p.c. of the monthly volume in 1962, are not new cases of disemployment. The count of claimants at the month-end indicates the extent to which claimants maintain contact with local offices of the Commission.
18.-Claims Filed, Claimants and Amount Paid, by Month, 1961 and 1962

${ }^{1}$ Average of month-end data.
In addition to the monthly data published on the operation of the Unemployment Insurance Act, annual tabulations are compiled regarding persons employed in insurable employment and benefit periods established and terminated. These data are published in the annual report Benefit Periods Established and Terminated under the Unemployment Insurance Act (Catalogue No. 73-201). The data on the insured population in Table 19 were obtained from returns from the renewal of insurance books and contribution cards at June 1, 1960 and June 1, 1961. Included are persons contributing in insurable employment on those dates and persons on claim.

## 19.-Persons Insured under the Unemployment Insurance Act, by Industrial Group and Sex, 1960 and 1961

Note.-Based on a 10-p.c. sample of contributors and claimants at June 1.

The following statement shows the current weekly rates of contribution and benefit that became effective Sept. 27, 1959. The weekly contribution is based on actual earnings in the week irrespective of the number of days in which the earnings are obtained; the employer pays a like amount. The benefit rates are calculated on the average weekly contributions for the last 30 weeks in the 104 weeks preceding claim. A claimant must have, to qualify for regular benefit, at least 30 weekly contributions in the last 104 weeks prior to claim; eight weekly contributions since the start of the last preceding regular benefit period or in the last year prior to claim, whichever is the shorter period; and 24 weekly contributions since the start of the last preceding benefit period, or in the year prior to the claim, whichever is the longer period.

> WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT, EFFECTIVE SEPT. 27,1959

Note.-Weekly rates in effect from Oct. 2, 1955 to Sept. 26, 1959 are given in the 1962 Year Book, p. 738.

## ${ }^{1} \mathrm{~A}$ half stamp, except for fishermen.

The duration of regular benefit is related to the contribution history-one week's benefit for every two weeks' contributions in the past 104 weeks with a maximum of 52 weeks. Disqualifications for benefit include: loss of work owing to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or any institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be imposed if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.

Table 20 distributes by province persons establishing regular benefit periods, regular benefit periods terminated, average weeks paid and average dollar benefit paid on these terminations. A claimant establishes a regular benefit period when he submits his claim in the prescribed manner and proves he has fulfilled the minimum contribution requirements. The duration of benefit authorized, the weekly rate authorized and total entitlement are then calculated and the claimant's benefit may be drawn upon during successive intervals of unemployment. His benefit period terminates either when he has exhausted the amount authorized or when 12 months have elapsed since he established, whichever comes first.

Seasonal benefit is payable in the period Dec. 1 to mid-May to certain claimants whose benefits have been exhausted or who have insufficient contributions to qualify for regular benefit. Table 22 gives the provincial distribution of persons establishing seasonal benefit periods in 1960 and 1961, average weeks paid and average benefits paid.
22.-Persons Establishing Seasonal Benefit Periods, Duration of Benefit and Amount Paid, by Province, 1960 and 1961

## ${ }^{1}$ Dec 1, 1959 to May 21, 1960.

Employment Service.-The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act. The public employment offices, which had functioned under a joint federal-provincial arrangement for more than two decades, were taken over by the Commission on Aug. 1, 1941, and additional offices were established in all provinces except Quebec. The Commission established its own offices in Quebec and the provincial government thereupon reduced the number of its offices.

## 23.-Applications for Employment, Positions Offered and Placements Effected by Employment Offices, by Province, 1960 and 1961

Nots.-Figures by province from 1920-57 are given in the corresponding table of previous Year Books beginning with the 1926 edition. Totals for 1920-37 are given in the 1938 edition, p. 766; for 1938 in the 1939 edition, p. 802; for 1939-48 in the 1951 edition, p. 686; for 1949 and 1950 in the 1960 edition, p. 790; and for 1951-59 in the 1962 edition, p. 741.

## Section 6.-Technical and Vocational Training

Because of the wide interest being shown in the development of technical and vocational education in Canada and the stimulation being advanced by governments through the provision of greatly expanded training facilities and programs, this subject is given detailed treatment in the following special article.

## RECENT DEVELOPMENTS IN PUBLIC TECHNICAL AND VOCATIONAL EDUCATION IN CANADA*

At probably no other time in Canadian history has there been more interest in education and training than there is today. An important expression of this interest is the greatly enlarged federal-provincial programs that are under way in all ten provinces which are designed to raise the level of technical knowledge and increase the occupational competency of the labour force. The reasons underlying this expansion in technical and vocational facilities and training programs are many. It had been evident for many years, and particularly in the postwar period, that the shortage of training facilities had been a serious drawback to the development of effective technical and vocational programs in Canada. Research studies conducted by the federal Department of Labour have pointed up the need for expanded and improved technical and vocational training facilities, both in the educational system and in industry, as a result of such factors as the rapid advances in technology and their effect on occupational needs and training requirements; the school drop-out problem; the shortage of skilled manpower; the insufficiency of training programs in industry; and the rapid increase in the population in the age group 15-19 years.

The acceleration in technology, which has been particularly apparent in the postwar years, has brought a growing demand for workers with higher levels of education and

[^216]training and with the ability to adapt to a continually changing work environment. A look at what has been happening to occupations points clearly to the growing need for more education and training. Estimates prepared by the federal Department of Labour show that in the period 1958-59 skilled, professional, and 'white-collar' jobs represented about 54 p.c. of employment in Canada, and that semi-skilled and unskilled occupations constituted some 30 p.c. Furthermore, the fastest growing occupations were those requiring higher levels of education and training. In the period 1949-59, professional occupations had increased by 71 p.c., skilled occupations by 38 p.c., and white-collar occupations by 34 p.c., while semi-skilled and unskilled occupations increased by only 24 p.c.

At the same time as the shift in occupations has been occurring, Canada has been faced with the serious problem of young people leaving school too early. The majority of youths who have been entering the labour force have not had sufficient education and training to meet the needs of industry. About one third of the young people who have entered elementary schools in recent years have left school at or before grade 8. Another third have left before completing high school.

In this regard, Canada faces an even greater problem in the next decade. The population in the age group 15-19 will increase by an estimated one quarter of a million persons over the period 1960-65 and in the last half of the decade the numbers will be even greater. It is essential, therefore, that these young people be provided with the kinds of education and training that will serve as effective paths to satisfying working careers in tomorrow's world.

The level of education and training of those already in the labour force is also cause for concern. About 43 p.c. of the work force in 1960 had an education of grade 8 or less, yet technological change has generated a need for workers with higher levels of education and training. Training programs in industry have not been increasing at a sufficient rate to meet either the growing demand for skilled people or the urgent demand for training facilities. Between 1946 and 1956, of the 280,000 skilled workers added to the labour force, 110,000 came from abroad. The heavy reliance on immigration as a major source for skilled and technical workers means that development of Canada's own manpower resources has been neglected to a considerable extent. Canada can no longer depend on immigration as a main source of trained manpower because the countries from which such manpower has traditionally been drawn also have a strong demand for skilled workers.

A recognition of all these factors culminated in the Technical and Vocational Training Assistance Act of December 1960, thus altering decisively the course of technical and vocational training. Essentially, the new legislation provided for greatly expanded assistance to the provinces to allow them more effectively to meet Canada's urgent need to train both the youth and adult populations.

The Pattern of Vocational Education and Training.-The pattern of vocational education and training in Canada varies from province to province and there are also variations within the provinces. There are basically three types of institutions offering vocational education-trade schools, secondary (or high) schools, and post-secondary technical institutes. Courses at the trade level do not usually require high school graduation; the grade level demanded, which varies according to province or trade, ranges from grade 8 to grade 11 or even grade 12. On the other hand, enrolment in technical institutes presupposes high school graduation or at least high school standing in such relevant subjects as mathematics and the sciences. Training in schools is basically a provincial responsibility. Thus, most of the trade schools and institutes of technology across Canada are provincially operated, but many municipal school boards provide vocational courses as part of the regular high school program in technical or composite type schools.

Vocational education is also carried out under a system of apprenticeship training. A main feature of apprenticeship is that training is done mainly on the job with concurrent attendance in classes either during the evening or on a full-time basis during the day for periods ranging from three to ten weeks a year.

Federal Financial Assistance.-The Federal Government contributes substantially to the maintenance and development of vocational training facilities, recognizing vocational training as an important part of the economic development of the country. The financial involvement of the Federal Government in vocational training goes back half a century to the years immediately preceding the First World War. In 1913, the Agriculture Instruction Act provided $\$ 10,000,000$ to promote projects in agricultural training. The Technical Education Act of 1919 provided a similar amount for the development of industrial and technical education and introduced the principle of matching provincial capital expenditures. The Vocational Training Co-ordination Act of 1942, together with specific agreements signed by most of the provinces, established federal contributions toward vocational training, for both capital and operational expenditures. That Act was replaced in December 1960 by the Technical and Vocational Training Assistance Act (SC 1960-61, c. 6), which provides financial support to the provinces under two separate agreements: (1) the Technical and Vocational Training Agreement, which is the basic agreement and extends over the period Apr. 1, 1961 to Mar. 31, 1967; and (2) the Apprenticeship Training Agreement, a ten-year agreement which expires in 1964.

The new Act contains fundamental changes in the basic policy of federal financial assistance. Of perhaps greatest immediate effect is the provision that the Federal Government will contribute 75 p.c. of the total capital expenditures incurred by a province in the building and equipping of vocational training facilities up to Mar. 31, 1963, and 50 p.c. thereafter during the life of the Agreement.

The Minister of Labour has recently announced that an amendment will be introduced for the continuation beyond Mar. 31, 1963, of the 75-p.c. federal contribution up to a specified total for each province. This will allow provinces to share in the provision for capital facilities to an equal extent and will, at the same time, give them more time to put these training facilities into place.

The capital expenditure program under the new Act has given a tremendous impetus to the development of training facilities in Canada. As of Mar. 31, 1963, some 513 construction projects on new and existing schools, providing places for 138,000 additional students, were in various stages of completion across Canada. The total cost of these projects is $\$ 508,000,000$, of which the federal contribution is some $\$ 323,000,000$. The following table presents a summary of capital projects approved for Canada and the provinces.

Capital Projects Approved under the Technical and Vocational Training Agreement, April 1961 $^{1}$ to Mar. 31, 1963

| Province or Territory | Projects | Total Cost ${ }^{2}$ | Federal Share | New Student Places Provided |

| Canada. | 513 | 507,570,169 | 323,424,821 | 138,039 |

[^217]In addition to sharing in capital expenditures, the Federal Government also shares in the operating costs of the various programs conducted under the Agreement. The proportion of the federal share of such costs is indicated below.

Programs under the Technical and Vocational Training Agreement.-The ten different programs provided under this Agreement are closely correlated with the common objectives of training the country's labour force at all levels, below university, and in all fields.

Program 1, the Technical and Vocational High School Program, covers any courses or programs of regular secondary school, technical, vocational or composite high schools where the full-time courses have a minimum of 50 p.c. of the school time spent in instruction preparing for an occupation. Over the six-year period of the Agreement, the Federal Government will contribute up to a total of $\$ 15,000,000$ to the provinces on a sharing basis not to exceed 50 p.c. of provincial costs. Allotments are made on the basis of the number of persons in the 15-19 age group in each province.

Program 2, Technician Training, provides training at the post-secondary level. Training under this category covers engineering, science, business or other fields requiring advanced theoretical and practical training below the professional level. The Federal Government contributes 50 p.c. of provincial costs.

Program 3, Trade and Other Occupational Training, has a three-pronged objective: (1) to assist employed persons wishing to upgrade their skill; (2) to help those about to enter employment; and (3) to provide training for those individuals wishing to retrain for change of occupation. To qualify for training under this program, trainees must have left elementary or secondary schools and must be over the compulsory school attendance age. The Federal Government pays 50 p.c. of provincial costs.

Program 4, Training in Co-operation with Industry, may include the following: training to allow employees to upgrade their skills (including basic training in mathematics, science and languages), retraining for those required to learn new skills or occupations, and supervisory training. Projects undertaken under this program are developed jointly by the province and one or more employers or industries in the particular area. Training may be provided in public or approved private schools, in industrial establishments by means of full-time, part-day, day or evening, day release, sandwich, on-the-job type of programs, or by correspondence courses. The Federal Government contributes 50 p.c. of provincial expenditures on approved training programs.

Program 5, Training of the Unemployed, is designed to provide training for unemployed persons to improve their employment opportunities by increasing their basic education, trade, technical or occupational competence. Training under this program may be of the 'refresher' type or training for employment in an occupation previously followed by the trainee. The Federal Government may provide up to 75 p.c. of training costs when a minimum number of training days is given by a province in each fiscal year; otherwise, the federal share is 50 p.c.

Program 6, Training of the Disabled, provides for the technical or vocational or professional training, retraining, or vocational assessment of any disabled person who, because of a continuing disability, requires training to fit him for employment in a suitable occupation. One half of the provincial costs of approved programs is contributed by the Federal Government.

Program 7, Training of Technical and Vocational Teachers, includes training for technical and vocational teachers and for supervisors and administrators of technical and vocational programs. The federal share in such training is 50 p.c.

Program 8, Training for Federal Departments and Agencies, provides for training for members of the Armed Services or the Public Service as requested by any department or agency of the Federal Government. For such training or training services provided by a province under this program, the Federal Government will contribute up to 100 p.c. of training costs.

## TECHNICAL TRAINING FOR MODERN INDUSTRY

The nation's greatest asset is not in its reserve of natural resources but in the occupational and technical competency of its workers and in the potential productivity of its youth. Changing conditions of employment, technology and productive practices have created problems of displacement, unemployment and insecurity for unskilled workers and a dearth of persons trained in newly required skills. The growing need to overcome these and attendant social and economic problems has prompted on unprecedented expansion of technical and vocational education facilities and programs in Canada, the object of which is to prepare youth for entry into skilled and specialized employment and to provide for the adult the opportunity of increasing proficiency in his chosen field.

The co-ordinated manpower development ond edveotion progroms include training ar all levels below professional-the operator, the apprentice, the skilled worker, the craftsmon and the technician-in all occupational fields in primary, secondary, service and commercial industries.

Program 9, Student Aid, is a means whereby financial assistance may be given to students at university and to nurses-in-training. At the discretion of the province, assistance may take the form of a grant or loan or combination of both. The federal contribution is limited by a fixed allotment.

In addition, the Federal Government contributes up to 50 p.c. of provincial costs of preparing, printing and servicing technical and vocational correspondence courses.

The Apprenticeship Training Agreement.-This Agreement has provided, since 1944, for a federal reimbursement of 50 p.c. of provincial expenditures for the training of apprentices in classes or their supervision on the job. Apprentices must be registered with the provincial Departments of Labour in designated trades. The purpose of this Agreement is to encourage and assist in the development of organized training for apprentices in all skilled trades.

Developments under the Various Programs.-A large part of the funds provided for new vocational school buildings is being used to expand facilities under Program 1. By mid-1963, 228 vocational secondary school projects (including 170 new schools) were under construction in Ontario to implement the new Ontario Secondary School Program. Alberta had 25 vocational high school projects (including 16 new schools) under construction. No vocational secondary school projects are under way in Quebec, Newfoundland or New Brunswick, but each of these provinces is expanding facilities at the trade school and technical institute level. Of the 513 projects now approved, 285 concern either major additions to existing vocational high schools or new buildings. The secondary vocational school programs are being re-examined in those provinces where expansion is under way. New programs and courses are being introduced and tested.

There are a number of problems to be solved, such as the co-ordination of Program 1 with all other programs and the needs of industry, full utilization of facilities that now represent a very large capital investment, and the development of recognized standards.

In 1961-62, estimated full-time enrolments in technical, vocational and composite high schools numbered 127,195 compared with 114,952 in 1960-61 and 104,676 in 1959-60.

One of the fastest growing occupational fields in Canada is that of technicians. In recent years, a number of institutes of technology at the post-secondary level have been established to help meet this growing need. Four new institutes of technology are in various stages of construction and additions are being made to 13 existing institutes. Additional facilities are being provided in 16 projects that have been or are being constructed as combined trade schools and institutes of technology. In 1961-62, 29 institutes and over 25 trade schools offered courses at the post-secondary level. Full-time enrolment for 1961-62 numbered 11,178 students and graduates numbered 1,961, contrasted with an estimated enrolment of 8,333 and 1,688 graduates in 1959-60.

Trade school projects approved under the Agreement as of Mar. 31, 1963 numbered 116 (including 46 new schools). Additional facilities are also being provided by the 16 combined trade and technical institutes mentioned previously. At the end of March 1963, there were 6,319 students enrolled in trade school courses under Program 3, exclusive of trainees who were unemployed or who were receiving training under other programs. Annual enrolments would be very much larger than the figure given because of continual enrolments throughout the school year in courses ranging in duration from five days to two years.

A considerable expansion of the training in co-operation with industry program is deemed to be essential for the development of manpower skills. In considering how training might best be encouraged in industry, a broad examination of the training needs in industry has been undertaken by the Department of Labour as a basis for producing practical proposals to encourage, strengthen and broaden existing training activities. Such an enquiry will be helpful in establishing guidelines for the development of new and vigorous training programs wherever needed in industry and in bringing about a fuller coordination of the various groups involved in such training.

The response to basic training for skill development-mathematics, science and communication skills-of those already in the labour force, both employed and unemployed, is noteworthy. There is a growing realization that such training is essential for the adaptation of workers to rapidly changing industrial conditions. There is considerable interest in the setting of standards for basic training which will be accepted as the equivalent of the usual entrance requirements in trade schools and institutes of technology. A significant development in this connection is an experimental co-operative scheme involving three employers in the Leaside area of Toronto, which began in January 1963. Working in co-operation with unions, provincial and federal governments, and local school board officials, these companies are providing a six-month course to upgrade their workers in mathematics, science and English to a level where they can take further training and retraining in specific skills. Trainees include men and women from a cross-section of workers, ranging in age up to 45 , who have completed grades 8 or 9 . The new courses are designed to raise the levels of attainment in the subjects given by two school grades, and the Ontario Department of Education has agreed to issue an Equivalency Certificate on a subject-grade basis when the trainee completes a course. This pilot project is being conducted under Program 4, Training in Co-operation with Industry. Basic training for skill development programs is also being provided in other provinces for the employed as well as the unemployed worker.

A strong effort is being made to train or retrain unemployed persons. Over the period Apr. 1, 1962 to Mar. 31, 1963, 38,439 persons were enrolled for training in some $9 \pm$ occupations under Program 5; in the previous year, 26,887 students were enrolled for training. The substantial increase in enrolment is a measure of the emphasis being placed on this form of training.

## Unemployed Persons Enrolled for Training, by Province, Years Ended Mar. 31, 1962 and 1963

| Province or Territory | 1961-62 | 1962-63 |
| :---: | :---: | :---: |
|  | No. | No. |
| Newfoundland. | 411 | 402 |
| Prince Edward Island. | 123 | 183 |
| Nova Scotia. | 694 | 873 |
| New Brunswick | 3,143 | 4,076 |
| Ontario. | 7,344 | 18,511 |
| Manitoba. | 2,083 | 2,325 |
| Saskatchewan. | 1,168 | 1,177 |
| Alberta. | 1,759 | 1,658 |
| British Columbia. | 1,854 | 2,416 |
| Yukon Territory | - |  |
| Northwest Territories. |  | 59 |
| Canada | 26,887 | 38,439 |

Disabled persons given training in the fiscal year 1962-63 numbered 2,966, compared with 2,765 in the previous fiscal year.

Teacher training programs have been expanded in most provinces to meet both immediate and long-term needs for technical and vocational training teachers. Although at present a number of short courses are being conducted to meet immediate needs, there is a definite trend toward acquiring at least one year of pre-service teacher education for individuals who wish to teach in secondary schools or adult vocational schools.

There were 20,576 apprentices registered in eight provinces (excluding Quebec and Prince Edward Island) as of June 30, 1962. Quebec is not a party to the Apprenticeship Agreement and Prince Edward Island signed the Agreement in 1962. In 1950, the number of registered apprentices was 9,482 , which means that over the period 1950-62 the number had more than doubled. Completions over this period rose from 1,807 to an estimated 4,400 .

Advisory Bodies.-The advisory body to the Minister of Labour under the Act is the National Technical and Vocational Training Advisory Council which provides a national forum for the discussion of matters pertaining to the development of training of Canada's manpower. The Council has a membership of 23, including representatives from employer organizations, organized labour, women's organizations, agriculture, Canadian veterans, the Canadian Association of Administrators of Labour Legislation, and provincial governments. The major continuing committees of the Council are the National Apprenticeship Committee and the National Advisory Committee on Technological Education, the latter being concerned with the development and co-ordination of interprovincial programs for educating technicians and technologists.

Provincial advisory and consultative committees on the technical and vocational training of manpower have also been established in most provinces under the Act. These committees include representation from employers, labour, provincial departments of education, youth and labour, and the National Employment Service.

Research Needs.-The full effects and accomplishments of the current program of technical and vocational training in Canada will not be known for some time, since it is still in the early stages of development and there are a number of problems to be overcome. A good deal of consideration is being given to the needs and problems that have arisen as a result of the large expansion of facilities and the objectives of the legislation, both at the federal and provincial levels.

It is recognized that the building of schools and the expansion of programs alone are not the complete answer to the training problem. There is a need to achieve a proper balance in the facilities being built, to improve the competency of teachers and teaching methods, to improve courses at all levels of technical education to better meet the needs of individuals and the changing requirements of industry, to bring about a better integration between the schools and industry and define the role that each can most effectively play in the training of manpower, and, most important, to determine present and future occupational requirements. The development of an educational-training system which takes into consideration the unfolding requirements of a changing economy for trained people should be based on continuing research activities to identify these needs, to throw light on their consequences for training policies and programs, and to assess the effectiveness of various kinds of training.

Recognition of the essential contribution of research to the development of technical and vocational training programs is contained in the Act, in that it provides for an expanded federal research program, which can be undertaken in co-operation with any province or provinces, in such areas as changing needs for training manpower, the relationship between technical and vocational training and the requirements of the economy, the development of course content through trade analyses, and the development of training standards.

## Section 7.-Industrial Accidents and Workmen's Compensation

## Subsection 1.-Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the federal Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners and other government authorities, and from press reports.

Of the 1,086 fatal accidents to industrial workers that occurred during the year 1961, 275 were the result of the victims being struck by objects- 56 by falling trees or limbs, 31 by landslides or cave-ins, 27 by automobiles or trucks, 25 by materials falling from stockpiles and loads, 21 by trains or other railway vehicles, and 15 by objects being hoisted or conveyed. Falls and slips were responsible for 246 industrial deaths, of which 229 were falls to different levels, including 83 deaths caused by falls into rivers, lakes, seas or harbours, 35 by falls from scaffolds or stagings, 24 by falls from buildings, roofs and towers, and 18 by falls from ladders or stairs. Collisions, derailments,
wrecks, etc., were responsible for 193 fatalities-automobiles and trucks were involved in 110, aircraft in 38, and tractors and loadmobiles in 28. The classification "caught in, on, or between objects, vehicles, etc." included 122 fatalities, 43 of which were caused by tractors and loadmobiles, 22 by automobiles and trucks, and 21 by elevators, hoisting and conveying apparatus. Exposure to dust, poisonous gases and poisonous substances caused 90 fatalities and contact with electric current was responsible for 57 . Conflagrations, explosions and exposure to hot substances caused 57 deaths, 36 were the result of over-exertion, strain, etc., and 10 fatalities were caused by miscellaneous accident types.

## 24.-Fatal Industrial Accidents, by Industry, 1958-61

## Subsection 2.-Workmen's Compensation*

In all provinces legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or for disablement caused by a specified industrial disease, except where the workman is disabled for fewer than a stated number of days. The Acts of all provinces provide for a compulsory system of collective liability on the part of employers. To ensure payment of compensation, each Act provides for an accident fund, administered by the province, to which employers are required to contribute at a rate determined by the Workmen's Compensation Board in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. The Acts vary in scope but in general they cover construction, mining, manufacturing, lumbering, transportation and communications and the operation of public utilities. The Acts also cover various types of commercial establishments. Undertakings in which not more than a stated number of workmen are usually employed are excluded in some provinces. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation as determined by the Board and pay a proportion of the expenses of administration. A federal Act provides for compensation for accidents to Federal Government employees according to the scale of benefits provided by the Act of the province in which the employee is usually employed. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the Merchant Seamen Compensation Act.

[^218]Benefits in case of disability include all necessary medical care and hospitalization, cash payments during the period of temporary disability to indemnify the injured workman for loss of wages, a life pension for any resulting permanent disability, and rehabilitation services. In the case of the death of the workman, a widow is granted a monthly pension, a special lump sum payment, an allowance for funeral expenses and a monthly payment for each child under the age limit provided by the law. When there is no dependent widow or children and there are other dependants such as a parent or parents, an award is made which; in the judgment of the Board concerned, is proportionate to the pecuniary loss sustained.

Table 25 gives the number of industrial accidents reported by each of the provinces and the amount of compensation paid by Workmen's Compensation Boards in the years 1960 and 1961.

## 25.-Industrial Accidents Reported and Compensation Paid by Workmen's Compensation Boards, 1960 and 1961

[^219]
## Section 8.-Organized Labour in Canada

At the beginning of 1963, 1,449,200 workers belonged to labour organizations active in Canada, an increase of almost 2 p.c. over the 1962 membership. Seventy-five per cent of the organized workers were members of unions affiliated with the Canadian Labour Congress (CLC). Of the unions within the CLC, a major group belonged also to the American Federation of Labor and Congress of Industrial Organizations (AFL-CIO) in the United States. Another 8 p.c. of union membership in Canada was in unions affiliated with the Confederation of National Trade Unions, and 16 p.c. was represented by unaffiliated international, national or local unions. About 2 p.c. of the total union membership in Canada belonged to unions having no affiliation with a central labour body in Canada but linked with the AFL-CIO.

The 1963 total union membership represented a net increase of 26,000 over the previous year. Sixteen unions operating in Canada reported increases of 1,000 members or more; the Steelworkers added 8,000, recording the largest increase for any single union, and the Auto Workers reported a gain of 4,300 . On the other hand, a number of unions experienced a falling-off in membership during the year; the membership of the Mine, Mill and Smelter Workers was down by 8,000 , the Teamsters' membership by 3,500 and the Seafarers by 2,400 . Six other unions reported decreases of 1,000 or more.

Of the $1,449,200$ union members reported in the 1963 survey, $1,031,700$ belonged to international unions having branches in both Canada and the United States and in most cases belonging to central labour bodies in both countries. Of the 110 international unions active in Canada in January 1963, 87 with 882,200 members were affiliated with the CLC and the AFL-CIO; three with 12,600 members were affiliated with the CLC only; and ten with 30,500 members were affiliated with the AFL-CIO only. Ten, accounting for some 106,300 members, were without any affiliation.

National unions active in Canada numbered 51 with 350,900 members in January 1963. Of these, 18 with 163,200 members were affiliated with the CLC, 13 with a membership of 104,500 were within the Confederation of National Trade Unions, and 20 with 83,200 members were without affiliation.

International and national unions had almost $1,382,600$ members in 161 unions at the beginning of 1963. Canadian membership in these unions ranged in size from fewer than 10 to the 90,000 reported by the United Steelworkers of America. The International Union, United Automobile, Aerospace and Agricultural Implement Workers of America, with an increase of 4,300 members to a total of 61,100 , replaced in second place the United Brotherhood of Carpenters and Joiners of America with 60,200 members. Among the national unions, the National Union of Public Employees with 52,900 members continued to rank first in size, followed by the 35,200 -member Canadian Brotherhood of Railway, Transport and General Workers.

The grand total of $1,449,200$ members reported by labour organizations in 1963 was equal to about 30 p.c. of the estimated total number of non-agricultural paid workers in Canada.
26.-Union Membership in Canada, 1935-63

| Year | Members | Year | Members | Year | Members | Year | Members |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## 27.-Union Membership, by Type of Union and Affiliation, as at January 1963

| Type and Affiliation | Unions | Locals | Membership |
| :---: | :---: | :---: | :---: |
| International Unions. | 110 | 4,424 | 1,031,658 |
| AFL-CIO/CLC. | 87 | 4,031 | 1,882,222 |
| CLC only.... | 3 | 42 | 12,614 |
| AFL-CIO only.. | 10 | 49 | 30,507 |
| Unaffiliated railway brotherhoods | 2 | 123 | 9,347 |
| Other unaffiliated unions. | 8 | 179 | 96,968 |
| National Unions. | 51 | 2,289 | 350,918 |
| CLC. | 18 | 1,442 | 163,227 |
| CNTU. | 13 | 490 | 104,497 |
| Unaffiliated unions. | 20 | 357 | 83,194 |
| Totals, International and National Unions................... | 161 | 6,713 | 1,382,576 |
| Directly Chartered Local Unions...................................... | 232 | 232 | 27,926 |
| CLC . .................................................................. | 181 | 181 | 21,846 |
| CNTU. | 51 | 51 | 6,080 |
| Independent Local Organizations. | 128 | 128 | 38,679 |
| Grand Totals. | 521 | 7,073 | 1,449,181 |

A list of the individual international and national unions, with number of locals and membership in Canada, is carried in the Department of Labour publication Labour Organizations in Canada, available from the Queen's Printer, Ottawa, price 35 cents.

## Section 9.-Strikes and Lockouts

Statistical information on strikes and lockouts in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. Table 28 covers strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The developments leading to work stoppages are often too complex to make it practicable to distinguish statistically between strikes on the one hand and lockouts on the other. However, a work stoppage that is clearly a lockout is not often encountered.

The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Where the number of workers involved varied in the course of a stoppage, the peak figure is used in tabulating annual totals. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included in the number of workers involved.

Duration of strikes and lockouts in terms of man-days is calculated by multiplying the number of workers involved in each work stoppage by the number of working days the stoppage was in progress. Where the number of workers involved varied during the period of a stoppage, an appropriate adjustment is made in the calculation as far as this is practicable. The duration in man-days of all work stoppages in a year is also shown as a percentage of estimated working time, based on the annual average of all non-agricultural paid workers in Canada.

The data on duration of work stoppages in man-days are provided to facilitate comparison of work stoppages in terms of a common denominator. They are not intended as a measure of the loss of productive time to the economy.

## 28.-Strikes and Lockouts by Industry, 1962 with Totals for 1958-62

Nore.-Comparable statistics, except for 1961, are given in the corresponding table of previous Year Books; the latter are available in the Department of Labour annual publication Strikes and Lockouts in Canada.

## Section 10.-Canada and the International Labour Organization

The Department of Labour is the officially designated liaison between the Government of Canada and the International Labour Organization. The ILO was established in 1919, in association with the League of Nations under the Treaties of Peace, with the object of improving labour and social conditions throughout the world by international agreement and legislative action. Under an agreement approved by the General Conference of the International Labour Organization and by the United Nations General Assembly in 1946, the Organization became a specialized agency of the United Nations although it retained its autonomy.

The ILO is an association of 107 Member States, financed by their governments and democratically controlled by representatives of those governments and of their organized employers and workers. It is comprised of three main organs: (1) the Governing Body; (2) the International Labour Office; and (3) the International Labour Conference. Ten tripartite industrial committees have been established to deal with problems of important world industries, by the holding of regional and special technical conferences, and by technical assistance to aid under-developed countries in such fields as co-operatives, social security, vocational training, productivity techniques and employment service organization. The ILO also administers numerous technical aid projects in developing countries on behalf of the United Nations Special Fund and the Expanded Program of Technical Assistance.

The Governing Body consists of 40 members- 20 government representatives, 10 employers' representatives and 10 workers' representatives. It is planned to increase the membership in June 1963 to 48-24 government representatives, 12 employers' representatives and 12 workers' representatives. Of the goverment seats, each of the 10 Member States of chief industrial importance (of which Canada is one) holds a permanent place and the other 10 government representatives are elected triennially by the Conference. The worker and employer members are elected by their groups every three years at the Conference. The Governing Body usually meets three times a year and has supervision over the work of the International Labour Office and the various Conferences and Committees, in addition to framing the budget and approving the agendas of the Conferences and meetings. Canada's representative on the Governing Body is the Deputy Minister of Labour for Canada.

The International Labour Office acts as the permanent secretariat of the ILO and as a world research and information centre and publishing house on subjects concerned with working and living conditions. In the operational field it assists Member States by furnishing experts on manpower training and other types of technical assistance. The ILO maintains branch offices in all parts of the world; the Canada Branch is located at 202 Queen Street, Ottawa.

The International Labour Conference is a world assembly for the consideration of labour and social problems. It meets annually and is attended by four delegates from each Member State (two representing the government, one representing the employers and one representing the workers) accompanied by technical advisers. The Conference formulates international standards concerning working and living conditions in the form of Conventions and Recommendations; the former are subject to ratification by the Member States concerned.

There have been 46 Sessions of the International Labour Conference, at which 118 Conventions and 117 Recommendations have been adopted. Canada has ratified 20 of these Conventions, of which 12 concern maritime and dock labour. In Canada the provincial legislatures are the competent legislative authorities with jurisdiction over the subjects covered by most of the ILO Conventions and Recommendations. The Department of Labour, as the official link with the International Labour Organization, is responsible for forwarding to the ILO reports on ratified Conventions as well as periodic reports on many other industrial and social matters. Canada is represented at most of the ILO annual and special meetings, and accounts of the discussions and decisions are regularly published in the Labour Gazette.

## CHAPTER XVII.-TRANSPORTATION

Section 2. Civil Aviation Operation Statistics ..... 811
Part VI.-Oil and Gas Pipelines ..... 815

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

The physiographic and population characteristics of Canada present unusual difficulties from the standpoint of transportation. The country extends 4,000 miles from east to west and its main topographic barriers run in a north-south direction, so that sections of the country are cut off from one another by such water barriers as Cabot Strait and the Strait of Belle Isle separating the Island of Newfoundland from the mainland; by rough, rocky forest terrain such as the New Brunswick-Quebec border region and the areas north of Lakes Huron and Superior dividing the industrial region of Ontario and Quebec from the agricultural areas of the Prairie Provinces; and by the mountain barriers between the prairies and the Pacific Coast. Unevenly distributed along a narrow southern strip of Canada's vast area is its relatively small population of $18,896,000$ (estimate of June 1, 1963). To such a country, with a population so dispersed and producing for export as well as for consumption in distant parts of the country itself, efficient and economical transportation facilities are necessities of existence.

A special article giving some idea of the competitive problems that have faced the major agencies of transport during recent years of economic and technological change appears in the 1962 Year Book at pp. 753-758.

## PART I.-GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION

The Federal Government's control and regulation of transportation reflect to a considerable extent conditions that date back to the period when the railways possessed a virtual monopoly of transportation within the country. Although federal regulation was a direct outcome of such particular matters as the prevention of unjust discrimination in
rates and charges resulting from monopoly conditions in the industry and the safety of transportation facilities and operating practices, yet the railways have been so involved in the public interest that their regulation has been extended to become the most comprehensive of any industry in Canada.

In the meantime, conditions in the transportation industry have been drastically altered by the increasing competition arising from the advance of highway transportation and a large part of the present competition between common carriers has become a permanent feature of the transportation industry. In these circumstances, it is not surprising that regulations, which under monopoly conditions were not onerous to the railways or were purely nominal in their effect, are now alleged to have become increasingly restrictive and hampering under highly competitive conditions. Regulatory authorities are therefore faced with the problem of piecemeal 'revision of their regulations-retaining those where railway monopoly or near-monopoly conditions still make them necessary in the public interest, and relaxing those where competition can be relied on to protect the public in order to enable the railways to meet this competition more effectively. The emphasis has shifted from the regulation of monopoly to maintaining a balance between the several competing modes of transport.

In 1936, the amalgamation of the Department of Railways and Canals and the Department of Marine, together with the Civil Aviation Branch of the Department of National Defence, to form the Department of Transport brought under one control railways, canals, harbours, marine and shipping, civil aviation, radio and meteorology.

Road and highway development is mainly under provincial or municipal control or supervision. According to the judgment of the Judicial Committee of the Privy Council dated Feb. 22, 1954, jurisdiction over interprovincial and international highway transport rests with the Federal Government, but the Motor Vehicle Transport Act, 1954 gives to all provinces, at their option, the authority to apply to interprovincial and international highway transport the same regulations respecting certificates of public convenience and necessity and rates as they apply to undertakings operating entirely within the province. This Act has since been proclaimed in seven provinces.

The Board of Transport Commissioners for Canada.-The Board of Transport Commissioners for Canada was created and initially named the Board of Railway Commissioners for Canada by the Railway Act, 1903, and was given its present name by the Transport Act, 1938. It was organized on Feb. 1, 1904, and succeeded to all the powers and duties of its predecessor, the Railway Committee of the Privy Council. The Board, now consisting of a Chief Commissioner, a Deputy Chief Commissioner, an Assistant Chief Commissioner and three Commissioners, has extensive regulative and administrative powers and is also a statutory court of record, so constituted by the Railway Act and recognized as such by other courts. The finding or determination of the Board upon any question of fact within its jurisdiction is binding and conclusive and no order or decision may be questioned or reviewed except on appeal to the Supreme Court of Canada upon a question of law or a question of jurisdiction with leave of a judge of that Court, or by the Governor in Council.*

The Board has jurisdiction under more than a score of Acts of Parliament, including jurisdiction, under the Railway Act and the Transport Act, over transportation by railway and by inland water, and over communication by telephone and telegraph.

[^221]Under the Railway Act its jurisdiction is, stated generally, in respect of construction, maintenance and operation of railways that are subject to the legislative authority of the Parliament of Canada, including matters of engineering, location of lines, crossings and crossing protection, safety of train operation, operating rules, investigation of accidents, accommodation for traffic and facilities for service, abandonment of operation, freight and passenger rates, and uniformity of railway accounting. The Board also has certain jurisdiction over telephones and telegraphs, including regulation of the telephone tolls of The Bell Telephone Company of Canada, the British Columbia Telephone Company, the Bonaventure and Gaspe Telephone Company and the Yellowknife Telephone Company, over tolls for express traffic and tolls for the use of international bridges and tunnels.

Regulation of railway freight and passenger rates is one of the Board's principal tasks. Except for certain statutory rates, it has power "to fix, determine and enforce just and reasonable rates, and to change and alter rates as changing conditions or cost of transportation may from time to time require"; it may disallow any tariff that it considers to be unjust or unreasonable or contrary to any provision of the Railway Act; it may prescribe other tolls in lieu of the tolls disallowed, or require the railway company to substitute a tariff satisfactory to the Board. Since the end of World War II there has been a succession of applications for authority to make general freight rate increases and general telephone rate increases.

A review of transport regulation was undertaken by the Royal Commission on Transportation, under the chairmanship of the Hon. W. F. A. Turgeon, which held extensive hearings in 1949-50 and issued its Report in 1951 (see 1952-53 Year Book, p. 741). Certain of its recommendations were incorporated into the Railway Act by amendments made in 1951 (see 1962 Year Book, p. 760).

Under the Transport Act, the Board entertains applications for licences for ships to transport goods or passengers for hire or reward between places in Canada on the Great Lakes and the Mackenzie and Yukon Rivers, except goods in bulk on waters other than the Mackenzie River. Before granting a licence, the Board must be satisfied that public convenience and necessity require such transport. The Board also has regulative powers over tolls for such transport.

A Royal Commission was appointed May 13, 1959 with the Hon. C. P. McTague named as chairman (later succeeded by M. A. MacPherson) to inquire into the railway rate structure and other matters affecting transportation. Its findings were published in three volumes, which appeared between March 1961 and July 1962.

On July 8, 1959, Parliament passed the Freight Rates Reduction Act designed as a relief measure for shippers. The Act provided a fund of $\$ 20,000,000$ to permit a reduction in class and commodity rates (other than competitive rates) on Canadian railways for a period of one year to Aug. 1, 1960. In compliance with the Act, the Board of Transport Commissioners ordered the substitution of an increase of 10 p.c. for the permissive increase of 17 p.c. authorized in November 1958 but suspended pending the findings of the Royal Commission. A further reduction, substituting an increase of 8 p.c. in lieu of 10 p.c. was ordered effective May 1960; these reduced rates have continued in effect. Later amendments extended the Freight Rates Reduction Act to Apr. 30, 1961 and then to Apr. 30, 1962 and the authorized expenditure was raised from $\$ 20,000,000$ to $\$ 35,000,000$ and then to $\$ 55,000,000$. In respect of the year 1961, interim payments related to recommendations of the Royal Commission pending its complete report were authorized by Parliament to the amount of $\$ 50,000,000$ to compensate the railway companies for maintenance of their rates on freight traffic at the reduced levels.

The Freight Rates Reduction Act was not extended beyond Apr. 30, 1962, but authority for payments in respect of reduced freight rates between that date and Mar. 31, 1963 was
provided under Governor General's Warrant. Provision for extended authority in respect of the period Apr. 1, 1963 to Mar. 31, 1964 for payments of $\$ 50,000,000$ in respect of the calendar year 1963 was made in Supplementary Estimates (A) for the year ending Mar. 31, 1964.

Total payments under the so-called $\$ 20,000,000$ and $\$ 50,000,000$ subsidies, respectively, have been $\$ 72,300,000$ for the period Aug. 1, 1959 to June 30, 1963 and $\$ 124,800,000$ for the period Jan. 1, 1961 to June 30, 1963.

The Air Transport Board.-The Air Transport Board was established in September 1944 by amendment to the Aeronautics Act. Subsequent amendments to the Act were made in 1945, 1950 and 1952. The Board has three members including the Chairman, and the staff is comprised of a Senior Adviser; a Legal Branch; an Operations Branch which includes the Traffic Division, Operations Analyst, Special Traffic Adviser, International Relations Division, and the Licensing and Inspection Division; an Economic and Accounting Branch which includes the Economics Division, Audit Division and Financial Analyst; and a Secretary's Branch which includes the Administrative Division. In addition, a small staff is located in Montreal to serve the Senior Canadian Representative on the Council of the International Civil Aviation Organization.

The Board is responsible for the economic regulation of commercial air services in Canada and is also required to advise the Minister of Transport in the exercise of his duties and powers in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad and to foreign air services operating into and out of Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. As provided by the Act, the Board issues Regulations, approved by the Governor in Council, dealing with the classification of air carriers and commercial air services, applications for licences to operate commercial air services, accounts, records and reports, ownership, transfers, consolidations, mergers and leases of commercial air services, traffic tolls and tariffs, and other related matters. Detailed regulatory instructions are issued by the Board in the form of General Orders and Rules, relating to all air services, or groups of air services; Board Orders relating to individual air services; and Circulars for general guidance and information. Financial and operating statistics are collected under authority of the Board's Regulations.

The Board has under study the potential for and requirements of increased and improved air services into the Canadian North as well as the consolidation of its over-all regulations. The procedures governing applications for licence are being examined for improved processing methods.

The Board continues to take an active part in the work of the International Civil Aviation Organization and to undertake bilateral negotiations for the exchange of traffic rights when appropriate. At present, Trans-Canada Air Lines, Canadian Pacific Air Lines Limited and TransAir Limited are Canada's designated international scheduled carriers.

The Canadian Maritime Commission.-The Canadian Maritime Commission was established by Act of Parliament in 1947 (RSC 1952, c. 38) as a separate department of the Government reporting to Parliament through the Minister of Transport. It is the function of the Commission to "consider and recommend to the Minister from time to time such policies and measures as it considers necessary for the operation, maintenance, manning and development of a merchant marine and a ship-building and ship-repairing
industry commensurate with Canadian maritime needs". The Commission is authorized to examine into, ascertain and keep records of all phases of ship operation and to "administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament".

In 1961 a national maritime policy was inaugurated to encourage the construction and operation of ships in Canada and, as well, provide assistance to Canadian fishermen. A federal capital subsidy was authorized, amounting to 35 p.c. of the cost of construction of self-propelled ships in Canadian shipyards, to be increased to 40 p.c. for work done after May 12, 1961 and under any contract entered into and filed with the Commission on or before Mar. 31, 1963. For steel fishing trawlers constructed to replace old vessels withdrawn from service, the assistance is 50 p.c. of the cost. Capital grants toward the construction of small wooden fishing vessels were also increased. Payments of capital subsidy are made under regulations of the Governor in Council; up to Mar. 31, 1963, about $\$ 24,500,000$ was expended under the regulations.

Subsidies have been paid by the Federal Government for the maintenance of essential steamship services since the latter part of the nineteenth century; the services subsidized and the amounts paid for the years ended Mar. 31, 1962 and 1963 are given on p. 804.

The National Energy Board.-The National Energy Act (SC 1959, c. 46) proclaimed Nov. 1, 1959, provided for the establishment of a five-member Board charged with the duty of assuring the best use of energy resources in Canada. In the performance of this function, the Board is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipeline, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The functions and operations of the Board are covered in the Domestic Trade and Prices Chapter of this volume (see Index).

## PART II.-RAIL TRANSPORT*

## Section 1.-Railways

Since Confederation the railways of Canada have been the principal transport facility throughout, and beyond, the nation. The two great transcontinental systems, supplemented by a major north-south line on the West Coast and a number of regional independent railways, are the only carriers able to transport large volumes of freight at low cost in all weather by continuous passage over Canadian transcontinental routes. Although highway and air competition is increasing, the railways still retain their primary position in the freight transport field.

The two national railway companies control a wide variety of Canadian and international transport and communication services. The government-owned Canadian National Railway System is the country's largest public utility and operates the greatest length of trackage in Canada. In addition, it operates a highway service, a fleet of coastal and ocean-going steamships, a national telecommunications system connecting the principal points of Canada with other parts of the world, an extensive express service in Canada and abroad, a chain of large hotels and resorts, and a scheduled air service connecting all major cities across the country and Canadian with other North American and European points. Its chief competitor, the Canadian Pacific Railway Company, is a joint-stock corporation

[^222]operating a transcontinental railway supported by a national telecommunications system with connections throughout the world, a large fleet of inland, coastal and ocean-going vessels, a chain of year-round and resort hotels, a domestic airline servicing points in British Columbia, Alberta and Yukon Territory, a transpacific airline service to the Orient and the Antipodes, air services to Mexico, Peru, Chile and Argentina, a transpolar air route connecting Vancouver and Amsterdam, a transatlantic service to Portugal, Spain and Italy, and a limited (one flight daily each way) transcontinental air service between Vancouver and Montreal. Also included in the company's operations are a world-wide express service and a domestic truck and bus network.

The Pacific Great Eastern Railway, owned by the British Columbia Government, operates over a 789.5 -mile route from North Vancouver to Fort St. John in the Peace River area of northeastern British Columbia, with a branch line from Chetwynd to Dawson Creek. The completion in 1958 of the northern section of this line opened up to development the vast interior of the province and brought to an end the largest railway construction job undertaken in North America for two decades. With the completion in May 1959 of the last link in the microwave system, the PGE became the first railway on the Continent to be operated entirely by means of radio communication.

The statistics in Subsections 1 to 3 of this Section cover the combined railway facilities of all companies operating in Canada, including intercity freight and passenger services of electric railway companies. Details relating to the Canadian National Railway System are dealt with separately in Subsection 4. A special article covering the consolidation and organization of the CNR appears in the 1955 Year Book at pp. 840-847.

## Subsection 1.-Milage and Equipment

Construction was begun in 1835 on the first railway in Canada-the short link of 14.5 miles between Laprairie and St. Johns, Que.-but only 66 miles were in operation by 1850. The first great period of construction was in the 1850 's when the Grand Trunk and the Great Western Railways were built as well as numerous smaller lines. The building of the Intercolonial and the Canadian Pacific railways contributed to another period of rapid expansion in the 1870 's and 1880 's. In the last period of extensive railway building (1900-17), the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

There has been little change in total track milage since the late 1920's, although in recent years the development of a number of large projects in districts far removed from transport facilities and the opening up of the Northwest Territories has necessitated the building of branch lines. Those completed up to 1956 are listed in the 1957-58 Year Book, p. 815, and those completed from that year to 1961 are mentioned in subsequent editions. During 1962, the first section of the 430 -mile Great Slave Railway, being built by the CNR for the Federal Government, went into operation. By the end of October, track had reached Manning, Alta., a distance of 56 miles, and rail grain shipments began moving out of this northerly agricultural area. At year-end, 73.5 miles of track had been completed and clearing, grading, bridge and trestle work progressed on the remainder of the right-of-way. Also in Alberta, a 23 -mile rail extension was constructed from Whitecourt to Windfall to carry sulphur shipments from the Windfall gas fields. Track-laying was two thirds completed on the 61 -mile branch line to the Matagami Lake region in northern Quebec and construction was started on an eight-mile extension from Chisel Lake to a new mining development at Stall Lake in northern Manitoba. Preparatory work was undertaken for the construction of a 15 -mile branch line from Nepisiguit Junction, near

Bathurst, N.B., to a zinc, lead and copper mining development, and a survey report was made on the possible construction of a 57 -mile line between Matane and Ste. Anne des Monts in the Gaspe region of Quebec. The CPR completed a 16 -mile branch line south from Bredenbury, Sask., to serve a new mineral development and the PGE began construction of a 100 -mile extension in northern British Columbia, which will leave the existing main line about 35 miles north of Prince George; it is scheduled for completion in 1965.

While new construction has added considerably to first main track milage placed in operation in the past few years, other lines have been abandoned because they have become unprofitable. Thus, new milage is not reflected in the totals shown in Table 1.

## 1.-Railway Track Milage Operated, 1900-61

Note.-Figures of total milage of first main track operated for 1835-1909 are given in the 1941 Year Book, p. 546; for 1911-14 in the 1954 edition, p. 786; for 1916-24 in the 1955 edition, p. 830; and for 1926-49 in the 1956 edition, p. 792.

| 1960. | 44,029 43,689 | Grand Totals. | 59,319 ${ }^{2}$ | 59,394 ${ }^{3}$ | 59,193 ${ }^{3}$ | 58,7824 |

[^223]Rolling-Stock.-Although the figures of Table 2 show the number of the different types of rolling-stock in operation at Dec. 31 of the years 1955 to 1961, they do not by any means give a complete picture of rolling-stock capacity for service. Each year hundreds of units, particularly freight cars, are retired and replaced by more efficient equipment, much of it specially designed and engineered for specific hauling jobs. Improvement in the efficiency of car use is also a factor that may reduce the amount of equipment required. Between 1955 and 1961 the average capacity of box cars increased from 45.8 tons to 47.2 tons, of gondola cars from 64.4 tons to 65.5 tons, flat cars from 45.6 tons to 48.1 tons, hopper cars from 64.6 tons to 67.0 tons, ore cars from 63.3 tons to 79.4 tons and of all freight cars from 48.6 tons to 51.6 tons. The average tractive power of locomotives advanced during the same period from $42,701 \mathrm{lb}$. to $56,597 \mathrm{lb}$. Table 2 shows the increasing number of diesel locomotives in service. The Canadian National Railways
completed its dieselization program during 1960，retiring all remaining steam units from service，while the Canadian Pacific Railway Company at the close of 1961 had replaced all but 188 steam locomotives．

${ }^{1}$ Includes one gasoline locomotive．

## Subsection 2．－Finances

The tables in this Subsection give information on capital liability and capital invest－ ment，earnings，operating expenses，employees and their earnings and government aid to all railways．＊Financial statistics of government－owned railways are given separately and in detail in Subsection 4．A Uniform Classification of Accounts for common carriers became effective for the Canadian National and the Canadian Pacific Railways on Jan．1，1956， and for all other common carrier railways on Jan．1，1957．In transportation statistics a distinction is made between expenditures and expenses．In this Subsection，the term ＇expenses＇is used as defined in the Uniform Classification of Accounts and refers to the expenses of furnishing rail transportation service and of operations incident thereto，includ－ ing maintenance and depreciation of the plant used in such service．

[^224]Capital Liability and Investment.-The capital liability of railways operating in Canada for the years 1942 to 1961 is shown in Table 3. The increase of $\$ 12,455,158$ in 1961 over 1960 compares with an increase in investment in road and equipment property of $\$ 85,684,597$ as shown in Table 4.

## 3.-Capital Liability of Railways, 1942-61

Note.-Figures for 1876-1925 are given in the 1927-28 Year Book, p. 649, and those for 1926-41 in the 1947 edition, p. 662.
(Exclusive of Canadian railway capital owned by Canadian railways)

| Rents and taxes. | $63,181,195$ | 5.4 | 58,845,207 | 5.3 | 60,683,010 | 5.4 |
| Totals. | 1,166,306,724 | 100.0 | 1,109,470,426 | 100.0 | 1,114,432,525 | 100.0 |

Employment and Salaries and Wages.-Railway employment in 1961 declined 5 p.c. from employment in the previous year, 23 p.c. from that in 1956 and was 16 p.c. lower than the average for the ten-year period 1952-61. Compared with 1952, employees on hourly rates in 1961 worked 0.4 p.c. fewer average hours but their average wages per hour were 7 p.c. higher. Since 1956, statistics have been reported in accordance with the revised Canadian Classification of Railway Employees and Their Compensation, which became effective Jan. 1, 1956.

## 7.-Railway Employees and Their Earnings, 1952-61

Nore.-Figures include employees and wages for 'outside' operations amounting to from 3 to 6 p.c. of total employees and from 2 to 5 p.c. of total salaries and wages. Figures for $1912-39$ are given in the 1941 Year Book, p. 551 ; for 1940-49 in the 1951 edition, p. 723 ; and for 1950 and 1951 in the 1961 edition, p. 785 .

| Year | Employees | Total Salaries and Wages | Average Salaries and Wages | Ratio of Total Payroll (charged to operating expenses) |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Operating <br> Revenues | Operating Expenses |
|  | No. | \$ | \$ | p.c. | p.c. |

| 1961.. | 166,081 | 748, 097, 831 | 4,504 | 52.7 | 54.9 |

${ }^{1}$ Includes employees engaged in cartage and highway transport (rail) operations.
Government Aid to Railways.-In order that the private railways of Canada might be constructed in advance of settlement as colonization roads or through sparsely settled districts where little traffic was available, it was necessary for federal and provincial governments and even for municipalities to extend some form of assistance. The form of aid was usually a bonus of a fixed amount for each mile of railway constructed and, in the early days, grants of land were also made other than for right-of-way. As the country developed, objections to the land-grant method became increasingly apparent and aid was given more frequently in the form of a cash subsidy for each mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling-stock, have been guaranteed by the Federal Government.

During the era of railway expansion before 1918, provincial governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. These bonds as they mature or are called are paid off by the Canadian National Railways, in large measure through funds raised by the issue of new bonds with Federal Government guarantee. Bonds guaranteed by the Governments of New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia have been eliminated in this manner in recent years. Railway bonds guaranteed by the Government of Canada at Dec. 31, 1961 amounted to $\$ 1,670,653,176$; this amount includes $\$ 88,972$ perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National Railway System, on which interest and dividends are guaranteed by the Federal Government.

## Subsection 3.-Passenger and Freight Traffic

Tables 8 and 9 show passenger and freight statistics for all railways for the years 1957-61. A separate analysis of the operations and traffic of the Canadian National Railways is given at pp. 763-766.

## 8.-Statistics of Passenger Service and Revenue, 1957-61

Nors.-Figures for earlier years are given in the corresponding table of previous Year Books.

| Revenue per freight-train mile............ \$ | 13.85 | 14.51 | 15.48 | 15.54 | 16.72 |

${ }^{1}$ Includes caboose miles but excludes miles made in passenger and non-revenue trains.
${ }^{2}$ Excludes traffic handled by more than one railway; see Table 10 for details of freight carried.

The total tonnage of revenue freight carried (including national loadings and receipts from United States rail connections) was 3.4 p.c. lower in 1961 than in 1960. Among the main commodity groups, only agricultural products increased over the previous year. Of the $153,080,317$ tons carried in 1961 (excluding freight handled by more than one railway and in intermediate switching), mine products accounted for 40.1 p.c., manufactures and miscellaneous products for 30.3 p.c., agricultural products 18.3 p.c., forest products 9.5 p.c., animal products 1.1 p.c., and less-than-carload freight for 0.8 p.c.

## 10.-Commodities Hauled as Freight by Railways, 1958-61

Note.-In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

| Commodity | 1958 | 1959 | 1960 | 1961 |

Railway Accidents.-Accidents shown in Table 11 include all those in which railway trains were involved and accidents on railway property. The classification of accidents used for DBS vital statistics treats collisions between motor vehicles and trains as motor vehicle accidents; provincial statistics also class them as motor vehicle accidents and consequently adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor vehicle. Also, all passengers injured are included in the figures but, for employees, only those who were kept from work for at least three days during the 10 days following the accident are recorded.

## Subsection 4.-The Canadian National Railway System*

In view of the interest in Canada's publicly owned railway, the Canadian National Railway System is given separate treatment in this Subsection. Its history is presented in a special article published in the 1955 Year Book at pp. 840-847. More detailed information than can be given here is obtainable from DBS annual report Canadian National Railways (Catalogue No. 52-201).

Financial Statistics.-The original financial structure of the CNR and the steps taken through the Capital Revision Acts of 1937 and 1952 to alleviate the burden of interest debt undertaken by the company on its formation in 1923 are described in the special article mentioned above. Briefly, the Capital Revision Act of 1937 wrote off all loans that had been made to cover deficits and also unpaid interest on loans, and certain loans made for the purpose of additions and betterments were converted to equity capital, relieving the CNR from paying fixed charges on this amount. Under the 1952 Capital Revision Act, 50 p.c. of the company's interest-bearing debt was changed to preferred stock on which, after settling income taxes, a dividend of 4 p.c. is paid on earnings. Also, for a term of ten years ended Dec. 31, 1961, the Railway was not obliged to pay interest on

[^226]$\$ 100,000,000$ of its long-term debt. The Government is authorized to buy additional preferred stock annually in amounts related to the company's gross revenues. As a consequence, the proportion of total capitalization represented by equity capital in shareholders' account was raised from 34.5 p.c. at Dec. 31, 1951 to 67.2 p.c. at Jan. 1, 1952, and the proportion of borrowed capital was correspondingly reduced.
12.-Capital Structure of the Canadian National Railway System as at Dec. 31, 1953-62

[^227]The financial details presented in Table 14 are those of the entire Canadian National Railway System, including both Canadian and United States operations. Revenues and expenses include those of express and commercial communications throughout, and highway transport (rail) operations from 1956. In conformity with the requirements of the Uniform Classification of Accounts, tax accruals and rents have been charged to operating expenses since Jan. 1, 1956.

## 14.-Total Revenue, Operating Expenses, Net Revenue, Fixed Charges and Deficits of the Canadian National Railway System (Canadian and United States Operations), 1953-62

Nors.-Figures for 1911-52 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

## Section 2.-Express Companies

Express, which is actually expedited freight carried on passenger trains, is a service provided by rail carriers either through a separate express company or as a department of the railway organization. Many express and package freight shipments are handled on a contract basis-contracts which provide for payment to the railways of a fixed percentage of the gross express revenue.

Express companies are organized under authority of federal legislation and their business concerns the rapid transit of valuable or perishable commodities and animals, the delivery of parcels and the issuing of financial papers, money orders, travellers cheques and letters of credit. Express rates are usually much higher than freight rates and the two services are not normally competitive. Both tariffs are subject to the approval of the Board of Transport Commissioners.

Five express organizations operate in Canada-four Canadian and one American. The Canadian Pacific Express Company is a subsidiary of the Canadian Pacific Railway Company and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Algoma Central and Hudson Bay Railway, the Canadian National Railway System, and the Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency Incorporated, of the United States, operates mainly over the Canadian sections of United States railways and over the route from Skagway in Alaska to points in Yukon Territory. Operations of the Algoma Central and Hudson Bay Railway express department were reported for the first time in 1957. No statistics are available on the volume of express traffic because much of it consists of parcels and small lots that cannot be classified.

## 16.-Summary Statistics of Express Companies, 1953-62

Norz.-Figures for 1911-52 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.

## PART III.-ROAD TRANSPORT*

Highways and motor vehicles are herein treated as related features of transportation. An introductory Section summarizes provincial regulations regarding motor vehicles and motor traffic.

## Section 1.-Provincial Motor Vehicle and Traffic Regulations

#### Abstract

Note.-It is obviously impossible to include here the great mass of detailed regulations in force in each province and territory; only the more important general information is given. The source of information for detailed regulations for each province and territory is given at p. 770.

The registration of motor vehicles and the regulation of motor vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. Regulations common to all provinces and territories are summarized as follows.

Operators' Licences.--The operator of a motor vehicle must be over a specified age, usually 16 years ( 17 in Newfoundland and 18 for class A licence in Alberta), and must carry a licence, obtainable in most provinces only after prescribed qualification tests and renewable annually, except in Alberta and British Columbia where it is renewable every five years, and in New Brunswick and Manitoba where it is renewable every two years. Special licences are required for chauffeurs in all provinces except Newfoundland and in some jurisdictions special licences may be granted to those who have not reached the specified age.

Motor Vehicle Regulations.-In general, all motor vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back of trailers), with the exception that Alberta does not require the licensing of trailers used for personal purposes. In most provinces, in event of sale the registration plates stay with the vehicle but in Quebec, Manitoba, Saskatchewan and Alberta the plates are retained by the owner. In Nova Scotia vehicles pass from owner to owner by due process of law and title must be secured before issue of plates and permit. A change of ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days, except in Quebec where the maximum is 90 days and in British Columbia and Ontario where it is six months) in any year to visitors' private vehicles registered in another province or a state that grants reciprocal treatment. Regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes and stipulate that equipment include non-glare headlights, a proper rear light, a muffler, a windshield wiper, a rear-vision mirror, and a warning device.

Traffic Regulations.-In all provinces and territories, vehicles keep to the righthand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. The speed limit in Prince Edward Island, Quebec and New Brunswick is 60 miles an hour in daytime and 55 at night; in Manitoba and Alberta it is 60 in daytime and 50 at night, with the exception of a few selected sections of four-lane highways in Alberta where maximum speeds are 65 in daytime and 55 at night. In Nova Scotia the limit is a "reasonable and prudent" speed, with a maximum of 60 miles an hour except where 65 miles an hour is authorized. In Ontario maximum speeds vary from 50 to 60 miles an hour, depending on type of highway. In the other provinces the maximum speed permitted is normally 50 miles an hour. Slower speeds are always required in cities, towns and villages, when passing schools and public playgrounds, at road intersections, railway crossings or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. In almost all provinces, truck speed limits are at least five miles an hour below automobile speed limits. In all provinces and territories, accidents resulting in personal injury or property damage

[^229]of $\$ 100$ or more must be reported to a police officer (in Quebec to the Motor Vehicle Bureau) and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

Driver Licensing Controls.-All provinces impose penalties for infractions of driving regulations, ranging from fines for minor infractions to suspension of the operator's driving permit, impounding of the car, or imprisonment for more serious infractions. In most provinces penalties have been linked to a driver-improvement program, the aim of which is to correct faulty driving habits, not to take drivers off the road. The most common driver-improvement program includes the demerit-point-system.

Safety Responsibility Legislation.-Each province has enacted legislation under this heading (sometimes referred to as financial responsibility legislation). In general, these laws provide for the automatic suspension of the driver's licence and motor vehicle permit of a person convicted of a serious offence (impaired driving, driving under suspension, etc.) or a person involved directly or indirectly in an accident who is not covered for thirdparty insurance at the time of the accident. The suspension remains effective until any penalty or judgment has been satisfied and proof of financial responsibility for the future is filed. In Quebec, Manitoba, Saskatchewan, Alberta, British Columbia and the Yukon Territory, uninsured motor vehicles may be impounded following an accident of any consequence, i.e., an accident resulting in personal injury or death, or property damage in excess of $\$ 100$ ( $\$ 200$ in Saskatchewan and $\$ 250$ in British Columbia).

Although safety responsibility legislation has not been enacted in the Northwest Territories, the Motor Vehicle Ordinance requires the owner of a motor vehicle to submit evidence of stipulated insurance coverage on such vehicle before he can obtain registration. In the Yukon Territory, proof of insurance must be supplied before vehicle licence is issued. When the insurance expires or is cancelled, vehicle licence plates must be returned to the Registrar of Motor Vehicles.

Unsatisfied Judgment Fund.-Legislation has been enacted in all provinces except Saskatchewan and in the territories, usually in the form of an amendment to the motor vehicle laws of the province or territory, providing for the establishment of a fund, frequently called an Unsatisfied Judgment Fund, out of which are paid judgments awarded for damages arising out of motor vehicle accidents in the province which cannot be collected in the ordinary process of law. In Newfoundland, Prince Edward Island, Nova Scotia, Quebec and British Columbia the fund is maintained by insurance companies. In all the other provinces, except Saskatchewan where insurance is compulsory, the funds are obtained by the annual collection of a fee from the registered owner of every motor vehicle or from every person to whom a driver's licence is issued. The fee does not exceed $\$ 1$ per annum except that Ontario collects $\$ 20$ from each uninsured owner of a motor vehicle at the time of registration or transfer. A feature of this legislation, which is contained in some provincial statutes, is the provision for the payment of judgments in 'hit-and-run' accidents. When these occur, if neither the owner nor the driver can be identified, action may be taken against the Registrar of Motor Vehicles (the Minister of Finance in Newfoundland); any judgment secured against the responsible authority is paid out of the Fund. All of these laws contain a provision limiting the amount that can be paid out of the Fund on one judgment. In Newfoundland and Nova Scotia, the limits are $\$ 10,000$ for one person, $\$ 20,000$ for two or more persons injured in one accident and $\$ 5,000$ for property damage. In Alberta and British Columbia, the limit is based on the single amount of $\$ 25,000$ and $\$ 35,000$, respectively, for any one accident with the proviso that not more than $\$ 5,000$ may be paid on a property damage claim until injury claims up to $\$ 20,000$ and $\$ 30,000$, respectively, have been satisfied; the $\$ 30,000$ limit exists in British Columbia for hit-and-run accidents but does not apply to payments for property damage. In Ontario, the limits are $\$ 35,000$ for death or personal injury to two or more persons and $\$ 5,000$ for damage to property, subject to a limit of $\$ 35,000$ in any one accident. In Manitoba, effective July 1, 1963, the limit based on one accident is $\$ 35,000$ for claims for injury or
property damage with the stipulation that not more than $\$ 5,000$ may be allocated to property damage until injury claims up to $\$ 30,000$ have been satisfied; the increased amount will apply in hit-and-run accidents occurring after July 1, 1963 but will be limited to personal injury only. In other provinces, lower limits of $\$ 5,000, \$ 10,000$ and $\$ 1,000$ are retained. For hit-and-run accidents payments are made for personal injuries only.

Sources of information on provincial motor vehicle and traffic regulations:-

## Newfoundland

Administration.-The Minister of Finance, St. John's.
Legislation.-The Highway Traffic Act, 1962.

## Prince Edward Island

Administration.-The Provincial Secretary, Charlottetown.
Legislation.-The Highway Traffic Act (RSPEI 1951, c. 73).

## Nova Scotia

Administration.-Registry of Motor Vehicles, Department of Highways, Halifax.
Legislation.-The Motor Vehicle Act (1954, c. 184, as amended) and the Motor Carrier Act (1958, c. 7, as amended).

## New Brunswick

Administration.-Motor Vehicle Division, Provincial Tax Branch, Department of Provincial Secretary-Treasurer, Fredericton.
Legislation.-The Motor Vehicle Act (RSNB 1955, as amended).

## Quebec

Administration.-Motor Vehicle Bureau, Department of Transportation and Communications, Parliament Bldgs., Quebec.

## Ontario

Administration.-Ontario Department of Transport, Toronto.
Legislation.-The Highway Traffic Act (RSO 1960, c. 172), the Public Vehicles Act (RSO 1960, c. 337), the Public Commercial Vehicles Act (RSO 1960, c. 319) and the Motor Vehicle Accident Claims Act (1961-62, c. 84).

## Manitoba

Administration.-Minister of Public Utilities, Winnipeg.
Legislation.-The Highway Traffic Act (RSM 1954, c. 112, as amended).

## Saskatchewan

Administration.-Treasury Department, Highway Traffic Board, Revenue Building, Regina. Legislation.-The Vehicles Act, 1957.

## Alberta

Administration and Legislation.-The Vehicles and Highway Traffic Act (RSA 1955, c. 356) and the Motor Vehicles Accident Indemnity Act (RSA 1955, c. 209) are administered by the Motor Vehicle Branch, Department of Highways, Edmonton. The Public Service Vehicles Act (RSA 1955, c. 265) and the Rules and Regulations are administered by virtue of authority vested in the Highway Traffic Board, Department of Highways, Edmonton.

## British Columbia

Administration and Legislation.-Enforcement of the Motor Vehicle Act, the Commercial Transport Act and the Motor Carrier Act is vested in the Royal Canadian Mounted Police and the various municipal police forces. The Motor Carrier Act is administered by the Public Utilities Commission, the Motor Vehicle Act by the Superintendent of Motor Vehicles and the Commercial Transport Act by the Minister of Commercial Transport, Victoria, B.C.

## Yukon Territory

Administration.-Commissioner of the Yukon Territory, Whitehorse, I.T. Information regarding regulations may also be obtained from the Registrar of Motor Vehicles, Government of the Yukon Territory, Whitehorse, Y.T.
Legislation.-The Motor Vehicles Ordinance (Revised Ordinances 1958, c. 77, as amended).

## Northwest Territories

Administration.-Commissioner of the Northwest Territories. Address communications to the Director, Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.
Legislation.-The Revised Ordinances of the Northwest Territories (SC 1956, c. 3, as amended).

## Section 2.-Highways, Roads and Streets

Highways and Roads.-The populated sections of Canada are well supplied with highways and roads. Access to outlying settlements is provided to some extent by roads built by logging, pulp and paper, and mining companies, although these are not generally available for public travel. At the same time, great areas of Newfoundland, Quebec, Ontario, the Prairie Provinces, British Columbia and the Territories are very sparsely settled and are virtually without roads of any kind.

At the end of 1961, the milage of highways and rural roads in Canada was 430,004, an increase of 8,556 miles over the 421,448 reported in 1960 . The 430,004 miles include all roads under provincial jurisdiction, federal roads, and local roads under municipal jurisdiction other than the milages in census metropolitan areas and urban centres of more than 1,000 population. The latter are given separately under the heading of "Urban Streets", p. 174.

## 1.-Highway and Rural Road Milage classified by Type and by Province, 1961 with Totals for 1957-61

Note.-Excludes urban streets but includes milages under jurisdiction of rural and small urban municipalities; excludes milages of all roads on Indian reservations except those of flexible pavement.

[^231]The Trans-Canada Highway.-The original federal-provincial agreement for construction of the Trans-Canada Highway is given in outline, together with data on specifications and route across the participating provinces, in the 1951 Year Book, pp. 631-634. Construction progress and changes in legislation are reported in subsequent editions.

Under the Act, which became effective Dec. 10, 1949, agreements covering the Federal Government's participation in the cost of construction were entered into with each of the provinces, except Quebec. Construction standards were set and the date of completion fixed. The shortest practicable east-west route was to be designated by each province within its own borders, in agreement on terminal points with adjoining provinces, and those sections within the National Parks were to be the responsibility of the Federal Government. Later amendments to the Act increased the extent of federal financial participation and extended the period in which construction costs might be incurred under the Act to May 1964. In 1960, Quebec became a participant.

Although construction was still going on in a number of sections, the closing in 1962 of the last major gap-in the Rocky Mountains-made it possible for the first time to drive the entire length of the $4,860-$ mile route. The Trans-Canada Highway was officially opened on Sept. 3, 1962.

Provincial milages are approximately as follows: Newfoundland, 540; Prince Edward Island, 71; Nova Scotia, 318; New Brunswick, 390; Quebec, 399; Ontario, 1,453; Manitoba, 309; Saskatchewan, 406; Alberta, 282; and British Columbia, 552. Length through the National Parks totalled 140 miles.

Up to Mar. 31, 1963, contractual commitments for new construction on the Highway amounted to $\$ 727,720,108$, of which the federal share approximated $\$ 400,000,000$. Federal payments to the provinces for prior, interim and new construction totalled $\$ 374,500,938$. On-site labour expended on the Highway up to Mar. 31, 1963 was 12,004,244 eight-hour man-days of employment; off-site employment required for the provision of necessary
material and services was estimated at $20,407,215$ man-days. Paving to specified standards had been completed over a distance of 3,325 miles and 658 bridges, overpasses and other structures of more than 20 -foot span had been or were being constructed.

Roads to Resources and Roads in the North.-The Roads to Resources Program is a national undertaking started in 1958 to provide access to areas potentially rich in natural resources. Agreements have been signed with all ten provinces that will eventually result in the construction or reconstruction of more than 4,700 miles of road. Progress of the program to May 1, 1963 was as follows:-

| Province | Estimated <br> Total Cost | Value of Approved Contracts | Provincial Expenditure ${ }^{1}$ | Federal Contribution | Total Milage | Milage Completed |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

${ }^{1}$ Includes only expenditures reported by the provinces to the Federal Government. ${ }^{2}$ Additional projects to be included later will bring the total to $\$ 15,000,000$.

In several provinces the total estimated cost exceeds the $\$ 15,000,000$ shareable under the agreement but the total federal contribution to each province will remain at $\$ 7,500,000$. Private companies share in the cost of some roads that will be of direct benefit to them.

A road and causeway to link New World Island to the provincial road system in Newfoundland is the most easterly road in the program and is intended to assist the fishing industry in that portion of the province. The most westerly road is one of 321 miles extending from Stewart northeasterly to Cassiar, which will open up a new mining area in British Columbia. The most northerly project is the reconstruction of the 300 mile section of the Mackenzie Highway in Alberta, which will connect with the Northwest Territories road system being built by the Federal Government. The most southerly project is the improvement of an existing 5.4-mile road between Yarmouth Light and the town limits of Yarmouth in Nova Scotia, which is intended to increase the tourist potential in that section. The roads in the program vary in length from the less-than-one-mile French River Spur in Prince Edward Island to the 505-mile Uranium City road in northern Saskatchewan. In any province the construction program may consist of as many projects as can qualify for inclusion and for which funds are available; the current program consists of about 100 projects. In contrast to one project program in British Columbia, there are 30 in Prince Edward Island.

The Development Road Program in the Yukon Territory and the Mackenzie District of the Northwest Territories is distinct from the Roads to Resources Program in that the Federal Government is responsible for construction; maintenance costs are shared by the Federal Government and the Territorial Government concerned on an 85-15-p.c. basis.

Approximately 900 miles of road will be built in the Yukon Territory at an estimated cost of $\$ 36,000,000$ and 1,300 miles of road in the Northwest Territories at an estimated cost of $\$ 64,000,000$. At the end of 1962 , more than 500 miles of road had been completed in the Yukon Territory and 427 miles were in use in the Northwest Territories. The largest single project carried out in the Northwest Territories was the reconstruction of the Mackenzie Highway. The first 20 miles of an extension leading from Yellowknife to MacKay Lake was completed in 1962.

Revisions in the territorial roads policy came into effect in April 1962, permitting greater federal financial assistance to mining companies for exploration and development work, including road construction. Where two or more companies are developing a mineralized region, a mine development road may be built and paid for by the Federal Government. Assistance may also be given in the building of more elementary roads to give access to a mine or to enable the supplies for development to be transported to a property. Two thirds of the cost of a mine-access road may be paid by the Federal Government, and one half the cost of a basic tote-trail may be contributed by the Territorial Government concerned. Tote-trail assistance will be financed from a $\$ 50,000$ fund provided to each territorial government by the Federal Government.

Urban Streets.-Information on urban streets is obtained from the local administrations of all areas with populations over 1,000 , all areas located within census metropolitan areas, improvement districts over 1,000 population and rural municipalities over 15,000 population. Brief statistical data are given in Table 3; more detail may be obtained from DBS annual report Road and Street Mileage and Expenditure (Catalogue No. 53-201).

${ }^{1}$ Includes expenditures on sidewalks, footpaths, bridges and ferries.

## Section 3.-Motor Vehicles

Motor Vehicle Registrations.-Registrations continue to increase year by year, a record of $5,774,810$ being reached in 1962. Of that total, $4,531,384$ were passenger carsone for every 4.1 persons. Registrations by province are given in Table 4 and types of vehicles registered by province in Table 5.

## 4.-Motor Vehicles Registered, by Province, 1953-62

Note.-Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for 1904-52 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

${ }^{1}$ Includes taxis.
${ }^{2}$ Includes service cars, road tractors, etc.
${ }^{3}$ Included with trucks.
Apparent Supply of Automobiles.-The apparent supply of automobiles in Canada in any year is computed by deducting the number exported from the sum of the production and imports. Statistics regarding retail sales and the financing of motor vehicle sales are given in Chapter XIX on Domestic Trade and Prices.
6.-Apparent Supply of New Automobiles, 1952-61

[^233]Provincial Government Revenue from Motor Vehicles.-The taxation of motive fuels, motor vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial government income. In every province licences or permits duly issued by the provincial authorities are required for motor vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. In 1961 the average cost per motor vehicle for operating taxes and licences was about $\$ 113$.

The more important sources from which provincial revenue from motor vehicles is derived are shown in Table 7. Motive fuel tax rates are given in the Public Finance Chapter, Section 2, Subsection 2 on Provincial Taxes; Federal Government revenue from import duties, excise and sales taxes is given in the same chapter, Section 3, Subsection 3 on Revenue from Taxation.

## 7.-Provincial Revenue from the Registration and Operation of Motor Vehicles, by Province, 1961 and 1962

| Year and Province or Territory | Passenger Automobile Licences | Truck, Bus, Trailer and Other Vehicle Licences | Motorcycle Licences | Chauffeur, Driver and Dealer Licences | Public Service Vehicle Tax | Motive Fuel Taxes | Total ${ }^{1}$ |

[^234]Sales of Motive Fuels.-In order to estimate the total amount of motive fuel purchased in Canada for use in motor vehicles on public streets and highways, it has been necessary to eliminate from the total the amount of motive fuel used for other purposes. Thus, from the total or gross sales, including imports and exports, the following are subtracted to obtain net sales: tax exempt sales to the Federal Government and other consumers, exports, and sales on which refunds were paid. Net sales are thus defined as sales on
which a tax or taxes have been paid in full and are considered to be approximately equivalent to the actual amount of motive fuel purchased in Canada for use on public streets and highways. However, net sales include an indeterminate amount of motive fuel which is taxable but not used on public streets and highways, such as, in some provinces, aviation gasoline and turbo fuel used by aircraft and motive fuels consumed by power boats, but the total effect of this is considered to be relatively insignificant.

As shown in Table 8, consumption of taxable gasoline, which is used almost entirely for automotive purposes, rose 4.1 p.c. in 1961 and net sales of diesel oil increased by 10.9 p.c.

Motor Carriers-Freight.*-Statistics of the common carrier segment of the intercity and rural motor carrier industry have been collected on a continuing basis since 1941. However, as little capital is required to enter the trucking business, many marginal operators are associated with the industry and the large turnover and numerous changes each year have created many problems in the collection of statistics, although these are gradually being overcome. Statistics of contract carriers are available from 1958.

[^235]

Passenger Buses.*-The operations of companies predominantly engaged in passenger bus service are summarized in Table 11. Data refer to the for-hire segment of the industry and only those firms engaged in intercity and rural operations and having an annual gross revenue of $\$ 3,000$ or over are covered. Operators predominantly involved in the provision of school bus service are not included.

* Statistics are given in more detail in DBS annual report Passenger Bus Statistics (Catalogue No. 53-215).
11.-Summary Statistics of Intercity and Rural Passenger Bus Companies, 1958-62

Note.-Only carriers with an annual gross revenue of $\$ 6,000$ or over are included.

Motor Transport Traffic.*-Surveys of motor transport traffic in all provinces were placed on a continuing basis in 1957. Approximately 3 p.c. of total registrations were sampled for surveys of truck operations during each quarter of 1960. Each quarterly sample was spread over three survey weeks with one third of the sample being used for a seven-day period (Sunday through Saturday) per month.

Excluding vehicles that do not perform normal transportation services, such as cranes, tow trucks, road building equipment, etc., the average number of trucks licensed in Canada during the year 1961 was 942,900 . Of these, 6.2 p.c. were for-hire carriers, 21.1 p.c. were private intercity trucks, 39.3 p.c. were private trucks operated predominantly within urban areas, and 33.4 p.c. were farm trucks. Almost one third of the total number were registered in Ontario and one half were registered in the two provinces of Ontario and Quebec.

For-hire trucks averaged 200,900 net ton-miles per vehicle and, although amounting to only 6.2 p.c. of total registrations, they accounted for 65 p.c. of the total net ton-miles performed by all commercial trucks in Canada, a result of the comparatively high average yearly milage of for-hire trucks and also of the heavier average load carried ( 10.8 tons as compared with an average of 5.2 tons for all trucks). The predominance of heavier vehicles in the for-hire group also explains the low milage per gallon of gasoline of 6.0 as compared with an average of 9.3 for all vehicles.

Urban Transit Systems.-The collection of statistical information on urban transit systems has been extensively reorganized in the past few years. Because of major changes made in the types of vehicles used for mass passenger movement in urban centres, the statistical series that began with the financial and operating statistics of electric railways and later included their motor bus and trolley coach lines, became quite inadequate. The current series, which was started in 1956, includes operations of motor buses, trolley coaches, streetcars and subway cars carrying passengers in urban and suburban service.
13.-Summary Statistics of Urban Transit System, 1958-62

[^238]Motor Vehicle Accidents.-Motorists are required by law to report accidents but complete statistics of these accidents are not available for all provinces. The numbers of deaths from motor vehicle traffic accidents in each province are shown in Table 14 for the years 1952-61. It should be noted, however, that direct comparison of these figures between provinces is of little value because of differences in size, population, motor vehicle density, climate, road conditions, tourist cars, etc., all of which are factors in accidents. Also, the data presented in Table 15 relate to traffic accidents only and consequently may not be compared with figures of Table 14 which include fatalities occurring elsewhere than on public streets or roads.

## PART IV.-WATER TRANSPORT*

The Canada Shipping Act.-Legislation regarding all phases of shipping is consolidated in the Canada Shipping Act (RSC 1952, c. 29). Under the Act and its amendments the Parliament of Canada accepts full responsibility for the regulation of Canadian shipping.

## Section 1.-Shipping Facilities and Traffic

## Subsection 1.-Shipping

All Canadian waterways including canals, lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world so that the commerce of Canada is not dependent entirely upon Canadian shipping. However, a large part of the inland and coastal traffic is carried in ships of Canadian registry.

Up to June 1961, under the provisions of the British Commonwealth Merchant Shipping Agreement, all Commonwealth ships enjoyed equal privileges with Canadian ships in the carriage of goods and passengers from one port in Canada to another port in Canada, commonly known as the coasting trade. Before the completion of the St. Lawrence Seaway, most of the domestic Great Lakes traffic was moved in Canadianregistered ships and the rights of other Commonwealth ships in this trade were largely theoretical. However, after the Seaway was finished, the intrusion of other Commonwealth ships, particularly from Britain, became a reality and, in order to restore the status quo as it existed before the advent of the Seaway, the Canada Shipping Act was amended to exclude the Great Lakes and the St. Lawrence River system from some of the reciprocal provisions of the Agreement. This amendment (SC 1960-61, c. 32) gives to Canadian-registered ships the exclusive right to carry goods and passengers between Canadian ports in the Great Lakes and the St. Lawrence River system from Havre St. Pierre westward.

Canadian Registry.-Under Part I of the Canada Shipping Act, ships in excess of 15 tons net register and pleasure yachts in excess of 20 tons net are required to be registered; ships of lower tonnage may be registered voluntarily, otherwise they are required to be operated under a Vessel Licence if powered by a motor of 10 hp . or more. Sect. 6 of the Act restricts ownership to British subjects or bodies corporate incorporated under the law of a country of the Commonwealth or of the Republic of Ireland, and having their principal place of business in those countries. Under the British Commonwealth Merchant Shipping Agreement, all Commonwealth ships are given the general designation 'British Ship'; and a ship that should be but is not registered is not entitled to the privileges accorded to British ships. Ships in the planning stage or in course of construction may be recorded before registry by a Registrar of Shipping at one of the 73 Ports of Registry in Canada.

Shipping Traffic.-Before 1952 the only information available on shipping activity in Canada was the number and registered net tonnage of vessels operating in and out of Canadian customs ports and the tonnage of cargoes loaded and unloaded at these ports destined for or arriving from foreign countries. In 1952 the coastwise movement of cargo in and out of customs ports was reported for the first time and in January 1957 the coverage was extended to include tonnage of vessels and tons of cargo in and out of non-customs ports. Reports are not required for vessels of less than 15 registered net tons.

[^242]${ }^{2}$ Churchill only for 1960.

The freight movement through a large port takes a number of different forms. These include cargoes loaded for and unloaded from foreign countries and cargoes loaded and unloaded in coastwise shipping, i.e., domestic freight moving between Canadian points. There is, as well, the in-transit movement in vessels that pass through the harbour without loading or unloading and the movement from one point to another within the harbour, which in many ports amounts to a large volume.

Shipping statistics covering traffic in and out of both customs and non-customs ports are available from 1957. These do not include freight in transit or freight moved from one point to another within the harbour. Table 5 shows the principal commodities loaded and unloaded in foreign and coastwise shipping at the ten ports handling the largest cargo volumes in 1961. These ports handled 59 p.c. of all Canada's international shipping and 42 p.c. of the coastwise trade. The list of commodities used for these statistics was expanded and changed in 1961 to conform with the revised Standard Industrial Classification. The specific commodities shown are those transported in volume and often in bulk form. As the description of such commodities remains unchanged in the revised classification, the effect of the changeover on continuity and comparability is considered to be relatively unimportant.

## 5.-Principal Commodities in Water-Borne Cargo Loaded and Unloaded at Ports Handling the Largest Tonnages in 1961

Nore.-Only commodities totalling over 50,000 tons are listed.

## Subsection 2.-Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil and grain. Facilities may include cold storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks and, in the chief harbours, dry dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board. Eleven other harbours come under the supervision of the Department of Transport and are administered by commissions that include municipal as well as Federal Government appointees. In addition, there are about 300 public harbours that are under the direct supervision of the Department of Transport. These harbours are administered under rules and regulations approved by the Governor General in Council. Harbour masters have been appointed by the Minister of Transport for 110 of these harbours, their remuneration being paid from fees levied on vessels under the terms of the Canada Shipping Act.

At most ports, in addition to the harbour facilities operated by the operating authorities, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil and sugar industries. At several of the ports there are also dry dock facilities.

National Harbours Board.-The National Harbours Board, a Crown corporation established in 1936, is charged with the administration and operation of the following properties: port facilities such as wharves and piers, transit sheds, grain elevators, cold storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Trois Rivières, Montreal, Vancouver and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier Bridge at Montreal. Current operating revenues and expenditures are given in Table 23, p. 803.

## 6.-Facilities of the Larger Harbours Administered by the National Harbours Board, as at Dec. 31, 1982

| Note.-The facilities at these ports include those under the control of other agencies as well as those of the |

| National Harbours Board. |

## Subsection 3.-Canals

The canals and canalized waters of Canada under the jurisdiction of the Department of Transport, together with those under the jurisdiction of the St. Lawrence Seaway Authority, comprise a series of waterways providing navigation for 1,875 miles inland from salt water.

The canals included under the two classifications-Seaway canals and Department of Transport canals-are listed in Table 7 with their locations, lengths and lock complement. In addition to these, the federal Department of Public Works administers the St. Andrew's Lock (length, width and draught, respectively, 215, 45 and 17 feet) on the Red River at Selkirk, Man., and the lock at Poupore, Que. A few small locks are operated by provincial authorities.

During 1961, 57,222,696 tons of freight and 25,980 vessels passed through the canals as compared with $52,946,883$ tons of freight and 29,629 vessels during 1960. In addition to freight and passenger vessels, thousands of pleasure craft are locked through the canals. Vessels locking at Sault Ste. Marie during 1961 carried 153,154 passengers as compared with 173,715 in 1960.

## 7.-Lengths of Channels and Dimensions of Locks under the Control of the St. Lawrence Seaway Authority or the Department of Transport

| Traffic using United States Locks at Sault Ste. Marie only. . | 9,085,994 | 70,804,144 | 79,890,138 |
| Totals | 19,727,766 | 97,721,251 | 117,449,017 |

Traffic through the Sault Ste. Marie canals, Canadian and United States, has fluctuated between a high of $128,489,000$ tons reached in 1953 and a low of $70,906,000$ tons in 1959. A rise to $91,775,000$ tons in 1960 was followed by a decline to $81,038,000$ tons in 1961. The dominant traffic from a tonnage aspect is iron ore which also reached its highest point in 1953 at $98,658,000$ tons, decreasing to $47,214,000$ tons in 1959, rising to $67,939,000$ tons in 1960 and dropping again to $55,919,000$ tons in 1961. Soft coal has usually been second in volume to iron ore with a tonnage ranging from $13,301,000$ tons in 1950 to a low of $6,389,000$ in 1958. Although in the past wheat was generally third in tonnage, during the four years 1958-61 wheat remained in second place with tonnages of $7,478,000,7,496,000,7,611,000$ and $10,177,000$, respectively. Other grains usually range between 40 p.c. and 60 p.c. of the wheat tonnage but declined to 28 p.c. in 1961.

Canadian use of the Panama Canal.-The use of the Panama Canal as a transport facility for the movement of goods from one Canadian port to another is of relatively minor importance. Of the total of $3,887,000$ long tons of cargo leaving the West Coast of Canada in the year ended June 30, 1962 and passing through the Panama Canal, only 26,000 long tons were destined for Eastern Canadian ports. Similarly, of the 960,000 long tons of cargo leaving Eastern Canadian ports and passing through the Panama Canal, 16,000 long tons were destined for Western Canadian ports. The total tonnage passing through the Panama Canal and arriving in Canadian West Coast ports from any origin, Canada or elsewhere, amounted to 525,621 long tons in the year ended June 30, 1962; the total from any origin arriving at Eastern Canadian ports after having passed through the Panama Canal was 584,399 long tons.

## Subsection 4.-The St. Lawrence Seaway

Events leading up to the beginning of the St. Lawrence Seaway project and the progress made during the years of its construction are covered in the 1954 to 1959 Year Books. A special article carried in the 1956 edition (pp. 821-829) gives detailed information on Great Lakes-St. Lawrence waterway traffic immediately prior to the beginning of construction on the project and another special article carried in the 1960 Year Book (pp. 851-860) covers the story of the Seaway, its new facilities and services and the movement of freight during the second year of its operation.

The St. Lawrence Seaway Authority, constituted as a Corporation by Act of Parliament in 1951 (RSC 1952, c. 242), undertook the construction (and subsequent maintenance and operation) of Canadian facilities between Montreal and Lake Erie to allow 27-foot navigation, concurrently with the construction of similar facilities in the International Rapids

Section of the St. Lawrence River by the Saint Lawrence Seaway Development Corporation of the United States. The Seaway was opened to commercial traffic on Apr. 1, 1959 and officially opened on June 26, 1959. With the opening of the Seaway, certain ancillary canals were transferred to the jurisdiction of the St. Lawrence Seaway Authority for operation and maintenance purposes. These include the Lachine, a section of the Cornwall Canal, a portion of the third Welland Canal and the Canadian locks at Sault Ste. Marie. Tolls are not assessed against vessel movements on these waterways and traffic data for them are not included in this Subsection.

Tables 13 and 14 give combined traffic statistics of the St. Lawrence and Welland Canals for the year 1962. Duplicate transits are eliminated so that the figures show the actual total movement of goods through the St. Lawrence Seaway. On this basis, 4,816 ships carrying more than $13,245,000$ tons of cargo moved upbound through the Seaway in 1962 and 4,815 vessels carrying $26,400,000$ tons moved downbound. Ocean-going ships carried 22.9 p.c. of the total cargoes, lakers 77.0 p.c. and other craft 0.1 p.c. There is still evident an imbalance of loading, 48.6 p.c. of the gross registered tonnage of all vessels upbound being in ballast compared with only 16.6 p.c. of the vessels downbound. Of the total tonnage carried upbound in 1962, 11,119,000 tons were domestic cargo and $2,127,000$ foreign traffic; downbound, $20,241,000$ tons were domestic freight and $6,159,000$ tons were carried to and from foreign ports.
13.-Summary Statistics of St. Lawrence Seaway Traffic, 1962

On the Montreal-Lake Ontario Section, upbound freight increased 32.1 p.c. in 1962 compared with 1961 but downbound traffic decreased by 3.1 p.c. This increase in upbound traffic was accounted for almost entirely by the volume of iron ore shipped from St . Lawrence ports to Hamilton and Lake Erie. The number of transits were 275 fewer upbound and 266 fewer downbound in 1962 than in 1961, indicating a slight increase in the size of vessel using this portion of the Seaway and in the volume of cargo carried. Bulk cargo comprised 90.2 p.c. of the total traffic through the Section for 1962, the principal commodities through the St. Lawrence canals being iron ore, wheat, corn, fuel oil, bituminous coal and barley. Traffic patterns show that 30.3 p.c. of the total movement was between two Canadian ports, 36.9 p.c. moved between Canadian and United States ports and 32.2 p.c. consisted of foreign trade to and from Canada and the United States.

In the Welland Canal there were 7,615 transits in 1962 with a cargo volume of $10,843,000$ tons upbound and $24,563,000$ tons downbound; bulk cargo accounted for 94.1 p.c. of the traffic. Although many vessels pass through both the St. Lawrence and the Welland Canals on "through" trips, there is a substantial amount of local traffic between Great Lakes ports which involves only the Welland Canal. These movements are largely iron ore, grain and coal. The Welland Canal traffic was nearly $9,813,000$ cargo tons greater than that reported for the Montreal-Lake Ontario Section.

Income of the St. Lawrence Seaway Authority for 1962 amounted to $\$ 10,691,922$, comprising toll revenue of $\$ 8,914,380$ assessed for transits through the Seaway locks between Montreal and Lake Ontario, $\$ 641,261$ for transits through the Welland Canal to July 1 when tolls were suspended, together with sundry revenues (rentals, wharfage,
bridge revenue, etc.) amounting to $\$ 1,136,281$. Operating and maintenance expenses amounted to $\$ 5,911,284$ and administrative expenses were $\$ 1,759,721$, making a total of $\$ 7,671,005$, excluding an amount of $\$ 324,432$ for non-toll canals. Other financial statistics are given in Section 2, pp. 802-803

Pleasure craft locked through the Montreal-Lake Ontario Section canals numbered 335 upbound and 402 downbound in 1962, and those locked through the Welland Canal numbered 95 upbound and 127 downbound.

## Subsection 5.-Marine Services of the Federal Government

The services covered in this Subsection deal with the Canadian Coast Guard and aids to navigation, including the maintenance of the St. Lawrence River Ship Channel, steamship inspection and pilotage service.

Canadian Coast Guard.-The Canadian Coast Guard, known by that name only since January 1962, has played a vital part in Canada's maritime economic and industrial development since Confederation. At that time several previously established government marine organizations were brought together as a single marine service, founding the fleet that became the responsibility of the Department of Transport when it was established in 1936.

From a small beginning, the fleet has expanded into an organization consisting of nearly 200 vessels of all types, of which nearly 50 are of a larger size. Of these, 28 measure more than 1,000 tons gross. They include 10 fully strengthened icebreakers and eight lighthouse supply-and-buoy ships with 引icebreaking capabilities. These vessels comprise in numbers the world's second largest icebreaking force. The greater part of the fleet's expansion has occurred within the past few years to meet a new and fast-growing requirement for icebreaker support of shipping activities in the Canadian Arctic during the summer and for commercial shipping in the Gulf of St. Lawrence in the winter.

The Department's concern with marine search-and-rescue activities has also increased, not only in the field of commercial shipping but also in connection with the mushrooming public interest in pleasure boating with its attendant safety problems.

The duties of the Canadian Coast Guard are"civilian in nature"and no armaments are carried on the ships. It maintains and supplies shore-based and floating aids to navigation in Canadian waters, including the Atlantic and Pacific coastal areas, the St Lawrence River and Great Lakes, the channels of both the eastern and western Arctic, Hudson Bay, the Mackenzie River system and other inland waters. The territory covered is vast and the duties involved are extensive.

Since its beginning, the fleet has carried out icebreaking as one of its important undertakings. In its earliest years, such work was done mainly to aid shipping in eastern port areas and in the St. Lawrence for whatever winter period was allowed by weather conditions and the limitations of ships of that area. Icebreaking has also been carried out through the years at Montreal to prevent floods caused by ice jams in the river. When the development of the sea route from Churchill, Man., to Europe became a factor in the country's maritime economy, icebreaker assistance was extended to commercial shipping using that route. Since 1954, as a result of the opening up of the Canadian Arctic, the Department has handled all icebreaker requirements in these waters, extending to within a few hundred miles of the North Pole.

Arctic operations necessitate ice reconnaissance services, which are carried out by fixed wing aircraft flying out of such ports as Churchill, Man., and Frobisher Bay and

Resolute Bay in the High Arctic. These flights are under the direction of the Department's Meteorological Branch and provide information on ice conditions in the sea lanes in all areas where the convoys operate. Helicopters, based aboard the icebreakers, are used for close-range reconnaissance. They carry trained observers provided by the Meteorological Branch and their ability to spot leads through the ice, which cannot be seen from the ship, has resulted in tremendous savings in time for the convoys. The helicopters are also extremely useful in ship-to-shore personnel movements and for carrying light freight.

As an indication of the growth of Arctic re-supply operations handled by the Canadian Coast Guard, the total tonnage in 1954 was approximately 8,000 and the annual figure is now in the vicinity of 100,000 tons.

Aids to Navigation.-Included under aids to navigation are the lighthouses and the whole system of marine danger signals on the East and West Coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the Mackenzie River and Arctic passages, and the inland rivers and lakes-a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described at p. 799. A further aid to safe navigation is found in the chains of radio signal and direction-finding stations described in the 1962 Year Book pp. 848-849. Lists of aids to navigation, with the exception of very minor ones, are published by the Department of Transport.

## 15.-Marine Danger Signals Maintained in Canada, Years Ended Mar. 31, 1961 and 1962

Note.-In addition to the aids to navigation listed, approximately 10,400 unlighted buoys, balises, dolphins and beacons are maintained. Lists of marine danger signals maintained from 1929 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

| Type of Signal | 1961 | 1962 | Type of Signal | 1961 | 1962 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. |  | No. | No. |
| Lights.. | 3,054 | 3,196 | Mechanical bells and gongs........... | 18 | 17 |
| Lightships. | 3 | 3 | Hand fog horns and bells............ | 85 | 84 |
| Light-keepers. | 903 | 953 | Lighted and combination lighted whistling and bell buoys | 1,324 | 1,384 |
| Fog whistles and sirens. | 45 | 46 | Unlighted bell and whistling buoys... | 136 | 121 |
| Diaphones and tyfons.... | 270 | 277 | Explosive signals.................... | 3 | 4 |

Navigable waters have been improved greatly by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. Icebreaking operations are continuous throughout the winter.

St. Lawrence Ship Channel.-This channel extends from about 40 miles below Quebec City to the foot of the Lachine Canal at Montreal, a distance of 200 miles. About 130 miles of this distance is dredged channel.

Above Quebec the channel has a limiting depth of 35 feet at extreme low water and a minimum width of 550 feet, with additional width up to 1,500 feet at all curves and difficult points, and additional anchorage and turning areas. Widening of the channel to a minimum width of 800 feet, commenced in 1952, is about half completed. This section com-
comprises about 115 miles of dredged channel. Below Quebec the limiting depth of dredged channel, about 15 miles in length, is 30 feet at low tide, with a width of 1,000 feet. An average tidal range of 15 feet in this area provides ample depth for any vessel using the St. Lawrence route. Above Quebec, maintenance requirements as a result of silting in this dredged channel are relatively minor but below the city silting is more pronounced because of tidal action.

The ship channel is well defined by buoys and the centre marked by range lights, permitting uninterrupted day and night navigation throughout the open season from about mid-April to early December. The movements of all shipping, weather and ice conditions and obstructions to traffic throughout the St. Lawrence waterway from Fame Point, Que., to Kingston, Ont., are recorded and made available to all concerned through a series of reporting stations known as the Marine Reporting Service.

## 16.-Seasons of Open Navigation on the St. Lawrence Ship Channel, 1953-62

Nore.-Figures from 1882 are given in the corresponding table of previous Year Books beginning with the 1934-35 edition.

| Year | Channel Open, Quebec to Montreal ${ }^{1}$ | First <br> Arrival from Sea, Montreal Harbour | Last Departure for Sea, Montreal Harbour | Year | Channel Open, Quebec to Montreal ${ }^{1}$ | First <br> Arrival from Sea, Montreal Harbour | Last Departure for Sea, Montreal Harbour |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1953. | Mar. 30 | Apr. 2 | Dec. 21 | 1958. | Apr. 6 | Mar. 30 | Dec. 23 |
| 1954. | Apr. 15 | Mar. 30 | " 15 | 1959 | " 13 | Apr. 1 | " 20 |
| 1955. | 17 | Apr. 5 | " 16 | 1960. | " 14 | Mar. 21 | " 16 |
| 1956. | " 13 | 2 | " 17 | 1961. | " 11 | " 27 | " 22 |
| 1957. | " 8 | 4 | " 18 | 1962 | " 15 | " 12 | " 19 |

${ }^{1}$ "Channel Open" means the route can be navigated although there may be floating ice in the river.
Steamship Inspection.-The Steamship Inspection Service was established by authority of the Canada Shipping Act. Its functions include the approval of design of the hulls, machinery and equipment of ships; inspection during construction; periodic inspection and the issue of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers employed in loading and unloading ships; the prevention from pollution of Canadian territorial waters by oil from ships; and the certification of marine engineers. The Board also looks after the interests of the Federal Government in schools for marine engineers.

The Chairman and the Board of Steamship Inspection are located at Ottawa and field offices are maintained in the principal ocean and inland ports. A total of 1,743 vessels of Canadian ownership or registry and 52 vessels registered or owned elsewhere were inspected during the year ended Mar. 31, 1962 compared with 1,668 and 28 vessels, respectively, in the previous fiscal year.

Pilotage.-Pilotage service functions under the provisions of Part VI and Part VIa of the Canada Shipping Act. Wherever a pilotage district has been created by the Governor in Council, qualified pilots are licensed by the pilotage authority of the district. There are in Canada 23 pilotage districts, in 10 of which the Minister of Transport is the pilotage authority (see Table 17); in each of the other districts the authority is a local body appointed by the Governor in Council. There are also three districts that are administered jointly by Canada and the United States.

## 17.-Pilotage Service, by Pilotage District, 1961 and 1962

In addition there are known to be five districts in Newfoundland under the local pilotage authority. These districts continued to be administered under Newfoundland statutes after union with Canada (Mar. 31, 1949). Part VI of the Canada Shipping Act with respect to pilotage has not been proclaimed in force in Newfoundland.

## Section 2.-Financial Statistics of Waterways

The principal statistics available on the cost of facilities for water-borne traffic consist of the record of public expenditure on waterways. Such expenditure may be classified as capital expenditure, or investment and expenditure for maintenance and operation. Revenue from operation is also recorded. The major part of the capital expenditure for the permanent improvement of waterways is provided by the Federal Government. Capital expenditure by municipalities and private capital expenditure are confined almost entirely to terminal or dockage facilities. On the other hand, most of the investment in shipping has come from private sources. No figures are available regarding private investment in shipping except those appearing in the reports of the operating companies that cover only a portion of the field. There are no statistics showing the revenue of ship operators from passenger and freight traffic.

Capital Expenditure.-The only figures available of federal capital expenditure on Canadian waterways are those contained in the Public Accounts and the annual reports of the Departments of Transport, Public Works and Finance and in the annual report of the St. Lawrence Seaway Authority. It must be realized that such expenditure cannot be regarded as an accurate indication of the present worth of the undertakings represented. The cost of building canals and other waterways and permanent works to facilitate water transportation in Canada is represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of works that have been superseded, such as, for example, the first Welland canals and the now flooded St. Lawrence River canals. To this extent, such figures are an over-statement of the present value of the works in use. The figures are further limited by the fact that they do not include the cost of maintenance and improvements or the operation of these works, such charges having been made to the consolidated deficit account as annual expenditure and not to capital account. Thus, such capital expenditure on waterways is not included in this publication, with the exception of that made by the National Harbours Board on facilities under its jurisdiction. Capital values of the fixed assets administered by the Board are shown as at Dec. 31, 1961 and 1962 in Table 18. These figures include all buildings, machinery and durable plant improvements and have been subject to deductions for depreciation and the scrapping or abandonment of plant and therefore represent a fair approximation of the present value of the properties.

## 18.-Capital Values of Fixed Assets Administered by the National Harbours Board, as at Dec. 31, 1961 and 1962

Nore.-Compiled from the annual reports of the National Harbours Board.

The total amount advanced by the Federal Government to the National Harbours Board for capital expenditure during 1961 was $\$ 19,001,935$, distributed as follows: Saint John, N.B., $\$ 838,585$; Quebec, Que., \$2,144,361; Montreal, Que., \$13,797,462; and Churchill, Man., $\$ 2,221,527$. The total for 1962 was $\$ 19,709,613$, distributed as follows: Saint John, N.B., \$3,344,844; Quebec, Que., \$123,341; Montreal, Que., \$8,757,431; Churchill, Man., \$1,838,674; and Champlain Bridge (Montreal), \$5,645,323.

Waterways Expenditure and Revenue on Consolidated Fund Account.Expenditure under this heading (Tables 19 to 21) is mainly for the operation and maintenance of various facilities for water transport but, unfortunately, the line between operation and maintenance expenditure is not as finely drawn as is desirable. Revenue in connection with waterways of the Department of Transport, the Department of Public Works and the St. Lawrence Seaway Authority is shown in Table 22.

To facilitate water transportation, the Federal Government expends annually, in addition to the recurrent expenditure shown here, a considerable amount to cover deficits of the National Harbours Board, and for mail subsidies and steamship subventions as shown in Table 24. Operating revenue and expenditure of facilities administered by the National Harbours Board are shown separately in Table 23.

[^246]Shipping Subsidies.-Table 24 shows the net amount of steamship subventions paid in connection with contracts made for the maintenance of essential coastal and inland water shipping services. The payment of these subventions is administered by the Canadian Maritime Commission under statutory authority.
24.-Steamship Subventions, Years Ended Mar. 31, 1962 and 1963

## PART V.-CIVIL AIR TRANSPORT

Administration.-Civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act 1919 and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Director of Civil Aviation under the supervision of the Assistant Deputy Minister, Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain regulatory functions of commercial air services (see p. 753). Part III deals with matters of government internal administration in connection with the Act.

International Air Agreements.-The position of Canada in the field of aviation as well as its geographical location makes co-operation with other nations of the world engaged in international civil aviation imperative. Canada therefore took a major part in the original discussions that led to.the establishment of the International Civil Aviation Organization (ICAO) which has headquarters at Montreal, Que. A special article on The International Civil Aviation Organization and Canada's Participation Therein appears in the 1952-53 Year Book, pp. 820-827. At present Canada has air agreements with 21 other countries.

## Section 1.-Air Services

Air transport services may be grouped into two broad classes-Scheduled Services and Non-scheduled Services. Services in the first group are operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft, serving designated points in accordance with a service schedule and at a toll per unit. The second group includes the following:-
(1) Regular Specific Point Air Services-operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft serving designated points on a route pattern and with some degree of regularity, at a toll per unit.
(2) Irregular Specific Point Air Services-operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft from a designated base, serving a defined area or a specific point or points, at a toll per unit.
(3) Charter Air Services-operated by air carriers who offer public transportation of persons and/or goods by aircraft from a designated base, at a toll per mile or per hour for the charter of the entire aircraft, or at such other tolls as may be permitted by the Air Transport Board.
(4) Contract Air Services-operated by air carriers who do not offer public transportation but who transport persons and/or goods solely in accordance with one or more specific contracts.
(5) Flying Clubs-operated by air carriers incorporated as non-profit organizations for the purpose of furnishing flying training and recreational flying to club members.
(6) Specialty Services-operated by air carriers for purposes not provided for by any other class, such as flying training, recreational flying, aerial photography and survey, aerial pest control, aerial advertising, aerial patrol and inspection, etc.

Current operations of the two major airlines forming the nucleus of Canada's freight and passenger air service are outlined below.

Trans-Canada Air Lines.-In 1962, its 25th year of operation, TCA carried a record $3,865,408$ passengers, 4 p.c. more than in the previous year, and flew $2,659,578,000$ revenue passenger-miles with an average load factor of 60 p.c. Ton-miles of revenue commodity traffic, including air express, totalled $29,827,000$ and ton-miles of air mail totalled $12,862,000$. TCA celebrated its silver anniversary by flying one of its first aircraft, a ten-passenger Lockheed 10A, across the country from Halifax to Vancouver. This aircraft then flew the 122 -mile route between Vancouver and Seattle on Sept. 1, 1962, 25 years to the day after TCA inaugurated its first passenger service over the same route.

During the busy summer months of 1962 , the airline offered more than 3,000 seats in each direction on 24 weekly return flights across the North Atlantic, and more than 1,000 seats daily in each direction across Canada. DC-8 jets were operated across the North Atlantic to Britain and Continental Europe and during the year were introduced on all services between Canada and the Caribbean. At the year end, TCA was serving 58 communities across Canada, in the United States, in Britain and Continental Europe and in the Caribbean over 35,426 miles of air routes.

TCA's fleet at the end of the year consisted of 11 DC-8's, 22 turbo-prop Vickers Vanguards and 48 turbo-prop Vickers Viscounts, plus two DC-3's. Four Douglas DC-8F's and an additional Vanguard were scheduled for delivery early in 1963 and a fifth DC-8F was on order for delivery in 1964.
1.-Operating Statistics of Trans-Canada Air Lines, 1953-62

| Year | Traffic |  |  |  | Operating Revenue |  |  | Operating <br> Expenditure | Operating Surplus |

i Includes non-scheduled service.
${ }^{2}$ Includes excess baggage and express.
${ }^{3}$ Includes other revenue.

Canadian Pacific Air Lines Limited.-Canadian Pacific Air Lines operates a 45,287 -mile route pattern linking five continents as well as major cities in Canada. This pattern comprises 6,900 domestic route miles, including 2,450 miles on Canadian mainline service.

In 1962, CPA carried 461,658 passengers, a greater number than in any other year since the company's inception in 1942. The increase in passenger load, on both domestic and international routes, amounted to 18.6 p.c. over 1961. The revenue passenger-miles showed a 32.8 -p.c. advance to $799,111,166$, indicating greater milage travelled per passenger.

CPA's international routes, 37,600 miles in extent, operate from Vancouver to Honolulu, Fiji, New Zealand and Australia on the South Pacific service; to Japan and Hong Kong via the Great Circle Route across the North Pacific; from Vancouver, Calgary and Edmonton to Amsterdam via the Polar Route; and across the Atlantic from Montreal to Portugal, Spain and Italy. A South American network serves Mexico City, Lima, Santiago and Buenos Aires. Three services link Mexico with Windsor, Toronto and Montreal in Eastern Canada and Vancouver in the West. In Canada, CPA operates a mainline transcontinental service linking Vancouver, Winnipeg, Toronto and Montreal and a domestic network of north-south routes in British Columbia, Alberta and the Yukon Territory.

CPA's fleet of aircraft consists of five Douglas Super DC-8's, five Bristol Britannias, three Douglas DC-6B's, one Douglas DC-6AB, five Convair 240's and three Douglas DC-3's. The international routes are served by the Super DC-8's and the Bristol Britannias and the domestic routes are served by the other aircraft. The transcontinental route is served by Super DC-8's.

Independent Airlines.-In addition to the two major Canadian air carriers-Trans-Canada Air Lines and Canadian Pacific Air Lines Limited-there are four domestic air carriers licensed to operate scheduled commercial air services in Canada, namely, Eastern Provincial Airways Limited, Gander, Nfld.; Quebecair, Inc., Rimouski, Que.; TransAir Limited, Winnipeg, Man.; and Pacific Western Airlines Limited, Vancouver, B.C.

Licensed Canadian air carriers operating in Canada as at Mar. 31, 1962 held valid operating certificates covering 43 scheduled, 157 flying training, and 1,244 other non-scheduled and specialty services. These non-scheduled services, in addition to providing effective access to sections of Canada that are inaccessible by other means of transportation, act as
feeder lines to the scheduled airlines. They also include such specialty services as recreational flying, aerial photography and surveying, aerial pest control, aerial advertising and aerial patrol.

Eastern Provincial Airways Limited.-This company (successor to Maritime Central Airways-purchased in 1963) operates throughout the Atlantic Provinces, eastern Quebec, Labrador and Greenland. It serves Charlottetown and Summerside in Prince Edward Island; Moncton and Dalhousie in New Brunswick; New Glasgow and Halifax in Nova Scotia; Stephenville, Corner Brook, Gander and St. John's in Newfoundland; Goose Bay and Saglek in Labrador; Sept Îles and the Magdalen Islands in Quebec; and the French Islands of St. Pierre-Miquelon.

The Airways fleet consists of four H.P. Dart Heralds, one DC-4, two C-46's, five DC-3's, five PBY Canso's, four Cessna 185's, five DH Beavers, two S-55 helicopters, two Super Cub's and one Beechcraft 18. The company carries on an extensive air freight service throughout the above areas and conducts many specialty services such as mineral exploration, the transporting of hunting and fishing parties, ambulance service and forestry, seal, and ice patrol services.

Quebecair.-Quebecair, a privately owned commercial airline with headquarters at Rimouski, serves various points in the Province of Quebec including Montreal, Quebec, Saguenay, Rivière du Loup, Rimouski, Mont Joli, Sept Iles, Wabush, Schefferville, Gagnon, Baie Comeau, Forestville, Manicouagan and Murray Bay. No point served is more than five flying hours from Montreal.

The company began operations in 1946 under the name of Rimouski Aviation Syndicate and was incorporated under the name of Rimouski Airlines in 1947. At the beginning of 1954, the newly created Rimouski Airlines bought out Gulf Aviation and formed Quebecair. Since then, passenger service has multiplied six times, air mail carried fourteen times and freight carried sixteen times. The number of passengers flown in 1962 was 102,462 and the amount of freight carried totalled $2,137,264 \mathrm{lb}$.

The Quebecair fleet consists of four DC-3's, three F-27's, and one C-46 cargo aircraft.
TransAir Limited.-TransAir operates scheduled, charter and sportsmen's flights in Manitoba, Saskatchewan, Ontario and the Northwest Territories. Thirty-two aircraft are in service from headquarters in Winnipeg and a major base in Churchill. Scheduled flights also originate from Pickle Lake and Sioux Lookout in Ontario and Lac du Bonnet, Norway House and Lynn Lake in Manitoba. The airline has scheduled Viscount, DC-4 and DC-3 services over 4,603 unduplicated miles. Mainline stops are made at Winnipeg, Brandon, Dauphin, The Pas, Flin Flon, Lynn Lake, Thompson and Churchill in Manitoba; Red Lake, Winisk and Ottawa in Ontario; Montreal in Quebec; Yorkton, Regina, Saskatoon, Prince Albert and Swift Current in Saskatchewan; and Medicine Hat and Calgary in Alberta. TransAir also has regular flights between Churchill and Rankin Inlet, Baker Lake and Coral Harbour in the Northwest Territories. From its Winnipeg and Churchill bases, TransAir operates the vertical re-supply flights to the four main sites in the Canadian sector of the Distant Early Warning Line. The company's head office is at the Winnipeg International Airport.

Pacific Western Airlines Limited.-Pacific Western Airlines Limited, with head office at Vancouver International Airport, is one of the largest independent air carriers in Canada. Total route miles in the system is close to 7,200 and services operated include scheduled mainline, local regular unit toll and charter flights in Saskatchewan, Alberta, Yukon Territory, the Northwest Territories including the Arctic islands, and British Columbia.

Regularly scheduled mainline services are operated by Pacific Western northbound from Edmonton to Dawson Creek, Peace River, McMurray, Uranium City, Fort Smith, Pine Point, Fort Resolution, Hay River, Yellowknife, Fort Simpson, Wrigley, Norman Wells and Inuvik. Regular local services are flown from Yellowknife to Cambridge Bay and Resolute Bay; and from Inuvik to Aklavik to Fort McPherson to Arctic Red River. Local services also originate from Norman Wells to Fort Good Hope, Fort Norman, Wrigley and Fort Simpson; and from Yellowknife to Rocher River, Port Radium, Coppermine and Bathurst. The first no-reservations-required airbus service in Canada operates daily between Edmonton and Calgary.

On the Pacific Coast, mainline services are operated from Vancouver to Comox, Powell River, Campbell River, and Port Hardy and local services are operated between Prince Rupert, Stewart, Ford's Cove, Anyox, Maple Bay and Alice Arm in northern British Columbia. In addition, charter services are operated out of Vancouver, Nelson, Kamloops, Prince George, Terrace and Prince Rupert; in the Northern Division from Edmonton, Peace River, Fort Smith, Hay River, Yellowknife, Inuvik and Cambridge Bay.

Aircraft operated by Pacific Western number 48 and range from DC-6B's, DC-4's, Super 46's and DC-3's on mainline services, to Otters, Beavers, Grumman Goose and Cessnas on charter and freight flights. Revenue passengers carried in 1962 totalled 146,939, freight and express carried amounted to $31,710,643 \mathrm{lb}$. and miles flown numbered 3,732,719.

Commonwealth and Foreign Scheduled Commercial Air Services.-At the end of 1962, there were 20 Commonwealth and foreign air carriers holding valid Canadian operating certificates and licences issued for the following international scheduled commercial air services into Canada:-

Aeronaves de Mexico, S.A., operating between Montreal, Canada, and Mexico City, Mexico.
Air France (Compagnie Nationale Air France), operating between Paris and other points in Metropolitan France, Montreal, Canada, and Chicago, U.S.A., and beyond.
Alitalia (Italian International Airlines), operating between Rome and Milan, Italy, Montreal, Canada, and Chicago, Ill., U.S.A.
American Airlines, Inc., operating between Toronto, Canada, and New York/Newark, U.S.A., direct or via Buffalo, U.S.A.
British Overseas Airways Corp., operating between London and Manchester, England, Prestwick, Scotland, Gander, Montreal and Toronto, Canada, and between London, England, Montreal, Canada, Bermuda, Barbados, Trinidad, Bahamas, Jamaica and Antigua.
Deutsche Lufthansa Akiengesellschaft (Lufthansa German Airlines), operating between Hamburg, Germany, and other points abroad, Montreal, Canada, and Chicago, U.S.A.
Eastern Air Lines, Inc., operating between the terminals Ottawa and Montreal, Canada, and New York, U.S.A., and between the terminals Ottawa and Montreal, Canada, and Washington, U.S.A.

KLM Royal Dutch Airlines, operating between Montreal, Canada, and Amsterdam, the Netherlands.
Mohawk Airlines, Inc., operating between Toronto, Canada, and Buffalo, U.S.A.
North Central Airlines, Inc., operating between Port Arthur/Fort William, Canada, and Duluth/ Superior, Hancock/Houghton, U.S.A.
Northeast Airlines, Inc., operating between Montreal, Canada, and Boston, U.S.A., via Concord, Montpelier-Barre, Burlington, White River Junction, U.S.A.
Northwest Airlines, Inc., operating between Winnipeg, Canada, and Fargo, U.S.A., and between Minneapolis/St. Paul, U.S.A., Winnipeg, Edmonton, Canada, Anchorage, Alaska, and beyond.
Pan American World Airways Inc., operating between Seattle, Wash., and Fairbanks, Alaska, U.S.A., with points of call at Juneau and Annette Island, Alaska, U.S.A. and Whitehorse, Y.T., Canada; and between points in the United States, Gander, Nfld., Canada, and points in Britain.

Qantas Empire Airways Ltd., operating between Sydney, Australia, San Francisco, U.S.A., and Vancouver, Canada.
Sabena Belgian World Airlines, operating between Brussels, Belgium, Shannon, Ireland, and Montreal, Canada.
Seaboard and Western Airlines, Inc., operating between points in the United States, Gander, Canada, and points in Europe.
Swiss Air Transport Company Ltd. (Swissair), operating between points in Switzerland, Montreal, Canada, and points in the U.S.A.
United Air Lines, Inc., operating between Vancouver, Canada, and Seattle, U.S.A.
West Coast Airlines, Inc., operating between Calgary, Canada, and Spokane, U.S.A.
Western Air Lines, Inc., operating between Calgary, Canada, and Great Falls, U.S.A.
Flying Schools and Clubs.-At the end of 1962, 80 commercial flying schools were registered as members of the Air Transport Association of Canada. During the year, these schools instructed and graduated 1,328 students as private pilots and 74 students as commercial pilots.

Membership in the 39 flying clubs connected with the Royal Canadian Flying Clubs Association numbered 9,646 at the end of 1962. During the year these clubs instructed and graduated 1,141 students as private pilots and 52 students as commercial pilots.

Weather Services.-Weather services are provided by the Meteorological Branch, Department of Transport, to meet the demands of the general public and all basic economic endeavours such as agriculture, industry, forestry, shipping and fishing. Meteorological service is provided to national and international aviation. The military meteorological requirements in Canada and overseas are met by special co-operative arrangements with the Department of National Defence. The observing and forecasting of ice conditions in navigable waters, both inland and coastal, have expanded rapidly in recent years.

There are 52 forecast offices in Canada, one on shipboard and four in Europe. Forecast offices are linked by 55,300 miles of teletype and radio-teletype circuits, and a national facsimile system 14,600 miles long is used for the distribution of meteorological information in chart form. As of Jan. 1, 1963 the Branch maintained 266 surface synoptic and hourly weather reporting stations, a network of 31 radiosonde stations including five in the Arctic operated jointly with the United States, 59 stations recording upper winds, and 1,878 climatological stations. One Ocean Weather Station in the Pacific, 1,000 miles west of Vancouver, is maintained under International Agreement. (See also pp. 55-56.)

Ground Facilities.-Aircraft landing areas in Canada are classified in Table 2 by administrative agency, as licensed or unlicensed land facilities or seaplane bases, and military airfields. The unlicensed aerodromes and seaplane bases shown are kept in varying degrees of readiness but lack one or more of the facilities usually found in licensed airports, such as lights, passenger accommodation, ground/air communication, etc. Associated with these facilities is a network of radio aids to navigation designed to facilitate en route navigation and safe landings under low visibility conditions.

As at April 1963, the Department of Transport operated 77 low frequency radio ranges and 36 VHF omni-directional ranges ( 11 additional ranges were under construction). Instrument landing systems in operation totalled 39 (one of which was scheduled for decommissioning and three additional systems were under construction) and there were 183 non-directional radio beacons in operation (an additional 19 were under construction). These facilities are regularly calibrated and flight-checked by civil aviation inspectors.

Air Traffic Control．－The primary functions of the Air Traffic Control Division of the Department of Transport are to expedite and maintain an orderly flow of air traffic and to prevent collision between aircraft operating within controlled air space and between aircraft and obstructions on the movement area of controlled airports．This is accom－ plished through airport control，terminal control and area control services．These and other allied services are described below．

Airport Control Service is designed particularly to provide control service to flights operating in the vicinity of major civil airports where the volume and type of aircraft operations， weather conditions and other factors indicate its need in the interest of flight safety．The service also includes the control of all traffic on the manoeuvring area of the airport．Con－ trol is effected by means of direct radiotelephone communication or visual signals．Air－ port control towers are located at：Whitehorse，Y．T．；Victoria（international），Port Hardy， Abbotsford and Vancouver，B．C．；Lethbridge，Calgary，Edmonton（municipal）and Edmonton（international），Alta．；Saskatoon and Regina，Sask；Winnipeg（international）， Man．；Lakehead，Windsor，London，Toronto Island，Toronto（international），Ottawa and North Bay，Ont．；Montreal（international），Cartierville，Quebec，Baie Comeau and Sept Îles，Que．；Moncton，Fredericton and Saint John，N．B．；Halifax（international）and Sydney， N．S．；Gander（international），Nfld．；and Frobisher，N．W．T．
Terminal Control Service consists of the provision of separation to aircraft operating in accord－ ance with the instrument flight rules in the vicinity of all controlled airports．While this service is normally provided by area control centres，separate terminal control units have been established at certain airports as follows：Calgary and Edmonton（international）， Alta．；Saskatoon and Regina，Sask．；Lakehead，Toronto，North Bay and Ottawa，Ont．； Quebec，Que．；Halifax，N．S．；Gander，Nfld．；and Frobisher，N．W．T．
Area Control Service is designed particularly to provide air traffic control service to en route flights operating within controlled airspace during weather conditions which prevent a pilot from seeing other aircraft or obstructions and necessitate his reliance on instruments
to conduct the flight. Area control centres are located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., Moncton, N.B., Goose Bay and Gander, Nfld. Each centre is connected with control towers, terminal control units, communications stations and operation offices within its area by means of an extensive system of local and long-line interphone or radio circuits, and through radio communications facilities available at these stations to all aircraft requiring area control service. In addition, area control centres are capable of communicating directly with most pilots flying within their control areas. Each area control centre is similarly connected with adjacent centres, including centres in the United States, for the purpose of co-ordinating control of aircraft operating through more than one control area. This communications system permits each centre to maintain a continuous detailed record of all aircraft operating in accordance with the Instrument Flight Rules and a general record of aircraft operating in accordance with the Visual Flight Rules within its control area. In addition to providing area control service to aircraft operating within controlled airspace over Newfoundland, the Gander Control Centre provides control service within the airspace over approximately one half of the North Atlantic Ocean. The Vancouver Area Control Centre also provides control service over the Pacific Ocean within the Vancouver Oceanic Control Area.
Radar Control Service is provided extensively in the control of IFR traffic, both in terminal areas and while en route. Terminal Radar Control Service is provided at Vancouver, B.C.; Calgary and Edmonton, Alta.; Regina and Saskatoon, Sask.; Winnipeg, Man.; Lakehead, Toronto, North Bay and Ottawa, Ont.; Montreal and Quebec, Que.; Moncton, N.B.; Halifax, N.S.; and Gander, Nfld. En route Radar Control Service is provided by area control centres and by one radar unit located at Kenora, Ont. Ground Control Approach (GCA) Service is provided at Gander, N fld., Montreal, Que., and Toronto, Ont.

Flight Information Service consists of the provision of advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field conditions reports, data concerning aids to navigation, traffic information, refueling and transportation facilities, and other related data of assistance to the pilot in planning or conducting a flight. This service is provided by all air traffic control units, but particularly by all area control centres.
Alerting Service is designed to ensure that appropriate organizations are notified of aircraft which may be in need of search and rescue aid. This entails the maintenance and constant supervision of a continuous record of active flights to ensure that failure of an aircraft to arrive at the planned destination notified to ATC is detected immediately. The service is available to any pilot who files either a flight plan or flight notification with air traffic control.

Customs Notification Service facilitates the routine notification of the appropriate customs agency by pilots who plan to cross the Canada/United States boundary at certain designated customs airports. This is achieved through the prompt notification by ATC, at a pilot's request, of the customs officer at the destination airport of the intended arrival and of the need for customs clearance.

Airspace Reservation Service provides reserved airspace for specified air operations within controlled airspace and information to other pilots concerning these reservations and military activity areas in controlled and uncontrolled airspace. The Airspace Reservation Coordination Office, located at Ottawa, is responsible for co-ordinating all airspace reservations in Canada and in the Gander and Vancouver Oceanic Control Areas.
Aircraft Movement Information Service is provided by area control centres to assist the Department of National Defence in establishing the identification of all aircraft operating within specified areas.

The total number of aircraft movements at Department of Transport controlled airports in Canada during 1962 was 2,237,413.

## Section 2.-Civil Aviation Operation Statistics

Table 3 provides a picture of commercial civil aviation in Canada for the five years 1957-61. It shows data on miles and hours flown, traffic carried, fuel and oil consumed, employees, salaries and operating revenues and expenses, by type of service, for Canadian air carriers followed by summary statistics for both Canadian and foreign air carriers operating in Canada. Figures for Canadian carriers include domestic and international operations, and figures for foreign companies cover miles and hours flown over Canadian territory only and exclude passengers and goods in transit through Canada. Unit toll
service refers to the transportation of passengers or goods at a toll per unit, whereas bulk service is the transportation of passengers or goods at a toll per mile or per hour for the entire aircraft. Other flying services comprise non-transportation services such as flying training, aerial photography and aerial patrol and inspection.

## 3.-Summary Statistics of Civil Aviation, 1957-61

[^247]Summary statistics of Canadian and foreign commercial air carriers, by type of carrier, are given in Table 4 for 1961. No breakdown between the domestic and the international operations of the Canadian carriers is available for bulk services. For the foreign carriers, hours and miles reported are those flown over Canadian territory only and passengers and goods in transit through Canada are excluded.

It is interesting to note that the six scheduled carriers-those holding a Class 1 licence from the Air Transport Board-accounted for 90 p.c. of all revenue passengers transported by Canadian carriers during 1961. Their share of the freight traffic, however, was smaller, amounting to approximately 55 p.c.

## PART VI.-OIL AND GAS PIPELINES*

A special article covering the history and development of pipeline construction in Canada appears in the 1954 Year Book at pp. 861-869. Additional information has been carried in each succeeding edition and the following write-up brings pipeline development up to the end of 1961. DBS pipeline statistics were undergoing revision at time of writing and 1962 figures were not ready for presentation in this edition. Summary of the previous series appears in the 1962 Year Book at pp. 835-836.

Oil Pipelines.-At the end of 1962, oil pipeline milage in Canada totalled just under 10,000 miles. Most of this is used mainly for transporting crude oil but a few systems carry natural gas liquids or refined petroleum products. The two main trunk crude-oil pipeline systems originate in Edmonton, one extending eastward to Toronto and the other southwestward to Vancouver and the State of Washington. In 1961, 1,115 miles of oil pipeline were laid but less than half that amount was constructed in 1962.

British Columbia's important new pipeline system, Western Pacific Products \& Crude Oil Pipelines Ltd. was completed late in 1961 and deliveries began in January 1962. The pipeline extends from Taylor in northeastern British Columbia to Kamloops where it joins the Trans Mountain pipeline which serves Vancouver and the United States Puget Sound area. During 1962, Western Pacific doubled the capacity of its line to $45,000 \mathrm{bbl}$. a day by installing new pumping units. Trans-Prairie Pipelines, Ltd. added a 25 -mile 8 -inch loop to its Boundary Lake-to-Taylor system in the Peace River area to take care of the sharply increased demand for British Columbia oil.

Most of the new crude oil pipelines constructed in Alberta were field gathering lines: Pembina Pipe Line Ltd. added 51 miles of gathering line extensions in the Pembina, Willesden Green and adjacent fields; Federated Pipe Lines Ltd. laid 21 miles of extensions to the Swan Hills gathering system; and the Twining and Twining North fields were

[^248]joined to the Britamoil pipeline south of Fenn-Big Valley field by 30 miles of smalldiameter pipe constructed by Twining Pipeline Ltd. The largest trunk lines completed in Alberta in 1962 are for moving natural gas liquids (NGL). Hudson's Bay Oil and Gas Company Limited, through its Rangeland Division, constructed a 70 -mile, 8 -inch NGL pipeline from Sundre to the Westerose South field. The Cremona Pipe Line Division of Home Oil Company Limited completed 14 miles of 6 -inch pipe from Harmattan to Sundre, and 28 miles of 6 -inch from Madden to Calgary. Rangeland's and Cremona's NGL pipelines supplement their crude oil lines which serve the same general areas. Fifteen miles of NGL pipeline was laid by Peace River Oil Pipe Line Co. Ltd. from the new Carson Creek gas-cycling plant to Whitecourt.

Producers Pipelines Ltd. added 130 miles of extensions to its gathering systems in Saskatchewan, mainly in the Willmar, Oungre and Gapview regions. In Minnesota and Wisconsin, the Lakehead Pipe Line Co. Inc., Interprovincial Pipe Line Company's whollyowned United States subsidiary, added 39 miles of 34 -inch loop beside its 18 - and 24 -inch lines. This is the largest diameter pipe yet used in the Interprovincial-Lakehead system.

In October 1962, two Canadian pipeline companies received United States presidential permission to construct pipeline facilities across the international boundary. As a result, the Aurora Pipe Line Company commenced exporting natural gas liquids at a rate of about $11,000 \mathrm{bbl}$. a day from Alberta to Montana, and Interprovincial Pipe Line Company started building a lateral line to Buffalo, N.Y., capable of moving $20,000 \mathrm{bbl}$. a day of crude oil.

Interprovincial Pipeline.-Canada's longest oil pipeline, the system of Interprovincial Pipe Line Company, extends from the Redwater field, 29 miles northeast of Edmonton, Alta., to Port Credit near Toronto, Ont. This includes the part of the line passing through the United States which is operated by Interprovincial's subsidiary, Lakehead Pipe Line Company Incorporated. The total right-of-way distance of the whole system is 1,928 miles, although there is considerably more pipe than this in the system because of looping. Upon completion of the 1963 construction program, the throughput capacities of various sections of the system will range between $170,000 \mathrm{bbl}$. a day between Sarnia and Port Credit, Ont., and $494,000 \mathrm{bbl}$. a day between Cromer and Gretna, Man.

Trans Mountain Pipeline.-The system of Trans Mountain Pipe Line Company extends from Edmonton to Vancouver, enabling West Coast refineries to use Alberta crude oil. The system, completed in 1953, consists of 718 miles of 24 -inch pipeline plus two 50 mile loops. Extensions into the State of Washington carry crude to refineries at Ferndale and Anacortes. In 1962, deliveries totalled 198,300 bbl., well above the throughput of previous years but still considerably below the $250,000-\mathrm{bbl}$. capacity of the system. In earlier years, there were two main crude oil receiving terminals on the line, at Edmonton and Edson. In 1962, the Western Pacific pipeline began delivering British Columbia crude at Kamloops, thus establishing a third point of delivery to the Trans Mountain system.

Other Oil Pipelines.-The pipeline of Western Pacific Products \& Crude Oil Pipelines Ltd. consists of 504 miles of 12 -inch pipe extending from Taylor in northeastern British Columbia to Kamloops where it joins Trans Mountain pipeline. Trans-Prairie Pipelines, Ltd. and British Columbia Oil Transmission Co. Ltd. deliver oil to the Taylor terminal from fields in northeastern British Columbia.

In Alberta, Federated Pipe Lines Ltd. serves fields in the Swan Hills region with two pipelines to Edmonton which have a combined capacity of $67,000 \mathrm{bbl}$. a day. Peace River Oil Pipe Line Co. Ltd. has a line from the Kaybob and Windfall fields to Edmonton and one from the Sturgeon Lake field to the Trans Mountain pipeline at Edmonton. Pembina Pipe Line Ltd. gathers crude from the Pembina and adjacent fields. Britamoil Pipe Line Company Limited operates a pipeline that begins 140 miles south of Edmonton in the Drumheller area and gathers crude from several fields en route to Edmonton, and the Edmonton Pipe Line Company transports crude from the Joarcam and Camrose fields 40 miles south of Edmonton. Most of the other fields between Calgary and Edmonton are served by a composite pipeline system owned by three companies: Texaco Exploration

Company, which owns the Edmonton-Rimbey section; Rangeland Pipe Line Division of Hudson's Bay Oil and Gas Company Limited, the Rimbey-Sundre section; Cremona Pipeline Division of Home Oil Company Limited, Sundre to Calgary. The Imperial Pipe Line Company Limited has four systems that serve the fields in the Edmonton area including Leduc-Woodbend, Golden Spike and Redwater.

In Saskatchewan, Producers Pipelines Ltd. and its wholly-owned subsidiary Westspur Pipe Line Company gather crude from most of the fields in the southeastern part of the province and deliver it to the Interprovincial pipeline at Cromer, Man. Trans-Prairie Pipelines, Ltd., in addition to its comparatively new system in northeastern British Columbia, has a system serving the Weyburn field in southwestern Saskatchewan and connected to the Westspur pipeline, and another system in southwestern Manitoba which is linked to the Interprovincial pipeline. The South Saskatchewan Pipe Lines Company delivers oil from the group of fields in southwestern Saskatchewan to Moose Jaw, Regina and the Interprovincial pipeline at Regina.

Oil Pipeline Tariffs.-On Feb. 1, 1963, Interprovincial Pipe Line Company put into effect a new tariff schedule which included tariff reductions up to a maximum of 3 cents from Edmonton to Port Credit. Western Pacific Products \& Crude Oil Pipelines Ltd. announced a tariff reduction, effective May 1, 1963, from 66 to 55 cents on its Taylor-toKamloops pipeline. Trans-Prairie Pipelines, Ltd., which delivers crude to Western Pacific, effected tariff reductions on Jan. 1, 1963 on oil from fields other than the Boundary Lake field. Trans Mountain Oil Pipe Line Company will reduce the tariff between Kamloops and Vancouver from 22 to $18 \frac{1}{2}$ cents when deliveries from Western Pacific exceed a $30,000-$ bbl.-a-day average over a 12 -month period. Some examples of tariffs for the two major systems follow:-

| Route | $\begin{aligned} & \text { Transmission } \\ & \text { Distance } \end{aligned}$ | Tariff as of <br> Feb. 1, 1963 |
| :---: | :---: | :---: |
|  | miles | cts. per bbl. |
| Edmonton, Alta., to- |  |  |
| Regina, Sask. | 438 | 20 |
| Gretna, Man. | 772 | 29 |
| Sarnia, Ont.. | 1,743 | 48 |
| Port Credit, Ont. | 1,899 | 51 |
| Kamloops, B.C.. | 510 | 33 |
| Vancouver, B.C. | 718 | 40 |
| Anacortes, Wash., U.S.A | 740 | 40 |

Natural Gas Pipelines.-There were no large natural gas pipeline construction projects in 1962 but approximately 1,000 miles of line were laid, of which more than half were small- and medium-diameter distribution lines. Trans-Canada Pipe Lines Limited, which :ulded four sections of 34 -inch loop totalling 59 miles in Manitoba and Saskatchewan in 1962, plans to begin laying another 205 miles of 34 -inch loop in the spring of 1963 . The company in 1963 will also purchase the Crown section which extends from the Manitoba boundary to Kapuskasing, Ont., a distance of 675 miles; Trans-Canada has operated the section since completion in 1958 but it has been owned by Northern Ontario Pipe Line Crown Corporation. The Alberta Gas Trunk Line Company, Trans-Canada's main gas supplier, laid 10 miles of 34 -inch loop just west of the Alberta-Saskatchewan boundary and plans to lay another 25 miles in 1963 to serve the Trans-Canada pipeline. Gas deliveries began in October 1962 through the new 39 -mile, 12 -inch pipeline that Alberta Gas Trunk installed to connect the Worsley field in northwestern Alberta with the pipeline of Westcoast Transmission Company Limited near Boundary Lake, B.C.

Pipeline construction companies took advantage of the frozen ground during early 1963 to lay 72 miles of the casinghead-gas gathering systems in the Swan Hills, Judy Creek and Virginia Hills fields, and to construct 53 miles of the 12 -inch transmission line that will carry the gas to the Leduc gas plant south of Edmonton. This was the first winter construction of a pipeline in Canada. A 27 -mile, 14 -inch gas transmission line was laid in
the early part of 1962 to transport sour gas from the Pine Creek field to the Windfall field where it is injected underground to replace Windfall gas that has been processed and marketed.

In Ontario, The Consumers' Gas Company and its subsidiaries constructed more than 300 miles of distribution and transmission lines, and Union Gas Company of Canada, Limited, built 203 miles of pipeline. Saskatchewan Power Corporation added 232 miles of transmission pipeline and 149 miles of distribution line to its Saskatchewan systems.

Trans-Canada Pipe Lines Limited.-The Trans-Canada pipeline, extending from the Alberta-Saskatchewan boundary to Montreal, is Canada's longest pipeline, with a right-of-way length of 2,145 miles. In addition, there are 145 miles of lateral lines and a 50 -mile lateral completed in 1960 which delivers gas from the main line at Winnipeg to the United States boundary near Emerson, Man. In September 1962, Trans-Canada began delivering gas to the St. Lawrence Gas Company Inc. in northern New York State through the Niagara Gas Transmission Ltd. line near Cornwall. Trans-Canada increased its sales of gas from $210,400,000 \mathrm{Mcf}$. in 1961 to $237,300,000 \mathrm{Mcf}$. in 1962 , an increase of 13 p.c. The company receives most of its gas from the Alberta Gas Trunk Line Company.

Alberta-to-California Pipeline.-The total length of the main Alberta-to-California line, including the section in the United States, is 1,367 miles-all 36 -inch pipe except the most northerly 126 -mile section just south of Whitecourt, Alta., which is 30 inches. The Alberta Gas Trunk Line Company owns the 351-mile main section in Alberta, plus more than 220 miles of the lateral feeder lines. The 107-mile section of line which crosses southeastern British Columbia from the Crowsnest Pass to Kingsgate is owned by Alberta Natural Gas Company. The two Canadian companies that deliver gas through the pipe-line-Alberta and Southern Gas Co. Ltd. and Westcoast Transmission Company Limitedhave been authorized to export a maximum of 610,750 Mcf. a day at the British ColumbiaIdaho boundary. The pipeline began deliveries in December 1961.

Westcoast Transmission Company Limited.-The Westcoast pipeline transports gas to the Vancouver area and adjacent United States areas from the Peace River district of northeastern British Columbia and northwestern Alberta. The main trunk consists of 650 miles of 30 -inch pipe starting at Taylor, B.C., but there are some 400 miles of gathering lines supplying gas from British Columbia fields. The Worsley field in Alberta started supplying gas to Westcoast late in 1962. The ultimate throughput capacity of the present Westcoast main line, after installation of more compression equipment, will be 660,000 Mcf. per day. The company also buys Alberta gas and delivers it through the Alberta-to-California pipeline to Idaho, Washington and Oregon.

Other Gas Pipelines.-The most important gas transmission lines in Alberta are owned by the Alberta Gas Trunk Line Company. The company's pipeline systems are divided into two main sections. The Plains Division is roughly the shape of a recumbent ' Y ', with one arm running southeast from the Homeglen-Rimbey area and the other extending northeast from Pincher Creek. The two lines join at Princess, and the third arm runs eastward to the Trans-Canada pipeline near Burstall, Sask. The newer Foothills Division is part of the earlier-discussed Alberta-to-California pipeline. In British Columbia, the British Columbia Hydro and Power Authority provides natural gas service to Vancouver and lower mainland areas, and Inland Natural Gas Co. Ltd. serves the southern interior region. In Saskatchewan, all cities and towns using natural gas are served by Saskatchewan Power Corporation. In Manitoba, Greater Winnipeg Gas Company distributes natural gas in the Winnipeg area. Union Gas Company of Canada, Limited serves southwestern Ontario in the Windsor, London, Sarnia and Chatham areas. The Consumers' Gas Company and its subsidiaries distribute gas in Toronto, Ottawa, Niagara Falls, Welland and Fort Erie regions. In Quebec, gas is distributed by Quebec Natural Gas Limited which serves the Montreal area. Although a small amount of gas is imported into southwestern Ontario from the United States, most of the gas used in Eastern Canada is supplied by the Trans-Canada pipeline.

## CHAPTER XVIII.-COMMUNICATIONS

## CONSPECTUS

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

Communications media in Canada have been shaped to meet the needs of the country. Great networks of telephone, telegraph and radio services, inextricably bound together, provide adequate and efficient service which, in this era of electronic advancement, is under continual technological change and development. The familiar challenges of the country-its size, its topography, its climate, its small population-which have reared their heads in other areas of development, have had to be faced as well in the field of communications. That these have been met is evidenced by the fact that today Canada possesses communication facilities and services second to none in the world.

## Section 1.-Telecommunications*

During the past half-century, Canada has experienced tremendous economic expansion. Population growth and the advance to new industrial frontiers have been matched by an upward surge in national productivity and general standard of living. Continuing development of Canada is dependent on both individual pioneering and the co-operative efforts of many industries and the telecommunications industry is filling a vital role in this drama of growth.

Business and industry have expanded and ventured into isolated areas assisted and promoted by Canadian telecommunications industries which have anticipated the needs of the future with vast programs of development in virgin territories. Technological development has been particularly important to the extension of telecommunications in Canadit. To meet the demands placed upon it, the industry has constantly introduced newer and better equipment, tools and methods of operation. In the growth of urban centres, the development of rural communities and the pioneering of new territory, Canadian telecommunications agencies through the years have sought to provide the highest quality of service for the greatest number of people. The major railways, the

[^249]hundreds of co-operating telephone companies, the radio and television companies and federal communications organizations work together with a common purpose-building networks of telecommunications from coast to coast. They provide such familiar services as telephone, telegraph, teletype, radio and television, and many other related means of communication; in addition, mutual co-operation has allowed them to satisfy a variety of defence needs.

## Subsection 1.-Government Control over Telecommunications Agencies

Telephone and telegraph companies incorporated under the Federal Government are subject to the jurisdiction of the Board of Transport Commissioners in the matter of rates and practices under the provisions of the Railway Act (see pp. 751-753); other companies are responsible to provincial regulatory bodies. International telegraph and telephone communications are handled subject to the International Telecommunication Convention and the Regulations thereunder and/or under regional agreements. Tolls charged to the public for radio communication service are subject to the provisions of the Regulations made under the Radio Act. Overseas cables landed in Canada are subject to the External Submarine Cable Regulations under the Telegraphs Act.

Radio communications in Canada, except for those matters covered by the Broadcasting Act, are regulated under the Radio Act and Regulations and also under the Canada Shipping Act and Ship Station Radio Regulations. In addition, radio communication matters are administered in accordance with the International Telecommunication Convention and Radio Regulations annexed thereto; the International Civil Aviation Convention; the International Convention for the Safety of Life at Sea; the Inter-American Telecommunication Convention and the Convention between Canada and the United States of America relating to the operation by citizens of either country of certain radio equipment or stations in the other country; and also in accordance with such regional agreements as the agreement between Canada and the United States for the promotion of safety on the Great Lakes by means of radio, the Inter-American Radio Agreement and the North American Regional Broadcasting Agreement (see also pp. 830-832).

National radio broadcasting in Canada entered its present phase in 1936 when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission. The Act gave the Corporation wide powers in the operation of a national broadcasting system and gave to the Minister of Transport the technical control of all broadcasting stations.

During 1958 the Government established a Board of Broadcast Governors and the Canadian Broadcasting Corporation Board of Governors was abolished. The Board of Broadcast Governors regulates the establishment and operation of networks of radio and television broadcasting stations, the activities of public and private broadcasting stations and the relationship between them, in the interest of providing a national broadcasting service of high standard, basically Canadian in content and character. While the Minister of Transport is the licensing authority under the Radio Act, the Broadcasting Act requires that applications for broadcasting station licences or for any change in an existing broadcasting station be referred to the Board of Broadcast Governors for its recommendation before being dealt with by the Department.

## Subsection 2.-Telephones

Alexander Graham Bell first transmitted human speech through electrically energized equipment in March 1876, and in August of the same year a one-way call from Brantford to Paris in Ontario marked the first successful long-distance test of the new invention. Soon after the instrument was perfected, telephone exchanges sprang up in many Canadian communities, sometimes with two competing companies in one place.

In April 1880, The Bell Telephone Company of Canada was established by Act of Parliament and authorized as the official agent for telephone service in 32 cities and towns across the country. However, it came to be recognized that, in the existing state of the industry, one company could scarcely develop and organize service over so wide an area, and a separate company was set up in British Columbia. The Bell Telephone Company withdrew from the Maritime Provinces in the 1880's and installations in the Prairie Provinces were sold to the respective provincial governments in 1908-09. The seven major telephone systems that developed across Canada worked together to establish long-distance service on a national basis and in 1931 they founded the Trans-Canada Telephone System which now has eight full members. These include both shareholder-owned companies and provincial government systems. They are as follows:-

The Avalon Telephone Company Limited<br>Maritime Telegraph and Telephone Company Limited<br>The New Brunswick Telephone Company Limited<br>The Bell Telephone Company of Canada (serving Ontario, Quebec, Newfoundland and the Northwest Territories)<br>Manitoba Telephone System<br>Saskatchewan Government Telephones<br>Alberta Government Telephones<br>British Columbia Telephone Company.

These eight systems, together with the Island Telephone Company (P.E.I.), QuébecTéléphone, serving the Lower St. Lawrence area, Ontario Northland Communications and the Okanagan Telephone Company, comprise the Telephone Association of Canada. This organization was established to ensure general co-operation in telephone matters and to provide a means of sharing technical and operating information. Many of the smaller systems have also formed similar groups, such as the Canadian Independent Telephone Association, the Quebec Independent Telephone Association and the Saskatchewan Association of Rural Telephone Companies.

Backbone of the Canadian telephone network is the Trans-Canada microwave system. Stretching more than 3,900 miles from the Atlantic to the Pacific, it is the longest single microwave system in the world. In all, the Canadian telephone industry operates more than 10,000 miles of microwave routes, carrying simultaneously many hundreds of long-distance conversations, large volumes of data, and television programs for the CBC and CTV television networks. The Trans-Canada System also supplies the communications facilities linking the more than 200 stations on the CBC French and English radio networks.

The steadily rising demand for local and long-distance service has called not only for general expansion of Canadian telephone systems but for the constant introduction of modern farilities and services. A number of Canadian companies have introduced what is called "Extended Area Service" in many of the communities they serve. This plan eliminates long-distance charges between several larger centres and their suburbs, and between many smaller places with a close community of interest. The cost of this service is included in the monthly charge for local telephone service.

Distance Dialing by both operators and customers enables the industry to provide faster and better long-distance service, while making the most efficient use of manpower and equipment. Direct Distance Dialing now makes it possible for users to dial their own long-distance calls to nearly $6,000,000$ telephones in Canada, and more than $80,000,000$ in Canada and the United States.

Numerous flexible telephone services are provided for government, business and industry. Special conference circuits can be quickly arranged, enabling businessmen to
discuss their affairs without the inconvenience and expense of travel. Radiotelephone installations link travellers with the regular telephone network, providing mobile service for such users as highway departments, trucking and construction firms, fire and ambulance services and police departments. A pocket radio signaller carried by a person temporarily leaving a telephone instrument area will indicate an incoming call requiring his attention.

Improvement and extension of local and long-distance telephone services continue to absorb the bulk of invested money and labour. However, the increasing mechanization of government and business operations and the resultant need to transmit large volumes of information at economical rates have led to the accelerated development of machine-tomachine communication. The growth of such communication in the past few years has been made possible to a large extent by the introduction of Data-Phone data sets which convert the electrical impulses from business machines into tone-signals acceptable to telephone circuits. A Data-Phone data set at the receiving business machine re-converts the tone-signals into machine language. Data-Phone service is now used in conjunction with a variety of business machines to send information from punched cards and from paper or magnetic tape.

Several optional services introduced recently provide great flexibility for machine-tomachine and voice calling over long distances. Wide Area Telephone Service extends a customer's flat-rate calling to telephones within seven progressively wider zones, the largest of which includes the whole of Canada. Telpak, a new private line intercity service, is now available to organizations which transmit large volumes of information requiring an exceptionally broad band of frequencies, such as data from advanced computers and highspeed facsimile equipment. It may also be used to carry simultaneously many smaller loads of information, such as voice calls and teletypewriter messages, which require relatively narrow bands of frequencies.

Many new services for business use were introduced by the industry in 1962. Among these was an electronic facsimile service which transmits or receives letter-size handwritten or printed messages, charts or drawings over the regular network or private lines. Dial Teletypewriter Exchange Service (TWX)—also made available in 1962-transmits typewritten information and certain low-speed data over the regular telephone network. Handwritten messages or sketches can be transmitted over private lines, or over the regular telephone network, in conjunction with Data-Phone data sets.

A recent product of Canadian telephone research which has been quickly accepted by business customers is known as Business Interphone, a versatile, hands-free intercommunication system and regular telephone service in a single instrument. Centrex, designed for large customers, permits outside calls to be dialed straight through to an extension without being relayed at the switchboard of private branch exchanges. A complete intercommunication system is available for use in the home and in small businesses. A special type of telephone has been introduced for hard-of-hearing users. Another new service is an automatic dialer which can retain up to 290 telephone numbers in its electronic memory. Canadian telephone research laboratories are working on basic research in such fields as electronic circuitry, microminiaturization, solid state physics and ferrites. Applied research has concentrated on meeting the needs of Canadian subscribers for modern data communications and telephone service.

The northward extension of industry in Canada has, of course, required the northward expansion of telephone communications. The British Columbia Telephone Company operates a tropospheric scatter system from Port Hardy to Annette Island. Alberta Government Telephones, in conjunction with Saskatchewan Government Telephones, recently completed construction of a microwave transmission system from Uranium City
in Saskatchewan to Fort Smith in the Northwest Territories. In Manitoba, radiotelephone service reaches out to a large number of isolated settlements and bush camps and provides communication for aircraft and for boats plying Lake Winnipeg. In northern and northwestern Ontario, Fringe Radio Service extends telephone communication beyond wire and cable facilities. A radio unit on the customer's premises permits two-way calling between subscribers in the fringe area and those served by the regular telephone network. Goose Bay in Labrador and the Schefferville area of the Quebec-Labrador boundary are in contact with the remainder of the world through a tropospheric scatter and radio-relay network hinged on Sept Iles. Bell Telephone operates its farthest north exchange at Frobisher on Baffin Island. A high-frequency radio base station at Alma, Que., serves the communications needs of the northern settlements in the area between the Atlantic Coast of Labrador and the Quebec shore of Hudson Bay, and also provides communications for aircraft operating in the North.

Telephone Statistics.-There were 2,509 telephone systems operating in Canada in 1961, compared with 2,558 in 1960. The number of co-operative systems in rural districts decreased from 2,180 to 2,108 , and the number of shareholder-owned companies decreased from 283 to 259 . The largest of the stock companies, The Bell Telephone Company of Canada, which operates throughout the greater part of Ontario and Quebec and in Newfoundland and the Northwest Territories, served 61 p.c. of all the telephones in Canada, as compared with 63 p.c. in 1960. The British Columbia Telephone Company, also share-holder-owned, served 8.5 p.c. of the total number of telephones in 1961 and 9 p.c. in 1960.

The number of telephones in use in Canada increased by 79 p.c. during the ten-year period 1952-61. At Dec. 31, 1961, there were $6,014,015$ telephones in service, compared with $5,728,167$ in 1960 and $3,352,366$ in 1952 . The number of residential telephones and the number of business telephones increased by 6 p.c. and 3 p.c., respectively, during 1961.

## 1.-Milages of Pole-Line and Wire and Number of Telephones in Use, 1952-61

Note.-Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

| Year | Systems | Route Milage ${ }^{1}$ | Length of Wire | Telephones in Use |  |  |  |

${ }^{1}$ Ontario 4-party telephones included under Rural Lines.
The major telephone systems record completed calls on representative days throughout the year and on this basis estimate the number of local conversations which, added to the actual count of long-distance calls, gives their total volume of business. Estimates are included for the smaller systems. The number of completed calls on all systems in 1961 was estimated at $10,468,915,000$, or an average of 1,741 calls per telephone and 568 calls per person. Despite the increase in extended area service which eliminates toll charges between adjacent communities, long-distance calls continue to increase in number.

## 3.-Local and Long-Distance Calls and Average Calls per Capita and per Telephone, 1952-61

Nore.-Figures from 1928 will be found in the corresponding table of previous Year Books beginning with the 1939 edition.

| Year | Local Calls | $\begin{aligned} & \text { Long- } \\ & \text { Distance } \\ & \text { Calls } \end{aligned}$ | Total Calls | Total Calls per Capita | Average Calls per Telephone |  |  |

## Subsection 3.-Telegraphs

Public telegraph service in Canada is, for the most part, furnished by the railway companies through their telecommunications departments. The preponderance of this service is provided by Canadian National and Canadian Pacific. Both major telecommunication companies were at one time engaged primarily in meeting the communications needs of the railways and in handling telegrams and cablegrams for the public. While continuing with these activities they have kept pace with modern technological advances and are now providing a wide range of services which include data processing systems, radio and television network services, facsimile and wire photo services, telemetering, complex teletype and data switching centres, and other forms of voice and record communications.

Canadian National-Canadian Pacific telex service, established in 1956, has had very good public acceptance. At the end of 1962 there were about 5,000 customer installations in Canada, each having access to the other and also to world-wide telex networks in other countries.

In 1962, Canadian National and Canadian Pacific commenced construction of a highgrade microwave radio relay system between Montreal and Vancouver. The new system, to be completed in late 1963, is designed to serve Ottawa, Toronto, Sudbury, the Lakehead, Winnipeg, Saskatoon, Regina, Edmonton, Calgary and Kamloops, as well as the terminal points at Montreal and Vancouver. Because of the high value of such a system for national defence, it will be routed to by-pass military target areas. At the outset it will be capable of carrying 600 voice channels which may be used for the transmission of all forms of voice and record communications. The system can be expanded readily by the addition of radio channels to provide network television service or increased circuitry for general communications use. The new system will link up with the system already in operation from St . John's, Nfld., to Montreal, thus providing microwave service across the Continent.

Increased industrial and military interests in the Canadian northwest have created a need for all forms of communications services, and to meet these Canadian National Telecommunications (CNT) undertook several major projects. The first of these was a 1,200-mile microwave system between northern Alberta and the Yukon-Alaska border, which was completed in July 1961. Starting at Grande Prairie, 450 miles north of Edmonton, this network proceeds northward through Alberta, crosses the northeast corner of British Columbia and, following the Alaska Highway through Yukon Territory, joins an interchange system at Mount Dave on the Yukon-Alaska border. At Grande Prairie, the CNT system joins the Alberta Government telephone system running southward through Alberta to the Canada-United States border, where it connects with United States networks.

In the summer of 1961, CNT completed construction of a land-line communications network stretching around Great Slave Lake from Fort Smith on the Alberta-Northwest Territories border to Yellowknife, bringing the full range of communications services to residents of Yellowknife, Fort Rae, Fort Providence, Hay River, Pine Point and Fort Smith. This network is connected to the 'outside' by a microwave system between Hay River and Edmonton; the section of the microwave system within the Northwest Territories was constructed by CNT and the Alberta section by the Alberta Government Telephone Company.

In 1962, approval was given to CNT to construct a 1,020 -mile telephone pole-line down the length of the Mackenzie River from Hay River to Inuvik. When completed in 1965 this project will provide simultaneous long-distance telephone, teletype, telex, commercial telegraphs, air operational and weather communications to Fort Simpson, Wrigley, Fort Norman, Norman Wells, Fort Good Hope and Inuvik. In addition, Aklavik, Fort McPherson and Arctic Red River will be linked to the system at Inuvik by very high frequency radio communications. Service will be instituted at successive communities as construction of the line proceeds northward.

In late 1962, CNT started construction of a tropospheric scatterwave communications system which will extend from Hay River in the Northwest Territories to Lady Franklin Point on Victoria Island in the Arctic Archipelago. Some channels of this 554-mile system, to be completed by the end of 1963, will be used for defence purposes and, in addition, the system will enable CNT to provide various types of communications services to such outlying communities as Coppermine and Cambridge Bay.

CNT has also made a major entry in the field of public telephone service. In Newfoundland, it provides public telephone service at Gander and at many smaller communities throughout that province. At the end of 1962 there were over 8,000 telephones connected to CNT exchanges in Newfoundland. CNT telephone exchanges also provide service to the public in the Yukon and Northwest Territories and in northern British Columbia. CNT local and long-distance telephone service is available in such northern communities

Massive antenna installations at the Hay River, N.W.T., terminal of the Tropospheric Scatterwave system; similar installations are being made at Snare Falls, Port Radium and Lady Franklin Point.

Pole-line construction in the isolated North is adapted to local conditions; where heavy rock or permafrost is encountered, tripod installations are used.

as Hay River, Fort Smith, Yellowknife, Fort Nelson, Watson Lake, Cassiar, Whitehorse, Mayo, Elsa, Keno and Dawson. Service to the latter points north of Whitehorse is provided over a CNT land-line between Whitehorse and Dawson. The total number of telephones in service in the Yukon and Northwest Territories is in excess of 6,000, almost 3,000 of them in Whitehorse alone.

Telegraph Statistics.-At the end of 1961 nine telegraph and cable companies were in operation in Canada. These systems, composed of lines owned by the chartered railway and telegraph companies, including the Canadian Overseas Telecommunication Corporation (see below), increased their property and equipment to $\$ 299,568,298,12$ p.c. above that reported in 1960. Both operating revenues and expenses continued to increase and net income decreased to $\$ 10,696,819$, 10 p.c. below the 1960 figure. Fewer telegrams were sent, the lowest number since 1942, but cablegrams continued to increase.

## 6.-Summary Statistics of Canadian Telegraphs, 1952-61

${ }_{1}^{1}$ Excludes commission operators. $\quad{ }^{2}$ Includes messages to and from vessels on the Great Lakes and the St. Lawrence River and messages to and from stations. ${ }^{3}$ Excludes relayed messages.

## Subsection 4.-Overseas Telecommunications Services

The Canadian Overseas Telecommunication Corporation was established in 1950 to maintain and operate external telecommunication services for the conduct of public communications by cable, radiotelegraph and radiotelephone and any other means of telecommunication between Canada and overseas points; to make use of all developments in cable and radio transmission and reception for external telecommunication services; and to conduct investigation and research with the object of improving and co-ordinating such telecommunication services with the telecommunication services of other parts of the Commonwealth.

In 1952 the Corporation commenced an expansion program of overseas services designed to meet future requirements and the following services have so far been established: direct telegraph, telephone and telex communications between Canada and Argentina, Australia, Barbados, Bermuda, Britain, Denmark, Finland, France, Germany, Italy, Jamaica, Japan, Netherlands, New Zealand, Norway, Sweden and Switzerland.

In 1956 the first transatlantic telephone cable, a joint project with the British Post Office, the American Telephone and Telegraph Company, the Eastern Telephone and Telegraph Company and the Corporation, was brought into service. Apart from normal use of the system for public telephone and telegraph message traffic, capacity is available for private leased circuits. The Corporation introduced international telex service to Canada in 1956 and service with 75 countries is available. The first transatlantic slow-scan
television pictures were transmitted between Canada and Britain in 1959. In addition, 55 telephone circuits have been provided by cable and microwave for use between the mainland and Newfoundland.

The Canada-Britain 80-circuit telephone cable (CANTAT) was opened for service on Dec. 19, 1961. The Canada-Greenland-Iceland 24-circuit telephone cable (ICECAN), primarily provided to meet the North Atlantic communication needs of international civil aviation, was opened for service on Jan. 1, 1963. Its connecting counterpart between Iceland and Scotland (SCOTICE) was brought into service on Jan. 22, 1962. A four-party project (Canada-Britain-Australia and New Zealand) will provide a Canada-New ZealandAustralia 80 -circuit telephone cable (COMPAC). This section of a Commonwealth round-the-world telephone cable system is scheduled for completion in late 1963. The Tasman section between Australia and New Zealand was opened July 9, 1962. Arrangements were completed for the right of use of a number of circuits for Canadian purposes in a telephone cable system connecting Bermuda and the United States brought into operation in January 1962, and in a telephone cable system connecting Jamaica and the United States brought into operation in February 1963. A six-party (Canada-Britain-AustraliaNew Zealand-Singapore and the Federation of Malaya) section of the Commonwealth round-the-world telephone cable system, scheduled for completion in 1966, will provide an Australia-New Guinea-North Borneo-Singapore-Malaya and Hong Kong 80-circuit telephone cable (SEACOM).

In addition to the overseas services operated by the Canadian Overseas Telecommunication Corporation, two cable companies operate submarine cables landing in Canadathe Commercial Cable Company and the Western Union Telegraph Company. These companies operate to stations in Britain, Ireland, the United States, the Azores and St. Pierre and Miquelon Islands.

A list of cables landed in Canada is given in Table 7.
7.-External Cables Landed in Canada, 1962

## Subsection 5.-Meteorological Communications

Weather stations operated by the Meteorological Branch of the Department of Transport throughout Canada are linked coast-to-coast by means of teletype and in the remote northern areas by radio or radioteletype. The land-line teletype circuits are leased from commercial companies. The radio circuits are operated chiefly by the Telecommunications and Electronics Branch of the federal Department of Transport.

Weather stations on the teletype network transmit their reports directly; other stations report via commercial or radio facilities to the nearest station on the teletype line for subsequent transmission on the meteorological circuit. The reports are collected on a regional basis and then relayed to other parts of the country as required. There are two coast-tocoast teletype systems transmitting weather information, with main relay points at Vancouver, Edmonton, Winnipeg, Toronto, Montreal, Halifax, Gander and Goose Bay. These main meteorological communications centres not only handle the distribution of weather information within Canada including the Arctic, but also effect international exchange with the United States and Europe and, through them, with many other countries. For the latter purpose, the Canadian Meteorological Branch and the British Meteorological Office share the cost of a leased duplex circuit in the transatlantic cable. Altogether, the Meteorological Branch uses 55,300 miles of teletype circuits connecting 350 teletype offices.

In addition, a facsimile network connects forecast offices including radio facsimile transmission to Arctic stations and ships at sea. Weather charts originating at the Central Analysis Office in Montreal receive national distribution over this network. Regional transmissions of additional charts are distributed on a local basis. Altogether, the Meteorological Branch utilizes 14,600 miles of facsimile circuits, serving 71 offices.

## Subsection 6.-Federal Government Civil Telecommunications and Electronics Services

Radio regulation and radio aids to navigation services are under the jurisdiction of the Telecommunications and Electronics Branch of the Department of Transport. The functions and responsibilities of the Branch may be summarized as follows: (1) administration of the Radio Act and Regulations and the Radio Provisions of the Canada Shipping Act and Ship Station Radio Regulations; (2) research into and development of new and improved communication and electronic equipment and systems needed for aeronautical, marine, meteorological and other services; (3) construction, maintenance and operation of radio aids to marine and air navigation and of radio communication stations including procurement of the necessary equipment; (4) development and administration of government policy with respect to the Canadian Overseas Telecommunication Corporation and Canada's participation on the Commonwealth Telecommunications Board; (5) administration of the leasing of land-line facilities required for all services of the Department; (6) planning of emergency measures and administration of the Emergency National Telecommunication Organization (ENTO); (7) administration of the Telegraphs Act and the Regulations thereunder covering the licensing of overseas submarine cables; (8) participation in the work of the International Telecommunication Union and its subsidiary organs; and (9) participation in the communication and electronic activities of the International Civil Aviation Organization (ICAO), the International Air Transport Association (IATA) and the International Marine Consultative Committee (IMCO).

Licensing and Regulation of Radio Stations.-Under the Radio Act and the Canada Shipping Act it is provided that radio stations employing a form of Hertzian wave transmission, including television and radar, be licensed by the Department of Transport, unless otherwise exempted by regulation. Licensing, which provides basic control over the right to establish a radio station, involves the assigning of specific frequencies to each station. Frequencies are assigned to many types of services on a shared non-interference basis. Engineering briefs covering the selection or change of frequency, amount of power and
design of the directional antenna system must be approved by the Department of Transport and notification sent to the signatory countries of the North American Regional Broadcasting Agreement before a new broadcasting station can be licensed or before modification can be made in an existing station. The setting of standards for the equipment, installation and operation of a station provides control for efficient use of the radio spectrum. A further control is the requirement that operating personnel be subject to examination and certification.

Eight monitoring stations are maintained at suitable points across Canada to make frequency measurements and record transmissions to ensure that radio stations are complying with the procedures set forth for their particular service, to detect non-licensed stations, to assist in the investigation of inter-station interference and to make studies of spectrum utilization.

Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph or radiotelephone equipment, primarily for distress use. Approval is given for each make and model of equipment that comes up to the required standard and, in addition, the ship station as a whole is inspected after the licence is issued and periodically thereafter. All Canadian and foreign ships are subject to inspection to ensure that they conform to the requirements of the Safety of Life at Sea Convention.

Standards have been developed for the installation of aircraft radio stations specifying the techniques and materials that may be used, and inspections of radio stations aboard civil aircraft of all operational categories are carried out at prescribed periods. Inflight inspections of the radio communications and navigational aspects of proposed new air carrier operations, encompassing both land and oceanic routes, are also made as required.

Marine and aeronautical radio operator standards and related regulations are covered by international agreement. The International Telecommunication Convention prescribes the qualifications for radio operators on mobile stations and the regulations made under the Radio Act provide for the examination and certification of operators, both professional and amateur.

Number of Radio Stations Licensed and Operated in Canada.-During the year ended Mar. 31, 1963, 98,485 licences were issued in respect of radio stations in Canada. This figure includes stations operated by departments of the federal, provincial and municipal governments, stations on ships and aircraft registered in Canada and mobile stations operating in the public and private land mobile services but does not include private commercial broadcasting licences.

| Item | Mar. 31, 196\% | Ended Mar. 31, 1963 |

| Certificates of registration issued to U | 1,630 | 1,831 |
| Net increase over preceding year. | 11,487 | 19,156 |

Investigation and Suppression of Inductive Interference.-The Radio Act provides penalties for selling or using apparatus liable to cause interference to radio reception. Standards are developed and type approvals issued for certain classes of such equipment. The Telecommunications and Electronics Branch of the Department of Transport provides also a country-wide interference service using special investigation equipment for the purpose of tracing sources of interference and recommending cures for interference to broadcast, television and other radio reception.

Cars equipped for measuring and locating sources of interference operate from offices located in 30 cities throughout Canada; 29,526 cases were dealt with during the fiscal year 1962-63. Sources include power lines, auto ignitions, heavy electrical equipment, domestic appliances, electro-medical apparatus, industrial radio frequency generators and TV receivers.

Regulations specifying the limits to be met by particular types of apparatus are contained in the Radio Noise Limits Order. Certain low-powered radio transmitting and receiving equipment is exempt from the operation of the Radio Act, e.g., garage door radio controls for a number of models have been exempted and consequently may be operated without the radio station licence otherwise required.

Radio Aids to Marine and Aeronautical Navigation.-The services of the Telecommunications and Electronics Branch of the Department of Transport in aid of marine and aeronautical navigation are outlined in the 1962 Year Book, at pp. 848-850. Details may be obtained on request from the Department of Transport, Ottawa.

## Subsection 7.-Public and Private Commercial Microwave Facilities

Because of its population distribution and the vast areas served by microwave communication links, Canada ranks second highest among the world's users of microwave communication systems on a per capita/per mile basis. This subsection gives a summary of the facilities existing or under construction at mid-1963.

Railways.-As already stated on pp. 825-828, the Canadian National and Canadian Pacific Telecommunications Departments' existing microwave system links Ontario, Quebec and parts of the Maritimes and Newfoundland. A major expansion under way will provide communication services from coast to coast for television, telephone and data relay purposes. In addition, Canadian National Telecommunications has installed a microwave system between Alberta and the Yukon Territory which carries telephone and data traffic, and serves both civil and military organizations in these areas. In co-operation with Alberta Government Telephones, a combination microwave and tropospheric-scatter system connects Alberta and the Northwest Territories, also intended to provide communication for civil and military use in Far North areas. The Quebec North Shore-Labrador Railways have developed a microwave system extending into northern Quebec to provide communication for mining operations and to serve some civil communication purposes. Ontario Northland Railway is in the process of completing a microwave installation connecting northern Ontario and James Bay for purposes of military and civil communication. The Pacific and Great Eastern Railway has made use of an extensive $6,000 \mathrm{Mc} / \mathrm{s}$ microwave system linking Vancouver with Prince George and Dawson Creek, B.C.

Telephones.-The Trans-Canada Telephone System consists of eight provincial and private communication companies serving the various provinces and collectively providing an extensive trans-Canada microwave system for the purpose of carrying telephone, television and data transmissions from coast to coast (see also p. 821). This organization utilizes the portions of the radio spectrum in the $450,900,4,000,6,000$ and $10,000 \mathrm{Mc} / \mathrm{s}$ bands. Member companies individually operate microwave systems into northern British Columbia, Alberta, Saskatchewan, Manitoba and Ontario, in addition to the main TD-2 cross-country radio systems. These routes provide service to civil and military organizations throughout the various provinces. Tropospheric-scatter systems in British Columbia, Manitoba and Quebec are necessary for communications beyond the reach of existing microwave systems. Numerous microwave television feeds are located in areas not served by the trans-Canada system for the purpose of interconnecting outlying areas with the television networks.

Hydro.-The Quebec Hydro-Electric Commission, The Hydro-Electric Power Commission of Ontario, Manitoba Hydro, the Saskatchewan Power Corporation, the Calgary Power Corporation and the British Columbia Hydro and Power Authority utilize considerable microwave radio systems for control and communication purposes. These organizations use portions of the radio spectrum from 450 to $10,000 \mathrm{Gc} / \mathrm{s}$.

Television.-The two main television interests in Canada, the CBC and CTV, lease private microwave facilities for the relay of television programs from coast to coast. In addition to this, studio transmitter links are used by various television stations where the television transmitter is situated some distance from the studio and interconnection is required. In sparsely populated areas, off-air pickup signals from primary television stations are sometimes relayed via microwave to rebroadcasting sites. Microwave facilities are also used in connection with portable and mobile television pickup where program material is intended for the main studio.

Industrial.-Many industrial firms utilize existing public communication facilities. However, some organizations have installed private microwave systems; for example, The Aluminum Company of Canada uses a multiple hop $6,000 \mathrm{Mc} / \mathrm{s}$ system in the Arvida, Que., area.

## Subsection 8.-Miscellaneous Radio Communication Services

In addition to radio communication services provided by the Federal Government, extensive radio communication systems have been established in the provinces, mainly for police, highway and forestry protection purposes.

Municipal government departments have steadily increased their use of radio to facilitate operations, particularly as a medium of communication with vehicles-police, fire, engineering, hydro, etc. Such services as taxi, heavy construction, ready-mix concrete, oil pipeline construction and operation, veterinarian and rural medical are participating extensively in the use of radio.

Public utilities, power companies, provincial power commissions, oil exploration and mineral development organizations have expanded considerably their use of radio in both mobile and point-to-point radio fields.

The telephone companies provide an extension of land telephone service, by radio, to suitably equipped vehicles. This service is available in all major cities in Canada and along many of the nation's arterial highways. Restricted common-carrier mobile radio service (this service to vehicles does not permit interconnection with the over-all telephone system but only with specific dispatchers) is available in most major cities in Canada as well as in a number of smaller urban centres. The latter service is provided by telephone companies as well as by other organizations. In 1962 a General Radio Service was established authorizing the licensing of low-power radio stations to permit short distance personal and private business radiotelephone communications. This new service has proved quite popular, nearly 14,000 licences having been issued during 1962-63.

## Subsection 9.-Radio and Television Broadcasting*

Broadcasting in Canada has developed over a period of some forty-five years as a combination of public and private enterprise. Since the opening program from the first radio station was beamed into a few Montreal homes in 1918, the role of the radio and television program in the daily life of the Canadian family has grown to startling prominence. Today, radio service reaches 98 p.c. and television service about 92 p.c. of the Canadian population.

[^253]To have become such an integral force in the daily life of the nation, broadcasting had to learn the needs of the people and how to serve them. Two official languages forming two distinct cultures had to be served independently but without diminishing the concept of national unity. Dozens of other smaller groups, distinct in culture and frequently dwelling in the same radio or TV coverage area but in separate communities with widely divergent program interests, had to be served. Physical problems of distance and geography had to be overcome. It requires some 360 radio transmitters and 105 TV stations and satellites to reach a population distributed across a 4,000-mile southern frontier, through seven time zones and a variety of topographical and climatic regions, and scattered northwest through thousands of square miles to the shores of the Arctic Ocean. Not only do these people have local service that is a reflection of life in their own districts, but by means of 15,000 miles of land-lines for radio networks and 8,500 miles of microwave circuits for television nearly every Canadian may, at the same time, listen or watch as an event of national interest takes place.

Since 1932, a publicly owned body, now known as the Canadian Broadcasting Corporation, created to develop a national service, has worked with the private or independent station-owner to establish this service. A more recent addition (1958) is the Board of Broadcast Governors, which consists of three full-time members including the Chairman and Vice-Chairman and 12 part-time members; the function of the Board is to "regulate the establishment and operation of networks of broadcasting stations, the activities of public and private broadcasting stations in Canada and the relationship between them, and provide for the final determination of all matters and questions in relation thereto". (See also p. 105.) The Canadian Broadcasting Corporation consists of a President and a VicePresident and nine other directors appointed by the Governor in Council. It is accountable to Parliament through a Cabinet Minister designated by the Governor in Council and is empowered to establish and maintain program networks and stations. (See also pp. 117-118.)

The Broadcasting Act also requires that, before dealing with any application for a licence to establish a broadcasting station (private or public) or for an increase in power, change of frequency or change of location of a broadcasting station, the Minister of Transport must receive a recommendation from the Board of Broadcast Governors. The same requirement exists with respect to the making of a new regulation or effecting changes in the regulations under the Radio Act. Before making the appropriate recommendation to the Minister of Transport, the Board considers all such applications at a public hearing at which the applicant, licensees and the Canadian Broadcasting Corporation are given the opportunity of being heard.

Under the provisions of the Radio Act, the Minister of Transport must also receive a recommendation from the Board before dealing with any application to change the ownership or control of any share of capital stock in the licensee of a broadcasting station which is incorporated as a private company. The Board of Broadcast Governors has established a policy that any such application, which would result in a change of ownership or control of a licensee, would be referred to a public hearing before a recommendation is made to the Minister. Applications of this kind not involving a change of ownership or control may be dealt with by the Board or the Executive Committee of the Board at a regular meeting.

Under the provisions of the Broadcasting Act, the Board has issued the Radio Broadcasting Stations Regulations and the Radio (TV) Broadcasting Regulations applying to radio and television stations respectively; these regulations cover all aspects of station operation and the enforcement of them as the responsibility of the Board.

Broadcasting Facilities.-As of Apr. 1, 1963, there were in operation in Canada some 38 CBC radio stations plus another 100 low-power relay transmitters maintained by the Corporation, and 14 CBC television stations plus about 95 rebroadcasting and network relay stations. On the same date there were 261 privately owned radio stations in operation
and 134 privately owned television broadcasting and relay stations. All but 11 of the privately owned television stations and many of the privately owned radio stations are affiliated with the CBC and help to distribute national radio and television services over networks operated by the CBC. Of the 11 unaffiliated private television stations, nine form the Canadian Television Network (CTV) which commenced operating in the fall of 1961. The other two stations, in Hamilton and Montreal, are independent of any network affiliation. Of the 261 private radio stations, 219 were AM standard band stations, 36 were FM stations and six were shortwave stations; 12 of the 36 FM stations operated on the new Multiplex Stereophonic system.

## Operations of the Canadian Broadcasting Corporation, 1962-63*

Television.-The CBC in 1962 celebrated its tenth anniversary in television. During the year, as a direct result of new stations being placed in operation and improvement to existing stations, CBC television became available to an additional 247,000 Canadians and service extended to reach about 92 p.c. of the Canadian population. Making service available to the other 8 p.c. is becoming increasingly difficult and expensive since many of them live in isolated communities sometimes thousands of miles from the main east-west lines of communication. The expansion during 1962 was into the northern areas where costs were not too prohibitive. New rebroadcasting stations were completed at Grande Prairie and Peace River in Alberta, The Pas in Manitoba, Dryden and Sioux Lookout in Ontario, and Courtenay in British Columbia, and rebroadcasting stations of the French network were completed at Sudbury in Ontario and Timiskaming in Quebec. A kinescopeprogrammed station was completed at Flin Flon in Manitoba and a new network relay station began operating at Cranbrook, B.C. Many projects to improve or extend service were under way at the end of the year. Notable among them were the new Head Office building at Ottawa, consolidation of facilities at Toronto and Montreal, relocation and increase in power of the CBLT transmitter and tower at Toronto, and a network relay centre at Winnipeg.

The complexities of CBC television broadcasting have greatly increased in recent years in the administrative area and as a result of the setting up of an entirely separate, wholly commercial television network (CTV). Of significance, too, are the recently expanding activities of community antenna television service (CATV)-operated by unlicensed systems which pick up programs produced by licensed television stations from the air and distribute them by means of cable to subscribers who pay a fee for the service-and the changing role of the rebroadcasting stations. Both systems were developed originally to bring service to remote communities but the implications of their use in already serviced communities is beginning to emerge. The future of the CATV service was discussed at a public hearing of the Board of Broadcast Governors in June 1963.

With coverage gaps narrowing, the CBC is turning its attention more and more to improvement of facilities and programming to fulfil its basic purpose of maintaining a complete service with a wide range of fare for all tastes, bringing Canadians in widely separated parts of the country closer together and serving the various geographical regions equitably.

Armed Forces Service.-The Armed Forces Service arranged the supply of a weekly package of kine-recordings of popular CBC television programs to bases of the Canadian Armed Forces in Europe, the Middle East and the Congo and, for the third season, organized a tour of a CBC Concert Party to the NATO bases in France and Germany and to the UNEF bases in the Middle East. Live coverage of major news and sports events, such as the federal elections in June 1962 and April 1963 and the Grey Cup, was also provided to bases in France and Germany through transatlantic cable.

[^254]Radio.-A milestone in the long history of CBC radio was reached on Oct. 1, 1962, with the inauguration of the new CBC Radio Network consolidating the English-language Trans-Canada and Dominion Networks. The purpose of the consolidation was to provide a schedule of broadcasting balanced in terms of subject matter and of the relative positioning of spoken word and music within each program day. To a large extent, the programs of the new network are carried by microwave facilities, thus providing a quality and reliability not previously attained by radio network operations.

During the year, English radio network was extended to new low-power relay transmitters at Noranda in Quebec, Andover and St. Stephen in New Brunswick, Uranium City in Saskatchewan and Nakusp in British Columbia. The French network was extended to service new low-power relay transmitters at Hearst in Ontario and Wedgeport in Nova Scotia and to three privately owned affiliated stations at Trois Rivières, Roberval and La Tuque in Quebec. CBC stations at Halifax and Sydney in Nova Scotia and at Grand Falls in Newfoundland were increased in power.

Because of budget restrictions arising out of the Government's austerity program, the experimental FM network between Toronto, Ottawa and Montreal was closed on Oct. 31, 1962. However, the experience gained during its thirty months of operation was of great benefit to both the Corporation and the network supplier. The three stations are broadcasting AM service with some separate FM programming included on a non-network basis until finances permit resumption of FM network services.

In 1962 the CBC developed an emergency broadcasting plan to meet its responsibilities in connection with the Emergency Measures Organization, making it possible for every radio and television station in Canada to be connected within five minutes to emergency radio networks in order to broadcast instructions and information to the public in the event of a national emergency. This service was suspended in the fall but reactivated on June 30, 1963.

Northern Service.-The Northern Service, established in 1958, extends the national radio broadcasting system to the Yukon and Northwest Territories and to the northern portions of all provinces except the Maritimes. With the recent addition of a third highpower transmitter at Sackville, N.B., the Northern Service shortwave schedule was increased from eight to nine and one-half hours daily. In addition to the CBC network programs provided on shortwave, the Northern Service produced programs of special interest to its listeners, such as Uqausi, an Eskimo-language program of messages, news, views and music prepared by Eskimo personnel, Arctic Window, a program of interviews with visitors to the North, and The Commissioner Replies on which questions submitted by residents are answered on the air by the Commissioner of the Northwest Territories. A number of programs prepared with the co-operation of the Northern Service were carried on the full CBC radio network, including programs originating from the Dawson City Festival held in the summer of 1962. Tape recordings of National Service programs were supplied to a number of RCAF and Mid-Canada line stations which had their own low-power radio stations.

International Service.-The CBC International Service is operated on behalf of the people of Canada to provide information about this country to listeners in other lands. Shortwave programs are broadcast in 11 languages daily to Europe, Africa, Latin America, the Caribbean, Australia and New Zealand. Despite the fact that television is being introduced in more and more countries, radio broadcasting and listening show no signs of decreasing. In fact, radio broadcasting, both medium and shortwave, is being expanded particularly in those underdeveloped countries that have recently achieved nationhood.

A notable fact on the international broadcasting scene is the growing interest in the exchange of programs, which opens up wider possibilities for the CBC International Service in the realm of music and also in the area of special events where rapid transmission is vitally important. All sections of the International Service prepared programs dealing with the political developments in Ottawa, including the dissolution of the 25 th Parliament; the German-language section, for example, relayed twice as many programs to the German
networks as it did in the preceding year. Twenty-four items on cultural and sports topics were shipped to Radio Moscow and virtually all of them were heard by Russian listeners. Programs for philatelists continued to generate great interest and the programs, broadly classified under the heading of Letter Box, on which listeners' mail is answered on the air, found a wide audience. News, news reports and commentaries continued to be the mainstay of the shortwave service. The monthly $15-$ minute television program Canada Magazine was distributed to an increased number of broadcasting organizations.

International Relations.-In mid-1962, the launching of Telstar heralded the coming era of 'live' international television. Meantime, the CBC has recently increased its contracts with other broadcasting organizations in the world in anticipation of increasing television exchanges, which will be done initially by means of television recordings. A healthy exchange of programs with many countries is already in progress both in television and radio. For example, most countries have contributed teen-age radio programs to CBC's Countdown series. Commonwealth countries show particular interest in CBC drama, Europe in variety programs, Japan in sports, and Russia in farm and fisheries. Frenchlanguage program exchanges have been most active, particularly with Belgium and Switzerland. In April 1963, CBC delivered its third contribution to a series of high-quality documentaries being produced for TV by Intertel, a four-nation (Britain, Australia, United States and Canada) partnership.

In May 1963, Canada for the first time acted as host for a Commonwealth Broadcasting Conference. This event was the fifth conference of its kind, and the meetings were held in Montreal and Montebello, Que., Toronto, Ont., and Banff, Alta. Fourteen publicly owned national broadcasting organizations of the Commonwealth were represented. Delegates discussed matters of mutual concern and interest in the programming and engineering field, as well as legal and other problems affecting broadcasting as a whole.

CBC activities in the field of external aid involving co-operation in training, instruction and secondment date back for many years. Recently, however, these activities have increased markedly, mainly because of the determination of the developing countries of Asia and Africa to bring to fruition their plans for broadcast communication services. For instance, two senior employees are spending two years in Ghana, working toward the development of television service in that country which will start in 1964; 26 Ghanaians are being given preliminary training in Ghana before coming to Canada for advanced training with the CBC. Also, a CBC senior program officer is acting as adviser to the Director of TV in Malaya and a number of Malayans will later be trained in Canada. Other less formal assistance has been given to countries of the West Indies, to British Guiana, Israel, Nigeria, Formosa and Japan, and requests for assistance have been received from such countries as Cambodia, Morocco, Jamaica and Viet Nam.

Finance.-The CBC, being a Crown corporation, is financed through public funds authorized by Parliament and through commercial advertising. In 1962, commercial revenue accounted for about 30 p.c. of the Corporation's income. However, the advent of many privately owned second stations and the second TV network has had an adverse effect on CBC commercial returns. It should be pointed out that such revenue cannot be expected to grow significantly beyond present levels, since there are no large untapped sources of advertising revenue available to television and the CBC continues to follow a policy whereby certain programs are not available for sponsorship (including news, talks and public affairs, farm and fisheries broadcasts, school broadcasts, religious and institutional broadcasts) and also deliberately restricts the quantity of commercial messages. The Corporation's efforts to increase commercial revenues are at no time allowed to influence its program decisions.

The following statement of operations shows a 0.7 -p.c. increase in expenditures in $1962-63$ over the previous year to the amount of $\$ 108,365,882$. The first estimates of net operating requirements from public funds amounted to $\$ 74,994,000$ which was subsequently reduced to $\$ 73,994,000$ as a result of the economy program introduced in July 1962.

This amount was under-expended by $\$ 1,339,262$. Advertising revenues at $\$ 30,846,627$ showed a $6.3-$ p.c. reduction from 1961-62, which accounted for much of the increase in net operating expenditures.

Statistics of the Radio and Television Broadcasting Industry.-In 1961, for the first time, the Dominion Bureau of Statistics co-operated with the Board of Broadcast Governors and the Department of Transport in obtaining financial and other statistics of the Canadian radio and television broadcasting industry, summary results of which are given in the following tables. This co-operation made available much more detailed information than was possible previously; the figures given for earlier years were adjusted to make them comparable with those presented for 1961. Table 9 covers the operations of the whole industry, including the CBC and Table 10 gives the main items separately for radio and television broadcasting.

The operating revenue of the broadcasting industry in 1961 amounted to $\$ 110,600,000$, an increase of 6 p.c. over the previous year. Of this total, radio broadcasting contributed 46.6 p.c. as compared with 49.4 p.c. of the total revenue in 1960 . Advertising revenues rose about 4 p.c. during the year. With the advent of eight new privately owned TV stations, more revenue was received from local and national advertising and from advertising carried by private networks than in 1960, but less was received from advertising carried on the publicly operated networks of the CBC; there was an increase of 9.3 p.c. in revenues from privately operated networks and national advertising, an increase of 8.9 p.c. from local advertising, and a decrease of 13.8 p.c. from public network advertising.

Operating expenditures in 1961 reached a total of $\$ 181,000,000$, an increase of 15 p.c. over 1960. The higher rate of increase in expenditures than in revenues changed the overall operating profit of $\$ 6,076,000$ recorded in 1960 to a loss of $\$ 228,000$ in 1961. After adjusting the operating profit or loss on account of other income and expenses and income taxes paid by the profitable firms, the final net loss of the private sector of the broadcasting industry for 1961 amounted to $\$ 2,700,000$ compared with a profit of $\$ 5,000,000$ in 1960 . There are no CBC profits or losses in the figure of net income before taxes because the unexpended balance of the Parliamentary grant is treated as an account due to the Government of Canada.

## Section 2.-The Post Office

The basic tasks of the Canadian Postal Service are to receive, convey and deliver postal matter with security and dispatch. In discharging these duties it maintains post offices and utilizes air, railway, land and water transportation facilities. Associated functions include the sale of stamps and other articles of postage, the registration of letters and other mail for dispatch, the insuring of parcels, the accounting for COD articles, and the transaction of money order and Post Office Savings Bank business. Because of its widespread facilities, it has been found expedient for the Post Office to assist other government departments in the performance of certain tasks including the sale of unemployment insurance stamps, the collection of government annuity payments, the distribution of income tax forms and Civil Service employment application forms, and the display of government posters.

Post offices are established wherever the population warrants. Those in rural areas and small urban centres transact all of the functions of the city office. In larger urban areas postal stations and sub-post offices have full functions similar to the main post office, including a general delivery service, lock-box delivery and letter-carrier delivery.

At Mar. 31, 1962 there were 11,401 post offices in operation compared with 11,421 in 1961. Letter-carrier delivery, performed in 180 urban centres, employed over 8,400 uniformed letter carriers. Postage paid in 1961-62 by means of postage stamps amounted to $\$ 88,573,175$ as compared with $\$ 85,807,987$ in $1960-61$. Post office money orders, issued for any amount not exceeding $\$ 100$ and payable in almost any country of the world, were sold at more than 8,800 post offices and money orders payable in Canada only, for amounts not exceeding $\$ 15.99$, were sold at some 1,900 additional post offices. Post Office Savings Banks operate in all parts of the country and, on Mar. 31, 1962, had deposits totalling $\$ 27,365,119$.

The Operating Service of the Post Office Department is organized into 14 Districts, each under a District Director. Ten of the Districts report directly to the Assistant Deputy Postmaster General. In addition, there are two Regions, each consisting of two Districts and a major Post Office, under a Regional Director. These also report to the Assistant Deputy Postmaster General who has the responsibility of conducting the normal field operations of the Postal Service. The operating and support functions required in the provision of postal service to the public are the responsibility of the local postmasters who receive technical and administrative assistance from District Offices located at strategic points.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island and from Pelee Island, Ont., (the most southerly inhabited point of Canada) to settlements and missions far into the Arctic. Canada's airmail system provides several transcontinental flights daily, intersected by branch and connecting lines radiating to every quarter and linking up with the United States airmail system. All first-class domestic mail up to and including eight ounces in weight is carried by air between one Canadian point and another, whenever delivery can thus be expedited. Air stage service provides the only means of communication for many areas in the hinterland. There were approximately 43,175 miles of airmail and air stage routes in Canada in 1962 compared with 41,825 miles in 1961. However, the railways are the principal means of mail transport; the railway mail service operates along 21,670 miles of track and, in 1962, covered more than $35,050,000$ service-miles. A staff of 619 mail clerks prepared the mails for delivery and dispatch while en route in railway mail cars.

The rural mail delivery organization provided direct postal service over approximately 5,637 rural mail routes in 1962, extending over 145,493 route-miles and serving 550,703 rural mail boxes. Rural mail routes are generally circular in pattern and average about 26 miles in length. About 1,913 side services were in operation to transport mail between post offices, railway stations, steamer wharves and airports, and 1,904 stage services operated to convey mail to and from post offices not located on railway lines. Transportation
of mail by motor vehicle on highways is expanding and over 390 such services were in operation in 1962, many of them replacing or reducing conveyance by rail. In 1962 there were 932 city mail services transporting mail to and from post offices, postal stations and sub-post offices, collecting mail from street letter-boxes and delivering parcel post. The 9,454 land-mail service couriers employed travelled approximately $54,000,000$ miles during the year; land-mail services are performed under a contract system. Coastal mail service is also conducted under contract; 29 contractors operated as far north along the West Coast as Alaska and on the East Coast to the northern part of Labrador in 1962.

The larger post offices in Canada may be described as intricate industrial plants where mail is unloaded, cancelled, transported and shipped by semi-automatic means. Conveyor belts, automatic chutes and other devices increase output of mail matter without increasing staff and all the larger offices are provided with the latest mechanical equipment. In some areas household mail is carried by mailmobile. In most cities, postage stamps may be obtained at any time from automatic vending machines and a curbside mail receptacle (snorkel) in which patrons may deposit mail without leaving their automobiles is coming into use. Electronic equipment checks money orders and accounts for the $\$ 900,000,000$ annually that they represent.

Post Office Statistics.-Tables 11 and 12 give the numbers of post offices in operation, together with revenue and expenditure for recent years.
11.-Post Offices in Operation, by Province, as at Mar. 31, 1958 and 1962

| Province | 1958 | 1962 | Province or Territory | 1958 | 1962 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. |  | No. | No. |
| Newfoundland. | 641 | 660 | Saskatchewan. | 1,310 | 1,266 |
| Prince Edward Island | 105 | 107 | Alberta. | 1,112 | 1,070 |
| Nova Scotia. | 1,096 | 869 | British Columbia | 937 | 910 |
| New Brunswick | . 676 | 555 | Yukon Territory | 16 | 20 |
| Quebec. | 2,413 | 2,414 | Northwest Territories. | 36 | 40 |
| Manitoba | , 810 | , 804 | Canada | 11,768 | 11,401 |

12.-Revenue and Expenditure of the Post Office Department, Years Ended Mar. 31, 1958-62

Nore.-Figures from 1868 will be found in the corresponding table of previous Year Books beginning with the 1911 edition.

| Year | Gross Revenue | Net Revenue ${ }^{1}$ | Expenditure ${ }^{2}$ | $\begin{aligned} & \text { Surplus (+) } \\ & \text { or } \\ & \text { Deficit (-) } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
|  | \$ | \$ | \$ | \$ |
| 1958. | 177,492,783 | 152,919,881 | 153,319,782 | -399,901 |
| 1959. | 183,380, 508 | 157,630,336 | 157, 803,478 | -173,142 |
| 1980. | 193,659,715 | 167,629,053 | 165,792,339 | +1,836,714 |
| 1961. | 202,003,790 | 173,645,658 | 178,371,716 | $-4,726,058$ |
| 1962. | 213,517,994 | 183,678,936 | 185,019,700 | -1,340,764 |

${ }^{1}$ Gross revenue less commissions and allowances to postmasters, and other small items. $\quad 2$ Excludes
rental of semi-staff and staff post offices.

The gross revenue receipts shown in Table 12 are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions. The gross value of the postage stamps and stamped stationery sold during $1961-62$, was $\$ 88,573,175$ and receipts from postage meter or postage register impressions and postage paid in cash by other means amounted to $\$ 109,999,967$.

Auxiliary Postal Services.-Auxiliary postal services include the issuing of money orders and the operation of the Post Office Savings Bank.

Table 13 shows the amount of money order business conducted by the postal service in recent years. A statement on the financial business of the Post Office Savings Bank will be found in Chapter XXIII on Currency and Banking.

> 13.-Operations of the Money Order System, Years Ended Mar. 31, 1958-62

## Section 3.-The Press*

Daily newspapers published in Canada numbered 115 in 1962, counting morning and evening editions separately. English and French dailies had an aggregate reported circulation of more than $4,146,000$-about 82 p.c. in English and 18 p.c. in French. Thirteen of those with circulations in excess of 100,000 accounted for over 55 p.c. of the circulation. French dailies, as would be expected, have their widest circulation in Quebec where nine of the 11 in existence in 1962 were published. Some of the largest of these papers have been established in that province for over 60 years. Weekly newspapers serve more people in rural communities than do the dailies. They cater to local interests and exercise an important influence in the areas they serve.

The Canadian Press, a co-operative organization owned and operated by Canada's daily newspapers, provides its 100 members with world and Canadian news and news photographs, mostly by means of teletype and wirephoto transmission. It also serves weekly newspapers and radio and television stations. It is, in effect, a partnership through which each member newspaper provides its fellow members with the news of its particular area and through which the general news of the world is brought to Canada. Cost of editing and transmission is divided among members according to the population of the cities in which they publish. CP gets world news from Reuters, the British agency, and from the Associated Press, the United States co-operative, and these agencies have reciprocal arrangements with CP for their coverage of Canada.

The United Press International (British United Press) is a limited company in Canada and maintains a close association with the UPI World Service, of which it is an affiliate. From its headquarters in Montreal, it provides Canadian news for general world distribution as well as for 163 subscribers including 65 private broadcasting stations in Canada. Agence France Presse maintains offices in Montreal and Ottawa and certain foreign newspapers have agencies in Ottawa to interpret Canadian news for their readers.

[^255]Press Statistics．－The following tables are based on data estimated from Canadian Advertising．Circulation figures are given for daily English－language and French－language newspapers only．Such circulation figures are relatively easy to obtain because，in their own interest，newspapers qualify for and subscribe to the Audit Bureau of Circulation； for these，ABC＇net paid＇figures have been used．On the other hand，circulation data for foreign－language newspapers，weekly newspapers，weekend newspapers and magazines are incomplete and therefore not usable．

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

## PART I.-THE MOVEMENT AND MARKETING OF COMMODITIES

Domestic trade is broad and complicated; it encompasses all values added to commodities traded, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services including amusement services, such as theatres and sports. Only certain phases of this broad field are covered here and, wherever possible, cross references are given to related material appearing in other Chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The index will be found useful in this respect.

## Section 1.-Merchandising and Service Establishments*

The surveys of merchandising and service establishments centre around a census of such business establishments which in the past has been conducted every ten years. The

[^257]first census of this kind related to business transacted for the year 1930 and similar censuses were taken for 1941, 1951 and 1961. Only the first classifications of retail trade (by provinces, counties or census divisions, and urban centres of 30,000 or more population) were available at the time of preparation of this Section (see Subsection 1). It is noteworthy that the scope of the data collected in 1961 was widened. Gross margin information was collected from retail stores and wholesalers; operating expense figures were collected from wholesalers and service businesses; and more information was sought about the operating characteristics of retailers and wholesalers. Reports giving detailed results of the census, classifying retail, wholesale and service establishments by geographic areas, kinds of business and types of operation-including such data as number of establishments, sales, employment and payrolls, and inventories and commodities for the retail and wholesale trades-are scheduled to begin appearing late in $1963 . \dagger$

Census information is supplemented in intercensal years by monthly, quarterly and annual surveys on the more important phases of the retail, wholesale and service trades -sample surveys for some businesses and full coverage for others. The 1951 Census formed a new base for such surveys and certain improvements have been implemented for continuance during the 1951-61 intercensal period. Current information available on the distributive trades is given in Subsections 2, 3 and 4 and continues to project the 1951 base. Data related to the new 1961 base will be available early in 1965. Estimates for the years prior to 1951 have been revised in accordance with the census base.

## Subsection 1.-1961 Census of Merchandising and Service Establishments

As stated above, the only results available from the 1961 Census of Merchandising and Service Establishments at the time of preparation of this Chapter were those of retail trade classified by counties or census divisions, by provinces and by incorporated urban centres of 30,000 or more population. The two latter classifications are given in Tables 1 and 2, respectively.

It should be noted that figures for 1961 are not directly comparable with 1951 Census information as summarized in the 1955 Year Book, pp. 953-977, since certain classifications were excluded from retail trade in 1961 and others added. Restaurants, lumber dealers, farm implement dealers and feed stores were included in 1951 but not in 1961; all automotive repair shops, radio and television repair and jewellery repair were included in 1961 as part of retail trade but in 1951 were considered service trades. It should also be noted that the total retail trade as reported by the census does not coincide with the total shown in Tables 4 and 5 of Subsection 3; the latter is estimated from sample surveys, whereas the census is a full-coverage survey.

## Subsection 2.-Wholesale Trade

Estimated sales of wholesalers expanded from $\$ 5,784,400,000$ in 1951 to $\$ 8,897,100,000$ in 1961. The figures given in Table 3 include only wholesalers proper, i.e., they exclude agents and brokers and manufacturers' sales branches. Sales estimates have been revised but have not been adjusted for price changes. The business of agents and brokers for the years 1957-59 is given in the 1962 Year Book, p. 869; no later figures are available.

## 3.-Wholesale Sales, by Kind of Business, 1957-61

Nors.-Includes only wholesalers proper, i.e., firms performing the function of buying merchandise on their own account for ressle.

## Subsection 3.-Retail Trade

The trend of retail trade is one of the best general indicators of the economic condition of the country. It is through retail stores that most goods are ultimately sold and such sales reflect the financial strength of the consumer except in times of short supply. The estimated value of retail sales increased by 105.9 p.c. during the period 1949-62. Estimates, not adjusted for price changes, are shown by province in Table 4 for 1930, 1941 and 1951-62 and by kind of business for the latest five years in Table 5.

## 4.-Retail Trade, by Province, 1930, 1941 and 1951-62

Nork.-Figures for 1931-40 are given in the 1957-58 Year Book, p. 938 and those for 1942-50 in the 1962 edition, p. 870.

| Year | Atlantic Provinces ${ }^{1}$ | Quebec | Ontario | Manitoba | Saskatchewan | Alberta | British Columbia ${ }^{2}$ | Canada ${ }^{3}$ |

Retail Chain Stores.-Retail chains are defined as companies operating four or more retail outlets in the same or related kinds of business. The latest figures available are those for 1960 given in Tables 6 and 7. Operating results of selected kinds of chain stores and operating ratios of independent stores by kind of business for the same year are given in the 1962 Year Book at pp. 872-873.

## 6.-Retail Chain Store Statistics, 1930, 1941 and 1951-60

Nore.-Figures for 1942-50 are given in the 1962 Year Book, p. 871.

| Year | Stores | $\begin{gathered} \text { Net } \\ \text { Retail Sales } \end{gathered}$ | Salaries and Wages Paid to Store Employees | Value of Stocks on Hand End of Year |  | Accounts Outstanding End of Year |

Farm Implement Sales.-The value, at wholesale prices, of new farm implements and equipment sold in 1961 amounted to $\$ 201,777,000$, a decrease of 7.2 p.c. from the value of such sales in 1960. Increases reported by the Atlantic Provinces, Quebec, Ontario, Alberta and British Columbia did not offset decreased sales in Manitoba and Saskatchewan. In addition to the amount spent on new machinery, $\$ 39,643,554$ was spent in 1961 for repair parts, 4.0 p.c. less than the amount so spent in 1960.

Consumer Credit.-Total balances outstanding on credit extended to consumers by retail stores and certain financial institutions are increasing very rapidly. Although the financial institutions included in the survey do not cover all sources of consumer credit, returns from the selected holders indicate that balances outstanding on credit extended to individuals for the purchase of consumer goods and services have almost doubled in the past nine years. The figures in Table 12 do not include credit extended for commercial purposes.

Accounts outstanding on the books of retailers stood at $\$ 1,125,100,000$ at the end of 1962. This amount excludes lumber and building material dealers and farm implement dealers, two trades included up to and including 1957, so that the results for 1958 and subsequent years more closely approximate "consumer" credit shown in Table 13.

${ }^{1}$ Excludes lumber and farm implement dealers. ${ }^{2}$ Included in "Charge".

## Subsection 4.-Service Establishments

Service establishments as defined in the census included all those places of business where the major part of gross income (annual turnover) was derived from the rendering of services as opposed to the sale of merchandise. The following types of service were covered: amusement and recreation such as motion picture theatres and producers, and bowling alleys; personal services such as laundries and dry-cleaning plants, barber shops and shoe repair shops; certain business services such as advertising agencies and window display services; repair services such as automobile repair, radio repair and watch repair; burial services; photography, commercial and portrait; hotels and tourist camps; and other services such as cold storage locker rentals and taxis.

Summary statistics of the detailed coverage in 1951 are given in the 1955 Year Book at pp. 974-977. Annual data for certain services only are included here.

Motion Picture Theatres.-The receipts of motion picture theatres increased steadily up to 1953 when they amounted to $\$ 108,603,966$, but thereafter decreased each year to $\$ 68,882,172$ in 1961 . The number of theatres in operation also decreased rapidly. The receipts of drive-ins, the most recent of theatre developments, amounted to $\$ 6,653,262$ in 1961, somewhat below the total receipts of 1960; the previous peak was in 1954.
14.-Summary Statistics of Motion Picture Theatre Operations, 1960 and 1961

Motion Picture Production.-Table 15 shows the operations of private firms in the production and printing of motion picture films and film strips for industry, government, education, entertainment, etc. Films are also produced by government agencies but information concerning such production is, of course, not available. In addition, 10 firms in other business categories produced films in 1961 (four theatrical short, three films for television use, 10 other non-theatrical films of five minutes or longer, 252 newsreel stories and ciné-magazines for television, 25 for other uses, 20 commercial advertising films and 12 non-commercial advertising films for television and 25 films for unspecified uses). This production brought in revenue amounting to $\$ 82,750$.
15.-Summary Statistics of Motion Picture Production by Private Firms, 1953-61

| Year | Firms | Employees | Salaries and Wages | Gross Revenue |  |  |

${ }^{1}$ Figures from 1956 include laboratories with no motion picture production; these are not included in previous years. $\quad 2$ As of the last week of November 1961; not comparable with previous years.

Table 16 shows types of film produced by private industry, classified by major producing region and by government agencies during 1961. Of the total of 623 films of five minutes or longer produced by private industry, one theatrical, 62 television and 30 other non-theatrical films were adaptations or language versions of original films; 55 were made for other than Canadian sponsors. Of the government films, 10 theatrical shorts, 10 television and 136 other non-theatrical films of five minutes or longer were adaptations or language versions of original films and all films were produced for Canadian sponsors.

Private industry and government agencies together printed $64,351,799$ feet of 16 mm . film in black and white, $8,205,054$ feet of 16 mm . film in colour, $22,640,272$ feet of 35 mm . film in black and white and 116,561 feet of 35 mm . film in colour.

## Section 2.-The Marketing of Agricultural Products

## Subsection 1.-The Grain Trade, 1961-62

Based on the combined total of the five major Canadian grains (wheat, oats, barley, rye and flaxseed) production, marketings and domestic disappearance during the 1961-62 crop year each recorded substantial declines from their respective 1960-61 levels. Exports of the five grains in 1961-62 were almost the same as in the previous year and carryover stocks at the close of the crop year were considerably lower than those at Aug. 1, 1961.

Marketing of wheat, oats and barley continued under the compulsory crop year pools system of the Canadian Wheat Board. An initial quota of 100 units was in effect at local delivery points at the beginning of the marketing year. Permit holders were entitled to deliver a maximum of 300 bu . of wheat or $1,000 \mathrm{bu}$. of oats or 500 bu . of barley or 500 bu . of rye or any combination of these grains which, when calculated on the unit basis, did not exceed 100 units

Deliveries of Durum wheat were placed on a number of special open quotas between the beginning of the crop year and Mar. 15, 1962, at which date the open delivery quota was extended for the remainder of the crop year. Flaxseed was on an open delivery quota during the entire crop year. A number of supplementary delivery quotas were established on soft white spring wheat, oats, barley and rye. An open quota basis was issued for delivery of rye as at Nov. 22, 1961 and for soft white spring wheat at Jan. 23, 1962.

The initial unit quota which prevailed at the beginning of the crop year was followed by general quotas based on bushels per specified acreage. Specified acreage consisted of each permit holder's acreage seeded to wheat (including Durum), oats, barley and rye as well as summer fallow and eligible acreage seeded to cultivated grasses and forage crops. Reflecting the relatively large export clearances during the early months of the crop year, grain shipments out of the Prairie Provinces were comparatively heavy. At the same time marketings declined because of the small crop in 1961. As a result, the Wheat Board was able to advance delivery quotas at a rapid pace. On Jan. 3, 1962, a total of 310 delivery points were placed on an open quota, marking the first time since 1950-51 that stations in the Western Division were on this basis. By Apr. 12, 1962, the Canadian Wheat Board had authorized open delivery quotas at all stations for the remainder of the crop year.
20.-Supply and Disposition of Canadian Grain, Crop Years Ended July 31, 1961 and 1962
(Millions of bushels)

[^260]Wheat.-Supply and Disposition.-With a substantial decline in production more than offsetting larger opening stocks, total supplies of wheat in the 1961-62 crop year were below the $1,000,000,000$-bu. level for the first time since 1954-55 and the lowest since the crop year 1951-52. Total supplies of wheat, consisting of the Aug. 1 carryover of $607,800,000 \mathrm{bu}$. and the 1961 crop of $283,400,000$ bu., amounted to $891,200,000 \mathrm{bu} ., 20$ p.c. less than the 1960-61 total of $1,118,000,000$ bu. and 23 p.c. below the record 1956-57 supplies of $1,152,800,000 \mathrm{bu}$. Exports of wheat and flour in terms of wheat, at $358,000,000$ bu., were 1 p.c. above the $353,200,000$ bu. exported in the preceding year and were the third highest on record. Domestic disappearance of wheat declined to $142,200,000$ bu., the lowest level since the crop year 1949-50 and 9 p.c. less than in 1960-61; a reduction in wheat used for feed more than offset heavier requirements for food and seed. With total disappearance amounting to $500,200,000$ bu. and production at $283,400,000$ bu., carryover stocks at July 31 registered a 52-p.c. decline from 607,800,000 bu. in 1961 to 391,100,000 bu. in 1962.

Price and Marketing Arrangements.-Marketing of western Canadian wheat during the crop year 1961-62 was again conducted by the Canadian Wheat Board on a one-year pool basis, the initial payment commencing at $\$ 1.40$ per bu., basis No. 1 Northern in store Fort William-Yort Arthur or Vancouver. However, on Aug. 24, 1961, the Wheat Board announced that initial payments for all grades of wheat would remain at the same levels as during the previous crop year except for all grades of Canada Western Amber Durums.

Initial payments for these grades were increased by 35 cents per bu. to assist in meeting an abnormal supply position and to encourage producers to deliver these grades at the earliest possible date. Effective Mar. 1, 1962, the intial payment prices for wheat were increased by 75 cents per bu. for Durums (in addition to the 35 -cent increase announced Aug. 24) and 10 cents per bu. for all other grades of wheat. An adjustment payment was made to producers at these rates for deliveries during the period Aug. 1, 1961 to Feb. 28, 1962.

An interim payment on the 1961-62 wheat pool account pertaining to Durum grades was announced on Dec. 6, 1962, and this payment was, at the same time, a final payment on 1961-62 deliveries. Although the Canadian Wheat Board Act does not make provision for separate final payments for Durum and other spring wheat, it does provide for interim payments when they can be made without a loss. Producers delivered $10,500,000 \mathrm{bu}$. of Durum wheat to the 1961-62 pool and all of it was sold. After deduction of the 1-p.c. Prairie Farm Assistance Act levy, the interim payment amounted to $\$ 6,900,000$, or an average of 65.9 cents per bu. The final payment on the 1961-62 pool account for wheat, announced Mar. 22, 1963, was about $\$ 123,900,000$, which, after deduction of the PFAA levy, amounted to a record 42.974 cents per bu. The total final payment for No. 1 Northern basis in store Fort William-Port Arthur or Vancouver, before deducting the PFAA levy, was $\$ 1.91021$ per bu.

The crop year 1961-62 coincided with the third year of the fourth three-year International Wheat Agreement. Sales under the Agreement were widely distributed; 28 of the 36 importing countries included in the pact purchased wheat and /or flour from Canada. Such purchases amounted to the equivalent of $232,100,000 \mathrm{bu}$. and accounted for 37 p.c. of total sales under the Agreement. The leading IWA market for Canadian wheat and flour was Britain, shipments to that country amounting to some $86,000,000 \mathrm{bu}$. Other major importers were: Japan, 49,100,000 bu.; the Federal Republic of Germany, 43,900,000 bu.; Belgium and Luxembourg, 11,700,000 bu.; East Germany, $8,000,000$ bu.; Switzerland, $8,000,000$ bu.; the Philippines, $4,900,000$ bu.; and Venezuela, $4,700,000$ bu. The leading markets for Class II wheat were: Mainland China, $72,000,000$ bu.; Poland, $12,300,000$ bu.; Italy, $3,900,000$ bu.; the United States, 2,900,000 bu.; and Finland, 2,500,000 bu.

During 1961-62, domestic sales of all classes of wheat were made at the same prices as those prevailing for wheat sold under the International Wheat Agreement. Class II prices for all grades of wheat coincided with the IWA and domestic quotations.

[^261]Other Grains.-Supply and Disposition.-The supply and disposition of the major Canadian grains for the crop years 1960-61 and 1961-62 is shown in Table 20.

Price and Marketing Arrangements.-Marketings of Western Canadian oats and barley were again carried on through compulsory crop year pools, administered by the Canadian Wheat Board. The initial payment for oats in the 1961-62 crop year, basis No. 2 C.W. in store Fort William-Port Arthur, was 60 cents per bu., the same as in 1960-61. The initial payment for barley, basis No. 3 C.W. Six-Row in store Fort William-Port Arthur, at 96 cents per bu., was also unchanged from 1960-61. No interim payments were made on either grain during the crop year. Final payment on the 1961-62 oat pool was announced Nov. 26, 1962. The final surplus for distribution was some $\$ 4,300,000$ and, based on $24,900,000$ bu. delivered to the 1961-62 pool, averaged 17.26659 cents per bu. before deducting the PFAA levy. The final payment on the 1961-62 barley pool, based on deliveries of $56,400,000 \mathrm{bu}$. and a final payment to producers of about $\$ 17,000,000$, averaged 30.2 cents per bu. before deduction of the PFAA levy. Total prices, basis in store Fort William-Port Arthur, realized by producers for representative grades prior to the PFAA levy were as follows: No. 2 C.W. oats, $\$ 0.77196$ per bu.; No. 1 Feed oats, $\$ 0.69542$ per bu.; No. 3 C.W. Six-Row barley, $\$ 1.28045$ per bu.; and No. 1 Feed barley, $\$ 1.16170$ per bu. Some $3,400,000 \mathrm{bu}$. of rye and $12,000,000 \mathrm{bu}$. of flaxseed were delivered by farmers in Western Canada in 1961-62.

Combined exports of oats, barley, rye and flaxseed (including exports of oatmeal and rolled oats, malt and pot and pearl barley in terms of grain equivalent) amounted to $62,700,000$ bu. during the crop year 1961-62, about 5 p.c. less than the comparable 1960-61 level of $66,100,000 \mathrm{bu}$. and sharply below the ten-year (1950-51-1959-60) average of $126,800,000$ bu. Exports of oats and rye were larger than in the previous season and shipments of barley and flaxseed were lower.

Clearances of Canadian oats in 1961-62 amounted to 2,700,000 bu. and represented one of the lowest shipments of this grain on record. Britain and the United States, with imports of $1,600,000$ bu. and $1,000,000$ bu., respectively, absorbed the bulk of the exports. Exports of bagged seed oats amounted to $300,000 \mathrm{bu}$. and of oatmeal and rolled oats, in terms of grain equivalent, to 500,000 bu., amounts relatively unchanged from the previous year. Barley exports of $36,700,000$ bu. represented a decline of 12 p.c. from the 1960-61 level of $41,500,000$ bu.; Mainland China purchased $19,300,000$ bu., more than half the 1961-62 total, and most of the remainder was accounted for by exports of $9,700,000 \mathrm{bu}$. to the United States and $7,400,000$ bu. to Britain. Shipments to these three countries during the preceding crop year were $20,400,000 \mathrm{bu} ., 12,000,000 \mathrm{bu}$. and $8,700,000$ bu., respectively. In addition, exports of malt were the equivalent of $6,300,000 \mathrm{bu}$. of barley compared with $5,600,000$ bu. in 1960-61.

Exports of Canadian rye during 1961-62, at 4,400,000 bu., showed considerable improvement over the previous year's total of $2,600,000$ bu.; the major customer was the Federal Republic of Germany, which purchased $3,600,000$ bu. Canadian flaxseed moving overseas during 1961-62 amounted to $12,000,000 \mathrm{bu}$. compared with $13,600,000 \mathrm{bu}$. in the previous year; Britain imported $4,600,000 \mathrm{bu}$. and Japan $3,100,000 \mathrm{bu}$. Exports of linseed oil were equivalent to about $500,000 \mathrm{bu}$. of flaxseed and most of it went to Britain.

Trade in rapeseed amounted to $6,900,000 \mathrm{bu}$. against $8,100,000 \mathrm{bu}$. in the preceding year, the leading markets being Italy, Japan and the Netherlands. Mustard seed exports, at 500,000 bu., were somewhat reduced from the $1960-61$ level of 800,000 bu.; the major markets in the latest year were the United States, Japan and Belgium and Luxembourg.

Miscellaneous Grain Trade Statistics.-Grain Handled at Eastern Elevators.-Total receipts of the five major grains at eastern elevators in the 1961-62 crop year amounted to $293,100,000$ bu., 18 p.c. less than in 1960-61. Shipments totalled $312,100,000$ bu., 13 p.c. less than in 1960-61. Receipts and shipments of rye and flaxseed increased but handlings of each of the other three grains declined.

## 22.-Canadian Grain Handled at Eastern Elevators, Crop Years Ended July 31, 1958-62

Nore.-Figures for the crop years ended 1922-57 are given in the corresponding table of previous Year Books beginning with the 1931 edition.

| Item and Crop Year | Wheat | Oats | Barley | Rye | Flaxseed | Total Grain |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Lake Shipments of Grain.-The 1962 navigation season opened on Apr. 22 and closed on Dec. 13. During that period, total vessel shipments of wheat, oats, barley, rye, flaxseed and buckwheat amounted to $249,700,000$ bu., 23 p.c. less than the $326,100,000$ bu. shipped during the 1961 navigation season which opened on Apr. 9 and closed on Dec. 16.

Wheat Flour.-Production of wheat flour in the crop year 1961-62 amounted to $39,500,000$ cwt., about 1 p.c. lower than in the previous crop year. Similarly, wheat milled for flour at $88,200,000$ bu. was slightly less than during 1960-61. Of the wheat milled for flour, about $79,000,000 \mathrm{bu}$. were Western Canadian spring wheat (other than Durum), the remainder consisting of Ontario winter wheat to the amount of $6,600,000$ bu., Durum $1,800,000$ bu., and "other" 896,000 bu. Based on a daily operating potential of some 166,400 cwt., utilization of milling capacity averaged 81.5 p.c. in 1961-62 compared with 82.6 p.c. in the preceding year.

Exports of wheat flour during the 1961-62 crop year amounted to $13,893,000$ cwt., 10 p.c. lower than the quantity exported during the previous crop year.

## 25.-Wheat Milled for Flour, and Production and Exports of Wheat Flour, Five-Year Averages 1936-55 and Crop Years Ended July 31, 1956-62

## Subsection 2.-Livestock Marketings*

Marketings of cattle and sheep and lambs in 1962 were lower than in 1961 while marketings of hogs and calves were higher. Cattle marketed through stockyards and shipped directly to packing plants numbered $2,493,814$, down 1.5 p.c. from the previous year, and the proportion of steers and heifers graded choice and good was lower. The number of cattle moving from stockyards and plants to feedlots was also down about 5 p.c. compared

[^263]with 1961. On the other hand, calves marketed at stockyards and packing plants increased in number by 7.1 p.c. and the number of hog carcasses graded at approved and inspected plants increased by 2.2 p.c. The proportion of Grade A hogs was 34.9 p.c. of the total, slightly higher than in 1961. Marketings of sheep and lambs decreased 5.2 p.c.

## 26.-Livestock Marketed at Stockyards and Packing Plants, by Grade, 1958-62

(Exclusive of Newfoundland)

${ }^{1}$ Lamb carcasses.

## Section 3.-Warehousing and Cold Storage*

The presentation of warehousing statistics is difficult because it is not an easy matter to define clearly what are to be regarded as stocks in storage. However, if the strict economic definition of warehousing is adopted, then this term should be restricted to those facilities that add the utility of 'time' to the 'form' utilities that are the product of the extraction and manufacturing industries. Because the warehouses established in close connection with retail trade are more often than not convenient places for the temporary storage of goods in process of transfer from the manufacturer or wholesaler to the consumer, they are not, in the strict economic sense, services that add the utility of 'time' to commodities already worked up into 'form'. Separate statistics of the latter branch of storage are not available.

[^265]The statistics of warehousing are gathered together under this Section. Subsection 1 presents statistics of the licensed storage of grain. Subsection 2 deals with cold storage facilities without which perishable foods such as meats, dairy products, fish and fruits could not be exchanged or distributed on a wide scale; it includes also figures of stocks of food on hand. Subsection 3 deals with the storage of petroleum and its products, and Subsection 4 with public warehouses and customs warehouses. The facilities that specialize in the storage of tobacco and alcoholic liquors are analysed in Subsection 5. These bonded warehouses, as they are called, are under the strict surveillance of Federal Government excise officers, who supervise all movements into and from such places of storage.

## Subsection 1.-Licensed Grain Storage

Total grain storage capacity in Canada, licensed under the provisions of the Canada Grain Act by the Board of Grain Commissioners for Canada, amounted to $652,112,000$ bu. at Dec. 1, 1961 and represented an increase of $7,156,000$ bu. over capacity at Dec. 1, 1960 . Although the capacity of western country elevators declined by 575,000 bu., capacity at the Lakehead was expanded by $6,800,000$ bu. and relatively small increases were recorded at interior, private and mill elevators and at lower Lake and St. Lawrence ports.

The system was generally congested at the beginning of 1961-62 but this congestion was relieved, especially during the latter months of the crop year, as a result of heavy export shipments and the prairie drought which caused farmers to hold back grain that might otherwise have been delivered before the end of the crop year. As indicated in Table 28, only 56.3 p.c. of the licensed storage capacity was occupied at July 31, 1962 as compared with 74.9 p.c. a year earlier.

## Subsection 2.-Cold Storage and Storage of Foods

Cold Storage Warehouses.-Under the Cold Storage Act (RSC 1952, c. 52), as amended (RSC 1952, c. 313), subsidies are granted by the Federal Government to encourage the construction and equipment of cold storage warehouses open to the public. The Act is administered by the Department of Agriculture.

There are five classifications of cold storage warehouses in Canada: (1) public warehouses that store foods and food products and where the entire space is open to the public; (2) semi-public, or those that store foods and where part of the space is retained for the products of the owner and the remainder is available to the public; (3) private, or those that store foods and food products and allot no space to the public, a classification that includes refrigerated space in connection with abattoirs, creameries, dairies, cheese factories and wholesale and retail distributing warehouses; (4) locker plant, where the total space is occupied by lockers for rental to the public and where food and food products may be cut, processed, chilled and frozen for storage in lockers; and (5) bait depots, where space is used solely or principally for the freezing and storing of bait for the use of fishermen.

No hard and fast rule can be laid down for distinguishing between public and private warehouses. In general, those owned and operated by firms trading in the goods stored in the warehouse are considered as private, although most of these places rent space to the public when it is not required for their own purposes.

The figures in Tables 29 and 30, compiled by the Department of Agriculture, give some idea of the cold storage warehouse capacity in Canada, but it must be explained that it is not possible to secure completely accurate information on this subject and that the figures are approximations only.
29.-Cold Storage Warehouses, by Province, Year Ended Mar. 31, 1963

Cold Storage Holdings of Fish.-Normally, stocks of frozen fish decrease gradually during the early months of the year and reach a low point at the beginning of April or May when fishing activity is at its lowest ebb; during subsequent months they increase and reach a peak at the beginning of October or November. In 1962, stocks followed the usual seasonal trend but were, on the average, slightly lower than in 1961.

The three main items in the production of frozen fish in Canada are groundfish fillets, Pacific salmon and halibut. The production of frozen groundfish fillets on the Atlantic Coast reached an all-time high of $164,000,000 \mathrm{lb}$. in $1962,22,000,000 \mathrm{lb}$. more than in 1961. Demand for these products in the domestic and United States market was good so that year-end stocks were only slightly higher than the year before. At the beginning of the year, stocks of frozen Pacific salmon were much lower than at the beginning of 1961 but production increased by about $3,000,000 \mathrm{lb}$. and exports did not keep pace, with the result that stocks were higher in the last few months of the year. The 1962 production of frozen Pacific dressed halibut, at $17,500,000 \mathrm{lb}$., was about the same as in 1961 and prices were high. Demand was good in the United States market and stocks were, on the average, below those of 1961 .

## 32.-Storage Stocks of Fish, by Month and by Type, 1961 and 1962

Nors.-Stock totals are as at the beginning of each month; stocks of the individual products are monthly averages.

## Subsection 3.-Storage of Petroleum and Petroleum Products

Bulk storage plants for petroleum and petroleum products are established at convenient distributing centres, often on a waterfront so that full advantage may be taken of the lower cost of water-borne traffic. From these centres the goods are transferred by boat, rail or truck to smaller distributing depots or directly to retail outlets. The principal refining and distributing centres are located at or near Halifax, Saint John, Quebec, Montreal, Ottawa, Toronto, Sarnia, Fort William, Regina, Calgary, Turner Valley, Edmonton and Vancouver.

## Subsection 4.-Warehousing of General Merchandise and Refrigerated Goods

Public Warehouses.-The summary statistics of the warehousing industry in Canada presented in Table 34 cover the operations of the majority of firms offering general merchandise and refrigerated storage facilities to the public. Associations and organizations such as co-operatives operating warehouses or storages for their own members are not included nor are packing houses and other firms operating storage facilities in connection with their respective businesses. Small food lockers are not included except where they may be part of a general warehousing business.

[^266]Customs Warehouses.-Warehouses for the storage of in-bond goods are known as customs warehouses and are divided into three categories. (1) Those occupied by the Federal Government, some of which are used for examination and appraisal of imported goods and others, known as Queen's warehouses, used for the storage of unclaimed, abandoned, seized or forfeited goods. (2) Bonded warehouses operated and owned by a person other than the Crown and used for the storage and safekeeping of imported goods after entry and conforming to one of the following: (a) an entire building or part of a building completely separated from the remainder of the building by adequate partitions or walls and devoted to the safekeeping of imported goods consigned or sold to the warehouse keeper or other persons; (b) a yard, shed or other suitable enclosure or area devoted to the safekeeping of imported goods too large or too heavy for lodging in a Class 2(a) warehouse; and (c) a farm, yard or other suitable enclosure devoted to the safekeeping of horses, sheep and cattle for feeding and pasturage. (3) Sufferance warehouses for the landing, storage, safekeeping, transfer, examination, delivery and forwarding of imported goods before entry and conforming to one of the following: (a) a warehouse operated or provided by railway, express, airline and shipping companies; (b) warehouses for in-bond goods arriving by commercial motor vehicle; and (c) all sufferance warehouses not described under ( $a$ ) or (b).

## Subsection 5.-Bonded Warehousing and Storage of Wines

Bonded Warehousing.-The Excise Duty Branch of the Department of National Revenue considers any premises licensed under the Excise Act to be a warehouse, whether for storage of raw materials to produce finished tobacco or cigar products or for spirits or malt used for brewing. Practically the total production of spirits is placed in bonded warehouses and only a small part of the output of beer is retained in storage. Wine, unlike spirits and beer, is not secured under bond. All imports of alcoholic beverages must go through bonded warehouses before being released to Provincial Liquor Commissions or Boards, or other agencies authorized by the Commissions or Boards to take alcoholic beverages out of bond. Similarly, tobacco, cigars and cigarettes that are not stamped and duty paid are secured in bond. In addition to these warehouses, there are those in which no manufacturing or production is carried on but which are used solely for the storage of goods upon which duty has not been paid. Goods are stored in these warehouses usually for the purpose of rapid distribution and for delivery as ships' stores.

Table 35 shows the quantities of distilled liquor, tobacco, cigars and cigarettes in bond in recent years. In addition, the year-end inventories of beer in breweries amount to some $30,000,000$ gal.
35.-Distilled Liquor, Tobacco, Cigars and Cigarettes in Bond, Quarterly 1958-62

Storage of Wines.-The wine industry is confined to a few localities such as the Niagara Peninsula in Ontario and the Okanagan Valley in British Columbia. Firms manufacturing native wines are not bonded, as far as the Federal Government is concerned, nor is wine in storage for maturing placed in bond. The only goods warehoused in bond in connection with wineries are sugar supplies and supplies of grape spirit distilled by the distilleries and held by the wineries for fortifying wines.

## Section 4.-Co-operative Organizations

Canadian co-operative activities continued to be dominated by marketing and purchasing associations which did a volume of business, including other revenue, amounting to $\$ 1,430,197,000$ during the year ended July 31, 1961. Other revenue, which included payment for services provided by the co-operatives such as grinding, chopping, trucking and revenue for rent, interest dividends and commissions, accounted for $\$ 18,617,000$.

Marketing and purchasing associations reported a membership of $1,324,270$ during 1961, although this number includes some duplication since many individuals belong to more than one co-operative. The number of associations decreased from 1,934 in 1960
to 1,914 in 1961, mostly through amalgamations. The number of places of business declined from 5,537 in 1960 to 5,473 in 1961. Total sales of farm products were recorded at $\$ 1,019,819,000$. Grain and seed sales were valued at $\$ 427,190,000$ and represented 42 p.c. of the total sales of farm products by co-operatives; next in importance were livestock sales valued at $\$ 270,469,000$ and dairy products sales valued at $\$ 228,550,000$. Sales of eggs and poultry and fruit and vegetables, which accounted for most of the remainder, were valued at $\$ 44,640,000$ and $\$ 33,581,000$, respectively.

On the provincial level, Saskatchewan recorded the greatest value of farm products marketed co-operatively. Sales in that province amounted to $\$ 289,762,000$ and grain and seed sales accounted for 66 p.c. of that amount. Other provinces sharing substantially in the sales of farm products by co-operatives were Ontario with $\$ 173,046,000$, Alberta with $\$ 169,008,000$, Quebec with $\$ 119,976,000$, Manitoba with $\$ 105,173,000$ and British Columbia with $\$ 59,342,000$. Leading provinces for co-operative sales of merchandise and supplies were: Quebec with $\$ 90,050,000$, Saskatchewan with $\$ 82,750,000$ and Ontario with $\$ 73,880,000$. Members' equity in marketing and purchasing co-operatives increased by $\$ 14,800,000$ in 1961 ; no change was recorded in liabilities to the public.

Wholesale co-operatives are federations of local co-operatives which act as central marketing agencies for farm products and as wholesalers of farm supplies, machinery and consumer goods. The wholesale associations had assets amounting to $\$ 100,610,000$ in 1961, of which members' equity represented 37 p.c. Total sales of supplies and farm products by these associations amounted to $\$ 293,773,000$ an increase of 11 p.c. over the 1960 total.

In addition to the above-mentioned associations, there were 882 service co-operatives in 1961 providing a wide range of functions such as housing, rural electrification, medical insurance, transportation, grazing, custom grinding, seed cleaning, operation of farm machinery and restaurant operation. These associations had a total membership of 294,249 and assets amounting to $\$ 110,066,000$.

Data for marketing and purchasing co-operatives do not include fishermen's cooperatives. Co-operatives in this category were found in all provinces except Manitoba in 1961. They reported a total membership of 9,593 , sales of fish amounting to $\$ 16,480,000$ and sales of supplies amounting to $\$ 3,982,000$.

## Section 5.-Interprovincial Freight Movements*

Statistics relating to interprovincial freight movements are difficult to collect since there are no controls over, or barriers to, such trade. Provincial freight traffic statistics are available for loadings and unloadings of goods carried by rail, water, pipeline and motor transport.

Details of railway freight movement are confined to tons loaded and unloaded by province and contain a certain amount of import and export of goods shipped by water. The figures given in Table 41, however, do not give a precise measure of total interprovincial freight movement by rail; they indicate only the net interprovincial movement of railway freight, which is but one aspect of that trade. For water-borne traffic, Table 42 shows tonnages of all cargoes unloaded at Canadian ports in both interprovincial and intraprovincial trade, by province of origin. Interprovincial and international traffic carried by Canadian registered trucks is shown in Table 43.

## PART II.-GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

## Section 1.-Controls Affecting the Marketing of Farm Products

## Subsection 1.-Control of the Grain Trade

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners which, since 1912, has administered the provisions of the Canada Grain Act, and the Canadian Wheat Board which operates under the Canadian Wheat Board Act, 1935.

The Board of Grain Commissioners.*-The Board of Grain Commissioners was established in 1912 under the authority of the Canada Grain Act, 1912 (RSC 1952, cc. 25 and 308 and amendments). It is a quasi-judicial and administrative body of three-a Chief Commissioner and two Commissioners-reporting to the Minister of Agriculture.

The Canada Grain Act has been called the Magna Charta of the Canadian grain trade or, more particularly, of the Canadian farmer, and the Board's chief duties are to ensure that the rights conferred on the different parties by the provisions of the Act are properly protected. Transportation of grain is restricted except from or to licensed elevators, and restriction is placed on the use of established grade names. The Act does not provide for any control or supervision of grain exchanges and the Board of Grain Commissioners has no power or duties in the matter of grain prices.

The Board manages and operates, under semi-public terminal licences, the Canadian Government elevators situated at Moose Jaw and Saskatoon, Sask., Lethbridge, Edmonton and Calgary, Alta., and Prince Rupert, B.C. The Executive Offices of the Board and other principal offices are situated at Winnipeg, Man., but branch offices are maintained at numerous points from Montreal in the east to Victoria in the west. Total personnel is approximately 1,100 , including elevator staff.

On a fee basis, the Board provides official inspection (see p. 862), grading and weighing of grain, and registration of warehouse receipts. All operators of elevators in Western Canada and of elevators in Eastern Canada that handle western-grown grain for export, as well as all parties operating as grain commission merchants, track buyers of grain, or as grain dealers, are required to be licensed by the Board annually and to file security by bond or otherwise as a guarantee for the performance of all obligations imposed upon them by the Cansda Grain Act or by the regulations of the Board.

To protect the rights of the different parties, the Board has jurisdiction to inquire into and is empowered to give direction regarding any matter relating to the grading or weighing of grain; deductions made from grain for dockage; shortages on delivery of grain into or out of elevators; unfair or discriminatory operation of any elevator; refusal or neglect of any person to comply with any provision of the Canada Grain Act; and any other matter arising out of the performance of the duties of the Board.

In the Prairie Provinces the Board maintains four Assistant Commissioners-one in Alberta, two in Saskatchewan and one in Manitoba. These Assistant Commissioners investigate complaints of producers and inspect periodically the country elevators in their respective provinces; all elevators with their equipment and stocks of grain are subject at any time to inspection by officials of the Board.

The Board sets up, annually, Committees on Grain Standards and also appoints Grain Appeal Tribunals to give final decisions in cases where appeals are made against the grading of grain by the Board's inspection officials. To assist in maintaining the uniform quality of the top grades of Red Spring Wheat handled through terminal elevators, the Canada Grain Act provides that wheat of these grades shall be stored with grain of like grade only.

[^271]The Grain Research Laboratory, located at Winnipeg, is the main centre of research on the chemistry of Canadian grains. It is well staffed and equipped to provide the service required to help maintain and expand domestic and foreign markets for all types of grain. The Laboratory collects and tests samples of various crops to obtain information on the current quality of all grains shipped during the crop year. Fundamental research is also undertaken; the program is directed toward better understanding of what constitutes quality in cereal grains and toward improvement in the methods of assessing quality.

In addition to its duties under the Canada Grain Act, certain other duties are performed by the Board. Under the provisions of the Inland Water Freight Rates Act (RSC 1952, c. 153), the Board maintains records of rates for the carriage of grain from Fort William or Port Arthur, Ont., by lake or river navigation and is empowered to prescribe maximum rates for such carriage. Under the provisions of the Prairie Farm Assistance Act (RSC 1952, c. 213 as amended), the Board collects from licensees under the Canada Grain Act 1 p.c. of the purchase price of wheat, oats, barley, rye, flax and rapeseed purchased by such licensees.

The Canadian Wheat Board.*-The Canadian Wheat Board was established under the Canadian Wheat Board Act of 1935 for the purpose of "the marketing in an orderly manner, in interprovincial and export trade, of grain grown in Canada". The Board was at first a voluntary Board, that is, farmers had the option of marketing their wheat through it or through the private grain trade. In 1943, under the War Measures Act, the Board was made a compulsory Board, and all wheat going into commercial channels was required to be marketed through it. At the end of the War, the Transitional Powers Act continued the Board as the sole marketing agency for wheat until 1947 when the Canadian Wheat Board Act was amended. The major wartime powers of the Board were coatinued in the 1947 Act. It is under provisions of this 1947 legislation (RSC 1952, c. 44 and amendments) that the Board is operating today.

The Canadian Wheat Board accomplishes its objective of orderly marketing of grain through regulation and agreement. It owns no grain handling facilities but, by entering into agreements with the owners of these facilities, it attempts to bring about an orderly flow of grain through each of the steps involved in merchandising the grain from the producer to the domestic or overseas buyer.

In the selling of wheat, the Board utilizes the services of shippers and exporters. In its sales operations, the Board endeavours to meet the wishes of overseas buyers and, on occasion, enters into direct contracts. When an exporter completes an export sale, in his capacity as an agent of the Board, he is responsible for the transaction; he completes the transaction with the buyer and settles with the Board for the purchase of the wheat from the Board.

When the commercial storage facilities are inadequate to handle all the grain produced, it is necessary for the Board to regulate the flow of grain from the producer to these forward positions. The first step is accomplished by the use of producer's delivery permits issued annually by The Canadian Wheat Board. Every delivery of grain made to country elevators by a producer is entered in his permit book. By regulation, the amount of grain delivered by the producer to the country elevator by the use of a quota system, and by apportioning shipping orders to country elevators according to the needs created by sales commitments, the Wheat Board regulates the amount of grain coming into the marketing channel.

The next step is the handling of the grain by the country elevator. The maximum charges for the handling and storing of the grain are set by the Board of Grain Commissioners, but the actual charges are subject to negotiation between the elevator companies and the Wheat Board.

The third step in the marketing process-transporting the grain from the country elevators to large terminal elevators in Eastern Canada, Churchill or on the West Coast-

[^272]is carried out by the railways. The Wheat Board determines the kinds and grades of grain that are required at the different terminal destinations to meet its sales commitments and informs the elevator companies and the railways of these needs. The maximum tariffs are set by an agreement between the railways and the Government of Canada.

The fourth major step-storing and handling of the grain at terminal elevatorsis done in privately or co-operatively owned elevators. Maximum charges are established for this service by the Board of Grain Commissioners.

In the case of oats and barley, the Board's operations are less extensive than those relating to wheat. These two grains are sold in store positions at the terminal elevators at Fort William-Port Arthur and Vancouver. Oats and barley are marketed either on a straight cash basis at prices quoted daily by the Board or on the basis of exchange of futures concluded through the facilities of the Winnipeg Grain Exchange. The Board controls the movement of coarse grains to the Lakehead. The private trade is responsible for the movement of oats and barley from Lakehead or Vancouver positions.

The producer receives payment for his wheat, oats and barley in two or three stages. An initial payment price is established early in the crop year by Order in Council. The initial payment price less the cost of handling grain at the local elevator and the transportation costs to the Lakehead or Vancouver is the initial price received by the producer. This price is a guaranteed floor price in that if the Wheat Board, in selling the grain, does not realize this price and the necessary marketing costs, the deficit is borne by the Federal Treasury. However, with very few exceptions, the Wheat Board has operated without financial aid from the Federal Treasury.

After the end of the crop year, but prior to the final payment being made, if the Wheat Board can confidently foresee a surplus accumulating and if authorized by Order in Council, an interim payment is made to producers. This interim payment is the same amount per bushel to all producers of the same grade of grain. When the Board has sold all the grain or otherwise disposed of it in accordance with the Canadian Wheat Board Act, the Board, if authorized by Order in Council, makes a final payment to producers.

Under the Prairie Grain Advance Payments Act, administered by the Board, producers may receive, through their elevator agents, cash advances on farm-stored grain in accordance with a prescribed formula. The purpose of this legislation is to make cash available to producers pending delivery of their grain under delivery quotas established by the Board. Cash advances are interest-free as far as producers are concerned.

Western Canadian producers receive the price for their grain that the Wheat Board receives, less its operating costs including carrying charge, and the general level of prices received by the Board is determined by competitive conditions in world markets. The only subsidy received by the farmer in the Canadian wheat marketing system is the part payment of storage costs for wheat made by the Government of Canada. Under provisions of the Temporary Wheat Reserves Act, the Minister of Finance, out of the Consolidated Revenue Fund, pays to the Wheat Board the storage costs on wheat in storage at the end of the crop year in excess of $178,000,000$ bu.

## Subsection 2.-Controls Over Farm Products Other Than Grain*

With the growing complexity of agricultural marketing caused by the fact that the producer is more and more becoming a specialist and produces more for marketing off the farm than for his own needs, a substantial and continuing change in the approach to marketing problems is evident.

With the exception of tobacco, little or no attempt at production control has been introduced in Canada, although in some countries this also forms part of a broad program

[^273]of market control. The methods of control might be summarized as follows, although some of those mentioned may be combined in certain operations: (1) producers may organize co-operative marketing agencies; (2) producers may establish compulsory marketing boards to bargain with groups buying the product for processing or further sale; (3) producers may establish compulsory marketing boards to direct the flow of product and bargain on price; (4) producers may request the Federal Government to establish a government marketing board; and /or (5) producers may request intervention in the pricing system through an offer by the Government either to assist in financing the orderly marketing of the product or to support the price of the product in the marketplace.

The Government of Canada and provincial governments have, through legislation and in other ways, given marketing aids such as those related to research, education, information, inspection, grading and many other service measures of this type, designed to assist in making adjustments in marketing within agriculture and between agriculture and the remainder of the economy.

There exists in Canada today considerable legislation at the federal, provincial and municipal levels which gives government agencies and farmers the power to take measures for controlling the marketing of farm products. Legislation relating to grain marketing is dealt with in Subsection 1, pp. 877-879, and an attempt is made here to cover in a general way some of the other types of legislation, with particular reference to the Agricultural Products Co-operative Marketing Act and the Agricultural Products Marketing Act. The Agricultural Stabilization Act, which provides price support for certain key products, is discussed in the Agriculture Chapter, pp. 422-423.

General Marketing Controls.-At the municipal level, many cities and towns have controls with respect to the sale of foods in certain areas or with respect to health standards. For example, most municipalities have some form of health regulation concerning milk being sold within their boundaries. This is often extended to licensing for the purpose of assuring sanitary standards on the farms where the milk originates. Similarly, zoning bylaws may not only control the areas where commercial merchandising generally can take place, but also state that public markets where fruit and vegetables and other goods are sold may operate only under fairly strict supervision of the municipality.

With respect to provincial government controls, most of the provinces enacted milk control legislation before 1940. Most of them finance these milk-control agencies out of public funds, others finance through the collection of licence fees and assessments from those engaged in the fluid milk industry, and some combine the two methods. Most milk-control agencies have authority to carry out some system of licensing which provides for the revocation of such licences if those engaged in the fluid milk business do not conform with the orders of the milk control board.

In all provinces with such boards, the milk control board sets the minimum price which distributors in specified markets may pay producers for Class I milk, that is, milk actually sold for fluid consumption. In Ontario and British Columbia, this minimum price is based on formulas. Most provinces also set either minimum or fixed wholesale and retail prices for fluid milk. The wholesale and retail prices are fixed in Prince Edward Island, Nova Scotia and Saskatchewan; minimum prices are established in New Brunswick, Quebec and Alberta. However, maximum, but not minimum, prices are set in Manitoba and no control is exercised over milk prices at the wholesale and retail levels in Ontario and British Columbia. In these three provinces some degree of price competition between store and home delivery sales has developed.

The powers given to or requirements made by milk control boards include: (1) authority to inquire into all matters pertaining to the fluid milk industry, to define market areas, to arbitrate disputes, to examine the books and records of those engaged in the industry, to issue and revoke licences, and to establish a price for milk; and (2) authority to require a
bond from distributors, periodic reports from distributors, payments to be made to producers by a certain date each month, distributors to give statements to suppliers, distributors to give notice before ceasing to accept milk from any producer, producers to give notice before ceasing to deliver milk to any distributor, and the prohibition of distributors requiring capital investment from producers.

Thus, fluid milk controls are not only widespread but also numerous. They are generally considered to be administered in the public interest as well as in the interest of those who have regular opportunities to appear before the boards in connection with requests for price changes.

Federally, the Food and Drug Directorate of the Department of National Health and Welfare has wide control over the content of foods sold. The Department of Agriculture establishes grades or quality standards for various foods and exercises some control over size and type of packages and containers used in food preparation. The Weights and Measures Division of the Department of Trade and Commerce also exercises controls in its sphere.

The Agricultural Products Co-operative Marketing Act.-In the late 1930's, the Federal Government decided to assist orderly marketing by encouraging the establishment of pools which would give to the producer the maximum sales return for his product less a maximum margin for handling expenses agreed upon in advance. Thus the Agricultural Products Co-operative Marketing Act and the Wheat Co-operative Marketing Act were passed in 1939. The latter was used in one year only but the Agricultural Products Co-operative Marketing Act, which covers the marketing of all agricultural products except wheat, has been used to a greater or lesser degree from time to time during the intervening years.

The purpose of this Act is to aid farmers in pooling the returns from sale of their products by guaranteeing initial payments and thus assisting in the orderly marketing of the product. The Government will undertake to guarantee a certain minimum initial payment to the producer at the time of delivery of the product, including a margin for handling; sales returns are to be made to the producer on a co-operative plan. The guaranteed initial payment may be up to a maximum of 80 p.c. of the average price for the previous three years, the exact percentage to be recommended by the Minister of Agriculture who enters into an agreement with the selling agency for the product. The payment to the producer is to be made through the sales agency on a graded basis at the time of delivery of the product.

Agreements under this Act have been made with respect to the marketing of maple products, honey, onions, potatoes, cheddar cheese, apples, peaches, apricots, cherries, oats, barley, flax, rye, corn, tobacco, fox and mink pelts, and the following seeds: alfalfa, crested wheat grass, brome grass, slender wheat grass, western rye grass, timothy, red clover, alsike clover, sweet clover, creeping red fescue, meadow fescue, and peas. Thus far the Government of Canada has suffered losses under this Act only with respect to fox pelts and potatoes. This experience indicates that any service to agriculture rendered by this Act has been at relatively small expense to the taxpayers of Canada except for minor administrative expenses, most of which have been taken care of as part of the day-to-day administration of the Department of Agriculture.

The Agricultural Products Marketing Act.-Following the withdrawal of wartime powers of the Federal Government, the Agricultural Products Marketing Act of 1949 was enacted to provide delegation for like powers to those established for marketing boards within a province for the purposes of interprovincial and export trade. A Supreme Court judgment in January 1952 cleared the validity of the Agricultural Products Marketing Act but left some doubt with respect to how licences, levies or other charges could be made by marketing boards beyond the extent of immediate administrative expenses without some approval by the Federal Government in its constitutional field of indirect taxation.

In April 1957, following a further Supreme Court judgment in respect to Ontario legislation, an amendment to the Federal Agricultural Products Marketing Act vested in the Governor in Council the right to authorize local boards to "fix, impose and collect levies or charges from persons engaged in the production or marketing of the whole or any part of any agricultural product and for such purpose to classify such persons into groups and fix the levies or charges payable by the members of the different groups in different amounts, to use such levies or charges for the purposes of such board or agency, including the creation of reserves, and the payment of expenses and losses resulting from the sale or disposal of any such agricultural product, and the equalization or adjustment among producers of any agricultural product of moneys realized from the sale thereof during such period or periods of time as the board or agency may determine".

There are at present 76 such marketing boards organized in Canada, 60 p.c. of which are in the Province of Quebec and 22 p.c. in Ontario; all other provinces with the exception of Newfoundland have one or more boards.

The annual statistical report prepared by the Economics Division of the Department of Agriculture in relation to these boards indicates that over one sixth of the farm cash income in Canada in 1961 was received from sales made under the control of provincial marketing board plans, including the following commodities: seed corn, potatoes, other vegetables, sugar beets, tobacco, hogs, certain dairy products, fruits, wool, honey, white beans, maple products, pulpwood, wheat and soybeans. As at May 31, 1963, 38 of these provincial boards had received an extension of powers for purposes of interprovincial and export trade from the Federal Government. Five boards had received authority with regard to eight commodities to collect levies in excess of administrative expenses.

The Agricultural Products Marketing Act does not give the local or provincial marketing board any greater control over agencies outside the province than is possible through the control of the commodity by the board and whatever contractual arrangements it may make with such agencies outside the province. It does make it possible, however, for marketing boards to give groups within a province complete marketing control over any commodity produced in that province, or any area of that province which may be defined.

## Section 2.-Combinations in Restraint of Trade*

The purpose of Canadian anti-combines legislation is to assist in maintaining free and open competition as a prime stimulus to the achievement of maximum production, distribution and employment in a system of free enterprise. To this end, the legislation seeks to eliminate certain practices in restraint of trade that serve to prevent the nation's economic resources from being most effectively used for the advantage of all citizens.

By amendments which came into force on Aug. 10, 1960 (SC 1960, c. 45), all the provisions of the anti-combines legislation which previously had been divided between the Combines Investigation Act (RSC 1952, c. 314) and the Criminal Code were amended and consolidated in the Act. The substantive provisions now are contained in Sects. 2, $32,33,33 \mathrm{~A}, 33 \mathrm{~B}, 33 \mathrm{C}$ and 34 of the Combines Investigation Act. The Act was enacted in 1923 and was amended extensively in 1935, 1937, 1946, 1949, 1951 and 1952 as well as in 1960.

Sect. 32, generally speaking, forbids in Subsect. (1) combinations that prevent or lessen "unduly" competition in the production, manufacture, purchase, barter, sale, storage, rental, transportation or supply of an article of trade or commerce or in the price of insurance. Subsect. (1) derives from Sect. 411 of the Criminal Code which was enacted originally in 1889. While Subsect. (2) provides that no person shall be convicted for participation in an arrangement relating only to such matters as the exchange of statistics or the defining of product standards, etc., Subsect. (3) provides that Subsect. (2) does not apply if the arrangement has lessened or is likely to lessen competition unduly in respect of

[^274]prices, quantity or quality of production, markets or customers or channels of distribution, or if the arrangement "has restricted or is likely to restrict any person from entering into or expanding a business in a trade or industry". Subsect. (4) provides that, subject to Subsect. (5), no person shall be convicted for participation in an arrangement which relates only to the export trade. Subsect. (5) provides that Subsect. (4) does not apply if the arrangement has had or is likely to have harmful effects on the volume of export trade or on the businesses of Canadian competitors or on domestic consumers.

Sects. 2 and 33 make it an offence to participate in a merger which has or is likely to have the effect of lessening competition to the detriment or against the interest of the public. These Sections also make it an offence to participate in a monopoly that has been operated or is likely to be operated to the detriment or against the interest of the public.

Sect. 33A deals with what are commonly called "price discrimination" and "predatory price cutting". It provides that a supplier may not make a practice of discriminating among those of his trade customers who come into competition with one another by giving one a preferred price which is not available to another if the second is willing to buy in like quantities and qualities as the first; it also forbids a supplier from selling at prices lower in one locality than in another, or unreasonably low anywhere, if the effect or tendency of such policy is to lessen competition substantially or eliminate competitors or the policy is designed to have such effect.

Sect. 33B provides that where a supplier grants advertising or display allowances to competing trade customers he must grant them in proportion to the purchases of such customers; any service he exacts in return must be such that his different types of customers are able to perform; and if such customers are required to incur expenses to earn such allowances, such expenses also must be proportionate to their purchases.

Sect. 33C makes it an offence for any person, for the purpose of promoting the sale or use of an article, to make any materially misleading representation to the public concerning the price at which such or like articles have been, will be or are ordinarily sold.

Sect. 34 prohibits a supplier of goods from prescribing the prices at which they are to be resold by wholesalers or retailers or from cutting off supplies to a merchant because of the merchant's failure or refusal to abide by such prices, i.e., the practice of "resale price maintenance". The Section also provides that it shall not be inferred that a person practised resale price maintenance simply because he refused, or counselled the refusal of supplies to a merchant if there were reasonable cause to believe and the supplier did believe that the merchant was making a practice of using articles of such supplier as "lossleaders" or as bait advertising or was making a practice of engaging in misleading advertising in respect of such articles or of not providing services that purchasers of such articles might reasonably expect.

The Act provides for a Director who is responsible for investigating combines and other restrictive practices, and a Commission (the Restrictive Trade Practices Commission) which is responsible for appraising the evidence submitted to it by the Director and the parties under investigation, and for making a report to the Minister. When there are reasonable grounds for believing that a forbidden practice is engaged in, the Director may obtain from the Commission authorization to examine witnesses, search premises, or require written returns. After examining all the information available, if the Director believes that it proves the existence of a forbidden practice, he submits a statement of the evidence to the Commission and to the parties believed to be responsible for the practice. The Commission then sets a time and place at which it hears argument on behalf of the Director in support of his statement, and hears argument and receives evidence on behalf of any persons against whom allegations have been made in the statement. Following this hearing, the Commission prepares and submits a report to the Minister, ordinarily required to be published within thirty days.

The Act also provides for general inquiries into restraints of trade which, while not forbidden or punishable, may affect the public interest. It further provides in Sect. 31
that the courts, including the Exchequer Court of Canada, in addition to imposing punishment for a contravention of the legislation, may make an order restraining persons from embarking on, continuing or repeating a contravention or directing the dissolution of a merger or monopoly as the case may be. Application also may be made to the courts for such an order in lieu of prosecuting and convicting for a contravention of the legislation. By virtue of the 1960 amendments, prosecutions for offences against the substantive provisions of the legislation (other than Sect. 33C which is punishable only on summary conviction) may be taken either in the provincial courts or with the consent of the accused in the Exchequer Court of Canada. The amendment conferring jurisdiction on the Exchequer Court came into force on Dec. 1, 1960.

In the years 1957-62 the following reports of inquiries under the legislation have been published:-
(1) The Sugar Industry in Western Canada and a Proposed Merger of Sugar Companies.
(2) Manufacture, Distribution and Sale of Metal Culverts and Related Products.
(3) Purchase of Pulpwood in Certain Districts in Eastern Canada.
(4) Manufacture, Distribution and Sale of Yeast.
(5) Production, Distribution and Sale of Zinc Oxide.
(6) Wholesale Trade in Cigarettes and Confectionery in the Edmonton District.
(7) Study of Certain Discriminatory Pricing Practices in the Grocery Trade.
(8) Manufacture, Distribution and Sale of Ammunition in Canada.
(9) Distribution and Sale of Electrical Construction Materials and Equipment in Ontario.
(10) Sale and Distribution of Surgical Rubber Gloves and Certain Other Surgical Supplies.
(11) The Sugar Industry in Eastern Canada.
(12) Alleged Attempts at Resale Price Maintenance in the Distribution and Sale of Gasoline in the Toronto Area.
(13) Manufacture, Distribution and Sale of Specialty Bags and Related Products.
(14) Automobile Insurance in Canada.
(15) Distribution and Sale of Coal in Sault Ste. Marie, Ontario.
(16) Production and Supply of Newspapers in the City of Vancouver and Elsewhere in the Province of British Columbia.
(17) Manufacture, Distribution and Sale of Transparent Packaging Products and Related Products.
(18) Manufacture, Distribution, Supply and Sale of Belts.
(19) Distribution and Sale of Gasoline in the Toronto Area (Alleged Price DiscriminationSupertest Petroleum Corporation, Limited).
(20) Distribution and Sale of Gasoline in the Toronto Area (Alleged Price DiscriminationThe British American Oil Company Limited).
(21) Distribution and Sale of Gasoline in the Toronto Area (Alleged Price DiscriminationTexaco Canada Limited).
(22) Alleged Attempts at Resale Price Maintenance in the Distribution and Sale of Cameras and Related Products (Arrow Photographic Equipment Limited).
(23) Meat Packing Industry and the Acquisition of Wilsil Limited and Calgary Packers Limited by Canada Packers Limited.
(24) Alleged Attempts at Resale Price Maintenance in the Distribution and Sale of Cameras and Related Products (Garlick Films Limited).
(25) Distribution and Sale of Automotive Oils, Greases, Anti-Freeze, Additives, Tires, Batteries, Accessories and Related Products.
(26) Manufacture, Distribution and Sale of Paperboard Shipping Containers and Related Products.
(27) The Acquisition of the Common Shares of Hendershot Paper Products Limited by Canadian International Paper Company.
(28) The Acquisition by Bathurst Power \& Paper Company Limited of Wilson Boxes, Limited.
(29) Manufacture, Distribution and Sale of Evaporated Milk and Related Products.
(30) Distribution and Sale of Electric Appliances, Electric Shavers and Accessory Products (Sunbeam Corporation (Canada) Limited).
These reports and copies of the Annual Reports under the Act may be obtained from the Queen's Printer or the office of the Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

## Section 3.-Control and Sale of Alcoholic Beverages

The retail sale of alcoholic beverages in Canada is controlled by provincial and territorial government liquor control authorities. Alcoholic beverages are sold directly by most of these liquor control authorities to the consumer or to licensees for resale. However, in some provinces beer and wine are sold directly by breweries and wineries to consumers or to licensees for resale. During the year ended Mar. 31, 1962, provincial government liquor control authorities operated 950 retail stores.

Table 1 shows revenue from administration of liquor control by provincial and territorial governments. Details are given in DBS report, The Control and Sale of Alcoholic Beverages in Canada (Catalogue No. 63-202).

## 1.-Provincial Revenue from Administration of Liquor Control, Years Ended Mar. 31, 1961 and 1962

Note.-Figures include revenue collected directly by the provincial and territorial governments as well as revenue of the liquor authorities, but exclude revenue resulting from a general retail sales tax on alcoholic beverages levied by eight provinces.

[^275]Specified revenue of the Government of Canada from alcoholic beverages comprising excise duties, excise taxes, customs duties and certain fees and licences in that connection are shown in Table 2.

# 2.-Specified Revenue of the Federal Government from Alcoholic Beverages, Years Ended Mar. 31, 1958-62 

Note.-Figures exclude revenue from the general sales tax which is not available by commodities.

| Nature of Levy | 1958 | 1959 | 1960 | 1961 | 1962 |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Section 4.-The National Energy Board*

The National Energy Board was established by the National Energy Board Act, 1959 (SC 1959, c. 46) for the broad purpose of assuring the best use of energy resources in Canada. The Board is responsible for the regulation in the public interest of the construction and operation of oil and gas pipelines subject to the jurisdiction of the Parliament of Canada, the tolls charged for transmission by such pipelines, the export and import of gas, the export of electric power and the construction of those lines over which such power is exported. The Board is also required to study and keep under review all matters relating to energy within the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary or advisable in the public interest with regard to such matters. The Act also authorizes the extension of the export and import provisions to oil upon proclamation by the Governor in Council. The Board, which reports to the Minister of Trade and Commerce, consists of a Chairman, a Vice-Chairman and three other members.

The Act was given Royal Assent on July 18, 1959, the members were appointed by Order in Council on Aug. 10, 1959 and the Act came into force by proclamation on Nov. 2, 1959. The Act supersedes the Pipe Lines Act, formerly administered by the Board of Transport Commissioners for Canada, and the Exportation of Power and Fluids and Importation of Gas Act, formerly administered by the Standards Branch of the Department of Trade and Commerce. Provision was made in the new Act for the continuation or re-definition of authorizations issued under the two previous Acts, and in 1960 the Act was amended to extend to Dec. 31, 1961 the duration of licences to export power issued under the Exportation of Power and Fluids and Importation of Gas Act unless earlier replaced by a licence issued under the National Energy Board Act.

While the Board continued during 1962 (its third year of operations) to give detailed attention to the implementation of the National Oil Policy (announced by the Minister of Trade and Commerce on Feb. 1, 1961), it expanded its activities in each of the other areas of responsibility assigned to it by statute and Joutlined ${ }^{\top}$ below.

The National Oil Policy sought the co-operation of the oil industry in achieving a series of target levels of Canadian production of oil and natural gas liquids to attain an average daily output of $640,000 \mathrm{bbl}$. in 1961 and $800,000 \mathrm{bbl}$. per day in 1963. These targets were to be achieved by the increased use of Canadian oil in domestic markets west of the Ottawa Valley and by some expansion of export sales, largely in existing markets that could be reached through established pipelines. Under the policy, importers of crude oil and petroleum products were required to report their imports to the National Energy Board which, in turn, was required to evaluate the contribution of individual companies to the production targets and to report periodically on the progress and development of the program. Although no specific target was established for the year 1962, production of crude petroleum and natural gas liquids by the end of that year reached approximately $732,000 \mathrm{bbl}$. per day, an increase of over 12 p.c. for 1962 and one comparing favourably with the rate of growth during 1961. In 1962 as compared with 1961, a significantly greater proportion of the production gain was attributable to growth in the domestic markets. Moreover, with the exception of minor volumes for special purposes, imports of crude oil into Ontario in 1962 were virtually eliminated, while imports and transfers of products of foreign origin into Canada west of the Ottawa Valley were further reduced. As a result of the National Oil Policy, the rate of growth of imports of crude petroleum into

[^276]Canada, east of the Ottawa Valley, declined and these imports became more closely related to increased demand for petroleum products in the Province of Quebec and the Maritime Provinces.

During 1962, the Board held eleven public hearings and, with the approval of the Governor in Council, issued thereafter five certificates respecting facilities of three gas pipelines, one oil pipeline and an international power line, as well as six export licences respecting electric power and energy (four) and natural gas (two).

The projects certified covered two applications of Trans-Canada Pipe Lines Limited in respect of certain additional compressor stations and facilities and other works at thirteen points in Saskatchewan, Manitoba and Ontario to be connected with its existing pipeline of the Northern Ontario Pipe Line Crown Corporation, and the conversion of certain compressor stations on the prairies to enable the use of propane as an alternative to natural gas; an application of Petroleum Transmission Company to construct a 577 -mile $6 \frac{5}{8}$-inch diameter pipeline extending from Alberta to Winnipeg for the transmission of propane and butanes; an application of Interprovincial Pipe Line Co. to construct 41 miles of 34 -inch diameter oil pipe to loop four sections of existing line in Manitoba; and an application of the Consolidated Mining and Smelting Company of Canada Limited to construct a 14.2 -mile international power line to connect its Waneta station on the Pend D'Oreille River with the Bonneville Power Administration near Nelway, B.C.

The exports licensed by the Board included the following applicants in respect of electric power and energy: B.C. Power Commission, Southern Canada Power Company Limited, Consolidated Mining and Smelting Co., and Ontario-Minnesota Pulp and Paper Company Limited; and the following in respect of natural gas (butanes by pipeline): Shell Oil Company of Canada Limited and Texaco Exploration Company.

In addition to issuing the above certificates and licences, the Board issued eighteen exemption orders for gas and oil pipeline facilities under Sect. 49 of the Act which empowers it to approve the construction of pipelines or extensions not exceeding 25 miles and of miscellaneous facilities by exercising its discretion to exempt such construction from the provisions relating to certificate proceedings. Four of these exemption orders concerned the construction of 57 miles of 34 -inch diameter gas pipeline by Trans-Canada Pipe Lines Limited to parallel its existing system at four prairie vicinities, while three others related to construction by Westcoast Transmission Company Limited of 27 miles of various diameters of gas pipeline and of an addition to a compressor station. Four of the nine exemption orders governing oil pipelines authorized construction by the Interprovincial Pipe Line Company of additions to pump station facilities and to its pipeline at numerous points throughout its system, while another four provided for construction by Westspur Pipe Line Company of some 8,880 feet of pipeline and of additional works at Midale and other points in southern Saskatchewan.

During the year, the Board concerned itself also with requirements of the National Energy Board Act respecting the protection of the public safety, such as those providing for control of crossings by pipelines of various other utilities and vice versa, and those providing that no pipeline shall be opened for the transmission of hydrocarbons without leave of the Board. Under the former, 295 crossing orders were processed. Under the latter, 28 applications were reviewed as to adequacy of pipeline testing and safety devices. Seventy other orders were issued on applications received under other sections of the Act.

Pursuant to its obligations (under Part II of the Act) to review matters relating to energy, and to its responsibilities (under Part VI of the Act) relating to exports of gas and electricity, the Board continued the preparation of detailed supply and demand forecasts and the development of its statistical records. Liaison was established with the Dominion Bureau of Statistics with a view to assisting in the improvement of energy statistics.

The Board participated in arrangements for studies of a national power grid, and in feasibility studies of certain large potential hydro-electric developments. It is currently participating in the work of Canadian Standards Association Committees to establish a Canadian code for the design, construction and operation of oil and gas pipelines, and for aluminum pressure piping.

Activities were intensified in the emergency planning field in conjunction with the Emergency Supply Planning Branch of the Department of Defence Production. The Board also strengthened its liaison with such international organizations as the Organization for Economic Co-operation and Development.

## Section 5.-Miscellaneous Aids or Controls

Trade Standards.-The Standards Branch of the Department of Trade and Commerce consolidates under one Director the administration of the Electricity Inspection Act, the Gas Inspection Act, the Precious Metals Marking Act, the Weights and Measures Act, and the National Trade Mark and True Labelling Act.

Commodity Standards.-On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act (RSC 1952, c. 191) which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising. In brief, the use of the National Standard is voluntary and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. This is exemplified in the National Trade Mark Garment Sizing Regulations which were passed on Mar. 16, 1961. In addition, where manufacturers descriptively label any commodity or container, it must be labelled accurately to avoid public deception. The regulation applying to the labelling of fur garments, for example, has been established as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act, 1946 (RSC 1952, c. 215), commodities composed of gold, silver, platinum or palladium may be marked with a quality mark describing accurately the quality of the metal. Where such mark is used, a trade mark registered in Canada or for which application for registration has been made, must also be applied. Gold-plated or silver-plated articles may also be marked under certain conditions outlined in the Act. The inspection staff of the Standards Branch is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale, and in checking the marks applied.

Weights and Measures.-The Weights and Measures Act (RSC 1952, c. 292) prescribes the legal standards of weight and measure for use in Canada. The Act requires control of the type of all weighing and measuring devices used for commercial purposes and their periodic verification and surveillance directed toward the elimination of sales by short weight or short measure. During 1962 more than 725,000 prepackaged articles were checked for weight or measure. The number of inspections of devices made was 494,326 compared with 500,737 in 1961. The more important inspections comprised the following: weighing machines including scales of all kinds, 237,950; measuring machines for liquids, 122,306; weights, 128,647; and other measures, 5,423 . Total expenditure was $\$ 1,235,233$ in 1962 compared with $\$ 1,215,510$ in 1961 and total revenue was $\$ 1,031,209$ compared with $\$ 1,081,603$.

Electricity and Gas Inspection.-Responsibilities of the Standards Branch under the Electricity Inspection Act (RSC 1952, c. 94) and the Gas Inspection Act (RSC 1952, c. 129) comprise the testing and stamping of every electricity and gas meter used throughout Canada for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. Canada is divided into 21 districts for administration of the two Acts and staff numbers 195. During the year ended Mar. 31, 1962, 1,223,552 electricity and gas meters were tested as compared with $1,071,835$ in the preceding year. Revenue derived from the testing amounted to $\$ 968,979$ and expenditure to $\$ 1,074,548$.
4.-Electricity and Gas Meter Registrations, 1952-61

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to 21,659 in the year ended Mar 31, 1962. Roughly, 68 p.c. of the patents granted resulted from inventions made by residents of the United States, 6 p.c. by residents of Britain and other Commonwealth countries and 6 p.c. by residents of Canada. Printed copies of patents issued from Jan. 1, 1948 to date are available at a nominal fee. The Canadian Patent Office Record gives a brief digest of each patent.

Canadian and foreign patents may be consulted at the Patent Office Library. The Library has records of British patents and abridged specifications thereof from 1617 to date, and of United States patents from 1845 to date, as well as many patents, indexes, journals and reports from Australia, New Zealand, South Africa, India, Pakistan, France, Belgium, Austria, Norway, Mexico, Italy, Sweden, the Netherlands, Switzerland, Japan, Egypt, Germany, Ireland, Colombia, Czechoslovakia and Yugoslavia.

Copyrights, Industrial Designs and Timber Marks.*-Copyright protection is governed by the Copyright Act (RSC 1952, c. 55) in force since 1924. Protection is automatic without any formality. However, a system of voluntary registration is provided. Application for registration should be addressed to the Commissioner of Patents, Ottawa.

The Act sets out the qualifications for a copyright and its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional

[^277]Protocol . . . or resident within Her Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

Canada now belongs to the Universal Copyright Convention. This means that the works of Canadian authors are protected in the United States without the formality of compulsory registration or the obligation of printing in the United States, provided that, from the first publication the work bears in a prominent place the following identification: ©, followed by the name of the proprietor and the year of publication.

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection in Canada, in all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States. Protection of industrial designs and of timber marks is afforded under the Industrial Design and Union Label Act and the Timber Marking Act. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office.

Trade Marks.*-The Trade Marks Office, a Branch of the Department of the Secretary of State, administers the Trade Marks Act (SC 1952-53, c. 49) which covers all legislation concerning the registration and use of trade marks and supersedes from July 1, 1954, former legislation enacted under the Unfair Competition Act, the Union Label Act and the Shop Cards Registration Act. Correspondence relating to an application for registration of a trade mark should be addressed to the Registrar of Trade Marks, Ottawa.

Applications are advertised for opposition purposes in the Trade Marks Journal, a weekly publication that also gives particulars of every registration of a trade mark and every registration of a registered user. The required fee payable on application for registration of a trade mark is $\$ 25$, for advertisment of an application $\$ 15$ and for registration of a person as a registered user of a trade mark $\$ 20$.

Subventions and Bounties on Coal. $\dagger$-A major problem of the Canadian coal mining industry arises from the fact that its fields are situated far distant from the main consuming markets of the Provinces of Ontario and Quebec while these markets lie in close proximity to the bituminous and anthracite fields of the United States. Transportation subventions, which have been maintained in varying degree during the past 30 years,

[^278]were designed to further the movement of Canadian coals by equalizing as far as possible their laid-down costs with the laid-down costs of imported coals in various market areas. During the year a change was made so that Eastern Canadian coals were made competitive with imported residual oils in the Maritimes and the Province of Quebec. This assistance is authorized from year to year by Parliamentary vote and payments are administered in accordance with regulations established by Orders in Council.

## 8.-Expenditure for Coal Subventions, by Province, 1958-62

Nore.-Tonnages and expenditures shown in a given year, being on a calendar-year basis, are not necessarily in direct relationship; certain of the amounts include adjustments on movements of previous years.

[^279]The Canadian Coal Equality Act (RSC 1952, c. 34), which implemented one of the recommendations of the Royal Commission on Maritime Claims (1926), was designed to assist the Canadian steel industry and only incidentally affects coal. It provides for the payment of 49.5 cents per ton on bituminous coal mined in Canada and converted into coke to be used in the Canadian manufacture of iron and steel. Bounties paid under this authority for the years 1958-62 were as follows:-

## PART III.-BANKRUPTCIES AND COMMERCIAL FAILURES

Two series of figures are included in this part which, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures. The first under the heading of "Administration of Bankrupt Estates" is limited to the supervision, by the Superintendent of Bankruptcy, of the administration of bankrupt estates under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act); it gives information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can therefore be assumed that this applies in even greater degree to the more extended fields covered in the second section under the heading of "Returns under the Bankruptcy and Winding-Up Act" which is compiled by the Dominion Bureau of Statistics. This series is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-Up Act) and, since 1955, includes business failures only (see p. 893). The figures of assets and liabilities are estimates made by the debtor and, because they are not made uniformly, should be accepted with reservations.

Administration of Bankrupt Estates.*-Federal insolvency legislation comprises the Bankruptcy Act 1949 (RSC 1952, c. 14), the Farmers' Creditors Arrangement Act 1943 (RSC 1952, c. 111). the Companies' Creditors Arrangement Act and, to some extent, the Winding-Up Act. The two Arrangement Acts are designed to avert failure and neither series of statistics therefore includes proposals or arrangements under these Acts. When such proposals or arrangements are rejected by the creditors or fail in their purpose, the proceedings may then come under the Bankruptcy Act, the bankruptcy provisions of the Farmers Creditors Arrangement Act or, in certain circumstances, the Winding-Up Act. There are no provisions in the Companies' Creditors Arrangement Act for the liquidation or winding-up of insolvent companies.

${ }^{1}$ Includes summary administration provisions of the Bankruptcy Act.
${ }^{2}$ In addition to the amount paid to creditors by the trustee, secured creditors realized direct from their security approximately $\$ 34,797,906$.

Returns under the Bankruptcy and Winding-Up Acts. $\dagger$-The DBS statistics concerning bankruptcies and insolvencies cover only the failures coming under federal legislation, i.e., the Bankruptcy Act and the Winding-Up Act. Certain documents relating to estates administered under these Acts have been forwarded, since July 1920, to the Dominion Statistician for statistical analysis. The Bankruptcy Act of 1949 altered the administration of bankruptcies by providing for proposals from insolvent persons. Since

[^280]July 1950, agreements made under this method have not been included with the statistics of bankruptcy, so that subsequent figures are not strictly comparable with those for previous years. Table 2 shows the number of proposals in order to give a general impression of the trend. The series was revised in 1955 to cover business failures only, excluding failures of individuals such as wage-earners, salesmen and executive personnel formerly included. In Tables 2, 3 and 4 figures for the year 1955 are given on both the old and new bases.

## PART IV.-PRICES*

## Section 1.-Index Numbers of Wholesale Prices

The term "wholesale prices" refers in this Section to transactions that occur below the retail level. It has more of a connotation of bulk purchase and sale than of any homogeneous level of distribution.

Wholesale price indexes and individual price series have numerous uses. One of the most important is in escalator contracts which contain a price adjustment clause. Other major uses include: studies of replacement and construction costs in investment projects; analysis of price movements of both individual items and commodity groups in relation to purchases and sales; industrial planning and market analysis; valuation for tax purposes and inventory analysis; and studies in changes of physical volume. They are also used by business firms abroad in connection with sales and purchases in Canada.

[^282]General Wholesale Index.-The general wholesale index includes prices mainly of manufacturers but also included are those of wholesalers proper, assemblers of primary products, agents and operators of other types of commercial enterprises which trade in commodities of a type, or in quantities characteristic of primary marketing functions. In the general wholesale index, prices are grouped according to a commodity classification scheme based on chief component material similarities. In addition, indexes classified according to degree of manufacture are available. In Table 1, the general wholesale index is presented for the period 1935-62. The general index is used as a conventional summary figure against which to observe the behaviour of particular price groups such as farm products, raw materials and building materials, for which separate price indexes have been constructed. Table 2 gives, for the years 1953-62, the general wholesale price index and two of its integral classifications-raw and partly manufactured goods, and fully and chiefly manufactured goods; also presented in that table are two related systems-industrial materials and Canadian farm products. Annual price index numbers of non-residential building materials and residential building materials are given for 1953-62 in Tables 3 and 4, respectively. More specific indexes are published regularly in the DBS monthly publication Prices and Price Indexes (Catalogue No. 62-002), which also contains current series on retail and security prices. Vol. 23 of that publication is a historical summary reaching back to the year 1867 for some series.

The DBS has introduced a new system of wholesale price indexes called Industry Selling Price Indexes $1956=100$, referring exclusively to manufacturing industries and including approximately 100 industry and 175 commodity indexes. DBS Reference Paper No. 62-515 contains tables, explanatory text, charts and weights relating to these indexes; current indexes are published monthly in Prices and Price Indexes.

The general wholesale index rose 2.9 p.c. from 233.3 in 1961 to 240.0 in 1962 and thus continued its annual increases which began in 1954.

## 1.-General Wholesale Index Annual Averages, 1935-62

( $1935-39=100$ )

| Year | Average | Year | Average | Year | Average | Year | Average |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1935. | 94.4 | 1942. | 123.0 | 1949. | 198.3 | 1956. | 225.6 |
| 1936. | 96.8 | 1943. | 127.9 | 1950 | 211.2 | 1957. | 227.4 |
| 1937. | 107.7 | 1944. | 130.6 | 1951. | 240.2 | 1958 | 227.8 |
| 1938. | 102.0 | 1945. | 132.1 | 1952. | 226.0 | 1959. | 230.6 |
| 1939. | 99.2 | 1946. | 138.9 | 1953. | 220.7 | 1960. | 230.9 |
| 1940 | 108.0 | 1947. | 163.3 | 1954. | 217.0 | 1961 | 233.3 |
| 1941 | 116.4 | 1948 | 193.4 | 1955 | 218.9 | 1962 | 240.0 |

The raw and partly manufactured goods index increased 5.3 p.c. from 212.6 in 1961 to 223.8 in 1962 and thus exceeded the increase of 1.8 p.c. shown by the fully and chiefly manufactured goods index.
2.-Annual Index Numbers of Wholesale Price Groups, 1953-62
$(1935-39=100)$

| Year | General Wholessale Index | Raw and Partly Manufac tured Goods | Fully and Chiefly Manufactured Goods | Industrial Materials | Canadian Farm Products |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | Field | Animal | Total |
| 1953. | 220.7 | 207.0 | 228.8 | 232.3 | 179.4 | 263.8 | 221.6 |
| 1954. | 217.0 | 204.8 | 224.2 | 223.7 | 170.9 | 256.2 | 213.6 |
| 1955. | 218.9 | 209.7 | 224.5 | 236.0 | 180.1 | 245.1 | 212.6 |
| 1956. | 225.6 | 215.8 | 231.5 | 248.2 | 181.6 | 246.9 | 214.2 |
| 1957. | 227.4 | 209.4 | 237.9 | 240.3 | 169.2 | 258.0 | 213.6 |
| 1958. | 227.8 | 209.3 | 238.3 | 229.8 | 171.4 | 274.5 | 222.9 |
| 1959. | 230.6 | 210.9 | 241.6 | 240.2 | 176.1 | 271.6 | 223.9 |
| 1960. | 230.9 | 209.6 | 242.2 | 240.4 | 189.1 | 264.1 | 226.6 |
| 1981. | 233.3 | 212.6 | 244.5 | 243.2 | 191.7 | 270.0 | 230.9 |
| 1962......... | 240.0 | 223.8 | 249.0 | 248.0 | 185.1 p | 286.0 p | 235.6p |

The indexes of building materials* showed little change over the year 1962. The non-residential index (1949=100) advanced almost steadily during the year and, at 132.9 in December, was up from 131.2 a year earlier; the annual index was 131.9 compared with 131.1 for 1961. The residential building materials index (1935-39=100, arithmetically converted to the base 1949=100 for comparability with the non-residential index) moved up from 128.2 in December 1961 to 130.0 in December 1962; the composite for the year was 1.4 points higher than in 1961.

[^283]

## Section 2.-Consumer Price Index*

The purpose of the consumer price index is to measure the movement from month to month in retail prices of goods and services bought by a representative cross-section of the Canadian urban population. For a particular article or service, a price index number is simply the price of the article in one period of time expressed as a percentage of its price in a reference period, usually called a base period. However, indexes for individual goods may be combined to form indexes representing prices of broad groups of goods and services. Thus, the consumer price index relates to the wide range of goods and services bought by Canadian urban families. The index expresses the combined prices of such goods each month as a percentage of their prices in the base period 1949.

The group of goods and services represented in the index is called the index "basket" and "weights" are assigned to the price indexes of individual items for purposes of combining them into an over-all or composite index. The weights reflect the relative importance of items in expenditures of middle-size urban families with medium incomes. The basket is an unchanging or equivalent quantity and quality of goods and services. Only prices change from month to month and the index, therefore, measures the effect of changing prices on the cost of purchasing the fixed basket. The basket and weights now used in the index are based on expenditures in 1957 of families of two to six persons, with annual incomes of $\$ 2,500$ to $\$ 7,000$, living in cities of 30,000 population or over.

The behaviour of the consumer price index during the years of almost continuous economic growth following the end of the Second World War up to 1959 is discussed in the 1962 Year Book at pp. 928-929. During 1959, the upward movement in the index was far less marked than in the preceding years. For the year as a whole, the average level of consumer prices increased by 1.1 p.c. as compared with increases of 2.6 p.c. and 3.2 p.c. in 1958 and 1957, respectively. The most significant change in the pattern of price movement occurred in food prices which were fractionally lower on average in 1959. This was in marked contrast to increases of 3.0 p.c. in 1958 and 4.6 p.c. in 1957.

During 1960, consumer prices continued to reflect the relative stability of the previous year with an over-all price rise of 1.2 p.c. compared with an increase of 1.1 p.c. in 1959 over the year 1958. Changes in six of the seven component groups were quite similar; each of the six was at a higher level compared with 1959 , the increases ranging from 0.9 p.c. for food to 1.8 p.c. for recreation and reading. The health and personal care component, which in the past has risen faster than any of the other components, again experienced the largest gain in 1960 , rising 2.9 p.c. above the 1959 level.

In 1961, the index ranged narrowly from a low of 128.9 in February to a high of 129.7 in November. Two factors in price movement during the year were (1) the introduction of the 3-p.c. sales tax in Ontario in September, which was taken into account, and (2) the change in the exchange rate of the Canadian dollar. Although the latter was considered likely to result in higher prices on imported goods and ultimately in higher consumer prices, no evidence of this was available up to December 1961 as the index stood at just about the same level as in December 1960.

Relative price stability continued throughout 1962 for the fourth consecutive year. The annual average of 130.7 was 1.2 p.c. higher than the 1961 figure of 129.2. Increases of 1.8 p.c. and 1.9 p.c. in the food, and health and personal care groups were the largest of the year. Lesser upward movements occurred in the other components with the exception of transportation, in which a slight decline was noted.

## 7.-Consumer Price Index Numbers, 1953-62

( $1949=100$ )

| Year | Food | Housing | Clothing | Transportation |  | Recreation and <br> Reading | Tobacco and Alcohol | Composite Index |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^284]Consumer Price Indexes for Regional Cities.-Table 9 gives regional consumer price indexes for ten cities or city combinations. These indexes do not show whether it costs more or less to live in one city than in another and should not be used for such comparison. Their function is to measure percentage changes in retail prices-over a certain time in each city or city combination-of a fixed basket of goods and services representing the level of consumption of a particular group of families.

World Retail Price Indexes.-In order to place changes in Canadian retail prices in perspective with those occurring elsewhere, Table 10 provides consumer price indexes for selected countries for 1959, 1960 and 1961. These indexes measure price changes only within each country and should not be used to compare actual levels of living costs from country to country.

## Section 3.-Consumer Expenditure Surveys

A continuing program of surveys of family income and expenditure in urban areas was begun in 1953 and surveys have been conducted since then at two-year intervals. The primary purpose of these surveys has been to collect information for reviewing and revising, if necessary, the weights of the consumer price index. The surveys have therefore been restricted to cover only those families which were comparable in family composition and income level to the consumer price index target group which was selected for index number purposes from a nation-wide survey conducted in 1947-48. For each of the three survey periods covering 1953, 1955 and 1957, respectively, the program consisted of a series of monthly surveys in which the major objective was the collection of detailed expenditure data on food, followed by a recall survey of all expenditures and income for the same calendar year. Detailed results for each survey have been published in two series of occasional publications, of which the latest are Urban Family Food Expenditure, 1957, (Catalogue No. 62-516) and City Family Expenditure, 1957 (Catalogue No. 62-517).

Summary results of the 1959 surveys appear in the 1962 Year Book at pp. 934937 where tables are given showing how expenditure patterns varied among families grouped by income levels, and the average dollar expenditure per family and per person for major items. No expenditure surveys were taken in 1961, the decennial census year, but the regular program was resumed in 1962 when monthly surveys of food expenditure were made throughout the year and a recall survey of the complete budget was made in February and March 1963. Results of these surveys were not yet available at the time of printing.

## Section 4.-Security Price Indexes*

Security price indexes measure, through time, the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on the Toronto, Montreal and Canadian stock exchanges. In the case of the mining and the two supplementary indexes (primary oils and gas, and uraniums), eligible issues are for producing mines and wells only. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the weekly common stock indexes (investors, mining and supplementary indexes) are Thursday's closing quotations. For the monthly preferred stock indexes, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The indexes express current prices as a percentage of prices in 1956. Monthly and certain weekly indexes appear in DBS monthly publication Prices and Price Indexes (Catalogue No. 62-002) and a weekly DBS report gives indexes on a weekly basis for all groups and sub-groups.

The investors index is comprised of three major groups, with relative importance indicated by percentage weights as follows: industrials, 67.2; utilities, 18.5 ; and finance, 14.3. Each major group is further divided into industry sub-groups corresponding to the Standard Industrial Classification, adopted as the basis of classification in the revision of the index to the $1956=100$ base. The mining index is composed of two groups: base metals with a weight of 64.6 p.c. and golds with a weight of 35.4 p.c. The two supplementary indexes of common stocks-primary oils and gas, and uraniums-and the index of preferred stocks are not divided into component groups.

| Section 6. Comparison of Value, Price and Volume of Foreign Trade..... | 936 | Part IV.-Travel between Canada and Other Countries. | 957 |

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

The subject of foreign trade covers more than the treatment of exports and imports of commodities, important though this is. In its broader sense foreign trade is made up of the total international interchange of goods, services, securities and other financial transactions, all of which are presented in their appropriate relationship in this Chapter and in Sections 3 and 4 of Chapter XXII. Following Part I, which is a review of Canada's commodity trade during 1962-63, Part II gives detailed statistics of that trade. Part III outlines the various ways in which the Federal Government promotes and encourages trade relationships, and contains a brief review of the Canadian tariff structure. Part IV contains a review of the extent of travel between Canada and other countries in 1962 with estimates of the amount of money expended for this purpose. The Canadian balance of international payments and Canada's international investment position is covered in Chapter XXII.

## PART I.-CANADIAN MERCHANDISE EXPORTS AND IMPORTS IN 1962-63*

The year 1962 was one of continued buoyancy both in Canada and in most areas abroad; this was reflected in a further substantial growth in Canadian merchandise exports and imports. Exports rose for the eighth successive year, bringing the aggregate increase in value since 1954 to 62 p.c. The rise in value of exports in 1962 of 8 p.c. from $\$ 452,000,000$ to $\$ 6,348,000,000$ was a little smaller than the 9 -p.c. or $\$ 509,000,000$ increase in 1961 . Apart from the consequences of changes in international prices, exports were subject in both years to the lower foreign exchange value of the Canadian dollar; on a physical volume basis, the increases were about 4 p.c. and 9 p.c., respectively. The record of 1962 exports by principal commodity groupings reveals some diverse trends and varied motivating factors. In only a few instances, e.g., grains and uranium, were exports in 1962 substantially lower than in 1961. The decrease in grains was attributable to a drop in sales to Eastern Europe and, more generally, to smaller available supplies of coarse

[^286]grains. Uranium exports continued the decline that had been in progress for several years as a result of the stretch-out in the United States purchasing program. In a number of items, exports tended to be rather stagnant; newsprint exports to the United States and Britain showed little change while those to other overseas countries suffered a drop, and, in aggregate, base metals, chemicals and fertilizers remained about the same as in 1961.
1.-Canadian Merchandise Exports, by Main Commodities or Groupings, 1954 and 1960-62
(Millions of dollars)

On the other hand, exports of lumber and wood pulp, miscellaneous farm and fish products, iron ore, aluminum, oil and gas and manufactured goods all rose substantially. Lumber and wood pulp responded to improved conditions in the United States and iron ore in particular to the recovery in the scale of steel operations and the availability of new sources in Canada. Oil and gas exports, which advanced from $\$ 196,000,000$ in 1961 to $\$ 305,000,000$ in 1962 , reflected stronger U.S. market conditions, and the fact that this was the first full year of operation of new gas transmission facilities to the United States. While the lower foreign exchange value of the Canadian dollar undoubtedly created a favourable environment for prosecuting export opportunities, it seems likely that the main increases in exports of raw and semi-manufactured materials were attributable primarily to other factors, particularly in those large areas where prices are quoted in U.S. dollars. Yet, on the other hand, in the increase in manufactured and miscellaneous products from $\$ 719,000,000$ in 1961 to $\$ 902,000,000$ in 1962 , accounting for almost 40 p.c. of the total increase, the change in the exchange rate during the year plus previous reductions in the external value of the Canadian dollar provided an effective improvement in the Canadian competitive position in a wide range of goods. The increase in manufactured and miscellaneous goods in 1962, though distributed over a wide range of products, was most pronounced in aircraft and machinery and equipment.

Following the War, with heavy exports connected with postwar reconstruction, the share of Canada's exports going overseas was half or better. Later, throughout most of the 1950 's, the overseas portion fell to an average of around 40 p.c. In 1960 and 1961 it rose to 44 p.c. and 46 p.c., respectively, as a result of heavier shipments abroad of a number of items, particularly wheat. In 1962 exports to the United States rose by $\$ 530,000,000$ or by more than the over-all increase and, as a result, the overseas share fell back to around 41 p.c. This was attributable to the drop in wheat exports to Eastern Europe, as previously noted, and lower overseas exports of newsprint, primary iron and steel, aluminum and other base metals. Primarily, however, it was attributable to the fact that the strongest growth occurred in items such as oil and gas, iron ore, lumber and pulp and certain manufactured items, the natural markets for which are predominantly in the United States. Only in manufactured and miscellaneous goods were Britain's and other overseas markets strong. Exports to Japan fell off somewhat in 1962 but Japan remained Canada's third largest customer. Exports to Germany and Belgium were lower in 1962 but were offset by increases to Italy and the Netherlands. Elsewhere, lower exports to India, Pakistan and Hong Kong were counterbalanced by sharply higher exports to Australia.

The following charts indicate that, while exports showed an irregular but upward trend during 1962, imports moved in a much less consistent fashion when shown on a seasonally adjusted basis. They rose sharply and steadily during the first half of the year and fell off equally sharply and by a greater degree in the final months of the year. The increase of $\$ 487,000,000$ in 1962 was substantially greater than in 1961. Largely as a result of the drop in the foreign exchange value of the Canadian dollar, the 8-p.c. increase in value was only about 3 p.c. in terms of physical volume compared with 2 p.c. in 1961. While 1962 imports were almost 14 p.c. higher in value than in the previous peak year (1959), the increase in physical volume was scarcely 4 p.c.

From Table 2, which classifies imports on a functional basis, it may be seen that the increases in 1962 were well spread over industrial materials, investment goods and consumer goods.
2.-Imports into Canada classified by End-Use, 1960-62

| Special items... | 46 | 53 | 60 |
| Totals, Imports...... | 5,483 | 5,771 | 6,258 |

Imports of fuels and lubricants, although a little higher than in the two previous years, continued steady and well below previous peaks, reflecting the increasing share of consumption of domestic fuels in Canada. Greater reliance on expanded domestic sources is also in evidence in structural materials and pipe, in automobiles and in clothing, textiles and leather and consumer durables and semi-durables.

During 1962 imports were not only subject to the deterrent effect of the cumulative fall in the foreign exchange value of the Canadian dollar-some 11 p.c. from the levels of the late 1950's-but in June import surcharges were imposed at the time of the foreign exchange crisis, ranging from 5 p.c. to 15 p.c. and covering approximately half of total imports. Some surcharges covering imports valued at approximately $\$ 500,000,000$ in 1961 were removed in October and November 1962 and the remainder in February and March of 1963.

The increase in imports in 1962 also came mainly from the United States. Imports from Britain fell off slightly, while imports from other overseas countries, continuing their upward trend, rose by $\$ 107,000,000$. The sources of these increases were widely dispersed over all areas. The share of imports coming from the United States has fluctuated a little above or below 70 p.c. for many years. Since 1954 when it reached its highest point in the 1950 's (almost 73 p.c.), the United States proportion fell fractionally but consecutively to 67 p.c. in 1961. In 1962, however, the trend was reversed and it rose to 68.7 p.c. or about the same as in 1958.

The first merchandise export surplus since 1953 occurred in 1961 when it amounted to $\$ 125,000,000$; this was in marked contrast to the import surpluses of previous years iranging from $\$ 100,000,000$ to more than $\$ 700,000,000$. In 1962 the greater increase in mports over exports reduced the surplus to $\$ 90,000,000$.

The trade returns for the first eight months of 1963 show a continuation of the improvement in exports. Total exports were about 7 p.c. higher than in the same period of 1962. Imports, on the other hand, were about the same as in the corresponding period of the previous year, although the latter months were higher than the abnormally low first quarter. In the first half of 1963, details available for exports indicate the increase to have been predominantly in lumber, aluminum, copper and nickel and manufactured and miscellaneous goods.

From January to August, inclusive, the over-all trade balance shifted from a deficit of $\$ 98,000,000$ in 1962 to a surplus of $\$ 175,000,000$ in 1963 . The share of exports going to countries other than the United States recovered to 44 p.c. Imports from both Britain and the United States were lower than a year previously, while those from other countries were somewhat higher.

## PART II.-FOREIGN TRADE STATISTICS*

## Section 1.-Explanatory Notes on Canadian Trade Statistics

Sources.-Canadian foreign trade statistics are compiled from information recorded on customs documents received in the Dominion Bureau of Statistics from the various customs ports in Canada (except for exports of electric energy, which are based on data received from the National Energy Board). Record is kept of value and, whenever possible, of quantity. In considering these trade figures, it should be noted that the statistics do not necessarily reflect the financial transactions relating to the movement of goods since the method and time of payment are affected by many factors.

[^287]Coverage.-"Domestic exports" or "exports of Canadian produce" include exports of goods wholly produced in Canada together with exports of previously imported goods that have been changed in form by further processing in Canada. "Re-exports" or "exports of foreign produce" include previously imported goods that are exported from Canada in the same form as when imported.
"Imports" or "imports entered for consumption" include all goods that enter Canada and are cleared through customs for domestic sale or use, i.e., imports on which all duties are paid and which have passed from customs control into the possession of the importer. Goods re-exported without being cleared for domestic consumption are not included. It should be noted that the fact that imports have been "entered for consumption" does not necessarily imply that the goods will all be consumed in Canada but only that consumption can take place without further customs formalities.

The most important exclusions from export totals are: gold, goods shipped to $\mathrm{Ca}-$ nadian Armed Forces or diplomats stationed abroad, goods financed under the Defence Appropriation Act and shipped to other NATO countries, temporary exports for exhibition or competition, fuel and stores sold to foreign vessels and aircraft in Canada, settlers' effects, private donations and gifts, and identifiable tourist purchases.

The most important exclusions from import totals are: gold, goods for use of the United States Armed Forces stationed at treaty bases in Canada, Canadian-owned military equipment returned to Canada, ships imported for use in foreign trade and ships of British construction and registry imported for use in the coasting trade, temporary imports for exhibition or competition, fuel and stores purchased by Canadian vessels and aircraft abroad, settlers' effects, private donations and gifts, tourist purchases exempt from duty, and goods imported for foreign armed forces or diplomats stationed in Canada.

From Jan. 1, 1960, a new category was established in both export and import statistics entitled "Special Transactions-Non-Trade". This category includes certain commodity movements which either have no international financial implications or, for various reasons, are better considered separately from merchandise trade in economic analysis. The value of transactions of these types is now excluded entirely from published totals of Canadian merchandise trade, and do not appear in this volume, but statistics for the classes of this category are contained in the regular monthly export and import reports.

Beginning with statistics for January 1961, a new Export Commodity Classification was used, based on the Standard Industrial Classification developed in the DBS as a tool for integrating statistical series derived from different sources. Whereas the classification previously used classified commodities primarily according to the material of which they were chiefly composed, the new classification places commodities in sections mainly according to stage of processing and purpose, as follows: Live Animals; Food, Feed, Beverages and Tobacco; Crude Materials, Inedible; Fabricated Materials, Inedible; End Products, Inedible; and Special Transactions-Trade.

As part of the change to the new classification, the commodity detail shown in export statistics has been modernized by eliminating statistics on many commodities of minor significance and instituting new classes for many commodities of greater importance. The grouping system employed in the new classification also makes easier the identification of other commodities which may merit separate specification. For most of the commodities of greatest importance in Canadian exports, the classes of the new Export Commodity Classification are substantially identical with those of its predecessor.

It is expected that a similar new commodity classification will be introduced for import statistics in 1964.

Valuation.-Exports are normally valued f.o.b. point of consignment from Canada, i.e., at the actual amount received or to be received by the exporter in Canadian dollars, exclusive of inland freight, ocean freight, insurance, handling and other charges.

Imports are normally valued f.o.b. point of consignment to Canada, i.e., excluding inland freight, ocean freight, insurance, handling and export or import duties. The statistical value of imports is usually the value as determined for customs duty purposes, which is basically the fair market value at which equivalent goods would be sold for home use in the country from which the imports were received; the customs value of imports usually corresponds to the invoice value of the goods. From Jan. 1, 1959, the statistical value of imports on which dumping duty has been collected is considered to be the value of the goods as declared by the importer, i.e., the value for duty less the amount of the dumping duty. This change was introduced to conform with the principle that trade statistics should show, whenever possible, the actual amount paid for imports; previously the statistical value of such imports was considered to be the value for duty.

Country Classification.-Trade is credited to countries on the basis of consignment. For exports from Canada, the country of consignment is that country to which goods are, at the time of export, intended to pass without interruption of transit except in the course of transfer from one means of conveyance to another. For imports into Canada, the country of consignment is the country from which the goods came without interruption of transit except in the course of transfer from one means of conveyance to another. This is not necessarily the country of actual origin, since goods produced in one country may be imported by a firm in another country and re-sold to Canada; in such cases the second country is the country of consignment to which the goods are credited. There is one exception to this rule; an attempt is made to classify by country of origin goods produced in South America, Central America, Bermuda and the Antilles and consigned to Canada from the United States. The effect of this procedure, in force since 1946, is to reduce slightly the imports credited to the United States and to increase those credited to South and Central American countries.

The country sub-totals, which formerly related to Commonwealth countries only, now include trade with other countries entitled to Preferential rates of duty (the Republic of Ireland and the Republic of South Africa). These totals are now described as "Commonwealth and Preferential".

Discrepancies in Trade Statistics between Canada and Other Countries.Canada's statistics of exports are rarely in exact agreement with the import statistics of its customers and parallel differences occur with Canadian imports. Major factors contributing to these discrepancies include:-
(1) Differences in the system of valuation used by Canada and those of other countries, especially with respect to the treatment of transportation charges.
(2) Differences in the statistical treatment of special categories of trade, such as armaments and military supplies, government-financed gift or mutual aid shipments, postal and express shipments, or warehouse trade.
(3) Differing definitions of territorial areas.
(4) Differing systems of geographical classification of trade, notably the consignment system used by Canada and the actual origin or ultimate destination system in use by some other countries.
(5) Differences in the time at which trade is recorded in the statistics of partner countries caused by the time required for goods to move from one country to another.

## Section 2.-Total Foreign Trade

In considering the figures in Sections 2 to 6, reference should be made to the explanatory notes on trade in Section 1. Exports and imports of gold are excluded from all tables.

## 1.-Value of Total Foreign Trade of Canada (excluding Gold), 1948-62

Nore.-Figures have been revised to cover the adjustment for "Special Transactions-Non-Trade"; see p. 912.

| Year | Exports |  |  | Imports |  |  | Balance of Trade: Excess of Exports ( + ) Imports (-) |

| 1962. | 6,178,523 | 169,190 | 6,347,713 | 3,479,930 | 2,777,884 | 6,257,814 | + 89,899 |

Treatment of Gold in Trade Statistics.-The general use of gold as a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors rather than by ordinary trade or commercial considerations. Gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price. Also, gold may be bought or sold internationally without any physical movements of the metal, such transactions being recognized by simply setting aside or 'ear-marking' the metal in the vaults of some central bank.

For these reasons movements of gold in a primary or semi-fabricated state are excluded from the totals of Canada's commodity trade. However, since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published as a supplement to the trade statistics. Because this series is calculated on a production basis, a division of the figures into transactions with individual countries is not possible.

## 2.-New Gold Production Available for Export, by Month, 1955-62

Nore.-Since Mar. 21, 1956, mines not receiving aid under the Emergency Gold Mining Assistance Act have been allowed to sell their gold to private residents and non-residents, either for export or for safe-keeping in Canada. Such sales, commencing in April 1956, are included in the figures of new gold production available for export.
(Millions of dollars)

[^291]The proportion of imports subject to duty varies widely between countries and geographic areas. Generally, the Canadian tariff imposes duties on a greater proportion of manufactured goods than of natural products. Countries supplying chiefly manufactures to Canada tend to have duties charged on a greater proportion of their goods and also to have relatively higher average ad valorem rates of duty charged on their goods than is the case with countries supplying chiefly natural products. Variations in the proportion of imports dutiable as between different countries or in the average ad valorem rates of duty charged on imports from different countries therefore do not necessarily indicate differences in the tariff relations between Canada and these countries.

Detailed Exports and Imports.-Detailed statistics of all commodities of any importance exported from Canada to all countries, to Britain and to the United States during the years 1961 and 1962 are given in Table 11; corresponding statistics for imports into Canada appear in Table 12. An explanation of the different classifications used in these tables is given on p. 912.
11.-Domestic Exports from Canada to All Countries, to Britain and to the United States, by Section and Commodity, 1961 and 1962

| Section and Commodity | All Countries |  | Britain |  | United States |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1961 | 1962 | 1961 | 1962 | 1961 | 1962 |
|  | \$'000 | \$'000 | \$'000 | \$'000 | \$'000 | \$'000 |
| Live Animals. | 66,901 | 68,054 | 184 | 105 | 61,060 | 64,422 |
| Food, Feed, Beverages and Tobacco. | 1,197,803 | 1,172,135 | 238,240 | 270,282 | 298,121 | 305,780 |

## Section 5.-Trade by Origin and Degree of Manufacture

Tables 13 and 14 classify exports and imports, respectively, according to origin, by group and degree of manufacture for the years 1959 and 1960. These were the latest figures available for this classification at the time of going to press.

## 13.-Exports according to Origin, by Group and Degree of Manufacture, 1959 and 1960

## Section 6.-Comparison of Value, Price and Volume of Foreign Trade

In recent years there has been a substantial increase in the value of Canada's exports and imports. Changes in the value of trade, however, are the joint product of changes in the volume of goods traded and in the prices at which transactions are conducted. To assess the significance of value changes, it is desirable to isolate the contributions made to them by the price and volume factors.

Special indexes of export and import prices have been developed to provide this information. These indexes are based chiefly on unit values (average prices) calculated from the trade statistics, supplemented by information on wholesale and retail prices. Price relatives are calculated for a sample of commodities representing the greater part of export and import trade, and these relatives are weighted by the percentage of 1948 trade represented by each commodity in the sample in obtaining group and total indexes. By dividing these price indexes into the trade values the effects of price change are removed from the values, or by dividing the price index into an index of values on the same timebase an index is obtained showing changes in the volume of trade from year to year.

The grouping of commodities used in these calculations differs from that of the regular trade statistics, the changes being desirable to simplify the pricing problem. The chief differences are that the first two main groups of the trade statistics have been combined into one group, "agricultural and animal products", and that the sub-group "rubber and its products" has been transferred from this group to the "miscellaneous" group. The declared values of domestic exports and imports have been revised to cover the adjustment for "Special Transactions-Non-Trade". An explanation of that ;adjustment is given at p. 912. Table $\mathbf{1 5}$ shows the revised values of trade adjusted for pricing purposes and the value, price and volume indexes of Canadian trade for 1959-62.

# 15.-Declared Values, and Value, Price and Physical Volume Indexes of Foreign Trade, by Commodity Group, 1959-62-concluded 

${ }^{1}$ The groups, though classified by component material, differ slightly from conventional groups (see text, p. 912).

## PART III.-THE GOVERNMENT AND FOREIGN TRADE

## Section 1.-Federal Foreign Trade Services*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, largely because the productive capacity of Canada is greater than the ability of its population to consume the output of farms, factories, forests, fisheries and mines. Every effort is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the Canadian economy. It is appreciated, however, that two-way trade should be encouraged in order that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore, many commodities that are not indigenous to this country must be imported. Some of these are required for industrial processes and others may be classed as consumer goods necessary for the maintenance of the Canadian standard of living.

Although many private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls imposed by many countries for a variety of reasons, together with foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without assistance from government representatives.

The federal Department of Trade and Commerce, the primary function of which is the promotion of external trade, makes available to businessmen a wide variety of services to assist them in selling their products abroad. These services are provided by the Department's head office in Ottawa, four regional offices in Canada, and a corps of Trade Commissioners stationed around the world.

The highlight of the 1963 trade promotion program of the Department was "Operation World Markets", a comprehensive four-stage campaign which took place from Mar. 23 to May 3. It included a program entitled World Markets Machinery, held Mar. 23 to 31, for which nearly 200 foreign businessmen and government officials were brought to Canada; a National Canadian Samples Show, held in Toronto Apr. 2 to 4, attended by more than 600 buyers from Britain, Ireland, Western Europe, the West Indies and the United States; an Export Trade Promotion Conference, held in Ottawa Apr. 16 to May 3, at which 1,143 Canadian businessmen discussed export opportunities with Trade Commissioners brought from their posts abroad; and a Trade Commissioner Conference which carried out detailed group studies and discussions on special problems encountered in trading areas abroad.

Services available from the various branches, divisions and agencies of the Department of Trade and Commerce are described below. The work of these entities is interrelated, each operating in its own field but working closely with the others to effect the over-all objective of trade promotion.

Trade Commissioner Service.-The Trade Commissioner Service is the overseas arm of the Department and is actively engaged in the promotion of Canadian trade and the protection of Canada's commercial interests; 64 offices are maintained in 47 countries.

Every effort is made by the Trade Commissioners to bring Canadian exporters and prospective buyers together. On their own initiative, and in response to requests from the Department and Canadian businessmen, they study potential markets for specific Canadian commodities and services. Reports are provided on the demand in the country concerned, prices, competition, trade and exchange regulations, tariffs, shipping and packaging requirements, credit terms, channels of distribution, labelling regulations, etc. Inquiries from local businessmen for goods obtainable from Canada are forwarded to the Department in Ottawa, or directly to Canadian firms in a position to supply the products required.

[^298]The supervision of Canadian exhibits at overseas trade fairs and the provision of assistance to participating Canadian firms is an important function of many offices. Trade commissioners make local arrangements for and travel with Canadian trade missions visiting overseas markets. They also seek sources of supply for a wide variety of goods on behalf of Canadian importers.

In developing trade opportunities, Canada's trade commissioners travel extensively in their territories, visit leading industrial and commercial centres, and call on government officials, businessmen, trade associations and municipal authorities in an effort to arouse interest in Canadian products. They establish social contacts with commercial interests, thereby developing goodwill for Canada and Canadian products, while creating connections for Canadian exporters and facilitating the collection of trade information. They return to Canada at periodic intervals and make tours of Canadian industrial and commercial centres. Such direct contacts enable them to discuss specific problems with businessmen and bring into focus the Canadian commercial scene.

In countries where Canada has a diplomatic mission, the Canadian trade office is the commercial division and the trade commissioner has the rank of Minister (Commercial), Minister-Counsellor (Economic), Commercial Counsellor or Commercial Secretary. When attached to a consulate, he carries the title of Deputy Consul General (Commercial), Consul (Commercial), or Vice-Consul (Commercial), according to his rank, in addition to that of Trade Commissioner. He may also be the Consul General, in charge of the office. Where trade offices are detached and do not form part of a diplomatic mission, the trade commissioner may also be required to undertake consular, immigration and other duties as the sole representative of Canada.

CANADIAN FOREIGN TRADE OFFICES ABROAD, AS AT SEPT. 21, 1963
Argentina.-Commercial Counsellor, Canadian Embassy, Bartolome Mitre 478, Buenos Aires. Territory includes Paraguay.

Australla.-
Sydney: Commercial Counsellor for Canada, 21st Floor A.M.P. Bldg., Circular Quay, Sydney. Mail: P.O. Box 3952 G.P.O.
Melbourne: Commercial Counsellor for Canada, Mobile Centre, 2 City Road, South Melbourne.
Canberra: Commercial Counsellor, Office of the High Commissioner for Canada, Commonwealth Ave., Canberra.
Austria.-Commercial Counsellor for Canada, Opernringhof, Opernring 1, Vienna 1. Mail: P.O.
Box 106, Vienna 1/15. Territory includes Albania, Bulgaria, Czechoslovakia, Hungary, Romania and Yugoslavia.

Belgrum.-Commercial Counsellor, Canadian Embassy, 35 rue de la Science, Brussels 4. Territory includes Luxembourg, European Economic Community, European Atomic Energy Community and European Coal and Steel Community.
Brazil.-
Rio de Janeiro: Commercial Counsellor, Canadian Embassy, Edificio Metropole, Av. Presidente Wilson 165, Rio de Janeiro. Mail: Caixa Postal 2164-ZC-00.
São Paulo: Consul and Trade Commissioner, Canadian Consulate, Edificio Alois, Rua 7 de Abril 252, São Paulo. Mail: Caixa Postal 6034.

Britain.-
London: Minister (Commercial), Office of the High Commissioner for Canada, One Grosvenor Square, London W.1.
Liverpool: Canadian Government Trade Commissioner, Martins Bank Bldg., Water Street, Liverpool.
Glasgow: Canadian Government Trade Commissioner, Cornhill House, 144 West George St., Glasgow C.2, Scotland.
Belfast: Canadian Government Trade Commissioner, 15-17 Chichester St., Belfast 1, Northern Ireland.

Camgroon.-Commercial Division, Canadian Embassy, Soppo Priso Bldg., rue Joseph Clerc,
Yaounde. Mail: P.O. Box 572. Territory includes Central African Republic, Chad, Congo (Brazzaville) and Gabon.

Ceylon.-Commercial Division, Office of the High Commissioner for Canada, 6 Gregory's Road, Cinnamon Gardens, Colombo. Mail: P.O. Box 1006.
Chile.-Commercial Secretary, Canadian Embassy, 5th Floor, Agustinas 1225, Santiago. Mail: Casilla 771.
Colombia.- Commercial Secretary and Consul, Canadian Embassy, Edificio Banco de Los Andes, Carrera 10, No. 16-92, Bogota. Airmail: Apartado Aereo 8582.' Surface Mail: Apartado 1618. Territory includes Ecuador.
Congo.-Chargé d'Affaires, Canadian Embassy, C.C.C.I. Bldg., Boulevard Albert 1er, Leopoldville 1. Mail: Boite Postale 8341.
Cuba.-Commercial Division, Canadian Embassy, Calle 30, No. 518, esquina 7a Avenida, Miramar, Havana. Mail: Gaveta 6125.

Denmark.-Commercial Counsellor, Canadian Embassy, Prinsesse Maries Allé 2, Copenhagen V. Territory includes Greenland and Poland.

Dominican Republic.-Commercial Secretary and Vice Consul, Canadian Embassy, Edificio Copello 408, Calle El Conde, Santo Domingo. Mail: Apartado 1393. Territory includes Puerto Rico.
France.-Commercial Counsellor, Canadian Embassy, 35 Ave. Montaigne, Paris $8^{e}$. Territory includes Algeria and Morocco.
Germany.-
Bad Godesberg: Commercial Counsellor, Canadian Embassy, Frankengrabenstrasse 35, Bad Godesberg.
Duesseldorf: Consul, Canadian Consulate, Bismarckstrasse 95, 4 Duesseldorf 1.
Hamburg: Consul General, Canadian Consulate General, Ferdinandstrasse 69, Hamburg.
Ghana.-Commercial Counsellor, Office of the High Commissioner for Canada, E115/3 Independence Ave., Accra. Mail: P.O. Box 1639. Territory includes Guinea, Ivory Coast, Liberia, Mali, Mauritania, Togo and Upper Volta.
Greece.-Commercial Counsellor, Canadian Embassy, 31 Vassilissis Sophias Ave., Athens 138. Territory includes Turkey.
Guatemala.-Commercial Counsellor, Canadian Embassy, 5a Avenida 11-70, Zone I, Guatemala City, C.A. Airmail P.O. Box 400. Surface mail: P.O. Box 444 . Territory includes Costa Rica, El Salvador, Honduras, Nicaragua, Panama and Canal Zone.
Harti.-Chargé d'Affaires ad interim and Consul, Canadian Embassy, Route du Canape Vert, St. Louis de Turgeau, Port-au-Prince. Mail: P.O. Box 826.

Hong Kong.-Canadian Government Trade Commissioner, Hong Kong and Shanghai Banking Corporation Bldg., Hong Kong. Mail: P.O. Box 126. Territory includes Cambodia, Communist China, Laos, Viet Nam and Macao.

India.-
New Delhi: Commercial Counsellor for Canada, 13 Golf Links Road, New Delhi 1. Mail: P.O. Box 11. Territory includes Bhutan, Nepal and Sikkim.

Bombay: Canadian Government Trade Commissioner, Gresham Assurance House, Mint Road, Bombay 1-BR. Mail: P.O. Box 886.
Iran.-Commercial Division, Canadian Embassy, Bezrouke Bldg., Corner of Takht Jamshid Ave. and Forsat St., Tehran. Mail: P.O. Box 1610.

Ireland.-Commercial Counsellor for Canada, 66 Upper O'Connell St., Dublin.
IsRaEl.-Commercial Secretary for Canada, 84 Hahashmonaim St., Tel Aviv. Mail: P.O. Box 20140. Territory includes Cyprus.

Italy. -
Rome: Commercial Counsellor, Canadian Embassy, Via G.B. De Rossi 27, Rome. Territory includes Libya and Malta.
Milan: Consul General.
Jamaica.-Commercial Counsellor, Office of the High Commissioner for Canada, 32 Duke St. (corner Duke and Barry Sts.), Kingston. Mail: P.O. Box 225. Territory includes Bahamas and British Honduras.

Japan.-Minister (Commercial), Canadian Embassy, 16, Omote-Machi, 3-Chome, Akasaka, Minato-ku, Tokyo. Mail: c/o Akasaka Post Office, Tokyo. Territory includes Korea and Okinawa.

Lebanon.-Commercial Counsellor, Canadian Embassy, Alpha Bldg., Rue Clemenceau, Beirut. Mail: Boite Postale 2300. Territory includes Iraq, Jordan, Persian Gulf Area, Saudi Arabia and Syria.

Mexaco.-Commercial Counsellor, Canadian Embassy, Melchor Ocampo 463, 7th Floor, Mexico 5, D.F. Mail: Apartado 25364.
netherlands.-Commercial Counsellor, Canadian Embassy, Sophialaan 5-7, The Hague.
New Zraland.-Commercial Counsellor, Office of the High Commissioner for Canada, Government Life Insurance Bldg., Wellington. Mail: P.O. Box 1660. Territory includes Fiji, Samoa, Tahiti and Tonga.

Nigeria.-Commercial Secretary, Office of the High Commissioner for Canada, 4th Floor Barclays Bank Bldg., 40 Marina Road, Lagos. Mail: P.O. Box 851. Territory includes Dahomey, Gambia, Niger, Senegal and Sierra Leone.

Norway.-Commercial Secretary, Canadian Embassy, Fridtjof Nansens Plass 5, Oslo 1. Mail: P.O. Box 1379-Vika. Territory includes Iceland.

Pakistan.-Commercial Secretary, Office of the High Commissioner for Canada, Hotel Metropole, Victoria Road, Karachi. Mail: P.O. Box 3703. Territory includes Afghanistan.

Pero.-Commercial Secretary, Canadian Embassy, Edificio Boza, Carabaya 831, Plaza San Martin, Lima. Mail: Casilla 1212. Territory includes Bolivia.

Pheurppines.-Consul General and Trade Commissioner, Canadian Consulate General, L \& S Bldg., 3rd Floor, 1414 Dewey Blvd., Manila. Mail: P.O. Box 1825. Territory includes Republic of China (Taiwan).

Portugal.-Commercial Counsellor, Canadian Embassy, Rua Marques de Fronteira, No. 8-4에 ${ }^{\circ}$, Lisbon. Territory includes Angola, Azores, Cape Verde Islands, Madeira and Portuguese Guinea.

Rhodesia and Nyasaland, Federation of.-Canadian Government Trade Commissioner, 8th Floor, Grindlays Bank Chambers, Baker Ave., Salisbury. Mail: P.O. Box 2133. Territory includes Seychelles Islands and Zanzibar.

Singapore.-Canadian Government Trade Commissioner, American International Bldg., Robinson Road and Telegraph St., Singapore. Mail: P.O. Box 845. Territory includes Brunei, Burma, Federation of Malaya, Indonesia, North Borneo, Sarawak and Thailand.

South Africa.-
Johannesburg: Canadian Government Trade Commissioner, Mobil House, 17th Floor, Corner Rissik and De Villiers Sts., Johannesburg. Mail: P.O. Box 715. Territory includes Madagascar, Mauritius, Mozambique and Reunion.
Cape Town: Trade Commissioner, 13th Floor, African Life Centre, St. George's St., Cape Town. Mail: P.O. Box 683. Territory includes St. Helena and South West Africa.

Sparn.-Commercial Counsellor, Canadian Embassy, Edificio España, Avenida de Jose Antonio 88, Madrid. Mail: Apartado 117. Territory includes Balearic Islands, Canary Islands, Gibraltar, Rio Muni and Rio de Oro.

Swrden.-Commercial Counsellor, Canadian Embassy, Strandvagen, 7-C, Stockholm. Mail: P.O. Box 14042. Territory includes Finland.

Switzerland.-Commercial Counsellor, Canadian Embassy, Kirchenfeldstrasse 88, Berne. Territory includes Tunisia.

Trintdad and Tobago- - Commercial Counsellor, Office of the High Commissioner for Canada, Colonial Bldg., 72 South Quay, Port-of-Spain. Mail: P.O. Box 125. Territory includes Barbados, Windward and Leeward Islands, British Guiana, French Guiana, Surinam, Guadeloupe and Martinique.

Union or Soviet Sociaust Republics.-Commercial Counsellor, Canadian Embassy, 23 Starokonyushenny Pereulok, Moscow.

United Arab Republic.-Commercial Counsellor, Canadian Embassy, 6 Sharia Rouston Pasha, Garden City, Cairo. Mail: Kasr el Doubara Post Office. Territory includes Aden, Sudan, Ethiopia and Yemen.

United States.-
Washington: Minister (Economic), Canadian Embassy, 1746 Massachusetts Ave., N.W., Washington 36, D.C.
New York City: Deputy Consul General (Commercial), Canadian Consulate General, 680 Fifth Ave., New York City 19. Territory includes Bermuda.
Boston: Consul and Trade Commissioner, Canadian Consulate General, 607 Boylston St., Boston 16.
Chicago: Consul and Trade Commissioner, Canadian Consulate General, 310 South Michigan Ave., Suite 2000, Chicago 4.
Detroit: Consul and Trade Commissioner, Canadian Consulate, 1139 Penobscot Bldg., Detroit 26.

Los Angeles: Consul and Trade Commissioner, Canadian Consulate General, 510 West Sixth St., Los Angeles 14.
New Orleans: Consul and Trade Commissioner, Canadian Consulate General, Suite 1710, 225 Baronne St., New Orleans 12.
Philadelphia: Consul and Trade Commissioner, Canadian Consulate, 3 Penn Center Plaza, Philadelphia 2.
San Francisco: Consul General, Canadian Consulate General, 333 Montgomery St., San Francisco 4. Territory includes Hawaii.
Seattle: Consul General, Canadian Consulate General, The Tower Bldg., Seventh Ave. at Olive Way, Seattle 1. Territory includes Alaska.

Uruguay.-Commercial Division, Canadian Embassy, No. 1409 Avenida Agraciada, Piso 70, Montevideo. Mail: Casilla Postal 852. Territory includes Falkland Islands.

Venezuela.-Commercial Counsellor, Canadian Embassy, Avenida La Estancia No. 10, Ciudad Comercial Tamanaco, Caracas. Mail: Apartado 11452-Este. Territory includes Netherlands Antilles.

Trade Fairs and Missions Branch.-It is the function of this Branch, through its Trade Fairs Abroad Division and its Trade Missions Division, to organize and co-ordinate the trade fairs and missions programs sponsored by the Department. Liaison within the Department and program development are conducted through advisory committees-one on trade fairs abroad and another on trade missions. Each committee is convened and chaired by the Director of the Branch and includes representatives of all trade promotion branches of the Department.

The 1963 program of the Trade Fairs Abroad Division included exhibits in 35 trade fairs held in the United States, Britain and other European countries, Australia and Japan. At many of these exhibitions, selected Canadian companies displayed their products in individual booths within a Canadian exhibit. However, exhibits ranged in size from trade information booths manned by Departmental personnel to 'solo' fairs completely organized by the Department and involving upwards of 100 business firms. Outstanding was the solo fair held in the United States at Philadelphia, from Nov. 11 to 16, in which 103 Canadian firms participated. The 20 trade missions organized in 1963 by the Trade Missions Division included 13 teams of Canadian businessmen sent to study special markets in Europe, the United States, Latin America and the Middle East, and seven groups of business visitors brought to Canada from Argentina, Britain, Jamaica, Japan, Mexico, South Africa and Venezuela. Four missions were concerned with improving Canadian production in the furniture and machinery industries and the remainder to promoting the exports of a particular industry or commodity group. Both Divisions work in close co-operation with trade associations and other interested organizations outside the Department.

International Trade Relations Branch.-The function of the International Trade Relations Branch is to safeguard and improve terms of access for Canadian exporters in foreign markets. In the field of trade policy the Branch is concerned with the conduct
of Canadian trade relations with other countries, including the negotiation and administration of trade agreements and Canadian participation in international trade conferences such as those of the General Agreement on Tariffs and Trade. The Branch endeavours to find practical solutions for tariffs and other difficulties encountered in foreign markets by Canadian exporters and as a service to exporters provides expert information, advice and assistance on foreign tariffs, import and exchange controls, documentation requirements and other foreign governmental regulations affecting Canada's trade. The Branch also has responsibilities in relation to the export financing facilities available for the development of exports of Canadian capital equipment. Through the Area DivisionsCommonwealth, United States, European, Latin American and Asia and Middle East-the Branch is the central point of contact between Canada's Trade Commissioners abroad and the Department in Ottawa.

Trade Services Branch.-The functions of this Branch relate to transportation problems, export and import controls, trade directories, the administration of the Regional Offices and the provision of general guidance to firms seeking entry into the export field. These activities are conducted by three Divisions: the Transportation Division is concerned primarily with industrial transportation from the user's point of view, keeping in touch with developments and trends in shipping services and in freight rates; the Trade Controls Division administers the controls established under the Export and Import Permits Act; and the Allied Services Division administers the Department's Regional Offices and compiles the Exporter's Directory, a confidential list of firms engaged in or seriously interested in exporting commodities or services.

Commodities Branch.-The principal role of the Commodities Branch is to maintain close contact with the Canadian business community and become familiar with production and supply conditions. Emphasis is placed on the search for products and services, the sale of which can be promoted abroad. The Branch is organized into six divisionsAppliances and Commercial Machinery, Textiles and Consumer Goods, Forest Products, Chemicals, Metals and Minerals, and Engineering and Equipment. The divisions are staffed by Commodity Officers who are specialists in such fields as engineering services and plant equipment, electrical and electronic equipment, transportation and agricultural equipment, ferrous and non-ferrous metals, lumber, pulp and paper, chemicals and petroleum products, rubber and plastic, as well as a wide range of commercial and consumer products. These officers visit manufacturing plants and production facilities, attend and address meetings of business associations and study groups, prepare product reports and market surveys, provide information on trade opportunities, and advise on the export potential of products in markets abroad. In co-operation with the Canadian Government Exhibition Commission, they arrange for the display of Canadian products at trade fairs for the purpose of introducing them into new markets. They organize and accompany trade missions and also serve as delegates to international commodity conferences to study world market conditions and to consider corrective adjustments in conjunction with industry advisers.

Agriculture and Fisheries Branch.-This Branch, concerned primarily with the export of agricultural, fisheries and food products to world markets, operates through four specialized divisions-Grain, Fisheries, Livestock and Animal Products, and Plant Products. It works closely with other branches of the Department, particularly the Trade Commissioners Service and maintains liaison with food processors, agricultural producers, trade associations, provincial marketing boards and with other government departments, both federal and provincial. The Branch is particularly active in those trade fairs sponsored by the Department which exhibit agricultural, food and fisheries products.

Branch officers organize trade missions for the agricultural and fisheries processing industries and arrange for visits of foreign buyers to Canada, thus providing effective stimulation to the export of such products. As a service to these industries, surveys of foreign markets are undertaken as well as special studies relating to trade. A continuing assessment of foreign market conditions with their competitive factors is obtained from Canadian Trade Commissioners abroad, and the Branch keeps the industries fully informed of market potentials or of circumstances that appear to be detrimental to trade. In turn, the Trade Commissioners are kept informed of export possibilities of Canadian products and their competitive position.

Branch functions include participation in activities relating to international commodity agreements. The Director serves as departmental representative on the Interdepartmental FAO Committee, and the Branch provides the secretariat for the Canadian Fur Council and the Interdepartmental Fisheries Trade Committee. During 1963, delegates were provided for the International Coffee Conference, meetings of the International Sugar Council, the FAO Cocoa Study Group, and various commodity meetings under FAO and GATT. Branch officials also serve on many interdepartmental commodity committees.

Trade Publicity Branch.-The Trade Publicity Branch is responsible for the advertising: publicity and public information activities of the Department. Its function is to promote an awareness of, and interest in, Canadian products in foreign markets and to publicize the activities of all Branches, so as to further the Department's objectives both in Canada and abroad. All communications media are employed to these ends, with particular emphasis on the graphic arts. The Branch has three main divisions.

The Editorial and Art Services Division is responsible for the writing, art work, design and production of all advertising and printed matter for the Department. While its interests range over all aspects of the Department's work, its primary objective is to publicize Canadian products in foreign markets. This involves the production of booklets, catalogues, folders, posters and other material prepared for distribution at trade fairs abroad or at points being visited by Canadian trade missions. Advertising campaigns, using all appropriate media, are prepared to attract attention to Canadian exhibits at trade fairs or to acquaint foreign audiences with the services and assistance available to them from the Trade Commissioner Service at posts abroad. The Division produces Canada Courier, a publication on Canadian exports and exporters, which is distributed to businessmen abroad at periodic intervals.

A second Division edits and publishes Foreign Trade, a fortnightly magazine, and Commerce exterieur, a monthly, which are distributed to Canadian subscribers and are designed to inform and assist them in developing export markets. Each issue contains information on foreign exchange rates, trade and tariff regulations, marketing information and other valuable trade data. Articles by Trade Commissioners abroad discuss marketing needs and requirements in the areas they serve.

The Media Relations Division prepares and distributes press releases, articles, photographs, speeches and background information to newspapers, radio and television stations, magazines and trade publications throughout Canada. It provides publicity material for distribution by Trade Commissioners abroad and distributes motion picture films and TV film clips to promote interest in Canada as a supplier of a wide range of commodities.

Export Credits Insurance Corporation.-The Export Credits Insurance Corporation was established under the provisions of the Export Credits Insurance Act, 1944 (RSC 1952, c. 105 as amended) and is administered by a Board of Directors that includes the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance. It operates in two fields-export credits insurance and export financing.

Insurance is available to all persons or corporations carrying on business in Canada to cover export sales made on customary credit terms. It provides protection against risks involved in the export, manufacture, treatment or distribution of goods, or the rendering of engineering, construction, technical or similar services. The main risks covered include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country.

The insurance is available under three main classifications-general commodities, capital goods, and services. General commodities policies cover a policyholder's export sales to all countries except the United States for a period of one year, and are renewable. Two types are available: the contracts policy, which insures an exporter against loss from the time he books an order until payment is received; or the shipments policy, obtainable at lower rates of premium and covering the exporter from the time of shipment until payment is received.

Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit up to a maximum of five years may be necessary. Specific policies are issued for transactions involving capital goods but the general terms and conditions are the same as those applicable to policies for general commodities. Specific policies are also issued to cover engineering, construction, technical or similar service contracts entered into between Canadian firms and persons in foreign countries who have agreed to purchase such services.

The Corporation insures exporters on a co-insurance basis, the exporter retaining a small percentage of the risk involved, and the same principle operates in the distribution of recoveries obtained after the payment of a claim.

The Corporation has authority to enter into certain contracts of insurance, which, although they would impose upon the Corporation a liability for a term or in an amount in excess of that normally undertaken, would, in the opinion of the Minister of Trade and Commerce, be considered in the national interest. The Corporation also administers direct financing facilities available under the Act in cases where export sales involving capital goods are of such a nature as to warrant credit terms in excess of five years. The Corporation, when authorized, buys the promissory notes or other negotiable instruments of the foreign purchaser.

Canadian Government Exhibition Commission.-The Canadian Government Exhibition Commission organizes, designs, produces and administers all Canadian exhibits at fairs and exhibitions abroad in which the Canadian Covernment participates. It also advises private exhibitors and their agents on the best means of displaying Canadian products at trade fairs, and prepares domestic exhibits for government departments and agencies on request. It is responsible for international fairs and exhibitions held in Canada that are financed and sponsored by the Government of Canada.

Canadian Government Travel Bureau.-The Canadian Government Travel Bureau is in operation to encourage tourist travel to Canada and to co-ordinate the tourist promotion conducted by the provinces, transportation companies and national, regional and local tourist associations. The Bureau undertakes extensive tourist advertising campaigns abroad, provides tourist publicity material for foreign newspapers, magazines, radio and television outlets, and annually handles more than $1,000,000$ inquiries from potential visitors to Canada. It operates tourist offices in New York, Chicago and San Francisco in the United States and in London, England.

## Section 2.-The Development of Tariffs

Limitations of space in the Year Book have made it necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships in force at present and to summarize as much as possible historical data and details of preceding tariffs, giving references to those editions of the Year Book where extended treatments may be found.

## Subsection 1.-The Canadian Tariff Structure*

The Canadian Tariff consists, in the main, of three sets of tariff rates-British Preferential, Most-Favoured-Nation, and General.

British Preferential Tariff rates are, with some exceptions, the lowest rates. They are applied to imported commodities from British countries, with the exception of Hong Kong, when conveyed without trans-shipment from a port of any British country enjoying the benefits of the British Preferential Tariff into a port of Canada. Some Commonwealth countries have trade agreements with Canada which provide for rates of duty, on certain specified goods, lower than the British Preferential rates.

Most-Favoured-Nation rates are usually higher than the British Preferential rates and lower than the General Tariff rates. They are applied to commodities imported from countries with which Canada has trade agreements. These rates would apply to British countries when they are lower than the British Preferential Tariff rates. The most important trade agreement concerning the effective rates applied to goods imported from countries entitled to Most-Favoured-Nation rates is the General Agreement on Tariffs and Trade (GATT).

General Tariff rates are applied to goods imported from the few countries with which Canada has not made trade agreements.

There are numerous goods which are duty free under the British Preferential Tariff, or under both the British Preferential and Most-Favoured-Nation Tariffs, or under all Tariffs.

Valuation.-In general, the Customs Act, as amended effective Sept. 6, 1958, provides that the value for duty of imported goods shall be the fair market value of like goods as established in the home market of the exporter at the time when and place from which the goods are shipped directly to Canada when sold " $a$ ) to purchasers located at that place with whom the vendor deals at arm's length and who are at the same or substantially the same trade level as the importer, and (b) in the same or substantially the same quantities for home consumption in the ordinary course of trade under competitive conditions". In cases where like goods are not sold for home consumption but similar goods are sold, the value for duty shall be the cost of production of the goods imported plus an amount for gross profit at least equal in percentage to that earned on the sale of similar goods in the country of export. The value for duty may, in no case, be less than the amount for which the goods were sold to the purchaser in Canada, exclusive of all charges thereon after their shipment from the country of export. Internal taxes in the country of export (when not incurred on exported goods), the cost of shipping goods to Canada and similar charges do not normally form part of the value for duty. There are, of course, further provisions for determining value for duty under the Act.

Dumping.-Sect. 6 of the Customs Tariff provides that when the actual selling price of goods being imported is less than the fair market value and the goods are of a class or kind made or produced in Canada, a special or dumping duty shall be collected. This duty is to be equal to the difference between the actual selling price and the fair market

[^299]value of the goods, except that it may not be more than 50 p.c. ad valorem. These provisions are designed to offset the advantage foreign exporters may achieve by exporting to Canada at less than the going prices.

Drawback.-There are provisions in the Customs and Excise Tax Acts for the repayment of a portion of the duty, sales and/or excise taxes paid on imported goods used in the manufacture of products later exported. The purpose of these drawbacks (as these repayments are called) is to assist Canadian manufacturers to compete in foreign markets with foreign producers of similar goods. A second class of drawback, known as "home consumption" drawbacks, is provided for under the Customs Tariff Act and applies to imported materials and/or parts used in the production of specified goods to be consumed in Canada.

The Tariff Board.-The organization and functions of the Tariff Board are described at pp. 112-113 of this volume.

## Subsection 2.-Tariff and Trade Arrangements with Other Countries as at Dec. 31, 1962

Canada's tariff arrangements with other countries fall into three main categories: trade agreements with a number of Commonwealth countries; the General Agreement on Tariffs and Trade (GATT); and other agreements and arrangements.

Canada accords preferential tariff treatment to all members of the Commonwealth and dependent territories with the exception of Hong Kong. In addition, preferences are extended to the Republics of Ireland and South Africa. The preferential arrangements with Britain, Australia, New Zealand, the West Indies, the Federation of Rhodesia and Nyasaland and the Republics of Ireland and South Africa are governed by bilateral trade agreements. A number of Commonwealth countries-India, Pakistan, Ghana, Nigeria, Tanganyika, Uganda and Kenya-do not accord preferential tariff treatment to Canadian goods. Canada's arrangements and agreements with Commonwealth countries have been modified on a number of occasions by the negotiations which Commonwealth countries have had with their non-Commonwealth trading partners in GATT.

Canada signed the Protocol of Provisional Application of the General Agreement on Tariffs and Trade on Oct. 30, 1947, and brought the General Agreement into force on Jan. 1, 1948. The Agreement provides for scheduled tariff concessions and the exchange of most-favoured-nation treatment among the contracting parties, and lays down rules and regulations to govern the conduct of international trade.

On Dec. 31, 1962, there were 44 contracting parties to the Agreement. The names of these, and the dates of their accession, are given in the list on pp. 948-956. In addition, Switzerland, Tunisia, Argentina and Yugoslavia have acceded provisionally. The contracting parties approved the provisional accession of the United Arab Republic, effective Jan. 9, 1963. Cambodia and Spain are expected to become full contracting parties in the near future. Poland also participates in the work of the GATT. Five rounds of major multilateral tariff negotiations have been held under the GATT-at Geneva in 1947, Annecy in 1949, Torquay in 1950-51 and again at Geneva in 1956 and 1960.

Canada already had most-favoured-nation trade agreements with most contracting parties prior to the effective date of the General Agreement. These arrangements continue in force in conjunction with the GATT. As an exception, however, the Canada-United States Trade Agreement was suspended for as long as both parties should continue to be contracting parties to the GATT.

Trade relations between Canada and many other countries are governed by trade agreements of various kinds, by exchange of most-favoured-nation treatment under Orders in Council, by continuation to newly independent states of the same treatment originally negotiated with the mother country and by even less formal arrangements.

# Tariff and Trade Arrangements with Commonwealth Countries as at Dec. 31, 1962 

| Country | Agreement | Principal Terms |
| :---: | :---: | :---: |
| Australla.................. | Trade Agreement signed Feb. 12, 1960; in force June 30, 1960. GATT effective Jan. 1, 1948. | Agreement includes schedules of tariff rates and exchange of British preferential rates on items not scheduled. May be terminated on six months notice. |
| Britain..................... | Trade Agreement signed Feb. 23, 1937, effective Sept. 1, 1937; modified by exchanges of letters Nov. 16, 1938 and Oct. 20, 1947. GATT effective Jan. 1, 1948. | Various concessions are granted by each country including exchange of preferential tariff rates. The Agreement (as modified) includes provisions relating to the Colonies, Dependencies and Trusteeships. |
| Ceylon. | Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective July 29, 1948. | Canada and Ceylon exchange preferential tariff treatment. |
| Cyprus. | Relations continue to be governed by Trade Agreement of 1937 with Britain. | Canada exchanges preferential treatment with Cyprus. |
| Ghana. | Relations continue to be governed by Trade Agreement of 1937 with Britain. <br> GATT effective Oct. 18, 1957. | Canada accords Ghana the British preferential rates, except on cocoa beans. <br> Exchange of most-favoured-nation treatment. |
| India........................ | Since 1897 Canada has unilaterally accorded British preferential treatment without contractual obligation. <br> GATT effective July 8, 1948 . | Canada accords British preferential treatment to India. <br> Exchange of most-favoured-nation treatment. |
| Jamaica, Trinidad, | Canada-British West Indies Trade Agreement signed July 6, 1925, | The parties exchange specified tariff preferences. Agreement |
| Bermuda, British | in force Apr. 30, 1927; Canadian | may be terminated on six |
| Guiana, British | notice of termination of Nov. 23, | months notice. |
| Honduras, and the <br> Leeward and <br> Windward Islands. | 1938, was replaced by notice of Dec. 27, 1939, which continued the Agreement. <br> GATT effective for Trinidad Aug. 31, 1962. <br> Jamaica, Barbados, Bermuda, British Guiana, British Honduras and the Leeward and Windward Islands participate in GATT. |  |
| Malaya, Federation of... | Relations continue to be governed by Trade Agreement of 1937 with Britain. <br> GATT effective Oct. 24, 1957. | Canada and Federation of Malaya exchange preferential tariff treatment. |
| New Zealand............. | Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. GATT effective July $26,1948$. | The parties exchange specific preferences on scheduled goods and reciprocally concede British preferential rates on items not scheduled. May be terminated on six months notice. |

# Tariff and Trade Arrangements with Commonwealth Countries as at <br> Dec. 31, 1962-concluded 

| Country | Agreement | Principal Terms |
| :---: | :---: | :---: |
| Nigeria, Federation of... | Relations continue to be governed by Trade Agreement of 1937 with Britain. <br> GATT effective Oct. 1, 1960. | Canada accords British preferential treatment to Nigeria. <br> Exchange of most-favoured-nation treatment. |
| Pakistan.................... | Canada unilaterally accords British preferential treatment without contractual obligation. GATT effective July 30, 1948. | Canada accords British preferential treatment to Pakistan. <br> Exchange of most-favoured-nation treatment. |
| Rhodesia and Nyasaland, Fedrration of. | Trade Agreement signed Feb. 6, 1958; effective Feb. 7, 1958. <br> GATT effective in Southern Rhodesia May 19, 1948; extended to whole Federation, Oct. 29, 1954. | Canada exchanges preferential tariffs with the Federation of Rhodesia and Nyasaland. |
| Sierra Leone.. | Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Apr. 27, 1961. | Canada and Sierra Leone exchange preferential tariff treatment. |
| Tanganyika. . . . . . . . . . . | Relations continue to be governed by Trade Agreement of 1937 with Britain. <br> GATT effective Dec. 9, 1961. | Canada accords British preferential treatment to Tanganyika. <br> Exchange of most-favoured-nation treatment. |
| Uganda. | Relations continue to be governed by Trade Agreement of 1937 with Britain. <br> GATT effective Oct. 9, 1962. | Canada accords British preferential treatment to Uganda. <br> Exchange of most-favoured-nation treatment. |

## Tariff and Trade Arrangements with Non-Commonwealth Countries as at Dec. 31, 1962

| Algeria. | Franco-Canadian Trade Agreement of 1933 applied to Algeria. | Since the creation of Algeria as an independent state in 1962, Canada has continued to grant most-favoured-nation rates. |
| :---: | :---: | :---: |
| Argentina. | Trade Agreement signed Oct. 2, 1941; provisionally in force Nov. 15, 1941. <br> Argentina has acceded to GATT provisionally. | Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months notice. |
| Austria. | GATT effective Oct. 19, 1951. | Exchange of most-favoured-nation treatment. |
| Belgium-Luxembourg.... | Convention of Commerce with Belgium-Luxembourg Economic Union (including Belgian colonies) entered into effect Oct. 22, 1924. <br> GATT effective Jan. 1, 1948. | Exchange of most-favoured-nation treatment. May be terminated on one years notice. |

Tariff and Trade Arrangements with Non-Commonwealth Countries as at Dec. 31, 1962-continued

| Country | Agreement | Principal Terms |
| :---: | :---: | :---: |
| Benelux (Belgium-Netherlands-Luxembourg Customs Union). | (See Belgium-Luxembourg and Netherlands). |  |
| Bolivia. | Order in Council of July 20, 1935, accepted Article 15 of BritainBolivia Treaty of Commerce of Aug. 1, 1911. | Exchange of most-favoured-nation treatment. May be terminated on one years notice. |
| Brazil. | Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. <br> GATT effective July 31, 1948. | Exchange of most-favoured-nation treatment. |
| Burma... | GATT effective July 29, 1948. | Exchange of most-favoured-nation treatment. |
| Burundi. | Belgo-Canadian Convention of Commerce of 1924 applied to Burundi. | Since Burundi's independence in 1960, Canada has continued to grant most-favoured-nation rates |
| Cambodia. | Franco-Canadian Trade Agreement of 1933 applied to Cambodia. | Since the creation of Cambodia as an independent state in 1955, Canada has continued to grant most-favoured-nation rates. |
| Cameroon.... | Franco-Canadian Trade Agreement of 1933 applied to Cameroons. | Since the creation of Cameroon as an independent state in 1960, Canada has continued to grant most-favoured-nation rates. |
| Central African Republic. | Franco-Canadian Trade Agreement of 1933 applied to Central African Republic. | Since the creation of the Central African Republic as an independent state in 1960, Canada has continued tograntmost-favourednation rates. |
| Crad. | Franco-Canadian Trade Agreement of 1933 applied to Chad. | Since the creation of Chad as an independent state in 1960, Canada has continued to grant most-favoured-nation rates. |
| Chile. | Trade Agreement signed Sept. 10, 1941; provisionally in force Oct. 15, 1941, and definitively on Oct. 29, 1943. <br> GATT effective Mar. 16, 1948. | Exchange of most-favoured-nation treatment. |
| China. | Modus vivendi signed Sept. 26, 1946. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| Colombia.................. | Treaty of Commerce with Britain of Feb. 16, 1866, applies to Canada. Modified by protocol of Aug. 20, 1912, and exchange of notes Dec. 30, 1938. <br> A Trade Agreement between Colombia and Canada was signed Feb. 20, 1916, but has not been put into force. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |

Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Dec. 31, 1962-continued

| Country | Agreement | Principal Terms |
| :---: | :---: | :---: |
| Congo, Republic of (Brazzaville). | Franco-Canadian Trade Agreement of 1933 applied to Congo (Brazzaville). | Since the creation of Congo (Brazzaville) as an independent state in 1960, Canada has continued to grant most-favoured-nation rates. |
| Congo, Republic of (Leopoldville). | Belgo-Canadian Convention of Commerce of 1924 applied to Congo (Leopoldville). | Since the Congo's independence in 1960, Canada has continued to grant most-favoured-nation rates. |
| Costa Rica. | Modus vivendi signed Nov. 18, 1950; brought into force Jan. 26, 1951. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| Cuba. | GATT effective Jan. 1, 1948. | Exchange of most-favoured-nation treatment. |
| Czechoslovakia............ | Convention of Commerce signed Mar. 15, 1928; in force Nov. 14, 1928. <br> GATT effective May 21, 1948. | Exchange of most-favoured-nation treatment. May be terminated on one years notice. |
| Dahomey. ................. | Franco-Canadian Trade Agreement of 1933 applied to Dahomey. | Since the creation of Dahomey as an independent state in 1960, Canada has continued to grant most-favoured-nation rates. |
| Denmark (including Greenland). | Treaties of Peace and Commerce with Britain of Feb. 13, 1660 and July 11, 1670, apply to Canada. GATT effective May 28, 1950. | Exchange of most-favoured-nation treatment. Declaration of May 9,1912 provides means for separate termination by Dominions on one years notice. |
| Dominican Republic...... | Trade Agreement signed Mar. 8, 1940; in force Jan. 22, 1941. GATT effective May 19, 1950. | Exchange of most-favoured-nation treatment including scheduled concessions. |
| Ecuador................... | Modus vivendi signed Nov. 10, 1950; in force Dec. 1, 1950. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| Egypt. | (See United Arab Republic). |  |
| El Salvador............... | Exchange of notes of Nov. 2, 1937; in force Nov. 17, 1937. | Exchange of most-favoured-nation treatment. May be terminated on four months notice. |
| Ethiopia. | Exchange of notes effective June 3, 1955. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| Finland.. | Exchange of notes of Nov. 13-17, 1948; effective Nov. 17, 1948. GATT effective May $25,1950$. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| France and French overseas territories. | Trade Agreement signed May 12, 1933; in force June 10, 1933. Exchange of notes of Sept. 29, 1934, and additional protocol of Feb. 26. 1035 | Exchange of most-favoured-nation treatment including scheduled concessions. May be terminated on three months notice. |

Tariff and Trade Arrangements with Non-Commonwealth Countries as at

| Portugal, Portuguese adjacent Islands and Portuguese overseas Provinces. | Trade Agreement signed May 28, 1954 provisionally in effect July 1, 1954, definitively in force on ratification Apr. 29, 1955. GATT effective May 6, 1962. | Exchange of most-favoured-nation treatment. Remains in effect for two years from ratification and thereafter unless terminated on three months notice. |

Tariff and Trade Arrangements with Non-Commonwealth Countries as at Dec. 31, 1962-continued

| Country | Agreement | Principal Terms |
| :---: | :---: | :---: |
| Senegal. | Franco-Canadian Trade Agreement of 1933 applied to Senegal. | Since the creation of Senegal as an independent state in 1960, Canada has continued to grant most-favoured-nation rates. |
| South Arrica............. | Trade Agreement signed Aug. 20, 1932; in force Oct. 13, 1932. | Exchange of British preferential rates on scheduled items. May be terminated on six months notice. |
|  | Exchange of notes Aug. 2-31, 1935; effective retroactively from July 1, 1935. <br> GATT effective June 14, 1948. | Exchange of most-favoured-nation treatment. May be terminated on six months notice. |
| Spain and Spanibhpossessions. | Since Aug. 1, 1928, Canada has adhered to Britain-Spain Treaty of Commerce of Oct. 31, 1922. | Exchange of most-favoured-nation treatment. May be terminated on six months notice. |
|  | Trade Agreement signed May 26 , 1954, provisionally in effect July 1, 1954, definitively in force on ratification June 30, 1955. | Supplements and amends BritainSpain Treaty of Commerce. Remains in effect for three years from ratification, and thereafter unless terminated on three months notice. |
| Stweden. | Britain-Sweden Convention of Commerce and Navigation of Mar. 18, 1826 applies to Canada. GATT effective May 1, 1950. | Exchange of most-favoured-nation treatment. Declaration of Nov. 27, 1911 provides means for separate termination by the Dominions on one years notice. |
| Switzerland.............. | Britain-Switzerland Treaty of Friendship, Commerce and Reciprocal Establishment of Sept. 6, 1855 applies to Canada. By exchange of notes Liechtenstein included under terms of this Agreement, effective July 14, 1947. | Exchange of most-favoured-nation treatment. Convention of Mar. 30, 1914 provides means for separate termination by the Dominions on one years notice. |
|  | Switzerland has acceded to GATT provisionally. |  |
| Syrin Arab Republic.. | Special Arrangement by Order in Council of Nov. 19, 1946. | Canada grants most-favoured-nation tariff rates as long as Syria accords reciprocal treatment. |
| Tomo.. | Franco-Canadian Trade Agreement of 1933 applied to Togo. | Since the creation of Togo as an independent state in 1960, Canada has continued to grant most-favoured-nation rates. |
| Tunisia. | Franco-Canadian Trade Agreement of 1933 applied to Tunisia. <br> Tunisia has acceded to GATT provisionally. | Since the creation of Tunisia as an independent state in 1956, Canada has continued to grant most-favoured-nation rates. |

Tariff and Trade Arrangements with Non-Commonwealth Countries as at Dec. 31, 1962-concluded

| Country | Agreement | Principal Terms |
| :---: | :---: | :---: |
| Turkey. | Exchange of notes signed Mar. 1, 1948; in effect Mar. 15, 1948. GATT effective Oct. 17, 1951. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| Union of Soviet Socialist Republics. | Trade Agreement signed Feb. 29, 1956; renewed Apr. 18, 1960. Ratifications exchanged Sept. 16, 1960. | Exchange of most-favoured-nation treatment and undertaking by U.S.S.R. to purchase from Canada twice as much as their sales to Canada up to $\$ 25,000,000$ annually. At least half of Soviet purchases are to be in wheat. In force for three years from date of signature and may thereafter be extended by mutual agreement. |
| United Arab Republic (Egypt). | Exchange of notes Nov. 26 and Dec. 3, 1952; in force Dec. 3, 1952. | Exchange of most-favoured-nation rates. May be terminated on six months notice. |
| United States. . . . . . . . . . | Trade Agreement signed Nov. 17, 1938; suspended as long as both countries continue to be contracting parties to GATT. GATT effective Jan. 1, 1948. | Most - favoured - nation treatment exchanged. |
| Upper Volta (Voltaic Republic). | Franco-Canadian Trade Agreement of 1933 applied to Upper Volta. | Since the creation of Upper Volta as an independent state in 1960, Canada has continued to grant most-favoured-nation rates. |
| Uranda.................... | Belgo-Canadian Convention of Commerce of 1924 applied to Uranda. | Since Uranda's independence in 1960, Canada has continued to grant most-favoured-nation rates. |
| Urdguar................... | Trade Agreement signed Aug. 12, 1936; in force May 15, 1940. Ad ditional protocol signed Oct. 19, 1953. GATT effective Dec. 16, 1953. | Exchange of most-favoured-nation treatment. |
| Veneztela.................. | Modus vivendi signed and brought into force Oct. 11, 1950. | Exchange of most-favoured-nation treatment. Made for one year subject to annual renewal. |
| Viet Nam. . . . . . . . . . . . . . | Franco-Canadian Trade Agreement of 1933 applied to Viet Nam. | Since the creation of Viet Nam as an independent state in 1955, Canada has continued to accord most-favoured-nation rates. |
| Yugoslavia................ | Trade Agreements Act of June 11, 1928, accepted Article 30 of Britain - Serb - Croat - Slovene Treaty of Commerce and Navigation of May 12, 1927; in force Aug. 9, 1928. <br> Yugoslavia has acceded to GATT provisionally. | Exchange of most-favoured-nation treatment. May be terminated on one years notice. |

## PART IV.-TRAVEL BETWEEN CANADA AND OTHER COUNTRIES*

Travel between Canada and other countries (exclusive of visitors arriving direct from countries other than the United States) consisted of nearly $60,000,000$ trips in 1962. The slight decline from the 1961 figure was attributable to fewer re-entries of Canadians returning from trips to the United States which numbered $27,944,600$ as compared with $29,288,500$ in 1961. Re-entries of Canadians returning direct from overseas countries numbered 253,400 , a figure 30,300 higher than in the previous year. In 1962, $31,656,400$ visitors entered Canada from the United States, 1,182,200 more than in 1961. The basic record of the volume of non-immigrant travel to Canada from overseas countries is not available for 1961 or 1962. Prior to January 1961, transportation companies were required to complete a form for the Department of Citizenship and Immigration which provided certain details on this movement. However, a request from the transportation companies to be relieved of this procedure was granted and, as a result, the record of visits from overseas countries was no longer available.

## 1.-Number and Expenditure of United States Travellers in Canada and Canadian Travellers in the United States, 1950-62

| Year | U.S. Travellers in Canada | U.S. Expenditure in Canada | Canadians <br> Travelling in U.S. | Canadian Expenditure in U.S. | Excess of U.S. Travellers in Canada | Balance of Payments with the U.S. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1956 | 27,666, 500 | 309,000 | 27,076,700 | 391,000 | $+\quad 589,800$ + | - 82,000 |
| 1957. | 28, 619,400 | 325,000 | 27,209,400 | 403,000 | $+1,410,000$ | - 78,000 |
| 1958. | 28,530,700 | 309,000 | 27,421,700 | 413,000 | +1,109,000 | -104,000 |
| 1959. | 29,880,800 | 351,000 | 27,989,900 | 448,000 | +1,890,900 | -97,000 |
| 1960. |  |  | 29,045,800 | 462,000 ${ }^{1}$ | + 608,800 | - 87,000 |
| 1961. | 30,474, 200 | 435,000 | 29,288,500 | 459, 0001 | +1,185,700 | - 24,000 |
| 1962. | 31,656,400 | 512,000 | 27,944,600 | 419,0001 | +3,711,800 | + 93,000 |

${ }^{1}$ Includes Hawaii.
Expenditures in 1962 on international travel between Canada and other countries was estimated at well over $\$ 1,000,000,000$, about $\$ 43,000,000$ higher than such expenditures in 1961. Receipts from visitors to Canada amounted to $\$ 562,000,000-\$ 512,000,000$ from residents of the United States and $\$ 50,000,000$ from residents of overseas countries, representing gains of $\$ 77,000,000$ and $\$ 3,000,000$, respectively, over 1961 . The devaluation of the Canadian dollar in May 1962 no doubt contributed to the substantial increase in United States travel expenditures in Canada and, conversely, had the effect of reducing Canadian travel expenditures in the United States. The latter dropped from $\$ 459,000,000$ in 1961 to $\$ 419,000,000$ in 1962 , while Canadian travel expenditures in overseas countries showed a slight increase from $\$ 183,000,000$ to $\$ 186,000,000$. Effective June 25,1962 , as part of a series of official actions to relieve pressure on the Canadian dollar, the customs exemption on Canadian purchases of merchandise in the United States was reduced from $\$ 100$ to $\$ 25$ every four months.

Expenditures by Canadians for travel in other countries have exceeded receipts from residents of other countries travelling in Canada since 1950. The small deficit of $\$ 6,000,000$ occurring in 1951 gradually increased to a maximum of $\$ 207,000,000$ in 1959 and 1960 and then declined to $\$ 160,000,000$ in 1961 and $\$ 43,000,000$ in 1962.

[^300]Travel account between Canada and overseas countries changed from an equilibrium in 1946 to a deficit of $\$ 136,000,000$ in 1961 and 1962. The debit balance in the travel account with the United States was restricted to the decade 1952-61, inclusive, during which period the deficit increased from $\$ 37,000,000$ to a record $\$ 104,000,000$ in 1958 and then dropped to $\$ 97,000,000$ in $1959, \$ 87,000,000$ in 1960 and $\$ 24,000,000$ in 1961 ; in 1962 there was a credit balance of $\$ 93,000,000$. Visitors crossing the border from the United States into Canada increased in number from 30,500,000 in 1961 to $31,700,000$ in 1962 and their expenditures in Canada rose from $\$ 435,000,000$ to $\$ 512,000,000$. In the other direction, however, the number of crossings was reduced from $29,300,000$ in 1961 to $27,900,000$ in 1962 and expenditures of Canadian visitors to the United States dropped from $\$ 459,000,000$ to $\$ 419,000,000$.

${ }^{1}$ Includes substantial amounts of in-transit, commuting and local traffic. ${ }^{2}$ Excludes Hawaii.
3.-Highway Traffic at Canadian Border Points, 1961 and 1962

Many factors influence the flow of American visitors to Canada, among them being the ease of making border crossings, the location of highly populated areas near the International Boundary, the natural attractions of the country, and the currency exchange rate and the economic situation generally. In addition, the recent construction of new roads and bridges has enticed the motor traveller to cross the border; of particular interest has been the completion of the Trans-Canada Highway north of Lake Superior and the international bridges at Prescott and Rainy River in Ontario, connecting the United States with Canada.

Completion of the Trans-Canada Highway north of Lake Superior has had an effect mainly on foreign vehicles entering and departing from Canada at Pigeon River to the west of Lake Superior and Sault Ste. Marie to the east. During the six-month period, May to October 1961 (the latest year for which data are available), 41,500 vehicles entered Canada at Pigeon River and stayed two days or more, compared with 26,800 a year earlier. Entries via Sault Ste. Marie for the same two periods were 81,000 and 62,300 , respectively.

In addition to the increase in crossings, the records show that fewer vehicles returned at the port of entry. It would appear that since the completion of the Trans-Canada Highway the "circle tour" of both Lake Superior in Canada and Lake Michigan in the United States is becoming popular. Motorists using the direct route between Pigeon River and Sault Ste. Marie cover approximately 485 miles in Canada.

The new bridge spanning the St. Lawrence River at Prescott in Ontario also had an effect on the flow of traffic to Canada. In the year ended September 1961, 51,100 foreign automobiles entered Canada at Prescott, 21,000 more than during the previous year. Similarly, the new bridge at Rainy River was responsible for more entries in that area. During the year ended June 1961, 13,900 foreign automobiles crossed into Canada at that point, almost double the number in the previous year.

## CHAPTER XXI.-PUBLIC FINANCE*

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

Combined statistics of public finance for all governments in Canada-federal, provincial and municipal-are presented in Section 1 of this Chapter and Section 2 covers the incidence of taxation at the three levels. More detailed information for each level of government is given in Sections 3, 4 and 5.

A report on the financial statistics of Federal Government business enterprises was issued for the first time in October 1962; analyses of their assets, liabilities, revenues and expenditures are shown in Section 3, pp. 995-996. The first report on the financial statistics of provincial government enterprises, released in the autumn of 1963, is summarized in Section 4, pp. 1004-1005.

Government enterprise finances are usually reflected to a certain extent in the general statistics of the governments. For example, the portion of their profits that is remitted to the parent government appears in Table 1 (receipts from government enterprises); government contributions toward enterprise capital construction and toward their operating deficits appear in Table 2 (payments to own government enterprises); and the direct debt of government enterprises that is guaranteed by the parent government appears in Table 3 (the bulk of the item "guaranteed bonds" represents direct issues of government enterprises).

## Section 1.-Combined Statistics of Public Finance for All Governments

Combined Revenue and Expenditure.-Tables 1 and 2 give details of the federal, provincial and municipal net combined revenue by source and net combined current and capital expenditure by function, respectively, for 1959 and 1960. This net basis has been prepared by deducting from revenue, and the appropriate expenditure, certain specified amounts such as grants-in-aid and shared-cost contributions from other governments, institutional revenue, and interest, premium, discount and exchange revenue. Amounts provided for debt retirement are excluded to avoid duplication since all expenditure resulting from capital borrowings is included.

[^301]Inter-government transfers such as subsidy payments by the Federal Government to the provincial governments are unconditional grants and therefore cannot be offset against any specific expenditure. These are set out separately in Tables 1 and 2 in order to prevent duplication and to provide additive totals. Because of the differing accounting practices of governments and variations in fiscal year-ends, discrepancies appear between the amounts recorded as inter-government transfers in the two tables.

## 1.-Combined Revenue of All Governments, 1959 and 1960

Note.-Figures are for fiscal years ended nearest Dec. 31.

## Section 2.-Taxation in Canada*

Canada is a federal state with a central government and ten provincial governments. In 1867 the principal colonies of the British Crown in North America joined together to form the nucleus of a new nation and the British North America Act of that year became its written constitution. This statute created a central government with certain powers while continuing the existence of political subdivisions called provinces with powers of their own.

Under the British North America Act the Parliament of Canada has the right of raising "money by any mode or system of taxation" while the provincial legislatures are restricted to "direct taxation within the Province in order to the raising of a Revenue for Provincial purposes". Thus the provinces have a right to share only in the field of direct taxation while the Federal Government is not restricted in any way in matters of taxation. The British North America Act also empowers the provincial legislatures to make laws regarding "municipal institutions in the Province". This means that the municipalities derive their incorporation with its associated powers, fiscal and otherwise, from the provincial government concerned. Thus, from a practical standpoint, municipalities are also limited to direct taxation.

A direct tax is generally recognized as one "which is demanded from the very person who it is intended or desired should pay it". In essence, this conception has limited the provincial governments to the imposition of income tax, retail sales tax, succession duties and an assortment of other direct levies. In turn, municipalities, acting under the guidance of provincial legislation, tax real estate, water consumption, places of business and in some cases retail sales. The Federal Government levies direct taxes on income, on gifts, and on the estates of deceased persons and indirect taxes such as excise taxes, excise and customs duties, and a sales tax.

The increasing use by both the federal and the provincial governments of their rights in the field of direct taxation in the 1930's resulted in uneconomic duplication and some severe tax levies. Starting in 1941, a series of tax agreements, each normally enduring for a period of five years, were concluded between the federal and the provincial governments to promote the orderly imposition of direct taxes. All provinces surrendered their claims to personal income tax for the duration of the wartime agreements which expired in 1947. The Provinces of Quebec and Ontario did not rent any tax fields under the 1947 agreements. The Province of Quebec did not rent any of its tax fields under the 1952 and 1957 agreements; the Province of Ontario did not rent succession duties under the 1952 agreements and did not rent either succession duties or corporation income tax under the 1957 agreements. Apart from these exceptions all provinces participated in the various tax agreements as fully as possible. Newfoundland rented its tax fields as soon as it entered Confederation.

Under these agreements, the participating provinces undertook, in return for compensation, not to use or permit their municipalities to use certain of the direct taxes. Under the last two agreements, the federal income tax and death tax otherwise payable in nonparticipating provinces were abated by a fixed percentage to make room for the provincial levies. The Wartime Tax Agreements of $19+2$ are outlined in the 1946 Year Book, pp. 900-901; the 1947 and 1952 Tax Rental Agreements in the 1954 Year Book, pp. 1087-1090; and the 1957 fiscal arrangements in the 1961 Year Book, pp. 1067-1069. The 1962 fiscal arrangements are authorized by the Federal-Provincial Fiscal Arrangements Act, assented to Sept. 29, 1961. They became operative on Apr. 1, 1962 and will run until Mar. 31, 1967.

Basically, the 1962-67 arrangements entail a partial federal withdrawal from the field of direct taxation and the re-entry of all provinces into the vacated area. The Federal Government reduces its personal income tax otherwise payable on income earned in a province, and on income received by a resident of a province, by the following percentages:

[^304]16 p.c. in 1962; 17 p.c. in $1963 ; 18$ p.c. in $1964 ; 19$ p.c. in 1965 ; and 20 p.c. in 1966 . Also, the Federal Government reduces its rate of corporation income tax on taxable income of corporations earned in the provinces. The reduction is 9 p.c. of taxable income earned in any province except Quebec and 10 p.c. of taxable income earned in Quebec. The additional 1 p.c. reduction in respect of taxable income earned in Quebec is to compensate for the additional tax levied by the province on corporation income to provide grants to universities. These provincial grants replace federal grants which in other provinces are paid to the universities by the Federal Government through the Canadian Universities Foundation. Finally, the Federal Government abates the federal estate tax otherwise payable by 50 p.c. in respect of property situated in a province which levies its own death tax. Only Ontario, Quebec and British Columbia at present levy death taxes in the form of succession duties.

These reductions in federal income tax and estate tax under the terms of the 1962-67 arrangements do not apply to the Yukon Territory or the Northwest Territories or to income earned outside Canada. The Yukon and Northwest Territories do not impose income taxes or death taxes.

The provincial tax rates are not restricted to the extent of the federal withdrawal. Their constitutional position permits them unlimited use of direct taxes for the raising of revenue for provincial purposes. However, in all but four provinces (Ontario, Quebec, Manitoba and Saskatchewan) rates of income tax coincide with the amount of the federal abatement.

As part of the 1962-67 arrangements, the Federal Government has entered into tax collection agreements under which it collects the provincial personal income taxes for all provinces except Quebec and the provincial corporation income taxes for all provinces except Ontario and Quebec.

Under the terms of 1962-67 arrangements, adjustment grants are made to the Atlantic Provinces in recognition of their special circumstances. These grants amount to $\$ 35,000,000$ per annum and are distributed as follows: $\$ 10,500,000$ to each of the Provinces of Newfoundland, Nova Scotia and New Brunswick, and $\$ 3,500,000$ to the Province of Prince Edward Island. Newfoundland gets an additional $\$ 8,000,000$ annually under the terms of the Newfoundland Additional Grants Act of 1959.

## Subsection 1.-Federal Taxes

## Individual Income Tax

Every individual who is a resident of Canada at any time during a year is liable for the payment of income tax for that year. In addition, every non-resident individual who is employed or carries on business in Canada during a year is required to pay tax on his income from Canadian sources. Canadian taxation practice is based to a large extent on the British experience. This is reflected particularly in the fact that taxation is on the basis of residence rather than citizenship, and in the tax freedom for capital gains. The term "residence" is difficult to define simply but, generally speaking, it is taken to be the place where a person resides or where he maintains a dwelling ready at all times for his use. There are also extensions of the meaning of Canadian resident to include a person who has sojourned in Canada for an aggregate period of 183 days in a taxation year, or a person who was during the year a member of the Armed Forces of Canada, or an ambassador, a high commissioner, or an officer or servant of Canada or of any one of its provinces, or the spouse or dependent child of any such person.

The Canadian tax law uses the concepts "income" and "taxable income". The income of a resident of Canada for a taxation year comprises his revenues from all sources inside or outside Canada and includes income for the year from all businesses, property, offices and employments. It does not include capital gains unless they arise out of the conduct of a business or as a result of an adventure in the nature of trade.

In computing his income for a taxation year, an individual must include all dividends, fees, annuities, pension benefits, allowances, interest, alimony, maintenance payments and other miscellaneous sources of income. On the other hand, war service disability pensions paid by Canada or an ally of Her Majesty at the time of the war service, unemployment insurance benefits, compensation in respect of an injury or death paid under a Workmen's Compensation Act of a province and family allowances do not have to be included in the computation of income.

In computing his income, an individual who is carrying on business may deduct business expenses including depreciation (called capital cost allowances), interest on borrowed money, reserves for doubtful debts, contributions to pension plans or deferred profit-sharing plans for his employees, bad debts, and expenses incurred for scientific research. In general, no deductions are allowed in computing income from salary and wages although there are exceptions. These exceptions include travelling expenses of employees who have to travel as they perform their work (such as employees on trains), union dues, alimony payments, and contributions to registered pension plans. Individuals may deduct, within limits, amounts set aside to provide a future income under registered retirement savings plans. Students in full-time attendance at a university or other educational institution in a course at a post-secondary school level may deduct their tuition fees in computing their income.

Having computed his income, the individual then calculates his taxable income by deducting certain exemptions and deductions: for single status an exemption of $\$ 1,000$; for married status an exemption of $\$ 2,000$; for dependent children eligible to receive family allowance $\$ 300$ per child; for other dependants (as defined in the law), $\$ 550$ per dependant; for a taxpayer over 65 years of age, an additional $\$ 500$; for a taxpayer who is blind or confined to a bed or a wheelchair for the whole of the taxation year, an additional $\$ 500$; for charitable donations, up to 10 p.c. of income; and for medical expenses in excess of 3 p.c. of income. In lieu of claiming deductions for charitable donations, medical expenses and membership dues in trade unions or professional societies, an individual may claim a standard deduction of $\$ 100$.

As already stated, an individual who is resident in Canada for the whole year is taxed on his income from both inside and outside Canada. An individual who is not resident in Canada at any time during the year but who carries on business in Canada or who earns salary or wages in Canada is taxed only on the income earned in Canada. In computing taxable income earned in Canada, such a non-resident individual is allowed to deduct that part of the exemptions and deductions that may reasonably be attributed to the income earned in Canada. (A non-resident who derives investment income from Canada is taxed in a different way described under a separate heading.) An individual who ceases to be a resident of Canada during the year or who becomes a resident during the year so that he is resident for only part of the year will be subject to income tax in Canada on that part of his income for the year received while he is resident in Canada. In these circumstances the deductions from income permitted for determining taxable income will be the amount that may reasonably be considered as applicable to the period during which he is resident in Canada.

A progressive schedule of rates is applied to taxable income. These rates begin at 11 p.c. on the first $\$ 1,000$ of taxable income and increase to 80 p.c. on taxable income in excess of $\$ 400,000$. In addition, an old age security tax is levied on taxable income at the rate of 3 p.c. with a maximum of $\$ 90$ reached at the level of $\$ 3,000$.

In calculating the amount of his income tax, an individual is allowed tax credits under three main headings: (1) Dividend Tax Credit-to partially eliminate the double taxation of corporate profits and to encourage participation in the ownership of Canadian companies, Canadian resident individuals are allowed to deduct from their tax an amount equal to 20 p.c. of the net dividends they receive from Canadian taxable companies; (2) Foreign Tax Credit-foreign taxes paid on income from foreign sources may be credited against Canadian income tax but the credit may not exceed the proportion of Canadian tax relative to such income; and (3) Abatement under Federal-Provincial Arrangements-in 1963 the
federal personal income tax otherwise payable on income of a resident of a province and on income earned in a province is reduced by 17 p.c. This abatement will increase by one percentage point a year until it becomes 20 p.c. in 1966.

To a very large extent, individual income tax is payable as the income is earned. Taxpayers in receipt of salary or wages have tax deducted from their pay by their employer and in this way pay nearly 100 p.c. of their tax liability during the calendar year. The balance of the tax, if any, is payable at the time of filing the tax return before Apr. 30 in the following year. People with more than 25 p.c. of their income from sources other than salary or wages must pay tax by quarterly instalments throughout the year. Here again returns must be filed before Apr. 30 in the following calendar year.

The following statement shows what taxpayers pay at various levels of income. In calculating these taxes it has been assumed that all taxpayers take the standard deduction of $\$ 100$. No allowance has been made for the 20 -p.c. dividend tax credit. In calculating the taxes shown for a married taxpayer with two children eligible for family allowances, a deduction of $\$ 300$ has been allowed for each child.

| Status | Income | Income Tax | Old Age Security Tax |
| :---: | :---: | :---: | :---: |
|  | \$ | \$ | \$ |
| Single taxpayer-no dependants............................. | 1,200 | 11 | 3 |
|  | 1,500 | 44 | 12 |
|  | 2,000 | 99 | 27 |
|  | 2,500 | 166 | 42 |
|  | 3,000 | 236 | 57 |
|  | 5,000 | 591 | 90 |
|  | 10,000 | 1,840 | 90 |
|  | 20,000 |  | 90 |
|  | 50,000 | 20,965 | 90 |
|  | 100,000 | 50,855 | 90 |
| Married taxpayer-no dependants......................... |  | 11 |  |
|  | 2,500 | 44 | 12 |
|  | 3,000 | 99 | 27 |
|  | 5,000 | 403 | 87 |
|  |  | 1,544 | 90 |
|  | 20,000 | 5,375 | 90 |
|  | 50,000 | 20,415 | 90 |
|  | 100,000 | 50,205 | 90 |
| Married taxpayer-two children eligible for family allowances. |  |  |  |
|  | 2,800 | 11 | 3 9 |
|  | 5,000 | 301 | 69 |
|  | 10,000 | 1,388 | 90 |
|  | 20,000 | 5,105 | 90 |
|  | 50,000 100,000 | 20,085 49,815 | 90 90 |

The income taxes shown above are abated by 17 p.c. in all provinces. In all provinces except Quebec, Manitoba and Saskatchewan the provincial tax is the same as the federal abatement. Therefore in these provinces the taxes shown above are the combined federal and provincial taxes. In Quebec the provincial tax does not coincide with the federal abatement. In Manitoba and Saskatchewan the provincial tax exceeds the abatement by 6 p.c.

It was announced in the 1963 Budget Speech that taxpayers who establish a manufacturing or processing business in a designated area of slower growth during a two-year period commencing from the date of enactment of the 1963 Income Tax Act Amending Bill would be eligible for a three-year exemption from income tax. As of July 1963, this proposed change had not been brought into force by legislation nor had any area been designated.

## Corporation Income Tax

The Income Tax Act levies a tax upon the income from everywhere in the world of corporations resident in Canada and upon the income attributable to operations in Canada
of non-resident corporations carrying on business in Canada. In computing their income, corporations may deduct operating expenses including municipal real estate taxes, reserves for doubtful debts, bad debts and interest on borrowed money. They may not deduct provincial income taxes other than provincial taxes on income derived from mining operations (for this purpose "income from mining operations" is specially defined). However, they can deduct from tax an amount equal to two thirds of a provincial tax on income from logging operations not exceeding two thirds of 10 p.c. of the corporation's income from logging operations in the province.

Regulations covering capital cost allowances (depreciation) permit taxpayers to deduct over a period of years the actual cost of all depreciable property. The yearly deductions of capital cost allowances are computed on the diminishing balance principle (taxpayers engaged in farming and fishing may choose between this and the straight-line method). Published regulations establish a number of classes of property and maximum rates. There is provision for recapture of any amount allowed in excess of the ultimate net capital cost of any asset. Certain accelerated depreciation provisions are available to taxpayers in certain circumstances and for a limited period of time. Businesses established in surplus manpower areas (officially designated) which produce goods new to these areas or businesses engaged in the production of goods that are new to Canada are allowed to claim depreciation at double the normal rates of capital cost allowance for one year in respect of capital expenditures incurred for the purpose of producing these new goods. This special incentive is available until Jan. 1, 1964. A modernization allowance in the form of a 50-p.c. increase in the first year in the rates of capital cost allowance can also be claimed by a business for expenditures on new capital assets which exceed its expenditures on capital assets in the previous year or its average expenditures on capital assets in the three previous years. This special allowance is available in respect of all depreciable assets eligible for depreciation by the diminishing balance principle which are acquired before Apr. 1, 1964. The 1963 Budget introduced a new incentive measure which, as of July 1963, had not yet been brought into force by legislation. Straight-line depreciation at a rate not exceeding 50 p.c. will be granted in respect of certain new depreciable assets (machinery and equipment that would otherwise fall in class 8 of the Income Tax Regulations) acquired in a 24 -month period commencing on June 14, 1963, for use in manufacturing or processing businesses by individuals resident in Canada or by companies resident in Canada that have a degree of Canadian ownership and control. To have a degree of Canadian ownership and control, a company must (a) be a resident of Canada, (b) have 25 p.c. of its voting shares beneficially owned by one or more individuals resident in Canada, one or more corporations controlled in Canada, or a combination thereof or have its voting shares listed on a stock exchange in Canada and have no more than 75 p.c. of its voting shares beneficially owned by a nonresident person alone or with associated persons, (c) ensure that at least 25 p.c. of its directors are resident in Canada (this requirement will not apply until 1965). For manufacturing or processing businesses in designated areas of slower growth there is no requirement that they have a degree of Canadian ownership and control to qualify for this 50 -p.c. straight-line depreciation rate.

Expenditures on scientific research by corporations qualify for special tax treatment. Generally speaking, all expenditures on scientific research in Canada may be written off for tax purposes in the year when incurred. In addition, corporations are permitted to deduct from income for tax purposes 150 p.c. of their increased expenditures on scientific research.

Taxpayers operating mines, oil wells and gas wells are allowed a depletion allowance, usually computed as a percentage of profits derived from mineral, oil or gas production, which continues as long as the mine or well is in operation. This allowance is in addition to capital cost allowances on buildings, machinery and similar depreciable assets used by the taxpayer. Taxpayers operating timber limits receive an annual allowance sometimes called a depletion allowance. This is a rateable proportion of the amount invested in the limit and is based on the amount of timber cut in the year. When the amount invested in the limit has been recovered no further allowance is given.

In computing taxable income, corporations may deduct dividends received from other Canadian taxpaying corporations and also from foreign corporations in which the Canadian corporation has at least 25 p.c. stock ownership. Business losses may be carried back one year or forward five years and deducted in computing taxable income. Corporations may also deduct donations to charitable organizations up to a maximum of 10 p.c. of their income.

The general rates of tax on corporate taxable income are 18 p.c. on the first $\$ 35,000$ of taxable income plus 47 p.c. on taxable income in excess of $\$ 35,000$. Corporations deriving more than one half of their gross revenue from the sale of electric energy, gas, or steam pay tax on their taxable income from such sources at the rate of 18 p.c. on the first $\$ 35,000$ of taxable income plus 45 p.c. on taxable income in excess of $\$ 35,000$. Corporations that qualify as investment companies pay a tax of 18 p.c. on their taxable income. In addition to these rates, all corporations pay an old age security tax of 3 p.c. of taxable income bringing their rates up to 21 p.c. and 50 p.c. ( 21 p.c. and 48 p.c. for public utility companies and 21 p.c. for investment companies).

In calculating the amount of their income tax, corporations are allowed tax credits under two headings: (1) Foreign I'ax Credit-foreign taxes paid on income from foreign sources may be credited against Canadian income tax but the credit may not exceed the proportion of Canadian tax relative to such income; and (2) Abatement under FederalProvincial Arrangements-corporations may deduct from their federal tax otherwise payable a tax abatement equal to a fixed percentage of their taxable income attributable to operations in a Canadian province. This abatement is to make room for the provincial income tax levied by each Canadian province. The amount of the abatement is 9 p.c. of taxable income attributable to operations in any province except Quebec and 10 p.c. of taxable income attributable to operations in Quebec.

A special tax incentive based upon increased sales is available to corporations engaged in manufacturing or processing. This concession consists of cancellation of 50 p.c. of the federal income tax on the first $\$ 50,000$ of taxable income arising from increased sales and cancellation of 25 p.c. of the tax on any additional taxable income arising from increased sales. It was announced in the 1963 Budget Speech that this incentive would not be available for the 1964 and subsequent taxation years.

It was announced in the 1963 Budget Speech that new manufacturing and processing businesses established in designated areas of slower growth during a two-year period commencing from the date of enactment of the 1963 Income Tax Act Amending Bill would be eligible for a three-year exemption from income tax. As of July 1963, this proposed change had not been brought into force by legislation nor had any area been designated.

Corporations are required to pay their tax (combined income and old age security tax) in monthly instalments but the period during which they pay tax for a taxation year does not coincide exactly with that taxation year. Until 1963, corporations did not start to pay taxes for a taxation year before the seventh month of that taxation year. In each of the last six months of their taxation year and the following three, they paid one twelfth of their estimated tax for the year (such estimate being based either on the taxable income of the previous year or the estimated taxable income of the year in progress). In each of the following two months they paid one third of the estimated balance of the tax computed by reference to the income of the taxation year. In the sixth month following the end of their taxation year, the final return had to be filed and the remainder of the tax paid for the year. The 1963 Budget introduced a new set of rules for the payment of corporation income tax which will not become fully operative until early 1966. These rules will require that corporations begin to pay their tax for a taxation year in the fifth month rather than in the seventh month of that taxation year. In each of the last eight months of their taxation year and the following two, they will pay one twelfth of their estimated tax for the year (such estimate will continue to be based on the taxable income of the previous year or the estimated taxable income of the year in progress). In each of the following two
months, they will pay one half of the estimated balance of the tax computed by reference to the income of the taxation year. In the sixth month following the end of their taxation year, the final return will have to be filed. In order to move on to the new pattern, it will be necessary for corporations to pay their tax for each of two taxation years within a payment period of eleven months. The first taxation year to be so compressed within eleven months for the purpose of moving forward the payment period of corporation income tax will be the first one to end after Nov. 30, 1963. The second will be the immediately succeeding one. As of July 1963, this proposed change had not been brought into force by legislation.

## Taxation of Non-residents

A non-resident is liable for payment of income tax if he was employed or was carrying on business in Canada during a taxation year. The expression "carrying on business in Canada" includes: (1) maintaining a permanent establishment in Canada; (2) processing goods even partially in Canada; and (3) entering into contracts in Canada. The taxable income of a non-resident individual derived from carrying on business in Canada or from employment in Canada is taxed under the same schedule of rates as Canadian resident individuals, and non-resident corporations deriving income from carrying on business in Canada are taxed on their taxable income attributable to operations in Canada at the same rates as Canadian resident corporations. (Tax treaties with some countries provide certain exemptions from tax for remuneration for services performed in Canada by residents or employees of these countries.)

Furthermore, the Income Tax Act provides for a tax at the rate of 15 p.c. on certain forms of income going from Canada to non-resident persons. It applies to interest, dividends, rentals, royalties, income from a trust or estate and alimony. This tax applies whether the income goes to non-resident individuals or corporations. The rate on royalties on motion picture films is only 10 p.c. The 1963 Budget announced that the 15 -p.c. rate on dividends paid by companies resident in Canada to non-resident persons would be reduced to 10 p.c. when paid by a company that has a degree of Canadian ownership and control (see p. 968). This change would be effective for dividends paid after June 13, 1963. At the same time, the 1963 Budget announced that the 15-p.c. rate on dividends paid by companies resident in Canada to non-resident persons would be increased to 20 p.c. effective from Jan. 1, 1965, when paid by a company that has not a degree of Canadian ownership and control. As of July 1963, these proposed changes had not been translated into legislation.

The non-resident tax is withheld at the source by the Canadian payer. It is an impersonal tax levied without regard to the status or other income of the non-resident recipient. Non-residents who receive only this kind of income from Canada do not file returns in Canada.

## Special Tax on Branch Businesses

Profits earned in Canada by a non-resident corporation carrying on business through a branch or permanent establishment in Canada are subject to an additional tax of 15 p.c. This tax is imposed on profits attributable to the branch after deducting therefrom Canadian federal and provincial income taxes and an allowance in respect of the net increase in capital investment in property in Canada. The 1963 Budget announced that the rate of this tax would be increased to 20 p.c., effective from Jan. 1, 1965. As of July 1963, this proposed change had not been translated into legislation.

## Gift Tax

The Income Tax Act levies a tax upon gifts. The rates range from 10 p.c. on an aggregate taxable value of $\$ 5,000$ or under to 28 p.c. on an aggregate taxable value of over $\$ 1,000,000$. Exemptions include complete exemption of gifts of $\$ 1,000$ or less and a general deduction of $\$ 4,000$ from aggregate taxable value of gifts in the year.

## Estate Tax

This tax applies to property passing, or deemed to pass, at death. All the property of persons who were domiciled in Canada before their death must be taken into consideration no matter where that property is situated; for persons dying domiciled outside of Canada, only their property situated in Canada is subject to tax.

In computing the tax of a Canadian domiciliary, the value of the whole estate is first determined. Once the aggregate value of the estate has been determined, estate debts and certain expenses may be deducted. From the resulting "aggregate net value", there may be deducted the amount of a basic exemption, which is increased where the deceased leaves a widow or dependent child, and also the amount of any bequests to charitable organizations in Canada. After these deductions, the amount remaining is the "aggregate taxable value" to which is applied the tax rates. From the tax so calculated may be deducted: (1) a tax abatement in respect of property situated in a province that levies a succession duty; (2) a credit for gift tax paid on gifts made within three years of death (the value of which must be included in the aggregate net value of the estate); and (3) a credit for foreign taxes.

No estate valued at less than $\$ 50,000$ is subject to estate tax. This $\$ 50,000$ is not an exemption but the starting point for tax. The estate tax must not reduce the value of an estate after tax to less than $\$ 50,000$. The basic deductible exemption which applies to all estates of Canadian domiciliaries is $\$ 40,000$. This basic exemption of $\$ 40,000$ is increased to $\$ 00,000$ in respect of a deceased male survived by a spouse, or in respect of a deceased female survived by an incapacitated spouse and a dependent child. In both cases, there is an additional exemption of $\$ 10,000$ for each surviving dependent child (under 21). Finally, the basic exemption of $\$ 40,000$ is increased by $\$ 15,000$ for every surviving dependent child made an orphan by the death of the deceased.

The tax on the estates of Canadian domiciliaries is calculated by applying a graduated scale of rates. For an aggregate taxable value of $\$ 5,000$ or less the rate is 10 p.c., for an aggregate taxable value of $\$ 100,000$ the tax is $\$ 19,000$, and anything between $\$ 100,000$ and $\$ 150,000$ is taxed at 24 p.c. At $\$ 2,000,000$ of taxable value the tax is $\$ 816,500$ and the excess over $\$ 2,000,000$ is chargeable at the highest rate of 54 p.c.

As already stated, there is an abatement from federal estate taxes otherwise payable, in respect of provincial succession duties. Generally, the abatement is a deduction of 50 p.c. from the federal tax otherwise payable in respect of property situated in a province that levies succession duties.

The property situated in Canada of a deceased person not domiciled in Canada is subject to estate tax at a flat rate of 15 p.c. No deduction is allowed against the assessed value of such property except for debts specifically chargeable to it. However, there is a special provision that exempts all such property of less than $\$ 5,000$ value and also provides that the tax must not reduce the value of the property to less than $\$ 5,000$. (The Estate Tax Convention between Canada and the United States increases this figure to $\$ 15,000$.) Where property is subject to provincial duties the 15-p.c. tax is abated by 50 p.c.

## Excise Taxes

The Excise Tax Act levies a general sales tax and special excise taxes. These taxes are levied on goods imported into Canada and on goods produced in Canada but are not levied on goods exported.

General Sales Tax.-An 8-p.c. sales tax is levied on the manufacturer's sale price of goods produced or manufactured in Canada or on the duty-paid value of goods imported into Canada. For alcoholic beverages and tobacco products the sale price for purposes of the sales tax includes excise duties levied under the Excise Act referred to below. An old age security tax of 3 p.c. is levied on the same basis as the 8-p.c. tax, bringing the total sales tax to 11 p.c.

Many classes of goods are exempt from sales tax. Foodstuffs and fuels for lighting or heating are generally exempt as well as articles and materials used by public hospitals, the products of farms, forests, mines and fisheries, and most equipment used in farming and fishing. Also a variety of items are exempt when purchased by municipalities.

It was announced in the 1963 Budget that the application of the federal sales tax would be extended to building materials and production machinery which had previously been exempt, the proposed change to take place by stages. The rate applicable between June 13, 1963 and Apr. 1, 1964 will be 4 p.c.; it will rise to 8 p.c. on Apr. 1, 1964 and to the full 11 p.c. (the 3-p.c. old age security rate being the last one to be added) on Jan. 1, 1965. As of July 1963, this proposed change had not been translated into legislation.

Special Excise Taxes.-The Excise Tax Act provides for a number of special excise taxes which are in addition to the sales tax. Where these are ad valorem taxes they are levied on exactly the same price or duty-paid value as the general sales tax. Articles subject to special excise taxes include jewellery, cosmetics, toilet articles, radios, record players and television sets. Tobacco products and wines are also taxed under the Excise Tax Act.

The special excise taxes levied at present are listed as follows:-

| Cigarettes | $2 \frac{1}{2}$ cents per 5 cigs. |
| :---: | :---: |
| Cigars. | 15 p.c. ad valorem |
| Jewellery, including clocks, watches, jewellery, articles of ivory, amber, shell, precious or semi-precious stones, goldsmiths' and silversmiths' products except gold-plated or silver-plated ware for the preparation or serving of food or drink. | 10 p.c. ad valorem |
| Lighters. | the greater of 10 cents per lighter or 10 p.c. ad valorem |
| Playing cards. | 20 cents per pack |
| Radios. | the greater of $\$ 2$ per radio or 15 p.c. ad valorem |
| Phonographs and television sets. | 15 p.c. ad valorem |
| Tubes for radios, phonographs and television sets, not including television picture tubes, priced under $\$ 5$ per tube. | the greater of 10 cents per tube or 15 p.c. ad valorem |
| Television set picture tubes. | 15 p.c. ad valorem |
| Slot machines-coin, disc or token-operated games or amusement devices. | 10 p.c. ad valorem |
| Matches. | 10 p.c. ad valorem |
| Tobacco-pipe tobacco, cut tobacco and snuff | 80 cents per lb. |
| Tobacco pipes, cigar and cigarette holders and cigarette rolling devices......... | 10 p.c. ad valorem |
| Toilet articles, including cosmetics, perfumes, shaving creams, antiseptics, etc.. | 10 p.c. ad valorem |
|  |  |
| Wines of all kinds containing not more than 7 p.c. absolute alcohol by volume Non-sparkling wines containing more than 7 p.c. absolute alcohol by volume | 25 cents per gal. |
| Non-sparkling wines containing more than 7 p.c. absolute alcohol by volume <br> but not more than 40 p.c. proof spirit. <br> Sparkling wines. | 50 cents per gal. $\$ 2.50$ per gal. |
| Insurance premiums paid to British or foreign companies not authorized to transact business in Canada or to non-resident agents of authorized British or |  |
| foreign companies........................................................... | 10 p.c. of net premium for property, surety, fidelity and liability insurance. (Most other kinds of insurance are exempt.) |

* These taxes apply only to wines manufactured in Canada. The customs tariff on wines includes a levy to correspond to these taxes on domestic production.

All the foregoing items, except the last, are also subject to the general sales tax of 8 p.c. and the old age security tax of 3 p.c. Cigarettes, cigars and tobacco are subject to further taxes under the Excise Act (referred to as excise duties).

## Excise Duties

The Excise Act levies taxes (referred to as excise duties) upon alcohol, alcoholic beverages and tobacco products produced in Canada. These duties are not levied on imported goods but the customs tariff on these products includes a levy to correspond to the duties levied on domestic production. These duties are not levied on goods exported.

Spirits.-The duties are on a per-gallon basis in proportion to the strength of proof of the spirits. These duties do not apply to denatured alcohol intended for use in the arts and industries, or for fuel, light or power, or for any mechanical purpose. The various duties are as follows:-

$$
\begin{aligned}
& \text { On every gallon of the strength of proof distilled in Canada...................... } \$ 13.00 \\
& \text { On every gallon of the strength of proof used in the manufacture of - }
\end{aligned}
$$

Canadian Brandy.-Canadian brandy is a spirit distilled exclusively from juices of native fruits without the addition of sweetening materials. It is subject to a duty of $\$ 11$ per gal.

Beer.-All beer or other malt liquor is subject to a duty of 38 cents per gal.
Tobacco, Cigars and Cigarettes.-The excise duties make up nearly as large a part of the total tax on tobacco products as the special excise taxes which have already been described. The rates of duty are as follows:-

| On manufactured tobacco of all descriptions, except cigarettes | 35 cents per lb. |
| :---: | :---: |
| Cigarettes weighing not more than 3 lb . per thousand (nearly all of the cigarettes used in Canada are of this type) | \$4.00 per thousand |
| Cigarettes weighing more than 3 lb . per thousand. | \$5.00 per thousand |
| Cigars. | \$2.00 per thousand |
| Canadian raw leaf tobacco when sold for consumption | 10 cents per lb. |

## Combined Effect of Excise Taxes and Excise Duties on Tobacco Products

Bringing together the taxes imposed on tobacco products under the Excise Tax Act and the duties imposed under the Excise Act gives the following total taxes:-

| Cigarettes. | 9.00 per thousand (or 18 cents per pack of 20 cigarettes) p the 11-p.c. sales tax on the manufacturer's sale price |
| :---: | :---: |
| Manufactured tobacco. | $\$ 1.15$ per lb. plus the 11-p.c. sales tax on the manufacturer's sal price |
| Ci | 2.00 per thousand plus the $15-$ p.c. special excise ta 11-p.c. sales tax on the manufacturer's sale price |

## Customs Duties*

Most goods imported into Canada are subject to customs duties at various rates as provided by tariff schedules. Customs duties, which once were the chief source of revenue for the country, have declined in importance as a source of revenue to the point where they provide less than 10 p.c. of the total. Quite apart from its revenue aspects, however, the tariff still occupies an important place as an instrument of economic policy.

The Canadian Tariff consists mainly of three sets of rates, namely, British Preferential, Most-Favoured-Nation and General. The British Preferential rates are, with some exceptions, the lowest rates. They are applied to imported dutiable commodities shipped directly

[^305]to Canada from countries within the British Commonwealth. Special rates lower than the ordinary preferential duty are applied on certain goods imported from designated Commonwealth countries.

The Most-Favoured-Nation rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled to the British Preferential rate. Canada has Most-Favoured-Nation arrangements with almost every country outside the Commonwealth. The most important agreement providing for the exchange of Most-Favoured-Nation treatment is the General Agreement on Tariffs and Trade.

The General Tariff applies to imports from countries not entitled to either the Preferential or Most-Favoured-Nation treatment. Few countries are in this category and in terms of trade coverage are negligible.

In all cases where the tariff applies there are provisions for drawbacks of duty on imports of materials used in the manufacture of products later exported. The purpose of these drawbacks is to assist Canadian manufacturers to compete with foreign manufacturers of similar goods. There is a second class of drawbacks known as "home consumption" drawbacks. These apply to imported materials used in the production of specified classes of goods manufactured for home consumption.

The tariff schedules are too lengthy and complicated to be summarized here but the rates which apply on any particular item may be obtained from the Department of National Revenue which is responsible for administering the Customs Tariff.

## Subsection 2.-Provincial Taxes

All of Canada's ten provinces impose a wide variety of taxes to raise the revenue necessary for provincial purposes. All provinces levy a tax on the income of individuals and corporations resident within their boundaries deriving income from activities or operations carried out therein. Only the Provinces of Ontario and Quebec impose special taxes on corporations and only the Provinces of Ontario, Quebec and British Columbia impose a tax on property passing at death. Under the terms of the existing federalprovincial fiscal arrangement, the Federal Government makes payments called "equalization payments" to some provinces in recognition of the fact that the potential tax revenue from the fields of income tax, death duties and natural resource revenue in those provinces, measured on a per capita basis, is lower than an agreed upon level. For some provinces these payments constitute a very important source of revenue.

Some of the more important provincial levies are reviewed briefly below.

## Individual Income Tax

All provinces levy a tax on the income of individuals who reside within their boundaries or who earn income therein. In nine of the ten provinces, these taxes are computed as a percentage of federal income tax otherwise payable at full federal rates and are collected by the Federal Government on behalf of these provinces. In Quebec, provincial income tax is levied at graduated rates that progress from 2.5 p.c. on the first $\$ 1,000$ of taxable income to a maximum of 13.2 p.c. on the excess over $\$ 400,000$. The determination of taxable income for Quebec tax is based on exemptions and deductions similar to those for federal tax. The Province of Quebec collects its own tax.

The percentages that provincial income tax liability is of federal income tax liability computed at full federal rates for 1963 are: Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Alberta and British Columbia each 17 p.c., Quebec approximately 18 p.c. and Manitoba and Saskatchewan each 23 p.c.

## Corporate Income Tax

All provinces levy a tax on the profits of corporations derived from activities carried out within their boundaries. In all provinces except Ontario and Quebec the provincial
tax is imposed on taxable income in the province determined on the same basis as for federal income tax. In Ontario and Quebec the determination of taxable profits for purposes of provincial tax follows closely the federal rules. The rate of tax in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Alberta and British Columbia is 9 p.c. of corporate taxable income. The rate that applies in Manitoba and Saskatchewan is 10 p.c., in Ontario 11 p.c. and in Quebec 12 p.c.

Four of the ten provinces levy corporate income taxes at rates in excess of the abatement allowed by the Federal Government. This abatement is equal to 9 p.c. of corporate profits except in Quebec where it is 10 p.c. (see p. 965). All provinces except Ontario and Quebec have signed agreements for the collection of their income taxes by the Federal Government.

## Alcoholic Beverages and Tobacco

Generally speaking, the sale of spirits in all provinces is made through provincial agencies operating as boards or commissions which exercise monopolistic control over alcoholic beverages. The provincial mark-up over the manufacturer's price is the effective means of revenue. Beer and wine may be sold by retailers or government stores depending on the province but in all cases they contribute to provincial revenues.* The Province of Prince Edward Island imposes a tax of 10 p.c. on all beer, wine and spirits sold at retail collected under authority of the Health Tax Act.

Prince Edward Island also imposes a tax on tobacco sold at retail: one fifth of one cent per cigarette purchased; from one to three cents per cigar, depending on price; and 10 p.c. of the retail price of all other tobacco purchased. Specific sales taxes on tobacco products are also levied in New Brunswick, Quebec and Manitoba.

## Retail Sales Taxes

Retail sales taxes are levied on the final purchaser or user and are collected by the retailer. Eight provinces now levy this type of tax at rates varying from 3 p.c. to 5 p.c. These provinces are Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan and British Columbia. In the Province of Quebec, the general rate is 4 p.c. but the province allows its municipalities to levy an additional 2 p.c. for municipal purposes.

## Amusement Taxes

Each of the provinces with the exception of Alberta, Saskatchewan and British Columbia has a tax on admission to places of entertainment. In addition, there is generally a licence fee imposed on the operator or owner of these amusement places. The tax on admissions is within the range of 5 p.c. to 13 p.c.

## Gasoline and Diesel Fuel Oil Taxes

Each of the ten provinces imposes a tax on the purchase of gasoline by motorists and truckers. The rates vary from 12 cents per gallon in Alberta to 19 cents in Nova Scotia and Newfoundland. The amount of tax borne by one gallon of motor vehicle fuel in each province is as follows:-

|  | Gasoline | Diesel Fuel |  | Gasoline | Diesel Fuel |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | cts. | cts. |  | cts. | cts. |
| Newfoundland. ${ }_{\text {a }}$. | 19 | 19 | Ontario. | 13 | 18.5 |
| Prince Edward Island | 18 | 18 | Manitoba........... | 14 | 17 |
| Nova Scotia.......... | 19 | 27 | Saskatchewan...... | 14 | 17 |
| New Brunswick...... Quebec........... | 18 15 | 23 21 |  | 12 | ${ }_{15} \dagger$ |
| Quebec............... | 15 | 21 | British Columbia... | 13 | 15 |

[^306]
## Motor Vehicle Licences and Fees

Each province also levies a fee on the annual registration of motor vehicles. This registration is compulsory and each vehicle is issued with licence plates for the year. The rates of this licence fee vary from province to province. The amount to be paid may be assessed in relation to the weight of the car, the number of cylinders of the engine, the age of the vehicle and the wheel base, or at a flat rate. The operator or the driver of a motor vehicle must also register annually and pay a fee for a new driver's licence; in Alberta and British Columbia, drivers' licences must be renewed every five years at a cost of $\$ 5$; in Quebec they must be renewed every two years, also at a cost of $\$ 5$. Alberta, in addition to registration fees, imposes a milage tax on buses, based on milage operated outside city limits by public service vehicles carrying passengers.

## Taxes on Mining Operations

All provinces except Prince Edward Island levy taxes of various kinds on mining operations. All provinces except Prince Edward Island and Alberta impose a tax on the income of firms engaged in mining operations in general or in specific kinds of mining operations. The Provinces of British Columbia, Alberta, Saskatchewan, Manitoba and Ontario impose a tax on the assessed value of minerals or a flat rate per acre of mining property.

## Tax on Logging Operations

The Provinces of Ontario, Quebec and British Columbia levy a tax on the income from logging operations of individuals, partnerships, associations or corporations engaged in this activity. In Quebec and Ontario the rate is 10 p.c. on income in excess of $\$ 10,000$ and in British Columbia the tax is 10 p.c. on income in excess of $\$ 25,000$. In Ontario, one third of the tax is allowed as a deduction from the corporate income tax in the case of corporations, and the remainder is deductible from federal income tax.

## Business Taxes

The Province of Quebec imposes a tax of one tenth of 1 p.c. on paid-up capital of corporations while Ontario levies a similar tax at the rate of one twentieth of 1 p.c.

The Provinces of Quebec and Ontario have a place-of-business tax. In Quebec the tax ranges from $\$ 20$ to $\$ 50$ for each place of business with the higher amounts being levied in the cities of Montreal and Quebec. In Ontario, the tax for each permanent establishment is the lesser of $\$ 50$ or one twentieth of 1 p.c. of paid-up capital of the corporation involved, but the total of the capital tax and the place-of-business tax cannot be less than $\$ 20$. Ontario also imposes an office tax of $\$ 50$ on every corporation that does not maintain a permanent establishment in the province but merely maintains a buying office, or merely holds certain provincial licences, or merely holds assets. A corporation that does not maintain a permanent establishment in Ontario but is represented by a resident employee or agent who is not deemed to operate a permanent establishment of the corporation in the province must pay an office tax of $\$ 50$ or one tenth of 1 p.c. of the total amount of its gross Ontario sales or revenue if less than $\$ 50,000$, subject to a minimum office tax of $\$ 5$.

Both provinces levy special taxes on certain kinds of companies such as banks, railway companies, express companies, trust companies and sleeping-car, parlour-car and dining-car companies. In Ontario these special taxes (except the tax payable by insurance corporations calculated on gross premiums) and the capital and place-of-business taxes are payable only to the extent that they exceed the corporate income tax otherwise payable.

The Province of Prince Edward Island charges special annual licence fees to most insurance companies, banks, acceptance companies, chain theatres and chain stores, steamship companies, telephone, telegraph and electric light companies and brokers, as well as nominal licence fees to other incorporated companies, the latter being similar to filing fees in other provinces.

## Land Transfer Taxes

The Provinces of Alberta and Ontario levy a tax based on the price at which ownership of land is transferred. In Ontario a straight one fifth of 1 p.c. tax is imposed. In Alberta, registration fees proportionate to the conveyancing services rendered are charged and in the case of transfers and mortgages the fees are assessed on the value of the land transferred or the amount of the mortgage. In addition, there is an Assurance Fund fee charged on transfers and mortgages which guarantees title in certain circumstances. The registration fee on transfers is one half of 1 p.c. up to $\$ 1,000$, one tenth of 1 p.c. from $\$ 1,000$ to $\$ 25,000$, and one twentieth of 1 p.c. over $\$ 25,000$; the Assurance Fund fee is one fifth of 1 p.c. up to $\$ 5,000$ and one tenth of 1 p.c. thereafter. The registration fee on a mortgage is $\$ 3$ up to $\$ 1,000$, one tenth of 1 p.c. from $\$ 1,000$ to $\$ 50,000$ and one twentieth of 1 p.c. thereafter. The Assurance Fund fee on a mortgage is one fortieth of 1 p.c.

In Quebec, a tax of $2 \frac{1}{2}$ p.c. of the purchase price is imposed only when property is transferred under the Bankruptcy or Winding-Up Acts. The Provinces of British Columbia, Saskatchewan and Manitoba do not have a land transfer tax but have an equivalent in the land title fees which are based on land values.

## Tax on Security Transfers

The Provinces of Ontario and Quebec levy a tax on the sale price of securities transferred; the rates in each province are:-

| res sold, transferred or assigned valued at- |  |
| :---: | :---: |
| Under \$1 | $1 / 10 \mathrm{th}$ of 1 p.c. of value |
| \$ 1 to \$ 5 | 1/4 cent per share |
| \$ 5 to \$ 25. | 1 cent per share |
| \$25 to \$ 50. | 2 cents per share |
| $\$ 50$ to \$ 75. | 3 cents per share |
| $\$ 75$ to $\$ 150$ | 4 cents per share |
| Over \$150. | 4 cents per share plus $1 / 10$ th of 1 p.c. of value in excess of $\$ 150$ |
| Bonds and debentures. | 3 cents for every $\$ 100$ or fraction thereof of par value. |

## Premium Income of Insurance Companies

All ten provinces impose a tax of 2 p.c. on the premium income of insurance companies relative to risks incurred in the province.

## Succession Duties

Only the Provinces of Ontario, Quebec and British Columbia levy succession duties. These duties are a tax upon the right to succeed to property and are assessed upon the interest or benefit passing at death to an heir or beneficiary. The three provinces impose succession duties on all property situated in the province belonging to the deceased and passing at his death whether the deceased was domiciled in the province or elsewhere. Personal property wherever situated of a person dying domiciled within the province is also liable if passing to a successor resident or domiciled in the province.

The rates of succession duty are governed by the value of the estate, the relationship of the beneficiary to the deceased and the amount going to any one person. The rate of tax increases as the degree of relationship between the deceased and his successor becomes more remote.

## Provincial Property Taxes

In unorganized (non-municipal) areas, British Columbia levies property taxes at varying rates according to class for provincial revenue. Improved, forest and tree-farm lands are taxed at 1 p.c. of assessed value; farm land at one half of 1 p.c.; wild land at 3 p.c.; coal land at 2 p.c. (non-operating) or 7 p.c. (operating); and timber land at $1 \frac{1}{2}$ p.c. In unorganized (non-municipal) areas, Ontario levies a property tax of $1 \frac{1}{2}$ p.c. of assessed value. The minimum annual tax in respect of any land is $\$ 6$. Nova Scotia and New Brunswick also impose property taxes of limited application.

## Race Tracks Tax

Ontario levies a tax upon operators of race meets and upon holders of winning tickets issued under the pari-mutuel system. The tax on race meeting operators is imposed at the rate of $\$ 1$ for each day the meet is conducted. Holders of winning tickets must pay a tax equal to 6 p.c. upon the amount which would be payable to them if no percentage were deducted by the person holding the race meeting. Alberta levies a pari-mutuel tax of 5 p.c. on money bet in the province on horse races.

## Subsection 3.-Municipal Taxes

The municipalities in Canada levy taxes on the owners of property situated within their jurisdiction according to the assessed value of such property. Methods of determining assessed value vary widely but for taxation purposes it is generally considered to be a percentage of the actual value. The revenues from such taxes are used to pay for street maintenance, schools, police and fire protection, snow removal in certain communities and other community services. Special levies are sometimes made on the basis of street frontage to pay for local improvements to the property such as sidewalks, roads and sewers. Not only is there a widespread difference in the bases used for property tax but there is also a wide variety of rates applied depending on the municipality.

In addition to the taxes described above, municipalities usually impose a charge for the water consumption of each property holder or a water tax based upon the rental value of the property occupied. There are no municipal income taxes although certain localities have retained the use of a poll tax. In Newfoundland, Quebec and Saskatchewan municipalities are empowered to levy an amusement tax on the admission of persons to places of entertainment, although the amusement tax is generally a provincial preserve (see p. 975). Electricity and gas are taxed at the consumer level in some western municipalities while coal and fuel oil for heating purposes are chargeable in urban areas of Newfoundland. Telephone subscribers are subject to a special levy in Montreal and certain Ontario municipalities impose a tax on the gross receipts of telephone companies.

In most municipalities, a tax is levied directly on the tenant or the operator of a business. In general, business tax rates are lower than those applying to property. Three bases of assessment are in use-a fraction of the property assessment, the annual rental value of the premises, or the area of the premises. Certain municipalities may charge a licence fee instead of a business tax while others charge both a licence fee and business tax. In Nova Scotia, all but one of the municipalities tax personal property (stock in trade, equipment, etc.) the same as real property.

## Subsection 4.-Miscellaneous Levies

These are not generally referred to as taxes but they are similar to taxes in many ways.

## Unemployment Insurance

For the past twenty-three years, a national program of unemployment insurance has been in operation in Canada. Essentially, it provides relief to those qualified persons who temporarily find themselves without work. It is administered by a federal commission appointed for this purpose and financed by equal contributions from employers and employees plus a contribution from the Federal Government. The amount paid into the fund by employee and employer is directly proportional to the weekly wages of the employee. The rates of contributions, together with statistics on the operation of the program, are given at pp. 731-736.

## Workmen's Compensation

Legislation in force in all provinces provides compensation for personal injury suffered by workmen as a result of industrial accidents. In general, these provincial statutes
establish an accident fund administered by a Board to which employers are required to contribute at a rate proportional with the hazards of the industry. See also pp. 744-745.

## Hospital Insurance

A federal-provincial hospital insurance plan has been adopted by each of the ten Canadian provinces. Under this arrangement, the Federal Government pays approximately one half of the cost of hospitalization for patients who are participants under the plan. The provinces meet the remainder of the cost. Provincial revenues for this purpose are raised by various means. The Province of Quebec has increased its personal and corporation income tax. Certain provinces require the deduction of a monthly premium from the wages of their residents as a contribution or premium for the plan. In such provinces non-salaried people must also pay the premium directly if they wish to be covered by the plan. In some other provinces the proceeds of a retail sales tax are earmarked in whole or in part for the support of the hospital plan. See also pp. 262-265.

## Section 3.-Federal Government Finance

Subsection 1 of this Section contains financial statistics of the Federal Government prepared as far as possible in accordance with the classifications, concepts and definitions used in the preparation of provincial and municipal finance statistics. These tables differ from the information presented in Subsection 2 in that the latter has been extracted directly from the Public Accounts of Canada. Detailed reports published by the Dominion Bureau of Statistics provide reconciliations of revenue, expenditure and debt as set out in Subsections 1 and 2. The Public Accounts of Canada presentation is retained for continuity and also because there is interest in and use for information on this basis.

## Subsection 1.-DBS Statistics of Federal Government Finance

Revenue and Expenditure.-Table 4 shows details of net general revenue of the Federal Government for the years ended Mar. 31, 1961 and 1962.

11.-Statement of Assets and Liabilities of the Government of Canada, as at Mar. 31, 1960-63-concluded

Guaranteed Debt.-In addition to the direct debt already dealt with, the Government of Canada has assumed certain contingent liabilities. The major categories of this indirect or contingent debt are the guarantee of insured loans under the National Housing Act, the guaranteed bonds and debentures of the Canadian National Railways and the guarantee of deposits maintained by the chartered banks in the Bank of Canada. The remainder consists chiefly of guarantees of loans made by chartered banks to the Canadian Wheat Board and to farmers and veterans for certain authorized purposes and guarantees under the Export Credits Insurance Act.

[^309]A brief commentary dealing with the national debt of the Government of Canada from 1914 to 1953 appears at p. 1091 of the 1954 Year Book. The following table summarizes the debt position during the period 1954-63 as to interest and amount outstanding. Details of unmatured debt and treasury bills outstanding and information on new security issues of the Federal Government may be found in the Public Accounts of Canada. They are summarized by standard classification in DBS publication Financial Statistics of the Government of Canada (Catalogue No. 68-211).

## 13.-Summary of the Public Debt and Interest Payments Thereon, Years Ended Mar. 31, 1954-63

Nore.-Statistics for 1867-1913 are given in the 1942 Year Book, p. 775; for 1914-35 in the 1947 edition, p. 972 for 1936-48 in the 1951 edition, p. 1009; and for 1949-53 in the 1959 edition, p. 1063.

## Subsection 3.-Revenue from Taxation

The incidence of Federal Government taxation is dealt with in Section 2. This Subsection includes statistical data on revenue received from individual income tax, corporation tax, estate tax, excise duties and excise taxes; customs receipts constitute a single item in the Public Accounts of Canada and are not included here.

## Individual and Corporation Income Tax

Statistics of income tax collections are gathered at the time the payments are made and are therefore up to date. Over 85 p.c. of individual taxpayers are wage or salary earners who have almost the whole of their tax liability deducted at the source by their employers. All other taxpayers are required to pay most of their estimated tax during the taxation year. Thus, the greater part of the tax is collected during the same year in which the related income is earned and only a limited residue remains to be collected when the returns are filed. The collections for a given fiscal year include tax deductions and instalments for twelve months, embracing portions of two taxation years, and a mixture of year-end payments for the first of these years and for the preceding year; they cannot therefore be closely related to the statistics for a given taxation year. As little information about a taxpayer is received when the payment is made and, as a single cheque from one employer may frequently cover the tax payments of hundreds of employees, the payments cannot be statistically related to taxpayers by occupation or income. Descriptive classifications of taxpayers are available only from tax returns but collection statistics, if interpreted with the current tax structure and the above factors in mind, indicate the trend of income in advance of the final compilation of statistics.

The statistics given in Table 14 pertain to tax collections by the Taxation Division of the Department of National Revenue. The collections are for fiscal years ended Mar. 31.

## 14.-Taxes Collected by the Taxation Division of the Department of National Revenue, Years Ended Mar. 31, 1954-63

Note.-Figures for 1917-34 are given in the 1947 Year Book, pp. 999-1000; for 1935-48 in the 1951 Year Book, p. 994; and for 1949-53 in the 1959 edition, p. 1066 .

| Year Ended Mar. 31- | Income Tax ${ }^{1}$ |  |  | Estate Tax | Total Collections |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Individual ${ }^{2}$ | Corporation | Total |  |  |

${ }^{1}$ Includes old age security tax.
Corporation Income Tax Statistics.-Corporation statistics presented in Tables 18 and 19 are on a taxation-year basis prior to assessment. The data were extracted and compiled from the returns shortly after they were filed and are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Provincial figures contain an unavoidable bias in favour of Ontario and Quebec because many large corporations operating across Canada file their returns in one or other of these provinces.

## 18.-Summary Statistics for Corporations Reporting a Profit, Taxation Years 1960 and 1961

## Succession Duties and Estate Taxes

A history of succession duties is given in the 1956 Year Book, pp. 1064-1068. From Jan. 1, 1947 to Mar. 31, 1963, only Ontario and Quebec among the provinces levied succession duties, the other provinces having leased this field to the Federal Government under the terms of the 1947, 1952 and 1957 tax rental agreements (see p. 964). However, British Columbia re-entered the field effective for all deaths occurring on or after Apr.1, 1963. The incidence of the estate tax is discussed at p. 971.

Federal revenue from succession duties and estate taxes in the year ended Mar. 31, 1962 amounted to $\$ 84,579,000$. In the same year, Quebec's revenue from succession duties amounted to $\$ 25,469,000$ and Ontario's revenue from succession duties to $\$ 40,397,000$.

## Excise Taxes

Excise taxes collected by the Excise Division of the Department of National Revenue are given for the years ended Mar. 31, 1958-62 in Table 21.
21.-Excise Taxes Collected, by Commodity, Years Ended Mar. 31, 1958-62

## Excise Duties

Gross excise duties collected during the years ended Mar. 31, 1958-62 are given in Table 22 and other data of interest arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of goods taken out of bond and subject to excise duty, are given in Table 23. The totals given in Table 22 do not agree with net excise duties as shown in Table 9 because refunds and drawbacks are included. A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities for medicinal or research purposes to universities, scientific or research laboratories, public hospitals, or health institutions in receipt of federal and provincial government aid.

The quantity of spirits manufactured has fluctuated greatly since 1920, varying from a low of $2,356,329$ proof gal. in that year to a high of $35,555,059$ proof gal. recorded in 1945. The total for 1962 was $36,420,769$ proof gal.

The amounts of beverage spirits, malt, cigars, cigarettes and other tobacco taken out of bond for consumption are given in the Domestic Trade Chapter, Table 36, p. 872.

## Subsection 4.-Statistics of Federal Government Enterprises

As stated on p. 960, a report on the financial statistics of Federal Government business enterprises was issued for the first time in 1962. For the purposes of this study, a government enterprise is defined as an instrument of a political, decision-making body to produce goods and services for sale on the open market at a price designed to cover cost. The essential feature of an enterprise as distinguished from a general government operation is that it charges a price for its services according to use. In motivation and behaviour, government enterprises are more similar to private business corporations than to general government operations. One obvious criterion in identifying an enterprise is the maintenance of accounting records which permit the allocation of specific elements of costs against revenue.

Tables 24 and 25 show details of assets, liabilities, current revenues and expenditures of Federal Government enterprises for the fiscal years ended nearest to Dec. 31. The data were obtained mainly from the annual reports of pertinent Crown corporations.

## 24.-Assets, Liabilities and Net Worth of Federal Government Enterprises as at Fiscal Year Ends Nearest Dec. 31, 1958-61

${ }^{1}$ Includes profits of the Canadian Wheat Board which are distributed to grain producers.

## Section 4.-Provincial Public Finance

Provincial government accounting and reporting practices vary considerably so that certain adjustments to the Public Accounts figures are required in order to produce comparable statistics. For example, transactions relating to a specific function are sometimes excluded from ordinary account; therefore special or administrative funds of this nature have been added to provincial ordinary account in the tables of this Section.

As of 1952, the fiscal years of all provinces end on Mar. 31. Figures for the Northwest Territories are included from 1955.

## Subsection 1.-Revenue and Expenditure of Provincial Governments

Table 26 shows net revenue and expenditure of provincial governments for the years ended Mar. 31, 1957-61, and Tables 27 and 28 give details of such revenue and expenditure for the fiscal year ended Mar. 31, 1961. "Net general revenue" and "net general expenditure" are arrived at by first analysing the combined revenues and expenditures of capital account, current or ordinary account and those working capital funds and special funds for which separate accounts are kept. Then the following types of revenue are deducted from
revenue and offset against related expenditure: interest, premium, discount and exchange; institutional revenue; grants-in-aid and shared-cost contributions from other governments; and capital revenue. Table 29 gives details of the amounts paid to other governments by provincial governments, according to nature of payment.

${ }^{1}$ Includes bonds issued by the Ontario Junior Farmer Establishment Loan Corporation $\$ 20,000,000$ and by the Ontario Municipal Improvement Corporation $\$ 40,300,000$. ${ }^{2}$ Excludes bonds due $\$ 4,000$. ${ }^{3}$ Includes province's share, at Mar. 31,1962 amounting to $\$ 39.552,000$, of the debt relating to the cost of the Metropolitan Boulevard constructed by the Montreal Metropolitan Corporation and the City of Montreal. ${ }^{4}$ Includes net liability of the province re Province of Ontario Savings Office $\$ 75,984,000$ at Mar. 31, 1962 .
${ }^{5}$ Excludes debt of toll road authority. ${ }^{6}$ Excludes bonds of the Halifax-Dartmouth Bridge Commission, $\$ 6,561,000$.
formation re amount actually outstanding not available; this figure is amount authorized. ${ }^{8}{ }^{8}$ In addition, the province has guaranteed the interest on school distric debentures having a par value of $\$ 5,630,000$ and on sewage disposal and water supply systems debentures having a par value of $\$ 3,134,000$. 9 Excludes guaranteed interest under the School Borrowing Assistance Act and the School Buildings Assistance Act on principal borrowings of $\$ 15,102,000$; includes guarantee of debentures issued by the Alberta Municipal Financing Corporation to finance the purchase of municipal debentures-see footnote 1, Table 38.

## Subsection 3.-Statistics of Provincial Government Enterprises

The first report on the financial statistics of provincial government business enterprises, covering the years 1958 to 1961, was released in early 1964 (Catalogue No. 61-204), a sequel to the publication dealing with the finances of Federal Government enterprises. It follows the same concepts and classification schema, presenting the data comparatively, industrially and geographically. Table 33, gives assets, liabilities and net worth of such enterprises as at the fiscal year ends nearest to Dec. 31, 1958-61.

## 33.-Assets, Liabilities and Net Worth of Provincial Government Enterprises, as at Fiscal Year Ends Nearest Dec. 31, 1958-61

## Section 5.-Municipal Public Finance

## Subsection 1.-Municipal Assessed Valuations and Taxation

Table 34 shows municipal assessed valuations and total exemptions, by province, for the year 1960 together with local taxes levied by municipalities and by some school authorities and total taxes outstanding at the end of the year. Assessment figures in the various provinces are not entirely comparable as there are still variations in methods, schedules and rates, not only between provinces but also between municipalities within the same province.

[^318]Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, extreme caution should be exercised in using the figures in Table 34 as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan municipalities are required to levy certain taxes for and on behalf of hail insurance associations and rural telephone companies and for other special purposes for which there is no comparable situation in other provinces. The amounts of such taxes excluded in the Saskatchewan municipal levies in Table 34 are: hail, $\$ 2,802,426$; telephone, $\$ 1,022,663$; and drainage, $\$ 143$.

## Subsection 2.-Municipal Revenue, Expenditure and Debt

Tables 35, 36 and $\mathbf{3 7}$ show comparative totals and details of gross ordinary revenue and expenditure of municipal governments, by province. Table 38 sets out the direct and indirect debt of local governments for the year 1960. The amounts shown include debt incurred for general and school purposes, debenture debt incurred for and by utilities, and debenture debt incurred by certain special areas organized to provide specific local services.

## 35.-Gross Ordinary Revenue and Expenditure of Municipal Governments, by Province, Fiscal Years Ended Nearest Dec. 31, 1960

# CHAPTER XXII.-NATIONAL AGCOUNTS, INDUSTRY PRODUCTION TRENDS, BALANCE OF INTERNATIONAL PAYMENTS AND INTERNATIONAL INVESTMENTS* 

## CONSPECTUS

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

In this Chapter various statistical statements and studies are presented in which broad areas of Canadian economic activity are covered in a comprehensive but summary form. These integrated aggregative economic accounts provide an inter-related framework for economic analysis and the observation of changes in the functioning of the Canadian economy and its structure and in economic and financial relationships with other countries.

## Section 1.-National Accounts

The national accounts constitute a set of accounting summaries for the nation as a whole and portray economic activity in terms of transactions taking place between different sections of the economy. By combining and summarizing these operations into their various classes, information may be obtained on the functioning of the economy which is of particular interest to governments concerned with problems of full employment, taxation and prices, and to businessmen concerned with programs of investment and marketing.

This measurement of the nation's output is in terms of established market prices; hence it is necessary to keep in mind that the value of the nation's production may change because of price variations as well as through increase or decrease in volume of output.

Data are available showing volume changes in gross national expenditure in addition to the value figures. Gross national expenditure is shown in Table 4 in constant dollars (i.e., in terms of 1949 prices). Because the gross national expenditure equals the gross national product, these data also reflect volume changes in the production of goods and services as measured by the gross national product. In all other tables the data are expressed in current dollars so that year-to-year changes must be considered in relation to price changes over the period.

National accounts calculated on a quarterly basis are a logical extension of the annual national accounts and have been published since 1953. However, their preparation on a reliable and analytically useful basis is rather more difficult because of the scarcity of quarterly data, special problems arising from the measurement of farm production and problems in connection with seasonal variation.

[^320]The tables on pp. 1016-1017 cover the more important aspects of the national income analysis in annual terms. Table 1 gives total gross national product in current and constant dollars for the years 1926-62. Tables 2 and 3 show the main aggregates of national income, gross national product, gross national expenditure and their components; other tables are included to show the source and disposition of personal income and expenditure and government revenue and expenditure.

National Income.-Net national income at factor cost measures the current earnings of Canadian factors of production (i.e., land, labour, capital) from productive activity. It includes wages and salaries, profits, interest, net rent and net income of farm and nonfarm unincorporated business.

Gross National Product.-Gross national product, by totalling all costs arising in production, measures the market value of all final goods and services produced in the current period by Canadian factors of production. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus capital consumption allowances and miscellaneous valuation adjustments.

Personal Income.-Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. It includes transfer payments from government (such as family allowances, unemployment insurance benefits and war service gratuities) in addition to wages and salaries, net income of unincorporated business, interest and dividends and net rental income of persons. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

Gross National Expenditure.-Gross national expenditure measures the same aggregate as gross national product, namely, total production of final goods and services at market prices, by tracing the disposition of production through final sales to persons, to governments, to business on capital account (including changes in inventories) and to non-residents (exports). Imports of goods and services, including net payments of interest and dividends to non-residents, are deducted since the purpose is to measure only Canadian production.

Economic Activity in 1962.-The economic expansion that began in 1961 continued in 1962 when gross national product rose to $\$ 40,401,000,000$, an 8 -p.c. advance over the previous year. This increase represented the largest year-to-year gain since 1956 when the economy was stimulated by an exceptionally high level of capital expenditure. Price increases were moderate in 1962, accounting for less than 2 p.c. of the increase in gross national product, leaving a gain in volume of a little more than 6 p.c.

All the main components of gross national expenditure contributed to the increase in the aggregate. Consumer spending, which rose more than 5 p.c., was a major expansionary influence. The strength in the consumer sector was particularly evident in the first and last quarters of the year; purchases of durables, notably passenger cars, were especially heavy in the fourth quarter. The increase in consumer spending was accompanied by a large rise in personal income and personal saving. Investment in fixed capital resumed its upward course, the bulk of the increased outlays being for machinery and equipment. Except in the third quarter, the accumulation of business inventories made only a modest contribution to the expansion of economic activity. With a near-record crop in 1962, in contrast to a poor crop in 1961, there was a considerable accumulation of farm inventories in place of the liquidation of a year earlier. Largely in response to a higher level of demand in the United States, exports of goods and services were up nearly 8 p.c. while imports also rose but not to the same extent; these increases reflected, in part, the lower exchange value of the Canadian dollar. Government expenditure was up substantially, mainly reflecting larger outlays at the provincial-municipal level. However, the deficit of all governments combined declined significantly.

The salient developments on the income side were a 7 -p.c. rise in labour income, a 13-p.c. increase in corporate profits, and a sharp expansion in accrued farm income, largely a reflection of a near-record crop. Personal income rose at about the same rate as national income.

All the major components of demand showed price increases, ranging from 1.5 p.c. in consumer expenditure to 3.7 p.c. in government expenditure. Prices of imports rose 4.4 p.c., largely as a result of the depreciation of the Canadian dollar. This increase is not reflected in the over-all implicit price index of gross national expenditure since imports are excluded by definition from Canada's gross national product.

## Production and Employment

Real output for 1962 was higher by just over 6 p.c. than the corresponding figure for 1961. If agriculture is excluded, the increase amounted to about 5 p.c. The 8 -p.c. gain in the goods-producing industries is reduced to 7 p.c. in the same manner.

Manufacturing, with an 8-p.c. gain, was the largest single contributor to the expansion during 1962, accounting for approximately one third of the total increase. The considerable advance ( 11 p.c.) in the cyclically volatile durables component formed the basis for this growth, with particular strength occurring in the transportation equipment and the electrical apparatus and supplies groups. Iron and steel and non-metallic mineral products increased by 9 p.c. each. Non-durable manufacturing continued to expand in 1962, showing a 5 -p.c. increase over 1961, with the largest gain of any major industry group in textile products ( 8 p.c.), and the smallest ( 2 p.c.) in the leather and clothing products groups.

Considerable gains were also made in mining and forestry, which increased by about 7 p.c. each, while construction expanded by 2 p.c.

The service-producing industries showed a 4-p.c. gain, about two fifths of which was accounted for by a considerable increase in wholesale trade ( 8 p.c.) and retail trade ( 4 p.c.), which paralleled the rapid expansion in manufacturing output. The most significant development within retail trade was an 11-p.c. increase in the motor vehicle dealer component. Oil and gas pipeline transport accounted for about half of the 4-p.c. increase in transportation, as the growth in output of this industry was well above average. The only major decline ( 12 p.c.) occurred in storage, largely as a result of declines in the volume of receipts and shipments at grain elevators during the first part of the year. Public administration and defence showed a smaller-than-average gain ( 2 p.c.), while electric power and gas utilities increased by 6 p.c. The remaining service-producing industries continued their steady advance, increasing by approximately 4 p.c.

The market for labour improved in 1962. The total number of employed persons increased by nearly 3 p.c., and the non-agricultural component of this number increased 3.5 p.c. In contrast to the previous year when the rate of rise in the employment of women substantially exceeded that of men, both men and women shared equally in the 1962 increase. Gains in employment occurred in all industries except agriculture and other primary industries, the largest being in construction and non-government service (community, business, personal, and recreational service). The average rate of unemployment in 1962 was 5.9 p.c. of the labour force, compared with the rate of 7.2 p.c. in 1961.

## The Components of Demand

Consumer expenditure rose to $\$ 25,749,000,000$ in 1962 , a gain of more than 5 p.c. over the previous year. This increase was associated with a strong upward movement in personal disposable income and was accompanied by a higher level of personal saving.

The expansion in personal expenditure, which took place mainly in the first and final quarters of the year, was the largest since 1959. It was attributable mainly to a particularly sharp increase in net purchases of new and used automobiles-motor vehicle dealers'
sales rose by 11 p.c. Purchasing of durable goods in total was higher by 8 p.c. in 1962 in contrast to the lack of any strong movement in either of the years 1960 and 1961; prices were unchanged, indicating an equivalent rise in volume. Consumer spending on nondurable goods also rose but more in line with the annual increases experienced in recent years; an increase of 5 p.c. from 1961 to 1962 compared with 4 p.c. in the two previous years. A part of this slightly larger increase reflected the first full year's impact of the Ontario sales tax which was introduced in September 1961. Spending on food, tobacco and alcohol all contributed to the over-all picture of strength as their rate of increase was significantly higher than between 1960 and 1961. Price increases of about 1 p.c. associated with consumer goods in total were mainly a reflection of price increases in non-durable goods.

The slackening rate of increase in personal expenditure on services, apparent in recent years, continued in 1962 -expenditures rose by 4.5 p.c. In part, this reflected significant movements in personal spending of non-residents in Canada and of Canadians travelling abroad. Abstracting this influence, outlays for services increased by 6 p.c. The increases were general, although a diminished rate of growth in spending on shelter was noticeable as increases in rental rates became less pronounced, a tendency apparent since 1960.

Capital expenditure in 1962 amounted to $\$ 6,954,000,000$, nearly 5 p.c. higher than in the previous year. Roughly similar rates of increase (over 8 p.c.) occurred in outlays for housing and for machinery and equipment; expenditure on non-residential construction showed little change.

The rise in fixed capital formation in 1962, mainly a result of the strength in demand for producers' durable equipment, occurred in the first three quarters of the year. This strength was centred in the primary metal manufacturing industries, mining and agricultural sectors of the economy, the last probably reflecting to some extent spending from the higher farm incomes received during the year. Although there was little change from 1961 to 1962 in the value of construction of non-residential buildings and works, there were offsetting movements within the year. Expansion took place in spending for plant and equipment by manufacturers; the utilities spending program appeared on balance slightly lower, with increased spending by electric power and telephone utilities more than offset by completion of a large-scale pipeline construction program. Offsets also occurred between higher outlays by the agricultural and fishing industries and lower spending by the mining industry.

The rise in housing expenditure in 1962 reflected not only a higher number of housing starts but a larger carry-over of houses under construction at the beginning of 1962 than in the previous year. Starts rose from 125,577 in 1961 to 130,095 in 1962, approximately 4 p.c., while completions were higher by 9.5 p.c., increasing from 115,608 in 1961 to 126,682 in 1962. An increase in starts of rental dwellings more than offset a decline in starts of dwellings for home-ownership; partly associated with this trend was an increase in conventional mortgage lending and a shift away from financing under the National Housing Act.

Investment in business inventories played only a small part in the expansion of gross national product in 1962. For the year as a whole the addition to stocks amounted to $\$ 375,000,000$, although in the third quarter of the year stock-building at an annual rate of $\$ 800,000,000$ was very important.

The largest build-up of stocks occurred in manufacturing industries, with widespread accumulation in both durable and non-durable lines. The ratio of stocks to shipments throughout the year remained below the average of the previous year.

The accumulation of stocks in wholesale trade was virtually negligible, the liquidation in the first half of the year being largely offset by accumulation in the second. There was a considerable accumulation of stocks in the hands of retail dealers. Most of this accumulation was in the hands of automotive dealers, where sales were sharply higher and stocks had been drawn down slightly in the previous year.

Some of the most notable developments of the year occurred in the field of foreign trade where both exports and imports of goods and services rose to record levels. Exports amounted to $\$ 8,224,000,000$, close to 8 p.c. higher than in 1961, the rate of increase for goods being somewhat higher than for services. At the same time, imports of goods and services reached a value of $\$ 9,033,000,000$, nearly 6 p.c. above the level of 1961 ; all the increase was in the merchandise part of the account. The result was that the deficit on international current account fell from about $\$ 911,000,000$ to about $\$ 809,000,000$, all of the improvement occurring in the non-merchandise items.

The pattern of trade in 1962 was affected, among other things, by the stabilization of the Canadian dollar in May, at 92.5 cents in terms of United States currency. Furthermore, the foreign exchange crisis in June 1962 culminated in government action to relieve pressure on the Canadian dollar, to bring about a greater stabilization in Canada's international transactions, and to strengthen the exchange reserves. The net effect of these factors in terms of Canadian production was to contribute to an increase in exports of Canadian goods and services and to lower the portion of domestic demand being met from foreign sources. The deficit with non-residents on current account, on a year-to-year basis, showed a fairly small change but within the year it declined progressively from just over $\$ 1,000,000,000$ in the first quarter to less than half that in the final quarter, although some of this improvement may have resulted from a decline in imports from an irregularly high third-quarter level.

The rise in exports of goods occurred mainly in the second quarter of the year, but the high level was sustained throughout the remainder of the year. It was attributable in part to the economic expansion in the United States (the increase in exports to the United States on a year-to-year basis was greater than the total increase in exports), in part to the effect of changes in the exchange rate, and in part to aggressive export sales promotion by both business and government. Although newsprint and wheat remained the two principal commodity exports, the level of exports for both of these was lower than in 1961. The major gains were in sales abroad of iron ore, crude petroleum and natural gas. Of less importance in dollar terms, but items in which very substantial advances were recorded, were non-farm machinery, aircraft and parts, aluminum and lumber and products. Almost three quarters of the increase in exports was attributable to the commodity groups noted above.

Receipts for services also rose sharply in the second quarter and then remained at the new high level. This increase was due primarily to the increased travel expenditures of foreigners, encouraged in part by the more favourable rate of exchange, and to an increase in receipts of interest, and from freight and shipping services resulting from the increased volume of merchandise exports, such as iron ore, petroleum and natural gas.

Imports of goods rose through the first three quarters of the year, despite an unfavourable exchange rate which raised the price of imports to Canadians, and despite the imposition of an import surcharge on certain classes of goods at mid-year which had the same effect. However, in the final quarter of the year imports fell off sharply, reflecting in part the earlier changes, including the unusually high level of the previous quarter. Even with this decline at the year-end, imports of goods for the year were the highest on record, although some of the increase, as in exports, was due to the change in the exchange rate. The figures indicate a particularly sharp pick-up in non-farm machinery, electrical apparatus and automobile, parts, all of which are consistent with the strong demand, noted earlier, for producers' durables and automobiles. However, increases in the level of imports were general and occurred in almost all classes of goods. About 80 p.c. of the increase in merchandise imports arose from increased purchases from the United States.

Payments for services rose to a peak in the second quarter of 1962, reflecting accelerated transfer of interest and dividends on non-resident investment, larger payments for business services and the continued high level of Canadians' travel expenditures abroad; they fell
back in the third quarter and remained stable in the latter part of the year. The reductions were largely a result of lower travel expenditures, a reduced rate of payments of dividends, and a decline in miscellaneous expenditures.

## The Government Sector

At $\$ 7,721,000,000$, expenditures on goods and services of all levels of government combined, excluding inter-governmental transfers, were 7 p.c. higher in 1962, with divergent movements concealed in the total figure. Purchases by provincial and municipal governments rose by over 11 p.c., reflecting the increased building of vocational schools under the federal-provincial cost-sharing plan; this increase is in contrast to the small gain at the federal level, where a 4-p.c. expansion of defence outlays was almost offset by a fall in non-defence expenditures. Within 1962, total government purchases rose sharply from the first to the second quarter but declined gradually thereafter, reflecting the contraction in spending by the Federal Government.

Transfer payments to persons from all governments advanced by more than 7 p.c. At the federal level, primarily because of the increase in monthly payments from $\$ 55$ to $\$ 65$ in February 1962, the payments from the Old Age Security Fund rose by nearly 20 p.c. This increase was offset largely by a decline of more than 17 p.c. in unemployment insurance benefits, reflecting the improved employment situation. Provincial transfers to hospitals under the Hospital Insurance and Diagnostic Services Act were higher by almost 10 p.c. Subsidies paid by the Federal Government showed an increase of nearly 18 p.c., principally because of the loss incurred by the Agricultural Commodities Stabilization Board.

At the combined level, all revenue components showed increases in 1962 over the previous year. Federal indirect tax revenue was up almost 10 p.c., reflecting in part the imposition of the temporary surcharges announced in June 1962 and the rise in the value of imports between the two years. There was an increase in indirect taxes of more than 13 p.c. at the provincial-municipal level, including increases in receipts from provincial sales tax of over 60 p.c. (mainly because of the introduction of a sales tax in Ontario in September 1961), from provincial gasoline taxes of over 7 p.c., and from municipal real property taxes of about 8 p.c.

Where there was a considerable rise in total expenditures of all governments combined, the increase in revenues was even larger, with the result that the deficit on a national accounts basis declined significantly from $\$ 905,000,000$ in 1961 to $\$ 770,000,000$ in 1962.

## Income Flows

In 1962, labour income reached an estimated total of $\$ 20,359,000,000$, nearly 7 p.c. higher than in the previous year, reflecting an expansion in employment and a further rise in wage rates. Labour income rose most rapidly in the early part of the year. As in the recent past, the largest gains in labour income among the major industries occurred in the non-government service group (close to 11 p.c.). The next highest rate of change was in construction (more than 8 p.c.).

In 1962, more than 42 p.c. of wages and salaries originated in goods-producing industries and the remainder in service-producing industries, in contrast to the beginning of the postwar period when the contribution of the two segments to the total was about equal. This changed relationship reflects the tendency for wages and salaries to rise more rapidly in the service-producing than in the goods-producing industries.

Estimated at $\$ 3,254,000,000$, corporation profits (before taxes and before dividends paid to non-residents) continued to remain at record levels in 1962. During the first three quarters of the year, profits tended to level off at the peak attained in 1961, but showed a gain in the fourth quarter; for the year as a whole, they increased by 10.5 p.c. All industries
showed strength except wholesale trade, and finance, insurance and real estate. Manu-facturing-particularly metal industries (including transportation equipment)-mining, quarrying and oil wells, and retail trade showed notable gains.

Rent, interest, and miscellaneous investment income rose by about 5 p.c. in 1962. All components showed gains except net residential non-farm rents (paid and imputed), which were estimated to have fallen as the rate of increase in gross rents slowed down although operating expenses indicated no such change. The trading profits of government business enterprises showed a substantial increase of about 9 p.c. in the year. Interest, dividends and net rental income of persons was up about 7 p.c., mainly as a result of a rise in bond interest and in dividends received.

Accrued net income of farm operators reached a level of $\$ 1,391,000,000$ in 1962, over 42 p.c. higher than the estimate for 1961 and the highest level attained since the mid-1950's. Although cash receipts from the sale of farm products were at an all-time high, the largest part of the increase in accrued net income may be attributed to the greatly increased production of grains in Western Canada, resulting in a build-up of inventories on farms. The 1962 estimate of the value of crop production was $\$ 1,175,000,000$, about $\$ 550,000,000$ higher than the 1961 estimate. Farm cash receipts, the largest component of farm net income, increased over 4 p.c. Major items contributing to the increase were larger participation payments by the Canadian Wheat Board and higher returns from the sale of wheat, oats, cattle and calves, poultry, and dairy products. Farm operating expenses showed a further increase in 1962, slightly dampening the increase in gross income. Contributing to the increase were substantially higher outlays for farm rents, livestock feeds, and the operation of farm machinery, including repairs.

In a comparison with the year 1961, net income of non-farm unincorporated business increased 4 p.c. in 1962 to a level of $\$ 2,380,000,000$. Net income in most industry groups showed some increase, the greatest increases occurring in the retail trade, construction, community service and fishing industries. Slight declines were registered in the transportation and finance industries.

## Section 2.-Industry Production Trends*

The Dominion Bureau of Statistics has made available a new set of historical production data pertaining to the entire spectrum of Canadian industries. These data, in the form of volume of production indexes, are measures of value added for each industry expressed in the dollars of a base year. Technically, they are termed "indexes of real gross domestic product (GDP) at factor cost originating by industry". $\dagger$

[^321]In measuring the production of a single product such as steel, it is normal to think of so many tons of steel when the question of quantity arises. When measuring the combined production of steel and natural gas, there is an obvious need for a common denominator and, in such a case, it is appropriate to use the average unit prices of some time period (chosen as a base) to value the quantities produced before adding them together. The resultant quantity, volume, or real output measure can subsequently be left in its constant or base period dollar form or it can be expressed in index number form. The latter is accomplished by dividing the constant dollar aggregate of the current period by the dollar aggregate for the base period and multiplying by 100 . In constructing a quantity index for a combination of industries where the output of one industry becomes the input of another, the portion double-counted must be eliminated. This is accomplished by revaluing both intermediate inputs (materials, fuel, etc.) and total output in terms of the dollars of a common base year and subtracting the constant dollar value of the former from the latter to yield a constant dollar value added aggregate.* This aggregate is the quantity or volume measure represented by the indexes presented herein.

The value added or GDP volume indexes can be regarded as an extension of the index of industrial production to encompass the remainder of the economy. Concepts and basic methodology used to construct the indexes are the same in both cases. Thus, industry production index coverage is extended from mining, manufacturing, and electric power and gas utilities, for which volume indexes have been published since the 1920's, to encompass all other major industrial divisions-agriculture, forestry, fishing and trapping, construction, retail and wholesale trade, finance, insurance and real estate, transportation, storage, communication, public administration and defence, and community, recreation, business and personal service; however, only the index of industrial production and its components are published currently and on a monthly basis. The GDP indexes can also be regarded as an extension of the national accounting framework, i.e., as an elaboration of the supply side of the national accounts.*

[^322]The annual indexes are well suited for studies of production trends, growth rates and inter-industry comparisons, but the quarterly indexes provide a much better tool for the study of the cyclical behaviour of industries, short-term changes in production and, in fact, for most types of current analysis. Statistics computed for less than annual intervals, however, are frequently subject to strong seasonal influences and variations in the number of working days during a quarter may cause differences in the levels of output between two quarters which otherwise would not exist. Accordingly, the quarterly real output indexes have been adjusted for both seasonal and calendar variation. The effects of the seasonal adjustment are shown on the following chart.

Factors Underlying Industrial Output Trends, 1935-62.-Over the course of the past three decades, the world has undergone profound economic changes, the more dramatic and far-reaching of which were: the depression of the 1930's and the subsequent slow recovery; the unprecedented upheaval of the Second World War; the emergence of new national and international spheres of influence in the postwar era, both on the political and on the economic fronts; the ever-present social flux with its attendant changes in mode of living; and the striking advances in the fields of science and technology-two forces which are themselves among the greatest contributors to change. Canada has not escaped these influences. Insofar as it has an open economy, sensitive to changes in world economic climate and affected in many ways by the powerful and technologically advanced economy of the United States, Canada may be said to be particularly susceptible to them. It is against this background that Canadian economic development during the 1935-62 period should be reviewed.

During this period, Canada's real domestic product more than tripled, growing at an average annual compound rate of 4.4 p.c. This growth resulted from the combined pressures brought to bear upon the various goods-producing and service-producing industries by the inter-related changes in demand (both domestic and foreign), technology, capital formation, marketing techniques and the labour force. The domestic market expanded considerably during this period, especially in the 1950's when immigration and net family formation reached a postwar peak. The population of Canada increased from $10,845,000$ in mid-1935, through $13,712,000$ in 1950 to $18,570,000$ in mid-1962, an average annual compound rate of increase of 2.2 p.c.

The tremendous expansion in productive activity following the outbreak of World War II, when output almost doubled within a period of five years, was facilitated by the existence of a large unused labour pool at the outset of hostilities. During the war years a large proportion of resources was diverted to the war effort, resulting in the expansion of many defence-oriented industries. At the same time, shortages of consumer goods and investment goods were created in other areas while income and savings were rising. During the immediate postwar period a certain amount of industrial dislocation occurred as a result of re-tooling and a large-scale changeover to peacetime production, coupled with major labour unrest in some industries. This phase of readjustment, however, did not generally extend beyond 1946, following which production resumed its upward trend.

The postwar period was marked by three major expansions. The first was based on satisfying the backlog of war-deferred investment and consumer demand and on supplying the needs of the war-devastated countries, especially for various materials. The second was based on the requirements of defence-supporting industries following the outbreak of the Korean hostilities, and on stock-piling requirements at home and abroad. The third was the investment boom of the mid-1950's during which output reached a new high level. These strong demand influences combined to make most of the period one of fairly rapid and sustained growth. Production data reveal, however, a diminishing rate of increase during the late 1950's, as external sources of supply for many commodities multiplied and as the competition encountered by many Canadian producers intensified. At the same time, there was an absence of strong stimulants to domestic demand, such as the deferred demand and the population growth of the preceding periods. During the early 1960's, however, the first waves of the postwar generation were beginning to swell the labour force and to exercise their influence on the demand for goods and services.

Along with the increases in total final demand there were also shifts in the composition of demand, which affected the output of the various industries. Imports retained roughly the same relative share of the gross national product, while the share of exports declined from 26.4 p.c. in 1935 to 20.4 p.c. in 1962, an indication of the growing importance of the domestic market as an outlet for the products of Canadian industry. Government expenditure and business gross fixed capital formation made considerable relative gains but personal expenditure on goods and services, as a percentage of total expenditure, declined from 77.4 p.c. in 1935 to 63.7 p.c. in 1962.

Even more remarkable than some of the-demand-induced changes were the striking changes brought about by the technological discoveries and innovations that have transformed whole production processes and opened up hitherto unknown areas in the fields of manufacturing, transportation and communication. Newer industries, such as air transport, have assumed major importance in a comparatively short time; entirely new industries, such as gas pipelines, have appeared; and a profusion of new products have been created, such as the petrochemicals of the chemicals industry and the television and other electronics products of the telecommunication equipment industry. As was to be expected, the industries in a position to benefit from such innovations were among the most rapidly expanding in the economy, although the impact of the expansion spread through the entire economic system. The changes in production and demand also influenced the level of employment in the various industries; there was a considerable shift in employment during the postwar period from the goods-producing to the service-producing industries and most of the loss in the former took place in agriculture. From 1946 to 1962, agriculture decreased its share of total employment by 15 p.c., while total employment continued to expand. In the same period the service-producing industries increased their share from 39 p.c. to just over 53 p.c. of the total.

${ }^{1}$ Contract drilling (excluding drilling for oil and gas) is not included here but is included in the totals "Goodsproducing industries" and "Gross Domestic Product". $\quad{ }^{2}$ Repair service establishments classified to manufacturing are not included here but are included in the totals "Goods-producing industries" and "Gross Domestic Product'.

Industrial Expansion, 1935-62.-An examination of industrial expansion since 1935 reveals certain well-defined patterns of development. Individual industries have flourished or, in rare instances such as coal mining, have declined but the major industry groups have all expanded. Development, however, has not been uniform throughout the period. Three major types of factors affecting the expansionary path of industry have been in evidence in the Canadian economy at some point during the period.

The first may be described as some special factor at work in a particular industry, the effects of which would be most noticeable in that industry-for example, the demand for uranium which played such an important role in the mining industry during the latter half of the 1950 's, the opening up of new mineral resources such as the iron ore mines in QuebecLabrador, and certain technological innovations such as the development of synthetic textiles or television.

The second type of factor is much more general in its effects and in its causes. Such factors as increased demand for consumer goods resulting from a rising standard of living and a growing population, shifts in world trading patterns or shortages causing increased demand for export goods; the surge of investment activity associated with replacement cycles, attempts to broaden the base of economic activity through investment in research, social overhead capital, education, improved management and marketing techniques, or a more efficient production process (or a confluence of all these factors) appear to lie at the root of such postwar expansions as the investment boom of the mid-1950's or the rapid expansion in production immediately following the Second World War.

The third type of factor would be some unique and far-reaching event, of which the Second World War and the Korean War might serve as conspicuous examples. Each afforded a powerful stimulus to growth in a large cross-section of industries.

All three factors, jointly or in turn, have reacted on the various industries resulting in the upswings in aggregate production. The effect of these factors on the individual industries is revealed to some extent by their relative rates of growth.
12.-Growth Rates of the Main Industrial Groups, 1935-62 and 1946-62

| Industry | 1935-62 | 1946-62 | Industry | 1935-62 | 194^-62 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | p.c. | p.c. |  | p.c. | p.c. |
| Goods-producing industries. | 4.4 | 4.1 | Service-producing industries. | 4.5 | 4.3 |
| Agriculture. | 0.9 | 1.3 | Transportation, storage and com- |  |  |
| Forestry.. | 3.1 | 1.4 | munication..................... | 5.0 | 4.4 |
| Fishing and trapping | 2.2 | 1.8 | Finance, insurance and real estate... | 5.2 | 5.1 |
| Mining. | 7.3 | 9.3 | Public administration and defence | 3.4 | 4.5 |
| Manufacturing . | 5.0 | 3.9 | Community, recreation, business |  |  |
| Construction. | 6.7 | 5.8 | and personal service.............. | 4.0 | 3.6 |
| Electric power and gas utilities. | 8.3 | 9.7 | Gross Domestic Product | 4.4 | 4.2 |

Foremost in growth was the electric power and gas utilities industry which showed an average annual compound rate of growth of close to 10 p.c. during the postwar period, while its longer-term growth rate was 8.3 p.c.; large-scale hydro-electric power developments along with the expansion of natural gas distribution helped to sustain this remarkable performance. The mining and construction industries ranked second and third, respectively. All three industries have been strongly affected by technological advances, new discoveries and a fairly well sustained demand for their products. In the case of mining, this demand frequently came from abroad, resulting in relatively high export sales and
providing incentive for the opening up and developing of new mineral resource areas. Some slackening in construction activity was evident following the unusually high levels reached during the mid-1950's but demand for housing proved to be a sustaining influence during most of the period.

The industry divisions consisting of manufacturing, transportation, storage and communication, trade, and finance, insurance and real estate all expanded at roughly the same average rate during the $1935-62$ period-close to 5 p.c. The rates of growth of these industries for the postwar period diverged slightly but still fell within the range of 4 to 5 p.c. During the latter period, public administration and defence also had a growth rate within this range. Although these industries expanded at about the same rates, the manufacturing, trade, and transportation, storage and communication industry divisions, which together account for about one half of total output, also showed strikingly similar cyclical patterns. In fact, these are the three industry divisions within the Canadian economy that showed the most pronounced and consistent patterns of cyclical swings during the postwar period.

The Second World War and, to some extent, the Korean War provided strong impetus to the output of the manufacturing industries and to transportation. Within manufacturing, it was the durable manufactures component which expanded considerably during both periods of hostilities and which benefited from the need for machinery and equipment during the investment boom and from consumer demand during the early part of the postwar expansion. Non-durables maintained a fairly steady rate of expansion for most of the period, largely in response to increased population and demand for industrial materials. Trade was less strongly affected by defence requirements. Retail trade, in particular, exhibited a relatively smooth expansionary path.

The community, recreation, business and personal service industry division was relatively insensitive both to cyclical and irregular influences but, along with some other steadily expanding industries such as finance, insurance and real estate, and non-durables, it helped to sustain aggregate production and growth during periods of contraction and expansion. Within the division, business services showed very rapid advances, reflecting increased use of advertising, accounting and legal services. Among the community services group, education and hospitals showed very pronounced gains but recreation services did not participate in the general upsurge during the 1950's. Within the personal services group, one of the more interesting developments was the decline in the domestic service component, while other industries such as restaurants, hotels and motels made considerable gains. Thus, while this division as a whole showed a less-than-average rate of growth, some of its components were among the most rapidly and steadily expanding in the economy.

The rates of growth in the forestry, agriculture, and fishing and trapping divisions were also below average and were subject to pronounced irregular fluctuations in output. Forestry experienced sharp year-to-year fluctuations because of the nature of its production process and also, to some extent, because of its sensitivity to changes in world demand and price. The volume of agricultural production varies, of course, with the crop produced and its output depends to a far greater extent on weather conditions and similar factors than to changes in prices and demand. It is interesting to note, however, that particularly poor crop years have coincided with the cyclical declines in the gross domestic product during the postwar period. Generally speaking, there has been a lack of buoyant expansion in agricultural production but, although the rate of growth was low, the year-to-year changes were sometimes quite spectacular. In absolute terms, the industry production levels have continued to rise over the longer term, and this increase has been accomplished with a declining labour force.

## Section 3.-Canadian Balance of International Payments*

Developments connected with the Canadian balance of international payments have drawn a good deal of public attention in recent years. For a long period wide degrees of imbalance in Canada's international accounts have been characteristic. Each year since 1950 Canada's current expenditures abroad have exceeded current external income with the exception of 1952. These large current deficits, which have ranged as high as $\$ 1,504,000,000$ in 1959, have been financed by massive inflows of capital. Although the deficits since then have been reduced, the current imbalance even by 1961 was still $\$ 982,000,000$. In 1962 the deficit for the year was reduced to $\$ 848,000,000$ due to improvements in the second half of the year, and the trend toward improvement continued in 1963.

Developments within 1962 were diverse and, as a result, the accounts for the year as a whole reflect two contrasting periods. In the first half of the year there was a rapid loss of foreign exchange holdings which led to the exchange crisis in June and to the series of official measures introduced in the second quarter with the object of stabilizing the international exchange value of the Canadian dollar and Canada's international transactions. In the first half of the year there had been net outflows of capital and a growing current account deficit. In the second half of the year there was a rapid restoration in official holdings of exchange accompanying large capital inflows and a contraction in the size of the current account deficit.

The official measures introduced in the second quarter of 1962 included the stabilization of the foreign exchange value of the Canadian dollar announced by the Minister of Finance on May 2, and the comprehensive program announced by the Prime Minister late in June 1962. This program included temporary graduated surcharges ranging between 5 p.c. and 15 p.c. on approximately half of all Canadian imports, a reduction in the amount of goods that Canadians travelling abroad were permitted to bring duty-free into Canada, reductions in government expenditures and the fixing of the bank rate at 6 p.c. To reinforce the reserves, Canada arranged for international financial support for well over

[^323]$\$ 1,000,000,000$ in cash and stand-by credits from the International Monetary Fund, the Federal Reserve System of the United States, the Bank of England, and the Export-Import Bank of Washington. After drawing $\$ 650,000,000$ of these resources, Canada's official holdings of gold and foreign exchange at the mid-year were $\$ 1,809,000,000$.

In the third quarter there were large increases in the official reserves of foreign exchange and other evidences of the restoration of confidence in Canada's ability to defend the exchange rate. A return of short-term capital from abroad contributed initially to the recovery of the reserves and the resumption of long-term capital inflows helped to consolidate the restoration. Accordingly, the above-mentioned international short-term credits were progressively retired so that at the end of 1962 only the drawing of $\$ 300,000,000$ from the International Monetary Fund remained outstanding. It was also possible to withdraw some of the surcharges on imports before the end of 1962 and these were all removed by the end of the first quarter of 1963.

From their low point in June 1962, the official holdings of gold and United States dollars increased rapidly to $\$ 1,159,000,000$ at the end of the month, $\$ 1,795,000,000$ by the end of the third quarter and $\$ 2,239,000,000$ by the end of the year, expressed in United States funds and exclusive of the international financial assistance.

Current Account Transactions.-The surplus on merchandise trade,* which emerged in 1961 for the first time since 1954, was maintained in 1962, although at a slightly lower level of $\$ 155,000,000$. However, a better than $10-$ p.c. reduction in net payments on non-merchandise transactions from $\$ 1,155,000,000$ to $\$ 1,003,000,000$ caused the current account deficit to decline from $\$ 982,000,000$ to $\$ 848,000,000$ in 1962 . The balance on merchandise trade has varied widely, with the peak deficit of $\$ 728,000,000$ occurring in 1956, when it accounted for more than one half of the total deficit. On the other hand, the non-merchandise deficit has risen steadily since 1952, except for the decline in 1962.

Since 1954, when merchandise exports and imports were almost equal at $\$ 3,900,000,000$, exports have increased fairly steadily to a peak of $\$ 6,364,000,000$ in 1962 , a 60 -p.c. advance. Imports on the other hand have shown wider fluctuations in their growth pattern. The value of imports in current dollars rose more than 40 p.c. in two years to $\$ 5,565,000,000$ in 1956 and remained at about that level until 1961, except for a sharp drop of nearly 8 p.c. to $\$ 5,066,000,000$ in 1958 . In 1962 imports rose more than 8 p.c. over 1961 to a record level of $\$ 6,209,000,000$.

In the past decade or so, the relative importance of exports of metals and minerals increased markedly, the relative importance of other materials for industry, such as chemicals and fertilizers, advanced more moderately, and the percentage shares for farm and forest products narrowed visibly. The relative position of wheat and wheat flour, which had been diminishing, recovered sharply in 1961, owing to large shipments of grain to mainland China and other communist countries. Notwithstanding a decline of some 6 p.c. in 1962, exports of wheat and wheat flour in the two most recent years were nearly as high as in 1952 and 1953, which were the years of peak shipments in the past decade. In addition to newer products for export, such as iron ore, uranium, petroleum and natural gas, there were general increases in more traditional staples such as lumber, pulp and paper, nickel, aluminum and copper, with the metal items showing above-average gains. About 80 p.c. of the rise of $\$ 475,000,000$ in exports in 1962 originated from larger shipments of farm and fish products other than grain, forestry products excluding newsprint, iron ore, crude petroleum and natural gas, and aircraft and parts. After the substantial gain in 1961, exports of grain and flour declined some 7 p.c. in 1962, with the reductions largely concentrated in shipments to countries in Eastern Europe. For the third successive year, exports of uranium dropped in 1962 to a level slightly more than half that of the peak year

[^324]1959. The rise of nearly $\$ 500,000,000$ in imports in 1962 was distributed widely over industrial materials, investment goods and consumer commodities. Each of the latter two groups accounted for just under one third of total imports in 1962, while industrial materials together with fuels and lubricants accounted for the remainder (see also Part I of Chapter XX on Foreign Trade).

The deficit on non-merchandise transactions of $\$ 1,003,000,000$, down 13 p.c. from the high level of $\$ 1,155,000,000$ of the preceding year, was over eight times as great as that of 1949 and double that of as recent a year as 1955. This expansion was attributable largely to the continuing rapid growth in Canada's indebtedness to foreign countries and to the rising population with higher per capita incomes. A total of $\$ 570,000,000$, or over one half of the 1962 deficit on "invisibles", was directly related to Canada's indebtedness abroad, with total interest and dividend payments by Canadians to non-resident investors reaching $\$ 781,000,000$. In addition, transfers in other forms of investment income amounted to well over $\$ 100,000,000$, and there were also substantial payments for a variety of business services by Canadian subsidiaries to their home offices and to other non-residents. Furthermore, some hundreds of millions of dollars worth of earnings, which accrued to foreigners but were retained in Canada for re-investment, are excluded from the current account.

From a peak of $\$ 207,000,000$ in 1959 and 1960 , net travel payments were reduced to $\$ 160,000,000$ in 1961, and were further cut down to $\$ 50,000,000$ in 1962 , which was about the level of the deficit on travel account in the early 1950's. In both 1961 and 1962, the improvement occurred wholly in transactions with the United States. Receipts from American visitors were up more than 15 p.c. each year, while expenditures by Canadians visiting the United States declined, particularly in the latter year. The stabilization of the Canadian dollar at a lowered value in terms of foreign currency and the additional restriction in the second quarter of 1962 to the privilege of duty-free purchases by Canadians abroad were important factors behind the narrowing of the deficit. To these net payments were added deficits of $\$ 90,000,000$ on freight and shipping services, $\$ 39,000,000$ on inheritances and transfers by migrants and $\$ 419,000,000$ covering government transactions, personal remittances, business services and miscellaneous income. Included in government expenditures were official contributions amounting to $\$ 32,000,000$, which compared with $\$ 56,000,000$ in the previous year. Against the expenditures in 1962 was an amount of $\$ 155,090,000$, representing gold production available for export.

The characteristic bilateral distribution of the Canadian balance of payments was maintained in 1962; a surplus from transactions with overseas countries partially covered a deficit-four times as large in absolute terms-with the United States. However, a larger decline in this deficit from $\$ 1,386,000,000$ to $\$ 1,116,000,000$ than in the surplus with overseas countries from $\$ 404,000,000$ to $\$ 268,000,000$ contributed to reducing the over-all deficit from $\$ 982,000,000$ to $\$ 848,000,000$. In current dollars, the 1962 deficit with the United States approximated the level in 1958 and was much higher than in any year before 1956. The surplus on current transactions with Britain continued to grow in 1962-from $\$ 26,000,000$ to $\$ 213,000,000$-while the substantial surplus of 1961 with other overseas countries was reduced by three quarters to $\$ 55,000,000$.

Capital Movements.-In 1962, Canada continued to draw substantially on the resources, both real and financial, of the other countries of the world. The outline of Canada's balance of international payments for the year, as traced out in capital movements and in the current account deficit, was broadly similar to that for 1961. But encompassed within the 1962 total were the exchange crisis of early summer, the effects of remedial measures and other developments through the course of the year. Capital movements in long-term forms, including direct investment, portfolio stocks and bonds, official loans and other long-term investments, totalled $\$ 693,000,000$ in 1962 , as compared with
$\$ 790,000,000$ in the previous year. Long-term capital financed 82 p.c. and 80 p.c., respectively, of the current account deficits in 1962 and 1961. The proportions were smaller in 1955, 1959 and 1960, but averaged about 94 p.c. for the postwar period as a whole.

The net inflow of capital to Canada for direct investment in foreign-controlled enterprises during 1962 was estimated at $\$ 525,000,000$, some $\$ 10,000,000$ higher than in 1961, and was exceeded only in three earlier postwar years-1956, 1959 and 1960. An unusually large proportion, perhaps as much as a third of the movement in 1962, was related to the acquisition of existing enterprises and interests and for refinancing. Approximately 60 p.c. of the direct investment inflow in 1962 originated in the United States and the remainder was about evenly divided between Britain and other overseas countries. Direct investment abroad of Canadian capital was estimated at $\$ 100,000,000$, up $\$ 20,000,000$ over the total for 1961.

Owing to the mid-year exchange crisis and to the re-entry in the final quarter of the Government of Canada as a borrower in the United States capital market for the first time since 1950, transactions in stocks and bonds between Canada and other countries were of more than usual interest in 1962. Net inflows from transactions in Canadian and foreign securities amounted to $\$ 257,000,000$, as compared with $\$ 306,000,000$ in 1961 and with an average of nearly $\$ 680,000,000$ for the four years 1956 to 1959 . While retirements of Canadian securities worth $\$ 322,000,000$ in 1962 were only moderately above the levels of recent years, new issues increased by a third to $\$ 710,000,000$, reaching a total exceeded only in 1957. At the same time, trade in outstanding Canadian securities led to a moderate net capital outflow, the first since 1955, as did also transactions in foreign securities. The over-all movement to Canada of portfolio security capital in 1962 came entirely from the United States with net inflows from that country of $\$ 430,000,000$, as there were outflows of $\$ 90,000,000$ to Britain and $\$ 83,000,000$ to other countries. Repayments totalling $\$ 129,000,000$ on loans made by the Government of Canada were received during 1962 from a number of European and Asian countries and included large prepayments from France and the Netherlands; and Canada subscribed $\$ 7,000,000$ for bonds of the United Nations.

The export of capital represented by the growth of Canada's official gold and foreign exchange holdings over the course of the year totalled $\$ 537,000,000$, or $\$ 207,000,000$ apart from the special international financial assistance received in connection with the exchange crisis in the second quarter of the year. In all, this aid amounted to $\$ 707,000,000$, representing a drawing from the International Monetary Fund of various foreign currencies equivalent to $\$ 300,000,000$ in United States funds, and of reciprocal currency arrangements with the central banks of the United States and Britain, under which amounts of $\$ 250,000,000$ and $\$ 100,000,000$, respectively, in terms of United States funds were made available to Canada. However, with the rapid restoration of confidence and of the official holdings of gold and foreign exchange, the latter arrangement was terminated in the final quarter and a Canadian dollar equivalent of $\$ 377,000,000$ was returned to the two countries, leaving a net balance of $\$ 330,000,000$ for international financial assistance. From a variety of factors including changes in accounts receivable and payable and due also to a repayment of bank loans financed from the sale abroad of a new corporate bond issue, inflows of "other capital movements" declined substantially from $\$ 467,000,000$ in 1961 to $\$ 280,000,000$. A more detailed description of the exchange crisis and of the corrective measures adopted and their effects are found in the relevant issues of the Quarterly Estimates of the Canadian Balance of International Payments (Catalogue No. 67-001).

Since the shift upward at the beginning of the 1950's, direct investment inflows have been a specially significant element in the capital account. Continuing and substantial, these receipts contributed in particular to resource development and the growth of associated industries. By far the largest part of the new capital went into the petroleum and natural gas industry, a dynamic element in the expansion of the Canadian economy in this period. Large amounts were also invested in other mining industries, particularly for the development of iron ore, and in various branches of manufacturing.

From 1956 to 1959, the inflow for direct investment, substantial though it was, was less than the inflow of portfolio capital, as some of the sharply increased demands for new capital were channelled to foreign capital markets through the sale to non-residents of new issues of Canadian bonds and debentures. Corporations, provincial governments and municipalities were all important borrowers in this period. Statistics and comments on the effects of the unprecedented capital inflows upon the ownership of investments in Canada will be found in Section 4 on Canada's International Investment Position.

## Section 4.-Canada's International Investment Position*

Canada's balance of payments is influenced to a considerable extent by the size and character of its balance of international indebtedness, a phrase used in the broad sense generally accepted in balance of payments terminology to include equity investments as well as contractual borrowings. This is true not only through the servicing of capital involving interest, dividends and miscellaneous income payments, but also through the influences of foreign investment on the Canadian economy and on the shape and direction of its external demands.

Canada has been among the world's largest importers of private long-term capital. The very substantial capital formation which was a feature particularly of the 1950's was associated with an unprecedented growth in the country's external liabilities. These investments contributed to a rapid rate of growth in the Canadian economy, particularly in the exploitation of natural resources, and added significantly to Canadian production, employment and income. At the same time they added substantially to the continuing burden of Canada's external debt and to the proportion of Canadian industry controlled by non-residents.

Canada's gross external liabilities amounted to $\$ 27,800,000,000$ at the end of 1961 ; non-resident-owned long-term investments in Canada had reached a book value of $\$ 23,600,000,000$, having more than tripled since the end of World War II (by the end of 1963 they totalled well over $\$ 25,000,000,000$ ). The part of these investments in establishments controlled outside of Canada totalled $\$ 13,700,000,000$. These direct investments have been growing more rapidly than the total. Investments in other Canadian equities, although smaller, have also been substantial and there have been periods in recent years of sharp increase in foreign holdings of Canadian bonds and debentures.

Investments of non-resident capital have been closely related to the high rate of growth in Canada and to the heavy demands placed on capital markets by this factor and by the financial needs of governments and municipalities. Large development projects have been initiated and financed by investors from other countries and the growth effects from this investment have, in turn, led to Canadian borrowing in capital markets outside of Canada. While capital inflows have been the principal source of the increased indebtedness abroad, another substantial contributor has been the earnings from non-resident-controlled branches and subsidiaries which were retained in Canada. New resource industries depending to a large extent on non-resident financing include all branches of the petroleum industry, iron ore and other mining, aluminum, nickel, pulp and paper, and chemical industries. In addition, secondary industry has also benefited from non-resident investment.

Canada's gross external assets totalled $\$ 9,800,000,000$ at the end of 1961 and govern-ment-owned assets made up a substantial part of that total. Canada's net balance of international indebtedness, including equity investments, at the same date was estimated at $\$ 17,900,000,000$, almost two thirds of which was incurred in the eight years since 1953. By the end of 1962, Canada's net balance of international indebtedness had risen to well over $\$ 19,000,000,000$.

Foreign Investments in Canada.-Dependence upon external sources of capital for financing in earlier periods of heavy investment activity has been characteristic of Canadian development. During the exceptional growth period that occurred before World War I the rate of increase in non-resident investment was very high and dependency upon external sources of capital was greater than in later periods. Total non-resident investments in Canada increased from an estimated $\$ 1,232,000,000$ in 1900 to $\$ 3,837,000,000$ by 1914, mainly in the form of bonded debt for railway and other expansion guaranteed by the Canadian Government. This was the period when the principal external source

[^326]of capital was London, and in 1914 British investments in Canada were estimated at $\$ 2,778,000,000$. By the same date, United States investments, although they had been increasing rapidly, had only about one third of the value of British-owned investments.

During the first part of the inter-war period the United States became the principal source of external capital, and by 1926 the United States-owned portion of Canada's international debt exceeded that owned in Britain, which had not increased since 1914. Growth in United States investments in Canada continued for some years but was interrupted in the 1930's when the total was reduced by repatriations of securities and other withdrawals of capital. Increases began again in the 1940's and by the end of World War II United States investments of $\$ 4,990,000,000$ compared with British investments of $\$ 1,750,000,000$. The latter had been reduced by wartime repatriation measures and the proceeds were used in financing British expenditures in Canada. Following the War, up to 1948, some further declines occurred in British investments in Canada but since then they have increased.

United States investments have risen each year since the end of World War II, particularly since 1947 when the period of intense activity in the petroleum industry got under way following new discoveries. More than half the growth in United States investment in Canada has occurred since 1953. At $\$ 17,966,000,000$, United States investments in 1961 continued to represent more than three quarters of all non-resident investments in Canada and also made up a similar ratio of the increase since 1953. The main rise occurred in direct investments in companies controlled in the United States, which are prominent in many branches of Canadian industry. By 1961 these had increased to well over twice their value in 1953. In the same period portfolio investments in Canada owned in the United States rose by more than four fifths. A considerable part of this latter rise occurred in the period 1956-59 when large sales of new issues of securities were made in that country.

British investments in Canada totalled $\$ 3,385,000,000$ at the end of 1961 . Although these investments then exceeded by more than $\$ 600,000,000$ the levels reached at the end of World War I and again in the early 1930's, they accounted for only about 14 p.c. of the total non-resident investments in Canada compared with 36 p.c. at the end of 1939 before most of the wartime repatriations. British investments in Canada had more than doubled from the low point in 1948; the increase had been particularly concentrated in direct investments which had more than quadrupled and which, at the end of 1961, represented a much larger portion of the total than in the prewar period. In absolute terms, this rise in total British investments in Canada was slightly below the rise in investments by all other overseas countries in the same period, although the rate of increase was lower.

Investments of countries other than the United States and Britain reached a record total of $\$ 2,219,000,000$ at the end of 1961 . Exceeding four times the corresponding 1952 figure, this represented a much higher rate of increase than had occurred in either United States or British investments and large increases had taken place in portfolio holdings of securities as well as in direct investments. At about 10 p.c. of the total, this group of countries, mostly in Western Europe, made up a larger portion of total investments than ever before. Over 90 p.c. of the direct investments, which totalled $\$ 840,000,000$ in 1961 , also came from Western Europe; more than one quarter was of Belgian origin with Dutch, French, Swiss and German investments making up the next largest groups.

The degree of dependence upon non-resident capital for financing Canadian investment has been relatively much less in the postwar period than in the earlier periods of exceptional expansion, even though the rise in non-resident investments has been so great. Thus, from 1950 to 1955 the net use of foreign resources amounted to about one fifth of net capital formation in Canada, and direct foreign financing amounted to about one third. But from 1956 to 1960 when these ratios had increased considerably to 33 p.c. and 45 p.c., respectively, they were still less than the corresponding ratios in the period 1929 to 1930 when inter-war investment activity was at its highest point. In that shorter period more than one half of net capital formation was financed from outside of Canada, and in the period of heavy investment before World War I an even larger ratio of investment was
financed by external capital. In considering these changes it should be noted that for a decade and a half, between 1934 and 1949, Canada was a net exporter of capital and that Canadian assets abroad have been rising over a long period.

It should also be noted that the above ratios relate to the place of non-resident investments in all spheres of development including those where Canadian sources of financing predominate such as in merchandising, agriculture, housing, public utilities, and other forms of social capital. Thus, non-resident financing of manufacturing, petroleum and mining has been much higher than the over-all ratios indicate, and has provided the major portion of the capital investment in this field in the period since 1948. The most recent comprehensive calculation of the ratios of non-resident ownership in Canadian manufacturing, mining and petroleum is for the year 1959 and it should be noted that subsequent changes may have increased non-resident ownership even more. In that year the Canadian manufacturing industry was 51 p.c. owned by non-residents but capital subject to foreign control was 57 p.c. These proportions compared with 47 p.c. and 51 p.c., respectively, as recently as the end of 1954. In the field of petroleum and natural gas, non-resident ownership and control amounted to 63 p.c. and 75 p.c., respectively, at the end of 1959 whereas at the end of 1954 non-resident ownership and control had amounted to 60 p.c. and 69 p.c., respectively; in mining and smelting, non-resident ownership and control amounted to 59 p.c. and 61 p.c., respectively, compared with 53 p.c. and 51 p.c. in 1954. However, resident-owned Canadian capital continued to play a leading role in the financing of such areas of business as merchandising, railways and other public utilities. Hence non-resident ownership of business as a whole, including manufacturing, petroleum, mining, merchandising and railways and utilities, rose only slightly from 32 p.c. in 1948 to 34 p.c. in 1959 (the last year for which the calculation has been made). But, in the same years, companies subject to non-resident control increased from 25 p.c. to 32 p.c. their share of the total even in this broad area of business, a trend also evident in many subdivisions of the manufacturing and extractive industries.

The petroleum and natural gas industry, including exploration and development, refining, merchandising, pipelines and other distribution facilities, has been the largest single recipient of capital inflows in the postwar period, accounting directly for far more than 40 p.c. of the inflow of United States capital for direct investment in Canada. By the end of 1959, investments in Canadian petroleum concerns controlled in the United States made up 69 p.c. of the total. Another 6 p.c. of the investment was controlled in overseas countries. Investments owned in the United States and overseas were 57 p.c. and 6 p.c., respectively, of the total.

Another basis of judging the place of foreign-controlled business in Canadian industry is provided by a special study of production and employment in the larger Canadian manufacturing establishments controlled in the United States. Such establishments having an investment of $\$ 1,000,000$ or more accounted for about 30 p.c. of Canadian manufacturing production in 1953 and 21 p.c. of employment in that field. These ratios in non-residentcontrolled plants were considerably higher than in 1946-the previous year for which a study of this kind was made.

In some industries the proportions of production and employment in plants controlled in the United States were much higher than this. Automobiles, for example, are mainly produced in United States-controlled plants, but this is exceptional. Among other industries where well over one half of the production is in United States-controlled firms are the smelting and refining of non-ferrous metals, petroleum refining, rubber products, and motor vehicle parts. In several major industries like electrical apparatus and supplies and non-ferrous metal products the distribution of control between Canadian and United States-controlled companies is more evenly divided. In other industries the non-resident share is large although less than one half the total. These include pulp and paper, other paper products, chemicals, medicinal and pharmaceutical products, sheet-metal products, and certain branches of the machinery industry.

There are, however, many industries where the largest part of production is in Canadian-controlled plants. Prominent among these are such important branches of
industry as primary iron and steel, and some other subdivisions of the iron and steel industry, textiles, clothing, and divisions of the foods and beverages industry, such as bakery products, beverages and dairy products. But even in some of these industries changes in ownership and control have been occurring in recent years.
18.-Estimate of the Canadian Balance of International Indebtedness, as at Dec. 31, 1939-61

Note.-Totals are rounded and may not represent the sum of their components.

${ }^{1}$ New series. $\quad 2$ Includes some investments held for residents of other countries.

## 20.-Foreign Capital Invested in Canada by Type of Investment, classified by Estimated Distribution of Ownership, as at Dec. 31, 1961p

Note.-Common and preferred stocks are at book values as shown in the balance sheets of the issuing companies; bonds and debentures are valued at par; and liabilities in foreign currencies are converted into Canadian dollars at par of exchange.

[^328]Canadian Assets Abroad.-While there has been a great growth in non-resident investment in Canada and in the balance of indebtedness to other countries, it will be noted that Canadian assets abroad, shown in Tables 21 and 22, have continued to rise in value each year. These now represent a larger proportion of liabilities abroad than was the case before World War II, but more than half of the increase since then has been in government-owned assets such as the official reserves and the loans by the Canadian Government to other governments which were extended during the war and early postwar years. At the end of 1962 the government credits outstanding had a value of $\$ 1,379,000,000$ while official holdings of exchange amounted to $\$ 2,154,000,000$ in terms of Canadian dollars. Other official Canadian assets include Canada's subscriptions to the capital of the International Bank for Reconstruction and Development, the International Development Association, the International Finance Corporation and the International Monetary Fund which, by March 1963, amounted to $\$ 80,500,000, \$ 24,900,000, \$ 3,500,000$, and $\$ 577,300,000$, respectively; these were more than offset by liabilities to these institutions, including outstanding assistance to Canada by the International Monetary Fund.

The portion of the assets in private investments, particularly in the form of direct investments abroad by Canadian companies, is still small in relation to the corresponding non-resident stake in equities in Canada. Private long-term investments abroad by Canadians in 1961 were made up of direct investments of $\$ 2,619,000,000$ and portfolio investments of $\$ 1,465,000,000$. More than two thirds of the privately owned investments were located in the United States. Direct investments in that country by Canadian businesses have grown rapidly and are found in many fields, among which the beverage and farm implement industries are particularly noteworthy.

Private investments in overseas countries are widely distributed. Somewhat more than one half of the total in 1961 were located in Commonwealth countries, with slightly more in Britain than in the remainder of the Commonwealth. Most of the direct investments in Britain were in industry, while in other Commonwealth countries there were investments in mining and petroleum as well as in industry. In foreign overseas countries the largest part is in the countries of Latin America where Canadian holdings in public utilities are substantial.

## 21.-Canadian Assets Abroad, 1939, 1948 and 1955-61

Nore.-Excludes investments of insurance companies and banks, Canada's subscriptions to international financial institutions and short-term assets, other than official holdings of gold and foreign exchange. Holdings of stocks are at book values as shown in the books of issuing companies; holdings of bonds are shown at par values. Foreign currencies are converted into Canadian dollars at current market rates. The series for portfolio investment was reconstructed in 1952 and is not strictly comparable with preceding years.

## PART I.-GURRENCY AND BANKING*

## Section 1.-The Bank of Canada

The Bank of Canada is Canada's central bank. It was incorporated under the Bank of Canada Act in 1934 and commenced operations on Mar. 11, 1935. The Act of Parliament which established the central bank charged it with the responsibility for regulating "credit and currency in the best interests of the economic life of the nation", and conferred on it certain specific powers for discharging this responsibility. Through the exercise of these powers, the Bank of Canada determines broadly the combined total of the basic forms of Canadian money held by the community-currency outside banks plus deposit balances in chartered bank accounts.

By virtue of the provisions of the Bank of Canada Act, which enable the central bank to increase or decrease the total amount of cash reserves available to the chartered banks as a group, the Bank of Canada is able to determine broadly the over-all level of the total assets and deposit liabilities of the group, and hence of the combined total of currency and bank deposits. The Bank Act requires that each chartered bank maintain a minimum amount of cash reserves in the form of deposits at the Bank of Canada and holdings of Bank of Canada notes. This minimum requirement is 8 p.c. of the bank's total Canadian dollar deposit liabilities on a monthly average basis. The ability of the chartered banks as a group to expand their total assets and deposit liabilities therefore depends on the level of total cash reserves. An increase in cash reserves will encourage the banks to expand their total assets (which consist chiefly of loans and marketable securities) with a concomitant increase in deposit liabilities; a decrease in cash reserves will bring about a decline in their total assets and deposit liabilities as they seek to restore their cash reserve ratios.

The chief method by which the Bank of Canada can affect the level of cash reserves of the chartered banks, and through them the total of chartered bank deposits, is by purchases and sales of government securities. Payment by the central bank for the securities it purchases in the market adds to the cash reserves of the chartered banks as a group

[^329]and puts them in a position to expand their assets and deposit liabilities. Conversely, payment to the central bank for securities it sells causes a reduction in reserves of the chartered banks and makes it necessary for them to reduce their assets and deposit liabilities.

The influence that the Bank of Canada has on credit conditions and hence on economic behaviour stems from its ability to determine broadly the level of total holdings of currency and chartered bank deposits. The trend of total holdings of these forms of money can have an influence on liquidity generally, including effects on interest rates and bond prices and the availability of credit, and on expectations regarding future financial and economic trends, all of which have some effect on decisions to spend or to save. However, many factors other than changes in the money supply also have important influences on financial and economic developments, such as: the state of economic conditions and prospects outside Canada; the competitive strength of Canadian business enterprises both at home and abroad; the character of the investment decisions and price and wage policies in domestic industries; the skills and degree of mobility of labour; and the nature of public policies at all levels of government with regard to such matters as expenditure, taxation, subsidies and the regulation of industry. In forming its judgments, the Bank of Canada is bound by criteria laid down by Act of Parliament in the preamble to the Bank of Canada Act of 1934. Its operations must be based, not on any simple mechanical formula, but rather on continuous observation and appraisal of the constantly changing state of the economy as reflected in the complex pattern of economic and financial developments.

While the Bank of Canada has the power to determine the combined total of currency and chartered bank deposits, it has no means of determining how much of this total is held in the form of currency and how much in the form of chartered bank deposits. That depends on the wishes of the public, since deposits can be converted freely into notes and coin and back again. Nor does the Bank have any direct control over the growth of other forms of money or of close substitutes for money as a store of wealth in liquid form, of which there are many varieties in Canada-mainly deposit balances in savings institutions other than chartered banks and short-term securities issued by governments and corporations.

The cash reserve system in Canada, which is similar to that in a number of other countries, while placing the central bank in a position where it can determine within broad limits the total amount of chartered bank assets and deposits, leaves the allocation of bank credit and other forms of credit to the private sector of the economy. Each chartered bank can attempt to gain as large a share as possible of the total cash reserves by competing for deposits. Each bank determines how its assets will be distributed, for example, between various kinds of securities and loans to various types of borrowers. The Bank of Canada has no power to direct banks or other lenders to make funds available to certain groups or in certain regions on the same terms or on different terms than to other groups or in other regions. The influence of the central bank-based in essence on its power to expand or contract chartered bank cash reserves through its market purchases or sales of securitiesis both indirect and impersonal and is brought to bear on financial conditions generally through the chartered banks and the numerous inter-connected channels of the capital market.

The powers of the Bank are set forth in the Bank of Canada Act, 1934 (RSC 1952, c. 13), revisions in which were made in 1936, 1938 and 1954. Some of these powers are outlined below.

The Bank may buy and sell securities issued or guaranteed by Canada or any province, short-term securities issued by Britain, treasury bills or other obligations of the United States, and certain classes of short-term commercial paper. The Bank is authorized by the Industrial Development Bank Act to purchase bonds and debentures issued by the Industrial Development Bank. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may also deal in foreign exchange. The Bank may accept deposits that do not bear interest from the Government of Canada, the government of any province, any chartered bank or any bank to which the Quebec Savings Bank Act applies. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

The Bank acts as the fiscal agent for the Government of Canada in the payment of interest and principal and generally in respect of the management of the public debt of Canada.

The Bank has the sole right to issue paper money for circulation in Canada. Details regarding the note issue are given on p. 1046.

The Bank of Canada may vary the minimum cash reserve requirement of the chartered banks between 8 p.c. and 12 p.c. of their Canadian dollar deposit liabilities, provided that the chartered banks are given a minimum notice period of one month before each increase becomes effective and that any increase is not more than 1 p.c. during any one month. When this legislation became effective on July 1, 1954, the requirement was 8 p.c. and it has since remained at that level.

The Bank may make loans or advances for periods not exceeding six months to chartered banks, or to banks to which the Quebec Savings Bank Act applies, on the pledge or hypothecation of certain classes of securities. Loans or advances on the pledge or hypothecation of readily marketable securities issued or guaranteed by Canada or any province may be made to the Government of Canada or the government of any province for periods not exceeding six months. Other loans may be made to the Government of Canada or the government of any province in amounts not exceeding a fixed proportion of such government's revenue; such loans must be repaid before the end of the first quarter after the end of the fiscal year of the borrower.

The Bank of Canada is required to make public at all times the minimum rate at which it is prepared to make loans or advances; this rate is known as the Bank Rate. From Nov. 1, 1956 until June 24, 1962, the Bank Rate was established weekly at a fixed margin of $\frac{1}{4}$ of 1 p.c. above the latest weekly average tender rate for 91 -day treasury bills. On June 24, 1962, the Bank Rate was fixed at 6 p.c.; it was reduced to $5 \frac{1}{2}$ p.c. on Sept. 7, 1962, to 5 p.c. on Oct. 12, 1962, to 4 p.c. on Nov. 13, 1962 and to $3 \frac{1}{2}$ p.c. on May 6, 1963 ; it was increased again to 4 p.c. on Aug. 11, 1963. Since June 24, 1962, the Money Market Rate, the rate at which the Bank of Canada is prepared to enter into purchase and resale agreements with money market dealers, has been $\frac{1}{4}$ of 1 p.c. above the average rate on 91day treasury bills at the preceding weekly tender, or the same as Bank Rate, whichever is lower.

The Bank of Canada is not required to maintain a minimum or fixed ratio of gold or foreign exchange to its liabilities unless the Governor in Council prescribes otherwise.

The Bank is under the management of a Board of Directors composed of a Governor, a Deputy Governor and twelve Directors. The Governor and Deputy Governor are appointed for terms of seven years each by the Directors, with the approval of the Governor General in Council. The Directors are appointed by the Minister of Finance, with the approval of the Governor General in Council, for terms of three years each. The Deputy Minister of Finance is a member of the Board but does not have the right to vote. There is an Executive Committee of the Board composed of the Governor, the Deputy Governor, one Director and the Deputy Minister of Finance (who is without a vote) which has the same powers as the Board except that its decisions must be submitted to the Board at its next meeting. In addition to the Deputy Governor who is a member of the Board, there may be one or more Deputy Governors appointed by the Board of Directors to perform such duties as are assigned by the Board.

The Governor is the chief executive officer of the Bank and Chairman of the Board of Directors. The Governor has the power to veto any action or decision of the Board of Directors or of the Executive Committee but such veto is subject to confirmation or disallowance by the Governor General in Council. In the absence of the Governor, the Deputy Governor, who is a member of the Board, exercises all the powers and functions of the Governor.

The capital of the Bank is $\$ 5,000,000$ and is held entirely by the Minister of Finance. The Bank of Canada Act as amended in 1954 provides that each year 20 p.c. of the Bank's annual profits (after provision for depreciation in assets, pension funds and such matters)
shall be allocated to the Rest Fund until the Rest Fund reaches an amount five times the paid-up capital of the Bank and the remainder shall be paid to the Receiver General and placed to the credit of the Consolidated Revenue Fund. At the end of 1957, the Rest Fund of the Bank reached its maximum of $\$ 25,000,000$ so that, since that date, the whole of the Bank's profits have been transferred to the Receiver General.

The head office of the Bank is at Ottawa. It has agencies at Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Regina, Calgary and Vancouver and is represented in St. John's and Charlottetown. The agencies are concerned chiefly with the functions of the Bank as fiscal agent for the Government of Canada and with the issue and redemption of currency. The Industrial Development Bank, which is described below, is a subsidiary of the Bank of Canada.

The Bank of Canada Act requires that statements of the assets and liabilities of the Bank on each Wednesday and on the last day of each month be published in the Canada Gazette. A summary of the statements as at Dec. 31, 1959-62, appears in Table 1.

The Industrial Development Bank.-The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:-
"To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises."

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors of the Bank of Canada and the Deputy Minister of Trade and Commerce. The authorized capital of the Bank is $\$ 50,000,000$ and it may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed five times the aggregate of the Bank's paid-up capital and Reserve Fund.

The Bank may extend financial assistance to industrial enterprises in Canada which, by definition in the Act, include any industry, trade or other business undertaking of any kind. With respect to such enterprises the Bank is empowered to lend money or guarantee loans; and where an enterprise is a corporation the Bank may also enter into underwriting agreements with regard to any issue of stock, bonds or debentures; acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement; and acquire certificates issued by a trustee to finance the purchase of transportation equipment. The total amount of commitments of the Bank, in the form of loans, guarantees, etc., in excess of $\$ 200,000$ each, may not exceed $\$ 200,000,000$.

The Bank may accept any form of collateral security against its advances, including realty and chattel mortgages which constitute the usual kind of security taken. The Bank is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of Incorporation provides that it should extend credit only when, in the Bank's opinion, credit or other financial resources would not otherwise be available on reasonable terms and conditions. Its lending takes the form of fixed-term capital loans rather than current operating loans. The Bank is specifically prohibited from engaging in the business of deposit banking. It has branch offices in the following cities: St. John's, Halifax, Saint John, Moncton, Quebec, Trois Rivières, Montreal, Ottawa, Toronto, Hamilton, Waterloo, London, Sudbury, Port Arthur, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria, Kelowna and Windsor.

## Section 2.-Currency

Note Circulation.-The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. Those features of the development which then became permanent are outlined in the 1941 Year Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of $\$ 1, \$ 2, \$ 5, \$ 10, \$ 20$, $\$ 50$ and $\$ 100$. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of $\$ 1,000$ to $\$ 50,000$ denomination that had previously been used as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered banks to issue or re-issue notes after Jan. 1, 1945, and in January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

${ }^{1}$ Total issue less notes held by chartered banks.
Coinage.*-Under the Currency, Mint and Exchange Fund Act (RSC 1952, c. 315), gold coins may be issued in denominations of twenty dollars, ten dollars and five dollars (nine-tenths fine or millesimal fineness, 900). Subsidiary coins include: silver coins in denominations of one dollar, 50 cents, 25 cents, 10 cents (eight-tenths fine or millesimal fineness, 800); pure nickel five-cent coins; and bronze (copper, tin and zinc) one-cent coins. Provision is made for the temporary alteration of composition in event of a shortage of prescribed metals. A tender of payment of money in coins is a legal tender in the case of gold coins issued under the authority of Sect. 4 of the Currency, Mint and Exchange Fund Act for the payment of any amount; in the case of silver coins for the payment of an amount up to $\$ 10$; nickel coins for payment up to $\$ 5$; and bronze coins up to 25 cents.

## 5.-Canadian Coin in Circulation, as at Dec. 31, 1953-62

Notr.-The figures shown are of net issues of coin. Figures from 1901 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.

${ }^{1}$ Tombac, a copper-zinc alloy, was used to conserve nickel for war purposes; no coins of this metal have been issued since 1944.

The Royal Canadian Mint.*-The Mint at Ottawa was established as a branch of the Royal Mint under the (Imperial) Coinage Act 1870 and opened on Jan. 2, 1908. In 1931 (RSC 1952, c. 240) it was constituted a branch of the Canadian Department of Finance and has since operated as the Royal Canadian Mint. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation and of British sovereigns and small coins struck under contract for Newfoundland and Jamaica. Before 1914 only small quantities of gold bullion

[^332]were refined but during World War I the Mint came to the assistance of the British Government by establishing a refinery in which nearly $20,000,000$ oz.t. of South African gold were treated on Bank of England account. The subsequent development of the gold mining industry in Canada resulted in gold refining becoming one of the principal activities of the Mint. Fine gold produced from the rough bullion shipments received from the mines is purchased by the Mint and later delivered to the Bank of Canada for account of the Minister of Finance in bars of approximately $400 \mathrm{oz.t}$. each or, for those mines authorized to sell gold in the open market, the bullion is shipped according to instructions from the mines. The fine silver extracted from the rough gold is generally used for coinage purposes.

[^333]
## Section 3.-The Commercial Banking System*

The Canadian commercial banking system consists of eight privately owned banks, chartered by Parliament and operating under the provisions of the Bank Act. Of these eight, five are nation-wide institutions; two operate mainly in the Province of Quebec and in other French-speaking areas and one, a subsidiary of a Netherlands bank, has a branch in each of the three largest cities. At the end of 1962, these banks together operated 5,496 banking offices of which 5,332 were in Canada and 164 abroad. Thus, the chief distinguishing feature of the Canadian banking system is the relatively small number of large banks having an extensive network of branches, operating under a single legislative jurisdiction (the Federal Government) and under one detailed and comprehensive statute (the Bank Act).

Since the first banks were established during the first quarter of the nineteenth century, the commercial banking system has developed in response to the changing needs of the Canadian economy, an evolution which is still in rapid progress. Canadian economic development has been characterized by two main features-successive but by no means continuous periods of rapid geographical expansion of settlement, and a continued dependence on export markets as new natural resources (agricultural land, forests and minerals) were exploited. Thus, Canadian banking has continually had to migrate to new areas and to find appropriate methods of financing new industries and new products; and it has from the beginning possessed a strongly 'international' character $\dagger$ with much emphasis on the financing of foreign trade, on foreign exchange operations, and on correspondent relations with foreign banks. At the same time, as regional isolation has gradually broken down and the economy has been integrated, banks originating in local areas have become part of a nation-wide banking system, in part by process of amalgamation particularly marked in the first twenty-five years of the present century.

## Bank Legislation

From the first, banks in what is now Canada sought to operate under Acts of incorporation (charters) passed by the legislatures of the colonies in which they operated. As new banks were incorporated and older ones obtained charter renewals, there developed in the bank charters themselves a quite extensive and fairly uniform code of banking law. At Confederation, responsibility for banking and currency was given to the Dominion Government and in 1871 the first general Bank Act was passed. This legislation is subject to review and revision every ten years, a feature that has helped to keep the banking system adapted to the needs of a changing economy.

Certain characteristic features of the Canadian financial system have thus emergednotably the traditional emphasis of the chartered banks on "commercial" banking. The early banks were established by merchants for merchants. Their note issues provided a badly needed medium of internal exchange and they advanced working capital to finance the processes of trade. The aim was to make lending as far as possible short-term and self-liquidating. The bank charters from the first contained prohibitions against lending on the security of real property, except as secondary or subsequent security. Now, however, exceptions to the rule against lending upon security of real property, incorporated in the Bank Act in 1944 and 1954, allow the banks to participate in government-guaranteed loans to farmers and fishermen and for housing constructed under the National Housing Act, to lend to oil companies on the security of oil "in, under or upon the ground" and production equipment, and to extend their consumer-finance lending by taking chattel

[^334]mortgages. It is also permissible for banks to make advances on the security of natural products and goods, wares and merchandise while they remain in the borrower's possession. These 'pledge' arrangements have facilitated loans to small businesses and farmers and have aided in commercial and manufacturing development, while giving the banks a reasonable degree of protection for their loans.

Today the Bank Act has become a most detailed and comprehensive piece of legislation which provides for the internal regulation and organization of the banks, for the auditing of their accounts, and for the ways in which their capital stock may be issued and transferred, their dividends paid, and their affairs settled in case of amalgamation, winding-up or insolvency. In addition, it states what cash reserves the banks must keep, what reports they must make to the Government and to the Bank of Canada about their affairs and sets forth a variety of rules governing the conduct of business with the public. The Bank Act also specifies the maximum rate of interest that may be charged on bank loans. (Since the 1944 Bank Act Revision this ceiling has been 6 p.c., replacing the 7-p.c. ceiling that had prevailed since 1871.) The banks derive their corporate existence from the Act, which states that "each bank. . . . is a body politic and corporate and this Act is its charter"; successive Bank Acts have empowered the banks to do business for a period of ten years, until the next revision of the Act.

## Banking Operations

Operating under the Bank Act, the chartered banks at their branches accept deposits from the public, make loans covering a wide range of commercial, industrial, agricultural and consumer activities, deal in foreign exchange, receive and pay out Bank of Canada notes and coin, provide safekeeping facilities, and perform a variety of other services coming within the scope of the general business of banking. The head office of a Canadian bank does not transact ordinary day-to-day business with the public; it performs general administration and policy-making functions, manages the bank's investment portfolio, does its centralized accounting work, and maintains specialized departments devoted to inspection of branch operations, the development of branch office methods, the acquisition of new business, premises, staff, arrangements with foreign banks, advertising, etc.

Under its branch system, Canadian banking is able to provide standard banking facilities throughout the country. Every branch, even the smallest, can provide all banking services, and each has behind it the resources of a large bank, which means that lending requirements can be met just as well by a branch in a small town or a suburban branch as in the main branches of a large city. Branch banking also provides an excellent training for Canadian bank officers, through the system of promotion and transfer from branch to branch. Almost without exception, the chief executives of the Canadian banks have grown up in the service and have been trained in this way.

The branch system has proved to be most flexible and Canadian banking has been able to keep pace with settlement and economic development during its periods of most rapid growth. Particularly during the past quarter-century, with a rapidly expanding economy, sharply rising population and growing urbanization, new branches have opened at a very rapid rate. Offices have been established in suburban areas, in new towns, oil fields and mining camps, as well as in the long-established urban centres where industrial and commercial growth have so enlarged the demand for banking services. In all, the number of banking offices in Canada, which was about 3,300 at the end of 1939 and 3,100 at the end of 1945 , grew by over 2,200 in the next seventeen years. As this growth suggests, Canadian banks have taken full advantage of the recent expansive atmosphere to extend the volume and variety of their services to industry and to individuals. Strongly competing for customers, they offer a wide variety of new deposit arrangements, including new savings programs, new forms of chequing accounts, and greatly broadened lending facilities.

By the end of the War, the banks had experienced more than fifteen years of restricted demand for commercial credit. Loans had declined sharply during the depression and shown only a slightly rising trend during the prewar years of incomplete recovery and, of
course, in the wartime economy bank lending was subject to a variety of restrictive influences. The result was a marked change in the composition of bank assets; by the end of 1945 security holdings accounted for about 55 p.c. of the banks' total assets, compared with a little over 40 p.c. just before the War and only about 15 p.c. in 1930 . In the early years of postwar reconstruction, the economic control apparatus created for the War was gradually dismantled. The expansion of the private sector of the economy and the contraction of the government sector was quickly reflected in a shift of bank assets from government securities to commercial loans. Between the end of 1945 and the end of 1950, bank loans in Canadian currency increased from about 21 p.c. to 31 p.c. of total assets. There was, at the same time, a rapid growth in total assets, as the monetary authorities leaned to the side of relatively easy money conditions to stimulate the economy and to ward off the widely anticipated postwar recession. In the five years ended Dec. 31, 1950, total assets expanded from about $\$ 7,300,000,000$ to $\$ 9,400,000,000$, almost all of the increase being in Canadian assets.

It was not until the outbreak of the Korean war in June 1950 that the fear of inflation, arising from the heavy demands on Canadian resources, led to the adoption of restraining measures. Since then the banks have experienced substantial changes in their creditgranting capacity, as the country's official monetary policy was adapted to meet changes in business conditions. Alternating periods of ease and restraint have been marked by periods of rapidly rising bank assets followed by levelling-off phases.

The Korean boom of 1950-51 was followed, after only a short pause, by the investment boom of 1953-54. Recession in 1954-55 was accompanied by an easy monetary policy, during which the banks built up their liquid assets in the form of government bonds. Then a second and greater investment boom got under way in late 1955, which carried the Canadian economy and the banking system into another period when resources were strained to the limit. At this time, new measures of restraint were introduced into the Canadian banking system by the monetary authorities, including an agreed secondary reserve ratio of 7 p.c. in addition to the cash reserves of 8 p.c. already prescribed in the Bank Act Revision of 1954. A further agreement with the Bank of Canada was aimed at restraining term loans for capital purposes* and in 1956 bank loans to instalment finance companies were also put under some restraint. The boom of 1955-57 was followed by a mild recession in 1957-58, moderate recovery in 1958-59, slackening in 1960 and recovery again in 1961-62. In this period the banks have not regained the liquidity that characterized earlier postwar recessions, and there has been a growing need to husband resources carefully for the various and growing alternative outlets which developed as the result of economic growth, and of the efforts of both the Federal Government and the banks themselves to provide new uses for bank credit.

One of the first government measures was the Farm Improvement Loans Act of 1944, under which the chartered banks were authorized to make loans to farmers for the purchase of equipment and livestock and for making various improvements to their farm buildings and facilities. These loans are often for sizable amounts (an average about $\$ 1,500$ ) and the terms have been gradually extended to a maximum sum of $\$ 7,500$ outstanding to any one borrower with a maximum period of ten years (four years for implements). The banks are guaranteed against loss up to 10 p.c. of their loans made during the three-year "lending periods", up to a maximum total of loans by all banks. This total is $\$ 400,000,000$ for the lending period to end in mid-1965. By the end of 1962 the total amount of loans made under this Act was more than $\$ 1,240,000,000$ (see also pp. 419-420).

The 1954 Revision of the Bank Act introduced a major change in banking practice by enabling the banks to acquire mortgages issued under the National Housing Act. About 35 p.c. of all NHA mortgage loans in the years 1954-59 were made by the chartered banks, but at the end of 1959 the NHA interest rate was raised to $6 \frac{3}{4}$ p.c. and the banks withdrew from this field of lending. Notwithstanding this, by Dec. 31, 1962 they held

[^335]some $\$ 920,000,000$ in NHA mortgages, representing about 5 p.c. of total assets. Another change affecting housing in the 1954 Revision enabled the banks to make Home Improvement Loans under a guarantee system rather similar to the one developed for Farm Improvement Loans. By the end of 1962, Home Improvement Loans amounting to $\$ 275,000,000$ had been approved and the banks had about $\$ 70,000,000$ of such loans on their books.

In November 1960, the Small Businesses Loans Act was passed guaranteeing, under terms to the banks similar to those of the Farm Improvement Loans Act, certain types of bank loan to small businesses for the purposes of making capital improvements to premises and equipment. This provides for loans that do not fall within the usual scope of bank lending to small business, by reason of the term nature of the loan, together with the lack of collateral resources of the borrower. Of course, chartered banks make loans to small businesses for a great variety of purposes, including many of a medium-term character; indeed, the working capital loan to the small-size or medium-size industry or commercial enterprise is the traditional stock-in-trade business of the chartered banks.

In April 1961, the charter of the Export Finance Corporation of Canada Limited, which had been incorporated by special Act of Parliament in June 1959 for private interests, was acquired by the chartered banks. The principal purpose of the Corporation is to assist in the medium-term (one to five years) financing of exports which have been insured by the Export Credit Insurance Corporation, a Crown company.

Still another area of lending which has expanded greatly in recent years is that of consumer credit. While the banks have always made some personal loans, they have recently moved aggressively into the field of lending to the general public for the purchase of automobiles, consumer durables and debt consolidation. Following the 1954 Bank Act Revision, and partly as a result of the change then made which enabled the banks to take chattel mortgage security, some banks have developed extensive consumer credit divisions. Personal loans made by the banks, other than those secured by stocks and bonds and Home Improvement Loans, mounted from $\$ 420,000,000$ at the end of 1957 to $\$ 1,330,000,000$ outstanding at June 30, 1963.

Outside of Canada, the Canadian banks have continued to expand their branch systems in the Caribbean area, although the two Canadian banks operating in Cuba have found it necessary to withdraw. Elsewhere abroad, the banks have expanded their representation in South America and in Europe. In recent years the growth of an international money market, following the economic recovery in Europe and the restoration of confidence in the stability of the Western economies and their currencies, has led to large movements of Western capital from one centre to another. The Canadian banks have participated extensively in this international money market, mainly through New York and London where most of them maintain large offices.

The postwar growth in bank assets has been accompanied by a substantial increase in total earnings. Earnings per share of capital employed did not increase to the same extent, however, as the banks found it necessary to raise new funds from time to time after 1950 in order to maintain an appropriate relationship between their shareholders' capital and the rapidly rising level of risk assets. The banks have been among the largest issuers of new share capital to Canadians in the past quarter-century.

## Subsection 1.-Statistics of Chartered Banks

Branches of Chartered Banks.-Although there are fewer chartered banks now than at the beginning of the century, there has been a great increase in the number of branch banking offices. As a result of amalgamations, the number of banks declined from

34 in 1901 to 10 in 1931, and remained at that figure until the incorporation of a new bankThe Mercantile Bank of Canada-in 1953 brought the total to 11 . Since then the amalgamation in 1955 of The Bank of Toronto and The Dominion Bank as The TorontoDominion Bank, the amalgamation of Barclays Bank (Canada) with the Imperial Bank of Canada in 1956 and the amalgamation of the Canadian Bank of Commerce and the Imperial Bank of Canada as the Canadian Imperial Bank of Commerce on June 1, 1961 have reduced this number to eight. The number of branches of chartered banks in each province periodically from 1868 is given in Table 8.

## 8.-Branches of Chartered Banks, by Province, as at Dec. 31 for Certain Years 1868-1962

Note.-Figures for 1920 and subsequent years include sub-agencies in Canada receiving deposits for the banks employing them; there were 768 such sub-agencies at Dec. 31, 1962.

## 13.-Canadian Cash Reserves, 1953-62

Note.-For periods prior to July 1954 all figures are daily averages; from July 1954, in accordance with the Bank Act 1954, Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposits are averages of the four consecutive Wednesdays ending with the second last Wednesday in the previous month.
(Millions of dollars)

| Year | Cash Reserves |  |  | Canadian Dollar Deposit Liabilities ${ }^{1}$ | Average Cash Reserve Ratio ${ }^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Bank of <br> Canada <br> Deposits | Bank of Canada Notes | Total |  |  |
| 1953. | 627 | 256 | 883 | 8,624 | 10.2 |
| 1954-January to June | 634 | 260 | 894 | 8,820 | 10.1 |
| 1954-July to December | 525 | 286 | 811 | 9,097 | 8.9 |
| 1955. | 541 | 293 | 834 | 9,915 | 8.4 |
| 1956. | 548 | 325 | 873 | 10,527 | 8.3 |
| 1957. | 535 | 335 | 870 | 10.601 | 8.2 |
| 1958. | 607 | 336 | 943 | 11,452 | 8.2 |
| 1959. | 648 | 351 | 999 | 12,187 | 8.2 |
| 1960. | 625 | 360 | 985 | 12,052 | 8.2 |
| 1961. | 673 | 367 | 1,040 | 12,804 | 8.1 |
| 1962.................... | 748 | 376 | 1,124 | 13,812 | 8.1 |

${ }^{1}$ From July 1954 the figures are not adjusted for items in transit and are not strictly comparable with the figures for earlier periods. $\quad 2$ Prior to July 1, 1954, the statutory minimum requirement was 5 p.c. for each day; since that date it has been a monthly average of 8 p.c.

## 14.-Classification of Chartered Bank Deposit Liabilities Payable to the Public in Canada in Canadian Currency, as at Sept. 30, 1961 and 1962

[^337]Cheque Payments.-A monthly record of the value of cheques charged to customer accounts at all chartered bank offices in 35 major clearing-house centres of Canada is available from 1924. Except for a minor setback in 1938, the value of cheques cashed shows a continuously upward trend from 1932, the low point of the depression years. The total of $\$ 325,564,498$ in 1962 was a record, 953 p.c. greater than in 1938. The advance was well distributed throughout Canada's five economic areas. British Columbia showed the largest gain with an increase of 1,092 p.c. Ontario was second with an advance of 985 p.c., followed by the Prairie Provinces with 956 p.c., the Atlantic Provinces with 918 p.c. and Quebec with 882 p.c.

Value of cheques cashed in 34 of the original 35 centres was higher in 1962 than in 1961. Payments in Toronto showed a gain of 11.1 p.c. and Montreal rose by 12.2 p.c. In the western regions, Winnipeg showed little change and Vancouver advanced by 10.3 p.c.

## Subsection 2.-Government and Other Banking Institutions

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies: (1) the Post Office Savings Bank, in which deposits are a direct obligation of the Government of Canada; (2) Provincial Government savings banking institutions in Ontario and Alberta, where the depositor becomes a direct creditor of the province; and (3) two important savings banks in the Province of Quebec-the Montreal City and District Savings Bank and La Banque d'Économie de Québec-established under federal legislation and reporting monthly to the federal Department of Finance. In addition, co-operative credit unions encourage savings among low-income classes and extend small loans to their members.

Post Office Savings Bank.-The Post Office Savings Bank was established under the Post Office Act of 1867 (SC 1867, c. 10) to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon". Branches of the Government of Canada's Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years and the amalgamation was completed in March 1929. Summary financial statistics for the years ended Mar. 31, 1960-63 follow. Figures back to 1868 are available in previous editions of the Year Book.

Provincial Government Savings Banks.-Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta.

Ontario.-The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 Session and the first branches were opened in March 1922. Interest at the rate of 3 p.c. per annum, compounded half-yearly, is paid on accounts, and deposits are repayable on demand. Total deposits at Mar. 31, 1963 were $\$ 77,070,000$ and the number of depositors was approximately 95,000 . Twenty-one branches were in operation throughout the province.

Alberta.-Savings deposits are accepted at 56 Provincial Treasury Branches throughout Alberta. The total of these deposits at Mar. 31, 1962 was $\$ 37,104,790$, of which $\$ 34,298,016$ was payable on demand bearing interest at $2 \frac{3}{4}$ p.c. per annum, and $\$ 2,806,774$ in term savings for terms ranging from three months to five years bearing interest at rates from $2 \frac{3}{4}$ p.c. to 4 p.c. per annum depending on the term.

Authority was also given for the issue by the Provincial Treasury Department of savings certificates after Jan. 1, 1960 on the following basis: demand certificates bearing interest at $2 \frac{3}{4}$ p.c. per annum in denominations of $\$ 10$ and up, and five-year certificates bearing interest at $4 \frac{1}{2}$ p.c. per annum in denominations of $\$ 25$ and up. Nine of these certificates were outstanding as at Mar. 31, 1962.

Quebec Savings Banks.-The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871 had, at Mar. 31, 1963, a paid-up capital and reserve of $\$ 11,000,000$, savings deposits of $\$ 287,930,422$ and total liabilities of $\$ 308,153,084$. Total assets amounted to $\$ 308,153,084$, including $\$ 137,729,318$ of federal, provincial, municipal and other securities. La Banque d'Économie de Québec, founded in

1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a federal charter by SC 1871, c. 7, had, at Mar. 31, 1963, savings deposits of $\$ 47,629,683$ and a paid-up capital and reserve of $\$ 3,500,000$. Total liabilities amounted to $\$ 54,227,442$ and total assets to a like amount.

Credit Unions.-Credit unions are savings and loan associations operated by people with a common bond. The bond of association may be in a parish, club, lodge or labour union, that of employment in a plant, industry or department, or that of residence in a rural or a well-defined urban community. Figures showing the growing importance of credit unions as savings and loan associations in Canada are given in Table 18. During the ten-year period 1952-61 the number of credit unions chartered increased by 40 p.c.; the number of members in reporting organizations by 117 p.c.; and the assets of reporting organizations by 255 p.c. Membership reached 2,740,251 in 1961. Quebec holds the lead in the Canadian credit union movement, having more than half of the total membership and about 60 p.c. of the total assets of all credit unions in Canada in 1961.

Occupational credit unions are growing at a faster rate than those of other types; they accounted for 33 p.c. of the number of credit unions in Canada in 1961, about the same percentage as rural credit unions. In Ontario they represented 60 p.c. of the provincial total in 1961. Occupational credit unions also lead in British Columbia. In Alberta and Manitoba, their number was about the same as that of rural credit unions. In the Atlantic Provinces, Quebec and Saskatchewan the credit unions are predominantly rural.

Savings, which include shares and deposits, reached $\$ 1,382,000,000$ in 1961, an increase of 15 p.c. over 1960 ; the average saving per credit union member was $\$ 504$. Loans made to members from these savings amounted to $\$ 578,663,000$ at interest rates of 1 p.c. per month or less on the unpaid balance.

There were 27 central credit unions in 1961. The main function of the central credit union is to act as a credit union for credit unions, mainly by accepting deposits from them and making loans to them. The centrals facilitate the flow of funds to credit unions that cannot meet the demand for local loans. Some of these central credit unions admit cooperative associations to membership. The centrals had assets of $\$ 207,975,000$ in 1961 , an increase of 18 p.c. over 1960; they made loans amounting to $\$ 84,741,000$ to member credit unions and co-operatives. The Canadian Co-operative Credit Society serves as a central credit union for provincial centrals and co-operatives all across Canada. In 1961, membership in this national organization included four provincial centrals, four commercial co-operatives, The Co-operative Life Insurance Company and The Co-operative Fire and Casualty Insurance Company.

## Section 4.-Foreign Exchange

The dollar, established officially as the currency of the united provinces of Canada on Jan. 1, 1858, and extended to cover the New Dominion by the Uniform Currency Act of 1870 , was defined as $15 / 73$ of the British gold sovereign.* That is, the par rate of exchange between the dollar and the pound sterling was fixed at $\$ 4.866$, making the Canadian currency the equivalent of the United States dollar at parity. With minor variations between the import and export gold points representing the cost of shipping gold in either direction, the value of the pound sterling in Canada remained at this level until the outbreak of World War I. The United States dollar, on the other hand, was at a discount in terms of Canadian funds for the first eleven years after Confederation since it was not redeemable in gold from February 1862 to January 1879. On the basis of gold equivalents it would appear that the greatest monthly average discount on the United States dollar after Confederation was approximately 31 p.c., reached in August 1868. From 1879 to 1914 the dollars of the two countries remained at par, varying only within the gold points or under $\$ 2$ per thousand.

On the outbreak of World War I, Canada and Britain suspended the gold standard. For some weeks both the pound and the Canadian dollar rose to a premium in New York. Subsequently both fell back with the pound going to a slight discount. In January 1916 the pound was officially pegged at $\$ 4.76$ in American funds. This level was maintained with the help of funds realized by sales of United States securities owned by residents of Britain, by borrowing in the United States and, after the American entry into the War, by the United States Government financing Allied purchases in that country

From 1915 to the end of 1917, fluctuations in the rate of exchange between the Canadian and United States dollars did not exceed 2 p.c. on either side of parity; the pound was stable in terms of United States dollars during this period. In 1918 the Canadian dollar began to weaken. After the pound was unpegged in 1919, the Canadian dollar declined further and in 1920 it fell to 82 cents in New York with sterling going as low as $\$ 3.18$.

[^340]By the latter half of 1922 the Canadian dollar had returned practically to par in New York. Despite some further weakness in sterling, the dollar remained close to that level during the next two years, averaging 98.04 and 98.73 cents in terms of the United States dollar in 1923 and 1924, respectively, and fluctuating between a discount of about 3.6 cents and a premium of approximately 0.4 cents. After Britain resumed gold payments in April 1925, the range of fluctuation of the Canadian dollar narrowed further. From Canada's return to the gold standard in the period July 1, 1926 to January 1929, the exchange rate remained within the gold points. The Canadian dollar then went to a slight discount in New York. With the exception of the period July to November 1930, when it went to a small premium in New York, the dollar remained below parity until Britain abandoned the gold standard in September 1931. After that month the pound sterling depreciated sharply and the Canadian dollar followed, reaching lows* in New York of 80.5 cents in December 1931 and 82.6 cents in April 1933.

Following the prohibition of gold exports in the latter month by the United States, the pound and the Canadian dollar strengthened rapidly in terms of American funds. By November 1933 both currencies had reached a premium in New York. Meanwhile, in a series of steps beginning with permitting the export of newly mined gold in August 1933, the United States moved toward resumption of the gold standard. As of Feb. 1, 1934, the United States Treasury undertook to buy all gold offered at $\$ 35$ per ounce. After that the exchange rate between the Canadian and United States dollars stabilized. Until the outbreak of war in 1939 much of the trading was conducted within one cent of parity although the Canadian dollar in New York did go as high as 103.6 cents (September 1934) and as low as 98.0 cents (September 1938).*

On the outbreak of World War II in September 1939, Britain and other sterling countries introduced foreign exchange control involving fixed buying and selling rates of $\$ 4.02 \frac{1}{2}$ and $\$ 4.03 \frac{1}{2}$, respectively, in terms of the United States dollar. The Canadian dollar in New York declined until Sept. 16, 1939, when the Government instituted foreign exchange control $\dagger$ in Canada and established fixed buying and selling rates of $\$ 1.10$ to $\$ 1.11$ for the U.S. dollar and $\$ 4.43$ to $\$ 4.47$ for sterling. As compared with previous months, the depreciation of the Canadian dollar in terms of United States funds was approximately half as great as that of the pound sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to $\$ 1.10 \frac{1}{2}$ and $\$ 4.45$, respertively, the official rates for the Canadian dollar remained unchanged until July 5, 1946. At that time the rate on the U.S. dollar was restored to par, with buying and selling rates for that currency of $\$ 1.00$ to $\$ 1.00 \frac{1}{2}$ and for sterling $\$ 4.02$ to $\$ 4.04$. These rates continued in effect until Sept. 19, 1949 when, following a 30.5 -p.c. reduction by Britain in the value of sterling to $\$ 2.80$ U.S. (an action which was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of $\$ 1.10$ and $\$ 1.10 \frac{1}{2}$ for United States funds. Sterling was quoted at $\$ 3.07 \frac{1}{4}$ and $\$ 3.08 \frac{3}{4}$ on the basis of the New York cross rate.

On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates which had been in effect at varying levels since 1939 would be withdrawn effective Oct. 2, and that the rate would henceforth be determined in the market for foreign exchange. This policy was carried out within the framework of exchange control until Dec. 14, 1951, at which time the Foreign Exchange Control regulations were revoked by the Governor in Council, terminating the period of exchange control that had prevailed in Canada since 1939. The Foreign Exchange Control Act was repealed in 1952. On May 2, 1962, the Minister of Finance announced that the Canadian dollar was being stabilized at a fixed par value of $92 \frac{1}{2}$ cents in terms of United States currency. This action was taken with the concurrence of the International Monetary Fund and, in accordance

[^341]with the Articles of Agreement of that organization, the Government of Canada undertook to maintain the Canadian exchange rate within a margin of 1 p.c. on either side of the established par value.

The movements of the U.S. dollar in Canadian funds from January 1955 to October 1963 are shown in Table 20.

${ }^{1}$ Does not include $\$ 18,200,000$ in U.S. funds borrowed in the U.S. in August 1949 by the Government of Canada and set aside for the purpose of retiring an equal amount of certain securities payable in U.S. dollars on Feb. 1, 1950. ${ }^{2}$ On Oct. 1, 1959, $\$ 62,500,000$ representing the gold portion of Canada's increased quota was transferred to the International Monetary Fund. ${ }^{3}$ Includes the proceeds of a drawing equivalent to U.S. $\$ 300,000,000$ which was made from the International Monetary Fund in June 1962 and which was outstanding at year-end.

## PART II.-MISCELLANEOUS COMMERCIAL FINANCE

## Section 1.-Loan and Trust Companies*

Canadian loan and trust companies, registered with either the federal or provincial governments, operate under the Loan and Trust Companies Acts (RSC 1952, c. 170 as amended by SC 1953, c. 5, SC 1958, c. 35, and SC 1961, c. 51; and RSC 1952, c. 272 as amended by SC 1953, c. 10 , SC 1958, c. 42 , and SC 1961, c. 55 , respectively) and corresponding provincial legislation. Although statistics of provincially registered companies are not collected in detail, it is estimated that more than 95 p.c. of the business of such

[^342]companies is represented in the figures of this Section, so that they may be accepted as fairly inclusive and representative of the volume of business transacted.

The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings department deposits. The extent of investments in mortgages by federal and provincial loan companies may be gauged by the following figures: total assets of such companies for the years 1960 and 1961 amounted to $\$ 751,369,090$ and $\$ 771,995,209$, respectively, which amounts include mortgage loans of $\$ 583,982,535$ and $\$ 595,251,243$, respectively; thus, the resulting percentages of mortgages to total assets for those years were approximately 78 p.c. and 77 p.c., respectively.

Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies, as transfer agents and registrars for stocks and bond issues, as trustees for bond issues and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits for investment but the investing and lending of such deposits and of actual trust funds are restricted by law. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from $\$ 154,202,165$ in 1928 to $\$ 1,608,484,326$ in 1961 . In the former year the total of estates, trust and agency funds administered amounted to $\$ 1,077,953,643$ and in 1961 to $\$ 8,118,543,169$.

A summary of operations of provincial and federal loan and trust companies is given in Table 1. As a result of the nature of the operations of the latter companies, which are intimately connected with the matter of probate, the larger trust companies usually choose to operate under provincial charters. The statistics of Tables 2, 3 and 4 refer to those companies incorporated both by the Government of Canada and by the provinces. Included in the statistics of federal companies are data of loan and trust companies incorporated by Nova Scotia and brought by the laws of that province under the examination of the federal Department of Insurance, as well as data for trust companies in New Brunswick and Manitoba.

## Section 2.-Licensed Small Loans Companies and Licensed Money-Lenders*

Licensed small loans companies and licensed money-lenders are subject to the provisions of the Small Loans Act (RSC 1952, c. 251, as amended by c. 46 of the Statutes of 1956) an enactment of the Parliament of Canada regulating personal loans not in excess of $\$ 1,500$ made on the security of promissory notes of borrowers. Most of these notes are additionally secured by endorsements or chattel mortgages. The Act permits, in the case of licensed lenders, maximum rates of cost of loan, including charges of every kind, of 2 p.c. per month on that portion of the unpaid balance of a loan not exceeding $\$ 300$, 1 p.c. per month on that portion of the balance exceeding $\$ 300$ but not exceeding $\$ 1,000$, and one half of 1 p.c. per month on any remainder of the balance exceeding $\$ 1,000$. The maximum rate permitted to be charged by an unlicensed lender is 1 p.c. per month. Prior to Jan. 1, 1957, the scope of the Act extended only to loans of $\$ 500$ and under and the maximum rate permitted to be charged by licensed lenders was 2 p.c. per month and by unlicensed lenders 12 p.c. per annum. The small loans companies-five in number-were incorporated by special Acts of the Parliament of Canada, the first such company commencing business in 1928. Moneylenders, of which there are 76, are made up of companies otherwise incorporated and include a few partnerships and individuals. Table 5 gives the combined financial experience of small loans companies and licensed money-lenders for the years 1958-61.

## 5.-Assets and Liabilities of Small Loans Companies and Money-Lenders, 1958-61

The combined companies showed a sizable increase in the amount of business done in 1961 compared with 1960. The number of small loans made to the public during 1961 increased from $1,094,512$ to $1,169,699$, or by about 7 p.c., and the amount of such loans rose from $\$ 547,824,471$ to $\$ 605,687,740$, or by about 11 p.c. The average small loan made

[^345]was approximately $\$ 518$ compared with $\$ 501$ in 1960 . At the end of the year, small loans outstanding numbered 992,169 for an amount of $\$ 426,157,274$ or an average of $\$ 430$ per loan; comparable figures for 1960 were 957,965 and $\$ 391,548,554$, respectively.

Gross profits of small loans companies and money-lenders before income taxes and before taking into account any increase or decrease in reserves for bad debts, increased from $\$ 28,220,425$ in 1960 ( $\$ 20,922,043$ being the profit on small loans and $\$ 7,298,382$ the profit on business other than small loans) to $\$ 28,975,756$ in 1961 ( $\$ 20,746,644$ being the profit on small loans and $\$ 8,229,112$ the profit on business other than small loans).

## Section 3.-Sales of Canadian Bonds*

Previous editions of the Year Book have traced sales of Canadian bonds to the end of 1961. This review continues the record, discussing new issues placed in 1962 with some comment on developments in the first half of 1963.

Excluding all financing of less than one year, the preliminary total of new security issues placed in 1962 has been calculated at $\$ 5,428,161,039$. This total is exclusive of $\$ 207,783,000$ other financing committed for in 1962 but not 'closed' until 1963. Of such 'open' financing, $\$ 64,774,000$ was payable in Canada and $\$ 143,009,000$ was payable in United States funds. Table 6 shows the sales of bonds by class and country of sale for the ten years 1953-62.

* Prepared by E. C. Gould, Financial Editor, The Monetary Times.

## 6.-Sales of Canadian Bonds, by Class of Bond and Country of Sale, 1953-62

Note.-Figures from 1904 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

[^346]The federal total of $\$ 3,420,799,600$ includes a preliminary amount of $\$ 1,720,799,600$ for Series 17, Canada Savings Loan, compiled for subscriptions received to May 13, 1963 by the Securities Department of the Bank of Canada. This figure will be revised when complete returns are available. A similar adjustment in connection with the 1961 Series 16 accounts for the revision of the 1961 figures in Table 7.

Series 17 matures in 1976 and will yield an average of 5.11 p.c. if held to maturity. Interest is payable annually at the rate of: $4 \frac{1}{2}$ p.c. for the first three years, 5 p.c. for the next three years, and $5 \frac{1}{2}$ p.c. for the remaining eight years. The average yield at 5.11 p.c. contrasts favourably with previous top yields at 4.98 p.c. in 1959, 4.71 p.c. in 1960, and 4.60 p.c. in 1961 . Several attractive features were continued in Series 17 . The bonds could be registered in names of adults, children, estate or trustees under a will, or administrators of an estate; they were sold in denominations from $\$ 50$ to $\$ 5,000$ up to a maximum limit of $\$ 10,000$ per name; as with all other savings loan issues, they are cashable any time at full face value, plus earned interest.

## 7.-Sales of Canada Savings Loans, 1946-62

Note.-Figures for the issues 1946-61 are for the entire loans, i.e., either to the year-end or to the closing date within the year or in the subsequent year. The figure for Series 17 (1962) is to May 13, 1963 and is subject to revision when complete returns are available.

| Series | Applications | Limits per Individual | Total Sales |
| :---: | :---: | :---: | :---: |
|  | No. | \$ | \$ |
| Series 1, 1946. | 1,248,444 | 2,000 | 535,285, 550 |

| Series 17, 1962. | 1,685,756 | 10,000 | 1,720,799,600 |

Provincial financing at $\$ 860,060,800$ in 1962 comprised direct sales totalling $\$ 422,784,000$ and provincial guarantees for utility, municipal and educational purposes at $\$ 437,276,800$. Excluding all provincial short-term financing of less than one year (as represented by Treasury Bill issues from the provinces of Manitoba and Saskatchewan), direct provincial entries into the bond market during 1962 were as follows:-

| Province | Month | Amount | Province | Month | Amount |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | \$ |  |  | \$ |
| Saskatchewan | January | 15,000,000 | New Brunsw | September | 5,000,000 |
| Nova Scotia. | February | 10,000,000 | Nova Scotia | October... | 15,000,000 |
| Ontario. | February | 60,000,000 | Saskatchewan | October | 15,000,000 |
| Quebec. | March. | 60,000,000 | Ontario....... | Novembe | 60,000,600 |
| Saskatchewan | March | 11,600,000 | New Brunswic | Novembe | 5,000,000 |
| Manitoba* | March | 20,184,000 | Quebec........ | November | 60,000,000 |
| Saskatchewan | April. | 15,000,000 | Prince Edward | Novembe | 2,500,000 |
| Quebec... | July | 50,000,000 |  |  | 422,784,000 |
| New Brunswic | August | 7,500,000 |  |  | ,42,784,000 |

[^347]In the category of direct municipal financing (exclusive of municipal issues, guaranteed by various provinces), the market for new flotations totalled $\$ 444,199,639$ in 1962 . Exclusive of loans for parochial and other educational purposes at $\$ 120,740,400$, these issues amounted to $\$ 323,459,239$. Largest municipal flotations in 1962 were undertaken by the urban centres of Winnipeg, London, Ottawa, Hamilton, Toronto and Montreal.

In the 1962 Canadian bond market, new corporate bond sales totalled $\$ 703,101,000$. Although this was significantly lower than the peak of such sales in 1957 and slightly lower than the 1958 total, it was well above the totals for the three immediately preceding years, as shown in Table 6. The recent upward trend may be attributed to generally improved business environment and a better borrowing position for more corporations.

The largest single corporate borrowers during 1962 were: the Aluminum Company of Canada Limited which entered the market in May with an issue of $\$ 100,000,000,5.10$ p.c., promissory notes, maturing in 1992; and Wabush Securities Corporation which entered the market in August with an issue of $\$ 130,000,000$ in first mortgage and collateral trust bonds, Series "A", maturing Jan. 2, 1991. Both issues were placed privately on the United States market.

The largest single corporate borrowers on the Canadian market during 1962 were The Bell Telephone Company of Canada and Price Brothers \& Company Limited. Bell entered the market in June with an issue of $\$ 30,000,000,5 \frac{1}{2}$ p.c., first mortgage bonds, Series "W", maturing June 15, 1984. This issue was offered at $\$ 99.00$ by a syndicate of dealers, headed by A. E. Ames \& Company Limited, and the Bank of Montreal. Price Brothers entered the market in December with a two-part issue of $\$ 25,000,000,5 \frac{3}{4}$ p.c., serial debenture and sinking fund bonds, Series "A", maturing on Dec. 1, 1964 to 1968 and on Dec. 1, 1982. This issue was sold privately at $\$ 100.50$ by a syndicate of dealers, headed by Royal Securities Corporation Limited; Wood, Gundy \& Company Limited; W. C. Pitfield \& Company Limited; and Dominick Corporation of Canada. There was an additional amount of $\$ 6,626,000,000$ for short-term financing of less than one year in 1962. The increases from $\$ 6,394,000,000$ in 1961 and $\$ 6,490,000,000$ in 1960 indicated a growing importance for the Canadian money market with a sound development since its inception in June of 1954.

In addition to the federal sales of Treasury Bills during 1962, the Provinces of Manitoba and Saskatchewan floated Treasury Bill issues of their own and, later in the year, the City of Montreal began financing in this way. At the same time, several other large Canadian municipalities floated short-term security issues of less than one year. Along with the introduction of Bankers' Acceptances (June 11, 1962), these trends have significantly increased the volume of security financing on a near-term basis.

Because of the exchange crisis in June 1962, interest rates (on the bond market and elsewhere) fluctuated much more abruptly than is customary in Canada. They were forced to a sharply higher level, particularly on short-term funds, in order to attract investments and thus ease the dollar position. As the dollar strengthened, the rates declined steadily but returned to much higher levels toward the end of the year. During the first six months of 1963, the situation became more stabilized at lower levels again and with much less confusion on near-term markets.

Mid-year returns on security financing indicated a relatively stable market during the first half of 1963 with a somewhat more satisfactory reception for new issues. An outstandingly significant trend was the marked increase in new Canadian bond sales in the United States.

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

Insurance, for the purpose of statistical analysis, is usually classified as life, fire and casualty. Most companies operate under Federal Government registration although some have provincial licences only. Also many fraternal orders and societies are engaged in this kind of business. The special articles relating to insurance that have appeared in previous editions of the Year Book are listed in Part II of Chapter XXVI under the heading "Insurance". This volume contains, in Section 1, a specially prepared article on the life insurance business in Canada, its regulation, its growth, and its place in the life of the individual and in the economic structure of the country.

## Section 1.-Life Insurance $\dagger$

Life insurance in Canada is transacted by 128 companies and by 91 fraternal benefit societies. Of the companies, 32 are federal companies, having been incorporated by special Act of Parliament, 27 are provincial companies incorporated pursuant to provincial legislation and 69 are companies incorporated in countries other than Canada, principally the United States and Britain. Of the fraternal benefit societies, 15 have been incorporated by special Act of Parliament, 30 were incorporated in the United States and the remainder were formed under provincial legislation. In addition, there are a large number of provincially incorporated mutual benefit societies and funeral societies that provide small amounts of life insurance.

All companies and societies transacting life insurance in Canada are subject to government supervision in one form or another. There is a Department of Insurance as part of the organization of the Federal Government and each province has a Department of Insurance or an Insurance Branch of a department charged with responsibility for supervising insurance companies. All companies and societies incorporated by Parliament, and all companies and societies incorporated out of Canada and transacting insurance in Canada,

[^348]are required to be registered under statutes administered by the federal Department of Insurance; these companies and societies are also required to be licensed under the laws of each province in which they transact business. Companies incorporated under provincial legislation are required to be licensed under the laws of the province of incorporation and of any other province in which they transact business; some provincial companies may also be registered under statutes administered by the federal Department of Insurance.

The federal Department of Insurance exercises general financial supervision over the companies and societies registered with it, mainly for the purpose of seeing that they maintain a solvent position and are able to meet their insurance obligations. Hence, all registered companies and societies must file annual statements with the Department giving the details of their condition and affairs and all such companies are subject to examination at their principal offices in Canada by Departmental examiners. The legislation prescribes the classes of assets in which Canadian companies may invest their funds, the classes of assets that must be held in Canada to cover the liabilities in Canada of British and foreign companies, and methods for valuing these assets and liabilities.

Companies and societies from outside Canada are required to maintain assets in Canada, either on deposit with the Minister of Finance or vested in trust with corporate trustees, at least equal to their liabilities in Canada. If assets are vested in trust with corporate trustees, the relevant trust deed must be so drawn up as to require the approval of supervisory authorities for the release of assets. The classes of assets that may be deposited with the Minister of Finance or so vested in trust are, in general, the same as those in which a Canadian company may invest its funds.

Provincial insurance departments, in addition to carrying out financial supervision of provincial companies not registered with the federal Insurance Department, administer provincial insurance Acts which deal with the terms of insurance contracts issued in the province, the licensing of insurance agents and other matters relating to the conduct of insurance within the province.

Since the larger companies are all federal companies and all British and foreign companies and societies must be registered with the federal Department of Insurance, the companies so registered transact about 95 p.c. of the life insurance business in Canada. The annual statements submitted by these companies are published in the annual reports of the Department, thus providing a ready source of statistical information concerning life insurance in Canada of companies registered with the Department. Each provincial insurance department also publishes an annual report giving summary statistics concerning insurance in the province and the financial statements of companies incorporated in the province. However, most of the statistics used in the following paragraphs are drawn from the reports of the federal Department of Insurance, and may be taken to be sufficiently representative to give a reliable picture of the industry.

The total life insurance in force in Canada at the end of 1962, including both federally registered and provincially licensed companies and societies, amounted to approximately $\$ 56,342,000,000$.

| Insurance <br> in Force |
| ---: |
| $\$ \mathbf{0 0 0 , 0 0 0}$ |
| 52,233 |
| 790 <br> 53,023 |
| 2,601 |
| 169 |
| 409 |
| 140 |
| 3,319 |
| 56,342 |

This is truly an enormous sum and, with the exception of the United States, it exceeds the amount of life insurance in force in any other country in the world. In relation to national income, the amount of life insurance in force in Canada exceeds that of any other country including the United States, the ratio being about 180 p.c. for Canada and about 150 p.c. for the United States. At the end of 1962 the life insurance in force per capita amounted to $\$ 3,034$. The very startling growth, particularly over the past few years, is shown in the following statement of insurance in force in federally registered companies.

|  | Year | In Force at Beginning of Year | Increase in Force for the Year | Percentage Gain |
| :---: | :---: | :---: | :---: | :---: |
|  |  | \$'000,000 | \$'000,000 |  |

| 1957. |  | 29,087 | 4,000 | 13.8 |
| 1958.. |  | 33,087 | 3,409 | 10.3 |
| 1959. |  | 36,496 | 4,378 | 12.0 |
| 1960. |  | 40,874 | 3,775 | 9.2 |
| 1961.. |  | 44,649 | 3,635 | 8.1 |
| 1962.. |  | 48,284 | 3,949 | 8.2 |

Life insurance is divided into three main classes-ordinary, group and industrial. The term "ordinary" describes insurance issued by way of individual policies to individual policyholders; "group" describes insurance covering a group of persons under a single contract, the most common example being the employees of a single employer; and "industrial" applies to policies for small amounts, usually less than $\$ 1,000$, calling for weekly premiums to be collected by an agent of the company at the home of the insured person.

Ordinary insurance in force increased from $\$ 13,600,000,000$ at the end of 1952 to $\$ 33,300,000,000$ at the end of 1962 . Group insurance also increased very greatly, both absolutely and relative to the volume of the other two classes; in 1952 it amounted to only $\$ 3,800,000,000$, representing less than one quarter of the total, but in 1962 it reached over $\$ 18,000,000,000$, one third of the total. Industrial insurance, on the other hand, decreased over the years and appears to be gradually vanishing from the scene; it reached a peak of $\$ 1,700,000,000$ in 1954 and declined steadily to $\$ 867,000,000$ at the end of 1962. To a large extent, the purpose it once served is being taken over by group insurance.

In addition to the growth in total amounts, there has been a substantial increase in the size of individual policies. At the end of 1962, the average size of ordinary policies in force was $\$ 4,169$ compared with $\$ 2,542$ ten years earlier. For group business, the average amount of insurance in force per person covered under group policies was $\$ 1,209$ compared with $\$ 993$ ten years earlier. However, the year-to-year trend for group insurance has been uneven due in part to the rapid increase in the number of groups covered. The trend toward increased size appears more sharply from an examination of the average size of policies issued each year rather than the average size of policies in force. In 1962, the average size of new ordinary policies was $\$ 6,732$; in 1952 it was $\$ 3,842$.

The increases in average size of policies and in total insurance in force are attributable partly to larger policies of the same general types as have been issued over the years, partly to the growth in population and national income leading to increased insurance needs, and partly to the trend toward term insurance and away from policies providing for lifetime coverage or for endowment benefits. Under term insurance, the coverage extends for a specified period of years only and, consequently, larger amounts are obtainable for a given premium than in the case of policies providing for lifetime coverage. In the
search for security there is evidently a strong effort being made to obtain larger amounts of protection for dependants in the years of age when policyholders are likely to have young children, at the expense of having no insurance protection in later years after the term insurance expires. Many influences have led to this trend. Inflation and rising prices have forced it to some extent because larger amounts are needed to give adequate protection. The development of employer-employee pension plans has provided a secure income for retirement years and thus permitted greater attention to be given to immediate protection of dependants through insurance; this has been particularly so where pension plans include widows' benefits. In the absence of pension plans, endowment insurance policies and policies providing lifetime coverage were sometimes used, not only to provide insurance protection but also to build up equity values to be available at retirement. In addition to these influences, the growth of mutual savings funds and investment funds has undoubtedly drawn off some share of the money that would otherwise have gone toward the higher premium plans of insurance.

A further important point in this connection is the growth in group insurance. Group insurance is usually issued on the one-year term plan, i.e., insurance is renewed from year to year on the basis of a premium determined each year taking into account the amounts of insurance and the ages of the persons covered. Such insurance principally covers employees of a single employer but other groups may be insured in this way also; for example, members of a labour union, borrowers from a financial institution, or members of a professional group. The insurance provided under such a plan for any particular person usually exists only while he is a member of the group. Thus the coverage is temporary and is likely to exist only in the years of active employment-years when mortality rates are low. The premiums are low as compared with insurance that continues for the lifetime of the person insured since in the latter case the payment of the face amount is certain; the only uncertainty is the time of payment. (It may be noted, however, that there is a growing trend in group insurance to include a small amount of insurance on retired employees; this is, in effect, insurance continuing for the whole of life. The inclusion of coverage on retired employees will have a significant influence in raising the cost of group insurance plans.)

The appeal of group insurance arises not only from the low premium due to low mortality and low administrative costs, but also from the appeal to employers as a convenient and popular 'fringe' benefit that relieves employers and fellow employees of responsibility that they might otherwise feel toward destitute dependants of a deceased employee.

The growth of group insurance on the lives of creditors of financial institutions is another important development. Such insurance is earmarked for the discharge of specific obligations.

Even among ordinary insurance policies there has been a substantial growth over the years in the relative amount of term insurance. In 1925 only 5 p.c. of new life insurance issued by federally registered Canadian life insurance companies was on the term plan, whereas, in 1962, 39 p.c. was either on the term plan or in the form of temporary additions to sums insured; in 1925 only 5 p.c. of ordinary insurance in force in such companies was term insurance, whereas, in 1962, 25 p.c. was term insurance or temporary additions to sums insured. Although these percentages are derived from the business both in and out of Canada of federally registered Canadian companies, the trend also applies to the business in Canada. In fact, the trend in Canada is probably even more strongly toward term insurance. Figures for the amount of term insurance issued in Canada by Canadian companies are not readily available; however, for British and foreign companies in 1962, 36 p.c. of the business in force in Canada consisted of term insurance or temporary additions to the sums insured. This compares with the 25 p.c. already mentioned for Canadian companies both in and out of Canada.

Another important aspect of the life insurance business falls under the head of annuities. From the social viewpoint, the emphasis here is more on the problem of providing an $\mathrm{i}^{\text {ncome at older ages than of providing protection for dependants. However, the provision }}$
of retirement income is not completely divorced from insurance. Many insurance policies provide not only for payment on death of the policyholder but also, as an alternative, for payment of a lump sum or an annuity to the policyholder should he survive to a specified age. Also, many insurance policies taken out principally for the protection of dependants are surrendered at advanced ages and the proceeds are used to provide retirement income when the need for dependants' protection has decreased or disappeared.

The annuity business of life insurance companies falls into two categories-annuity contracts issued to individuals and annuity contracts providing benefits to the members of a group. The most common example of the use of the latter is the issuance of a group contract to an employer to provide retirement annuities to his employees. There has been a rapid increase in the annuity business over the years but particularly in the group annuity category and the growth of employer-employee pension plans is principally responsible for this increase. Income tax concessions granted in favour of organized pension plans have encouraged the growth of group annuities but, until recently, no such incentive existed for individual annuities.

The number of individual annuity contracts in force at the end of 1962 under which the payment of benefit has not yet started was 96,692 , and the gross annual payment provided for under such contracts amounted to $\$ 52,000,000$. Individual vested contracts numbered 21,627 providing annual payments of $\$ 13,000,000$. Corresponding figures for 1952 were $\$ 38,000,000$ and $\$ 6,000,000$, respectively. Under group annuities, the number of contracts in force at the end of 1962 was 8,276 , covering some 536,886 individuals. The annual payment provided for on the basis of current contributions to vesting date was $\$ 758,000,000$. The corresponding figures for 1952 were 2,026 contracts covering 207,839 individuals with an estimated annual payment of $\$ 217,000,000$.

The figures of amounts of insurance in force give an indication of the volume and growth of the business and indicate also the potential benefits to policyholders or other beneficiaries. The actual benefit payments year by year are also of interest. Although the principal purpose of life insurance policies is to provide a benefit payable on the death of the policyholder, nevertheless life insurance policies in use are of great variety and many provide benefits to policyholders that are not limited to a payment on death. Endowment policies provide for payment of the face amount at a specified time; nearly all policies provide for the payment of cash surrender values if the policy is terminated prior to maturity; some policies provide for payments to be made on disability of the policyholder; and many policies provide for the payment of dividends based upon the profits of the company. Amounts paid to policyholders or beneficiaries in 1962 under policies in Canada by federally registered companies, with an indication of the nature of the payment, were as follows:-

| Type of Benefit | Amount | Type of Benejit | Amount |
| :---: | :---: | :---: | :---: |
|  | \$ |  | \$ |
| Death benefits | 230,746,890 | Surrender benefits. | 175,746,797 |
| Maturity benefits. | 50,154,364 | Annuity benefits. | 36,117,936 |
| Disability benefits. | 6,570,931 | Dividends....... | 139,644, 287 |

The extent to which the 'savings' element of life insurance contracts is made use of by policyholders is illustrated by the fact that cash surrender values paid on termination of policies amounted to $\$ 176,000,000$ compared with death benefits of $\$ 231,000,000$.

The funds available to meet these payments to policyholders arise from premium payments and from interest earned by the companies on their portfolio of investments. Premium payments to federally registered companies for life insurance and for annuities in Canada during 1962 amounted to $\$ 1,028,000,000$ (life insurance premiums, $\$ 807,000,000$ and annuity premiums, $\$ 221,000,000$ ) and investment income amounted to $\$ 598,000,000$. Taking federal and provincial companies and societies together, the insurance premiums in Canada in 1962 amounted to $\$ 873,000,000$. These income items must be used to meet policy claims, to provide any necessary increase in reserves and to meet expenses.

The total premium income has been increasing year by year, as would be expected after noting the increase in the insurance in force. Life insurance premiums and annuity premiums received by federally registered and provincially licensed companies represented 3.83 p.c. of personal disposable income in Canada in 1962. This ratio reached a high of 7.99 p.c. in 1933, dropped steadily to about 3.4 p.c. in 1942,1943 and 1944, and has since varied irregularly between a minimum of 3.18 p.c. in 1952 and a maximum of 3.97 p.c. in 1961. There is no very clear trend in recent years, although a gradual but irregular increase has occurred since 1952. In view of the growth in personal savings as a proportion of disposable income, it might have been expected that life insurance premiums would grow even faster than they have. The rapid growth in other savings media together with a swing toward lower premium plans of insurance has evidently reduced to some extent the relative importance of life insurance in the savings field.

The extent to which life insurance companies act as a medium for savings and investment is illustrated by great growth in their assets. Although these funds are referred to as being assets of the companies and are in fact owned by the companies, they are, for the most part, much in the nature of trust funds since the companies are required by law to hold the major portion of such funds in reserve against future liabilities. The investment of these funds forms an important part of the activities of life insurance companies and, of course, has an important effect on the economy of the country. At the end of 1962, federally registered Canadian life insurance companies had assets amounting to $\$ 9,800,000,000$ applicable to their life insurance business. Of this amount, 45 p.c. was invested in bonds, 6 p.c. in stocks (preferred 1.55 p.c. and common 4.11 p.c.), 38 p.c. in mortgage loans, 3 p.c. in real estate, 5 p.c. in policy loans and the remainder in other minor categories. Of the total amount, the assets invested in Canadian securities and mortgages amounted to $\$ 5,900,000,000$. British and foreign companies transacting insurance in Canada maintain assets on deposit with the Minister of Finance or vested in trust with Canadian trust companies amounting to $\$ 2,200,000,000$. Of this amount, 69 p.c. was in bonds, 3 p.c. in stocks and 27 p.c. in mortgages. Almost all of these investments are in Canadian securities.

The recent growth in the assets of federally registered life insurance companies is shown in the following statement.

|  | Year | Total Assets |  | Year | Total Assets |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | \$'000,000 |  |  | \$'000,000 |
| 1950. |  | 4,612 | 1958. |  | 7,583 |
| 1952. |  | 5,207 | 1960. |  | 8,610 |
| 1954. |  | 5,872 |  |  |  |
| 1956. |  | 6,670 | 1962. |  | 9,812 |

The change in the distribution of these assets from 1950 to 1962 was as follows:-

| Type of Investment | 1950 | 1962 | Type of Investment | 1950 | 1962 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | p.c. | p.c. |  | p.c. | p.c. |
| Bonds. | 66 | 45 | Policy loans........ | 5 | 5 |
| Stocks. | 6 | 6 | Other. | 4 | 3 |
| Mortgage loans. | 18 | 38 | Totals.... | 100 | 100 |
| Real estate. | 1 | 3 |  |  |  |

The most significant change during the period was the reduction in the proportion of assets invested in government bonds and the increase in the proportion invested in mortgage loans. Mortgage loans are a particularly suitable investment for life insurance companies since they are usually of long term and they produce a fixed interest yield; this enables an insurance company to undertake the long-term interest commitments involved in issuing life insurance and annuity contracts.

The yield on investments of registered Canadian companies has risen steadily for many years as shown in the following statement.

|  | Year | Net Rate of Investment Income Earned |  | Year | Net Rate of Investment Income Earned |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | p.c. |  |  | p.c. |
| 1954. |  | 4.06 | 1959. |  | 4.80 |
| 1955. |  | 4.18 | 1960. |  | 4.98 |
| 1956. |  | 4.31 |  |  |  |
| 1957. |  | 4.52 | 1961. |  | 5.13 |
| 1958. |  | 4.66 | 1962. |  | 5.26 |

Further statistical details are shown in the following Subsections.

## Subsection 1.-Summary of Life Insurance in Canada

Tables 1 and 2 summarize insurance premiums, claims, amounts of new policies effected, and amounts of insurance in force on Dec. 31 for the years 1961 and 1962. These data are presented in Table 1 on the basis of the supervising government authorities for the companies and societies concerned, and the same data are presented in Table 2 classified on the basis of nationality of company or society and by supervising government authorities.

## Subsection 2.-Operational Statistics for Life Insurance Transacted in Canada by Companies under Federal Registration

The amount of life insurance in force in Canada has shown an almost continuous advance year by year since the beginning of the record in 1869. The amount per capita of the estimated population has almost doubled since 1953-evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune.

The operations analysed in the tables of this Subsection, with the exception of Table 7, include only those companies under federal registration and are exclusive of fraternal organizations and provincial licensees. However, companies under federal registration account for about 95 p.c. of the life insurance in force in Canada.

# 3.-Life Insurance Effected and in Force in Canada by Companies under Federal Registration, Decennially 1880-1950 and Annually 1951-62 

Note.-Figures for 1869-1900 are given in the 1938 Year Book, p. 958; for 1901-39 in the 1942 edition, p. 855; and for $1940-49$ in the 1957-58 edition, p. 1168. Statistics of fraternal society insurance, excluded here, are given at pp. 1084-1085.

## Subsection 3.-Finances of Companies Transacting Life Insurance under Federal Registration

The financial statistics in Tables 8 and 9 relate only to life insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising outside of Canada as well as in Canada.

${ }^{1}$ Includes amounts written off shares purchased under mutualization plan.
${ }^{2}$ Dividends on shares other than those purchased by the company under mutualization plan.

## Subsection 4.-Life Insurance in Canada Transacted by Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 10 gives statistics of life insurance in Canada transacted by fraternal benefit societies and Table 11 shows statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits
granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of Actuaries) and a readjustment of rates or benefits must be made, unless the actuary certifies to the solvency of each fund. The first sections of Tables $\mathbf{1 0}$ and $\mathbf{1 1}$ relate to the 16 Canadian societies registered by the federal Department of Insurance, only one of which does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, though forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not been licensed previously by the provinces have since obtained federal authority to transact business.

## 11.-Financial Statistics for Fraternal Benefit Societies under Federal Registration, 1960-62-concluded

[^352]
## Subsection 5.-Life Insurance Effected and in Force Outside Canada by Canadian Companies under Federal Registration

In this Subsection, there are given for the years 1961 and 1962 summary statistics of insurance effected and insurance in force at the end of the year in currencies other than Canadian dollars, as written by Canadian companies under federal registration. The statistics for individual companies are shown in Table 12 and for individual currencies in Table 13. The data given in both of these tables are in terms of Canadian dollars, the conversions from the various foreign currencies having been made at the book rates of exchange used by the various companies. Although these book rates of exchange do not follow the day-to-day fluctuations in the current rates of exchange, they are adjusted when necessary to keep them reasonably in line with the current rates.

Canadian life insurance companies operating under federal registration at Dec. 31. 1962 had life insurance in force amounting to $\$ 15,119,095,790$ in countries outside Canada, Insurance in force in currencies other than Canadian dollars amounted to $\$ 15,091,047,886$; the difference between these figures is presumably the net amount of business in countries outside Canada transacted in Canadian currency. The business in force in Canada of Canadian companies registered by the Federal Government amounted to $\$ 35,907,032,820$ at Dec. 31, 1962, and the total business on the books of these companies, in and out of Canada, amounted to $\$ 51,026,128,610$. Thus, about 30 p.c. of the total business in force for Canadian companies registered by the Federal Government was in force in countries outside Canada.

In connection with their business outside Canada, the Canadian life insurance companies registered by the Federal Government held, at the end of 1962, Commonwealth and foreign investments in the amount of $\$ 3,074,279,241$.

## Section 2．－Fire and Casualty Insurance

At the end of 1962 there were 278 companies registered by the Federal Government to transact fire insurance in Canada（ 86 Canadian， 77 British and 115 foreign）．Of these companies， 270 （ 80 Canadian， 77 British and 113 foreign）were also registered to transact casualty insurance．In addition， 96 companies were registered by the Federal Government to transact casualty insurance but not fire insurance（22 Canadian， 7 British and 67 foreign）．Of the companies registered to transact fire and／or casualty insurance， 72 were also registered to transact life insurance； 14 of these were registered for fire，life and casualty insurance and 58 for life and casualty but not fire insurance．It should be noted also that，in addition to the companies registered by the Federal Government to transact casualty insurance，there were 25 registered fraternal benefit societies transacting accident and sickness insurance，of which 22 also transacted life insurance．

The operations analysed in the tables of this Section，with the exception of Table 14， include only those companies under federal registration．As shown in Table 14，some fire and casualty insurance is transacted in Canada by companies that are provincially licensed only．These companies generally confine their operations to the province of incorporation but may be allowed to sell insurance in other provinces．Many of them are mutual organizations transacting only fire insurance on a county，municipal or parish basis．

Table 14 summarizes net premiums written and net claims incurred for the years 1961 and 1962 in the fields of fire insurance and casualty insurance in Canada. These data are presented on the basis of the supervising government authorities for the companies concerned. The table relates to insurance companies only; no data are included with respect to fraternal benefit societies.

## 14.-Fire and Casualty Insurance Transacted in Canada, 1961 and 1962

${ }^{1}$ Registered or licensed reinsurance deducted from all companies. Prior to 1961, all reinsurance was deducted for Canadian companies included in the data of federally registered companies; these figures are therefore not strictly comparable with the same items in previous years.

## Subsection 1.-Fire Insurance Transacted in Canada by Companies under Federal Registration

Net premiums written and net claims incurred during each year from 1953 to 1962 are given in Table 15 and the figures for 1961 and 1962 are classified by province and nationality of company in Table 16.

## 15.-Fire Insurance Transacted in Canada by Companies under Federal Registration, 1953-62

(Less all reinsurance for Canadian companies and registered or licensed reinsurance only for British and foreign companies)

## Subsection 2.-Fire Losses

The information in Tables 17 to 19, which deals with the loss of property and life caused by fire, has been summarized from the annual report Fire Losses in Canada prepared by the Dominion Fire Commissioner, Department of Public Works. Federal losses not included in these figures in 1961 amounted to $\$ 3,129,743$ from 1,966 fires; average federal losses for the period 1952-61 amounted to $\$ 4,945,019$ from an annual average of 2,252 fires.

## 17.-Statistics of Fire Losses, 1952-61

Note.-Figures for 1926-46 are given in the 1947 Year Book, p. 1078, and those for 1947-51 in the 1960 edition, p. 1169. Figures from 1922 may be obtained from the Dominion Fire Commissioner, Department of Public Works.

[^354]${ }^{2}$ Addition not accurate; breakdown

## Subsection 3.-Casualty Insurance Transacted in Canada by Companies under Federal Registration

The various classes of casualty insurance are shown in Table 20. These figures relate only to companies registered by the Federal Government.

## 20.-Net Casualty Premiums Written, Premiums Earned and Claims Incurred in Canada, 1961 and 1962

Note.-Excluding marine insurance for which a certificate of registration is not required. Less all reinsurance for Canadian companies and registered or licensed reinsurance only for British and foreign companies.

## 20.-Net Casualty Premiums Written, Premiums Earned and Claims Incurred in Canada, 1961 and 1962-concluded

## Subsection 4.-Finances of Companies Transacting Fire and Casualty Insurance under Federal Registration

The financial statistics of Tables 21 to 23 relate to fire and casualty insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising out of Canada as well as in Canada.
21.-Total Assets for Fire and Casualty Insurance of Canadian Companies under Federal Registration and Assets in Canada for Fire and Casualty Insurance of British and Foreign Companies under Federal Registration, 1960-62.

[^355]21.-Total Assets for Fire and Casualty Insurance of Canadian Companies under Federal Registration and Assets in Canada for Fire and Casualty Insurance of British and Foreign Companies under Federal Registration, 1960-62-concluded.

## Section 3.-Government Insurance

## Federal Government Insurance

For more than fifty years the Federal Government has operated an annuity service, instituted to assist Canadians to make provision for old age; this service is described below. In addition, various insurance schemes have been adopted in recent years by the Federal Government or co-operatively by the federal and provincial governments. Information on unemployment insurance, health insurance, veterans insurance, export credits insurance, etc., will be found in the appropriate Chapters on Labour, Health and Welfare, Foreign Trade, etc.

Government Annuities.*-The Government Annuities Act (RSC 1952, c. 132) was passed in 1908 and is administered by the Minister of Labour.

A Canadian Government annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in monthly instalments for life, or for life and guaranteed for a period of years. The minimum annuity is $\$ 10$ and the maximum $\$ 1,200$ a year or the actuarial equivalent if the annuity is to reduce by the amount of payments under the Old Age Security Act. Annuity contracts may be deferred or immediate. Deferred annuities are purchased by periodic or single premiums. Immediate annuity contracts provide immediate income. Annuities may be arranged to reduce by $\$ 65$ a month at age 70 to fit in with payments under the Old Age Security Act.

The property and interest of the annuitant are neither transferable nor attachable. In the event of the death of the annuitant before a deferred annuity vests, all money paid is refunded with interest. Provision is made in the Act for group annuity contracts whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members, the purchase money being derived partly from wages and partly from employer contributions or entirely from employer contributions. Group annuity plans now in effect cover a variety of industries and many municipal corporations throughout Canada. Annuities arising from individual contracts may be taxable in either of two ways: (1) if registered under Sect. 79B of the Income Tax Act for tax exemption on premiums, the annuity is fully taxable, or (2) if not registered the annuity is taxable on the interest portion only. Annuities arising from registered pension plans are fully taxable but the employee and the employer are entitled to tax exemption year by year on their annual contributions to the pension plan.

From Sept. 1, 1908, the date of the inception of the system, to Mar. 31, 1963, the total number of annuity contracts and certificates issued, excluding replacements, was 525,284 . On the latter date, 88,379 annuities were being paid amounting to $\$ 49,118,134$ annually and 293,358 deferred annuities were being purchased. The net total amount of purchase money received up to Mar. 31, 1963 was $\$ 1,350,459,405$. At that date there were in force 1,437 pension plans underwritten by government annuities, providing 203,742 employees with portable pensions; approximately 23,000 retired employees were receiving pensions. The number of certificates issued during the year was 3,687 compared with 7,480 in 1961-62.

* Revised in the Government Annuities Branch, Department of Labour, Ottawa.

[^357]
## Provincial Government Insurance

Saskatchewan.-The Saskatchewan Government Insurance Office, a Crown corporation established by the Saskatchewan Government Insurance Act, 1944, commenced business in May 1945. It deals in all types of insurance other than sickness and life. The aim of the legislation is to provide residents of the province with low-cost insurance designed for their particular needs. Rates are based on loss experience in Saskatchewan only and the surplus is invested, to the extent possible, within the province. Premium income for 1962 amounted to $\$ 8,165,620$ and earned surplus to $\$ 142,685$. The total amount made available to the Government of Saskatchewan since the beginning of government insurance operations in 1945 to Dec. 31, 1962, was $\$ 4,274,339$. Assets at the latter date were $\$ 17,805,774$, of which more than $\$ 11,000,000$ were invested in bonds and debentures issued by Saskatchewan schools, municipalities, hospitals, and the province. Over 600 independent insurance agents sell government insurance throughout the province.

The Automobile Accident Insurance Act, which became effective Apr. 1, 1946, is administered by the Saskatchewan Government Insurance Office. It establishes a compulsory automatic insurance plan designed to provide a reasonable minimum of compensation for losses arising from motor vehicle accidents regardless of fault. It also provides public liability insurance, with limits of $\$ 10,000 / \$ 20,000$ for bodily injury and $\$ 5,000$ for property damage, as well as comprehensive and collision coverage subject to a $\$ 200$ deductible for private passenger cars. Rates vary from $\$ 4$ a year for trucks to $\$ 49$ for late-model private passenger cars, and also vary for other types of motor vehicles depending on size and usage. From the inception of the Act in 1946 to Dec. 31, 1962, more than $\$ 61,000,000$ were paid in claims.

The Saskatchewan Government Insurance Office, under contract with the Saskatchewan Department of Natural Resources, offers insurance to farmers covering damage to unharvested crops by certain wildlife such as ducks, geese, sandhill cranes, deer, elk, bear and antelope.

Information regarding the operation of the Saskatchewan Government Insurance Office or the Automobile Accident Insurance Act may be obtained from the Office Librarian, Saskatchewan Government Insurance Office, Regina, Sask.

Alberta.-Provincial government insurance in Alberta, coming within the purview of the Alberta Insurance Act, relates (1) to the Alberta General Insurance Company, in which the entire business of the fire branch of the Alberta Government Insurance Office was vested by the Legislature on Mar. 31, 1948, and (2) to the Life Insurance Company of Alberta, which was constituted on the same date to take over the life branch of the Alberta Government Insurance Office. Each company is administered by a separate board of directors. The Lieutenant-Governor in Council appoints the members to the respective boards but the charter of the Life Insurance Company of Alberta provides for the election of two policyholder directors. While both companies are Crown corporations, they are not entitled to the usual immunities of the Crown, since they may sue and be sued in any court of competent jurisdiction.

A variety of agencies in Alberta offer forms of prepaid protection corresponding to insurance but the nature of the enabling legislation governing these plans emphasizes the fact that they do not constitute insurance. Because such exemptions are specifically provided by the insurance laws of the province, reference to these plans is necessary only to make it clear that they do not come within the scope of the Alberta Insurance Act. It should be noted that the Alberta Hail Insurance Act is administered by the Provincial Treasurer but none of the provisions of the Alberta Insurance Act apply to the Alberta Hail Insurance Board.

Further information on provincial insurance matters may be obtained from the Superintendent of Insurance, Department of the Provincial Secretary, Edmonton, Alta.

## Section 4.-Pension Plans

Very few pension plans in Canada have been in existence for more than 25 years and most of the older plans were installed by governments and financial institutions, such as banks. Employers in industry began showing an interest in pension plans for their employees shortly before World War II and from that time on there was a rapid increase in the rate at which plans were introduced.

Up to 1948 the majority of employers made arrangements with either the Annuities Branch of the Department of Labour (see pp. 1096-1097) or an insurance company for the underwriting of their plans. Then began the use of the facilities of corporate trustees (trust companies) to handle pension moneys, and by 1953 the amount of funds under control of such trusteed plans had become a significant factor in the capital market and a growing form of savings. Trusteed pension funds are also managed by individual trustees appointed by the employer or through a Pension Fund Society, which is a body incorporated under federal or provincial pension fund societies Acts, companies Acts, etc.

Table 27 shows the distribution of pension business for the years 1957-61.
2\%.-Distribution of Pension Business between Trusteed Funds, Life Insurance Company Annuities and Government Annuities, 1957-61

Pension trust funds derive their income from employer and employee contributions, investment income and profit on the sale of securities. Expenditures arise from pension payments, pensions purchased from an underwriter on retirement or separation, cash withdrawals on death or separation, administrative costs and losses on the sale of securities. The funds are invested in federal, provincial, municipal and corporate bonds, stocks, mortgages, real estate and lease-backs. In recent years corporate trustees have introduced the "pooled" or "classified" type of fund, which enables small plans to have their assets combined so that each fund participates in the diversity, security and yield previously available only to the much larger single funds. The trustees of a fund, whether corporate or individuals, may also purchase mutual funds.

Table 28 shows the various types of trusteed funds and the income, expenditures and assets of the funds in 1960 and 1961.

In November 1960 there were $5,367,000$ non-agricultural workers in the Canadian labour force, $2,672,724$ or 50 p.c. of whom were employed by employers with an installed pension plan. These plans had $1,815,022$ members, representing 34 p.c. of the labour force; the remainder of the $2,672,724$ employees were outside the pension plan for one reason or another. Table 30 shows the employee and membership data of the plans for males and females separately.

[^359]In a pension plan the employer may make provision for an employee whose services are terminated before retirement to be credited with all or a portion of the contributions made by the employer on his behalf. The various degrees of vesting are as follows: (1) none; (2) immediate-all employer contributions are vested in the employee at the time they are paid; (3) deferred sudden-there is no vesting of employer contributions until the employee has fulfilled certain conditions, at which time all the employer contributions vest in the employee-vesting is usually determined on the number of years of service with the employer, the number of years of participation in the plan or the employee's age when his services are terminated, or any combination of these three factors; (4) deferred graduated-partial vesting commences when certain conditions as in (3) are fulfilled, with the scale of vesting graduated until it is complete.

Table 31 gives a distribution of the number of members of the 8,920 plans by the type of vesting.
31.-Distribution of Pension Plan Members by Type of Vesting, 1960

| Type of Vesting | Plans | $\begin{gathered} \text { Male } \\ \text { Members } \end{gathered}$ | Female Members | Total Members | Percentage |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | No. | No. |  |
| None. | 330 | 428,231 | 150,430 | 578,661 | 31.1 |
| Immediate. | 2,612 | 72,748 | 15,405 | 88,153 |  |
| Years of service only.... | $\stackrel{2,925}{234}$ | ${ }^{610}{ }^{612} 225$ | 158, $864{ }^{1}$ | 769,0891 | 41.3 |
| Years of participation only | 2,334 | 131,535 | 23, 253 | 154,888 | 8.3 |
| Combination of service, participation, or age..... | 710 | 220, 158 | 51,164 | 271,322 | 14.6 |
| Totals. | 8,920 | 1,463,208 | 399,473 | 1,862,681 | 100.0 |

${ }^{1}$ Includes Federal Government employees covered under the Public Service Superannuation Act and members of the Armed Forces covered under the Canadian Forces Superannuation Act.

The first column in Table 32 shows the distribution of the 8,920 plans by any one or combination of two or more methods of underwriting or trusteeship. Some contributory plans (the employees are required to contribute) which provide for the vesting of employer contributions on termination of employment also give the terminated employee the option of taking a cash refund. By exercising the right to a cash refund, the terminated employee may be obliged to waive his rights to the vested employer contributions. The second and third columns show the distribution of the 8,920 plans, depending upon whether or not the terminated employee waives his vested rights if he elects to take a cash settlement. The table also shows the total employee and employer contributions paid into pension funds during 1960.

## 32.-Method of Underwriting, Waiver of Vesting and Employee and Employer Contributions, 1960

| Method of Underwriting | Plans | Waiver of Vesting |  | Employee Contributions in 1960 | $\begin{gathered} \text { P.C. } \\ \text { of } \\ \text { Total } \end{gathered}$ | Employer Contributions in 1960 | $\begin{aligned} & \text { P.C. } \\ & \text { of } \\ & \text { Total } \end{aligned}$ |

## GHAPTER XXV.-DEFENCE OF GANADA

The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

## PART I.-THE ARMED SERVICES AND DEFENCE RESEARCH*

## Section 1.-The Department of National Defence

The control and management of all matters relating to national defence, the Canadian Forces and the Defence Research Board are the responsibility of the Minister and Associate Minister of National Defence; the duties and functions relating to national survival have also been assigned to the Department of National Defence with the Canadian Army undertaking the major role. The Canadian Forces consist of three Services, the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force. Each Service has an officer appointed as Chief of Staff who, subject to the regulations and under the direction of the Ministers, is charged with the control and administration of his Service. The Defence Research Board conducts research relating to the defence of Canada and also undertakes the development of or improvements in materiel. The Chairman, Chiefs of Staff Committee is responsible to the Minister for ensuring that all matters of joint defence and defence policy, in their widest sense, are carefully examined and co-ordinated before decisions are made.

The civilian administration of the Department is organized under the Deputy Minister and is constituted on a functional basis. The Deputy Minister maintains a continuing review and control over the financial aspects of operational policy, logistics, and personnel and administration. The Deputy Minister is assisted by an Associate Deputy Minister. In addition, there are four Assistant Deputy Ministers each of whom administers a division of the Deputy Minister's branch responsible for: administration and personnel; construction, engineering and properties; finance; and supply. Also responsible to the Deputy Minister are: the Controller General of Inspection Services, the Judge Advocate General, the Chief Secretary, and the Director of Public Relations.

[^361]A number of committees meet at regular intervals to consider and advise on joint issues. These include:-
(1) Defence Council.-Composed of the Minister of National Defence (Chairman), the Associate Minister (Vice Chairman), the Deputy Minister, the Chairman, Chiefs of Staff Committee, the three Chiefs of Staff, the Chairman, Defence Research Board, and the Associate Deputy Minister. Its purpose is to advise the Minister on administrative and other matters.
(2) Chiefs of Staff Committee.-Composed of the Chairman, Chiefs of Staff, the Chiefs of Staff of the three Armed Services and the Chairman, Defence Research Board. The purpose of the Committee and its subcommittees is to maintain a continuous review of all operational problems.
(3) Personnel Members Committee.-Composed of the Chief of Naval Personnel, the Adjutant-General, the Air Member for Personnel, the Assistant Deputy Minister (Finance) and a representative of the Chairman, Defence Research Board. The purpose of the Committee and its subcommittees is to examine personnel problems of the three Services with the general aim of achieving uniform personnel policies.
(4) Principal Supply Officers Committee.-Composed of the Chief Naval Technical Services, the Quartermaster-General, the Air Member for Technical Services, the Assistant Deputy Minister (Requirements) and a representative of the Chairman, Defence Research Board. The purpose of the committee and its subcommittees is to deal with common problems in the field of supply and logistics.

Canada-United States Committee on Joint Defence.-This committee is com posed of: for Canada, the Secretary of State for External Affairs, the Minister of National Defence and the Minister of Finance; for the United States, the Secretary of State, the Secretary of Defense and the Secretary of the Treasury; together with such other Cabinet members as either government may designate from time to time. Its function is to consult periodically on any matters affecting the joint defence of Canada and the United States; to exchange information and views at the ministerial level on problems that may arise, with a view to strengthening further the close co-operation between the two governments on joint defence matters; and to report on such discussions in order that consideration may be given to measures deemed appropriate and necessary to improve defence cooperation. Meetings normally alternate between Canada and the United States with the host country providing the chairman.

Liaison in Other Countries.-The Chairman, Chiefs of Staff, who is the Canadian military representative in the North Atlantic Treaty Organization, is responsible for co-ordinating all NATO military matters and acts as a military adviser to Canadian NATO delegations. For purposes of liaison and the furtherance of international co-operation in defence, Canada also maintains: (1) the Canadian Joint Staff (London) representing the three Services and the Defence Research Board in Britain, the Chairman of which is the principal military adviser to the Canadian High Commissioner in London, the principal military adviser to the Permanent Canadian Delegate to the NATO Council and the Canadian National Military Representative at SHAPE; (2) the Canadian Joint Staff (Washington) representing the three Services and the Defence Research Board in the United States, the Chairman of which is the principal military adviser to the Canadian Ambassador in Washington, the Canadian National Liaison Representative at SACLANT Headquarters and the Canadian member of the NATO Military Committee in Permanent Session; and (3) Service Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence.

Mutual Aid.-Canada's contributions to NATO are outlined on pp. 152-153.
Rates of Pay and Allowances.-The entire pay structure for comparable ranks in the different Services is on a uniform basis. Monthly rates of pay and allowances effective Oct. 1, 1962 are given in Table 1.
1.-Monthly Rates of Pay and Allowances for the Canadian Armed Forces, Effective Oct. 1, 1962

${ }^{1}$ Paid to other ranks only.
2 Depending on rank on promotion.

The allowances shown in Table 1 are explained briefly as follows.
Subsistence Allowance.-This allowance is granted whenever rations and quarters are not provided. A married man living with his family uses his subsistence allowance for their maintenance as well as his own.

Ration Allowance.-A ration allowance is granted when quarters are available but rations are not provided. It is not payable concurrently with subsistence allowance.

Marriage Allowance.-The amount of this allowance is $\$ 30$ a month for men and $\$ 10$ a month for officers, subject to a reduction of $\$ 10$ a month where permanent married quarters are occupied or $\$ 2.50$ a month where temporary married quarters are occupied. All ranks may draw this allowance upon marriage provided the initial training period has been completed and the age of 21 years has been attained by men and 23 years by officers.

Separated Family's Allowance.-An officer or man while separated from his dependants for any of various reasons (i.e., movement of dependants prohibited, illness of dependants, lack of suitable accommodation), on being moved other than temporarily may be entitled to separated family's allowance at a rate and for a period depending on circumstances (i.e., rank, reason for separation, whether or not he has children, whether or not his family is accommodated in married quarters, whether or not he is provided with quarters and rations). The rates listed are the maximum.

In addition to the above, Foreign Allowances of various kinds are granted to officers and men posted for duty outside Canada to compensate for additional living expenses or hardships incurred; these vary with rank, appointment and location. Isolation Allowances are granted to officers and men serving at specified isolated posts in Canada at rates depending upon location and circumstances. Outfit Allowances and Clothing Credits are as follows: Officers receive a single payment of $\$ 450$ on appointment and Warrant Officers Class I, $\$ 270$; men receive a free issue of clothing when they join and thereafter a monthly clothing credit or allowance of $\$ 7$, Navy Petty Officer 1st class and above receive $\$ 8$, and women $\$ 8$. An Aircrew Allowance of $\$ 75$ a month is paid to an officer or man undergoing fying training. For qualified aircrew this allowance may be increased to $\$ 150$, depending on rank, if filling an appointment requiring active and continuous flying duties, and to $\$ 100$, depending on rank, for maintaining proficiency. Submarine Allowance is granted an officer or man undergoing submarine training or filling an appointment in a submarine; the allowance varies from $\$ 65$ to $\$ 115$ a month depending on rank. An officer or man actively engaged or undergoing training as a parachutist or on flying or submarine duty and not entitled to aircrew allowance or submarine allowance is paid a Risk Allowance at the rate of $\$ 30$ a month. Medical, Dental and Legal Officers are granted extra allowances according to rank.

## Subsection 1.-The Royal Canadian Navy

Role and Organization.-The role of the Royal Canadian Navy, in support of Canada's defence policy, is to maintain sea communications, to defend Canada against attack from the sea, to contribute to the collective defence of the NATO area against attack from the sea and to contribute naval forces to the United Nations as may be required. It is substantially an anti-submarine (A/S) role.

The Royal Canadian Navy comes under the central authority of the Chief of the Naval Staff at Naval Headquarters in Ottawa. The Flag Officer Atlantic Coast, at Halifax, N.S., and the Flag Officer Pacific Coast, at Esquimalt, B.C., exercise operational and administrative command of ships and establishments within the Atlantic and Pacific Coast Commands. The Flag Officers also hold the additional appointments of Maritime Commander Atlantic and Maritime Commander Pacific, respectively. As such, each is responsible for anti-submarine operations involving RCN and RCAF forces in his Command. The 21 Naval Divisions of the Royal Canadian Naval Reserve are under the over-all command of the Commanding Officer Naval Divisions, with headquarters at Hamilton,

Ont. There are naval staffs in London, England, and Washington, D.C., U.S.A., to maintain liaison with the Royal Navy and the United States Navy. As a result of Canada's NATO commitments, officers of the Royal Canadian Navy serve on the staffs of: the Supreme Allied Commander, Atlantic, at Norfolk, Va., in the United States; the Com-mander-in-Chief, Eastern Atlantic Area, at Northwood in Britain; and the Commander-in-Chief, Western Atlantic Area, at Norfolk, Va. The Flag Officer Atlantic Coast holds the NATO appointment of Commander, Canadian Atlantic Sub-Area.

The strength of the RCN on Mar. 31, 1963, was 21,476 officers men and women in the regular force and 3,583 in the reserve force.

Operations at Sea, 1962-63.-During 1962, ships of the RCN spent more than 7,000 days at sea and logged over $1,200,000$ nautical miles on exercises, training cruises and patrols. During the same year naval aviators flew over $5,000,000$ nautical miles in 40,000 air hours, and made 4,269 day and night deck landings on board HMCS Bonaventure.

At mid-1963, three new Mackenzie class destroyer escorts had joined the fleet and three others were under construction in Canadian shipyards. A 22,000-ton fleet replenishment ship was nearing completion and the fitting of variable depth sonar and helicopter handling facilities in the first two St. Laurent class destroyer escorts was well under way. The first of nine CHSS-2 anti-submarine helicopters had been accepted. These will eventually replace the HO4S-3's and will be operated from the aircraft carrier Bonaventure and destroyer escorts.

Training.-At the end of 1962, the Navy had approximately 1,100 men taking new-entry training, 1,200 men undergoing other training in the various trade areas, and 532 cadets and 175 officers on courses. The major training establishments of the RCN are HMCS Cornwallis near Digby, N.S.; HMCS Shearwater near Dartmouth, N.S.; HMCS Stadacona at Halifax, N.S.; HMCS Hochelaga at LaSalle, Que.; HMCS Gloucester near Ottawa, Ont.; and HMCS Naden at Esquimalt, B.C.

Cadets entered under the Regular Officer Training Plan (ROTP) or College Training Plan (CTP) receive most of their early training at the Canadian Services Colleges or a Canadian university while those entered on a short-service appointment train in HMCS Venture at Esquimalt, B.C. All cadets receive practical training with the Fleet at various times of the year.

Men and women entering the RCN receive their basic training at HMCS Cornwallis; the courses are normally of 15 weeks duration.

A University Naval Training Division program is conducted to provide well-trained junior officers for the RCN and the RCN Reserve. The cadets are required to complete three winter-training periods, two summer-training periods and certain specified courses. In March 1963, there were 596 UNTD cadets at 26 Canadian universities and colleges.

Royal Canadian Naval Reserve.-The recruiting and training of officers and men of the RCN Reserve is conducted mainly through 21 Naval Divisions across Canada under the over-all command of the Commanding Officer Naval Divisions, with headquarters at Hamilton, Ont. Naval Divisions are established in the following centres:-

St. John's, Nfld., HMCS Cabot<br>Charlottetown, P.E.I., HMCS Queen Charlotte<br>Halifax, N.S., HMCS Scotian<br>Saint John, N.B., HMCS Brunswicker<br>Quebec, Que., HMCS Montcalm<br>Montreal, Que., HMCS Donnacona<br>Toronto, Ont., HMCS York<br>Ottawa, Ont., HMCS Carleton<br>Kingston, Ont., HMCS Cataraqui<br>Hamilton, Ont., HMCS Star

Windsor, Ont., HMCS Hunter<br>London, Ont., HMCS Prevost<br>Port Arthur, Ont., HMCS Griffon<br>Winnipeg, Man., HMCS Chippawa<br>Regina, Sask., HMCS Queen<br>Saskatoon, Sask., HMCS Unicorn<br>Calgary, Alta., HMCS Tecumseh<br>Edmonton, Alta., HMCS Nonsuch<br>Vancouver, B.C., HMCS Discovery<br>Victoria, B.C., HMCS Malahat<br>Prince Rupert, B.C., HMCS Chatham

Naval Divisions, commanded by Reserve officers, provide both basic and specialized training for officers and men of the RCN Reserve. The Great Lakes Training Centre at Hamilton conducts new-entry reserve training afloat during the summer months.

Royal Canadian Sea Cadets.-Royal Canadian Sea Cadets, sponsored by the Navy League of Canada and supported by the RCN, consist of 164 authorized corps. These are divided into seven Sea Cadet areas, supervised by 16 naval officers responsible to the Commanding Officer Naval Divisions. Instruction is carried out by RCSCC officers. Two RCSCC training establishments-Acadia on the East Coast and Quadra on the West Coast-accommodate officers and cadets for two-week training periods in the summer. In addition, selected Sea Cadets received seven-week training courses at naval establishments. Sea experience is provided for Cadets throughout the year in various types of ships of the RCN. In March 1963 the strength of the Corps was 1,114 Sea Cadet officers and 10,588 Sea Cadets.

## Subsection 2.-The Canadian Army

Organization.-Army Headquarters at Ottawa is organized into four separate Branches. The General Staff Branch deals with all matters affecting the fighting efficiency of the Army, the Adjutant-General Branch deals with all problems affecting the soldier as an individual, the Quartermaster-General Branch is responsible for supply and the Comptroller-General Branch is responsible for financial management. The senior appointment at Army Headquarters is the Chief of the General Staff who, through the Heads of the four Branches, directs all activities of the Canadian Army. For command and control, Canada is divided into Commands and Areas with Headquarters as follows:-

The Canadian Army comprises the Canadian Army (Regular) and the Reserves. The Canadian Army (Regular) consists of a field force of four Infantry Brigade Groups, headquarters and administrative, training and logistic support units. One of the Infantry Brigade Groups is in Europe with the NATO Force and is under command of the Supreme Allied Commander in Europe. The Reserves include the Canadian Army (Militia), the Regular Reserve, the Supplementary Reserve, the Canadian Officers' Training Corps, the Cadet Services of Canada and the Reserve Militia. Additional to but not an integral part of the Canadian Army are the Services Colleges, officially authorized cadet corps, rifle associations and clubs.

The strength of the Canadian Army (Regular) at Mar. 31, 1963 was 49,760 officers and men and the strength of the Canadian Army (Militia) was 53,872 , including personnel taking the special militia training courses.

Operations in 1962.-In fulfilment of military obligations under the North Atlantic Treaty, Canada has continued to provide ground forces for the defence of Western Europe.

The 4th Canadian Infantry Brigade Group, the major units of which are the Fort Garry Horse, the 3rd Regiment Royal Canadian Horse Artillery, No. 1 Surface-to-Surface Missile Battery, 1st Battalion, The Royal Canadian Regiment, the 1st Battalion, The Queen's Own Rifles of Canada, and the 2nd Battalion, The Black Watch (Royal Highland Regiment) of Canada, constituted the Canadian Army contribution to NATO at the end of the year. The headquarters of the Brigade Group is at Soest, and married quarters are located in the vicinity of Soest, Werl, Hemer and Iserlohn.

The Canadian Army continued to provide forces in support of United Nations operations as follows. (1) A force of approximately 870 officers and men forms a part of the United Nations Emergency Force in the Middle East; its tasks are the patrolling of a sector of the Egypt-Israel International Frontier, the provision of engineer services, communications, stores, transport and workshop services, and postal facilities for the Force. (2) In the Congo, 57 Canadian Signal Unit, with a strength of approximately 310 officers and men, supports the United Nations force by the provision of communications, staff officers and other headquarters personnel; the bulk of the Unit is stationed in Leopoldville, with signal detachments at subordinate headquarters throughout the country. (3) Canadian Army contributions to United Nations commissions include some 30 officers employed in Kashmir, Korea and Palestine.

A specially trained and equipped infantry battalion is maintained on standby in Canada to provide at short notice a force for service in support of the United Nations in any part of the world. In addition to its United Nations commitments, the Canadian Army, as a result of Canadian participation in the International Commissions for Supervision and Control in Viet Nam, Cambodia and Laos continues to provide approximately 75 officers and men for truce supervisory duties in Indo-China. During 1962, a Canadian Armed Forces Training Team was established in Ghana to assist in the training of the Ghana Armed Forces. The Canadian Army provides 23 of the members of this Team, the Royal Canadian Navy three, and the Royal Canadian Air Force four. An officer of the Royal Canadian Engineers is employed on map-making duties in Nigeria. A number of officer cadets from Nigeria and from Trinidad and Tobago have received training in Canadian Army schools.

Survival Operations.*-Since Sept. 1, 1959 the Army has been charged with certain civil defence responsibilities and is supported in this assignment by the Royal Canadian Navy and the Royal Canadian Air Force, the Defence Research Board providing assistance in research. (See also pp. 1121-1123).

A National Survival Attack Warning System has been established to give warning of an impending attack. A Canadian Army Liaison Officer is stationed at NORAD Headquarters and Canadian Army Sections are located in the appropriate NORAD Regional Headquarters in the United States and at Northern NORAD Regional Headquarters at North Bay. All of these have access to early warning information which enables them to keep a watch over friendly and enemy air traffic over Canada and the northern United States. Warning centres near Ottawa and in each province are manned 24 hours a day. Dissemination of alerts to the general public will be by siren signals and radio broadcasts over emergency networks in the provinces.

A Nuclear Detonation and Fallout Reporting System is being installed which, in the event of a nuclear detonation, will provide information needed to determine the areas likely to be affected by fallout. Information from this system will be passed to the public via the National Survival Attack Warning System. Provision has been made for an exchange of nuclear detonation and fallout data with the United States.

The Army also has the responsibility for re-entry into areas damaged by nuclear detonations or contaminated by serious radioactive fallout, decontamination work in those areas, and the rescue and provision of first aid to those trapped or injured. A headquarters responsible for planning re-entry operations has been established in the vicinity of each

[^362]of 16 most probable target areas. Military personnel available will be used to form unit cadres which will employ large numbers of civilian volunteers to form rescue forces. These units will provide basic first aid and rescue, decontamination, casualty sorting, and certain traffic control and other services. Assistance and instruction will be given to those who remain in the damaged areas or in areas subjected to serious radioactive fallout. Planning is conducted in conjunction with all levels of civil government and agencies such as police, fire and health services.

Pamphlets have been distributed outlining the operating procedures for damage and casualty estimation and procedures have been evolved by which government agencies may use information provided by the Army to determine the resources remaining after an attack.

Planning of emergency communications has been completed by the Army and construction of the various stations is in progress

Training.-Training Canadian Army (Regular).-The policy of training is determined at Army Headquarters. General Officers Commanding Commands implement the training policies within their Commands except for that conducted at Army and corps schools under the supervision of Army Headquarters. During 1962, the basic training of 4,834 recruits and the corps training of officers and men of the Canadian Army was carried out at regimental depots, units and corps schools, and 9,736 personnel attended courses at the schools of instruction; 253 officers completed promotion qualification examinations for the rank of major and 138 officers for the rank of captain; six officers passed the entrance examinations for the Royal Military College of Science; 51 officers attended the Canadian Army Staff College and five commenced courses at Commonwealth Staff Colleges. Qualifying courses for junior NCO's were conducted under General Officers Commanding Commands and senior NCO courses were conducted at corps schools. Officers from the RCN and the RCAF as well as officers from Australia, Britain, Denmark, France, India, Italy, Pakistan, Turkey and the United States attended courses at Canadian Army schools of instruction.

English and French language training, which is available to all ranks of the Canadian Army, was conducted by Commands and AHQ. The R22eR Depot (Language Training Company) conducted six-month French language courses for English-speaking officers and NCO's and a number of French-speaking recruits and potential NCO's received English language training.

Trade and specialty training is given at corps schools and units. When required, the facilities of civilian schools are used to supplement training at Army establishments. Under an apprentice training program selected young men are trained as soldier tradesmen and prepared for advancement to senior non-commissioned ranks. During 1962 an additional 460 apprentices were enrolled and 44 civilian teachers were employed to provide academic instruction for about 800 apprentice soldiers. Academic credits are obtained from the educational authorities of the province where the training is conducted.

The training of the Field Force Canada airborne/air transportable element continued throughout 1962. Airborne continuation training was carried out by each unit in conjunction with unit exercises. Units carried out exercises during the winter under cold weather conditions. Parachute and air supply courses were conducted at the Canadian Joint Air Training Centre at Rivers, Man., and courses in Arctic training at Fort Churchill, Man. Collective training for units in Canada was carried out during the summer months at Camp Gagetown, N.B., and Camp Wainwright, Alta. All arms training comprised sub-unit and unit training and culminated in exercises at the Brigade Group level.

The Regular Officer Training Plan (ROTP.).-The Regular Officer Training Plan, under which selected students are trained for commissions in the Canadian Army (Regular), is in effect at the three Canadian Services Colleges and at all Canadian universities and affiliated colleges that have contingents of the COTC. Students enrol in the Canadian Army (Regular) with a special rate of pay; tuition and essential fees are paid and grants given for the required books and instruments. During the year ended Mar. 31, 1963,

104 of these sponsored students graduated and were commissioned. Training consists of military studies, drill and physical training during the academic year; the summer term is devoted to practical training at military establishments.

The Canadian O.ficers' Training Corps (COTC).-Units of the Canadian Officers' Training Corps are maintained at Canadian universities to produce primarily, from among university undergraduates, officers for the reserve components of the Army. University graduates who have been members of the Canadian Officers' Training Corps are also eligible for commissions in the Canadian Army (Regular). Members of the COTC undertake training similar to that given members of the ROTP. During the year ended Mar. 31, 1963, 15 who had trained with the COTC were awarded commissions in the Canadian Army (Regular).

Canadian Army (Militia).-The role of the Militia is to prepare for survival operations, complement the active force and provide assistance for internal security on mobilization. The training aim is to establish a nucleus of trained or partially trained personnel and units to meet these requirements. In 1962 funds were provided to permit an average of 40 days training for all ranks, plus up to 70 days for key Militia personnel. This included seven days of summer training for selected personnel by attachment to Regular Army Units, attendance at command camps and in-job training at establishments and headquarters. During the summer 31,101 all ranks, including members of the Canadian Women's Army Corps and high school students, participated in survival and military training. At Mar. 31, 1963, Militia membership totalled 53,872 all ranks.

Royal Canadian Army Cadets.-The aim of the Army Cadet organization is to provide cadets with a sound knowledge of military fundamentals based on the qualities of leadership, patriotism and good citizenship. Planning and the supervision of organization, administration and training are carried out by the Canadian Army (Regular). A total of 113 officers and men are employed continuously on these duties.

Training and administration of Army Cadets are the responsibility of officers of the Cadet Services of Canada, a sub-component of the reserves, and civilian instructors. As at Mar. 31, 1963, a total of 2,396 cadet instructors were engaged in these activities. Cadets take a progressive three-year course in basic military subjects at local headquarters and selected cadets are given training at summer camps. In 1962, 5,389 cadets attended seven-week trades and specialists courses at summer camps at Aldershot, N.S., Farnham, Que., Camp Borden and Ipperwash, Ont., and Vernon, B.C.; 975 attended two-week junior leader and special courses at Camp Borden, Ont., and Clear Lake and Rivers, Man.; 214 Master and First Class cadets attended the National Cadet Camp, Banff, Alta., for four weeks; 377 cadet instructors attended qualifying courses up to seven weeks, and another 467 were employed in training and administrative duties at summer camps. As at Mar. 31, 1963, a total of 75,094 cadets were enrolled in 507 corps.

## Subsection 3.-The Royal Canadian Air Force

Organization.-The RCAF is controlled from Air Force Headquarters at Ottawa, which is responsible for planning, policy and administration of the Regular and Reserve components of the RCAF. The Headquarters organization comprises four major Divisions -Plans and Operations, Technical Services, Personnel and Comptroller. On Mar. 31, 1963, the major RCAF formations and their Headquarters locations were as follows:-

Formations
Headquarters
Air Defence Command
5 Air Division.
St. Hubert, Que. Victoria, B.C.

Air Transport Command Metz, France

Air Materiel Command Trenton, Ont.

Maritime Air Command. Rockcliffe, Ont.

Training Command
Halifax, N.S. Winnipeg, Man.

The organization included 22 flying squadrons of the RCAF Regular and 11 flying squadrons of the RCAF Auxiliary. The Auxiliary squadrons performed an emergency and rescue role. Five of the Regular squadrons contributed to the air defence of the Canada-United States regions; eight squadrons were assigned to No. 1 Air Division in Europe; four squadrons were required for RCAF transport operations at home and abroad; four maritime squadrons operated in conjunction with other forces for the defence of Canada's East and West Coasts; and one reconnaissance squadron carried out aerial photography and reconnaissance in Canada.

The strength of the RCAF at Mar. 31, 1963 was 52,458 officers and men in the Regular Force and 2,223 in the Auxiliary Air Force.

Operations in 1962.-The RCAF contribution to the air defence of North America, consisting of five CF101B squadrons, two Bomarc squadrons and the many radar sites, continued under the operational control of North American Air Defence Command (NORAD). No. 1 Air Division, Canada's NATO contribution in Europe, commenced the changeover from air defence squadrons using $F 86$ and $C F 100$ aircraft to tactical squadrons employing CF104 aircraft. By the end of March 1963, all four CF100 squadrons and two $F 86$ squadrons were disbanded and two CF104 squadrons were formed.

Air Defence Command continued its planned build-up of the Pinetree Line radar system, and continued to operate the Distant Early Warning Line (DEW) and the MidCanada Line (MCL) as an integral part of NORAD. The RCAF continued the takeover of the U.S.-financed and manned radar sites in accordance with the government agreement. The Ground Observer Corps continued operations in the North as a supplement to the DEW radar system.

The RCAF Maritime Air Command during 1962 contributed four land-based maritime squadrons to the Maritime Defence of North America. Three of these squadrons, based on the East Coast, have been completely equipped with Argus aircraft, the largest and most modern anti-submarine aircraft in the world. A continuous program of aircraft modernization and re-equipping with improved anti-submarine devices was also conducted throughout the period. These three squadrons and a Neptune aircraft squadron on the West Coast participated in a number of national, international and NATO anti-submarine exercises conducted throughout the year. Daily patrols and surveillance of ocean areas adjacent to the Canadian coastline were also maintained.

Air Transport Command continued to provide support to the Air Division and to the Army Brigade in Europe using its new Yukon aircraft. Airlift support was also given to the United Nations Emergency Force Middle East and the Organization des Nations Unies du Congo using Yukon and North Star aircraft. In addition, a flying unit operating Caribou and Otter aircraft was maintained for local employment in Egypt in support of UNEF. In Canada, ATC aircraft airlifted DND personnel and cargo over air routes from coast to coast. C119 were used for paratroop training of the Canadian Army, and 408 Squadron carried out routine reconnaissance flights in the Arctic Archipelago and photographic missions for the Department of National Defence.

During the year, the RCAF continued to provide search and rescue services in Canadian areas of responsibility. Of the 36 major searches conducted, 31 were for civil aircraft and five were for military aircraft. In addition, there were 11 major marine searches and 371 mercy flights. The total time for search and rescue operations was 8,222 hours.

Training.-During the year ended Mar. 31, 1963, the RCAF provided training for approximately 4,500 officers and airmen to replace releases, meet increased establishments and assume new appointments resulting from modernization of equipment.

Approximately 800 entrants whose native language is French were given from 10 to 21 weeks of instruction in the English language in schools located at St. Jean, Que., and Centralia, Ont. Basic training qualified personnel to do the rather simple but vital jobs
in the RCAF; conversion and advanced training qualified personnel to perform more complex jobs and to assume increased responsibilities. During the year, training continued in the operation and maintenance of the SAGE and Bomarc systems which have become operational in the RCAF. To keep pace with rapid technological developments, a number of officers and airmen attended short familiarization courses on guided missiles and space technology at Clinton, Ont.; some attended brief familiarization courses on computers and other electronic equipment at Clinton; a few attended specialized courses with industrial firms; and a few took postgraduate courses, mainly at Canadian universities, to qualify for highly specialized positions.

Pilot and radio navigator trainees received training at the Central Officers School at Centralia, Ont. Pilot trainees were given primary flying training at Centralia, basic training at Moose Jaw, Sask., or Penhold, Alta., and advanced flying training at Portage la Prairie, Man., or Gimli, Man. Radio navigators received training at Winnipeg, Man. Under bilateral agreements, 45 Danish and 30 Norwegian nationals entered training as pilots. About 30 Canadian Army officers received a 70-hour flying training course at Centralia and 30 RCN personnel received advanced twin-engine training at Saskatoon, Sask., and Rivers, Man.

Formal trade courses for tradesmen and technicians and newly commissioned nonflying list officers in aeronautical engineering, armament, supply, telecommunications and flying control were conducted at RCAF technical schools in Ontario located at Camp Borden, Centralia and Clinton. Aircraft system trainers were used extensively to support technician and aircrew training programs at field technical training units and operational training units. Advanced personnel, both Regular and Reserve, were given assistance in a wide range of subjects to help them improve in job proficiency and to qualify for higher trade groupings. Semi-annual trade examinations were written under the direction of the Training Standards Establishment located at Trenton, Ont.

RCAF Reserve.-The active sub-components of the RCAF Reserves are designated as the Auxiliary and the Primary Reserve. Eleven Auxiliary Flying Squadrons, equipped with transport aircraft, are maintained to carry out, in the event of an emergency, air operations in support of military and civilian requirements and to carry out air search and transport operations within their capabilities. Twelve Auxiliary Medical Units and eight Technical Training Units are also maintained. The Primary Reserve is concerned mainly with the training of members of the University Reserve Training Plan (URTP). Other Primary Reserve components are Air Cadet Officers (ACO) and Manning Support Officers.

Each summer some 300 first-year URTP university undergraduates attend an off cers' training course at the Reserve Officers School at Centralia, Ont. Following this initial training, cadets in the aeronautical engineering, telecommunications, construction engineering, armament, mobile support equipment, supply, accounts, and administration branches commence basic training at RCAF training schools while cadets in the air services, medical, chaplain and personnel branches are employed at Regular Force units on contact training. Second-year and third-year cadets continue with formal or contact training commenced in previous years.

Manning Support Officers are employed for a minimum of 15 or a maximum of 30 days during each fiscal year on Career Counselling duties at RCAF Recruiting Units.

Royal Canadian Air Cadets.-Air cadet activities are sponsored and administered by the Air Cadet League of Canada, a voluntary civilian organization. The objectives of air cadet training are to encourage air cadets to develop the attributes of good citizenship, to stimulate in them an interest in aviation and space technology and to help them develop a high standard of physical fitness, mental alertness and discipline. The RCAF works in partnership with the League and provides training personnel, syllabi and equipment.

The authorized ceiling of cadet enrolment is 28,000 and the strength at Mar. 31, 1963 was approximately 26,900 attached to 347 squadrons across Canada. Cadet training is carried out in more than 290 communities from Newfoundland to British Columbia.

During the summer of 1962, camps were held at RCAF Stations at Greenwood, N.S., St. Jean, Que., Trenton, Ont., and Sea Island, B.C., attended by over 7,000 cadets together with officers and instructors. A seven-week course for senior leaders was held for 240 cadets at RCAF Station, Camp Borden, Ont. Under the International Exchange Visits Program for 1962, sponsored jointly by the RCAF and the Air Cadet League, 58 cadets were exchanged with Britain, the United States, Denmark, the Netherlands, Norway, Sweden, Belgium, France, West Germany, Italy and Israel.

About 250 senior air cadets receive flying training annually at flying clubs through scholarships provided by the RCAF and additional scholarships are awarded by the Air Cadet League and other organizations, which in 1962 numbered 109.

## Subsection 4.-The Defence Research Board

The Defence Research Board, established on Apr. 1, 1947, provides scientific assistance and advice to the Canadian Forces. It consists of a full-time chairman and vice-chairman, five ex officio members and nine other appointed members. The ex officio members are the Chiefs of Staff of the three Armed Services, the Deputy Minister of National Defence and the President of the National Research Council. The other members, appointed by the Governor in Council for three-year terms, are selected from universities and industry because of their scientific and technical backgrounds.

The organization consists of headquarters staff, an operational research group and nine research laboratories, and liaison offices at London, England, and Washington, U.S.A. Advisory committees composed of leading Canadian scientists provide invaluable assistance to the Board by their consideration of a variety of problems.

The Defence Research Board is a fully integrated and permanent part of the defences of the country. The Chairman has the status of a Chief of Staff and is a member of the Chiefs of Staff Committee and of the Defence Council. The Board's fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large. Its efforts are concentrated upon defence problems of particular importance to Canada or for which Canada has unique resources or facilities. Existing research facilities such as the National Research Council are used whenever possible to meet the needs of the Armed Forces. The Board has built up new facilities only in those fields that have little or no civilian interest. Close collaboration is maintained with Canada's larger partners; specialization is made possible only through the willingness of Britain and the United States to exchange the results of their broader programs for the less numerous but nevertheless valuable benefits of Canadian research.

The Board operates nine specialized research and development laboratories which are concerned primarily with maritime warfare, guns, rockets and missiles as armaments, defence against missiles, research on the upper atmosphere using ground-based equipment as well as balloons, rockets and satellites, propulsion and propellants, telecommunications, geophysical studies of the Arctic, defence against atomic, chemical and biological weapons, studies of shock and blast, biosciences research and operational research. The Board also supports and organizes an extramural program of research in the universities and industry. Some 200 grants are awarded annually to Canadian university staff members for research on problems of defence interest and a special fund is used to place contracts with industry for research in selected fields.

Research on maritime warfare problems, particularly those relating to submarine detection and tracking, is carried out at the Naval Research Establishment, Dartmouth, N.S., and at the Pacific Naval Laboratory, Esquimalt, B.C. Research and development of weapons and defence against various weapons is undertaken in co-operation with the

Armed Services at several establishments, the largest of which is the Canadian Armament Research and Development Establishment near Valcartier, Que. Its principal activities include studies of defence against missiles, studies of the properties and application of infrared and other detection devices, exploration of the upper atmosphere with balloons and rockets, and the development of rocket propellants.

The Defence Research Telecommunications Establishment in Ottawa is concerned mainly with problems of communications which involves exploration of the ionosphere with ground-based equipment, with rockets and with satellites, and the applications of the science of electronics to military problems. The Defence Research Northern Laboratory, Fort Churchill, Man., conducts a variety of experiments requiring an Arctic environment including studies of the aurora borealis, communications experiments and rocket firings. Research on the defensive aspects of chemical, biological and atomic weapons is carried out at three Defence Research Board establishments-the Defence Research Chemical Laboratories at Ottawa, Ont., the Suffield Experimental Station at Ralston, Alta., and the Defence Research Kingston Laboratory at Barriefield, Ont.

The Defence Research Medical Laboratories near Toronto are concerned with biosciences research, chiefly with raising the operating efficiency of man working in the military environment, and includes such subjects as human physiology, experimental psychology and research on clothing.

Operational research is carried on by a headquarters group which conducts long-range scientific analyses of future defence problems. Trained operational research scientists are provided by the Board to the operational research teams in the three Armed Services.

Thus, the Board continues to support the fields of research that are of foremost interest to the Canadian Armed Services and the program is under continuing review to ensure that cognizance is taken of all changes in emphasis in defence requirements. Close liaison is maintained between the Defence Research Board and the Department of Defence Production to ensure that research and development activities are closely integrated with production.

## Section 2.-Services Colleges and Staff Training Colleges

Canadian Services Colleges.-The three Canadian Services Colleges are the Royal Military College of Canada founded at Kingston, Ont., in 1876, Royal Roads which was established in 1941 near Victoria, B.C., as a school for naval officers, and Collège Militaire Royal de Saint-Jean established at St. Jean, Que., primarily to meet the needs of Frenchspeaking cadets. The Royal Military College and Royal Roads were constituted as Canadian Services Colleges in 1948, and Collège Militaire Royal de Saint-Jean was opened in 1952. In 1959 the Legislature of the Province of Ontario granted the Royal Military College a charter empowering it to grant degrees.

The purpose of the instruction and training at the Services Colleges is to impart the knowledge, to teach the skills and to develop the qualities of character and leadership essential to officers of all three Armed Services. The courses of instruction provide a sound and balanced liberal scientific and military education leading to degrees in arts, science and engineering which are granted by the Royal Military College. The organization and training give cadets the opportunity to command and to exercise judgment.

For cadets entering the Royal Military College and Royal Roads the course is of four years duration. As the third and fourth years of the course are given only at the Royal Military College, cadets entering Royal Roads must proceed to that College for the final two years of the arts, science or engineering courses. For cadets entering Collège Militaire Royal de Saint-Jean, which gives a preparatory year, the course is of five years duration. Cadets take the preparatory, first and second years at that institution and the final two years at the Royal Military College.

Academic requirement for admission to the first year at the Royal Military College and Royal Roads is senior matriculation (or its equivalent) in the following subjects: English, physics, mathematics (algebra, geometry and trigonometry), chemistry and either history or a language, preferably French. French-speaking candidates having a B.A. degree from a classical college may be accepted directly into the first year at Collège Militaire Royal. For admission to the preparatory year at that institution, the academic requirement is junior matriculation (or its equivalent) in English, French, algebra, geometry, physics and chemistry, although consideration is given candidates who do not possess the standing in French. Candidates from the classical colleges require at least sixth-year standing.

To be accepted, a candidate must be single, a Canadian citizen or British subject normally resident in Canada, and physically fit in accordance with the medical standards of the Service in which he enrols. The age limits for admission to the first year are between 16 and 21 years as of Jan. 1 of the year of entry; for admission to the preparatory year a cadet must have reached his 16th but not his 20th birthday on Jan. 1 of the year of entry. Personal interviews and medical examinations of candidates are carried out by Service Boards located at various centres across Canada.

Most cadets entering the Services Colleges enrol under the Regular Officer Training Plan. Applicants accepted for entry enrol according to their choice, as naval cadets in the Royal Canadian Navy, as officer cadets in the Canadian Army or as flight cadets in the Royal Canadian Air Force. Costs of tuition, board, lodging, uniforms, books, instruments and other essential fees are borne by the Department of National Defence and cadets are paid at the rate of $\$ 63$ a month. On successfully completing their academic and military training, cadets are granted permanent commissions in the Regular Force but may, if they so wish, apply for release after three years of service following completion of academic training.

A limited number of high school students may be selected to enter the Services Colleges on payment of tuition fees, etc. Graduates are granted commissions and serve in the reserve components of the Forces. Young men who qualify for Dominion Cadetships also serve in a reserve capacity. These Cadetships are awarded by the Federal Government in recognition of a candidate's parent having been killed, died or been severely incapacitated in the service of one of Canada's Armed Forces. A maximum of 15 Dominion Cadetships may be awarded in any one year, five in each Service. Each is valued at $\$ 580$, which covers first-year fees.

During the 1962-63 academic year, 1,102 cadets were in attendance at the Services Colleges, 495 of them at the Royal Military College, 212 at Royal Roads and 395 at Collège Militaire Royal de Saint-Jean. Of the total, 263 were enrolled in the Navy, 411 in the Army and 428 in the Air Force.

Staff Training Colleges.-The Canadian Army Staff College at Kingston, Ont., trains officers for staff appointments. The course is 21 months in duration with a student intake every second year. Although most of the student body is composed of Canadian Army officers, officers from the other two Services and from the armies of other Commonwealth and NATO countries also attend. The system of instruction is based upon the study of précis and other references, demonstrations and lectures, and indoor and outdoor exercises. Aside from purely military subjects, the curriculum includes national survival, research and development, world affairs and lectures by prominent guest speakers.

The Royal Canadian Air Force College at Armour Heights in Toronto, Ont., is a permanent establishment consisting of a Staff College for senior officers and a Staff School for junior officers. The former affords professional education for officers normally of

Squadron Leader and Wing Commander ranks, preparing them to assume higher appointments. The directing staff selected from the Royal Canadian Air Force is augmented by an officer from each of the Royal Canadian Navy, the Canadian Army and the Royal Air Force. The student body, in addition to Royal Canadian Air Force officers, has ten representatives from the Royal Canadian Navy and one or two from each of the Canadian Army, Royal Air Force and United States Air Force. The College and School courses are designed to assist the student to think logically and express his ideas with precision, both orally and in writing; to know his Service and understand the employment of air forces; to keep abreast of scientific and technical developments that may affect the employment of air forces; and to gain a perspective of national and international problems. Lecturers are drawn, when desirable, from industry, the Armed Forces, the diplomatic corps and universities. Instructional visits are made to commercial and military establishments in Canada and abroad.

The National Defence College at Kingston, Ont., is a senior defence college providing an 11-month course of study covering the economic, political and military aspects of the defence of Canada. Senior officers and civil servants from the Armed Forces and government departments attend, as well as a few representatives from industry. An extensive lecture course is provided, with lecturers chosen from among the leaders in various fields in Canada, the United States, Britain and other countries. In addition, educational tours and visits to certain parts of Canada, the United States, Europe and the Middle East give students more knowledge of conditions and influences in their own and other countries. The 16th course, held from August 1962 to July 1963, was attended by: three students from the Royal Canadian Navy, four from the Canadian Army and five from the Royal Canadian Air Force; two each from the Defence Research Board and the Department of Transport; and one each from the Department of External Affairs, Department of National Defence, Department of National Revenue, National Research Council, Atomic Energy of Canada and Defence Construction Limited. Representation from outside Canada included one member each from the Royal Navy, the British Army, the Royal Air Force, the British Foreign Office, the United States Army, the United States Navy, the United States Air Force and the State Department of the United States.

## PART II.-DEFENCE PRODUCTION*

Under the provisions of the Defence Production Act (RSC 1952, c. 62, as amended), the Department of Defence Production has exclusive authority to procure the goods and services required by the Department of National Defence and the responsibility to ensure that the necessary productive capacity and materials are available to support the defence production program. The Department also serves as procurement agent for the Canadian Commercial Corporation, a Crown company primarily responsible for the purchase in Canada of defence goods required by other governments and of supplies to meet Canadian requirements under External Aid programs and other international agreements. The Department is responsible for planning and making other necessary arrangements for the immediate establishment of a War Supplies Agency should there be a nuclear attack. Military construction is the prime responsibility of Defence Construction (1951) Limited, a Crown company reporting to Parliament through the Minister of Defence Production.

Procurement and construction contracts issued by the Department of Defence Production and Defence Construction (1951) Limited had a net value of $\$ 797,640,000$ in 1962 and $\$ 410,015,000$ in the first half of 1963 . (The net value of contracts is made up of the

[^363]value of new contracts issued as well as amendments that increased or decreased existing contracts.) The net value of contracts in 1962 according to the various sources for which they were issued was as follows:-

| Source | Net Value | P.C. of <br> Total Value |
| :---: | :---: | :---: |
|  | \& |  |
| Department of National Defence................. | 536,666, 324 | 67.28 |
| Department of Defence Production <br> (DDP Votes). | 9,387,255 | 1.18 |
| Foreign Governments- |  |  |
| United States. | 202,886,820 | 25.44 |
| Britain. | 1,147,166 | 0.14 |
| Other..................................... | 21,586, 283 | 2.71 |
| Canadian Sources other than DND and DDP- |  |  |
| Colombo Plan................................. | 24,981,231 | 3.13 |
| Other. | 984,688 | 0.12 |
| Totals. | 797,639,767 | 100.00 |

Of the $\$ 410,015,000$ in contracts issued during the first half of $1963, \$ 344,190,000$ or 84 p.c. was for the Department of National Defence.

The $\$ 536,666,000$ in contracts placed for the Department of National Defence in 1962 was 1.5 p.c. above the value in 1961. The aircraft program accounted for most of the increase; it rose from $\$ 112,693,000$ to $\$ 205,252,000$, due in a substantial measure to contracting for the $F$-104G aircraft for the Canada-United States mutual aid program. Contracting for the electronics and communication equipment program showed a net decrease from 1961 of 32.4 p.c. to $\$ 82,785,000$. Shipbuilding and repairing contracts increased to $\$ 27,841,000$ compared with $\$ 26,585,000$ in 1961. Significant reductions in contracting appeared in the defence construction program which declined by 56.4 p.c. to $\$ 39,443,000$ in 1962. Armament program contracts (including weapons, ammunition and explosives) increased to $\$ 25,466,000$ from $\$ 11,812,000$ in 1961.

Contracts placed outside Canada on behalf of the Department of National Defence in 1962 amounted to $\$ 50,143,000$, which was 9 p.c. of the total net value of prime contracts issued. Contracts valued at $\$ 32,117,000$ were placed in the United States, $\$ 5,171,000$ in Britain and $\$ 12,855,000$ in other countries.

Expenditures on contracts placed for the Department of National Defence amounted to $\$ 606,374,000$ or 2.5 p.c. less than in 1961. Expenditures against aircraft programs declined from 1961 levels by $\$ 30,851,000$ or 13.9 p.c. and those for electronics and communication equipment by $\$ 10,301,000$ to $\$ 113,537,000$ in 1962 . Expenditures for ships increased to $\$ 53,503,000$ as a result of increasing work done on the destroyer escort program. In the first half of 1963, expenditures against prime contracts placed for the Department of National Defence stood at $\$ 270,614,000$.

The Department of Defence Production placed $\$ 9,387,000$ in contracts in 1962 and $\$ 5,562,000$ in the first half of 1963 against certain appropriations to assist Canadian defence industry. The major area of assistance in 1962, which involved contracts totalling $\$ 8,466,000$, was to sustain research and development capability in Canadian industry related to the needs of the Canada-United States development and production sharing program. Revolving Fund contracts amounted to $\$ 115,386,000$ in 1962 , primarily to make funds available for production in connection with the Canada-United States $F$-104G mutual aid program. Revolving Fund contracts amounted to $\$ 17,033,000$ in the first half of 1963.

Contracts placed for all sources other than the Department of National Defence and Defence Production totalled $\$ 251,586,000$ in 1962, of which $\$ 202,887,000$ was for the United States Government and $\$ 1,147,166$ for the British Government.

## 1.-Canadian Government Defence Contracts and Expenditures, by Defence Program, 1962 and First Half of 1963

Note.-The contract values include all contracts placed by the Department of Defence Production and Defence Construction (1951) Limited on behalf of the Department of National Defence, and the expenditure values include all payments made by the Department of National Defence against such contracts. The net value includes the value of all new contracts issued together with the value of amendments which increased or decreased the commitments of existing contracts.

Defence Production and Development Sharing.-In 1962, \$254,300,000 worth of United States defence production-sharing business was placed with Canadian industry. This was a 78-p.c. increase over 1961, due largely to contracts for Caribou aircraft and a contribution by the United States to the Canada-United States $F-104 G$ aircraft program. The total United States defence production-sharing business in this country during the four years of the program was $\$ 605,900,000$.

During 1962, continuing attention was given to simplifying procedural arrangements, such as those involved in the United States duty regulations, security matters, obtaining specifications and interpreting new instructions issued by the United States Department of Defense and military authorities. The provision of information on the program to prime contractors and subcontractors, as well as to government procurement officers, was emphasized by both governments. Publications issued during the year included: a new edition of the Production Sharing Handbook; a handbook entitled Canadian Commodity Index; a Guide to Research and Development Capabilities in Canadian Defence Industry, designed to assist government research and development agencies and the defence industry in the United States to locate potential sources within Canadian industry; and a Defence Development Sharing handbook, designed to assist Canadian companies in participating in United States defence research and development requirements.

Assistance was given to Canadian industry for research and development projects of interest to the United States Services. Contracts amounting to $\$ 8,500,000$ were issued in 1962 for this type of assistance, with expenditures totalling almost $\$ 6,800,000$. Among the major new projects were surveillance and guidance systems, short take-off and landing (STOL) aircraft, communications and navigation equipment, and surface vehicles.

These efforts resulted in significant increases in bid solicitation and submissions in the prime contract area. United States inquiries to Canadian industry increased from 5,786 in 1961 to 8,290 in 1962, and responses by Canadian companies from 1,799 to 2,384. Prime contracts placed by the United States Government with Canadian Commercial Corporation increased from 830 to 1,088 , having a total value of $\$ 176,500,000$. In the subcontract area, solicitations increased from 2,524 in 1961 to 3,108 in 1962, and responses
from 1,986 to 2,624 . Subcontracts received by Canadian firms increased from 1,111 to 1,769 , valued at $\$ 76,500,000$. Other prime contracts received directly from the United States Government by Canadian industry and other institutions totalled $\$ 1,300,000$.

Co-operation in NATO on RDP and Exports Overseas.-This program of research, development and production endeavours to attain maximum efficiency in standardization and production of military equipment by member countries of the North Atlantic Treaty Organization. Canada has submitted for consideration by the NATO groups a number of projects in the fields of vertical and short take-off and landing (V/STOL) aircraft, mobile radar, vehicle navigation equipment, sonar equipment, personnel carriers, anti-tank weapons, anti-personnel land mines, airborne navigation aids, aircraft engines, and telephone terminal equipment.

Canadian industry was encouraged to participate in supplying the defence needs of European and other countries in such areas as aircraft, navigation aids and engine spares. During 1962, Canadian firms reported that they had received $\$ 45,114,000$ in prime contracts and subcontracts from NATO and other countries (excluding the United States) of which prime contracts accounted for $\$ 7,359,000$. Subcontracts placed in Canada by overseas countries amounted to $\$ 37,755,000$. The major purchases in this group were for inertial navigation systems, vehicle spares, positional homing indicators, $F-104 G$ support equipment and engine spares.

Emergency Supply Planning.-In 1962, the Department continued with plans and preparations to bring a War Supplies Agency into immediate existence in the event of a nuclear war. The Agency would assume control of the production, distribution and pricing of all civilian and military supplies except for certain aspects of the agricultural and fishing industries. The staffing of the national and regional components of the War Supplies Agency on a standby basis was completed, and progress was made in the selection of zonal standby staffs. In several areas, a beginning was made in the selection of standby staff for local components.

In order to provide a basis on which the War Supplies Agency could make a postattack assessment of surviving supply resources, the research program was extended to produce in readily usable form comprehensive inventory data on major stocks of essential commodities and related production facilities normally available in this country. New surveys of inventory stocks and related production facilities were initiated in the materials field. In co-operation with the oil industry, energy vulnerability studies were begun and are continuing. In addition, economic studies of two emergency government zones and reports on specific segments of industry were completed. Although the research program as a whole is primarily a long-term project, significant progress was made.

Various emergency regulations and orders required to bring the War Supplies Agency into existence and give it authority under the War Measures Act were reviewed in their peacetime draft form and brought up to date. Manning and warning procedures were revised, and a system for the control of personnel records of the national and regional standby staffs was instituted in co-operation with the Department.

Plans for consumer rationing advanced to the point where sample ration documents were approved by an interdepartmental advisory committee. Agreement was reached on the transfer of a quantity of surplus military clothing to the Department for civilian use under War Supplies Agency control in an emergency. Also, the Government approved a program of industrial preparedness measures.

## PART III.-GIVIL EMERGENGY PLANNING (GIVIL DEFENGE)

The present arrangements for civil emergency planning in Canada took form in 1958, when the Canadian Government instituted a survey of the civil defence situation in Canada in the context of the total military and civilian arrangements necessary to prepare the nation for the possibility of nuclear war. This review led to a major rearrangement of
federal civil defence functions, together with an offer from the Federal Government to assume certain responsibilities previously carried out by provinces and municipalities. This reorganization became effective on Sept. 1, 1959, and was based on two principles: (1) that civil defence should be considered a function or activity of government rather than a separate organization as such; and (2) that the civil defence function should be divided into clearly defined tasks assigned to the appropriate level of government, and at each governmental level, made the responsibility of those departments or agencies best able to undertake and discharge them. A further change took place on July 1, 1963, when the Emergency Measures Organization, which until that time had been part of the Privy Council Office, reporting to Parliament through the Prime Minister, was placed under the control and supervision of the Minister of Defence Production and designated as a department for administrative purposes. At the same time, responsibility for the direction and administration of the Canadian Civil Defence College at Arnprior, Ont., was transferred from the Minister of National Health and Welfare to the Minister of Defence Production, to be exercised through EMO.

At the federal level, the present distribution of responsibilities resulting from these changes is as follows:-
(1) The Emergency Measures Organization is the co-ordinating agency for all civil emergency planning and for all federal/provincial planning. Its responsibilities include planning for continuity of government, all tasks not specifically assigned to another department of government, general liaison with the provinces, NATO and foreign countries on matters relating to civil emergency planning, and operation and administration of the Canadian Civil Defence College.
(2) The Department of National Defence, more particularly the Army, has a primary role in survival operations and has been delegated the responsibility for a substantial number of functions that are technical in character (see pp. 1110-1111).
(3) The Department of National Health and Welfare has the duty of advising and assisting provincial authorities with respect to the provision of emergency health and welfare services.
(4) The Royal Canadian Mounted Police is responsible for providing advice and assistance to provinces concerning the preservation of law and order, and the control of road traffic under emergency conditions.
(5) Other federal departments and agencies have duties that relate chiefly to carrying on essential functions or to maintaining the country's economic life under conditions of nuclear attack, e.g., the Department of Defence Production, the Department of Agriculture, the Department of Finance, the Bank of Canada, the Department of Transport, the Canadian Broadcasting Corporation, and the Department of Labour in consultation with the National Employment Service of the Unemployment Insurance Commission.

Certain emergency functions of government are a projection of normal peacetime provincial responsibilities. In such fields, the provinces and municipalities understandably have more experience and knowledge of local conditions and problems than has the Federal Government and its agencies. The following represent responsibilities of this kind, and are considered to be the proper concern of provincial authorities with such federal assistance as may prove necessary:-
(1) Preservation of law and order and the prevention of panic by the use of provincial and municipal police and special constables, with whatever support is necessary and feasible from the RCMP and the Armed Services at provincial request.
(2) Control of road traffic, except in areas damaged or covered by heavy fallout, including special measures to assist in the emergency movement of people from areas likely to be attacked or affected by heavy fallout.
(3) Reception services, including arrangements for providing accommodation, emergency feeding and other emergency supplies and welfare services for people who have lost or left their homes or who require assistance because of the breakdown of normal facilities.
(4) Organization and control of medical services, hospitals and public health measures.
(5) Maintenance, clearance and repair of highways.
(6) Organization of municipal and other services for the maintenance and repair of water and sewage systems.
(7) Organization of municipal and other firefighting services, and control over and direction of these services in wartime, except in damaged or heavy fallout areas, where firefighting services would be under the direction of the Army as part of the re-entry operation.

The federal Civil Emergency Planning Organization consists of a Cabinet Committee on Emergency Plans to give policy guidance in all areas of civil emergency planning for war, the federal Emergency Measures Organization (EMO) with a headquarters staff at Ottawa and regional offices in each provincial capital, and departmental planning staffs. The function of the regional offices of EMO is to co-ordinate the emergency planning of federal departments and agencies in the provinces and maintain liaison with provincial governments, the provincial emergency planning organizations and the appropriate military authorities. At the international level, EMO has an officer in Paris to maintain liaison with other NATO countries and to keep abreast of developments in civil emergency planning in these countries. Liaison with the United States is carried out by the headquarters staff in Ottawa.

EMO administers a Financial Assistance Program to assist the provinces and municipalities in the development of emergency plans. Under this Program, the Federal Government may pay up to 75 p.c. of the cost of approved civil defence projects; $\$ 5,300,000$ was earmarked for this purpose for the year ending Mar. 31, 1964. Advice and guidance is also given at the government level; a Survival Planning Guide for Municipalities was issued by EMO in 1961 and additions and amendments to this Guide are issued from time to time as additional experience and knowledge are acquired.

To provide the public with information on survival measures, shelter designs and related matters, EMO and other government agencies have published literature of various kinds. The booklet Survival in Likely Target Areas examines the advantages and disadvantages of evacuation as opposed to shelter. The leaflet Simpler Shelters includes five designs for less complex shelters for both basement and outdoor construction. These publications supplement the booklet 11 Steps to Survival, a general outline of what can be done for personal protection; Your Basement Fallout Shelter giving instructions for "do-ityourself" shelters; and Fallout on the Farm describing the effects of radioactive fallout on agriculture and the protective measures that might be taken against it. Copies of these publications may be obtained from provincial civil defence or emergency measures coordinators in provincial capitals.

A War Supplies Agency, established in 1960 and administered by the Department of Defence Production, will, in time of war, control the distribution and use of essential supplies, their prices, and their rationing as required. The Emergency Supply Planning Branch, which has the direct responsibility for the development of this Agency, has a headquarters staff in Ottawa and representatives in each region of Canada.

One of the major accomplishments of EMO has been the establishment of emergency facilities for the Federal Government in the Ottawa area, and the construction of regional emergency headquarters in six provinces; plans are proceeding in the other four provinces for the development of similar facilities. To ensure the further decentralization and dispersal of authority during an emergency, planning is proceeding on the development, in co-operation with the provinces, of a system of zone headquarters which will form part of the governmental structure at the level below that of the regional emergency headquarters.

To ensure continuity of communications in an emergency, an Emergency National Telecommunications Organization has been established within the Department of Transport. Under its authority, the Canadian Broadcasting Corporation has developed plans for emergency broadcasting which can be instituted at any time of the day or night to broadcast to all areas of Canada (see also p. 836).

A federal-provincial Conference on Civil Emergency Planning was held in December 1962. All provinces were represented and a number of federal Cabinet Ministers attended. This was in continuation of conferences held in previous years. Matters reviewed and discussed included the federal Financial Assistance Program, public information programs, training and exercises, shelter policy, radiological defence, and the decentralization of government in an emergency.

# CHAPTER XXVI.-SOURCES OF OFFIGIAL INFORMATION AND MISCELLANEOUS DATA 

## CONSPECTUS

## PART I.-SOURCES OF OFFICIAL INFORMATION

## Section 1.-Federal Government Information Services

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the ten-year and five-year censuses of Canada are planned and statistical information of all kinds-federal and provincial-is centralized. Certain areas of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, population and national defence are constitutionally federal affairs and on such subjects the respective departments at Ottawa are the proper sources of information with which to communicate. Other fields of effort such as the administration of lands and natural resources, education, roads and highways, and health and hospitals are the responsibility of the provinces and data may be obtained concerning the individual provincial efforts in these fields from the respective provincial government departments. However, certain federal departments are also concerned with specific aspects of these subjects and, as in the case of the Dominion Bureau of Statistics, in the co-ordination and presentation of the material for Canada as a whole. The Government of Canada, while not administering the resources within the provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of livestock and the improvement of strains, on agricultural marketing and on crop yields are cases in point; in forestry, questions on forest research, forest fire protection and reforestation offer good examples.

Certain Federal Government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests originating abroad for information on Canada and Canadian affairs; the Trade Publicity Branch, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Broadcasting Corporation; and the National Film Board. The Departments of Agriculture, Fisheries, Forestry, Northern Affairs and National Resources, and Mines and

Technical Surveys, and such agencies as the National Gallery of Canada, the National Museum of Canada, the National Library, and the National Research Council, while not thus classed, are interested in the dissemination of information to a greater extent than most of the remaining government departments, although several of the latter have publicity branches.

Thus, inquiries for information of a statistical nature should be forwarded to the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa. Inquiries to federal sources for information not of a statistical nature should be sent as a general rule to the individual departments and agencies of government which are listed, with their functions, at pp. 104-122 of this publication. Inquiries relating to provincial efforts may be directed to the provincial government department concerned. Inquiries about the Yukon and Northwest Territories should be addressed to the Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

## Section 2. Sale of Official Publications

Under the provisions of the Public Printing and Stationery Act, the Queen's Printer and Controller of Stationery, Ottawa, has charge of the sale of all official publications of Parliament and the Government of Canada that are issued to the public, as well as of the free distribution of all public documents and papers to persons and institutions (libraries) entitled by statutory provisions to receive them. The regulations relating to the distribution and sale of government publications made in accordance with the provisions of Sect. 7 of the Public Printing and Stationery Act and Sec. 7 (e) of the Financial Administration Act were brought up to date and approved by Treasury Board on Mar. 31, 1955.

In compliance with these regulations, the Queen's Printer and Controller of Stationery issues the Daily Checklist of Government Publications which records for the information of the public service, libraries, etc., all Federal Government publications immediately upon release. Those authorized by law or regulation to receive free copies of government publications receive the Daily Checklist without charge; others desiring the service may purchase an annual subscription to be forwarded daily or in weekly batches as requested.

The Queen's Printer and Controller of Stationery also issues the Monthly Catalogue of Canadian Government Publications, a comprehensive listing of all official publications, public documents and papers not of a confidential nature published at government expense, an Annual Catalogue (in January) listing all publications issued during the previous year, as well as sectional catalogues and selected titles bulletins advertising new government publications.

The Queen's Printer is the national sales agent in Canada for publications issued by the United Nations; the United Nations Educational, Scientific and Cultural Organization; the World Health Organization; the Food and Agriculture Organization; the Organization for Economic Co-operation and Development; the International Atomic Energy Agency; the International Civil Aviation Organization; the Council of Europe; the Commonwealth Economic Committee; the Organization of American States (Pan American Union); the General Agreement on Tariffs and Trade; and the New Zealand Government.

Canadian Government and international organizations publications may be obtained from Queen's Printer bookstores located in Ottawa, Toronto and Montreal, or by mail from the Queen's Printer, Ottawa.

Dominion Bureau of Statistics Publications.-The Dominion Bureau of Statistics acts as the agent of the Queen's Printer with respect to the sale of DBS publications. Reports of the Bureau cover all aspects of the national economy; the Canada Year Book and Official Handbook Canada constitute authoritative compendiums of information on the institutions and economic and social development of Canada.

DBS publications are listed with their prices in a catalogue of Current Publications and in the Queen's Printer's Catalogue of Canadian Government Publications. The DBS Daily Bulletin and Weekly Bulletin, available from the Bureau's Information and Public Relations Division at an annual subscription of $\$ 1$ each, are designed to serve persons wishing
to keep closely informed on the full range of published information issued by the Bureau. Subscription orders for DBS publications or orders for single copies should be addressed to the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, and should contain the necessary remittance in the form of a cheque or money order made payable to the Receiver General of Canada.

Provincial Government Publications.-Most provincial government publications may be obtained from the Queen's Printer of the province concerned. Inquiries should be addressed to the provincial capital cities:-

| Newfoundland | St. John's |
| :---: | :---: |
| Prince Edward Island | Charlottetown |
| Nova Scotia. | Halifax |
| New Brunswick | Fredericton |
| Quebec... | Quebec |

## DIRECTORY OF SOURCES OF OFFICIAL INFORMATION

Note.-In the "Federal Data" column, the major source of information on each subject is given first; other sources follow in alphabetical order, with the exception of the National Film Board and the Dominion Bureau of Statistics which appear at the end of each listing with which they are concerned, except where they are the major source.

## PART II.-SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions. Therefore the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population", which are automatically revived when later census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

The articles marked with an asterisk ( ${ }^{*}$ ) are available in reprint form from the Information and Public Relations Division, Dominion Bureau of Statistics.

## PART IV.-FEDERAL LEGISLATION, 1962-63

Legislation passed in the first session of the Twenty-Fifth Parliament, which began on Sept. 27, 1962 and ended on Feb. 6, 1963, is outlined below, together with legislation passed in the elapsed period of the First Session of the Twenty-Sixth Parliament which began on May 16, 1933, recessed from Aug. 3 to Sept. 29 and was still in progress on Nov. 15, 1963, the date of cut-off for this edition of the Year Book.

These classified lists of federal legislation have been compiled from the Statutes. Naturally in summarizing material of this kind it is not always possible to convey the full implication of the legislation. The reader who is interested in any specific Act is therefore referred to the Statutes of Canada in the given volume and chapter.

# Legislation of the First Session of the Twenty-Fifth Parliament, Sept. 27, 1962 to Feb. 6, 1963 

| Subject, Chapter and Date of Assent |  | Synopsis |

Sept. 30, Social Credit Government of Premier W. A. C. Bennett returned to power in British Columbia election.
October: Oct. 1, Death of Miss Margaret MacLaren, Superintendent-in-Chief, St. John Ambulance Brigade in Canada. Oct. 2, Twenty men cleared on charges of non-capital murder in the shooting of three striking bushworkers and on charges of rioting, by Ontario Supreme Court Grand Jury; three charged with possession of offensive weapons and fined $\$ 100$ each. Oct. 4, Strike of 3,800 longshoremen in three St. Lawrence River ports began, delaying shipment of wheat to U.S.S.R. Oct. 7 , Eleven members of FLQ pleaded guilty to terrorist activities; sentences ranging from six months to 12 years were imposed for charges ranging from public mischief to manslaughter. Oct. 7-9, His Imperial Majesty Haile Selassie I, Emperor of Ethiopia, on state visit to Canada. Oct. 8, Progressive Conservative Government of Premier R. L. Stanfield returned to power in Nova Scotia election. Oct. 9, Agreement between Canada and U.S. to provide for the storage of nuclear-tipped missiles at two U.S. Air Force interceptor bases in Newfoundland announced by Prime Minister Pearson. Oct. 10, Nobel Peace Prize for 1963 awarded to the International Red Cross Committee and the League of Red Cross Societies in recognition of their work in the international field. Oct. 12, Open criticism by U.S. leaders of Canadian proposal to put maritime unions under government trusteeship aroused indignant Canadian reaction. Quebec longshoremen's strike forced CPR ship Empress of Canada to sail from Montreal to Halifax
to disembark her passengers. Death of Senator Mark Drouin of Quebec, Que., former Speaker of the Senate. Oct. 15, Canada's contribution to the UN Special Fund doubled to $\$ 5,000,000$. Oct. 16, Old age security pensions increased to $\$ 75$ monthly. Oct. 18, Longshoremen of the Seafarers' International Union left their ships and marched on Parliament Hill at Ottawa in protest against trusteeship. Lord Home invited to form a government to succeed Sir Harold Macmillan who resigned as Prime Minister of Britain on the grounds of ill health. Oct. 21, House of Commons concurred in report (Oct. 9) of Committee on Privileges and Elections to give precedence in the House to the Thompson Social Creditors and to recognize the Caouette Social Credit Rally (Ralliement des Creditistes) as a separate group in the House. Announcement of new nuclear agreement between Canada and Britain on the development of heavy water reactors using natural or enriched uranium fuel, a Canadian-pioneered system. Oct. 23, The Maritime Transportation Unions Trustee Act placing the maritime unions of Canada under the management and control of trustees received Royal Assent; three-man board of trustees appointed. To be eligible to stand for election to the British House of Commons, Lord Home entered a "disclaimer" of his four hereditary titles. Oct. 24, SIU longshoremen voted to end their walkout and return to work. Oct. 28, Government announcement that $\$ 45,000$ had been made available from Canadian sources, of which $\$ 10,000$ was a grant from public funds to victims of the earthquake at Skopje, Yugoslavia. Oct. SO, U.S. Grain Workers Union, Local 418, ordered by Chicago court to pay $\$ 26,500$ in fines for refusing to load Canadian ships. Young member of FLQ given three-year prison sentence for Westmount bomb incident that crippled Sgt. Maj. Walter Leja; three others placed on probation.
November: Nov. 1, SIU documents seized by RCMP. Nov. 5-7, SIU leader Hal C. Banks and others charged with conspiring to cause bodily harm by assault to Ship's Captain H. F. Walsh of Welland, Ont., in 1957. Nov. 6, Death of John Wilson McConnell, former President of the Montreal Star. TCA jet airliner with 90 passengers and a crew of seven crashed on take-off from London Airport in fog; no lives lost. Nov. 7, Sir Alec Douglas-Home elected Member of British Parliament for Kinross and West Perthshire in a by-election. Nov. 11-16, Canada Week Trade Fair in Philadelphia, U.S.A., sponsored by the Dept. of Trade and Commerce; featured, in addition to Canadian products displays, were champion Canadian skaters and an RCN flotilla. Nov. 19, Unveiling of portrait of Rt. Hon. R. B. Bennett, the late Canadian Prime Minister, to be hung near the Commons Chamber in Ottawa. Opening of the Royal Agricultural Winter Fair in Toronto; world championship wheat title won by George Luco of Lethbridge, Alta.; title for barley by J. E. French of Mitchell, Ont.; for flax by John E. Cotton of Kenville, Man.; for oats by Jeffrey Abbott of South Edmonton, Alta.; and for potatoes by Mrs. A. R. Chorney of East Selkirk, Man.; Sandra Peart of Guelph, Ont. won Queen's Guineas, top prize for 4-H Club members, for her Shorthorn steer. Nov. 15, Accidental death of Senator Duncan K. MacTavish of Ottawa. Death of Senator Calvert Coates Pratt of St. John's, Nfld. Death of Francis C. C. Lynch former head of the National Museum. Nov. 18, Governor General and Mme Vanier received honorary counsellorships-the highest title the Canadian Red Cross Society can bestow in recognition of their service to the Red Cross during and after the Second World War. Nov. 19, Death of Mayor Donald Summerville of Toronto. Nov. 22, Death of U.S. President John Fitzgerald Kennedy in Dallas, Texas, from an assassin's bullet; burial was in Arlington National Cemetery Nov. 25. Vice-President Lyndon Baines Johnson sworn in as 36th President of the United States.

## APPENDIX

Certain information given in Chapter II on Constitution and Government (closed off Apr. 30, 1963) is brought up to the date of going to press (Nov. 15, 1963) in this Appendix.

## Page 69, Table 4

On July 25, 1963, Hon. Charles Mills Drury, Minister of Defence Production, was appointed Minister of Industry.

## Pages 70-71, Table 5

Queen's Privy Council for Canada appointments from Apr. 30 to Nov. 15, 1963 are given in the Register of Official Appointments, p. 1164.

## Pages 73-74, Table 8

Senate appointments from Apr. 30 to Nov. 15, 1963 are given in the Register of Official Appointments, p. 1165. Deaths of Senators, creating vacancies, are noted in the Chronology. At Nov. 15, 1963 there were five vacancies.

## Page 76

The final list of Members of the House of Commons, the number of voters on the list and the votes polled at the Twenty-Sixth General Election of Apr. 8, 1963, and the provincial summary of the voters and votes polled, which data were not available at the time of printing of Chapter II, are here given in Tables 1 and 2.
1.-Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons as Elected at the Twenty-Sixth General Election, Apr. 8, 1963.

Speaker.
Prime Minister
Hon. Alan A. Macnaughton

Clerk of the House of Commons.
Léon J. Raymond

Note.-The vote is summarized by provinces in Table 2, p. 1185. The leaders of the political parties are indicated by asterisks (*). For Parliamentary Secretaries, see p. 69. This information, except the population of constituencies, has been supplied by the Chief Electoral Officer. Party affiliations are unofficial. Lib.=Liberal; P.C. $=$ Progressive Conservative; S.C. $=$ Social Credit; N.D.P. $=$ New Democratic Party; L.-Lab. $=$ Liberal-Labour.

## Pages 76-77, Indemnities and Allowances

Effective Apr. 8, 1963, the sessional allowance of members of the Senate and House of Commons was increased from $\$ 8,000$ to $\$ 12,000$ per annum. In addition to actual moving and travelling expenses from his constituency to Ottawa for each session of Parliament and actual telecommunication expenses incurred while in Ottawa, the expense allowance was increased in the case of each member of the Senate from $\$ 2,000$ to $\$ 3,000$ per annum and in the case of each member of the House of Commons from $\$ 2,000$ to $\$ 6,000$, to be paid quarterly. Additional annual allowances of $\$ 4,000$ (beyond the above-noted sessional allowance) are provided to each leader of a party having a recognized membership of 12 or more persons in the House of Commons, other than the Prime Minister and the member occupying the recognized position of Leader of the Opposition in the House of Commons, and likewise to the Chief Government Whip and to the Chief Opposition Whip in the House of Commons. A motor vehicle allowance (previously provided by Appropriation Act No. 5,1931 ) was authorized by this amendment to the Senate and House of Commons Act to the amount of $\$ 2,000$ to be paid to each Minister of the Crown and to the recognized Leader of the Opposition in the House of Commons, and of $\$ 1,000$ to be paid to the Speaker of the Senate and to the Speaker of the House of Commons.

Pages 81-91
Three provincial elections took place between Apr. 30 and Nov. 15, 1963:-

## Page 83

A general election took place in Nova Scotia on Oct. 8, 1963 as a result of which the Party standing in the Legislature was: 39 Progressive Conservative and 4 Liberal. There was no change in the Ministry; to the office of the "Provincial Secretary, Minister of Public Welfare and Minister in charge of Emergency Measures Organization" was added "and Minister under the Water Act".

| Page 86 |  |  |

| Minister of Transport. | Hon. Irwin Haskett. | Aug. 14, 1963 |
| Minister of Travel and Publicity | Hon. James A. C. Auld | Aug. 14, 1963 |
| Minister of Education | Hon. William G. Davis. | Oct. 25, 1962 |
| Minister of Energy Resources. | Hon. John R. Simonett. | Oct. 16, 1963 |
| Minister of Economics and Development.............. | Hon. Stanley J. Randall. | Nov. 8, 1963 |

## Page 91

A general election took place in British Columbia on Sept. 30, 1963, as a result of which the Party standing in the Legislature was: 33 Social Credit, 13 New Democratic Party, 5 Liberal and 1 disputed. There was no change in the Ministry.

## Page 98

One Federal Royal Commission was established during the period Apr. 30 to Nov. 15, 1963 as follows:-

Nature of Commission
To inquire into and report upon the existing state of bilingualism and biculturalism in Canada.

Co-chairmen*

André Laurendeau Davidson Dunton

* See p. 1171 for other appointments to Commission.

## Pages 104-122

Organizational changes were made in several government departments and agencies during the period Apr. 30 to Nov. 15, 1963, including the transfer of certain duties from one department to another and the transfer of certain Ministerial responsibilities. In particular, a Department of Industry was established taking over, in addition to its new functions, some of the duties of the Department of Trade and Commerce (see pp. 677 and 1173), and an Economic Council was established (see pp. 1168 and 1173). The Chart inserted between pp. 104 and 105 shows the organization of the Government of Canada as at Nov. 15, 1963 and therefore includes all transfers of Ministerial responsibilities taking place between Apr. 30 and that date.

[^26]:    * Further information on officials of various Federal Government departments serving the Yukon Territory may be obtained from the Director, Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

[^27]:    * Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics,

[^28]:    Alberta.-The whole Province of Alberta is under some type of municipal organization. The province has an Act applying to each type of municipality and under these Acts the Department of Municipal Affairs supervises the 10 cities, 89 towns, 158 villages, 31 municipal districts and 17 counties. The latter administer schools as well as municipal services. Municipal government for the 49 improvement districts and two special areas is provided by the Department of Municipal Affairs.

    British Columbia.-Less than one half of 1 p.c. of the area of British Columbia is organized into municipalities. Additional small areas have sufficient population to require administration of local activities by the provincial government. There are 32 cities, four

[^29]:    ${ }^{1}$ Municipalities grouped according to their official nomenclature, which is roughly indicative of size and nature (see footnote 10).

    2 Municipalities grouped under the classification devised by the Dominion-Provincial Conferences on Municipal Statistics, designed to bring municipalities into comparable groups for statistical presentation. ${ }^{2}$ Census 1961 figures. 4 Includes 62 local improvement districts and 10 commissions. ${ }^{5}$ The Montreal Metropolitan Corporation. ${ }^{6}$ The Municipality of Metropolitan Toronto. ${ }^{7}{ }^{7}$ The Metropolitan Corporation of Greater Winnipeg.

    8 Designated by the province as towns (39), rural districts (5) and local improvement districts (3); all operate under the same Act. ${ }^{9}$ Classified by the province as community councils. ${ }^{10}$ Rural municipalities are designated by different names in the different provinces. ${ }^{11}$ Includes 20 improvement districts. ${ }^{12}$ Includes 5 units of self-government known as suburban municipalities; excludes the unincorporated local government districts. ${ }^{13}$ Excludes the 12 unincorporated local improvement districts. ${ }^{14}$ Includes 20 county municipalities; excludes the 49 unincorporated improvement districts and 2 special areas.
    ${ }^{15}$ Includes the Inter-Urban Corporation of Ile Jesus, formerly Laval County.
    ${ }^{16}$ Includes municipalities shown wholly or partly in metropolitan areas by the 1961 Census, with subsequent revisions to take care of annexations, etc. Included in urban are the Montreal Metropolitan Corporation, the Municipality of Metropolitan Toronto and the Metropolitan Corporation of Greater Winnipeg. the province as suburban or semi-urban.

[^30]:    * Prepared under the direction of H. R. Balls, Comptroller of the Treasury, Department of Finance, Ottawa.

[^31]:    * On July 1, 1963, the Organization was given the responsibility of directing and administering the Civil Defence College at Arnprior, Ont. (See Part III of Chapter XXV on Defence of Canada.)

[^32]:    * Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary the Industrial Development Bank, because of the special nature of their functions, are excluded from operations of the Crown corporations Part of the Act and are governed by their own Acts of incorporation as is also the Eastern Rockies Forest Conservation Board, a joint federal-provincial enterprise. Though not included in the Schedules to the Financial Administration Act, certain provisions of the Act apply to the Northern Ontario Pipe Line Crown Corporation, set up on June 7, 1956 to oversee the building of a cross-country natural gas pipeline. The Canada Council was set up under the Canada Council Act (assented to Mar. 28, 1957) as a Crown corporation but has been declared not an agency of the Crown and hence is not included in the Schedules to the Financial Administration Act; the same situation applies to the National Productivity Council set up under the National Productivity Act (assented to Dec. 20, 1960) and the Atlantio Development Board set up under the Atlantic Development Board Act (assented to Dec. 20, 1962).

[^33]:    - Compiled from information supplied by the respective Departments.

[^53]:    ${ }^{1}$ Includes persons who reported themselves as stateless.

[^54]:    ${ }^{1}$ Canadian-born persons who lost their citizenship by marriage; this applies to females only.

[^55]:    ${ }^{1}$ Mainly children over 14 years of age.

[^56]:    * Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics.

[^57]:    ${ }^{1}$ Excludes Newfoundland for which data are not available.

[^58]:    ${ }^{1}$ Figures for Newfoundland are included from 1949, and those for the Yukon and Northwest Territories from 1951.

    Multiple Births.-Approximately one confinement in 90 in Canada results in the birth of more than one child as compared with one in 85 several years ago-in other words, the chances of a confinement resulting in the birth of more than one child are fewer now than formerly. The chance of a mother delivering twins is about one in 90 , triplets, one in about 10,000 and quadruplets, one in about 750,000 or more. Two sets of quadruplets were born in Canada during 1960, the first since 1957.

    Other facts illustrated by Table 6 are that the proportion of stillbirths is higher among multiple than among single births, about twice as high for twins and between three and five times as high for triplets.

    * The term "illegitimate", as used here, does not refer to all births conceived out of wedlock but is necessarily restricted to those in which parents reported themselves as not having been married to each other at the time of birth or registration and, in Ontario, to those in which the marita! status of the mother was reported as "single" at the time of birth or registration.

[^59]:    * A crude rate is one based on the total population.

[^60]:    * Although there are at present some provincial differences in the requirements for compulsory registration of stillbirths (i.e., with respect to minimum gestational age-limits and specific criteria of life), stillbirths, as referred to here, may be summarized as including "foetuses of 28 or more weeks of ges tation, which did not show any sign of life'".

[^61]:    * For international comparisons, see Section 7, pp. 256-257.
    $\dagger$ A crude rate is one based on the total population.

[^62]:    ${ }^{1}$ Excludes the Yukon and Northwest Territories.

[^63]:    * INCLUDES: DISEASES OF HEART (INCL. RHEUMATIC FEVER) AND ARTERIES, INTRACRANIAL LESIONS, CHRONIC NEPHRITIS.

[^64]:    ${ }^{1}$ Many rates have been revised since the publication of the 1962 Year Book; see headnote to Table 1.

[^65]:    *For international comparisons, see Section 7, pp. 256-257.

[^66]:    * For international comparisons, see Section 7, pp. 256-257.

[^67]:    ${ }^{1}$ Includes one in the Northwest Territories. $\quad{ }^{2}$ Includes two in the Northwest Territories.

I to VI (Catalogue Nos. 83-210 to 83-215); Mental Health Statistics (Catalogue No. 83-204) and Financial Supplement (No. 83-205) Tuberculosis Statistics (No. 83-206) and Financial Supplement (No. 83-207); and List of Canadian Hospitals and Related Institutions and Facilities (No. 83-201).

[^75]:    ${ }^{1}$ Based on estimated population as at June 1， 1962.

[^76]:    ${ }^{1}$ Adults, children and newborn.
    ${ }^{2}$ First admissions and re-admissions.
    ${ }^{3}$ Mental hospitals only; does not include psychiatric or mental units in other hospitals. ${ }_{4}$ Tuberculo tuberculosis units in other hospitals. $\quad 5$ Includes other types not specified.

[^77]:    ${ }^{1}$ Subject to later adjustments by Provincial Plan.

[^78]:    ${ }^{1}$ Subject to later adjustments by Provincial Plan.

[^79]:    ${ }^{1}$ Subject to later adjustments by Provincial Plan.

[^80]:    ${ }^{1}$ Subject to later adjustments by Provincial Plan.

[^81]:    ＊Prepared in the Public Health Section，Health and Welfare Division，Dominion Bureau of Statistics．

[^82]:    ${ }^{1}$ Excludes the Northwest Territories.
    ${ }^{2}$ Includes venereal diseases only for Northwest Territories. ${ }^{3}$ Not reportable. $\quad{ }^{4}$ Includes other cases and cases where type not specified. ${ }_{5}$ Less than 0.05 per 100,000 population.

[^83]:    ${ }^{1}$ Not reportable
    100,000 population.
    ${ }^{2}$ Includes other cases and cases where type not specified.
    ${ }^{3}$ Less than 0.05 per

[^84]:    ${ }^{1}$ Based on gross payment for March.

[^85]:    ${ }^{1}$ Applied to repayment of loan from Consolidated Revenue Fund, leaving a net loan of $\$ 17,282,796 . \quad{ }^{2}$ Of this sum, $\$ 17,282,796$ was applied to repayment of loan from Consolidated Revenue Fund, leaving a balance in the Old Age Security Fund, Mar. 31, 1962, of $\$ 1,563,639$.

    Persons in receipt of old age assistance (see p. 295) who reach age 70 are automatically transferred to old age security. Others make application to the regional offices. Recipients of old age security who are in need may receive supplementary aid under general assistance programs in the provinces. Where the amount of aid is determined through an individual assessment of need, which takes the recipient's requirements and resources into consideration, the Federal Government may share in it under the Unemployment Assistance Act.

[^86]:    ${ }^{1}$ The increase in the maximum assistance rate from $\$ 55$ to $\$ 65$ a month was effective in these provinces from Apr. 1, 1962. ${ }^{2}$ The effective date for the increase from $\$ 55$ to $\$ 65$ a month in the maximum assistance rate was Feb. 1, 1962 in these jurisdictions but not all of them had made the adjustments by Mar. 31, $1962 . \quad{ }^{3}$ The effective date of the increase from $\$ 55$ to $\$ 65$ a month in the maximum assistance rate was July 1,1962 . ${ }^{\text {The }}$ average monthly assistance was $\$ 61.09$ for June 1962 , the first month for which an average based on the maximum of $\$ 65$ a month was computed.

[^87]:    ${ }^{1}$ The increase in the maximum rate of a!lowance from $\$ 55$ to $\$ 65$ a month was effective in these provinces from Apr. 1, 1962. $\quad{ }_{2}$ The effective date for the increase from $\$ 55$ to $\$ 65$ a month in the maximum rate of allowance was Feb. 1, 1962 in these jurisdictions but not all of them had made the adjustments by Mar. 31, $1962 .{ }^{3}$ The effective date of the increase from $\$ 55$ to $\$ 65$ a month in the maximum rate of allowance was July 1, 1962. $\quad$ The a verage monthly allowance was $\$ 64.04$ for June 1962 , the first month for which an average based on the maximum of $\$ 65$ a month was computed. $\quad 5$ Excluding Yukon Territory.

[^88]:    ${ }^{1}$ Includes dependants.
    ${ }^{2}$ Payment figures shown are for the months to which the claims made under the program relate and include amounts paid to the provinces by the Federal Government after the end of the fiscal year. ${ }^{3}$ Includes persons of a class formerly granted aid under a mothers' allowances program.
    ${ }^{4}$ Nine

[^89]:    ${ }^{1}$ Approximate.
    ${ }^{2}$ An additional 1,512 families with 4,466 children were assisted under Part III of the Public Welfare Act; cost of allowances for this group is included in total payments for all groups under Part III. ${ }^{2}$ Caseload transferred to social assistance; no separate figures are available. ${ }_{4}$ Figures for 1958-62 exclude British Columbia; figures for 1958 also exclude Newfoundland.

[^90]:    * Prepared by the Department of Veterans Affairs, Ottawa.

[^91]:    * A detailed study of this Act is given in the 1962 Year Book, pp. 282-283.

[^92]:    * A detailed outline of the Board's functions and responsibilities is given in the 1961 Year Book, p. 302.

[^93]:    * Prepared in the Education Division, Dominion Bureau of Statistics.

[^94]:    *The subject of vocational training is covered in detail in an article entitled "Recent Developments in Public Technical and Vocational Education in Canada" appearing in Chapter XVI on Labour (see Index).

[^95]:    ${ }^{1}$ Includes publicly controlled，private，and Indian schools．
    ${ }^{2}$ From kindergarten to and including Grade 8 in all provinces except Quebec；Grade 8 included with secondary grades in Quebec．

[^96]:    ${ }^{1}$ Fully qualified at the elementary level are teachers with junior matriculation and two or more years, or senior matriculation and one or more years of professional training. At the secondary level they are teachers with junior matriculation and four or more years, or senior matriculation and three or more years of schooling, of which one year was professional training. garten and elementary grades only, and those instructing or supervising both elementary and secondary grades in rural schools with five or fewer classes. Teachers and principals in Ontario are classified as elementary according to the provincial Report of the Minister, 1961.
    ${ }_{3}$ Comprises teachers and principals instructing or supervising secondary grades only, and those instructing or supervising both elementary and secondary grades in urban centres and in rural schools with six or more classes. Teachers and principals in Ontario are classified as secondary according to the provincial Report of the Minister, 1961.

[^97]:    Note.-Figures to 1960-61 are for enrolment at Dec. 1 of the academic year indicated and comprise actual graduate enrolment reported and estimated figures for total enrolment based on data available from institutions representing about 98 p.c. of the total enrolment.

[^98]:    ${ }^{1}$ All theology enrolment included as undergraduate prior to 1962-63.

[^99]:    For footnotes, see end of table, p. 346.

[^100]:    ${ }^{4}$ Estimated. $\quad{ }^{2}$ Includes Bachelors of Letters and Social Science. ${ }^{3}$ Some institutions include Science degrees in Arts. ${ }_{4}$ Includes Bachelors of Accounting and Secretarial Science. ${ }^{5}$ Includes diplomas in Architecture from the School of Architecture of Montreal. ${ }^{6}$ Includes all diplomas and degrees except for Bachelors of Divinity. ${ }^{7}$ Includes M. Com., M.Ed., M.Paed., M.S.W., as well as M.A. In some institutions, M.Sc. degrees are included with M.A.'s. ${ }^{8}$ Includes M.A.Sc., M.S.A., M.Sc.F., M. Arch., M.V. Sc., M.Sc. Dent., M. Surgery (where conferred separately) as well as M.Sc. ${ }^{9}$ The "Licence" in the French language universities is the next degree in advance of the Bachelor.

[^101]:    - This subject is covered in detail in a special article entitled "Recent Developments in Public Technical and Vocational Education in Canada" appearing in Chapter XVI on Labour (see Index).

[^102]:    ${ }^{1}$ Excludes training of the unemployed.
    ${ }^{2}$ Excludes some 2,000 fee-paying students.
    ${ }^{8}$ Excludes training of the unemployed in Quebec and some 2,000 fee-paying students in British Columbia. ${ }^{2}$ In addition, there were 9,679 part-time students and 390 students taking correspondence courses. ${ }^{5}$ Excludes 10,169 parttime students and 37,679 students taking correspondence courses from private trade schools and business schools. ${ }^{6}$ Excludes some 18,000 part-time students.

[^103]:    ${ }^{1}$ Operated and assisted by federal and provincial departments and agencies.

[^104]:    * Prepared by R. A. Lay, Public Relations Office, National Research Council of Canada, Ottawa.

[^105]:    ${ }^{*}$ Prepared by Dr. W. B. Lewis, Vice-President, Research and Development, Atomic Energy of Canada Limited, Chalk River, Ont.

[^106]:    * Prepared (March 1963) by Dr. D. C. Rose of the National Research Council, Ottawa.

[^107]:    ${ }^{1}$ Includes planning and administering research-development and grants-in-aid of research. ship and fellowship programs.

[^108]:    * Except as otherwise credited, this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics.
    $\dagger$ Prepared by the Criminal Law Section, Department of Justice, Ottawa.

[^109]:    * Salmond on Jurisprudence, 7th Edition, p. 496.

[^110]:    ${ }^{1}$ Includes abortion, indecent assault on female, sexual intercourse and attempt, incest, procuring, rape, attempted rape and seduction. $\quad 2$ Includes causing death in the operation of a motor vehicle or otherwise.

[^111]:    * Prepared under the direction of A. J. MacLeod, Commissioner of Penitentiaries, Ottawa.
    $\dagger$ Prepared by T. G. Street, Chairman, National Parole Board, Ottawa.

[^112]:    * Prepared by the Census of Agriculture Section, Census Division, Dominion Bureau of Statistics. Summary statistics on which this material is based appear in Section 5 of this Chapter.

[^113]:    * See also p. 476.

[^114]:    * Prepared under the direction of S. C. Barry, Deputy Minister of Agriculture, Ottawa.

[^115]:    ${ }^{1}$ Repealed by the Farm Credit Act, proclaimed Oct. 5, 1959.

[^116]:    * This Act repealed the Agricultural Prices Support Act, 1944.

[^117]:    * Information supplied by the agricultural authorities of the various provinces.

[^118]:    * Except as otherwise credited, this Section was prepared under the direction of S. C, Barry, Deputy Minister, Department of Agriculture, Ottawa.

[^119]:    * Prepared in the Water Resources Branch, Department of Northern Affairs and National Resources, Ottawa.

[^120]:    * Revised by the Deputy Minister, Saskatchewan Department of Agriculture.

[^121]:    * Revised in the Deputy Minister's office, Alberta Department of Agriculture.

[^122]:    * Revised in the Agriculture Division, Dominion Bureau of Statistics.
    $\dagger$ Available from the Dominion Bureau of Statistics or the Queen's Printer, Ottawa.

[^123]:    * Information on the methods and concepts used to determine the contribution of agriculture to national income is available in DBS publication Handbook of Agricultural Statistics, Part II.

[^124]:    ${ }^{1}$ Gross value of farm production: does not represent cash income from sales.
    ${ }^{2}$ Not available at time of

[^125]:    ${ }^{1}$ Values for 1962 not available at time of going to press; see fontnote 2, Table 11.

[^126]:    ${ }^{1}$ Values for 1962 not available at time of going to press; see footnote 2, Table 11. ${ }^{2}$ Fewer than 500 acres.

[^127]:    ${ }^{1}$ Census. $\quad{ }^{2}$ Cows and heifers, two years old or over, kept for milk purposes.

[^128]:    ${ }^{1}$ Includes malted milk, cream powder, formula milks, whole milk powder of less than 26-p.c. fat, evaporated milk of 2 -p.c. fat, concentrated liquid milk and sterilized cream manufactured by fewer than three firms. ${ }^{2}$ Includes sugar of milk (lactose), condensed buttermilk, concentrated liquid skim milk and special formula skim milk products manufactured by fewer than three firms.

[^129]:    ${ }^{1}$ Includes Newfoundland for all manufactured dairy products.
    ${ }^{2}$ Includes, in addition to the items listed, malted milk, cream powder, partly skimmed evaporated milk, whole milk powder of less than 26 -p.c. fat, formula milks, evaporated milk of 2 -p.c. fat, and concentrated liquid milk.
    ${ }^{3}$ Includes milk by-product items not listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein, powdered whey, special formula skim milk products and concentrated liquid skim milk. Since the quantities used for human consumption and livestock feeding cannot be separated, per capita figures include both.
    ${ }^{4}$ Includes ice cream mix in terms of milk.

[^130]:    ${ }^{1}$ Prior to 1960, acreages of peas in Prince Edward Island and New Brunswick are included with Nova Scotia; in 1960, 1961 and 1962, Prince Edward Island and Nova Scotia acreages of peas are included with New Brunswick. ${ }^{2}$ Acreages of beans, corn and peas in Manitoba are included with Alberta.

[^131]:    .$^{1}$ Includes Agricultural Stabilization Act payments of 28 cents per lb . in 1958, 21 cents per lb . in 1959, 23 cents per lb. in 1960, 22 cents per lb. in 1961 and 18 cents per lb. in 1962 on qualifying graded wool.

[^132]:    For footnotes, see end of table, p. 474.

[^133]:    ${ }^{1}$ Fluctuations in apparent per capita flour consumption are caused partly by lack of complete data on flour inventories in all positions. ${ }^{2}$ Includes soybean flour. paste and purée. $\quad 4$ Exclusive of Newfoundland.
    ${ }^{3}$ Tomatoes canned, tomato juice, tomato pulp,
    ${ }^{5}$ Includes process cheese.
    ${ }^{6}$ Includes cream expressed as milk.

[^134]:    ${ }^{1}$ Includes field, vegetable, fruit and nursery crop land.

[^135]:    ${ }^{1}$ Operators not reporting age are excluded from 1951 figures.

[^136]:    ${ }^{1}$ Estimated totals, which in the case of production are rounded to millions, include allowances for any missing data for countries shown and for other producing countries not shown. estimates.

[^137]:    ${ }^{1}$ Estimated totals, which are rounded to millions, include allowances for any missing data for countries shown and for other producing countries not shown
    ${ }_{2}$ Tentative unofficial production estimates.

[^138]:    * Sections of this Chapter that deal with forestry and the federal forestry program were revised in the Department of Forestry, Ottawa. Provincial forestry programs were prepared by the forestry officials of the respective provincial governments. Sections dealing with forest and allied industries, except as otherwise noted, were revised in the Forestry Section, Industry Division, Dominion Bureau of Statistics.
    $\dagger$ A more detailed discussion of forest regions is given in Bulletin 123, Forest Regions of Canada, published by the Department of Forestry. Accounts of variations in Canadian physiography and climate are included in a special article on The Climate of Canada, appearing in the 1959 Year Book, pp. 23-51.

[^139]:    *The sixth edition, 1961, is obtainable from the Queen's Printer, Ottawa, price $\$ 2$.

[^140]:    ${ }^{1}$ Figures do not include such values as damage to soil, stream-flow, wildlife, recreation and tourist facilities.

[^141]:    ${ }^{1}$ Prince Edward Island is not included, but 1960 was a particularly serious year for forest fires in that province; an estimated 25 fires burned 18,000 acres with damage assessed at $\$ 221,000$. Cost of fire fighting is not available. ${ }^{2}$ Included in provincial figures.

[^142]:    * Prepared by B. W. Burgess, Secretary, Pulp and Paper Research Institute of Canada, Montreal, Que.

[^143]:    ${ }^{1}$ Includes transportation costs; see text above.

[^144]:    ${ }^{1}$ Includes value of forest products other than wood.

[^145]:    ${ }^{1}$ Prior to 1958, employment statistics included those individuals employed in the transportation of products from the woods to the manufacturing plant or user. In order to report only employment in woods operations, and to avoid duplication of data collected elsewhere, employment statistics for $1958-60$ were compiled to conform with this principle. In 1961, employees engaged in transportation costs were included.
    ${ }^{2}$ Includes transportation costs; see text on p. 510 .

[^146]:    ${ }^{1}$ Includes screenings and unspecified pulps.

[^147]:    ${ }^{1}$ Includes production in other provinces; Prince Edward Island is now the only province in which there is no production.

[^148]:    ${ }^{1}$ Production figures differ slightly from DBS figures given in Table 16, because of a different basis of calculation.

[^149]:    * See Chapter XIV for further particulars regarding the pulp and paper and paper-converting industries.

[^150]:    * For reasons given in Section 1, Part II of the Foreign Trade Chapter, gold is excluded from Canadian trade statistics.

[^151]:    ${ }^{1}$ Imports included in totals only.

[^152]:    * Asphalt roofing manufacturers, folding box and set-up box manufacturers, corrugated box manufacturers, paper bag manufacturers, and miscellaneous paper converters.

[^153]:    * Prepared under the direction of Dr. W. E. van Steenburgh, Deputy Minister of Mines and Technical Surveys, Ottawa, in the following Divisions: Introduction and Subsections 1 and 3 by the Mineral Resources Division; Subsection 2 by the Mineral Processing Division, Mines Branch; and Subsection 4 by the Fuels and Mining Practice Division, Mines Branch.

[^154]:    * This review covers the year 1961, the latest year for which final figures were available at the time of preparation; preliminary figures for 1962 are given in Tables 22-25, pp. 572-573.

[^155]:    * Revised, under the direction of the Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

[^156]:    * Revised under the direction of C. L. O'Brian, Chairman of the Dominion Coal Board, Ottawa.

[^157]:    * Compiled from material supplied by the respective provincial governments.

[^158]:    * Compiled from material supplied by the provincial governments.

[^159]:    PROPORTION OF TOTAL VALUE OF MINERAL PRODUCTION CONTRIBUTED BY METALLICS, NON-METALLICS, FUELS AND STRUCTURAL MATERIALS, 1930-62
    

[^160]:    ${ }^{1}$ Includes minor items not specified.

[^161]:    * For a description of this index, as well as one for manufacturing and electric power and gas utilities, see DBS Reference Paper Revised Index of Industrial Production, 19.95-1957 (1949=100) (Catalogue No. 61-502). To update these series and others in the Index of Industrial Production, see DBS monthly report Index of Industrial Production $(1949=100)$ (Catalogue No. 61-005).

[^162]:    ${ }^{1}$ Based on commodity data.

[^163]:    ${ }^{1}$ Includes 240 oz.t. valued at $\$ 8,052$ produced in New Brunswick.
    ${ }^{2}$ Includes 52 oz.t. valued at $\$ 1,767$ produced in New Brunswick. ${ }^{8}$ Includes 299 oz.t. valued at $\$ 11,186$ produced in New Brunswick.

[^164]:    I Includes relatively amall quantities produced in New Brunswick and Alberta. There was no silver produced in New Brunswick from 1958 to 1961; output in 1962 was 112,493 oz.t.

[^165]:    ${ }^{1}$ Recovered from sour natural gas and nickel sulphide ores.
    ${ }^{2}$ Does not include sulphur in acid made from roasting zinc sulphide concentrates at Arvida. ${ }_{3}$ Includes sulphur in acid made from roasting zinc sulphide concentrates at Arvida and Port Maitland.
    ${ }^{4}$ Excludes pyrite and pyrrhotite used to produce iron

[^166]:    ${ }^{1}$ The sum of Canadian coal mines' sales, colliery consumption. coal supplied to employees and coa! used in making coke, etc., less the tonnage of coal exported. $\quad 2$ Imports of briquettes are not included in this table but are shown separately in Table 23.
    ${ }^{3}$ Includes small tonnages from countries other than Britain and the United States. Deductions have been made from this column to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores.

[^167]:    ${ }^{1}$ Shipments plus imports less exports.

[^168]:    ${ }^{1}$ Includes only hydroelectric installations that develop power mainly for sale.
    power installations developed by industries mainly for their own use.
    ${ }^{2}$ Includes only water

[^169]:    * Revised by the various provincial commissions concerned.

[^170]:    *The Commission also purchases $135,000 \mathrm{hp}$. from the Shawinigan Water and Power Company.

[^171]:    ${ }^{1}$ Capacities quoted are dependable at time of system peak except those marked with an asterisk (*), which are installed capacities.

[^172]:    ${ }^{1}$ Dependable peak capacity-the amount of power which resources can be expected to supply at the time of the system primary peak requirements, assuming that all units are available and that the supply of water is normal. This capacity will vary from time to time in accordance with changing conditions. The capacity of a source of purchased power is based on the terms of the purchase contract.

[^173]:    ${ }^{1}$ Sum of the maximum 20 -minute coincident peak loads (primary plus secondary) of each of the systems operated by the Commission, given in terms of net output of the sources of supply to each system for the last month of each fiscal year.

[^174]:    ${ }^{1}$ November 1962 figure.

[^175]:    * Prepared by the Information and Consumer Service, Department of Fisheries, Ottawa.

[^176]:    * Prepared by the respective provincial departments responsible for fisheries administration.

[^177]:    ${ }^{1}$ Excludes livers. $\quad{ }^{2}$ Includes value of livers and liver products.
    4 Excludes landings by Canadian fishermen in United States ports.
    ${ }^{3}$ Included with "Herring".

[^178]:    * Prepared by A. Stewart, Production and Marketing Branch, Department of Agriculture, Ottawa.

[^179]:    * Prepared by the Agriculture Division, Dominion Bureau of Statistics.

[^180]:    ${ }^{1}$ Totals inolude a few pelts and their values not allocated to a province or territory.

[^181]:    * Prepared by W. L. Posthumus, Economics Branch, Department of Trade and Commerce, Ottawa.
    $\dagger$ Secondary manufacturing, as here used, includes the rubber products industry; the leather products industry, excluding the tanning industry; the textiles industry; the knitting and hosiery industry; the clothing industry; the wood products industry, excluding saw and planing mills; the paper products industry, excluding the pulp and paper industry; the printing, publishing and allied industries; the iron and steel products industry; the transportation equipment industry; the non-ferrous metal products industry, excluding smelting and refining; the electrical apparatus and supplies industry; the non-metallic mineral products industry, excluding the cement, lime and salt industries; the chemicals and allied products industry, excluding the fertilizer and vegetable oils industries; and the miscellaneous products industry.

[^182]:    For footnotes, see end of table, p. 646.

[^183]:    ${ }^{1}$ See footnote 1, Table 1.

[^184]:    ${ }^{1}$ A change in the method of computing the number of production workers in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. There was therefore a proportionate reduction in the averages for $1925-30$ per employee as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are therefore comparable with those for 1924 and earlier years. ${ }_{2}$ Net value of products; see footnote 1, Table 1, p. $646 . \quad{ }_{3}$ Based on the revised Standard Industrial Classification; see text on p. $651 . \quad{ }^{4}$ Not strictly comparable with previous years; see third paragraph, p. $645 . \quad{ }^{5}$ In 1952 gross value of products was replaced by value of factory shipments; see text on p. 645 .

[^185]:    * For a description of the methods used in constructing the index and a description of its scope, see DBS publication Revised Index of Industrial Production, 1935-1957 (Catalogue No. 61-502).

[^186]:    * DBS publication Standard Industrial Classification Manual (Catalogue No. 12-501).

[^187]:    For footnotes, see end of table, p. 653.

[^188]:    ${ }^{1}$ See footnote 1, Table 1.
    years; see third paragraph, p. 645.
    ${ }^{2}$ See footnote 6, Table 1.
    ${ }^{3}$ Not strictly comparable with previous 1958 because of a change in p. 645 . ${ }^{4}$ Figures for 1959 and later are not comparable with those of 1957 and basis, figures for 1957 and 1958 would be about $\$ 268,000,000$ lower.

[^189]:    ${ }^{1}$ Reported on a production basis.

[^190]:    ${ }^{1}$ Reported on a production basis.

[^191]:    ${ }^{1}$ Newfoundland included from 1955. ${ }^{2}$ Includes only those head offices not located at a plant.

[^192]:    ${ }^{1}$ Confidential; included in "Miscellaneous manufacturing industries".
    authorized by the firms concerned.
    ${ }^{3}$ Confidential; included under "All other groups".

[^193]:    ${ }^{1}$ Confidential; included in "Miscellaneous manufacturing industries".

[^194]:    ${ }^{1}$ Confidential; included in "Miscellaneous manufacturing industries".

[^195]:    ${ }^{1}$ Confidential; included under "All other groups".

[^196]:    * Except where otherwise noted, prepared in the Planning and Development Section, Business Finance Division, Dominion Bureau of Statistics.
    $\dagger$ Capital expenditure figures for 1961 and earlier years are final and those for 1962 are preliminary and subject to revision at a later date. Capital expenditures for 1961 and 1962, as well as intentions for 1963, appear in greater detail in the publication Private and Public Investment in Canada, Outlook 1963, available from the Queen's Printer (Catalogue No. C51-1/1963).

[^197]:    * An explanation of sources and methods is given in DBS annual report Construction in Canada (Catalogue No. 64-201).

[^198]:    ${ }^{1}$ Work done by the labour forces of utility, manufacturing, mining and logging firms and by government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry.

[^199]:    ${ }^{1}$ Metropolitan Corporation of Greater Winnipeg.

[^200]:    * Subsections 1 and 2 were prepared in the Information Division, Central Mortgage and Housing Corporation, Ottawa.

[^201]:    For footnotes, see end of table.

[^202]:    ${ }^{1}$ Data on 1956 Census Area definitions.
    ${ }^{2}$ Data on 1961 Census Area definitions.
    ${ }^{3}$ Reclassified from Major Urban Area to Metropolitan Area in 1961 Census.
    ${ }^{4}$ Classified as Major Urban Area in 1961 Census. ${ }^{5}$ Excludes Yukon and Northwest Territories.

[^203]:    ${ }^{1}$ Exclusive of the Yukon and Northwest Territories.
    2 Dwellings in which the number of persons exceeded the number of rooms. ${ }^{3}$ Figures relate to owner-occupied, single detached, non-farm dwellings only. $\quad$ Figures relate to non-farm dwellings only.

[^204]:    ${ }^{*}$ More detailed information may be found in Vol. 11 (Part 2) of the 1961 Census (Catalogue Nos. 93-523 to 93-535).
    $\dagger$ Based on a 20 -p.c. sample of occupied dwellings across Canada. A dwelling, for census purposes, is a structurally separate set of living quarters with a private entrance either from outside the building or from a common hall or stairway inside. The entrance must not be through anyone else's living quarters.

[^205]:    * Except as otherwise noted, this Chapter has been revised under the direction of the Deputy Minister of the Department of Labour, Ottawa.

[^206]:    * Statistics on numbers and earnings of prevailing rate and other groups of federal employees exempt from the Civil Service Act are given at pp. 134-139.

[^207]:    ${ }^{1}$ In hotels and restaurants the rates apply to a maximum of 54 hours per week.
    ${ }^{2}$ Applies only to canning or processing of fish, vegetables or fruit; 60 cents in the garment industry for 48 hours or less in a week. side set \& minimum rate of 821 a cashiers in Summerside. ${ }_{4}$ Cher warresses, $\$ 16$ for other restaurant workers in Charlottetown, $\$ 23$ for 56 cents. $\quad 5$ Dollars per week

[^208]:    * Prepared in the Special Surveys Division, Dominion Bureau of Statistics.

[^209]:    * Prepared in the Employment Section, Labour Division, Dominion Bureau of Statistics.

[^210]:    ${ }^{1}$ The durable goods group includes wood products, iron and steel products, transportation equipment, nonferrous metal products, electrical apparatus and supplies, and non-metallic mineral products; the non-durable goods group includes all other manufacturing industries.

[^211]:    ${ }^{1}$ Mainly hotels, restaurants, laundries, dry-cleaning establishments and business and recreational services.

[^212]:    ${ }^{1}$ The durable goods group includes wood products, iron and steel products, transportation equipment, nonferrous metal products, electrical apparatus and supplies, and non-metallic mineral products; the non-durable goods group includes all other manufacturing industries.

[^213]:    1 "Other Industries" consists of logging; mining; transportation (all sectors including air transportation), storage and communication (including radio and TV); public utilities; trade; finance; and government and personal service.

[^214]:    ${ }^{1}$ Distinction between vacation policies providing for increasing vacation periods with increasing service and vacation policies providing for vacations of one stated period regardless of length of service was made for the first time in 1960; thus, in comparing 1960, 1961 and 1962 figures with those for previous years, the percentages of employees granted vacations under both policies should be added.

[^215]:    - Prepared by the Unemployment Insurance Section, Labour Division, Dominion Bureau of Statistics; statistics of unemployment insurance are compiled and published by the DBS from material supplied by the Unemployment Insurance Commission.

[^216]:    * Prepared (July 1963) by Phillip Cohen, Chief, Training Research Section of the Economics and Research Branch, Department of Labour, Ottawa.

[^217]:    ${ }^{1}$ Present federal-provincial Agreements entered into under the Technical and Vocational Training Assistance Act came into effect in April 1961.

    2 Estimates.

[^218]:    * More detailed information is given in the Department of Labour publication Workmen's Compensation in Canada, A Comparison of Provincial Laws.

[^219]:    ${ }^{1}$ Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for compensation; the period varies in the several provinces.
    ${ }_{2}$ Includes, except where noted otherwise, payments to compensate loss earnings, medical aid payments, cost of rehabilitation and hospitalization (not including capital expenditures) and pensions paid (not pensions awarded) for temporary and permanent disabilities
    ${ }^{3}$ Excludes payments by employers who make direct compensation to their employees; such employees come under Schedule II of the Ontario and Quebec Workmen's Compensation Acts.

[^220]:    ${ }^{1}$ Figures for years up to and including 1949 are as at Dec. 31; figures from 1951 are as at Jan. 1. ${ }^{2}$ Newfoundland included from 1949. members.

[^221]:    * The Board's judgments are reported in Canadian Railway Cases and Canadian Railway and Transport Cases, and its judgments, orders, rulings and regulations are published by the Queen's Printer, Ottawa, in what is known as J.O.R. \& R.

[^222]:    *Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics; more detailed information is given in the annual reports of the Division.

[^223]:    ${ }^{1}$ Newfoundland included from 1950 . . $\quad{ }^{2}$ Excludes 51 miles of joint track.
    ${ }^{3}$ Excludes 52 miles of joint track. $\quad{ }_{4}$ Excludes 53 miles of joint track.

[^224]:    ＊Statistics for individual railways are given in DBS annual report Railway Transport，published in six parts （Catalogue Nos．52－207－52－212）．

[^225]:    ${ }^{1}$ Includes investments totalling $\$ 11,188,835$ of the British Columbia Electric Railway which in 1957 reported for the first time in the railway transport series.

    Revenues and Expenses.-The ratio of operating expenses to revenues of railways operating in Canada was 96.36 p.c. in 1961 compared with 90.19 p.c. in 1952; the high for the period 1952-61 was 97.30 p.c. recorded in 1958. Operating revenues, which reached an all-time high in 1956, declined 1.3 p.c. over the ten years. Operating expenses, on the other hand, increased 5.4 p.c. during the same period. Because outlay increased more rapidly than income, the net operating revenue per mile of line dropped from $\$ 2,675$ in 1952 to $\$ 936$ in 1961, although the lowest figure during the period was recorded in 1958 at $\$ 696$.

[^226]:    *The Hudson Bay Railway, formerly managed and operated for the Federal Government by the CNR, was absorbed into the Canadian National Railway. System on Jan. 1, 1958, to be operated in the same manner as other Canadian Government railway lines. Statistics of the Hudson Bay Railway are therefore included with CNR data for 1958 and subsequent years.

[^227]:    ${ }^{1}$ Includes "loans and bills receivable" and "rents receivable".

[^228]:    ${ }^{1}$ Full-time employees only for 1953 and all employees, including part-time, for 1954-62.

[^229]:    * Except as otherwise indicated, the material in this Part has been revised in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^230]:    ${ }^{1}$ Decrease due to exclusion of unused road allowance included in 1957. ${ }^{2}$ Decrease from 1957 due to elimination of duplications in reporting. $\quad{ }_{3}$ Includes roads in Provincial Parks and forest development and mining roads not included previously.

    Total expenditure on highways and rural roads in the year ended \ar. 31, 1962 was $8753,515,554$, an amount 5.2 p.c. lower than that for the previous fiscal year; construction expenditures decreased by 9.6 p.c. while maintenance costs were 5.7 p.c. higher. Table 2 shows expenditure by province and the federal-provincial-municipal distribution of such expenditure for the years ended Mar. 31, 1961 and 1962.

[^231]:    ${ }^{1}$ Includes federal administrative costs re Trans-Canada Highway amounting to $\$ 188,265$ in $1960-61$ and $\$ 198,500$ in 1961-62.

[^232]:    ${ }^{1}$ Includes registrations in the Yukon and Northwest Territories.

[^233]:    ${ }^{1}$ Includes Armed Forces vehicles.

[^234]:    ${ }^{1}$ Includes other items not shown such as transfer of motor vehicles, garage and service station licences, and fines for infractions of motor vehicle laws.
    ${ }^{3}$ Included with other motor vehicles. ${ }_{2}$ Includes commissions allowed to gasoline agents and refunds.
    ${ }^{5}$ Included with passenger automobiles. ${ }^{4}$ Included with miscellaneous revenues and therefore in total. 6 Not complete.

[^235]:    - Statistics are given in more detail in DBS annual report Motor Carriers-Freight, Part I (Catalogue No. 53-222) and Part II (Catalogue No. 53-223).

[^236]:    * Statistics are given in more detail in DBS annual report Moving and Storage, Household Goods (Catalogue No. 53-221).

[^237]:    * Statistics are given in more detail in DBS annual reports Motor Transport Traffic for Canada and the provinces (Catalogue Nos. 53-207-53-214).

[^238]:    ${ }^{1}$ Initial revenue passenger fares, excluding transfers.
    ${ }_{2}^{2}$ Excludes British Columbia Electric Railway Company (British Columbia Hydro and Power Authority in 1962).

[^239]:    ${ }^{1}$ All reported accidents are those resulting in property damage estimated at $\$ 100$ or over. ${ }^{2}$ Included with passengers in Quebec. ${ }_{5}$ Incomplete; see footnotes 2 and $4 . \quad{ }_{4}$ Included with bicyclists in New
    Brunswick. ${ }^{5}$ Excludes Quebec.

[^240]:    * Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services by the Department of Transport and the National Harbours Board; the St. Lawrence Seaway by the St. Lawrence Seaway Authority; part of the financial statistics by the Department of Public Works; shipping subsidies by the Director of Subsidized Steamship Services, Canadian Maritime Commission; and canal traffic and statistics of shipping by the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^241]:    ${ }^{1}$ Sea-going and inland international.

[^242]:    ${ }^{1}$ Includes smaller ports not shown separately.

[^243]:    ${ }^{1}$ Minimum depth of Seaway canals is 27 feet and minimum width 200 feet. Wiley-Dondero canal and two locks near Massena, N.Y., are in United States territory; dimensions are approximately the same as those of Canadian facilities. ${ }^{2}$ Notice must be given by vessels of more than six-foot draught.
    ${ }^{3}$ With Lake Ontario at elevation of 243 feet.

[^244]:    ${ }^{1}$ Grouped according to the revised Standard Industrial Classification．

[^245]:    ${ }^{1}$ Includes naval vessels.
    ${ }^{2}$ Upbound passengers in all types of vessel numbered 4,847 and downbound

[^246]:    ${ }^{1}$ Tolls removed June 1, 1962.
    ${ }^{2}$ Commenced operations June 29, 1962.

[^247]:    ${ }^{1}$ Includes other flying services.

[^248]:    * Prepared in the Mineral Resources Division, Department of Mines and Technical Surveys, Ottawa, under the direction of Dr. W. E. van Steenburgh, Deputy Minister.

[^249]:    *Subsections 1 and 4 to 7 were revised in the Telecommunications and Electronics Branch of the Department of Transport, Ottawa. Textual data in Subsection 2 were prepared by The Bell Telephone Company of Canada, Montreal, and in Subsection 3 by Canadian Pacific Telecommunications Department, Montreal. Statistical material of Subsection 2 and Subsection 3 was revised in the Public Finance and Transportation Division, Dominion Bureau of sitatistics.

[^250]:    ${ }^{1}$ Includes underground conduits and buried cable.

[^251]:    ${ }^{1}$ Includes premium on capital stock.
    ${ }^{2}$ Full-time and part-time.
    ${ }^{2}$ Includes data of The Bell

[^252]:    ${ }^{1}$ Twin cable from Clarenville, Nfld. to Oban, Scotland and single cable from Clarenville, Nfld. via Terranceville, Nfld. to Sydney Mines, N.S. $\quad 2$ Licensed for operation by two carriers-COTC and ET\&T. $\quad$ ane
    cable unserviceable.

[^253]:    ${ }^{*}$ Textual information in this Subsection was supplied by the Canadian Broadcasting Corporation, the Board of Broadcast Governors and the Canadian Association of Broadcasters; statistical data were prepared by the Public Finance and Transportation Division of the Dominion Bureau of Statistics.

[^254]:    The establishment and growth of CBC radio and television facilities throughout the years is covered in previous editions of the Year Book; developments taking place during 1962 and early 1963 only are covered here.

[^255]:    *An article in the 1957-58 Year Book traces developments in Canadian journalism from their beginnings in 1752 to (circa) 1900. A second article appearing in the 1959 edition brings that account up to the date of writing (1958). The complete presentation is available in reprint form from the Dominion Bureau of Statistics.

[^256]:    ${ }^{1}$ Includes semi－weeklies，tri－weeklies and bi－weeklies．
    ${ }^{2}$ Circulation not reported for all newspapers．
    Includes bilinguals．
    newspapers．

[^257]:    * Prepared in the Merchandising and Services Division, Dominion Bureau of Statistics.

[^258]:    $\dagger$ Vol. VI (Pt.1) Census of Merchandising: Retail Trade (Series 6.1). Vol. VI (Pt. 2) Census of Merchandising: Wholesale Trade; Services (Series 6.2).

[^259]:    ${ }^{1}$ Newfoundland included from 1949. ${ }^{2}$ Includes the Yukon and Northwest Territories.
    ${ }^{3}$ Totals are not the exact addition of the components because of rounding of the figures.

[^260]:    ${ }^{1}$ Includes flour in terms of wheat, rolled oats and oatmeal in terms of oats, malt and pot and pearl barley in terms of barley, and rye flour in terms of rye. $\quad{ }^{2}$ Fewer than 50,000 bu. ${ }^{3}$ Includes bagged seed wheat, wheat flour in terms of wheat, rolled oats and oatmeal in terms of oats, malt and pot and pearl barley in terms of barley, and rye flour in terms of rye. handling and animal feed.

[^261]:    ${ }^{1}$ Includes bagged seed wheat and wheat flour in terms of wheat.
    ${ }^{2}$ Fewer than 50.000 bu.

[^262]:    ${ }^{1}$ Western grain in bushels of 50 lb .

[^263]:    * More detailed information is available from DBS annual report Livestock and Animal Products Statistics (Catalogue No. 23-203), and the Department of Agriculture publication Livestock Market Review. Statistics of livestock and poultry are given on pp. 454-458 of this edition of the Year Book.

[^264]:    ${ }^{1}$ Livestock billed through stockyards to country points outside province of origin.

[^265]:    - Information supplied by various Divisions of the Departments of Agriculture, Fisheries, Mines and Technical Surveys, and National Revenue and of the Dominion Bureau of Statistics.

[^266]:    ${ }^{1}$ Includes household goods storage operators, now compiled separately (see p. 000). $\quad{ }^{2}$ Includes 21,601,786 $\mathrm{cu} . \mathrm{ft}$. of storage space for household goods.
    ${ }^{3}$ Includes $1,574,620 \mathrm{cu}$. ft . of storage space for household goods.

[^267]:    ${ }^{1}$ Includes other revenue.

[^268]:    ${ }^{1}$ Includes duplication, as some associations market produce as well as handle supplies, some associations market more than one product and some handle many of the supplies listed.

[^269]:    ${ }^{*}$ Revised in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^270]:    ${ }^{1}$ Class I and II railways operating in Canada.
    ${ }^{2}$ Freight terminated exceeds totals carried due to tonnages originated by non-reporting industrial railways which are delivered to common carrier lines for further haul and unloading.

[^271]:    * Prepared by W. J. MacLeod, Secretary of the Board of Grain Commissioners for Canada, Winnipeg, Man.

[^272]:    * Revised by R. L. Kristjanson, Executive Assistant, The Canadian Wheat Board, Winnipeg, Man.

[^273]:    *Prepared in the Economica Division of the Administration Branch, Department of Agriculture, Ottawa. A more detailed statement on this subject, including the history of developments leading to the present situation, appears in the 1960 Year Book, pp. 961-986.

[^274]:    * Revised by D. H. W. Henry, Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

[^275]:    ${ }^{1}$ After provision for depreciation on fixed assets and capital expenditure met out of operating income; includes commission on general sales tax collections. ${ }^{2}$ Before deducting any payments to municipalities out of liquor control authority revenue. ${ }^{3}$ Includes $\$ 1,897,000$ in 1961 and $\$ 2,068,000$ in 1962 commission on beer sold direct from local breweries to the public through licensed outlets under controlled prices.
    ${ }^{4}$ The unemployment tax on sales of alcoholic beverages was repealed on Apr. 13, 1961.

[^276]:    ${ }^{*}$ Prepared from the report of the National Energy Board for the year ended Dec. 31, 1962. The functions of the Board are given in greater detail in the 1961 Year Book, pp. 1022-1023.

[^277]:    * Revised by the Commissioner of Patents, Department of the Secretary of State. Ottawa.

[^278]:    *Revised by the Registrar of Trade Marks, Department of the Secretary of State, Ottawa.
    $\dagger$ Revised by the Administrative Officer, Dominion Coal Board, Ottawa.

[^279]:    ${ }^{1}$ Includes $\$ 500,000$ paid by the Nova Scotia Government as its share of the joint cost of certain Nova Scotia subvention payments.

[^280]:    *Prepared by the Superintendent of Bankruptcy, Ottawa. Early bankruptcy and insolvency legislation is reviewed in the 1952-53 Year Book, pp. 914-915.
    $\dagger$ Prepared by the Business Finance Division, Dominion Bureau of Statistics.

[^281]:    ${ }^{1}$ New series not strictly comparable with previous figures; see text above.

[^282]:    * Prepared in the Prices Division, Dominion Bureau of Statistics.

[^283]:    * Details of weighting and construction and historical series appear in DBS publications Price Index Numbers of Residential Building Materials, 1926-48 (Catalogue No. 62-505) and Price Index Numbers of Non-residential Building Materials, 1935-52 (Catalogue No. 62-506). Revised item list and weighting for the electrical component of the residential building materials index, effective July 1960, is available on request.

[^284]:    1 "Pork, fresh loins."

[^285]:    - All security price indexes presented in this Section are on the new base $1956=100$; indexes presented in the 1962 and previous editions of the Year Book were on the $1935-39=100$ base. Historical indexes on the 1956 base are available from the Prices Division, Dominion Bureau of Statistics.

[^286]:    * Prepared by G. S. Watts, Research Department of the Bank of Canada, Ottawa.

[^287]:    Based on statistics taken from reports published by the External Trade Division, Dominion Bureau of Statistics.

[^288]:    ${ }^{1}$ Less than $\$ 500 . \quad 2$ Included with Saudi Arabia prior to 1960. prior to 1960.

[^289]:    ${ }^{1}$ Less than $\$ 500$.
    2 Includes Alaska and Hawaii.

[^290]:    ${ }^{1}$ Included with Kenya prior to 1960 prior to 1961. prior to 1960.
    ${ }^{2}$ Less than $\$ 500$.
    ${ }^{2}$ Included with French Africa, n.e.s.
    4 Included with Portuguese Africa, n.e.s. prior to 1960 . ${ }_{5}$ Included with Viet Nam

[^291]:    ${ }^{1}$ Less than $\$ 500$.
    2 Includes Alaska and Hawaii.

[^292]:    ${ }^{1}$ Not comparable with data for 1960-62.

[^293]:    ${ }^{2}$ Not comparable with data for 1961 and 1962.

[^294]:    ${ }^{1}$ Less than $\$ 500$.

[^295]:    ${ }^{1}$ Less than $\$ 500$.

[^296]:    ${ }^{1}$ In this classification the expression "Canadian Farm Products" refers to commodities actually produced, in their original form, on Canadian farms. "Foreign Farm Products" covers materials or commodities Canada does not produce, e.g., cane sugar, tea, rubber, cotton, silk, etc.

[^297]:    ${ }^{1}$ In this classification the expression "Canadian Farm Products" refers to commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers materials or commodities Canada does not produce, e.g., cane sugar, tea, rubber, cotton, silk, etc.

[^298]:    * Prepared in the several branches and agencies concerned, and collated in the Trade Publicity Branch, Department of Trade and Commerce, Ottawa.

[^299]:    * Information relating to rate of duty and value for duty is available from the Department of National Revenue, Customs and Excise Division, which administers the Customs Act and the Customs Tariff.

[^300]:    ${ }^{*}$ Prepared in the Travel Statistics Unit, National Accounts and Balance of Payments Division, Dominion Bureau of Statistics.

[^301]:    * Except as otherwise indicated, revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^302]:    ${ }^{1}$ Incomplete; not separable from real property taxes in some provinces.

[^303]:    I Excludes capital expenditures out of capital fund for the Province of Quebec. ${ }^{2}$ Includes pensions paid from Old Age Security Fund. ${ }^{3}$ Includes interest on debentures issued for school purposes. interest on debentures issued for school purposes.

[^304]:    * Revised (July 1963) in the Taxation Division, Department of Finance, under the direction of F. R. Irwin, Director of the Division, and by the provincial authorities concerned.

[^305]:    * See also pp. 946-947.

[^306]:    *The provincial mark-up over the manufacturer's price is not considered a "tax" in DBS financial statistics, but forms part of the "profits of government business enterprises" (see p. 960).
    $\dagger$ Generally, fuel oil used for agricultural and industrial purposes is exempt from tax.

[^307]:    ${ }^{1}$ Includes pensions paid from the Old Age Security Fund.
    ${ }^{2}$ Unconditional payments; grants for specific purposes are classified by function. See Table 6 for details of all grants to provincial governments and municipal corporations.

[^308]:    ${ }^{1}$ Includes Board of Grain Commissioners and payments in respect of the Canadian Wheat Board, the Prairie Grain Advance Payments Act and the Prairie Grain Provisional Payments Act, previously included in "Trade and Commerce". ${ }^{2}$ Pensions under the Old Age Security Act, 1951 (effective January 1952) are paid out of the Old Age Security Fund account and are not recorded under departmental expenditure.

[^309]:    ${ }^{1}$ These contingent liabilities are expressed in Canadian dollars; where applicable, stocks and bonds payable solely in sterling or United States dollars are converted on the basis of $£ 1=\$ 2.80$ and $\$ 1$ U.S. $=\$ 1$ Canadian, respectively. In addition the government has an indeterminate contingent liability in respect of rental guarantee contracts which in 1961 amounted to approximately $\$ 15,333,000$. Against this amount was a reserve of $\$ 3,726,563$. ${ }_{2}$ As at Dec. 31, 1961.
    ${ }^{3}$ As reported (in accordance with Sect. 45, National Housing Loan Regulations) by approved lenders for their respective fiscal years ended between Oct. 31 and Dec. 31, 1961.

[^310]:    1 Includes old age security tax.

[^311]:    ${ }^{1}$ Does not include government-owned plants but does include physical property held for sale. 2 Of these amounts, $\$ 1,024,710,000, \$ 1,335,510,000, \$ 1,677,209,000$ and $\$ 1,670,653,000$, respectively, are guaranteed by the Federal Government.

[^312]:    ${ }^{1}$ Excludes debt retirement.

[^313]:    ${ }^{1}$ Taxed under the general sales tax．

[^314]:    ${ }^{1}$ Excludes bonds assumed by the provinces.

[^315]:    For footnotes, see end of table.

[^316]:    ${ }^{1}$ Includes physical property held for sale and an undertermined amount of interest capitalized during construction. $\quad 2$ Of these amounts, $\$ 2,432,307,000, \$ 2,795,952,000, \$ 3,028,071,000$ and $\$ 4,013,074,000$, respectively, are guaranteed by provincial governments. ${ }_{3}$ These amounts differ by $-\$ 299,000$ and $\$ 4,526,000$, respectively, from change in asset item "Inventories", by reason of the closing out of one establishment of an enterprise and the acquisition of a private company.

[^317]:    For footnotes, see end of table, p. 1006.

[^318]:    ${ }^{1}$ City of St. John's only. ${ }^{2}$ Includes: N.S.-household tax, Halifax; N.B.-occupancy tax, Fredericton, and rentals tax, Moncton; Sask.-special franchise. $\quad{ }^{3}$ Total of valuations assessed but exempt from taxation; excludes exempt property not assessed. ${ }^{4}$ Incomplete. ${ }^{5}$ Excludes permissive exemptions. ${ }^{6}$ Whitehorse only. $\quad 7$ Yellowknife only. ${ }^{8}$ Excludes partial statutory and permissive exemptions.

[^319]:    ${ }^{1}$ Less than $\$ 500$

[^320]:    * Prepared in the National Accounts and Balance of Payments Division, Dominion Bureau of Statistics.

[^321]:    * Replaces, for this issue only, the Survey of Production analysis.
    $\dagger$ Indexes of Real Domestic Product by Industry of Origin, 1935-61 (Catalogue No. 61-505). This paper provides a detailed explanation of concepts, uses and limitations, data sources , methodology, etc., as well as a much wider range of industries than provided in this Section.

[^322]:    *Indexes of Real Domestic Product by Industry of Origin, 1995-61 (Catalogue No. 61-505). This paper provides a detailed explanation of concepts, uses and limitations, data sources, methodology, etc., as well as a much wider range of industries than provided in this Section.
    $\dagger$ See Revised Index of Industrial Production, 1935-1957 (Catalogue No. 61-502) and the current monthly publication Index of Industrial Production (Catalogue No. 61-005).

[^323]:    * More detailed information is given in DBS annual report Canadian Balance of International Payments and International Investment Position (Catalogue No. 67-201) and in Quarterly Estimates of the Canadian Balance of International Payments (Catalogue No. 67-001).

[^324]:    * Commodity trade statistics have been adjusted to reflect more closely the timing of transactions, particularly for investment goods, and to exclude commodities which are either covered elsewhere in the accounts or are not pertinent for balance of payments purposes.

[^325]:    ${ }^{1}$ Includes all net exports of non-monetary gold.

[^326]:    * A more extended historical review appears in DBS report Canada's International Investment Position, 1926 to 1954 (Catalogue No. 67-503) and more recent statistics in the annual report Canadian Balance of International Payments and International Investment Position (Catalogue No. 67-201).

[^327]:    ${ }^{1}$ Excludes short-term commercial indebtedness. $\quad{ }^{2}$ Includes international financial agencies. ${ }^{3}$ Country

[^328]:    ${ }^{1}$ Includes some investments held for residents of other countries.

[^329]:    * Except where otherwise indicated, this material has been revised by the Research Department of the Bank of Canada.

[^330]:    ${ }^{1}$ Includes investments; the change in loans outstanding does not equal the difference between disbursements and repayments because of year-end accounting adjustments.

[^331]:    ${ }^{1}$ Note issues in the process of being retired, the liability for which has been taken over by the Bank of Canada from the original issuers.

[^332]:    *Revised by the Master of the Royal Canadian Mint, Ottawa.

[^333]:    ${ }^{1}$ Less total float, i.e., cheques and other items in transit. $\quad 2^{2}$ The deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes were reclassified from "personal savings deposits" to "other notice deposits" as at Sept. 30, 1957, in the returns of the banks to the Department of Finance; from that date the figures are thus not comparable with those for previous years. The amount of deposits reclassified was approximately $\$ 140,000,000$.

[^334]:    * More detail is included in an article appearing in the 1961 Year Book, pp. 1115-1120, prepared by J. Douglas Gibson, General Manager of The Bank of Nova Scotia. The early history of currency and banking in Canada is given in the 1938 Year Book, pp. 900-905. A list of the banks at Confederation appears in the 1940 Year Book, p. 897 , and bank absorptions since 1867 are given in the 1941 edition, pp. 812-813. A table in the 1937 Year Book, pp. 894-895, shows the insolvencies since Confederation; the last insolvency occurred in 1923.
    $\dagger$ The larger Canadian banks have long maintained offices in London and New York. In addition, some Canadian banks for more than half a century have been providing an important part of the commercial banking lacilities in the Caribbean area (see Table 10, p. 1054). The Bank of Montreal opened an office in Tokyo in January 1962, the first to be established in Japan by a Canadian bank.

[^335]:    * Such loans were almost entirely a postwar innovation in Canadian lending practice, and had increased markedly during the easy-money period of 1954-55. Since 1956, term lending has generally been confined within narrower limits, although it is still practised when conditions permit.

[^336]:    ${ }^{1}$ Includes other items not specified.

[^337]:    ${ }^{1}$ Realized profits and losses on disposal of securities are included in operating earnings. for income taxes, losses, and transfers to inner reserves, 3 Includes taves other frofits and losses on sale of fixed assets and adjustments relating to prior years. ${ }^{5}$ After amounts retransferred to rest account.
    ${ }^{6}$ Includes income taxes on taxable portion of additions to and amounts retransferred
    from inner reserves, and foreign income taxes.

[^338]:    ${ }^{1}$ Excludes some debits reported in preceding years.

[^339]:    ${ }^{1}$ Reporting organizations only.

[^340]:    * The gold sovereign remained the standard for the Canadian dollar until 1910 when the currency was defined in terms of fine gold, making it the exact gold equivalent of the United States dollar. Both British and United States gold coins were, however, legal tender in Canada for this whole period.

[^341]:    * Noon quotations. Daily highs and lows may have exceeded these rates.
    $\dagger$ The operations of the Foreign Exchange Control Board from the time of its establishment to the termination of exchange control in December 1951 are reviewed in the 1941 to 1952-53 editions of the Year Book.

[^342]:    *Revised under the direction of the Superintendent of Insurance for Canada, Ottawa.

[^343]:    ${ }^{1}$ Profits before income taxes.

[^344]:    ${ }^{1}$ Includes companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba which, by arrangement, are inspected by the federal Department of Insurance. ${ }^{2}$ Excludes provincial companies of Nova Scotia, New Brunswick and Manitoba which are included with federal companies.
