Timber cutting rights are awarded by Forest Management Licences, Timber Sales and, in certain cases (particularly for salvage operations) by Timber Permits. Forest Management Licences may be granted for periods of up to 20 years and are renewable. Timber Sales may be for varying periods from one year upward and Timber Permits for periods of up to one year. At present, one long-term Pulpwood Berth with an area of 2,745 sq. miles and 12 long-term Timber Berths, all granted prior to 1930, are in force.

The area of the province under forest fire protection is 120,000 sq. miles with zones of priority established in the less accessible areas. Fires are detected through a comprehensive network of lookout towers and supporting air and ground patrols, all tied together by radio and departmental or public telephones. Two Canso water-bombers and two helicopters are rented for the worst of the fire season to back up the aircraft of the Manitoba Government Air Service.

The province has no forestry research organization but co-operates with several federal services which maintain two research areas. The Department co-operates fully with federal authorities in investigating and controlling forest damage resulting from insects and diseases. Public education in the fields of fire prevention and forest conservation is carried out and use is made of all usual methods including radio, television, newspapers, signs, talks to school children and club members, film tours, etc.

Saskatchewan.-The forests of Saskatchewan are located mainly in the northern half of the province and cover 117,738 sq. miles, or 53 p.c. of the total land area. Provincial forests constitute approximately 92 p.c. of all forest land in the province and are managed and developed by the Forestry Branch of the Department of Natural Resources.

The Forestry Branch, consisting of six divisions-Administration, Fire Control, Forest Management, Forest Research, Inventory and Silviculture-is responsible for developing and evaluating forest policies and management programs based on the findings of inventory and research. The responsibility for carrying out such policies and programs is borne by the various regional administrative authorities. For purposes of resource administration, the province, with the exception of the most northern portion, is divided into four Regions, each under the supervision of a Regional Superintendent. The Regions are subdivided into Conservation Officer Districts which vary in size according to resource base and population to be served. In the most northern part of the province, because of various special programs with northern residents, resource administration is the responsibility of the Northern Affairs Branch of the same Department. Close liaison is maintained between the Forestry Branch and the various regional authorities.

A major responsibility of the Forestry Branch is the development of techniques in the prevention, detection and suppression of forest fires. A network of 70 lookout towers equipped with two-way radios is maintained throughout the province and is supplemented by three aircraft on regular patrol duty during the high-hazard periods. A group of smokejumpers, trained to parachute on remote fires, is in constant readiness during the fire season and takes immediate suppression action which it maintains until relieved by overland crews. Northern Saskatchewan's communication system, with more than 875 two-way radio sets in operation in towers, vehicles, aircraft and forest camps, plays a vital role in the detection and suppression of forest fires. These activities have been assisted recently by the use of helicopters and aircraft equipped for water dropping.

Alberta.-The 157,595 sq. miles of provincial forest in Alberta are administered by the Alberta Forest Service of the Department of Lands and Forests at Edmonton. The Service is composed of five branches under a Director of Forestry-Administration, Forest Protection, Forest Management, Forest Surveys and Planning and Forestry Training.

For ease of administration the forest area has been divided into nine Divisions, each responsible for the forest within its boundaries. These Divisions are composed of Ranger Districts in which all activities are supervised by the district forest officer responsible to his divisional superintendent. The divisional staffis include: forest superintendent, assistant forest superintendent, divisional forester, chief ranger, mechanical foreman, carpenter foreman, equipment operators, scalers, land-use officers, radio operators, clerks, stenographers, and seasonal help such as standby fire crews, lookout men, general labourers and construction crews. Some Divisions have minimum security crews that are employed in forest management, protection and construction projects.

The Administration Branch supervises all branches, maintains general control over revenue and expenditure, maintains the equipment inventory and deals with personnel.

The Forest Protection Branch has charge of all phases of protection including prevention, detection, suppression and use of forest and prairie fires. The Branch also plans, supervises and executes the construction and maintenance of the road and building programs and supervises the radio communication facilities.

The functions of the Forest Management Branch include the acceptance and approval of management and annual operating plans prepared for leased and licensed Crown lands, implementation of management plans prepared by the Department, supervision of proper land-use practices and the disposal of Crown timber. This extends to all phases including the processing of timber applications, selection of timber to be sold, the cruising of merchantable timber, inspections of cutting areas to ensure proper logging and utilization practices, scaling of forest products, collection of dues and fees and the reforestation programs for areas denuded by cutting and fire.

The Forest Surveys and Planning Branch maintains the provincial forest inventory and prepares and maintains detailed inventories by management units; prepares long-and short-term management and protection plans; provides timber application forest-type maps; conducts other work pertaining to photogrammetry and forest-cover maps; develops and supervises recreational area plans; provides regulation of geophysical activities in the forest area; and provides technical drafting and mapping services to the Forest Service and the general public.

The Forestry Training Branch prepares training material and conducts training programs for Departmental personnel and other persons concerned with activities of fire control, forest management, forest protection and conservation. The Branch also organizes and supervises the activities of the Junior Forest Warden Clubs.

Two divisions and part of a third division are included in the Rocky Mountains Forest Reserve. This area is administered by the Alberta Forest Service but decisions of the Director of Forestry are based on policies of wise watershed regulation formed by the

Eastern Rockies Forest Conservation Board. The Board comprises one federal and two provincial members. This reserve includes part of the headwaters of the main prairie provinces river system.

Research in general is carried out by the federal Department of Forestry, which maintains the Kananaskis Experiment Station.

British Columbia.-The productive forest land of British Columbia in 1958 was inventoried at $208,411 \mathrm{sq}$. miles and, in addition, there were $59,227 \mathrm{sq}$. miles of forest land classed as non-productive. Of the productive area, immature timber occurred on 95,739 sq. miles; 84,275 sq. miles carried matured timber with a total volume of $251,000,000,000$ cu . feet; $28,397 \mathrm{sq}$. miles, including areas of recent burn, cut-over or windfall not yet re-stocked, were unclassified.

For administrative purposes, the province is divided into five Forest Districts with regional headquarters at Vancouver, Prince Rupert, Prince George, Kamloops and Nelson. Further decentralization of authority is effected by subdivision of the Forest Districts into Ranger Districts. There are approximately 25 Ranger Districts in each Forest District. Twelve directional, servicing or policy-forming divisions constitute the head office of the Forest Service at Victoria.

Efforts continue to bring British Columbia's forest resources under sustained-yield management and the forest industries are making progress toward more complete utilization of their raw materials. The problem is urgent despite the fact that, with a present annual cut of approximately $1,340,000,000 \mathrm{cu}$. feet, the total inventory would appear sufficient to support present needs in perpetuity. One of the more spectacular results of sustained-yield administration has been the swinging of a greater proportion of the annual forest harvest to the interior of the province. The over-cut coast (wet belt) forests now account for about 58 p.c. of the total forest cut each year and the interior cut for almost 42 p.c. For all practical purposes, the entire interior forest is publicly owned; the great majority of privately owned, leased or licensed forests are on the coast.

Several systems of timber disposal are in effect. The most publicized is the Tree Farm Licence, which constitutes a contract between the government and a company or individual whereby the latter agrees to manage, protect and harvest an area of forest land for the best possible return, in exchange for the right to the timber crop on the area. Tree Farm Licences are subject to re-examination for renewal every 21 years. Provincial Forests, Public Working Circles, and Sustained-Yield Units are the governmental equivalent of the Tree Farm Licence with the timber, when it is ready for cutting, being disposed of by public auction. Of major interest is the establishment of the first "pulp harvesting" area in the vicinity of Prince George. This plan is unique in North America, calling for the integration of a "saw-log" economy with a new pulp industry. Management, silviculture, roadbuilding and protection on such areas are the responsibility of the Forest Service. Other tenures of lesser importance are Tree Farms, Farm Woodlot Licences, and those Timber Sales issued outside 'regulated' areas.

Forest fire prevention techniques and organization for effective forest fire suppression are important aspects of planned, sustained-yield management of the forest resource, and these are constantly under review by the Forest Service. Although the Forest Service does not operate its own fleet of aircraft, extensive use is made of air tankers, patrol and reconnaissance aircraft, and helicopters under seasonal contracts. The predominantly rugged topography of the province and its extensive sparsely populated areas present problems in fire detection and accessibility to fires, and aircraft are playing an increasingly important part in the key initial discovery and attack period by supplementing the fixed lookout system and ground suppression organization. Close liaison with the federal Department of Forestry, which maintains laboratories in Vernon and Victoria, provides information about insect and fungal enemies of the forest.

## Subsection 3.-The Pulp and Paper Research Institute of Canada*

The Pulp and Paper Research Institute of Canada is a centre of research and learning concerned with virtually every aspect of the production and use of pulp and paper products. It was established in 1913 as a branch of the Dominion Forest Products Laboratories and in 1927 was reorganized under the joint sponsorship of the Canadian Pulp and Paper Association, the Federal Government and McGill University. The Institute staff carries out fundamental research and some applied research in the fields of woodland operations and pulp and paper mill operations. In addition, in co-operation with McGill University, it trains postgraduate students who are working toward master's and doctorate degrees in physical chemistry, wood chemistry, or chemical and mechanical engineering, and whose theses subjects lie in fields of interest to the pulp and paper industry.

The Institute occupies a building on the McGill campus erected by the pulp and paper industry and a building at Pointe Claire on the western outskirts of Montreal constructed by the Government of Canada. The Institute's facilities include: organic and physical chemistry, physics, hydraulics and engineering laboratories; pilot plants for chemical pulping, pulp and chip refining and waste liquor pyrolysis; a greenhouse and other facilities for woodlands research; an extensive library; shops and special facilities for pulp and paper testing and for photographic and microscopic (both light and electron) studies of wood, pulp and paper. It has a staff of about 180.

The Institute's research activities comprise a basic program in pulp and paper research and in woodlands research, contract research, and technical services. The basic pulp and paper research program is supported by assessments from the Maintaining Membership (some 42 companies, representing more than 100 mills and about 95 p.c. of the total production of the Canadian industry) and by a grant from the Canadian Pulp and Paper Association. The woodlands research program is supported by assessments on all member companies of the Canadian Pulp and Paper Association east of the Rockies that use pulpwood and by a grant from the Association. Both programs comprise research of interest to the industry broadly, as distinct from that which is the concern of a single company only.

The projects in the basic programs range from studies of the growing seedling in the forest to the converted pulp and paper product, and fall into seven broad classifications: woodlands, mechanical pulping, chemical pulping, paper making, process control, product quality and waste utilization. The Institute is regarded as a centre for broad, long-range and uninterrupted studies of basic principles and for major engineering research and development projects which individual pulp and paper companies would find difficult to justify if the costs were not shared. Moreover, the Institute is a centre of highly specialized equipment and manpower which individual companies would not normally have.

In addition to its permanent staff, the Institute, in co-operation with McGill University, has some 40 graduate students working on fundamental projects in the background of pulp and paper technology, which also serve as their theses topics. The head of the Institute's Wood Chemistry Division, who is also Chairman of the Chemistry Department and the E. B. Eddy Professor of Industrial and Cellulose Chemistry at McGill, directs graduate student work on such subjects as the behaviour of the materials of which wood is made-cellulose, lignin and hemicelluloses. The head of the Institute's Physical Chemistry Division, also a Research Associate in the McGill Chemistry Department, directs graduate student work in the physical chemistry of fibres, e.g., the forces that cause cellulose fibres in a water suspension to mat together to form paper. An Associate Professor of Chemical Engineering at McGill, who is a consultant to the Institute, directs graduate students in such chemical studies as the rate of drying of droplets and fibres. In addition, other members of the Institute's staff who likewise hold concurrent honorary positions at McGill assist in this student training program.

[^156]The Institute also undertakes contract research projects on a cost-reimbursement basis for individual companies or groups of companies in the pulp and paper or allied fields. The larger of these co-operative contracts have been concerned with problems of particular segments of the Canadian pulp and paper industry, such as the investigation into the causes of corrosion in alkaline pulping equipment and the study of the rapid deterioration of paper machine wires.

A further function of the Institute is to provide a broad range of technical information services to the industry and, to some extent, to other industries and the public. It maintains a specialized library for this purpose which stocks bibliographies, abstracts, translations and critical reviews for the use of the scientific staff and the industry.

## CHAPTER XIII.-MINES AND MINERALS

The interpretation of the symbols used in the tables throughout the Year Book will be found on $p$. viii of this volume.

## Section 1.-Canada's Mineral Industry, 1962-63*

Canada's mineral industry continued to grow and diversify in 1963 as production value reached an all-time high of $\$ 3,000,000,000$. Each of the three sectors of the industrymetals, industrial minerals, and mineral fuels-contributed to the $5.3-$ p.c. over-all increase in output, with mineral fuels production registering the largest advance.

The growth of the industry may also be measured by the index of physical volume of mineral production which reached a new high at 294 (base $1949=100$ ), up from 287 the previous year. The metals index was 194 compared with 198 in 1962; the industrial minerals index rose from 222 to 228 ; and the mineral fuels index advanced sharply from 481 to 514 . The per capita value of mineral output rose in 1963 to an estimated $\$ 158.94$ from the previous high of $\$ 153.53$ in 1962 ; in 1950 it was $\$ 76.24$. Since 1950, per capita mineral production has increased at an average annual rate of 5.9 p.c. compared with an average annual gain of 4.3 p.c. in per capita value of Canada's gross national product (GNP), as measured in terms of current dollars.

In addition to a new record for the value of mineral production in 1963, the mineral industry experienced a very successful year from several other points of view. Exploration activity and investment generally remained at high levels and accelerated in some directions. Development of properties for production and expansion of established facilities provided for further gains in output and greater diversification in the years ahead. The export of minerals in the form of ore and raw materials and in semi-processed forms continued to account for about one third of Canada's total merchandise exports, which in 1963 were worth $\$ 6,800,000,000$. The Canadian mineral industry remained in the forefront among world producers in market development and in the adoption of mining, milling

[^157]
and processing techniques for more efficient production. The need to be highly competitive is imperative because a condition of abundant supply in world markets exists for many mineral commodities. The Canadian mineral industry depends greatly on a strong position in world markets; in recent years the value of mineral and mineral product exports has been the equivalent of almost two thirds of mineral production value.

The ten leading minerals in terms of value of output in 1963 accounted for 78.7 p.c. of total output, essentially the same as in 1962. Production values were higher for copper, iron ore, zinc, asbestos, oil, natural gas, cement, and sand and gravel but lower for gold, nickel and uranium. The leading minerals, valued in millions of dollars with 1962 figures in brackets, were: crude petroleum, 633 (552); nickel, 363 (384); iron ore, 292 (263); copper, 288 (283); gold, 150 (156); uranium, 149 (158); and asbestos, 135 (130). Canada leads the Free World in the production of nickel, asbestos and platinum metals; is second in cadmium, cobalt, uranium, zinc, sulphur and gold; third in titanium, gypsum, magnesium and lead; and ranks high among world producers of copper, iron ore, silver and several other mineral commodities. Although the United States is Canada's principal export market, having taken 60 p.c. of all mineral exports in 1963, Canadian minerals and mineral products are finding new markets every year and some mineral exports are marketed in as many as forty or fifty countries.

Mineral trends are apparent from an examination of 1963 production values of the three industry sectors and of the provinces. Metals output was valued at $\$ 1,504,500,000$, $\$ 8,100,000$ higher than in the previous year; shipments of industrial minerals (non-metallic minerals and structural materials) were worth $\$ 607,500,000$, up from $\$ 566,000,000$ in 1962 ; and mineral fuels output increased to $\$ 882,400,000$ from $\$ 780,900,000$ in 1962. Mineral production gains were recorded for all provinces except Ontario, which had a decline of 4 p.c., and Prince Edward Island. Output in the Yukon Territory advanced but there was a 13-p.c. decline in the Northwest Territories. Ontario continued to be Canada's
leading mineral-producing province, accounting for 29.1 p.c. of the total value of mineral output, but its percentage of production has been showing a year-to-year decline since 1959. Alberta, with 21.1 p.c. of the total, was the second highest mineral-producing province followed by Quebec with 17.9 p.c., British Columbia with 8.7 p.c. and Saskatchewan with 9.3 p.c. Thus, Ontario, Quebec and Alberta accounted for over 68 p.c. of the country's total output. Provincially, Alberta had the largest gain in mineral output in 1963 ( $\$ 68,500,000$ ) followed by British Columbia ( $\$ 25,300,000$ ) and Newfoundland ( $\$ 19,900,000$ ).

The following were representative of new mineral developments in Eastern Canada. In Newfoundland, one company commenced asbestos production in a 5,000-ton-a-day mill; in Labrador, one company started producing high-grade iron ore pellets at a $5,000,000-$ ton-a-year facility at Labrador City and another, with property near Wabush Lake, continued mine development, construction of railway and port facilities and started construction of a 5,000,000-ton-a-year pellet plant at Pointe Noire, Que., the shipping port on the St. Lawrence River. In Quebec, Eastern Canada's first zinc refinery began production at Valleyfield, near Montreal. Three copper-zinc mines in the Mattagami Lake area in the northwestern part of the province commenced production and shipped their zinc concentrates to the Valleyfield refinery. A large iron ore producer completed its first full calendar year of concentrate production from an $8,000,000$-ton-a-year plant at Gagnon, In Ontario, mine development and plant construction continued on a 1,000,000-ton-a-year iron ore pellet operation southeast of Kirkland Lake. A tripling in capacity of an iron ore pellet plant to 750,000 long tons a year was completed at Copper Cliff. A producer of

medium-grade direct shipping iron ore in the Steep Rock Lake area announced plans to build a $1,000,000$-ton-a-year pellet plant to pelletize the screened fines from its 2,500,000-ton-a-year operation.

The more notable mineral developments of 1963 in the four western provinces included the first year of major production of potash in Saskatchewan, with output amounting to an estimated $1,000,000$ tons. Output of elemental sulphur in Alberta and British Columbia from the processing of natural gas increased greatly and there was a muchimproved sulphur market in Canada, the United States and across the Pacific. The yearend production target of $800,000 \mathrm{bbl}$. a day of crude petroleum and natural gas liquids was reached. Steady gains were recorded in natural gas production and consumption. The mining industry maintained a high rate of activity in exploration and development of iron ore and base-metal properties, with several mines commencing production.

Canada can look forward with much assurance to continuing expansion of its mineral resource base and steady production growth; its prominent position as a world mineral producer will thereby be maintained and, perhaps, even enhanced. There are many projects under way, both large and small in the three sectors of the industry, which will result in higher output and greater production-diversification. There is, happily, no feeling of self-complacency over past achievements in the industry but rather one of expectancy concerning future major developments. The important base metals discovery made in early 1964 by Texas Gulf Sulphur Corporation in the Timmins area of Ontario gave a great impetus to mineral exploration. Much of the country's favourable mineral-bearing lands, particularly in the northern two thirds of the country, remain unexplored and there is no reason to believe that these areas will be any less productive in mineral wealth than the southern third.

## Subsection 1.-Metals

Nickel.-Canadian nickel production during 1963 was 218,649 tons valued at $\$ 362,781,957$, slightly less than in 1962 . The industry operated at about 93 p.c. of its rated capacity. Canada is traditionally the world's leading supplier of nickel and accounts for about 80 p.c. of Free World production. The leading producers-The International Nickel Company of Canada, Limited and Falconbridge Nickel Mines, Limited-are the world's largest.

Near Sudbury, Ont., International Nickel operated six mines-the Creighton, FroodStobie, Garson, Levack and Murray underground mines and the Clarabelle open pit. Also near Sudbury, Falconbridge operated five mines-Falconbridge, East, Hardy, Onaping and Fecunis. As a result of a production cut, the East mine was closed and production was reduced at the other four mines. The company completed and opened a $\$ 1,000,000$ addition to its research centre at Thornhill, Ont.

In Manitoba, the Lynn Lake mine of Sherritt Gordon Mines Limited operated at capacity though at slightly lower grade than in 1962. It had a good market for its nickel products sold in briquette and powder forms. The only major change at the Thompson mine of International Nickel was the decision to sink a service shaft at a location on the edge of Thompson Lake.

Several smaller nickel mining operations made good progress in 1963. The Gordon Lake mine of Metal Mines Limited in northwestern Ontario began production with a mill designed to treat 500 to 700 tons daily, although difficulties were experienced in reaching capacity because of poor ground conditions in the mine. A bulk nickel-copper concentrate is trucked to Lac du Bonnet, Man., and shipped to Copper Cliff, Ont., for smelting. The Marbridge Mines Limited mine in La Motte township, Que., was operating at close to its daily capacity of 400 tons. Bulk nickel-copper flotation concentrates, amounting to about 2,800 tons a month, are trucked to Falconbridge, Ont., for smelting. Lorraine Mining Company was shaft sinking to 1,000 feet on its property in the Belleterre area of Quebec. Indicated ore reserves to 800 feet are 550,000 tons of 2.1 p.c. combined nickelcopper. Giant Mascot Mines Limited, near Hope, B.C., treated about 1,200 tons of ore
daily for 23 days each month. Bulk nickel-copper concentrates are exported to Japan. After installation of new equipment, daily mill capacity in 1964 will be about 1,500 tons.

There were no price changes for nickel during the year. Prices remained at 84 cents a lb. for Canada and 79 cents for the United States, both f.o.b. Port Colborne, Ont. The United States price includes import duty of $1 \frac{1}{4}$ cents a lb.

Copper.-Mine production of copper increased slightly over 1962 but there was a minor decline in the output of refined copper; total mine output was 458,735 tons valued at $\$ 287,704,456$ in 1963. Increased production in British Columbia, Manitoba and New Brunswick offset reductions in Ontario, Quebec, Newfoundland and Saskatchewan. There was no production from the Yukon and Northwest Territories. Five mines started production in 1963 and 12 were under development. A sustained demand for copper has stimulated prospecting in all the copper-producing provinces and territories.

Six smelters for the reduction of copper and copper-nickel ores and concentrates are operated in Canada. In the Sudbury district of Ontario, International Nickel operates smelters at Copper Cliff and Coniston, and Falconbridge Nickel Mines produces coppernickel matte at its Falconbridge smelter. Hudson Bay Mining and Smelting at Flin Flon, Man., smelts concentrates from its mines in Manitoba and Saskatchewan and copper concentrates from Sherritt Gordon's mine at Lynn Lake, Man. Ores and concentrates from most of the copper mines in Ontario, Quebec and Newfoundland are smelted at the Noranda smelter of Noranda Mines, Limited and the Murdochville smelter of Gaspe Copper Mines, Limited, both in Quebec. Copper refineries are operated by International Nickel at Copper Cliff, Ont., and by Canadian Copper Refiners Limited at Montreal East, Que. Production of refined copper in 1963 was 378,911 tons, 1 p.c. less than in 1962.

Production from the three copper-producing mines in Newfoundland totalled 14,058 tons valued at $\$ 8,856,369$. At Baie Verte, Consolidated Rambler Mines Limited started construction of a 400-ton-a-day mill in preparation for production in 1964. New Brunswick's copper production totalled 8,150 tons valued at $\$ 5,134,500$, more than double the 1962 output. Production was obtained from the Wedge mine of The Consolidated Mining and Smelting Company and from Heath Steele's mine both in the Newcastle-Bathurst district. Brunswick Mining and Smelting Corporation Limited near Bathurst was building a 4,500-ton-a-day concentrator in preparation for production in 1964.

The combined output of Quebec's 21 copper-producing mines was 145,019 tons valued at $\$ 91,362,122$, slightly less than in 1962 because of the continuation of production curtailments at Noranda's Horne mine and Gaspe Copper's Needle Mountain mine, and a prolonged strike at the property of Solbec Copper Mines, Ltd. In the Mattagami Lake area, Mattagami Lake Mines Limited, New Hosco Mines Limited and Orchan Mines Limited started production from their mines in October. In the Noranda-Val d'OrNormetal area, Lake Dufault Mines Limited completed an initial shaft-sinking program and began development of its massive copper-sulphide orebody. Construction of a $1,300-$ ton-a-day mill was started with production scheduled for 1964. North of Amos, Rio Algom Mines Limited and Joutel Copper Mines Limited continued underground exploration at their respective properties.

Production curtailments at the mines of International Nickel and Falconbridge in the Sudbury area reduced Ontario's copper output by about 5 p.c., to 180,058 tons valued at $\$ 112,137,657$. Ontario's producing mines were: Geco and Willroy at Manitouwadge; North Coldstream at Kashabowie; Rio Algom's Pater at Spragge; Kam-Kotia and McIntyre at Timmins; International Nickel (six mines, three mills and two smelters) and Falconbridge (four mines, three mills and a smelter) in the Sudbury district. Kam-Kotia Porcupine Mines, Limited continued underground development of its new orebody and production from it will start in 1964. McIntyre-Porcupine Mines, Limited started production from its low-grade copper orebody in July. Concentrates were shipped to Copper Cliff for smelting by International Nickel. Prospecting parties have been active in northwestern Ontario between Sault Ste. Marie and Port Arthur since the discovery of copper mineralization in the Batchawana area.

In Manitoba-Saskatchewan, Hudson Bay Mining and Smelting Co., Limited, Sherritt Gordon Mines Limited and Stall Lake Mines Limited had a combined output of 47,165 tons of copper valued at $\$ 29,714,095$, an increase of 5 p.c. over 1962. Hudson Bay operated a central mill and smelter on ores from the Schist Lake and Chisel Lake mines in Manitoba, the Coronation mine in Saskatchewan and the Flin Flon mine that straddles the ManitobaSaskatchewan boundary. The company continued development and exploration of its Stall Lake and Osborne Lake mines near Snow Lake, Man.

Copper production in British Columbia at 63,964 tons, worth $\$ 40,297,518$, set a new record, exceeding the 1962 value by about 19 p.c. The producing mines were: Cowichan Copper's Sunro at River Jordan and Coast Copper at Benson Lake on Vancouver Island; Britannia at Britannia Beach; Bethlehem in Highland Valley; Craigmont at Merritt; and Phoenix at Greenwood. Bethlehem Copper Corporation increased its mill capacity from 3,300 tons of ore a day to 4,000 tons a day. Western Mines Limited continued surface and underground exploration at its property at the south end of Buttle Lake on Vancouver Island. Granduc Mines Limited on the Unuk River and Granisle Copper Limited on an island in Babine Lake were conducting studies on the feasibility of bringing their properties into production. Exploration parties were active in all parts of British Columbia.

Iron Ore.-The Canadian iron ore industry in 1963 experienced its second consecutive record year; shipments were $30,134,598$ short tons, up over 10 p.c. from 1962. The gain was largely the result of higher steel production rates in the United States. All producing provinces shared in the increase but some companies that shipped medium-grade ore encountered lower sales and prices. This was a reflection of a general trend in all consuming countries whereby steel companies are demanding ore of high grade and good physical characteristics. In'their efforts to meet these demands, many Canadian ore producers are conducting research programs to develop economical beneficiation processes to improve their ores.

There are five main market areas for Canadian iron ore-the United States, Britain, Western Europe, Japan and Canada. The United States is the principal market and iron ore consumption there rose by $7,500,000$ long tons in 1963 . United States mines accounted for half of this increase and Canadian mines for most of the remainder. Canadian iron ore shipments to the United States increased mainly because of production capability increases of two large producers owned by United States steel companies; these companies produce high-grade concentrate or pellets particularly suitable for the United States market. On the other hand, non-captive sales of medium-grade ore to the United States continued to weaken. In Western Europe, steel production rates continued on a plateau after a decade of continuous, rapid growth. Canadian iron ore exports to Britain increased but this was because a large tonnage contracted for delivery in 1962 was postponed until 1963. Substantial shipments of high-grade concentrates and pellets from Labrador were made to Britain for the first time; exports to Britain and Western Europe in the past had always been of medium-grade ore. Canadian ore sales to Western Europe continued to decline because of competition from new sources of high-grade ore in Africa, Asia and South America. Activity in the Japanese steel industry picked up again in 1963, following a pause in 1962. Canadian shipments of iron ore to Japan, all from British Columbia, reflected the increase in steel production.

Despite Canada's rapidly expanding iron mining industry, nearly two thirds of the iron ore consumed in this country is imported from the United States. There are several reasons for this but mainly it is because Canadian consumers participated in the development of United States mines or established commercial ties with United States merchant companies prior to 1950, when little ore was mined in Canada. However, Canadian steel companies have recently participated in domestic mining ventures and an increasing proportion of consumption will be of domestic ore. Consumption of domestic ore increased by nearly 10 p.c. in 1963 but imports were about 12 p.c. higher. In 1965 a new producer
in Labrador will begin production of concentrates and pellets and nearly $2,000,000$ long tons a year of captive ore will be taken by Canadian steel companies that have interests in the company.

Canadian iron ore producers continue to benefit from the stabilization of the external value of the Canadian dollar at a rate below that of the United States, since most sales contracts specify prices in United States dollars. This benefit is partly offset by increased costs of machinery and equipment imported for property development and production.

In 1963, fourteen companies were directly engaged in iron mining-one in Newfoundland, one with mines in Labrador and Quebec, two in Quebec, five in Ontario, and five in British Columbia. A sixth mine in Ontario shipped small tonnages from stockpile. In addition, four companies shipped iron ore produced as a byproduct of base-metal operations. Iron Ore Company of Canada, with direct-shipping ore deposits astride the LabradorQuebec border at Schefferville (Que.) and concentrating-grade deposits near Labrador City (Nfld.), is the largest producer, accounting for nearly 40 p.c. of 1963 shipments. Wabana Mines of Dominion Steel and Coal Corporation, Limited, producing mediumgrade concentrate from underground mines on Bell Island, Nfld., accounted for 4.3 p.c. of the year's shipments. Quebec Cartier Mining Company's shipments of high-grade concentrate from its operations at Gagnon, Que., made up 23.4 p.c. of 1963 shipments, making it Canada's second largest producer, and high-grade pellets from Hilton Mines, Ltd. near Shawville, Que., accounted for another 3.2 p.c. In Ontario, Algoma Ore Properties Division of The Algoma Steel Corporation, Limited operates mines and a sinter plant at Wawa and accounted for 6.3 p.c. of 1963 shipments. Marmoraton Mining Company, Ltd. produces high-grade pellets at its mine and plant near Marmora, and Lowphos Ore, Limited produces a similar product near Capreol. These two companies shipped 1.4 p.c. and 1.8 p.c., respectively, of Canada's total in 1963 . In the Steep Rock Lake area, Caland Ore Company Limited and Steep Rock Iron Mines Limited produce medium-grade, direct-shipping ore and concentrate; they accounted for 7.4 p.c. and 3.5 p.c., respectively, of Canadian shipments. Five British Columbia producers ship magnetite concentrate to Japan and accounted for 6.6 p.c. of Canadian shipments. Byproduct iron ore was produced by the Consolidated Mining and Smelting at Kimberley, B.C., and by International Nickel and Falconbridge Nickel Mines in the Sudbury area. Noranda Mines shipped from stockpile at Cutler, Ont.

Several companies were preparing for iron ore production in 1963. In Labrador, Wabush Mines will produce up to $5,500,000$ long tons of iron ore concentrate annually, beginning in 1965; up to $4,900,000$ tons of this concentrate will be pelletized in a plant being built at Pointe Noire, Que. Jones \& Laughlin Steel Corporation will begin production of high-grade pellets, up to $1,000,000$ long tons a year, at a new mine plant near Kirkland Lake, Ont.; it is scheduled for completion in 1964. In British Columbia, Coast Copper Mines Limited will begin recovery in 1964 of 250 long tons of magnetite concentrate a day as a byproduct from copper ore at its mine on northern Vancouver Island.

Gold.-In 1963 the average Royal Canadian Mint price for gold rose to $\$ 37.74$ an oz.t. in Canadian funds from $\$ 37.41$ in 1962. Despite the higher price, gold production decreased to $3,979,003$ oz.t. valued at $\$ 150,175,632$ from $4,178,396$ oz.t. valued at $\$ 156,313,794$ the previous year. On May 2, 1962, the Canadian dollar was stabilized at $92 \frac{1}{2}$ cents in terms of the U.S. dollar but could fluctuate 1 p.c. either side of the fixed value. The range in value for the Canadian dollar was thus set at from $\$ 0.916$ to $\$ 0.934$ in relation to the U.S. dollar and the corresponding Mint price for gold between $\$ 37.46$ and $\$ 38.22$ per oz.t.

An Act to amend the Emergency Gold Mining Assistance Act was passed by the House of Commons on Dec. 9, 1963. This amendment extended the Act to the end of the calendar year 1967, without changing the present method of computing the amount of assistance payable. New provisions in the Act required, however, that new lode gold mines commencing production after June 1965 must provide direct support to existing gold
mining communities to qualify for cost assistance. Despite continuing cost assistance, many gold mines were having difficulty in continuing to operate. Increased depth of mining and lower grades of ore available for mining increased operating costs. Two small gold mines ceased operating in 1963 and several others were expected to close late in 1964 or early in 1965. No new gold mines opened in 1963 but a few small ones were expected to start producing in 1964-65.

A total of 50 lode gold mines operated during 1963 and of these 42 received cost assistance under the terms of the Emergency Gold Mining Assistance Act. Mines not eligible for cost assistance sold most of their gold on the open market. During the year, the proportion of gold coming from lode gold mines decreased to 82.6 p.c. from 83.4 p.c. and byproduct gold recovered from base-metal ores increased to 16.0 p.c. from 15.3 p.c. Placer gold accounted for 1.4 p.c. compared with 1.3 p.c. in 1962.

Ontario was again the main producer, accounting for 58.5 p.c. of the 1963 gold output compared with 58.0 p.c. in 1962, but production was lower at an estimated $2,326,433$ oz.t. compared with $2,421,249$ oz.t. in 1962. Only the Kirkland Lake area and Port Arthur mining division showed increases. Twenty-nine lode gold mines operated in the province, the same as in 1962, but H. G. Young Mines Limited in the Red Lake mining division closed in March. Twelve mines operated in the Porcupine district, the chief producers being Hollinger Consolidated Gold Mines, Limited (Canada's second-largest gold producer), McIntyre-Porcupine Mines, Limited and Dome Mines Limited. In the Red LakePatricia mining divisions, seven mines operated, the chief producers being Campbell Red Lake Mines Limited, Madsen Red Lake Gold Mines Limited and Dickenson Mines Limited. In the Larder Lake area, Kerr Addison Mines Limited had a 22-p.c. drop in gold output but still remained Canada's largest gold producer. In the Kirkland Lake area, five mines operated, the main producers being Macassa Gold Mines Limited, WrightHargreaves Mines, Limited and Upper Canada Mines, Limited. In the Port Arthur mining division, three mines operated, with Consolidated Mosher Mines Limited being the largest producer. Renabie Mines Limited continued operations in the Sudbury mining division. Some 64,000 oz.t. of gold were recovered as a byproduct from basemetal ores in Ontario, mainly from the nickel-copper mines of the Sudbury district. No placer gold production was reported.

Quebec produced 23.4 p.c. of Canada's gold output compared with 23.8 p.c. in 1962. Thirteen lode gold mines operated, one fewer than in 1962, and production was estimated at 931,621 oz.t. compared with 993,560 oz.t. Eldrich Mines Limited ceased operating in December 1962. The largest lode gold producers were Lamaque Mining Company Limited and Sigma Mines (Quebec) Limited, both at Bourlamaque, and East Malartic Mines, Limited at Malartic. Several prospective gold producers were under development. Gold recovered as a byproduct from base-metal ores represented 44.6 p.c. of the provincial total compared with 41.6 p.c. in 1962. No placer gold was reported.

The Northwest Territories produced 9.5 p.c. of the gold recovered compared with 9.6 p.c. in 1962. All production came from lode mines in the Yellowknife district and totalled 378,520 oz.t. compared with 400,292 oz.t. in 1962 . Four mines operated with Giant Yellowknife Mines Limited, Canada's third largest gold producer, being the main producer.

British Columbia produced 3.9 p.c. of Canada's output compared with 3.8 p.c. in 1962; recovery was 156,000 oz.t. compared with 159,492 oz.t. The only two large lode gold mines operating were Bralorne Pioneer Mines Limited and The Cariboo Gold Quartz Mining Company, Limited. Byproduct gold from base-metal ores accounted for 30.4 p.c. of the total in 1963 and placer recovery for 1.9 p.c.

Manitoba and Saskatchewan together accounted for 3 p.c. of the Canadian total. Most of the output came from the Flin Flon base-metal mining area and from the San Antonio gold mine. In the Yukon Territory, all gold recovered came from placer operations. The dredging and hydraulicking operations of The Yukon Consolidated Gold

Corporation Limited in the Dawson City area recovered about 75 p.c. of Canada's total placer gold production. The small gold output of the Atlantic Provinces came as a byproduct of base-metal production.

Uranium.-Canada has been one of the world's leading producers of uranium since the metal became important as a fissionable material for military purposes and, more recently, in the development and production of atomic energy for electric power generation. One of the largest known deposits in the world is in Canada where present reserves represent about 37 p.c. of the total in the non-communist world. The production of uranium in Canada has been characterized by features which are unique in this country because the industry was started by the Canadian Government at a time of emergency and, unlike other minerals, the sale of uranium products is government controlled.

The rapid growth of the uranium mining industry since World War II was a remarkable achievement. In 1958, Canada was the world's leading producer of uranium and the value of $\mathrm{U}_{3} \mathrm{O}_{8}$ produced in both 1958 and 1959 exceeded the value of any other Canadianproduced metal. As an export commodity, uranium ranked fourth in value in 1959 following newsprint, wheat and lumber. Production from 25 mines in that year was 15,892 tons of $\mathrm{U}_{3} \mathrm{O}_{8}$ valued at $\$ 331,000,000$. Since 1959, however, the decline in production, resulting from declining export markets, has been almost as rapid as the spectacular rise from 1953 to 1959. In $1963,8,141$ tons were produced and at the end of the year only seven mines were in operation; it is expected that the number will be reduced to two by the end of 1965.

The present surplus of uranium in the United States and Britain, the major consuming countries to which Canada has been shipping, makes it unlikely that demand will rise again before the 1970's. Practically all of Canada's uranium was sold under contract to the United States Atomic Energy Commission (USAEC) and the United Kingdom Atomic Energy Authority (UKAEA). The United States, Canada's largest customer, announced in 1959 that it would not exercise its option to purchase additional uranium from Canada. To prevent a collapse of the industry in 1962 and 1963, when the USAEC contracts would expire, the Government of Canada, through Eldorado Mining and Refining Limited (see p. 121), negotiated a delivery stretch-out for the uranium already under contract with the USAEC and the UKAEA. This plan also permitted the transfer of contracts between companies. By September 1968, when the stretch-out period ends, most companies will have fulfilled their original contracts and any additional ones they may have acquired through transfers from other companies.

In 1962, a contract was signed with the UKAEA for the delivery of 12,000 tons of $\mathrm{U}_{3} \mathrm{O}_{8}$ over a period extending until late 1971. This contract permitted each of the seven mining companies, which were still operating in 1962, to extend its operating life approximately 16.7 months past the completion date of its previous commitments. However, only one mine will be able to stretch out its production into 1971.

Procurement and marketing of most of the uranium produced in Canada is the responsibility of Eldorado Mining and Refining Limited. Canadian producers are permitted, however, to make small sales of surplus uranium $\left(\mathrm{U}_{3} \mathrm{O}_{8}\right)$ to countries that do not hold agreements with Canada for co-operation in the peaceful uses of atomic energy. The maximum amount that any such country may receive in total from Canada is $2,500 \mathrm{lb}$. Producers may also sell larger amounts, under permit from the Federal Government, directly to countries that hold bilateral agreements with Canada, but sales of this nature have been small.

Ore reserves as of Jan. 1, 1964, were estimated at 225,000,000 tons containing 207,000 tons of recoverable uranium oxide $\left(\mathrm{U}_{3} \mathrm{O}_{8}\right)$ and about 82,000 tons of thorium oxide $\left(\mathrm{ThO}_{2}\right)$. Reserves in the conglomeratic deposits in the Blind River-Elliot Lake district of Ontario constitute 93 p.c. of Canada's total. Reserves in pitchblende-bearing vein-type deposits in the Beaverlodge Lake area of northern Saskatchewan comprise 6 p.c. and the pegmatitic deposits in the Bancroft area of southeastern Ontario make up about 1 p.c. Scheduled deliveries of $\mathrm{U}_{3} \mathrm{O}_{8}$ to the USAEC and the UKAEA from 1964 to 1971, inclusive, total 16,851
tons. Thus, by the end of 1971 Canada's reserves will be approximately 190,000 tons of recoverable $\mathrm{U}_{3} \mathrm{O}_{8}$ if no further exploration is undertaken before then. Domestic requirements of uranium for nuclear power purposes will not appreciably affect Canada's ability to export uranium in the future.

Lead and Zinc.-Based on the lead content of ores and concentrates exported and the lead recovered domestically from ores and concentrates, Canada's estimated production of lead in 1963 was 205,899 tons, slightly less than in 1962. Small increases reported by a number of mines were offset by declines in shipments that resulted, in part, from prolonged strikes at the Solbec mine in the Eastern Townships of Quebec and the Reeves MacDonald mine in southeastern British Columbia. Canada's average annual lead prices during 1963 and 1962 were 11.04 and 9.93 cents a lb. Exports of lead ores and concentrates went to Belgium, the United States, West Germany and Britain, the United States, by far the largest importer, receiving 27,103 tons or 50 p.c. of the total. Lead metal exports totalling 97,144 tons went to 16 countries including Britain and the United States which, respectively, received 44,080 and 31,690 tons; the two together took 78 p.c. of total lead metal exports.

Like lead, estimated production of zinc in all forms, including that from zinc plant residues, at 457,517 tons was slightly lower than in 1962 . Most of the decrease was accounted for by the reduced output of the Solbec mine in Quebec and the Reeves MacDonald mine in British Columbia. Output of refined zinc was 283.380 tons, slightly higher than in 1962. The average price for the year was 12.20 cents a lb.; in 1962 it was 11.50 cents. Exports of zinc ore concentrates, totalling 213,044 tons, went mainly to the United States ( 156,964 tons), Belgium ( 14,379 tons), Norway ( 13,035 tons) and Britain ( 10,616 tons). The remaining 18,050 tons went to four other countries. Of the 25 countries that imported zinc metal from Canada in 1963, Britain, the United States, India and the Netherlands accounted for 186,765 tons, or 94 p.c. of the 200,002 tons exported. By far the largest amounts went to Britain and the United States which imported 82,857 and 74,251 tons, respectively.

All of the Yukon Territory's production of lead and zinc was accounted for by United Keno Hill Mines Limited, which operates mines in the Mayo district some 200 miles north of Whitehorse.

British Columbia's production was mainly from the southeastern part of the province with most of the production being accounted for by The Consolidated Mining and Smelting Company of Canada Limited which operates the Sullivan mine at Kimberley, the H. B. mine at Salmo and the Bluebell mine at Riondel. Daily lead-zinc ore production from these three mines was, respectively, $10,000,1,200$ and 700 tons. Other large producers in this part of the province included Canadian Exploration, Limited at Salmo, Reeves MacDonald Mines Limited at Remac and Sheep Creek Mines Limited at Toby Creek. British Columbia's only producer of copper-zinc ore was the Anaconda Company (Canada) Ltd. which operates the Britannia mine some 20 miles north of Vancouver. There are a number of smaller lead-zinc producers in British Columbia and Consolidated Mining and Smelting treats concentrates from most of these properties, as well as some Yukon Territory and foreign concentrates, at its Trail smelter.

All of Saskatchewan's output of zinc came from the large base-metal mine at Flin Flon operated by Hudson Bay Mining and Smelting Co., Limited. This mine, which straddles the Saskatchewan-Manitoba boundary, was also the source of most of Manitoba's zinc and some of its lead. Other mines operated by Hudson Bay in the Flin Flon area and the Chisel Lake mine in the Snow Lake area of Manitoba accounted for a significant portion of Manitoba's output of lead and zinc. Stall Lake Mines Limited in the Snow Lake area began, in 1963, to mine copper-zinc metal ore at about 100 tons daily. This ore plus all the ore mined by Hudson Bay was concentrated in Hudson Bay's 6,000 -ton mill at Flin Flon.

Ontario's two producers of lead and zinc were Geco Mines Limited and Willroy Mines Limited, both of which mine copper-zinc-lead ore at Manitouwadge, north of Lake Superior.

The companies' main products are copper and zinc concentrates; only small amounts of lead concentrate are produced. At Port Maitland on Lake Erie, zinc concentrates from Ontario and Quebec mines are roasted by Sherbrooke Metallurgical Company Limited.

Quebec's lead and zinc production was less than in 1962, due for the most part to the five-month strike at the copper-zinc-lead mine in the Eastern Townships operated by Solbec Copper Mines, Ltd. and to the October 1962 closure of the copper-zinc mine at Noranda operated by Waite Amulet Mines, Limited. Besides Solbec, there were three other producers of ores containing recoverable amounts of lead-The Coniagas Mines, Limited at Bachelor Lake and Manitou-Barvue Mines Limited at Val d'Or in northwestern Quebec, and New Calumet Mines Limited on Grand Calumet Island in the Ottawa River. These three companies produced substantial amounts of zinc; Manitou-Barvue was also a copper producer. Other sources of zinc were the copper-zinc ores mined in northwestern Quebec where two new companies came into production-Mattagami Lake Mines Limited and Orchan Mines Limited in the Mattagami Lake area. The electrolytic zinc reduction plant of Canadian Electrolytic Zinc Limited at Valleyfield near Montreal was placed in operation in October. Concentrates were obtained from several mines in Ontario and Quebec, including the two new producers in the Mattagami Lake area of Quebec. When operating at capacity, production will be at the rate of 200 tons of zinc metal daily.

In the Atlantic Provinces, three companies accounted for all the production. American Smelting and Refining Company, the operator of a zinc-lead-copper mine at Buchans, Nfld., was the largest producer. Magnet Cove Barium Corporation and Heath Steele Mines Limited operated mines at Walton, N.S., and in the Bathurst area of New Brunswick.

In 1963, exploration and development activity was widespread, being concentrated in the Bathurst area of New Brunswick, in northwestern Quebec, in the Snow Lake area of Manitoba, at Pine Point in the Northwest Territories and at Buttle Lake near the centre of Vancouver Island. In the Bathurst area, preparations were made by Brunswick Mining and Smelting Corporation Limited to begin mining one of its large base-metal orebodies early in 1964. An associated company, East Coast Smelting and Chemical Company Limited, began to erect a smelter near Bathurst in which some of the concentrates produced by Brunswick Mining and Smelting will be treated, beginning in 1966. In northwestern British Columbia near Stewart, Silbak Premier Mines Limited commenced preparations to erect a 75 -ton mill which will be used to concentrate silver-lead-zinc ore from the old Premier mine property. At Pine Point on the south shore of Great Slave Lake in the Northwest Territories, Pine Point Mines Limited continued preparations to mine its large lead-zinc deposits, with production to commence in 1966.

Silver.-Although two new mines in the Cobalt area of Ontario were placed in production in 1963, Canada's output of silver, which totalled $30,739,429$ oz.t., was only slightly greater than 1962 production. The opening of these two mines and increased output of byproduct silver from the copper-zinc mine of Geco Mines Limited brought Ontario's output up by 542,000 oz.t. Output in the Yukon Territory was about 367,000 oz.t. less than in 1962 because of the lower grade of ore mined by United Keno Hill Mines Limited. The large increase of $\$ 7,000,000$ in the 1963 value of silver production was accounted for principally by a marked increase in price from $\$ 1.164$ per oz.t. in 1962 to $\$ 1.385$. Of the total 1963 output, 81 p.c. came from base-metal ores, 17 p.c. from silvercobalt ores mined in northern Ontario and 2 p.c. from lode gold ores mined in British Columbia, Ontario and Quebec and placer-gold ores mined almost entirely in British Columbia and the Yukon Territory.

Canada's principal producer of refined silver-Consolidated Mining and Smelting Company-at its refinery at Trail, B.C., produced $6,847,606$ oz.t., most of which was derived from lead and zinc concentrates originating in mines in southeastern British Columbia and in the Yukon Territory. The remainder of the Canadian output of refined silver was produced from blister copper by Canadian Copper Refiners Limited in Montreal East and by International Nickel at Copper Cliff, Ont.; from gold precipitates by Hollinger

Consolidated Gold Mines Limited at Timmins, Ont.; from gold bullion by the Royal Canadian Mint at Ottawa; and from arsenical-silver-cobalt concentrates by Cobalt Refinery Limited at Cobalt, Ont.

Canada's largest sources of silver are the Calumet, Elsa and Hector silver-lead-zinc mines in the Yukon Territory about 200 miles north of Whitehorse, operated by United Keno Hill Mines Limited, and the Sullivan lead-zinc-silver mine at Kimberley, B.C., operated by Consolidated Mining and Smelting. In its fiscal year, ended Sept. 30, 1963, United Keno produced concentrates containing 5,978,075 oz.t. and in 1962 the Consolidated Mining and Smelting Company produced concentrates at the Sullivan mine containing $4,070,666$ oz.t. Other important producers of byproduct silver included MastodonHighland Bell Mines Limited at Beaverdell in southern British Columbia; Hudson Bay Mining and Smelting Co., Limited at Flin Flon, Man.; Geco Mines Limited and International Nickel at Manitouwadge and Sudbury, Ont.; and American Smelting and Refining Company in Newfoundland. In the old Cobalt and Gowganda areas of Ontario, where exploration was reactivated as a result of the increased price, a number of firms mined silver-cobalt ores from which 5,193,298 oz.t. of silver were recovered in 1963.

Platinum Metals.-Canadian production of the platinum metals in 1963 amounted to 344,736 oz.t. valued at $\$ 21,848,696$. This reduction from the previous year resulted from decreased 1963 nickel production; platinum metals are recovered as a byproduct of nickel mining. World markets for platinum metals were fairly strong in 1963. The group consists of platinum, palladium, rhodium, ruthenium, iridium and osmium; all except osmium are produced in Canada.

During 1963, Canada, the Republic of South Africa and the Union of Soviet Socialist Republics continued to supply the bulk of the world's production of the platinum metals. Estimated world production in 1962 was $1,190,000$ oz.t., of which Canadian production was 470,787 oz.t., that of South Africa an estimated 306,180 oz.t. and that of the U.S.S.R. an estimated 375,000 oz.t.

Platinum metals occur in Canadian nickel ores to the extent of about 0.025 oz . per ton of ore. In the treatment of these ores for nickel, the platinum metals follow nickel and are eventually removed as sludges from the electrolytic tanks in which nickel anodes have been formed. The sludge is purified and sent to precious metal refineries in Britain and the United States for recovery of the platinum metals. All of Canada's platinum metals production results from the treatment of nickel ores of the Sudbury district of Ontario and those of the Thompson mine in Manitoba.

Cobalt.-Cobalt is derived as a byproduct from smelting and refining of nickelcopper ores of Sudbury, Ont., and Lynn Lake, Man.; from nickel ores of Thompson, Man.; and from silver ores of Cobalt, Ont. International Nickel recovers cobalt from its refinery operations at Port Colborne, Ont., Thompson, Man., and Clydach, Wales, based on its Sudbury and Thompson ores. Falconbridge Nickel produces electrolytic cobalt in the refining of nickel-copper matte exported to its refinery at Kristiansand, Norway. Sherritt Gordon recovers cobalt as a byproduct at its nickel refinery at Fort Saskatchewan, Alta., from its Lynn Lake nickel-copper ores. Cobalt Refinery Limited at Cobalt, Ont., recovers black cobalt oxide, and mixed cobalt and nickel oxide from silver concentrates.

Columbium.-St. Lawrence Columbium and Metals Corporation, the only Canadian producer of columbium concentrates, in 1963 shipped pyrochlore concentrates containing $1,270,000 \mathrm{lb}$. of columbium pentoxide from its mine and plant at Oka, Que., about 20 miles west of Montreal. Geo-Met Reactors Limited, Ottawa, Ont., is the only Canadian producer of ferrocolumbium, which it sells in Canada and the United States.

Molybdenum.-Molybdenite Corporation of Canada Limited is the principal Canadian producer of molybdenite. Most of its production is converted to molybdic oxide at its mine-site plant at Lacorne, 23 miles north of Val d'Or, Que. In 1963, Gaspé

Copper Mines Limited began production of molybdenite as a byproduct at its Murdochville, Que., copper concentrator. Canadian shipments in 1963 of molybdenum contained in molybdenite and molybdic oxide amounted to $1,000,000 \mathrm{lb}$., valued at $\$ 1,534,000$. Exploration and development work continued at several molybdenum deposits: five miles north of Cadillac, Que.; in the Matachewan area of Ontario; and at Endako, Alice Arm, and Boss Mountain, B.C. Noranda announced plans for a $\$ 5,000,000,1,000-$ ton-a-day mining operation at Boss Mountain. Canadian Exploration plans a 10,000-ton-a-day operation at Alice Arm, to start production in 1965.

Titanium.-Ilmenite, an iron-titanium oxide, is mined in the Allard Lake and St. Urbain areas of Quebec. The Allard Lake ore, mined by Quebec Iron and Titanium Corporation, is smelted by the company in electric furnaces at Sorel, Que., to produce high-titania slag and pig iron. The slag is sold to producers of titanium-based pigments in Canada, the United States, Britain, Japan and other countries. Ilmenite mined at St. Urbain by Continental Titanium Corporation is used as heavy aggregate in weighting oil and gas transmission pipelines and in shielding nuclear reactors.

Selenium and Tellurium.-Selenium production in 1963 totalled $482,960 \mathrm{lb}$. valued at $\$ 2,240,101$, a minor decrease from 1962 ; tellurium output at $74,942 \mathrm{lb}$. valued at $\$ 483,271$ was about 28 p.c. higher than in 1962. These metals are recovered from the anode muds resulting from the electrolytic refining of copper at the plants of Canadian Copper Refiners Limited at Montreal East, Que., and International Nickel at Copper Cliff, Ont.

Magnesium.-An all-time Canadian production record of 8,700 tons was achieved in 1963 by the only Canadian producer, Dominion Magnesium Limited, also the only Canadian source of calcium and thorium. Dolomite of exceptional purity is quarried and reduced to metal by the ferrosilicon method at Haley, Ont. About 6,000 tons of magnesium were exported during the year.

Aluminum.-Canada is second, after the United States, in Free World aluminum production. At the end of 1963, annual capacity was 888,000 tons. Capacity for a further 20,000 tons was completed in March 1964 at the Kitimat, B.C., smelter of Aluminum Company of Canada Limited, and another 20,000 tons will be completed in 1965. This Company also has smelters at Arvida, Isle Maligne, Shawinigan and Beauharnois, all in Quebec. Canadian British Aluminium Company Limited operates a 90,000 -ton smelter at Baie Comeau, Que. As all bauxite or alumina used by the aluminum smelters must be imported, mainly from the Caribbean area, metal production is classed in official statistical data with manufactures and not with smelter production of ores and metals of domestic origin. Production of primary aluminum in 1963 was 719,390 tons, of which 635,187 tons were exported. Domestic consumption was estimated at about 155,000 tons as measured at the semi-fabricated level.

## Subsection 2.-Industrial Minerals

For the fifth successive year, Canada's industrial mineral production in 1963 rose to a new high. In that year the value of output exceeded $\$ 607,500,000$ and amounted to 20 p.c. of the total mineral production. New records were established for asbestos, potash, sulphur, gypsum, cement and sodium sulphate.

Asbestos.-Canada is by far the Free World's leading asbestos producer but is challenged by the U.S.S.R. for first position in world production. Despite competition from the U.S.S.R., Africa and the United States, all of which countries have expanded or are expanding production, Canada has maintained a steady increase in its asbestos exports and is at present supplying about 40 p.c. of the world output. In 1963, 1,206,425 tons of asbestos fibre valued at $\$ 139,447,444$ were exported from Canada.

Chrysotile, the most widely used variety of asbestos, occurs in Newfoundland, Quebec, Ontario, British Columbia and the Yukon Territory. The main centre of the industry is in Quebec, where 12 mines account for 90 p.c. of the country's production, but operating mines are also located in Newfoundland, Ontario and British Columbia. Newfoundland became a producing province in July 1963 when Advocate Mines Limited began production at Baie Verte on the Burlington Peninsula. This project, involving a capital expenditure of $\$ 25,000,000$, will be of great economic benefit to the northeastern portion of the province. The 5,000 -ton-a-day mill is producing fibre particularly suited to asbestos-cement manufacture; it will be shipped mainly to the United States and Europe.

During the year, Canadian Johns-Manville announced plans to develop an asbestos occurrence in Reeves township, 40 miles southwest of Timmins, Ont. A development shaft is planned to open up two underground levels and provide bulk samples for pilot plant processing. This deposit, acquired by the company several years ago, is expected to provide a source of fibre to supplement the output of the Munro mine, east of Matheson in northern Ontario. In northern Quebec, Asbestos Corporation Limited continued its study of the Asbestos Hill project of the Murray Mining Corporation. This occurrence is 40 miles southeast of Deception Bay in Ungava and the fibre is reported to be of a type suited to the asbestos-cement industry.

Potash.-Potash has been newly added to the list of Canadian mineral products and although the industry is still in the early stages of development its product has unquestionably found a place in the markets of the world. The emphasis being placed on the need for fertilizers to improve agricultural productivity to feed a rapidly growing world population establishes the future of this industry.

The Canadian industry, concentrated in southern Saskatchewan, had its first full year of production in 1963 with the successful operation of the Esterhazy mine of International Minerals and Chemicals Corporation (Canada) Limited. The annual refinery capacity of this company was raised from $1,000,000$ tons of product to $1,200,000$ tons early in 1964 with the addition of processing machinery. A second shaft was started at Gerald, six miles southeast of the first shaft, and when this is completed in 1968 the mine capacity will be increased to about $4,000,000$ tons of end products.

Several other significant developments are taking place in the field of potash recovery. In 1963, Kalium Chemicals Limited, after an extensive period of development and testwork, began the construction of a major facility for the recovery of potash by solution mining. This project, located near Belle Plaine 25 miles west of Regina, will tap the sylvite beds more than 5,000 feet below surface. The plant is expected to be 'on stream' in late 1964. The Potash Company of America Ltd. is completing a program of shaft rehabilitation and major equipment change at Patience Lake and plans to resume production in December 1964; the project will have an annual capacity of 600,000 tons of granular potash. Alwinsal Potash of Canada Limited in mid-1963 announced plans for the investment of $\$ 50,000,000$ in a potash development in the Lanigan-Guernsey area of Saskatchewan. Shaft-sinking will start in 1964 and production is scheduled for 1968. Alwinsal brings to Western Canada extensive European experience in shaft mining of potash. Three European companies are major shareholders.

Sulphur.-The dramatic development of the western Canadian gas fields as an important source of world sulphur continued into 1963. Output of elemental sulphur was some 20 p.c. higher than in 1962 and the aggressive drive by the western producers to seek wider markets met with outstanding success. More than $1,100,000$ tons of Western Canada sulphur were shipped to domestic and foreign markets-an increase of almost 70 p.c. over the previous year.

The recent development of a world-wide marketing outlook has been of particular value to the Canadian industry. In addition to large exports to the United States, substantial tonnages have been shipped to the U.S.S.R., India, the Republic of South Africa, Australia and Taiwan, and during 1963 elemental sulphur began moving to Japan; it is
interesting to note that for many years Canada shipped large quantities of pyrite to Japan for use in the manufacture of sulphuric acid. Sales of sulphur within Canada have also increased, serving to reduce the imports of Frasch sulphur from the United States.

With a capacity of $2,000,000$ tons of elemental sulphur per annum, Canada ranks second to the United States among world elemental sulphur producers and is capable of supplying 10 p.c. of the current world market. Elemental sulphur is a byproduct of the preparation of natural gas for the market. It is produced at 15 plants in Alberta, one in Saskatchewan and one in British Columbia. Existing plants are adequate to serve current contracts for cleaned natural gas for markets in Canada and the United States but it is expected that by 1967 the demand for western Canadian natural gas will require the construction of additional plants and these will have a capacity of 500,000 tons of elemental sulphur per annum. Two new plants are planned for 1964.

Construction Materials.-An active construction industry brought the output of mineral products used in that industry to a record level in 1963. Such major projects as the Hydro Quebec power complex under construction north of Baie Comeau, which will eventually add over $7,000,000 \mathrm{hp}$. to the Quebec system, together with large road and other engineering projects and the building industry required record quantities of crushed and natural aggregate. It is estimated that the 1963 production of aggregate exceeded $200,000,000$ tons. An interesting development during the year was the opening of an industrial aggregate plant in trachytic phonolite in Verchères County of Quebec, which produces aggregate for special concretes and granules for industrial application. This is an example of a small specialized stone operation adapted to the needs of a regional market.

Renewed interest is being shown in certain phases of the dimensional stone industry in Canada. In this industry, limestone, sandstone, granite and marble are all quarried and dressed for use in building construction and ornamental applications. Canadian marble quarrying, which has been virtually dormant, became active in 1963 with the development of deposits of white, grey and green serpentinized marble in Lanark and Renfrew counties of Ontario, just west of Ottawa, and of green serpentinized and blue marble near Tatlock, Ont. The latter is of unique character and can be quarried in large blocks. The Italian marble industry has shown interest in these marbles and blocks have been shipped to Italy to test the market there.

Recently, Canadian architects have been using ornamental stone for various effects, despite the growing availability of reconstituted stone and alternative building materials.

Gypsum.-Shipments of gypsum were more than 11 p.c. heavier in 1963 than in 1962 as a result of increased demand from the United States; much of the Canadian production goes to that country in crude form. A great part of the output of this mineral is mined in Nova Scotia, although smaller amounts are produced in Newfoundland, New Brunswick, Ontario, Manitoba and British Columbia. The only addition to productive capacity in 1963 was that of a new underground gypsum mine at Silver Plains, 36 miles south of Winnipeg, Man.

Salt.-Over the past two decades, the growing need for ice control for winter highway traffic has brought about a significant increase in the market for rock salt, so that about one half of the Canadian production, which fluctuates between $3,200,000$ tons and $3,800,000$ tons annually, is of rock salt mined in Nova Scotia and southern Ontario. Part of this production is exported to the United States. Since the market is primarily for particle sizes greater than eight-mesh, disposal of fines has become a problem.

## Subsection 3.-Petroleum and Natural Gas

The oil and gas industry in Canada continued to experience general economic buoyancy during 1963 and developments during the early part of 1964 indicate another successful year with higher outputs of both products. Crude oil production averaged $709,000 \mathrm{bbl}$. daily during 1963; extraction of propane, butanes and pentanes from natural gas added
$78,000 \mathrm{bbl}$. daily, to bring total output of liquid hydrocarbons to $787,000 \mathrm{bbl}$. daily. During the early part of 1964, total production of liquid hydrocarbons averaged over $835,000 \mathrm{bbl}$. daily and appeared to be moving toward the new target suggested by the Federal Government-an average of $850,000 \mathrm{bbl}$. daily in 1964. Natural gas output averaged over $3,055,000 \mathrm{Mcf}$. daily in 1963 and, although output in 1964 is not expected to increase as much as in 1963, deliveries are expected to be higher.

All western provinces except Manitoba shared in the increased production. Manitoba does not produce natural gas and the absence of new oil discoveries indicates a further downtrend in oil production. Oil-field activity in Saskatchewan was at a high level and directed largely to pressure maintenance schemes which have increased the province's recoverable reserves of oil about threefold. Production of oil in Saskatchewan was at a high level with demand exceeding productive capacity throughout most of the year. In Alberta, exploration was moderately successful, with several oil discoveries being made in the north-central part of the province. South of Lesser Slave Lake significant oil dis-coveries-indicative of a major oil producing area-were made early in 1964. Much farther north, at Zama Lake near the Northwest Territories border, several oil and gas discoveries were reported at about the same time.

Although Alberta oil production was at a record level of about $500,000 \mathrm{bbl}$. daily, output was equivalent to less than one half of the province's productive capacity. Natural gas output averaged $2,585,000 \mathrm{Mcf}$. daily, or 85 p.c. of Canadian output. Exploration in British Columbia slackened somewhat but development of fields near Fort St. John continued at a high level. Production remained at about $40,000 \mathrm{bbl}$. a day in 1963 and into early 1964. Gas output amounted to 323,000 Mcf. daily. In the Arctic islands the second and third exploratory wells were both abandoned after failing to find oil or gas. Comparatively little drilling was done on the Northwest Territories mainland.

The total footage drilled in Western Canada during oil and gas exploration and development was $14,132,000$ feet, an increase of 8 p.c. over 1962. The increase was mainly in development drilling; exploratory drilling increased only slightly. One third of the footage drilled was of an exploratory nature while the remainder was development drilling of known oil and gas fields. Of the 2,888 new levels, 52 p.c. were oil wells, 13 p.c. were gas wells and the remainder were dry wells. Of all wells drilled in Western Canada, 59 p.c. were in Alberta and 33 p.c. were in Saskatchewan. A sharp decrease in drilling in British Columbia was counterbalanced by an increase in Saskatchewan. In Ontario, 202 wells were drilled, nearly the same as in 1962, although a greater proportion of dry holes resulted.

Geophysical activity in Western Canada, based on a month-by-month comparison of the number of crews working, was slightly less than in 1962. The decline in geophysical activity has been evident since 1953, except for a levelling-off in the 1961-62 period. The gravity survey remained a comparatively minor geophysical method. Seasonal fluctuations in seismic surveying were slightly less than in 1962. In terms of crew-months, seismic survey work in the western provinces was as follows: Alberta, 392; British Columbia, 107; Saskatchewan, 79; Manitoba, nil; and Yukon Territory and Northwest Territories, 53.

Alberta.-In 1963, the total footage drilled in the search for and development of petroleum and natural gas amounted to $9,807,000$ feet, an increase of 7.7 p.c. over 1962 . Despite the over-all increase, exploratory drilling decreased slightly. The increase was due to greater development of known fields, particularly the Swan Hills, Snipe Lake, Kaybob South, Sylvan Lake, Medicine River and Deer Mountain fields. A total of 1,704 wells were completed of which 869 were oil wells, 275 were gas wells and 560 were dry. The Goose River field north of the Kaybob field was probably the most important 1963 oil discovery. Drilling carried out in 1963 on a natural gas discovery made the previous year near Edson partly outlined the largest natural gas reservoir found in Alberta in the past several years.

The proposed projects of Cities Service Athabasca Inc. and Shell Canada Limited to produce oil from Athabasca bituminous sands were deferred by the Alberta Oil and Gas Conservation Board on the grounds that such large-volume production would disrupt the conventional oil industry. In February 1964, the Conservation Board approved the application of Great Canadian Oil Sands Limited, with the backing of Sun Oil Company, to have their 31,500 bbl.-a-day Athabasca oil sands production permit revised upward to $45,000 \mathrm{bbl}$. a day.

Alberta's reserves of recoverable crude oil will be increased by more than $1,000,000,000$ bbl. by several secondary recovery or pressure maintenance projects begun in 1962 and 1963. Waterflood is the main recovery mechanism used and the largest projects are in the Swan Hills area.

British Columbia.-A high rate of drilling in 1961 and 1962 was the result of rapid development of existing oil fields to supply the new oil pipeline serving the Vancouver refinery area. By the beginning of 1963, however, a major proportion of Boundary Lake oil-field development was completed and drilling declined; only 898,700 feet of drilling was carried out, a 42 -p.c. decrease from 1962. Development drilling comprised 64 p.c. of all drilling in 1962 compared with 42 p.c. in 1963, reflecting a swing back to the pre-1961 emphasis on exploratory drilling in this province. No significant oil discoveries were made in 1963 but important natural gas finds continued to be made in the Fort Nelson region, confirming this as one of Canada's major gas-reserve tracts although, as yet, no pipeline serves the area.

Saskatchewan.-The trend of declining drilling was sharply reversed in 1963, when both exploratory and development drilling increased substantially. A total of $3,220,400$ feet was drilled, 40 p.c. more than in 1962. Of the 951 wells completed, 572 were oil wells, 41 were gas wells and 338 were dry. No major oil discoveries were made but two important secondary recovery projects are being developed which will add greatly to provincial oil reserves-the Midale field waterflood plan was instituted late in 1962 and a huge waterflood program was initiated in the Weyburn field in the latter half of 1963.

Manitoba.-An aggregate of 142,563 feet was drilled in 1963, more than double the 1962 total, some incentive being provided by an oil discovery, late in 1962, near Hartney. However, no important discoveries were made during the year and the number of commercial wells in operation in the province decreased from 852 to 839 .

Yukon and Northwest Territories.-Six wells, totalling 62,643 feet, were completed in the Territories. An exploratory well drilled on Cornwallis Island in the Arctic islands was abandoned in December after failing to find any significant amounts of oil or gas. Similarly, the deep well on adjacent Bathurst Island, completed in February 1964, was dry. These two Arctic drilling projects had been preceded by an exploratory well on Melville Island in 1962 which was also abandoned.

Eastern Canada.-In Ontario, a greater footage was drilled in 1963 despite a reduction in the number of wells completed. The 202 wells (excluding service wells) totalled 392,753 feet, an average of 1,940 feet per well compared with 1,815 feet per well in 1962 . This trend toward deeper wells is largely the result of discoveries made at depth in 1960 and 1962. A major 'oil play' developed in the neighbouring State of Ohio in 1963 following some important oil discoveries and this, too, is providing further incentive for deeper exploration in Ontario.

In Quebec, 13 exploratory wells were drilled. Two of these wells, drilled on a gravity anomaly 10 miles southwest of Trois Rivières, yielded significant quantities of natural gas but the wells have not yet been classed as commercial. Three exploratory dry wells were completed on Anticosti Island and three development wells were drilled at the Pointe du Lac shallow gas field near Trois Rivières.

In New Brunswick, a 3,500-foot dry well was completed four miles south of the Stoney Creek oil and gas field. Waterflood secondary recovery was started in the Stoney Creek field. Two oil companies acquired substantial off-shore acreage near Sable Island off the Nova Scotia coast and are planning seismic surveying for 1964.

Petroleum Refining and Marketing.-At the end of 1963 there were 41 operating refineries in Canada having an aggregate crude oil capacity of $1,016,600 \mathrm{bbl}$. daily, allowing for maintenance shutdowns. One new refinery with a crude oil capacity of $30,500 \mathrm{bbl}$. daily began operating at Oakville, Ont., in October. In March 1964, a new refinery, near Halifax, N.S., added $13,500 \mathrm{bbl}$. daily to crude oil capacity. Three small plants in Alberta shut down and together reduced capacity by $8,890 \mathrm{bbl}$. daily. The rate of growth of the petroleum refinery industry from 1943 to 1963 is shown in Table 1.

> 1.-Petroleum Refining Throughput Capacity, by Region, as at Dec. $31,1943,1953$ and 1963

Use of Canadian crude at domestic refineries averaged $510,000 \mathrm{bbl}$. daily, an increase of 7 p.c. over 1962. Foreign oil received by plants in Canada averaged $402,000 \mathrm{bbl}$. daily, an increase of 8 p.c. over 1962. Domestic oil, therefore, accounted for 56 p.c. of all crude oil received, about the same percentage as in 1962. Canada exported an average of $248,000 \mathrm{bbl}$. of crude oil to United States refineries, about the same as in 1962. Refineries in the Puget Sound region of the State of Washington took an average of $126,000 \mathrm{bbl}$. daily and plants in the mid-west took $122,000 \mathrm{bbl}$. daily. Imported oil continued to come chiefly from Venezuela and Middle East countries. Table 2 shows the regional demand for domestic and foreign crudes.

## 2.-Domestic and Foreign Crude Oil Received at Canadian Refineries, by Region, 1955, 1960 and 1963

| Region | 1955 |  | 1960 |  | 1963 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Domestic | Foreign | Domestic | Foreign | Domestic | Foreign |
|  | bbl./day | bbl./day | bbl./day | bbl./day | bbl./day | bbl./dsy |
| Maritime Provinces and Quebec..... Ontario.................... | 106,446 | 210,423 27,275 | $\underset{197,555}{ }$ | 337,494 10,004 | 260,198 | 399,672 1,999 |
| Prairie Provinces and Northwest | 106,440 | 27,275 | 107,555 | 10,004 | 260,198 | 1,898 |
| Territories...... | 133,961 | 二 | 145,499 | - | 177,479 | - |
| British Columbia. | 47,431 | - | 65,917 | - | 72,778 | - |
| Canada. | 287,838 | 237,698 | 408,971 | 347,498 | 510,455 | 401,671 |

Natural Gas Processing and Marketing.-Ontario displaced Alberta in 1963 as the leading province of utility gas sales. Ontario sales accounted for more than 37 p.c. of total domestic sales and Alberta accounted for 35 p.c. Nearly one third of the natural
gas produced was exported to the United States. A very large proportion of Canadian natural gas requires processing to remove contained constituents such as sulphur, propane, butane and natural gasoline. The extent to which the natural gas processing industry has developed is apparent from a comparison of gas plant statistics: in 1955 there were seven plants having a processing capacity of 452,000 Mcf. daily; by 1960 there were 55 plants having a raw gas capacity of $1,944,000 \mathrm{Mcf}$. daily; and at the end of 1963 there were 75 plants capable of treating $3,849,000 \mathrm{Mcf}$. daily to produce $2,993,000 \mathrm{Mcf}$. of pipeline gas.

## Subsection 4.-Coal ${ }^{*}$

Production from Canadian coal mines in 1962 was only slightly lower than in 1961, giving some encouragement to the hard-pressed coal industry. Significant increases in the production of subbituminous and lignite coals were attained and productivity per man-day increased in practically all coal mining regions, leading to lower or relatively steady values for all coals.

As compared with 1953, annual production declined about 5,600,000 tons, consumption about $16,000,000$ tons, and imports dropped from $22,900,000$ tons to $12,400,000$ tons. Exports, on the other hand, more than tripled in the decade but this bright spot is confined almost entirely to one segment of the industry, being attributable to higher exports of western bituminous coking coal, mainly to Japan. The weak competitive position of Canadian coals is caused by a number of factors, including high production costs because of low productivity in comparison with coal mines in the United States, and high costs of moving coal long distances, particularly bituminous coal from mines in Nova Scotia and New Brunswick to the industrial centres of Ontario and Quebec.

Mechanization of production, underground and surface coal preparation, particularly of slack and fine sizes, and efforts to control quality through coal sampling and analysis have all been increased to enable the industry to supply higher quality products at reduced costs. On the basis of costs per ton, significant improvement was noted in 1962. Increased productivity is expected from the projects undertaken in 1962 to improve methods of mining and conveying coal in underground mines.

Assistance to the coal industry was continued by the federal and provincial governments through research programs. The problem of fine coal production continued to receive attention with research directed toward improved methods of mining, beneficiation and combustion. Technical assistance has also been rendered in the field of quality control through sampling and analysis, and studies of the coking properties of coals in relation to their preparation for export markets and their use in prospective steel industries.

Financially, the Federal Government continued assistance to the coal industry through payments administered by the Dominion Coal Board with aid in the acquisition of new equipment and subventions on coal transportation. More than 30 p.c. of the production was moved with the aid of subvention payments; the total tonnage to which such assistance was applied, $3,100,000$, decreased by more than 250,000 tons in 1962 . The value of this assistance, which in 1961 amounted to $\$ 17,854,456$, decreased in 1962 to $\$ 17,433,355$. Financial assistance amounting to $\$ 2,400,000$ was applied to the export of 634,855 tons of coal from Alberta and British Columbia. The Federal Government also made payments in 1962 totalling about $\$ 1,540,000$ under the Atlantic Provinces Power Development Act, 1958, which indirectly aids the marketing of coal. In addition to the general coal subsidy, more than $\$ 1,000,000$ was paid out by the Federal Government to delay the closure of certain mines. Mines in Nova Scotia and New Brunswick shipping coal to markets in direct competition with imported residual oil received additional financial assistance.

Production and Value.-Production of coal in Canada in 1962 decreased 1.1 p.c. to $10,285,000$ tons, just under 54 p.c. of the record production of $19,139,000$ tons in 1950 . The average value for all coal was $\$ 6.72$ per ton. This declining production was reflected

[^158]in the employment at the mines, where the number of man-days dropped from 2,291,933 in 1961 to $2,198,420$ in 1962-more than 4 p.c. In Nova Scotia, the major coal-producing province and where the economy is most affected by declining coal markets, the decrease in coal-mine employment was 5.3 p.c. from $1,535,176$ man-days in 1961 to $1,453,414$ man-days in 1962. Employment in coal mines in New Brunswick decreased almost 10 p.c., in Alberta 1.6 p.c., in Saskatchewan 3.8 p.c. and in British Columbia 17.5 p.c.

The major part ( 63.5 p.c.) of the coal produced in 1962 was bituminous, valued at 89.02 a ton at the mine. Subbituminous accounted for 14.6 p.c. of production and lignite for 21.9 p.c. The average value of subbituminous coal was $\$ 3.80 \mathrm{a}$ ton and the value of lignite $\$ 2.02$ a ton. Production of bituminous coal decreased 4.3 p.c. from 1961 but subbituminous increased almost 10 p.c. and lignite 2.1 p.c.

The proportion of the output won by stripping methods was 40 p.c. The output per man-day of coal from Canada's strip mines was 17.1 tons in 1962 compared with 3.2 tons from underground mines. This represents an increase of 1.7 tons for strip mines and an increase of 0.1 tons for underground mines. The over-all output per man-day increased from 4.5 tons to 4.8 tons.

Consumption, Imports and Exports.-The consumption of coal in Canada amounted to about $21,900,000$ tons in 1962, an increase of 1.2 p.c. over 1961. Of this total, 56.6 p.c. was imported, and of the imported coal 93.5 p.c. was bituminous, used mainly in Ontario and Quebec; imports were 2.7 p.c. higher than in 1961. The production of coke used about $5,500,000$ tons of coal, of which about 88 p.c. was imported. Sales of coal by retail fuel dealers to the commercial and household heating markets decreased by almost 500,000 tons to $3,600,000$ tons in 1962 but the use of coal by industrial consumers, including thermal-electric power plants, increased 10 p.c. to $10,800,000$ tons. There were 901,560 tons of Canadian coal exported in 1962 compared with 939,360 tons in 1961, most of it going to the United States and Japan for blending in the manufacture of metallurgical coke. The exports included about 4,500 tons sent to the Island of St. Pierre from Nova Scotia.

The manufacture of briquettes decreased from 67,327 tons in 1961 to 54,059 tons in 1962.

Provincial Activities of the Industry.-Coal is produced in five provinces and a large share of the market for the industry is concentrated in Central Canada where there is no coal production. A small amount of coal is also mined in the Yukon Territory. A review of the provincial activities of the industry follows.

Nova Scotia.-Nova Scotia's 1962 coal production of 4,204,779 tons, which accounted for almost 41 p.c. of the total Canadian output, was 2.2 p.c. lower than in 1961. This province's coal is mainly high volatile bituminous coking coal mined in the Sydney, Cumberland and Pictou areas, although some non-coking bituminous coal is mined in the St. Rose, Inverness and Port Hood areas of Cape Breton Island. The over-all value at the mines increased to $\$ 9.92$ a ton in 1962 compared with $\$ 9.70$ a ton in 1961 and the output per man-day was about 2.8 tons.

All Nova Scotia's coal comes from underground mines, which are mostly mechanized. Coal-washing plants which prepare about 27 p.c. of the province's coal production are operated at two of the collieries. In 1962 over 63 p.c. of the production was shipped to other provinces, mainly Central Canada to be used for industrial purposes; the remainder was used locally for steam-raising, power generation, household and commercial heating and the manufacture of metallurgical coke. Subvention payments were made on the movement of $2,191,938$ tons.

New Brunswick.-New Brunswick's production, of which 82 p.c. was strip-mined in 1962, is entirely high volatile bituminous coal mainly from the Minto area; a small amount comes from strip mines in the Chipman and Coal Creek areas. The production of 815,529
tons in 1962, about 8 p.c. of Canada's output, represented a decrease of 8.2 p.c. from 1961. Average output per man-day from strip mines was 5.5 tons and from underground mines 1.8 tons. In 1962 the coal had an average value at the mines of $\$ 8.28$ a ton.

Modern coal-washing plants operated at two of the strip-mining operations mechanically clean almost half of the province's output. A large part of the production is used locally for heating, power generation and processing; about 11 p.c. is shipped to Central Canada and about 14 p.c. to the United States. Government subventions aided in the moving of 114,186 tons during 1962.

Saskatchewan.-Coal produced in Saskatchewan is entirely lignite, mined by stripping in the Bienfait and Estevan areas in the Souris Valley; this is the only active lignite coal-field in Canada. Production in 1962 was slightly higher than in the previous year, amounting to $2,256,306$ tons, which represented about 22 p.c. of the Canadian production. The average output per man-day was 44.9 tons and the coal was valued at the mine at an average of $\$ 2.02$ a ton. This is the cheapest source of coal in Canada. The Estevan area serves the provincially owned Boundary Dam thermal-electric generating station which used about 45 p.c. of the total lignite production. Almost 37 p.c. of the 1962 output was shipped to Manitoba and 3.5 p.c. to Ontario for industrial, commercial and household use; the remainder was used within the province for similar purposes. Subvention assistance was given on 82,511 tons.

In 1962, 24,461 tons of briquettes, manufactured from carbonized lignite and used entirely for commercial and household purposes, were produced; this was a decrease of nearly 24 p.c. from the 1961 output.

Alberta.-Several types of coal are available in Alberta, ranging from semi-anthracite mined in the Cascade area to subbituminous. Coking bituminous coals are present in the Inner Foothills Belt but, because of market conditions, they are at present mined mainly in the Cascade and Crowsnest areas and a large part of the production is exported to Japan for use in metallurgical industries. In several areas of the foothills, lower rank bituminous non-coking coals are available but production is confined to the Lethbridge and Coalspur areas. The other coal areas produce subbituminous coals which made up almost 72 p.c. of Alberta's output in 1962 and are used mainly for household and commercial heating and thermal power generation; increasing quantities are being used for the latter purpose. The four largest producing areas for subbituminous coals are Castor, Drumheller, Pembina and Sheerness and mines in these areas produced more than 78 p.c. of the Canadian subbituminous coal output which amounted to $1,497,171$ tons in 1962, almost 10 p.c. higher than in the previous year. The output of bituminous coal decreased 11.4 p.c. to 590,139 tons.

Total coal production in Alberta increased 2.9 p.c. in 1962 to $2,087,310$ tons, this being about 20 p.c. of the nation's coal output. Of the total, 51.5 p.c. was won by stripping, the average output per man-day being 16.5 tons compared with 4.8 tons for underground mines. The average value of bituminous coal was $\$ 7.26$ a ton at the mine, and that of subbituminous coal $\$ 3.80$ a ton.

Of the provincial production, 1.4 p.c. was shipped to Ontario, 7.4 p.c. (mainly subbituminous) to Manitoba, 16.6 p.c. to Saskatchewan and 13.6 p.c. to British Columbia. Subvention assistance from the Federal Government was applied on the movement of 692,394 tons of Alberta and British Columbia coal.

The output of briquettes, which are made from the semi-anthracite and low volatile bituminous coals of the Cascade area and the medium volatile coals of the Crowsnest area, decreased from 35,195 tons in 1961 to 28,631 tons in 1962.

British Columbia and Yukon Territory.-About 90 p.c. of British Columbia's 1962 coal output came from the Crowsnest area (East Kootenay district) and most of the remainder came from Vancouver Island, with a small output from mines in the northern mainland. The coals range from high volatile to low volatile bituminous coking coals and
over 88 p.c. comes from underground mines. Production decreased to 913,196 tons, about 9 p.c. of the country's output, and had an average value of $\$ 6.63$ a ton at the mine. The average output per man-day was 38.8 tons for strip mines and 5.2 tons for underground mines.

Beneficiation facilities located at Union Bay (Vancouver Island) and Michel (East Kootenay) process nearly all of British Columbia's coal production. Of the 1962 total production, 16.5 p.c. was shipped to Manitoba, 2.1 p.c. to Ontario and small quantities to Alberta and Saskatchewan. Nearly 335,000 tons of medium volatile bituminous coking coal from the Crowsnest area were exported, some to the United States but most of it to Japan for blending in the manufacture of metallurgical coke.

In the Yukon Territory, 7,649 tons of coal were mined from a single underground mine with an average output per man-day of 2.5 tons. This coal was valued at $\$ 15.06$ a ton and was all used locally.

## Section 2.-Government Aid to the Mineral Industry

## Subsection 1.-Federal Government Aid

Federal assistance to the mining industry takes the form of the provision of detailed geological, topographical, geodetic, geographical and marine data which are of basic importance to the discovery and development of the mineral resources of Canada; the provision, through metallurgical research, of technical information relating to the processing of ores, industrial minerals and fuels on a commercial scale; financial and technical assistance to the ailing coal industry; assistance to the gold mining industry under the Emergency Gold Mining Assistance Act, and certain tax incentives (see Chapter XXIII, Section 2 on Taxation in Canada).

The Department of Mines and Technical Surveys.*-The federal Department of Mines and Technical Surveys came into being in January 1950 in the reorganization of the former Department of Mines and Resources. The Department has six branchesSurveys and Mapping Branch, Geological Survey of Canada, Marine Sciences, Mines Branch, Dominion Observatories and Geographical Branch-and its functions include the administration of the Emergency Gold Mining Assistance Act, the Explosives Act and the Canada Lands Act.

The Surveys and Mapping Branch provides the base maps required for use in the development of Canada's natural resources, is responsible for legal surveys of federal lands and provides a national system of levelling and precision surveys for use as geodetic control by federal, provincial and private agencies. The functions and current operations of the Geodetic Survey, the Topographical Survey, and the Legal Surveys and Aeronautical Charts Division are covered in Chapter I, Section 3 on Federal Government Surveying and Mapping (pp. 17-24). The compilation and printing of maps and charts of all types for which data are secured by departmental surveying and research operations is conducted by the Map Compilation and Reproduction Division of this Branch.

The primary function of the Geological Survey is to obtain information on the geology of Canada that will be of assistance in the search for and development of mineral deposits. The results of its activities also provide a basis for the appraisal and conservation of Canada's mineral resources generally, as well as for soil surveys and for the solution of geological problems that frequently arise in construction projects. Geological mapping activities are covered on pp. 21-22.

The Marine Sciences Branch was established in April 1962, combining hydrographic surveys and research in oceanography, marine geology and the geophysical sciences of the seas. These functions have the threefold purpose of ascertaining the resource potential

[^159]of the country's continental shelf, of assisting navigation with particular reference to Arctic waters, and of undertaking the extensive program of oceanographic research required for military and civilian purposes. The current activities of this Branch are covered on p. 21.

The Mines Branch undertakes investigations in its laboratories covering a wide range of technical projects of importance to the advance of fundamental research; to the processing of ores, industrial minerals and fuels on a commercial scale; and to the theory and practice of physical metallurgy. The Mineral Processing Division is concerned primarily with the development of economical methods of mineral dressing and with research toward the improvement of present processing techniques. It is equipped to conduct laboratory and pilot-plant studies involving a variety of procedures: crushing, grinding, gravity concentration, sink and float (heavy media) separation, magnetic and electrostatic concentration, amalgamation, cyanidation, flotation and roasting. The Extraction Metallurgy Division seeks the development of better hydrometallurgical and pyrometallurgical processes for the treatment of ores and the solution to specific technical problems in this field. A substantial part of its effort was devoted recently to ores of uranium, iron and other elements and to corrosion problems encountered in certain industrial and governmental projects. The Division accepts samples from operating mines or those under development. The Mineral Sciences Division applies the principles of chemistry and physics to fundamental and long-term problems in the field of mineral technology and related aspects of metallurgy. It deals with ores, mineral and metal products, inorganic crystalline materials and radioactive substances, and its work ranges from relatively simple routine determinations to complex research problems requiring the most modern techniques and equipment. The Fuels and Mining Practice Division studies the properties of fossil fuels in Canada to determine the most efficient means of utilizing fuel resources. Most of the work on coal is directed to investigations on the immediate problems of the industry and to engineering studies on the most efficient use of coal in combustion applications with particular reference to thermally generated electric power. Such investigations include work on the evaluation of cleaning performance and the beneficiation of coal fines that are difficult to market, the uses of coal in the metallurgical industries and the study of stress phenomena in mining. Research in petroleum is directed mainly to problems in the refining of heavy crudes and high-sulphur bitumens, and to the chemical evaluation of oils and bituminous substances for classification and genetic purposes. The Physical Metallurgy Division aids the metal industries through the development of new alloys, new manufacturing techniques and new applications, and in activities aimed toward improving present practices in metal fabrication. It also conducts fundamental research on the properties and behaviour of metals. The Division serves the Department of National Defence by extensive research and investigative work concerned broadly with the development of defence materials and prototype equipment and with the metallurgical problems of that Department. It is also operative in the nuclear metallurgy field.

The major activities of the Dominion Observatory in its two main units-the Dominion Observatory at Ottawa, Ont., and the Dominion Astrophysical Observatory at Victoria, B.C.-are in the field of astronomical and related research, and these activities are covered in a detailed presentation in Chapter I, pp. 48-51. The geophysical work of the Observatory, which has a definite relation to the locating of mineral deposits, is covered in the same Chapter, pp. 22-23.

Current surveying and mapping activities of the Geographical Branch of the Department are outlined on p. 24.

In addition to the above Branches, the Department contains a Mineral Resources Division which provides a mineral information service that is freely used by government departments, mining and allied industries and others interested in mining or its significance in the Canadian economy. A mineral resources index inventory is maintained of all known occurrences and of mines, both active and potential. The Division makes economic studies of different phases of the mining industry. It administers the Emergency Gold Mining Assistance Act, prepares reports on request to aid in the administration of such
matters as tax exemptions on new mining properties, and prepares reports and briefs on general legislation, taxation and tariff matters connected with the mineral industry. The Division is widely known for its publications, among the most valuable of which are the annual reviews of production, marketing and other matters concerning 64 minerals. It issues more detailed economic studies of metals and fuels of current interest and prepares annual lists of metallurgical works, metal and industrial mineral mines, milling plants, coal mines and petroleum refineries. Also published are special monographs on mining laws, taxation and subjects of particular interest to the mineral industry.

The Dominion Coal Board.*-The Board was established by the Dominion Coal Board Act (RSC 1952, c. 86) which was proclaimed on Oct. 21, 1947. By this Act the Board was constituted a department of government to advise on all matters relating to the production, importation, distribution and use of coal in Canada. The Board is also charged with the responsibility of administering, in accordance with regulations of the Governor in Council, any coal subventions or subsidies voted by Parliament.

The Board is empowered to undertake research and investigations with respect to:-
(1) the systems and methods of mining coal;
(2) the problems and techniques of marketing and distributing coal;
(3) the physical and chemical characteristics of coal produced in Canada with a view to developing new uses therefor;
(4) the position of coal in relation to other forms of fuel or energy available for use in Canada;
(5) the cost of production and distribution of coal and the accounting methods adopted or used by persons dealing in coal;
(6) the co-ordination of the activities of government departments relating to coal; and
(7) such other matters as the Minister may request or as the Board may deem necessary for carrying out any of the provisions or purposes of the Act.

In addition, the Dominion Coal Board Act provides authority in the event of a national fuel emergency to ensure that adequate supplies of fuel are made available to meet Canadian requirements.

The Act authorizes a Board membership of seven, including the chairman. The latter is the Chief Executive Officer, has the status of a Deputy Minister, spends full time on the Board's business, receives a salary and is in charge of a civil service staff. The other members, men of long experience and expert knowledge of aspects and regions of the Canadian coal industry, receive per diem payments and travelling expenses while attending Board meetings or while otherwise officially engaged on Board business.

In general, the Board and its staff constitute a central agency through which representations on coal matters are made to the Government from any sector of the industry or the public. Conducting a continuous study of developments and problems within the industry, exchanging information with provincial authorities concerned with coal and with national authorities and agencies in other countries and maintaining the most complete files of Canadian coal information in existence, the Board makes recommendations to the Government and reports to Parliament through the Minister of Mines and Technical Surveys. In view of the growing impact of oil and natural gas on the markets for Canadian coal, the Board and its staff have intensified the study of the relation of the competing sources of energy and of possible new outlets for the solid fuel.

Since its inception, the Board has worked toward the co-ordination of the activities, relating to coal, of various government departments, agencies and other bodies. Its own responsibilities in research on the mining and utilization of coal have been carried out mainly by delegation to the Fuels and Mining Practice Division, Mines Branch, Department of Mines and Technical Surveys. On occasion, the Board has recommended or commissioned specialized types of research by experts outside the government service-for example, the studies resulting in the Christie Reports which became influences leading to the enactment of the Atlantic Provinces Power Development Act (SC 1958, c. 25) and the

[^160]establishment of a power grid in the Maritimes. As a contribution to the co-ordination of coal research and to the dissemination to the industry of technical information resulting from research, the Board initiated the now annual Dominion-Provincial Conferences on Coal. The Dominion Bureau of Statistics collects most of the statistical information required by the Board.

Government purchases of fuel, which constitute an important outlet for coal, claim a part of the time of the Board's staff in an advisory capacity. Advice on fuel matters is also continuously available to all government departments and agencies. A senior official of the Coal Board is chairman of the Interdepartmental Fuel Committee, which advises on the supply, purchase and utilization of fuel for the Department of National Defence, and of the Dominion Fuel Committee, which is organized along similar lines as an advisory body to other government departments.

The subvention assistance on the movement of Canadian coals, which the Board administers, is authorized from year to year by votes of moneys by Parliament; payments are in accordance with Regulations established by Order in Council. This assistance, which has been provided in varying degrees for the past 30 years, was designed to further the marketing of Canadian coals by equalizing as far as possible the laid-down costs of Canadian coals with imported coals. During the year ended Mar. 31, 1963, a total of $3,192,100$ tons of coal was shipped under subvention and $\$ 16,771,963$ was paid in assistance; in 1963-64, the figures were $3,836,313$ tons and $\$ 18,341,784$, respectively. Costs and conditions of the coal industry being subject to variations, the Board must review from time to time the rates of subvention and the areas where the assistance is required.

Coal subventions of another type, based on the Btu content of coal used in thermalelectric power production, were authorized in January 1958 by the provisions of the Atlantic Provinces Power Development Act. The Dominion Coal Board was designated as the Government of Canada's administrative agency for subvention matters in agreements made with the provinces under this Act.

As agent to the Minister of Mines and Technical Surveys, the Board receives applications and administers loans under the Coal Production Assistance Act (RSC 1952, c. 173, as amended by SC 1958, c. 36; SC 1959, c. 39; SC 1960-61, c. 20; and SC 1962-63, c. 13). The Board also administers payments under the Canadian Coal Equity Act (RSC 1952, c. 34), which provides a subsidy on Canadian coal used in the manufacture of coke for metallurgical purposes. In the year ended Mar. 31, 1963, payments under this Act totalling $\$ 234,881$ were made on 474,507 tons of coal and in the following year payments totalling $\$ 236,108$ were made on 476,986 tons.

Emergency Gold Mining Assistance Act.-Under this Act, which came into force in 1948 (RSC 1952, c. 95), financial assistance is provided to marginal gold mines to counteract the effects of increasing costs of production and a fixed price for gold. By enabling gold mines to extend their productive life, the subventions help communities dependent on gold mining to adjust to diminishing economic support gradually.

Application of the Act was extended for four years to the end of 1967 on Dec. 12, 1963. The amending legislation provides a restriction on the payment of assistance to new lode gold mines commencing production after June 30, 1965. A lode gold mine brought into operation after that date will be eligible for assistance only if the mine provides direct support to an existing gold-mining community. A gold mine will be deemed to provide such support if the majority of the persons employed at the mine reside in one or more of a number of gold-mining communities which are specified in the Act.

The Act is administered by the Department of Mines and Technical Surveys with the aid of the Office of the Comptroller of the Treasury in accounting matters. Since the inception of the Act, the amount of assistance payable to the operators of a gold mine has been calculated by a formula consisting of two factors: the "rate of assistance" which is based on the cost per ounce of gold produced from the mine, and the "assistance ounces" which are a specified proportion of the total ounces of gold produced.

The amount of assistance payable to an operator is computed under the current formula by adding 25 p.c. to the product of the rate of assistance and the number of assistance ounces. The number of assistance ounces is two thirds of the total number of ounces produced in the assistance period. The rate-of-assistance factor is determined by taking two thirds of the amount by which the average cost of production per ounce exceeds $\$ 26.50$. Thus, a gold mine that has an average cost of production less than $\$ 26.50$ per ounce is not eligible for payment of assistance. The amount of assistance increases as the average cost of production increases from $\$ 26.50$ to $\$ 45$. A maximum rate of assistance of $\$ 12.33$ per ounce precludes an increase in the amount of assistance as the average cost of production rises above $\$ 45$ per ounce.

For purposes of the Act, the cost of production of gold from a mine is the cost properly attributable to the gold produced from the mine during the year and includes mining, milling, smelting, refining, transportation and administration costs and amounts for depreciation, pre-production expenses and expenditures on exploration and development as determined in accordance with the Regulations.

The amounts paid to operators of gold mines to Mar. 31, 1964, for the years 1948 to 1963, inclusive, totalled $\$ 185,895,965$ on $46,418,762 \mathrm{oz.t}$. of gold produced and sold under the provisions of the Act. The assistance payable in respect of gold produced and sold under the Act in 1963 is estimated at $\$ 14,970,000$.

## Subsection 2.-Provincial Government Aid*

Newfoundland.-The Newfoundland Government, through its Mines Branch, provides several valuable services to those interested in prospecting and mining. It publishes, for sale at nominal cost, geological reports, geophysical maps and compilations of general data pertaining to specific areas and makes available, from unclassified files, various other information to interested parties. It identifies specimens sent in from Newfoundland and Labrador and assays by chemical means those that appear to have some mineral content. If good specimens from a known area warrant further investigation, a geologist from the Department of Mines, Agriculture and Resources is available to visit the locality and give advice. Prospector's or miner's permits are issued by the Department and claims are registered.

Nova Scotia.-Under the provisions of the Mines Act (RSNS 1954, c. 179), the Government of Nova Scotia may assist a mining company or operator in the sinking of shafts, slopes, deeps and winzes and the driving of adits, tunnels, crosscuts, raises and levels. This assistance may take the form of work performed under contract, the payment of bills for materials and labour, or the guarantee of bank loans. Any such work must be approved by the Department of Mines. The Government is also authorized to assist the mining industry to procure power on the most economical basis and may guarantee the Nova Scotia Power Commission against any loss of revenue incurred on account of capital investments made for that purpose. Mining machinery and equipment to be used in searching for or testing and mining minerals may be made available through the Government. Such equipment is under the direct supervision of the Chief Mining Engineer.

The Government of Nova Scotia is also empowered to make any regulations considered necessary for increasing the output of coal. Such regulations cover the appropriation, on payment, of unworked coal lands, the operation of coal mines, and loans or guarantees for loans. Close co-operation is maintained with the Federal Government in carrying out federal regulations made to secure increased production and economical distribution of coal from the mines of the province.

New Brunswick.-The Mines Branch of the Department of Lands and Mines has five divisions. The Mineral Lands Division administers the disposition of Crown mineral rights including the issuing of prospecting licences, recording of mining claims, issuing of mining licences and leases and other matters pertaining thereto. Detailed and index claim

[^161]maps are prepared for distribution. The Mine Inspection and Engineering Division administers the safety regulations governing operations under the Mining Act. All mines are regularly inspected, laboratory facilities are maintained and all equipment used in mines must be approved by the Division. The Geological Division carries on general and detailed geological mapping and investigation. Maps and reports are prepared for distribution, mineral and rock specimens are examined for prospectors and preliminary examinations of mineral prospects are made when requested and circumstances warrant. The Mine Assessment Division is responsible for the collection of mining taxes and royalties and the preparation of statistics on mineral production. The Bathurst Division serves as recording office for northeastern New Brunswick. In addition, claim maps as well as topographical, geological and aero-magnetic maps are available for perusal and distribution. The staff is prepared to provide information concerning the Mining Act and the use of various types of maps.

Quebec.-The Mining Act (RSQ 1941, c. 196) authorizes the Department of Natural Resources of the Province of Quebec to build, maintain and improve roads needed for mining development. Such work is done by contract under the supervision of departmental engineers. The Act gives the Department considerable latitude in this respect. Certain major roads have been built to new mining districts and completely paid for; on the other hand, if a particular property requires a branch road from an established highway the owner may be required to contribute a portion of the cost. To prevent the development of uncontrolled settlements in the vicinity of operating mines, the Department regulates the use of land and permits the establishment of well organized communities.

The Department maintains well equipped laboratories for the benefit of prospectors, geologists, engineers and mine operators. The facilities include equipment for mineralogy, petrography, ore dressing, and analysis by wet or dry assay, spectrography or X-ray. Qualitative and mineralogical determinations are made free of charge but quantitative analyses are charged for according to a tariff schedule. The Mining Act provides free coupons to be used by prospectors in paying for such analyses. The province has authorized the establishment of research laboratories and a pilot plant to assist mining and metallurgical enterprises in the processes and techniques of extracting, transforming and utilizing ores.

Two branches of the Department undertake geological mapping and inspection-one responsible for reconnaissance (areal) mapping, and the other for detailed mapping in mining districts and inspection of individual deposits or properties. The published reports on these investigations are available on request. When weather permits, about 40 crews, headed by geologists or mining engineers, work in different regions of the province. In five mining areas, offices managed by resident geologists are maintained where geological information obtained from mining explorations is gathered and compiled and from which copies of such documentation may be obtained by the public. Furthermore, four other crews are engaged in hydrogeological surveying, mainly for the purpose of assisting municipalities in resolving their water supply problems.

Departmental inspectors supervise the observance of all regulations concerning the safety of workmen in operating mines. Three Mobile Mine Rescue Stations are operated and a mine rescue training program is conducted.

Five-week courses for the training of prospectors are conducted by Laval and Montreal Universities, and lectures are given at different localities throughout the province. University scholarships are granted each year to deserving undergraduate and postgraduate students in mining, geology and metallurgy, thus contributing to the training of qualified engineers for the benefit of the mining industry.

Ontario.-The Ontario Department of Mines renders a multiplicity of services of direct assistance to the mining industry within the province. The Mining Lands Branch of the Department handles all matters dealing with the recording of mining claims, assessment work, etc., and the preparation of title to mining lands. As a service to the mining
public, individual township maps are prepared and kept up to date showing lands open for staking and recorded and patented claims therein. District Mining Recorders maintain offices at strategic locations throughout the province. The Geological Branch carries on a continuing program of geological mapping and investigation and prepares, for the use of the public, detailed reports and maps of the areas studied. A program is under way, in co-operation with the Geological Survey of Canada, through which the whole province is to be flown and mapped in a series of airborne magnetometer surveys. In many active areas of the province, resident geologists gather and make available to the public information concerning geological conditions, exploration and development within their respective districts. A geologist specializing in industrial minerals investigates methods of treatment and recovery of such minerals and compiles data on the uses, specifications and markets for such products. During the winter months, courses of instruction for prospectors are held in various centres throughout the province.

The work done by the Laboratory Branch includes wet analyses and assays of metal and rock constituents on a custom fee basis, as well as mineralogical analyses and physical testing. The same service is given free of charge to holders of valid assay coupons issued for the performance of assessment work on mining claims. The Temiskaming Testing Laboratories, situated at Cobalt, operate a bulk sampling plant mainly to assist the producers of the area in marketing their silver-cobalt ores; they also perform fire assays and chemical analyses. The Inspection Branch administers the operating rules of the Mining Act which call for the regular examination of all operating mines, quarries, sand and gravel pits and certain metallurgical works with a view to ensuring proper conditions of health and safety to the men employed. District offices to serve the local areas are maintained in the major mining centres of the province. Mine rescue stations in the principal mining sections are operated under the supervision of the Branch and all hoisting ropes in use at mines are periodically tested by a Branch-operated cable-testing laboratory.

Since 1951 the Department has been engaged in a road-building program to give access to mineralized areas and open them for full development. In 1955 this became an interdepartmental project with other interested departments participating through an interdepartmental committee of Ministers which decides on priorities and locations. Actual construction is carried out by the Department of Highways. The federal-provincial Roads-to-Resources program was inaugurated in Ontario in 1959; under the terms of agreement, the federal and provincial governments share equally in the cost of constructing roads to otherwise inaccessible areas (see also the Transportation Chapter, Part III, Section 2).

The Public Relations Office of the Department carries out a regular publicity and information program and maintains a library of films on mining subjects which are available for free loan to the public. Each year, displays pertaining to mining are prepared and presented at the Canadian National Exhibition and elsewhere in the province.

Manitoba.-The Mines Branch of the Manitoba Department of Mines and Natural Resources offers five main services of assistance to the mining industry: maintenance, by the Mining Recorder's offices at Winnipeg and The Pas, of all records essential to the granting and retention of titles to every mineral location in Manitoba; compilation, by the geological staff of the Branch, of historical and current information pertinent to mineral occurrences of interest and expansion of this information by a continuing program of geological mapping; enforcement of mine safety regulations and, by collaboration with industry, introduction of new practices such as those concerned with mine ventilation and the training of mine rescue crews which contribute to the health and welfare of mine workers; and maintenance of a chemical and assay laboratory to assist the prospector and the professional man in the classification of rocks and minerals and the evaluation of mineral occurrences.

Manitoba also aids the mining industry by the construction of access roads to mining districts.

Saskatchewan.-Assistance to the mining industry in Saskatchewan is administered by the Mines Branch, Department of Mineral Resources, with its head office at Regina.

The Geology Division is directed by the Chief Geologist and maintains resident geologists in or near the principal mining areas. The Division conducts a prospectors' school which gives basic training in geology, mineralogy, prospecting and exploration techniques and administers the Prospectors' Assistance Plan which assists by lending equipment, paying certain transportation costs, paying for a grub-stake, and by providing technical advice. During the summer months, geological crews survey and map areas and prepare reports which are made available to the public. Exploration costs are also underwritten to the extent of 25 p.c. of air travel expenses incurred in connection with approved mineral exploration activities in the Precambrian area. A further 25-p.c. subsidy is offered for approved airborne geophysical surveys or other surveys involving special instrumentation. A royalty-free period for new mines of three years or until a net operating profit of $\$ 2,000,000$ has been realized, whichever comes first, is allowed for Precambrian mines.

The Engineering Division administers the Mines Regulation Act, the purpose of which is to ensure safe working conditions in mines. Inspections of mines are carried out by Division officers, a Chief Engineer of Mines stationed at Regina, and an Inspector of Mines stationed at Uranium City. Safety education is also part of the Division's work, taking the form of first aid instruction, mine rescue training and analysis of accidents.

The Mining Lands Division is responsible for making disposition of all Crown minerals with the exception of petroleum, natural gas and helium, and maintains records respecting areas let out by lease, permit or claim. Recording offices, having the responsibility of assisting the public in determining the lands available and accepting applications, are located at Regina, Prince Albert, La Ronge, Uranium City and Flin Flon.

Alberta.-Alberta Government assistance to the mining industry is diversified in character. The Mines Division of the Department of Mines and Minerals regulates coal mines and quarries and maintains standards of safety by inspection and certification of workers. The Workmen's Compensation Board also maintains safety standards and trains mine rescue crews. The oil and gas industries are served in a similar way by the Oil and Gas Conservation Board. Its regulatory measures, however, are also concerned with preventing the waste of oil and gas resources and with giving each owner of oil and gas rights the opportunity of obtaining a fair share of production. This Board compiles periodic reports and annual records which are of invaluable assistance in oil development in Alberta. The mining industry is also served by the Research Council of Alberta which has made geological surveys of most of the province and has carried forward projects concerned with the uses and development of minerals. The Council has studied the occurrence, uses and analyses of Alberta coals and their particular chemical and physical properties, the use of coals in the generation of power, and the upgrading and cleaning of coal, and has also studied briquetting, blending, abrasion loss, shatter and crushing strength, asphalt binders and dust-proofing of coal. Studies have been made of glass sands, salt, fertilizers, cement manufacture and brick and tile manufacture. (See also pp. 387-388.)

The province from time to time has had commissions examine various aspects of the mining industry when it has considered that their findings would be of assistance in developing such industries. The province, together with the Canadian Association of Oil Well Drilling Contractors and the Western Canada Petroleum Association, maintains a detailed supervisory and safety training program concerned with the drilling of oil and gas wells. Of assistance also to mining companies and oil companies are the special deductions provided for in the Alberta Income Tax Act. These follow the parallel provisions in the federal Income Tax Act.

British Columbia.-The Department of Mines and Petroleum Resources of British Columbia provides the following services: detailed geological mapping as a supplement to
the work of the Geological Survey of Canada; free assaying and analytical work for prospectors registered with the Department; assistance to the prospector in the field by departmental engineers and geologists; grub-stakes, limited to a maximum of $\$ 700$, for prospectors; assistance in the construction of mining roads and trails; and inspection of mines to ensure safe operating conditions.

## Section 3.-Mining Legislation

Federal Mining Laws and Regulations.-The Federal Government administers mining laws in the Yukon Territory, the Northwest Territories and certain other lands vested in the Crown in the right of Canada. The Yukon Quartz and Placer Mining Acts and the Canada Mining Regulations which are applicable to the Northwest Territories and other Crown lands are administered by the Resources Division, Northern Administration Branch, Department of Northern Affairs and National Resources. Minerals underlying federal land under grants are reserved to the Crown, and mining rights may be acquired by staking mineral claims under the appropriate Acts or Regulations. Twenty-one-year leases of claims may be issued and these leases may be renewed. The disposal of mineral rights underlying Indian reservations is subject to the consent of the Indians occupying the reserve and to the treaties relating thereto.

The Northwest Territories Quartz Mining Regulations were replaced by the Canada Mining Regulations, Mar. 3, 1961, amended in 1962. The new Regulations provide for the exploration and development of minerals in the Northwest Territories and for the exploration and development of minerals underlying territorial waters of Canada and lying outside any of the provinces and the Yukon Territory. The revised Regulations require a prospector's licence to enter, locate and prospect on lands subject to the Regulations. However, a prospector's licence is not required to maintain claims in good standing.

Any individual over 18 years of age or any joint stock company incorporated or licensed to do business in Canada may hold a prospector's licence. Claim tenure is limited to ten years from the date of recording. At the end of ten years, the claim owner must apply for a lease or relinquish his rights. No lease will be granted to an individual unless the Minister of Northern Affairs and National Resources is satisfied that the applicant is a Canadian citizen and will be the beneficial owner of any interest acquired under such lease; no lease will be granted to a corporation unless the Minister is satisfied that at least 50 p.c. of the issued shares of the corporation are owned by Canadian citizens or that the shares of the corporation are listed on a recognized Canadian stock exchange and that Canadians will have the opportunity of participating in the financing and ownership of the corporation.

Any new mine beginning production after the Canada Mining Regulations came into force will not be required to pay royalties for a period of 36 months, starting from the day the mine comes into production.

Oil and Gas Legislation.-The Federal Government administers oil and gas laws and regulations in the Yukon and Northwest Territories, through the Resources Division, Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa. All land in both territories is, in the first instance, owned by the Federal Government, complete with under-rights. These include oil and gas rights. When title to land is granted by letters patent, surface rights only are conveyed and under-rights continue to be vested in the Federal Government, which may dispose of them under appropriate legislation. Nine-year to 12 -year permits to explore for oil and gas and 21-year oil and gas leases are available.

The Government has set up the Canada Oil and Gas Land Regulations and the Canada Oil and Gas Drilling and Production Regulations, both dated June 6, 1961. They also include provisions for the exploration, development and production of oil and gas from land under all sea-coast waters of Canada which are not within any province.

An oil and gas exploration permit may be issued to any individual over 21 years of age or to any joint stock company incorporated or licensed to do business in Canada, or incorporated in any province of Canada. Permits are issued in periods of nine, 10 or 12 years, depending on the location, by which times the permittee is expected to apply for an oil and gas lease or relinquish his rights. No oil and gas lease will be issued to an individual unless the Minister of Northern Affairs and National Resources is satisfied that the applicant is a Canadian citizen and will be the beneficial owner of any interest acquired under such lease, or to a corporation unless the Minister is satisfied that at least 50 p.c. of the issued shares of the corporation are beneficially owned by persons who are Canadian citizens or that the shares of the corporation are listed on a recognized Canadian stock exchange, and that Canadians will have an opportunity of participating in the financing and ownership of the corporation.

Provincial Mining Laws and Regulations.*-All Crown mineral lands lying within the boundaries of the several provinces (with the exception of those within Indian reserves and National Parks which are under the jurisdiction of the Federal Government) are administered by the respective provincial governments.

The granting of land in any province except Ontario and Nova Scotia no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. In Nova Scotia no mineral rights belong to the owner of the land except those pertaining to gypsum, limestone and building materials, and the Governor in Council may declare deposits of either limestone or building materials to be minerals. Such declaration is to be based on economic value or to serve the public interest. In such case, the initial privilege of acquiring the declared minerals lies with the owner of the surface rights who must then conform with the requirements of the Mines Act. In Newfoundland, mineral and quarry rights are expressly reserved. Some early grants in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick, Quebec and Newfoundland also included certain mineral rights. Otherwise, mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (or veined minerals and bedded minerals), fuels (coal, petroleum and gas) and quarrying. Provincial mining regulations under these divisions are summarized in the following paragraphs.

Placer.-In most provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

General Minerals.-These minerals are sometimes described as quartz, lode, or minerals in place. With the exception of British Columbia, the most elaborate laws and regulations apply in this division. In all provinces except Alberta and Saskatchewan, a prospector's or miner's licence, valid for one year, must be obtained to search for mineral deposits, the licence being general in some areas but limited in others; a claim of promising ground of a specified size may then be staked. In Saskatchewan, a licence is required only for staking and any number of dispositions may be staked under one licence. A claim must be recorded within a time limit and payment of recording fees made, except in Quebec where no fees are required. Work to a specified value per annum must be performed upon the claim for a period of up to ten years; in Saskatchewan there is no work commitment in the first year of the claim. There is no time limit in British Columbia but $\$ 500$ assessment work, of which a survey may represent two fifths, must be performed and recorded before a lease may be obtained. In Quebec, a specified number of man-days of work must be performed and the excess may be carried forward for renewal of licence; before mining

[^162]can be commenced, a mining concession must be purchased for which it is necessary to produce an engineer's report indicating the presence of an orebody. The taxation applied most frequently is a percentage of net profits of producing mines or royalties. In Newfoundland, the provincial mining tax was modified after Confederation on Mar. 31, 1949 to conform with the provincial obligations under the Dominion-Provincial Tax Agreement. No other form of taxation or royalty exists. In Saskatchewan, subsurface mineral regulations covering non-metallics stipulate the size and type of dispositions that may be made in order to maintain the disposition in good standing, provide for fees, rentals and royalties, and set out generally the rights and obligations of the disposition holder.

Fuels.-In provinces where coal occurs, the size of holdings is laid down together with the conditions of work and rental under which they may be held. In Quebec, ordinary mining claims give rights to all mineral substances and to their development, and stakings for combustible natural gas, salt, coal, mineral oil or naphtha, or iron sands may cover 1,280 acres per claim. In Nova Scotia, mining rights to certain minerals, including petroleum, occurring under differing conditions may be held by different licensees. Provision is sometimes made for royalties. Acts or regulations govern methods of production. In the search for petroleum and natural gas, an exploration permit or reservation is usually required; however, in Manitoba, Saskatchewan, Alberta and British Columbia leases usually follow the exploration reservation whether or not any discovery of oil or gas is made. In Manitoba, Saskatchewan and Alberta, exploration costs are applicable in part on the first year's lease rental. In other provinces, the discovery of oil or gas is usually prerequisite to obtaining a lease or grant of a limited area, subject to carrying out drilling obligations and paying a rental, a fee, or a royalty on production.

Quarrying.-Regulations under this heading define the size of holdings and the terms of lease or grant. In Nova Scotia, sand deposits of a quality suitable for uses other than building purposes and limestone deposits of metallurgical grade belong to the Crown; gypsum quarries belong to the owner of the property. On Quebec private lands the quarry belongs to the owner; on Crown lands mineral rights belong to the Crown and may be obtained in accordance with the provisions of the law although the rights to exploit peat or marl must be obtained by special licence. In Saskatchewan, sand and gravel belong to the owner of the surface of the land. In Alberta, sand, gravel, clay and marl recovered by excavating from the surface belong to the owner of the surface of the land.

Copies of mining legislation including regulations and other details may be obtained from the provincial authorities concerned.

## Section 4.-Statistics of Mineral Production

## Subsection 1.-Value and Volume of Mineral Production

Statistics of the annual value of mineral production are available from 1886, total production being shown for five-year intervals from that date to 1950 and annually for subsequent years in Table 3. These figures are not strictly comparable throughout the period because of minor changes in methods of computing metallic content of ores sold and valuations of products but they do serve to show broad trends in the mineral industry.

The mineral industry has tripled its value of output in the past 15 years. In 1949, the base year for many economic studies, the production per head of population was $\$ 67.01$; by 1963 this had advanced to $\$ 158.94$. Although part of the increase was accounted for by higher prices, the index of the volume of output from Canadian mines recorded an advance from 100.0 to 294.4 in the same period (see p. 575).
3.-Value of Mineral Production, 1886-1963

| Year | Total Value | Value per Capita | Year | Total Value | Value per Capita | Year | Total Value | Value per Capita |

| 1957. | 1,159,579,226 | 169,061.110 | 564,776,791 | 296,905,265 | 2,190,322,392 |
| 1958. | 1,130,160,395 | 150,354,802 | 510,768,681 | 309,455,160 | 2,100,739,038 |
| 1959 | 1,370,648,535 | 178,216,641 | 535,577, 823 | 324,577,512 | 2.409,020,511 |
| 1960. | 1,406,558,061 | 197,505,783 | 565,851,829 | 322,594,308 | 2,492,509,981 |
| 1961. | 1,387, 159,036 | 210,467,786 | 653,327,802 | 331, 345,763 | 2,582,300,387 |
| 1962 | 1,496, 433,950 | 217, 453,009 | 780,932,387 | 356, 166, 833 | 2,850,986,179 |
| 1963p | 1,504,532,688 | 250,890,047 | 882,412,442 | 365,574,741 | 3,003, 409,918 |

Current Production.-The estimated value of mineral products shipped in Canada during 1963 was over $\$ 3,000,000,000$, and was 5.3 p.c. above the 1962 value. Canada's mineral output exceeded $\$ 500,000,000$ in value for the first time in 1940, passed the $\$ 1,000,000,000$-mark in 1950 and exceeded $\$ 2,000,000,000$ in 1956.

Metals, ores and concentrates produced in 1963 were valued at $\$ 1,505,000,000$, an amount slightly higher than in 1962 . Nickel contributed $\$ 363,000,000$, iron ore $\$ 292,000,000$ and copper $\$ 288,000,000$, together making up almost 63 p.c. of the total 1963 metal output. There was a reduction in output of nickel-copper in the Sudbury area of Ontario but new base-metal mines came into production in British Columbia and the Maritime Provinces. The values of gold and uranium produced were below those of 1962 but silver, priced at an all-time high average of $\$ 1.38$ oz.t., yielded about $\$ 7,000,000$ more than in 1962, although the quantity shipped was only slightly higher.

The value of shipments of non-metallic minerals in 1963 increased 15.4 p.c. to reach $\$ 251,000,000$. More than half of this total was accounted for by an asbestos output of $\$ 135,000,000$, an amount approximately $\$ 5,000,000$ higher than in 1962 . Salt output was valued at $\$ 23,000,000$ and potash, a new product with a high potential, at about the same amount. Over $1,000,000$ tons of elemental sulphur were shipped from the natural gas processing plants of Alberta and, although production of sulphur exceeds current demand, there has been a notable increase in export sales.

An increase of over $\$ 100,000,000$ brought the value of mineral fuels produced in 1963 to $\$ 882,000,000$. Crude petroleum output of $260,000,000 \mathrm{bbl}$. was a new high and natural gas output exceeded $1,000,000,000 \mathrm{Mcf}$. for the first time, resulting in a corresponding increase in production of the by-products of the natural gas industry. Coal output remained about the same as in 1962.

Structural materials were valued at $\$ 366,000,000$ as compared with $\$ 356,000,000$ in 1962. The demand for brick, tile, cement and lime was about the same but more stone, sand and gravel were used in highway construction.
5.-Quantity and Value of Mineral Production, 1961-63

${ }^{1}$ Includes minor items not specified.
With 1949 production levels equalling 100,* the total quantity of mineral output had reached an all-time high of 294.4 by 1963, an increase of 2.4 p.c. over the previous year. The most significant gains were recorded in the iron ore, natural gas and crude petroleum industries, with lesser gains in asbestos and coal. Declines occurred in gold, copper, nickel and uranium (not shown).

## Subsection 2.-Provincial Distribution of Mineral Production

Certain changes in provincial mineral production in 1963 are worthy of note. Newfoundland increased its output of iron ore when the Carol Lake project was brought into production. Nova Scotia increased the output of its major mineral products-gypsum, salt and coal. In New Brunswick, some of the base-metal mines resumed operations. In Quebec, three new base-metal mines-Orchan, New Hosco and Mattagami Lake-were officially brought into production on the same day-Oct. 16. The Sudbury area of Ontario did not produce as much nickel and copper as in the previous year, but Manitoba's basemetal mines increased their output of both these metals as well as of lead. Potash in Saskatchewan boosted the mineral value of the province by $\$ 23,000,000$. The energy minerals-oil, gas and coal-of Alberta continued their upward trend with an increase of $\$ 66,000,000$ over 1962. New copper mines in British Columbia helped to raise the value of that province's metallic output to $\$ 171,000,000$. The Yukon Territory benefited from higher silver prices, but the closing of the nickel-copper mine in the Northwest Territories brought the total mineral output for the Territories down from 1962.

## 8.-Value of Mineral Production, by Province, 1954-63

Nots.-Figures from 1899 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

## Subsection 3.-Production of Metallic Minerals

The metallic minerals of greatest dollar value to Canada during 1963 were, in order: nickel, iron ore, copper, gold, uranium, zinc, lead and silver. Except for iron ore, which advanced from third place to second, this order remained unchanged from 1962. Developments taking place in metal mining during 1963 are described in detail in Section 1, pp. $543-552$. The following statistical information gives a comparison of quantity and value figures for each of the principal metals over the ten-year period 1954-63.

Nickel.-The output of nickel in Canada was slightly lower in 1963 than in 1962 because the older mines in Ontario, which are by far the largest producers, continued the cutback in production that commenced in 1962 (see p. 543). The other producing prov-inces-Quebec, Manitoba and British Columbia-recorded moderately higher quantities than in 1962 but the only mine in the Northwest Territories closed down.

Canada uses only about 5,000 tons of refined nickel (anodes, cathodes and ingots) annually. Exports amounted to 109,156 tons in 1963 compared with 121,712 tons in 1962, most of it going to the United States and Britain; exports of nickel in ores, concentrates and matte, mostly to Britain and Norway, amounted to 83,392 tons compared with 77,409 tons in the previous year.
10.-Nickel Production, by Province, and Total Value 1954-63

| 1963p.. | 2,596 | 149, 196 | 65,007 | 1,850 | - | 218,649 | 362,781,957 |

Iron Ore.-Shipments of iron ore from Canadian mines, which have fluctuated considerably over the past ten years, reached a record high level in 1963. The quantity shipped by each producing province was higher than in 1962, the largest increase being contributed by Newfoundland. Quebec accounted for 39.2 p.c. of the country's output, Newfoundland for 31.2 p.c., Ontario for 22.7 p.c. and British Columbia for the remainder.

Production of pig iron and production of steel ingots and castings were also at their highest levels in 1963. Exports of iron ore-direct shipping grade, concentrated, agglomerated and other forms-amounted to $26,717,570$ tons valued at $\$ 270,948,783$, a considerable increase over the 1962 totals. Of the 1963 tonnage exported, 76.8 p.c. went to the United States and most of the remainder to Europe, mainly to Britain. Japan received $2,216,227$ tons compared with $1,729,866$ tons in 1962.
11.-Iron Ore Shipments and Production of Pig Iron and Steel Ingots and Castings, 1954-63

Copper.-Production of copper in Canada reached its highest point in 1963 in both quantity and value. Increases in British Columbia, Manitoba, New Brunswick and Nova Scotia offset decreased output in the other producing provinces. There was no production in the Yukon and Northwest Territories in 1963.

## 12.-Copper Production, by Province, and Total Value 1954-63

Norg.-Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

Gold.-Over the ten-year period 1954-63, Canada's annual gold production fluctuated narrowly between about $4,000,000$ oz.t. and $4,600,000$ oz.t., and its value between $\$ 149,000,000$ and $\$ 159,000,000$; the high point was reached in 1961. Output in 1963 was down by 200,000 oz.t. compared with 1962 and, despite the establishment of a higher price per oz.t. (see p. 546), the value was $\$ 6,000,000$ lower. All provinces except New Brunswick and Saskatchewan, as well as the Yukon and Northwest Territories, reported decreased output in 1963, the major producers-Ontario and Quebec-declining by 4.7 p.c. and 6.2 p.c., respectively. Ontario produced 58.5 p.c. of Canada's gold output in 1963, Quebec 23.4 p.c., the Northwest Territories 9.5 p.c. and British Columbia 3.9 p.c.
13.-Quantity and Value of Gold Produced, by Province, 1954-63

Note.-Values are calculated at world prices in Canadian funds. Figures from 1862 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

Uranium.-Uranium mineralization has been found in Canada at intervals along the western and southern edges of the Canadian Shield but production has been concentrated in four areas within this belt-Great Bear Lake in the Northwest Territories, Beaverlodge in northern Saskatchewan, and Elliot Lake and Bancroft in Ontario. Although output of uranium first began in the Northwest Territories in 1942, figures were not available until 1954 because of government restrictions. However, it was after that time that the large mines and mills of Saskatchewan and Ontario came into production. Peak output amounting to $31,800,000 \mathrm{lb}$. was reached in 1959 from 23 mines, but by the end of 1963 , for economic reasons (see p. 548), only seven mines remained in operation and production dropped to about $16,300,000 \mathrm{lb}$. for the year. Of the 1963 quantity, 76.3 p.c. was produced in Ontario and the remainder in Saskatchewan.
14.-Production and Value of Uranium $\left(\mathrm{U}_{3} \mathrm{O}_{8}\right)$, by Province, 1954-63

${ }^{1}$ Figures for 1956 include radium salts, silver, cobalt and uranium oxides; figures for 1957-63 are for uranium oxide $\left(\mathrm{U}_{3} \mathrm{O}_{8}\right)$.

Zinc.-The output of zinc fluctuates considerably from year to year. It reached its highest point in 1962, dropping by about 5,000 tons in 1963. British Columbia accounted for 44.4 p.c. of the quantity produced in 1963 , Quebec for 14.0 p.c., Ontario 12.5 p.c. and Manitoba 10.1 p.c., followed in order by Newfoundland, Saskatchewan, New Brunswick, Yukon Territory and Nova Scotia.

## 15.-Quantity and Value of Zinc Produced, 1954-63

${ }^{1}$ Estimated foreign smelter recoveries and refined zine produced in Canada.
Lead.-Lead production in 1963 in the form of refined pig and recoverable lead in ore and concentrates was somewhat lower than that in 1962. As stated on p. 549, most of the decrease resulted from lower production in the Eastern Townships of Quebec and in southeastern British Columbia. British Columbia produced about 77 p.c. of the total

1963 output. Lead also occurs in the complex ores at Buchans in Newfoundland and in the silver-lead ore mined in the Mayo district of Yukon Territory, and smaller amounts are produced in Quebec, Manitoba and Ontario. In 1963, Nova Scotia and New Brunswick each produced lead concentrates from complex ores.

## 16.-Quantity and Value of Lead Produced from Canadian Ores, 1954-63

Nore.-Figures from 1887 are given in the corresponding table of previous Year Books beginning with the 1929 edition.

Silver.-Production of silver is fairly widespread across Canada, being recovered mainly as a by-product in the treatment of gold ores and ores of copper, lead, zinc, cobalt and nickel. Output is therefore often affected by changes in the production of these metals. The total amount produced in 1963 was slightly above that for 1962 but a considerable increase in the price of silver, for the second consecutive year, brought the value of that production to an all-time high. The peak volume production occurred in 1960.

## 17.-Quantity of Silver Produced, by Province, and Total Value, 1954-63

Nore--Figures from 1887 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

[^165]
## Subsection 4.-Production of Non-metallic Minerals (excluding Fuels)

Asbestos is by far the most important item in this group in point of value, followed by salt, potash, sulphur and gypsum. Four of these items are discussed separately below; potash, a recently developed product, is covered on p. 553. Next in importance is peat moss which, although included as a non-metallic mineral, consists of the dead fibrous moss produced from peat bogs; its growing use as a soil conditioner, as poultry and stable litter and as packaging material resulted in shipments valued at nearly $\$ 8,900,000$ in 1963, double the shipments of 1958. Quantities and values of other non-metallic minerals produced are shown in Table 5, p. 573, and a review of recent developments in the industrial mineral field is given at pp. 552-554.

Asbestos.-In 1963, Canadian asbestos mines shipped a record 1,272,024 tons valued at $\$ 134,880,000$, representing an increase of 4.6 p.c. in quantity and 3.5 p.c. in value over 1962. Quebec, with 10 producing firms, accounted for over 91 p.c. of the total tonnage; Ontario's one mine produced 34,000 tons and British Columbia's one mine produced 63,000 tons.

## 18.-Quantity and Value of Asbestos Produced, 1954-63

Nore.-Figures from 1896 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

| Year | Quantity | Value | Year | Quantity | Value |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | tons | \$ |  | tons | \$ |
| 1954. | 924,116 | 86,409,212 | 1959. | 1,050,429 | 107,433,344 |

| 1958. | 925,331 | 92,276,748 | 1963p | 1,272,024 | 134,880,206 |

Salt.-The output of salt reached a high point in both quantity and value in 1963, with Ontario and Nova Scotia contributing most of the increase over 1962. Ontario produced over 86 p.c. of the total tonnage. Rock salt is mined in Nova Scotia and Ontario only; brine wells are operated in Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta.
19.-Quantity of Salt Produced, by Province, and Total Value, 1954-63

Nort.-Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

Sulphur.-The figures in Table 20 represent the quantity and value of sulphur contained in derivatives from smelter gases such as sulphur dioxide, sulphuric acid, etc., and in pyrite and pyrrhotite shipments, as well as the quantity and value of sulphur refined from natural gas production. The increase in the latter over the past six years has been quite remarkable. In Canada, sulphur is used in the treatment of sulphite pulps and in the manufacture of rayon, explosives, rubber goods, petroleum refining, matches and insecticides.

[^166]Gypsum.-Nova Scotia deposits provided 83 p.c. of the total output of gypsum in 1963 and accounted for the major part of the increased production in that year, although Newfoundland showed the greatest relative increase. The over-all increase in quantity was about 11 p.c. and in value about 19 p.c. In Canada, gypsum is used in the manufacture of plaster and wallboard and is added to Portland cement to control setting, but most of the output is exported in crude form to United States plants for processing.

## 21.-Quantity of Gypsum Produced, by Province, and Total Value, 1954-63

## Subsection 5.-Production of Fuels

Coal.-The downward trend in the production of coal, in evidence for some time, was interrupted in 1960 and again in 1963. In the latest year, all producing provinces with the exception of Saskatchewan showed some increase in output compared with the previous year. Imports and exports were also higher in both quantity and value.
22.-Coal Production, by Province, 1954-63

| ${ }^{2}$ Includes coal ex-warehoused for ships' stores. and coal n.o.p. |  |  |  |  |  |  |  |  |

The amounts and percentages of domestic and imported coal apparently consumed in Canada in the years 1954-63 are shown in Table 24. The imports represent amounts taken out of bond for consumption during the respective years, regardless of when received. Thus, the totals are exclusive of coal landed at Canadian ports and re-exported or exwarehoused for ships' stores without being taken out of bond.

## 24.-Consumption of Canadian and Imported Coal in Canada, 1954-63

Nore.-Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1921 edition.

| Year | Canadian Coal ${ }^{1}$ |  | Imported Coal 'Entered for Consumption'z |  |  |  | Grand Total | Con-sumption per Capita |

[^167]Petroleum.-The upward climb of crude petroleum production which started with the discovery of the Leduc field in Alberta in 1947 halted temporarily in 1958 but resumed in 1959 and continued in subsequent years. Quantity production in 1963 reached a record level, about $15,000,000 \mathrm{bbl}$. higher than in 1962 . Over 40 p.c. of this increase was contributed by Alberta.

## 25.-Quantity and Value of Crude Petroleum Produced, by Province, 1954-63

Natural Gas.-The output of natural gas continues to increase at a rapid rate in Alberta and British Columbia. Total Canadian shipments, which amounted to $150,772,000$ Mcf. in 1955, reached a high of $1,070,900,000$ Mcf. in $1963 ; 895,000,000$ Mcf. of that amount came from Alberta. A review of developments in the natural gas industry is given at pp. 557-558.

## 26.-Quantities of Natural Gas Produced, by Province, and Total Value, 1954-63

Nors.-Figures from 1920 are given in the corresponding table of previous Year Books beginning with the 1940 edition.

## Subsection 6.-Production of Structural Materials

Active construction throughout Canada has kept production of structural materials at a high level in recent years. The value of such materials produced reached the record total of $\$ 365,574,741$ in 1963. In point of value, sand and gravel is the most important of the structural materials, followed by cement, stone, clay products and lime. Developments in the construction materials industries during 1963 are covered in the review at p. 554.

Sand and Gravel.-Deposits of sand and gravel are numerous throughout Eastern Canada, with the exception of Prince Edward Island where gravels are scarce. The local needs for these materials are usually supplied from the nearest deposits as their cost to the consumer is governed largely by the length of haul. This accounts for the large number of small pits and the small number of large plants in operation. Every province except New Brunswick and Prince Edward Island produces natural bonded sand but some grades particularly suitable for certain industries command much higher prices than ordinary sand. The greater part of the sand and gravel output is used in road improvement, concrete works or as railway ballast, and most of the commercial plants are equipped for producing crushed gravel, a product that can compete with crushed stone.

In 1963, an estimated $185,498,913$ tons of sand and gravel were produced, valued at $\$ 121,167,131$. This represented an increase of 2 p.c. in both quantity and value compared with 1962. Quebec and Ontario together contributed 64 p.c. of the quantity.
27.-Producers' Shipments of Sand and GraveI, by Province, and Total Value, 1954-63

Cement.-The production of cement in Canada reached an all-time high in 1963, output in that year being almost 2 p.c. above the previous peak of 1962. Consumption, continuing the almost steadily upward trend in evidence throughout the decade, also attained a record in 1963. Of the Canadian total of $6,988,000$ tons produced in that year, Ontario contributed 36 p.c. and Quebec 33 p.c.; all other provinces except Prince Edward Island and Nova Scotia contributed to the remainder.

## 28.-Quantity and Value of Production, Imports, Exports and Apparent Consumption of Cement, 1954-63

Nots.-Figures from 1910 are given in the corresponding table of previous Year Books beginning with the 1939 edition.

| Year | Shipments (sold or used) |  | Imports | Exports | Apparent Consumption ${ }^{1}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | tons | \$ | tons | tons | tons |
| 1954. | 3,926,553 | 59,035,644 | 401,135 | 21,638 | 4,306,050 |

| 1956. | 5,021,683 | 75, 233,321 | 677, $616^{2}$ | 124,561 | 5,574,738 |
| 1957. | 6,049,098 | 93,167,477 | 92,380 | 338,316 | $5,803,162$ |
| 1958. | 6,153,421 | 96,414,142 | 41,550 | 141,250 | 6,053,721 |
| 1959. | 6,284,486 | 95, 147,798 | 29,256 | 303,126 | 6,010,616 |
| 1960. | 5,787,225 | 93, 261, 473 | 22,478 | 181,117 | 5,628,586 |
| 1961. | 6,205,948 | 103,923,644 | 29,217 | 249,377 | 5,985,788 |
| 1962. | 6,878,729 | 113,233, 726 | 26,525 | 219,164 | 6,686,080 |
| 1963p. | 6,988,412 | 117,588,571 | 10,776 | 272,803 | 6,726,385 |

Stone.-The stone industry in Canada has two main divisions-stone quarrying and the stone products industry. The granite, limestone, marble, sandstone and slate quarries yield high-grade structural and decorative materials and also supply requirements for chemical and other allied industries but the major part of the tonnage produced is crushed stone.
29.-Producers' Shipments of Stone, ${ }^{1}$ by Province, and Total Value, 1954-63

${ }^{1}$ Excludes limestone used to make lime or cement.
Clay Products.-The sales value of clay products produced in 1963 was slightly lower than in 1962. Common clays suitable for the production of building bricks and tile are found in all the provinces; production is greatest in Ontario and Quebec. Stoneware clays are produced largely from the Eastend and Willows areas in Saskatchewan and shipped to Medicine Hat, Alta., where, utilizing the cheap gas fuel, they are manufactured into stoneware, sewer pipe, pottery, tableware, etc. Stoneware clay also occurs in Nova Scotia and, although it has not been developed extensively for ceramic use, some is used for pottery. Two large plants and a few small plants manufacture fireclay refractories from domestic clay in British Columbia, Saskatchewan and Nova Scotia. Deposits of high-grade, plastic, white burning clays occur in northern Ontario and deposits yielding high-grade china clay have been found along the Fraser River in British Columbia but these have not been used on a commercial scale, nor have the ball clays of high bond strength occurring in the white mud beds of southern Saskatchewan been developed to any extent.

## 30.-Value (Total Sales) of Clay Products Produced, by Province, 1954-63

Note.-Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

## Section 5.-Industrial Statistics of the Mineral Industry

The scope of the annual statistics on mineral production published by the Dominion Bureau of Statistics includes a general review of the principal mineral industries such as the copper-gold, silver-lead-zinc, and nickel-copper industries as well as a section on metallurgical works. Additional data published at irregular intervals include such features as numbers of employees, salaries and wages paid and net value added by processing.

The figures for 'net value added by processing' of industries given in Tables 31 and 32 are, in each table, the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada, less the cost of materials, fuel, etc. The totals indicate returns to the different industries, or the 'business done' by these industries. These industry series of data are not comparable to the commodity series shown in Table 5, p. 573 where, with respect to copper, lead, zinc and silver, values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity and other supplies consumed in the production process.

Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminum, where imported ore only is used. There are some imported lead-zinc concentrates processed at the smelter in British Columbia. The smelting and refining industry is classified as manufacturing and the data relative to that industry are included in the primary metal industry (see Chapter XVI on Manufactures).

## 31.-Principal Statistics of the Mineral Industry, by Province, 1962

Nots.-Figures prior to 1961 are not comparable with those given for earlier years in previous editions of the Year Book.

| Province or Territory | Plants or Establishments | Employees | Salaries and Wages | Cost of Process Supplies, Fuel, Electricity, Freight and Smelter Charges | Net Value Added by Processing |

## Section 6．－World Production of Certain Metallic Minerals and Fuels

Table 33 shows the production of certain metallic minerals and fuels in the different countries of the world for the year 1962．These figures are taken from the United Nations Statistical Yearbook 1963 which presents production figures for a much more extensive list of mining and quarrying industries．The 1962 figures are provisional and have been con－ verted from kilograms to ounces troy for gold，from metric tons to ounces troy for silver， and from metric tons to short tons for the other metals and fuels shown．

## 33．－World Production of Certain Metallic Minerals and Fuels， 1962

Note．－Where dashes occur throughout this table they indicate that no figures were given in the United Nations Statistical Yearbook either because there was no production or because the quantity was not available．

The interpretation of the symbols used in the tables throughout the Year Book will be found on $p$. viii of this volume.

## Section 1.-Water Power Resources-Available and Developed*

Canada, a land of many large lakes and fast-flowing rivers, is richly endowed with immense water power resources. With the exception of the prairies of the mid-west, these resources are found in considerable magnitude in almost every part of the country.

British Columbia, traversed by three distinct mountain ranges and with, generally speaking, a high rate of precipitation, has many mountain rivers which offer abundant opportunity for the development of hydro-electric power. Notable for their power potential are such rivers as the Columbia, the Fraser, the Peace and the Stikine. Up to the present time, however, hydro-electric developments on smaller rivers in the southern part of British Columbia have supplied the province's major load requirements. The immense power resources of the larger rivers have gone unused, chiefly because of remoteness from present demand areas or because of conflicts of interest between fisheries and power development. The water power resources of British Columbia, in total magnitude the second greatest in Canada, have played and will continue to play a very important part in the development of the province.

Important water power sites await development on the Yukon River in the Yukon Territory and on the South Nahanni River in the Northwest Territories. Indications are that the rivers draining the District of Keewatin, north of Manitoba, will also contribute materially to the total power potential of the Northwest Territories. In view of the lack of developed native fuel sources and difficulties in transportation, water power is of special importance in the development of mining areas such as those at Yellowknife in the Northwest Territories and at Mayo in the Yukon Territory.

Of the three Prairie Provinces, Manitoba has the greatest water power potential. For many years, the more heavily populated southern region of the province has been supplied from hydro-electric developments on the Winnipeg River. With the advent of high-voltage, long-distance transmission, however, power from hydro-electric stations on northern rivers will flow south to help meet the constantly growing demands of industrial, urban and rural users. In both Alberta and Saskatchewan, abundant reserves of coal, oil and natural gas are used to fuel the thermal-electric plants which satisfy much of the demand for power in these provinces. In Alberta, the principal existing hydro-electric developments are located on the Bow River and its tributaries, but there are substantial power resources in northern regions of the province, too remote from urban centres to

[^170]warrant development at the present time. In Saskatchewan, large water power resources exist in the central and northern parts of the province, principally on the Churchill, Fond du Lac, and Saskatchewan Rivers. In 1963, power from the first development on the Saskatchewan River was fed into the transmission network of the provincially owned Saskatchewan Power Corporation, which serves the more settled areas of the province. Previously, these areas had been served by thermal-electric plants fuelled by coal, oil or natural gas, the hydro-electric power generated in the province being used almost exclusively for mining purposes in northern areas.

The pace of industrial expansion in Ontario since the turn of the present century has made heavy demands on the province's substantial water power potential, to the extent that hydro-electric installed capacity in Ontario is exceeded in total magnitude only by that of Quebec. The largest hydro-electric development in the province is located on the Niagara River at Queenston, where the Sir Adam Beck-Niagara Generating Stations Nos. 1 and 2 and the associated pumping-generating station have a combined capacity of $2,521,000 \mathrm{hp}$. Completion of development of most of Ontario's water power sites located within economic reach of demand areas has led, within the past few years, to an increasing dependence upon electric energy generated in thermal plants and to the building of Canada's first nuclear thermal plants. An important contributing factor is the growing recognition of the benefits offered by integrating the operation of hydro and thermal plants. Despite this growing emphasis on thermal power, development of a number of the province's more remote hydro sites is now considered economically feasible, largely as a result of recent marked advances in extra-high-voltage, long-distance transmission techniques. Several of these sites are under construction.

With more than 30 p.c. of the national recorded total, Quebec's water power resources are the most extensive in the country. Quebec leads the other provinces also in terms of installed turbine capacity with a total installation of some $13,200,000 \mathrm{hp}$.-about 47 p.c. of the total for all of Canada. The greatest concentration of hydro-electric capacity in one plant in Canada is installed in the 2,145,000-hp. Beauharnois development on the St. Lawrence River. Notable also are the Bersimis I development on the Bersimis River and the Shipshaw plant on the Saguenay River, each with an installed capacity of $1,200,000$ hp . A major power scheme involving the harnessing of the headwaters of the Manicouagan and Outardes Rivers is under construction. The completed project will make available about $7,300,000 \mathrm{hp}$. of additional capacity at new and existing developments on the two rivers.

The water power resources of New Brunswick and Nova Scotia, although small in comparison with those of other provinces, are a valuable source of energy. Numerous rivers in both provinces provide moderate-sized power sites advantageously situated for urban or rural use. In Prince Edward Island there are no large streams and, consequently, water power plants are limited in size to those used for small mills. Topography and runoff conditions on the Island of Newfoundland are favourable for the development of power, even though river drainage areas are generally not large. Considerable power development has taken place on the Island, mainly to serve the pulp and paper industry. Labrador has what is considered to be one of the largest sources of water power in Canada in the Hamilton River and its tributaries.

An accurate comparison of the magnitude and state of development of Canada's water power resources with those of other countries is not possible because world statistics are incomplete and are not tabulated on the same basis. Available information would indicate, however, that Canada is exceeded only by the United States in the total amount of hydraulic turbine capacity actually installed. In terms of installed water power capacity per thousand population, Canada is second only to Norway. It is interesting to note that, with the exception of those of the United States, Canada's water power resources, fifth in order of magnitude, are more readily available to prospective markets than is the case in any of the countries that have greater power potential.

Table 1 gives, by province or territory, the estimated total water power resources of Canada and the total existing capacity of all water power plants.

## 1.-Available and Developed Water Power, by Province, as at Jan. 1, 1964

| Province or Territory | Available 24-Hour Power at 80 p.c. Efficiency |  | Turbine Installation |

${ }^{\prime}$ Reflects the effect of possible stream-flow regulation based on known storage potentials.
The figures in the first and second columns of Table 1 represent continuous 24 -hour power based on available data on stream-flow and hydraulic head at individual sites. The hydraulic head used is the feasible concentration of head, which has been measured or at least estimated at existing falls, rapids and known power sites. No consideration has been given to possible economic concentrations of head on rivers and streams of gradual gradient, except at those locations where the available head has been definitely established by field investigations.

It should be emphasized that the figures of available power represent only the minimum water power possibilities of Canada. Many unrecorded power sites exist on rivers and streams throughout the country, particularly in the less-explored northerly districts. As power surveys are extended, detailed information on new sites will become available and, undoubtedly, substantial additions to present figures of available power will result. With the exception of British Columbia, Yukon Territory and the Northwest Territories, estimates of available power are based upon existing river flows and do not take into account the benefits of stream-flow regulation that would result from the development of storage potential. In addition, the figures of available power do not include the power potential of major river diversions that have been investigated but not developed.

The figures in the third column of Table 1 are the totals of plant capacities based upon the manufacturer's rating as indicated on the name-plate of each unit. In a few cases where, subsequent to installation of the unit, a change in the normal operating head has been effected, a rating based on the new normal operating head is used. The maximum economic turbine installation at any power site can be determined only by careful consideration of all the conditions and circumstances pertinent to its individual development. It is the usual practice, however, to install turbines with a total capacity in excess of the power equivalent of the ordinary six-month flow at the site. This additional capacity may be installed for use at peak-load hours or to facilitate plant or system maintenance, or to take advantage of high river flow.

The extent to which the installed capacity exceeds the power equivalent of the ordinary six-month flow depends upon the factors that govern the system of power-plant operation, and varies widely in different parts of the country. In some developments, the difference may amount to as much as several hundred per cent. For this reason, the figures in the third column of Table 1 are not directly comparable with those in column two. For the same reason, it is not feasible to forecast future capacity installation on the basis of estimates of available water power.

The steady growth of hydraulic turbine capacity is shown in Table 2. The average annual growth of $56,000 \mathrm{hp}$. in the period $1900-05$ increased sharply to about $150,000 \mathrm{hp}$.
per annum in the 1906-22 period, largely as a result of improvements in electric power transmission and of the construction of large hydro-electric stations. Because of the heavier demand for electricity during the prosperous $1920^{\prime}$ s, the rate of installation increased appreciably in 1923 and continued at a nearly uniform rate of $377,000 \mathrm{hp}$. per annum until 1935. Conditions resulting from the economic depression of the early 1930's were responsible for a decrease in construction starts and the comparatively low rate of installation during the period 1936-39. The wartime demand for power accelerated the installation rate to an average of $481,000 \mathrm{hp}$. per annum for the period $1940-43$. Few new developments were started in the later war years or in the immediate postwar period so that from 1944 to 1947 only a small amount of new capacity came into operation. However, the program of construction of hydro-electric power plants gained momentum soon after the War and the results are apparent in the substantial growth in new capacity brought into service during the period 1948-60, when the average annual rate of installation exceeded $1,200,000 \mathrm{hp}$. In sharp contrast to this high average rate are the comparatively moderate net totals of $294,650 \mathrm{hp} . *$ and $415,468 \mathrm{hp}$. of new capacity put into service in 1961 and 1962, respectively. The previous high rate of installation resumed in 1963, however, when a total of $1,090,000 \mathrm{hp}$. of new capacity was brought into service.

* Does not reflect an increase of $60,000 \mathrm{hp}$. brought about by the re-rating of an existing plant in Quebec.

## 2.-Hydraulic Turbine Horsepower Installed, by Province, as at Dec. 31, Decennially 1900-50 and Annually 1954-63

Notz.-Figures for the years 1900-30 are given in the 1939 Year Book, p. 362; for 1931-39 in the 1946 edition, p. 362; for 1940-49 in the 1954 edition, pp. 556-557; and for 1951-53 in the 1963-64 edition, pp. 584-585.

The availability of large amounts of low-cost hydro-electric energy has been an essential factor in the development of Canadian industry. Power from hydro-electric plants ranging in capacity from a few hundred horsepower to more than a million horsepower is carried via transmission line networks to urban centres and rural districts. The ability to transmit power over relatively long distances has facilitated the decentralization of industry and has enabled manufacturers to carry on operations in many of the smaller centres of population.

Table 3 indicates the respective amounts of water power developed by utilities and by industrial establishments. For the purposes of this tabulation, utilities are defined as companies, municipalities or individuals who sell most of the power they develop. In some cases, they include also certain subsidiary companies whose main purpose is to develop and sell power to a parent company for industrial uses. The total of $21,972,661 \mathrm{hp}$. of turbine capacity installed in plants operated by utilities on Jan. 1, 1964 represented 78 p.c. of Canada's total installed capacity.

Industries are defined as companies or individuals who develop power mainly for their own use. The total installed capacity of plants operated by industrial establishments on Jan. 1, 1964 was $6,220,901 \mathrm{hp}$. In addition to the power generated in their own plants, industries purchase a considerable amount from utilities.

The total hydraulic installation at the beginning of $1964(28,193,562 \mathrm{hp}$.) is the total of all existing installations of water wheels and hydraulic turbines in Canada.

## 3.-Installed Water Power Capacity, by Province, as at Jan. 1, 1964

[^171]${ }^{2}$ Includes only water

## Section 2.-Power Generating Capability and Load Requirements*

Power generating capability, as covered in this Section, is the measurement of the available generating resources of all hydro and thermal facilities at the time of the one-hour firm peak load for each reporting company, and is not equal to the capacity of such generating facilities. For example, a hydro plant may have a capacity of $100,000 \mathrm{kw}$. but if, at the time of peak load, the water available for generation is only 80 p.c. of the plant capacity requirements, then its capability is $80,000 \mathrm{kw}$.

[^172]Total generating capability has grown at a rapid rate since 1950. The annual rate of increase was 8.0 p.c. in the twelve-year period 1951-63 and 6.0 p.c. in the period 1959-63. In comparison, the forecast rate of growth for the years 1964-68 is only 6.4 p.c.; thermal generating capability is expected to grow at the average rate of 7.3 p.c. a year in the forecast period compared with 15.8 p.c. in the period 1951-63 but hydro-electric capability is expected to increase at only 3.0 p.c. a year compared with 6.7 p.c. in the 1951-63 period.

Among the provinces, Quebec has the largest generating capability, followed by Ontario, British Columbia and Alberta. Quebec also has the largest hydro-electric generating capability, followed by Ontario and British Columbia, but Ontario has the largest thermal capability, followed by Alberta and British Columbia. The first nuclear capability is scheduled for 1967.

The largest absolute growth in generating capability for the forecast years is indicated for Quebec amounting to $2,323,000 \mathrm{kw}$., followed by Ontario $2,199,000 \mathrm{kw}$., Alberta $790,000 \mathrm{kw}$., and British Columbia $769,000 \mathrm{kw}$. Quebec will meet most of its increased generating capability by adding over $2,014,000 \mathrm{kw}$. in hydro capability and $309,000 \mathrm{kw}$. in thermal capability. Ontario will add $1,915,000 \mathrm{kw}$. thermal, including $218,000 \mathrm{kw}$. nuclear, and $284,000 \mathrm{kw}$. hydro, and Alberta will add $300,000 \mathrm{kw}$. hydro and $490,000 \mathrm{kw}$. thermal. Thus, it is apparent that thermal capability is becoming of greater importance, partly because of decreasing availability of hydro resources in provinces such as Ontario and partly because technological advances have made possible much more efficient use of thermal fuels in the operation of thermal base load plants.

Firm power peak load is the measure of the maximum average net kilowatt demand of one-hour duration from all loads, including commercial, residential, farm and industrial consumers as well as the line losses. Such load demand increased at the rate of 6.8 p.c. a year from 1951 to 1963 but only 6.4 p.c. a year from 1959 to 1963; peak load demand is forecast to increase at the average rate of 6.0 p.c. a year in the period 1964-68. As a result of the rapid increase in generating capability and the somewhat slower but steady increase in the peak loads, together with the slight reduction in deliveries of firm power to the United States, the indicated reserve on net generating capability increased each year from 1951 to 1963, with the exception of 1961 and 1963. The forecast is for decreases from 1964 to 1967 and an increase for 1968. The reserve ratio as a percentage of firm power peak load, which reached a high of 28.2 p.c. in 1960 , is expected to decrease to 16.8 p.c. in 1968.

## Section 3.-Electric Power Statistics

Electric power statistics presented in this Section are based on reports of all electrical utilities and all industrial establishments that generate energy regardless of whether or not any is sold and therefore show the total production and distribution of electric energy in Canada. Utilities are defined as companies, commissions, municipalities or individuals whose primary function is to sell most of the electric energy that they have either generated or purchased. Industrial establishments are defined as companies or individuals that generate electricity mainly for use in their own plants.

The current series of electric power statistics dates back to 1956. Earlier reports, entitled Central Electric Stations, were concerned solely with the electrical utility industry and hence excluded statistics relating to power produced by industrial establishments for their own use, although power sold by such establishments was included.

The figures of total water and thermal power generated for the years 1950-55 shown in Table 6 are compiled on the old basis, figures for 1956 are shown on both bases for comparative purposes, and those for later years are on the new basis.
6.-Electric Energy Generated, by Type of Station 1950-62, and by Province 1961 and 1962

${ }^{1}$ New series, see immediately preceding text.
Of the total generation in 1962 of $117,468,748,000 \mathrm{kwh} ., 88.6$ p.c. was produced from water power and 11.4 p.c. was generated thermally; the proportions differed somewhat among provinces as shown in the following statement.

Table 7 gives summary figures of power production and distribution classified by province, and Tables 8 and 9 give figures classified by type of production establishment. Total installed capacity in Canada amounted to $24,967,000 \mathrm{kw}$. in 1962, an increase of $875,632 \mathrm{kw}$. over 1961 . Of the 1962 total, $20,382,963 \mathrm{kw}$. were accounted for by utilities and the remainder by industrial establishments. During 1961 and 1962 total sales to ultimate customers amounted to $79,874,233,000 \mathrm{kwh}$. and $84,331,799,000 \mathrm{kwh}$., respectively, of which 99.6 p.c. was sold each year by utilities.

Sales to power customers made up 60.7 p.c. of the total in 1961 and 59.4 p.c. in 1962, sales to domestic and farm customers were 27.5 p.c. and 28.1 p.c., and commercial sales 10.9 p.c. and 11.5 p.c. in the respective years. Exports to the United States in 1962 amounted to $4,112,411,000 \mathrm{kwh}$. compared with $4,157,531,000 \mathrm{kwh}$. in 1961.

Average domestic and farm consumption rose from $4,660 \mathrm{kwh}$. in 1961 to $4,873 \mathrm{kwh}$. in 1962. Among the provinces, the averages in 1962 varied from a low of $1,866 \mathrm{kwh}$. in Prince Edward Island to a high of $6,468 \mathrm{kwh}$. in Manitoba. For domestic and farm customers the average annual bill was $\$ 75.24$ in 1962 as against $\$ 73.53$ in 1961, an increase of 2.3 p.c.

Although many utilities do not keep records on farm customers separate from other domestic customers, the data reported on farm service indicate that the average consumption rose from $4,654 \mathrm{kwh}$. per customer in 1961 to $5,230 \mathrm{kwh}$. in 1962 and the average bill from $\$ 99.52$ to $\$ 106.55$.

## Section 4.-Progress in the Development of Hydro-Electric and Thermal-Electric Facilities, 1963

During 1963, a massive program of power plant construction in Canada boosted the nation's total generating capacity by $1,220,000 \mathrm{kw}$. About $785,000 \mathrm{kw}$. of this total was installed in hydro-electric plants with turbine capacities totalling $1,090,000 \mathrm{hp}$. and the other $435,000 \mathrm{kw}$. was installed in thermal-electric plants. No slackening in the pace of development is in sight - some $900,000 \mathrm{hp}$. of hydro capacity and another $700,000 \mathrm{kw}$. of thermal capacity being scheduled for completion in 1964. Moreover, almost $12,000,000$ hp . of hydro capacity and $2,810,000 \mathrm{kw}$. of thermal capacity are proposed or under construction for installation over the years following 1964.

Atlantic Provinces.-During 1963, the Province of Newfoundland was the only Atlantic Province in which new hydro-electric capacity was brought into operation. This hydro capacity, totalling $128,000 \mathrm{hp}$., overshadowed the $2,440 \mathrm{kw}$. of new thermal generating capacity installed. The two $60,000-\mathrm{hp}$. units placed in service at the Twin Falls development on the Unknown River in Labrador made up the largest part of the new capacity; the development is owned by the Twin Falls Power Corporation Limited. Completion by Newfoundland Light and Power Company Limited of a single-unit, 8,000-hp. development on Sandy Brook, on the island portion of the province, made up the remainder of the year's hydro-electric installation. No other developments were under way at the end of 1963 but the Newfoundland Power Commission plans early development of up to $350,000 \mathrm{hp}$. at Head Bay d'Espoir on the Salmon River and the proposed harnessing of the Hamilton River in Labrador promises to be of great significance to the province and to Canada. According to unofficial reports, if markets can be found for Hamilton River power, as much as $6,000,000 \mathrm{hp}$. of generating capacity may be installed eventually, making it potentially the largest hydro-electric development in the world. In the thermal field, the addition of two $1,000-\mathrm{kw}$. diesel units at the Wabush Lake plant of Wabush Mines brought the capacity of that plant to $4,000 \mathrm{kw}$. The Newfoundland Power Commission brought into operation three small thermal plants totalling 440 kw .

In Prince Edward Island, recent introduction of frozen food plants and fish processing plants have added considerably to the electrical load in the province. To meet growing requirements, Maritime Electric Company Limited added a $20,000-\mathrm{kw}$. unit to its steam plant at Charlottetown and the Town of Summerside thermal plant was increased by the installation of a $2,250-\mathrm{kw}$. unit, raising total plant capacities to $52,500 \mathrm{kw}$. and $6,890 \mathrm{kw}$., respectively.

Construction in Nova Scotia in the past two years has been devoted largely to strengthening the distribution network. No new generating capacity was brought into service but a start was made in 1963 on a single-unit, $100,000-\mathrm{kw}$. steam plant at Tufts Cove on the upper reaches of Halifax Harbour and there is a possibility of the early development of one or more water power sites. The Tufts Cove installation by the Nova Scotia Light and Power Company Limited will be ready for service in 1965; as proposed, the unit is the first of a multi-unit complex which may eventually have a capacity exceeding $500,000 \mathrm{kw}$. Hydro-electric plants under consideration include three plants with capacities ranging from $6,500 \mathrm{hp}$. to $10,800 \mathrm{hp}$., and a fourth, on Wreck Cove Brook, with a possible ultimate capacity of $90,000 \mathrm{hp}$.

Although no new hydro- or thermal-electric capacity was brought into operation during 1963 in New Brunswick, considerable progress was made on the construction of new plants which will add $60,500 \mathrm{kw}$. of thermal-electric capacity to New Brunswick Electric Power Commission plants in $1964-60,000 \mathrm{kw}$. at Grand Lake and 500 kw . at Grand Manan, raising these plant capacities to $103,750 \mathrm{kw}$. and $1,490 \mathrm{kw}$., respectively. Construction was begun in 1963 of a $100,000-\mathrm{kw}$. thermal unit, an extension to the Commission's $50,000-$ kw. Courtenay Bay plant. In hydro-electric construction, work was begun by the Maine and New Brunswick Electric Power Company Limited to increase the capacity of its Aroostook River plant to $34,640 \mathrm{kw}$. from the present $10,040 \mathrm{kw}$. The New Brunswick

Electric Power Commission has undertaken initial development of the Mactaquac site on the St. John River where some $500,000 \mathrm{kw}$. of generating capacity is expected to be installed.

Quebec.-Development of Quebec's water power resources over the past decade has been spectacular but even more formidable was the pace of development in 1963 and that scheduled for the next few years. The $360,000 \mathrm{hp}$. of hydro capacity brought into service in 1963 and the estimated $256,000 \mathrm{hp}$. for 1964 are but a small part of a projected hydroelectric program involving almost $7,600,000 \mathrm{hp}$. The current thermal-electric program will bring $150,000 \mathrm{kw}$. into service in 1964 and another $150,000 \mathrm{kw}$. after 1964. During 1963, the Government of Quebec, through the Quebec Hydro-Electric Commission, purchased the assets of a number of private power-producing utilities in the province; the general administrative framework of each of the companies, however, has been retained, at least for the present. The Shawinigan Water and Power Company is one of the companies whose ownership has passed to the province.

Quebec Hydro-Electric Commission's Carillon hydro-electric development on the Ottawa River was extended in 1963 with installation of six $60,000-\mathrm{hp}$. units; four units remain to be installed in 1964 when the ultimate capacity of $840,000 \mathrm{hp}$. in fourteen units will be reached. The Commission's Rapid II development on the Ottawa River also will reach its ultimate capacity of $64,000 \mathrm{hp}$. in 1964 when the fourth $16,000-\mathrm{hp}$. unit is brought into service. The massive hydro-electric development program referred to above involves the Manicouagan and Outardes Rivers which appear destined to meet most of the province's power needs for many years to come. As proposed, the two rivers would be harnessed as an integrated system with some $7,300,000 \mathrm{hp}$. to be installed in eight plants, including two existing plants which would be extended. Construction has begun at two sites, Manic 2 and Manic 5 , which will have installed capacities of $1,360,000 \mathrm{hp}$. and $1,800,000 \mathrm{hp}$., respectively. First power is scheduled to be available from Manic 2 in mid1965 and from the entire plant in 1967; Manic 5 is scheduled for initial operation in 1968 and for completion in 1971. Start of construction at other proposed sites has not yet been scheduled. At the Manic 5 site, the dam, a buttressed multi-arch structure, will be over 4,000 feet long and some 703 feet high at the highest point above bedrock. The structure, reported to be the highest and most massive of its kind in the world, will create a reservoir containing $115,000,000$ acre-feet of water, covering a surface area of 800 sq . miles. Power from the plants which make up the Manicouagan-Outardes complex will be transmitted via $300-\mathrm{kv}$. circuits to two major collector stations where voltages will be stepped up to 735 kv . for transmission to Quebec City and Montreal. The operating voltage of 735 kv . is the highest at present planned for long-distance transmission in Canada and one of the highest in the world.

Construction by Shawinigan Water and Power Company of a $300,000-\mathrm{kw}$. thermalelectric plant at Tracy on the south shore of the St. Lawrence River was on schedule; the first of two $150,000-\mathrm{kw}$. steam units is planned for operation in mid-1964 and the second unit for installation in mid-1965.

Ontario.-The $412,800 \mathrm{kw}$. of electric generating capacity brought into service in Ontario was the largest amount installed in any one province during 1963. This total included hydro and thermal capacity in approximately equal amounts. The forecast for 1964 indicates an expected addition of $315,000 \mathrm{kw}$., most of which will be thermal. Proposals for installation over later years indicate $1,700,000 \mathrm{kw}$. of thermal-electric capacity and more than $800,000 \mathrm{kw}$. of hydro-electric capacity. To meet increasing loads, Ontario Hydro during 1963 was engaged in the construction of seven generating stations, four of which are hydro-electric, two conventional thermal-electric and one nuclear thermalelectric.

The hydro-electric stations under construction during the year were the Otter Rapids Generating Station on the Abitibi River and the Little Long, Harmon and Kipling Stations on the Mattagami River. The Otter Rapids Station, with two units already in operation, was extended in 1963 by the addition of two more units, raising the plant capacity to $240,000 \mathrm{hp}$. The headworks at the Otter Rapids plant make provision for eight units, four of which are as yet unscheduled. At the Little Long Generating Station, construction has brought about the installation of two units of $84,000 \mathrm{hp}$., with provision for two other units. The Harmon and Kipling sites each will comprise initial installations of $186,000 \mathrm{hp}$. in two units, with provision for two other units. Construction at the Harmon site was well advanced at the end of 1963 and the construction program at the Kipling site was in the preliminary stage.

The two conventional thermal plants under construction in 1963 were the Commission's Lakeview station near Toronto and its Thunder Bay station at Fort William. At the Thunder Bay station, final tests were carried out and the $100,000-\mathrm{kw}$. unit commissioned in July 1963. At the Lakeview station, work was progressing on the installation of the third and fourth $300,000-\mathrm{kw}$. units for initial service in 1964 and 1965, respectively. The ultimate planned capacity has been raised to $2,400,000 \mathrm{kw}$. in eight units, with the last of these tentatively scheduled for commissioning late in 1968.

Douglas Point Nuclear Power Station, now under construction on the shore of Lake Huron between Kincardine and Port Elgin, is a joint undertaking of the Commission and Atomic Energy of Canada Limited. The $200,000-\mathrm{kw}$. unit is scheduled for commissioning in 1965. Plans are under way for the building of a nuclear power plant at Fairport, Ont. (about 20 miles east of Toronto). It will have a capacity of $1,000,000 \mathrm{kw}$. and will be the second largest in the world. Construction is expected to commence late in 1965 and be completed by 1967 or 1968.

The Great Lakes Power Corporation Limited commenced construction of its new Hogg Generating Station on the Montreal River. The station will house a $21,750-\mathrm{hp}$. turbine and is expected to be in service in December 1964. Two turbo-generator units, each rated at $8,900 \mathrm{kw}$. and producing electric power from waste steam, were installed at The International Nickel Company of Canada Limited iron ore recovery plant in Copper Cliff. Dow Chemical of Canada, Limited installed two turbo-generators at its plant in Sarnia; the units, each rated at $30,500 \mathrm{kw}$., were scheduled to go into operation in November 1963. The generating station of Algoma Steel Corporation Limited at Sault Ste. Marie was extended to house two new $12,500-\mathrm{kw}$. turbo-generators and several smaller units with capacities totalling $4,500 \mathrm{kw}$. were dismantled.

Prairie Provinces.-In Manitoba, construction progressed at the site of Manitoba Hydro's Grand Rapids development on the Saskatchewan River. Two 150,000-hp. units
will go into service in 1964 at that site and a third in 1965; provision is being made for the addition of a fourth unit. Engineering studies of potential sites on the lower Nelson River were continued during the year. Extensions to small thermal plants at Bakers Narrows and Norway House were under way in 1963.

Prior to 1963, Saskatchewan's total hydro-electric turbine capacity of approximately $142,000 \mathrm{hp}$. was used solely to service mining operations in the northern part of the province; in 1963, for the first time, hydro-electric power generated in the province was fed into the Saskatchewan Power Corporation's system serving the southern areas. This power was generated by four $46,000-\mathrm{hp}$. turbines brought into service at Squaw Rapids on the Saskatchewan River. Two units will be added in 1964 to bring the capacity to $276,000 \mathrm{hp}$. and there is provision in the powerhouse for another two units. At the South Saskatchewan Project near Outlook, the Corporation will install two 84,000-hp. units in 1967 and an $84,000-\mathrm{hp}$. unit in 1969. In the thermal field, the province's total installed capacity decreased by $59,700 \mathrm{kw}$. with the closing down of thermal stations at Moose Jaw and Prince Albert. There are no firm reports of thermal additions for 1964 or the years immediately following.

In Alberta, Calgary Power Ltd. continued construction at the Big Bend site on the Brazeau River where the first generating unit, with a $210,000-\mathrm{hp}$. turbine, will be ready for operation late in 1964. A pump-turbine unit rated at $11,000 \mathrm{hp}$. will be incorporated in the reservoir outlet works at Big Bend. Capacity of the Company's Wabamun thermal plant will be almost doubled in 1967 when a $225,000-\mathrm{kw}$. turbo-generator is placed on line. The City of Edmonton reported the commissioning of a $75,000-\mathrm{kw}$. thermal unit in 1963, and approved installation of a tenth and final unit at the Edmonton plant. In the Battle River thermal plant of Canadian Utilities Limited, installation of the second $32,000-\mathrm{kw}$. unit is proceeding on schedule, with in-service date expected in 1964.

British Columbia.-In 1963, British Columbia Hydro and Power Authority construction crews at the Portage Mountain damsite diverted the Peace River through three 48 foot diameter tunnels, setting the stage for construction of the main dam. First power from Portage Mountain will become available in 1968 and the entire development, comprising $2,300,000 \mathrm{kw}$., is expected to be operational by 1979 .

Negotiations aimed at clarifying and adjusting arrangements proposed earlier with respect to the Columbia River Treaty were carried on between Canada and the United States during 1963. The Treaty, signed on behalf of the two countries in 1961, provides that Canada would receive one half of the power benefits accruing to the United States from regulation of $15,500,000$ acre-feet of water stored in Canada behind the proposed Duncan Lake, High Arrow and Mica Dams on the Columbia River. In addition, Canada would receive one half of the estimated flood damage prevented in the United States through

operation of the proposed dams for flood control. The Treaty ratified by the United States has been presented to the Canadian Parliament and currently is being considered by a Parliamentary Committee.*

At B.C. Hydro's Burrard thermal-electric station, the second $150,000-\mathrm{kw}$. unit was placed in service and a third unit was being assembled for service late in 1964. The ultimate capacity of the Burrard plant will be $900,000 \mathrm{kw}$. in six units. A $6,000-\mathrm{kw}$. gas turbine unit was scheduled for installation at Prince George before the end of 1963 and several other units were transferred from one plant to another to meet changing load conditions.

Installation of a third generating unit at the Consolidated Mining and Smelting Company of Canada Limited Waneta plant on the Pend d'Oreille River was completed in 1963, bringing the installed turbine capacity to $370,000 \mathrm{hp}$. Installation of a $31,680-\mathrm{kw}$. unit at the Harmac thermal plant of MacMillan, Bloedel and Powell River Limited was completed in October 1963, raising the plant capacity to $36,930 \mathrm{kw}$.

The Yukon and Northwest Territories.-During 1963, the generating capacity of the Territories was increased by $4,385 \mathrm{kw}$. of thermal-electric capacity. This increase included a $1,000-\mathrm{kw}$. diesel unit installed by the Northern Canada Power Commission in its Inuvik thermal-electric plant, increasing the generating capacity at Inuvik to $3,460 \mathrm{kw}$. The Commission brought a new thermal plant into service at Frobisher Bay, comprising a new $1,000-\mathrm{kw}$. diesel unit, a new $1,500-\mathrm{kw}$. gas turbine unit and two $1,000-\mathrm{kw}$. diesels transferred from the old plant. Construction of an $18,000-\mathrm{kw}$. hydro-electric plant at Twin Gorges on the Taltson River, begun early in 1964, is scheduled to be in operation by December 1965.

During 1963, the Yukon Electrical Company Limited increased the capacity of two of its thermal plants and placed in service two other thermal plants in Yukon Territory. The new units, ranging in size from 75 kw . to 350 kw ., have a total generating capacity of 885 kw .

## Section 5.-Public Ownership and Regulation of Electrical Utilities $\dagger$

Federal Government regulation of electrical utilities, particularly with respect to the export of electric power and the construction of lines over which such power is exported, falls within the jurisdiction of the National Energy Board established in November 1959 and concerned with all matters relating to energy resources within the jurisdiction of the Parliament of Canada (see Domestic Trade Chapter XXI, Part II, Section 4 for a brief survey of the functions and operations of the National Energy Board).

Power is generated in Canada by publicly and privately operated utilities and by industrial establishments. Table 9, p. 605, giving statistics by type of establishment, shows that 53 p.c. of the total electric power generated in 1961 was produced by publicly operated utilities, 26 p.c. by privately operated utilities and 21 p.c. by industrial establishments. However, ownership differs greatly in different areas of the country. Quebec output until recently was predominantly from privately owned plants and in Ontario almost all electric power is produced by a publicly owned utility. Figures for 1962 and subsequent years will show a much greater proportion of publicly operated electrical utilities since they will reflect the recent provincial take-over of privately owned facilities in both British Columbia and Quebec.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. Neither Newfoundland nor Prince Edward Island has a provincially

[^173]operated electric power system, although in the former province a Commission, known as the Newfoundland Power Commission, was established by the provincial government in 1954 for the purpose of supplying electric power wherever needed throughout the province, particularly to rural areas. In Prince Edward Island, the town of Summerside and surrounding area is served by the municipally operated Town of Summerside Electric Light Department. The functions and activities of provincially operated electric power commissions in the other provinces are summarized in the following paragraphs.

Nova Scotia.-The Nova Scotia Power Commission was created under the Power Commission Act of 1919 with the function of supplying electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service by providing financial assistance to equalize cost and revenue of extensions approved by the Governor in Council. In 1941 an amendment to the Power Commission Act authorized the Commission, subject to the approval of the Governor in Council, to regulate and control the generation, transmission, distribution, supply and use of power in the province. Certain investigatory work is carried on in the province by the Federal Government in close association with the Commission, but the control of water resources is vested in the Crown and administered under the provisions of the Nova Scotia Water Act, 1919. The Commission pays regular fees for water rights.

Financially, the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30,1963 showed total fixed assets of $\$ 75,615,668$ including work in progress amounting to $\$ 2,069,463$. Current assets amounted to $\$ 3,595,017$ and liabilities were as follows: fixed $\$ 51,008,727$; current $\$ 2,263,960$; contingency and renewal reserves $\$ 9,554,499$; sinking fund reserves, $\$ 844,083$; and special reserves $\$ 13,860,270$.

The initial development of the Commission was an $800-\mathrm{hp}$. installation on the Mushamush River which went into operation in 1921 and delivered $208,752 \mathrm{kwh}$. in the first complete year of operation. Succeeding years showed considerable growth in installed capacity, which at the end of 1961 reached $132,650 \mathrm{hp}$. in hydraulic turbines, 700 kw . in diesel units and $60,000 \mathrm{kw}$. in steam turbines. No new power plant construction was undertaken in Nova Scotia during 1962 and 1963.

The territory of the Commission extends over the entire province and embraces six systems which include 24 generating stations and more than 4,500 miles of transmission and distribution lines.
12.-Capacity and Output of the Nova Scotia Power Commission, Year Ended Nov. 30, 1963

| System ${ }^{1}$ and First Year of Operation | Present Installed Capacity | Output | System ${ }^{1}$ and First Year of Operation | Present Installed Capacity | Output |

[^174]New Brunswick.-The New Brunswick Electric Power Commission was incorporated under the Electric Power Act, 1920. Generating stations owned by the Commission at Mar. 31, 1964 were as follows:-

| Plant | Type | Capacity | Plant | Type | Capacity |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | hp. |  |  | hp. |
| Grand Falls | Hydro | 80,000 | Courtenay Bay | Steam | 67,0001 |
| Musquash | Hydro | 9,320 | Saint John (Doc | Steam | 21,5001 |
| Tobique . | Hydro | 27,000 | Chatham....... | Steam | 43,6001 |
| Beechwood | Hydro | 145,000 | Grand Manan. | Diesel | 1,8601 |
| Milltown... | Hydro | 4,200 $135,700^{1}$ | Total |  | 535,180 |

${ }^{1}$ Capacity rating of generators in kw. converted to hp.
All the above generating units with the exception of Grand Manan were interconnected in a province-wide grid system. The statistical information given in Table 13 shows the growth of the Commission's undertakings since 1960. Power plant construction under way in New Brunswick during 1963 is outlined at p. 608.

Quebec.-Stream and Reservoir Control.-The Quebec Streams Commission was created in 1910 (SQ 1910, c. 5) and given additional powers in 1912 (RSQ 1925, c. 46) and 1930 (SQ 1930, c. 34); it was authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct and operate certain storage dams to regulate the flow of streams. On Apr. 1, 1955, the Commission was abolished and its powers and attributions transferred to the Hydraulic Resources Department, now the Department of Natural Resources. The rivers controlled by the Commission at the time of transfer, either by means of dams on the rivers or by regulating the outflow of lakes at the headwaters, were: the St. Maurice, the Gatineau, the Lièvre, the St. Francis, the Chicoutimi, the Au Sable and the Métis. The Commission also operated nine reservoirs on North River, two in the watershed of the Ste. Anne de Beaupré River, and one at the outlet of Lake Morin on Rivière du Loup (lower).

Storage reservoirs otherwise controlled or operated are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River controlled by the Aluminum Company of Canada; the Onatchiway on the Shipshaw River controlled by Price Brothers and Company Limited; Memphremagog Lake on the Magog River controlled by the Dominion Textile Company; and Témiscamingue and Quinze Lakes on the Ottawa River controlled by the federal Department of Public Works. Storage reservoirs under the control of the Quebec Hydro-Electric Commission are: the Témiscouata Lake on the

Madawaska River, Kipawa Lake on the Ottawa River, Lac Dozois on the upper Ottawa River, Lac Cassé in the Bersimis River watershed and Lac Ste. Anne on the Toulnustouc River, a tributary of the Manicouagan River.

The Quebec Hydro-Electric Commission.-The Quebee Hydro-Electric Commission was established in 1944 (SQ 1944, c. 22) for the purpose of supplying power to the municipalities, to industrial and commercial undertakings and to citizens of the Province of Quebec at the lowest rates consistent with sound financial administration. On May 1, 1963, the Commission acquired control of the following privately owned electrical utilities operating in the Province of Quebec: the Shawinigan Water and Power Company, the St. Maurice Power Corporation, the Quebec Power Company, the Southern Canada Power Company, the Gatineau Power Company, the Northern Quebec Power Company, the Saguenay Electric Company and the Lower St. Lawrence Power Company. As a result of these transactions, all electricity production, except for facilities operated by certain industrial organizations in their own manufacturing operations, was brought under the control of a single authority. The services of the Commission now cover virtually the entire province except for local distribution of small amounts of electricity by some municipalities, most of which is purchased from the Commission or its subsidiaries.

At the end of 1963 the Commission controlled, among other assets, the following hydro-electric and thermal-electric plants:-

[^175]These facilities now permit the balanced distribution of power throughout Quebec and the most efficient use of the water power resources of the province. In September, the Commission announced a standardization of rates for domestic customers in approximately 900 communities served by certain of the newly acquired subsidiaries. At the same time, new rates were announced for electric house heating to make this form of heating more attractive to customers. It is anticipated that complete administrative reorganization will be accomplished by the end of 1964. Nationalization of service will be of particular benefit to some 20,000 customers in the northwestern area where the system frequency is being changed from 25 cycle to 60 cycle. The changeover is scheduled for completion in 1965 at an estimated cost of $\$ 12,000,000$.

Hydro-Quebec and its subsidiaries, at the end of 1963, served 1,550 communities with $1,363,390$ customers and distributed primary power amounting to $5,695,000 \mathrm{kw}$. or $7,634,000 \mathrm{hp}$. Total power distributed was $5,909,000 \mathrm{kw}$. or $7,921,000 \mathrm{hp}$. Power distributed is given in terms of the net output of the sources of supply made available to each
system coincident with the time of the Montreal primary peak; it also includes purchases of power from other power producers. The distribution of primary power to systems of Hydro-Quebec on the day of primary peak in 1963 was as follows:-

Ontario.-The Hydro-Electric Power Commission of Ontario is a corporate entity, a self-sustaining public enterprise endowed with broad powers with respect to the supply of electricity throughout the Province of Ontario. Its authority is derived from an Act of the Provincial Legislature passed in 1906 to give effect to recommendations of earlier advisory commissions that the water powers of Ontario should be conserved and developed for the benefit of the people of the province. It now operates under the Power Commission Act (SO 1907, c. 19) passed in 1907 as an amplification of the Act of 1906 and subsequently modified from time to time (RSO 1960, c. 300, as amended). The Commission may have from three to six members, all of whom are appointed by the LieutenantGovernor in Council. Two commissioners may be members of the Executive Council of the Province of Ontario.

The basic principle governing the financial operations of the Commission and its associated municipal utilities is that electrical service is provided at cost. The Commission interprets cost as including payments for power purchased, charges for operating and maintaining the power supply facilities, and related fixed charges. The fixed charges represent interest on debt, provisions for depreciation, allocations to reserves for contingencies and rate stabilization, and the further provision of a sinking fund reserve for retiring the Commission's capital debt. While the enterprise from its inception has been self-sustaining, the province guarantees the payment of principal and interest on all bonds issued by the Commission and held by the public. In addition, the province has materially assisted the development of agriculture by contributing under the Hydro-Electric Distribution Act toward the capital cost of extending rural distribution facilities.

The entire provincial area served is regarded for financial and administrative purposes as a unit, but there is no electrical connection between the Commission's facilities in northwestern Ontario and those serving customers in the remainder of the province. Statistics are therefore presented for two operating systems, the East System and the West System; the systems respectively serve the areas east and west of a line extending north from Lake Superior to the Albany River, a line that roughly conforms with the boundary dividing Thunder Bay District from the Districts of Algoma and Cochrane. Service is provided for the most part on a co-operative basis, and predominantly for the benefit of more than 350 municipalities supplied by the Commission with power at cost.

In addition to administering the enterprise over which it has direct control, the Commission, under the Power Commission Act and the Public Utilities Act, exercises certain regulatory functions, particularly with respect to the group of municipal electrical utilities which it serves. In order to provide convenient and expeditious service in this dual function of regulation and supply, the Commission subdivides its province-wide operations into seven regions with regional offices located in seven major municipalities.

The Commission is concerned primarily with the provision of electric power by generation or purchase, and its delivery to the electrical utilities for resale in the more than 350 municipalities having cost contracts with the Commission. The Commission supplies power in bulk, though not under cost contract, to approximately 200 direct customers, some located within the areas of the municipalities already referred to and some outside these areas. These direct customers include industrial customers whose requirements are so large or so unusual as to make service by the local municipal utilities impracticable. They also include mines, industries in unorganized territories, and certain interconnected systems, including a number of independent municipal utilities. These interconnected systems purchase power for resale either within or beyond the boundaries of the province.

In addition to these operations, which represent about 90 p.c. of its energy sales, the Commission delivers electric power to retail customers in rural areas and in a small group of about 30 municipalities served by Commission-owned local distribution facilities. A much larger part of retail service throughout the province is provided, however, by the municipal electrical utilities, who supply ultimate customers in most cities and towns, in many villages, and in certain populous township areas. The municipal electrical utilities are owned and operated by local commissions.

During 1963, the Commission's investment in fixed assets at cost increased by $\$ 97,928,049$ and at the end of the year amounted to $\$ 2,664,942,685$. Total assets after deducting accumulated depreciation were $\$ 2,751,881,845$.

In 1963 a total of 355 associated municipal electrical utilities engaged in the retail distribution of electricity purchased power from the Commission. The total assets of these utilities, after deducting accumulated depreciation, amounted to $\$ 802,395,530$, of which $\$ 329,924,857$ represented the equity acquired in the Commission's systems by the municipal utilities operating under cost contracts.

The Commission's power development program as at Dec. 31, 1963 is given in Table 14 and is also outlined at p. 610.

## 14.-Current Power Development Program of The Hydro-Electric Power Commission of Ontario, as at Dec. 31, 1963

| System and Development | Units | In Service | Installed Capacity |
| :---: | :---: | :---: | :---: |
|  | No. |  | kw. |
| Lakeview-near Toronto. | 8 | 1961-68 | 2,400,000 |

${ }^{1}$ Dependable peak capacity-the amount of power which resources can be expected to supply at the time of the system primary peak requirements, assuming that all units are available and that the supply of water is normal. This capacity will vary from time to time in accordance with changing conditions. The capacity of a source of purchased power is based on the terms of the purchase contract.

[^176]Manitoba.-Manitoba Hydro is the primary developing, generating and distributing power agency in the Province of Manitoba. The corporation came into being Apr. 1, 1961, following the amalgamation of the two former provincial government electrical utilities engaged in the generation and distribution of electric power. It operates five hydro-electric generating stations, two thermal type plants and a limited number of diesel generating installations. The combined generating capability of the corporation is $832,860 \mathrm{kw}$. which will be increased by $330,000 \mathrm{kw}$. in 1965 following the completion of the Grand Rapids hydro-electric development on the Saskatchewan River.

Hydro installations account for $580,000 \mathrm{kw}$. of the generating capability-thermal for $244,000 \mathrm{kw}$. and diesel for $8,860 \mathrm{kw}$. Of the hydro stations, four are located on the Winnipeg River and, like the thermal installations, produce power for the southern section of the province; the fifth hydro station, rated at $160,000 \mathrm{kw}$., is situated on the Nelson River 425 miles north of Winnipeg and supplies power for The International Nickel Company of Canada, Limited, development and the townsite at Thompson in northern Manitoba. Diesel installations are used to provide power in several northern areas.

In serving its 205,847 urban, rural, commercial and industrial customers, the corporation maintains some 34,333 miles of primary transmission and farm distribution lines. Approximately 98 p.c. of the total resident-occupied farms in the province are electrified, and 534 cities, towns and villages are provided with power service. While Manitoba Hydro supplies power for most of the province, including the cities and municipalities adjoining the city of Winnipeg and comprising part of Metropolitan Winnipeg, it does not distribute power within the corporate limits of the city, although it does supply a portion of the city's basic power requirements.

Power plant construction in Manitoba in 1963 is outlined at pp. 610-611.
Saskatchewan.-The Saskatchewan Power Corporation was established on Feb. 1, 1949, and operates under the provisions of the Power Corporation Act (SS 1950, c. 10, as amended). It succeeded the Saskatchewan Power Commission which had operated from Feb. 11, 1929. The original functions of the Corporation included the generation, transmission, distribution, sale and supply of hydro and steam electric energy. Since 1952, the Corporation has been authorized to produce or purchase and to transmit, distribute, sell and supply natural or manufactured gas.

In 1963, the Corporation served approximately 965 urban communities (with six or more customers) in retail sales, and served the cities of Saskatoon and Swift Current, the town of Battleford and the hamlet of Waskesiu in bulk sales. Some bulk power was also sold to the City of Regina and to the Manitoba Hydro-Electric Board on an exchange basis. Activities of the Corporation cover the entire province with the exception of the city of Regina, which owns and operates municipal plants and a distribution system.

At the end of 1963, the Corporation served 240,812 customers, 201,807 of whom were retail customers and 39,005 of whom were located in communities supplied with power through bulk sales. The retail customers included 136,396 urban customers and 65,211 classified as rural, mainly farm meters. During $1963,1,926,862,734 \mathrm{kwh}$. were made available to customers, of which $1,870,746,937 \mathrm{kwh}$. were generated in Corporation plants and $56,115,797 \mathrm{kwh}$. were purchased in bulk. At the end of the year, the Corporation had invested, at cost, a total of $\$ 325,262,458$ in electric plants out of a total of $\$ 459,051,365$ in fixed assets in the combined electric and natural gas systems.

During 1963, the first hydro-electric plant within the provincial system was put on the line at Squaw Rapids, supplying 13.0 p.c. of total system requirements. The Corporation also owned and operated four steam generating plants at year end-two each at Saskatoon and Estevan. Two other steam plants located at Moose Jaw and Prince Albert were closed at approximately mid-year. Steam supplied 80.2 p.c. of total system gross generation, and two internal combustion gas dual fuel plants at Kindersley and Swift Current supplied 6.7 p.c. System capability in operation at the end of 1963 was assessed at $619,150 \mathrm{kw}$. with $444,000 \mathrm{kw}$. in steam plants, $134,000 \mathrm{kw}$. in hydro and 41,150
kw. in gas dual fuel and diesel plants. At the end of 1963, the Corporation owned and operated 71,070 miles of transmission and rural lines; this figure excludes urban distribution and hi-lines but includes 231.5 miles of 480 -volt line which services oil wells.'

Power plant construction in Saskatchewan in 1963 is outlined at p. 611.

${ }^{1}$ November 1962 figure.
Alberta.-The generation and distribution of electric power in Alberta is handled by a combination of several municipally-owned urban systems and three investor-owned companies serving the greater part of the province. The regulatory authority over the investor-owned systems is the Public Utilities Board, which has jurisdiction over the distribution and sale of electricity. The Board, which controls franchises and rates, has power to hold investigation upon complaint either by a municipality or by a utility company, and following such investigation may fix just and reasonable rates. The Alberta Power Commission controls all phases of system development, including the provincial grid system.

Plant additions completed or under way in Alberta during 1963 are outlined at p. 611.
British Columbia.-The British Columbia Hydro and Power Authority was created in 1962 by amalgamation of the British Columbia Electric Company Limited with the British Columbia Power Commission. The electric service of the organization includes the generation and transmission of electricity and its distribution throughout the areas of British Columbia containing more than 90 p.c. of the population of the province; the Authority also operates gas, passenger transportation and rail freight services.

Of the Authority's total electric power requirements of $7,243,013,053 \mathrm{kwh}$. for the year ended Mar. 31, 1964, 6,660,549,899 kwh. or 92.0 p.c. was produced by hydro-electric plant, $378,126,406 \mathrm{kwh}$. or 5.2 p.c. was produced by thermal plant and the remainder, amounting to $204,336,748 \mathrm{kwh}$., was purchased. Kilowatt-hours of electricity sold totalled $6,430,898,173$, an amount 6.1 p.c. higher than the sales of the previous year. A relatively small percentage increase in gross revenue over 1962-63 compared with the more substantial increase in sales, was largely the result of rate reductions. The Central Interior Region, which includes Prince George, the fast-growing industrial and transportation centre of the north, and the Southern Interior Region, including Kamloops and Vernon, each reported an increase of 17 p.c. in amount of electricity sold, a growth well above the average for the system. There was a net increase of 19,288 in electric customers during the year, bringing the total to 478,386 at the year-end. Average annual consumption per residential account rose from $5,029 \mathrm{kwh}$. in 1962-63 to $5,200 \mathrm{kwh}$. in 1963-64.

Power plant additions and construction in British Columbia in 1963 are outlined at pp. 611-612.
19.-Summary Statistics of the British Columbia Hydro and Power Authority, Year Ended Mar. 31, 1964

Northwest Territories and Yukon Territory.-The Northern Canada Power Commission, formerly Northwest Territories Power Commission, was created by Act of Parliament in 1948 to supply electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. By legislation passed in 1950, the Act was extended to include Yukon Territory. The Commission has authority to construct and operate power plants as required in the Territories and, subject to approval of the Governor in Council, in any other parts of Canada.

The Commission has hydro-electric power developments on the Yukon River near Whitehorse, Y.T., the Mayo River near Mayo Landing, Y.T., and the Snare River northwest of Yellowknife, N.W.T. Diesel-electric plants are operated at Fort Simpson, Fort Smith, Fort Resolution, Fort McPherson, Aklavik and Field, B.C., and utility plants comprising power, central heat and water and sewerage services at Inuvik and Frobisher Bay, N.W.T., and at Moose Factory, Ont.

The Whitehorse Rapids power development, in service since 1958, supplies the Department of National Defence at Whitehorse, most of the power for the city of Whitehorse, and three electric steam generators for heating the Department of National Health and Welfare hospital and two Department of Citizenship and Immigration hostels. The Snare River hydro developments supply power to the mines in the Yellowknife area and, in conjunction with the Bluefish hydro-electric plant of the Consolidated Mining and Smelting Company of Canada Limited, the town of Yellowknife. The original Snare Rapids plant has been in operation since September 1948 and the Snare Falls plant, situated on the same river about 10 miles downstream from the original plant and remotely controlled from Snare Rapids, was placed in service in November 1960. The Mayo River plant has supplied power to mining properties in the Elsa and Keno areas and to the Mayo Landing and Keno City communities since 1952. A hydro-electric development is under construction on the Taltson River near Fort Smith, N.W.T. When completed in the fall of 1965 this plant will supply hydro power to Fort Smith and to the lead-zinc mining operation being developed by Pine Point Mines Limited at Pine Point, N.W.T., near Great Slave Lake. The dieselelectric plants supply the needs of Federal Government departments and the general public in the communities in which they are located. Details of plant additions and construction in the Territories during 1963 are outlined at p. 612.

## PART I.-FISHERIES

## Section 1.-Commercial Fishing and Marketing*

Canadian fishermen reap large harvests from two mighty oceans-the Atlantic and the Pacific-and from the most extensive system of lakes and rivers in the world. The annual catch amounts to some $2,000,000,000 \mathrm{lb}$. of fish and shellfish, which has a total marketed value of about $\$ 250,000,000$. Only about one third of this output is used domestically and the remainder is shipped abroad in fresh, frozen, canned, salted, dried or otherwise preserved forms. Thus, Canada is one of the major suppliers of fish and fish products to world markets, being surpassed only by Japan and Norway in value of fish exports. There are more than 80,000 commercial fishermen in Canada and more than 13,000 persons employed in the fish processing industry.

Regional experience varied greatly in 1963. The Atlantic industry achieved a record level of prosperity in 1962 but surpassed it in 1963. The Pacific industry established an all-time record in 1958 when salmon fishermen sold their catch for $\$ 37,000,000$ and the canneries produced a pack of $1,900,000$ cases. Its second best year was 1962 when an unequalled abundance of pink salmon brought the fishermen more than $\$ 30,000,000$ and the cannery pack was $1,800,000$ cases. However, 1963 was not a good year. The value of the salmon catch dropped to $\$ 22,000,000$ and the pack to $1,200,000$ cases, and of the three major fisheries only herring showed satisfactory results. In the freshwater industry, the excellent progress achieved in 1962 was not continued because of export marketing problems over which the Canadian producers had no control.

Several government proposals affected planning within the industry in 1963. The Prime Minister announced in June that the Federal Government was considering the establishment of a 12 -mile exclusive fishing zone along the whole of Canada's coastline; protection of Canadian owners of small vessels was revised upward under the Fishermen's Indemnity Plan; and, under terms of an existing treaty, Japanese vessels were admitted to the halibut fishery of eastern Bering Sea and the herring fishery west of the Queen Charlotte Islands.

[^177]Atlantic Fisheries.-For the Atlantic fisheries, 1963 was a year of strong capital expansion, especially in the freezing industry, with emphasis on a swing from the export of raw materials to more fully processed products. Construction was started on four large new filleting plants in the Maritimes, one of which-at Lunenburg-will be among the largest on the Continent. All four will specialize in the latest oven-ready consumer products. Expansion taking place in other plants throughout the Atlantic area is also noteworthy and, with so much new equipment available in 1964, a considerable increase in output is anticipated to meet the growing market demand for processed fish products.

The fishermen added between $\$ 7,000,000$ and $\$ 8,000,000$ to their collective gross income in 1963 and the value of plant output increased by more than double that amount. High prices for lobsters and a continued increase in scallop landings gave the shellfish industry the largest percentage advance, although the groundishery, which is a much larger operation, also made striking gains in value of products.

The Maritime Provinces.-In the Maritime Provinces, the total value of the fish catch increased from just under $\$ 40,000,000$ in 1961 to nearly $\$ 46,000,000$ in 1962 and almost $\$ 50,000,000$ in 1963 . The fishermen received more than half their income in 1963 from shellfish. The lobster catch alone brought them $\$ 18,000,000$, despite the fact that it was smaller than in the previous year. Fishing results in southern Nova Scotia, the most important lobster-producing area, were generally good throughout the year but the catch in Northumberland Strait, the area of second importance, was consistently disappointing. Lobsters in the traps were few in number and small in size, a development that suggests over-fishing. By voluntary agreement, some fishermen in the area have for years limited the number of traps they fish per boat but others have been less foresighted. Local alarm was reflected in discussions at the Federal-Provincial Fisheries Development Conference held in Ottawa in January 1964 (see p. 625), at which it was agreed that strong measures must be continued to prevent poaching.

Much of the tremendous increase in shellfish landings in the Maritime Provinces in recent years has resulted from the discovery of abundant scallop supplies on Georges Bank. A fleet of large draggers was built to handle the resource and, after at first increasing rapidly, the catch has now levelled off at what is believed to be the maximum desirable yield in relation to conservation. In 1963, however, new supplies were found on St. Pierre Bank and Brown's Bank and even inshore in the Gulf of St. Lawrence near Richibucto, N.B. Several large draggers were added to the offshore fleet and new plants went into production. The total catch increased by 14 p.c. in 1963, reaching a value of $\$ 6,000,000$. Meanwhile, the oyster industry of the area has been recovering, with the aid of government scientists, from a disease that decimated the beds six years ago. A sudden strong increase in production in 1963 indicated an early return to previous yields.

Good spring and fall weather gave the groundfish industry a long season. Landings of cod and haddock were a little heavier and landings of redfish much heavier than in the previous year. Flounders were abundant in the Gulf of St. Lawrence. Only halibut were scarce. All prices were strong and markets excellent. The swordfish catch quadrupled as a result of the use of the longline technique which in 1962 began to replace the traditional method of harpooning. Another successful innovation was a brief seine fishery for tuna by two vessels out of Campobello, N.B., which produced more than $700,000 \mathrm{lb} .$, mostly bluefin.

Newfoundland.-Newfoundland fishermen had a year of unprecedented prosperity in 1963. The freezing industry has never absorbed more than about a third of the cod catch and in recent years, as consumer demand has turned toward frozen products, the saltfish output often has been in excess of demand. However, in 1963, the cod fishery of northern Europe had a poor yield and demand for Canadian salt cod rose sharply just as five new freezing plants were opening in Newfoundland. With the salters and freezers buying competitively, cod prices rose to record levels. Even in volume the cod catch, at 400,000,000 lb ., was above average and at the high prices it reached a landed value of over $\$ 12,000,000$.

The best fishing was found northward-on the northeast coast of the Island and on the Labrador coast. The fleet operating in the latter area increased in size from 31 vessels in 1962 to 43 in 1963 and produced in the later year 71,000 quintals of heavy-salted cod. There were also more men pursuing a shore-based fishery in the same area.

Demands of the freezing industry had the effect of stepping up fishing for other types of groundfish and, since the lobster catch actually increased while the decline of supplies from the Maritime Provinces was driving prices to record levels, Newfoundland's over-all landings were 7 p.c. heavier than in 1962 and increased 11 p.c. in value to the recordbreaking total of $\$ 19,200,000$. Output of the freezing plants, at $75,800,000 \mathrm{lb}$., was also at a record high. The sharpest increase was in the seasonal operations of the numerous small plants on the east and northeast coasts, which depend mainly on inshore cod. Haddock was very scarce and halibut was increasingly supplemented with turbot but since 1959 the Island's output of other frozen groundfish, including cod, has increased steadily; flounder products have doubled and redfish products tripled. The United States continued to be by far the most important market but there were marked increases in shipments to Britain and continental Europe.

Output of the salting plants, which in recent years has been declining fairly steadily for lack of market demand, remained below the average of the past ten years but showed an upswing compared with 1962. There were only 55 plants in operation, six fewer than in the previous year, and shipments of saltbulk to Nova Scotia drying plants declined. But, because of the scarcity in Europe, this slack was taken up by larger orders from Norway and Portugal and, for the first time in many years, buying by Greek importers. Also the Canadian Government made purchases on behalf of the World Food Bank of extra-hard heavysalted fish. Over and above this, mainly in response to orders from Italy and Spain, output of light-salted fish expanded and actually accounted for the over-all production increase over 1962.

Pacific Fisheries.-In British Columbia the relative importance of salmon ensures that the over-all annual result in the fishing industry will depart little from the salmon record; in 1963 this was poor. In mid-July a strike in both fleets and plants brought the industry to a standstill and fishing was not resumed until Aug. 3. Meanwhile, the year's major run of sockeye, the most valuable salmon species, had come and gone, as had the early pink runs. The value of the July catch of all commercial fish dropped to less than $\$ 7,000,000$ compared with $\$ 17,000,000$ in July 1962. Pink salmon remained plentiful until late in the year. Fall chums were abundant through September and October but fell off so abruptly in November that several areas were closed to fishing as a protective measure. Although prices for canned pinks remained low because of over-supply, the year's export of canned salmon, much of which was, of course, from the previous year's pack, increased in value by $\$ 3,000,000$ over the 1962 figure.

The autumn troll catch of spring and coho salmon for the freezing plants was good and output of frozen salmon increased. With prices and market demand both high, the 1963 value of frozen salmon exports was high enough to counterbalance losses on frozen halibut, the market for which was over-stocked and slow. Heartened by a $\$ 10,000,000$ fishery in 1962, the halibut men left in unusually large numbers for distant-water operations in Bering Sea in the spring, and when fishing opened in British Columbia waters in May a larger number of small boats also joined in the effort. As a result, halibut stocks in Canada and the United States at the end of April were five times as large as at the same time in 1962 and slow buying pushed per-pound prices down by as much as eight and nine cents.

A very successful 1962-63 herring season closed in March and intensive fishing in the fall built up the year's receipts at reduction plants to over 286,000 tons, an all-time record. Output of meal went up to about 50,000 tons and oil production soared to above $5,000,000$ gal. The unit price for herring oil rose during the year from 5.50 cents to 9.25 cents but the price for meal declined about 5 p.c.

Fishermen's earnings for the year from all commercial fisheries were about $\$ 9,000,000$ below those for 1962.

Inland Fisheries.-Freshwater fisheries continued at the high level of prosperity established in 1962 until very hot July weather caused a scarcity of ice on the prairies, a long warm fall delayed the start of ice fishing, and a fish-poisoning scare in the United States in October caused a market collapse. No Canadian fish was involved but the American market, which is the main outlet for Canadian lake fish, was almost at a standstill until the end of the year. Up to the time of this setback, expansion had continued at the same rate as in 1962. The Lake Winnipeg fishery for pickerel and sauger yielded well and whitefish were plentiful in Saskatchewan and Alberta lakes. Exports of dressed fish declined during the summer but fillet exports increased 20 p.c. in volume up to October. The American market came back strongly in January but the break had left its mark on the 1963 sales record on this side of the border.

## Section 2.-Governments and the Fisheries

The British North America Act gave the Federal Government full legislative jurisdiction for the coastal and the inland fisheries of Canada and under this Act laws are made for the protection, conservation and development of the fisheries throughout the country. However, the provinces have, by agreement, assumed administrative responsibilities in varying degree. Consequently, though all the regulations governing fishing are made by the Federal Government, the work of administering the fisheries (enforcing the different laws and regulations, inspecting fish products, issuing licences, etc.) is done without duplication of staff by either federal or provincial officers, according to arrangement.

Specifically, all tidal or sea fisheries except those of the Province of Quebec are administered by the federal Department of Fisheries, and the freshwater or non-tidal fisheries, with some exceptions, are administered by the provincial departments. Quebec takes responsibility for all its fisheries including those in salt waters. Ontario, Manitoba, Saskatchewan and Alberta administer their freshwater species. In British Columbia, provincial government control extends to the freshwater forms and the Federal Government is responsible for marine and anadromous species. In Prince Edward Island, Nova Scotia, New Brunswick, Newfoundland and the Yukon and Northwest Territories, the Federal Government maintains complete control; administration of the fisheries of the National Park areas throughout Canada is the responsibility of the Canadian Wildlife Service, Department of Northern Affairs and National Resources.

Federal-Provincial Conference on Fisheries Development.-The basis for a national fisheries development program was laid in Ottawa in January 1964 at the first federal-provincial ministerial conference convened to discuss Canadian fisheries. The Conference met at the invitation of the Minister of Fisheries for Canada and all provinces were represented.

Experts advised the delegates that Canada's fishery resource, if properly managed, could support a great long-term expansion of the industry. The following points were among those emphasized in the ensuing discussion of ways and means for bringing the industry to maximum efficiency and productivity while protecting fish stocks from overexploitation: without careful management, certain valuable but vulnerable species could be seriously reduced in one season, such as lobsters in Northumberland Strait or the entire fish population of a northern lake not previously subjected to commercial fishing; pollution can change the dominant species in a lake; sport fishing must be taken into account in calculating how much exploitation a local resource can stand; the commercial possibilities of unused species should be examined as well as the possibilities of commercial fish farming, a valuable source of food in many other countries but almost unknown in Canada.

Since it is clear that if Canada is to keep abreast of new fishing and processing techniques the fishermen and plant workers must be taught to use them, broad lines were laid
down for more applied research at government level, more effective communication of the results to the industry, more technical education for crews and workers. Initial arrangements were made to set up committees authorized to implement these decisions.

Because the need for credits, subsidies or grants varies from one area to another and assistance in vessel construction is most effective when most closely related to the local fishery, it was felt that the provinces can best meet the credit needs of their own fishermen and that the proper role of the Federal Government in this respect is to make additional capital available.

Marketing problems of certain areas were considered in detail and a committee to give further study to those peculiar to the Prairie Provinces was set up immediately after the Conference. Also, the Development Service of the Department of Fisheries established a study group to work with all the provinces in their efforts to expand opportunities for technical education in the fisheries field. Groundwork having been laid for attacks on many other problems defined at the Conference, other detailed studies are under way and, with the better integration of federal and provincial effort which was also achieved, effective solutions are being sought.

## Subsection 1.-The Federal Government

The work of the Federal Government in the conservation, development and general regulation of the nation's coastal and freshwater fisheries is performed by three agencies under the Minister of Fisheries:-
(1) The Department of Fisheries proper with headquarters at Ottawa, Ont., and area offices under Area Directors at Vancouver, B.C., Winnipeg, Man., Halifax, N.S., and St. John's, Nfld .
(2) The Fisheries Research Board of Canada with headquarters at Ottawa and eight stations across Canada.
(3) The Fisheries Prices Support Board with headquarters at Ottawa.

A brief outline of the functions of these agencies is given in this Subsection.
The Department of Fisheries.-The chief responsibilities of the Department of Fisheries throughout Canada are, in brief: to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the optimum utilization of the resource; and to develop a proper public understanding of the resource and the industry. The larger part of the staff of the Department is stationed in the field and is composed mainly of protection and inspection officers. The protection officers, including those on the Department's 80 patrol and protection vessels, are concerned with the enforcement of the conservation regulations under the Fisheries Act and other Acts designed to ensure a continuing maximum yield of fish, and are also responsible for the inspection of fish products and processing plants under the Fish Inspection Act and relevant section of the Meat and Canned Foods Act.

A conservation program is carried out by the Conservation and Development Service of the Department. Protection officers enforce regulations pertaining to restricted areas, close seasons, limitations in location and types of gear, and also inspect spawning streams and keep them clear of obstructions. Biologists investigate such problems as pollution and water supply, and engineers construct fishways to enable fish to bypass obstructions of all kinds. Hatcheries are maintained to restock waters where the fisheries are under federal administration.

For the past few years a bounty has been paid for the killing of the parasite-carrying harbour seals along the Atlantic and Pacific Coasts at a rate of $\$ 10$ for adult and $\$ 5$ for young seals. Total payments for the year ended Mar. 31, 1964 amounted to $\$ 35,480$.

Inspection of fish and fish products to ensure a high standard of quality is carried out by the Inspection Service, and fish inspection laboratories are maintained on the

Atlantic and Pacific Coasts and in Toronto and Winnipeg. A staff of home economists operates test kitchens in Ottawa, Toronto, Vancouver, Montreal, Halifax, Edmonton and Winnipeg, and conducts demonstrations and lectures on methods of preparing and cooking fish and fish products.

Through the medium of printed material, films, radio, television and exhibitions, the Information and Consumer Service of the Department informs the public on the various aspects of the industry and the work of the fisheries services. This Service works closely with the Conservation and Development Service in matters concerning the conservation of fisheries and with the Inspection Service toward encouraging increased consumption of Canadian fish products in the domestic, United States and other markets.

The Economics Service has two related fields of responsibility: (1) to provide the government and the commercial fishing industry with current information, including statistical data, under the general heading of trade intelligence, and (2) to carry out studies and investigations in the primary fisheries and in the processing and distribution of fish products.

In addition to these regular services, the Department assists the commercial fishing industry in several special ways. To promote efficient primary fishing operations and improve the marketing of fishery products, assistance is provided for the construction of draggers and longliners and for bait-freezing and storage facilities on the Atlantic Coast. The Fishermen's Indemnity Plan affords low-cost protection from losses of boats and lobster traps through storms and other causes. The Plan has been in operation since 1953 and at Dec. 31, 1963, a total of 6,719 vessels with an appraised value of $\$ 22,954,000$ were insured under it. The Department also provides financial assistance to educational institutions agreeing to carry out specialized educational work among fishermen.

International Fisheries Conservation.-Conservation of the resources of the high seas can be effected only through regulation, and for this purpose international treaties have had to be made. Canada's obligations under such treaties with the United States and other countries are administered by the Department of Fisheries.

Canada and the United States have led the world in joint fisheries conservation development. Major examples of this joint effort are the International Pacific Halibut Convention, concerned with the preservation of the halibut stocks of the north Pacific and the Bering Sea, and the International Pacific Salmon Fisheries Convention, concerned with the conservation and development of the sockeye and pink salmon of the Fraser River. Investigations carried out under the auspices of Commissions appointed under these conventions, subsequent regulation and limitation of catches, and the construction of salmon fishways appear to have been successful in arresting and reversing an earlier trend toward depletion of these fisheries. Another example of restoring a depleted marine resource by international agreement and action is that of the fur seals of the Pribilof Islands in the Bering Sea. Under a treaty signed in 1911, known as the (North Pacific) Sealing Convention, pelagic sealing was prohibited while the animals were migrating to and from the Pribilofs where most of them breed. This treaty had been signed by the United States, Canada, Russia and Japan, and was one of the earliest conventions on resources of the sea. In 1941 Japan abrogated the treaty and the following year Canada and the United States signed a Provisional Fur Seal Agreement under which Canada, in return for abstaining from pelagic sealing, received 20 p.c. of the annual catch, which was supervised by the United States. A conference to re-negotiate the original convention was begun in Washington in November 1955 and a new settlement was signed by the original four countries on Feb. 9, 1957.

In 1949 the Government of Canada became a signatory, along with nine other countries, to the International Northwest Atlantic Fisheries Convention which came into force in 1950. The Commission established under this Convention, with headquarters at Halifax, N.S., makes scientific investigations of the fishery resources of the northwest Atlantic. The Commission has no regulatory powers but can make recommendations to the respective governments regarding measures that may be necessary for maintaining the
stocks of fish that support the international fisheries in the Convention area. Treaty signatories now are: Canada, Denmark, Iceland, the United States, Britain, France, Italy, Norway, Poland, Portugal, Spain, the Federal Republic of Germany and the Union of Soviet Socialist Republics.

A step toward international action in regulating the high seas fisheries of the northern Pacific Ocean was achieved in December 1951 when Canada, the United States and Japan conferred at Tokyo. The resulting Convention was ratified by the three contracting governments and instruments of ratification were deposited at Tokyo in June 1953. The treaty is known as the International Convention for the High Seas Fisheries of the North Pacific Ocean and aims at providing the maximum sustained yield of the fishery resources of the northern Pacific non-territorial waters with each of the parties assuming obligations to encourage conservation measures. The Commission established under this Convention is studying the northern Pacific fisheries and will determine the application of the treaty principles and promote and co-ordinate the necessary scientific studies.

The seventh, and latest, international fisheries agreement to which Canada is a signatory is the Great Lakes Fisheries Convention, which provides for joint action by Canada and the United States in Great Lakes fishery research and in a program for the control of the predator lamprey in these waters. This Convention came into force in October 1955.

Canada is a member of the International Whaling Commission and is obligated to collect biological data on whales caught by Canadian vessels. Whaling operations are conducted in some years off the coasts of Newfoundland and British Columbia.

The Fisheries Research Board of Canada.-The Fisheries Research Board is a research organization established by Act of Parliament (RSC 1952, c. 121) for the purpose of conducting basic and applied research on Canada's living aquatic resources, their environment and their utilization. Its antecedents go back to 1898 and it is thus the lineal descendant of one of the oldest scientific organizations in Canada and one of the oldest government-supported research organizations under the supervision of an independent scientific board in North America.

By its Act, the Board is placed under the control of the Minister of Fisheries. The Board proper consists of a permanent chairman, who is appointed by the Governor in Council and who is a member of the Public Service of Canada, and "not more than eighteen other members" holding honorary appointments from the Minister of Fisheries for fiveyear terms; the Act requires that "a majority of the members of the Board, not including the chairman, shall be scientists, and the remaining members of the Board shall be representative of the Department [of Fisheries] and the fishing industry". The scientific members are drawn principally from universities and research foundations across Canada, to include specialists in disciplines related to the Board's work. The industry members are selected from among Canada's leading business men with an intimate knowledge of fishing and the fishing industry and the Department of Fisheries representative is usually a senior staff member in Ottawa. Board members have both advisory and executive functions. The advisory functions are delegated in the first instance to regional Advisory Committees who conduct on-the-spot regional reviews and report to the Board on the operations and scientific programs with a view to their improvement. The executive functions are delegated to an Executive Committee elected from Board members and approved by the Minister.

The operations of the Board are highly decentralized, there being only a small administrative, supervisory and publications staff in Ottawa. The Board employs approximately 800 persons, of whom about 200 are scientists.

Biology.-The biological program of the Board is designed to add to fundamental knowledge concerning Canada's vast living marine and freshwater resources. Included here are life history, population and behaviour studies leading to a sound scientific basis for the conservation and management of the commercially important fisheries including those for lobsters, crabs, shrimps, oysters, scallops, clams, marine mammals and other
well known economically important aquatic species of animals, such as salmon, cod, herring and halibut, as well as some marine plants, such as phytoplankton and seaweeds. Also included are studies in fish and shellfish diseases, fish enemies including the ill effects of water pollution, and such basic studies as fish genetics, physiology and behaviour, the latter with a view to improving fish cultural and farming methods and also to improving fish farm and hatchery stocks. Besides these basic studies, new fishing grounds and new species for exploitation are sought and experiments in improving fishing methods are undertaken.

The biological work on the Atlantic Coast is conducted out of research stations located at St. Andrews, N.B., and St. John's, Nfld.; work on arctic fisheries and on sea mammals is directed from a laboratory situated in Montreal, Que.; freshwater work is carried out from a station in London, Ont.; and work on the Pacific Coast is directed from research laboratories situated at Nanaimo, B.C. The Board operates 15 research vessels for its biological studies, varying from small inshore and lake craft to specially built seagoing ships. The Board acts as Canada's research agent for three international fisheries commissions and two international sea-mammal commissions to which Canada is party.

Oceanography.-Oceanography includes the study of the marine (and freshwater) environment in which aquatic organisms live. This is under continuing study to further knowledge in primary and secondary productivity and the occurrence of ocean and freshwater life of importance to man. Encompassed here also are investigations into the distribution and physical and chemical characteristics of major ocean currents and the physical and biological structure of large ocean areas including the ocean bottom where concentrations of fish and other aquatic life occur. Ocean climate and ocean weather as they affect the distribution of fish and other living organisms as well as the vertical and horizontal distribution of nutrient matter and the cycle of energy and life in the seas are regularly observed and correlated. These studies, as well as special studies of interest to the Royal Canadian Navy, the Department of Transport and the international fishery commissions, are carried out by the Board's two oceanographic groups operating from Dartmouth, N.S., and Nanaimo, B.C., with strong ship support from the Navy and the Department of Transport, and co-operation from the Department of Mines and Technical Surveys.

Technology.-Investigations are conducted toward improving methods of preserving, processing, storing and distributing fish products, as well as of utilizing all parts of the fish. These include developments in refrigeration and the use of antibiotics as fish preservatives, of improved refrigerated rail cars for fish distribution, improvements in canning, smoking and salting of fish as well as the development of new products such as protein concentrates (fish flour) and new uses such as the development of wieners for the utilization of abundant species that are not now used for food. Fundamental studies of the structure and composition of fish proteins, fish oils, fish hormones, the energy expenditure of migrating salmon and the nutrition of marine bacteria are under way.

Technological investigations on the Atlantic Coast are carried out at research laboratories situated at Halifax, N.S., and Grande Rivière, Que., and applied work for Newfoundland is carried out at a Technological Unit at St. John's. For inland areas there is a Technological Unit in London, Ont., and a Technological Research Laboratory in Vancouver, B.C., undertakes investigation of Pacific Coast problems.

The Fisheries Prices Support Board.-Under the Fisheries Prices Support Act passed in 1944, this Board was set up in July 1947 to recommend to the Government pricesupport measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry, representative of the various fish-producing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between
a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices nor has it any jurisdiction over operations in the fishing industry or the fish trade. Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum amount of $\$ 25,000,000$ but only on recommendation of the federal Treasury Board and authorization of the Governor in Council.

The Board maintains a small staff for administrative activities. The work is closely integrated with that of the Department's Economics Service and, where possible, services required by the Board are carried out by Department personnel. The Board has carried out field surveys on market conditions and possibilities and on factors affecting the income of fishermen in the various producing areas. The financial position of fishermen is kept under continuous review and recommendations are made to the Government on the basis of the findings. Special investigations are made when serious problems arise in particular areas.

## Subsection 2.-The Provincial Governments*

An outline of the work undertaken by each of the provincial governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

Newfoundland.--The provincial Department of Fisheries in conjunction with the Newfoundland Fisheries Development Authority, a Crown corporation established in 1953, is concerned mainly with the improvement and development of fishing and production methods. It conducts experiments and demonstrations in longlining, Danish seining and otter trawling, in the construction of multi-purpose fishing craft, and in the exploration of potential fishing grounds.

Loans are made to processors for the establishment and expansion of fish processing plants and for deepsea draggers and also to fishermen for the construction and purchase of modern vessels capable of a greater variety of fishing operations and larger production. Fishermen receive further aid through bounty payments at the rate of $\$ 160$ per ton for newly constructed vessels under the Fishing Ships (Bounties) Act, 1955. The Fishing and Coastal Vessels Rebuilding and Repairs (Bounties) Act, 1958 authorizes the government to assist financially in maintaining and prolonging the life of the existing fleet. The Coasting Vessels (Bounties) Act, 1959 authorizes the granting, for locally built ships, of a maximum bounty of $\$ 300$ per ton for vessels measuring from 15 to less than 100 gross tons, and $\$ 150$ per ton for vessels of between 100 and 400 gross tons. An Inshore Fisheries Assistance Programme provides a maximum bounty of $\$ 10$ per foot on boats measuring from 24 to 35 feet and bounties are paid to fishermen on certain types of nylon and other synthetic fibre fishing nets and lines.

Other services include advisory services to fishermen on gear and equipment, industrial research, plant construction, plant engineering and economics; assistance to fishermen's unions; weather and ice reports; and search and rescue. The Fisheries Salt Act, 1957 implements more rigid control over the use of fisheries salt.

Sport Fisheries.-The inland waters of Newfoundland, although they provide excellent sport fishing, are not commercially exploited. The lakes and ponds actually remain under the authority of the Natural Resources Branch of the provincial Department of Mines, Agriculture and Resources but, under federal-provincial agreement, these waters, including rivers and streams, are under federal control in matters of conservation and guardianship.

Prince Edward Island.-The sea and inland fisheries of Prince Edward Island are administered by the Federal Government. The provincial Department of Fisheries supplements federal activity and is concerned mainly with development of the fisheries

[^178]industry. The Department provides technical assistance and, in conjunction with the Fisheries Research Board of Canada and branches of the federal Department of Fisheries, engages in some experimental work.

Financial assistance is made available to fishermen through the Fishermen's Loan Board of Prince Edward Island, a body corporate operating under the provincial Department. The Fishermen's Loan Board operates under authority given by the Re-establishment Assistance Act and regulations thereunder, approved by the Lieutenant-Governor in Council, Jan. 7, 1949, with amendments. Loans are made to fishermen and companies for the purchase of boats, engines and other deck machinery at an interest rate of 4 p.c. From its reorganization in 1949 until the end of March 1963, the Board has lent approximately $\$ 1,875,000$ for the modernization of the inshore and offshore fleets. Loans for the construction or expansion of processing plants are available through the Industrial Establishments Promotion Act under which loans may be made for facilities handling agricultural, horticultural or fishery products.

Game fisheries are the responsibility of the Department of Industry and Natural Resources. The streams of the province, mostly spring-fed and fairly constant in flow, provide very favourable conditions for the reproduction of game fish, of which speckled trout is the most important variety. Investigations concerning the production of trout of a size attractive to anglers are being conducted by the Fisheries Research Board of Canada at sites provided by the provincial Department. Unfortunately, many of the formerly fertile and highly productive ponds of the province have disappeared, and the provincial Department is actively concerned with damming and restoring these for the enjoyment of the public.

Nova Scotia.-Although the Federal Government has exclusive jurisdiction over the marine and inland fisheries of Nova Scotia and attends to all phases of administration related thereto, the Nova Scotia Government operates in several fields where provincial initiative is found to be necessary and appropriate, having regard for the importance of the fishery resources in terms of employment, industry, trade and recreation.

In the commercial fisheries, provincial government interests are the concern of the Nova Scotia Department of Fisheries. The Fishermen's Loan Board is administered by that Department and the Industrial Loan Board by the Nova Scotia Department of Trade and Industry; the first makes loans to fishermen for the purchase of boats and engines and the second makes loans for the construction or improvement of fish processing plants. Fisheries engineers perform inspection and survey duties for the Loan Boards and provide technical assistance and advice to loan applicants and others in the fisheries and allied industries, notably the boatbuilding industry. Instructors conduct courses for fishermen in the care and maintenance of marine engines, in basic navigation and in the design, construction and maintenance of gear. This program receives substantial assistance from the Technical and Vocational Training Branch of the federal Department of Labour. The on-course instruction is supplemented frequently by informal on-the-spot assistance to smaller groups who find themselves in need of technical help with particular problems. The Nova Scotia Department of Fisheries, with the financial and/or technical assistance of the federal Department of Fisheries, organizes and conducts demonstrations of fishing methods and gear of types untried in some or all of the several fishing areas of the province.

Sport Fisheries.-In recent years, Nova Scotia, through the Wildlife Division of its Department of Lands and Forests, has spent a considerable amount of money on the improvement of certain streams in the province with a view to aiding salmon migration. A system of salmon-rearing ponds capable of producing 200,000 smolts each year has been established on the Medway River in Queens County, and a system of trout-rearing ponds with an annual capacity of 100,000 fingerlings has been set up on the Moser River in Halifax County. A full-time fisheries biologist is employed by the Division.

New Brunswick.-Commercial fishing is one of the most important basic industries of New Brunswick, employing more than 6,500 fishermen with annual earnings of over $\$ 9,000,000$ and about 2,800 plant workers. The annual marketed value of fish products is about $\$ 33,000,000$.

New Brunswick fisheries, both tidal and inland, are under the legislative jurisdiction of the federal Department of Fisheries, and angling in Crown waters is under the jurisdiction of the provincial Department of Lands and Mines. To supplement the activities of the federal Department of Fisheries and to make practical application of research data obtained from the Fisheries Research Board of Canada and other agencies, the New Brunswick Government created its own Department of Fisheries in 1963. The Fishermen's Loan Board of New Brunswick, formerly administered by the Department of Industry, was transferred to the new Department and three new Branches createdAdministration Branch, Boatbuilding and Maintenance Branch, and Exploratory Fishing and Education Branch. The Department is also undertaking fish inspection control under authority of the Fish Inspection Act passed by the New Brunswick Legislature in 1964.

Since its inception in 1946, the Fishermen's Loan Board of New Brunswick has disbursed over $\$ 9,000,000$ for the construction of fishing vessels and the purchase of modern gear and equipment for the commercial fishermen of the province. Loans ranging from $\$ 1,500$ to $\$ 3,000$ are made available to inshore fishermen for the purchase of lobster boats and marine engines, and amounts ranging from $\$ 15,000$ to $\$ 225,000$ are lent to offshore fishermen and companies for the construction of modern Danish seiners, purse seiners, draggers and trawlers. These amounts represent 70 p.c. of the total cost of each unit after deducting down payments and Federal Government subsidies. This long-term assistance program has been largely responsible for the doubling of the value of the fishing fleet during the past 15 years. Commercial fishermen now own a modern fleet of 90 groundfish draggers, seven steel stern trawlers, 27 Danish seiners, two steel tuna seiners, 30 herring purse seiners and more than 3,000 inshore boats.

New and improved designs of fishing vessels are under constant study by the technical staff of the Department in co-operation with naval architects, boatbuilders and fishermen. A certain pattern of standardization is followed to keep building and maintenance costs low because fishing has become very competitive with the influx of large foreign fishing vessels on Canadian east coast fishing grounds. Multi-purpose types have been successfully introduced in inshore fisheries of the Gulf of St. Lawrence area, capable of being converted easily into longliners, Danish seiners or scallop draggers. Modified versions of the 65foot groundfish dragger, equipped with more powerful diesel engines and larger nets, have proved very efficient. Stern trawlers, the first to be built in North America, were added to the New Brunswick fleet in 1962, contributing in large measure to the expansion of the industry. The province has also taken the lead in the field of commercial tuna fishingtwo ultra-modern tuna seiners, built in a New Brunswick shipyard, are operating successfully off the south shore of the province, making large catches of bluefin tuna and skipjack.

Exploratory projects conducted by the Department in co-operation with the Federal Government have led to the practical introduction of stern trawling, tuna purse seining, Danish seining, cod gillnetting, crab fishing, mechanical clam digging and the use of many other techniques and types of gear not generally in use by Atlantic Coast fishermen. And to educate the fishermen in the use of such modern vessels and gear, intensive training in navigation, motor mechanics, electronic devices, fishing gear technology, bacteriology, marine biology and other related subjects is being given at two new schools of fisheries erected in 1963; each school is equipped to give instruction to 50 students a year.

Sport fishing contributes substantially to the economy of the province, mainly through the tourist trade. Great Atlantic salmon rivers like the Miramichi, the Restigouche and the St. John are known around the world for their prolific production of this majestic game fish and attract many thousands of tourists to the province each year. Anglers catch as
many as 50,000 salmon a year in the Miramichi system alone. Many other species are also sought after by both residents and non-residents in the hundreds of streams, rivers and lakes of the province.

Quebec.-The Quebec Government, through its Department of Industry and Commerce, gives much consideration to the administration of the commercial fisheries of the province. For the benefit of producers and fishermen, it operates a network of cold storage plants for the freezing and preservation of fish. The network comprises 60 plants, together having a daily freezing capacity of 500 tons and a storage capacity of $25,000,000$ lb . of fish. These plants also perform a valuable service to fishermen by providing them with frozen bait and ice. In addition, the Department owns and maintains 123 stations in small fishing ports where fish is kept under proper conditions while awaiting collecting trucks or boats, and operates an artificial drying plant with a processing capacity of $3,000,000 \mathrm{lb}$. of fish annually. A staff of fish wardens, technicians and technologists administers fishery legislation and assists in the application of new techniques for the expansion of the industry. The central administration is located at Quebec City with offices at the principal fishing centres for administration of the Protection, Refrigeration and Maritime Economy Services. Fish inspection is carried out by federal inspectors who are vested with additional powers by the provincial government with respect to local sales.

Educational work among the fishermen and producers is conducted by the Department to teach the latest methods of fish preparation and of obtaining high-quality products. The Fisheries Training School at Grande Rivière gives to fishermen of all ages the opportunity of taking free theoretical and practical courses in fishery. Encouragement is given to the Co-operative Associations of Fishermen through the Social Economic Service of Ste. Anne de la Pocatière subsidized by the Federal Government. Under a maritime credit system, fishermen may obtain loans from credit unions for the purchase of boats and gear. The fish trade is promoted through advertising campaigns in newspapers and magazines, exhibits at fairs, cooking demonstrations, educational films and the free distribution of fish recipes and publicity leaflets.

The Department adheres to the federal-provincial agreement on the building of draggers and longliners and assumes the building costs on a capital refunding plan. At the end of 1963, the fishing fleet of Quebec consisted of 85 draggers, eight longliners, 49 small longliners and four Danish seiners, representing an investment of over $\$ 5,000,000$. After deduction of the federal subsidy of $\$ 250$ per gross ton for wooden vessels or 50 p.c. of the cost for steel trawlers, the cost to the fishermen was approximately $\$ 4,000,000$.

Biological and hydrographical research in the Gulf of St. Lawrence is directed by the Marine Biological Station at Grande Riviere and a laboratory is operated at Quebec City for the study of the biology of freshwater fish of the St. Lawrence River and its tributaries. The Quebec Aquarium at Quebec City exhibits freshwater and saltwater fish in 60 large tanks.

Sport Fisheries.-The Department of Tourism, Fish and Game exercises jurisdiction over the inland waters; it employs 250 full-time wardens. Licences are required for sport fishing and hunting. Four hatcheries are maintained at strategic points throughout the province-St. Faustin, Lac Lyster, Tadoussac and Gaspe. These establishments distribute speckled trout, Atlantic salmon and grey trout fry, maskinonge fingerlings and older fish in public waters.

The Department administers six parks and seven reserves in all of which, except for Mont Orford Park, excellent fishing may be found. Gaspesian and Laurentide Parks are renowned for their trout fishing. Chibougamau Reserve and La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips in search of pickerel, pike and grey or speckled trout. Four salmon streams are open to anglers-the St. Jean River, the Petite Cascapédia River, the Matane River and the Port Daniel River. A joint committee composed of departmental officials and the directors of the federation of fish and game
associations recommends the proper legislation for the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the province.

Ontario.-The fishery resources of Ontario are administered by the Fish and Wildlife Branch, Department of Lands and Forests. The Branch operates under the authority of the federal Fisheries Act, the Special Fishery Regulations for the Province of Ontario, the Ontario Game and Fish Act and the Regulations connected therewith.

Commercial Fisheries.-The commercial fishing industry in Ontario provides employment for about 3,000 persons directly and for many more indirectly, and produces an annual yield of from $45,000,000 \mathrm{lb}$. to $55,000,000 \mathrm{lb}$. of fish. A record of $63,783,000 \mathrm{lb}$. was established in 1962 with very heavy catches of smelt and yellow perch contributing to the increased landings. The industry, although widely scattered throughout the province, is centred chiefly on the Great Lakes, particularly Lake Erie which is the most productive of these lakes. The principal species of fish taken commercially are perch, smelt, whitefish, pickerel, lake trout, white bass, pike, herring, chub, sheepshead, carp, catfish and bullheads, sturgeon, eels, goldeyes, rock bass, sunfish and suckers. Over one hundred smaller inland lakes are commercially fished, principally those in the northwestern portion of the province, and careful management of these lakes is essential to ensure continued production.

The types of fishing boats in use vary from small craft to 60 -foot tugs, and types of gear vary from the most common gillnets, pound-nets and trap-nets, seines and baited hooks to small hand-operated seines and dip-nets. Fishing methods and equipment have been modernized extensively during the past few years. Diesel-driven steel-hull tugs have replaced steam-driven wooden tugs, such aids as depth-sounding devices, radar, ship-toshore and ship-to-ship communications have been developed and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods are in use as well as new types of fishing gear. Trawling has proved very efficient in harvesting smelt on a year-round basis in Lake Erie.

Most Ontario fishermen are organized into various local associations. Many of these associations are, in turn, represented by the Ontario Council of Commercial Fisheries which performs important services to the industry. The Ontario Fishermen's Co-operative and its member groups are of interest also in the organization of the fishery in the province.

Sport Fisheries.-Angling in Ontario is rapidly becoming one of the major industries of the province. With an estimated freshwater area of some 68,490 sq. miles, the province is one of the most attractive fishing areas on the Continent. Excellent angling opportunities are available for such prized fish as brook, rainbow, lake and brown trout, walleye, smallmouth and largemouth bass, pike and maskinonge. It is difficult to measure the total value of the sports fishing industry to the province but the annual revenue from the sale of angling licences alone (mainly to non-residents, as residents require a licence for provincial parks only) is in the neighbourhood of $\$ 2,500,000$. The management of this valuable resource is administered by a well-trained field staff of conservation officers and biologists located in the 22 forestry districts of the province.

Provincial Hatcheries.-Ontario operates 17 hatcheries and rearing stations and excellent results have been produced in the culture and distribution of various species of game fish. The primary species reared in these operations include brook trout, rainbow trout, lake trout, smallmouth and largemouth bass, and maskinonge. Four of the finest troutrearing stations on the Continent are located in this province-at Dorion near Port Arthur, Sault Ste. Marie, Hills Lake near Englehart, and Chatsworth.

Fisheries Research.-Research in Ontario is carried on in the Great Lakes and in inland waters. At the South Bay Mouth Station on Manitoulin Island in Lake Huron, Wheatley on Lake Erie, and Glenora on the Bay of Quinte on Lake Ontario, fishery biological stations are operated for the investigation and study of the commercial and sport
fisheries on the respective lakes. In Algonquin Park, detailed studies concerning lake trout, smallmouth bass and brook trout are in progress and management techniques are being tested against the background of a creel census which has been continuous since 1936. Studies on walleyes, parasitology and limnology have recently been initiated.

A selective breeding experiment concerning the hybrid between lake trout and speckled trout is progressing favourably. The deep-swimming character of the lake trout and the character of maturity at early age of the speckled trout are those being selected for combination in the hybrid.

Co-operation by Ontario in the field of sea lamprey control is being extended through the Great Lakes Fishery Commission.

Manitoba.-The fishing industry in Manitoba occupies an important position in the economy of the province. This valuable resource produces annually some $36,000,000 \mathrm{lb}$. of commercially caught fish with a market value in excess of $\$ 7,000,000$. Over 5,000 persons are engaged in the industry as producing fishermen and 6,000 are employed in processing, transportation, boat building and other related industries. The lake area in Manitoba totals some 39,000 sq. miles. As road and transportation facilities are developed in the northern area and remote lakes become accessible for production, commercial production will increase.

Those engaged in the commercial fishing industry in Manitoba own and operate some 1,600 fishing boats ranging in size from large diesel lake freighters to small skiffs powered by outboard motors. The value of these boats together with gear and equipment is estimated at $\$ 4,000,000$. Much of the fishing gear is costly but is essential to efficient production. New types of gear are at present in use on a research basis and experiments are being conducted in an effort to develop efficient low-cost methods of production. The Department of Mines and Natural Resources has given leadership in these matters and the continuing program of gear research has produced gratifying results.

Supervision of commercial fishing operations and the enforcement of the Manitoba Fishery Regulations occupies a staff of Conservation Officers who patrol the province using diesel boats during the open water season, bombardier snowmobiles and light trucks during the winter months, and aircraft in remote areas. All patrol units are equipped with two-way radio systems. An active and continuing campaign is conducted by the government and industry directed toward improvement of sanitation and quality standards in fish handling facilities and processing plants.

Sport Fishing.-Angling continues to be one of the most popular forms of outdoor recreation in Manitoba and many anglers are extending their activities to include winter ice fishing. During the year ended Mar. 31, 1963, more than 104,000 licences were sold to resident and non-resident anglers. In 1963, master angler awards were made to 640 anglers who caught fish of trophy size, an all-time record.

The Department formulated a program to diversify sport fishing waters and two new species have been introduced to Manitoba waters-the kokanee, a land-locked fish of the sockeye family, and the prized sportfish muskellunge. Eventually, these species will provide challenging and interesting angling opportunities.

Provincial Hatcheries.-Manitoba's four main hatcheries and two spawn-taking camps serve an important function in the management of fishery resources. The Whiteshell Trout Hatchery raises several trout species which are planted to diversify and improve sport fishing waters. The other three hatcheries support the populations in commercial fishing waters. Plantings of hatchery-reared pickerel are also made to replenish sport fishing waters. The two spawn-taking camps are operated on a seasonal basis.

Fisheries Research.-Biological research covers a wide field of scientific endeavour designed to provide factual information that can be used as a basis for sound management policies. Research studies involve oxygen tests to determine the incidence of winterkill,
test netting of planted lakes, whitefish investigations and quality tests, pollution studies, creel census, spawning habits of sport and commercial fish, bottom fauna and fish feeding, lake and river surveys, tagging to determine migratory trends and environmental effects and analyses of trends in fish populations.

Saskatchewan.-Saskatchewan's fishery resource, based on approximately 32,000 sq. miles of water area, has contributed much to the economic and recreational development of the province. The Fisheries Branch of the Department of Natural Resources, with head office at Prince Albert, is responsible for the administration of the fisheries.

Its main objective is to encourage multi-use (harvest) of the fishery, taking into consideration the interests of the various groups concerned-anglers, commercial fishermen and mink ranchers. The Branch plans policies and develops programs that will ensure the proper management and utilization of the fishery; interprets and explains policies, programs and regulations to the public; administers the Acts and Regulations, both federal and provincial, and adapts regulations to meet changing conditions. Its five Divisions deal with commercial fisheries, sport fisheries, fisheries research, spawn camps and the Fish Culture Station.

A record commercial production of $14,998,581 \mathrm{lb}$. was achieved in Saskatchewan in 1962. The province continues to be one of Canada's largest producers of whitefish and lake trout; $7,388,751 \mathrm{lb}$. of whitefish and $1,987,475 \mathrm{lb}$. of lake trout were harvested during the year. Market demand remained firm, returning a gross value of $\$ 3,114,798$ from which the fishermen received $\$ 1,477,448$ on the lake. The 14 processing plants operating in the province produced $2,045,879 \mathrm{lb}$. of fillets. Quality control and plant standards are maintained.

During the year, 1,162 domestic fishing licences were issued, with an estimated take of $1,162,000 \mathrm{lb}$. of fish. In addition, about $500,000 \mathrm{lb}$. were harvested under the 486 free Indian permits issued; 66 mink ranchers were licensed to permit the feeding of fish to $9,502 \mathrm{mink}$ breeders and used an estimated $5,169,088 \mathrm{lb}$. of coarse fish (mainly suckers, marias and cisco).

Sport fishing is considered to be one of Saskatchewan's main outdoor attractions. In addition to the summer fishing activities, winter angling is on the increase. During 1962-63, a total of 96,904 angling licences were sold, 87,608 of them to residents of the province.

Continuing the fisheries research program instituted in the province 15 years ago, 11 research projects were undertaken during 1962-63; three reports, covering the survey of 11 lakes, were completed and depth-sounding maps were completed on four other lakes. In connection with the brine shrimp industry, 44 lakes were examined; brine shrimp eggs and shrimp were found to be present in 39 of these lakes. Limnological and fisheries surveys were continued on lakes in the Precambrian area along the highway from Lac la Ronge to the Churchill River and the Hanson Lake road, and on Provincial Park lakes. The creel census project on Lac la Ronge was conducted for the thirteenth consecutive year.

The first phase of the fish culture program entailed the taking of lake trout, northern pike and walleye (pickerel) eggs at the Lac la Ronge spawn camps; arctic grayling eggs were taken at the Black Lake spawn camp, near Lake Athabasca; whitefish eggs were taken from Lepine Lake in the vicinity of Pierceland; and rainbow and eastern brook trout and kokanee eggs were secured from the United States. The second phase of the program was the incubation and hatching of these eggs at the Fish Culture Station at Fort Qu'Appelle and the final phase was the transportation of the fry, fingerling and adult fish from the Fish Culture Station to the lakes selected for stocking. During the year, a total of 96 lakes were stocked with $15,664,150$ fry, 645,298 fingerlings and 15,260 yearlings and adults.

Alberta.-Commercial and game fishing is administered by the Fish and Wildlife Division of the Department of Lands and Forests under authority of the Fisheries Act (Canada) and the Fishery Act (Alberta).

Commercial fish production in the year ended Mar. 31, 1963 totalled 9,039,000 lb. with a market value of $\$ 1,141,700$-about the same as in 1961-62. Lake whitefish again accounted for about 50 p.c. of the market value but comprised only 27 p.c. of the catch. Tullibee, a low-priced animal food fish, made up 45 p.c. of the catch but only 19 p.c. of the market value. Northern pike production exceeded $1,000,000 \mathrm{lb}$. for the first time since 1936 and ranked third in quantity and value. Other species taken, in order of value, were walleye (pickerel), suckers, burbot, yellow perch, goldeye and trout.

Generally low water levels, heavy growths of plankton and rooted aquatic plants, and heavy snow cover during the winter months combined to cause widespread winterkills over most of the province. An extensive re-stocking program was undertaken in the many trout lakes in the north central portion of the province. The provincial hatchery located in Calgary operated at capacity; a total of $2,260,085$ trout were stocked in 111 locations throughout the province. As in previous years, most of these were placed in lakes in the settled areas. Six licensed commercial game fish farms and two private game fish farms were operated during the year.

Research into the survival of hatchery trout in streams was continued at the Alberta Biological Station at Gorge Creek. This was supplemented by studies at Jumping Pound and Carbondale Rivers designed to ascertain recovery by anglers of catchable-size planted hatchery trout. Studies of growth and abundance of fish populations and basic lake productivity, as well as the general inventory of Alberta waters were continued in 1963.

British Columbia.-A Fisheries Office, which was organized in 1901-02 and became very active in fish culture work, building and operating fish hatcheries and instituting scientific research into various fishery problems, was superseded in 1947 by the Department of Fisheries which in turn was superseded in 1957 by the Department of Recreation and Conservation. Commercial fisheries are represented today as the Commercial Fisheries Branch of the Department of Recreation and Conservation. Broadly speaking, the administrative and regulative jurisdiction over the fisheries of British Columbia rests with the federal authority. The ownership of the fisheries in the non-tidal waters is vested in the Crown in the right of the province, as are the shell fisheries such as oyster fishing and clam fishing in tidal waters. The province administers these fisheries although the regulations covering them are made under federal Order in Council on the advice and recommendation of the province.

The provincial Fisheries Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish processing plants under a system of licensing. Provision is also made for arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations.

Regulation and administration of net fishing in the non-tidal waters of the province, including commercial fishing and authority for regulation of the game fisheries in non-tidal waters, is vested in the Fish and Game Branch which operates a number of trout hatcheries and egg-taking stations for re-stocking purposes.

The Branch co-operates closely with the Fisheries Research Board of Canada. The biological research into those species of shellfish over which the province has control, principally oysters and clams as well as marine plants, is conducted by the Fisheries Research Board of Canada at the Pacific Biological Station, Nanaimo, B.C., under agreement with the federal and provincial authorities. The object of this research is to encourage the industry to produce better products more economically and to enable the Commercial Fisheries Branch to regulate the various species so that maximum exploitation may be obtained on a sustained-yield basis.

## Section 3.-Fishery Statistics

The review of commercial fishing and marketing given in Section 1, pp. 622-625, covers the situation in 1963 and contains estimated figures for that year. However, at the time of the preparation of this Chapter, the latest statistics available in detail for both the primary industry and the fish products industry were those for 1962 contained in the following Subsections.

## Subsection 1.-Primary Production

Atlantic Coast fishermen experienced a very prosperous year in 1962, with landings valued at $\$ 68,373,000$. This represented an increase of 15.9 p.c. over the 1961 catch of $\$ 59,004,000$ and 28.6 p.c. over the 10 -year $1952-61$ average of $\$ 53,159,000$. Lobster continued to be the most valuable species, returning $\$ 19,781,000$ to the fishermen; cod valued at $\$ 18,904,000$, haddock at $\$ 4,869,000$ and scallops at $\$ 4,524,000$ were also major sources of revenue.

Fishermen's earnings in Newfoundland reached record levels with the catch valued at $\$ 17,454,000$. Fishing was good both on the Banks and inshore. The catch of cod off the southwest part of the province by both the small boats and the traps was something of a record. The market demand for frozen cod fillets and cod blocks, mainly in the United States, continued to increase. Production of frozen fillets and blocks, of which more than half were cod, reached $72,179,000 \mathrm{lb}$. with a value of $\$ 16,780,000$.

Although the total catch in Nova Scotia was down from the previous year, the returns to fishermen in 1962 were at a record high level of $\$ 32,062,000,16$ p.c. over the value of the catch in 1961. Lobsters continued to be the chief source of income, with landings of $20,004,000 \mathrm{lb}$. having a value of $\$ 9,786,000$. Scallop landings of $13,373,000 \mathrm{lb}$. valued at $\$ 4,492,000$, cod landings of $95,920,000 \mathrm{lb}$. valued at $\$ 4,043,000$, and haddock landings of $71,426,000 \mathrm{lb}$. valued at $\$ 3,573,000$ were the other major sources of revenue, in order of importance. In New Brunswick, lobsters were also the principal income source for fishermen. In 1962, landings of $9,355,000 \mathrm{lb}$. had a value of $\$ 3,891,000$; although the catch was somewhat lighter than that of 1961 , improved unit values resulted in higher total returns to fishermen. Herring landings were almost double the 1961 catch but were still well below the 1959 and 1960 levels; the 1962 catch of $106,520,000 \mathrm{lb}$. had a value of $\$ 1,740,000$. Cod, the third most important species, returned $\$ 1,456,000$ for the $40,871,000 \mathrm{lb}$. caught. Both quantity and value were greater than the five-year 1957-61 averages of $37,870,000 \mathrm{lb}$. and $\$ 1,115,700$, respectively. Prince Edward Island fishermen received slightly more for their efforts in 1962 than they did in the previous year; the total catch was valued at $\$ 4,649,000$ compared with $\$ 4,489,000$ in 1961 . Of the 1962 total, 69 p.c. was accounted for by lobsters.

Total 1962 landings in Quebec, including both sea and inland species, had a value of $\$ 5,710,000,21$ p.c. higher than in 1961 . Cod, valued at $\$ 2,148,000$, was the most valuable species followed by lobsters at $\$ 1,421,000$.

In 1962, the British Columbia catch was valued at $\$ 45,928,000$, salmon accounting for $\$ 30,559,000$. A record catch of $93,214,000 \mathrm{lb}$. of pink salmon returned $\$ 10,909,000$ to the fishermen. Sockeye salmon, which have a four-year cycle, was expected to produce heavy runs in 1962 but the catch was disappointing, amounting to only $20,077,000 \mathrm{lb}$.; in the latest "on" year (1958), 74,011,000 lb. were taken. Although the herring fleet was tied up for six weeks during price negotiations, landings of $445,275,000 \mathrm{lb}$. were well above the five-year 1957-61 average of $356,128,000 \mathrm{lb}$. and returns to fishermen amounted to $\$ 4,752,000$. The halibut catch of $24,527,000 \mathrm{lb}$. was smaller than that of 1961 but higher returns per pound brought the value to the fishermen up to $\$ 7,773,000$; comparable figures for 1961 were $24,951,000 \mathrm{lb}$. and $\$ 5,316,000$. Two converted salmon seiners fished for tuna off the California coast with encouraging results. These vessels were equipped with a new brine spray refrigeration and expansion of this type of fishery seems to be in prospect.

## 1.-Quantity and Value of Sea and Inland Fish Landed, by Province, 1958-62

Nore.-Figures for the years 1918-57 are given in the corresponding table of previous Year Books, beginning with the 1947 edition.

| Province or Territory | 1958 | 1959 | 1960 | 1961 | 1962 |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Subsection 2.-The Fish Products Industry

The Census of Industry survey of the fish products industry covers establishments engaged in the processing of fish at the secondary industrial level. Some fishermen process the fish they land to a certain degree but their operations are not included nor are the minor amounts of processing done in the inland areas (Ontario, the Prairie Provinces, and the Northwest Territories). The value of all sea and inland fishery products processed or handled by processors, handlers and fishermen during 1962 was $\$ 255,603,000$, the highest amount on record. All provinces, except Ontario, Saskatchewan and Alberta shared in the 15-p.c. increase over 1961.
4.-Value of All Products of the Fisheries, by Province, 1958-62

Norg.-Figures for the years 1917-57 are given in the corresponding table of previous Year Books beginning with the 1922-23 edition. Totals for five-year intervals from 1870 are given in the 1956 edition, p. 597.

| Province or Territory | 1958 | 1959 | 1960 | 1961 | 1962 |

${ }^{1}$ Totals differ from the sum of provincial totals because duplications resulting from inter-shipments between provinces are removed.

Canned salmon produced in British Columbia has long been the most important product of the industry, although annual output fluctuates considerably with the extent of the catch. In 1962, for example, the output of $1,816,586$ cases was almost three times as high as the 1960 production, as shown in Table 5.

## 5.-Pacific Coast Production of Canned Salmon, 1960-62

${ }^{1} 48 \mathrm{lb}$.

The demand for Atlantic Coast frozen groundfish fillets and blocks continues to rise, with the result that these products are running a close second to canned salmon and new and expanding facilities are being provided to supply the growing market. Table 6 shows the increase in production from 1960 to 1962.

## PART II.-FURS

## Section 1.-The Fur Industry*

Although the relative importance of the fur industry in the Canadian economy has declined through the years, the production of furs continues to contribute substantially to the national income. Furs are produced in all the provinces and, in addition to returns from the sale of pelts, the thriving fur farming industry has boosted the economy of many areas through creation of a chain of associated businesses such as feed supply houses and pelt processing stations. Demand from the industry for feeding stuffs has resulted in the utilization of practically all of what were formerly the waste products from meat packing operations and poultry processing plants. In addition, some $50,000,000 \mathrm{lb}$. of rough fish and fish frames, formerly of little or no value, are used annually by this industry. In the case of furs from the wilds, trapping returns are distributed through countless northern villages, providing a welcome source of additional revenue for many part-time trappers as well as for the professionals.

The total value of furs produced in the $1962-63$ season was $\$ 32,131,000$, ranched furs accounting for $\$ 19,957,000$ or 62.1 p.c. and wildlife pelts for the remainder. A large proportion of the Canadian furs are exported annually, the principal varieties being wild mink, beaver and muskrat. In 1963 the value of raw furs exported was $\$ 30,987,000$ and during the same year raw furs worth $\$ 20,914,000$ were imported. The chief imports were mink, Persian lamb, raccoon, fox and muskrat.

Fur Trapping.-Despite intensive trapping which has been carried on for many years, the numbers of wild fur bearers in Canada have been well maintained. Some species, principally beaver and muskrat, are still taken in the settled areas, but much of the wildlife has retreated before the advance of settlement so that the principal trapping areas now lie in the northern portions of the provinces and in the Northwest Territories.

Conservation measures instituted by the respective provincial governments and, for the Yukon and Northwest Territories, by the Department of Northern Affairs and National Resources have been largely responsible for maintaining the numbers of fur bearers. These measures include control of the length of the period during which trapping is permitted and, where necessary, the imposition of closed seasons for the protection of scarce species. Also, in many fur producing areas a system of registered traplines is in effect whereby trapping areas are assigned to individual trappers on a constant basis. This system puts the responsibility on the trapper for conservation of the fur bearers in his area and encourages him to trap less intensively any species that show signs of becoming scarce. Prior to institution of the registration system, competition between trappers in the same area often resulted in exhaustion of the fur resource.

According to records maintained by the Dominion Bureau of Statistics since 1919, the 1962-63 catches of beaver, lynx and otter were the largest on record and above-average numbers of fisher and marten were also taken. On the other hand, the white fox catch was the lowest on record because, in 1962, this species was at the low point of its four-year cycle throughout the Arctic.

The total value of the wild fur catch in 1962-63 was 17.5 p.c. higher than in the previous season, reflecting an increased catch of many species and also a fairly general advance in pelt prices. However, prices of most of the principal varieties of furs were still substantially lower than they were when records were commenced in 1919 and, consequently, recent returns from the trapping enterprise have not been sufficiently attractive to keep trappers on their traplines on a full-time basis. In areas where other forms of employment are available many trappers have become full-time or part-time wage-earners, carrying on their trapping activities on week-ends or off days, and others have abandoned trapping

[^179]completely. In the northern regions, however, trapping still plays an important part in the lives of the native Indians and Eskimos, providing an independent means of livelihood in these remote areas.

Fur Farming.-Fox.-Fur farming originated in Canada around 1890 with the raising of black and silver foxes on farms in Prince Edward Island. Subsequent years saw these fox furs gain world-wide prominence and then gradually fall again from favour until, by around 1950, the prices realized were less than breeders' production costs. In 1962, 1,647 fox pelts were produced on Canadian farms, the average value being estimated at $\$ 10$ per pelt. Although fox furs of all types have been used extensively for coat collars and garment trimming in recent years, no major swing is evident toward the use of silver fox in the formerly fashionable capes, jackets or full-length garments.

Mink.-Mink farming had its beginnings in Canada around 1910 and has since grown to be by far the most important branch of fur farming. In 1962 the production of $1,308,281$ mink pelts from 1,503 Canadian farms accounted for 99.1 p.c. of the value of fur farm production. This industry is carried on in all the provinces, the principal producers, in order of importance, being Ontario, British Columbia, Manitoba and Alberta. The following figures indicate the growth of the industry since 1935:-

| Year | Pelt Production | Average Realization | Year | Pelt Production | Average Realization |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | \$ |  | No. | 8 |
| 1935. | 30,558 | 10.58 | 1955. | 786,760 | 20.07 |
| 1940. | 229, 202 | 9.64 | 1960. | 1,204,077 | 14.03 |
| 1945. | 255,968 | 21.51 | 1961. | 1,269,050 | 14.50 |
| 1950. | 589,352 | 17.08 | 1962. | 1,308,281 | 15.12 |

As the industry developed, improved ranching practices enabled producers to increase the size of their operations without additional help and also to improve the quality of their product. On early mink farms the mink were raised in cages which were ranged in rows in the open. Feed and water had to be carried to the mink and this limited to around 300 the number of animals that could be cared for by one operator. By the mid-1950's most of the old-style cages had disappeared and mink were being raised in roofed structures with more or less open sides, housing up to several thousand animals each. Most of the modern operations make use of automatic watering systems and other labour-saving devices, including electric powered feeding carts which roll through the sheds, with an operator controlling the delivery of the semi-liquid feed to each mink through a hose backed by a pressure system.

Through selective breeding, mink farmers have made marked improvement in the quality of their animals. Of prime importance also in this improvement are the Live Mink Shows at which experienced judges place the animals and the Field Days where expert fur graders discuss the fine points of the animals exhibited before mink farmer audiences. The diseases of mink have been the subject of considerable research at universities and at the Canada Department of Agriculture Experimental Fur Farm, Summerside, P.E.I. As a result of findings, most mink farmers now carry out programs of preventive vaccination for control of the major diseases.

Mink has remained the dominant fur in the world fur industry since the late 1940 's. This continuing popularity is undoubtedly due in part to the many natural advantages of mink and to the resourcefulness of the industry in developing a large number of natural coloured mutations. However, some credit must also be given to the effective promotional campaigns waged by public relations firms on behalf of mink breeder associations in Canada and other countries. Members of Canada Mink Breeders' Association, the national association of Canadian mink farmers, voluntarily contribute 1.5 p.c. of the gross selling price of their mink pelts to the Association, the amount realized being used largely for promotional purposes. Similar fund-raising plans are in effect in other major mink producing countries such as the United States and Scandinavia.

Chinchilla.-The first chinchillas were imported into Canada in 1937 and since then growth of the industry has been steady. In 1962 Canadian raisers marketed 11,268 chinchilla pelts, the average realization being $\$ 13.50$ per pelt. At present, chinchillas are being raised in 468 locations throughout Canada, the principal producers, in order of importance, being British Columbia, Ontario, Quebec and Alberta.

In planning for the future, the most pressing problem to be overcome by the raisers is the low production rate. Currently, kits raised to maturity annually from each breeding female average only $1 \frac{1}{2}$ and the goal of the industry is to increase this production to three or four kits per female. The reasons why the number of animals raised to maturity is comparatively small are numerous, ranging from failure of the female to conceive to loss of the litter for a variety of causes.

During the forty-year period from 1914, when the trapping of wild chinchillas in South America was prohibited, to 1954, when the first sale of ranch-raised pelts was held, this fur was completely off the market. As a result, when chinchilla again became available members of the fur industry knew very little about it, details of the dressing and manufacture of the pelts had to be re-learned and the fur had to be promoted anew at the retail level. Today a firm market exists for chinchilla and the business appears well on its way toward securing a place in the world fur industry.

Fur Marketing.-The bulk of Canada's fur production is sold by public auction through eight fur auction houses located in Montreal, North Bay, Winnipeg, Regina, Edmonton and Vancouver. Most of the ranched mink pelts are shipped directly from farm to auction house where they are sold for the account of the producer, the auction house charging a commission for its services based on a percentage of the selling price. In the case of wildlife pelts, a small percentage of the total catch goes direct from trapper to auction house but most of these furs pass initially from the trapper to the local fur buyer who may ship his collection to one of the selling outlets or may sell it outright to a travelling fur buyer who will add the furs to his larger collection before shipping.

The selling season commences in December with large offerings of ranched mink pelts, and later in the same month initial quantities of the new season's wild furs become available. Trapping in the northern regions gets under way around the same time as the pelting of ranched mink but, because of the slower process involved in shipping furs from isolated areas, major quantities of wildlife pelts are not generally available until January. In this and succeeding months, offerings of ranched mink continue, along with quantities of the world-famed Canadian wild mink, beaver and other varieties.

At the auctions, furs are purchased through competitive bidding by buyers who may be purchasing for their own accounts or who may represent firms in any part of the world. Canadian furs are traditionally sold in the raw or unprocessed state, facilitating entry into the many countries that maintain tariffs on imports of processed furs. In order to ensure that the auctions will be successful, it is important to obtain maximum possible purchasing power at these events, in the form of a substantial number of buyers. Mink are now being produced in many countries, the crops reaching the various markets practically simultaneously. Therefore, competition for the buyers' favour is keen and mink breeder associations in all the important producing countries are studying the problem of how to increase buyer attendance at their auctions. In this connection, Canadian fur auction houses are co-operating with each other in the scheduling of their sales, with a view to making it convenient for visiting buyers to take in two or more successive auctions while they are in this country. Also, Canada Mink Breeders' Association is encouraging its members to adopt uniform pelting methods with the object of producing large numbers of pelts having a similar appearance, rather than the mixed offering that formerly resulted from the use of a variety of pelt-handling methods. At the auction level these uniformly handled pelts facilitate rapid inspection by buyers who might otherwise pass up an auction entirely, due to lack of time to inspect all the offerings being made at the height of the season.

## Section 2.-Provincial and Territorial Fur Resource Management

Most of the fur resources of the provinces of Canada are under the administration of the respective provincial governments. Exceptions include those resources within the boundaries of the National Parks and the Indian reserves, and the fur resources of the Yukon and Northwest Territories, all of which are under the administration of the Federal Government. The Canadian Wildlife Service of the Department of Northern Affairs and National Resources is responsible for all Federal Government interests in wildlife resources except for those related to Indian affairs, which are administered by the Indian Affairs Branch of the Department of Citizenship and Immigration. The Canadian Wildlife Service co-operates with provincial governments and other agencies concerned and handles federal interests in relevant national and international problems (see pp. 37-39). Provincial fur resource management practices are discussed in the following paragraphs.

Newfoundland.-One of the most important steps taken recently by the Wildlife Division of the Newfoundland Department of Mines, Agriculture and Resources in fur resource management was the setting up of experimental beaver traplines on the Avalon and Burin Peninsulas. It is intended that, using the beaver as a basis, the trapline system be expanded to cover the entire province and eventually all fur bearers. In the 1930's and 1940's beaver were transplanted from areas of high density to areas where there were few or no beaver and these transplants have resulted in fairly good beaver populations throughout most of the Island. The trapper is required to locate a minimum of five active beaver lodges before applying for permission to trap. His finds must be confirmed by a Wildlife Officer and he must trap according to regulations and agree to provide required information and certain organs for research purposes. This system, which has been quite successful in the two seasons it has been in operation, should eventually produce a relatively small number of trappers who will, in effect, be beaver managers, since the maintenance of a trapline will depend on the individual's care and attention to good management practices. Management of marten is also in prospect. Generally, Newfoundland trapping regulations provide limited open seasons for most species. On the Island these include beaver, mink, muskrat and otter, and in Labrador they include beaver, mink, marten, muskrat, otter, fisher and Arctic fox. Trapping of other foxes, lynx and weasel is permitted throughout the year in the whole province and wolves and wolverines may be trapped throughout the year in Labrador.

It is interesting to note that the mink population on the Island has developed from fur farm escapes and is therefore concentrated in the fur farm areas of Avalon Peninsula, Springdale and Corner Brook. The first mink trapping season was declared in 1958.

Nova Scotia.-Nova Scotia's wild fur bearers include beaver, muskrat, mink, otter, fox, raccoon and weasel and the trapping of these animals provides supplementary income for several thousand persons who harvest from $\$ 100,000$ to $\$ 1,000,000$ worth of wild furs each year. The value, of course, depends on the numbers of each fur species available and on fur prices, both being subject to marked variations from year to year.

The beaver, once almost extinct in the province, is now the most valuable fur bearer taken. A $\$ 2$ licence is required by residents to trap a limited number of beavers (five to seven) during the approximately six-week season beginning Nov. 1. No licence is required to trap other fur bearers, although a royalty must be paid to the province for each pelt exported. These animals may be taken between Nov. 1 and Dec. 14.

Beaver research is at present being carried on in Nova Scotia to increase knowledge of this valuable animal as a preparation for better management of its populations. $\mathrm{Be}-$ haviour, feeding, movement and reproduction studies are being conducted near the Tobeatic Sanctuary in western Nova Scotia, in Cumberland County in the eastern part of the province and in an enclosed area in Queens County. In addition, data as to size, age, etc., are collected from beaver carcasses taken by trappers in all parts of the province.

Several trappers' associations have been started throughout the province so that the men closest to the fur resources may have some say in their wise use and management.

These groups can also assist in ensuring proper handling and marketing of the raw furs and in up-grading quality, thus commanding good market prices.

New Brunswick.-A fur management program is just being started in New Brunswick. The first fur bearer to be investigated is the muskrat and the study area is on the St. John River in the Fredericton-Gagetown area, one of the best muskrat areas in the province. For many years the open season on muskrat has been held in the spring. Also, the beaver will soon be receiving more attention. For about 20 years, trapping of this animal was not permitted and the first open season was declared in 1946. As a result, the beaver has made a remarkable recovery and there has been an open season each year since 1951, the annual take averaging about 7,500 pelts. It is now thought that, if heavier trapping is not done, there will soon be cause for concern over beaver damage to farms and woodlots, highways and railways.

There are closed seasons on fisher and marten. These animals are found mainly in the northern part of the province but as their numbers appear to be increasing they are gradually working their way farther south. A zoned trapping season is being considered on these two animals in 1965. Mink and otter are not prevalent in the province but in the two-month fall trapping season the catches average about 1,700 and 240 , respectively. In 1962-63 about 2,500 trapping licences were issued.

Recent provincial legislation will enable quick changes to be made in trapping seasons; thus, the autumn benefit of available fur may be utilized by the trapper or a closed season established on any fur bearer showing signs of serious depletion in numbers. A summary of trapping laws, which includes information as to how the different pelts should be handled to receive the best price, is available from the Fish and Wildlife Branch of the Department of Lands and Mines.

Quebec.-The fur trade has been of considerable importance in Quebec since the beginning of New France and the province has remained in the forefront of fur producers. The principal native species, in order of importance, are beaver, mink, muskrat, hair-seal, otter, lynx and marten.

Management of wild fur bearers began in 1932 with the establishment by an official of the Hudson's Bay Company of a privately leased reserve at Rupert House. The administration of this reserve passed to the Hudson's Bay Company and a second concession, at Nottoway, was granted to the Company in 1938. Strict conservation practices were enforced in these two reserves with such success that the provincial government took over their management and have since added steadily to the area of Crown lands set aside for Indian trappers. At present, 12 reserves are under conservation: Rupert House, 7,500 sq. miles (1932); Nottoway, 11,300 sq. miles (1938); Vieux Comptoir, 30,000 sq. miles (1941); Peribonca, 12,600 sq. miles (1941); Fort George, 17,700 sq. miles (1942); Abitibi, 6,000 sq. miles (1943); Great Victoria Lake, 6,300 sq. miles (1948); Mistassini, $50,000 \mathrm{sq}$. miles (1948); Manouane, 5,000 sq. miles (1951); Roberval, 20,000 sq. miles (1951); Bersimis, 21,000 sq. miles (1951); and Saguenay, 140,000 sq. miles (1955). The value of beaver pelts alone taken from these reserves in 1963 was $\$ 367,000$.

In 1945, a separate system of registered lands for white trappers was set up in the areas of Abitibi-Est, Abitibi-Ouest, Rouyn-Noranda, Témiscamingue, Pontiac and part of Saguenay County. Each leaseholder is granted exclusive trapping rights on his assigned land and each is subject to strict regulation. The trapping of fur bearers, other than beaver, is not restricted on either the reserves or the registered lands except for a general regulation concerning the protection of animals and the fixing of catch limits. Recently, biological research has been undertaken to assess the results of this system.

In 1963, the value of the catch of wild furs in Quebec amounted to approximately $\$ 2,500,000-\mathrm{a}$ fraction of the value of the finished product.

Ontario.-Legislation for the management of wild fur bearers had its beginning in Ontario with the setting of seasons in 1860 by an Act of Upper Canada. However, 32
years passed before there was any field staff to enforce the regulations and then began an era of restrictive legislation to protect species threatened by the earlier exploitation. Progress beyond the restrictive enforcement of open and closed seasons has come about only in the past 20 or 30 years. The first steps in this direction involved the setting aside of special Indian hunting areas in which white men were not allowed to trap.

The registered trapline system was introduced in 1935 on a very small scale. This system is based on government recognition of an individual's rights to trap a certain area. In its early stages, surveyed townships were assigned as trapline areas but more explicit trapline boundaries, established in 1947-48, now cover the province and mostly follow natural physiographical features. At the same time, resident traplines were established in areas of patented land, which means most of southern Ontario; these are blocks of land on which trappers are licensed to trap, providing they make their own written agreements with the landowners. Trapline licences are renewable annually as long as the trapper meets the conditions of the regulations and continues to trap. Trappers may sell the equipment and improvements they have made on their lines and so have a vested interest in their traplines.

In full realization that fur is a natural resource that cannot in nature be stockpiled, and is harvested on a commercial basis only, the Ontario Department of Lands and Forests has assisted the Ontario Trappers' Association to establish their fur auction at North Bay. This allows the trappers to sell furs on a competitive market and realize their full value.

Much valuable research has been carried out on fur bearers, with present emphasis on beaver and otter. Transplantings have been successfully carried out to speed the recovery of reduced populations, particularly with beaver. A new aging technique was perfected for beaver in 1964 and an aerial beaver survey technique was developed recently.

Manitoba.-Trading in furs is Manitoba's oldest industry and the province produces some of the finest pelts on the world markets. The annual value of production varies widely, depending both on the cyclic abundance of fur bearing animals and on world prices for the pelts produced.

As the northern portion of Manitoba became more accessible following construction of the Hudson Bay Railway to Churchill, competition for fur and for trapping grounds became so severe that the fur resources were sadly depleted. In 1940, Manitoba started a program of trapline registration. The program provided security of tenure to individuals or community groups of trappers, weeded out the part-time trappers and changed harvesting of wild fur from fur mining to wild fur farming. At that time beaver were a rarity and a series of closed seasons had been declared. Since then, beaver have increased steadily and 46,361 pelts were harvested in the 1962-63 season. Within the past decade new records in the production of muskrat, beaver, mink, lynx, fisher and otter have been set for this century.

The wild fur industry is still of economic importance in the province, and particularly so for northern residents, both white and native. A program of trapper education, inaugurated in 1957 and designed to improve the general handling of furs by trappers and at the same time achieve a certain measure of standardization in pelt care, has shown gratifying results. It has been expanded to include improved trapping methods and the use of humane trap sets; a booklet, The Trapper's Guide, is available from the Wildlife Branch of the Department of Mines and Natural Resources.

Manitoba has been working in close co-operation with federal and other provincial agencies in the promotion of quality furs by contributing a collection of representative wild furs for exhibit at the more important European fairs.

Saskatchewan.-Before the introduction of Saskatchewan's fur conservation and development program, little was done to control the trapping of beaver and muskrat. During open seasons, trappers took every pelt available and then the season had to be closed the following year in hope of natural population build-up. This "feast and famine" policy had a disastrous effect on both the fur resources and the livelihood of trappers.

Few trappers had exclusive rights to specific areas and most of them were unable to establish permanent homes in communities. Poaching was common practice and there was little economic security. Beaver began declining steadily after World War I and this affected the habitat for other fur bearers as well.

In 1944, the Saskatchewan Government set up a committee to study trapping problems and the following year the South Saskatchewan Muskrat Trapping Program was instituted. Under this plan, individuals received exclusive rights to trap on definite land locations. Owners and occupants received first consideration, with special priority given to Indians and metis on Crown lands. Muskrat quotas were established to assure continuing populations, and marketing of pelts under government supervision was instituted.

In 1946, under federal-provincial agreement, all Crown lands north of the 53rd parallel were set up as the Northern Fur Conservation Block. Up to $\$ 50,000$ was to be expended over the following ten years to establish and administer conservation areas, purchase equipment, pay salaries of personnel, transplant live beaver and build dams; the Federal Government agreed to assume 60 p.c. of the cost and the province the remainder. A Fur Advisory Committee, with representation from the provincial Department of Natural Resources and the federal Indian Affairs Branch was set up to supervise the program. Organization of conservation areas was left to the trappers. Five-man councils were elected in all districts, with Indian, metis and white trappers sharing privileges, obligations and responsibilities on an equal basis. Conservation measures and licensing regulations were initiated. In 1962, a co-ordinating body was set up by the Fur Advisory Committee to promote better communications and understanding of the fur program.

Under the present fur program, security of trappers has been strengthened; fur bearer populations have increased; quotas have put trapping on a sustained-yield basis; poaching has been largely eliminated; higher water levels resulting from comeback of beaver have improved the habitat for other wildlife; and Indian and white trappers are sharing alike in the self-government of trapping areas and in fur management policies and programs.

Alberta.-Meetings under the auspices of the Fish and Wildlife Division of the provincial Department of Lands and Forests have been held with trappers to advise them of new and improved methods of trapping and to help alleviate problems in trapping that arise from time to time. Studies are being made by the biological staff of the Division regarding fur bearing animals, their habits and their habitat, and knowledge gained from these studies is passed on to the trapper. Pamphlets are distributed to trappers showing how and where to set traps, how to pelt the different fur bearing animals, and regulations in force. The Alberta Government has submitted pelts to the main fur exhibits in Canada and Europe, a policy that has increased the interest of foreign buyers in Alberta furs.

Several legislative measures have been taken in the past few years. The spring beaver season has been shortened, as a result of which Alberta has been marketing a higher grade pelt. Investigations have shown that beaver pelts coming on prime bring a higher price than pelts going off prime and the main reason for this legislation was to persuade trappers to trap beaver in winter when pelts are at their best. The season on otter was closed three years ago but there has been no significant change in their population. The prohibiting of mismanagement of registered trapping areas by holders, although introduced only in 1963, has already had the effect of greatly increasing activity in trapping-areas have been taken away from persons holding them for investment and given to persons willing and able to trap, and borderline trappers have been forced to put more effort into trapping. It should be stated that the present price of pelts has made it easier to make this legislation effective.

British Columbia.-The British Columbia wild fur resource is administered by the Fish and Game Branch of the Department of Recreation and Conservation. Regulations are derived under authority of the Game Act and resource use is controlled under the registered trapline system, in effect since 1926. Registered traplines are areas of Crown land allotted, for purpose of trapping wild fur, to trappers who are resident in the province.

Registration of a specific trapline is renewable on an annual basis by the trapper, subject to certain requirements of tenure aimed at conservation and sustained yield of fur species. Approximately 5,000 trappers are involved in provincial wild fur production, of whom one third are Indians.

The market value of wild fur produced during the fur harvest of 1962-63 was $\$ 1,024,878$, beaver comprising 38 p.c., lynx 18 p.c. and wild mink 14 p.c. Pelts of muskrat, otter, marten, fisher, squirrel and weasel made up the remainder. The 1962-63 beaver harvest was the highest since 1923 , numbering 26,529 pelts.

Recent legislative measures entail a general shortening of the annual trapping season to restrict the harvesting of unseasonable pelts and administrative emphasis being placed on the desirability of increasing the market value of the resource through improved pelt quality. Administrative interest in the fur resource currently includes membership in the Canadian Fur Council and the submission of an exhibit of selected wild British Columbia furs in the International Fur Fair at Frankfurt, Germany.

## Section 3.-Fur Statistics

## Subsection 1.-Fur Production and Trade*

Total Fur Production.-Early records of raw fur production were confined to the decennial censuses when account was taken of the number and value of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of raw fur production. For a number of years the statistics were based on information supplied by the licensed fur trappers. More recently, annual statements based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are used in the preparation of the statistics issued annually by the Bureau. Figures for Prince Edward Island are based on returns supplied to the Dominion Bureau of Statistics by fur dealers in that province.

## 1.-Pelts of Fur Bearing Animals Produced and Percentage Sold from Fur Farms, Years Ended June 30, 1944-63

| $\begin{aligned} & \text { Year Ended } \\ & \text { June 30- } \end{aligned}$ | Pelts |  | Percentage of Value Sold from Farms | $\begin{aligned} & \text { Year Ended } \\ & \text { June } 30- \end{aligned}$ | Pelts |  | Percentage <br> of Value Fur Farms |

${ }^{1}$ Totals include a few pelts and their values not allocated to a province or territory.
Wild Fur Production.-The principal kinds of wild fur pelts taken, according to their value in 1962-63, were beaver, mink, muskrat, lynx, squirrel, otter, rabbit, marten, white fox, other fox, ermine, fisher and raccoon. These 12 kinds of pelts accounted for 99.1 p.c. of the total value of wild pelts produced.

[^181]Fur Farm Production.-The number of fur farms in operation in Canada continues to decline, 2,083 reporting in 1962 compared with 2,161 in 1961. However, the value of pelts produced on fur farms was higher in 1962 than in the previous year. There were 39,369 more animals on 78 fewer farms and the number of pelts taken during the year increased from $1,288,157$ to $1,325,667$. Mink accounted for 99.1 p.c. of the value of fur farm production and fur farm production accounted for 62 p.c. of total production.

${ }^{1}$ Includes some pelts not valued by province.
In 1962, the 1,503 farms raising mink reported having 557,046 animals; 468 farms raising chinchilla had 35,630 animals; 115 raising nutria had 5,856 animals; and 53 farms raising fox had 883 animals. Only farms raising chinchilla increased in number over 1961 but the number of mink on farms increased by 36,861 , the number of chinchilla by 2,600 and the number of nutria by 315 . Fox decreased by 395.

[^182]Exports and Imports.-The Canadian fur trade, both export and import, is mostly in undressed furs, the value of dressed and manufactured furs going out of or coming into Canada being a comparatively small proportion of the total. Canadian fur exports consist largely of those produced in greatest abundance, mink being by far the most valuable followed by beaver, muskrat, lynx, fox and squirrel. Mink, Persian lamb, raccoon and fox make up the major portion of the imports. Exports and imports of furs, undressed, dressed and manufactured, from and to Britain, the United States and all countries, are given for the years 1962 and 1963 in Table 6.

## Subsection 2.-The Fur Processing Industry

The rather general term "fur processing" includes the fur dressing and dyeing industry and the fur goods industry. The former is concerned with the dressing or dyeing of pelts on a custom basis and the latter is a manufacturing industry that makes up fur goods such as coats, scarves and gloves.

In the 1962 survey, as fully explained in Chapter XVI on Manufactures, a change was made in the "total activity" approach and this new concept was also reflected in the 1961 data. Tables 7 and 8 give selected statistics on the new basis for 1961 and 1962. In 1962, the number of skins treated was $6,229,747$, of which muskrat comprised 34 p.c., $\operatorname{mink} 20$ p.c., Persian and other types of lamb 14 p.c., raccoon 5 p.c., and squirrel 4 p.c.
7.-Principal Statistics of the Fur Dressing and Dyeing Industry, 1961 and 1962

## Section 1.-Recent Revisions in Classification and Concept of the Census of Manufactures

With the publication of the results of the 1962 Census of Manufactures, DBS has completed a major revision in classification and concept of its annual census of manufacturing establishments. Because of its size and complexity, this project had to be carried out in three stages. The first stage was the change in industrial classification, and the results of the 1960 Census, together with the re-compilation of the 1957, 1958 and 1959 Censuses, were published in Chapter XIV of the 1963-64 Year Book on the basis of the revised standard industrial classification. This part of the project was confined entirely to a re-coding of existing reporting units. The second stage consisted of the implementation of the new definition of the reporting unit, i.e., "establishment", as it applied to manufacturing activities of manufacturing establishments. Results of the 1961 Census reflected this change in concept and, in order to provide comparability of data for recent years, Table 1, pp. 658-659, contains principal statistics on the basis of the revised standard industrial classification and the new establishment definition for years back to 1957.

The third stage, the extension of the definition of the establishment to cover total activities of manufacturing establishments, is reflected in the statistics for 1961 and 1962 contained in Tables 2, 7, 8 and 9. This full implementation of the new definition of the establishment has resulted in an extension of the data to non-manufacturing activities of manufacturing establishments and in additional changes in the 1961 statistics of manufacturing activities. Statistics on manufacturing activities will continue to be shown separately in certain tables as in the past but, beginning with 1961, data on all operations (total activity) of manufacturing establishments will also be given. By definition, "total activity" relates to all operational data and excludes such non-operational items as rent, interest and dividends. In addition, statistics on man-hours paid will be included as part of the regular series of industry statistics. For many industries, adjustments and revisions were made to the 1961 data on manufacturing activities which were published during the second stage to bring them in line with reporting procedures followed in the 1962 Census
and to reflect the final application of the new concept. The 1961 statistics on manufacturing activities contained in Table 1 are thus not entirely comparable with those contained in Tables 2, 7 and 8. However, the 1961 statistics are shown in both their original and revised forms in order to provide a link with the immediate past.

A more complete account of recent changes and additions and brief descriptions of the principal industry statistics are given in the "Explanatory Notes" section in each of the more than 140 individual industry annual reports and various general and provincial reviews of manufacturing for 1962 published by the Industry Division, DBS.

## Section 2.-Growth of Manufacturing

## Subsection 1.-The Manufacturing Situation in 1962

Stimulated by continuing high levels of export and domestic demand, including a 6.6 p.c. increase in capital and repair expenditures, virtually all phases of Canadian manufacturing established new records in 1962; the index of the total volume of manufactured production increased by 7.8 p.c. and many of the current dollar measures of output by approximately 10 p.c. over 1961. Although the 1962 Census of Manufactures figures used in this Subsection are subject to revision, it is not anticipated that the changes will be important, particularly at the industrial group and provincial levels. Data on some individual industries, however, were not considered to be sufficiently final at time of publication and have been omitted from this edition of the Year Book. They may be obtained from DBS publication Manufacturing Industries of Canada-Summary for Canada (Catalogue No. 31-203) or from the more than 140 individual industry reports for 1962 to be published progressively by the Industry Division, as data become available.

As has been indicated in Section 1, 1962 is the first year for which data on both manufacturing and total activity have been published for the Canadian manufacturing industry. In order to provide comparisons with 1961, the data for that year have been re-compiled and are shown in Tables 2, 7 and 8. As far as manufacturing activity is concerned, all items included in the tables are conceptually identical with previous years, although this is the first time that data on "man-hours paid" have been included.

In the manufacturing activity sector, new records were established in 1962 for all five major dollar measures: wages, $\$ 3,880,000,000$ (up 8.2 p.c. over 1961); cost of fuel and electricity, $\$ 557,000,000$ (up 7.7 p.c.); cost of materials and supplies used, $\$ 14,691,000,000$ (up 11.2 p.c.); value of shipments of own manufacture, $\$ 26,895,000,000$ (up 10.2 p.c.); and value added by manufacture, $\$ 11,816,000,000$ (up 9.8 p.c.). The number of establishments, at 33,440 , was only marginally greater than the 1961 total of 33,355 but the number of production workers, at 985,369 , represented an increase of 3.5 p.c. over the 1961 total of 951,835.

On the basis of the value of factory shipments, nine industrial groups each accounted for more than $\$ 1,000,000,000$ of the total of $\$ 26,895,000,000$. The food and beverage industries, with total shipments of $\$ 5,439,000,000$, accounted for 20.2 p.c. of the total, followed by the primary metal industries with $\$ 2,991,000,000$ ( 11.1 p.c.); the transportation equipment industries, $\$ 2,455,000,000$ ( 9.1 p.c.); the paper and allied industries, $\$ 2,334,000,000$ ( 8.7 p.c.); and the metal fabricating industries, $\$ 1,724,000,000$ ( 6.4 p.c.). These were also the leading five industrial groups in their contribution to "value added", although the relative positions of the transportation equipment industries and paper and allied industries were interchanged in the latter category. Contributions of these five groups to the total "value added" figure of $\$ 11,816,000,000$, with proportions of the total in parentheses, are as follows: food and beverage industries, $\$ 1,852,000,000$ ( 15.7 p.c.); primary metal industries, $\$ 1,224,000,000$ ( 10.4 p.c.); paper and allied industries, $\$ 1,131,000,000$ ( 9.6 p.c.); transportation equipment industries, $\$ 993,000,000$ ( 8.4 p.c.); and metal fabricating industries, $\$ 855,000,000$ (7.2 p.c.).

Regionally, Ontario continued to dominate the Canadian manufacturing scene in 1962 with its value of factory shipments of $\$ 13,340,000,000$ accounting for 49.6 p.c. of the total and representing an increase of 10.9 p.c. over its 1961 shipments. Quebec's shipments of $\$ 8,017,000,000$ represented 29.8 p.c. of the total and were up by 8.9 p.c. over the 1961 total. The Prairie Provinces, with shipments of $\$ 2,276,000,000$, accounted for 8.5 p.c.; British Columbia's $\$ 2,243,000,000$ for 8.3 p.c.; and the Atlantic Provinces' $\$ 1,016,000,000$ for 3.8 p.c. of the total. On an individual province basis, the largest proportional increases over 1961 shipments were registered by Prince Edward Island, 14.5 p.c.; Nova Scotia, 14.1 p.c.; British Columbia, 13.1 p.c.; Manitoba, 11.4 p.c.; and Ontario, 10.9 p.c. The smallest rates of increase were realized in New Brunswick, with 2.1 p.c.; the Yukon and Northwest Territories, 4.4 p.c.; and Newfoundland, 5.3 p.c.

The over-all increase of 3.5 p.c. in numbers of production workers obscures some rather marked regional changes, although all provinces except Newfoundland, which had a 1.6-p.c. decrease, shared in the increase. Two of the highest proportional increases occurred in the Atlantic Provinces-Nova Scotia registering a 9.2-p.c. increase and Prince Edward Island an 8.0-p.c. increase. Ontario, which employed 46.3 p.c. of all production workers in 1962, had an increase of 5.2 p.c., and the remaining provincial increases were each less than 4.0 p.c.

The increases of 3.5 p.c. in number of production workers and 4.9 p.c. in number of man-hours paid were accompanied by a 7.8-p.c. increase in the index of the total volume of manufactured production, indicating a continuation of the trend toward increased productivity for workers in manufacturing. The index of the total volume of manufactured production reached a record level of $164.9(1949=100)$, with the two major sectors-durable manufactures at 165.0 and non-durable manufactures at 164.8 -registering gains of 11.2 p.c. and 5.0 p.c., respectively, over 1961 (see Table 3). It should be noted that, as component groups of each of these major sectors are still based on the 1948 standard industrial classification rather than the 1960 version as are the statistics from the annual Census of Manufactures, direct comparisons are not possible between all components of the index and the current industrial groups.

The increase of 11.2 p.c. in the durable sector, the largest since 1955, was composed of rather widely varying increases of individual groups, ranging from 0.9 p.c. for non-ferrous metal products to 20.7 p.c. for transportation equipment. Electrical apparatus and supplies recorded the second highest increase, 16.6 p.c., and the three remaining groups-nonmetallic mineral products, iron and steel products, and wood products-showed approximately the same increases over 1961 at $9.4,9.1$ and 8.5 p.c., respectively. All eleven groups in the non-durable sector registered increases in 1962, ranging from 2.3 p.c. for leather products to 15.0 p.c. for rubber products. The second and third largest increases were recorded by the miscellaneous industries with 11.4 p.c., and textile products (except clothing) with 8.9 p.c. Three groups-tobacco and tobacco products, products of petroleum and coal, and chemicals and allied products-had increases ranging from 5.0 p.c. to 5.4 p.c. and the remaining four were between 2.4 p.c. and 3.9 p.c.

As indicated in Section 1, statistics on total activity of the manufacturing industry are now being collected and published. Although much of these data represent a net addition to previously published data on manufacturing activity, it should be noted that statistics on working owners and partners, formerly included with administrative and office workers, are now being shown under "total activity". In 1962 the number of working owners and partners, at 17,220 , was 1.4 p.c. higher than in 1961 and their withdrawals, at $\$ 60,743,000$, were 4.8 p.c. higher. Total employees, i.e., those engaged in both non-manufacturing and manufacturing activities, numbered $1,404,566$, an increase of 2.7 p.c. over 1961 , and total salaries and wages were $\$ 6,158,000,000$, an increase of 6.8 p.c. Total value added by all activities of the manufacturing industries was $\$ 12,392,000,000$, an amount 10.2 p.e. higher than the 1961 total of $\$ 11,246,000,000$.

## Subsection 2.-Historical and Current Statistics of Manufacturing

Statistics on manufacturing in Canada have been collected since 1870, originally in connection with the decennial or quinquennial censuses for the period 1870 to 1915 and, since 1917, through the annual Census of Manufactures. Although every effort has been made to maintain comparability in the statistics since 1917, as shown in Table 1, changes in coverage of industries, type of data collected and the method of its treatment have inevitably introduced discontinuities or lack of comparability in certain components. One such major change in concept occurred in 1952 when the gross value of products was replaced by the value of factory shipments. More recently, as explained in Section 1, the introduction of the revised standard industrial classification in 1960 and the new establishment concept in 1961 led to a break in continuity with previous years. An indication of the effects of these revisions in classification and concept is given in Table 1 where statistics for the 1957-59 period are given on both the 1948 standard industrial classification and manufacturing activity concept and the revised (1960) standard industrial classification and new establishment concept. Under the latter concept, a manufacturing establishment (i.e., one whose major activity is manufacturing) is the smallest reporting unit capable of reporting all of the following: materials and supplies used, goods purchased for resale as such, fuel and power consumed, number of employees and their pay, inventories, and shipments or sales.

The introduction of the total activity concept in 1962 and its application to 1961 data has produced a considerable amount of data on non-manufacturing activities of manufacturing industries and has resulted in the transfer of statistics on some items, such as office and administrative workers and working owners and partners, from manufacturing to total activity. Table 2 sets out summary statistics for manufacturing activity and total activity for 1961 and 1962. It should be noted that the 1961 data in Table 2 are not directly comparable with those in Table 1 and that 1962 data were preliminary at the time of publication.

## 1.-Summary Statistics of Manufactures, 1917-61

#### Abstract

Note.-Figures for alternate years from 1918 to 1940 are given in the 1962 Year Book, p. 616. Statistics of manufacturing from 1870 have been published but between that year and 1917 figures are not on a basis comparable to the series given below; statistics for significant years appear in the 1943-44 Year Book, p. 363. Figures of the non-ferrous metal smelting industries were first included with manufactures in 1925.

| Year | Estab-lishments | Employees | Salaries and Wages | Cost at Plant of Materials Used | Value Added by Manufacture ${ }^{1}$ | Gross <br> Value of <br> Products ${ }^{2}$ |

#### Abstract

${ }^{1}$ For 1924-51, inclusive, the value added by manufacture is computed by subtracting cost of fuel, electricity and materials from gross value of products; for 1952 and 1953 the deduction is made from value of factory shipments and for 1954 and subsequent years from the calculated value of production. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available. selling value of factory shipments; see text on p. 658. ${ }^{2}$ In 1952 gross value of products was replaced by ${ }^{3}$ A change in the method of computing the number of employees in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. . Newfoundland is included from 1949 but figures for the fish processing industry for 1949 and 1950 are not available for that province and are not included. ${ }^{5}$ See text on p. 655 .

## 2.-Summary Statistics of Manufactures, 1961 and 1962

Nore.-Based on the revised standard industrial classification and new establishment and total activity concepta (see p. 655). Figures in this table include poultry processors, book publishers, electroplating establishments, dental laboratories, and prescription branches in the ophthalmic goods manufactures industry, not included in Table 1.

| Year | Manufacturing Activity ${ }^{1}$ |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1962P... | 33,440 | 985,369 | 2,094,400 | 3,879,668 | 557,018 | 14,691,175 | 26,895,363 | 11, 815,580 |

For footnotes, see end of table, p. 660.

## 2.-Summary Statistics of Manufactures, 1961 and 1962-concluded

| Year | Total Activity |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Estab-lishments | Working Owners and Partners ${ }^{3}$ |  | Total Employees ${ }^{4}$ |  | Total Cost of Materials and <br> Supplies ${ }^{5}$ Used and Goods Purchased for Re-sale | Total Operational Revenue ${ }^{6}$ | Total Value Added ${ }^{7}$ |
|  |  | Number | Withdrawals | Number | Salaries and <br> Wages |  |  |  |
|  | No. |  | \$'000 |  | \$'000 | \$'000 | 8 '000 | \$'000 |
| 1961... | 33,355 | 16,981 | 57,960 60,743 | 1,368,225 | 5,765,696 | 15, 132,081 | 26,777,693 | 11,245,982 |
| 1962 ${ }^{\text {P }}$.... | 33,440 | 17,220 | 60,743 | 1,404,566 | 6,157,881 | 16,724,514 | 29,488, 028 | 12,392,426 |

${ }^{1}$ Conceptually identical to previous years. $\quad{ }^{2}$ Cannot be reported separately for manufacturing and nonmanufacturing activities but related substantially to manufacturing activity. ${ }^{3}$ Included with administrative and office employees in the Manufacturing series published in previous years. ${ }^{\text {4 }}$ Includes production and related workers, administrative and office employees, sales, distribution and other employees; excludes working owners and partners. facturing activity. for re-sale and othe
${ }^{5}$ Includes fuel and electricity and supplies used in both manufacturing and non-manuother operational revenue. ${ }^{7}$ Value of total operational revenue less total cost of materials, supplies, fuel and electricity used and goods purchased for re-sale; all adjusted for inventory changes where required.

## Value and Volume of Manufactured Production

In assessing the growth of manufacturing in real terms, it is necessary to adjust the current dollar values of factory shipments for changes in price levels. Although there is currently no composite price index designed to measure these variations for manufacturing as a whole, selling prices for 102 individual industries are available.* The fundamental distinction between industry selling price indexes and wholesale price indexes is that the former are compiled on the basis of the 1948 standard industrial classification and the latter are classified by commodity on a chief component material basis. It has been found, however, that in the period for which the industry selling price indexes have been published ( 1956 to date) there has been a very close relationship between the movements of the two series of indexes. For practical purposes, this means that, for individual industries since 1956, industry selling price indexes will provide the most appropriate measure of price variations; for manufacturing as a whole, particularly for the period prior to 1956 for which there are no industry selling price indexes, either the general wholesale price index or the price index of fully and chiefly manufactured products will provide an approximate indication of the movement of prices of manufactured goods, as these latter indexes are composed mainly of manufacturers' prices. Indexes for selected years since 1917, on the base period $1935-39=100$, are as follows:-

| Year | General Wholesale Price Index | Price Index of Fully and Chiefly <br> Manufactured Products | Year | General Wholesale Price Index | Price Index <br> of Fully and Chiefly <br> Manufactured <br> Products |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1917. | 148.9 | 150.9 | 1949. | 198.3 | 199.2 |
| 1920. | 203.2 | 208.2 | 1953. | 220.7 | 228.8 |
| 1929. | 124.6 | 123.7 | 1957. | 227.4 | 237.9 |
| 1933. | 87.4 | 93.3 | 1959. | 230.6 | 241.6 |
| 1939. | 99.2 | 101.9 | 1960. | 230.9 | 242.2 |
| 1944. | 130.6 | 129.1 | 1961. | 233.3 | 244.5 |
| 1946.. | 138.9 | 138.0 | 1962. | 240.0 | 249.0 |

A more direct measure of the growth of manufacturing in physical terms is available in the index of the volume of industrial production $\dagger$ which, like the index of industry selling prices, is based on the 1948 standard industrial classification. The index covers three

[^183]industries-mining, manufacturing, and electric power and gas utilities. Manufacturing has a 1949 base period industry weight of 84.8 p.c. of which durable manufactures account for 39.1 p.c. and non-durable manufactures 45.7 p.c.

Table 3 shows the fluctuations in the volume indexes of durable, non-durable and total manufactured goods produced during the years 1953-62, and Tables 4 and 5 show the fluctuations in the groups comprised within the durable and non-durable classifications during the same period.

## 3.-Indexes of the Total Volume of Manufactured Production classified on the Basis of Durable and Non-durable Goods, 1953-62 <br> $(1949=100)$

Nore.-Indexes for the years 1935-45 are given in the 1961 Year Book, p. 637, and for 1946-52 in the 1963-64 edition, p. 649.

| Year | Durable Manufactures |  | $\xrightarrow[\text { Manu- }]{\text { All }}$ factures | Year | Durable Manufactures |  | Manu- factures |

## Capital and Repair Expenditures

Capital expenditures for new construction, machinery and equipment by the Canadian manufacturing industries in 1962 amounted to $\$ 1,269,600,000$, the third highest on record and exceeding the $\$ 1,000,000,000$ level for the seventh consecutive year. In addition to capital expenditures of $\$ 353,200,000$ on construction and $\$ 916,400,000$ on new machinery and equipment, a record $\$ 750,100,000$ was expended on repairs. The combined expenditures of $\$ 2,019,700,000$ on capital and repair expenditures was second only to the record $\$ 2,092,800,000$ spent in 1957. Of the total capital expenditures in 1962, 17.1 p.c. was reported by the primary metal industries, 13.7 p.c. by the paper and allied industries and 13.3 p.c. by the food and beverage industries. These three groups also spent the largest amounts for repairs, the proportions being $22.7,15.8$ and 11.0 p.c., respectively.
6.-Capital and Repair Expenditures by the Manufacturing Industries, 1953-62, and by Province and Industrial Group, 1962

| Year and Province | Capital Expenditure |  |  | Repair Expenditure |  |  |

## Section 3.-Provincial and Local Distribution of Manufacturing Industries

## Subsection 1.-Provincial Distribution of Manufacturing Production

The tables of this Subsection, containing summary statistics of manufactures by province and industrial group, indicate the predominance of Ontario and Quebec both in over-all manufacturing activity and, with the single exception of the wood industries, in industrial groups. Ontario's factory shipments of $\$ 13,339,600,000$ and Quebec's $\$ 8,017,200,000$ together accounted for 79.4 p.c. of the Canadian total in 1962.

Quebec had the greatest provincial shipments in five groups-tobacco products industries, textile industries, knitting mills, clothing industries and paper and allied industries. In each of the first four groups, Quebec's shipments accounted for over half the Canadian total; in the paper and allied group, its share of 36.1 p.c. was only marginally greater than Ontario's 35.9 p.c. With the exception of the wood industries, where British Columbia's factory shipments of $\$ 626,500,000$ accounted for 54.3 p.c. of the Canadian total, Ontario led in factory shipments of the remaining 15 industrial groups. In three of theserubber industries, machinery industries (except electrical machinery), and transportation equipment industries-its share was almost 75 p.c. of the Canadian total. In three othersthe electrical products industries, chemical and chemical products industries, and miscellaneous manufacturing industries-it was between 60 and 69 p.c., and in printing, publishing and allied industries, primary metal industries, and metal fabricating industries it was between 52 and 58 p.c. of the Canadian total.

Details of the leading industries in each province in 1962 were not available at publication time. This information for 1961, and for 1962 when it becomes available, may be obtained from DBS publications in the Manufacturing Industries of Canada series: Atlantic Provinces (Catalogue No. 31-204), Quebec (No. 31-205), Ontario (No. 31-206), Prairie Provinces (No. 31-207) and British Columbia, Yukon and Northwest Territories (No. 31-208).

Nors.- Based on the revised standard industrial classification and new establishment and total activity concepts. Figures for 1961 have been re-compiled on the same basis as 1962 and are not directly comparable with those for previous years. Figures for 1962 are preliminary.

${ }^{1}$ Conceptually identical to previous years.
${ }^{2}$ Cannot be reported separately for manufacturing and non-manufacturing activities but related substantially to manufacturing activity. ${ }^{3}$ Included with administrative and office employees in the Manufacturing series published in former years. ${ }^{4}$ Includes production and related workers, administrative and office employees, sales, distribution and other employees; excludes working owners and partners. 5 Value of total shipments and other operational revenue less total cost of materials, supplies, fuels used and purchases of products and materials for re-sale in the same condition; all adjusted for inventory changes
where required.
6 Includes where required. ${ }^{6}$ Includes poultry processors; not included in Table 1. Includes dental laboratories, and prescription branches in the ophthalmic goods manufactures industry; not included in Table 1 .
9.-Summary Statistics of Manufactures, by Province and Industrial Group, 1962

Norz.-Based on the revised standard industrial classification and new establishment and total activity concepts. Figures are preliminary.

## Subsection 2.-Manufacturing Industries in Urban Centres

Table 10 indicates the extent to which the manufacturing industries are concentrated in urban centres and shows, by province, the proportion of the selling value of factory shipments contributed by cities and towns each having shipments of over $\$ 1,000,000$. In 1961, the latest year for which data were available at time of publication, there were 536 such centres with combined shipments of $\$ 19,723,500,000$. Their proportion of total factory shipments, at 80.7 p.c., was little changed from the 1960 figure of 81.1 p.c. and has remained relatively stable for several years. Proportions of provincial total shipments accounted for by urban centres having shipments of $\$ 1,000,000$ or over ranged from 45.3 p.c. in British Columbia, where four of the six leading industries in 1961 were in the wood industries group, to 94.1 p.c. in Quebec, where pulp and paper mills, smelting and refining, petroleum refining, and slaughtering and meat packing were the leading industries.
10.-Urban Centres, Each with Selling Value of Factory Shipments of Over $\mathbf{\$ 1 , 0 0 0 , 0 0 0}$, Number of Establishments and Total Shipments in these Centres as a Percentage of the Provincial Total, by Province, 1961.

Of the 3,613 manufacturing establishments in 1961 with selling value of factory shipments of $\$ 1,000,000$ or over, 1,749 or almost one half were located in Ontario and 1,044 in Quebec. Except for Prince Edward Island, such establishments accounted for more than 70 p.c. of the total value of shipments in their respective provinces, with the highest proportion, 85.3 p.c., occurring in Ontario. That province also had the highest proportion of total Canadian shipments in this category, 42.1 p.c., followed by Quebec with 24.2 p.c. For Canada as a whole, such establishments accounted for 82.3 p.c. of the $\$ 24,243,000,000$ of factory shipments in 1961.

## 11.-Principal Statistics of the Manufacturing Industries of the Six Leading Manufacturing Cities, Selected Years, 1939-61

[^187]
## 12.-Statistics of Manufactures of Municipalities, each with Selling Value of Factory Shipments of $\$ 10,000,000$ or Over and with Three or More Establishments, 1961

Notb.-Statistics for urban centres with three or more establishments cannot be published when one establishment has 75 p.c. or two establishments 90 p.c. of the total value of shipments.

## Section 4.-Selected Characteristics of the Manufacturing Industries-Ownership, Employees and Factory Shipments

This Section includes a number of classifications and cross-classifications of the manufacturing industries according to type of ownership, employees and value of shipments. Table 13 shows the distribution of establishments, employees and shipments by type of ownership and size of establishment. As is to be expected, the smaller establishments, regardless of the type of products manufactured, are operated mainly under individual ownership or partnerships. Industries conducted on a small scale usually contain a large number of establishments in this category, the percentage decreasing as the scale of operation increases; with the increase in size, the importance of individual ownership as well as that of partnerships declines. For incorporated companies, however, the opposite is true; as the size increases their importance increases-numerically and also as employers and producers.
13.-Percentage Distribution of Manufacturing Establishments, Employees and Shipments, by Type of Ownership and Size of Establishment, 1961

| Item | Selling Value of Factory Shipments |  |  |  |

| Totals................................. | 100.0 | 100.0 | 100.0 | 100.0 |

Type of Ownership.-Of the 32,415 establishments operating in 1961, individual ownership numbered 11,160 establishments, partnerships 3,058 , incorporated companies 17,439 , and co-operatives 758 . The percentage distribution of the four categories of ownership is given in Table 14 for the years 1952-61 and by province and industrial group for 1961. It is interesting to note that incorporated companies are becoming increasingly important, the percentage of the total number of establishments rising from 36.9 in 1952 to 54.0 in 1961. Within industrial groups, the extent of incorporation shows considerable variation, ranging from 34.3 p.c. in the wood industries to 95.6 p.c. in the petroleum and coal products industries in 1961 . Individual ownership ranged from 4.4 p.c. in the petroleum and coal products industries to 53.6 p.c. in the furniture and fixture industries. Partnerships had their highest proportion- 12.5 p.c. of the total-in the wood industries, and co-operatives - 9.7 p.c.-in_the food and beverage industries.

## 14.-Percentage Distribution of Manufacturing Establishments classified by Type of Ownership, 1952-61, and by Province and Industrial Group, 1961

| Year, Province or Territory and Group | Individual Ownership | Partnerships | Incorporated Companies | Co-operatives | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | p.c. | p.c. | p.c. | p.c. | p.c. |

| Furniture and fixture industries | 53.6 | 11.1 | 35.3 | 2 | 100.0 |
| Paper and allied industries............. | 5.8 | 2.5 | 91.7 | - | 100.0 |
| Printing, publishing and allied industries.. | 36.6 | 9.9 | 53.3 | 0.2 | 100.0 |
| Primary metal industries................. | 12.0 | 7.0 | 81.0 | - | 100.0 |
| and transportation equipment industries) | 25.3 | 9.0 | 65.6 | 0.1 | 100.0 |
| Machinery industries (except electrical)...... | 7.0 | 3.1 | 89.9 | 2 | 100.0 |
| Transportation equipment industries... | 24.1 | 9.0 | 66.9 | - | 100.0 |
| Electrical products industries. | 4.9 | 1.1 | 94.0 | $\square$ | 100.0 |
| Non-metallic mineral products industries. | 25.2 | 7.9 | 66.9 | 2 | 100.0 |
| Petroleum and coal products industries.... | 4.4 | 1 | 95.6 | ${ }^{2}$ | 100.0 |
| Chemical and chemical products industries. | 11.6 32.0 | 2.9 9.1 | 85.0 58.9 | 0.5 | 100.0 100.0 |

${ }^{1}$ Included with individual ownership. $\quad{ }^{2}$ Included with incorporated companies.
The establishments operating under individual ownership are not as important from the point of view of employment provided as their large numbers would indicate. These establishments, which comprised 34.4 p.c. of the total number in 1961 , had only 3.7 p.c. of the total employees. Partnerships accounted for 9.4 p.c. of the establishments and 1.9 p.c. of the total employees. Incorporated companies, with 54.0 p.c. of the number of establishments, had 93.5 p.c. of the employees, and co-operatives with 2.2 p.c. of the number had 0.9 p.c. of the employees.

Thus, on the basis of employment provided, incorporated companies are, by a wide margin, the most important factor in the employment field. Such companies had 99 p.c. or more of the employees in the rubber, paper, primary metal, machinery, transportation equipment, electrical products and chemical products groups; over 97 p.c. of the employees in the tobacco products and petroleum and coal products groups; and over 95 p.c. in the leather, textiles, knitting mills and non-metallic minerals groups. The lowest proportion was 84 p.c. in the wood group.

## 15.-Percentage Distribution of Employment in the Manufacturing Industries classified by Type of Ownership, 1952-61, and by Province and Industrial Group, 1961

${ }^{\prime}$ Included with individual ownership. $\quad{ }^{2}$ Included with incorporated companies.
Size of Manufacturing Establishments Based on Number of Employees and on Factory Shipments.-The size of a manufacturing establishment is usually measured either by the number of employees or by the value of the product, but each of these methods has its limitations. The former takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery
may lead to increased production concurrently with the use of fewer employees. Also, industries with high capital investment in machinery and equipment are underrated as compared with industries lacking such equipment and employing larger numbers of hand workers. The latter measure must be adjusted for price changes and, as between industries, those in which the cost of raw materials is relatively high appear to operate on a larger scale.

Size Based on Number of Employees.-In the late 1920's there was a tendency in evidence of increasing concentration into larger units. Although this trend was checked during the depression of the 1930's, it was resumed again during the war years. However, following the War, the larger establishments began to decrease in size and by 1961 only 52 establishments employed over 1,500 persons as compared with 101 in 1944.
16.-Establishments and Employees in Manufactures classified by Number of Employees per Establishment, 1949, 1955, 1959 and 1961

${ }^{1}$ Newfoundland included from 1955.
${ }^{2}$ Includes only those head offices not located at a plant.
The provincial concentration of manufacturing in large establishments in 1961 is shown in Table 17. Of the 337 establishments in Canada with 500 or more employees, almost half were in Ontario and more than one third in Quebec. The 157 establishments in this category in Ontario accounted for 43.0 p.c. of the total value of factory shipments for the province and 21.2 p.c. of the Canadian total. Comparable percentages for the other provinces or regions were: Quebec, 36.8 and 11.7; the Atlantic Provinces, 31.8 and 1.2; British Columbia, 29.1 and 2.4; and the Prairie Provinces, 18.3 and 1.5. There were no plants in either Prince Edward Island or the Yukon and Northwest Territories with 500 or more employees.

Size Based on Factory Shipments.-Although historical statistics on the value of manufacturing output in Canada are not strictly comparable because of differences in concept and coverage, there has been a general trend toward large establishments accounting for an increasing proportion of total output. In 1949, the number of factories having an output of $\$ 1,000,000$ or over numbered 1,926 and the proportion of their production to the total was 74.4 p.c. By 1961 the number of establishments in that category had increased to 3,613 and their proportion of the output to 82.3 p.c.

## 19.-Manufacturing Establishments and Total and Average Selling Value of Factory Shipments classified by Value of Product Group, 1949, 1955, 1959 and 1961

| Value Group | Estab-lishments | Selling Value of Factory Shipments ${ }^{1}$ | Average per Establishment | Estab-lishments | Selling Value of Factory Shipments ${ }^{1}$ | Average per <br> Estab- <br> lishment |

## Section 5.-The Federal Department of Industry

The Department of Industry was established July 25, 1963 by Act of Parliament (SC 1963, c. 3). The duties and powers of the Minister of Industry under the Act include all matters relating to manufacturing industries in Canada over which the Parliament of Canada has jurisdiction not assigned to any other branch or agency of the Government. The Department is responsible for fostering the establishment, growth, efficiency and improvement of manufacturing industries by programs: (1) to assist the adaptation of manufacturing industries to changing conditions in domestic and export markets and to changes in the techniques of production; (2) to assist manufacturing industries that require special measures to develop an unrealized potential or to cope with exceptional problems of adjustment; and (3) to promote the development and use of modern industrial technology in Canada and improve the effectiveness of participation by the Government of Canada in industrial research. In addition, the Department has an Area Development Agency which has been established to formulate and implement programs to assist economic development in designated areas. In all of its activities, the Department of Industry works in the closest possible liaison with representatives of industry and with the provincial governments.

The establishment of the Department of Industry formally recognized the importance of secondary industry to the over-all economy of Canada. The Department is the representative and spokesman in the Government for Canada's secondary industries.

Branches.-Each of the ten Branches of the Department has a special responsibility for dealing with matters relating to a specific sector of manufacturing and each is directly concerned with industrial development and government procurement. The Aircraft Branch is concerned with the aircraft industry development and expansion; the Chemicals Branch is concerned with industrial development and government procurement of chemical, petroleum, plastic and rubber products; the Clothing and Textiles Branch with the primary textiles, clothing and leather industries; the Electrical and Electronics Branch with the development and expansion of programs to widen the base of electrical and electronic manufacturing; the Food Products Branch with the development of food industries including fruits, vegetables, meat products, confectionery and beverages as well as cereals and prepared foods; the Machinery Branch with industrial development of machinery, mechanical
products and armament; the Materials Branch with industrial development of the products and processes of the iron and steel and non-ferrous industries, as well as of industrial materials or non-metallic minerals; the Mechanical Transport Branch with the industrial development of motor vehicle manufacturing, including parts and accessories as well as truck body and trailer manufacturing, and also with railway rolling-stock, agricultural implements and construction equipment industries; the Shipbuilding Branch with the development of the shipbuilding complex and heavy equipment industries; and the Wood Products Branch with industrial development of wood, pulp, paper, printing, lumber, plywood, furniture and other wood-based products. Within these ten Branches are 33 Divisions, each covering a major segment of an industrial group and directing its attention to one type of industry.

Each Branch is headed by a Director supported by a Deputy Director, and each Division is supervised by a Division Chief; all are specialists in their own field of industry.

Product Design.-The organization also includes a National Design Branch the function of which is to promote good design in all sectors of the economy. This Branch provides administrative support to the National Design Council and together they have prepared a program and initiated projects to assist industry in product design. The Design Centre, which operates under the guidance of these two bodies, is located in Toronto and constitutes a permanent place of exhibition for products of Canadian design.

Area Development Agency.-This Agency, established under the provisions of the Department of Industry Act, is responsible for developing economic intelligence on an area or regional basis and employing programs of development for areas of high unemployment and slow economic growth throughout the country. This is done in co-operation with the provincial Departments of Trade and Industry as well as other developmental and industrial groups within the provinces.

The activities of the Area Development Agency will be carried out at the local level by area development officers, each of whom will be responsible for a group of the 35 areas in Canada that have been designated as in need of industrial development assistance. Each Area Development Officer must be thoroughly familiar with the economic problems peculiar to the areas of concern to him and must serve as liaison with the Department and local industrial, civic and provincial government officials in initiating and sustaining an active industrial development program. Through these officers the facilities of the Department of Industry and of all sources of assistance available at the federal level can be integrated to stimulate economic activity within any designated area.

# CHAPTER XVII.-CAPITAL EXPENDITURES, CONSTRUCTION AND HOUSING*

## The interpretation of the symbols used in the tables throughout the Year Book will be found on $p$. viii of this volume.

This Chapter provides data on the capital expenditures made by all sectors of the Canadian economy on construction and on machinery and equipment, together with summaries of other available statistics for the construction industry. Section 1 shows the amounts spent by each of the various industrial or economic sectors. Section 2 brings together a number of summaries of related series on construction activity-value of work performed by type of structure, value of materials used, salaries and wages paid and numbers employed, contracts awarded and building permits issued. Government aid to house-building, construction of dwelling units and housing statistics of the 1961 Census are covered in Section 3.

## Section 1.-Capital Expenditures on Construction and on Machinery and Equipment

Capital expenditures $\dagger$ in all sectors of the economy amounted to $\$ 9,312,000,000$ in 1963 , an increase of 6.9 p.c. over the 1962 total of $\$ 8,715,000,000$. The over-all increase resulted from an 8.0 -p.c. rise in the purchase of machinery and equipment and a 6.3 -p.c. increase in construction expenditures. Throughout most of the period after 1946, capital outlays in Canada increased each year, reaching a peak in 1957; after a four-year decline, a significant increase was shown in 1962 and a further strengthening occurred in 1963 when capital spending, in current dollars, exceeded the 1957 total. However, in constant (1957) dollars, the total 1963 capital program was still 5 p.c. below the level of 1957, declines having occurred in constant dollar volume each year following 1957 until 1962 and 1963. A significant proportion of Canada's gross national product is being devoted to the expansion, modernization or renewal of the nation's production facilities, notwithstanding the decline in this proportion in recent years.

| 1959.. | 5,709 | 5,557 | 2,708 | 2,590 | 8,417 | 8,147 | 24.1 | 24.5 |
| 1960... | 5,453 | 5,224 | 2,809 | 2,636 | 8,262 | 7,860 | 23.0 | 23.2 |
| 1961..... | 5,518 | 5,331 | 2,654 | 2,455 | 8,172 | 7,786 | 21.8 | 22.2 |
| 1962..... | 5,787 | 5,388 | 2,928 | 2,643 | 8,715 | 8,031 | 21.6 | 21.6 |
| 1963.... | 6,149 | 5,485 | 3,163 | 2,799 | 9,312 | 8,284 | 21.7 | 21.3 |

As shown in Table 1, construction accounts for about two thirds of the total capital expenditures each year and machinery and equipment for about one third. Recently, there has been a slightly upward trend in the proportion of the total being used for the purchase of machinery and equipment. This rose from 32.5 p.c. in 1961 to 34.0 p.c. in 1963. The proportion used for housing construction also rose in the same period-from 17.9 p.c. to 18.4 p.c.-but the non-residential construction outlays dropped from 49.6 p.c. of the total to 47.6 p.c., accounting for the lower proportion spent on construction as a whole.

All economic sectors, with the exception of trade and finance, reported increased capital outlays in 1963. The mining industry showed an increase of $\$ 23,000,000$, reflecting an expanding program in non-metallic minerals, particularly in oil and gas well development, with some offsetting decline in plans of producers of primary metals. Expenditures on new manufacturing facilities increased by $\$ 78,000,000$ over 1962 , accounted for mainly by higher outlays for newsprint and pulp-making facilities and increased spending by chemical companies and capital goods producing industries. Capital expenditures for utilitiesincluding transportation, communication and storage facilities, and public utilities such as gas, water and electricity-went up by $\$ 221,000,000$, much of the increase resulting from additions to facilities for power generation and gas distribution, accelerated work on the rapid-transit systems in two major cities, an expanded pipeline program, and installation of additional telegraph facilities. Institutional services-including hospitals, schools, universities, churches and welfare institutions-recorded an advance of $\$ 22,000,000$; the technical school building program and greater expenditure on university facilities kept the school construction outlay at a somewhat higher level than in 1962, offsetting a decline in spending on hospitals. Capital outlays by government departments at all levels increased by $\$ 37,000,000$ over 1962 ; government departments as defined for capital expenditure purposes include the part of government activity (excluding institutions) generally dependent on tax revenues for financial support as opposed to activities directly producing revenues on a service-rendered basis. Spending by provincial governments increased by $\$ 63,000,000$ and spending by municipal governments by $\$ 19,000,000$ but the Federal Government spent $\$ 44,000,000$ less than in the previous year, reflecting the continuance of the austerity program for part of 1963. One of the major activities of government involving expenditures by federal, provincial and municipal governments is the roads, highways, bridges and streets program.

All provinces except Newfoundland contributed to the increase in capital spending in 1963. An advance of 21.2 p.c. was recorded by Manitoba and one of 9.7 p.c. by British Columbia, both reflecting, in part, larger electric power programs. Increases above the national rate of 6.9 p.c. were also recorded by Saskatchewan with 16.6 p.c., Nova Scotia with 10.3 p.c. and New Brunswick with 7.3 p.c., but in Quebec, Alberta and Prince Edward Island the increases were more modest at 5.9 p.c., 5.3 p.c., and 4.7 p.c., respectively. Newfoundland's decline of 13.0 p.c. was accounted for by the near completion of construction on a major iron ore development in Labrador. It should be pointed out that sharp year-to-year fluctuations in capital outlays in any one province are often associated with the changing phases of a few large projects.
2.-Summary of Capital and Repair Expenditures, by Economic Sector, 1962 and 1963 Note.-Actual expenditures 1962; preliminary actual 1963.
(Millions of dollars)

Details of some of the above economic sectors are given in Table 3. The value of construction work performed, together with statistics of contracts awarded and building permits issued in recent years, is covered in Section 2 of this Chapter. Housing is treated separately in Section 3.

A summary of the capital expenditures in each province for the years 1962 and 1963 is given in Table 4. Such expenditures represent gross additions to the capital stocks of the province and are a reflection of economic activity in the area, although the actual production of these assets may generate major employment and income-giving effects in other
regions. For example, the spending of millions of dollars on oil refineries and pipelines in Western Canada means activity in the steel industries of Ontario as well as construction activity in the western provinces.

## 4.-Capital and Repair Expenditures, by Province, 1962 and 1963

Note.-Actual expenditures 1952; preliminary actual 1963.
(Millions of dollars)

## Section 2.-Construction Statistics

## Subsection 1.-Value of Construction Work Performed

Statistics of the construction industry are based largely on information received at the same time and from the same sources as the data on capital expenditures that appear in Section 1.* The data represent the estimated total value of all new and repair construction performed by contractors; by labour forces of utility, manufacturing, mining and logging firms; and by government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry.

Table 5 shows the value of new and repair construction work performed during the ten-year period 1954-63, and Table 6 shows that contractors account for 75 p.c. to 80 p.c. of the work performed each year.

[^189]
## 5.-Value of New and Repair Construction Work Performed, 1954-63

Note.-Actual expenditures 1954-62; preliminary actual 1963.

| Year | New | Repair | Total | Total Construction as Percentage of Gross National Product |
| :---: | :---: | :---: | :---: | :---: |

${ }^{1}$ Work done by the labour forces of utilities, manufacturing, mining and logging firms and by government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry.

Table 7 gives estimates of total expenditures in Canada on each type of construction for which information is available.
7.-Value of Construction Work Performed, by Type of Structure, 1962 and 1963

Note.-Actual expenditures 1962; preliminary actual 1963.

Principal statistics of the construction industry are shown by province and for contractors, utilities, governments and others in Table 8. The statistics given for Canada as a whole may be considered as relatively accurate but those for individual provinces and
by class of builder are approximations only. All estimates given for cost of materials used are based on ratios of this item to total value of work performed, derived from annual surveys of construction work and applied to the total value-of-work figures. Estimates of labour content are similarly based but, in addition, are adjusted to include working owners and partners and their withdrawals. Although the ratios were calculated in some detail by type of industry, still further refinements are required. There are also some difficulties in obtaining the precise location of projects undertaken or to be undertaken by large companies operating in a number of provinces. However, if used with these qualifications in mind, the table provides useful estimates.

## 8.-Labour Content, Cost of Materials and Value of Work Performed in Construction, by Province and by Employer, 1962 and 1963 with Totals for 1959-63

Note.-Actual expenditures 1959-62; preliminary actual 1963. Comparable figures from 1953 are given in the corresponding table of previous Year Books beginning with the 1957-58 edition.

## Subsection 2.-Contracts Awarded and Building Permits Issued

In this Subsection, statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the capital expenditure surveys. Further, values of contracts awarded, and especially of building permits, are estimates (more often under-estimates) of work to be done.

## 9.-Value of Construction Contracts Awarded, 1940-63

(Source: MacLean Building Guide)
Notz.-Figures for the years 1926-39 are given in the corresponding table of the 1962 Year Book, p. 682.

| Year | Value of Construction Contracts | Year | Value of Construction Contracts | Year | Value of Construction Contracts |

10.-Value of Construction Contracts Awarded, by Province and Type of Construction, 1962 and 1963
(Source: MucLean Building Guide)

Building Permits.-The estimated value of proposed construction is indicated by the value of building permits issued. Figures of building permits issued are collected for more than 1,300 municipalities across the country and are available for the individual municipalities, for metropolitan areas, for provinces and for economic areas in Quebec, Ontario and Manitoba.

The total value of permits issued for construction work exceeded $\$ 2,800,000,000$ for 1963, the highest figure on record and an increase of 12.2 p.c. over 1962. Residential
construction was 20.9 p.c. higher, with new construction up 21.5 p.c. and repairs up 11.5 p.c. Non-residential construction increased 4.1 p.c., industrial construction showing a gain of 28.8 p.c. and commercial construction a decline of 2.0 p.c. No change was recorded in institutional and government construction. All provinces except Alberta recorded gains in 1963, the largest percentage increases being shown by the Atlantic Provinces. Table 11 shows the value of building permits issued in each of 50 municipalities for 1962 and 1963.

## 11.-Estimated Value of Proposed Construction as Indicated by Building Permits Issued in 50 Municipalities, 1963 and 1963

Note.-Comparable figures for 1956-60 are given in the 1962 Year Book, p. 684, and for 1961 in the 1963-64 Year Book, p. 692.

${ }^{1}$ Although this is a metropolitan area, only St. John's proper is included in the building permits survey.

Table 13 shows the value of building permits, by province, for the years 1962 and 1963.
13.-Value of Building Permits Issued, by Province, 1962 and 1963 with Totals for 1959-63

Note.-Comparable figures from 1952 are given in the corresponding table of previous Year Books beginning with the $1957-58$ edition.

${ }^{1}$ Includes other construction.
The indexes given in Table 14 show as far as possible the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied.

## Section 3.-Housing*

## Subsection 1.-Government Aid to House-Building

Federal Assistance.-The role of the Federal Government in housing has expanded progressively since the introduction of the first continuing statute in 1935. Although the Government originally entered the housing field in 1918, when it made money available to the provinces for re-lending to municipalities for housing purposes, the first general piece of federal housing legislation was the Dominion Housing Act passed in 1935. This was followed by the National Housing Acts of 1938 and 1944, culminating in 1954 with the present National Housing Act, defined as "an Act to promote the construction of new houses, the repair and modernization of existing houses and the improvement of housing and living conditions" Central Mortgage and Housing Corporation (CMHC), a Crown agency incorporated by Act of Parliament in 1945, administers the National Housing Act and coordinates the activities of the Federal Government in housing. The Corporation has the authority and responsibility for a variety of functions affecting housing in its long-term outlook as well as in its immediate requirements. It is empowered to act as an insurer of mortgage loans, as a lender or investor of public funds, as a guarantor and as an owner of property and other assets. It also acts as a research agency in fields associated with housing and assists provinces and municipalities in many aspects of urban growth.

In general, the Government, through the successive Housing Acts, has attempted to stimulate and supplement the market for housing rather than assume direct responsibilities that rightfully belong to other levels of government or that could be borne more effectively by private enterprise. In each case the aim has been to increase the flow of mortgage money and to encourage lenders to make loans on more favourable terms to prospective home owners.

The volume of house-building in Canada since 1935 has been spectacular. Close to half of the country's present stock of approximately $5,000,000$ houses have been built since the first covering legislation was enacted; about one-third of these were financed in one way or another under the Housing Acts.

Under the terms of the National Housing Act, 1954 and its subsequent amendments, the Federal Government is active in many ways.

Loan Insurance.-Mortgage loans made by approved lenders may be insured for new home-ownership and rental housing and for existing dwellings in approved urban renewal areas. They are normally available from approved lenders (chartered banks. life insurance, trust and loan companies) to individual home-owner applicants, to builders constructing houses for sale or for rent, to rental investors and to special groups such as co-operative housing associations and farmers. Upon application, the borrower pays CMHC a fee of $\$ 35$ per unit to help defray expenses incurred in the examination of plans and specifications, in the determination of lending values and in compliance inspections during construction. An approved lender requires evidence that a home owner or home purchaser is providing 5 p.c. of the value of the house from his own resources. For the home owner this equity may be in the form of cash or a combination of cash, land and labour; for the home purchaser it may be in cash or labour. The regulations require that gross debt service-the ratio of repayments of principal, interest and municipal taxes to the income of the borrowershould not exceed 27 p.c., although instances involving higher ratios may be considered on their merits. The borrower pays an insurance fee which is added to the amount of the loan and is repaid over the term of the mortgage; the fee ranges from $1 \frac{3}{4}$ p.c. to $2 \frac{1}{2}$ p.c. of the loan, according to type of unit and time of mortgage advances.

For home-ownership housing, loans may be up to 95 p.c. of the first $\$ 13,000$ of lending value and 70 p.c. of the balance but may not exceed $\$ 15,600$ for a house with four or more bedrooms or $\$ 14,900$ for a house with fewer than four bedrooms. Loans for rental houses may be up to 85 p.c. of the lending value, subject to the same maximum loan amounts.

[^191]The maximum loan available for apartment multiple-family dwellings is $\$ 12,000$ per family housing unit. The period for loan repayment is generally 25 years but may be extended to 35 years if the lender agrees. Repayments are made in equal monthly instalments which include payment of interest and loan principal. The total monthly payment includes one twelfth of the estimated municipal taxes. The interest rate is prescribed by the Governor in Council; on June 13, 1963, it was reduced from $6 \frac{1}{2}$ p.c. to $6 \frac{1}{4}$ p.c.

Direct Loans.-CMHC may make direct loans for both home-ownership and rental housing where, in the opinion of the Corporation, loans are not available through approved lenders. Loans are made to any eligible home-owner applicant but direct loans to builders are subject to a requirement that the houses be pre-sold to satisfactory purchasers. Loans not subject to pre-sale condition were made available in the fall of 1963 and again in 1964 to support the Federal Government's winter-building incentive program by ensuring an adequate supply of mortgage funds. By the end of 1963, direct lending by the Corporation totalled nearly $\$ 1,900,000,000$ and in June 1964 the amount that may be advanced for this purpose out of the Consolidated Revenue Fund was increased from $\$ 2,000,000,000$ to $\$ 2,500,000,000$.

CMHC, with Government approval by Order in Council, may make loans to nonprofit corporations and limited-dividend housing companies to assist in financing the construction of low-rental housing projects or in the purchase of existing buildings and their conversion into a low-rental housing project. In addition to self-contained units, developments undertaken by non-profit corporations may include hostel or dormitory accommodation for the elderly and individuals and families of low income. The dividends of a limited-dividend company are restricted by the terms of its charter to 5 p.c. or less of paid-up share capital. Loans may be up to a maximum of 90 p.c. of the lending value established by CMHC. The period for repayment may not exceed the useful life of the project and in any case may be for not more than 50 years. The interest rate is established by Order in Council. Plans and specifications for such projects must be approved by the Corporation as well as financing and operating arrangements.

Since December 1960, the National Housing Act has provided financial assistance for the elimination or prevention of water and soil pollution. CMHC is authorized to make a loan to a province, municipality or a municipal sewerage corporation for the construction or expansion of a central plant for the treatment and disposal of sewage wastes and the construction of one or more trunk collector sewers. The loan may not exceed two thirds of the cost of the project and the maximum repayment term is 50 years from date of completion. The interest rate is prescribed by the Governor in Council. The agreement covering the project contains a condition whereby 25 p.c. of the loan principal and 25 p.c. of the accrued interest will be forgiven for projects completed to the satisfaction of CMHC on or before Mar. 31, 1967. Where construction is not complete before that date, 25 p.c. of the loan advanced or warrantable by construction progress at that date, plus 25 p.c. of the accrued interest on advances, may be forgiven.

Long-term loans to universities, colleges, co-operative associations and charitable corporations are authorized under the Act for the construction of university housing projects or the acquisition of existing buildings and their conversion into a university housing project. CMHC may lend up to 90 p.c. of the project cost subject to maximum amounts as follows: houses with four or more bedrooms, $\$ 15,600$ and with fewer than four bedrooms, $\$ 14,900$; self-contained apartments, $\$ 12,000$ per unit; and hostels, $\$ 7,000$ per student accommodated. Term of the loan may not exceed 50 years. The interest rate is prescribed by the Governor in Council.

Guarantees.-CMHC is authorized to give a limited guarantee to banks or approved instalment credit agencies in return for an insurance fee paid by the borrower on loans made for additions, repairs and alterations to existing houses and apartments. A home improvement loan and the balance owing on any existing NHA home improvement loan on the property may not exceed $\$ 4,000$ for a one-family dwelling or $\$ 4,000$ for the first unit of a
duplex, semi-detached or multiple-family dwelling, plus $\$ 1,500$ for each additional unit. Loans are repayable in monthly instalments, together with interest at the rate of 6 p.c., in not more than 10 years.

Public Housing.-Under the National Housing Act and complementary provincial legislation, the Federal Government and the government of a province may enter into a partnership agreement to build rental housing for families and individuals of low income or purchase and rehabilitate existing housing for this purpose. Projects may include hostel or dormitory accommodation in addition to self-contained units. The Federal Government bears up to 75 p.c. of the capital costs and the provincial government the remainder, although the latter may call upon the municipality concerned to bear a portion of the provincial share. Projects are of two types-subsidized and full recovery. In the former, rents are related to the tenant's family income and size of family and operating deficits are shared on the same contractual basis as the capital costs; in the latter, rents are set at a level sufficient to amortize capital costs and to recover operating expenses. The Federal Government and the government of a province may also enter into an agreement to provide for a land assembly project which involves the development of raw land for housing purposes. Such projects are financed in the same manner as federal-provincial housing projects.

A 1964 amendment to the National Housing Act authorized another type of assistance to produce public housing-the Corporation may make long-term loans to a province, or to a municipality or public housing agency with the approval of the province, for the provision of public housing accommodation for low-income individuals and families. Projects may consist of new construction or existing buildings and include dormitory and hostel accommodation as well as self-contained family units. Loans may be up to 90 p.c. of the total cost as determined by CMHC and for a term as long as 50 years but not in excess of the useful life of the development. The maximum amount that may be borrowed for a house with four or more bedrooms is $\$ 15,600$ and for a house with three or fewer bedrooms, $\$ 14,900$. The maximum loan for a fully serviced apartment is $\$ 12,000$ and for hostels or dormitories, $\$ 7,000$ for each person accommodated. The interest rate is set by the Governor in Council.

The 1964 amendment also provides for federal contributions to assist in meeting losses incurred in the operation of public housing projects. Such grants, covering up to 50 p.c. of operating losses, may be for a period up to 50 years but not exceeding the useful life of the project. Grants may be provided whether or not a public housing project is undertaken with a loan under the National Housing Act. Loans to assist proponents of public housing projects to acquire land for future projects were also authorized; the maximum loan is 90 p.c. of the cost of acquiring and servicing the property.

Urban Renewal.-The 1964 changes in the National Housing Act broadened substantially the scope of federal assistance available to provinces and municipalities undertaking programs of urban renewal. CMHC, with Federal Government approval, may arrange with a municipality to undertake either a city-wide study or a study within a specific area for the purpose of identifying blighted areas, determining housing requirements and providing data upon which an orderly program of conservation, rehabilitation and redevelopment can be based. The federal contribution may be as much as 75 p.c. of the cost of a city-wide study and up to 50 p.c. of the cost of a limited area study. The amended legislation also authorizes federal contributions equal to one half of the costs of preparing an urban renewal scheme setting out proposals for urban renewal action, a similar cost-sharing arrangement for the implementation of a scheme, and loans up to two thirds of the provincial or municipal share of the cost of carrying out an urban renewal scheme. Loans may be for 15 years at an interest rate prescribed by the Governor in Council. To encourage the improvement and conservation of housing meeting minimum standards of construction, loans under the homeownership and rental housing provisions of the Act were also authorized in June 1964 for the sale, purchase or refinancing of existing housing in urban renewal areas not designated for demolition.
C.MHC Building.-The Corporation may construct and administer housing and certain other buildings on its own account and for other government departments and agencies. Its responsibilities include the provision of architectural and engineering designs, the calling of public tenders and the administration of construction contracts-including any necessary on-site surveying and engineering. On such contracts the Corporation carries out full architectural and engineering inspections.

Research.-CMHC is concerned with building technology in the formulation of standards for housing construction, in the use of suitable materials and in the development of new building techniques. The Corporation has no laboratory facilities but has direct experience of performance in the field and seeks the advice of specialists in various agencies and departments of the Federal Government in such matters. Research into the factors affecting housing is concerned with the measurement of the demand for new housing, the volume of new housing built and the supply of mortgage money for house construction. The Corporation also co-ordinates and publishes statistical information on housing. Funds provided under the National Housing Act support the activities of the Canadian Housing Design Council, the Community Planning Association of Canada and the Canadian Council on Urban and Regional Research.

Other Federal Legislation.-The Farm Credit Act, 1959 provides for federal long-term loan assistance for housing as well as for other farm purposes (see pp. 450-451); the Veterans' Land Act, 1942 provides a form of loan and grant assistance to veterans for housing and other purposes (see pp. 326-327); and the Farm Improvement Loans Act, 1944 (see pp. 452-453) provides for guarantees for intermediate- and short-term loans made by approved lending agencies to farmers for housing and other purposes. These three statutes are concerned only incidentally with housing.

Provincial Assistance.-All provinces have complementary legislation providing for joint federal-provincial housing and land assembly projects. In addition, separate legislation with respect to housing has been enacted by several provinces. An Act to Improve Housing Conditions, 1948 (QS 1918, c. 6), passed by the Quebec Government, provides for a subsidy on mortgage loan interest charges in excess of 3 p.c. on new dwellings. In Ontario, the Planning Act (RSO 1960, c. 296) empowers municipalities with approved official plans to designate redevelopment areas and acquire and clear land for designated purposes. The Rural Housing Assistance Act (RSO 1960, c. 355) authorizes the establishment of a Crown company-the Rural Housing'Finance Corporation-to lend and invest mortgage money for new rural housing. The Junior Farmer Establishment Act (RSO 1960, c. 198) provides loans to young qualified farmers for housing and other purposes.

Four provinces have legislation enabling their government to make grants for the construction of housing for elderly people. Manitoba provides one third of the construction costs of a two-person unit or $\$ 1,667$ per unit, whichever is the lesser, and one third of the construction costs of a one-person unit or $\$ 1,400$ per unit. In addition, grants are made for the construction of hostels and the purchase and conversion of existing buildings-one third of the construction cost or $\$ 1,200$ per bed for the former and one third of $\$ 700$ per bed for existing buildings. Grants in Ontario may be made only to a limited-dividend housing company that has received a loan under NHA provisions. Grants are calculated at the rate of $\$ 500$ for each dwelling unit or 50 p.c. of the costs in excess of the CMHC loan, whichever is the lesser. In British Columbia, capital grants do not exceed one third of the total cost of the project and the limited-dividend housing company must provide equity amounting to 10 p.c. of the total. In Saskatchewan, capital grants are made up to 20 p.c. of the total capital cost.

## Subsection 2.-Housing Activities in 1963-64

Housing starts in Canada reached their second highest annual volume in 1963 and increased again in the first eight months of 1964. The 1963 total of 148,624 units, substantially in excess of the previous year's figure of 130,095 , was surpassed only in 1958 when starts on all types of dwellings numbered 164,632. Total investment in new housing in 1963 amounted to $\$ 1,713,000,000,7.9$ p.c. more than in 1962. Between the first of January and the end of August 1964, housing starts in municipalities of 5,000 or more population totalled 78,318 units, nearly 11 p.c. above the figure for the same period of 1963.

The high level of starts since the beginning of 1963 reflected an accelerated program of apartment construction'in many Canadian cities. Starts on these dwellings, a large number of which were financed by conventional mortgage loans, totalled 59,680 in 1963, an increase of 46 p.c. over the 1962 total of 40,935 . The upward swing continued into 1964, reaching 43,888 in the first eight months, a rise of 26 p.c. over the same period of 1963.

Although starts on single detached dwellings were lower during the first eight months of 1963 than in the similar period of 1962, they were very high in the last three months of the year, so that the total for 1963 reached 77,158 , a figure nearly 4 p.c. above the 1962 volume. This late-year increase was mainly attributable to the introduction of the Federal Government's house-building incentive program which provided a cash payment of $\$ 500$ to the first owner of houses built during the winter months-Dec. 1, 1963 to Apr. 15, 1964; nearly 30,000 dwellings qualified for the bonus. An increase in the maximum amounts of National Housing Act loans authorized in the summer of 1963 and an extended program of direct lending by CMHC in the fall also contributed to the record level of starts in the usual off-season period.

${ }^{1}$ Excludes the Yukon and Northwest Territories.

Operations under the National Housing Act.-Mortgage loans for 54,694 dwellings were approved under the Act in 1963 compared with 47,689 in 1962. In the same period, approved lenders provided loans in the amount of $\$ 364,500,000$ as against $\$ 383,852,000$, and direct lending by Central Mortgage and Housing Corporation rose to $\$ 295,828,000$ from $\$ 163,309,000$.

Following a reduction in the interest rate on insured mortgages from $6 \frac{1}{2}$ p.c. to $6 \frac{1}{4}$ p.c. in June 1963, there were developments in the United States which had the effect of increasing long-term interest rates in Canada. These developments included a rise in the U.S. Federal Reserve discount rate and announcement of the proposed interest equalization tax. Consequently, NHA lending by approved lenders declined during the year, with loans for

30,085 dwellings compared with 32,437 in 1962 . Under these circumstances, the private lenders directed their operations mainly to the conventional mortgage sector, particularly for apartment construction. Conventional lending for new housing totalled $\$ 1,307,000,000$ in 1963, surpassing by a wide margin the 1962 figure of $\$ 862,000,000$. Of the 30,085 dwellings financed by approved lender loans under the NHA in 1963, 16,986 were made by life insurance companies, 11,970 by trust companies, and 1,126 by loan and other companies. The chartered banks continued virtually inactive as mortgage lenders.

While the reduced NHA lending activity by approved lenders was accompanied by an increase in the demand for direct loans, the main impetus to the high volume of lending by CMHC was the extension of these loans to builders, without the usual pre-sale requirements, in the fall. As a result of this action to support the Federal Government's winter housebuilding incentive program, direct loans reached an unprecedented level in the last quarter of the year. Loans were approved for 15,333 dwellings during the period as compared with 4,031 in the same three months of 1962 . When the success of the winter-building program was assured by Nov. 15, the Corporation reverted to its policy of making direct loans to individual prospective home owners and builders where the sale of the houses had already been arranged. Direct loans continued to be available for rental housing construction where assistance was not available from approved lenders and CMHC was satisfied that a need for the units existed.

Lending under the Act declined by some 9 p.c. in the first eight months of 1964 with the approval of loans for 30,073 dwellings as against 33,048 a year previous. Approved lender loans declined by 20 p.c. to 19,604 but the drop was substantially offset by an increase of nearly 24 p.c. in direct loans, which numbered 10,469 . Following announcement of the Government's decision to repeat the winter house-building incentive program in 1964-65, CMHC was authorized in September to again make available direct loans to merchant builders without the pre-sale requirement. This action will undoubtedly have a marked effect on the housing market during the winter months.

## 17.-Mortgage Loans Approved by Lending Institutions, by Type of Property and of Loan, 1954-63

| Year | New Housing |  | Existing Houses | Other <br> Property | Total |

| 1961.. | 453 | 333 | 300 | 298 | 1,384 |
| 1962.. | 412 | 450 | 358 | 311 | 1,531 |
| 1963. | 385 | 652 | 430 | 373 | 1,840 |

Borrower and House Characteristics-Purchasers of NHA-financed houses in 1963 had an average income of $\$ 6,179$-slightly higher than the 1962 figure of $\$ 6,015$. Income of borrowers for houses financed by approved lender loans averaged \$6,450 and, for houses assisted by direct loans from CMHC, $\$ 5,684$. The purchase price of the average house was $\$ 15,229$ with a down payment of $\$ 2,634$. Monthly payments by borrowers, including principal, interest and municipal taxes, averaged 21.4 p.c. of income, unchanged from 1962.

As in 1962, the average age of borrowers was 34.5 years, with approximately half the total in the 25-34 age group. The percentage of larger families borrowing under the Act
continued to increase, 31.0 p.c. having three or more children as compared with 29.6 p.c. in 1962 and 12.5 p.c. in 1950 . Approximately 72 p.c. of borrowers were buying a house for the first time.

The increase in family size of borrowers was accompanied by a heavier volume of houses with four or more bedrooms. These homes, representing 22.7 p.c. of the total as against 17.8 p.c. in 1962, contributed to an increase in the average size of dwellings to 1,204 square feet from 1,189 square feet in 1962. While bungalows remained by far the most popular type of house- 72.0 p.c. of the total-the trend to larger houses was accompanied by an increase in the number of two-storey dwellings to 7.0 p.c. from 4.7 in 1962 . Split-level houses, as in 1962 , formed 20.2 p.c. of the total.

Loans to Limited-Dividend Housing Companies.-Construction of limited-dividend housing projects showed a marked increase in 1963. Loans were approved for projects comprising 2,094 units as compared with 1,482 dwellings in 1962. Of the total, 1,111 units were for occupancy by low-income families and 983 for elderly persons. Loans were made to non-profit organizations and municipalities for projects involving 1,889 units; entrepreneurs, whose developments are subject to more restrictive terms, received loans for 205 dwellings.

Home Improvement Loans.-The volume of NHA-guaranteed bank loans for home improvements declined slightly in 1963 when 22,024 loans amounting to $\$ 36,700,000$ were approved, as compared with 23,895 loans for $\$ 38,000,000$ in 1962. Outstanding debt of such loans at the end of 1963 was reported by the banks as $\$ 71,700,000$; the total a year earlier was $\$ 69,900,000$. The Home Improvement Loan Insurance Fund, comprised of fees received from borrowers, was $\$ 2,600,000$ compared with $\$ 2,500,000$ a year previously.

Loans for University Housing Projects.-There was a sharp increase in 1963 in the volume of NHA lending for university housing projects. Thirty-three loans, amounting to $\$ 27,600,000$, were made to universities and colleges for the construction of accommodation for 6,300 students. In 1962, 19 loans were approved for projects housing 4,400 students. Loans made in 1963 were distributed provincially as follows:-

| Province | Loans | Amount | $\begin{gathered} \text { Students } \\ \text { to be } \\ \text { Accommodated } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
|  | No. | \$'000 | No. |
| Nova Scotia.. | 1 | 1,232 | 244 |
| Quebec., | 21 | 13,515 | 3,081 |
| Ontario.. | 6 | 3,226 | 855 |
| Alberta.. | 2 | 3,845 | 997 |
| British Columbia. | 3 | 5,810 | 1,220 |

Since authorization of university housing loans in December 1960 to December 1963, 74 loans totalling $\$ 70,100,000$ were approved for the construction of residences for 15,100 students. The statutory limit of $\$ 100,000,000$ that may be advanced for university housing loans was increased to $\$ 150,000,000$ in June 1964.

Loans for Municipal Sewage Treatment Projects.-During 1963, 178 loans amounting to $\$ 36,000,000$ were made to assist municipalities in financing sewage treatment projects. This activity was distributed provincially as follows:-

| Province | Loans | Amount | Province | Loans | Amount |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | \$'000 |  | No. | \$'000 |
| Newfoundland......... | 3 | 83 | Ontario. | 62 | 16,999 |
| Prince Edward Island. . | 2 | 25 | Manitoba. | 28 | 12,618 |
| Nova Scotia. | 2 | 219 | Saskatchewan. | 39 | 550 |
| New Brunswick | 5 | 179 | Alberta. | 9 | 243 |
| Quebec................ | 19 | 2,273 | British Columbia |  | 2,723 |

By the end of 1963 , nearly 18 p.c. of all Canadian cities, towns and villages had received assistance for municipal sewage treatment projects, which were first authorized in December 1960. During the period, 532 loans totalling $\$ 119,000,000$ were made to 442 municipalities. Projects have been approved for all ten provinces with the greatest volume in Ontario, Saskatchewan, Manitoba and Quebec.

Mortgage Marketing.-Further efforts were made during the year to stimulate the development of a market for NHA insured first mortgages. Including those sold by CMHC, sales of mortgages in 1963 amounted to more than $\$ 130,000,000$ as compared with $\$ 101,000,000$ in 1962 . The Corporation made two offerings amounting to $\$ 70,000,000$, of which $\$ 62,250,000$ were sold to members of the Investment Dealers' Association of Canada, NHA approved lenders and their NHA approved correspondents. Total sales from the Corporation's mortgage portfolio since the initial offering was made in June 1961 reached almost $\$ 154,000,000$ at the end of 1963 . An amendment to the National Housing Act in June 1964 empowered the Corporation to give added support to the development of a mortgage market by making short-term loans available to any holder of NHA mortgages. Previously, such loans were restricted to NHA approved lenders.

Urban Redevelopment.-Federal aid to assist municipalities undertaking redevelopment projects was extended to three cities in 1963. A net contribution of $\$ 848,600$ was approved for the third redevelopment project in Halifax, involving the acquisition and clearance of a 31 -acre blighted area in the northeast section of the city. The cleared land will be used mainly for residential purposes including a proposed 150 -unit public housing development. Approximately 19 acres of land near Montreal's waterfront are being redeveloped for industrial purposes, with a net federal contribution of $\$ 1,200,000$. Families living in the area have been offered alternative accommodation in federal-provincial and CMHC-owned projects in the city. Half of the $\$ 3,300,000$ net cost of an Ottawa redevelopment project is being met through a federal grant. The project calls for clearance of a rundown area of 16.7 acres in the west-central part of the city. The land will be used for the construction of a subsidized low-rental housing project and a high school and for commercial purposes. Other redevelopment projects have been completed or are under way in St. John's, Nfld., Saint John, N.B., Toronto, Hamilton, Sarnia and Windsor, Ont., Winnipeg, Man., and Vancouver, B.C.

Federal-Provincial Projects.-Approval under federal-provincial arrangements was given during 1963 to projects in Chatham and Moncton, N.B.; Cochrane, Collingwood, Delhi, Fort Frances, Kapuskasing, Lindsay, Ottawa, Palmerston, Port Arthur, Timmins and Toronto, Ont.; and Estevan, North Battleford and Regina, Sask. The projects will provide 864 units of rental accommodation for lease to low-income families. Developments comprising 12,031 units have been approved since 1950 when the first project was authorized. During 1963, three land-assembly projects were also approved under federal-provincial arrangements. The developments, located in Carleton Place, Toronto and Trenton, Ont., will provide a total of 597 serviced building lots. From the inception of the program in 1949, a total of 18,085 lots had been authorized for development and 10,253 sold by the end of 1963 .

## Subsection 3.-Housing Statistics of the 1961 Census*

The tremendous upsurge in building construction in the 1951-61 decade is reflected in the 1961 Housing Census results $\dagger$ which recorded $1,145,198$ more occupied dwellings in 1961 than in 1951, the total for Canada in the later year being 4,554,493. The rate of increase in occupied dwellings of 33.6 p.c. exceeded the population increase of 30.2 p.c. in the same period.

[^192]Table 18 gives a summary of housing characteristics for Canada in 1951 and 1961. In this period both owned and rented dwellings increased by about one third and single detached dwellings and apartments and flats increased at about the same proportionate rate. The median value of homes was $\$ 11,021$ in 1961 and the median monthly cash rent $\$ 62$. Almost two out of five dwellings were constructed in the postwar period, a fact reflected in part in the proportion of dwellings in need of repair, which dropped from 13.4 p.c. in 1951 to 5.6 p.c. in 1961.

[^193]Table 19 gives certain 1961 housing characteristics by province and by metropolitan area. Among the provinces, Alberta had the largest proportionate gain over 1951, recording an increase of 39.5 p.c. and 99,059 dwellings; Ontario was first numerically with 459,625 more dwellings in 1961 than in 1951, an increase of 38.9 p.c. Saskatchewan had the largest proportion of the single detached type in 1961, 85.7 p.c. of its occupied dwellings being in that category. On the other hand, 49 p.c. of Quebec's dwellings were apartments or flats, the highest among the provinces. The largest homes were in Prince Edward Island where they had an average of 6.4 rooms and 3.3 bedrooms. The smallest were in British Columbia and the Prairie Provinces where they averaged 4.9 rooms and 2.4 bedrooms ( 2.5 bedrooms in Saskatchewan). Crowded homes (those in which the number of persons exceeded the
number of rooms) were most in evidence in Newfoundland where about three out of ten were thus classified. The proportion of such homes was lowest in Ontario at 11.8 p.c.

Among the metropolitan areas, Vancouver, Victoria and Windsor had the largest proportion of single detached type dwellings in 1961, with 75.0 p.c. of their homes in that category, 69.8 p.c. of Montreal's dwellings were apartments or flats, the highest proportion for this group. Largest homes, on the average, were found in St. John's, Nfld., where they averaged 5.7 rooms and 3.0 bedrooms, and the smallest were in Sudbury, Ont., where they had an average of 4.6 rooms and 2.3 bedrooms.

## 19.-Housing Characteristics, by Province and Metropolitan Area, Census 1961

${ }^{1}$ Dwellings in which the number of persons exceeded the number of rooms.

As shown in Table 20, Newfoundland had the largest proportion of owner-occupied dwellings in 1961 with 87.2 p.c., followed by Prince Edward Island with 79.2 p.c.; Quebec had the smallest proportion with 49.0 p.c. However, of owner-occupied, single detached, non-farm dwellings with mortgage, Ontario had the highest percentage (53.5) and Newfoundland the lowest (7.9). The median value of homes ranged from $\$ 4,311$ in Newfoundland to $\$ 12,952$ in Ontario and the average cash rent from $\$ 48$ in Prince Edward Island and New Brunswick to $\$ 76$ in Ontario. Average gross rent, including amounts paid monthly for services such as water, electricity, gas or fuel, ranged from $\$ 66$ in New Brunswick to $\$ 87$ in Ontario.

Among the metropolitan areas, Hamilton had the largest proportion of owner-occupied dwellings ( 73.5 p.c.) in 1961. Montreal ranked first among the tenant-occupied with 67.4 p.c. The median value of owner-occupied, single homes ranged from $\$ 17,301$ in Toronto to $\$ 9,899$ in Saint John, N.B. Average cash rents were highest in Toronto at $\$ 101$ and lowest in Saint John at \$48, and average gross rents ranged from a high of \$109 in Toronto to $\$ 64$ in Quebec.

## Section 1.-The Government in Relation to Labour

## Subsection 1.-The Federal Department of Labour and Federal Labour Legislation

The Department of Labour.-The federal Department of Labour was established in 1900 under the Conciliation Act which provided machinery to aid in preventing and settling labour disputes and required the Department to collect, compile and publish statistical and other relevant information. The Department also assumed the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds. Since that time the Department has been charged with the administration of new legislation and has taken on new functions. Its work today falls very broadly into two main areas-industrial relations and manpower supply.

The legislation it administers in the industrial relations area applies to employers, workers and trade unions under federal jurisdiction. The Department is responsible for conciliation procedures in industrial disputes, the investigation of complaints of unfair labour practices, refusals to bargain and violations of legislation, the processing of applications for the certification and decertification of trade unions and the conducting of representation votes. It determines wage rates and hours of work in Federal Government contracts for construction or supplies, and promotes joint labour-management consultation. It also administers legislation to prevent discrimination in employment based on race, religion, colour or national origin, to provide for equal pay for female employees and to provide for annual vacations with pay.

In the manpower supply area the Department has been increasingly concerned with promoting the best use of all available manpower resources. Under federal-provincial agreements, assistance is provided to the provinces for the construction and equipping of

[^195]technical and vocational schools and for the operation of a variety of training programs, including training for the unemployed in provincially organized courses. The Department is responsible for the co-ordination of the national program for the vocational rehabilitation of the civilian disabled, and provides financial assistance, also under federal-provincial agreements, to provincial rehabilitation programs.* The new Manpower Consultative Service went into operation in 1964 to assist management and unions to carry on advance planning to meet the manpower effect of automation and other technical changes and so to reduce hardship and unemployment.

To stimulate winter activity and so increase winter employment, the Department organizes, in co-operation with the National Employment Service, the annual nation-wide "Do It Now" winter employment campaign to persuade home and business owners to plan inside renovation and repair work for the cold months. It is also responsible for the municipal winter works incentive program, through which the Federal Government contributes toward winter works projects undertaken by municipalities. As a further stimulus to winter employment, a winter house-building incentive program was introduced in 1963-64 (see p. 704) and continued in 1964-65.

Research, involving regular surveys and analyses of economic and social trends affecting the labour force, is an important part of its work. It studies wages and working conditions, employment and unemployment, particular occupations, the training and utilization of manpower, union organization and collective bargaining.

Through the Women's Bureau and the Division on Older Workers, it investigates the problems of women and of older persons in the labour force. It assists in the movement of farm workers between provinces and between Canada and the United States, under federal-provincial agreements. It operates a plan of workmen's compensation for seamen on Canadian ships, and arranges workmen's compensation for Federal Government employees.

The Department publishes the monthly Labour Gazette, maintains records of labour legislation in the provinces and in other countries and operates a labour lending library. It provides liaison between the International Labour Organization and the federal and provincial governments, and is responsible for the sale and administration of Canadian Government annuities.

Federal Labour Legislation.-Fair Wages Policy.-The Fair Wages Policy applying to all Federal Government contracts was first set forth in a Resolution of the House of Commons (1900) and later incorporated in an Order in Council and amended from time to time. Wages and hours on contracts for construction are now regulated by the Fair Wages and Hours of Labour Act and Order in Council PC 1954-2029 of Dec. 22, 1954. Hours of work on construction contracts are limited to eight per day and 44 per week, except in an emergency or in special circumstances where exemption is granted by Order in Council; wages to be paid are those current for the type of work in the district or, if there are no current rates, fair and reasonable rates as determined by the Minister of Labour.

Wages and hours of work on contracts for equipment and supplies are also regulated by Order in Council PC 1954-2029. The hours of such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed. This Order in Council contains a clause prohibiting discrimination against any person in matters of employment because of that person's race, national origin, colour or religion, or because he has made a complaint or given information with respect to such alleged discrimination.

[^196]Government Prevailing Rate Employees.*-Many departments and agencies of government employ non-office workers in public buildings, defence establishments, parks and forests, experimental farms, canal operation, airports and government vessels, survey parties, special projects, etc. Such positions are exempt from the operations of the Civil Service Act and rates of pay are fixed by the Treasury Board in consultation with the Department of Labour on the basis of prevailing private industry rates for comparable work in the appropriate area. Data used in the determination of these pay rates are secured from wage surveys made by Industrial Relations Officers of the Department of Labour, from wage research conducted by the Economics and Research Branch, and from collective agreements and wage rates established under the legislation of some provinces.

The Fair Wages and Prevailing Rates Division of the Industrial Relations Branch also recommends rates of pay for 4,000 commissionaires employed by various government departments and agencies throughout Canada, provides wage data to assist certain Crown corporations in the preparation of their wage schedules, and gives assistance in the establishment of class titles, job descriptions and the application of job evaluation techniques.

Three sets of comprehensive Regulations have been established by the Treasury Board governing hours of work, overtime, vacations, statutory holidays, sick leave, pensions, etc., for (1) prevailing rate workers generally employed, (2) ships' officers and (3) ships' crews.

The Industrial Relations and Disputes Investigation Act.-This legislation came into effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regulations in effect since March 1944 and repealing the Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries, both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or of two or more provinces. However, the Act provides that provincial authorities if they so desire may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively and that trade unions may be certified as bargaining agents for employee groups. Trade unions and employers are required, upon notice, to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act, which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such provision is lacking application may be made for its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade union activity. The conditions that must be observed prior to strike and lockout action are set down in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards, industrial inquiry commissions, consent to prosecute, and complaints that the Act has been violated or that a party has failed to bargain in good faith.

[^197]The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents, the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister that a party has failed to bargain collectively.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Department of Labour. In brief, from Sept. 1, 1948 to Dec. 31, 1963, the Canada Labour Relations Board received 1,481 applications for certification, 859 of which were granted, 302 rejected, 292 withdrawn and 28 were pending at the end of the period. Of the 955 industrial disputes dealt with under the conciliation provisions of the Act, 849 were settled by conciliation officers and conciliation boards, 68 were not settled, 29 lapsed and nine were pending at Dec. 31, 1963.

Labour-Management Co-operation Service.-During World War II, production committees based on the principle of joint consultation between labour and management were established in many vital industries. Since 1947 the establishment of labour-management committees in industry has been encouraged and assisted by the Labour-Management Co-operation Service, a division of the Industrial Relations Branch of the Department of Labour. There are now more than 1,800 active committees whose efforts are directed toward such objects as better understanding between management and labour, improved production efficiency, improved quality, reduction of waste, accident prevention, good housekeeping and reduction of absenteeism.

Reinstatement in Civil Employment Act.-This Act provides for the reinstatement in their civil employment of discharged members of the Armed Forces and other designated persons. It was originally passed in 1942, revised in 1946, and broadened in its application in 1954. The Act is administered by the Minister of Labour through the National Employment Service (see p. 744).

Canada Fair Employment Practices Act.-This Act, which came into effect on July 1, 1953, prohibits discrimination in employment based on race, colour, religion or national origin. It applies only to industries within federal jurisdiction-those covered by the Industrial Relations and Disputes Investigation Act (see p. 714). This law prohibits acts of discrimination by employers; discrimination by trade unions in regard to membership or employment; the use by employers of employment agencies that practise discrimination; and the use of advertisements or inquiries in connection with employment that express, directly or indirectly, any limitation, specification or preference as to race, colour, religion or national origin.

Female Employees Equal Pay Act.-This Act came into effect on Oct. 1, 1956 and applies to employers and employees engaged in works, undertakings or businesses coming within federal jurisdiction. The Act, in its principal provision, prohibits an employer from employing a female for any work at a rate of pay that is less than the rate at which a male is employed by that employer for identical or substantially identical work.

Annual Vacations Act.-This Act was passed in January 1958 and became effective by proclamation on Oct. 1, 1958. It provides a one-week vacation with pay for the first year of employment and a two-week vacation for subsequent years. Vacation pay is computed at 2 p.c. of wages, as defined in the Act, for a vacation of one week and 4 p.c. for a vacation of two weeks.

## Subsection 2.-Provincial Labour Legislation

Because of the authority given by the British North America Act to the provincial legislatures to make laws in relation to local works and undertakings and in relation to property and civil rights in the province, power to enact labour legislation is largely the prerogative of the provinces. Since it imposes conditions on the rights of the employer
and employee to enter into a contract of employment, labour legislation is, generally speaking, law in relation to civil rights. Under this authority, the provincial legislatures have enacted a large body of legislation affecting the employment relationship in such fields as working hours, minimum wages, the physical conditions of workplaces, apprenticeship and training, wage payment and wage collection, labour-management relations, workmen's compensation and other matters. In each province a Department of Labour is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines. The workmen's compensation law in each province is administered by a Workmen's Compensation Board appointed by the Lieutenant-Governor in Council.

As a means of ensuring adequate living standards for workers, all provinces have enacted minimum wage legislation. These laws vest in a minimum-wage-fixing board authority to set minimum wages for employees. Five provinces have general hours-of-work laws, which either limit daily and weekly working hours or require the payment of an overtime rate if work is continued beyond specified daily and weekly hours.

Hours of work are also restricted and minimum wages established for certain types of employment under industrial standards legislation in Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta, under the Manitoba Fair Wage Act and under the Quebec Collective Agreement Act (see p. 720).

Eight provinces have passed annual vacations laws (see pp. 718-719) and in most provinces there is legislation setting a minimum age for the employment of young workers in various industries and occupations. A weekly day of rest is provided for by law in most provinces. In two provinces there are statutory requirements regarding the observance of certain public holidays.

Factory or industrial safety Acts in most provinces establish safeguards for the protection of the health and safety of workers in factories and other workplaces with respect to such matters as sanitation, heating, lighting, ventilation and the guarding of dangerous machinery. Long-established laws regulating the design, construction, installation and operation of mechanical equipment such as boilers and pressure vessels, elevators and lifts and electrical installations, have been revised in recent years in line with technological changes, and legal standards have been set in new fields involving hazards to workers and the public, such as the use of gas- and oil-burning equipment. This legislation also prescribes standards of qualification for workers who install, operate or service such equipment. Laws requiring measures to be taken to eliminate accidents in construction and excavation work are in force in a number of jurisdictions.

All provinces have apprenticeship laws providing for an organized procedure of on-the-job training and school instruction in designated skilled trades, and statutory provision is made in most provinces for the issue of certificates of qualification, on application, to qualified tradesmen in certain trades. In some provinces legislation is in effect making it mandatory for certain classes of tradesmen to hold a certificate of competency.

In all provinces there is legislation similar in principle to the federal Industrial Relations and Disputes Investigation Act, designed to establish equitable relations between employers and employees and to facilitate the settlement of industrial disputes. These laws guarantee freedom of association and the right to organize, establish machinery (labour relations boards) for the certification of a trade union as the exclusive bargaining agent of an appropriate unit of employees, and make compulsory collective bargaining between an employer and the certified trade union representing his employees. Except in Saskatchewan, they provide for compulsory conciliation, that is, they require the parties to comply with the conciliation procedures laid down in the Act before a strike or lockout may legally take place. A two-stage conciliation process is provided for-the intervention of a conciliation officer at the first stage of a dispute and, failing settlement, the establishment of a conciliation board. The Acts also provide for the compulsory settlement of any dispute that arises out of a collective agreement, and prohibit strike action while an agreement is in force. All prescribe and provide penalties for unfair labour practices.

In some provinces certain classes of employees who are engaged in essential services, such as policemen and firemen, are forbidden to strike and, in lieu of the right to strike, have recourse to final and binding arbitration.

Six provinces have adopted fair employment practices laws forbidding discrimination in hiring and conditions of employment and in trade union membership on grounds of race, colour, religion or national origin. The same six provinces have laws providing that places to which the public is customarily admitted must be open to all without regard to race, colour, religion or national origin. Eight provinces have equal pay laws, which forbid discrimination in rates of pay solely on the basis of sex. In Ontario and Nova Scotia, fair employment practices, fair accommodation practices and equal pay laws have been combined in one statute (the Ontario Human Rights Code and the Nova Scotia Human Rights Act).

Workmen's compensation legislation providing a system of collective liability on the part of employers for accidents occurring to employees in the course of their employment are in force in all provinces. Workmen's compensation laws are described in greater detail on pp. 745-746.

Changes in 1963.-In 1963 a number of important changes were made in provincial labour laws.

The Newfoundland Legislature passed an Industrial Standards Act similar to the legislation in force in five other provinces. It also enacted an Hours of Work Act applying specifically to shop employees throughout the province. This Act limits working hours to eight in a day and 40 in a week unless time and one half the regular rate is paid, provides for a weekly rest and, subject to certain exceptions, requires shops to remain closed on specified public holidays.

The Ontario Minimum Wage Act was amended to provide that tips are not to be counted as wages for purposes of the Act and to give authority to the Industry and Labour Board to fix minimum wages on an hourly rather than a weekly basis. Under this authority new hourly minimum wage rates have been established for workers of both sexes. The rates for male workers were the first to be set for men in the province. As a result of an amendment to the Ontario Wages Act, it is now obligatory for employers to give their employees a pay statement on each regular pay day.

In Prince Edward Island, a new Apprenticeship and Tradesmen's Qualification Act was passed, making provision for the setting up of an organized system of apprenticeship training and for the voluntary certification of tradesmen. The British Columbia Apprenticeship and Tradesmen's Qualification Act was amended to provide for the compulsory certification of tradesmen. In Ontario, an amendment to the Apprenticeship Act removed the upper age limit of 21 years for persons desiring to become apprentices in any of the designated trades.

Changes were made in the labour relations laws of several provinces. The principal amendment in British Columbia was one permitting the parties to a collective agreement to refer a grievance to the Labour Relations Board as a speedier and less expensive alternative to private arbitration. The Newfoundland amendments introduced new emergency procedures for hospital disputes. Amendments to the Ontario Labour Relations Act provided for the continuation of the bargaining rights of a trade union when a business changes hands. The Public Service Act was amended to establish negotiating machinery for provincial civil servants. Ontario thus became the second province to give its civil servants negotiating rights.

Industrial safety continued to be a matter of concern and a number of special measures for the protection of workmen in hazardous employments were adopted. A new Loggers'

Safety Act was passed in Ontario, the first safety legislation to be enacted for the logging industry in the province. New foundry regulations, and regulations designed to safeguard workmen against accidents in hazardous underground projects, and particularly work in compressed air, were also issued in Ontario. Legislation governing elevators and hoists was revised in Manitoba. The Ontario Boilers and Pressure Vessels Act was rewritten to bring its safety requirements into line with modern technology and practice. A new Act governing electrical installations was passed in New Brunswick.

Workmen's compensation laws were amended in five provinces. The Quebec Legislature made provision for a much wider coverage of the Act. In Ontario, the maximum annual earnings on which compensation may be paid were increased from $\$ 5,000$ to $\$ 6,000$. In Quebec, the minimum payment for total disability was fixed at $\$ 25$ a week instead of $\$ 15$. Of special importance were changes with regard to the age to which children's allowances are payable. In Quebec, a child is now eligible for an allowance as long as he is in regular attendance at school and, in Prince Edward Island, payment of compensation may be continued to the age of 21 , at the discretion of the Workmen's Compensation Board, in respect of a child who is furthering his education. Greater expenditures for rehabilitation services were authorized in Manitoba and Quebec. Both Ontario and Quebec reduced the waiting period to three days.

Further information about legislative changes in 1963 may be found in the Labour Gazette, September-December 1963 issues.

Regulation of Hours and Annual Vacations.-Ontario, Manitoba, Saskatchewan, Alberta and British Columbia have statutes of general application limiting working hours. The Acts are of two types. Those of Ontario, Alberta and British Columbia set actual limits on daily and weekly hours, and provide that work may not be carried on beyond those limits except with the permission of the administrative authority. The Manitoba and Saskatchewan Acts regulate hours through the requirement that one and one half times the regular rate must be paid if work is continued after specified limits. Hours are also regulated under the Industrial Standards Acts, the Manitoba Fair Wage Act and the Quebec Collective Agreement Act (see p. 720) and there is, in addition, some regulation of hours under other legislation, such as factories Acts, mines Acts and, in Newfoundland, legislation governing shops.

In Ontario, working hours are limited to eight in a day and 48 in a week. In Alberta, the maximum daily and weekly hours permitted to be worked in all centres with a population of over 5,000 are eight and 44, and in the remainder of the province they are eight and 48. In British Columbia, hours are limited to eight in a day and 44 in a week. Under the Saskatchewan law, one and one half times the regular rate must be paid for work done after eight hours in a day and 44 hours in a week, except in workplaces (other than factories) in the smaller centres, where the overtime rate must be paid after a 48 -hour week. In addition to the above, the Lieutenant-Governor in Council has authority to limit daily hours in any class of employment in order to prevent the working of excessive hours; this authority has been used to limit daily hours to 12 in highway construction and maintenance. The Manitoba Act, which applies to the chief industrial areas of the province, requires one and one half times the regular rate to be paid after eight hours in a day and after 48 hours in a week for men and 44 hours for women. The Manitoba and British Columbia Acts cover specified industries but the other three Acts apply to most industries in the province concerned.

Seven provinces-Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia-have annual vacations legislation applicable to most industries,
and the New Brunswick Vacation Pay Act (as amended in 1964) covers all employees except those in domestic service or agriculture, employees of the Crown and certain parttime workers. In Nova Scotia, New Brunswick, Quebec and Ontario, workers are entitled to a vacation with pay of one week after a year of service; in the four western provinces, a vacation of two weeks with pay must be granted after a year of employment. In Saskatchewan, a worker becomes eligible for a vacation of three weeks after five years of service with the same employer. A worker employed for less than a year is entitled, in Quebec, to a half-day for each month of employment and, in Saskatchewan, to one day for every month. Coal miners in Alberta are entitled to a vacation of one day for every 20 days worked in a month but not more than two weeks in a year.

A stamp system of vacation pay credits is in effect for the construction industry in Alberta and Nova Scotia. In Ontario, the stamp system is used in any industry (including construction) in which employment is terminated during a working year. In Manitoba, vacation pay of transitory construction workers in Greater Winnipeg is deposited by employers with the Department of Labour and disbursed to employees by cheque after the first day of July in each year.

Farm workers are excluded from the vacation provisions in all provinces, and domestic servants in all but Manitoba and Saskatchewan. In addition, Quebec exempts employees of municipal and school corporations, janitors and caretakers, salesmen with less than three months experience and certain part-time workers; Ontario exempts professional workers, salesmen, flower, fruit and vegetable growers, and funeral directors and embalmers; Nova Scotia excludes workers engaged in lumbering and commercial fishing; Alberta exempts salesmen; Manitoba and Saskatchewan exclude ranch and market garden employees; and British Columbia exempts professional workers and horticultural workers. Workers covered by decrees under the Quebec Collective Agreement Act are excluded from the vacation order and are subject to the annual vacation provided for in the decree concerned.

Minimum Wage Regulations.-All provinces have minimum wage legislation under which minimum rates are fixed by a government board. The British Columbia board makes a separate order for each industry or occupation. In the other provinces general orders are issued setting rates which apply to most industries and occupations. Except in three provinces, the general orders apply to both sexes.* In Nova Scotia, minimum rates have been set for women only. $\dagger$ In New Brunswick, there is a general minimum wage order for women; minimum rates have been set for male workers in certain industries only-logging, sawmilling, the garment industry and the canning or processing of fish, vegetables or fruit. In Prince Edward Island, a general minimum wage order for male workers is in effect; the only rates set for women are for restaurant workers in Charlottetown and Summerside and for laundry workers throughout the province. Nova Scotia, Ontario and Quebec are divided into zones for minimum wage purposes and rates are set according to zone. In the three Prairie Provinces rates vary between rural and urban areas. Elsewhere minimum rates apply throughout the province. Weekly rates are set in some provinces, hourly rates in others.

Table 1 shows the minimum rates in effect on Jan. 1, 1964 for several classes of establishment in the principal cities.

[^198]

${ }^{1}$ In hotels and restaurants the rates apply to a maximum of 54 hours per week. $\quad{ }^{2} 80$ cents per hour for male workers in food processing plants. ${ }^{3}$ Applies only to canning or processing of fish, vegetables or fruit; 60 cents in the garment industry for 48 hours or less in a week. men and firemen 70 cents; bell boys 56 cents. s Dollars per week for waitresses; $\$ 16$ for other restaurant workers.
${ }^{6}$ Dollars per week.
Regulation of Wages and Hours of Work under Industrial Standards Legislation and the Quebec Collective Agreement Act.-Industrial Standards Acts are in effect in Nova Scotia, New Brunswick, Ontario and Saskatchewan and there are similar provisions in the Alberta Labour Act (Part IV). These provide that a schedule of wage rates and hours of work agreed upon by a representative group of employees and employers in an industry may, upon approval by the government, be given statutory effect by Order in Council, to become the minimum terms of employment for the entire industry in the area. This legislation applies only to certain trades and areas in the province concerned. It has been used fairly extensively in the building trades, the clothing industries, barbering and a few other industries. An advisory committee, usually equally representative of employers and employees, is established to assist in enforcing a schedule.

The Nova Scotia Act applies only to construction work in Halifax, Dartmouth and Sydney; 12 schedules of wages and hours for individual building trades were in force during the year ended Mar. 31, 1963. In New Brunswick, five schedules covering an individual building trade or group of such trades were in effect in the same period.

At the end of March 1963, there were 152 schedules in force under the Ontario Industrial Standards Act. Of these, 73 applied to the building trades, 68 to barbering, and four to the retail gasoline service industry. Five schedules for the garment industries, one for the fur industry and one for hard furniture applied throughout the province.

In Saskatchewan, 17 schedules were in effect on Mar. 31, 1963, covering barbering, beauty culture, baking, carpentry, painting and the electrical trade. The schedule for barbering covered the whole province except the cities of Regina, Saskatoon and Prince Albert, for each of which a separate schedule was in effect. Each of the other schedules
applied to a zone consisting of a city and its environs. In Alberta, 15 schedules were in force at the end of the year 1933. These governed, in one or more areas, certain building trades, dairy employees, garage and service station workers, and bakers and bakery salesmen. In Manitoba, the Fair Wage Schedule issued annually under the Fair Wage Act for the construction industry sets a regular work week and hourly rates of wages for various classifications of workers. The schedule applies to private construction work in the larger centres of population as well as to public constructon work throughout the province.

In the Province of Quebec, 105 decrees under the Collective Agreement Act were in force on Mar. 31, 1963, governing 36,317 employers and 248,768 employees. Of these, 18 applied to barbers and hairdressers, 21 to commercial establishments, 17 to the construction industry, 24 to manufacturing, and 25 to other industries and services. Fourteen of the decrees had province-wide jurisdiction, governing the manufacture of women's coats and suits, dresses, hats and handbags, men's and boys' clothing, hats and caps and shirts, the manufacture of shoes, leather gloves, furniture, corrugated paper boxes and caskets, the tanning industry and the building materials industry. The remaining decrees regulated an industry in a particular urban centre or region of the province. Each decree is enforced by a parity committee which has power to levy an assessment on employers and employees to obtain funds for the enforcement of the decree.

## Section 2.-The Labour Force*

A current and periodic analysis of the state of employment in Canada was organized in 1945 to provide up-to-date and reliable information concerning the Canadian labour force. A labour force survey, on a sample basis, was conducted in November 1945 and quarterly surveys were carried out thereafter until November 1952, when the survey was placed on a monthly basis. A multi-stage area sample was used involving the selection of progressively smaller sample areas and ultimately of households. Random methods of choice were used at every stage of selection so that all members of the population had an equal chance of inclusion. The present sample covers more than 30,000 households throughout Canada. The estimates of the labour force are restricted to the civilian labour force. In addition to members of the Armed Forces, inmates of institutions and Indians living on reservations are excluded.

The labour force surveys provide a classification of persons 14 years of age or over on the basis of their activity during the week preceding the beginning of interviewing for the survey. The main divisions of the population are defined as follows:-

Labour Force.--The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age or over who, during the survey week, were employed or unemployed.

Employed.-The employed include all persons who, during the survey week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job but were not at work because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the survey week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed.-The unemployed include all persons who, through the survey week: (a) were without work and seeking work, i.e., did no work during the survey week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force.-Those not in the labour force include all civilians 14 years of age or over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those going to school, keeping house, too old or otherwise unable to work, and voluntarily idle or retired. Housewives, students and others who worked part time are classified as employed. If they looked for work they are classified as unemployed.

[^199]The estimates derived from the labour force surveys are subject to sampling error. In general, the percentage of error tends to decrease as the size of the estimate increases. The chances are about 19 out of 20 that the difference between the estimate and the figure which would have been obtained from a complete count is less than shown below. The sampling variabilities indicated are averages, since sampling error differs from characteristic to characteristic; in particular, for the unemployed the sampling variability is about 40 p.c. higher than the general average.

Size of Estimate Sampling Variability

## 2.-Estimates of the Civilian Labour Force and its Main Components, Annual Averages, 1946 and 1954-63

Note.-Comparable figures for 1947-53 are given in the 1962 Year Book, p. 708. Figures do not include inmates of institutions and Indians on reservations.

| Year | Civilian <br> Population (14 years of age or over) | Civilian Labour Force (14 years of age or over) |  |  |  |  |  |  | Persons not in the Labour Force (14 years of age or over) |

| 1963. | 12,466 | 5,133 | 589 | 5,723 | 641 | 6,364 | 373 | 6,737 | 5,730 |

${ }^{1}$ Excludes Newfoundland.
Characteristics of the Civilian Labour Force, 1946-63.-The civilian noninstitutional population averaged $12,466,000$ in 1963 compared with $8,779,000$ in 1946, an increase of 42.0 p.c., and during the same period the labour force rose by only 39.5 p.c. to $6,737,000$. Thus, the proportion of the population 14 years of age or over in the labour force, which was 55.0 p.c. in 1946 , dropped to 54.0 p.c. in 1963 . Contributing to this decrease were such factors as shifts in the age composition of the population, the tendency for young people to remain in school until they are a little older and the tendency for older persons to retire at an earlier age. The effect of these factors was greater among men, whose rate of labour force participation dropped from 85.2 p.c. in 1946 to 78.8 p.c. in 1963. Although the growth in the female labour force was also affected by these factors, there was an offsetting development. From 1953 there was a rapid increase in job opportunities for women, particularly married women. The female participation rate dropped slightly from 24.7 p.c. in 1946 to 23.4 p.c. in 1953 and then rose to 29.6 p.c. in 1963 . During the 1953-63 period, the participation rate for the female group 25-44 years of age rose from 23.1 p.c. to 30.4 p.c. and for the $45-64$ age group from 17.2 p.c. to 30.6 p.c. In 1963 , women
in the labour force numbered $1,858,000$, about half of whom were married (excluding widowed, divorced and separated). Total employment in that year averaged $6,364,000$, an increase of 36.4 p.c. over 1946. The number of men employed $(4,567,000)$ was 26.5 p.c. higher and the number of women employed $(1,797,000)$ was 70.0 p.c. higher.

Between 1946 and 1963, employment in agriculture dropped from 1,186,000 to 641,000 , a decline of 46.0 p.c. On the other hand, employment in non-agricultural industries increased by 64.5 p.c. from $3,480,000$ to $5,723,000$ and the number of paid workers employed in non-agricultural industries rose by 71.7 p.c. from $2,990,000$ to $5,133,000$. Important changes also occurred in the distribution of employment among industries. In 1963, the goods-producing industries accounted for 45 p.c. and the service-producing industries for 55 p.c. of total employment compared with 60 p.c. and 40 p.c., respectively, in 1946. The most notable shift was in agriculture. In 1946, about one in four employed persons worked in agriculture whereas in 1963 the proportion was one in ten. In other primary industries the proportion employed also declined substantially but in manufacturing and in transportation and other utilities it remained about the same. In all other industry groups the proportion employed was higher in 1963 than in 1946. In the later year, almost one out of every two employed women worked in service industries as compared with one out of every three in 1946.

On an annual average basis, unemployment as a percentage of the labour force fluctuated widely during the period, ranging between 2.2 p.c. in 1947 and 7.2 p.c. in 1961; it averaged 5.5 p.c. in 1963 . Throughout the period, unemployment rates were substantially lower for women than for men.

The number of persons 14 years of age or over not in the labour force averaged $5,730,000$ in 1963 compared with $3,950,000$ in 1946, an increase of 45 p.c. Housewives and students together constituted more than 80 p.c. of the total in the later year; the number of women keeping house increased by almost one third during the period and the number of students more than doubled.
3.-Percentage Distribution of the Population 14 Years of Age or Over in the Labour Force and Non-labour Force Categories, by Sex, 1946 and 1954-63
Note.-Comparable figures for 1947-53 are given in the 1962 Year Book, pp. 710-711.

${ }^{1}$ Excludes Newfoundland.
Employment was substantially higher in 1963 than in 1946 in all regions. British Columbia experienced the largest increase of 47.9 p.c. followed by Ontario with 43.3 p.c., Quebec with 36.6 p.c., the Prairie region with 18.4 p.c. and the Atlantic region (excl. Newfoundland) with 9.4 p.c. In all regions, however, the increase in employment was not as great as the growth of the labour force and, as a consequence, there was a rise in unemployment. Unemployment in Canada averaged 373,000 in 1963, 5.5 p.c. of the labour force. The unemployed were distributed regionally as follows: Quebec 37.8 p.c., Ontario 24.9 p.c., Atlantic 15.3 p.c., Prairie 11.5 p.c. and British Columbia 10.5 p.c. In 1946, the unemployed were distributed among the regions in just about the same proportions.

Similarly, unemployment rates were higher in 1963 than in 1946. In the later year the unemployed as a percentage of the labour force in each of the five regions was as follows: Atlantic 9.5 p.c., Quebec 7.5 p.c., Ontario 3.8 p.c., Prairie 3.7 p.c. and British Columbia 6.3 p.c. From 1946 on, unemployment rates for the Atlantic region and Quebec were consistently higher than the national average and for Ontario and the Prairie region they were consistently lower. The British Columbia rate was above the national average in every year except 1955 and 1956.

## 5.-Estimates of Employment and Unemployment, by Region, 1946 and 1954-63

Note.-Comparable figures for 1947-53 are given in the 1962 Year Book, p. 712.

${ }^{1}$ Excludes Newfoundland.

## Section 3.-Employment, Earnings and Hours*

Monthly records of employment have been collected from larger business establishments since 1921. At that time a survey was instituted to provide employment index numbers which would serve as current economic indicators. In 1941 the survey was extended to provide information on payrolls and per capita wages and salaries and in 1944 it was further extended to provide data on hours of work and hourly and weekly wages. During the war period also, separate records for men and women employees were established.

The survey covers firms that usually employ 15 or more persons in all sectors of the following major industrial divisions: forestry; mining; manufacturing; construction; transportation, storage and communication; public utility operation; trade; and finance, insurance and real estate. Also included are certain branches of the service industry, mainly hotels and restaurants, laundries and dry-cleaning plants, and recreational and business services. The survey excludes agriculture, public administration and community services such as health and education. The coverage corresponds closely, therefore, to the business sector of the economy. Since the survey does not cover small firms and excludes several industries, the employment records are published in the form of index numbers $(1949=100)$.

The monthly employment statistics relate to the number of employees drawing pay in the last pay period in the month. Data are requested for all classes of employees with the exception of homeworkers and casual employees working less than one day in the pay period. Owners and firm members are also excluded. The respondents report the gross wages and salaries paid in the last pay period in the month, before deductions are made for income tax, unemployment insurance, etc. The reported payrolls represent

[^200]gross remuneration for services rendered and paid absences in the period specified, including salaries, commissions, piecework and time work payments, and such items as shift premiums, and regularly paid production, incentive and cost-of-living bonuses. The statistics on hours relate to the straight and overtime hours worked by those wage-earners for whom records of hours are maintained, and also to hours credited to wage-earners absent on paid leave during the reported period. If the reported period exceeds one week, the payroll and hours data are reduced to weekly equivalents.

## Subsection 1.-Employment and Weekly Wages and Salaries

Following the end of the War, the composite index of employment $(1949=100)$ showed successive gains each year, except for 1954, until 1957 when a peak of 122.6 was reached. During the next four years the index did not vary greatly but fluctuated at levels some 3 p.c. to 4 p.c. below the 1957 point. However, in 1962 the index again approached the 1957 level and in 1963, at 124.6, greatly exceeded it.

A general recovery in employment commenced in the second quarter of 1961 and continued through 1963. Employment rose substantially in all the goods-producing industries and in the service-producing industrial divisions. Construction, which was at a fairly low level in early 1961, began an upward trend in the second quarter of that year which continued into 1962 but was reversed slightly in 1963. In both forestry and mining, however, the long-term trend toward reduced levels of employment in particular areas or segments within the division continued in 1963.

## 6.-Annual Average Index Numbers of Employment by Industrial Division, 1954-63, and Monthly Indexes 1963

Note.-These indexes are calculated as at the last pay period of each month, on the base $1949=100$. Comparable averages for significant years 1921-53 are given in the 1963-64 Year Book, p. 717.

## 9.-Annual Average Index Numbers of Employment, by Metropolitan Area, 1954-63, and Monthly Indexes 1963

Note.-These indexes are calculated as at the last pay period of each month, on the base $1949=100$. Comparable averages for significant years 1939-53 are given in the 1963-64 Year Book, p. 720.

[^202]Average weekly wages and salaries have increased substantially in the years for which current payroll statistics have been collected, rising from $\$ 23.44$ in 1939 to $\$ 83.41$ in 1963. Following the relaxation of wartime wage restrictions in December 1949 and the progressive lifting of price controls, the upward movement in per capita earnings gained momentum and average annual increases from 1947 to 1962 were more than twice as great as those between 1939 and 1945. Variations over the years in the occupational and industry mix within the heterogeneous group of industries covered have had, on the whole, a buoyant effect on the per capita earning figures. More recently, year-to-year percentage changes have tended to level, those for 1961, 1962 and 1963 amounting to about 3 p.c.

## Subsection 2.-Hours and Earnings of Hourly Rated Wage-Earners

Since 1945, the monthly survey of employment and payrolls has covered statistics of hours of work and paid absence of those wage-earners for whom records of hours are maintained, together with the corresponding totals of gross wages paid. These wage-earners are mainly hourly rated production workers; information on hours is frequently not kept by employers for ancillary workers, nor in many industries and establishments, for any wage-earners. Salaried employees are excluded by definition from the series. As a result of these exclusions, data are available for fewer industries and workers than are covered in the employment and average weekly wage and salary statistics.

During the ten-year period 1954-63, there has been little change in the standard work week but average hourly and weekly wages have risen substantially. Upward wage-rate revisions have been the main cause of these advances but other factors have contributed, such as the employment of more highly skilled workers in the face of technological changes and the relatively greater expansion taking place in industries that pay rates higher than the general level. From 1954 to 1963, average weekly wages rose 38.3 p.c. in manufacturing, 40.2 p.c. in mining and 46.1 p.c. in construction. Average hourly earnings increased 38.3 p.c. in manufacturing, 41.8 p.c. in mining and 45.3 p.c. in construction. In manufacturing the 1963 average hourly earnings stood at $\$ 1.95$ and the average weekly wage at $\$ 79.40$, both 3.7 p.c. higher than in 1962.

${ }^{1}$ The durable goods group includes wood products, iron and steel products, transportation equipment, nonferrous metal products, electrical apparatus and supplies, and non-metallic mineral products; the non-durable goods group includes all other manufacturing industries.

## Section 4.-Wage Rates, Hours of Labour and Other Working Conditions

Statistics on occupational wage rates by industry and locality, with standard weekly hours of labour, are compiled by the federal Department of Labour and published in the annual report Wage Rates, Salaries and Hours of Labour.

The statistics published are based on an annual survey covering some 27,500 establishments in most industries and apply to the last normal pay period preceding Oct. 1. Average wage rates of time workers and average straight-time earnings of piece workers and other incentive workers in a given occupation are given separately in the report but are combined in the calculation of industry index numbers shown in Table 14. Predominant ranges of rates for each occupation used are also given; overtime pay is excluded.

The index numbers of Table 14 measure changes in wage rates for non-office employees below the rank of foreman. They do not, however, provide a basis for comparing the level of wages in one industry with that in another. Information on concepts and methods of developing these statistics is given in the annual report.

## 14.-Index Numbers of Average Wage Rates for Certain Main Industrial Groups, 1954-63 <br> ( $1949=100$ )

Note.-Indexes back to 1901 may be obtained from the Department of Labour publication Wage Rates, Salaries and Hours of Labour 1962.

[^204]Table 16 gives summary data on working conditions of plant and office employees in manufacturing industries for the years 1959 to 1963 and also for all industries in 1963. The percentages in this table denote the proportions that employees-plant or office-of establishments reporting specific items bear to the total number of all such employees in all establishments replying to the survey; they are not necessarily the proportions of employees actually covered by the various items.

Further details and additional information may be seen in the annual report Working Conditions in Canadian Industry, compiled and published by the Department of Labour and based on a survey at May 1 each year of some 30,000 establishments.

[^205]16.-Summary of Selected Working Conditions of Non-office and Office Employees in Manufacturing Industries, 1959-63 and All Industries 1963-concluded

${ }^{1}$ Available for the first time in 1963.

Wages of Farm Labour.-The information on farm wages is provided by volunteer farm correspondents located in all provinces except Newfoundland. The rates presented in Table 17 are average wages paid to all farm help regardless of age and skill. Because the rates reported may cover a wide range of skills, of types of work and of ages of hired workers,
the value of the resulting data is considered to be an indicator of trends rather than a measure of absolute wage levels. No attempt has been made to have the wage rates reflect such perquisites as separate housing accommodation, fuel, electricity and food which, under some conditions of hiring, are supplied by employers to their hired farm help.

## 17.-Average Daily and Monthly Wages of Male Farm Help as at Jan. 15, May 15 and Aug. 15, 1962-64

Note.-Figures from 1940 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

## Section 5.-Unemployment Insurance*

During the depression of the 1930's the need for a nation-wide unemployment insurance program became recognized. In 1935 the Employment and Social Insurance Act was passed by the Federal Parliament but was subsequently declared invalid by the Privy Council. Later, by consent of the provinces, an amendment to the British North America Act was obtained empowering the Federal Parliament to legislate on unemployment insurance and in 1940 the Unemployment Insurance Act was passed, making provision for a compulsory contributory unemployment insurance program at the national level and also for the establishment of a national employment service to operate in conjunction with and ancillary to the unemployment insurance operations. The Act came into effect on July 1, 1941; amended on several occasions, it was replaced by a new Unemployment Insurance Act, effective Oct. 2, 1955. $\dagger$

Legislation provides for compulsory coverage of some four fifths of all non-agricultural employees under an insurance program administered by the Federal Government, and requires employers to join with their insurable employees and the Government in building up a fund. This fund is held in trust by the Unemployment Insurance Commission for the payment of benefit to eligible unemployed persons. The Act is administered by a Commission of three persons appointed by the Governor in Council, of whom one is the Chief Commissioner; one Commissioner, other than the Chief Commissioner, is appointed after consultation with employer organizations and the other after consultation with employee organizations.

The Unemployment Insurance Act applies to all persons employed under a contract of service, $\ddagger$ except the following: employment in specified industries or occupations such as agriculture, horticulture and forestry (effective Jan. 1, 1956, coverage was also extended to certain employments in these three industries); the Canadian Armed Forces; the permanent public service of the Federal Government; provincial government employees except where insured with the concurrence of the government of the province; certified permanent employees of municipal or public authorities; private domestic service; privateduty nursing; teaching; certain director-officers of corporations; workers on other than an hourly, daily or piece rate earning more than $\$ 5,460$ a year effective Sept. 27, 1959, unless they elect to continue as insured persons; employees in a charitable institution or in a hospital not carried on for purpose of gain except where the institution or hospital consents to insure certain groups or classes of persons with the concurrence of the Commission. All persons paid by the hour, day, or at a piece rate (including a milage rate) are insured regardless of amount of earnings.

The amount of the employee contribution is determined by the employee's weekly earnings; an equal contribution is required from the employer. The Federal Government contributes one fifth of the aggregate employer-employee contribution and defrays administrative expenses. Contributions became payable on July 1, 1941. Benefit became payable on Jan. 27, 1942 and by Mar. 31, 1963 a total of $\$ 4,109,000,000$ had been paid, leaving a balance in the fund of $\$ 9,700,000$.

The following statement shows the current weekly rates of contribution and benefit effective Sept. 27, 1959. The weekly contribution is based on actual earnings in the

[^206]week, irrespective of the number of days worked. The benefit rates are calculated on the average weekly contributions for the last 30 weeks in the 104 weeks preceding claim. In order to qualify for regular benefit, a claimant must have at least 30 weekly contributions in the last 104 weeks prior to claim, eight weekly contributions since the start of the last preceding regular benefit period or in the last year prior to claim, whichever is the shorter period, and 24 weekly contributions since the start of the last preceding benefit period, or in the year prior to the claim, whichever is the longer period.

## WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT, IN EFFECT FROM SEPT. 27,1959

Note.-Weekly rates in effect from Oct. 2, 1955 to Sept. 26, 1959 are given in the 1962 Year Book, p. 738.

The Act contains a special provision whereby the regular contribution requirements are relaxed somewhat during a $5 \frac{1}{2}$-month period commencing with the first week of December each year. Under this provision, claimants unable to fulfil the contribution requirements for regular benefit may draw "seasonal benefit" if they have at least 15 contribution weeks during the fiscal year or, failing this, if they terminated regular benefit since the previous mid-May.

Statistics on the Operation of the Act.-In order to assess the impact of changing economic conditions on the insurance program, provision is made for collection of current operational data, such as claims filed and processed and payments made. This information is published monthly in the Statistical Report on the Operation of the Unemployment Insurance Act (Catalogue No. 73-001). Current claims and payment data are useful for administrative purposes and are also a source of information to the public regarding financial and other aspects of the program.

Persons wishing to draw benefit must file either an initial or a renewal claim. Where it is necessary to compute entitlement to benefit, an initial claim is taken, otherwise a renewal. In the main, initial and renewal claims combined are an approximation of recorded separations from employment during a month. However, if a claimant exhausts his benefit and wishes to be reconsidered for further benefit, an initial claim is required. Such claims, accounting for approximately 15 p.c. of the monthly volume in 1963, are not new cases of disemployment. The count of claimants at the month-end indicates the extent to which claimants maintain contact with local offices of the Commission.

${ }^{1}$ Average of month-end data.

In addition to the monthly data published on the operation of the Unemployment Insurance Act, annual tabulations are compiled regarding persons employed in insurable employment and benefit periods established and terminated. These data are published in the annual report Benefit Periods Established and Terminated under the Unemployment Insurance Act (Catalogue No. 73-201). Data on persons insured under the Act are obtained from a 10 -p.c. sample of insurance books and contribution cards renewed at June 1 each year. Included are persons engaged in insurable employment as well as persons on claim at that date.

## 19.-Persons Insured under the Unemployment Insurance Act, by Industrial Group and Sex, 1962 and 1963

Nore.-Based on a 10-p.c. sample of contributors and claimants at June 1.

Benefit.-The duration of regular benefit is related to the contribution history-one week's benefit for every two weeks' contributions in the past 104 weeks with a maximum of 52 weeks. However, contributions more than one year old cannot be used if they have already been taken into account in computing previous rights. Disqualifications for benefit include: loss of work owing to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or any institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be imposed if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.*

Table 20 distributes by province regular benefit periods terminated, average weeks paid and average dollar benefit paid on these terminations. A claimant establishes a regular benefit period when he submits his claim in the prescribed manner and proves he has fulfilled the minimum contribution requirements. The duration of benefit and the weekly rate authorized, comprising total entitlement, are then calculated and the claimant's benefit may be drawn upon during successive intervals of unemployment. His benefit period terminates either when he has exhausted the amount authorized or when 12 months have elapsed since he established, whichever comes first.

Employment Service.-The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act. The public employment offices, which had functioned under a joint federal-provincial arrangement for more than two decades, were taken over by the Commission on Aug. 1, 1941 and additional offices were established in all provinces except Quebec. The Commission established its own offices in Quebec and the provincial government thereupon reduced the number of its offices.

## Section 6.-Industrial Accidents and Workmen's Compensation

Fatal Industrial Accidents.-Data on fatal industrial accidents, compiled by the federal Department of Labour, are obtained from provincial Workmen's Compensation Boards, from the Board of Transport Commissioners and other government authorities, and from press reports.

Of the 1,147 fatal accidents to industrial workers that occurred during 1963, 263 were the result of the victims being struck by objects- 55 by falling trees or limbs, 41 by landslides or cave-ins, 39 by materials falling from stockpiles or loads, 18 by automobiles or trucks, and the remainder by other falling or flying objects. Collisions, derailments, wrecks, etc., were responsible for 252 fatalities, falls and slips for 240 , and 152 fatalities were included in the classification "caught in, on or between objects, vehicles, etc.". Exposure to dust, poisonous gases and poisonous substances caused 96 deaths, contact with
electric current caused 63, conflagrations, explosions and exposure to hot substances caused 59 deaths, and 10 were the result of over-exertion, strain, etc. Ten were caused by miscellaneous accident types.

Workmen's Compensation.*-In all provinces legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or for disablement caused by a specified industrial disease, except where the workman is disabled for fewer than a stated number of days. The Acts of all provinces provide for a compulsory system of collective liability on the part of employers. To ensure payment of compensation, each Act provides for an accident fund, administered by the province, to which employers are required to contribute at a rate determined by the Workmen's Compensation Board in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. The Acts vary in scope but in general they cover construction, mining, manufacturing, lumbering, transportation and communications and the operation of public utilities. The Acts also cover various types of commercial establishments. Undertakings in which not more than a stated number of workmen are usually employed are excluded in some provinces. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation as determined by the Board and pay a proportion of the expenses of administration. A federal Act provides for compensation for accidents to Federal Government employees according to the scale of benefits provided by the Act of the province in which the employee is usually employed. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the Merchant Seamen Compensation Act.

Benefits in case of disability include all necessary medical care and hospitalization, cash payments during the period of temporary disability to indemnify the injured workman for loss of wages, a life pension for any resulting permanent disability, and rehabilitation services. In the case of the death of the workman, a widow is granted a monthly pension, a special lump sum payment, an allowance for funeral expenses and a monthly payment for each child under the age limit provided by the law. When there is no dependent widow or children and there are other dependants such as a parent or parents, an award is made which, in the judgment of the Board concerned, is proportionate to the pecuniary loss sustained.

Table 25 gives the number of industrial accidents reported by each of the provinces and the amount of compensation paid by Workmen's Compensation Boards in the years 1961 and 1962.

[^208]

[^209]
## Section 7.-Organized Labour in Canada

At the beginning of 1964, membership of labour organizations active in Canada totalled approximately $1,493,000$. This amounted to 29.4 p.c. of the estimated total number of non-agricultural paid workers in Canada. Three quarters of the union members were in unions affiliated with the Canadian Labour Congress (CLC) and of these, a large group belonged also to the American Federation of Labor and Congress of Industrial Organizations (AFL-CIO) in the United States. Affiliates of the Confederation of National Trade Unions accounted for more than 8 p.c. of the union membership in 1964, a slightly higher proportion than in the previous year. Members of unaffiliated national, international and independent local organizations made up 16 p.c., and the membership of unions affiliated only with the AFL-CIO constituted 2 p.c. of the total.

The 1964 membership total of $1,493,000$ was 44,000 higher than in 1963. Of this increase, approximately 37,000 was a net membership gain and the remainder was the result of improved coverage of District 50, United Mine Workers of America. International unions reported 30,000 more members than in 1963 and national unions, mostly CNTU affiliates, gained about 15,000 members. Directly chartered unions experienced a decrease in membership, and that reported by independent local organizations remained virtually unchanged.
26.-Union Membership in Canada, 1936-64

| Year | Members | Year | Members | Year | Members | Year | Members |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | '000 |  | '000 |  | '000 |  | '000 |

|  |  |  |  |  |  |  |  |

${ }^{1}$ Figures for years up to and including 1949 are as at Dec. 31; figures from 1951 are as at Jan. $1 . \quad{ }^{2}$ Newfoundland included from 1949. ${ }^{3}$ Adjustment in coverage resulted in a net addition of approximately 23,000 members. Includes an addition of approximately 7,000 members resulting from improved coverage.

Among international unions, the Steelworkers, with a gain of 12,000 members, showed the largest increase. The National Federation of Services (Fédération Nationale des Services) and the Building Workers' Federation (La Fédération des travailleurs du bâtiment du Canada, Inc.) registered gains of 4,000 and 3,800 members, respectively, and the Canadian Federation of Public Service Employees (Fédération Canadienne des Employés de Servlces Publics) reported an increase of 3,000 . Other unions experiencing notable increases over 1963 were: the International Hod Carriers, Building and Common Laborers' Union of America ( 2,900 ); the International Union, United Automobile, Aerospace and Agricultural Implement Workers of America $(2,500)$; the International Woodworkers of America ( 1,300 ); the International Union of Electrical, Radio and Machine Workers ( 1,100 ); the International Ladies' Garment Workers' Union ( 1,000 ); and the American Federation of Musicians of the United States and Canada ( 1,000 ). All were AFL-CIO / CLC affiliates. The largest decrease in membership was recorded by the International Union of Mine, Mill and Smelter Workers (Canada)-Ind., which reported 20,000 members in 52 locals in 1964 compared with 25,000 members in 46 locals in 1963.

At the beginning of 1964, the CLC had in affiliation 108 national and international unions and 174 directly chartered local unions. The total membership of $1,106,000$ represented an increase of 26,100 over 1963 . Within the CLC, international unions continued to make up more than four fifths of the membership, national unions affiliated with the CLCC comprised almost 15 p.c., and directly chartered locals just under 2 p.c.

The Confederation of National Trade Unions, with a membership of 121,540, comprised 13 federations with 573 locals and 50 local unions not belonging to any of the federations. This was an increase of 82 locals and 11,000 members in the past year, resulting mainly from organizational activity in the service sector of Quebec's economy.

Of the $1,493,173$ union members in Canada reported in the 1964 survey, $1,062,054$ were in international unions having branches both in Canada and the United States, and in most cases affiliated with central labour bodies in both countries. Of the 111 international unions active in Canada, 88 were affiliated with the AFL-CIO as well as the CLC, nine were affiliated with the AFL-CIO only and three with the CLC only; the remaining 11 had no affiliation.

National unions at the beginning of 1964 had 363,526 members, about one quarter of the over-all union membership. Among this group, 17 unions with 164,156 members were affiliated with the CLC, 13 unions with 115,796 members belonged to the CNTU, and 22 unions with 85,584 members had no link with a central labour congress.

Taken together, international and national unions had $1,427,580$ members distributed among 163 unions whose membership in Canada ranged in size from fewer than 10 members to the 102,000 reported by the Steelworkers. One third of the total membership was in
the ten largest unions, listed below in order of their membership, with bracketed figures showing their relative position in the previous year.

|  | Union | 1964 <br> Membership |
| :---: | :---: | :---: |
|  | United Steelworkers of America (AFL-CIO/CLC)............................ . . 1 ) | 102.000 |
|  | Canadian Union of Public Employees (CLC)* | 86,100 |
|  | International Union, United Automobile, Aerospace and Agricultural Implement Workers of America (AFL-CIO/CLC). | 63,600 |
|  | United Brotherhood of Carpenters and Joiners of America (AFL-CIO/CLC).... (3) | 57,100 |
|  | International Association of Machinists (AFL-CIO/CLC) ...................... (5) | 39,800 |
|  | International Woodworkers of America (AFL-CIO/CLC) ..................... (6) | 39,200 |
|  | International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Ind.) | 38,200 |
|  | International Brotherhood of Electrical Workers (AFL-CIO/CLC) ............ (9) | 36,600 |
|  | International Brotherhood of Pulp, Sulphite and Paper Mill Workers (AFL-CIO/CLC) | - 36,100 |
|  | Canadian Brotherhood of Railway, Transport and General Workers (CLC)... (10) | ) 35,800 |

[^210]The 174 locals chartered directly by the CLC had a membership of 20,236 , the 50 non-federated locals in the CNTU had 5,744 members and the 124 independent local organizations covered by the survey had 39,603 members.
27.-Union Membership, by Type of Union and Affiliation, as at January 1964

| Type and Affiliation | Unions | Locals | Membership |
| :---: | :---: | :---: | :---: |
| International Unions. | 111 | 4,613 | 1,062,054 |
| AFL - CIO/CLC | 88 | 4,110 | 903,948 |
| CLC only. | 3 | 45 | 12,680 |
| AFL-CIO only. | 9 | 46 | 31,282 |
| Unaffiliated railway brotherhoods | 2 | 123 | 9,224 |
| Other unaffiliated unions. | 9 | 289 | 99,920 |
| National Unions. | 52 | 2,441 | 365,536 |
| CLC | 17 | 1,489 | 164,156 |
| CNTU | 13 | 573 | 115,796 |
| Unaffiliated unions | 22 | 379 | 85,584 |
| Directly Chartered Local Unions. | 224 | 224 | 25,980 |
| CLC | 174 | 174 | 20,236 |
| CNTU | 50 | 50 | 5,744 |
| Independent Local Organizations | 124 | 124 | 39,603 |
| Grand Totals | 511 | 7,402 | 1,493,173 |

A complete list of the individual international and national unions, with number of locals and membership in Canada, is carried in the annual Department of Labour publication Labour Organizations in Canada, available from the Queen's Printer, Ottawa, price 50 cents.

## Section 8.-Strikes and Lockouts

Statistical information on strikes and lockouts in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. Table 28 covers strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The developments leading to work stoppages are often too complex to make it practicable to distinguish statistically between strikes on the one hand and lockouts on the other. However, a work stoppage that is clearly a lockout is not often encountered.

The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. Duration of strikes and lockouts in terms of man-days is calculated by multiplying the number of workers involved in each work stoppage by the number of working days the stoppage was in progress. The duration in man-days of all work stoppages in a year is also shown as a percentage of estimated working time, based on the annual average of all non-agricultural paid workers in Canada. The data on duration of work stoppages in man-days are provided to facilitate comparison of work stoppages in terms of a common denominator. They are not intended as a measure of the loss of productive time to the economy.

## 28.-Strikes and Lockouts, by Industry, 1963 with Totals for 1959-63

Note.-Comparable statistics, except for 1961, are given in the corresponding table of previous Year Books; the latter are available in the Department of Labour annual publication Strikes and Lockouts in Canada.

## Section 9.-Canada and the International Labour Organization

The Department of Labour is the officially designated liaison between the Government of Canada and the International Labour Organization. The ILO was established in 1919, in association with the League of Nations under the Treaties of Peace, with the object of improving labour and social conditions throughout the world by international negotiations, legislative action and other means. Under an agreement approved by the General Conference of the International Labour Organization and by the United Nations General Assembly in 1946, the Organization became a specialized agency of the United Nations, although it retained its autonomy.

The ILO is an association of 110 Member States, financed by their governments and democratically controlled by representatives of those governments and of their organized employers and workers. It is comprised of three main organs-the Governing Body, the International Labour Conference, and the International Labour Office.

The Governing Body consists of 48 members- 24 government representatives, 12 employers' representatives and 12 workers' representatives. Of the government seats, each of the 10 Member States of chief industrial importance (of which Canada is one) holds a permanent place and the other 14 government representatives are elected triennially by the Conference. The worker and employer members are elected by their groups every three years at the same Conference. The Governing Body, which usually meets three times a year, supervises the work of the International Labour Office and co-ordinates the programs of the various Conferences and Committees, in addition to framing the budget and approving the agendas of the Conferences and meetings. Canada's government representative on the Governing Body is the Deputy Minister of Labour for Canada; there are also elected employer and worker representatives from Canada on the Governing Body.

The International Labour Conference is a world assembly for the discussion of labour and social problems. It meets annually and is attended by four delegates from each Member State (two representing the government, one representing the employers and one representing the workers) accompanied by technical advisers. The Conference formulates international standards concerning working and living conditions in the form of Conventions (which are subject to ratification by the Member States concerned) and Recommendations (which are guides for framing legislation and regulations).

There have been 47 sessions of the International Labour Conference, at which 119 Conventions and 119 Recommendations have been adopted. Canada has ratified 20 of these Conventions, of which 12 concern maritime and dock labour. The Department of Labour is responsible for forwarding to the ILO annual reports on ratified Conventions as well as periodic reports on many other industrial and social matters. Canada is represented at each annual Conference and most of the special meetings, and accounts of the discussions and decisions are regularly published in the Labour Gazette.

The International Labour Office acts as the permanent secretariat of the ILO, and as a world research and information centre and publishing house on subjects concerned with working and living conditions. In the operational field it assists Member States by furnishing experts on manpower training and other types of technical assistance. The ILO maintains branch offices in all parts of the world; the Canada Branch is located at 202 Queen Street, Ottawa.

Ten tripartite industrial committees have been established to deal with problems of important world industries. By the holding of regional and special technical conferences, and by technical assistance to aid under-developed countries in such fields as co-operatives, social security, vocational training, productivity techniques and employment service organization, the ILO aids in the development of improved economic and social conditions in these areas. The ILO also administers numerous technical aid projects in developing countries on behalf of the United Nations Special Fund and the Expanded Program of Technical Assistance.

The interpretation of the symbols used in the tables throughout the Year Book
will be found on p. viii of this volume.

The physiographic and population characteristics of Canada present unusual difficulties from the standpoint of transportation. The country extends 4,000 miles from east to west and its main topographic barriers run in a north-south direction, so that sections of the country are cut off from one another by such water barriers as Cabot Strait and the Strait of Belle Isle separating the Island of Newfoundland from the mainland; by rough, rocky forest terrain such as the New Brunswick-Quebec border region and the areas north of Lakes Huron and Superior dividing the industrial region of Ontario and Quebec from the agricultural areas of the Prairie Provinces; and by the mountain barriers between the prairies and the Pacific Coast. Unevenly distributed along a narrow southern strip of Canada's vast area is its relatively small population of $19,237,000$ (estimate of June 1, 1964). To such a country, with a population so dispersed and producing for export as well as for consumption in distant parts of the country itself, efficient and economical transportation facilities are necessities of existence.

A special article giving some idea of the competitive problems that have faced the major agencies of transport during recent years of economic and technological change appears in the 1962 Year Book at pp. 753-758.

## PART I.-GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION

The Federal Government's control and regulation of transportation reflect to a considerable extent conditions that date back to the period when the railways possessed a virtual monopoly of transportation within the country. Although federal regulation was a direct outcome of such particular matters as the prevention of unjust discrimination in
rates and charges resulting from monopoly conditions in the industry and the safety of transportation facilities and operating practices, yet the railways have been so involved in the public interest that their regulation has been extended to become the most comprehensive of any industry in Canada.

In the meantime, conditions in the transportation industry have been drastically altered by the increasing competition arising from the advance of highway, air and pipeline transportation and a large part of the present competition between common carriers has become a permanent feature of the transportation industry. In these circumstances, it is not surprising that regulations, which under monopoly conditions were not onerous to the railways or were purely nominal in their effect, are now alleged to have become increasingly restrictive and hampering under highly competitive conditions. Regulatory authorities are therefore faced with the problem of piecemeal revision of their regulations-retaining those where railway monopoly or near-monopoly conditions still make them necessary in the public interest, and relaxing those where competition can be relied on to protect the public in order to enable the railways to meet this competition more effectively. The emphasis has shifted from the regulation of monopoly to maintaining a balance between the several competing modes of transport.

The federal Department of Transport and the Crown agencies reporting to Parliament through the Minister of Transport have jurisdiction over railways, canals, harbours, shipping and civil aviation (see p. 114). Road and highway development is mainly under provincial or municipal control or supervision. Jurisdiction over interprovincial and international highway transport rests with the Federal Government, but the Motor Vehicle Transport Act, 1954 gives to all provinces, at their option, the authority to apply to interprovincial and international highway transport the same regulations respecting certificates of public convenience and necessity and rates as they apply to undertakings operating entirely within the province. This Act has since been proclaimed in seven provinces.

The Board of Transport Commissioners for Canada.-The Board of Transport Commissioners for Canada was created and initially named the Board of Railway Commissioners for Canada by the Railway Act, 1903, and was given its present name by the Transport Act, 1938. It was organized on Feb. 1, 1904 and succeeded to all the powers and duties of its predecessor, the Railway Committee of the Privy Council. The Board, now consisting of a Chief Commissioner, a Deputy Chief Commissioner, an Assistant Chief Commissioner and three Commissioners, has extensive regulative and administrative powers and is also a statutory court of record, so constituted by the Railway Act and recognized as such by other courts. The finding or determination of the Board upon any question of fact within its jurisdiction is binding and conclusive and no order or decision may be questioned or reviewed except on appeal to the Supreme Court of Canada upon a question of law or a question of jurisdiction with leave of a judge of that Court, or by the Governor in Council.*

The Board has jurisdiction under more than a score of Acts of Parliament, including jurisdiction, under the Railway Act and the Transport Act, over transportation by railway and by inland water, and over communication by telephone and telegraph.

Under the Railway Act its jurisdiction is, stated generally, in respect of construction, maintenance and operation of railways that are subject to the legislative authority of the Parliament of Canada, including matters of engineering, location of lines, crossings and crossing protection, safety of train operation, operating rules, investigation of accidents, accommodation for traffic and facilities for service, abandonment of operation, freight and passenger rates, and uniformity of railway accounting. The Board also has certain jurisdiction over telephones and telegraphs, including regulation of the telephone tolls of The Bell Telephone Company of Canada, the British Columbia Telephone Company,

[^211]the Bonaventure and Gaspe Telephone Company and the Yellowknife Telephone Company, over tolls for express traffic and tolls for the use of international bridges and tunnels.

Regulation of railway freight and passenger rates is one of the Board's principal tasks. Except for certain statutory rates, it has power "to fix, determine and enforce just and reasonable rates, and to change and alter rates as changing conditions or cost of transportation may from time to time require"; it may disallow any tariff that it considers to be unjust or unreasonable or contrary to any provision of the Railway Act; it may prescribe other tolls in lieu of the tolls disallowed, or require the railway company to substitute a tariff satisfactory to the Board. During the past decade there has been a succession of applications for authority to make general freight rate increases and general telephone rate increases.

Under the Transport Act, the Board entertains applications for licences for ships to transport goods or passengers for hire or reward between places in Canada on the Great Lakes and the Mackenzie and Yukon Rivers, except goods in bulk on waters other than the Mackenzie River. Before granting a licence, the Board must be satisfied that public convenience and necessity require such transport. The Board also has regulative powers over tolls for such transport.

A review of transport regulation was undertaken by the Royal Commission on Transportation, under the chairmanship of the Hon. W. F. A. Turgeon, which held extensive hearings in 1949-50 and issued its Report in 1951 (see 1952-53 Year Book, p. 741). Certain of its recommendations were incorporated into the Railway Act by amendments made in 1951 (see 1962 Year Book, p. 760).

A Royal Commission was appointed May 13, 1959 with the Hon. C. P. McTague named as chairman (later succeeded by M. A. MacPherson) to inquire into the railway rate structure and other matters affecting transportation. Its findings were published in three volumes, which appeared between March 1961 and July 1962. Pending the results of this inquiry, the enactment of the Freight Rates Reduction Act, 1959 and later amendments gave some relief to shippers by providing the finances necessary to permit the reduction of freight rates and the payment of compensation to the railways for maintenance of their rates on freight traffic at the reduced levels (see 1963-64 Year Book, pp. 752-753). Legislation based on the findings of the MacPherson Royal Commission was before the House of Commons when it adjourned in December 1964.

The Air Transport Board.-The Air Transport Board was established in September 1944 by amendment to the Aeronautics Act. Subsequent amendments to the Act were made in 1945, 1950 and 1952. The Board has three members including the Chairman and the staff is comprised of a Senior Adviser; a Legal Branch; an Operations Branch which includes the Traffic Division, Operations Analyst, Special Traffic Adviser, International Relations Division, and the Licensing and Inspection Division; an Economics and Accounting Branch which includes the Economics Division, Audit Division and Financial Analyst; and a Secretary's Branch which includes the Administrative Division. In addition, a small staff is located in Montreal to serve the Senior Canadian Representative on the Council of the International Civil Aviation Organization.

The Board is responsible for the economic regulation of commercial air services in Canada and is also required to advise the Minister of Transport in the exercise of his duties and powers in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad and to foreign air services operating into and out of Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. As provided by the Act, the Board issues Regulations, approved by the Governor in Council, dealing with the classification of air carriers and commercial air services, applications for licences to operate commercial air services, accounts, records and
reports, ownership, transfers, consolidations, mergers and leases of commercial air services, traffic tolls and tariffs, and other related matters. Detailed regulatory instructions are issued by the Board in the form of General Orders and Rules, relating to all air services, or groups of air services; Board Orders relating to individual air services; and Circulars for general guidance and information.

The Board is continuing its study of the potential for and requirements of increased and improved air services into the Canadian North as well as the consolidation of its over-all regulations. The procedures governing applications for licence are being examined for improved processing methods.

The Board continues to take an active part in the work of the International Civil Aviation Organization and to undertake bilateral negotiations for the exchange of traffic rights when appropriate. At present, Air Canada, Canadian Pacific Air Lines Limited and TransAir Limited are Canada's designated international scheduled carriers.

The Canadian Maritime Commission.-The Canadian Maritime Commission was established by Act of Parliament in 1947 (RSC 1952, c. 38) as a separate department of the Government reporting to Parliament through the Minister of Transport. It is the function of the Commission to "consider and recommend to the Minister from time to time such policies and measures as it considers necessary for the operation, maintenance, manning and development of a merchant marine and a ship-building and ship-repairing industry commensurate with Canadian maritime needs" The Commission is authorized to examine into, ascertain and keep records of all phases of ship operation and to "administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament"

The Commission administers the Ship Construction Assistance Regulations enacted by Order in Council PC 1961-1290 of Sept. 8, 1961, as amended. The Regulations authorize the payment of direct subsidies for the construction of commercial ships and fishing vessels in Canadian shipyards.

Subsidies are paid by the Federal Government for the maintenance of essential steamship services; the services and the amounts paid for the years ended Mar. 31, 1963 and 1964 are given on p. 807.

The National Energy Board.-The National Energy Act (SC 1959, c. 46) proclaimed Nov. 1, 1959, provided for the establishment of a five-member Board charged with the duty of assuring the best use of energy resources in Canada. In the performance of this function, the Board is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipeline, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The functions and operations of the Board are covered in the Domestic Trade and Prices Chapter of this volume, Part II, Section 4.

## PART II.-RAIL TRANSPORT*

## Section 1.-Railways

Since Confederation the railways of Canada have been the principal transport facility throughout, and beyond, the nation. The two great transcontinental systems, supplemented by a major north-south line on the West Coast and a number of regional independent railways, are the only carriers able to transport large volumes of freight at low cost in all weather by continuous passage over Canadian transcontinental routes.

[^212]The two national railway companies control a wide variety of Canadian and international transport and communications services. The government-owned Canadian National Railway System is the country's largest public utility and operates the greatest length of trackage in Canada. It is the only railway serving all ten provinces and is completing a branch line to serve the Great Slave Lake area of the Northwest Territories. In addition, it operates a highway service, a fleet of coastal steamships, an extensive express service, a chain of large hotels and resorts, and a scheduled air service connecting all major cities across the country and Canadian with other North American and European points. The Canadian National, jointly with the Canadian Pacific Railway Company, operates a national telecommunications system that employs modern microwave, high-speed teletype and private wire networks, telex, data and weather facsimile transmission and movement of telegrams to any point in the world. The Canadian Pacific Railway Company is a jointstock corporation also operating a transcontinental railway, an express service, a domestic truck and bus network, a fleet of inland, coastal and ocean-going vessels, a chain of yearround and resort hotels, a domestic airline servicing points in British Columbia, Alberta and Yukon Territory, a transpacific airline service to the Orient and the Antipodes, air services to Mexico, Peru, Chile and Argentina, a transpolar air route connecting Vancouver and Amsterdam, a transatlantic service to Portugal, Spain and Italy, and a limited (one flight daily) transcontinental air service between Vancouver and Montreal.

The Pacific Great Eastern Railway, owned by the British Columbia Government, operates over a 789.5-mile route from North Vancouver to Fort St. John in the Peace River area of northeastern British Columbia, with a branch line from Chetwynd to Dawson Creek. The completion in 1958 of the northern section of this line opened up to development the vast interior of the province and brought to an end the largest railway construction job undertaken in North America for two decades. With the completion in 1959 of the last link in the microwave system, the PGE became the first railway on the Continent to be operated entirely by means of radio communication.

## OPERATIONAL AND TEGHNOLOGICAL CHANGES IN RAIL TRANSPORT

In recent years, the railways have been strongly affected both by the emergence of competition and by the great advances of science and technology. The former has posed a threat to the supremacy of the railway in the field of freight and passenger movement but the railway companies' awareness of the need to innovate, experiment and market their services aggressively has enabled them to retain their pre-eminence, particularly in the area of freight transportation. The following sections give some idea of the changes that have been made by the two transcontinental railway systems to keep their services in line with the requirements of individuals and of industry.

## Canadian National Railways*

A new concept of rail transportation that combines lower customer costs with improved service and greater efficiency is being aggressively applied by Canadian National to both passenger and freight operations, with marked success. During 1963, CN handled the second highest volume of railway business in its history and gross revenues from all services reached an all-time high of $\$ 800,000,000$.

In the field of passenger transportation, a recently introduced market-oriented fare scheme brought about reduction of more than 50 p.c. in some fares. Application of the service concept to freight operations has resulted in the introduction of fast freight trains, incentive freight rates and a customer research service available to users and potential users of freight and express-freight facilities. During the past three years, a system-wide re-organization of administrative procedures has been carried out, the main purpose of which is to give regional and local officials more authority to make decisions and solve local transportation problems with greater speed and satisfaction to the customer. End-to-end

[^213]and train-to-wayside radio communications have been in use for the past several years. Direct radio communication between locomotive and caboose has reduced the frequency of stops, reduced accidents and eliminated the possibility of errors caused by communication difficulties.

One of the most important and extensive of recent CN modernization projects is its program of visual re-design. Starting with a new company symbol, a new colour scheme is being applied progressively to every item of equipment and every building used by the railway. In addition, the new design is being applied to forms, letterheads, time-tables, tickets, signs, printed advertisements and even to uniforms for employees who meet the public.

The program of redevelopment of CN real estate holdings, of which the Place Ville Marie complex in the Central Station area in Montreal is a prime example, is continuing to many parts of the country. The first commercial office tower building in the master plan for downtown Edmonton redevelopment is under construction and is scheduled for completion in 1966. CN facilities in downtown Saskatoon are being re-located on the outskirts of the city. Place Bonaventure, an imaginative trade, exhibition and convention centre, will be built over the railway tracks into Central Station in Montreal.

The CN work force numbers 92,000 and the total labour cost in 1963 was $\$ 519,000,000$. The labour relations department negotiates 178 contracts with 35 separate unions which bargain for 85,000 employees.

In all, the company maintains and operates more than 34,000 miles of railway track, over 1,100 miles of which are in the United States. It operates approximately 2,100 dieselelectric locomotives, 27 electric locomotives, 107,000 units of freight equipment and 3,000 passenger cars. In addition, it operates six car ferries on Canada's East Coast, 13 coastal steamers operating around the coasts of Newfoundland and Labrador, a luxury cruise ship, Prince George, that plies the inland passage from Vancouver to Alaska, and train ferries across the Great Lakes.

Passenger Services.-The CN has declared that it is in the passenger business to stay and the company accordingly is actively seeking passenger business with service, speed, comfort, convenience and low fares.

Public acceptance of the Red, White and Blue fare plan, introduced on an experimental basis in the Maritime Provinces in 1962 and later extended to every area of Canada, was reflected in a 9.3 -p.c. increase in the number of passengers in 1963 over the previous year. Fifty-nine days of the year are standard fare days during which Blue tickets are used; these are peak travel times, holidays and weekends when space is at a premium. Economy fares, issued on White tickets, are used for trips beginning on Mondays, Tuesdays, Wednesdays, Thursdays and Saturdays from June 1 to Sept. 30, and for trips beginning Fridays and Sundays between Oct. 1 and Apr. 30, for a total of 144 days. The Red bargain fare is the cheapest and is in effect for 163 days of the year during the months of October to May, except on Fridays, Sundays and holidays. With Red, White and Blue fares, passengers occupying sleeping or parlour car space are provided with complimentary meals.

To meet the increasing demand for meal service, nine buffet-sleeper-lounge cars were converted in 1964 to modern dining cars. In addition, the railway began testing microwave cooking and the results may influence the type of meals and service on a number of short intercity runs across Canada. Meals for passengers are pre-cooked and refrigerated. With microwave energy, the oven on the train brings the food to serving temperature within a matter of seconds.

The increased passenger load has created a demand for additional railway service and prompted inauguration of the Panorama, the first new Montreal/Toronto-Vancouver train to be introduced into service in more than ten years. By 1964, the running time between Montreal/Toronto and Vancouver had been reduced by seven hours. In addition, passenger train schedules have been integrated in many parts of Canada to ensure convenient connections at main terminals. A summer train, the Chaleur, was brought into service,
taking over from the Ocean Limited the over-night coach and sleeping car service between Montreal and Campbellton, N.B., and providing direct connections to Gaspe. A fivecar stainless steel streamliner, the Champlain, was placed in operation between Montreal and Quebec City; this train, operating in CN-CP pool service, covers the distance between the two cities in just three hours and 15 minutes. It comprises two parlour cars, one dinerlounge and two coaches. Ten glass-topped passenger lounge cars have been acquired, six of them combining sleeping accommodation and a lounge section with a partially glassed roof at the rear; they will go into service on the Ocean Limited and the Scotian, which operate between Montreal and Halifax. The other four Sceneramic cars are double-decked with glass roofs over the entire length, accommodating 68 seats and a downstairs lounge with facilities for light meals and refreshments; they are in service through the Rocky Mountains territory on Super Continental and Panorama trains.

Today's lounge cars on long-distance trains provide a cruise atmosphere with ultramodern decor, separate refreshment areas and dining car service catering to all tastes. Coach seats, on certain trains, are reserved without charge, special attendants are on duty to serve the passengers and coach lounges have been introduced.

Tickets can be sent to passengers by mail in response to telephoned requests and, as a result of Charge-a-trip and Go-now-pay-later schemes and CN-Air Canada credit cards, ready cash is not a requirement. Large groups, such as clubs and lodges, may charter coaches or sleeping cars, receiving not only the advantages of reduced fares but also privacy. Package tours, ranging from a week end special to deluxe 21-day vacations, are available and in 1963 a Car-go-Rail scheme was introduced allowing passengers to ship their personal automobiles for use at destination.

To provide speedier ticketing for travellers, faster handling by ticket sellers, easier ticket collection and improved accounting procedures, more than 200 separate ticket forms have been retired and replaced with nine consolidated forms.

All passenger reservation bureaux across Canada are connected by fast telecommunications networks.

Freight Services.-The CN railway system has been completely dieselized; main transcontinental trackage is almost completely under Centralized Traffic Control signalling. With the construction of electronic hump classification yards to replace flat yards, major strides have been made toward solving problems of freight delays in terminals. Four hump yards have been constructed at strategic points across Canada-Moncton, N.B., Winnipeg, Man., Montreal, Que., and Toronto, Ont. A coast-to-coast data processing network and increased use of computers and allied electronic equipment provides for internal efficiency.

The railway, through a broad research and development program, is in constant search for improved methods of transportation and endeavours to keep abreast of new technical developments, such as transportation of solids by pipeline, new forms of motive power and developments in cybernetics, with a view to their application to the railway wherever considered advantageous Long-range planning is an essential part of this process. This program, although directed primarily toward improving the efficiency and competitive position of the CN itself, at the same time makes a substantial contribution to the country's transportation industry generally. One example is the development, by company engineers, of an electronic scale for weighing moving freight cars. This scale has a high degree of accuracy, meets all government regulations and can calculate within three seconds the weight of a car travelling between 10 and 12 miles an hour and weighing up to 250 tons. British and United States companies are seeking the manufacturing rights.

Railway specialists have worked closely with industrial traffic executives in many fields of planning, design and acquisition of special equipment. This Customer Research Service makes available to customers the fund of technical 'know-how' and skills available within the railway organization. It deals with total distribution problems; to fit the right type of equipment to the particular service required may merely result in the better use of existing equipment or it may require the provision of a completely new kind of
equipment. The box-car continues to be the backbone of the railway freight car fleet but there is a growing trend toward the provision of specialized equipment to meet the requirements of many Canadian industries. During 1963 many freight cars were converted for greater efficiency or specialized service: 100 gondola cars were equipped with raised sides to give increased capacity when hauling woodchips; roofs were removed from 50 boxcars to make them suitable for woodchip traffic; end stakes were added to 100 gondola cars for pulpwood movements; bulkheads were installed on 130 flat cars assigned to lumber or pulpwood traffic; 100 ice-actuated refrigerator cars were converted to mechanically controlled refrigeration systems; nine-foot doors were installed on 500 box-cars; a number of 52 -foot gondola cars were equipped with canvas coverings to protect cargoes; and hopper cars and extra-wide-door box-cars were adapted to make them suitable for the movement of grain. In addition, 100 steel box-cars assigned to newsprint service are being equipped with special under-frame cushioning devices to protect the load from damage.

Shippers of bulk products have helped with design, installation and operation of pneumatic outlets on covered hopper cars. The CN worked closely with the aluminum industry on the design and construction of aluminum tank-design covered hopper cars, widely used today for the movement of potash from Saskatchewan. CN has pioneered in the development and in the promotion of the use of containers in Canada-a method of shipment that is going through a series of important changes. Joint effort by railway researchers and the meat packing industry resulted in the development of refrigerated walk-in containers for handling fresh meat and other perishable traffic from the Canadian mainland to Newfoundland. In 1963 the company manufactured 127 such containers in its shops at Point St. Charles, Montreal. There is also frequent consultation with the automobile industry on the provision of special equipment for handling shipments of automobiles to markets and of parts and components to assembly plants.

During 1964, a wide variety of freight equipment was purchased, including an additional 50 tri-level and 75 bi-level transporters for the movement of automobiles and trucks; 50070 -ton steel box-cars, 10 feet longer than the standard car; 100 specially designed flat cars for handling pulpwood and lumber traffic; four diesel-electric locomotives; and 500 steel hopper cars.

For the movement of express freight, the CN maintains a large truck fleet and a piggyback fleet of tractor-trailers which together provide door-to-door pickup and delivery service for most types of traffic. These services have enabled the company to recover much of the freight traffic lost in earlier years to other transport services, and also to participate in the movement of trailers of for-hire carriers and some of private ownership. Piggyback tonnage carried by CN increased by 5.9 p.c. in 1963 over the previous year.

Recently, the company has been implementing the Master Agency concept of expressfreight handling, which requires the co-ordination of road and rail services to provide customers in outlying, off rail-line points with the advantages of modern, centralized facilities, backed up by fast pickup and delivery. This concept integrates express and less-than-carload freight operations-a process that has been extended to various points across Canada-at main railheads that incorporate centralized, direct telephone line customer services. These have been established at Charlottetown, Halifax, Quebec City, Montreal, Toronto, Ottawa, Winnipeg, Edmonton and Vancouver, and at 13 other points where density of traffic requires them. Master Agency facilities feature the latest in materials-handling equipment-high speed conveyor belts, tape recorders and electronic billing aids; the larger centres can handle as many as 9,000 parcels an hour.

Co-ordination of road-rail operations also included the introduction of fast merchandise trains whose primary function is moving express and less-than-carload freight at high speed. These trains handle all package traffic to the railheads where it is sorted and immediately distributed to waiting trucks. Also, the removal of express and mail service from passenger trains has resulted in faster and more dependable passenger service and enabled the company to time express services to better suit the needs of shippers and industry.

## RAILWAY INNOVATIONS

Canada's railways have entered a new cycle in which continuous and rapid change is necessary to keep them abreast of the requirements of a dynamic and competitive economy. To share in the country's progress, they strive to provide the most efficient means of transport for a tremendous and growing variety of goods in large or small quantities, as well as the most pleasant and comfortable service for the travelling public.

Freight accounts for most of the railway traffic and the greatest recent advances in railroading technology have undoubtedly been those related to the sorting and segregating of freight cars. The modern "hump yard" uses rador computers and closedcircuit television and is heavily automated. The new CN yard at Toronto covers 1,000 acres, has 156 miles of track and can process 6,000 freight cars daily.

Hawker Siddeley Canado, LId.

In recent years, fast freight trains have been introduced in transcontinental service. The first of these was the Highballer that went into service in 1961 between Montreal/ Toronto and the West Coast. A similar east-bound freight train was inaugurated in 1962 which improved the Vancouver-to-Montreal/Toronto schedule by 24 hours. Incentive freight rates, designed to encourage full-carload traffic, were introduced in 1961 in the central provinces of Quebec and Ontario on all classes of goods except those not suitable for pickup and delivery, and were later extended to the Maritimes and then to Western Canada.

Since the end of World War II, CN has constructed some 1,500 miles of branch lines, more than any other railway in North America; most of the new line is in the northern part of the country, primarily to serve mineral extraction developments. The largest current project is the 430 -mile Great Slave Lake Railway being built from Roma in Alberta to Hay River in the Northwest Territories to provide market access for the zinc and lead resources of the Pine Point mine. Steel was being laid across the Alberta-Northwest Territories border during the summer of 1964 and the railway is scheduled for completion in 1965.

A rail-car-barge service from Prince Rupert, B.C., to southwestern Alaska, connecting at Whittier with the Alaska Railroad, has been in operation for two years. The trip from Prince Rupert to Whittier is one of the world's longest regularly scheduled barge tows.

## Canadian Pacific Railway Company*

To meet the challenge of today's fast-changing transportation markets, few industries have had to refine their methods to the same degree as Canada's railways, and few have been as successful.

In the realm of passenger service, Canadian Pacific's stainless steel, scenic dome streamliner The Canadian is one of the most advanced types of railway passenger equipment in North America. With its appearance in 1955 came the first extensive use on the Continent of plastic panelling on the interiors of passenger equipment; it was the first passenger train in Canada to feature stainless steel exteriors. Canadian Pacific is now one of the world's largest operators of stainless steel, self-propelled rail diesel passenger cars-rapid, smooth-riding vehicles, specifically tailored for the transport of passengers in lower density areas.

Although the railway completed its tremendous dieselization program only four years ago, it has already begun to renew the older elements of its diesel fleet by re-equipping with locomotives of more advanced design, greater reliability, greatly increased horsepower and lower maintenance costs per horsepower. It is the first railway in Canada to implement a major up-grading program in this area of operations.

Throughout its vast transportation system, Canadian Pacific has made many advances, taking immediate advantage of progressive electronic technological innovations. Electronic controls now govern the movement of trains across the country and through the newer terminal freight yards; computers facilitate research, operating, costing and marketing procedures; and an intricate telecommunications network speeds service.

To implement the new and faster handling methods available, additional customer services have been introduced, such as the freight movement concept by which package freight is handled by rail, road, water and air through the same organization (Merchandise Services), using the most economical mode or combination of modes of transport. Also, an aggressive sales approach takes the railway to the customer through industry service representatives who know transportation problems and how to alleviate them.

Freight Services.-Canadian Pacific has made many contributions to the development and expediting of freight-handling methods in Canada. Since the beginning of 1964, technological achievements have been recorded in almost every segment of the system through the co-operation of transportation suppliers, co-ordinated teamwork within the corporation and, in some instances, the National Research Council.

[^214]While it is difficult to place emphasis on a particular development, one innovation-a versatile plastic temperature-controlled container-has been received with such enthusiasm both in Canada and abroad that its distinctive Canadian character is noteworthy. The idea for such a container arose out of the need for a method of shipping perishable commodities at temperatures adhering to quality control codes both in Canada and abroad, expediting movement of such commodities in transit and, ultimately, reducing handling procedures and costs.

Railway researchers assessed and decided to use a design of the English firm, Mickleover Transport Ltd.-a frameless all-plastic insulated container, the largest one-piece reinforced plastic moulding ever produced, made of a rigid foam core (Polyurethane) sandwiched between an inner and outer skin of polyester resin-bounded fibreglass laminate, in which a series of stiffening webs bonded to the core blocks and the inner and outer skin are incorporated. Production techniques and structural properties of the container provide great rigidity and high impact resistance. It is immune to corrosion and its plastic panelling is contamination-proof. This container, therefore, was considered to be the most suitable replacement for traditional materials (such as steel) for equipment in intermodal transportation subject to stress, vibration and rust.

The refrigeration power pack includes evaporator, condenser, compressor, air-cooled diesel-electric generator, sea water heat exchanger, fuel tank and all automatic controls. It uses the air-cooled diesel-electric generator when operating over the highway, on piggyback, or on the deck of a ship. It is also capable of running off a ship's electric power and when below deck the condenser can be cooled by means of the sea water heat exchanger. These arrangements permit perishable traffic to be handled from origin to destination by highway, rail or ship, at evenly maintained specified temperatures.

Exterior hardware adds flexibility to the container: a highway bogie may be attached to the bottom of a container for road or piggyback movement; a fifth wheel assembly permits hook-up and movement of container by road tractor; the coupling feature permits two similar containers to form a 40 -foot trailer; lifting lugs permit the wheel assembly to be removed at the wharf and the container to be loaded into a ship's hold; and securing and stacking arrangements permit the container to be locked to a ship's deck and to containers loaded on top of each other.

The system of reverse airflow envelope cooling installed in the container was perfected at the request of the Department of Fisheries by the Division of Applied Biology of the National Research Council for use in highway transport refrigerated trailers. It is considered to be the only sure method of maintaining proper temperatures for frozen foods as prescribed by the Canadian Food Processors' Association voluntary code for handling frozen foods as well as the ARDOFS code of the United States which is now mandatory in certain States.

The highway transport refrigerated trailers were introduced by Canadian Pacific in 1963. Initially, 25 were placed in service, carrying fresh meat and meat products by highway or rail piggyback between the meat processing centres of Alberta and Winnipeg, Toronto and Montreal. These trailers proved so efficient that Canadian Pacific ordered an additional 28 and extended the service to Vancouver. Each trailer is capable of handling between 30,000 and $40,000 \mathrm{lb}$. of meat. They are operated by a relatively new traffic department of the Canadian Pacific called Merchandise Services (CPMS). This department has taken over and consolidated the functions in Western Canada of less-than-carload (l.c.l.) freight, express and Canadian Pacific Transport. It serves from Victoria to Port Arthur, linking with piggyback throughout the system and with Canadian Pacific Express, l.c.l. freight and Smith Transport in Eastern Canada.

CPMS operates several large terminals, the largest of which was completed late in 1963 at Winnipeg at a cost in excess of $\$ 1,000,000$. It is possibly the most modern package freight terminal in the world. Operating methods in these terminals are fascinating as well as functional. So efficiently have they been designed that a package can be unloaded from
a pickup truck, passed through a sorting centre and loaded into the proper railway car or trailer to be rushed to its destination in a fraction of the time formerly required under the manual method.

In Eastern Canada, where the density of package freight, l.c.l. and transport traffic is even greater, separate departments continue to make use of more efficient operating methods. Canadian Pacific Express, for instance, recently placed in service one of the latest methods of containerization. The first two of a potential fleet of standard-sized aluminum insulated containers are in service between Montreal, Toronto and points in southwestern Ontario. Perishable express freight is picked up anywhere by one of the containers which is carried on a transfer device pulled by a highway tractor. At railhead, the container is transferred onto a specially constructed flat car, the transfer taking two minutes. At destination the container is hauled to a terminal point for distribution or directly to the consignee's facilities. Another form of containerization-a relatively small wire cage type container-is being used by the Express company between Montreal and Maritime points. One of these cages, destined for a particular city or area, is loaded with express parcels at Montreal, fork-lifted into an express car on a passenger train and sped to destination with a minimum of handling.

There are a great many commodities to be moved that cannot be containerized. Most of Canada's foreign dollar-earning power comes from the export of raw materials in the form of minerals, forest products and grain, for the movement of which Canadian Pacific provides the most up-to-date freight-car facilities. For some products, it has been necessary to make substantial investments for specialized equipment: pneumatically operated dropbottom gondola cars are used to haul gypsum in Nova Scotia; aluminum tank-type hopper cars are in service carrying potash from Saskatchewan to tidewater and world markets; tri-level cars transport automobiles from the manufacturing areas of Ontario to all parts of Canada; bi-level cars serve much the same purpose but are used mainly to carry trucks; bulkhead-end flat cars, originally conceived to carry forest products, have been put into service carrying great quantities of shingles and piping; longer, more elaborate box-cars have been introduced for the newsprint industry; and damage-dunnage free bulkhead boxcars, which are also insulated, are being used to carry canned goods, electrical appliances and bottled goods, or almost anything normally shipped in cartons.

Specialization of freight equipment includes the modifying of freight cars already in use as well as the designing of new cars. On Canadian Pacific drafting boards are many new designs-all of which are the product of the current upsurge in railway research. And coincident with the advances in freight equipment has been the need for increased motive power capacity. Several locomotives have recently been upgraded to produce greater power output and incorporate other design changes: the locomotive bodies were pressurized to keep out dirt and moisture and thereby secure from electrical and diesel engine components a longer working life and better performance; running gears were improved; fuel capacity was improved without increasing total weight; new transistorized electrical apparatus was installed; and brake capacity was increased. In 1964, Canadian Pacific took delivery of twelve 2,500-hp. diesel units-the most powerful in use in Canada today.

At one time or another, most Canadian Pacific freight equipment passes through the railway's new Toronto freight yard-the most advanced automated freight classification operation in Canada and perhaps the world. The $\$ 15,000,000$ yard, which cuts in half the handling time for freight cars passing through the Toronto area, was completed in June 1964. It makes use of radar, television, an electronic computer, radio, integrated data processing, microwave, automatic switching devices and several remote-control systems to sort freight cars and group them into trains bound for common destinations. The Toronto yard is the fifth push-button type of classification yard put into operation by Canada's railways, but surpasses the others in the degree of efficiency of its automatic features. It incorporates the first transistorized centralized traffic control system in Canada, which allows one man to control the more than 1,000 train movements made each day over the rail approaches to the yard.

## Subsection 1.-Milage and Equipment

Construction was begun in 1835 on the first railway in Canada-the short link of 14.5 miles between Laprairie and St. Johns, Que.-but only 66 miles were in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and the Great Western Railways were built as well as numerous smaller lines. The building of the Intercolonial and the Canadian Pacific railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last period of extensive railway building (1900-17), the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

There has been little change in total track milage since the late 1920 's, although in recent years the development of a number of large projects in districts far removed from transport facilities and the opening up of the Northwest Territories has necessitated the building of branch lines. Those completed up to 1956 are listed in the 1957-58 Year Book, p. 815, and those completed from that year to 1962 are mentioned in subsequent editions. In 1963, work continued on the 430 -mile Great Slave Railway being built by the CNR for the Federal Government. At year-end, 226 miles of track had been completed and clearing, grading, bridge and trestle work progressed on the remaining portion; the right-of-way is being opened for service as construction proceeds. Other new line completions during 1963 included a 61 -mile extension by the CNR in the Mattagami Lake region of northwestern Quebec; a 15 -mile branch line from Nepisiguit Junction in New Brunswick to a zinc-copper mining property; and an eight-mile extension from Chisel Lake to Staff Lake in northern Manitoba. A branch line extending some 16 miles south from Bredenbury, Sask., was completed by the CPR. In 1963, the PGE began construction of a 100 -mile extension from Summit Lake, 35 miles north of Prince George, to Fort St. James; it is scheduled for completion in 1965.

## 1.-Railway Track Milage Operated, 1900-63

Nots.-Figures of total milage of first main track operated for 1835-1909 are given in the 1941 Year Book, p. 546; for 1911-14 in the 1951 edition, p. 786; for 1916-24 in the 1955 edition, p. 830; and for 1926-49 in the 1956 edition, p. 792.

${ }^{2}$ Excludes joint track amounting to 52 miles in 1960, 53 miles in 1961, 55 miles in 1962 and 61 miles in 1963.

Rolling-Stock.-Table 2 shows the numbers of the various types of freight and passenger equipment in operation in 1959 and in 1963, revealing a generally downward trend during the period; however, these figures do not reflect the trend toward larger, more efficient cars and locomotives. Each year hundreds of units, particularly freight cars, are converted and modified to make them suitable for specific types of traffic or replaced by special-purpose equipment designed for distinctive hauling jobs. The average capacity of all freight cars was 52.4 tons in 1963 compared with 51.1 tons in 1959. There were 3,385 locomotives in service at the end of 1963 as against 4,720 in 1959. Diesel-electric locomotives increased 6.1 p.c. in number during the period but coal- and oil-burning steam engines all but vanished from the rails. In addition to the reduced maintenance costs characteristic of diesel motive power, these units, in comparison with steam locomotives, are able to haul heavier trains over longer distances at increased speeds.

## 2.-Railway Rolling-Stock in Operation as at Dec. 31, 1959 and 1963

[^215]
## Subsection 2.-Finances

The tables in this Subsection give information on capital liability and capital investment, earnings, operating expenses, employees and their earnings and government aid to all railways.* Financial statistics of government-owned railways are given separately and in detail in Subsection 4. A Uniform Classification of Accounts for common carriers became effective for the Canadian National and the Canadian Pacific Railways on Jan. 1, 1956, and for all other common carrier railways on Jan. 1, 1957. In transportation statistics a distinction is made between expenditures and expenses. In this Subsection, the term 'expenses' is used as defined in the Uniform Classification of Accounts and refers to the expenses of furnishing rail transportation service and of operations incident thereto, including maintenance and depreciation of the plant used in such service.

Capital Liability and Investment.-The capital liability of railways operating in Canada for the years 1954 to 1963 is shown in Table 3. The decrease of $\$ 39,740,408$ in 1963 over 1962 compares with an increase in investment in road and equipment property of $\$ 15,572,931$ as shown in Table 4.

[^216]
## 3.-Capital Liability of Railways, 1954-63

Note.-Figures for 1876-1925 are given in the 1927-28 Year Book, p. 649; those for 1926-41 in the 1947 edition, p. 662; and those for 1942-53 in the 1963-64 edition, p. 758.
(Exclusive of Canadian railway capital owned by Canadian railways)

Revenues and Expenses.-The ratio of operating expenses to revenues of railways operating in Canada was 94.99 p.c. in 1963 compared with 93.07 p.c. in 1954; the high for the period 1954-63 was 97.30 p.c. recorded in 1958. Operating revenues, which reached an all-time high in 1956, increased 10.5 p.c. over the ten years. Operating expenses increased 12.8 p.c. during the same period. Because outlay increased more rapidly than income, the net operating revenue per mile of line dropped from $\$ 1,760$ in 1954 to $\$ 1,356$ in 1963, although the lowest figure during the period was recorded in 1958 at $\$ 696$.

## 5.-Operating Revenues and Expenses of Railways, 1954-63

Note.-Operating revenues and expenses from 1875 are given in previous editions of the Year Book beginning with the 1916-17 edition.

| Year | Total Operating Revenues | Total Operating Expenses | Ratio of Operating Expenses to Operating Revenues | Per Mile of Line |  |  | FFreightTrain <br> Revenue per <br> Freight- <br> Train Mile | Passenger-TrainRevenueperPassenger-TrinMile |

| 1959. | 1,224,567,928 | 1,166,306,724 | 95.24 | 27,093 | 25,804 | 1,289 | 15.48 | 3.29 |
| 1960. | 1,151,655,456 | 1,109,470,426 | 96.34 | 25,544 | 24,608 | 936 | 15.54 | 3.46 |
| 1961. | 1,156,480,700 | 1,114,432,525 | 96.26 | 25,736 | 24, 800 | 936 | 16.72 | 3.32 |
| 1962. | 1,165,296,722 | 1,119,662,072 | 96.08 | 26,002 | 24,984 | 1,018 | 16.91 | 3.56 |
| 1963. | 1,210,209,799 | 1,149,530,526 | 94.99 | 27,051 | 25,695 | 1,356 | 17.04 | 3.51 |

[^217]Of the total operating expenses in 1963 , amounting to $\$ 1,149,530,526$, those connected with the transporting of persons and property, such as station, yard and terminal services and employees, wharves, fuel, etc., accounted for 37.2 p.c.; equipment maintenance accounted for 22.6 p.c.; road maintenance for 21.1 p.c.; rents and taxes for 5.9 p.c.; expenses connected with traffic soliciting, such as advertising and information, ticket and freight offices, etc., for 2.7 p.c.; and miscellaneous expenses, including incidentals, dining and buffet services, grain elevators, etc., for the remaining 10.5 p.c. These proportions have remained fairly constant in recent years.

Employment, Salaries and Wages.-Rail employment in 1963 declined 3.9 p.c. from the preceding year; it was 27.3 p.c. lower than the 1956 high and 15.9 p.c. lower than the ten-year average, 1954-63. Compared with 1954, total compensation increased 14.4 p.c. and the average annual salary for the industry increased 43.4 p.c. Rail employment decreases, which have been continuous since 1956, are attributable in part to business losses but to a greater extent to technological and organizational changes.

## 6.-Railway Employees and Their Earnings, 1954-63

Nore.-Figures include employees and wages for 'outside' operations amounting to from 3 to 6 p.c. of total employees and from 2 to 5 p.c. of total salaries and wages. Figures for $1912-39$ are given in the 1941 Year Book, p. 551; for $1940-49$ in the 1951 edition, p. 723; and for 1950-53 in the 1961 edition, p. 785.

| Year | Employecs | Total Salaries and Wages | Average Salaries and Wages | Ratio of Total Payroll (charged to operating expenses) to- |  |

[^218]Government Aid to Railways. - In order that the private railways of Canada might be constructed in advance of settlement as colonization roads or through sparsely settled districts where little traffic was available, it was necessary for federal and provincial governments and even for municipalities to extend some form of assistance. The form of aid was usually a bonus of a fixed amount for each mile of railway constructed and, in the early days, grants of land were also made other than for right-of-way. As the country developed, objections to the land-grant method became increasingly apparent and aid was given more frequently in the form of a cash subsidy for each mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling-stock, have been guaranteed by the Federal Government.

During the era of railway expansion before 1918, provincial governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. These bonds as they mature or are called are paid off by the Canadian National Railways, in large measure through funds raised by the issue of new bonds with Federal Government guarantee. Railway bonds guaranteed by the Government of Canada at Dec. 31, 1963 amounted to $\$ 1,378,875,000$.

For some years the Federal Government has been assisting shippers by bearing a portion of rail transportation costs on certain types of traffic moving between and within specific areas of Canada. Reimbursement to the railways for diminution of revenue resulting from these reductions has been provided through four principal plans: the Freight Rates Reduction Act (SC 1959, c. 27), which reduces for shippers, on certain classes of traffic, the full effect of the last freight rate increase authorized by the Board of Transport Commissioners for Canada in 1958; the East-West Bridge Subsidy, which provides reduced rates to shippers on certain traffic moving between Eastern and Western Canada; the Maritime Freight Rates Act (RSC 1952, c. 174), which reduces rates to shippers on traffic moving within and out of the Atlantic Provinces; and interim payments related to recommendations of the MacPherson Royal Commission. (See also p. 753.)

## Subsection 3.-Passenger and Freight Traffic

Tables 7 and 8 show passenger and freight statistics for all railways for the years 1959-63. A separate analysis of the operations and traffic of the Canadian National Railways is given at pp. 769-772.

## 7.-Statistics of Passenger Service and Revenue, 1959-63

Note.-Figures for earlier years are given in the corresponding table of previous Year Books.

|  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Item |  |  |  |

${ }^{1}$ Includes express, baggage, mail and other cars.
2 Duplications included.

## 8.-Statistics of Freight Service and Revenue, 1959-63

Note.-Figures for earlier years are given in the corresponding table of previous Year Books.

| Item |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: |

${ }^{1}$ Includes caboose miles but excludes miles made in passenger and non-revenue trains. ${ }^{2}$ Excludes traffic handled by more than one railway; see Table 9 for details of freight carried.

The total tonnage of revenue freight carried (including national loadings and receipts from United States rail connections) was 6.7 p.c. higher in 1963 than in 1962. All the main commodity groups showed increases over the previous year. Of the $171,735,626$ tons
carried in 1963 (excluding freight handled by more than one railway and in intermediate switching), mine products accounted for 41.8 p.c., manufactures and miscellaneous products for 30.3 p.c., agricultural products 17.1 p.c., forest products 9.3 p.c., animal products 0.9 p.c., and less-than-carload freight for 0.6 p.c.

## 9.-Commodities Hauled as Freight by Railways, 1959-63

Note.-In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Cansdian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

Railway Accidents.-Accidents shown in Table 10 include all those in which railway trains were involved and accidents on railway property; all passengers injured are included but, for employees, only those who were kept from work for at least three days during the 10 days following the accident are recorded. The classification of accidents used in reporting other DBS statistics treats collisions between motor vehicles and trains as motor vehicle accidents. Therefore, care should be exercised when compiling total accidental deaths of all kinds or when comparing results of accidents of different kinds, such as train and motor vehicle.

## Subsection 4.-The Canadian National Railway System*

In view of the interest in Canada's publicly owned railway, the Canadian National Railway System is given separate treatment in this Subsection. More detailed information than can be given here is obtainable from DBS annual report Canadian National Railways (Catalogue No. 52-201).

Financial Statistics.-The original financial structure of the CNR and the steps taken through the Capital Revision Acts of 1937 and 1952 to alleviate the burden of interest debt undertaken by the company on its formation in 1923 are described in the 1955 Year Book, pp. 840-847. Briefly, the Capital Revision Act of 1937 wrote off all loans that had been made to cover deficits and also unpaid interest on loans, and certain loans made for the purpose of additions and betterments were converted to equity capital, relieving the CNR from paying fixed charges on this amount. Under the 1952 Capital Revision Act, 50 p.c. of the company's interest-bearing debt was changed to preferred stock on which, after settling income taxes, a dividend of 4 p.c. is paid on earnings. Also, for a term of ten years ended Jan. 1, 1962, the Railway was not obliged to pay interest on $\$ 100,000,000$ of its longterm debt. The Government is authorized to buy additional preferred stock annually in amounts related to the company's gross revenues. As a consequence, the proportion of total capitalization represented by equity capital in shareholders' account was raised from 34.5 p.c. at Dec. 31, 1951 to 67.2 p.c. at Jan. 1, 1952, and the proportion of borrowed capital was correspondingly reduced. By the end of 1963 , the proportion represented by equity capital in shareholders' account was just under 50 p.c.

[^219]11.-Capital Structure of the Canadian National Railway System as at Dec. 31, 1954-63

The financial details presented in Table 13 are those of the entire Canadian National Railway System, including both Canadian and United States operations. Revenues and expenses include those of express and commercial communications throughout, and highway transport (rail) operations from 1956. In conformity with the requirements of the Uniform Classification of Accounts, tax accruals and rents have been charged to operating expenses since Jan. 1, 1956.

## 13.-Total Revenue, Operating Expenses, Net Revenue. Fixed Charges and Deficits of the Canadian National Railway System (Canadian and United States Operations), 1954-63

Note.-Figures for 1911-5? are given in the corresponding table of previous Year Books beginning with the 1036 edition.

${ }^{1}$ Because of a change in the method of compiling passenger traffic statistics, the figures for 1962 and 1963 are not comparable with those for the earlier years shown.

## Section 2.-Express Companies

There are five express organizations operating in Canada. The Canadian Pacific Express exists as a subsidiary of the Canadian Pacific Railway Company, and the express business of the Algoma Central and Hudson Bay Railway, the Canadian National Railway System and the Northern Alberta Railways Company is handled by departments of the respective railways. The Railway Express Agency Incorporated of the United States operates mainly over the Canadian sections of U.S. rail lines.

Express companies are organized under federal legislative authority. They are primarily engaged in the rapid transportation of package freight but their services also include custom brokerage, money orders, travellers cheques and other financial paper transactions. Recently, the major railways have introduced a unified service for handling small package express freight and less-than-carload-lot shipments, using the efficient facilities of their rail, piggyback and highway transport services to provide fast and competitive movement of goods.

No statistics are available on the volume of express freight handled because much of it consists of parcels and small lots which cannot be classified. Table 15 shows the milages operated by and the financial statistics of the express agencies for 1959-63, with figures by company for 1963.

## 15.-Summary Statistics of Express Companies, 1959-63

Note.-Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.

| Year or Company | Milages Operated in Canada ${ }^{1}$ | Gross Earnings | Operating <br> Expenses ${ }^{2}$ | Express Privileges ${ }^{3}$ | Net Operating Revenue |

${ }^{1}$ Over railways, boat lines, motor carrier and aircraft routes. ance with the Uniform Classification of Accounts adopted Jan. 1, 1956. to the carriers, i.e., railways, steamship lines, etc., for transporting express matter.

Business transacted by express companies in financial paper is showing a downward trend, declining from $\$ 155,035,926$ in 1959 to $\$ 135,523,112$ in 1963. The 1963 total was made up of: domestic and foreign money orders, $\$ 107,414,528$; C.O.D. cheques, $\$ 18,089,947$; travellers cheques, $\$ 9,979,934$; and telegraphic transfers, $\$ 38,703$. The major decrease was shown in the amount of money orders issued.

The number of persons employed by express companies has also decreased over the five-year period. Employment (full-time and part-time) was provided for 8,282 persons in 1963 , to whom $\$ 35,386,525$ was paid in salaries and wages; this compared with 11,411 employees in 1959 , receiving $\$ 42,673,976$ in salaries and wages. Commissions paid dropped from $\$ 2,985,627$ to $\$ 2,316,610$ over the same period.

## PART III.-ROAD TRANSPORT*

Highways and motor vehicles are herein treated as related features of transportation. An introductory Section summarizes provincial regulations regarding motor vehicles and motor traffic.

## Section 1.-Provincial Motor Vehicle and Traffic Regulations $\dagger$

Note.-It is obviously impossible to include here the great mass of detailed regulations in force in each province and territory; only the more important general information is given. The source of information for detailed regulations for each province and territory is given at pp. 775-776.

The registration of motor vehicles and the regulation of motor vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. Regulations common to all provinces and territories are summarized as follows.

Operators' Licences.-The operator of a motor vehicle must be over a specified age, usually 16 years ( 17 in Newfoundland and 18 for class A licence in Alberta), and must carry a licence, obtainable in most provinces only after prescribed qualification tests. Such licence is renewable annually, except in Alberta and British Columbia where it is renewable every five years, in New Brunswick and Manitoba where it is renewable every two years and in Ontario where a licence is issued on a three-year basis and expires on the licensee's birth date. Special licences are required for chauffeurs in all provinces except Newfoundland and in some jurisdictions special licences may be granted to those who have not reached the specified age.

Motor Vehicle Regulations.-All motor vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back of trailers); in New Brunswick one licence plate is issued to be attached to the front of truck tractors and to the rear of all other vehicles. In most provinces, in event of sale the registration plates stay with the vehicle but in Quebec, Manitoba, Saskatchewan and Alberta the plates are retained by the owner. In Nova Scotia, vehicles pass from owner to owner by due process of law and title must be secured before issue of plates and permit. A change of ownership of the vehicle must be recorded with the registration authority. However, exemption from registration is granted for a specified period (usually at least 90 days, except in Quebec where the maximum is 90 days, in British Columbia where it is six months and in Ontario where it is six months for vehicles from other provinces and three months for vehicles registered outside Canada) in any year to visitors' private vehicles registered in another province or a state that grants reciprocal treatment. Regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes and stipulate that equipment include non-glare headlights, a proper rear light, a muffler, a windshield wiper, a rear-vision mirror, and a warning device.

[^220]Traffic Regulations.-In all provinces and territories, vehicles keep to the righthand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. The speed limit in Prince Edward Island, Quebec and New Brunswick is 60 miles an hour in daytime and 55 at night; in Manitoba and Alberta it is 60 in daytime and 50 at night, with the exception of a few selected sections of four-lane highway in Alberta where maximum speeds in excess of the foregoing may be authorized and posted. In Nova Scotia the limit is a "reasonable and prudent" speed, with a maximum of 60 miles an hour except where 65 miles an hour is authorized. In Ontario maximum speeds vary from 50 to 60 miles an hour, depending on type of highway. In the other provinces the maximum speed permitted is normally 50 miles an hour; in Saskatchewan where higher speed limits are in effect they are posted. Slower speeds are always required in cities, towns and villages, when passing schools and public playgrounds, at road intersections, railway crossings or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. In almost all provinces, truck speed limits are at least five miles an hour below automobile speed limits. In all provinces and territories, accidents resulting in personal injury or property damage of $\$ 100$ or more must be reported to a police officer (in Quebec to the Motor Vehicle Bureau) and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

Driver Licensing Controls.-All provinces impose penalties for infractions of driving regulations, ranging from fines for minor infractions to suspension of the operator's driving permit, impounding of the car, or imprisonment for more serious infractions. In most provinces penalties have been linked to a driver-improvement program, the aim of which is to correct faulty driving habits, not to take drivers off the road. The most common driver-improvement program includes the demerit-point-system.

Safety Responsibility Legislation.-Each province has enacted legislation under this heading (sometimes referred to as financial responsibility legislation). In general, these laws provide for the automatic suspension of the driver's licence and motor vehicle permit of a person convicted of a serious offence (impaired driving, driving under suspension, etc.) or a person involved directly or indirectly in an accident who is not covered for thirdparty insurance at the time of the accident. The suspension remains effective until any penalty or judgment has been satisfied and proof of financial responsibility for the future is filed. In Quebec, Saskatchewan, Alberta, British Columbia and the Yukon Territory, uninsured motor vehicles may be impounded following an accident of any consequence, i.e., an accident resulting in personal injury or death, or property damage in excess of $\$ 100$ ( $\$ 200$ in Saskatchewan and $\$ 250$ in British Columbia).

Although safety responsibility legislation has not been enacted in the Northwest Territories, under present requirements the owner of a motor vehicle resident in the Mackenzie Highway region must submit evidence of stipulated insurance coverage on such vehicle before he can obtain registration. In the Yukon Territory, proof of insurance must be supplied before vehicle licence is issued. When the insurance expires or is cancelled, vehicle licence plates must be returned to the Registrar of Motor Vehicles.

Unsatisfied Judgment Fund.-Legislation has been enacted in all provinces except Saskatchewan and in the territories, usually in the form of an amendment to the motor vehicle laws of the province or territory, providing for the establishment of a fund, frequently called an Unsatisfied Judgment Fund, out of which are paid judgments awarded for damages arising out of motor vehicle accidents in the province which cannot be collected in the ordinary process of law. In Newfoundland, Prince Edward Island, Nova Scotia, Quebec and British Columbia the fund is maintained by insurance companies. In all the other provinces, except Saskatchewan where insurance is compulsory, the funds are obtained by the annual collection of a fee from the registered owner of every motor vehicle or from every person to whom a driver's licence is issued. The fee does not exceed $\$ 1$ per
annum except that Ontario and Alberta collect $\$ 20$ from each uninsured owner of a motor vehicle at the time of registration or transfer and Manitoba (effective Mar. 1, 1965) collects an additional $\$ 25$ from each uninsured owner at the time of registration. A feature of this legislation, which is contained in some provincial statutes, is the provision for the payment of judgments in 'hit-and-run' accidents. When these occur, if neither the owner nor the driver can be identified, action may be taken against the Registrar of Motor Vehicles (the Minister of Finance in Newfoundland); any judgment secured against the responsible authority is paid out of the Fund. All of these laws contain a provision limiting the amount that can be paid out of the Fund on one judgment. In Newfoundland and Nova Scotia, the limits are $\$ 10,000$ for one person, $\$ 20,000$ for two or more persons injured in one accident and $\$ 5,000$ for property damage. In Nova Scotia and New Brunswick (effective May 1,1965 ) the limit is $\$ 35,000$ in respect of any one accident. In Quebec the limit is $\$ 35,000$ for all damages in the same accident, subject to a deduction of $\$ 200$ from all damage to the property of others; damages resulting in bodily injury or death are, up to $\$ 30,000$, payable by priority over damages to property and the latter are, up to $\$ 5,000$, payable by priority over the former out of the amount of any insurance or other guarantee of indemnity. In British Columbia, the limit is based on the single amount of $\$ 35,000$, respectively, for any one accident with the proviso that not more than $\$ 5,000$ may be paid on a property damage claim until injury claims up to $\$ 20,000$ and $\$ 30,000$, respectively, have been satisfied; the $\$ 30,000$ limit exists in British Columbia for hit-and-run accidents but does not apply to payments for property damage. In Ontario and Alberta, the limits are $\$ 35,000$ for death or personal injury to one or more persons and $\$ 5,000$ for damage to property, subject to a limit of $\$ 35,000$ in any one accident. In Manitoba, the limit based on one accident is $\$ 35,000$ for claims for injury or property damage with the stipulation that not more than $\$ 5,000$ may be allocated to property damage until injury claims up to $\$ 30,000$ have been satisfied. In other provinces, lower limits of $\$ 5,000, \$ 10,000$ and $\$ 1,000$ are retained. For hit-and-run accidents payments are made for personal injuries only.

Sources of information on provincial motor vehicle and traffic regulations:-

## Newfoundland

Administration.-The Minister of Finance, St. John's.
Legislation.-The Highway Traffic Act, 1962.

## Prince Edward Island

Administration.-The Provincial Secretary, Charlottetown.
Legislation.-The Highway Traffic Act (RSPEI 1951, c. 73).

## Nova Scotia

Administration.-Registry of Motor Vehicles, Department of Highways, Halifax.
Legislation.-The Motor Vehicle Act (1954, c. 184, as amended) and the Motor Carrier Act (1958, c. 7, as amended).

## New Brunswick

Administration.-Motor Vehicle Branch, Provincial Tax Branch, Department of Provincial Secretary, Fredericton.
Legislation.-The Motor Vehicle Act (RSNB 1955, as amended).

## Quebec

Legislation.-The Highway Traffic Act (RSO 1960, c. 172, as amended), the Public Vehicles Act (RSO 1960, c. 337, as amended), the Public Commercial Vehicles Act (RSO 1960, c. 319, as amended) and the Motor Vehicle Accident Claims Act (1961-62, c. 84, as amended).
Manitoba
Administration.-Minister of Public Utilities, Winnipeg.
Legislation.-The Highway Traffic Act (RSM 1954, c. 112, as amended).

## Saskatchewan

Administration.-Treasury Department, Highway Traffic Board, Revenue Building, Regina. Legislation.-The Vehicles Act, 1957.

## Alberta

Administration and Legislation.-The Vehicles and Highway Traffic Act (RSA 1955, c. 356) and the Motor Vehicles Accident Indemnity Act (RSA 1955, c. 209) are administered by the Motor Vehicle Branch, Department of Highways, Edmonton. The Public Service Vehicles Act (RSA 1955, c. 265) and the Rules and Regulations are administered by virtue of authority vested in the Highway Traffic Board, Department of Highways, Edmonton.

## British Columbia

Administration and Legislation.-Enforcement of the Motor Vehicle Act, the Commercial Transport Act and the Motor Carrier Act is vested in the Royal Canadian Mounted Police and the various municipal police forces. The Motor Carrier Act is administered by the Public Utilities Commission, the Motor Vehicle Act by the Superintendent of Motor Vehicles and the Commercial Transport Act by the Minister of Commercial Transport, Victoria, B.C.

## Yukon Territory

Administration.-Commissioner of the Yukon Territory, Whitehorse, Y.T. Information regarding regulations may also be obtained from the Registrar of Motor Vehicles, Government of the Yukon Territory, Whitehorse, Y.T.
Legislation.-The Motor Vehicles Ordinance (Revised Ordinances 1958, c. 77, as amended).

## Northwest Territories

Administration.-Commissioner of the Northwest Territories. Address communications to the Deputy Commissioner of the Northwest Territories, 150 Kent St., Ottawa.
Legislation.-The Motor Vehicles Ordinance (Revised Ordinances of the Northwest Territories, 1956, c. 72, as amended).

## Section 2.-Highways, Roads and Streets

Highways and Roads.-The populated sections of Canada are well supplied with highways and roads. Access to outlying settlements is provided to some extent by roads built by logging, pulp and paper, and mining companies, although these are not generally available for public travel. At the same time, great areas of Newfoundland, Quebec, Ontario, the Prairie Provinces, British Columbia and the Territories are very sparsely settled and are virtually without roads of any kind.

At the end of 1962, the milage of highways and rural roads in Canada was 437,137, an increase of 7,133 miles over the 430,004 reported in 1961 . The 437,137 miles include all roads under provincial jurisdiction, federal roads, and local roads under municipal jurisdiction other than the milages in census metropolitan areas and urban centres of more than 1,000 population. The latter are given separately under the heading of "Urban Streets", p. 779.

## 1.-Highway and Rural Road Milage classified by Type and by Province, 1962 with Totals for 1958-62

Note.-Excludes urban streets but includes milages under jurisdiction of rural and small urban municipalities; excludes milages of all roads on Indian reservations except those of flexible pavement.

${ }^{1}$ Includes federal administrative costs re Trans-Canada Highway amounting to $\$ 198,500$ in 1961-62 and $\$ 201,000$ in 1962-63.

The Trans-Canada Highway.-The original federal-provincial agreement for construction of the Trans-Canada Highway is given in outline, together with data on specifications and route across the participating provinces, in the 1951 Year Book, pp. 631634. Construction progress and changes in legislation are reported in subsequent editions.

Under the Act, which became effective Dec. 10, 1949, agreements covering the Federal Government's participation in the cost of construction were entered into with each of the provinces. Construction standards were set and the date of completion fixed. The shortest practicable east-west route was to be designated by each province within its own borders, in agreement on terminal points with adjoining provinces, and those sections within the National Parks were to be the responsibility of the Federal Government. Later amendments to the Act increased the extent of federal financial participation and extended the period in which construction costs might be incurred under the Act to Dec. 31, 1967.

Although construction was still going on in a number of sections, the closing in 1962 of the last major gap-in the Rocky Mountains-made it possible for the first time to drive the entire length of the 4,860 -mile route. The Trans-Canada Highway was officially opened on Sept. 3, 1962.

Provincial milages are approximately as follows: Newfoundland, 540; Prince Edward Island, 71; Nova Scotia, 318; New Brunswick, 390; Quebec, 399; Ontario, 1,453; Manitoba, 309; Saskatchewan, 406; Alberta, 282; and British Columbia, 552. Length through the National Parks totals 140 miles.

Up to Mar. 31, 1964, contractual commitments for new construction on the Highway amounted to $\$ 806,308,072$, of which the federal share was $\$ 492,764,659$. Federal payments to the provinces for prior, interim and new construction totalled \$413,741,225. Paving to
specified standards had been completed over a distance of 3,414 miles and 699 bridges, overpasses and other structures of more than 20 -foot span had been or were being constructed.

Roads to Resources and Roads in the North.-The Roads to Resources Program is a national undertaking designed to provide access to areas potentially rich in natural resources. Negotiations commenced in 1958 led to agreements being signed with all ten provinces that will eventually result in the construction or reconstruction of more than 4,700 miles of road. Progress of the program to June 30, 1964 was as follows:-

| Province | Estimated <br> Total Cost | Value of Approved Contracts | Provincial Expenditurel | Federal Contribution | Total <br> Milage | Milage Completed |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^221]As shown above, the total estimated cost in several provinces exceeds $\$ 15,000,000$, the amount shareable under the agreement, but the federal contribution to each province will remain at $\$ 7,500,000$. Private industry has shared in the cost of certain roads where construction has been of most direct benefit to the company concerned.

In any province the program may consist of as many projects as can qualify for inclusion and for which funds are available. At mid-1964 there were approximately 100 roads completed or under way, varying considerably among the provinces in number, milage and purpose. In Prince Edward Island, 30 comparatively small projects had been undertaken, but the one project under way in British Columbia was a 321 -mile road being constructed over very difficult terrain to a mining area in the northern interior. In most provinces, the majority of the roads being built under the program are intended for the purpose of opening up regions to primary resource development and exploration. In Prince Edward Island and Nova Scotia, on the other hand, a number of routes have been chosen for their tourist potential.

The Development Road Program in the Yukon Territory and the Mackenzie District of the Northwest Territories is distinct from the Roads to Resources Program in that the Federal Government is responsible for construction; in the Roads to Resources Program, the contribution of the Federal Government is wholly financial. Maintenance costs of Roads to Resources are borne by the provinces but Northern Roads costs are shared by the Federal and Territorial Governments on an 85-15 basis.

In the Yukon Territory about 900 miles of road will be built at an estimated cost of $\$ 36,000,000$, the largest projects under way being the construction of the Watson LakeRoss River road and the reconstruction of 16 miles of the Whitehorse-Keno road. In the Northwest Territories, more than 1,300 miles of road will be built at a cost of $\$ 64,000,000$; the largest single project under construction is the Hay River-Fort Smith highway with its branch road to Pine Point.

Federal assistance to mining companies for exploration and development work in the territories includes road construction. Where two or more companies are developing a mineralized region, a mine development road may be built and paid for by the Federal Government. Also, two thirds of the cost of a mine-access road may be paid by the Federal Government, and one half the cost of a basic tote-trail may be contributed by the Territorial Government concerned. Tote-trail assistance will be financed from a $\$ 50,000$ fund provided to each Territorial Government by the Federal Government.

Urban Streets.-Information on urban streets is obtained from the local administrations of all areas with populations over 1,000 , all areas located within census metropolitan areas, improvement districts over 1,000 population and rural municipalities over 15,000 population. Brief statistical data are given in Table 3 ; more detail may be obtained from DBS annual report Road and Street Mileage and Expenditure (Catalogue No. 53-201).
3.-Statistics of Urban Streets, 1958-62

${ }^{1}$ Includes expenditures on sidewalks, footpaths, bridges and ferries.

## Section 3.-Motor Vehicles

Motor Vehicle Registrations.-Registrations continue to increase year by year, a record of $6,074,655$ being reached in 1963 . Of that total, $4,788,896$ were passenger carsone for every 3.9 persons. Registrations by province are given in Table 4 and types of vehicles registered by province in Table 5.

## 4.-Motor Vehicles Registered, by Province, 1954-63

#### Abstract

Note.-Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for 1904-53 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

${ }^{1}$ Includes taxis. $\quad 2$ Includes service cars, road tractors, etc. ${ }^{3}$ Included with trucks.
Apparent Supply of Automobiles.-The apparent supply of automobiles in Canada in any year is computed by deducting the number exported from the sum of the production and imports. Statistics regarding retail sales and the financing of motor vehicle sales are given in Chapter XXI on Domestic Trade and Prices.

[^223]Provincial Government Revenue from Motor Vehicles.-The taxation of motive fuels, motor vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial government income. In every province licences or permits duly issued by the provincial authorities are required for motor vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. In 1963 the average cost per motor vehicle for operating taxes and licences was about $\$ 122$.

The more important sources from which provincial revenue from motor vehicles is derived are shown in Table 7. Motive fuel tax rates are given in the Public Finance Chapter, Section 2, Subsection 2 on Provincial Taxes; Federal Government revenue from import duties, excise and sales taxes is given in the same chapter, Section 3, Subsection 3 on Revenue from Taxation.

## 7.-Provincial Revenue from the Registration and Operation of Motor Vehicles, by Province, Years Ended Mar. 31, 1963 and 1964

[^224]Sales of Motive Fuels.-In order to estimate the total amount of motive fuel purchased in Canada for use in motor vehicles on public streets and highways, it has been necessary to eliminate from the total the amount of motive fuel used for other purposes. Thus, from the total or gross sales, including imports and exports, the following are subtracted to obtain net sales: tax exempt sales to the Federal Government and other consumers, exports, and sales on which refunds were paid. Net sales are thus defined as sales on which a tax or taxes have been paid in full and are considered to approximate the actual amount of motive fuel purchased in Canada for use on public streets and highways.

As shown in Table 8, consumption of taxable gasoline, which is used almost entirely for automotive purposes, rose 6.2 p.c. in 1963 and net sales of diesel oil 25.8 p.c.
8.-Sales of Motive Fuels, by Province, 1959-63

${ }^{1}$ The marked decrease in this figure is attributable to the elimination of $125,000,000 \mathrm{gal}$. of liquefied petroleum gases used for domestic and industrial heating and power. Net sales are not affected by this change.

Motor Carriers-Freight.*-Statistics of the common carrier segment of the intercity and rural motor carrier industry have been collected on a continuing basis since 1941. However, as little capital is required to enter the trucking business, many marginal operators are associated with the industry and the large turnover and numerous changes each year have created many problems in the collection of statistics, although these are gradually being overcome. Statistics of contract carriers are available from 1958.

[^225]

Household Goods Movers and Storage Operators.*-Statistics of household goods movers and storage operators, summarized in Table 10, were first presented separately in 1960; before that date, they were included with either motor carriers-freight or warehousing, depending upon the predominant source of operating revenues of the companies concerned.

Passenger Buses.*-The operations of companies predominantly engaged in passenger bus service are summarized in Table 11. Data refer to the for-hire segment of the industry and only those firms engaged in intercity and rural operations and having an annual gross revenue of $\$ 6,000$ or over are covered. Operators predominantly involved in the provision of school bus service are not included nor are airport servicing and urban transit bus operators.

## 11.-Summary Statistics of Intercity and Rural Passenger Bus Companies, 1959-63

Note.-Only carriers with an annual gross revenue of $\$ 6,000$ or over are included.

Motor Transport Traffic. $\dagger$-Surveys of motor transport traffic in all provinces were placed on a continuing basis in 1957. Approximately 3 p.c. of total registrations were sampled for surveys of truck operations during each quarter of 1961. Each quarterly sample was spread over three survey weeks with one third of the sample being used for a seven-day period (Sunday through Saturday) per month.

Excluding vehicles that do not perform normal transportation services, such as cranes, tow trucks, road building equipment, etc., the average number of trucks licensed in Canada during the year 1962 was 975,000 . Of these, 6.2 p.c. were for-hire carriers, 19.9 p.c. were

[^227]private intercity trucks, 40.6 p.c. were private trucks operated predominantly within urban areas, and 33.3 p.c. were farm trucks. Almost one third of the total number were registered in Ontario and one half were registered in the two provinces of Ontario and Quebec.

For-hire trucks averaged 198,900 net ton-miles per vehicle and, although amounting to only 6.2 p.c. of total registrations, they accounted for 65 p.c. of the total net ton-miles performed by all commercial trucks in Canada, a result of the comparatively high average yearly milage of for-hire trucks and also of the heavier average load carried (11.0 tons as compared with an average of 5.3 tons for all trucks). The predominance of heavier vehicles in the for-hire group also explains the low milage per gallon of gasoline of 5.8 as compared with an average of 9.3 for all vehicles.

Urban Transit Systems.-The collection of statistical information on urban transit systems has been extensively reorganized in recent years because of major changes made in the types of vehicles used for mass passenger movement in urban centres. The current series, which was started in 1956, includes operations of motor buses, trolley coaches, streetcars and subway cars carrying passengers in urban and suburban service.

[^228]Motor Vehicle Traffic Accidents.-There were 336,255 motor vehicle traffic accidents reported in 1963 compared with 310,745 in the previous year. Deaths from such accidents continue their upward trend, numbering 3,883 in 1962 and 4,210 in 1963 as against 2,715 in 1954. Statistics for 1963 are given by province in Table 14, but it should be noted that, although motorists are required by law to report accidents, complete statistics of these accidents are not available for all provinces. Vital Statistics 1963 data show 4,444 deaths from Motor Vehicle Accidents; of these, 84 occurred in non-traffic motor vehicle accidents on private property.

## PART IV.-WATER TRANSPORT*

The Canada Shipping Act.-Legislation regarding all phases of shipping is consolidated in the Canada Shipping Act (RSC 1952, c. 29). Under the Act and its amendments the Parliament of Canada accepts full responsibility for the regulation of Canadian shipping.

## Section 1.-Shipping Facilities and Traffic

Subsection 1.-Shipping

All Canadian waterways including canals, lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world so that Canadian shipping must compete with foreign flag shipping.

Under the British Commonwealth Merchant Shipping Agreement, all Commonwealth ships enjoy equal privileges with Canadian ships in the carriage of goods and passengers from one port in Canada to another port in Canada, commonly known as the coasting trade. Prior to the completion of the St. Lawrence Seaway most of the domestic Great Lakes traffic was moved in Canadian-registered ships and the rights of other Commonwealth ships in this trade were largely theoretical. After the Seaway was finished the intrusion of other Commonwealth ships, particularly United Kingdom ships, became a reality.

[^229]Canadian Registry.-Under Part I of the Canada Shipping Act, ships in excess of 15 tons net register and pleasure yachts in excess of 20 tons net are required to be registered; ships of lower tonnage may be registered voluntarily, otherwise they are required to be operated under a Vessel Licence if powered by a motor of 10 hp . or more. Sect. 6 of the Act restricts ownership to British subjects or bodies corporate incorporated under the law of a country of the Commonwealth or of the Republic of Ireland, and having their principal place of business in those countries. Under the British Commonwealth Merchant Shipping Agreement, all Commonwealth ships are given the general designation 'British Ship', and a ship that should be but is not registered is not entitled to the privileges accorded to British ships. Ships in the planning stage or in course of construction may be recorded before registry by a Registrar of Shipping at one of the 73 Ports of Registry in Canada.

## 1.-Vessels on the Canadian Shipping Registry, by Province, as at Dec. 31, 1961-63

Shipping Traffic.-Before 1952 the only information available on shipping activity in Canada was the number and registered net tonnage of vessels operating in and out of Canadian customs ports and the tonnage of cargoes loaded and unloaded at these ports destined for or arriving from foreign countries. In 1952 the coastwise movement of cargo in and out of customs ports was reported for the first time and in January 1957 the coverage was extended to include tonnage of vessels and tons of cargo in and out of non-customs ports. Reports are not required for vessels of less than 15 registered net tons, for naval vessels, or (commencing with 1962) for fishing vessels.

## 2.-Vessels Entered at Canadian Ports, 1953-62

[^231]The freight movement through a large port takes a number of different forms. These include cargoes loaded for and unloaded from foreign countries and cargoes loaded and unloaded in coastwise shipping, i.e., domestic freight moving between Canadian points. There is, as well, the in-transit movement in vessels that pass through the harbour without loading or unloading and the movement from one point to another within the harbour, which in many ports amounts to a large volume.

Shipping statistics covering traffic in and out of both customs and non-customs ports are available from 1957. These do not include freight in transit or freight moved from one point to another within the harbour. Table 4 shows the principal commodities loaded and unloaded in foreign and coastwise shipping at the ten ports handling the largest cargo volumes in 1962. These ports handled 59 p.c. of all Canada's international shipping and 41 p.c. of the coastwise trade. The specific commodities shown are those transported in volume and often in bulk form.
4.-Principal Commodities in Water-Borne Cargo Loaded and Unloaded at Ports Handling the Largest Tonnages in 1962
Note.-Only commodities totalling over 50,000 tons are listed.

## Subsection 2.-Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil and grain. Facilities may include cold storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks and, in the chief harbours, vessel repair docks.

Eight of the principal harbours of Canada are administered by the National Harbours Board. Eleven other major harbours come under the supervision of the Department of Transport and are administered by harbour commissioners that include municipal as well as Federal Government appointees. In addition, there are about 300 public harbours under the direct supervision of the Department of Transport, administered under rules and regulations approved by the Governor General in Council. Harbour masters have been appointed by the Minister of Transport for 110 of these harbours, their remuneration being paid from fees levied on vessels under the terms of the Canada Shipping Act.

Throughout the country there are several thousand minor wharves and breakwaters administered by the Department of Transport under the Government Harbours and Piers Act. These facilities are for the accommodation of smaller freight vessels and commercial fishing craft and are generally under the direct supervision of wharfingers whose remuneration is determined as a percentage of wharfage fees collected. Small non-revenue wharves are under the general supervision of the Department of Transport District Marine Agents. At most ports, in addition to the public harbour facilities operated by the operating authorities, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil and sugar industries.

National Harbours Board.-The National Harbours Board, a Crown corporation established in 1936, is charged with the administration and operation of the following properties: port facilities such as wharves and piers, transit sheds, grain elevators, cold storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Trois Rivières, Montreal, Vancouver and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier and Champlain Bridges at Montreal. Current operating revenues and expenditures are given in Table 21, p. 806.

## 5.-Facilities of the Larger Harbours Administered by the National Harbours Board, as at Dec. 31, 1963

Nore.-The facilities at these ports include those under the control of other agencies as well as those of the National Harbours Board.

## Subsection 3.-Canals

The canals and canalized waters of Canada under the jurisdiction of the Department of Transport, together with those under the jurisdiction of the St. Lawrence Seaway Authority, comprise a series of waterways providing navigation for 1,875 miles inland from salt water.

Those included under the two classifications-Seaway canals and Department of Transport canals-are listed in Table 6 with their locations, lengths and lock complement. In addition to these, the federal Department of Public Works administers the St. Andrew's Lock (length, width and draught, respectively, 215, 45 and 17 feet) on the Red River at Selkirk, Man., and the lock at Poupore, Que. A few small locks are operated by provincial authorities.

During 1963, $74,585,427$ tons of freight and 21,811 vessels passed through the canals as compared with $63,568,291$ tons of freight and 22,836 vessels during 1962. In addition to freight and passenger vessels, thousands of pleasure craft are locked through the canals. Vessels locking at Sault Ste. Marie during 1963 carried 142,663 passengers as compared with 146,208 in 1962.
6.-Lengths of Channels and Dimensions of Loeks under the Control of the St. Lawrence Seaway Authority or the Department of Transport

${ }^{1}$ Minimum depth of Seaway canals is 27 feet and minimum width 200 feet. Wiley-Dondero canal and two locks near Massena, N. Y., are in United States territory; dimensions are approximately the same as those of Canadian facilities. ${ }^{2}$ Notice must be given by vessels of more than six-foot draught.
${ }^{3}$ With Lake Ontario at elevation of 243 feet.

## 7.-Traffic through Canadian Canals, by Nationality of Vessel, Navigation Seasons 1954-63

Nore.-Figures include duplications where vessels pass through two or more canals. Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1902 edition.

| Traffic using United States Locks at Sault Ste. Marie only. | 9,557,192 | 69,726,041 | 79,283,233 | 10,675,828 | 74,575,468 | 85,251,296 |
| Totals.................. | 22,073,405 | 96,880,179 | 118,953,584 | 26,835,000 | 104,995,580 | 131,830,580 |

Traffic through the Sault Ste. Marie canal (Canadian lock and United States locks) fluctuated between a high of $128,489,000$ tons in 1953 and a low of $70,906,000$ tons in 1959; the volume in 1963 was $86,061,301$ tons. The dominant traffic from a tonnage aspect continued to be iron ore, which also reached its highest point in 1953 at $98,658,000$ tons, dropped to $47,214,000$ tons in 1961 and stood at $58,569,070$ tons in 1963. In the period 1958-63, wheat replaced soft coal in second place with tonnages increasing each year from $7,478,000$ in 1958 to $10,177,000$ in 1961 but dropping to $10,058,409$ tons in 1963; other grains usually ranged between 40 p.c. and 60 p.c. of the wheat tonnage, although they were only 28 p.c. of that tonnage in 1961 and 37 p.c. in 1963. Soft coal tonnages in the 1958-63 period ranged from $6,389,000$ in 1958 to $5,998,523$ in 1963.

Canadian use of the Panama Canal.-The use of the Panama Canal as a transport facility for the movement of goods from one Canadian port to another is of relatively minor importance. Of the total of $4,067,000$ long tons of cargo leaving the West Coast of Canada in the year ended June 30, 1963 and passing through the Panama Canal, only 23,000 long tons were destined for Eastern Canadian ports. Similarly, of the 712,000 long tons of cargo leaving Eastern Canadian ports and passing through the Panama Canal, 18,000 long tons were destined for Western Canadian ports. The total tonnage passing through the Panama Canal and arriving in Canadian West Coast ports from any origin, Canada or elsewhere, amounted to 539,088 long tons in the year ended June 30, 1963; the total from any origin arriving at Eastern Canadian ports after having passed through the Panama Canal was 617,399 long tons.

## Subsection 4.-The St. Lawrence Seaway

Events leading up to the beginning of the St. Lawrence Seaway project and the progress made during the years of its construction are covered in the 1954 to 1959 Year Books. A special article carried in the 1956 edition (pp. 821-829) gives detailed information on Great Lakes-St. Lawrence waterway traffic immediately prior to the beginning of construction on the project and another special article carried in the 1960 Year Book (pp. 851-860) covers the story of the Seaway, its new facilities and services and the movement of freight during the second year of its operation.

The St. Lawrence Seaway Authority, constituted as a Corporation by Act of Parliament in 1951 (RSC 1952, c. 242), undertook the construction (and subsequent maintenance and operation) of Canadian facilities between Montreal and Lake Erie to allow 27 -foot navigation, concurrently with the construction of similar facilities in the International Rapids Section of the St. Lawrence River by the Saint Lawrence Seaway Development Corporation of the United States. The Seaway was opened to commercial traffic on Apr. 1, 1959 and officially opened on June 26, 1959. With the opening of the Seaway, certain ancillary canals were transferred to the jurisdiction of the St. Lawrence Seaway Authority for operation and maintenance purposes. These include the Lachine, a section of the Cornwall Canal, a portion of the third Welland Canal and the Canadian locks at Sault Ste. Marie. Tolls are not assessed against vessel movements on these waterways and traffic data for them are not included in this Subsection.

Tables 12 and 13 give combined traffic statistics of the St. Lawrence and Welland Canals for the year 1963. Duplicate transits are eliminated so that the figures show the actual total movement of goods through the St. Lawrence Seaway. On this basis, 4,784 ships carrying more than $15,820,000$ tons of cargo moved upbound through the Seaway in 1963 and 4,737 vessels carrying $29,750,000$ tons moved downbound. Ocean-going ships carried 17.6 p.c. of the total cargoes, lakers 82.3 p.c. and other craft 0.1 p.c. There is still
evident an imbalance of loading, 46.7 p.c. of the gross registered tonnage of all vessels upbound being in ballast compared with only 14.0 p.c. of the vessels downbound. Of the total tonnage carried upbound in $1963,13,301,000$ tons were domestic cargo and $2,520,000$ tons were foreign traffic; downbound, $24,369,000$ tons were domestic freight and $5,381,000$ tons were carried to and from foreign ports.

| Sulphur.................. | 74,485 | 0.2 | Package freight-foreign. | 57,811 | 1 |
| Other mineral products.......... | 290,880 | 0.6 | Totals | 45,570,207 | 100.0 |

On the Montreal-Lake Ontario Section, upbound traffic increased 24.4 p.c. in 1963 compared with 1962 and downbound traffic by 18.3 p.c. The increase in upbound traffic was accounted for almost entirely by the volume of iron ore shipped from St. Lawrence ports to Hamilton and Lake Erie, and downbound cargoes rose because of greater overseas sales of wheat. There were 18 fewer upbound transits and 48 fewer downbound transits in 1963 than in 1962, indicating a slight increase in the size of vessels using this portion of the Seaway and in the average tons of cargo carried. Bulk cargo comprised 90.2 p.c. of the total traffic through the Section in 1963, the principal commodities through the St. Lawrence canals being iron ore, wheat, corn, fuel oil, bituminous coal and barley. Traffic patterns show that 31.4 p.c. of the total movement was between two Canadian ports, 42.7 p.c. moved between Canadian and United States ports and 25.5 p.c. consisted of foreign trade to and from Canada and the United States. The small remainder was traffic between two points in the United States.

Through the Welland Canal there were 7,597 transits in 1963 with a cargo volume of $13,152,000$ tons upbound and $28,151,000$ tons downbound; bulk cargo accounted for 94.1 p.c. of the traffic. Although many vessels pass through both the St. Lawrence and the Welland Canals on 'through' trips, there is a substantial amount of local traffic between Great Lakes ports which involved only the Welland Canal. These movements are largely iron ore, grain and coal. The Welland Canal traffic was nearly $10,360,000$ cargo tons greater than that reported for the Montreal-Lake Ontario Section.

Income of the St. Lawrence Seaway Authority for 1963 amounted to $\$ 12,045,224$, comprising toll revenue of $\$ 10,730,418$ assessed for transits through the Seaway locks between Montreal and Lake Ontario together with sundry revenues (rentals, wharfage, bridge revenue, etc.) amounting to $\$ 1,314,806$. Operating and maintenance expenses amounted
to $\$ 6,231,213$ and administrative expenses were $\$ 2,483,848$, making a total of $\$ 8,715,061$ excluding an amount of $\$ 461,986$ for non-toll canals. Comparable figures for 1962 are shown in Section 2, p. 805.

Pleasure craft locked through the Montreal-Lake Ontario Section canals numbered 368 upbound and 477 downbound in 1963, and those locked through the Welland Canal numbered 126 upbound and 161 downbound.

## Subsection 5.-Marine Services of the Federal Government

The services covered in this Subsection deal with the Canadian Coast Guard and aids to navigation, including the maintenance of the St. Lawrence River Ship Channel, steamship inspection and pilotage service.

Canadian Coast Guard.-The Canadian Coast Guard, known by that name only since January 1962, has played a vital part in Canada's maritime economic and industrial development since Confederation. At that time several previously established government marine organizations were brought together as a single marine service, founding the fleet that became the responsibility of the Department of Transport when it was established in 1936.

From a small beginning, the fleet has expanded into an organization consisting of more than 200 vessels of all types, of which nearly 50 are of a larger size. Of these, 31 measure more than 1,000 tons gross. They include 10 fully strengthened icebreakers and eight lighthouse supply-and-buoy ships with icebreaking capabilities. These vessels comprise in numbers the world's second largest icebreaking force. The greater part of the fleet's expansion has occurred within the past few years to meet a new and fast-growing requirement for icebreaker support of shipping activities in the Canadian Arctic during the summer and for commercial shipping in the Gulf of St. Lawrence in the winter.

The Department's concern with marine search-and-rescue activities has also increased, not only in the field of commercial shipping but also in connection with the mushrooming public interest in pleasure boating with its attendant safety problems.

The duties of the Canadian Coast Guard are civilian in nature and no armaments are carried on the ships. It maintains and supplies shore-based and floating aids to navigation in Canadian waters, including the Atlantic and Pacific coastal areas, the St. Lawrence River and Great Lakes, the channels of both the eastern and western Arctic, Hudson Bay, the Mackenzie River system and other inland waters. The territory covered is vast and the duties involved are extensive.

Since its beginning, the fleet has carried out icebreaking as one of its important undertakings. In its earliest years, such work was done mainly to aid shipping in eastern port areas and in the St. Lawrence for whatever winter period was allowed by weather conditions and the limitations of ships of that area. Icebreaking has also been carried out through the years at Montreal to prevent floods caused by ice jams in the river. When the development of the sea route from Churchill, Man., to Europe became a factor in the country's maritime economy, icebreaker assistance was extended to commercial shipping using that route. Since 1954, as a result of the opening up of the Canadian Arctic, the Department has handled all icebreaking requirements in these waters, extending to within a few hundred miles of the North Pole.

Arctic operations necessitate ice reconnaissance services, which are carried out by fixed wing aircraft flying out of such ports as Churchill, Man., and Frobisher Bay and Resolute Bay in the High Arctic. These flights are under the direction of the Department's Meteorological Branch and provide information on ice conditions in the sea lanes in all areas where the convoys operate. Helicopters, based aboard the icebreakers, are used for close-range reconnaissance. They carry trained observers provided by the Meteorological Branch and their ability to spot leads through the ice, which cannot be
seen from the ship, has resulted in tremendous savings in time for the convoys. The helicopters are also extremely useful in ship-to-shore personnel movements and for carrying light freight.

As an indication of the growth of Arctic re-supply operations handled by the Canadian Coast Guard, the cargo handled, which was approximately 8,000 tons in 1954, had increased to almost 100,000 tons in 1964.

Aids to Navigation.-The Canadian system of aids to navigation is similar to that of other North American countries. Such aids maintained by the Department of Transport for Canadian and contiguous waters consist of buoys, lightships, lighthouses, day beacons, radio beacons and two electronic networks operating on the hyperbolic principle-Loran and Decca. The numbers of danger signals maintained during the years ended Mar. 31, 1962 and 1963 were:-

| Type of Signal | 1961-62 | 1962-63 | Type of Signal | 1961-62 | 1969-63 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. |  | No. | No. |
| Lights. | 3,196 | 3,311 | Hand fog horns and bells | 84 | 69 |
| Lightships.. | 3 | 3 | Lighted and combination lighted |  |  |
| Light-keepers. | 953 | 948 | whistling and bell buoys........ | 1,384 | 1,480 |
| Fog whistles and sirens... | 46 | 53 | Unlighted bell and whistling buoys. | 121 | 61 |
| Diaphones and tyfons...... | 277 | 264 | Explosive signals.. | ${ }^{4}$ | 2 |
| Mechanical bells and gongs.. | 17 | 25 | Unlighted beacons and buoys....... | 10,400 | 11,617 |

All aids incorporating light or sound devices are listed in the Department of Transport annual publication List of Lights and Fog Signals. Information on the radio beacons and on Loran and Decca is published in Radio Aids to Marine Navigation.

Navigable waters have been improved greatly by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. Icebreaking operations are continuous throughout the winter.

St. Lawrence Ship Channel.-This channel extends from about 40 miles below Quebec City to the foot of the Lachine Canal at Montreal, a distance of 200 miles. About 130 miles of this distance is dredged channel.

Above Quebec the channel has a limiting depth of 35 feet at extreme low water and a minimum width of 550 feet, with additional width up to 1,500 feet at all curves and difficult points, and additional anchorage and turning areas. Widening of the channel to a minimum width of 800 feet, commenced in 1952, is slightly more than half completed. This section comprises about 115 miles of dredged channel. Below Quebec the limiting depth of dredged channel, about 15 miles in length, is 30 feet at low tide, with a width of 1,000 feet. An average tidal range of 15 feet in this area provides ample depth for any vessel using the St. Lawrence route. Above Quebec, maintenance requirements as a result of silting in this dredged channel are relatively minor but below the city silting is more pronounced because of tidal action.

The ship channel is well defined by buoys and the centre marked by range lights, permitting uninterrupted day and night navigation throughout the open season from about mid-April to early December. The movements of all shipping, weather and ice conditions and obstructions to traffic throughout the St. Lawrence waterway from Fame Point, Que., to Kingston, Ont., are recorded and made available to all concerned through a series of reporting stations known as the Marine Reporting Service.

## 14.-Seasons of Open Navigation on the St. Lawrence Ship Channel, 1954-63

Note.-Figures from 1882 are given in the corresponding table of previous Year Books beginning with the 1934-35 edition.

| Year | Channel Open, Quebec to Montreal ${ }^{1}$ |  | First Arrival from Sea, Montreal Harbour | Last <br> Departure for Sea, Montreal Harbour |  | Year | Channel <br> Open, <br> Quebec to <br> Montreal ${ }^{1}$ |  | First Arrival from Sea, Montreal Harbour |  | Last <br> Departure for Sea, Montreal Harbour |  |

| 1954. |  |  | Mar. 30 | Dec. |  | 1959. | Apr. |  |  |  |  |  |
| 1955. |  |  | Apr. 5 |  | 16 | 1960. |  |  |  |  |  |  |
| 1956. |  |  | " 2 |  | 17 | 1961. |  | 11 |  | 27 |  |  |
| 1957. |  |  | " 4 |  | 18 | 1962. |  |  |  | 12 |  |  |
| 1958. |  |  | Mar. 30 |  | 23 | 1963 |  | 10 |  | 12 |  | 24 |

1 "Channel Open" means the route can be navigated although there may be floating ice in the river.
Steamship Inspection.--The Steamship Inspection Service was established by authority of the Canada Shipping Act. Its functions include the formulation and subsequent enforcement of regulations concerned with the approval of design of hulls, machinery and equipment of ships; inspection during construction; periodic inspection and the issue of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers employed in loading and unloading ships; the prevention from pollution of Canadian territorial waters by oil from ships; control of pollution of the atmosphere by smoke emitted by ships; control of the powering, equipment and load limits of small vessels; and the certification of marine engineers. The Board also looks after the interests of the Federal Government in schools for marine engineers.

The Chairman and the Board of Steamship Inspection are located at Ottawa and field offices are maintained in the principal ocean and inland ports. A total of 1,642 vessels of Canadian ownership or registry, which included 524 passenger ships, and 42 vessels registered or owned elsewhere were inspected during the year ended Mar. 31, 1963.

Pilotage.--Pilotage service functions under the provisions of Part VI and Part VIa of the Canada Shipping Act. Wherever a pilotage district has been created by the Governor in Council, qualified pilots are licensed by the pilotage authority of the district. There are in Canada 22 pilotage districts, in nine of which the Minister of Transport is the pilotage authority (see Table 15); in each of the other districts the authority is a local body appointed by the Governor in Council. There are also three districts that are administered jointly by Canada and the United States.
15.-Pilotage Service, by Pilotage District, 1962 and 1963

| Totals. | 38,449 | 161,917,582 | 35,610 | 148,399,913 |

[^235]In addition, there are known to be five districts in Newfoundland under the local pilotage authority. These districts continued to be administered under Newfoundland statutes after union with Canada (Mar. 31, 1949). Part VI of the Canada Shipping Act with respect to pilotage has not been proclaimed in force in Newfoundland.

## Section 2.-Financial Statistics of Waterways

The principal statistics available on the cost of facilities for water-borne traffic consist of the record of public expenditure on waterways. Such expenditure may be classified as capital expenditure, or investment and expenditure for maintenance and operation. Revenue from operation is also recorded. The major part of the capital expenditure for the permanent improvement of waterways is provided by the Federal Government. Capital expenditure by municipalities and private capital expenditure are confined almost entirely to terminal or dockage facilities. On the other hand, most of the investment in shipping has come from private sources. No figures are available regarding private investment in shipping except those appearing in the reports of the operating companies that cover only a portion of the field. There are no statistics showing the revenue of ship operators from passenger and freight traffic.

Capital Expenditure.-The only figures available of federal capital expenditure on Canadian waterways are those contained in the Public Accounts and the annual reports of the Departments of Transport, Public Works and Finance and in the annual report of the St. Lawrence Seaway Authority. It must be realized that such expenditure cannot be regarded as an accurate indication of the present worth of the undertakings represented. The cost of building canals and other waterways and permanent works to facilitate water transportation in Canada is represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of works that have been superseded, such as, for example, the first Welland canals and the now flooded St. Lawrence River canals. To this extent, such figures are an over-statement of the present value of the works in use. The figures are further limited by the fact that they do not include the cost of maintenance and improvements or the operation of these works, such charges having been made to the consolidated deficit account as annual expenditure and not to capital account. Thus, such capital expenditure on waterways is not included in this publication, with the exception of that made by the National Harbours Board on facilities under its jurisdiction. Capital values of the fixed assets administered by the Board are shown as at Dec. 31, 1962 and 1963 in Table 16. These figures include all buildings, machinery and durable plant improvements and have been subject to deductions for depreciation and the scrapping or abandonment of plant, and therefore represent a fair approximation of the present value of the properties.

## 16.-Capital Values of Fixed Assets Administered by the National Harbours Board, as at Dec. 31, 1962 and 1963

Note.-Compiled from the annual reports of the National Harbours Board.

| Item | 1962 | 1963 | Item | 1962 | 1963 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ | 8 |  | \$ | \$ |
| Harbour dredging | 22,479,039 | 22,862,747 | Harbour buildings, service |  |  |
| Land and land improvements.. | 16,834,978 | 17,840,204 | plants and equipment...... | 10,427, 200 | 10,381, 288 |
| Wharves and piers. | 145,980,838 | 146,269,413 | Floating and shore equipment | 5,263,366 | 5,203,512 |

| Railway systems. | 6,639,753 | 6,654,763 | Works under construction...... | $31,872,634$ <br> $13,197,964$ | $34,616,821$ $4,422,326$ |
| Grain elevator systems. | 71,997,900 | 86,793,666 |  | 13,197,964 | 4,422,326 |
| Cold storage systems. | 6,714,210 | 6,813,943 | Totals. | 392,214,380 | 403,716,355 |

The total amount advanced by the Federal Government to the National Harbours Board for capital expenditure during 1962 was $\$ 19,709,613$, distributed as follows: Saint John, N.B., \$3,344,844; Quebec, Que., \$123,341; Montreal, Que., \$8,757,431; Churchill, Man., $\$ 1,838,674$; and Champlain Bridge (Montreal), $\$ 5,645,323$. The total for 1963 was $\$ 7,325,025$ distributed as follows: Saint John, $\$ 98,939$; Montreal, $\$ 4,481,043$; and Champlain Bridge (Montreal), \$2,745,043.

Waterways Expenditure and Revenue.-Expenditure under this heading (Tables 17 to 19) is mainly for the operation and maintenance of various facilities for water transport but, unfortunately, the line between operation and maintenance expenditure is not as finely drawn as is desirable. Revenue in connection with waterways of the Department of Transport, the Department of Public Works and the St. Lawrence Seaway Authority is shown in Table 20.

To facilitate water transportation, the Federal Government expends annually, in addition to the recurrent expenditure shown here, a considerable amount to cover deficits of the National Harbours Board, and for mail subsidies and steamship subventions as shown in Table 22. Operating revenue and expenditure of facilities administered by the National Harbours Board are shown separately in Table 21.

## PART V.-CIVIL AIR TRANSPORT

Administration.-Civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act, 1919 and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Director of Civil Aviation under the supervision of the Assistant Deputy Minister, Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain regulatory functions of commercial air services (see pp. 753754). Part III deals with matters of government internal administration in connection with the Act.

International Air Agreements.-The position of Canada in the field of aviation as well as its geographical location makes co-operation with other nations of the world engaged in international civil aviation imperative. Canada therefore took a major part in the original discussions that led to the establishment of the International Civil Aviation Organization (ICAO) which has headquarters at Montreal, Que. A special article on The International Civil Aviation Organization and Canada's Participation Therein appears in the 1952-53 Year Book, pp. 820-827. At present Canada has air agreements with 21 other countries.

## Section 1.-Air Services

Air transport services may be grouped into two broad classes-Scheduled Services and Non-scheduled Services. Services in the first group are operated by air carriers that offer public transportation of persons, mails and/or goods by aircraft, serving designated points in accordance with a service schedule and at a toll per unit. The second group includes the following:-
(1) Regular Specific Point Air Services-operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft serving designated points on a route pattern and with some degree of regularity, at a toll per unit.
(2) Irregular Specific Point Air Services-operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft from a designated base, serving a defined area or a specific point or points, at a toll per unit.
(3) Charter Air Services-operated by air carriers who offer public transportation of persons and/or goods by aircraft from a designated base, at a toll per mile or per hour for the charter of the entire aircraft, or at such other tolls as may be permitted by the Air Transport Board.
(4) Contract Air Services-operated by air carriers who do not offer public transportation but who transport persons and/or goods solely in accordance with one or more specific contracts.
(5) Flying Clubs-operated by air carriers incorporated as non-profit organizations for the purpose of furnishing flying training and recreational flying to club members.
(6) Specialty Services-operated by air carriers for purposes not provided for by any other class, such as flying training, recreational flying, aerial photography and survey, aerial pest control, aerial advertising, aerial patrol and inspection, etc.

Current operations of the two major airlines forming the nucleus of Canada's freight and passenger air service are outlined below.

Air Canada.-In 1963, its 26th year of operation, Air Canada (formerly TransCanada Air Lines) carried a record $3,883,590$ passengers on scheduled flights and 82,957 on charter flights, a total of $3,966,5+7$. This total was 3 p.c. above that for the previous year. The major growth was in Atlantic charter traffic which increased eightfold and represented one third of Air Canada's total Atlantic passenger travel. The high volume of transcontinental traffic recorded little change from 1962 but traffic on scheduled services to Bermuda and the Caribbean increased 31 p.c. Revenue passenger-miles totalled 2,887,239,000. Ton-miles of revenue commodity traffic, including air express, totalled $35,781,000$ and tonmiles of air mail, $13,859,000$. Income from operations amounted to $\$ 37,574,000$, almost $\$ 7,000,000$ more than the 1962 income.

At the end of the year, Air Canada was operating over 37,267 route miles, linking Canada, the United States, the British Isles, Continental Europe and the Caribbean. Its fleet consisted of 75 aircraft-13 DC-8's, 22 turbo-prop Vickers Vanguards and 40 turboprop Vickers Viscounts. Intensive evaluation of aircraft types to replace and complement the propeller-turbine aircraft now in service was completed by the end of 1963 and an initial order placed for six short-to-medium-range twin jet DC-9 aircraft, to be introduced into service in two years time. Continued improvement was made to ground services. Because of the major program of airport terminal building construction by the Department of Transport, Air Canada's airport passenger handling facilities have benefited tremendously at many points. The new electronic reservations system, known as ReserVec, went into full operation in 1963, enabling passengers to obtain almost instantaneous confirmation of
reservations requests. ReserVec, designed and manufactured in Canada, is the most modern system of its kind in the world. At the year-end, Air Canada employees numbered 11,330 .

${ }^{1}$ Includes non-scheduled service.
${ }^{2}$ Includes excess baggage and express.
${ }^{3}$ Includes other revenue.
Canadian Pacific Air Lines Limited.-Canadian Pacific Air Lines operates a 45,287 -mile route pattern linking five continents as well as major cities in Canada. This pattern comprises 6,900 domestic route miles, including 2,450 miles on Canadian mainline service.

In 1963, CPA carried 498,245 passengers, a greater number than in any other year since the company's inception in 1942. The increase in passenger load, on both domestic and international routes, amounted to 8.0 p.c. over 1962 and revenue passenger-miles on international routes showed a substantial advance.

CPA's international routes, 37,600 miles in extent, operate from Vancouver to Honolulu, Fiji, New Zealand and Australia on the South Pacific service; to Japan and Hong Kong via the Great Circle Route across the North Pacific; from Vancouver, Calgary and Edmonton to Amsterdam via the Polar Route; and across the Atlantic from Montreal to Portugal, Spain and Italy. A South American network serves Mexico City, Lima, Santiago and Buenos Aires. Three services link Mexico with Windsor, Toronto and Montreal in Eastern Canada and Vancouver in the West. In Canada, CPA operates a mainline transcontinental service linking Vancouver, Winnipeg, Toronto and Montreal and a domestic network of north-south routes in British Columbia, Alberta and the Yukon Territory.

CPA's fleet of aircraft consists of 22 aircraft, including five Douglas Super DC-8's, five Bristol Britannias, three Douglas DC-6B's, one Douglas DC-6AB, one Convair 240, three Douglas DC-3's and four other types. The international routes are served by the Super DC-8's and the Bristol Britannias, and the domestic routes are served by the other aircraft. The transcontinental route is served by Super DC-8's.

Independent Airlines.-In addition to the two major Canadian air carriersAir Canada and Canadian Pacific Air Lines Limited--there are four domestic air carriers licensed to operate scheduled commercial air services in Canada, namely, Eastern Pruvincial Airways (1963) Limited, Gander, Nfld.; Quebecair, Rimouski, Que.; TransAir Limited, Winnipeg, Man.; and Pacific Western Airlines Limited, Vancouver, B.C.

Licensed Canadian air carriers operating in Canada as at Mar. 31, 1963 held valid operating certificates covering 41 scheduled, 155 flying training, and 1,594 other non-scheduled and specialty services. These non-scheduled services, in addition to providing effective access to sections of Canada that are inaccessible by other means of transportation,
act as feeder lines to the scheduled airlines. They also include such specialty services as recreational flying, aerial photography and surveying, aerial pest control, aerial advertising, aerial patrol and inspection.

Eastern Provincial Airways (1963) Limited.-This company (successor to Maritime Central Airways-purchased in 1963) operates throughout the Atlantic Provinces, eastern Quebec, Labrador and Greenland. It serves Charlottetown and Summerside in Prince Edward Island; Moncton and Dalhousie in New Brunswick; New Glasgow and Halifax in Nova Scotia; Stephenville, Corner Brook, Gander and St. John's in Newfoundland; Goose Bay and Saglek in Labrador; Sept Iles and the Magdalen Islands in Quebec; and the French Islands of St. Pierre-Miquelon.

The Airways fleet consists of four H.P. Dart Heralds, one DC-4, two C-46's, five DC-3's, five PBY Canso's, four Cessna 185's, five DH Beavers, two S-55 helicopters, two Super Cub's and one Beechcraft 18. The company carries on an extensive air freight service throughout the above areas and conducts many specialty services such as mineral exploration, the transporting of hunting and fishing parties, ambulance service and forestry, seal and ice patrol services.

Quebecair.-Quebecair, a privately owned commercial airline with headquarters at Rimouski, serves various points in the Province of Quebec including Montreal, Quebec, Saguenay, Rivière du Loup, Rimouski, Mont Joli, Sept Iles, Wabush, Schefferville, Gagnon, Baie Comeau, Forestville, Manicouagan and Murray Bay. No point served is more than five flying hours from Montreal.

The company began operations in 1946 under the name of Rimouski Aviation Syndicate and was incorporated under the name of Rimouski Airlines in 1947. At the beginning of 1954, the newly created Rimouski Airlines bought out Gulf Aviation and formed Quebecair. Since then, passenger service has multiplied six times, air mail carried fourteen times and freight carried sixteen times. The number of passengers flown in 1963 was 105,045 and the amount of freight carried totalled $1,825,823 \mathrm{lb}$.

The Quebecair fleet consists of four DC-3's, three F-27's, and one C-46 cargo aircraft.
TransAir Limited.-TransAir operates scheduled, charter, and sportsmen's flights in Manitoba, Saskatchewan, Ontario and the Northwest Territories. Thirty aircraft are in service from headquarters in Winnipeg and a major base in Churchill. Scheduled flights also originate from Pickle Lake and Sioux Lookout in Ontario, and Lac du Bonnet and Norway House in Manitoba. The airline has scheduled Viscount, DC-4 and DC-3 services over 7,107 unduplicated miles. Mainline stops are made at Winnipeg, Brandon, Dauphin, The Pas, Flin Flon, Lynn Lake, Thompson and Churchill in Manitoba; Red Lake, Winisk and Ottawa in Ontario; Montreal in Quebec; and Yorkton, Regina, Saskatoon and Prince Albert in Saskatchewan. TransAir also has regular flights between Churchill and Rankin Inlet, Baker Lake and Coral Harbour in the Northwest Territories. From its Winnipeg and Churchill bases, TransAir operates the vertical re-supply flights to the four main sites in the Canadian sector of the Distant Early Warning Line.

Pacific Western Airlines Limited.-Pacific Western Airlines Limited, with head office at Vancouver International Airport, is one of the largest independent air carriers in Canada. Route miles in the system total almost 7,200 and services operated include scheduled mainline, local regular unit toll and charter flights in Saskatchewan, Alberta, Yukon Territory, the Northwest Territories including the Arctic islands, and British Columbia.

Regularly scheduled mainline services are operated by Pacific Western northbound from Edmonton to Dawson Creek, Peace River, McMurray, Uranium City, Fort Smith, Pine Point, Fort Resolution, Hay River, Yellowknife, Fort Simpson, Wrigley, Norman Wells and Inuvik. Regular local services are flown from Yellowknife to Cambridge Bay and Resolute Bay; and from Inuvik to Aklavik to Fort McPherson to Arctic Red River. Local services also originate from Norman Wells to Fort Good Hope, Fort Norman,

Wrigley and Fort Simpson; and from Yellowknife to Rocher River, Port Radium, Coppermine and Bathurst. The first no-reservations-required airbus service in Canada operates daily between Edmonton and Calgary.

On the Pacific Coast, mainline services are operated from Vancouver to Comox, Powell River, Campbell River and Port Hardy and local services are operated between Prince Rupert, Stewart, Ford's Cove, Anyox, Maple Bay and Alice Arm in northern British Columbia. In addition, charter services are operated out of Vancouver, Nelson, Kamloops, Prince George, Terrace and Prince Rupert and, in the Northern Division, from Edmonton, Peace River, Fort Smith, Hay River, Yellowknife, Inuvik and Cambridge Bay.

Aircraft operated by Pacific Western number 48 and range from DC-6B's, DC-4's, Super 46's and DC-3's on mainline services, to Otters, Beavers, Grumman Goose and Cessnas on charter and freight flights. Revenue passengers carried in 1963 totalled 158,600, freight and express carried amounted to $16,808,006 \mathrm{lb}$. and miles flown numbered $4,119,534$.

Commonwealth and Foreign Scheduled Commercial Air Services.-At the end of 1963, there were 21 Commonwealth and foreign air carriers holding valid Canadian operating certificates and licences issued for the following international scheduled commercial air services into Canada:-

## Aeronaves de Mexico, S.A., operating between Montreal, Canada, and Mexico City, Mexico.

Air France (Compagnie Nationale Air France), operating between Paris and other points in Metropolitan France, Montreal, Canada, and Chicago, U.S.A., and beyond.
Alitalia (Italian International Airlines), operating between Rome and Milan, Italy, Montreal, Canada, and Chicago, U.S.A.
American Airlines, Inc., operating between Toronto, Canada, and New York/Newark, U.S.A.
British Overseas Airways Corp., operating between London and Manchester, England; Prestwick. Scotland; Shannon, Ireland; Montreal and Toronto, Canada; and between London, England, Montreal, Canada, Bermuda, Barbados, Trinidad, Bahamas, Jamaica and Antigua.
Deutsche Lufthansa Atkiengesellschaft (Lufthansa German Airlines), operating between Hamburg, Germany, and other points abroad, Montreal, Canada, and Chicago, U.S.A.
Eastern Air Lines, Inc., operating between the terminals Ottawa and Montreal, Canada, and New York, U.S.A., and between the terminals Ottawa and Montreal, Canada, and Washington, U.S.A.
KLM Royal Dutch Airlines, operating between Montreal, Canada, and Amsterdam, the Netherlands.
Mohawk Airlines, Inc., operating between Toronto, Canada, and Buffalo, U.S.A.
North Central Airlines, Inc., operating between Port Arthur/Fort William, Canada, and Duluth/ Superior, U.S.A.
Northeast Airlines, Inc., operating between Montreal, Canada, and Boston, U.S.A., via Concord, Montpelier-Barre, Burlington, White River Junction, U.S.A.
Northwest Airlines, Inc., operating between Winnipeg, Canada, and Fargo, U.S.A., and between Minneapolis/St. Paul, U.S.A., Winnipeg and Edmonton, Canada, Anchorage, Alaska, and beyond.
Pan American World Airways Inc., operating between points in the United States, Gander, Canada, and points in Britain.
Qantas Empire Airways Ltd., operating between Sydney, Australia, San Francisco, U.S.A., and Vancouver, Canada.
Sabena Belgian World Airlines, operating between Brussels, Belgium; Manchester, England; Shannon, Ireland; and Montreal, Canada.
Seaboard and Western Airlines, Inc., operating between points in the United States, Gander, Canada, and points in Europe.
Swiss Air Transport Company Ltd. (Swissair), operating between points in Switzerland, Montreal, Canada, and points in the U.S.A.
United Air Lines, Inc., operating between Vancouver, Canada, and Seattle, U.S.A.
West Coast Airlines, Inc., operating between Calgary, Canada, and Spokane, U.S.A.
Western Air Lines, Inc., operating between Calgary, Canada, and Great Falls, U.S.A.
Wien-Alaska Airlines Inc., operating between Whitehorse, Y.T., Canada, and Fairbanks and Juneau, Alaska, U.S.A.

Flying Schools and Clubs.-At the end of 1963, 88 commercial flying schools were registered as members of the Air Transport Association of Canada. During the year, these schools instructed and graduated 1,569 students as private pilots and 331 students as commercial pilots.

Membership in the 35 flying clubs connected with the Royal Canadian Flying Clubs Association numbered 8,647 at the end of 1963. During the year these clubs instructed and graduated 1,132 students as private pilots and 76 students as commercial pilots.

Weather Services.-Weather services are provided by the Meteorological Branch, Department of Transport, to meet the demands of the general public and all basic economic endeavours such as agriculture, industry, forestry, shipping and fishing. Meteorological service is provided to national and international aviation. The military meteorological requirements in Canada and overseas are met by special co-operative arrangements with the Department of National Defence. The observing and forecasting of ice conditions in navigable waters, both inland and coastal, have expanded rapidly in recent years.

There are 52 forecast offices in Canada, one on shipboard and three in Europe. Forecast offices are linked by 55,300 miles of teletype and radio-teletype circuits, and a national facsimile system 14,600 miles long is used for the distribution of meteorological information in chart form. As of Jan. 1, 1964, the Branch maintained 281 surface synoptic and hourly weather reporting stations, a network of 32 radiosonde stations including five in the Arctic operated jointly with the United States, 61 stations recording upper winds, and 1,949 climatological stations. One Ocean Weather Station in the Pacific, 1,000 miles west of Vancouver, is maintained under International Agreement (see also p. 43).

Ground Facilities.-Aircraft landing areas in Canada are classified in Table 2 by administrative agency, as licensed or unlicensed land facilities or seaplane bases, and military airfields. The unlicensed aerodromes and seaplane bases shown are kept in varying degrees of readiness but lack one or more of the facilities usually found in licensed airports, such as lights, passenger accommodation, ground/air communication, etc. Associated with these facilities is a network of radio aids to navigation designed to facilitate en route navigation and safe landings under low visibility conditions.

On Apr. 1, 1964, the Department of Transport operated 75 low frequency radio ranges (with one under construction) and 36 VHF omni-directional ranges (with 11 under construction and five in the planning stage). Instrument Landing Systems in operation totalled 42 (with four under construction) and there were 197 non-directional beacons in operation (with 10 under construction). All of the operating facilities are regularly flight-checked and calibrated by civil aviation inspectors.
2.-Aircraft Landing Areas classified by Type of Facility and Operator, by Province,
as at Apr. 1, 1964

Air Traffic Control．－The primary functions of the Air Traffic Control Division of the Department of Transport are to expedite and maintain an orderly flow of air traffic and to prevent collision between aircraft operating within controlled air space and between aircraft and obstructions on the movement area of controlled airports．This is accom－ plished through airport control，terminal control and area control services．These and other allied services are described below．

Airport Control Service provides control service to flights operating in the vicinity of major civil airports where the volume and type of aircraft operations，weather conditions and other factors indicate its need in the interest of flight safety．The service also includes the control of all traffic on the manoeuvring area of the airport．Control is effected by means of direct radiotelephone communication or visual signals．Airport control towers are located at： Whitehorse，Y．T．；Victoria（international），Port Hardy，Abbotsford and Vancouver，B．C．； Lethbridge，Calgary，Edmonton（industrial）and Edmonton（international），Alta．；Saska－ toon and Regina，Sask．；Winnipeg（international），Man．；Lakehead，Windsor，London， Toronto Island，Toronto（international），Ottawa and North Bay，Ont．；Montreal（inter－ national），Cartierville，Quebec，Baie Comeau and Sept Iles，Que．；Moncton，Fredericton and Saint John，N．B．；Halifax（international）and Sydney，N．S．；Gander（international）， Nfld．；and Frobisher，N．W．T．

Area Control Service provides control service to en route flights operating within controlled air－ space during weather conditions that prevent a pilot from seeing other aircraft or obstruc－ tions and necessitate his reliance on instruments to conduct the flight．Area control centres are located at Vancouver，B．C．，Edmonton，Alta．，Winnipeg，Man．，Toronto，Ont．，Montreal， Que．，Moncton，N．B．，Goose Bay and Gander，Nfld．Each centre is connected with control towers，terminal control units，communications stations and operation offices within its area by means of an extensive system of local and long－line interphone or radio circuits，and through radio communications facilities available at these stations to all aircraft requiring area control service．Area control centres are also capable of communicating directly with most pilots flying within their control areas．Each area control centre is similarly con－ nected with adjacent centres，including centres in the United States，for the purpose of co－ ordinating control of aircraft operating through more than one control area．This com－ munications system permits each centre to maintain a continuous detailed record of all aircraft operating in accordance with the Instrument Flight Rules（IFR）and a general record of aircraft operating in accordance with the Visual Flight Rules within its control area．In addition to providing area control service to aircrait operating within controlled airspace over Newfoundland，the Gander Control Centre provides control service within the airspace over approximately one half of the North Atlantic Ocean．The Vancouver Area Control Centre also provides control service over the Pacific Ocean within the Van－ couver Oceanic Control Area．

Terminal Control Service consists of the provision of separation to aircraft operating in accordance with IFR in the vicinity of all controlled airports. This service is normally provided by area control centres but separate terminal control units have been established at Calgary and Edmonton (international), Alta.; Saskatoon and Regina, Sask.; Lakehead, Toronto, North Bay and Ottawa, Ont.; Quebec, Que.; Halifax, N.S.; Gander, Nfld.; and Frobisher, N.W.T.

Northern Area Control Service, inaugurated Sept. 26, 1963, is provided by the Edmonton, Winnipeg and Goose area control centres for aircraft flying above 23,000 feet, and is available throughout more than $3,000,000$ sq. miles of Northern Canada.

Radar Control Service is provided extensively in the control of IFR traffic, both in terminal areas and while en route. Terminal service is provided at Vancouver, B.C.; Calgary and Edmonton, Alta.; Regina and Saskatoon, Sask.; Winnipeg, Man.; Lakehead, Toronto, North Bay and Ottawa, Ont.; Montreal and Quebec, Que.; Moncton, N.B.; Halifax, N.S.; and Gander, Nfld. En route service is provided by area control centres and by one radar unit located at Kenora. Ont. Ground Control Approach Service is provided at Gander, N fld., Montreal, Que., and Toronto, Ont.

Flight Information Service is provided by all air traffic control units, but particularly by all area control centres. It consists of advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field condition reports, data concerning aids to navigation, traffic information, refuelling and transportation facilities, and other data of assistance to the pilot in planning or conducting a flight.

Alerting Service ensures that appropriate organizations are notified of aircraft that may be in need of search and rescue aid. This entails the maintenance and constant supervision of a continuous record of active flights to ensure that failure of an aircraft to arrive at the planned destination notified to air traffic control is detected immediately. The service is available to any pilot who files either a flight plan or flight notification with air traffic control.

Customs Notification Service facilitates the routine notification of the appropriate customs agency by pilots who plan to cross the Canada-United States boundary at certain designated customs airports. This is achieved through the prompt notification by air traffic control, at a pilot's request, of the customs officer at the destination airport of the intended arrival and of the need for customs clearance.

Airspace Reservation Service provides reserved airspace for specified air operations within controlled airspace and information to other pilots concerning these reservations and military activity areas in controlled and uncontrolled airspace. The Airspace Reservation Coordination Office, located at Ottawa, is responsible for co-ordinating all airspace reservations in Canada and in the Gander and Vancouver Oceanic Control Areas.

Aircraft Movement Information Service is provided by area control centres to assist the Department of National Defence in establishing the identification of all aircraft operating within specified areas.

The total number of aircraft movements at Department of Transport controlled airports in Canada during 1963 was $2,251,561$.

## Section 2.-Civil Aviation Operation Statistics

Table 3 provides a picture of commercial civil aviation in Canada for the years 195963. It shows data on miles and hours flown, traffic carried, fuel and oil consumed, employees, salaries and operating revenues and expenses, by type of service, for Canadian air carriers followed by summary statistics for both Canadian and foreign air carriers operating in Canada. Figures for Canadian carriers include domestic and international operations, and figures for foreign companies cover miles and hours flown over Canadian territory only and exclude passengers and goods in transit through Canada. Unit toll service refers to the transportation of passengers or goods at a toll per unit, whereas bulk service is the transportation of passengers or goods at a toll per mile or per hour for the entire aircraft. Other flying services comprise non-transportation services such as flying training, aerial photography and aerial patrol and inspection.

## 3.-Summary Statistics of Civil Aviation, 1959-63

${ }^{1}$ Includes other flying services.
Summary statistics of Canadian and foreign commercial air carriers, by type of carrier, are given in Table 4 for 1963. No breakdown between the domestic and the international operations of the Canadian carriers is available for bulk services. For the foreign carriers, hours and miles reported are those flown over Canadian territory only and passengers and goods in transit through Canada are excluded.

It is interesting to note that the six scheduled carriers-those holding a Class I licence from the Air Transport Board-accounted for 87 p.c. of all revenue passengers transported by Canadian carriers during 1963. Their share of the goods carried amounted to approximately 45 p.c.

## PART VI.-OIL AND GAS PIPELINES*

A special article covering the history and development of pipeline construction in Canada appears in the 1954 Year Book at pp. 861-869. Additional information has been carried in each succeeding edition and the following write-up brings pipeline development up to the end of 1963.

Oil Pipelines.-At the end of 1963, approximately 10,500 miles of oil pipelines, predominantly crude oil lines, were in operation. Nearly 1,100 miles were laid in 1963, of which about 400 miles came into operation by the end of the year and the remainder early in 1964. More than half of the 1963 pipeline construction was accounted for by one pro-ject-the 577 -mile, 6 -inch natural gas liquids pipeline from the Alberta-Saskatchewan boundary to Winnipeg. This line, owned by Pacific Petroleums, Ltd., parallels the TransCanada gas pipeline and is the longest Canadian pipeline built for the sole purpose of transporting natural gas liquids (NGL). The NGL-propane, butane and natural gasolinewill be extracted from the Trans-Canada pipeline stream at a new gas reprocessing plant about 25 miles south of Empress, Alta.

In Manitoba, Interprovincial Pipe Line Company continued its looping program, adding four sections of 34 -inch pipe, totalling 41 miles. The Company's wholly-owned subsidiary in the United States, Lakehead Pipe Line Company, Inc., added 126 miles of 34 -inch loop between the Manitoba boundary and Superior, Wis., U.S.A. Capacity increases were effected in 1963 in four of the seven sections of the Interprovincial-Lakehead system; the section between Cromer and Gretna, Man., was increased to $494,000 \mathrm{bbl}$ a day, the highest capacity in the line. First deliveries of crude through the new lateral to Buffalo, N.Y., were made in May 1963. However, deliveries of Canadian crude to the United States by Interprovincial increased only 3 p.c. in 1963. For the first time on a year-round basis, Interprovincial delivered North Dakota crude, received from the Portal pipeline at Clearbrook, Minn., to refineries in Minnesota and Wisconsin; in fact, 55 p.c. of Interprovincial's increase in deliveries consisted of North Dakota crude.

In Alberta, Peace River Oil Pipe Line Co. Ltd. laid a $25-\mathrm{mile}$, 8 -inch line to the Snipe Lake field from its existing system south of Sturgeon Lake, and a 6-inch extension from Snipe Lake to the Red Earth field, a distance of 120 miles, was completed in early 1964; this extension is the most northerly crude oil pipeline in the province. Imperial Oil Limited completed a 6 -inch natural gas liquids pipeline, 116 miles long, from the Judy Creek casinghead gas plant to the gas conservation plant at Devon, south of Edmonton. Hudson's Bay Oil and Gas Company Limited laid a short NGL pipeline from the Lookout Butte gas cycling plant in southwestern Alberta to connect with the NGL pipeline to Montana. An important step toward much greater utilization of heavy asphaltic crude oil from the Lloydminster area was achieved in 1963 by the successful application of a new pipelining method that renders Lloydminster viscous crude amenable to pipeline transportation. In the Pembina area, Pembina Pipe Line Ltd. added 30 miles to its gathering system, including a five-mile extension to serve the Cyn-Pem field. Federated Pipe Lines Ltd. extended its gathering facilities in the Swan Hills area.

In Saskatchewan, Producers Pipelines Ltd. completed 14 miles of loops in the Steelman and Pinto fields and 76 miles of gathering lines, including 50 miles in the new areas of Lost Horse Hills, Fletewode, Storthoaks and South Hastings. In British Columbia, there was no major pipeline construction. Deliveries by Trans Mountain Pipe Line Company decreased slightly and deliveries by the company to the Kamloops refinery ceased. That refinery was supplied solely with British Columbia crude from the pipeline of Western Pacific Products \& Crude Oil Pipelines Ltd. Deliveries by Western Pacific to Trans Mountain at Kamloops increased from 20,517 bbl. a day in 1962 to 28,739 in 1963. In Ontario, the flow of the Brockville-Toronto section of the Trans-Northern Pipe Line Company's petroleum products pipeline was reversed to a west-to-east direction in November 1963.

[^238]Interprovincial Pipeline.-Canada's longest oil pipeline, the system of Interprovincial Pipe Line Company, extends from Redwater field 29 miles northeast of Edmonton, Alta., to Port Credit near Toronto, Ont. This includes the part of the line passing through the United States which is operated by Interprovincial's wholly-owned subsidiary, Lakehead Pipe Line Company Incorporated. The total right-of-way distance of the whole system is 1,928 miles, although there is considerably more pipe than this because the system contains two complete pipelines between Edmonton and Superior, Wis., as well as additional loops. Upon completion of the 1964 construction program, the throughput capacities of various sections of the system will range from $193,000 \mathrm{bbl}$. a day between Sarnia and Port Credit to 538,000 bbl. a day between Cromer and Gretna, Man.

Trans Mountain Pipeline.-The system of Trans Mountain Pipe Line Company extends from Edmonton to Vancouver, enabling West Coast refineries to use Alberta crude oil. The system, completed in 1953, consists of 718 miles of 24 -inch pipeline plus two 50 mile loops. Extensions into the State of Washington carry crude to refineries at Ferndale and Anacortes. In 1963, daily deliveries averaged 191,800 bbl. compared with 198,300 bbl. in 1962-both well below the $250,000-\mathrm{bbl}$. daily delivery capacity of the system. There are three main crude oil receiving terminals on the line-at Edmonton and Edson in Alberta and Kamloops, B.C.

Other Oil Pipelines.-The pipeline of Western Pacific Products \& Crude Oil Pipelines Ltd. consists of 504 miles of 12 -inch pipe extending from Taylor in northeastern British Columbia to Kamloops where it joins Trans Mountain pipeline. Trans-Prairie Pipelines, Ltd. and British Columbia Oil Transmission Co. Ltd. deliver oil to the Taylor terminal from fields in northeastern British Columbia.

In Alberta, Federated Pipe Lines Ltd. serves fields in the Swan Hills region by two pipelines to Edmonton which have a combined capacity of $109,000 \mathrm{bbl}$. a day. Peace River Oil Pipe Line Co. Ltd. has a pipeline system serving the Sturgeon Lake, Sturgeon Lake South, Kaybob and Simonette fields with one outlet running south to join the Trans Mountain pipeline at Edson and the other southeast to Edmonton. Pembina Pipe Line Ltd. gathers crude from the Pembina and adjacent fields and delivers it to Edmonton. Britamoil Pipe Line Company Limited operates a pipeline that begins 140 miles south of Edmonton in the Drumheller area and gathers crude from several fields en route to Edmonton, and the Edmonton Pipe Line Company transports crude from the Joarcam and Camrose fields, 40 miles south of Edmonton. Most of the other fields between Calgary and Edmonton are served by a composite pipeline system owned by three companies: Texaco Exploration Company, which owns the Edmonton-Rimbey section; Rangeland Pipe Line Division of Hudson's Bay Oil and Gas Company Limited, which owns the Rimbey-Sundre section; and Cremona Pipeline Division of Home Oil Company Limited, the Sundre to Calgary section. The Imperial Pipe Line Company Limited has four gathering systems that serve the fields in the Edmonton area, including Leduc-Woodbend, Golden Spike and Redwater, with a major pipeline connection from the Leduc area to Edmonton.

Producers Pipelines Ltd. and its wholly-owned subsidiary, Westspur Pipe Line, gather crude from most of the fields in the southeastern part of Saskatchewan and deliver it to the Interprovincial pipeline at Cromer, Man. Trans-Prairie Pipelines, Ltd., in addition to its comparatively new system in northeastern British Columbia, has a system serving the Weyburn field in southwestern Saskatchewan and is connected to the Westspur pipeline. It also has a system in southwestern Manitoba which is linked to the Interprovincial pipeline. The South Saskatchewan Pipe Lines Company delivers oil from the group of fields in southwestern Saskatchewan to Moose Jaw, Regina and the Interprovincial pipeline at Regina.

Oil Pipeline Tariffs.-On Feb. 1, 1963, Interprovincial Pipe Line Company put into effect a new tariff schedule which included tariff reductions up to a maximum of three cents from Edmonton, Alta., to Port Credit, Ont. On May 16, 1963, tariffs were posted for Interprovincial's new lateral to Buffalo, N.Y. The tariff from Edmonton to Buffalo is

55 cents. Western Pacific Products \& Crude Oil Pipelines Ltd. announced a tariff reduction, effective May 1, 1963, from 66 to 55 cents on its Taylor-to-Kamloops pipelines. Trans-Prairie Pipelines Ltd., which delivers crude to Western Pacific, effected tariff reductions on Jan. 1, 1963 on oil from fields other than the Boundary Lake field, and posted further reductions on July 1. Trans Mountain Oil Pipe Line Company will reduce the tariff between Kamloops and Vancouver from 22 to $18 \frac{1}{2}$ cents when deliveries from Western Pacific exceed a 30,000 bbl.-a-day average over a 12 -month period. In southeastern Saskatchewan, Producers Pipelines Ltd. reduced tariffs for several of the newer fields. Some examples of tariffs for the two major systems follow:-

| Route | $\begin{gathered} \text { Transmission } \\ \text { Distance } \end{gathered}$ | $\begin{aligned} & \text { Tariff as } \\ & \text { Mar. } 1,19 \end{aligned}$ |
| :---: | :---: | :---: |
|  | miles | cts. per b |

| Regina, Sask. | 438 | 20 |
| Gretna, Man. | 772 | 29 |
| Sarnia, Ont.. | 1,743 | 48 |
| Port Credit, Ont. | 1,899 | 51 |
| Buffalo, N.Y.. | 1,954 | 55 |
| Kamloops, B.C. | 510 | 33 |
| Vancouver, B.C.. | 718 | 40 |
| Anacortes, Wash., U.S.A. | 740 | 40 |

Natural Gas Pipelines.-Additions to gas pipeline systems during 1963 brought the total of all transmission, distribution and gathering lines to nearly 40,000 miles. Construction increased appreciably over 1962, and more than 1,000 miles of gas transmission lines and 1,100 miles of distribution lines were laid. The largest gas pipeline construction project was the laying of 205 miles of 34 -inch diameter loops by Trans-Canada Pipe Lines Limited along its system in Manitoba and Saskatchewan. The Alberta Gas Trunk Line Company laid 25 miles of 34 -inch loop along the main line between Princess and Empress, and added a total of 43 miles of lateral lines in the Medicine Hat, Wimborne, Provost and Hussar areas. Northwestern Utilities,'Limited, completed a 118 -mile, 12 -inch line from the Judy Creek gas plant to Edmonton. Canadian Industrial Gas Ltd. established a new source of supply, the Westlock gas field, by building a 36 -mile extension from the company's existing system near Morinville. Mid-Western Industrial Gas Ltd. extended its Wabamun pipeline 23 miles to tie in additional gas sources in the Legal and Westlock areas. Saskatchewan Power Corporation added a total of 143 miles of transmission pipeline and 117 miles of distribution line in widely separated areas of Saskatchewan. In Ontario, Union Gas Company of Canada Limited provided services to a new region by laying more than 200 miles of transmission and distribution pipeline to communities between Waterloo and Owen Sound. The Consumer's Gas Company extended its transmission system from Brampton to Orangeville and laid a new 30 -inch major supply line from Malton to Toronto.

Trans-Canada Pipe Lines Limited.-Trans-Canada pipeline, extending from the Alberta-Saskatchewan boundary to Montreal, is Canada's longest pipeline, with a right-ofway length of 2,145 miles. In addition, there are 195 miles of lateral lines including a 50 mile lateral completed in 1960 which delivers gas from the main line at Winnipeg to the United States boundary near Emerson, Man. In September 1962, Trans-Canada began delivering gas to St. Lawrence Gas Company Inc. in northern New York State through the Niagara Gas Transmission Ltd. line near Cornwall. Trans-Canada increased its sales of gas from $237,300,000 \mathrm{Mcf}$. in 1962 to $271,100,000 \mathrm{Mcf}$. in 1963, an increase of 14 p.c. by volume. The company receives its gas from The Alberta Gas Trunk Line Company.

Alberta-to-California Pipeline.-The total length of the main line, including the section in the United States, is 1,367 miles, all 36 -inch pipe except the most northerly 126 -mile section just south of Whitecourt, Alta., which is 30 inches. The Alberta Gas Trunk Line Company owns the 351 -mile main section in Alberta plus more than 220 miles of lateral feeder lines. The 107 -mile section of line that crosses southeastern British Columbia from the Crowsnest Pass to Kingsgate is owned by Alberta Natural Gas Company. The two Canadian companies that deliver gas through the pipeline-Alberta and Southern Gas Co. Ltd. and Westcoast Transmission Company Limited-have been authorized to export a maximum of $610,750 \mathrm{Mcf}$. a day at the British Columbia-Idaho boundary. The pipeline began deliveries in December 1961.

Westcoast Transmission Company Limited.-The Westcoast pipeline transports gas to the Vancouver area and adjacent United States areas from the Peace River district of northeastern British Columbia and northwestern Alberta. The main trunk consists of 650 miles of 30 -inch pipe starting at Taylor, B.C., but there are some 400 miles of gathering lines supplying gas from British Columbia fields. The Worsley field in Alberta started supplying gas to Westcoast late in 1962. The ultimate throughput capacity of the present Westcoast main line, after installation of more compression equipment, will be 660,000 Mcf. per day. As already stated, the Company also buys Alberta gas and delivers it through the Alberta-to-California pipeline to Idaho, Washington and Oregon.

Other Gas Pipelines.-The Alberta Gas Trunk Line Company owns and operates the largest system of gas transmission pipelines in Alberta. Virtually all gas exported from the province is carried in'its system. The Company receives gas from the gathering systems of more than 40 fields and delivers it at the provincial boundaries to gas transmission companies supplying markets elsewhere in Canada and in the northwestern and north-central United States. In addition, Alberta Gas Trunk supplies gas to some communities located along or near the pipeline rights-of-way. The Plains Division of the Alberta Gas Trunk system, which serves the Trans-Canada pipeline, contains 946 miles of pipeline. The Foothills Division forms the Alberta section of the Alberta-to-California pipeline and consists of 571 miles of pipe. The Northern Division, 41 miles long, delivers gas from the Worsley and Boundary Lake South fields in northwestern Alberta to the Westcoast Transmission pipeline at the British Columbia boundary.

In British Columbia, the British Columbia Electric Company Limited provides natural gas service to Vancouver and lower mainland areas, and Inland Natural Gas Co. Ltd. serves the southern interior region. In Saskatchewan, all cities and towns using natural gas are served by Saskatchewan Power Corporation. In Manitoba, Greater Winnipeg Gas Company distributes natural gas in the Winnipeg area. Union Gas Company of Canada, Limited serves southwestern Ontario in the Windsor, London, Sarnia and Chatham areas. The Consumers' Gas Company and its subsidiaries distribute gas in Toronto, Ottawa, Niagara Falls, Welland and Fort Erie regions. In Quebec, gas is distributed by Quebec Natural Gas Limited which serves the Montreal area. Although a small amount of gas is imported into southwestern Ontario from the United States, almost all of the gas used in Eastern Canada is supplied by the Trans-Canada pipeline.

Oil Pipeline Statistics.*-There were 42 oil pipeline companies operating in Canada at the end of 1962. Pipeline deliveries shown in Table 1 were made to non-pipeline carriers, foreign pipelines, and terminals including refineries and distributing centres.

[^239]
## 1.-Pipeline Movements of Oil, 1959-62

| Item | 1959 | 1960 | 1961 | 1962 |

Revenue and employee data shown in Table 2 are not complete; both revenue and employee figures have been omitted for some companies, since pipeline operation forms only a part of the activities of these establishments and the data are not separable.

## 2.-Operating and Financial Statistics of Oil Pipelines, 1959-62

Gas Pipeline Transport Statistics.-The gas pipeline transport industry became a significant factor in the Canadian economy in 1957, with the completion of the first of several extensive pipelines constructed to transport natural gas from the field or processing plant to distribution outlets. The first detailed statistics for the industry cover the year 1959. Companies included are those that obtain the bulk of their revenue from the sale of gas to distribution companies for resale; those that derive most of their revenue from the sale of gas to final consumers are not included.

> The interpretation of the symbols used in the tables throughout the Year Book will be found on $p$ viii of this volume.

Communications media in Canada have been shaped to meet the needs of the country. Great networks of telephone, telegraph and radio services, inextricably bound together, provide adequate and efficient service which, in this era of electronic advancement, is under continual technological change and development. The familiar challenges of the country-its size, its topography, its climate, its small population-which have reared their heads in other areas of development, have had to be faced as well in the field of communications. That these have been met is evidenced by the fact that today Canada possesses communication facilities and services second to none in the world.

## Section 1.-Telecommunications*

During the past half-century, Canada has experienced tremendous economic expansion. Population growth and the advance to new industrial frontiers have been matched by an upward surge in national productivity and general standard of living. Continuing development of Canada is dependent on both individual pioneering and the co-operative efforts of many industries and the telecommunications industry is filling a vital role in this drama of growth.

Business and industry have expanded and ventured into isolated areas assisted and promoted by Canadian telecommunications industries which have anticipated the needs of the future with vast programs of development in virgin territories. Technological development has been particularly important to the extension of telecommunications in Canada. To meet the demands placed upon it, the industry has constantly introduced newer and better equipment, tools and methods of operation. In the growth of urban centres, the development of rural communities and the pioneering of new territory,

[^240]Canadian telecommunications agencies through the years have sought to provide the highest quality of service for the greatest number of people. The major railways, the hundreds of co-operating telephone companies, the radio and television companies and federal communications organizations work together with a common purpose-building networks of telecommunications from coast to coast. They provide such familiar services as telephone, telegraph, teletype, radio and television, and many other related means of communication; in addition, mutual co-operation has allowed them to satisfy a variety of defence needs.

## Subsection 1.-Government Control over Telecommunications Agencies

Telephone and telegraph companies incorporated under the Federal Parliament are subject to the jurisdiction of the Board of Transport Commissioners in the matter of rates and practices under the provisions of the Railway Act (see pp. 752-753); other companies are responsible to provincial regulatory bodies. International telegraph and telephone communications are handled subject to the International Telecommunication Convention and the Regulations thereunder and/or under regional agreements. Tolls charged to the public for radio communication service are subject to the provisions of the Regulations made under the Radio Act. Overseas cables landed in Canada are subject to the External Submarine Cable Regulations under the Telegraphs Act.

Radio communications in Canada, except for those matters covered by the Broadcasting Act, are regulated under the Radio Act and Regulations and also under the Canada Shipping Act and Ship Station Radio Regulations. In addition, radio communication matters are administered in accordance with the International Telecommunication Convention and Radio Regulations annexed thereto; the International Civil Aviation Convention; the International Convention for the Safety of Life at Sea; the Inter-American Telecommunication Convention and the Convention between Canada and the United States of America relating to the operation by citizens of either country of certain radio equipment or stations in the other country; and also in accordance with such regional agreements as the Agreement between Canada and the United States for the Promotion of Safety on the Great Lakes by Means of Radio, the Agreement between Canada and the United States relating to the Co-ordination and Use of Radio Frequencies Above Thirty Megacycles per Second, the Inter-American Radio Agreement and the North American Regional Broadcasting Agreement (see also pp. 833-834).

National radio broadcasting in Canada entered its present phase in 1936 when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission. The Act gave the Corporation wide powers in the operation of a national broadcasting system and gave to the Minister of Transport the technical control of all broadcasting stations.

During 1958 the Government established a Board of Broadcast Governors and the Canadian Broadcasting Corporation Board of Governors was abolished. The Board of Broadcast Governors regulates the establishment and operation of networks of radio and television broadcasting stations, the activities of public and private broadcasting stations and the relationship between them, in the interest of providing a national broadcasting service of high standard, basically Canadian in content and character. While the Minister of Transport is the licensing authority under the Radio Act, the Broadcasting Act requires that applications for broadcasting station licences or for any change in an existing broadcasting station be referred to the Board of Broadcast Governors for its recommendation before being dealt with by the Minister. (See also pp. 839-840.)

## Subsection 2.-Telephones

Alexander Graham Bell first transmitted human speech through electrically energized equipment in March 1876, and in August of the same year a one-way call from Brantford to Paris, Ont., marked the first successful long-distance test of the new invention. Soon
after the instrument was perfected, telephone exchanges sprang up in many Canadian communities, sometimes with two competing companies in one place. In April 1880, The Bell Telephone Company of Canada was established by Act of Parliament and authorized as the official agent for telephone service in 32 cities and towns across the country. However, it came to be recognized that, in the existing state of the industry, one company could scarcely develop and organize service over so wide an area, and a separate company was set up in British Columbia. The Bell Telephone Company withdrew from the Maritime Provinces in the 1880's and installations in the Prairie Provinces were sold to the respective provincial governments in 1908-09. The seven major telephone systems that developed across Canada worked together to establish long-distance service on a national basis and in 1931 they founded the Trans-Canada Telephone System which now has eight full members. These include both shareholder-owned companies and provincial government systems. They are as follows:-

The Avalon Telephone Company Limited<br>Maritime Telegraph and Telephone Company Limited<br>The New Brunswick Telephone Company Limited<br>The Bell Telephone Company of Canada (serving Ontario, Quebec, Newfoundland and the Northwest Territories)<br>Manitoba Telephone System<br>Saskatchewan Government Telephones<br>Alberta Government Telephones<br>British Columbia Telephone Company.

These eight systems, together with the Island Telephone Company (P.E.I.), QuebecTelephone serving the Lower St. Lawrence area, Ontario Northland Communications and the Okanagan Telephone Company, comprise the Telephone Association of Canada. This organization was established to ensure general co-operation in telephone matters and to provide a means of sharing technical and operating information. Many of the smaller systems have also formed similar groups, such as the Canadian Independent Telephone Association, the Quebec Independent Telephone Association and the Saskatchewan Association of Rural Telephone Companies.

Backbone of the Canadian telephone network is the trans-Canada microwave system. Stretching more than 3,900 miles from the Atlantic to the Pacific, it is the longest single microwave system in the world. In all, the Canadian telephone industry operates more than 10,000 miles of microwave routes, carrying simultaneously many hundreds of longdistance conversations, large volumes of data, and television programs for the CBC and CTV television networks. The trans-Canada system also supplies the communications facilities linking the more than 200 stations on the CBC French and English radio networks.

The steadily rising demand for local and long-distance service has called not only for general expansion of Canadian telephone systems but for the constant introduction of modern facilities and services. A number of Canadian companies have introduced what is called "Extended Area Service" in many of the communities they serve. This plan eliminates long-distance charges between several larger centres and their suburbs, and between many smaller places with a close community of interest. The cost of this service is included in the monthly charge for local telephone service.

Distance Dialing by both operators and customers enables the industry to provide faster and better long-distance service and at the same time makes the most efficient use of manpower and equipment. Direct Distance Dialing now makes it possible for users to dial their own long-distance calls to more than $6,000,000$ telephones in Canada and more than $89,000,000$ in Canada and the United States.

Numerous flexible telephone services are provided for government, business and industry. Special conference circuits can be quickly arranged, enabling business men to discuss their affairs without the inconvenience and expense of travel. Radiotelephone installations link travellers with the regular telephone network, providing mobile service
for such users as highway departments, trucking and construction firms, fire and ambulance services and police departments. A pocket radio signaller carried by a person temporarily leaving a telephone instrument area will indicate an incoming call requiring his attention.

Improvement and extension of local and long-distance telephone services continue to absorb the bulk of invested money and labour. However, the increasing mechanization of government and business operations and the resultant need to transmit large volumes of information at economical rates have led to the accelerated development of machine-tomachine communication. The growth of such communication in the past few years has been made possible to a large extent by the introduction of Data-Phone data sets which convert the electrical impulses from business machines into tone-signals acceptable to telephone circuits. A Data-Phone data set at the receiving business machine re-converts the tone-signals into machine language. Data-Phone service is now used in conjunction with a variety of business machines to send information from punched cards and from paper or magnetic tape.

Several optional services introduced recently provide great flexibility for machine-tomachine and voice calling over long distances. Wide Area Telephone Service extends a customer's flat-rate calling to telephones within seven progressively wider zones, the largest of which includes the whole of Canada. Telpak, a private line intercity service, is available to organizations which transmit large volumes of information requiring an exceptionally broad band of frequencies, such as data from advanced computers and highspeed facsimile equipment. It may also be used to carry simultaneously many smaller loads of information, such as voice calls and teletypewriter messages, which require relatively narrow bands of frequencies.

In 1963, the scope and value of Dial Teletypewriter Exchange Service was enhanced when arrangements were made to interconnect TWX subscribers in Canada with TWX users in the United States. This makes it possible for 60,000 TWX users to exchange typewritten information and certain low-speed data over the regular telephone network. Handwritten messages or sketches can be transmitted over private lines, or over the regular telephone network, in conjunction with Data-Phone data sets. The industry also offers an electronic facsimile service which transmits and receives letter-size handwritten or printed messages, charts or drawings over the regular network or private lines.

A recent product of Canadian telephone research which has been quickly accepted by business customers is known as Business Interphone, a versatile, hands-free intercommunication system and regular telephone service in a single instrument. Centrex, designed for large private telephone systems, permits incoming calls to be dialed straight through to an extension without being relayed at the switchboard of private branch exchanges. A complete intercommunication system is available for use in the home and in small businesses. A special type of telephone has been introduced for hard-of-hearing users. Another new service is an automatic dialer which can retain up to 290 telephone numbers in its electronic memory. Canadian telephone research laboratories are working on basic research in such fields as electronic circuitry, microminiaturization, solid state physics and ferrites. Applied research has concentrated on meeting the needs of Canadian subscribers for modern data communication and telephone service. Touch-tone service, featuring a telephone with push-buttons instead of a dial, was introduced in four communities in 1964.

The northward extension of industry in Canada has, of course, required the northward expansion of telephone communications. The British Columbia Telephone Company operates a tropospheric scatter system from Port Hardy to Annette Island. Alberta Government Telephones, in conjunction with Saskatchewan Government Telephones, operates a tropospheric scatter transmission system from Uranium City in Saskatchewan to Fort Smith in the Northwest Territories. In Manitoba, radiotelephone service reaches out to a large number of isolated settlements and bush camps and provides communication for aircraft and for boats plying Lake Winnipeg. In northern and northwestern Ontario, Fringe Radio Service extends telephone communication beyond wire and cable facilities. A radio unit on the customer's premises permits two-way calling between subscribers in
the fringe area and those served by the regular telephone network. Goose Bay in Labrador and the Schefferville area of the Quebec-Labrador boundary are in contact with the remainder of the world through a tropospheric scatter and radio-relay network hinged on Sept Iles. In mid-1964, Bell Telephone opened its most northerly exchange at Resolute on Cornwallis Island, far into the Arctic. A high-frequency radio base station at Alma, Que., serves the communications needs of the northern settlements in the area between the Atlantic Coast of Labrador and the Quebec shore of Hudson Bay, and also provides communications for aircraft operating in the North. To better serve this area, Bell in 1963 established a temporary base station at Frobisher, supplementing the base station at Alma, and opened five new radiotelephone stations.

Recently, the Canadian National Telecommunications (CNT) has made a major entry into the field of public telephone service. In Newfoundland, it provides public telephone service at Gander and at many smaller communities; at the end of 1963 there were more than 10,000 telephones connected to CNT exchanges in that province. CNT also supplies local and long-distance public telephone service to about 5,800 subscribers in the Yukon Territory, the Northwest Territories and northern British Columbia. Some of the points served are Hay River, Fort Smith, Yellowknife, Fort Nelson, Watson Lake, Cassiar, Whitehorse, Mayo, Elsa, Keno and Dawson City.

Telephone Statistics.-There were 2,430 telephone systems operating in Canada in 1962, compared with 2,509 in 1961. The number of co-operative systems in rural districts decreased from 2,108 to 2,079 and the number of shareholder-owned companies from 259 to 234. The largest of the incorporated companies, The Bell Telephone Company of Canada, which operates throughout the greater part of Ontario and Quebec and in Newfoundland and the Northwest Territories, served 61 p.c. of all the telephones in Canada in both 1961 and 1962. The British Columbia Telephone Company, also shareholder-owned, served 8.5 p.c. of the total in 1961 and 9.4 p.c. in 1962 . The number of telephones in use increased by 76 p.c. during the ten-year period, 1953-62.

## 1.--Milages of Pole-Line and Wire and Number of Telephones in Use, 1953-62

Note.-Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

| Year | Systems | Route Milage ${ }^{1}$ | Length of Wire | Telephones in Use |  |  |  |

${ }^{1}$ Ontario 4-party telephones included under Rural Lines.
${ }^{2}$ Includes Yukon Territory.

The major telephone systems record completed calls on representative days throughout the year and on this basis estimate the number of local conversations which, added to the actual count of long-distance calls, gives their total volume of business. Estimates are included for the smaller systems.

## 3.-Local and Long-Distance Calls and Average Calls per Capita and per Telephone, 1953-62

Nore.-Figures from 1928 will be found in the corresponding table of previous Year Books beginning with the 1939 edition.

| Year | Local Calls | Long- <br> Distance Calls | Total Calls | Total Calls per Capita | Average Calls per Telephone |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | Local | LongDistance | Total |
|  | '000 | '000 | '000 | No. | No. | No. | No. |
| 1953. | 5,952,756 | 131,899 | 8,084,655 | 412 | 1,650 | 36.6 | 1,687 |
| 1954. | 6,209,771 | 137,761 | 6,347,532 | 418 | 1,608 | 35.7 | 1,644 |

## Subsection 3.-Telegraphs

Public telegraph service in Canada is, for the most part, furnished by the railway companies through their telecommunications departments. The preponderance of this service is provided by Canadian National and Canadian Pacific, both of which, in addition to meeting their own railway communication needs and handling telegrams and cablegrams for the public, provide a wide range of services including data processing systems, radio and television network services, facsimile and wire photo services, telemetering, complex teletype and data switching centres, and other forms of voice and record communications.

At the end of 1963, there were about 6,000 customer installations in Canada for Canadian National-Canadian Pacific telex service; each installation has access to the other and also to world-wide telex networks in other countries.

In 1963, Canadian National-Canadian Pacific completed construction of a high-grade microwave radio relay system between Montreal and Vancouver. This system is capable of carrying 600 voice channels which are used for the transmission of all forms of voice and record communications and can be expanded readily by the addition of radio channels to provide network television service or increased circuitry for general communications use. This system links up with the railway microwave facilities running east from Montreal to St. John's in Newfoundland, and thus completes the railways' transcontinental microwave capability.

Increased civil and military interests in the Canadian northwest have created a need for all forms of communications services and to meet this need the Canadian National Telecommunications (CNT) has undertaken several major projects:-
(1) A 1,200-mile microwave system between northern Alberta and the Yukon-Alaska border was completed in July 1961. Starting at Grande Prairie, 450 miles north of Edmonton, this network proceeds northward through Alberta, crosses the northeast corner of British Columbia and, following the Alaska Highway through Yukon Territory, joins an interchange system at Mount Dave on the Yukon-Alaska border. At Grande Prairie, the system joins the Alberta Government telephone system running southward through Alberta to the Canada-United States border, where it connects with United States networks.
(2) Construction was completed in mid-1961 of a land-line communications network stretching around Great Slave Lake from Fort Smith on the Alberta-Northwest Territories border to Yellowknife, bringing the full range of communications services to residents of Yellowknife, Fort Rae, Fort Providence, Hay River, Pine Point and Fort Smith. This network is connected to the 'outside' by a microwave system between Hay River and Edmonton; the section of the microwave system within the Northwest Territories was constructed by CNT and the Alberta section by Alberta Government Telephones.
(3) Construction was completed in late 1962 of a tropospheric scatter communications system that extends from Hay River in the Northwest Territories to Lady Franklin Point on Victoria Island in the Arctic Archipelago. This system is used for defence purposes and provides various types of communication service to such outlying communities as Coppermine and Cambridge Bay.
(4) A 1,020-mile telephone pole-line is under construction down the length of the Mackenzie River from Hay River to Inuvik which, when completed in 1966, will provide simultaneous long-distance telephone, teletype, telex, commercial telegraphs, air operational and weather communications to Fort Simpson, Wrigley, Fort Norman, Norman Wells, Fort Good Hope and Inuvik. Aklavik, Fort McPherson and Arctic Red River will be linked to the system at Inuvik by very high frequency radio communications. Service will be instituted at successive communities as construction of the line proceeds northward.

Telegraph Statistics.-There were nine telegraph and cable companies operating in Canada during 1963 but, as already stated, telegraph service is provided mainly by the telecommunications departments of the two major railway companies. The Canadian Overseas Telecommunication Corporation (see p. 832), is responsible for maintaining and operating overseas telecommunication services. Total cost of property and equipment for all telegraph and cable companies increased by 16.3 p.c. during 1963 from $\$ 336,374,000$ to $\$ 391,173,000$. The number of telegrams sent continues to decline year by year, giving way to other types of message transmission, but the number of cablegrams sent has been rising. The business of telegraph and cable companies appears to be changing from one of handling messages directly to one of leasing equipment for the transmission of messages by others. Revenues from the latter source have been increasing over the past several years and have been the main factor in the steady advance in total operating revenues.

## 6.-Summary Statistics of Canadian Telegraphs, 1954-63

Note.-Figures from 1920 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

| Year | Operating Revenues | Operating Expenses | $\begin{gathered} \text { Net } \\ \text { Operating } \\ \text { Revenue } \end{gathered}$ | $\begin{aligned} & \text { Pole- } \\ & \text { Line } \\ & \text { Milage } \end{aligned}$ | $\begin{aligned} & \text { Wire } \\ & \text { Milage } \end{aligned}$ | $\underset{\text { ployees }^{1}}{\text { Em- }}$ | Telegrams | Cablegrams ${ }^{2}$ | $\begin{gathered} \text { Money } \\ \text { Transfers } \end{gathered}$ |

${ }^{1}$ Excludes commission operators.
${ }^{2}$ Includes wireless messages and transatlantic telephone and telex
messages.

## Subsection 4.-Overseas Telecommunications Services

The Canadian Overseas Telecommunication Corporation was established in 1950 to maintain and operate external telecommunication services for the conduct of public communications by cable, radiotelegraph and radiotelephone and any other means of telecommunication between Canada and overseas points; to make use of all developments in cable and radio transmission and reception for external telecommunication services; and to conduct investigation and research with the object of improving and co-ordinating such telecommunication services with the telecommunication services of other parts of the Commonwealth. By 1964 the following services had been established: direct telegraph, telephone and telex communications between Canada and Argentina, Australia, Barbados, Bermuda, Brazil, Britain, Denmark, Finland, France, Germany, Italy, Jamaica, Japan, the Netherlands, New Zealand, Norway, Sweden and Switzerland.

The first transatlantic telephone cable, a joint project with the British Post Office, the American Telephone and Telegraph Company, the Eastern Telephone and Telegraph Company and the Corporation, was brought into service in 1956. Apart from normal use of the system for public telephone and telegraph message traffic, capacity is available for private leased circuits. International telex service was introduced to Canada the same year and service with 84 countries is available. Since 1961 the following cables have been made available for service: the Canada-Britain 80-circuit telephone cable (CANTAT); the Canada-Greenland-Iceland 24-circuit cable (ICECAN), primarily intended to meet the North Atlantic communication needs of international civil aviation, and its connecting counterpart between Iceland and Scotland (SCOTICE); a four-party project (Canada-Britain-Australia-New Zealand), part of a Commonwealth round-the-world cable system, consisting of a Canada-New Zealand-Australia 80-circuit telephone cable; and the use of a number of circuits for Canadian purposes in a telephone cable system connecting Bermuda and the United States and in a telephone cable system connecting Jamaica and the United States. A five-party (Canada-Britain-Australia-New Zealand-Federation of Malaysia) project, a section of the Commonwealth round-the-world cable system, will provide, when completed in 1966, an Australia-New Guinea-North Borneo-Singapore-Malaya-Hong Kong 80-circuit telephone cable (SEACOM).

Canada is taking part in negotiations being held among the more advanced nations for the purpose of setting up an international organization to develop and establish a commercial communications satellite system. A communications satellite ground station is being constructed near Liverpool, N.S., by the Department of Transport for experimental purposes. It is designed to improve the capability of industry and government in this new
field and will be available to the Canadian Overseas Telecommunication Corporation for initial participation in the commercial satellite system when it becomes operational. The exploitation of this new technology to supplement existing cable and other facilities and form part of an improved global network will provide a means of meeting the ever-increasing demand for overseas communication services. A list of cables landed in Canada is given in Table 7.
7.-External Cables Landed in Canada, 1963

| Company and Station |  |  |
| :--- | :--- | :---: | :---: |
|  | Cables | Nautical |
| Miles |  |  |

${ }^{1}$ Twin cable from Clarenville, Nfld. to Oban, Scotland and single cable from Clarenville, Nfld. via Terrenceville, Nfld. to Sydney Mines, N.S. ${ }^{2}$ Licensed for operation by two carriers-COTC and ET\&T. ${ }^{3}$ One cable unserviceable.

## Subsection 5.-Federal Government Civil Telecommunications and Electronics Services

Radio regulation and radio aids to navigation services are under the jurisdiction of the Terecommunications and Electronics Branch of the Department of Transport. The functions and responsibilities of the Branch may be summarized as follows: (1) administration of the Radio Act and Regulations and the Radio Provisions of the Canada Shipping Act and Ship Station Radio Regulations; (2) research into and development of new and improved communication and electronic equipment and systems needed for aeronautical, marine, meteorological and other services; (3) construction, maintenance and operation of radio aids to marine and air navigation and of radio communication stations including procurement of the necessary equipment; (4) development of policy and plans with respect to international telecommunications by cables, satellites and other media including relations with the Canadian Overseas Telecommunications Board; (5) co-ordination of policy governing government use of telecommunication services; (6) administration of the leasing of land-line facilities required for all services of the Department; (7) planning of emergency measures and administration of the Emergency National Telecommunication Organization (ENTO); (8) administration of the Telegraphs Act and the Regulations thereunder covering the licensing of overseas submarine cables; (9) participation in the work of the International Telecommunication Union and its subsidiary organs; and (10) participation in the communication and electronic activities of the International Civil Aviation Organization
(ICAO), the International Air Transport Association (IATA) and the International Marine Consultative Committee (IMCO).

Licensing and Regulation of Radio Stations.-Under the Radio Act and the Canada Shipping Act it is provided that radio stations employing a form of Hertzian wave transmission, including television and radar, be licensed by the Department of Transport, unless otherwise exempted by regulation. Licensing, which provides basic control over the right to establish a radio station, involves the assigning of specific frequencies to each station. Frequencies are assigned to many types of services on a shared non-interference basis. Engineering briefs covering the selection or change of frequency, amount of power and design of the directional antenna system must be approved by the Department of Transport and notification sent to the signatory countries of the North American Regional Broadcasting Agreement before a new broadcasting station can be licensed or before modification can be made in an existing station. The setting of standards for the equipment, installation and operation of a station provides control for efficient use of the radio spectrum. A further control is the requirement that operating personnel be subject to examination and certification.

Eight monitoring stations are maintained at suitable points across Canada to observe actual radio spectrum conditions using a variety of modern electronic aids, their purpose being to ensure that radio communications are conducted according to regulatory procedures and to determine causes of harmful interference.

Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph or radiotelephone equipment, primarily for distress use. Approval is given for each make and model of equipment that comes up to the required standard and, in addition, the ship station as a whole is inspected after the licence is issued and periodically thereafter. All Canadian and foreign ships are subject to inspection to ensure that they conform to the requirements of the Safety of Life at Sea Convention.

Standards have been developed for the installation of aircraft radio stations specifying the techniques and materials that may be used, and inspections of radio stations aboard civil aircraft of all operational categories are carried out at prescribed periods. In-flight inspections of the radio communications and navigational aspects of proposed new air carrier operations, encompassing both land and oceanic routes, are also made as required.

Marine and aeronautical radio operator standards and related regulations are covered by international agreement. The International Telecommunication Convention prescribes the qualifications for radio operators on mobile radio stations and the regulations made under the Radio Act provide for the examination and certification of operators, both professional and amateur.

Number of Radio Stations Licensed and Operated in Canada.-During the year ended Mar. 31, 1964, 104,775 licences were issued in respect of radio stations in Canada. This figure includes stations operated by departments of the federal, provincial and municipal governments, stations on ships and aircraft registered in Canada and mobile stations operating in the public and private land mobile services but does not include private commercial broadcasting licences.

Investigation and Suppression of Inductive Interference.-The Radio Act provides penalties for selling or using apparatus liable to cause interference to radio reception. Standards are developed and type approvals issued for certain classes of such equipment. The Telecommunications and Electronics Branch of the Department of Transport provides also a country-wide interference service using special investigation equipment for the purpose of tracing sources of interference and recommending cures for interference to broadcast, television and other radio reception.

Cars equipped for measuring and locating sources of interference operate from offices located in 30 cities throughout Canada; 27,134 cases were dealt with during the year ended Mar. 31, 1964. Sources include power lines, auto ignitions, heavy electrical equipment, domestic appliances, electro-medical apparatus, industrial radio frequency generators and TV receivers.

Regulations specifying the limits to be met by particular types of apparatus are contained in the Radio Noise Limits Order. Certain low-powered radio transmitting and receiving equipment is exempt from the operation of the Radio Act, e.g., garage door radio controls for a number of models have been exempted and consequently may be operated without the radio station licence otherwise required.

Meteorological Communications.-Weather stations operated by the Meteorological Branch of the federal Department of Transport throughout Canada are linked coast-to-coast by means of teletype and in the remote northern areas by radio or radioteletype. The land-line teletype circuits are leased from commercial companies and the radio circuits are operated chiefly by the Telecommunications and Electronics Branch of the Department of Transport.

Weather stations on the teletype network transmit their reports directly; other stations report via commercial or radio facilities to the nearest station on the teletype line for subsequent transmission on the meteorological circuit. The reports are collected on a regional basis and then relayed to other parts of the country as required. There are two coast-tocoast teletype systems transmitting weather information, with main relay points at Vancouver, Edmonton, Winnipeg, Toronto, Montreal, Halifax, Gander and Goose Bay. These main meteorological communications centres not only handle the distribution of weather information within Canada including the Arctic, but also effect international exchange with the United States and Europe and, through them, with many other countries. For the latter purpose, the Canadian Meteorological Branch and the British Meteorological Office share the cost of a leased duplex circuit in the transatlantic cable. Altogether, the Meteorological Branch uses 55,800 miles of teletype circuits connecting 355 teletype offices.

In addition, a facsimile network connects forecast offices, including radio facsimile transmission to Arctic stations and ships at sea. Weather charts originating at the Central Analysis Office in Montreal receive national distribution over the network. Regional transmissions of additional charts are distributed on a local basis. Altogether, the Meteorological Branch utilizes 14,500 miles of facsimile circuits, serving 80 offices.

Radio Aids to Marine and Aeronautical Navigation.-Services of the Telecommunications and Electronics Branch of the Department of Transport in aid of marine and aeronautical navigation are outlined in the following paragraphs; details may be obtained on request from the Department of Transport, Ottawa.

Marine Navigation.-Radio aids to marine navigation are provided for about 4,000 radio-equipped Canadian vessels and almost as many foreign ships using Canadian waters. This safety and communications service for shipping covers the East and West Coasts, the Great Lakes, the St. Lawrence River and Gulf, Hudson Bay and Hudson Strait and includes regularly broadcast weather reports, storm warnings and notices of dangers to navigation.

Ships at sea may obtain medical advice from any coast station. The stations carry out communications by radiotelegraph and/or radiotelephone and many of them provide connections to land telephone lines. Halifax (VCS) and Vancouver (CKN) stations have shortwave facilities for world-wide communications and participate in the Commonwealth long-range ship communication scheme. Coast stations on Hudson Bay and Hudson Strait, in addition to their regular services, provide commercial communications for posts of the Hudson's Bay Company and various prospecting and development organizations, make weather observations, handle administrative traffic and assist aircraft with information, landing conditions, etc.

Automatic radiobeacon stations are maintained on the East and West Coasts, the St. Lawrence River and Gulf, and Hudson Bay and Strait, giving navigational aid to mariners by transmitting signals on which bearings may be taken. These stations are arranged, where possible, in groups up to a maximum of six stations transmitting in sequence on a common frequency, the sequence being repeated continually regardless of weather conditions. For distance finding in foggy weather, a number of radiobeacons are synchronized with fog alarms at the same point.

Loran is a long-range radio aid to marine and air navigation providing accurate fixes at distances up to 600 miles by day and 1,500 miles by night. Two Loran stations operate in Nova Scotia, three in Newfoundland and one on the West Coast. These stations, in conjunction with Loran stations of the United States Coast Guard, give service to ships and aircraft plying the North Atlantic and Pacific Oceans. Decca is a short-range radio aid to navigation providing accurate fixes at distances up to 250 miles. Four chains of Decca stations are in operation-the Newfoundland chain, the Nova Scotia chain, the Anticosti chain and the Cabot Strait chain-giving service to ships off Newfoundland and Nova Scotia and in the St. Lawrence River and Gulf.

It has become general practice to equip merchant ships with radar and important buoys are fitted with radar reflectors to increase their radar visibility. Two shore-based radar installations are in operation-one at Camperdown near the mouth of Halifax Harbour and the other on the Lion's Gate Bridge across the entrance to Vancouver Harbour. Low-powered transceivers are provided for use in emergencies at lighthouses, particularly at locations that would otherwise be completely cut off from assistance in case of illness.

Aeronautical Navigation.*-Radio aids to air navigation are provided from coast to coast and from the Canada-United States border to the Arctic along and off the airways, and are used by Canadian and foreign air carriers flying over Canadian territory. Six regional offices located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., and Moncton, N.B., carry out the construction and operation of facilities. Low-frequency radio range stations, located approximately every hundredmiles along airways, provide specific track guidance to pilots by means of audible signals which may also be used to obtain direction finding bearings. In addition, radiotelephone communications are available between ground and aircraft, by which means pilots may obtain weather data, air traffic control instructions and other information concerning the safety of flights. Forty-three very high frequency omni-directional ranges (VOR) are in operation, a type of facility that enables the pilot to select any desired course. The 43 omnidirectional ranges have permitted the establishment of VOR airways across Canada and of 31 trans-border airways. Two additional installations are under construction.

Aeronautical radiobeacon stations provide radio signals with which pilots may use their direction finding equipment to obtain relative directional bearings. Fan markers operating on very high frequencies, are usually placed on an airway to inform the pilot when he may safely lose altitude or to indicate accurately the distance from an airport. Station location markers, similar to fan markers, are installed at most radio range sites; they enable a pilot to determine when he is exactly over the station.

[^242]Airport and airway surveillance radars ( 150 nautical-mile) are in operation at 16 airports for air traffic control purposes. Precision approach radars are in operation at Montreal and Toronto International Airports and five additional installations are expected to be in operation by 1965. Instrument landing systems (ILS) provide radio signals which permit pilots to approach airports for landing during periods of very low visibility. An installation normally consists of a localizer transmitter providing lateral guidance to the runway, a glide path transmitter for slope guidance to the approach end of the runway, two marker transmitters giving distance indications from the runway and a low-power radiobeacon (compass locator) to assist in holding procedures and lining up on the localizer course. Forty instrument landing systems are in operation.

Aeronautical radio communications stations are located at strategic points across the country, including the Arctic. These stations, operating for the most part on high frequencies, provide communication with domestic and international air carriers. Thirteen international communication stations, giving coverage from coast to coast and over the oceans, form a major contribution on the part of Canada to international aviation.

## Subsection 6.-Public and Private Commercial Microwave Facilities

Canada, because of its population distribution and the vast areas served by microwave communication links, ranks second highest among the world's users of microwave communications systems on a per capita/per mile basis. Because of an increasing demand for television outlets, it has been necessary to extend microwave routes to provide television interconnections for the CBC English, French or private networks. With the use of more automated equipment by industry and various services, associated data and control information must be transmitted at rapid speeds over microwave radio-relay to wide areas of Canada. This Subsection gives a summary of the facilities existing or under construction at the end of March 1964.

Railways.*-Early in 1964 the Telecommunications Departments of the Canadian National and Canadian Pacific Railway Companies placed in operation a microwave system extending from Montreal to the Pacific Coast. The system will be used for television, telephone and data relay purposes. The railways also operate microwave facilities which link the Province of Quebec with the Maritime Provinces and Newfoundland. In addition, the Canadian National Telecommunications have installed a microwave system between Alberta and the Yukon Territory which carries telephone and data traffic and serves both civil and military organizations in the area. In co-operation with Alberta Government Telephones a combination microwave and tropospheric scatter system connects Alberta and the Northwest Territories. This system is also intended to provide communication for civil and military use in Far North areas. The Quebec North Shore Labrador Railways have developed a microwave system extending into northern Quebec to provide communication for mining operations and to serve some civil communication purposes. Ontario Northland Railways has completed a microwave installation connecting northern Ontario and James Bay for purposes of military and civil communication. The Northern Telephone Company is expanding its microwave facilities in northwestern Ontario for carrying television program material and civil communication. The Pacific and Great Eastern Railway makes extensive use of $6,000 \mathrm{Mc} / \mathrm{s}$ microwave facilities linking Vancouver with Prince George and Dawson_Creek, B.C.

Telephones.-The Trans-Canada Telephone System consists of eight provincial and private systems collectively providing a transcontinental microwave system for the purpose of carrying telephone, television, data and other types of communication services.

[^243]Extensive microwave systems are utilized within the respective provinces for civil and military communications or television relay purposes. Major expansion has taken place in each province, greatly increasing the number of areas served and system capacity for all types of communication requirements. Tropospheric scatter systems are employed to provide beyond line-of-sight transmissions especially to the Far North areas which are used for both civil and military applications.

Hydro.-The British Columbia Hydro and Power Authority, the Calgary Power Corporation, The Hydro-Electric Power Commission of Ontario, the Quebec HydroElectric Commission, the Saskatchewan Power Corporation and Manitoba Hydro use a considerable number of microwave relay systems for important control and communication purposes. The Quebec Hydro-Electric Commission has greatly expanded its power generating plants and new microwave routes have been added to permit a central control of the various power generating stations through the use of microwave communication.

Television.-The two main television interests in Canada-the CBC and CTVlease private microwave facilities for the relay of television programs from coast to coast. In addition, studio transmitter links are used by various television stations where the television transmitter is situated some distance from the studio and interconnection is required. In sparsely populated areas, off-the-air pick-up signals from primary television stations are sometimes relayed via microwave to rebroadcasting sites. Microwave facilities are also used in conncction with portable and mobile television pick-up where program material is intended for the main studio.

There has been a great increase in television coverage areas during the past year and the ensuing need for English and French program feeds via microwave relay has caused an expansion in the number of leased microwave circuits and new communication routes.

Industrial.-Many firms utilize existing public communication facilities on a lease basis; however, some organizations have installed private microwave systems to provide voice, teletype and control data for various purposes.

## Subsection 7.-Miscellaneous Radio Communication Services

In addition to radio communication services provided by the Federal Government, extensive radio communication systems have been established in the provinces, mainly for police, highway and forestry protection purposes. Municipal government departments have steadily increased their use of radio to facilitate operations, particularly as a medium of communication with vehicles-police, fire, engineering, hydro, etc. Such services as taxi, heavy construction, ready-mix concrete, oil pipeline construction and operation, veterinarian and rural medical participate extensively in the use of radio.

Public utilities, power companies, provincial power commissions, oil exploration and mineral development organizations have expanded considerably their use of radio in both mobile and point-to-point radio fields.

The telephone companies provide an extension of land telephone service, by radio, to suitably equipped vehicles. This service is available in all major cities in Canada and along many of the nation's arterial highways. Restricted common-carrier mobile radio service (this service to vehicles does not permit interconnection with the over-all telephone system but only with specific dispatchers) is available in most major cities in Canada as well as in a number of smaller urban centres. The latter service is provided by telephone companies as well as by other organizations. Low-power radio stations may be licensed to permit short-distance personal and private business radiotelephone communications; since the inauguration of this service in 1962, more than 24,000 licences have been issued.

## Subsection 8.-Radio and Television Broadcasting*

Broadcasting in Canada has developed over a period of some forty-six years as a combination of public and private enterprise. Since the opening program from the first radio station was beamed into a few Montreal homes in 1918, the role of the radio and television program in the daily life of the Canadian family has grown to startling prominence. Today, radio service reaches 98 p.c. and television service over 94 p.c. of the Canadian population.

To have become such an integral force in the daily life of the nation, broadcasting had to learn the needs of the people and how to serve them. Two 'official' languages forming two distinct cultures had to be served independently but without diminishing the concept of national unity. Dozens of other smaller groups, distinct in culture and frequently dwelling in the same radio or TV coverage area but in separate communities with widely divergent program interests, had to be served. Physical problems of distance and geography had to be overcome. It requires some 360 radio transmitters and 105 TV stations and satellites to reach a population distributed across a 4,000-mile southern frontier, through seven time zones and a variety of topographical and climatic regions, and scattered northwest through thousands of square miles to the shores of the Arctic Ocean. Not only do these people have local service that is a reflection of life in their own districts, but by means of 15,000 miles of land-lines for radio networks and 8,500 miles of microwave circuits, for television nearly every Canadian may, at the same time, listen or watch as an event of national interest takes place.

Since 1932, a publicly owned body, now known as the Canadian Broadcasting Corporation, created to develop a national service, has worked with the private or independent station-owner to establish this service. A more recent addition (1958) is the Board of Broadcast Governors, which consists of three full-time members including the Chairman and Vice-Chairman and 12 part-time members; the function of the Board is to "regulate the establishment and operation of networks of broadcasting stations, the activities of public and private broadcasting stations in Canada and the relationship between them, and provide for the final determination of all matters and questions in relation thereto" (See also p. 825.) The Canadian Broadcasting Corporation consists of a President and a VicePresident and nine other directors appointed by the Governor in Council. It is accountable to Parliament through a Cabinet Minister designated by the Governor in Council and is empowered to establish and maintain program networks and stations. (See also pp. 840-844.)

The Broadcasting Act also requires that, before dealing with any application for a licence to establish a broadcasting station (private or public) or for an increase in power, change of frequency or change of location of a broadcasting station, the Minister of Transport must receive a recommendation from the Board of Broadcast Governors. The same requirement exists with respect to the making of a new regulation or the effecting of changes in the Regulations under the Radio Act. Before making the appropriate recommendation to the Minister of Transport, the Board considers all such applications at a public hearing at which the applicant, licensees and the Canadian Broadcasting Corporation are given the opportunity of being heard.

Under the provisions of the Radio Act, the Minister of Transport must also receive a recommendation from the Board before dealing with any application to change the ownership or control of any share of capital stock in the licensee of a broadcasting station which is incorporated as a private company. The Board of Broadcast Governors has established a policy that any such application, which would result in a change of ownership or control of a licensee, would be referred to a public hearing before a recommendation is made to the Minister. Applications of this kind not involving a change of ownership or control may be dealt with by the Board or the Executive Committee of the Board at a regular meeting.

[^244]Under the provisions of the Broadcasting Act, the Board has issued the Radio Broadcasting Stations Regulations and the Radio (TV) Broadcasting Regulations applying to radio and television stations respectively; these regulations cover all aspects of station operation and the enforcement of them is the responsibility of the Board.

Broadcasting Facilities.-As of Apr. 1, 1964, there were in operation in Canada some 39 CBC radio stations plus another 110 low-power relay transmitters maintained by the Corporation, and 14 CBC television stations plus 104 rebroadcasting and network relay stations. On the same date there were 267 privately owned radio stations in operation and 158 privately owned television broadcasting and relay stations. All but 12 of the privately owned television stations and many of the privately owned radio stations are affiliated with the CBC and help to distribute national radio and television services over networks operated by the CBC. Of the 12 unaffiliated private television stations, nine form the Canadian Television Network (CTV) which commenced operating in the fall of 1961. The other three stations in Chicoutimi, Hamilton and Montreal are independent of any network affiliation. Of the 267 private radio stations, 228 were AM standard band stations, 33 were FM stations and six were shortwave stations; 21 of the 33 FM stations operated on the new multiplex stereophonic system.

## Operations of the Canadian Broadcasting Corporation, 1963-64

Television.-The current television policy of the Corporation is to establish facilities to serve those Canadians beyond the reach of existing CBC stations or of private stations affiliated with the CBC networks. The dramatic extension of coverage that marked the developing years of television is now past. By the end of 1964 , over 94 p.c. of Canadians were within reach of the national television service through CBC-owned stations and private affiliates. The remaining 6 p.c. are progressively difficult and expensive to serve since many of them live in isolated communities sometimes thousands of miles from the main east-west lines of communication and extension of coverage to these areas is subject to financial considerations and to various technical limitations, such as the availability of broadcasting frequencies and network services. The Corporation is following the policy of extending service first to those areas where the most people can be served at the least cost. Current planning takes into account all areas having a population of more than 2,000 and includes about 60 communities. The 63 p.c. of the Canadian public within reach of CBC-owned television stations receives full service of national programming but the 31 p.c. of the population served by private affiliates of the Corporation's networks receives an average of about 49 hours a week English and 66 hours a week French national network service. The Corporation intends gradually to eliminate this disparity in service by the installation of additional CBC facilities and, in keeping with the CBC-private station combination approach, television channels in the Saint John-Fredericton area of New Brunswick, at Saskatoon, Sask., and at Sudbury, Ont., have now been reserved for the use of the Corporation.

However, extension of television service to unserved areas is only one aspect of the Corporation's responsibilities. Of vital consideration is the gradual provision of basic production facilities in each province and the replacement of obsolete facilities in order to maintain operations at a high level of efficiency. During 1963-64, two new CBC television rebroadcasting stations were brought into operation and, as the year ended, six more stations were under construction; all of these were designed either to rebroadcast the signals of existing stations or to relay service direct from the television network. In addition, the Corporation completed two major television installations-one at Quebec City and the other at St. John's, Nfld.-both of which have production facilities and the necessary operating staffs. The establishment of production facilities and associated transmitters
has a twofold purpose-through CBC-owned transmitting facilities, the complete national service is made available to the audience and, through the production facilities, the Corporation is able to tap the program resources of the area and, thus, eventually reflect the area to the remainder of Canada. This enables the CBC to carry out one of its essential functions, that of showing the parts of Canada to each other, of reflecting the country to itself.

The complexities of CBC television broadcasting have greatly increased in recent years in the administrative area and as a result of the setting up of an entirely separate, wholly commercial television network (CTV). Of increasing significance for all broadcasters, public and private alike, is the growth in community antenna television systems. These systems, in which the TV receivers of fee-paying subscribers are linked to a common receiving and re-transmission system, makes television available to people who could not otherwise receive it, and thus, in effect, extends the coverage of existing television stations. The growth of both these systems can have substantial, and as yet largely unmeasured, effects on television broadcasting itself. A report on the future of community antenna television in relation to ordinary television broadcasting was published by the Board of Broadcast Governors at the request of the Government.

Radio.-As with television, the current demand on CBC radio broadcasting is two-fold-first, there is the need to bring service to the small percentage of the population now beyond the reach of Canadian radio and, secondly, the need to increase the amount of national service programming distributed by the national radio networks. About 2 p.c. of Canadians- 400,000 persons-are still beyond the reach of stations carrying the national service and 23 p.c. are reached only by private affiliates receiving on the average about 30 hours of national programming a week. At present there are about 120 communities of more than 500 population each on the planning list for service.

Changes during 1963-64 included the consolidation of the CBC's English-language radio networks into a single network, significantly altering the role of radio station CJBC in Toronto. No longer the anchor station of the former Dominion Network, CJBC was converted to a partial French-language station to serve a substantial minority of listeners in the area whose mother tongue is French or who have an understanding of the language. Complete French-language service on CJBC began in October 1964.

During the year the power of CFPR, Prince Rupert, B.C., was increased from 250 to 10,000 watts, greatly improving the service to the coastal areas of northern British Columbia. In the Maritimes, a new station, CBZ, was established at Fredericton and commenced operation on Mar. 4, 1964. In addition to bringing the complete service of the CBC network to central New Brunswick, CBZ will provide the first English-language production facilities that the Corporation has ever had in this province. The Corporation was authorized to establish a station at Calgary and a French-language station at Ottawa. Permission was also received to transfer the 50,000 -watt station CBX from Lacombe to Edmonton, Alta., replacing CBXA ( 250 watts) in the Alberta capital. The Corporation was authorized to erect a station at Saint John, N.B., which will operate as a rebroadcasting station of CBZ, Fredericton. All these stations came into operation in 1964.

Extension of CBC service to remote areas of small population concentration is achieved principally through the use of low-power relay transmitters (LPRT's). During the year, CBC brought into operation 11 new LPRT's, bringing the national service to an additional 55,000 people and increasing the number of these unmanned transmitters to 108. The new stations are at Stephenville, Nfld.; Shelburne, N.S.; St. Favien de Panet, Que.; Hearst, Manitouwadge and Elliot Lake, Ont.; Clinton and Fort St. John, B.C.; and Beaver Creek, Destruction Bay and Teslin in the Yukon Territory. The power of eight older LPRT's was doubled and the locations and frequencies of another four were altered to improve service. As the year ended, applications were on file with the Department of Transport, the licensing authority, for a further 22 LPRT's, which will bring service to an additional 95,000 people.

CBC participation in FM broadcasting was curtailed a few years ago when general economic conditions made it necessary for the Corporation to suspend temporarily the operations of a Montreal-Ottawa-Toronto FM network. During the summer of 1964, the Corporation made plans to reactivate this network, mainly on the basis of a program service on tape between its FM stations in these cities and in Vancouver. The initial goal of the reactivation was to provide, by late 1964, CBC FM stations at Montreal, Ottawa, Toronto and Vancouver and the CBC French-language FM outlet in Montreal with a program service completely separate from the AM service to be distributed, in the initial stages at least, largely on tape.

Northern Service.-The Northern Service, established in 1958, extends the national radio broadcasting system to the Yukon and Northwest Territories and to the northern portions of all provinces except the Maritimes. With the recent addition of a third highpower transmitter at Sackville, N.B., the Northern Service shortwave schedule was increased from eight to nine and one half hours daily. In 1963-64, the Yukon Network was extended and improved by the addition of low-power relay transmitters at Teslin, Destruction Bay and Beaver Creek on the Alaska Highway and the increase of the power of CFWH Whitehorse, the network program centre, from 250 to 1,000 watts. The network of LPRT's now reaches most of the population of the Territory.

Programs in the Indian and Eskimo languages, originated by local stations, were increased in number and variety and the number of programs in French and Eskimo on the shortwave service was increased. Two special series were produced by the Northern Service-Franklin's Diary and What Do You Know About. . .? The latter consisted of interviews with authorities on the North, both in and out of the government service, on matters directly affecting the citizens of the North. Indian Magazine, the first CBC program series devoted exclusively to activities of Canadian Indians, was inaugurated during the year. Although intended for people of Indian background living in the North, it drew its material from all parts of Canada, co-operating with the National Indian Council, the Indian-Eskimo Association, Indian Friendship Centres in cities across Canada, and federal and provincial government departments dealing with Indian affairs.

In addition to supplying material to a number of regular English radio network programs, special programs were produced at Whitehorse for Trans-Canada Matinee, in Inuvik for Christmas Day, and in Yellowknife for I.Q.

Armed Forces Service. - In the course of 1963-64, the Armed Forces Service supplied CBC radio network programs recorded on tape in French and English to bases of the Canadian Armed Forces in Germany and France. Taped programs were also provided to 13 low-power broadcasting stations operated by the RCAF on the Mid-Canada Line and at other locations in Northern Canada. A weekly package of telerecorded prints of popular television programs was sent to Canadian troops in the Arctic, Europe, the Middle East and the Congo.

For the fourth consecutive year, a CBC Concert Party visited the UNEF bases in the Middle East and performed for the troops of all the nations represented there. Another concert party, which consisted of top Canadian variety artists, made a three-week tour of Armed Forces bases in Europe. During this visit a special television show, which saluted the 40 th Anniversary of the founding of the RCAF, was taped at the fighter wing at Baden Soellingen, Germany, and was later shown in Canada on the CBC national network.

International Service.-The CBC International Service is operated on behalf of the people of Canada to provide information about this country to listeners in other lands. The Service continued in 1963-64 to pursue its aims by means of shortwave broadcasts in 11 languages, by transcriptions, relays and regular tape services, cable feeds of special actuality programs and by television programs. News reports and commentaries remained the mainstay of the shortwave service. New popular programs, such as the Radio-Canada Shortwave Club, and extended programs for philatelists have resulted in a marked increase in the mail received by the International Service.

A variety of programs were transcribed and made available to foreign broadcasting organizations. Radio Moscow broadcast a program on the symposium held by the Arctic Institute of McGill University, which included an interview with the Soviet representative. They also received a number of other transcriptions, including actuality reports about wheat shipments to Russia recorded on Soviet ships in Canadian ports. On a request from Czech Radio, the International Service arranged for Canada's contribution to the Year of Czech Composers by recording a special performance in Montreal of Janacek's Sinfonietta. Programs were prepared dealing with political developments in Ottawa, including the opening of Canada's 26th Parliament. The NATO Conference of May 1963 was reported directly from Ottawa in a multitude of languages in daily cable feeds to the broadcasting organizations of NATO and other countries. The monthly 15 -minute television program Canada Magazine was distributed to a greater number of broadcasting organizations.

International Relations.-The CBC in 1963-64 continued its activity in the field of international exchange and export sales of programs. Among the more interesting of these was the sale of The Open Grave, an allegory associated with the Easter story. After much controversial publicity, the program was bought by the British Broadcasting Corporation and was successfully shown on its television network. Subsequently, negotiations took place with broadcasters in the Republic of Ireland and the Netherlands for the purchase of this program. The National Broadcasting Company bought ten CBC-TV Parade productions for showing on the NBC-TV network during the summer of 1964.

CBC will be one of the participants in an international television exchange project organized by the CBS network in the United States. The CBC entry is a one-hour concert featuring France's avant-garde composer-conductor Pierre Boulez, with the L'Heure du Concert Orchestra, in a program of 20th century music by Stravinsky, Debussy and Boulez.

Intertel, of which CBC is a founding member, continued production of hour-long documentaries for distribution in the member countries and the world abroad. During the past year, CBC contributed two documentaries to this series-One More River, a study of negro-white attitudes in the southern United States, which won the CBC Wilderness Award, and What Price Freedom, an examination of Algeria a year after independence.

CBC personnel seconded from their positions in Canada have continued to assist in the development of television and radio broadcasting service in the newly emerging nations of Asia, Africa and the West Indies. Technical and executive staff have been made available to these countries to assess their requirements and advise on the establishment of broadcast service. Much of this work has been undertaken in co-operation with the External Aid Office of the Canadian Government. During 1963-64, CBC staff members worked in Ghana, Malaya, Jamaica, Sarawak and East Asia, and requests were being considered for assistance to Laos, Nyasaland, Cyprus and the Cameroons. In addition, broadcast trainees from these countries have had on-the-job training at CBC production points across Canada in various functions applicable to broadcasting-news services, farm and school broadcasts, press relations, financial operations, administration, technical and programming matters, production, audience research and station management. Trainees have come from Norway, Greece, Pakistan, France, Indonesia, Japan, Burma, Colombia, Sarawak, Morocco, Malaya, Turkey, Granada, the West Indies and many other countries.

Finance.-The CBC, being a Crown corporation, is financed through public funds authorized by Parliament and through commercial advertising. In the year ended Mar. 31, 1964, commercial revenue accounted for about 30 p.c. of the Corporation's income. It is recognized that such revenue cannot be expected to grow significantly beyond this level, since there are no large untapped sources of advertising revenue available to television and the CBC continues to follow a policy whereby certain programs are not available for sponsorship (including news, talks and public affairs, farm and fisheries broadcasts, school broadcasts, religious and institutional broadcasts) and also deliberately restricts the quantity of commercial messages. The Corporation's efforts to increase commercial revenues are at no time allowed to influence its program decisions.

The following statement of operations shows a 6.5 -p.c. increase in expenditures in 1963-64 over the previous year, to the amount of $\$ 115,458,000$. Increases for the previous four years were: 1962-63, 0.7 p.c.; 1961-62, 6.6 p.c.; 1960-61, 7.4 p.c.; and 1959-60, 7.7 p.c. The small increase in 1962-63, as compared with other years, is attributable to the austerity program which caused postponement of planned extensions and improvements to the national broadcasting service. The 1963-64 grant of $\$ 78,439,000$ voted by Parliament to discharge the responsibilities of the national broadcasting service was under-expended by $\$ 62,000$.

## Statistics of the Broadcasting Industry

Financial and other statistics of the radio and television broadcasting industry are obtained by the Dominion Bureau of Statistics in co-operation with the Board of Broadcast Governors and the Department of Transport; summary figures are given in Table 9 for 1959-62; for 1962, figures for the private sectors and the CBC are given separately.

The operating revenue of the broadcasting industry in 1962 amounted to $\$ 124,400,000$, an increase of 12.5 p.c. over the previous year. Of this total, radio broadcasting contributed 45.0 p.c. compared with 46.6 p.c. in 1961 . The number of private television stations reporting to the DBS increased from 55 in 1961 to 58 in 1962 and the number of radio stations from 194 to 198 . In both 1961 and 1962, revenue from network and national advertising represented 63 p.c. of the total broadcasting revenue and revenue from local advertising 37 p.c.; both categories increased approximately 11 p.c. over 1961 and other non-broadcasting revenues increased 33 p.c.

Operating expenses in 1962 reached a total of $\$ 196,000,000$, an increase of 8 p.c. over 1961. The growth of revenues exceeded the growth of expenses and resulted in an operating profit of $\$ 5,300,000$ in 1962 compared with an operating loss of $\$ 228,000$ in 1961. After adjustment on account of other income and expenses and income taxes, the final net profit of the private sector of the broadcasting industry for 1962 was $\$ 1,800,000$ compared with a
loss of $\$ 2,700,000$ in 1961. There are no CBC profits or losses in the figure of net profit because any unexpended balance of the parliamentary grant is treated as an account due to the Government of Canada.

${ }^{1}$ The CBC charges its operations with depreciation but deducts the charge on its published statements; the charge so made has been added to the parliamentary grant. $\quad 2$ Does not include advertising agency commissions, estimated at $\$ 11,761,211$ in 1962.

## Section 2.-The Post Office

The basic tasks of the Canadian Postal Service are to receive, convey and deliver postal matter with security and dispatch. In discharging these duties it maintains post offices and utilizes air, railway, land and water transportation facilities. Associated functions include the sale of stamps and other articles of postage, the registration of letters and other mail for dispatch, the insuring of parcels, the accounting for COD articles, and the transaction of money order and Post Office Savings Bank business. Because of its widespread facilities, it has been found expedient for the Post Office to assist other government departments in the performance of certain tasks including the sale of unemployment insurance stamps, the collection of government annuity payments, the distribution of income tax forms and Civil Service employment application forms, and the display of government posters. Post offices are established wherever the population warrants. Those in rural areas and small urban centres transact all of the functions of the city office. In larger
urban areas postal stations and sub-post offices have full functions similar to the main post office, including a general delivery service, lock-box delivery and letter-carrier delivery.

The Operating Service of the Post Office Department is organized into 14 Districts, each under a District Director. These District Directors and the Postmasters, Toronto and Montreal, report directly to the Assistant Deputy Postmaster General. The Assistant Deputy Postmaster General has the responsibility of conducting the normal field operations of the Postal Service. The operating and support functions required in the provision of postal service to the public are the responsibility of the local postmasters who receive technical and administrative assistance from District Offices at strategic points.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island and from Pelee Island, Ont., (the most southerly inhabited point of Canada) to settlements and missions far into the Arctic. Canada's airmail system provides several transcontinental flights daily, intersected by branch and connecting lines radiating to every quarter and linking up with the United States airmail system. All first-class domestic mail up to and including eight ounces in weight is carried by air between one Canadian point and another, whenever delivery can thus be expedited. Air stage service provides the only means of communication for many areas in the hinterland. There were approximately 46,000 miles of airmail and air stage routes in 1963. However, the railways are still the principal means of distant mail transport.

At Mar. 31, 1963 there were 11,336 post offices in operation and letter-carrier delivery, performed in 186 urban centres, employed over 9,113 uniformed carriers. Rural mail routes are generally circular in pattern and average about 26 miles in length. Some 1,680 side services transport mail between post offices, railway stations, steamer wharves and airports, and 1,874 stage services convey mail to and from post offices not located on railway lines. Transportation of mail by motor vehicle on highways is expanding and more than 400 such services were in operation in 1963, many of them replacing or reducing conveyance by rail. In 1963 there were 995 city mail services transporting mail to and from post offices, postal stations and sub-post offices, collecting mail from street letter-boxes and delivering parcel post. The 9,196 land mail service couriers employed travelled approximately $54,000,000$ miles during the year; both land mail and coastal mail services are performed under contract.

The larger post offices in Canada may be described as intricate industrial plants where mail is unloaded, cancelled, transported and shipped by semi-automatic means. Conveyor belts, automatic chutes and other devices increase output of mail matter without increasing staff and all the larger offices are provided with the latest mechanical equipment. In some areas householder mail is carried by mailmobile. In most cities, postage stamps may be obtained at any time from automatic vending machines, and a curbside mail receptacle in which patrons may deposit mail without leaving their automobiles is coming into use. Electronic equipment checks money orders and accounts for the $\$ 900,000,000$ annually that they represent.
10.-Post Offices in Operation, by Province, as at Mar. 31, 1962 and 1963

| Province | 1962 | 1963 | Province or Territory | 1962 | 1963 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. |  | No. | No. |
| Newfoundland. | 660 | 661 | Saskatchewan | 1,266 | 1,248 |
| Prince Edward Island | 107 | 107 | Alberta. | 1,070 | 1,062 |
| Nova Scotia | 869 | 830 | British Columbia | 916 | 906 20 |
| New Brunswick | 555 | 536 | Northwest Territories... | 40 | 43 |
| Quebec... | 2,414 | 2,414 |  |  |  |
| Ontario.. | 2,680 804 | 2,704 805 | Canada | 11,401 | 11,336 |

## 11.-Revenue and Expenditure of the Post Office Department, Years Ended Mar. 31, 1959-63

Note.-Figures from 1868 will be found in the corresponding table of previous Year Books beginning with the 1911 edition.

| Year | Gross Revenue | Net Revenue ${ }^{1}$ | Expenditure ${ }^{2}$ | $\begin{aligned} & \text { Surplus (+) } \\ & \text { or ( } \\ & \text { Deficit } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
|  | \$ | 8 | \$ | \$ |
| 1959. | 183,380,508 | 157,630,336 | 157, 803,478 |  |
| 1960. | 193,659,715 | 167,629,053 | 165,792,339 | +1,836,714 |
| 1961. | 202,003,790 | 173, 645,658 | 178,371,716 | -4,726,058 |
| 1962. | 213,517,994 | 183,678,936 | 185,019,700 | $-1,340,764$ |
| 1963. | 222,358,848 | 192,830,859 | 189,344,410 | +3,486,449 |

${ }^{1}$ Gross revenue less commissions and allowances to postmasters, and other small items.
${ }^{2}$ Excludes rental of semi-staff and staff post offices.

The gross revenue receipts shown in Table 11 are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions. The gross value of the postage stamps and stamped stationery sold during $1962-63$ was $\$ 91,723,497$, and receipts from postage meter or postage register impressions and postage paid in cash by other means amounted to $\$ 115,978,652$.

In the year ended Mar. 31, 1963, post office money orders, issued for any amount not exceeding $\$ 100$ and payable in almost any country of the world, were sold at more than 8,895 post offices and money orders payable in Canada only, for amounts not exceeding $\$ 15.99$, were sold at some 1,780 additional post offices. Table 12 shows the amount of money order business conducted by the Postal Service in recent years.

## 12.-Operations of the Money Order System, Years Ended Mar. 31, 1959-63

| Year | Money <br> Order <br> Offices in <br> Canada | Money Orders Issued in <br> Canada | Value of Orders Issued in <br> Canada | Value Payable in- |  | Value of Orders Issued in Other Countries, Payable in Canada |

|  |  |  |  | Canada | Other Countries |  |
|  | No. | No. | \$ | 8 | 8 | \$ |
| 1959. | 10,823 | 53,746,050 | 853,443, 891 | 825,973, 053 | 27, 470, 837 | 5,026,970 |
| 1960. | 10,778 | 54,953,087 | 868,669,133 | 840,584,556 | 28,084,576 | 5,250,922 |
|  | 11,098 | 55,939, 421 | 886,976,976 | 858,278, 412 | 28,698,563 | 5,505,224 |
| 1962. | 10,708 | 56,252,265 | 893,512,291 | 867,182,785 | 28,329,506 | 5,940,795 |
| 1963. | 10,679 | 55,448,076 | 898,164,577 | 874,680,765 | 23,503,811 | 6,885,116 |

A statement on the financial business of the Post Office Savings Bank will be found in Chapter XXV on Currency and Banking.

## Section 3.-The Press*

Daily newspapers published in Canada numbered 116 in 1963, counting morning and evening editions separately. English and French dailies had an aggregate reported circulation of more than $4,213,000$-about 82 p.c. in English and 18 p.c. in French. Thirteen of those with circulations in excess of 100,000 accounted for over 55 p.c. of the circulation. French dailies, as would be expected, have their widest circulation in Quebec where nine of

[^245]the 11 in existence in 1963 were published. Some of the largest of these papers have been established in that province for over 60 years. Weekly newspapers serve more people in rural communities than do the dailies. They cater to local interests and exercise an important influence in the areas they serve.

The Canadian Press, a co-operative organization owned and operated by Canada's daily newspapers, provides its 100 members with world and Canadian news and news photographs, mostly by means of teletype and wirephoto transmission. It also serves weekly newspapers and radio and television stations. It is, in effect, a partnership through which each member newspaper provides its fellow members with the news of its particular area and through which the general news of the world is brought to Canada. Cost of editing and transmission is divided among members according to the population of the cities in which they publish. CP gets world news from Reuters, the British agency, and from the Associated Press, the United States co-operative, and these agencies have reciprocal arrangements with CP for their coverage of Canada.

The United Press International (British United Press) is a limited company in Canada and maintains a close association with the UPI World Service, of which it is an affiliate. From its headquarters in Montreal, it provides Canadian news for general world distribution as well as for 163 subscribers including 65 private broadcasting stations in Canada. Agence France Presse maintains offices in Montreal and Ottawa and certain foreign newspapers have agencies in Ottawa to interpret Canadian news for their readers.

Press Statistics.-The following tables are based on data estimated from Canadian Advertising. Circulation figures are given for daily English-language and French-language newspapers only. Such circulation figures are relatively easy to obtain because, in their own interest, newspapers qualify for and subscribe to the Audit Bureau of Circulation; for these, ABC 'net paid' figures have been used. On the other hand, circulation data for foreign-language newspapers, weekly newspapers, weekend newspapers and magazines are incomplete and therefore not usable.

## 13.-Estimated Numbers and Circulations of reporting English-Language, FrenchLanguage and Foreign-Language Newspapers, by Province, 1962 and 1963

For footnotes, see end of table.

## PART I.-THE MOVEMENT AND MARKETING OF COMMODITIES

Domestic trade is broad and complicated; it encompasses all values added to commodities traded, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services, including amusement services such as theatres and sports. Only certain phases of this broad field are covered here and, wherever possible, cross references are given to related material appearing in other Chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The Index will be found useful in this respect.

## Section 1.-Merchandising and Service Establishments*

The surveys of merchandising and service establishments centre around a census of such business establishments. The first census of this kind related to business transacted for the year 1930 and similar censuses were taken for 1941, 1951 and 1961. It should be noted that a wider range of data was available from the 1961 than from the previous

[^246]censuses. Gross margin information was collected from retail stores and wholesalers; operating expense figures were collected from wholesalers and service businesses; and more information was sought about the operating characteristics of retailers and wholesalers. Detailed results may be obtained from the census reports.* Summary data are given in Subsection 1 following.

Census information is supplemented in intercensal years by monthly, quarterly and annual surveys on the more important phases of the wholesale, retail and service tradessample surveys for some businesses and full coverage for others. Each census forms a new base for such surveys and certain improvements were implemented for continuance during the 1951-61 intercensal period. Current information available on the distributive trades, given in Subsections 2, 3 and 4, continues to project the 1951 base and estimates for years prior to 1951 have been revised in accordance with that base. Data related to the new 1961 base will be available early in 1965 .

## Subsection 1.-1961 Census of Merchandising and Service Establishments

Wholesale Trade.-Results of the 1961 census of wholesale trade are given in Tables 1 and 2. Classification changes put into effect for that census should be noted-lumber and building material dealers, farm implement dealers, feed stores, farm supply stores and harness shops, which were classified as retail businesses in 1951, were in 1961 classified as wholesale businesses.

[^247]

Retail Trade.-Results of the 1961 census of retail trade are given in Tables $\mathbf{3}$ and 4. These figures are not directly comparable with 1951 census information since certain classifications were excluded from retail trade in 1961 and others added. Restaurants, lumber dealers, repair shops, radio and television repair and jewellery repair were included in 1961 as part of retail trade but in 1951 were considered service trades.

## 4.-Number of Retail Trade Locations and Value of Sales, by Kind of Business, Census 1961

Service Trades.-Results of the 1961 census of service trades are given in Tables 5 and 6. In 1961, restaurants, caterers, cocktail lounges, taverns and dressmakers, formerly classified as retail businesses, were included as service trades. Automotive repair shops (several kinds), radio and TV repair shops, jewellery repair and engraving, and bicycle repair shops, formerly classified as service trades, were transferred to the retail census. Dental laboratories, electroplating shops, machine shops and upholstery shops, formerly classified as service trades, were transferred to the manufacturing classification.

## 5.-Number of Service Trade Locations and Receipts, by Province, Metropolitan Area, Major Urban Area and Other Urban Centres of 30,000 or More Population, Census 1961

Nore.-Urban centres are designated in this table by the following abbreviations: m. = metropolitan area, u. $=$ major urban area and $c$. =urban centre of 30,000 or more population.

## Subsection 2.-Wholesale Trade (Intercensal)

Total sales of wholesalers, estimated from the results of intercensal sample surveys, have shown a continuously upward trend over the past decade, reaching a record amount of $\$ 10,181,600,000$ in 1963. As indicated in Table 7, all business groups reported increases in 1963 over 1962 with the exception of meat and dairy products and hardware, and the declines for these groups were not large.

## 7.-Wholesale Sales, by Kind of Business, 1959-63

Nore.--Includes only wholesalers proper, i.e., firms performing the function of buying merchandise on their own account for resale.

## Subsection 3.-Retail Trade (Intercensal)

The trend of retail trade is one of the best general indicators of the economic condition of the country. It is through retail stores that most goods are ultimately sold and such sales reflect the financial strength of the consumer except in times of short supply. The value of retail sales, estimated from intercensal sample surveys, increased by 75.2 p.c. during the period 1954-63. Estimates, by province and by kind of business, for 1959-63, not adjusted for price changes, are shown in Table 8.

because of rounding of the figures.

Farm Implement Sales.-The value, at wholesale prices, of new farm implements and equipment sold in 1962 amounted to $\$ 238,797,000$, an increase of 18.3 p.c. over the value of such sales in 1961. Decreases in the Atlantic Provinces, Ontario and British Columbia were offset by substantial increases in the other provinces, particularly Manitoba and Saskatchewan. In addition to the amount spent on new machinery, $\$ 43,879,451$ was spent in 1962 for repair parts, 10.7 p.c. more than the amount so spent in 1961.

New Motor Vehicle Sales.-Sales of new motor vehicles reached a peak in 1963 when 654,989 vehicles valued at $\$ 2,062,039,000$ were sold. Sales over the ten-year period 1954-63 are shown in Table 10.
10.-Retail Sales of New Motor Vehicles, 1954-63

Sales Financing.-As shown in Table 11, the amount of instalment financing transacted by sales finance companies has fluctuated within narrow limits during the years 1958-62, as have balances outstanding at year-end.

Consumer Credit.-Total balances outstanding on credit extended to consumers by retail stores and certain financial institutions are increasing very rapidly. Although the financial institutions included in the survey do not cover all sources of consumer credit, returns from the selected holders indicate that balances outstanding on credit extended to individuals for the purchase of consumer goods and services have more than doubled since 1954. The figures in Table 12 do not include credit extended for commercial purposes.

## 12.-Balances Outstanding on Retail Trade Credit and Loans Extended to Individuals for Non-business Purposes by Certain Financial Institutions, 1954-63

(Millions of dollars)

| Year | Retail Trade Credit | Sales Finance Companies | Small <br> Loans Companies | Chartered Banks | Credit <br> Unions | Life <br> Insurance Companies Policy Loans |

Accounts outstanding on the books of retailers stood at $\$ 1,183,300,000$ at the end of 1963. This amount excludes lumber and building material dealers and farm implement dealers, two trades included up to and including 1957, so that the results for 1958 and subsequent years more closely approximate "consumer" credit shown in Table 13.

${ }^{1}$ Excludes lumber and farm implement dealers.
${ }^{2}$ Included in "Charge"

## Subsection 4.-Service Establishments (Intercensal)

Summary figures from the 1961 census of service establishments are given in Subsection 1, pp. 852-858, Table 6 of which shows the types of business included. At the time of going to press, 1962 sample-survey figures were available for only a few services, certain of which are given here.

Motion Picture Theatres.-The receipts of motion picture theatres reached a peak in 1953 when they amounted to $\$ 108,604,000$; since then they have declined each year to $\$ 67,748,000$ in 1962 . The number of theatres in operation has also decreased rapidly, although drive-ins have shown some advance in both numbers and receipts.
14.-Summary Statistics of Motion Pieture Theatre Operations, 1961 and 1962

Motion Picture Production.-Table 15 shows the operations of private firms in the production and printing of motion picture films and filmstrips for industry, government, education, entertainment, etc. Films are also produced by government agencies but information concerning such production is, of course, not available. In addition, eight firms in other business categories produced films in 1962 ( 96 entertainment and documentary films for television use, six non-theatrical films, 10 commercial advertising films for television, one silent motion picture film and one sound filmstrip for unspecified use). This production brought in revenue amounting to $\$ 152,177$.
15.-Summary Statistics of Motion Picture Production by Private Firms, 1954-62

# Section 2.-The Marketing of Agricultural Products 

## Subsection 1.-The Grain Trade, 1962-63

Total production of the five major Canadian grains amounted to $1,253,138,000 \mathrm{bu}$. in 1962, an output 79 p.c. higher than the 1961 production of $700,996,000 \mathrm{bu}$. This expansion more than offset a 37-p.c. decline in carryover stocks, from $850,548,000$ bu. in 1961 to $537,006,000$ bu. in 1962, and, as a result, estimated domestic supplies in the crop year 196263 at $1,790,232,000 \mathrm{bu}$. were about 15 p.c. greater than the $1,557,067,000 \mathrm{bu}$. of the previous season. Total marketings of the five major grains in the Prairie Provinces during 1962-63 amounted to $666,658,000$ bu., exceeding by 63 p.c. the comparable 1961-62 total of $408,232,000 \mathrm{bu}$. and by 10 p.c. the ten-year (1951-52-1960-61) average of $605,828,000 \mathrm{bu}$. Reflecting reduced shipments of wheat, wheat flour and barley, total 1962-63 exports for the five major grains and their products, at $388,198,000$ bu., were 8 p.c. less than the 1961-62 figure of $420,735,000 \mathrm{bu}$. and 10 p.c. less than the ten-year average of $432,847,000 \mathrm{bu}$.

Disappearance of these grains into domestic channels in 1962-63 was estimated at $667,094,000 \mathrm{bu}$. compared with $599,326,000 \mathrm{bu}$. in 1961-62. This increase more than offset the decline in exports, but the effect of larger total domestic supplies was reflected in a 37p.c. increase in carryover stocks-from $537,006,000$ bu. at July 31,1962 to $734,919,000$ bu. at the same date in 1963. Higher carryover stocks and higher production of the five major grains brought total domestic supplies for the 1963-64 crop year to $2,166,242,000$ bu., 21 p.c. above the 1962-63 total of $1,790,232,000 \mathrm{bu}$.

In 1962-63, marketings of wheat, oats and barley continued under the compulsory crop year pools system of the Canadian Wheat Board (see p. 880). An initial quota of 100 units was in effect at local delivery points at the beginning of the marketing year; permit holders were entitled to deliver a maximum of 300 bu . of wheat or $1,000 \mathrm{bu}$. of oats or 500 bu . of barley or 500 bu. of rye or any combination of these grains, which, when calculated on the unit basis, did not exceed 100 units. The initial unit quota was followed by general quotas, based upon bushels per specified acre. Specified acreage consisted of each permit holder's acreage seeded to wheat (excluding Durum), oats, barley and rye, the summerfallow acreage, and the eligible acreage seeded to cultivated grasses and forage crops. For Durum grades, the delivery quota of 5 bu. per seeded acre or 200 bu., whichever was larger, established at the beginning of the year, was increased on Oct. 9 and Nov. 14, 1962 and again on June 20, 1963, the final quota being 15 bu . per seeded acre or 650 bu., whichever was larger. A number of supplementary delivery quotas were established on soft white spring wheat,
oats, barley and rye. An open quota basis was issued for delivery of rye as at Oct. 19, 1962. Flaxseed and rapeseed, the latter defined as a grain in an amendment to the Canadian Wheat Board Act, were on open quota for the entire 1962-63 crop year.

Total commercial supplies at the beginning of the crop year were more than $100,000,000$ bu. less than a year previously, most of the decline occurring in country elevator stocks. As a result, marketings were heavy early in the crop year and quotas were advanced as additional space became available. By June 24,1963 , slightly more than half of the operating delivery points in the Western Division were on a 12 -bu. quota. Marketings were heavy during June and July as producers, acknowledging the indications of abovenormal yields, took advantage of delivery privilege to reduce farm stocks. By the end of the crop year, all but six delivery points had been placed on the 12-bu. quota.

Wheat.-Total supplies of wheat for the 1962-63 crop year were estimated at $956,625,000$ bu., 7 p.c. above the 1961-62 total of $891,240,000$ bu.; a sharp increase in production more than offset a substantial decline in carryover stocks. Exports of wheat and flour in terms of wheat at $331,367,000$ bu. were 7 p.c. lower than the $358,022,000 \mathrm{bu}$. of the previous year but were 8 p.c. higher than the ten-year (1951-52-1960-61) average of $307,038,000 \mathrm{bu}$. Domestic disappearance of wheat declined to $138,011,000 \mathrm{bu}$., the lowest level since 1949-50, and was down 3 p.c. from the 1961-62 figure of $142,160,000$ bu. Total

disappearance of $469,378,000 \mathrm{bu}$. and production at $565,554,000 \mathrm{bu}$. brought carryover stocks at July 31,1963 up to $487,247,000$ bu., 25 p.c. above the carryover of $391,058,000$ bu. at July 31, 1962.

The initial payment from Western Canadian wheat in the 1962-63 crop year commenced at $\$ 1.50$ per bu., basis No. 1 Northern in store Fort William-Port Arthur or Vancouver. There were no adjustment or interim payments on the 1962-63 wheat pool, but on Feb. 14, 1964 the final payment was announced. Producers delivered $469,927,000 \mathrm{bu}$. of wheat to the pool, including $44,372,000 \mathrm{bu}$. of Durum wheat. The amount of the final payment distributed to producers was a record $\$ 199,737,000$ and, of this amount, $\$ 28,744,000$ went to producers of Durum wheat. After deducting the Prairie Farm Assistance Act levy, the average final payment on spring wheat (other than Durum) was 40.181 cents per bu. and the average final payment on Durum grades of wheat was 64.780 cents per bu. The total payment for No. 1 Northern, basis in store Fort William-Port Arthur or Vancouver and prior to deduction of the PFAA levy, amounted to $\$ 1.87448$ per bu.

The crop year 1962-63 coincided with the first year of the fifth three-year International Wheat Agreement (IWA) which became effective Aug. 1, 1962; 27 of the 37 importing countries included in the pact purchased wheat and/or flour from Canada. Such purchases amounted to the equivalent of $219,566,000 \mathrm{bu}$. during 1962-63, the major importers being: Britain, with shipments amounting to some $89,623,000$ bu.; Japan, $44,625,000$ bu.; Federal Republic of Germany, 27,997,000 bu.; Belgium and Luxembourg, 10,149,000 bu.; Republic of South Africa, $7,883,000$ bu.; Philippines, 6,752,000 bu.; Venezuela, 6,679,000 bu.; Netherlands, 4,754,000 bu.; Ireland, $3,470,000$ bu.; and Switzerland, 2,969,000 bu. The leading markets for Class II wheat and flour in 1962-63, were: Communist China, 56,444,000 bu.; Poland, 14,184,000 bu.; France, 6,877,000 bu.; Italy, 4,920,000 bu.; Czechoslovakia, $4,394,000 \mathrm{bu}$. ; and Yugoslavia, 3,920,000 bu.

During 1962-63, domestic sales of all classes of wheat were made at the same prices as those prevailing for wheat sold under the IWA. Class II prices for all grades of wheat coincided with the IWA and domestic quotations.

Other Grains.-The supply and disposition of the major Canadian grains for the crop years 1961-62 and 1962-63 is shown in Table 18.

The initial payment for Western Canadian oats in the 1962-63 crop year, basis No. 2 C.W. in store Fort William-Port Arthur, remained the same as in 1961-62. The initial payment for barley, basis No. 3 C.W. Six-Row in store Fort William-Port Arthur, at 96 cents per bu., was also unchanged. No interim payments were made on either grain during the crop year. Final payment on the 1962-63 oat pool was announced on Apr. 14, 1964. The final surplus for distribution was some $\$ 10,671,662$ and, based on $86,235,278 \mathrm{bu}$. delivered to the pool, averaged 12.375 cents per bu. after deducting the 1-p.c. PFAA levy. The final payment on the 1962-63 barley pool was announced on Mar. 26, 1964; based on deliveries of $77,610,648 \mathrm{bu}$. and a final payment for producers of some $\$ 14,091,969$, the average final payment was 18.157 cents per bu. after deducting the 1-p.c. PFAA levy. Total prices, basis in store Fort William-Port Arthur, realized by producers for representative grades prior to the PFAA levy were as follows: No. 2 C.W. oats, $\$ 0.71842$ per bu.; No. 1 Feed oats, $\$ 0.67967$ per bu.; No. 3 C.W. Six-Row barley, $\$ 1.13192$ per bu.; and No. 1 Feed barley, $\$ 1.05192$ per bu. Deliveries of rye and flaxseed in Western Canada amounted to $9,372,000 \mathrm{bu}$. and $13,528,000 \mathrm{bu}$., respectively.

Exports of Canadian oats totalled 20,585,000 bu. during 1962-63 in contrast to the $2,679,000 \mathrm{bu}$. shipped the previous year, and were at the highest level since 1957-58. Most of the increase was accounted for by shipments to the following destinations, with totals for 1961-62 in brackets: Netherlands, $7,377,000$ bu. ( 52,000 ); Belgium and Luxembourg, $3,432,000 \mathrm{bu}$. (nil); the Federal Republic of Germany, $3,333,000 \mathrm{bu}$. (nil); and United States, $2,496,000$ bu. $(951,000)$. In addition, exports of Canadian oatmeal and rolled oats amounted to the equivalent of $625,000 \mathrm{bu}$. in 1962-63 compared with $455,000 \mathrm{bu}$. in 196162. Barley exports, at $10,534,000$ bu., represented a sharp reduction from the 1961-62 level
of $36,655,000$ bu.; major declines occurred in shipments to Communist China, $1,083,000$ bu. $(19,284,000)$ and United States, $2,233,000$ bu. $(9,726,000)$ and a minor decline in exports to Britain, $6,803,000 \mathrm{bu} .(7,391,000 \mathrm{bu}$.). In addition to the exports of Canadian barley as grain, shipments of malt were the equivalent of $4,843,000 \mathrm{bu}$. compared with $6,254,000 \mathrm{bu}$. in 1961-62. Of the 1962-63 exports, the United States received the equivalent of 2,807,000 bu.

Exports of Canadian rye amounted to $7,310,000$ bu. in 1962-63, a substantial increase over the 1961-62 total of $4,363,000$ bu. Principal markets were the Federal Republic of Germany, $3,104,000$ bu., and the Netherlands, $2,089,000 \mathrm{bu}$. Smaller shipments went to nine other countries. Clearances of Canadian flaxseed moving overseas during 1962-63 amounted to $12,566,000$ bu. compared with $11,988,000 \mathrm{bu}$. the previous year. Britain, with imports amounting to $5,061,000$ bu., was the leading market for Canadian flaxseed followed by Japan with $3,785,000$ bu. Relatively smaller shipments went to 15 other overseas destinations. Exports of linseed oil were equivalent to about 429,000 bu. of flaxseed, most of which went to Britain.

Wheat Flour.-Production of wheat flour in the crop year 1962-63 amounted to $35,505,000 \mathrm{cwt}$., about 10 p.c. less than in the previous crop year. Similarly, wheat milled for flour at $78,789,000 \mathrm{bu}$. was 11 p.c. less than during 1961-62. Of the latter, about $70,065,000$ bu. were Western Canadian spring wheat (other than Durum) and the remainder consisted of Ontario winter wheat, Durum and 'other'. Based on a daily operating potential of some $169,000 \mathrm{cwt}$., utilization of milling capacity averaged 70.0 p.c. in 1962-63 compared with 81.5 p.c. in the preceding year. Exports of wheat flour during the 1962-63 crop year amounted to $11,854,000 \mathrm{cwt}$., 15 p.c. lower than in 1961-62.

## Subsection 2.-Livestock Marketings*

The number of cattle marketed and graded at stockyards and packing plants was about 3 p.c. higher in 1963 than in 1962. However, with reduced exports of live cattle, the total commercial movement as reported by the Canada Department of Agriculture was down slightly. The number of calves marketed decreased about 7 p.c., sheep 10 p.c. and hog carcasses graded at approved and inspected plants more than 1 p.c. from the 1962 volume. A moderate increase in the shipment of cattle, calves, sheep and lambs back to farms from stockyards and plants reflected increased feedlot activity. With a higher percentage of cattle being fattened on grain, the average weight of carcasses in inspected slaughter increased to 542.7 lb . from 529.5 lb . in 1962 and was the highest on record. There was also an appreciable increase in the percentage of beef carcasses in the top-quality grades. To a lesser extent, an increase in quality of marketings was also reflected in lamb and hog carcass gradings.

## Section 3.-Warehousing and Cold Storage

The available statistics on warehousing, normally carried under the heading of Warehousing and Cold Storage, include statistics of the licensed storage of grain; cold storage facilities without which perishable foods such as meats, dairy products, fish and fruits could not be exchanged or distributed on a wide scale, and stocks of food commodities on hand in dairy factories and cold storage warehouses at certain times of the year; storage of petroleum and petroleum products; public and customs warehouses; and bonded warehouses, which specialize in the storage of tobacco and alcoholic liquors and are under the strict surveillance of Federal Government excise officers.

In this issue of the Year Book, only licensed grain storage data and statistics of the warehousing industry are carried. Reference may be made to the 1963-64 Year Book, pp. 867-871 for information on the other types of storage and later statistics may be obtained from the following sources: cold storage and storage of food-Economics Division of the Canada Department of Agriculture; storage of petroleum and petroleum products-Public Utilities Section of the Public Finance and Transportation Division, DBS; customs ware-houses-Port Administration Branch of the Department of National Revenue; and bonded warehousing-Industry Statistics Section of the Industry Division, DBS.

## Subsection 1.-Licensed Grain Storage

Total grain storage capacity in Canada, licensed under the provisions of the Canada Grain Act by the Board of Grain Commissioners for Canada, amounted to 647,706,000 bu. at Dec. 1, 1962 and represented a decrease of $4,406,000 \mathrm{bu}$. from the capacity at Dec. 1, 1961. A decline of some $5,000,000$ bu. in the capacity of western country elevators, as well as relatively small reductions in the capacities at the Pacific Coast and at lower Lake and upper St. Lawrence ports, more than offset an increase at lower St. Lawrence ports and at interior, private and mill positions.

At the beginning of the crop year 1962-63, stocks of grain in commercial positions were some $116,000,000$ bu. less than those of a year previous, with about $94,000,000 \mathrm{bu}$. of this total recorded in country elevators. As a result, marketings were heavy early in the crop year and quotas were advanced as additional space became available. With the exception of the months of February and March, delivery quotas were increased fairly regularly throughout the crop year and, by June 24, 1963, slightly more than half of the operating delivery points in the Western Division were on a 12-bu. quota. Marketings were heavy during June and July as producers, acknowledging the indications of above-normal yields, took advantage of delivery privilege to reduce farm stocks. As indicated in Table 26, the proportion of occupied licensed storage capacity rose from 56.3 p.c. at July 31,1962 to 78.8 p.c. at the same date in 1963 .

## Subsection 2.-The Public Warehousing Industry

The summary statistics of the warehousing industry presented in Table 27 cover the operations of the majority of firms offering general merchandise and refrigerated storage facilities to the public. Associations and organizations such as co-operatives operating warehouses or storages for their own members are not included nor are packing houses and other firms operating storage facilities in connection with their respective businesses. Small food lockers are not included except where they may be part of a general warehousing business.

## Section 4.-Co-operative Organizations*

Canadian co-operative activities continued to be dominated by marketing and purchasing associations, which did a volume of business, including other revenue, amounting to $\$ 1,372,605,000$ during the year ended July 31, 1962 . Other revenue, which included payment for services provided by the co-operatives such as grinding, chopping, trucking and revenue for rent, interest dividends and commissions, accounted for $\$ 20,801,000$.

Membership in marketing and purchasing associations showed a slight rise in 1962 but the number of associations decreased from 1,914 in the previous year to 1,877 , mostly through amalgamations, and the number of places of business declined from 5,473 to 5,165 . Total sales of farm products was the lowest since 1958 but sales of supplies were at a record high. However, the increase in sales of supplies was not sufficient to counteract the drop in sales of products and the total business therefore was down by 4 p.c. Most of the decrease in the sales of products took place in Ontario, although lower sales were also reported in Manitoba, Saskatchewan and Prince Edward Island. Saskatchewan accounts for the greatest value of farm products marketed co-operatively; sales in that province

[^251]totalled $\$ 275,209,000$ in 1962 and of that amount grain and seed sales accounted for 60 p.c. Of the total sales for Canada, grain and seed sales accounted for 42 p.c., dairy product sales for 26 p.c., livestock sales for 22 p.c., and sales of eggs and poultry and fruits and vegetables for most of the remainder. Members' equity in marketing and purchasing co-operatives decreased by $\$ 7,370,000$ in 1962 and a decrease of $\$ 41,404,000$ was recorded in liabilities $t$ ) the public.

Wholesale co-operatives are federations of local co-operatives which act as central marketing agencies for farm products and as wholesalers of farm supplies, machinery and consumer goods. Such associations had assets amounting to $\$ 106,981,000$ in 1962 , of which members' equity represented 34 p.c., and reported sales of supplies and farm products amounting to $\$ 337,791,000$, an increase of 7 p.c. over 1961.

In addition to the above-mentioned associations, there were 869 service co-operatives in 1962 providing a wide range of functions such as housing, rural electrification, medical insurance, transportation, grazing, custom grinding, seed cleaning, operation of farm machinery and restaurant operation. These associations had a total membership of 297,616 and assets amounting to $\$ 106,668,000$, compared with a membership of 294,249 and assets of $\$ 110,066,000$ in 1961. Fishermen's co-operatives operate in all provinces except Manitoba and in 1962 reported a membership of 9,239 , sales of fish amounting to $\$ 18,428,000$ and sales of supplies amounting to $\$ 1,545,000$; comparable figures for 1961 were 9,593 , $\$ 16,480,000$ and $\$ 1,739,000$, respectively.

An important development in this field is the growth of co-operatives among the Eskimo population in the Canadian North. Fourteen co-operatives were reported in 1962 with a membership of 500 , which means that many families were participating in co-operative activities. Thirteen of these organizations are of a multi-purpose nature, engaged in a great variety of activities, and one is a housing co-operative. Nine of the co-operatives reported sales of $\$ 457,631$, share capital of $\$ 52,178$, statutory reserve of $\$ 55,768$ and undistributed savings of $\$ 74,216$.

${ }^{1}$ Duplication exists as some associations market more than one product.

## Section 5.-Interprovincial Freight Movements*

Statistics relating to interprovincial freight movements are difficult to collect since there are no controls over, or barriers to, such trade. Interprovincial freight traffic statistics are available for loadings and unloadings of goods carried by rail, water, motor transport and pipeline.

Details of railway freight movement are confined to tons loaded and unloaded by province and contain a certain amount of import and export of goods shipped by water. The figures given in Table 31, however, do not give a precise measure of total interprovincial freight movement by rail; they indicate only the net interprovincial movement of railway freight, which is but one aspect of that trade. For water-borne traffic, Table 32 shows tonnages of all cargoes unloaded at Canadian ports in both interprovinciai and intraprovincial trade, by province of origin. Interprovincial and international traffic carried by Canadian registered trucks is shown in Table 33. Pipeline statistics are given in the Transportation Chapter, p. 818-823.

# PART II.-GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE 

## Section 1.-Controls Affecting the Marketing of Farm Products

Subsection 1.-Control of the Grain Trade

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners which, since 1912, has administered the provisions of the Canada Grain Act, and the Canadian Wheat Board which operates under the Canadian Wheat Board Act, 1935.

The Board of Grain Commissioners.*-The Board of Grain Commissioners was established in 1912 under the authority of the Canada Grain Act, 1912 (RSC 1952, cc. 25 and 308 and amendments). It is a quasi-judicial and administrative body of three-a Chief Commissioner and two Commissioners-reporting to the Minister of Agriculture.

The Canada Grain Act has been called the Magna Charta of the Canadian grain trade or, more particularly, of the Canadian farmer, and the Board's chief duties are to ensure that the rights conferred on the different parties by the provisions of the Act are properly protected. Transportation of grain is restricted except from or to licensed elevators, and restriction is placed on the use of established grade names. The Act does not provide for any control or supervision of grain exchanges and the Board of Grain Commissioners has no power or duties in the matter of grain prices.

The Board manages and operates, under semi-public terminal licences, the Canadian Government elevators situated at Moose Jaw and Saskatoon, Sask., Lethbridge, Edmonton and Calgary, Alta., and Prince Rupert, B.C. The Executive Offices of the Board and other principal offices are situated at Winnipeg, Man., but branch offices are maintained at numerous points from Montreal in the east to Victoria in the west. Total personnel is approximately 1,100 , including elevator staff.

On a fee basis, the Board provides official inspection (see p. 868), grading and weighing of grain, and registration of warehouse receipts. All operators of elevators in Western Canada and of elevators in Eastern Canada that handle western-grown grain for export, as well as all parties operating as grain commission merchants, track buyers of grain, or as grain dealers, are required to be licensed by the Board annually and to file security by bond or otherwise as a guarantee for the performance of all obligations imposed upon them by the Canada Grain Act or by the regulations of the Board.

To protect the rights of the different parties, the Board has jurisdiction to inquire into and is empowered to give direction regarding any matter relating to the grading or weighing of grain; deductions made from grain for dockage; shortages on delivery of grain into or out of elevators; unfair or discriminatory operation of any elevator; refusal or neglect of any person to comply with any provision of the Canada Grain Act; and any other matter arising out of the performance of the duties of the Board.

In the Prairie Provinces the Board maintains four Assistant Commissioners-one in Alberta, two in Saskatchewan and one in Manitoba. These Assistant Commissioners investigate complaints of producers and inspect periodically the country elevators in their respective provinces; all elevators with their equipment and stocks of grain are subject at any time to inspection by officials of the Board.

The Board sets up, annually, Committees on Grain Standards and also appoints Grain Appeal Tribunals to give final decisions in cases where appeals are made against the grading of grain by the Board's inspection officials. To assist in maintaining the uniform quality of the top grades of Red Spring wheat handled through terminal elevators, the Canada Grain Act provides that wheat of these grades shall be stored with grain of like grade only.

[^255]The Grain Research Laboratory, located at Winnipeg, is the main centre of research on the chemistry of Canadian grains. It is well staffed and equipped to provide the service required to help maintain and expand domestic and foreign markets for all types of grain. The Laboratory collects and tests samples of various crops to obtain information on the current quality of all grains shipped during the crop year. Fundamental research is also undertaken; the program is directed toward better understanding of what constitutes quality in cereal grains and toward improvement in the methods of assessing quality.

In addition to its duties under the Canada Grain Act, certain other duties are performed by the Board. Under the provisions of the Inland Water Freight Rates Act (RSC 1952, c. 153), the Board maintains records of rates for the carriage of grain from Fort William or Port Arthur, Ont., by lake or river navigation and is empowered to prescribe maximum rates for such carriage. Under the provisions of the Prairie Farm Assistance Act (RSC 1952, c. 213 as amended), the Board collects from licensees under the Canada Grain Act 1 p.c. of the purchase price of wheat, oats, barley, rye, flax and rapeseed purchased by such licensees.

The Canadian Wheat Board.*-The Canadian Wheat Board was established under the Canadian Wheat Board Act of 1935 for the purpose of "the marketing in an orderly manner, in interprovincial and export trade, of grain grown in Canada" and now operates under RSC 1952, c. 44 as amended. The Board accomplishes its objective through regulation and agreement. It owns no grain handling facilities but, by entering into agreements with the owners of these facilities, it attempts to bring about an orderly flow of grain through each of the steps involved in merchandising the grain from the producer to the domestic or overseas buyer.

In the selling of wheat, the Board utilizes the services of shippers and exporters. In its sales operations, the Board endeavours to meet the wishes of overseas buyers and, on occasion, enters into direct contracts. When an exporter completes an export sale, in his capacity as an agent of the Board, he is responsible for the transaction; he completes the transaction with the buyer and settles with the Board for the purchase of the wheat from the Board.

When the commercial storage facilities are inadequate to handle all the grain produced, it is necessary for the Board to regulate the flow of grain from the producer to these forward positions. The first step is accomplished by the use of producer's delivery permits issued annually by The Canadian Wheat Board. Every delivery of grain made to country elevators by a producer is entered in his permit book. By regulation, the amount of grain delivered by the producer to the country elevator by the use of a quota system and, by apportioning shipping orders to country elevators according to the needs created by sales commitments, the Wheat Board regulates the amount of grain coming into the marketing channel.

The next step is the handling of the grain by the country elevator. The maximum charges for the handling and storing of the grain are set by the Board of Grain Commissioners, but the actual charges are subject to negotiation between the elevator companies and the Wheat Board.

The third step in the marketing process-transporting the grain from the country elevators to large terminal elevators in Eastern Canada, Churchill or on the West Coastis carried out by the railways. The Wheat Board determines the kinds and grades of grain that are required at the different terminal destinations to meet its sales commitments and informs the elevator companies and the railways of these needs. The maximum tariffs are set by an agreement between the railways and the Government of Canada.

The fourth major step-storing and handling of the grain at terminal elevatorsis done in privately or co-operatively owned elevators. Maximum charges are established for this service by the Board of Grain Commissioners.

[^256]In the case of oats and barley, the Board's operations are less extensive than those relating to wheat. These two grains are sold in store positions at the terminal elevators at Fort William-Port Arthur and Vancouver. Oats and barley are marketed either on a straight cash basis at prices quoted daily by the Board or on the basis of exchange of futures concluded through the facilities of the Winnipeg Grain Exchange. The Board controls the movement of coarse grains to the Lakehead. The private trade is responsible for the movement of oats and barley from Lakehead or Vancouver positions.

The producer receives payment for his wheat, oats and barley in two or three stages. An initial payment price is established early in the crop year by Order in Council. The initial payment price less the cost of handling grain at the local elevator and the transportation costs to the Lakehead or Vancouver is the initial price received by the producer. This price is a guaranteed floor price in that if the Wheat Board, in selling the grain, does not realize this price and the necessary marketing costs, the deficit is borne by the Federal Treasury. However, with very few exceptions, the Wheat Board has operated without financial aid from the Federal Treasury.

After the end of the crop year, but prior to the final payment being made, if the Wheat Board can confidently foresee a surplus accumulating and if authorized by Order in Council, an interim payment is made to producers. This interim payment is the same amount per bushel to all producers of the same grade of grain. When the Board has sold all the grain or otherwise disposed of it in accordance with the Canadian Wheat Board Act, the Board, if authorized by Order in Council, makes a final payment to producers.

Under the Prairie Grain Advance Payments Act, administered by the Board, producers may receive, through their elevator agents, cash advances on farm-stored grain in accordance with a prescribed formula. The purpose of this legislation is to make cash available to producers pending delivery of their grain under delivery quotas established by the Board. Cash advances are interest-free as far as producers are concerned.

Western Canadian producers receive the price for their grain that the Wheat Board receives, less its operating costs including carrying charge, and the general level of prices received by the Board is determined by competitive conditions in world markets. The only subsidy received by the farmer in the Canadian wheat marketing system is the partpayment of storage costs for wheat made by the Government of Canada. Under provisions of the Temporary Wheat Reserves Act, the Minister of Finance, out of the Consolidated Revenue Fund, pays to the Wheat Board the storage costs on wheat in storage at the end of the crop year in excess of $178,000,000 \mathrm{bu}$.

## Subsection 2.-Controls Over Farm Products Other Than Grain*

The Government of Canada and provincial governments have, through legislation and in other ways, given marketing aids such as those related to research, education, information, inspection, grading and many other service measures of this type, designed to assist in making adjustments in marketing within agriculture and between agriculture and the remainder of the economy. Closely related is regulatory action designed to protect the consumer.

Producers have been concerned about another type of market control, namely that which will give their organizations or else a government agency influence over the price received. In a highly specialized commercial agriculture, such as Canada now has, the producer is dependent on the price of his product for his livelihood. Canadian farmers have long attempted to obtain some measure of market control through voluntary organizations, mainly marketing co-operatives. All provinces have made provision for the incorporation of such co-operatives and most, if not all, have provided other assistance to them. In the federal field the Agricultural Products Co-operative Marketing Act encourages marketing under a co-operative plan.

[^257]Other legislation provides for legal control over the marketing of agricultural products, either by a producer's board or a government agency. Legislation of this type includes that pertaining to milk control boards and marketing boards which is discussed below. Measures pertaining to grain marketing have been reviewed in Subsection 1, pp. 864-870, and the Agricultural Stabilization Act, which provides price support for certain key products is discussed in the Agriculture Chapter, p. 453.

General Marketing Controls.-The federal and provincial departments of agriculture co-operate in establishing and enforcing grades of quality standards for various foods. Some control over size and type of containers used for distribution of agricultural products is exercised by the federal Department of Agriculture and the Department of Trade and Commerce enforces regulations pertaining to weights and measures (see p. 889).

Controls related to health and sanitation in food handling are developed and enforced at all three levels of government-municipal, provincial and federal. Examples of provincial and municipal action include laws pertaining to the pasteurization of milk, inspection of slaughterhouses and sanitary standards in restaurants. At the federal level, inspection by the Health of Animals Branch of the Department of Agriculture of all meat carcasses that enter into interprovincial trade is required. The Food and Drug Directorate of the Department of National Health and Welfare has wide control over the composition of foods sold and over misleading advertising of foods and drugs.

The Agricultural Products Co-operative Marketing Act.-In the late 1930's, the Federal Government decided to assist orderly marketing by encouraging the establishment of pools which would give to the producer the maximum sales return for his product, less a maximum margin for handling expenses agreed upon in advance. Thus, the Agricultural Products Co-operative Marketing Act and the Wheat Co-operative Marketing Act were passed in 1939. The latter was used in one year only but the Agricultural Products Co-operative Marketing Act, which covers the marketing of all agricultural products except wheat, has continuously served agricultural producers since 1939.

The purpose of this Act is to aid farmers in pooling the returns from sale of their products by guaranteeing initial payments and thus assisting in the orderly marketing of the product. The Government will undertake to guarantee a certain minimum initial payment to the producer at the time of delivery of the product, including a margin for handling; sales returns are to be made to the producer on a co-operative plan. The guaranteed initial payment may be up to a maximum of $80 \mathrm{p} . c$. of the average price paid to producers for the previous three years, the exact percentage to be recommended by the Minister of Agriculture who enters into an agreement with the selling agency for the product.

Agreements have been made under this Act pertaining to a wide variety of agricultural products. With regard to crops produced in 1963, they pertained to apples for processing, forage crop seeds and maple syrup.

Milk Control Legislation.-Most of the provinces enacted milk control legislation before 1940. Many of them finance these milk-control agencies out of public funds, others finance through the collection of licence fees and assessments from those engaged in the fluid milk industry, and some combine the two methods. Most milk-control agencies have authority to carry out some system of licensing which provides for the revocation of such licences if those engaged in the fluid milk business do not conform with the orders of the milk control board.

In all provinces with such boards, the milk control board sets the minimum price which distributors in specified markets may pay producers for Class I milk, that is, milk actually sold for fluid consumption. In Ontario and British Columbia, this minimum price is based on formulas. Most provinces also set either minimum or fixed wholesale and retail prices for fluid milk. The wholesale and retail prices are fixed in Prince Edward Island, Nova Scotia and Saskatchewan; minimum prices are established in New Brunswick, Quebec
and Alberta. However, maximum but not minimum prices are set in Manitoba and no control is exercised over milk prices at the wholesale and retail levels in Ontario and British Columbia. In these three provinces some degree of price competition between store and home delivery sales has developed.

The powers given to or requirements made by milk control boards include: (1) authority to inquire into all matters pertaining to the fluid milk industry, to define market areas, to arbitrate disputes, to examine the books and records of those engaged in the industry, to issue and revoke licences, and to establish a price for milk, and (2) authority to require a bond from distributors, periodic reports from distributors, payments to be made to producers by a certain date each month, distributors to give statements to suppliers, distributors to give notice before ceasing to accept milk from any producer, producers to give notice before ceasing to deliver milk to any distributor, and the prohibition of distributors requiring capital investment from producers.

Thus, fluid milk controls are not only widespread but also numerous. They are generally considered to be administered in the public interest as well as in the interest of those who have regular opportunities to appear before the boards in connection with requests for price changes.

Producer Marketing Boards.-During the 1930's strong support developed for legislation whereby agricultural producers could exercise legal authority under certain conditions to control the marketing of their produce. The Natural Products Marketing Act of 1934 attempted to provide this power at the federal level but proved ultra vires. The Natural Products Marketing (British Columbia) Act 1936 was intra vires of provincial government powers and provided the model from which marketing board legislation has evolved in all ten provinces.

While marketing board legislation has been revised from time to time on the basis of experience, and there are variations in detail from province to province, the same basic powers are given to producers in all provinces. These powers include authority for a duly constituted producer board to control the marketing of 100 p.c. of a specified commodity produced in a designated area. A producer's board, in at least some provinces, may set production quotas for each farmer as has been done with respect to tobacco in Ontario. One producer's board may control the marketing of several related commodities and the designated area may be either the whole or part of a province. A producer vote is required to establish a producer marketing board whose powers are delegated either by a provincial marketing board, which has certain supervisory authority, or by the Lieutenant-Governor in Council.

The powers of a producers' board provided by provincial legislation are necessarily limited to intraprovincial trade. Under the Agricultural Products Marketing Act, the Federal Government may delegate to a marketing board with respect to interprovincial and export trade similar powers to those obtained with respect to intraprovincial trade under provincial authority. This Act also gives the Governor in Council the right to authorize a provincial marketing board to impose and collect levies from persons engaged in the production and marketing of commodities controlled by it for the purposes of the board, the creation of reserves and equalization of returns.

In mid-1964 there were 80 such marketing boards organized in Canada, 50 of which were in the Province of Quebec and 16 in Ontario; each of the other provinces with the exception of Newfoundland had one or more boards. It is estimated that about one seventh of the 1962 farm cash income was received from sales made under the control of provincial marketing board plans, including the following commodities: hogs, certain dairy products, poultry, wool, tobacco, wheat, soybeans, sugar beets, potatoes, other vegetables, fruits, seed corn, white beans, honey, maple products and pulpwood. As at Apr. 30, 1964, 38 of these provincial boards had received an extension of powers for purposes of interprovincial and export trade from the Federal Government. Four boards had received authority with regard to seven commodities to collect levies in excess of administrative expenses.

The Agricultural Products Marketing Act does not give the local or provincial marketing board any greater control over agencies outside the province than is possible through the control of the commodity by the board and whatever contractual arrangements it may make with such agencies outside the province. It does make it possible, however, for marketing boards to give groups within a province complete marketing control over any commodity produced in that province or any area of the province that may be defined.

## Section 2.-Combinations in Restraint of Trade*

The purpose of Canadian anti-combines legislation is to assist in maintaining free and open competition as a prime stimulus to the achievement of maximum production, distribution and employment in a system of free enterprise. To this end, the legislation seeks to eliminate certain practices in restraint of trade that serve to prevent the nation's economic resources from being most effectively used for the advantage of all citizens.

By amendments which came into force on Aug. 10, 1960 (SC 1960, c. 45), all the provisions of the anti-combines legislation which previously had been divided between the Combines Investigation Act (RSC 1952, c. 314) and the Criminal Code were amended and consolidated in the Act. The substantive provisions now are contained in Sects. 2, $32,33,33 \mathrm{~A}, 33 \mathrm{~B}, 33 \mathrm{C}$ and 34 of the Combines Investigation Act. The Act was enacted in 1923 and was amended extensively in 1935, 1937, 1946, 1949, 1951 and 1952 as well as in 1960.

Sect. 32, generally speaking, forbids in Subsect. (1) combinations that prevent or lessen "unduly" competition in the production, manufacture, purchase, barter, sale, storage, rental, transportation or supply of an article of trade or commerce or in the price of insurance. Subsect. (1) derives from Sect. 411 of the Criminal Code which was enacted originally in 1889. While Subsect. (2) provides that no person shall be convicted for participation in an arrangement relating only to such matters as the exchange of statistics or the defining of product standards, etc., Subsect. (3) provides that Subsect. (2) does not apply if the arrangement has lessened or is likely to lessen competition unduly in respect of prices, quantity or quality of production, markets or customers or channels of distribution, or if the arrangement "has restricted or is likely to restrict any person from entering into or expanding a business in a trade or industry". Subsect. (4) provides that, subject to Subsect. (5), no person shall be convicted for participation in an arrangement which relates only to the export trade. Subsect. (5) provides that Subsect. (4) does not apply if the arrangement has had or is likely to have harmful effects on the volume of export trade or on the businesses of Canadian competitors or on domestic consumers.

Sects. 2 and 33 make it an offence to participate in a merger which has or is likely to have the effect of lessening competition to the detriment or against the interest of the public. These Sections also make it an offence to participate in a monopoly that has been operated or is likely to be operated to the detriment or against the interest of the public.

Sect. 33A deals with what are commonly called "price discrimination" and "predatory price cutting". It provides that a supplier may not make a practice of discriminating among those of his trade customers who come into competition with one another by giving one a preferred price which is not available to another if the second is willing to buy in like quantities and qualities as the first; it also forbids a supplier from selling at prices lower in one locality than in another, or unreasonably low anywhere, if the effect or tendency of such policy is to lessen competition substantially or eliminate competitors or the policy is designed to have such effect.

Sect. 33B provides that where a supplier grants advertising or display allowances to competing trade customers he must grant them in proportion to the purchases of such customers; any service he exacts in return must be such that his different types of customers are able to perform; and if such customers are required to incur expenses to earn such allowances, such expenses also must be proportionate to their purchases.

[^258]Sect. 33C makes it an offence for any person, for the purpose of promoting the sale or use of an article, to make any materially misleading representation to the public concerning the price at which such or like articles have been, will be or are ordinarily sold.

Sect. 34 prohibits a supplier of goods from prescribing the prices at which they are to be resold by wholesalers or retailers or from cutting off supplies to a merchant because of the merchant's failure or refusal to abide by such prices, i.e., the practice of "resale price maintenance" The Section also provides that it shall not be inferred that a person practised resale price maintenance simply because he refused, or counselled the refusal of supplies to a merchant if there were reasonable cause to believe and the supplier did believe that the merchant was making a practice of using articles of such supplier as "lossleaders" or as bait advertising or was making a practice of engaging in misleading advertising in respect of such articles or of not providing services that purchasers of such articles might reasonably expect.

The Act provides for a Director who is responsible for investigating combines and other restrictive practices, and a Commission (the Restrictive Trade Practices Commission) which is responsible for appraising the evidence submitted to it by the Director and the parties under investigation, and for making a report to the Minister. When there are reasonable grounds for believing that a forbidden practice is engaged in, the Director may obtain from the Commission authorization to examine witnesses, search premises, or require written returns. After examining all the information available, if the Director believes that it proves the existence of a forbidden practice, he submits a statement of the evidence to the Commission and to the parties believed to be responsible for the practice. The Commission then sets a time and place at which it hears argument on behalf of the Director in support of his statement, and hears argument and receives evidence on behalf of any persons against whom allegations have been made in the statement. Following this hearing, the Commission prepares and submits a report to the Minister, ordinarily required to be published within thirty days.

The Act also provides for general inquiries into restraints of trade which, while not forbidden or punishable, may affect the public interest. It further provides in Sect. 31 that the courts, including the Exchequer Court of Canada, in addition to imposing punishment for a contravention of the legislation, may make an order restraining persons from embarking on, continuing or repeating a contravention or directing the dissolution of a merger or monopoly as the case may be. Application also may be made to the courts for such an order in lieu of prosecuting and convicting for a contravention of the legislation. By virtue of the 1960 amendments, prosecutions for offences against the substantive provisions of the legislation (other than Sect. 33C which is punishable only on summary conviction) may be taken either in the provincial courts or with the consent of the accused in the Exchequer Court of Canada. The amendment conferring jurisdiction on the Exchequer Court came into force on Dec. 1, 1960.

In the years 1961-63 the following reports of inquiries under the legislation were published:-
(1) Distribution and Sale of Gasoline in the Toronto Area (Alleged Price DiscriminationSupertest Petroleum Corporation, Limited).
(2) Distribution and Sale of Gasoline in the Toronto Area (Alleged Price DiscriminationBritish American Oil Company Limited).
(3) Distribution and Sale of Gasoline in the Toronto Area (Alleged Price DiscriminationTexaco Canada Limited).
(4) Alleged Attempts at Resale Price Maintenance in the Distribution and Sale of Cameras and Related Products (Arrow Photographic Equipment Limited).
(5) Meat Packing Industry and the Acquisition of Wilsil Limited and Calgary Packers Limited by Canada Packers Limited.
(6) Alleged Attempts at Resale Price Maintenance in the Distribution and Sale of Cameras and Related Products (Garlick Films Limited).
(7) Distribution and Sale of Automotive Oils, Greases, Anti-Freeze, Additives, Tires, Batteries, Accessories and Related Products.
(8) Manufacture, Distribution and Sale of Paperboard Shipping Containers and Related Products.
(9) The Acquisition of the Common Shares of Hendershot Paper Products Limited by Canadian International Paper Company.
(10) The Acquisition by Bathurst Power \& Paper Company Limited of Wilson Boxes, Limited.
(11) Manufacture, Distribution and Sale of Evaporated Milk and Related Products.
(12) Distribution and Sale of Electric Appliances, Electric Shavers and Accessory Products (Sunbeam Corporation (Canada) Limited).
(13) Manufacture, Distribution and Sale of Drugs.
(14) Alleged Combine in the Matter of a Call for Tenders by the Town of Duvernay for the Construction of Sewers and Water Mains.

These reports and copies of the annual reports under the Act may be obtained from the Queen's Printer or the office of the Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

## Section 3.-Control and Sale of Alcoholic Beverages

The retail sale of alcoholic beverages in Canada is controlled by provincial and territorial government liquor control authorities. Alcoholic beverages are sold directly by most of these liquor control authorities to the consumer or to licensees for resale. However, in some provinces beer and wine are sold directly by breweries and wineries to consumers or to licensees for resale. During the year ended Mar. 31, 1963, provincial government liquor control authorities operated 993 retail stores.

Table 1 shows revenue from administration of liquor control by provincial and territorial governments. Details are given in DBS report, The Control and Sale of Alcoholic Beverages in Canada (Catalogue No. 63-202).

## 1.-Provincial Revenue from Administration of Liquor Control, Years Ended Mar. 31, 1962 and 1963

#### Abstract

Note.-Figures include revenue collected directly by the provincial and territorial governments as well as revenue of the liquor authorities, but exclude revenue resulting from a general retail sales tax on alcoholic beverages levied by eight provinces.

| Province or Territory | 1962 |  |  | 1963 |  |  |

## Section 4.-Miscellaneous Aids or Controls

The National Energy Board.-The National Energy Board was established by the National Energy Board Act, 1959 (SC 1959, c. 46) for the broad purpose of assuring the best use of energy resources in Canada. The Board is responsible for the regulation in the public interest of the construction and operation of oil and gas pipelines subject to the jurisdiction of the Parliament of Canada, the tolls charged for transmission by such pipelines, the export and import of gas, the export of electric power and the construction of those lines over which such power is exported. The Board is also required to study and keep under review all matters relating to energy within the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary or advisable in the public interest with regard to such matters. The Act also authorizes the extension of the export and import provisions to oil upon proclamation by the Governor in Council. The Board, which reports to the Minister of Trade and Commerce, consists of a Chairman, a Vice-Chairman and three other members.

During 1963, the work of the Board in fulfilment of its regulatory responsibilities under the National Energy Act included the issuing of 570 certificates, licences and orders, compared with 441 in 1962 . The certificates authorized the construction of certain additional oil and gas line facilities and international power lines; the licences and orders concerned the export of gas and electric power, the export of butanes by pipeline and exemption orders, the latter relating to the construction of pipelines or branches or extensions not exceeding 25 miles in length. Seven public hearings were held in connection with certificate and licence applications and one dealing with compensation in connection with the working of a quarry being prevented by a pipeline.

The Board continued active liaison or involvement with a number of agencies concerned with energy supply and demand, such as the Dominion Bureau of Statistics re the consolidation and improvement of procedures and content of surveys and statistical reports in connection with electric power and energy matters; the Federal-Provincial Working Committee on Long-Distance Transmission; the Nelson River Programming Board re feasibility studies associated with the development of remote hydro-electric power sites and their potential export possibilities; the Atlantic Development Board in the power and energy aspects of that Board's responsibilities; the Canadian Standards Association Committee $r e$ the establishment of a Canadian code for the design, construction and operation of oil and gas pipelines and of a code for aluminum pressure piping; the Emergency Supply Planning Branch of the Department of Defence Production re emergency planning in the energy field; and with certain international organizations.

The Board has under study detailed energy supply and demand forecasts and maintains up-to-date estimates of reserves and productibility for crude oil, natural gas and natural gas liquids.

Trade Standards.-The Standards Branch of the Department of Trade and Commerce consolidates under one Director the administration of the Electricity Inspection Act, the Gas Inspection Act, the Precious Metals Marking Act, the Weights and Measures Act, and the National Trade Mark and True Labelling Act.

Commodity Standards.-On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act (RSC 1952, c. 191) which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising. In brief, the use of the National Standard is voluntary and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. This is exemplified in the National Trade Mark Garment Sizing Regulations which were passed on Mar. 16, 1961. In addition, where manufacturers descriptively label any commodity or container, it must be labelled accurately to avoid public deception. The regulation applying to the labelling of fur garments, for example, has been established as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act, 1946 (RSC 1952, c. 215), commodities composed of gold, silver, platinum or palladium may be marked with a quality mark describing accurately the quality of the metal. Where such mark is used, a trade mark registered in Canada or for which application for registration has been made must also be applied. Gold-plated or silver-plated articles may also be marked under certain conditions outlined in the Act. The inspection staff of the Standards Branch is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale, and in checking the marks applied.

Weights and Measures.-The Weights and Measures Act (RSC 1952, c. 292) prescribes the legal standards of weight and measure for use in Canada; it also requires control of the type of all weighing and measuring devices used for commercial purposes and their periodic verification and surveillance directed toward the elimination of sales by short weight or short measure. During 1963, 638,888 prepackaged articles were checked for weight or measure and 481,942 inspections of devices were made.

Electricity and Gas Inspection.-Responsibilities of the Standards Branch, under the Electricity Inspection Act (RSC 1952, c. 94) and the Gas Inspection Act (RSC 1952, c. 129) comprise the testing and stamping of every electricity and gas meter used throughout Canada for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. Canada is divided into 21 districts for administration of the two Acts and the staff numbers 205. During the year ended Mar. 31, 1963, 1,323,020 meters were tested. In 1962, there were $5,659,848$ electricity meters and $1,440,344$ gas meters registered in Canada.

Patents.*-Letters patent are issued subject to the provisions of the Patent Act (RSC 1952, c. 203), effective since 1935. Applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.
4.-Patents Applied for, Granted, etc., Years Ended Mar. 31, 1959-63

| Item |  | 1959 | 1960 | 1961 | 1962 | 1963 |

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to 21,225 in the year ended Mar. 31, 1963. Roughly, 68 p.c. of the patents granted resulted from inventions made by residents of the United States, 6 p.c. by residents of Britain and other Commonwealth countries and 6 p.c. by residents of Canada. Printed copies of patents issued from Jan. 1, 1948 to date are available at a nominal fee. The Canadian Patent Office Record gives a brief digest of each patent.

Canadian and foreign patents may be consulted at the Patent Office Library. The Library has records of British patents and abridged specifications thereof from 1617 to date, and of United States patents from 1845 to date, as well as many patents, indexes, journals and reports from Australia, New Zealand, South Africa, India, Pakistan, France, Belgium, Austria, Norway, Mexico, Italy, Sweden, the Netherlands, Switzerland, Japan, Egypt, Germany, Ireland, Colombia, Czechoslovakia and Yugoslavia.

Copyrights, Industrial Designs and Timber Marks.*-Copyright protection is governed by the Copyright Act (RSC 1952, c. 55) in force since 1924. Protection is

[^261]automatic without any formality. However, a system of voluntary registration is provided. Application for registration should be addressed to the Commissioner of Patents, Ottawa.

The Act sets out the qualifications for a copyright and its duration: "Copyrights shall subsist in Canada. . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol . . . or resident within Her Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

Canada belongs to the Universal Copyright Convention. This means that the works of Canadian authors are protected in the United States without the formality of compulsory registration or the obligation of printing in the United States, provided that, from the first publication, the work bears in a prominent place the following identification: ©, followed by the name of the proprietor and the year of publication.

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection in Canada, in all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States. Protection of industrial designs and of timber marks is afforded under the Industrial Design and Union Label Act and the Timber Marking Act. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office.

## 5.-Copyrights, Industrial Designs and Timber Marks Registered, Years Ended Mar. 31, 1959-63

Trade Marks.*-The Trade Marks Office, a Branch of the Department of the Secretary of State, administers the Trade Marks Act (SC 1952-53, c. 49) which covers all legislation concerning the registration and use of trade marks and supersedes from July 1, 1954, former legislation enacted under the Unfair Competition Act, the Union Label Act and the Shop Cards Registration Act. Correspondence relating to an application for registration of a trade mark should be addressed to the Registrar of Trade Marks, Ottawa.

Applications are advertised for opposition purposes in the Trade Marks Journal, a weekly publication that also gives particulars of every registration of a trade mark and every registration of a registered user. The required fee payable on application for registration of a trade mark is $\$ 25$, for advertisment of an application $\$ 15$ and for registration of a person as a registered user of a trade mark $\$ 20$.

Subventions and Bounties on Coal.*-A major problem of the Canadian coal mining industry arises from the fact that its fields are situated far distant from the main consuming markets of the Provinces of Ontario and Quebec while these markets lie in close proximity to the bituminous and anthracite fields of the United States. Transportation subventions, which have been maintained in varying degree during the past 30 years, were designed to further the movement of Canadian coals by equalizing as far as possible their laid-down costs with the laid-down costs of imported coals in various market areas. Since 1963, an addition to subvention regulations has also enabled eastern Canadian coals to be made competitive with imported residual fuel oils in the Atlantic Provinces and the Province of Quebec. Subvention assistance is authorized by annual Parliamentary vote and payments are administered in accordance with regulations established by Orders in Council.

## 7.-Expenditure for Coal Subventions, by Province, 1959-63

Note.-Tonnages and expenditures shown in a given year, being on a calendar-year basis, are not necessarily in direct relationship; certain of the amounts include adjustments on movements of previous years.

${ }^{1}$ Includes $\$ 500,000$ paid by the Nova Scotia Government as its share of the joint cost of certain Nova Scot ia subvention payments.

The Canadian Coal Equality Act (RSC 1952, c. 34), which implemented one of the recommendations of the Royal Commission on Maritime Claims (1926), was designed to assist the Canadian steel industry and only incidentally affects coal. It provides for the payment of 49.5 cents per ton on bituminous coal mined in Canada and converted into coke to be used in the Canadian manufacture of iron and steel. Bounties paid under this authority for the years 1959-63 were as follows:-

## PART III.-BANKRUPTCIES AND COMMERCIAL FAILURES

Two series of figures are included in this part which, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures. The first under the heading of "Administration of Bankrupt Estates" is limited to the supervision, by the Superintendent of Bankruptcy, of the administration of bankrupt estates under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act); it gives information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can therefore be assumed that this applies in even greater degree to the more extended fields covered in the second section under the

[^263]heading of "Returns under the Bankruptcy and Winding-Up Act" which is compiled by the Dominion Bureau of Statistics. This series is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-Up Act) and, since 1955, includes business failures only (see p. 893). The figures of assets and liabilities are estimates made by the debtor and, because they are not made uniformly, should be accepted with reservations.

Administration of Bankrupt Estates.*-Federal insolvency legislation comprises the Bankruptcy Act 1949 (RSC 1952, c. 14), the Farmers' Creditors Arrangement Act 1943 (RSC 1952, c. 111), the Companies' Creditors Arrangement Act (RSC 1952, c. 54), and, to some extent, the Winding-Up Act (RSC 1952, c. 296). The two Arrangement Acts are designed to avert failure and neither series of statistics therefore includes proposals or arrangements under these Acts. When such proposals or arrangements are rejected by the creditors or fail in their purpose, the proceedings may then come under the Bankruptcy Act, the bankruptcy provisions of the Farmers' Creditors Arrangement Act or, in certain circumstances, the Winding-Up Act. There are no provisions in the Companies' Creditors Arrangement Act for the liquidation or winding-up of insolvent companies.

[^264]

[^265]Returns under the Bankruptcy and Winding-Up Acts.*-The DBS statistics concerning bankruptcies and insolvencies cover only the failures coming under federal legislation, i.e., the Bankruptcy Act and the Winding-Up Act. Certain documents relating to estates administered under these Acts have been forwarded, since July 1920, to the Dominion Statistician for statistical analysis. The Bankruptcy Act of 1949 altered the administration of bankruptcies by providing for proposals from insolvent persons. Since July 1950, agreements made under this method have not been included with the statistics of bankruptcy, so that subsequent figures are not strictly comparable with those for previous years. Table 2 shows the number of proposals in order to give a general impression of the trend. The series was revised in 1955 to cover business failures only, excluding failures of individuals such as wage-earners, salesmen and executive personnel formerly included.

## PART IV.-PRICES*

## Section 1.-Index Numbers of Wholesale Prices

The term "wholesale prices" refers to transactions that occur below the retail level. It has more of a connotation of bulk purchase and sale than of any homogeneous level of distribution. Wholesale price indexes and individual price series have numerous uses. One of the most important is in escalator contracts which contain a price adjustment clause. Other major uses include: study of replacement and construction costs in investment projects; analysis of price movements of both individual items and commodity groups in relation to purchases and sales; industrial planning and market analysis; valuation for tax purposes and inventory analysis; and study of changes in physical volume. They are also used by business firms abroad in connection with sales and purchases in Canada.

General Wholesale Index.-The general wholesale index mainly includes manufacturers' prices but also incorporates those of wholesalers proper, assemblers of primary products, agents and operators of other types of commercial enterprises which trade in commodities of a type, or in quantities characteristic of primary marketing functions. Prices are grouped according to a commodity classification scheme based on chief component material similarities. Indexes classified according to degree of manufacture are also available. In Table 1, the general wholesale index is presented for the period 1936-63. This index is used as a conventional summary figure against which to observe the behaviour of particular price groups such as farm products, raw materials and building materials, for which separate price indexes have been constructed. Table 2 gives, for the years 1954-63, the general wholesale price index and two of its integral classifications-raw and partly manufactured goods, and fully and chiefly manufactured goods; also presented are two related systems-industrial materials and Canadian farm products. Annual price index numbers of non-residential building materials and residential building materials are given for 1954-63 in Tables 3 and 4, respectively. More specific indexes are published regularly in the DBS monthly publication Prices and Price Indexes (Catalogue No. 62-002), which also contains current series on retail and security prices. Vol. 23 of that publication is a historical summary reaching back to the year 1867 for some series.

A system of wholesale price indexes called Industry Selling Price Indexes $1956=100$, refers exclusively to manufacturing industries and includes approximately 100 industry and 175 commodity indexes. DBS Reference Paper No. 62-515 contains tables, explanatory text, charts and weights relating to these indexes; current indexes are published monthly in Prices and Price Indexes.

The general wholesale index rose 1.9 p.c. from 240.0 in 1962 to 244.6 in 1963, continuing the annual increases that began in 1954.

* Prepared in the Prices Division, Dominion Bureau of Statistics.
1.-General Wholesale Index Annual Averages, 1936-63
$(1935-39=100)$

| Year | Average | Year | Average | Year | Average | Year | Average |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1936. | 96.8 | 1943.. | 127.9 | 1950. | 211.2 | 1957.. | 227.4 |
| 1937. | 107.7 | 1944. | 130.6 | 1951. | 240.2 | 1958. | 227.8 |
| 1938. | 102.0 | 1945. | 132.1 | 1952. | 226.0 | 1959. | 230.6 |
| 1939. | 99.2 | 1946. | 138.9 | 1953. | 220.7 | 1960. | 230.9 |
| 1940. | 108.0 | 1947. | 163.3 | 1954. | 217.0 | 1961. | 233.3 |
| 1941. | 116.4 | 1948 | 193.4 | 1955 | 218.9 | 1962. | 240.0 |
| 1942. | 123.0 | 1949 | 198.3 | 1956 | 225.6 | 1963. | 244.6 |

Between 1962 and 1963, the raw and partly manufactured goods index increased 1.4 p.c. from 223.8 to 226.9 and the fully and chiefly manufactured goods index increased 2.1 p.c. from 249.0 to 254.2 . The farm products index, on the other hand, decreased 4.5 p.c. in the same comparison, both field and animal products dropping from the high points reached in 1962.

The price indexes of building materials* were slightly higher in 1963. The nonresidential index $(1949=100)$ advanced almost steadily during the year and at 137.6 in December, was up from 132.9 a year earlier; the annual index was 135.5 compared with 131.9 for 1962. The residential building materials index (1935-39 $=100$, arithmetically converted to the base $1949=100$ for comparability with the non-residential index) moved up from 130.0 in December 1962 to 138.4 in December 1963; the composite for the year was 4.7 points higher than in 1962.

Highway Construction Price Index.-A system of annual base-weighted and cur-rent-weighted bid price indexes $(1956=100)$ relating mainly to provincial highway construction was developed recently, by which price movement is shown for completed units of work such as earth excavation or crushed gravel in place. DBS Reference Paper 62-520 contains tables, explanatory text, charts and weights relating to these indexes. Current indexes are published from time to time in the monthly reports on Prices and Price Indexes (Catalogue No. 62-002).

World Wholesale Price Indexes.-Price changes within different countries have varied widely during the years. Comparisons of Canadian wholesale price indexes with those of other countries are given in Table 5.

## Section 2.-Consumer Price Index*

The purpose of the consumer price index is to measure the movement from month to month in retail prices of goods and services bought by a representative cross-section of the Canadian urban population. For a particular article or service, a price index number is simply the price of the article in one period of time expressed as a percentage of its price in a reference period, usually called a base period. However, indexes for individual goods may be combined to form indexes representing prices of broad groups of goods and services. Thus, the consumer price index relates to the wide range of goods and services bought by Canadian urban families. The index expresses the combined prices of such goods each month as a percentage of their prices in the base period 1949.

The group of goods and services represented in the index is called the index "basket" and "weights" are assigned to the price indexes of individual items for purposes of combining them into an over-all or composite index. The weights reflect the relative importance of items in expenditures of middle-size urban families with medium incomes. The basket is an unchanging or equivalent quantity and quality of goods and services. Only prices change from month to month and the index, therefore, measures the effect of changing prices on the cost of purchasing the fixed basket. The basket and weights now used in the index are based on expenditures in 1957 of families of two to six persons, with annual incomes of $\$ 2,500$ to $\$ 7,000$, living in cities of 30,000 population or over.

| 1937. | 63.0 | 1944. | 74.6 | 1951. | 113.7 | 1958...... | 125.1 |
| 1938. | 63.7 | 1945. | 75.0 | 1952. | 116.5 | 1959. | 126.5 |
| 1939. | 63.2 | 1946. | 77.5 | 1953. | 115.5 | 1960. | 128.0 |
| 1940. | 65.7 | 1947. | 84.8 | 1954. | 116.2 | 1961. | 129.2 |
| 1941. | 69.6 | 1948. | 97.0 |  | 116.4 |  | 130.7 |
| 1942. | 72.9 | 1949. | 100.0 | 1956. | 118.1 | 1963. | 133.0 |

The behaviour of the consumer price index during the years of almost continuous economic growth following the end of the Second World War up to 1959 is discussed in the 1962 Year Book at pp. 928-929 and the movement during 1959 and 1960 in the 1963-64 edition, p. 900.

In 1961, the index ranged from a low of 128.9 in February to a high of 129.7 in November. Two factors in price movement during the year were (1) the introduction of the 3-p.c. sales tax in Ontario in September, which was taken into account, and (2) the change in the exchange rate of the Canadian dollar. Although the latter was considered likely to result in higher prices on imported goods and ultimately in higher consumer prices, no evidence of this was available up to December 1961 as the index stood at just about the same level as in December 1960.

Relative price stability continued throughout 1962 for the fourth consecutive year. The annual average was 1.2 p.c. higher than the 1961 figure. Increases of 1.8 p.c. and 1.9 p.c. in the food, and health and personal care groups were the largest of the year. Lesser upward movements occurred in the other components with the exception of transportation, in which a slight decline was noted. In 1963, prices increased slightly more than in any of the previous few years, the annual average being 1.8 p.c. higher than the 1962 average. The largest increases occurred in the food ( 3.2 p.c.), health and personal care ( 2.6 p.c.), and clothing ( 2.5 p.c.) groups.

Consumer Price Indexes for Regional Cities.-Table 9 gives regional consumer price indexes for ten cities or city combinations. These indexes do not show whether it costs more or less to live in one city than in another and should not be used for such comparisons. Their function is to measure percentage changes in retail prices-over a certain time in each city or city combination-of a fixed basket of goods and services representing the level of consumption of a particular group of families.

## 9.-Consumer Price Indexes for Regional Cities, 1954-63

World Retail Price Indexes.-In order to place changes in Canadian retail prices in perspective with those occurring elsewhere, Table $\mathbf{1 0}$ provides consumer price indexes for selected countries for 1960,1961 and 1962. These indexes measure price changes only within each country and should not be used to compare actual levels of living costs from country to country.

## Section 3.-Consumer Expenditure

A continuing program of surveys of family expenditure in urban areas was begun in 1953 and surveys were conducted since then at two-year intervals up to and including 1959. No expenditure surveys were taken in 1961, the decennial census year, but the regular program was resumed in 1962, when monthly surveys of food expenditure were made throughout the year, and a recall survey of the complete budget was made in February and March 1963.

The primary purpose in most of these surveys was to collect information for reviewing and revising, when necessary, the weights of the consumer price index. Therefore the surveys, with the exception of that for 1959, have been restricted to cover only the families comparable in composition and income level to the consumer price index target group which was selected for index number purposes from a nation-wide survey conducted in 1947-48. For each of the four survey periods covering 1953, 1955, 1957 and 1962, respectively, the program consisted of a series of monthly surveys in which the major objective was the collection of detailed expenditure data on food, followed by a recall survey of all expenditures and income for the same calendar year. In the 1959 survey program, the monthly surveys were omitted and a larger recall survey was made referring to all families and individuals in cities with populations of 15,000 or over. Detailed results for each survey have been published in two series of occasional publications of which the latest are: Urban Family Food Expenditure, 1957 (Catalogue No. 62-516) and Urban Family Expenditure, 1959 (Catalogue No. 62-521).

Summary results of the 1959 survey appear in the 1962 Year Book at pp. 934-937 where tables are given showing how expenditure patterns varied among families grouped by income level, and the average dollar expenditure per family and per person for major items. Summary results of the 1962 survey of family food expenditure are shown in Tables 11 and 12. Results of the 1962 survey of the complete budget were not yet available at the time of printing.

Table 11 shows weekly food expenditure patterns in 1962 for seven cities individually and the seven-city composite. Approximately 150 families in each month kept weekly diaries of food purchases for a four-week period; the families belonged to one of eight family types (two to four adults, two adults and one to four children, three adults and one child) with family incomes ranging from $\$ 3,000$ to $\$ 7,500$.

On the average, 29 p.c. of the family food dollar went for meat, poultry and fish, 14 p.c. for fruits and vegetables, 13 p.c. for bakery and cereal products, 12 p.c. for dairy products, 4 p.c. for fats and oils, 3 p.c. for eggs, 1 p.c. for frozen foods, 12 p.c. for other groceries for home use and 12 p.c. for food purchased and eaten away from home, including out-of-town board. This distribution differs only slightly from that recorded in a similar survey made in 1957. The most pronounced differences between the 1957 and 1962 distributions were in the proportions of food expenditure going to meat, from 28.2 p.c. in 1957 to 29.3 p.c. in 1962 and to fats and oils from 4.9 p.c. to 4.2 p.c. Among the seven cities surveyed, total weekly food expenditure ranged from an average of $\$ 20.61$ per family in Edmonton to $\$ 24.85$ in Montreal; average expenditure per person varied from $\$ 5.78$ in Halifax to $\$ 7.41$ in Montreal.

Table 12 shows how weekly food expenditure varied among families at different income levels. Average expenditure per family increased from $\$ 21.33$ in the lowest income group to $\$ 26.57$ in the highest, with over half the increase occurring between the two upper income classes. Family spending on food away from home and on frozen foods increased as income rose, not only in dollars but as a percentage of total expenditure. Expenditure on fruits and vegetables also increased with rising income but the percentage of total expenditure declined slightly at successive income levels. Expenditure per family and per person on
dairy products was highest in the $\$ 5,000$ to $\$ 5,999$ group where average family size was greatest. The only food group in which increasing income was accompanied by a consistent decline in expenditure per family and per person was eggs, although fats and oils showed a declining tendency on a per-person basis. Expenditure on meats and poultry was approximately the same per person in the lowest and highest income groups, although the proportion of total expenditure declined from 30.2 p.c. to 25.9 p.c.

## Section 4.-Security Price Indexes

Security price indexes measure, through time, the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on the Toronto, Montreal and Canadian stock exchanges. In the case of the mining and the two supplementary indexes (primary oils and gas, and uraniums), eligible issues are for producing mines and wells only. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the weekly common stock indexes (investors, mining and supplementary indexes) are Thursday's closing quotations. For the monthly preferred stock indexes, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The indexes express current prices as a percentage of prices in 1956. Monthly and certain weekly indexes appear in DBS monthly publication Prices and Price Indexes (Catalogue No. 62-002) and a weekly DBS report gives indexes on a weekly basis for all groups and sub-groups.

The investors index is comprised of three major groups, with relative importance indicated by percentage weights as follows: industrials, 67.2; utilities, 18.5; and finance, 14.3. Each major group is further divided into industry sub-groups corresponding to the standard industrial classification, adopted as the basis of classification in the revision of the index to the $1956=100$ base. The mining index is composed of two groups: base metals with a weight of 64.6 p.c. and golds with a weight of 35.4 p.c. The two supplementary indexes of common stocks-primary oils and gas, and uraniums-and the index of preferred stocks are not divided into component groups.

| Section 6. Comparison of Value, Price and Volume of Foreign Trade. | 929 | Part IV.-Travel Between Canada and Other Countries. | 948 |

The interpretation of the symbols used in the tables throughout the Year Book will be found on $p$. viii of this volume.

The subject of foreign trade covers more than the treatment of exports and imports of commodities, important though this is. In its broader sense foreign trade is made up of the total international interchange of goods, services, securities and other financial transactions, all of which are presented in their appropriate relationship in this Chapter and in Section 3 of Chapter XXIV. Following Part I, which is a review of Canada's commodity trade during 1963-64, Part II gives detailed statistics of that trade. Part III outlines the various ways in which the Federal Government promotes and encourages trade relationships, and contains a brief review of the Canadian tariff structure. Part IV contains a review of the extent of travel between Canada and other countries in 1963 with estimates of the amount of money expended for that purpose. The Canadian balance of international payments is covered in Chapter XXIV.

## PART I.-GANADIAN MERCHANDISE EXPORTS AND IMPORTS, 1963-64*

Economic conditions in most countries continued to gather strength during 1963 with a consequent further advance in international merchandise trade. Canada shared in the expansion particularly in exports but imports rose strongly through most of the year.

Exports, which had remained almost unchanged in value between 1956 and 1958, commenced to rise in 1959 and the increase continued at a generally accelerating rate. In 1963, exports enjoyed their greatest increase in this five-year continuous expansion phase; the rise amounted to $\$ 632,000,000$ or about 10 p.c. compared with an 8-p.c. increase in 1962 . Over the period $1958-63$, exports rose by 43 p.c. in value and about 33 p.c. in terms of physical volume. For $1953-63$, the corresponding figures were 68 p.c. and 53 p.c., respectively.

| Exports of foreign produce. | 65 | 129 | 140 | 169 | 182 |
| Totals, Exports | 3,926 | 5,387 | 5,895 | 6,348 | 6,980 |

From Table 1, which shows exports by principal product groupings, it may be seen that the course of expansion in 1963 was in certain respects a continuation of earlier trends and in other respects quite different. Exports of lumber, wood pulp, iron ore and aluminum continued to advance as did manufactured and miscellaneous goods which rose almost as strongly as in 1962 ; exports of newsprint and base metals remained relatively static and uranium continued to decline in response to the phasing out of remaining contracts. On the other hand, shipments of wheat and flour, which had fallen in 1962, rose strongly to a new peak and were responsible for almost one third of the total increase. This was attributable in large measure to initial shipments to the Soviet Union under contract amounting to about $\$ 500,000,000$ covering the $1963-64$ crop year; there were also large shipments to Mainland China under a new contract and demand elsewhere was generally strong. Primary iron and steel shipments were higher; chemicals and fertilizers and miscellaneous minerals were stronger (reflecting rising shipments of potash and sulphur among other items) but oil and gas, which had risen sharply in 1961 and 1962, remained almost unchanged. The increase of $\$ 171,000,000$ in fully manufactured products carried the total to double its value in 1957. There were a number of special or new factors involved, such as goods financed under long-term credits by the Export Credits Insurance Corporation, military aircraft and other military equipment outside the range of ordinary commercial trade. But there were, as well, extensive increases in exports of automobiles and parts, farm implements, engineering and electrical equipment and a wide range of items reflecting a strengthening in Canada's competitive position abroad in the area of highly manufactured goods.

Through most of the 1950's the share of Canadian exports going to countries other than the United States fell back from half or better during the postwar reconstruction phase to an average of around 40 p.c. In 1960 and 1961 it rose to 44 p.c. and 46 p.c., respectively, as a result of rising overseas shipments, particularly of wheat. In 1962 the latter item declined somewhat and a rise in exports of products sold mainly in the United States market, such as oil and gas, iron ore, aluminum and certain manufactured goods, increased that country's share to 59 p.c. In 1963, owing to the increase in wheat and flour exports to overseas countries, to greater strength in forest products and uranium to Britain and to higher exports of manufactured goods, the overseas share recovered to 44 p.c.

Merchandise imports, which fell off during the second half of 1962 for a combination of reasons partly associated with the earlier revaluation of the Canadian dollar and the imposition of import surcharges, changed comparatively little in the early months of 1963. Then, following the removal of the last remaining import surcharges in March and as a result of increasing buoyancy in the Canadian economy, they rose steadily and strongly during the remaining months of the year. The increase for the year of $\$ 300,400,000$ or 5 p.c. was less than the 8-p.c. increase in 1962; however, because of an almost equal increase in import prices, the rise in physical volume of imports appears to have been less than 1 p.c. compared with 4 p.c. in 1962. In contrast to the extensive rise in exports, imports which reached their low point in 1958 rose by only 30 p.c. in value and about 15 p.c. in volume in the succeeding five years. From Table 2, which shows imports on an end-use basis, it is seen that the distribution of the 1963 increase by commodity groupings follows a rather different pattern than in the previous year. Over one third of the increase occurred in the food and beverages group and was attributable mainly to the sharp advance in the prices of sugar and some fruits. Industrial materials, automobiles, fuels and lubricants were moderately stronger but investment goods remained about the same as in 1962. The behaviour of the latter group was rather surprising in view of the general buoyancy in the economy; in fact,
machinery imports rose by over $\$ 100,000,000$ to a new record but this was mainly offset by lower imports of aircraft and other transport equipment, which in turn was related to the completion of certain civilian and military aircraft programs.

Scarcely half of the increase in imports came from the United States, which is traditionally the source of about two thirds of total imports. Imports from Britain fell off in 1963 for the second year, a decline almost entirely associated with lower automobile imports and the completion of civilian aircraft replacements. On the other hand, imports from other countries rose by 14 p.c.; one third of the increase was attributable to sugar, previously mentioned, and petroleum and industrial materials accounted for most of the remainder. These increases were reflected in substantially larger imports from Venezuela and the Middle East oil-producing countries, and from sugar sources in the Antilles, India, Australia and South Africa. On the other hand, imports from Western Europe rose relatively little as did those from Japan, which is still Canada's fifth largest source of imports, after the United States, Britain, Venezuela and Germany.

In 1963, for the third successive year, Canada had a merchandise export surplus amounting to $\$ 421,000,000$, about $\$ 300,000,000$ larger than in either of the previous two years. It resulted from the much more buoyant behaviour of exports as compared with imports. The principal causes for the improvement were the special wheat contracts referred to previously and the low level of imports in the early part of the year.

Figures for the first half of 1964 show that the improvement in exports has accelerated; they totalled $\$ 3,935,000,000$ and were 21 p.c. higher than in the first half of 1963 . As in the latter part of 1963, a substantial share of the improvement was related to the high level of wheat exports including the special contracts, but there was also a general broadening in strength including increases in newsprint, base metals, manufactured goods and fertilizers. The resulting over-all export surplus amounted to $\$ 224,000,000$ compared with $\$ 123,000,000$ in the first half of 1963 .

Imports also rose rapidly during the first half of 1964; the six-month total amounted to about $\$ 3,711,000,000$, some 19 p.c. higher than in the same period of 1963 . All the main country groupings of imports rose by proportions not far removed from the over-all level. The increase from Britain is notable in that, besides being the largest percentage increase of the four country groupings, it reversed a trend that had been in evidence since 1961 and that ran counter to the persistent rise from other areas during this interval. Although at the time of writing details were not available for the whole period, the increase seems to have involved a broadening out in fields other than automobiles and aircraft.

## PART II.-FOREIGN TRADE STATISTICS*

## Section 1.-Explanatory Notes on Canadian Trade Statistics

Sources.-Canadian foreign trade statistics are compiled from information recorded on customs documents received by the Dominion Bureau of Statistics from the various customs ports in Canada with the following exceptions: electricity exports are based on reports received from the National Energy Board and imports are based on reports received from public utility companies; and crude petroleum exported by pipeline, statistics for which are reported directly to the Bureau by the pipeline companies. Record is kept of value and, whenever possible, of quantity. In considering trade figures, it should be noted that the statistics do not necessarily reflect the financial transactions relating to the movement of goods since the method and time of payment are affected by many factors.

[^272]Coverage.-Domestic exports or exports of Canadian produce include exports of goods wholly produced in Canada together with exports of previously imported goods that have been changed in form by further processing in Canada. Re-exports or exports of foreign produce include previously imported goods that are exported from Canada in the same form as when imported.

Imports, for years prior to 1964, include all goods that enter Canada and are cleared through customs for domestic sale or use, i.e., imports on which all duties are paid and which have passed from customs control into the possession of the importer. Goods reexported without being cleared for domestic consumption are not included. It should be noted that the fact that imports have been entered for consumption does not necessarily imply that the goods will all be consumed in Canada but only that consumption can take place without further customs formalities.

Beginning Jan. 1, 1964, Canada's trade statistics are being compiled on a "General Trade" basis, instead of on the "Special Trade" basis used until the close of 1963 and thus used for all figures appearing in this Chapter. The definitions of terms given in the above paragraphs are according to the Special Trade basis. The main difference for figures recorded on the General Trade basis is that imports are entered as such whether the goods are cleared through customs for immediate domestic use or stored in a customs warehouse under customs supervision. Domestic exports remain the same on both bases but reexports, after Jan. 1, 1964, will include exports from customs warehouses, which were previously excluded. Over a period of years, the totals of Canadian exports or imports will be almost the same on either the General Trade or Special Trade basis, but considerable differences may appear in individual years owing to time of clearance and extent of business activity.

The most important exclusions from export totals are: gold, goods shipped to Ca nadian Armed Forces or diplomats stationed abroad, goods financed under the Defence Appropriation Act and shipped to other NATO countries, temporary exports for exhibition or competition, fuel and stores sold to foreign vessels and aircraft in Canada, settlers' effects, private donations and gifts, and identifiable tourist purchases.

The most important exclusions from import totals are: gold, goods for use of the United States Armed Forces stationed at treaty bases in Canada, Canadian-owned military equipment returned to Canada, ships imported for use in foreign trade and ships of British construction and registry imported for use in the coasting trade, temporary imports for exhibition or competition, fuel and stores purchased by Canadian vessels and aircraft abroad, settlers' effects, private donations and gifts, tourist purchases exempt from duty, and goods imported for foreign armed forces or diplomats stationed in Canada.

From Jan. 1, 1960, a new category was established in both export and import statistics entitled "Special Transactions-Non-Trade". This category includes certain commodity movements which either have no international financial implications or, for various reasons, are better considered separately from merchandise trade in economic analysis. The value of transactions of these types is now excluded entirely from published totals of Canadian merchandise trade, and do not appear in this volume, but statistics for the classes of this category are contained in the regular monthly export and import reports.

Beginning with statistics for January 1961, a new export commodity classification was used, based on the standard industrial classification developed in the DBS as a tool for integrating statistical series derived from different sources. Whereas the classification previously used classified commodities primarily according to the material of which they were chiefly composed, the new classification places commodities in sections mainly according to stage of processing and purpose, as follows: Live Animals; Food, Feed, Beverages and Tobacco; Crude Materials, Inedible; Fabricated Materials, Inedible; End Products, Inedible; and Special Transactions-Trade.

As part of the change to the new classification, the commodity detail shown in export statistics has been modernized by eliminating statistics on many commodities of minor significance and instituting new classes for many commodities of greater importance. The grouping system employed in the new classification also makes easier the identification of
other commodities which may merit separate specification. For most of the commodities of greatest importance in Canadian exports, the classes of the new export commodity classification are substantially identical with those of its predecessor.

A similar new commodity classification was introduced for import statistics commencing January 1964. Import statistics will be presented on the new basis in the next edition of the Year Book.

Valuation.-Export entries define the value of exports as the "actual amount received or to be received in terms of Canadian dollars, exclusive of all charges" (freight, insurance, handling, etc.). This definition would give values f.o.b. point of consignment for export but in practice it is not always followed. For example, in recent years a significant but indeterminate proportion of exports has been reported in United States dollars, resulting in some overstatement of the value of exports for the period prior to June 1961 and some understatement of their value in subsequent months.

The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but, at least in recent years, importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January 1959); raw cotton and crude petroleum (from January 1962, retroactive to January 1961); raw sugar (from January 1963, retroactive to January 1961); and all shipments individually valued at $\$ 100,000$ or more (from January 1964). Only about one fifth of the value of imports is covered by these specific checks.

Country Classification.-Trade is credited to countries on the basis of consignment. For exports from Canada, the country of consignment is that country to which goods are, at the time of export, intended to pass without interruption of transit except in the course of transfer from one means of conveyance to another. For imports into Canada, the country of consignment is the country from which the goods came without interruption of transit except in the course of transfer from one means of conveyance to another. This is not necessarily the country of actual origin, since goods produced in one country may be imported by a firm in another country and re-sold to Canada; in such cases the second country is the country of consignment to which the goods are credited. There is one exception to this rule; an attempt is made to classify by country of origin goods produced in South America, Central America, Bermuda and the Antilles and consigned to Canada from the United States. The effect of this procedure is to reduce slightly the imports credited to the United States and to increase those credited to South and Central American countries.

The country sub-totals include trade with Commonwealth and other countries entitled to Preferential rates of duty (the Republic of Ireland and the Republic of South Africa).

Discrepancies in Trade Statistics Between Canada and Other Countries.-Canada's statistics of exports are rarely in exact agreement with the import statistics of its customers and parallel differences occur with Canadian imports. Major factors contributing to these discrepancies include:-
(1) Differences in the system of valuation used by Canada and those of other countries, especially with respect to the treatment of transportation charges.
(2) Differences in the statistical treatment of special categories of trade, such as armaments and military supplies, government-financed gift or mutual aid shipments, postal and express shipments, or warehouse trade.
(3) Differing definitions of territorial areas.
(4) Differing systems of crediting trade by countries, notably the consignment system used by Canada and the actual origin or ultimate destination system in use by some other countries.
(5) Differences in the time at which trade is recorded in the statistics of partner countries caused by the time required for goods to move from one country to another.

## Section 2.-Total Foreign Trade

In considering the figures in Sections 2 to 6, reference should be made to the explanatory notes on trade in Section 1. Exports and imports of gold are excluded from all tables.
1.-Value of Total Foreign Trade of Canada (excluding Gold), 1949-63

Notz.-Figures have been revised to cover the adjustment for "Special Transactions-Non-Trade"; see p. 912.

| 1963. | 6,798,529 | 181,613 | 6,980,142 | $3,542,601$ | 3,015,606 | 6,558,208 | + 421,934 |

Treatment of Gold in Trade Statistics.-The general use of gold as a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors rather than by ordinary trade or commercial considerations. Gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price. Also, gold may be bought or sold internationally without any physical movements of the metal, such transactions being recognized by simply setting aside or 'ear-marking' the metal in the vaults of some central bank.

For these reasons movements of gold in a primary or semi-fabricated state are excluded from the totals of Canada's commodity trade. However, since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published as a supplement to the trade statistics. Because this series is calculated on a production basis, a division of the figures into transactions with individual countries is not possible.

## 2.-New Gold Production Available for Export, by Month, 1956-63

Norz.-Since Mar. 21, 1956, mines not receiving aid under the Emergency Gold Mining Assistance Act have been allowed to sell their gold to private residents and non-residents, either for export or for safe-keeping in Canada. Such sales, commencing in April 1956, are included in the figures of new gold production available for export.
(Millions of dollars)

[^277]The proportion of imports subject to duty varies widely between countries and geographic areas. Generally, the Canadian tariff imposes duties on a greater proportion of manufactured goods than of natural products. Countries supplying chiefly manufactures to Canada tend to have duties charged on a greater proportion of their goods and also to have relatively higher average ad valorem rates of duty charged on their goods than is the case with countries supplying chiefly natural products. Variations in the proportion of imports dutiable as between different countries or in the average ad valorem rates of duty charged on imports from different countries therefore do not necessarily indicate differences in the tariff relations between Canada and these countries.

## Section 4.-Trade by Commodity

This Section provides detailed information on the composition of Canada's exports and imports for 1962 and 1963. Table 8 shows exports and re-exports to and imports from all countries, Britain and the United States, classified by section; Table 9 gives detailed statistics of all commodities of any importance exported from Canada to all countries, to Britain and to the United States; and detailed statistics for imports into Canada by group and commodity appear in Table 10. An explanation of the different classification used in the latter table is given on p. 912.

## Section 5.-Trade by Origin and Degree of Manufacture

The classifications of trade statistics according to origin and degree of manufacture are not included in this volume; they will be replaced in future editions by statistics calculated on new concepts of imports and exports by stage of fabrication.

## Section 6.-Comparison of Value, Price and Volume of Foreign Trade

In recent years there has been a substantial increase in the value of Canada's exports and imports. Changes in the value of trade, however, are the joint product of changes in the volume of goods traded and in the prices at which transactions are conducted. To assess the significance of value changes, it is desirable to isolate the contributions made to them by the price and volume factors.

Special indexes of export and import prices have been developed to provide this information. These indexes are based chiefly on unit values (average prices) calculated from the trade statistics, supplemented by information on wholesale and retail prices.

Price relatives are calculated for a sample of commodities representing the greater part of export and import trade, and these relatives are weighted by the percentage of 1948 trade represented by each commodity in the sample in obtaining group and total indexes. By dividing these price indexes into the trade values the effects of price change are removed from the values, or by dividing the price index into an index of values on the same timebase an index is obtained showing changes in the volume of trade from year to year.

The grouping of commodities used in these calculations differs from that of the regular trade statistics, the changes being desirable to simplify the pricing problem. The chief differences are that the first two main groups of the trade statistics have been combined into one group, "agricultural and animal products", and that the sub-group "rubber and its products" has been transferred from this group to the "miscellaneous" group. The declared values of domestic exports and imports have been revised to cover the adjustment for "Special Transactions-Non-Trade". An explanation of that adjustment is given at p. 912. Table 11 shows the revised values of trade adjusted for pricing purposes and the value, price and volume indexes of Canadian trade for 1960-63.

## 11.-Declared Values, and Value, Price and Physical Volume Indexes of Foreign Trade, by Commodity Group, 1960-63

## PART III.-THE GOVERNMENT AND FOREIGN TRADE Section 1.-Federal Foreign Trade Services*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, largely because the productive capacity of Canada is greater than the ability of its population to consume the output of farms, factories, forests, fisheries and mines. Every effort is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the Canadian economy. It is appreciated, however, that two-way trade should be encouraged so that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore, many commodities not indigenous to this country must be imported. Some of these are required for industrial processes and others may be classed as consumer goods necessary for the maintenance of the Canadian standard of living.

[^278]Although numerous private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls imposed by many countries for a variety of reasons, together with foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without assistance from government representatives. The federal Department of Trade and Commerce, the primary function of which is the promotion of external trade, makes available to business men a wide variety of services to assist them in selling their products abroad. These services are provided by the Department's head office in Ottawa, five regional offices in Canada, and a corps of trade commissioners stationed around the world.

Services available from the various branches, divisions and agencies of the Department of Trade and Commerce are described below. The work of these entities is inter-related, each operating in its own field but working closely with the others to effect the over-all objective of trade promotion.

Trade Commissioner Service.-The Trade Commissioner Service is the overseas arm of the Department and is actively engaged in the promotion of Canadian trade and the protection of Canada's commercial interests; 65 offices are maintained in 47 countries, of which 47 posts form part of Canadian Government diplomatic missions abroad and 18 are separate trade commissioner posts.

Every effort is made by the trade commissioners to bring Canadian exporters and prospective buyers together. On their own initiative, and in response to requests from the Department and Canadian business men, they study potential markets for specific Canadian commodities and services. Reports are provided on the demand in the country concerned, prices, competition, trade and exchange regulations, tariffs, shipping and packaging requirements, credit terms, channels of distribution, labelling regulations, etc. Inquiries from local business men for goods obtainable from Canada are forwarded to the Department in Ottawa, or directly to Canadian firms in a position to supply the products required.

The supervision of Canadian exhibits at overseas trade fairs and the provision of assistance to participating Canadian firms is an important function of many offices. Trade commissioners make local arrangements for and travel with Canadian trade missions visiting overseas markets. They also seek sources of supply for a wide variety of goods on behalf of Canadian importers.

In developing trade opportunities, Canada's trade commissioners travel extensively in their territories, visit leading industrial and commercial centres, and call on government officials, business men, trade associations and municipal authorities. They establish social contacts with commercial interests, thereby developing goodwill for Canada and Canadian products, while creating connections for Canadian exporters and facilitating the collection of trade information. They return to Canada at periodic intervals and make tours of Canadian industrial and commercial centres. Such direct contacts enable them to discuss specific problems with business men and bring into focus the Canadian commercial scene.

In countries where Canada has a diplomatic mission, the Canadian trade office is the commercial division and the trade commissioner has the rank of Minister (Commercial), Minister-Counsellor (Economic), Commercial Counsellor or Commercial Secretary. When attached to a consulate, he carries the title of Deputy Consul General (Commercial), Consul (Commercial), or Vice-Consul (Commercial), according to his rank, in addition to that of Trade Commissioner. He may also be the Consul General, in charge of the office. Where trade offices are detached and do not form part of a diplomatic mission, the trade commissioner may also be required to undertake consular, immigration and other duties as the sole representative of Canada.

## CANADIAN FOREIGN TRADE OFFICES ABROAD, AS AT AUG. 22, 1964

Argentina.-Commercial Counsellor, Canadian Embassy, Bartolome Mitre 478, Buenos Aires. Territory includes Paraguay.

Australia.-
Sydney: Commercial Secretary for Canada, 21st Floor A.M.P. Bldg., Circular Quay, Sydney. Mail: P.O. Box 3952 G.P.O.
Melbourne: Commercial Counsellor for Canada, Mobile Centre, 2 City Road, South Melbourne.
Canberra: Commercial Counsellor, Office of the High Commissioner for Canada, Commonwealth Ave., Canberra.

Augrria.-Commercial Counsellor for Canada, Obere Donaustrasse 49/51, Vienna II. Mail: P.O. Box 190, Vienna 1/8. Territory includes Albania, Bulgaria, Czechoslovakia, Hungary, Romania and Yugoslavia.

Belarum.-Commercial Counsellor, Canadian Embassy, 35 rue de la Science, Brussels 4. Territory includes Luxembourg, European Economic Community, European Atomic Energy Community and European Coal and Steel Community.

Brazil.-
Rio de Janeiro: Commercial Counsellor, Canadian Embassy, Edificio Metropole, Av. Presidente Wilson 165, Rio de Janeiro. Mail: Caixa Postal 2164-ZC-00.
São Paulo: Consul and Trade Commissioner, Canadian Consulate, Edificio Alois, Rua 7 de Abril 252, São Paulo. Mail: Caixa Postal 6034.

Britain.-
London: Minister (Commercial), Office of the High Commissioner for Canada, One Grosvenor Square, London W.1.
Liverpool: Canadian Government Trade Commissioner, Martins Bank Bldg., Water Street, Liverpool.
Glasgow: Canadian Government Trade Commissioner, Cornhill House, 144 West George St., Glasgow C.2, Scotland.
Belfast: Canadian Government Trade Commissioner, 15-17 Chichester St., Belfast 1, Northern Ireland.

Cameroon.-Commercial Division, Canadian Embassy, Soppo Priso Bldg., rue Joseph Clerc, Yaounde. Mail: P.O. Box 572. Territory includes Central African Republic, Chad, Congo (Brazzaville) and Gabon.

Ceylon.-Commercial Division, Office of the High Commissioner for Canada, 6 Gregory's Road, Cinnamon Gardens, Colombo. Mail: P.O. Box 1006.
Chile.-Commercial Counsellor, Canadian Embassy, 5th Floor, Agustinas 1225, Santiago. Mail: Casilla 771.

Colombia.-Commercial Counsellor, Canadian Embassy, Edificio Banco de Los Andes, Carrera 10, No. 16-92, Bogota. Airmail: Apartado Aereo 8582. Surface Mail: Apartado 1618. Territory includes Ecuador.

Congo.-Charge d'Affaires, Canadian Embassy, C.C.C.I. Bldg., Boulevard Albert 1 er, Leopoldville 1. Mail: Boite Postale 8341.

Cubn.-Commercial Division, Canadian Embassy, Calle 30, No. 518, esquina 7a Avenida, Miramar, Havana. Mail: Gaveta 6125.

Denmark.-Commercial Counsellor, Canadian Embassy, Prinsesse Maries Alle 2, Copenhagen V. Territory includes Greenland and Poland.

Dominican Repubuic.-Commercial Counsellor and Consul, Canadian Embassy, Edificio Copello 408. Calle El Conde, Santo Domingo. Mail: Apartado 1393. Territory includes Puerto Rico.

France.-Minister-Counsellor (Economic/Commercial), Canadian Embassy, 35 Ave. Montaigne, Paris $8^{\circ}$. Territory includes Algeria and Morocco.

## Germany.-

Bad Godesberg: Commercial Counsellor, Canadian Embassy, Kennedy-Allee 35, Bad Godesberg.
Duesseldorf: Consul, Canadian Consulate, Koenigsallee 82, 4 Duesseldorf 1.
Hamburg: Consul General, Canadian Consulate General, Ferdinandstrasse 69, Hamburg.

Ghana.-Commercial Counsellor, Office of the High Commissioner for Canada, E115/3 Independence Ave., Accra. Mail: P.O. Box 1639. Territory includes Guinea, Ivory Coast, Liberia, Mali, Mauritania, Togo and Upper Volta.

Greece.-Commercial Counsellor, Canadian Embassy, 31 Vassilissis Sophias Ave., Athens 138. Territory includes Turkey.
Guatemala.-Commercial Counsellor, Canadian Embassy, 5a Avenida 11-70, Zone 1, Guatemala City, C.A. Airmail P.O. Box 400. Surface mail: P.O. Box 444. Territory includes Costa Rica, El Salvador, Honduras, Nicaragua, Panama and Canal Zone.
Harrt.-Chargé d'Affaires ad interim and Consul, Canadian Embassy, Route du Canape Vert, St. Louis de Turgeau, Port-au-Prince. Mail: P.O. Box 826.
Hong Kong.-Canadian Government Trade Commissioner, Hong Kong and Shanghai Banking Corporation Bldg., Hong Kong. Mail: P.O. Box 126. Territory includes Cambodia, Communist China, Laos, Viet Nam and Macao.

India.-
New Delhi: Commercial Counsellor for Canada, 13 Golf Links Road, New Delhi 1. Mail: P.O. Box 11. Territory includes Bhutan, Nepal and Sikkim.

Bombay: Canadian Government Trade Commissioner, Gresham Assurance House, Mint Road, Bombay 1-BR. Mail: P.O. Box 886.
Iran.-Commercial Division, Canadian Embassy, Bezrouke Bldg., Corner of Takht Jamshid Ave. and Forsat St., Tehran. Mail: P.O. Box 1610.

Ireland.-Commercial Counsellor for Canada, 66 Upper O'Connell St., Dublin.
Israel.-Commercial Secretary for Canada, 84 Hahashmonaim St., Tel Aviv. Mail: P.O. Box 20140. Territory includes Cyprus.

Italy.-
Rome: Commercial Counsellor, Canadian Embassy, Via G.B. De Rossi 27, Rome. Territory includes Libya and Malta.
Milan: Consul General and Trade Commissioner, Canadian Consulate General, Via Pirelli 19, Milan. Mail: G.P. 3977.

Jamaica.-Commercial Secretary, Office of the High Commissioner for Canada, 32 Duke St. (corner Duke and Barry Sts.), Kingston. Mail: P.O. Box 225. Territory includes Bahamas and British Honduras.

Japan.-Minister (Commercial), Canadian Embassy, 16, Omote-Machi, 3-Chome, Akasaka, Minatoku, Tokyo. Mail: c/o Akasaka Post Office, Tokyo. Territory includes Korea and Okinawa.

Lebanon.-Commercial Counsellor, Canadian Embassy, Alpha Bldg., Rue Clemenceau, Beirut. Mail: Boite Postale 2300. Territory includes Iraq, Jordan, Persian Gulf Area, Saudi Arabia and Syria.
Malaysia.-Canadian Government Trade Commissioner, American International Building, Robinson Road and Telegraph Street, Singapore. Mail: P.O. Box 845.

Mexico.-Commercial Counsellor, Canadian Embassy, Melchor Ocampo 463, 7th Floor, Mexico 5, D.F. Mail: Apartado Postal 5-364.

Netherlands.-Commercial Counsellor, Canadian Embassy, Sophialaan 5-7, The Hague.
New Zealand.-Commercial Counsellor, Office of the High Commissioner for Canada, Government Life Insurance Bldg., Wellington. Mail: P.O. Box 1660. Territory includes Fiji, Western Samoa, Tahiti and Tonga.

Nigeria.-Commercial Secretary, Office of the High Commissioner for Canada, 4th Floor Barclays Bank Bldg., 40 Marina Road, Lagos. Mail: P.O. Box 851. Territory includes Dahomey, Gambia, Niger, Senegal and Sierra Leone.

Norway.-Commercial Secretary, Canadian Embassy, Fridtjof Nansens Plass 5, Oslo 1. Mail: P.O. Box 1379-Vika. Territory includes Iceland.

Pakistan.-Commercial Secretary, Office of the High Commissioner for Canada, Hotel Metropole, Victoria Road, Karachi. Mail: P.O. Box 3703 . Territory includes Afghanistan.

Peru.-Commercial Secretary, Canadian Embassy, Edificio Boza, Carabaya 831, Plaza San Martin, Lima. Mail: Casilla 1212. Territory includes Bolivia.

Philippines.-Consul General and Trade Commissioner, Canadian Consulate General, L \& S Bldg., 3rd Floor, 1414 Dewey Blvd., Manila. Mail: P.O. Box 1825. Territory includes Republic of China (Taiwan).
Portugar--Commercial Counsellor, Canadian Embassy, Rua Marques de Fronteira, No. 8-4 ${ }^{\circ} \mathrm{D}^{\circ}$, Lisbon. Territory includes Angola, Azores, Cape Verde Islands, Madeira and Portuguese Guinea.
South Africa.-
Johannesburg: Canadian Government Trade Commissioner, Mobil House, 17th Floor, Corner Rissik and De Villiers Sts., Johannesburg. Mail: P.O. Box 715.' Territory includes Malagasy, Mauritius, Mozambique and Reunion.
Cape Town: Canadian Government Trade Commissioner, 13th Floor, African Life Centre, St. George's St., Cape Town. Mail: P.O. Box 683. Territory includes St. Helena and South West Africa.
Southern Rhodesia.-Canadian Government Trade Commissioner, 8th Floor, Grindlay's Bank Chambers, Baker Avenue, Salisbury. Mail: P.O. Box 2133.
Spann.-Commercial Counsellor, Canadian Embassy, Edificio España, Avenida de Jose Antonio 88, Madrid. Mail: Apartado 117. Territory includes Balearic Islands, Canary Islands, Gibraltar, Rio Muni and Rio de Oro.
Sweden.-Commercial Counsellor, Canadian Embassy, Strandvagen, 7-C, Stockholm. Mail: P.O. Box 14042. Territory includes Finland.

Switzerland.-Commercial Counsellor, Canadian Embassy, Kirchenfeldstrasse 88, Berne. Territory includes Tunisia.
Trinidad and Tobago.-Commercial Secretary, Office of the High Commissioner for Canada, Colonial Bldg., 72 South Quay, Port-of-Spain. Mail: P.O. Box 125. Territory includes Barbados, Windward and Leeward Islands, British Guiana, French Guiana, Surinam, Guadeloupe and Martinique.
Union of Soviet Socialist Republics.-Commercial Secretary, Canadian Embassy, 23 Starokonyushenny Pereulok, Moscow.
United Arab Repubuc.-Commercial Counsellor, Canadian Embassy, 6 Sharia Rouston Pasha, Garden City, Cairo. Mail: Kasr el Doubara Post Office. Territory includes Aden, Sudan, Ethiopia and Yemen.
United States.-
Washington: Commercial Counsellor, Canadian Embassy, 1746 Massachusetts Ave., N.W., Washington 36, D.C.
New York City: Deputy Counsul General (Commercial), Canadian Consulate General, 680 Fifth Ave., New York City 19. Territory includes Bermuda.
Boston: Consul and Trade Commissioner, Canadian Consulate General, 607 Boylston St., Boston 16.
Chicago: Consul and Trade Commissioner, Canadian Consulate General, 310 South Michigan Ave., Suite 2000, Chicago 4.
Cleveland: Consul and Trade Commissioner, Canadian Consulate, Illuminating Building, 55 Public Square, Cleveland.
Detroit: Consul and Trade Commissioner, Canadian Consulate, 1139 Penobscot Bldg., Detroit 26.

Los Angeles: Consul and Trade Commissioner, Canadian Consulate General, 510 West Sixth St., Los Angeles 14.
New Orleans: Consul and Trade Commissioner, Canadian Consulate General, Suite 1710, 225 Baronne St., New Orleans 12.
Philadelphia: Consul and Trade Commissioner, Canadian Consulate, 3 Penn Center Plaza, Philadelphia 2.
San Francisco: Consul General, Canadian Consulate General, 333 Montgomery St., San Francisco 4. Territory includes Hawaii.
Seattle: Consul General, Canadian Consulate General, The Tower Bldg., Seventh Ave. at Olive Way, Seattle 1. Territory includes Alaska.
Uruguar.-Commercial Division, Canadian Embassy, No. 1409 Avenida Agraciada, Piso $7^{\circ}$, Montevideo. Mail: Casilla Postal 852. Territory includes Falkland Islands.
Venezuela.-Commercial Counsellor, Canadian Embassy, Avenida La Estancia No. 10, Ciudad Comercial Tamanaco, Caracas. Mail: Apartado 11452-Este. Territory includes Netherlands Antilles.

Trade Fairs and Missions Branch.-It is the function of this Branch, through its Trade Fairs Abroad Division and its Trade Missions Division, to organize and co-ordinate the trade fairs and missions programs sponsored by the Department. Liaison within the Department and program development are conducted through advisory committeesone on trade fairs abroad and another on trade missions. Each committee is convened and chaired by the Director of the Branch and includes representatives of all trade promotion Branches of the Department.

The 1964 program of the Trade Fairs Abroad Division included exhibits at 45 trade fairs held in the United States, Britain and six other European countries, Israel and Japan. At most of these exhibitions, selected Canadian companies displayed their products in individual booths within a Canadian exhibit. However, eight of the exhibits were trade information booths manned primarily by departmental personnel. The 20 trade missions organized in 1964 by the Trade Missions Division included ten teams of Canadian business men sent abroad to study special markets in Europe, the United States, the Caribbean, Australasia and Africa and ten groups of business visitors brought to Canada from France, Italy, Uruguay, India, Japan, Britain, Chile, Iran and Venezuela. Both Divisions work in close co-operation with trade associations and other interested organizations outside the Department.

Office of Trade Relations and Trade Policy.-The function of the Office of Trade Relations and Trade Policy is to safeguard and improve terms of access for Canadian exporters in foreign markets. The Office is concerned with the conduct of Canadian trade relations with other countries, including the negotiation and administration of trade agreements and Canadian participation in international trade conferences such as those of the General Agreement on Tariffs and Trade. It endeavours to find practical solutions for tariffs and other difficulties encountered in foreign markets by Canadian exporters and, as a service to exporters, provides expert information, advice and assistance on foreign tariffs, import and exchange controls, documentation requirements and other foreign governmental regulations affecting Canada's trade. The Office also has responsibilities in relation to the export financing facilities available for the development of exports of Canadian capital equipment. Through the Area Divisions-Commonwealth, United States, European, Latin American and Asia and Middle East-the Office is the central point of contact between Canada's trade commissioners abroad and the Department in Ottawa.

Trade Services Branch.-The functions of this Branch relate to transportation problems, export and import controls, trade directories, the administration of the five Regional Offices and the provision of general guidance to firms seeking entry into the export field. These activities are conducted by three Divisions: the Transportation Division is concerned primarily with industrial transportation from the user's point of view, keeping in touch with developments and trends in shipping services and in freight rates; the Trade Controls Division administers the controls established under the Export and Import Permits Act; and the Allied Services Division administers the Department's Regional Offices and compiles the Exporter's Directory, a confidential list of firms engaged in or seriously interested in exporting commodities or services.

Commodity Branches.-The Commodities and Industries Services include three commodity Branches-the Agriculture and Fisheries Branch, the Industrial Materials Branch and the Manufacturing Industries and Engineering Branch. These Branches provide the main link with industry and maintain close contact with the business community to be familiar with the production and supply conditions in Canada. Emphasis is placed in the search for products and services, the sale of which can be promoted abroad.

The Agriculture and Fisheries Branch is organized into four divisions to cover fisheries, grain, livestock, and animal products and plant products. The Industrial Materials Branch is composed of three divisions to handle chemicals, forest products and metals and minerals. The Manufacturing Industries and Engineering Branch is organized into three
divisions responsible for appliances and commercial machinery, engineering and equipment and textiles and consumer goods. These divisions are staffed by Commodity Officers who are specialists in their fields and are available to assist Canadian business men.

Commodity Officers visit manufacturing plants and production facilities, attend and address meetings of business associations and study groups and prepare product reports and market surveys. They constitute the principal channel through which information on Canadian products and services reaches Canadian trade commissioners abroad and the channel through which information on sales opportunities in foreign countries is disseminated to industry in Canada. They continually analyse reports from trade commissioners abroad to determine potential markets for commodities and services of interest to Canadian industry. In co-operation with the Canadian Government Exhibition Commission, they assist in making arrangements for the display of commodities in trade fairs throughout the world to introduce Canadian products into new markets. They organize and accompany departmental trade missions and serve as delegates to international commodity conferences to study world market conditions and to consider corrective adjustments in conjunction with industrial advisers.

Trade Publicity Branch.-The function of the Trade Publicity Branch of the Department is to promote an awareness of, and interest in, Canadian products in foreign markets and to publicize the activities of all Branches, so as to further the Department's objectives both in Canada and abroad. All communications media are employed to these ends, with particular emphasis on the graphic arts. The Branch has three main divisions.

The Editorial and Art Services Division is responsible for the writing, art work, design and production of all advertising and printed matter for the Department. Although its interests range over all aspects of the Department's work, the primary objective is to publicize Canadian products in foreign markets through the production of booklets, catalogues, folders, posters and other material prepared for distribution at trade fairs abroad or at points being visited by Canadian trade missions. Advertising campaigns, using all appropriate media, are prepared to attract attention to Canadian exhibits at trade fairs or to acquaint foreign audiences with the services and assistance available to them from the Trade Commissioner Service at posts abroad. Canada Courier, a publication on Canadian exports and exporters, is distributed to business men abroad at periodic intervals. A second Division produces Foreign Trade, a fortnightly magazine, and Commerce extérieur, a monthly, which are distributed to Canadian subscribers. Each issue contains information on foreign exchange rates, trade and tariff regulations, marketing information and other valuable trade data. Articles by trade commissioners abroad discuss marketing needs and requirements in the areas they serve. The Media Relations Division prepares and distributes press releases, articles, photographs, speeches and background information to newspapers, radio and television stations, magazines and trade publications throughout Canada. It provides publicity material for distribution by trade commissioners abroad and distributes motion picture films and TV film clips to promote interest in Canada as a supplier of a wide range of commodities.

Canadian Government Exhibition Commission.-The Commission organizes, designs, produces and administers all Canadian exhibits at fairs and exhibitions abroad in which the Canadian Government participates and also advises private exhibitors and their agents on the best means of displaying Canadian products at trade fairs. It acts as a central service agency for all government departments and agencies in the preparation of conventional exhibits and displays for showing in Canada and is responsible for international fairs and exhibitions held in Canada that are financed and sponsored by the Government of Canada.

Canadian Government Travel Bureau.-The Canadian Government Travel Bureau is in operation to encourage tourist travel to Canada and to co-ordinate the tourist promotion conducted by the provinces, transportation companies and national, regional
and local tourist associations. The Bureau undertakes extensive tourist advertising campaigns abroad, provides tourist publicity material for foreign newspapers, magazines, radio and television outlets, and annually handles more than $1,000,000$ inquiries from potential visitors to Canada. Tourist offices are operated in New York, Chicago, San Francisco, Minneapolis and Los Angeles in the United States, and in London, England. Also, the Bureau has field representation in Paris, France, and Duesseldorf, Germany.

Export Credits Insurance Corporation.-This Corporation was established under the provisions of the Export Credits Insurance Act, 1944 (RSC 1952, c. 105, as amended) and is administered by a Board of Directors that includes the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance. It operates in two fields-export credits insurance and export financing.

Insurance is available to all persons or corporations carrying on business in Canada to cover export sales made on customary credit terms. It provides protection against risks involved in the export, manufacture, treatment or distribution of goods, or the rendering of engineering, construction, technical or similar services. The main risks covered include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country. The insurance is available under three main classifications-general commodities, capital goods and services. General commodities policies cover a policyholder's export sales to all countries except the United States for a period of one year, and are renewable. Two types are available: the contracts policy, which insures an exporter against loss from the time he books an order until payment is received; or the shipments policy, obtainable at lower rates of premium and covering the exporter from the time of shipment until payment is received. Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit up to a maximum of five years may be necessary. Specific policies are issued for transactions involving capital goods but the general terms and conditions are the same as those applicable to policies for general commodities. Specific policies are also issued to cover engineering, construction, technical or similar service contracts entered into between Canadian firms and persons in foreign countries who have agreed to purchase such services.

The Corporation insures exporters on a co-insurance basis, the exporter retaining a small percentage of the risk involved, and the same principle operates in the distribution of recoveries obtained after the payment of a claim. The Corporation, when authorized by the Governor in Council, may enter into certain contracts of insurance, which, although they would impose upon the Corporation a liability for a term or in an amount in excess of that normally undertaken, would, in the opinion of the Minister of Trade and Commerce, be considered in the national interest. The Corporation also administers direct financing facilities available under the Act in cases where export sales involving capital goods are of such a nature as to warrant credit terms in excess of five years. The Corporation, when authorized by the Governor in Council, buys the promissory notes or other negotiable instruments of the foreign purchaser.

## Section 2.-The Development of Tariffs

Limitations of space in the Year Book have made it necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships in force at present and to summarize as much as possible historical data and details of preceding tariffs.

## Subsection 1.-The Canadian Tariff Structure*

The Canadian Tariff consists, in the main, of three sets of tariff rates-British Preferential, Most-Favoured-Nation, and General.

British Preferential Tariff rates are, with some exceptions, the lowest rates. They are applied to imported commodities from British countries, with the exception of Hong Kong, when conveyed without trans-shipment from a port of any British country enjoying the benefits of the British Preferential Tariff into a port of Canada. Some Commonwealth countries have trade agreements with Canada which provide for rates of duty, on certain specified goods, lower than the British Preferential rates.

Most-Favoured-Nation rates are usually higher than the British Preferential rates and lower than the General Tariff rates. They are applied to commodities imported from countries with which Canada has trade agreements. These rates would apply to British countries when they are lower than the British Preferential Tariff rates. The most important trade agreement concerning the effective rates applied to goods imported from countries entitled to Most-Favoured-Nation rates is the General Agreement on Tariffs and Trade (GATT).

General Tariff rates are applied to goods imported from the few countries with which Canada has not made trade agreements.

There are numerous goods which are duty free under the British Preferential Tariff, or under both the British Preferential and Most-Favoured-Nation Tariffs, or under all Tariffs.

Valuation.-In general, the Customs Act, as amended effective Sept. 6, 1958, provides that the value for duty of imported goods shall be the fair market value of like goods as established in the home market of the exporter at the time when and place from which the goods are shipped directly to Canada when sold " $(a)$ to purchasers located at that place with whom the vendor deals at arm's length and who are at the same or substantially the same trade level as the importer, and (b) in the same or substantially the same quantities for home consumption in the ordinary course of trade under competitive conditions". In cases where like goods are not sold for home consumption but similar goods are sold, the value for duty shall be the cost of production of the goods imported plus an amount for gross profit equal in percentage to that earned on the sale of similar goods in the country of export. The value for duty ordinarily may not be less than the amount for which the goods were sold to the purchaser in Canada, exclusive of all charges thereon after their shipment from the country of export. Internal taxes in the country of export (when not incurred on exported goods), the cost of shipping goods to Canada and similar charges do not normally form part of the value for duty. There are, of course, further provisions for determining value for duty under the Act.

Dumping.-Sect. 6 of the Customs Tariff provides that when the actual selling price of goods being imported is less than the fair market value and the goods are of a class or kind made or produced in Canada, a special or dumping duty shall be collected. This duty is to be equal to the difference between the actual selling price and the fair market value of the goods, except that it may not be more than 50 p.c. ad valorem. These provisions are designed to offset the advantage foreign exporters may achieve by exporting to Canada at less than the going prices.

[^279]Drawback.-There are provisions in the Customs and Excise Tax Acts for the repayment of a portion of the duty, sales and/or excise taxes paid on imported goods used in the manufacture of products later exported. The purpose of these drawbacks (as these repayments are called) is to assist Canadian manufacturers to compete in foreign markets with foreign producers of similar goods. A second class of drawback, known as "home consumption" drawbacks, is provided for under the Customs Tariff Act and applies to imported materials and/or parts used in the production of specified goods to be consumed in Canada.

The Tariff Board.-The organization and functions of the Tariff Board are described at p .113 of this volume.

## Subsection 2.-Tariff and Trade Arrangements with Other Countries as at Dec. 31, 1963

Canada's tariff arrangements with other countries fall into three main categories: trade agreements with a number of Commonwealth countries; the General Agreement on Tariffs and Trade (GATT); and other agreements and arrangements.

Canada accords preferential tariff treatment to all members of the Commonwealth and dependent territories with the exception of Hong Kong. In addition, preferences are extended to the Republics of Ireland and South Africa. The preferential arrangements with Britain, Australia, New Zealand, the West Indies and the Republics of Ireland and South Africa are governed by bilateral trade agreements. A number of Commonwealth countries-India, Pakistan, Ghana, Nigeria, Tanganyika, Uganda and Kenya-do not accord preferential tariff treatment to Canadian goods. Canada's arrangements and agreements with Commonwealth countries have been modified on a number of occasions by the negotiations which Commonwealth countries have had with their non-Commonwealth trading partners in GATT.

Canada signed the Protocol of Provisional Application of the General Agreement on Tariffs and Trade on Oct. 30, 1947, and brought the General Agreement into force on Jan. 1, 1948. The Agreement provides for scheduled tariff concessions and the exchange of most-favoured-nation treatment among the contracting parties, and lays down rules and regulations to govern the conduct of international trade. On Dec. 31, 1963, there were 60 full members of GATT. The names of these, and the dates of their accession, are given in the list on pp. 941-947. In addition, Switzerland, Tunisia, Argentina, Yugoslavia and the United Arab Republic have acceded provisionally. The GATT is applied on a de facto basis to a number of newly independent states (Algeria, Burundi, Congo (Leopoldville), Mali, Rwanda and Togo) pending final decisions as to their future commercial policy. Two other countries, Cambodia and Poland, while not members, participate in the work of the GATT. Five rounds of major multilateral tariff negotiations have been held under the GATT-at Geneva in 1947, Annecy in 1949, Torquay in 1950-51 and again at Geneva in 1956 and 1960.

Canada already had most-favoured-nation trade agreements with most contracting parties prior to the effective date of the General Agreement. These arrangements continue in force in conjunction with the GATT. As an exception, however, the Canada-United States Trade Agreement was suspended for as long as both parties should continue to be contracting parties to the GATT. Trade relations between Canada and many other countries are governed by trade agreements of various kinds, by exchange of most-favourednation treatment under Orders in Council, by continuation to newly independent states of the same treatment originally negotiated with the mother country and by even less formal arrangements.

# Tariff and Trade Arrangements with Commonwealth Countries as at Dec. 31, 1963 

| Country | Agreement | Principal Terms |
| :---: | :---: | :---: |
| Auttralia...................... | Trade Agreement signed Feb. 12, 1960; in force June 30, 1960. <br> GATT effective Jan. 1, 1948. | Agreement includes schedules of tariff rates and exchange of British preferential rates on items not scheduled. May be terminated on six months notice. |
| Britain........................ | Trade Agreement signed Feb. 23, 1937, effective Sept. 1, 1937; modified by exchanges of letters Nov. 16, 1938 and Oct. 20, 1947. <br> GATT effective Jan. 1, 1948. | Various concessions are granted by each country including exchange of preferential tariff rates. The Agreement (as modified) includes provisions relating to the Colonies, Dependencies and Trusteeships. |
| Britibe Cartbbean, Bahamas, Barbados, Bermuda, British Gulana, British Honduras, the Leeward Islands, and the Windward Iblands. | Canada-British West Indies Trade Agreement signed July 6, 1925, in force Apr. 30, 1927; Canadian notice of termination of Nov. 23, 1938, was replaced by notice of Dec. 27, 1939, which continued the Agreement. <br> Barbados, Bermuda, British Guiana, British Honduras and the Leeward and the Windward Islands participate in GATT. | The parties exchange specified tariff preferences. Agreement may be terminated on six months notice. |
| Ceylon.. | Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective July 29, 1948. | Canada and Ceylon exchange preferential tariff treatment. |
| Cyprus........................ | Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Aug. 16, 1960. | Canada exchanges preferential treatment with Cyprus. |
| Ghana......................... | Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Oct. 18, 1957. | Canada accords Ghana the British preferential rates, except on cocoa beans. Exchange of most-favoured-nation treatment. |

| Togo.......................... | Franco-Canadian Trade Agreement of 1933 applied to Togo. <br> Togo maintains a de facto application of the GATT. | Since the creation of Togo as an independent state in 1960, Canada has continued to grant most-favoured-nation rates. |
| Tunisla........................ | Franco-Canadian Trade Agreement of 1933 applied to Tunisia. <br> Tunisia has acceded to GATT provisionally. | Since the creation of Tunisia as an independent state in 1956, Canada has continued to grant most-favoured-nation rates. |
| Turkey....................... | Exchange of notes signed Mar. 1, 1948; in effect Mar. 15, 1948. <br> GATT effective Oct. 17, 1951. | Exchange of most-favoured-nation treatment. May be terminated on three months notice. |
| Union of Soviet Socialibt Republics. | Trade Agreement signed Feb. 29, 1956, renewed for another three years Apr. 18, 1960 and again for the same period on Sept. 16, 1963 by a protocol which provisionally entered into force on the same date (the extension to be valid from Apr. 18, 1963). | Exchange of most-favoured-nation treatment and undertaking by U.S.S.R. to purchase a minimum of $6,375,000$ long tons of wheat and flour during the threeyear period of validity of the extended agreement. |
| United Arab Republic (Egypt). | Exchange of notes Nov. 26 and Dec. 3, 1952; in force Dec. 3, 1952. <br> The United Arsb Republic has acceded provisionally to the GATT. | Exchange of most-favoured-nation rates. May be terminated on six months notice. |
| United States................ | Trade Agreement signed Nov. 17, 1938; suspended as long as both countries continue to be contracting parties to GATT. <br> GATT effective Jan. 1, 1948. | Most-favoured-nation treatment exchanged. |
| Upper Volita (Voltaic Republic). | Franco-Canadian Trade Agreement of 1933 applies to Upper Volta. GATT effective Aug. 5, 1960. | Exchange of most-favoured-nation treatment. |
| Ubdgday...................... | Trade Agreement signed Aug. 12, 1936; in force May 15, 1940. Additional protocol signed Oct. 19, 1953. <br> GATT effective Dec. 16, 1953. | Exchange of most-favoured-nation treatment. |
| Venezuzla..................... | Modus vivendi signed and brought into force Oct. 11, 1950. | Exchange of most-favoured-nation treatment. Made for one year subject to annual renewal. |
| Vibt Nam...................... | Franco-Canadian Trade Agreement of 1933 applied to Viet Nam. | Since the creation of Viet Nam as an independent state in 1955, Canada has continued to accord most-favoured-nation rates. |
| Ytgoblavia..................... | Trade Agreements Act of June 11, 1928, accepted Article 30 of Britain-Serb-Croat-Slovene Treaty of Commerce and Navigation of May 12, 1927; in force Aug. 9, 1928. <br> Yugoslavia has acceded to GATT proviBionally. | Exchange of most-favoured-nation treatment. May be terminated on one years notice. |

## PART IV.--TRAVEL BETWEEN GANADA AND OTHER COUNTRIES*

The Canadian border is crossed and recrossed each year by tens of millions of travellers. Much of this travel has little international financial significance but is testimony both of the important social and cultural relationships existing between Canada and the United States and of political geography. A part of it, however, contributes to a large and growing international travel industry which is of considerable significance to the balance of payments of Canada. For a long period, the travel industry was an important net earner of foreign exchange for Canada but from 1951 to 1962 Canadian travellers abroad spent more than foreign visitors to Canada. In 1963, however, travel earned a surplus for Canada; the shift of $\$ 67,000,000$ to a surplus, from a deficit in 1962, represented about one fifth of the net improvement in Canada's current account balance in the period.

During 1963, visits to and from Canada numbered more than 61,500,000. Canadians returning from trips to the United States rose by $1,445,200$ or about 5 p.c. and the number of United States residents entering Canada increased by 208,400 or around 0.7 p.c. Canadians returning direct from overseas countries numbered 282,057 , an increase of 28,657 , and there were 76,370 non-immigrant arrivals from overseas countries during the last nine months of 1963.

Estimated expenditures involved in travel between Canada and other countries reached a new high of $\$ 1,194,000,000$ in 1963, between 9 and 10 p.c. above the 1962 figure. Estimated receipts from non-resident travel in Canada came to $\$ 609,000,000$, an advance of between 8 and 9 p.c. over the previous year, but Canadian residents travelling to other countries spent an estimated $\$ 585,000,000$, some $\$ 20,000,000$ less than in 1962 . The net effect of these over-all receipts and expenditures was a $\$ 24,000,000$ balance of payments surplus on travel account with all countries in 1963 compared with a deficit of $\$ 43,000,000$ in 1962. This credit balance was the first surplus balance since 1950. Between 1951 and 1962, Canada had experienced deficits on travel account with all countries ranging from $\$ 6,000,000$ in 1951 to $\$ 207,000,000$ in 1959 and 1960 . The 1963 surplus was composed of a $\$ 161,000,000$ credit balance on travel account with the United States and a deficit in the overseas travel account amounting to $\$ 137,000,000$.

Travel Between Canada and the United States.-During 1963, some 31,864,800 residents of the United States entered Canada, 208,400 more than in the previous year. These travellers spent an estimated $\$ 549,000,000$ in Canada, a gain about 7 p.c. over the corresponding 1962 figure. Between 67 and 68 p.c. of the United States residents entering Canada came for short-term visits but the expenditure of this group, which on the average is normally low, represented only about 11 p.c. of the total expenditures. On the other hand, United States residents remaining in Canada for one or more nights constituted only between 32 and 33 p.c. of the total visits but accounted for 89 p.c. of the receipts. Nearly 79 p.c. of all United States residents who entered Canada in 1963 travelled by automobile and these travellers accounted for about 66 p.c. of the total receipts.

Canadians returning from border crossings to the United States in 1963 numbered $29,389,800$, an increase of $1,445,200$ over the 1962 volume. Canadian travel expenditures in the United States, however, dropped between 7 and 8 p.c. to $\$ 388,000,000$ in 1963. The devaluation of the Canadian dollar in May 1962 and the reduction in the value of merchandise exempt from customs duty from $\$ 100$ to $\$ 25$ every four months, effective in June 1962, were still major contributors to this decline. Of the Canadian travellers to the United States in 1963, about 83 p.c. were classified as short-term, and these accounted for only 14 p.c. of the total payments. Those who remained one or more nights in that country represented about 17 p.c. of the volume but their expenditures made up nearly 86 p.c. of the

[^280]payments. Between 78 and 79 p.c. of the Canadians visiting the United States travelled by automobile and accounted for nearly 51 p.c. of the total expenditures. The balance of payments surplus on travel account with the United States was $\$ 161,000,000$ in 1963, compared with the 1962 surplus of $\$ 93,000,000$.

## 1.-Number and Expenditure of United States Travellers in Canada and Canadian Travellers in the United States, 1954-63

| Year | U.S. Travellers in Canada | U.S. Expenditure in Canada | Canadians Travelling in U.S. | Canadian Expenditure in U.S. | Excess of U.S. Travellers in Canada | Balance of Payments with the U.S. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | \$'000 | No. | 8 '000 | No. | \$'000 |
| 1954. | 26,412,600 | 283,000 | 23,343,400 | 320,000 | +3,069,200 | - 37,000 |
| 1955. | 28, 283,400 | 303,000 | 24,753,800 | 363,000 | $+3,529,600$ | - 60,000 |
| 1956 | 27,666,500 | 309,000 | 27,076,700 | 391,000 | + 589,800 | - 82,000 |
| 1957. | 28,619,400 | 325,000 | 27,209,400 | 403,000 | $+1,410,000$ | - 78,000 |
| 1958. | 28,530,700 | 309,000 | 27,421,700 | 413,000 | +1,109,000 | -104,000 |
| 1959. | 29,880,800 | 351,000 | 27,989,900 | 448,000 | +1,890,900 | - 97,000 |
| 1960. | 29,654,600 | 375,000 | 29,045, 800 | 462,000 ${ }^{1}$ | + 605,800 | - 87,000 |
| 1961. | 30,474, 200 | 435,000 | 29,288,500 | 459,000 ${ }^{1}$ | +1,185,700 | - 24,000 |
| 1963. | 31,656,400 | 512,000 | 27,944,600 | 419,000 ${ }^{1}$ | $+3,711,800$ | + 93,000 |
| 1963. | 31, 864,800 | 549,000 | 29,389,800 | 388,000 ${ }^{1}$ | $+2,475,000$ | +161,000 |

${ }^{1}$ Includes Hawaii.
Many factors influence the flow of American visitors to Canada, including ease of border crossings, location of highly populated areas near the International Boundary, currency exchange rate between the two countries, prevailing economic conditions, and construction of new roads and bridges. During 1963, the year following the opening of the new bridge spanning the St. Mary's River at Sault Ste. Marie, the number of non-resident automobiles entering Canada at Sault Ste. Marie was 216,962 , compared with 72,473 in 1962. Similarly, re-entries of Canadian automobiles at the same point numbered 123,325 compared with 42,537 in the previous year.

Travel Between Canada and Overseas Countries.-Detailed information on the volume of non-immigrant visitors from overseas countries is not available for the period 1960 to March 1963 because of changes in administrative procedures. However, during the last nine months of 1963 some 76,370 non-immigrants entered Canada direct from overseas countries. Estimated expenditures in Canada by this group amounted to $\$ 60,000,000$ for the year 1963, compared with an expenditure of $\$ 50,000,000$ by such travellers in 1962 , a gain of 20 p.c.

Canadians returning direct from visits to overseas countries in 1963 numbered 282,057, an increase of 28,657 over 1962 and the payments by this group totalled $\$ 160,800,000$, an advance of nearly 4 p.c. over the previous year. The number returning from overseas trips via the United States was estimated at 60,000 , slightly more than in 1962 and their expenditures overseas were estimated at $\$ 36,600,000$ compared with $\$ 31,600,000$ in the previous year. Thus, total payments by Canadians in overseas countries in 1963 exceeded total receipts from overseas visitors to Canada, resulting in a debit balance of payments on travel account with overseas countries of $\$ 137,000,000$; the 1962 deficit was $\$ 136,000,000$.

The interpretation of the symbols used in the tables throughout the Year Book will be found on $p$. viii of this volume.

Combined statistics of public finance for all governments in Canada-federal, provincial and municipal-are presented in Section 1 of this Chapter and Section 2 covers the incidence of taxation at the three levels. More detailed information for each level of government is given in Sections 3, 5 and 6. Section 4 gives information on the rapidly growing list of joint federal-provincial programs and on the extent of federal financial participation in such programs.

## Section 1.-Combined Statistics of Public Finance for All Governments

Combined Revenue and Expenditure.-Tables 1 and 2 give details of the federal, provincial and municipal net combined revenue by source and net combined current and capital expenditure by function, respectively, for 1960 and 1961. This net basis has been prepared by deducting from revenue, and from the appropriate expenditure, certain specified amounts such as grants-in-aid and shared-cost contributions from other governments, institutional revenue, and interest, premium, discount and exchange revenue. Amounts provided for debt retirement are excluded to avoid duplication since all expenditure resulting from capital borrowings is included.

Inter-government transfers such as subsidy payments by the Federal Government to the provincial governments are unconditional grants and therefore cannot be offset against any specific expenditure. These are set out separately in Tables 1 and 2 in order

[^281]to prevent duplication and to provide additive totals. Because of the differing accounting practices of governments and variations in fiscal year-ends, discrepancies appear between the amounts recorded as inter-government transfers in the two tables.

## 1.-Combined Revenue of All Governments, 1960 and 1961

Nors.-Figures are for fiscal years ended nearest Dec. 31.

## Section 2.-Taxation in Canada*

Canada is a federal state with a central government and ten provincial governments. In 1867 the principal colonies of the British Crown in North America joined together to form the nucleus of a new nation and the British North America Act of that year became its written constitution. This statute created a central government with certain powers while continuing the existence of political subdivisions called provinces with powers of their own.

Under the British North America Act the Parliament of Canada has the right to raise "money by any mode or system of taxation" while the provincial legislatures are restricted to "direct taxation within the province in order to the raising of a revenue for provincial purposes". Thus the provinces have a right to share only in the field of direct taxation while the Federal Government is not restricted in any way in matters of taxation. The British North America Act also empowered the provincial legislatures to make laws regarding "municipal institutions in the province". This means that the municipalities derive their incorporation with its associated powers, fiscal and otherwise, from the provincial government concerned. Thus, from a practical standpoint, municipalities are also limited to direct taxation.

A direct tax is generally recognized as one "which is demanded from the very person who it is intended or desired should pay it". In essence, this conception has limited the provincial governments to the imposition of income tax, retail sales tax, succession duties and an assortment of other direct levies. In turn, municipalities, acting under the guidance of provincial legislation, tax real estate, water consumption and places of business. The Federal Government levies direct taxes on income, on gifts and on the estates of deceased persons, and indirect taxes such as excise taxes, excise and customs duties, and a sales tax.

The increasing use by both the federal and the provincial governments of their rights in the field of direct taxation in the 1930's resulted in uneconomic duplication and some severe tax levies. Starting in 1941, a series of tax agreements were concluded between the federal and the provincial governments to promote the orderly imposition of direct taxes. The duration of each agreement was normally five years. Under these agreements, the participating provinces undertook, in return for compensation, not to use or permit their municipalities to use certain of the direct taxes. Under the present arrangements, the federal income tax otherwise payable in all provinces and the estate tax otherwise payable in the non-participating provinces are abated by a fixed percentage to make room for provincial levies.

The current agreement became operative on Apr. 1, 1962 and will run until Mar. 31, 1967. Basically it entails a partial federal withdrawal from the field of direct taxation and the re-entry of all provinces into the vacated area. The federal personal income tax otherwise payable on income earned in a province and on income received by a resident of a province is reduced by the following percentages: 16 p.c. in 1962; 17 p.c. in 1963; 18 p.c. in 1964; 21 p.c. in 1965; $\dagger$ and 24 p.c. in 1966. $\dagger$ In 1965 and 1966, the federal tax abatements for income earned in Quebec or received by a resident of Quebec will be 24 p.c. and 27 p.c., respectively. The additional relief of three percentage points in the case of Quebec is to allow that province to collect revenue to pay monthly allowances for students between the ages of 16 and 18. Similar allowances in the other provinces will be paid directly by the Federal Government. The special federal income tax abatements for Quebec in 1965 and 1966 have not yet been authorized by legislation. Also, the Federal Government reduces its rate of corporation income tax on taxable income of corporations earned in the provinces. The reduction is 9 p.c. of taxable income earned in any province except Quebec and 10 p.c. in Quebec; the additional 1 p.c. reduction in Quebec is to compensate for the additional tax levied by the province on corporation income to provide grants to universities. These

[^284]provincial grants replace federal grants which in other provinces are paid to the universities by the Federal Government through the Canadian Universities Foundation. Finally, the Federal Government abates the federal estate tax otherwise payable by 75 p.c. in respect of property situated in a province which levies its own death tax. Only Ontario, Quebec and British Columbia at present levy death taxes in the form of succession duties.*

These reductions in federal income tax and estate tax under the terms of the 1962-67 fiscal arrangements do not apply to the Yukon Territory or the Northwest Territories or to income earned outside Canada. The Yukon and Northwest Territories do not impose income taxes or death taxes.

The provincial tax rates are not restricted to the extent of the federal withdrawal. The constitutional position of the provinces permits them unlimited use of direct taxes for the raising of revenue for provincial purposes. However, in all but four provinces (Ontario, Quebec, Manitoba and Saskatchewan) the provincial rates of income tax coincide with the amount of the federal abatement.

As part of the 1962-67 fiscal arrangements, the Federal Government has entered into tax collection agreements under which it collects the provincial personal income taxes for all provinces except Quebec and the provincial corporation income taxes for all provinces except Ontario and Quebec.

## Subsection 1.-Federal Taxes

## Individual Income Tax

Every individual who is resident in Canada at any time during a year is liable for the payment of income tax for that year. Every non-resident individual who is employed or carries on business in Canada during a year is required to pay tax on the part of his income earned in Canada. Canadian taxation practice is based to a large extent on the British experience. This is reflected particularly in the fact that taxation is on the basis of residence rather than citizenship, and in tax freedom for capital gains. The term "residence" is difficult to define simply but, generally speaking, it is taken to be the place where a person resides or where he maintains a dwelling ready at all times for his use. There are also extensions of the meaning of Canadian resident to include a person who has sojourned in Canada for an aggregate period of 183 days in a taxation year, or a person who was during the year a member of the Armed Forces of Canada, or an ambassador, a high commissioner, or an officer or servant of Canada or of any one of its provinces, or the spouse or dependent child of any such person.

The Canadian tax law uses the concepts "income" and "taxable income". The income of a resident of Canada for a taxation year comprises his revenues from all sources inside or outside Canada and includes income for the year from all businesses, property, offices and employments. It does not include capital gains unless they arise out of the conduct of a business or as a result of an adventure in the nature of trade.

In computing his income for a taxation year, an individual must include all dividends, fees, annuities, pension benefits, allowances, interest, alimony, maintenance payments and other miscellaneous sources of income. On the other hand, war service disability pensions paid by Canada or an ally of Her Majesty at the time of the war service, unemployment insurance benefits, compensation in respect of an injury or death paid under a Workmen's Compensation Act of a province and family allowances do not have to be included in the computation of income.

In computing his income, an individual who is carrying on business may deduct business expenses including depreciation (called capital cost allowances), interest on borrowed money, reserves for doubtful debts, contributions to pension plans or deferred profit-sharing

[^285]plans for his employees, bad debts, and expenses incurred for scientific research. In general, no deductions are allowed in computing income from salary and wages, although there are exceptions such as travelling expenses of employees who have to travel as they perform their work, union dues, alimony payments and contributions to registered pension plans. Individuals may deduct, within limits, amounts set aside to provide a future income under registered retirement savings plans. Students attending universities, colleges, high schools, public schools or certain other certified educational institutions in Canada may deduct their tuition fees if they exceed $\$ 25$ per annum. Students in full-time attendance at universities outside Canada may deduct their tuition fees.

Having computed his income, the individual then calculates his taxable income by deducting certain exemptions and deductions. These exemptions and deductions are as follows: for single status, an exemption of $\$ 1,000$; for married status, an exemption of $\$ 2,000$; for dependent children eligible to receive family allowance,* $\$ 300$ per child; for other dependants (as defined in the law), $\$ 550$ per dependant; where the taxpayer is over 65 years of age, an additional $\$ 500$; where the taxpayer is blind or confined for the whole of the taxation year to a bed or a wheelchair, an additional $\$ 500$; charitable donations, up to 10 p.c. of income; and medical expenses, in excess of 3 p.c. of income. In lieu of claiming deductions for charitable donations, medical expenses and membership dues in trade unions or professional societies, an individual may claim a standard deduction of $\$ 100$.

As already stated, an individual who is resident in Canada for the whole year is taxed on his income from both inside and outside Canada. An individual who is not resident in Canada at any time during the year but who carries on business in Canada or who earns salary or wages in Canada is taxed only on the income earned in Canada. In computing taxable income earned in Canada, such a non-resident individual is allowed to deduct that part of the exemptions and deductions that may reasonably be attributed to the income earned in Canada. (A non-resident who derives investment income from Canada is taxed in a different way described on p.961.) An individual who ceases to be a resident of Canada during the year or who becomes a resident during the year so that he is resident for only part of the year will be subject to income tax in Canada on only that part of his income for the year received while he is resident in Canada. In these circumstances, the deductions from income permitted for determining taxable income will be the amount that may reasonably be considered as applicable to the period during which he is resident in Canada.

A progressive schedule of rates is applied to taxable income, beginning at 11 p.c. on the first $\$ 1,000$ of taxable income and increasing to 80 p.c. on taxable income in excess of $\$ 400,000$. In addition, an old age security tax is levied on taxable income at the rate of 4 p.c. with a maximum of $\$ 120$ reached at the level of $\$ 3,000$.

In calculating the amount of his income tax, an individual is allowed tax credits under three main headings. (1) Dividend Tax Credit-to partially eliminate the double taxation of corporate profits and to encourage participation in the ownership of Canadian companies, Canadian resident individuals are allowed to deduct from their tax an amount equal to 20 p.c. of the net dividends they receive from Canadian taxable companies. (2) Foreign Tax Credit-foreign taxes paid on income from foreign sources may be credited against Canadian income tax but the credit may not exceed the proportion of Canadian tax relative to such income. (3) Abatement under Federal-Provincial Arrangements-in 1964 the federal personal income tax otherwise payable on income of a resident of a province and on income earned in a province is reduced by 18 p.c.; this abatement will increase to 21 p.c. in 1965 and 24 p.c. in $1966 . \dagger$

To a very large extent, individual income tax is payable as the income is earned. Taxpayers in receipt of salary or wages have tax deducted from their pay by their employer

[^286]and in this way pay nearly 100 p.c. of their tax liability during the calendar year. The balance of the tax, if any, is payable at the time of filing the tax return before Apr. 30 in the following year. Persons with more than 25 p.c. of their income from sources other than salary or wages must pay tax by quarterly instalments throughout the year and returns must be filed before Apr. 30 in the following calendar year.

The following statement shows what taxpayers pay at various levels of income. In calculating these taxes it has been assumed that all taxpayers take the standard deduction of $\$ 100$ and no allowance has been made for the 20-p.c. dividend tax credit.

|  | 100,000 | 49,815 | 120 |

The income taxes shown above are abated by 18 p.c. in all provinces. Where the provincial tax is the same as the federal abatement (i.e., in all provinces except Quebec, Manitoba and Saskatchewan) the taxes shown are the combined federal and provincial taxes. In Quebec the provincial tax approximates the federal abatement; in Manitoba and Saskatchewan the provincial tax exceeds the abatement by 6 p.c.

The income from a new manufacturing for processing business established in certain designated areas of slower growth by an individual or corporation during the period commencing on Dec. 5, 1963 and terminating on Mar. 31, 1967 is eligible for a three-year exemption from income tax.

## Corporation Income Tax

The Income Tax Act levies a tax upon the income from everywhere in the world of corporations resident in Canada and upon the income attributable to operations in Canada of non-resident corporations carrying on business in Canada. In computing their income, corporations may deduct operating expenses including municipal real estate taxes, reserves for doubtful debts, bad debts, and interest on borrowed money. They may not deduct provincial income taxes other than provincial taxes on income derived from mining operations. (For this purpose "income from mining operations" is specially defined.)

Regulations covering capital cost allowances (depreciation) permit taxpayers to deduct over a period of years the actual cost of all depreciable property. The yearly deductions of capital cost allowances are computed on the diminishing balance principle. (Taxpayers engaged in farming and fishing may choose between this and the straight-line method.)

Published regulations establish a number of classes of property and maximum rates. There is provision for recapture of any amount allowed in excess of the ultimate net capital cost of any asset.

Accelerated depreciation is available to taxpayers in certain circumstances and for a limited period of time. Straight-line depreciation at a rate not exceeding 50 p.c. is granted in respect of new machinery and equipment that would otherwise fall in Class 8 of the Income Tax Regulations acquired in the 24 -month period commencing on June 14, 1963, for use in manufacturing or processing businesses by individuals resident in Canada or by companies resident in Canada that have a degree of Canadian ownership. A company that has a degree of Canadian ownership is one which throughout the 60-day period immediately preceding the year in question complies with the following conditions: (1) it was resident in Canada; (2) for taxation years commencing after Dec. 31, 1964, not less than 25 p.c. of its directors were residents of Canada; and (3) either (a) not less than 25 p.c. of its shares having full voting rights and shares representing not less than 25 p.c. of its equity share capital were owned by individuals resident in Canada or corporations controlled in Canada, or (b) a class or classes of its shares having full voting rights were listed on a Canadian stock exchange and no one non-resident person and no one corporation that did not comply with (a) above owned more than 75 p.c. of the shares having full voting rights, and equity shares of the corporation representing not less than 50 p.c. of the paid-up capital of the corporation were listed on a Canadian stock exchange and no one non-resident person or no one corporation that did not comply with (a) above owned equity shares representing more than 75 p.c. of its equity share capital. For manufacturing or processing businesses in designated areas of slower growth there is no requirement that they have a degree of Canadian ownership to qualify for this 50 -p.c. straight-line depreciation. Moreover, the period during which their expenditures on eligible assets qualify for accelerated write-off extends from Dec. 5, 1963 to Mar. 31, 1967. Depreciation at the accelerated rate of 20 p.c. on a straightline basis is also available in respect of new buildings acquired in designated areas of slower growth in the period commencing on Dec. 5, 1963 and ending on Mar. 31, 1967.

Expenditures on scientific research by corporations qualify for special tax treatment. Generally speaking, all expenditures on scientific research related to the business of the taxpayer may be written off for tax purposes in the year when incurred. In addition, corporations are permitted to deduct, in computing income for tax purposes, 150 p.c. of their increased expenditures on scientific research in Canada.

Taxpayers operating mines, oil wells and gas wells are allowed a depletion allowance, usually computed as a percentage of profits derived from mineral, oil or gas production, which continues as long as the mine or well is in operation. This allowance is in addition to capital cost allowances on buildings, machinery and similar depreciable assets used by the taxpayer. Taxpayers operating timber limits receive an annual allowance sometimes called a depletion allowance. This is a rateable proportion of the amount invested in the limit and is based on the amount of timber cut in the year. When the amount invested in the limit has been recovered, no further allowance is given.

In computing taxable income, corporations may deduct dividends received from other Canadian taxpaying corporations and also from foreign corporations in which the Canadian corporation has at least 25 p.c. stock ownership. Business losses may be carried back one year or forward five years and deducted in computing taxable income. Corporations may also deduct donations to charitable organizations up to a maximum of 10 p.c. of their income.

The general rates of tax on corporate taxable income are 18 p.c. on the first $\$ 35,000$ of taxable income plus 47 p.c. on taxable income in excess of $\$ 35,000$. Corporations deriving more than one half of their gross revenue from the sale of electric energy, gas or steam pay tax on their taxable income from such sources at the rate of 18 p.c. on the first $\$ 35,000$ of taxable income plus 45 p.c. on taxable income in excess of $\$ 35,000$. Corporations that qualify as investment companies pay a tax of 18 p.c. on their taxable income. In addition
to these rates, all corporations pay an old age security tax of 3 p.c. of taxable income, bringing their rates up to 21 p.c. and 50 p.c. ( 21 p.c. and 48 p.c. for the public utility companies and 21 p.c. for investment companies).

In calculating the amount of their income tax, corporations are allowed tax credits under three headings. (1) Foreign Tax Credit-foreign taxes paid on income from foreign sources may be credited against Canadian income tax but the credit may not exceed the proportion of Canadian tax relative to such income. (2) Abatement under Federal-Provincial Fiscal Arrangements-corporations may deduct from their federal tax otherwise payable a tax abatement equal to a fixed percentage of their taxable income attributable to operations in a Canadian province. This abatement is to make room for the provincial income tax levied by each Canadian province. The amount of the abatement is 9 p.c. of taxable income attributable to operations in any province except Quebec and 10 p.c. of taxable income attributable to operations in Quebec. (3) Provincial Logging Tax-corporations may deduct from their federal tax otherwise payable an amount equal to two thirds of a provincial tax on income from logging operations not exceeding two thirds of 10 p.c. of the corporation's income from logging operations in the province. (At present only Ontario, Quebec and British Columbia impose logging taxes-see p. 967.)

New manufacturing and processing businesses established in certain designated areas of slower growth during the period commencing Dec. 5, 1963 and terminating Mar. 31, 1967 are eligible for a three-year exemption from income tax.

Corporations are required to pay their tax (combined income and old age security tax) in monthly instalments but the period during which they pay tax for a taxation year does not coincide with that taxation year. Until 1963, corporations started to pay tax for a taxation year in the seventh month of that year. In each of the last six months of their taxation year and in the following three, they paid one twelfth of their estimated tax for the year and in each of the following two months they paid one third of the estimated balance. In the sixth month following the end of their taxation year, the final return had to be filed and the remainder of the tax paid for the year. In 1963, a new set of rules was introduced for the payment of corporation income tax, which will become fully operative in early 1966. These rules require that corporations begin to pay their tax for a taxation year in the fifth month of that year. In each of the last eight months of their taxation year and in the following two, they pay one twelfth of their estimated tax for the year and in each of the following two months, they pay one half of the estimated balance. In the sixth month following the end of their taxation year, the final return must be filed.

## Taxation of Non-residents

A non-resident is liable for payment of income tax if he was employed or was carrying on business in Canada during a taxation year. The expression "carrying on business in Canada" includes (1) maintaining a permanent establishment in Canada, (2) processing goods even partially in Canada, and (3) entering into contracts in Canada. The taxable income of a non-resident individual thus derived is taxed under the same schedule of rates as Canadian resident individuals, and non-resident corporations deriving income from carrying on business in Canada are taxed on their taxable income attributable to operations in Canada at the same rates as Canadian resident corporations. (Tax treaties with some countries provide certain exemptions from tax for remuneration for services performed in Canada by residents or employees of these countries.)

Furthermore, a tax of 15 p.c. is applied on certain forms of income going from Canada to non-resident individuals or corporations, such as interest, dividends, rentals, royalties, income from a trust or estate and alimony. The standard rate of 15 p.c. is reduced to 10 p.c. in the case of dividends paid by a company that has a degree of Canadian ownership (see p. 960), and the rate on royalties from motion picture films is also 10 p.c.

The non-resident tax is withheld at the source by the Canadian payer. It is an impersonal tax levied without regard to the status or other income of the non-resident recipient. Non-residents who receive only this kind of income from Canada do not file returns in Canada.

Profits earned in Canada by a non-resident corporation carrying on business through a branch or permanent establishment in Canada are subject to an additional tax of 15 p.c. This tax is imposed on profits attributable to the branch after deducting therefrom Canadian federal and provincial income taxes and an allowance in respect of the net increase in capital investment in property in Canada.

## Gift Tax

The Income Tax Act levies a tax upon gifts. The rates range from 10 p.c. on an aggregate taxable value of $\$ 5,000$ or under to 28 p.c. on an aggregate taxable value of over $\$ 1,000,000$. Exemptions include complete exemption of gifts of $\$ 1,000$ or less and a general deduction of $\$ 4,000$ from aggregate taxable value of gifts in the year.

## Estate Tax

This tax applies to property passing, or deemed to pass, at death. All the property of persons who were domiciled in Canada before their death must be taken into consideration no matter where that property is situated; for persons dying domiciled outside of Canada only their property situated in Canada is subject to tax.

In computing the tax of a Canadian domiciliary, the value of the whole estate is first determined. Once the aggregate value of the estate has been determined, estate debts and certain expenses may be deducted. From the resulting "aggregate net value" there may be deducted the amount of a basic exemption, which is increased where the decedent leaves a widow or dependent child, and also the amount of any charitable bequests to charitable organizations in Canada. After these deductions the amount left is the "aggregate taxable value" to which is applied the tax rates. From the tax so calculated may be deducted (1) a tax abatement in respect of property situated in a province that levies a succession duty, (2) a credit for gift tax paid on gifts made within three years of death (the value of which must be included in the aggregate net value of the estate), and (3) a credit for foreign taxes.

No estate valued at less than $\$ 50.000$ is subject to estate tax. This $\$ 50,000$ is not an exemption but the starting point for tax. The estate tax must not reduce the value of an estate after tax to less than $\$ 50,000$. The basic deductible exemption which applies to all estates of Canadian domiciliaries is $\$ 40,000$. This basic exemption of $\$ 40,000$ is increased to $\$ 60,000$ in respect of a deceased male survived by a spouse, or in respect of a deceased female survived by an incapacitated spouse and a dependent child. In both cases, there is an additional exemption of $\$ 10,000$ for each surviving dependent child (i.e., under 21). Finally, the basic exemption of $\$ 40,000$ is increased by $\$ 15,000$ for every surviving dependent child made an orphan by the death of the deceased.

The tax on the estates of Canadian domiciliaries is calculated by applying a graduated scale of rates. For an aggregate taxable value of $\$ 5,000$, or less, the rate is 10 p.c. For an aggregate taxable value of $\$ 100,000$, the tax is $\$ 19,000$ and anything between $\$ 100,000$ and $\$ 150,000$ is taxed at 24 p.c. At $\$ 2,000,000$ of taxable value, the tax is $\$ 816,500$ and the excess over $\$ 2,000,000$ is chargeable at the highest rate of 54 p.c.

As stated above, there is an abatement from federal estate taxes otherwise payable, in respect of provincial succession duties. Generally, the abatement is a deduction of 75 p.c. from the federal tax otherwise payable in respect of property situated in a province that levies succession duties.*

The property situated in Canada of a decedent not domiciled in Canada is subject to estate tax at a flat rate of 15 p.c. No deduction is allowed against the assessed value of such property except for debts specifically chargeable to it. However, there is a special provision that exempts all such property of less than $\$ 5,000$ value and also provides that the tax must not reduce the value of the property to less than $\$ 5,000$. (The Estate Tax Convention between Canada and the United States increases this figure to $\$ 15,000$.) Where property is subject to provincial duties, the $15-$ p.c. tax is abated by 75 p.c. (At present this abatement is 50 p.c. in Ontario and Quebec.)

[^287]
## Excise Taxes

The Excise Tax Act levies a general sales tax and special excise taxes. Both the sales tax and the special excise taxes are levied on goods imported into Canada and on goods produced in Canada. They are not levied on goods exported. The sales tax, which is at the rate of 8 p.c., is levied on the manufacturer's sale price of goods produced or manufactured in Canada or on the duty-paid value of goods imported into Canada. For alcoholic beverages and tobacco products, the sale price for purposes of the sales tax includes excise duties levied under the Excise Act (see p. 964). An old age security tax of 3 p.c. is levied on the same basis as the 8-p.c. tax, bringing the total sales tax to 11 p.c.

Many classes of goods are exempt from sales tax. Foodstuffs, electricity and fuels for lighting or heating are generally exempt as well as articles and materials used by public hospitals. The products of farms, forests, mines and fisheries are, to a large extent, exempt as well as most equipment used in farming and fishing. Also, a variety of items are exempt from sales tax when purchased by municipalities. These and other exemptions are set forth in schedules to the Excise Tax Act.

In 1963, the application of federal sales tax was extended to the building materials and production machinery that had previously been exempt. The change was ultimately arranged to take place by stages. The 4-p.c. rate applicable between June 14, 1963 and Apr. 1, 1964 rose to 8 p.c. on the latter date. The full 11 p.c. (the 3-p.c. old age security rate being the last one to be added) will become applicable on Jan. 1, 1965.

A number of articles are subject to special excise taxes. Where these are ad valorem taxes they are levied on exactly the same price or duty-paid value as the general sales tax. Those levied at present are as follows:-

| Cigarettes. | 2 ${ }^{\frac{1}{2} \text { cents per } 5 \text { cigs. }}$ |
| :---: | :---: |
| Cigars. | 15 p.c. ad valorem |
| Jewellery, including clocks, watches, articles of ivory, amber, shell, precious or serni-precious stones, goldsmiths' and silversmiths' products except goldplated or silver-plated ware for the preparation or serving of food or drink.. | 10 p.c. ad valorem |
| Lighters. | the greater of 10 cents per lighter or 10 p.c. ad valorem |
| Playing cards. | 20 cents per pack |
| Radios. | the greater of $\$ 2$ per radio or 15 p.c. ad valorem |
| Phonographs and television sets. | 15 p.c. ad valorem |
| Tubes for radios, phonographs and television sets, not including television picture tubes, priced under $\$ 5$ per tube. | the greater of 10 cents per tube or 15 p.c. ad valorem |
| Television set picture tubes. | 15 p.c. ad valorem |
| Slot machines-coin, disc or token-operated games or amusement devices | 10 p.c. ad valorem |
| Matches. | 10 p.c. ad valorem |
| Tobacco-pipe tobacco, cut tobacco and snuff............................... | 80 cents per 1 l . |
| Tobacco pipes, cigar and cigarette holders and cigarette rolling devices........ | 10 p.e. ad valorem |
| Toilet articles, including cosmetics, perfumes, shaving creams, antiseptics, etc.. | 10 p.c. ad valorem |
| Wines-* |  |
| Wines of all kinds containing not more than 7 p.c. absolute alcohol by volume Non-sparkling wines containing more than 7 p.c. absolute alcohol by volume but not more than 40 p.c. proof spirit. | 25 cents per gal. |
| Sparkling wines............................................................ | \$2.50 per gal. |
| Insurance premiums paid to British or foreign companies not authorized to transact business in Canada or to non-resident agents of authorized British or |  |
| foreign companies............................................................ | 10 p.c. of net premium for property, surety, fidelity and liability insurance. (Most other kinds of insurance are exempt.) |

[^288]All the foregoing items, except the last, are also subject to the general sales tax of 8 p.c. and the old age security tax of 3 p.c. Cigarettes, cigars and tobacco are subject to further taxes, referred to as excise duties (see below).

## Excise Duties

The Excise Act levies taxes (referred to as excise duties) upon alcohol, alcoholic beverages and tobacco products produced in Canada. The customs tariff on such products imported into Canada includes a levy to correspond with the duties levied on domestic production. These duties are not levied on goods exported.

Spirits.-The duties are on a per-gallon basis in proportion to the strength of proof of the spirits. These duties do not apply to denatured alcohol intended for use in the arts and in industry, or for fuel, light or power, or for any mechanical purpose. The various duties are as follows:-

| lon | \$13.00 |
| :---: | :---: |
| On every gallon of the strength of proof used in the manufactu |  |
| Medicines, extracts, pharmaceutical preparatio | 81.50 per gal. |
| Approved chemical compositions | 15 cents per gal. |
| Spirits sold to a druggist and used in the preparation of prescrip | \$1.50 per gal. |
| Imported spirits when taken into a bonded manufactory in addition to other duties. | 30 cents per gal. |

Canadian Brandy.-Canadian brandy is a spirit distilled exclusively from juices of native fruits without the addition of sweetening materials. It is subject to a duty of $\$ 11$ per gal.

Beer.-All beer or other malt liquor is subject to a duty of 38 cents per gal.
Tobacco, Cigars and Cigarettes.-The excise duties make up nearly as large a part of the total tax on tobacco products as the special excise taxes already described. The rates are as follows:-

## Combined Effect of Excise Taxes and Excise Duties on Tobacco Products

Bringing together the taxes imposed on tobacco products under the Excise Tax Act and the duties imposed under the Excise Act gives the following total taxes:-

|  | $\$ 9.00$ per thousand (or 18 cents per pack of 20 cigarettes) p the 11-p.c. sales tax on the manufacturer's sale price |
| :---: | :---: |
| Man | $\mathbf{\$ 1 . 1 5}$ per lb. plus the 11-p.c. sales tax on the manufacturer's sale price |
|  | $\$ 2.00$ per thousand plus the $15-$ p.c. special excise tax and the |

## Customs Duties*

Most goods imported into Canada are subject to customs duties at various rates as provided by tariff schedules. Customs duties, which once were the chief source of revenue for the country, have declined in importance as a source of revenue to the point where they now provide less than 10 p.c. of the total. Quite apart from its revenue aspects, however, the tariff still occupies an important place as an instrument of economic policy.

The Canadian Tariff consists mainly of three sets of rates, namely, British Preferential, Most-Favoured-Nation and General. The British Preferential rates are, with some exceptions, the lowest rates. They are applied to imported dutiable commodities shipped directly

[^289]to Canada from countries within the British Commonwealth. Special rates lower than the ordinary preferential duty are applied on certain goods imported from designated Commonwealth countries.

The Most-Favoured-Nation rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled to the British Preferential rate. Canada has Most-Favoured-Nation arrangements with almost every country outside the Commonwealth. The most important agreement providing for the exchange of Most-Favoured-Nation treatment is the General Agreement on Tariffs and Trade.

The General Tariff applies to imports from countries not entitled to either the Preferential or Most-Favoured-Nation treatment. Few countries are in this category and in terms of trade coverage are negligible.

In all cases where the tariff applies there are provisions for drawbacks of duty on imports of materials used in the manufacture of products later exported. The purpose of these drawbacks is to assist Canadian manufacturers to compete with foreign manufacturers of similar goods. There is a second class of drawbacks known as "home consumption" drawbacks. These apply to imported materials used in the production of specified classes of goods manufactured for home consumption.

The tariff schedules are too lengthy and complicated to be summarized here but the rates that apply on any particular item may be obtained from the Department of National Revenue which is responsible for administering the Customs Tariff.

## Subsection 2.-Provincial Taxes

All of Canada's ten provinces impose a wide variety of taxes to raise the revenue necessary for provincial purposes. All provinces levy a tax on the income of individuals and corporations resident within their boundaries or deriving income from activities or operations carried out therein. Only the Provinces of Ontario and Quebec impose special taxes on corporations and only the Provinces of Ontario, Quebec and British Columbia impose a tax on property passing at death. Under the terms of the existing federalprovincial fiscal arrangement, the Federal Government makes "equalization payments" to some provinces in recognition of the fact that the actual tax revenue from the fields of income tax, death duties and natural resource revenue in those provinces, measured on a per capita basis, is lower than an agreed upon level. For some provinces these payments constitute a very important source of revenue.

Some of the more important provincial levies are reviewed briefly below.

## Individual Income Tax

All provinces levy a tax on the income of individuals who reside within their boundaries or who earn income therein. In nine of the ten provinces, these taxes are computed as a percentage of federal income tax otherwise payable at full federal rates and are collected by the Federal Government on behalf of these provinces. In Quebec, provincial income tax is levied at graduated rates that progress from 2.5 p.c. on the first $\$ 1,000$ of taxable income to a maximum of 14.4 p.c. on the excess over $\$ 400,000$. The determination of taxable income for Quebec tax is based on exemptions and deductions similar to those for federal tax. The Province of Quebec collects its own tax.

The percentages that provincial income tax liability is of federal income tax liability computed at full federal rates for 1964 are: Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Alberta and British Columbia each 18 p.c., Quebec approximately 18 p.c. and Manitoba and Saskatchewan each 24 p.c.

## Corporate Income Tax

All provinces levy a tax on the profits of corporations derived from activities carried out within their boundaries. In all provinces except Ontario and Quebec the provincial tax imposed on taxable income in the province is determined on the same basis as for federal
income tax. In Ontario and Quebec the determination of taxable profits for purposes of provincial tax follows closely the federal rules. The rate of tax in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Alberta and British Columbia is 9 p.c. of corporate taxable income. The rate that applies in Manitoba and Saskatchewan is 10 p.c., in Ontario 11 p.c. and in Quebec 12 p.c.

Four of the ten provinces levy corporate income taxes at rates in excess of the abatement allowed by the Federal Government. This abatement is equal to 9 p.c. of corporate profits except in Quebec where it is 10 p.c. (see p. 961 ). All provinces except Ontario and Quebec have signed agreements for the collection of their income taxes by the Federal Government.

## Taxes on Alcoholic Beverages and Tobacco

Generally speaking, the sale of spirits in all provinces is made through provincial agencies operating as boards or commissions which exercise monopolistic control over alcoholic beverages. The provincial mark-up over the manufacturer's price is the effective means of revenue. Beer and wine may be sold by retailers or government stores depending on the province but in all cases they contribute to provincial revenues.* The Province of Prince Edward Island imposes a tax of 10 p.c. on all beer, wine and spirits sold at retail, collected under authority of the Health Tax Act.

Newfoundland imposes a tax on tobacco sold at retail: one quarter of one cent per cigarette purchased; from one to five cents per cigar, depending on price; and one cent per half ounce or less of other tobacco. Prince Edward Island also imposes a tax on tobacco sold at retail: one fifth of one cent per cigarette purchased; from one to three cents per cigar, depending on price; and 10 p.c. of the retail price of all other tobacco purchased. Specific sales taxes on tobacco products are also levied in New Brunswick, Quebec and Manitoba.

## Retail Sales Taxes

Retail sales taxes are levied on the final purchaser or user and are collected by the retailer. Eight provinces now levy this type of tax at rates varying from 3 p.c. to 6 p.c. These provinces are Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan and British Columbia.

## Amusement Taxes

Each of the provinces with the exception of Alberta, Saskatchewan and British Columbia has a tax on admission to places of entertainment. In addition, there is generally a licence fee imposed on the operator or owner of these amusement places. The tax on admissions is within the range of 5 p.c. to 15 p.c.

## Gasoline and Diesel Fuel Oil Taxes

Each of the ten provinces imposes a tax on the purchase of gasoline by motorists and truckers. The rates vary from 12 cents per gallon in Alberta to 19 cents in Nova Scotia and Newfoundland. The amount of tax borne by one gallon of motor vehicle fuel in each province is as follows:-

|  | Gasoline | Diesel Fuel |  | Gasoline | Diesel Fuel |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | cts. | cts. |  | cts. | cts. |
| Newfoundland | 19 | 19 | Ontario........... | 15 | 20.5 |
| Prince Edward Island | $18 \dagger$ | $18 \dagger$ | Manitoba.......... | 14 | 17 |
| Nova Scotia.......... | 19 | 27 | Saskatchewan.... | 14 | 17 |
| New Brunswick....... | 18 | 23 | Alberta ........... | 12 | $14 \ddagger$ |
| Quebec................ | 15 | 21 | British Columbia. | 13 | 15 |

[^290]
## Motor Vehicle Licences and Fees

Each province levies a fee on the annual registration of motor vehicles which is compulsory. Upon registration a vehicle is issued with licence plates. The rates of fee vary from province to province and, in the case of passenger cars, may be assessed on the weight of the vehicle, the wheel base, the year of manufacture, the number of cylinders of the engine, or at a flat rate. The fees for commercial motor vehicles and trailers are based on the gross weight for which the vehicle is registered, i.e., the weight of the vehicle empty plus the load it is permitted to carry. Every operator or driver of a motor vehicle is required to obtain a driver's licence and pay a fee therefor. The licences are valid for periods of from one to five years and the fees vary from $\$ 1.00$ to $\$ 2.50$ a year.

## Taxes on Mining Operations

All provinces except Prince Edward Island levy taxes of various kinds on mining operations. All provinces except Prince Edward Island and Alberta impose a tax on the income of firms engaged in mining operations in general or in specific kinds of mining operations. The Provinces of British Columbia, Alberta, Saskatchewan, Manitoba and Ontario impose a tax on the assessed value of minerals or a flat rate per acre of mining property.

## Tax on Logging Operations

The Provinces of Ontario, Quebec and British Columbia levy a tax on the income from logging operations of individuals, partnerships, associations or corporations engaged in this activity. In Quebec and Ontario the rate is 10 p.c. on net income in excess of $\$ 10,000$ and in British Columbia the tax is 10 p.c. on net income where in excess of $\$ 25,000$. In Ontario and Quebec one third of the tax is allowed as a deduction from provincial corporate income tax, and the remainder is deductible from federal income tax.

## Business Taxes

The Province of Quebec imposes a tax of one tenth of 1 p.c. on paid-up capital of corporations while Ontario levies a similar tax at the rate of one twentieth of 1 p.c.

The Provinces of Quebec and Ontario have a place-of-business tax. In Quebec, the tax ranges from $\$ 25$ to $\$ 50$ for each place of business with the higher amounts being levied when capital paid up is $\$ 25,000$ or more. In Ontario, the tax for each permanent establishment is the lesser of $\$ 50$ or one twentieth of 1 p.c. of paid-up capital of the corporation involved, but the total of the capital tax and the place-of-business tax cannot be less than $\$ 20$. Ontario also imposes an office tax of $\$ 50$ on every corporation that does not maintain a permanent establishment in the province but merely maintains a buying office, or merely holds certain provincial licences, or merely holds assets. A corporation that does not maintain a permanent establishment in Ontario but is represented by a resident employee or agent who is not deemed to operate a permanent establishment of the corporation in the province must pay an office tax of $\$ 50$ or one tenth of 1 p.c. of the total amount of its gross Ontario sales or revenue if less than $\$ 50,000$, subject to a minimum office tax of $\$ 5$.

Both provinces levy special taxes on certain kinds of companies such as banks, railway companies, express companies, trust companies and sleeping-car, parlour-car and dining-car companies. In Ontario, these special taxes (except the tax payable by insurance corporations calculated on gross premiums) and the capital and place-of-business taxes are payable only to the extent that they exceed the corporate income tax otherwise payable.

The Province of Prince Edward Island charges special annual licence fees to most insurance companies, banks, acceptance companies, chain theatres and chain stores, steamship companies, telephone, telegraph and electric light companies and brokers, as well as nominal licence fees to other incorporated companies, the latter being similar to filing fees in other provinces.

## Land Transfer Taxes

The Provinces of Alberta and Ontario levy a tax based on the value of the consideration at which ownership of land is transferred. In Ontario, a straight one fifth of 1 p.c. tax is imposed. In Quebec, a tax of $2 \frac{1}{2}$ p.c. of the valuation or purchase price (whichever is greater) is imposed only when property is transferred under the Bankruptcy or WindingUp Acts. Other provinces do not have a land transfer tax but most have a scale of charges or fees imposed upon registration of transfer of land. These fees are not regarded as taxes since a service is rendered or an assurance given with each charge.

## Tax on Security Transfers

The Provinces of Ontario and Quebec levy a tax on the sale price of securities transferred; the rates in each province are:-

## Tax on Premium Income of Insurance Companies

All ten provinces impose a tax of 2 p.c. on the premium income of insurance companies relative to risks incurred in the province.

## Succession Duties

Only the Provinces of Ontario, Quebec and British Columbia levy succession duties. These duties are a tax upon the right to succeed to property and are assessed upon the interest or benefit passing at death to an heir or beneficiary. The three provinces impose succession duties on all property situated in the province belonging to the deceased and passing at his death whether the deceased was domiciled in the province or elsewhere. Personal property wherever situated of a person dying domiciled within the province is also liable if passing to a successor resident or domiciled in the province.

The rates of succession duty are generally governed by the value of the estate, the relationship of the beneficiary to the deceased and the amount going to any one person. The rate of tax increases as the degree of relationship between the deceased and his successor becomes more remote.

## Provincial Property Taxes

In unorganized (non-municipal) areas, British Columbia levies property taxes at varying rates according to class for provincial revenue. Improved, forest and tree-farm lands are taxed at 1 p.c. of assessed value; farm land at one half of 1 p.c.; wild land at 3 p.c.; coal land at 2 p.c. (non-operating) or 7 p.c. (operating); and timber land at $1 \frac{1}{2}$ p.c. In unorganized (non-municipal) areas, Ontario levies a property tax of $1 \frac{1}{2}$ p.c. of assessed value; the minimum annual tax in respect of any land is $\$ 6$. Nova Scotia and New Brunswick also impose property taxes of limited application.

## Race Track Taxes

Ontario levies a tax on operators of race meets and upon holders of winning tickets issued under the pari-mutuel system. The tax on race meeting operators is imposed at the rate of $\$ 1$ for each day the meet is conducted. Holders of winning tickets must pay a tax equal to 6 p.c. upon the amount which would be payable to them if no percentage were deducted by the person holding the race meeting. A number of other provinces levy a pari-mutuel tax on money bet in the province on horse races: in Newfoundland the rate is

11 p.c., in Prince Edward Island $10 \frac{1}{2}$ p.c., in New Brunswick $5 \frac{1}{2}$ p.c., in Alberta and Saskatchewan 5 p.c., and in Quebec 1 p.c. on ordinary pools and 9 p.c. on special pools (quinella and daily-double). In British Columbia the tax is 12 p.c. but the province returns $2 \frac{1}{2}$ p.c. of money bet to horsemen and track operators for purses, etc.

## Subsection 3.-Municipal Taxes

The municipalities in Canada levy taxes on the owners of property situated within their jurisdiction according to the assessed value of such property. Methods of determining assessed value vary widely but for taxation purposes it is generally considered to be a percentage of the actual value. The revenues from such taxes are used to pay for street maintenance, schools, police and fire protection, snow removal in certain communities and other community services. Special levies are sometimes made on the basis of street frontage to pay for local improvements to the property such as sidewalks, roads and sewers. Not only is there a widespread difference in the bases used for property tax but there is also a wide variety of rates applied, depending on the municipality.

In addition to the taxes described above, municipalities usually impose a charge for the water consumption of each property holder or a water tax based upon the rental value of the property occupied. There are no municipal income taxes although certain localities have retained the use of a poll tax. In Newfoundland, Quebec and Saskatchewan, municipalities are empowered to levy an amusement tax on the admission of persons to places of entertainment, although the amusement tax is generally a provincial preserve (see p.966). Electricity and gas are taxed at the consumer level in some western municipalities and coal and fuel oil for heating purposes are chargeable in urban areas of Newfoundland. Telephone subscribers are subject to a special levy in Montreal and certain Ontario municipalities impose a tax on the gross receipts of telephone companies.

In most municipalities, a tax is levied directly on the tenant or the operator of a business. In general, business tax rates are lower than those applying to property. Three bases of assessment are in use-a fraction of the property assessment, the annual rental value of the premises, or the area of the premises. Certain municipalities may charge a licence fee instead of a business tax but others charge both a licence fee and a business tax. In Nova Scotia, all but one of the municipalities tax personal property (stock in trade, equipment, etc.) the same as real property.

## Subsection 4.-Miscellaneous Levies

These are not generally referred to as taxes but they are similar to taxes in many ways.

## Unemployment Insurance

For the past twenty-three years, a national program of unemployment insurance has been in operation in Canada. Essentially, it provides relief to those qualified persons who temporarily find themselves without work. It is administered by a federal commission appointed for this purpose and financed by equal contributions from employers and employees plus a contribution from the Federal Government. The amount paid into the fund by employee and employer is directly proportional to the weekly wages of the employee. The rates of contributions, together with statistics on the operation of the program, are given at pp. 739-743.

## Workmen's Compensation

Legislation in force in all provinces provides compensation for personal injury suffered by workmen as a result of industrial accidents. In general, these provincial statutes establish an accident fund administered by a Board to which employers are required to contribute at a rate proportional with the hazards of the industry. See also pp. 745-746.

## Hospital Insurance

A federal-provincial hospital insurance plan has been adopted by each of the ten Canadian provinces. Under this arrangement, the Federal Government pays approximately one half of the cost of hospitalization for patients who are participants under the plan. The provinces meet the remainder of the cost. Provincial revenues for this purpose are raised by various means. The Province of Quebec has increased its personal and corporation income tax. Certain provinces require the deduction of a monthly premium from the wages of their residents as a contribution or premium for the plan. In such provinces non-salaried people must also pay the premium directly if they wish to be covered by the plan. In some other provinces the proceeds of a retail sales tax are earmarked in whole or in part for the support of the hospital plan. See also pp. 273-276.

## Section 3.-Federal Government Finance

Subsection 1 of this Section contains financial statistics of the Federal Government prepared as far as possible in accordance with the classifications, concepts and definitions used in the preparation of provincial and municipal finance statistics. These tables differ from the information presented in Subsection 2 in that the latter has been extracted directly from the Public Accounts of Canada. Detailed reports published by the Dominion Bureau of Statistics provide reconciliations of revenue, expenditure and debt as set out in Subsections 1 and 2. The Public Accounts of Canada presentation is retained for continuity and also because there is interest in and use for information on this basis.

## Subsection 1.-DBS Statistics of Federal Government Finance

Revenue and Expenditure.-Table 4 shows details of net general revenue of the Federal Government for the years ended Mar. 31, 1962 and 1963.

Guaranteed Debt.-In addition to the direct debt already dealt with, the Government of Canada has assumed certain contingent liabilities. The major categories of this indirect or contingent debt are the guarantee of insured loans under the National Housing Act, the guaranteed bonds and debentures of the Canadian National Railways and the guarantee of deposits maintained by the chartered banks in the Bank of Canada. The remainder consists chiefly of guarantees of loans made by chartered banks to the Canadian Wheat Board and to farmers and veterans for certain authorized purposes and guarantees under the Export Credits Insurance Act.

${ }^{1}$ These contingent liabilities are expressed in Canadian dollars; they are payable solely in United States dollars and are converted on the basis of $\$ 1$ U.S. $=\$ 1.08108$ Canadian. In addition, the government has an indeterminate contingent liability in respect of rental guarantee contracts which in 1962 amounted to approximately $\$ 15,006,000$. Against this amount was a reserve of $\$ 3,872,193$ held by Central Mortgage and Housing Corporation. $\quad 2$ As at Dec. 31, 1962. ${ }^{2}$ As reported (in accordance with Sect. 45, National Housing Loan Regulations) by approved lenders at Dec. 31, 1962.

Table 13 summarizes the national debt position during the period 1955-64 as to interest and amount outstanding. Details of unmatured debt and treasury bills outstanding and information on new security issues of the Federal Government may be found in the Public Accounts of Canada. They are summarized by standard classification in DBS publication Financial Statistics of the Government of Canada (Catalogue No. 68-211).

## Subsection 3.-Revenue from Taxation

The incidence of Federal Government taxation is dealt with in Section 2. This Subsection includes statistical data on revenue received from individual income tax, corporation tax, estate tax, excise duties and excise taxes; customs receipts constitute a single item in the Public Accounts of Canada and are not included here.

## Individual and Corporation Income Tax

Statistics of income tax collections are gathered at the time the payments are made and are therefore up to date. Over 85 p.c. of individual taxpayers are wage or salary earners who have almost the whole of their tax liability deducted at the source by their employers. All other taxpayers are required to pay most of their estimated tax during the taxation year. Thus, the greater part of the tax is collected during the same year in which the related income is earned and only a limited residue remains to be collected when the returns are filed. The collections for a given fiscal year include tax deductions and instalments for twelve months, embracing portions of two taxation years, and a mixture of year-end payments for the first of these years and for the preceding year; they cannot therefore be closely related to the statistics for a given taxation year. As little information about a taxpayer is received when the payment is made and, as a single cheque from one employer may frequently cover the tax payments of hundreds of employees, the payments cannot be statistically related to taxpayers by occupation or income. Descriptive classifications of taxpayers are available only from tax returns but collection statistics, if interpreted with the current tax structure and the above factors in mind, indicate the trend of income in advance of the final compilation of statistics.

The statistics given in Table 14 pertain to tax collections by the Taxation Division of the Department of National Revenue. The collections are for fiscal years ended Mar. 31.

## 14.-Taxes Collected by the Taxation Division of the Department of National Revenue, Years Ended Mar. 31, 1955-64

Notr.-Figures for 1917-34 are given in the 1947 Year Book, pp. 999-1000; for 1935-48 in the 1951 Year Book, p. 994; and for 1949-54 in the 1959 edition, p. 1066.

[^295]Corporation Income Tax Statistics.-Corporation statistics presented in Tables 18 and 19 are on a taxation-year basis prior to assessment. The data were extracted and compiled from the returns shortly after they were filed and are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Provincial figures contain an unavoidable bias in favour of Ontario and Quebec because many large corporations operating across Canada file their returns in one or other of these provinces.

## 18.-Summary Statistics for Corporations Reporting a Profit, Taxation Years <br> 1961 and 1962

## Succession Duties and Estate Taxes

A history of succession duties is given in the 1956 Year Book, pp. 1064-1068. From Jan. 1, 1947 to Mar. 31, 1963, only Ontario and Quebec among the provinces levied succession duties, the other provinces having leased this field to the Federal Government under the terms of the 1947, 1952 and 1957 tax agreements (see p. 956). However, British Columbia re-entered the field, effective for all deaths occurring on or after Apr. 1, 1963. The incidence of the estate tax is discussed at p. 962.

Federal revenue from succession duties and estate taxes in the year ended Mar. 31, 1963 amounted to $\$ 87,143,312$. In the same year, Quebec's revenue from succession duties amounted to $\$ 27,842,000$ and Ontario's revenue from succession duties to $\$ 44,149,000$.

## Excise Taxes

Excise taxes collected by the Excise Division of the Department of National Revenue are given for the years ended Mar. 31, 1962 and 1963 in Table 21.
21.-Excise Taxes Collected, by Commodity, Years Ended Mar. 31, 1962 and 1963

## Excise Duties

Gross excise duties collected and other data of interest arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of goods taken out of bond and subject to excise duty, are given in Table 22 for the years ended Mar. 31, 1962 and 1963. The totals do not agree with net excise duties as shown in Table 9 because refunds and drawbacks are included. A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities for medicinal or research purposes to universities, scientific or research laboratories, public hospitals, or health institutions in receipt of federal and provincial government aid. The quantity of spirits manufactured has fluctuated during the past ten years from $24,710,625$ proof gal. in 1954 to a record $38,276,930$ proof gal. in 1963.

## Section 4.-Federal-Provincial Conditional Grants and Shared-Cost Programs* $\dagger$

During the past decade there has been a rapid increase in federal expenditures on joint federal-provincial programs. These programs take three forms: (1) the Federal Government contributes financial assistance to a program administered by a province; (2) the federal and provincial governments each assume the sole responsibility for the construction, administration and financing of separate aspects of a joint project; or (3) the province contributes financially to a joint program administered by the Federal Government.

The first category of joint programs is by far the most common and such programs are commonly called conditional grant programs. They are characterized by the Federal Government agreeing to make money available to a province on certain conditions, such conditions always specifying the field, service or project to which the money must be applied. In addition, the province may be required to make a financial contribution to the program

[^297]or to provide certain facilities; although the province will be entrusted with the administration of the program, it is usually required to maintain it at certain specified standards. The various programs in the welfare field are good examples of conditional grant programs. Under the old age assistance program, the Federal Government undertakes to share with a province the cost of assistance to persons who have attained the age of 65 years to the extent of 50 p.c. of a monthly assistance allowance of $\$ 75$; the recipient, besides being above a certain age, must have been a resident of Canada for 10 years and his income, including the assistance, must not be in excess of $\$ 1,260$ a year if unmarried, $\$ 2,220$ if married, and $\$ 2,580$ if married to a blind spouse. The provinces are entrusted with the administration of the program and are required to bear the administrative costs as well as one half of the monthly allowance.

While the old age assistance program, with its specification of the standards for eligibility, the level of the allowance and the federal share of the joint costs, is characteristic of conditional grant programs, there are some in which the conditions are nominal. For example, under the unemployment assistance program the Federal Government undertakes to share one half the cost of relief paid to social assistance recipients, the scale and conditions of the assistance to be determined by the provinces. In general, it may be said that the old age assistance program conforms to the traditional pattern of conditional grants, whereas the unemployment assistance program marks a newer approach in which flexibility and adaptability to local circumstances has been allowed to modify insistence on a national uniform standard.

The federal payments to the provinces under the conditional grant programs increased from $\$ 75,000,000$ in the year ended Mar. 31, 1954, to an estimated $\$ 880,000,000$ in 1963-64. The increase was attributable largely to the introduction of the unemployment assistance program in 1955 and the hospital insurance and diagnostic services program in 1958, to the increase in the level of old age assistance, disabled persons' and blind persons' allowances, and to the enlargement and reorientation of the vocational and technical training program (see Index). In 1963-64, federal contributions to the programs under the unemployment assistance and the hospital insurance and diagnostic services programs were estimated at $\$ 107,000,000$ and $\$ 391,000,000$, respectively.

The second category of joint programs, in which the federal and provincial governments undertake to accept sole responsibility for portions of a total project, are not numerous and are generally of a public works type. The joint irrigation projects carried out by the Prairie Farm Rehabilitation Administration and the Province of Alberta on the St. Mary's and Bow Rivers in southern Alberta are of this nature, as are the bridges recently built or under construction between Cross Point in Quebec and Campbellton in New Brunswick, or between Ottawa in Ontario and Hull in Quebec. In the St. Mary's irrigation project, the Federal Government has undertaken the responsibility for the construction of all main reservoirs, large dams and connecting works, and Alberta has assumed responsibility for the construction of the distribution system and the development and colonization of the new irrigable areas.

Joint programs in the third category are also few in number and the sums of money involved are seldom large. The Fraser River Board and the South Saskatchewan River Dam are two examples. The Fraser River Board was established by Canada and British Columbia in 1955 to investigate flood control and hydro-electric power generation on the Fraser River. Canada undertook to pay the costs of the Board in the first instance with British Columbia subsequently reimbursing Canada for half of the expenditures of the Board. In the case of the South Saskatchewan River project, Saskatchewan is to reimburse Canada for 25 p.c. (up to a maximum of $\$ 25,000,000$ ) of the federal expenditure on the dam and reservoir. In the year ended Mar. 31, 1963, British Columbia's share of the joint expenditures on the Fraser River Board amounted to $\$ 156,327$, and Saskatchewan's share of the expenditures on the South Saskatchewan River project was $\$ 4,376,329$.

Table 23 presents pertinent information on the various federal-provincial joint programs.

## Section 5.-Provincial Public Finance

Provincial government accounting and reporting practices vary considerably so that certain adjustments to the Public Accounts figures are required in order to produce comparable statistics. For example, transactions relating to a specific function are sometimes excluded from ordinary account; therefore special or administrative funds of this nature have been added to provincial ordinary account in the tables of this Section. The fiscal years of all provinces end on Mar. 31.

Revenue and Expenditure.-Table 24 shows net revenue and expenditure of provincial governments for the years ended Mar. 31, 1958-62, and Tables 25 and 26 give details of such revenue and expenditure for the fiscal year ended Mar. 31, 1962. "Net general revenue" and "net general expenditure" are arrived at by first analysing the combined revenues and expenditures of capital account, current or ordinary account and those working capital funds and special funds for which separate accounts are kept. Then the following types of revenue are deducted from revenue and offset against related expenditure: interest, premium, discount and exchange; institutional revenue; grants-in-aid and sharedcost contributions from other governments; and capital revenue. Table 27 gives details of the amounts paid to other governments by provincial governments, according to nature of payment.

## 24.-Net Revenue and Expenditure of Provincial Governments, Years Ended Mar. 31, 1958-62

 ${ }^{2}$ Excludes bonds due $\$ 2,000$. ${ }^{3}$ Includes $\$ 51,185,000$ deposits on Quebec savings bonds to be dated Apr. $1,1963$.

4 Includes debts assumed by the province as follows: Metropolitan Boulevard $\$ 67,265,000$, bonds issued by the Quebec Municipal Commission in the name of school corporations $\$ 17,516,000$, University Financing Act $\$ 5,845,000$, and bonds of St. Lambert General Hospital $\$ 800,000$. ${ }_{7}$ Includes net liability of the province re Ontario Savings Office $\$ 75,671,000$ at Mar. 31,1963 . $\quad 6$ Excludes debt of toll road authority. ${ }^{7}$ Excludes bonds of the Halifax-Dartmouth Bridge Commission $\$ 6,236,000$.
${ }^{8}$ Amount authorized; information $r e$ amounts outstanding not available. In addition, the province has guaranteed the interest on school district debentures having a par value of $85,223,000$ and on sewage disposal and water supply debentures having a par value of $\$ 2,985,000$. 10 Excludes guaranteed interest under the School Borrowing Assistance Act and the School Building Assistance Act on principal borrowings of $\$ 13,769,000$; includes guarantee of debentures issued by the Alberta Municipal Financing Corporation to finance the purchase of municipal debentures (see footnote ${ }^{2}$, Table 35).

## Section 6.-Municipal Public Finance

Municipal Taxation.-Table 31 shows, for the year 1962, local taxes levied by municipalities and by some school authorities and total taxes outstanding at the end of the year. Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, these figures should not be used as a basis for interprovincial comparisons of the relative burden of municipal taxation.

The interpretation of the symbols used in the tables throughout the Year Book
will be found on $p$ viii of this volume.

In this Chapter various statistical statements and studies are presented in which broad areas of Canadian economic activity are covered in a comprehensive but summary form. These integrated aggregative economic accounts provide an interrelated framework for economic analysis and the observation of changes in the functioning of the Canadian economy and its structure and in economic and financial relationships with other countries.

## Section 1.-National Accounts

The national accounts constitute a set of accounting summaries for the nation as a whole and portray economic activity in terms of transactions taking place between different sections of the economy. By combining and summarizing these operations into their various classes, information may be obtained on the functioning of the economy which is of particular interest to governments concerned with problems of full employment, taxation and prices, and to businessmen concerned with programs of investment and marketing.

This measurement of the nation's output is in terms of established market prices; hence it is necessary to keep in mind that the value of the nation's production may change because of price variations as well as through increase or decrease in volume of output.

Data are available showing volume changes in gross national expenditure in addition to the value figures. Gross national expenditure is shown in Table 4 in constant dollars (i.e., in terms of 1949 prices). Because the gross national expenditure equals the gross national product, these data also reflect volume changes in the production of goods and services as measured by the gross national product. In the other tables in which the data are expressed in current dollars, year-to-year changes must be considered in relation to price changes over the period.

National accounts calculated on a quarterly basis are a logical extension of the annual national accounts and have been published since 1953. However, their preparation on a reliable and analytically useful basis is rather more difficult because of the scarcity of quarterly data, special problems arising from the measurement of farm production and problems in connection with seasonal variation.

[^304]The tables on pp. 1009-1013 cover the more important aspects of the national income analysis in annual terms. Table 1 gives total gross national product in current and constant dollars for the years 1927-63. Tables 2 and $\mathbf{3}$ show the main aggregates of national income, gross national product, gross national expenditure and their components; other tables are included to show the source and disposition of personal income and expenditure and government revenue and expenditure.

National Income.-Net national income at factor cost measures the current earnings of Canadian factors of production (i.e., land, labour, capital) from productive activity. It includes wages and salaries, profits, interest, net rent and net income of farm and nonfarm unincorporated business.

Gross National Product.-Gross national product, by totalling all costs arising in production, measures the market value of all final goods and services produced in the current period by Canadian factors of production. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus capital consumption allowances and miscellaneous valuation adjustments.

Personal Income.-Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. It includes transfer payments from government (such as family allowances, unemployment insurance benefits and war service gratuities) in addition to wages and salaries, net income of unincorporated business, interest and dividends and net rental income of persons. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

Gross National Expenditure.-Gross national expenditure measures the same aggregate as gross national product, namely, total production of final goods and services at market prices, by tracing the disposition of production through final sales to persons, to governments, to business on capital account (including changes in inventories) and to non-residents (exports). Imports of goods and services, including net payments of interest and dividends to non-residents, are deducted since the purpose is to measure only Canadian production.

Economic Activity in 1963.-During 1963, gross national product (GNP) experienced continuous growth, registering an increase of 6.6 p.c. in value over the previous year; at a level of $\$ 43,007,000,000$ the additional value of output amounted to $\$ 2,668,000,000$. Since over-all prices for the year increased by less than 2 p.c., more than two thirds of the value increase represented a gain in real output. The year ended on a particularly strong note with a 3-p.c. increase in the final quarter, one of the sharpest gains since the beginning of the expansion in early 1961; the increase between the fourth quarters of 1962 and of 1963 was over 7 p.c., somewhat greater than that registered by the annual averages.

The 1963 expansion was widespread. All components of final demand shared in the growth and there was little change in the moderate rate at which inventories were being built-up. A notable 11-p.c. rise in the level of merchandise exports and a contraction in Canada's deficit on current merchandise account with other countries were the most prominent developments. The rise in exports was dominated by exceptionally large shipments of wheat to Russia in the final quarter, although increased foreign demand was spread over many commodities. This growth in exports took place against a background of increasing world trade, expanding economic activity in the main industrial countries, and an improvement in Canada's competitive position. Imports rose more moderately, by about 6 p.c., but the annual average increase does not reveal the growing importance of the supply of foreign goods during the course of the year. Also noteworthy was the performance of business fixed capital formation, including residential construction which registered the sharpest relative year-to-year increase since 1957. The increase was particularly pronounced toward the end of the year, especially in housing, when special Federal

Government legislation designed to stimulate winter building of houses came into effect. Consumer demand registered a higher than average year-to-year increase and was particularly strong in the second half of the year, accounting for more than half of the increase in GNP. This pattern was partly the result of general increases in non-durable goods in the third quarter and the notably buoyant demand for automobiles in the fourth quarter.

The year-to-year increase of under 5 p.c. in government expenditure on goods and services was smaller than the increase in GNP and less than that experienced in both 1961 and 1962. The net result of total revenue and expenditure of all levels of government was a decline in the deficit from that of 1962; the deficit declined progressively after the second quarter of the year and in the final quarter was the lowest since early 1960. Increases in demand were paralleled by a 7 -p.c. rise to $\$ 32,553,000,000$ in national income, in which both profits and labour income registered similar relative gains. Accrued net farm income rose more sharply owing to the record wheat crop which was over one quarter greater than in 1962 and more than one and a half times the size of the 1961 crop. Personal income rose somewhat less than national income.

Despite the almost three years of continuous expansion in the economy, evidence of unutilized labour resources persisted during 1963. The unemployment rate (seasonally adjusted) in the fourth quarter stood at just over 5 p.c. of the labour force, compared with close to 6 p.c. at the end of 1962 . This decline was less than would be suggested by the increase in employment of more than 4 p.c. over the same period because of the 3-p.c. growth in the total labour force (about 200,000 persons) between the fourth quarters of 1962 and of 1963.

Prices rose by nearly 2 p.c. during the year, about the same amount as in 1962 ; these increases were moderate compared with those experienced in the 1954-57 and 1949-52 business expansions. The rise in prices of certain foodstuffs, notably sugar and to a lesser extent citrus fruits, affected the indexes for personal expenditure and for imports.

The Components of Demand.-Consumer markets were strong in 1963, particularly in the second half of the year. Consumer purchasing rose to $\$ 27,230,000,000$, almost 6 p.c. higher than in the previous year and the largest increase since 1959. Prices were $1 \frac{1}{2}$ p.c. higher, partly because of the already noted rise in certain foodstuffs, so that the increase in real terms was about $4 \frac{1}{2}$ p.c., slightly more than in 1962.

Durable goods made a notable contribution to the over-all increase in personal expenditure; the $9 \frac{1}{2}$-p.c. increase, following the 8-p.c. rise in 1962, was the largest since 1955 and contrasted particularly with 1960 and 1961 when purchases of such goods showed little change. Automobile sales, particularly in the last quarter, were an extremely important expansionary element; net purchases of new and used automobiles rose more than 14 p.c. over the previous year and accounted for three quarters of the increase in durables. Home furnishings increased by almost 8 p.c. and each of the remaining items increased about 3 p.c.

Expenditures on services rose by more than $6 \frac{1}{2}$ p.c., making the largest contribution to the increase in personal spending. This increase was somewhat higher than in the three preceding years and was a reflection, mainly, of higher shelter expenses. Again in 1963 the movement in services was dampened by changes in net expenditure abroad,* as the balance on tourist and travel account with the external sector moved to a surplus for the first time in more than a decade.

The 4-p.c. increase in non-durables was more moderate, reflecting in part lower than usual growth in alcoholic beverages and tobacco products, each of which increased by about 3 p.c. Expenditures on food and clothing were 4 p.c. higher and expenditures on fuel (including gas) were up only 2 p.c., probably reflecting the mild weather during the autumn of 1963.

Private capital spending totalled $\$ 7,495,000,000$ in 1963 , an amount nearly 8 p.c. higher than in 1962; outlays on residential construction and machinery and equipment were

[^305]both higher by over 8 p.c. and non-residential construction by just over $6 \frac{1}{2}$ p.c. The spending trend through the year was continuously upward with sharp increases in the spring and final quarters of the year; the hesitancy between the second and third quarters possibly reflected uncertainty regarding changes in the building materials sales tax. The surge at the year-end, which was centred in housing, carried the fourth quarter level to an annual rate $5 \frac{1}{2}$ p.c. above the annual average. The over-all advance in business spending on fixed capital matched the increase in GNP and the ratio of capital spending to GNP remained over 17 p.c.

Investment in new housing fluctuated more widely than other components of fixed capital formation in the period 1961-63, and the 8-p.c. increase in 1963 to an average annual level of $\$ 1,705,000,000$ concealed some sharp movements within the year. Dwelling unit starts rose moderately in the first three quarters when those for multiple dwelling units offset some decline in single units, but very sharply in the final quarter when the Federal Government's winter house-building incentive program and direct lending by the Central Mortgage and Housing Corporation stimulated house-building activity. At the year-end, the number of units under construction stood at a record high of $96,600-20,000$ above the number at the previous year-end; starts for the year totalled $148,600,14$ p.c. higher than for 1962. The value of non-residential construction rose by just over $6 \frac{1}{2}$ p.c. to $\$ 2,811,000,000$, the sharpest year-to-year gain to emerge in the business expansion period beginning in 1961. During the year the gains were even more notable as the value of work put in place rose by over $11 \frac{1}{2}$ p.c. between the fourth quarters of 1962 and of 1963 . The strength was centred mainly in the development of such utilities as electric power, railway and urban transit systems, oil and gas pipeline facilities and communications systems. Within manufacturing, which had a slightly smaller construction program than in 1962, the machinery and transportation equipment industries stand out as the two groups with much heavier spending programs than in the previous year.

Investment in machinery and equipment rose by $8 \frac{1}{2}$ p.c. in 1963 to almost $\$ 2,979,000,000$. Most of the strength occurred in the second half of the year when the seasonally adjusted annual rate was running 12 p.c. above the 1962 average. The increases stemmed mainly from a sharply higher level of investment in farm implements, machinery and equipment; a larger investment program in the manufacturing sector of the economy, particularly in the paper, chemical and transportation equipment industries; and higher outlays by the telephone utilities. Two of these areas reflected to some extent the buoyancy of farm incomes following two good crop years, the high level of overseas demand for Canadian wheat for three years, and sustained strength in the demand for new automobiles for two years.

During 1963 there were a number of special factors operating on economic activity. Measures were introduced by the Federal Government designed to stimulate employment and investment in slow-growth areas and in certain industries. New manufacturing or processing enterprises located in designated areas of slower growth were offered exemption from income tax for three years and the concession of writing off new machinery and equipment in two years and new buildings in five. Accelerated depreciation was extended on certain ncw facilities for manufacturing and processing enterprises owned by Canadian residents and to companies having a specified minimum degree of Canadian ownership and control. Oil and gas transmission companies were also allowed to deduct from income, for tax purposes, expenditures on drilling for oil, gas or minerals. Another factor was the introduction in June of a 4-p.c. sales tax on certain previously exempt building materials and machinery and equipment; this was to be increased by stages to 11 p.c. in January 1965.

On the other hand, the building up of stocks did not contribute to expansion in 1963. Business inventories showed an accumulation of $\$ 166,000,000$, a moderately lower rate than in the previous year. In total, the quarterly pattern revealed virtually no net change in inventories in the first half of the year and a growing rate of accumulation in the second half. The figures at the total level suggest a continuation of the downward drift in the
ratio of stocks to output which has been apparent for a number of years. The main buildup in stocks appears to have taken place in the hands of retail dealers, partly representing increased holdings of new automobiles in the closing months of the year as producers' shipments had run slightly ahead of sales; manufacturers' stocks showed little change.

Against a background of general expansion in world trade and economic activity, Canada's transactions with non-residents in both merchandise and non-merchandise trade rose in 1963. With exports of goods and services rising by 10 p.c. to a level of $\$ 9,054,000,000$ and imports $5 \frac{1}{2}$ p.c. higher at $\$ 9,542,000,000$, the deficit on current account transactions with non-residents (on a national accounts basis) fell to just under $\$ 500,000,000$ from a little over $\$ 800,000,000$ in 1962. The entire improvement was attributable to transactions on merchandise trade, the surplus rising from $\$ 155,000,000$ to $\$ 484,000,000$; little change occurred in the balance on service and non-merchandise transactions account, which stood at $\$ 972,000,000$.

The gains in exports of goods, after allowance for seasonal influences, were concentrated in the second and final quarters. In the second quarter, exports of nickel were particularly strong and higher newsprint exports reflected the settlement of a labour dispute in the United States. In the fourth quarter, heavy shipments of wheat and wheat flour began to flow to Russia as a result of the agreement signed with that country in September. The increase of 11 p.c. in exports for the year, which carried the total value to $\$ 7,064,000,000$, reflected sizable increases in iron ore, softwood lumber, wood pulp, railway rolling-stock, navigational systems and electronic control equipment, as well as sharply higher wheat sales. Although gains were widespread over many other commodities and the relative rise in the general grouping of manufactured products was notable, close to half the total increase was accounted for by four of the main commodities noted above (wheat, iron ore, softwood lumber and wood pulp). The rise in prices of exports was around 1 p.c. in 1963, indicating that most of the increase was in real terms.

The 6-p.c. rise in imports of goods was spread more evenly through the year, although some irregularity appeared in the third quarter when there were unusually large imports of raw sugar. The 1963 increase of $\$ 371,000,000$, which carried imports to a total of $\$ 6,580,000,000$, was mainly the result of heavier inflows of raw sugar, farm equipment and tractors, crude petroleum and automobile parts, although the increase in automobile parts was largely offset by a decline in finished automobile imports; some of the increase may be attributable to the elimination at the end of March of the remaining temporary surcharges imposed at the time of the exchange crisis in mid-1962. Prices of imports rose more significantly than exports; sugar prices were notably higher among the commodities. In addition, the impact of the devaluation of the Canadian dollar influenced year-to-year comparisons for part of the year.

Receipts from non-merchandise transactions increased by 7 p.c. to reach $\$ 1,990,000,000$ in 1963. Close to three quarters of the change was accounted for by sharply higher receipts from travel and from freight and shipping. The rise of 5 p.c. to $\$ 2,962,000,000$ in payments for services was accounted for by increases of between 6 p.c. and 8 p.c. in freight and shipping, interest and dividends and miscellaneous services. The latter includes official contributions which nearly doubled mainly as a result of aid financed under the Colombo Plan; this was at an unusually low level in 1962 . The balance on service transactions showed little year-to-year change. However, among the individual items the most noteworthy was the shift in the balance on travel account from a deficit of $\$ 50,000,000$ in 1962 to a surplus of $\$ 13,000,000, *$ the continuation of an improving trend that had been apparent since 1960. This improvement was largely offset by a widened deficit on account of interest and dividends and the increase in official contributions.

The Government Sector.-Total expenditure of all governments advanced by almost 5 p.c. or $\$ 683,000,000$ in 1963 . All components showed increases with the exception of federal expenditure on goods and services which registered a decline, reflecting a 6-p.c.

[^306]reduction in defence outlays. Non-defence expenditures rose slightly as a result of offsetting changes: increases included a 7-p.c. rise in wages and salaries and a doubling of payments from the Colombo Plan Fund; decreases were registered in non-defence investment and in the changes in inventories of the Agricultural Stabilization Board. Transfer payments to persons increased by 4 p.c. to a total of $\$ 3,829,000,000$. The larger part of the increase occurred at the provincial-municipal level, reflecting higher payments under the hospital insurance programs, larger grants to universities and increased social assistance payments.

Meanwhile, the expansion of activity in the economy was reflected in advances in all major components of government revenue. Indirect taxes rose by over $5 \frac{1}{2}$ p.c., the largest contribution to the increase occurring at the provincial-municipal level. Provincial revenues rose as a result of higher volume of sales or upward revisions of tax rates or both. The gain in property taxes accounted for most of the rise at the municipal level, the year-to-year change being about the same as had occurred in previous years. Federal indirect taxes rose by 2 p.c. but the total masks offsetting changes in the components. Federal excise taxes rose sharply, partly as a result of the imposition of the 4-p.c. sales tax on building materials and production machinery and equipment effective in June 1963, but revenues from customs import duties declined as a result of the elimination in the first quarter of 1963 of the last of the temporary emergency surcharges imposed in mid-1962.

Personal and corporate direct tax revenues contributed almost as much as indirect taxes to the rise in total revenue. Both the federal and provincial governments shared in the rise in direct taxes, although unevenly; the federal share of personal direct taxes rose by 5 p.c. and of the corporate income taxes by $6 \frac{1}{2}$ p.c. compared with 14 p.c. and 6 p.c. for the provinces. The sharper increase in the provincial income tax collections was partly attributable to the fact that, under the terms of the federal-provincial fiscal arrangement that became effective in 1962, the federal share of the taxes on personal incomes dropped slightly, the difference going to the participating provinces. In addition, British Columbia imposed its own succession duties in April 1963, thus contributing to a sharp increase in this component at the provincial level.

Investment income accruing to government rose by $7 \frac{1}{2}$ p.c., the largest increase occurring in trading profits of government enterprises and in interest on government-held public funds. At the federal level, investment income increased by 10 p.c., reflecting mainly increases in profits of the Bank of Canada, earnings of the Exchange Fund Account and interest on government-held public funds. Increased trading profits of liquor commissions and higher interest income were responsible for most of the increases at the provincialmunicipal level.

Because of the greater increase in revenue than in expenditure, the total deficit for 1963 amounted to $\$ 735,000,000$, a decline of $\$ 86,000,000$ from 1962 . The 1962 federal deficit of $\$ 543,000,000$ was almost halved to $\$ 278,000,000$ in 1963 but the provincial-municipal deficit increased from $\$ 278,000,000$ to $\$ 457,000,000$. It should be noted that in 1962 the federal deficit was irregularly high by about $\$ 75,000,000$ and the provincial-municipal deficit correspondingly low, as a consequence of the introduction in 1962 of the new tax collection arrangements.

Income Flows.-All major shares of national income were up in 1963 when the level reached $\$ 32,553,000,000$, an amount 7 p.c. higher than in 1962 . This rise was paralleled by an almost 7-p.c. gain in labour income which totalled $\$ 21,550,000,000$. Reflecting gains in both wage rates and labour inputs, the increase was broadly based, occurring in all
industrial groups. The quarterly pattern showed continuous increases, the largest of which occurred in the final quarter. Wages and salaries originating in the goods-producing industries accounted for $41 \frac{1}{2}$ p.c. of the total; this represents a slight decline in their relative importance between 1962 and 1963, a continuation of the postwar trend toward the growing relative importance of the service industries.

Profits increased by a little less than 8 p.c. to reach $\$ 3,920,000,000$, largely a reflection of a gain in the first quarter of the year and a particularly sharp pick-up in the final quarter. The main increases over 1962 were recorded in the food and metal industries of manufacturing, the wholesale and retail trades and the transportation, storage and communication groups. After allowance for corporate taxes and distribution of dividends, undistributed profits rose by $15 \frac{1}{2}$ p.c. to $\$ 964,000,000$.

In 1963, accrued net income of farm operators from farm production amounted to $\$ 1,786,000,000$, almost 16 p.c. higher than in 1962. This figure, the third highest on record, was exceeded only in 1951 and 1952. Contributing most to the 1963 increase was an accumulation of farm-held stocks of grain and livestock and increased profits of the Canadian Wheat Board. The estimate of the value of field crop production was $\$ 1,381,000,000$, 17 p.c. higher than in 1962 and fractionally higher than in the previous all-time record year, 1952. Farm cash receipts increased over 2 p.c. in 1963 to reach an all-time high. The most important gains were made in returns from the sales of wheat, oats, barley, tobacco, dairy and poultry products. Farm operating expenses were about 5 p.c. higher than in 1962. Higher outlays for fertilizers, feed and seed, and the operation of farm machinery, including repairs, were the factors contributing most to the increase.

Personal income rose by over 6 p.c. to $\$ 32,771,000,000$ in 1963 , the main increases occurring in the second and fourth quarters as a result of unusually large payments to farmers by the Canadian Wheat Board in the second quarter and the combined effects of higher labour income, farm income and increased old age security transfer payments from the government in the final quarter. Disposable personal income rose faster than personal spending with a resultant increase in saving. Personal net saving, which includes unincorporated business saving, increased to $\$ 2,631,000,000$ in 1963 and, as a proportion of disposable income, rose to 8.8 p.c. from 8.4 p.c. in 1962.

Production.-Real gross domestic product at factor cost in 1963 increased by more than 5 p.c., goods- and service-producing industries rising by about $5 \frac{1}{2}$ p.c. and 5 p.c., respectively. Real domestic product less agriculture increased slightly less than 5 p.c. Manufacturing increased faster during the expansion than total production, accounting for almost one third of the aggregate increase during the 1961-63 period. The primary industry group (agriculture, forestry, fishing and trapping and mining) accounted for over 20 p.c. of the growth, as did the cyclically sensitive trade and transportation group.

In 1963, the index of industrial production reached a level of 196.2 for the year, up by $5 \frac{1}{2}$ p.c. from 1962. Manufacturing also advanced $5 \frac{1}{2}$ p.c., mining just over 3 p.c. and electric power and gas utilities almost 9 p.c. With the exception of utilities, these gains were lower than those recorded in 1962. However, the annual averages do not reveal the increasing strength during the latter half of 1963; the index of industrial production from the fourth quarter of 1962 to the corresponding quarter of 1963 recorded a gain of 8 p.c. as against 6 p.c. in the comparable 1961-62 period.

Durables continued to expand in 1963, again led by transportation equipment, where output of motor vehicles and parts was up by almost 25 p.c. Iron and steel products contributed heavily, with both iron castings and primary steel higher by about 12 p.c., partly
reflecting the strength in the transportation equipment industry. Wood products, with greater strength appearing toward the end of the year, advanced by 5 p.c., as did electrical apparatus and supplies; the latter group was particularly influenced by higher refrigerator and appliance output. Non-metallic mineral products moved up slightly but non-ferrous metal products showed little change.

Non-durable manufacturing showed a gain of $4 \frac{1}{2}$ p.c. over 1962, with all major groups contributing. Leather products gained only marginally, tobacco and printing and publishing by about 2 p.c., and other increases ranged from 3 p.c. in paper products and foods and beverages to 13 p.c. in rubber products. Solid gains of 7 p.c. to 9 p.c. were recorded in chemicals, textiles and petroleum products, and clothing gained about 5 p.c.

Mining showed a smaller gain in 1963 than in 1962, reflecting weaknesses in metals; with the exception of iron ore, all major metals showed declines of up to about 5 p.c. in nickel, gold and lead. However, the fuels component of mining continued to expand with good gains in all three industries-coal, crude petroleum and natural gas-and asbestos, among the non-metals, was up by more than 2 p.c.

Among the service-producing industries, the transportation, storage and communication group advanced 7 p.c. Storage and transportation, influenced by record wheat movements, showed increases of 18 p.c. and 8 p.c., respectively, and shipping and pipelines increased by more than 10 p.c. Railways, with a 7-p.c. advance, accounted for about two fifths of the gain in transportation. Wholesale and retail trade each gained 4 p.c. over 1962. Growth was widespread at the retail level, with a particularly strong advance in farm implement dealer sales. Motor vehicle dealers and garages and filling stations were also among the more rapidly expanding components. Public administration and defence showed little change in 1963, expansion in the provincial component being offset by declines in the other two components. The remaining service-producing industry groups increased at rates slightly above their long-term trends.

## Section 2.-Industry Production Trends

## Indexes of Real Domestic Product

The Dominion Bureau of Statistics has made available a new set of production data pertaining to the entire spectrum of Canadian industries. These data, in the form of volume of production indexes, are measures of value added for each industry expressed in the dollars of a base year. Technically, they are termed "indexes of real domestic product
(GDP) at factor cost originating by industry".* The value added, or GDP, volume indexes can be regarded as an extension of the index of industrial production $\dagger$ to encompass the remainder of the economy. Concepts and basic methods used to construct both indexes are the same. Thus, industry production index coverage is extended from mining, manufacturing and electric power and gas utilities, for which volume indexes have been published since the 1920's, to include all other major industrial divisions-agriculture, forestry, fishing and trapping, construction, retail and wholesale trade, finance, insurance and real estate, transportation, storage and communication, public administration and defence, and community, recreation, business and personal service. However, only the index of industrial production is published on a monthly basis; for the remaining industries only quarterly and annual indexes are currently being published. The GDP indexes can also be regarded as an extension of the national accounting framework, i.e., as an elaboration of the supply side of the national income accounts.*

In measuring the output of a single product such as steel, it is normal to think in terms of tons of steel when the question of quantity arises. When measuring the combined production of steel and natural gas, there is an obvious need for a common denominator and it is appropriate to use the average unit prices of a certain time period (chosen as the base) to value the quantities produced before adding them together. The resultant quantity, volume or real output measure can be subsequently left in its constant or base period dollar form or it can be expressed in index number form. The latter is accomplished by dividing the constant dollar aggregate of the current period by the dollar aggregate for the base period and multiplying by 100 . In constructing a quantity index for a combination of industries where the output of one industry becomes the input of another, the portion double-counted must be eliminated. This is accomplished by revaluing both intermediate input (materials, fuel, etc.) and total output in terms of the dollars of a common base year and subtracting the constant dollar value of the former from the latter to yield a constant dollar value added aggregate.* This aggregate is the quantity or volume measure represented by the indexes presented herein.

[^308]

The annual indexes are well suited for studies of production trends, growth rates and inter-industry comparisons, but the quarterly indexes provide a much better tool for the study of the cyclical behaviour of industries, short-term changes in production and, in fact, for most types of current analysis. Statistics computed for less than annual intervals, however, are frequently subject to strong seasonal influences, and variations in the number of working days during a quarter may cause differences in the levels of output between two quarters which otherwise would not exist. Accordingly, the quarterly real output indexes have been adjusted for both seasonal and calendar variation. The effects of the seasonal adjustment are shown on the quarterly chart for the period 1947-63.

Factors Underlying Industrial Output Trends, 1935-63.-Over the course of the past three decades, the world has undergone profound economic changes, the more dramatic and far-reaching of which were: the depression of the 1930's and the subsequent slow recovery; the unprecedented upheaval of the Second World War; the emergence of new national and international spheres of influence in the postwar era, both on the political and on the economic fronts; the ever-present social flux with its attendant changes in the mode of living, and the striking advances in the fields of science and technology-two forces which are themselves among the greatest contributors to change. Because Canada has an open economy, sensitive to changes in the world economic climate and affected in many ways by the powerful and technologically advanced economy of the United States, it may be said to be particularly susceptible to these influences.

During the 1935-63 period, Canada's real domestic product more than tripled, growing at an average annual compound rate of 4.4 p.c. as a result of combined pressures brought to bear upon the various industries by interrelated changes in demand (both domestic and foreign), technology, capital formation, marketing techniques and the labour force. The domestic market expanded considerably during this period, especially in the 1950's when immigration and net family formation reached a postwar peak. The population of Canada increased from $10,845,000$ in mid-1935 to $18,896,000$ in mid-1963, an average annual compound rate of increase of 2.2 p.c.

The tremendous expansion in productive activity following the outbreak of World War II, when output almost doubled within a period of five years, was facilitated by the existence of a large unused labour pool at the outset of hostilities. During the war years a
large proportion of resources was diverted to the war effort, resulting in the expansion of many defence-oriented industries. At the same time, shortages of consumer goods and investment goods were created in other areas while income and savings were rising. During the immediate postwar period a certain amount of industrial dislocation occurred as a result of re-tooling and a large-scale changeover to peacetime production, coupled with major labour unrest in some industries. This phase of readjustment, however, did not generally extend beyond 1946, following which production resumed its upward trend.

The postwar period was marked by several major expansions. The first was based on satisfying the backlog of war-deferred investment and consumer demand and on supplying the needs of the war-devastated countries, especially for various materials. Following this expansion there was some slowing down in production, but the requirements of defencesupporting industries after the outbreak of the Korean hostilities, and stock-piling requirements at home and abroad, introduced a second expansionary period. The third was the investment boom of the mid-1950's during which output reached a new high level. These strong demand influences combined to make most of the period one of fairly rapid and sustained growth. Production data reveal a diminishing rate of increase during the late 1950's, as external sources of supply for many commodities multiplied and as the competition encountered by many Canadian producers intensified. At the same time, there was an absence of strong stimulants to domestic demand, such as the deferred demand and the population growth of the preceding periods. During the early 1960 's, however, the first waves of the postwar generation were beginning to exercise a growing influence on the demand for goods and services. This appears to be one of the major influences affecting the current expansion which began early in 1961. Some of the other notable features of the current expansion have been: the relatively slow growth of imports compared with previous expansions, particularly after the stabilization of the Canadian dollar and other government measures in mid-1962; the increase in exports, especially during the latter part of 1963, reflecting large wheat sales abroad; the substantial gains in motor vehicle and primary iron and steel production; and the above-average output of mining and agriculture during 1962 and 1963.

Along with the increases in total final demand, there were also shifts in the composition of demand, which affected the output of the various industries. Imports retained roughly the same relative share of the GNP but the share of exports declined from 26.4 p.c. in 1935 to 21.1 p.c. in 1963, an indication of the growing importance of the domestic market as an outlet for the products of Canadian industry. Government expenditure and business gross fixed capital formation made considerable relative gains but personal expenditure on goods and services as a percentage of total expenditure declined from 77.4 p.c. in 1935 to 63.3 p.c. in 1963.

Even more remarkable than some of the demand-induced changes were the striking changes brought about by the technological discoveries and innovations that transformed whole production processes and opened up previously unknown areas in the fields of manufacturing, transportation and communication. Newer industries, such as air transport, assumed major importance in a comparatively short time; entirely new industries, such as gas pipelines, appeared; and a profusion of new products were created, such as the petrochemicals of the chemicals industry and the television and other electronic products of the telecommunication equipment industry. As was to be expected, the industries in a position to benefit from such innovations were among the most rapidly expanding in the economy, although the impact of the expansion spread through the entire economic system. The changes in production and demand also influenced the level of employment in the various industries; there was a considerable shift in employment during the postwar period from
the goods-producing to the service-producing industries and most of the loss in the former took place in agriculture. From 1946 to 1963, agriculture decreased its share of total employment by over 15 p.c. but total employment continued to expand. In the same period the service-producing industries increased their share from 39 p.c. to 53 p.c. of the total.

[^309]Industrial Expansion, 1935-63.-Industrial development since 1935 showed certain well-defined patterns. Individual industries flourished or, in rare instances such as coal mining, declined but all the major industry groups expanded. Development, however, was not uniform throughout the period. Three major types of factors affecting the expansionary paths of industries were in evidence in the Canadian economy at some point during the period.

The first may be described as some special factor at work in a particular industry, the effects of which would be most noticeable in that industry-for example the demand for uranium which had an important influence on the mining industry during the latter half of the 1950's; the opening up of new mineral resources such as the iron ore mines in Quebec-Labrador; and certain technological innovations such as the development of synthetic textiles or television. The second type of factor is much more general in its effects and in its causes. Such factors as increased demand for consumer goods resulting from a rising standard of living and a growing population, shifts in world trading patterns or shortages causing increased demand for export goods; the surge of investment activity associated with replacement cycles; attempts to broaden the base of economic activity through investment in research, social overhead capital, education, improved management and marketing techniques, or a more efficient production process (or a confluence of all these factors) appear to lie at the root of such postwar expansions as the investment boom of the mid-1950's or the rapid expansion in production immediately following the Second World War. The third type of factor would be some unique and far-reaching event, of which the Second World War and the Korean War might serve as conspicuous examples. Each afforded a powerful stimulus to growth in a large cross-section of industries.

All three factors, jointly or in turn, have reacted on the various industries resulting in the upswings in aggregate production. The effect of these factors on the individual industries is revealed to some extent by their relative rates of growth.
12.-Growth Rates of the Main Industrial Groups, 1935-63 and 1946-63

| Industry | 1935-63 | 1946-63 | Industry | 1935-63 | 1946-63 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | p.c. | p.c. |  | p.c. | p.c. |
| Agriculture. | 1.0 | 1.4 | Trade. | 5.1 | 4.0 |
| Forestry .......................... | 3.1 | 1.4 | Finance, insurance and real estate.... | 4.9 | 5.0 |
| Fishing and trapping | ${ }_{7.3}^{2.0}$ | 1.9 9.0 | Public administration and defence... | 3.3 | 4.3 |
| Manufacturing. | 4.9 | 3.9 | Community, recreation, business |  |  |
| Construction. | 6.5 | 5.4 | and personal service............. | 4.0 | 3.6 |
| Electric power and gas utilities. | 8.4 | 9.6 |  |  |  |
|  | 5.0 | 4.3 | Real Domestic Product. | 4.4 | 4.1 |

Foremost in growth was the electric power and gas utilities industry which showed an average annual compound rate of growth of close to 10 p.c. during the postwar period and a longer-term growth rate of 8.4 p.c.; large-scale hydro-electric power developments along with the expansion of natural gas distribution helped to sustain this remarkable performance. The mining and construction industries ranked second and third, respectively. All three industries were strongly affected by technological advances, new discoveries and a fairly well sustained demand for their products. In the case of mining, this demand frequently came from abroad, resulting in relatively high export sales and providing incentive for the opening up and developing of new mineral resource areas. Some slackening in construction activity was evident following the unusually high levels reached during the mid-1950's, but demand for housing proved to be a sustaining influence during most of the period.

The industry divisions consisting of manufacturing, transportation, storage and communication, trade, and finance, insurance and real estate all expanded at roughly the same average rate during the $1935-63$ period-about 5 p.c. During the postwar period the rates of these industries diverged slightly but still fell within the range of 4 to 5 p.c. and public administration and defence also had growth rates within this range. Although these industries expanded at about the same rates, the manufacturing, trade, and transportation, storage and communication industry divisions, which together account for about one half of total output, also showed strikingly similar cyclical patterns. In fact, these are the three industry divisions within the Canadian economy that showed the most pronounced and consistent patterns of cyclical behaviour during the postwar period.

The Second World War and, to some extent, the Korean War provided strong impetus to the output of the manufacturing industries and transportation. Within manufacturing, it was the durables manufacturing component which expanded considerably during both periods of hostilities and which benefited from the need for machinery and equipment during the investment boom and from consumer demand during the early part of the postwar expansion. Non-durables maintained a fairly steady rate of expansion for most of the period, largely in response to increased population and demand for industrial materials. Trade was less strongly affected by defence requirements than some of the other industries. Retail trade in particular exhibited a relatively smooth expansionary trend.

The community, recreation, business and personal service industry division was relatively insensitive both to cyclical and irregular influences but, along with some other steadily expanding industries such as finance, insurance and real estate, non-durables and retail trade, it helped to sustain aggregate production and growth during periods of contraction and expansion. Within the division, business services showed very rapid advances, reflecting increased use of advertising, accounting and legal services. Among the community services group, education and hospitals showed very pronounced gains but recreation services did not participate in the general upsurge during the 1950 's. Within the personal services group, one of the more interesting developments was the relative decline in the domestic service component while other industries, such as restaurants, hotels and motels made considerable gains. Thus, while this division as a whole showed a less-than-average rate of growth, some of its components were among the most rapidly and steadily expanding in the economy.

The rates of growth in the forestry, agriculture and fishing and trapping divisions were also below average and were subject to pronounced irregular fluctuations in output. Forestry experienced sharp year-to-year fluctuations because of the nature of its production processes and also, to some extent, because of its sensitivity to changes in world demand and price. The volume of agricultural output varies largely with the grain crop, as this constitutes a considerable part of agricultural output. Therefore, marked differences from year to year in agricultural output are more often caused by changes in weather conditions and similar factors than by changes in prices and demand conditions. It is interesting to note, however, that particularly poor crop years coincided with cyclical declines in the gross domestic product during the postwar period. Generally speaking, there was a lack of buoyant expansion in agricultural production but, although the rate of growth was low, the year-to-year changes were sometimes quite spectacular. In absolute terms, the industry production levels continued to rise over the longer term and this increase was accomplished with a declining labour force.

## Production of Commodity-Producing Industries

The data contained in the tables of this section are published in the DBS report Survey of Production.* The scope of the survey of production is limited to industries chiefly engaged in the production of commodities and it measures production in current dollars. This is in contrast to the real domestic product series (pp. 1013-1019) which encompasses all industries and measures production in terms of the dollars of a base year.

[^310]Tables 13 and 14 give "census value added" production data, classified by province and industry, respectively. Census value added is derived by deducting the cost of materials, fuel, electricity and process supplies consumed in the production process from the gross value of output (shipments or sales adjusted for inventories). The figures include interim classification and valuation changes in mining and manufacturing brought about by the adoption of the 1960 standard industrial classification of establishments. However, the two industry aggregates continue to consist of census value added accruing from their primary activity only. Standard industrial classification changes have not yet been implemented for other industries.

## Section 3.-Canadian Balance of International Payments*

Canada's total commercial and financial transactions with residents of other countries are presented in summary form in statements of the Canadian balance of international payments. The current account shows separately the principal types of transactions in goods and services with non-residents. The capital account provides a distribution of capital movements into direct and portfolio investments and into long-term and short-term forms. The difference between the current account balance and the balance of these capital movements in an accounting period is reflected in the change in the official holdings of gold and foreign exchange, including Canada's net International Monetary Fund position and other special international financial assistance.

Since the beginning of the 1950 's, apart from 1952 when there was a small surplus on current transactions, a wide degree of imbalance has characterized Canada's international payments. Larger current account deficits have customarily been associated with periods of Canadian prosperity. High levels of investment, rising personal consumption and the growth in government expenditures, including defence outlays abroad, have contributed to the deficits. These large current deficits, which reached a peak of $\$ 1,504,000,000$ in 1959, have reflected and been financed by substantial inflows of capital. Following this record high level, the imbalances in current transactions have narrowed in successive years to $\$ 557,000,000$ in 1963.

Current Account Transactions.-The surplus on merchandise trade, $\dagger$ which emerged in 1961 for the first time since 1954, was maintained in 1962 at about the same level of $\$ 177,000,000$, and expanded sharply to $\$ 503,000,000$ in 1963 ; an important element in this rise was the extraordinary sales of wheat and flour to the U.S.S.R. Net payments on non-merchandise transactions remained almost unchanged between the two years at slightly more than $\$ 1,050,000,000$. Thus, the enlarged trade surplus caused the deficit on current transactions in goods and services to fall over one third from $\$ 874,000,000$ in 1962 to $\$ 557,000,000$ in 1963 . The balance on merchandise trade has varied widely; the record deficit of $\$ 728,000,000$ occurred in 1956 when it accounted for more than one half of the total current account deficit and the unusually large surplus of $\$ 503,000,000$ for 1963 exceeded the level of the merchandise surpluses of the immediate postwar years. The

[^312]non-merchandise deficit rose steadily from 1952 to a recent peak of $\$ 1,155,000,000$ in 1961 but remained at a lower level in the following two years mainly because of an improvement in the travel account.

Since 1954, when merchandise exports and imports were almost equal at $\$ 3,900,000,000$, exports have increased fairly steadily to a record $\$ 7,082,000,000$ in 1963 , an advance of 80 p.c. Imports, on the other hand, have shown wider fluctuations in their growth pattern. The value of imports in current dollars rose more than 40 p.c. in two years to $\$ 5,565,000,000$ in 1956 and, except for a substantial drop of nearly 8 p.c. to $\$ 5,066,000,000$ in 1958 , remained at about that level until 1961. In 1962 it rose more than 8 p.c. over 1961 to $\$ 6,203,000,000$, and a further 6 p.c. to a record of $\$ 6,579,000,000$ in 1963.

In the past decade or so, the relative importance of exports of metals and minerals has increased markedly, that of other materials for industry, such as chemicals and fertilizers, has advanced more moderately, and the percentage shares for farm and forest products have narrowed visibly. The relative position of wheat and wheat flour, which had been diminishing, recovered sharply in 1961 as a result of the large shipments of grain to Mainland China and other communist countries. The very heavy shipments of wheat on the Russian account, together with sizable exports to Japan, Mainland China and Eastern European countries, boosted the total value of wheat and wheat flour exports in 1963 to some $\$ 880,000,000$, well above the previous record reached in 1952. In addition to newer products for export, such as iron ore, uranium, petroleum and natural gas, there were general increases in more traditional staples such as lumber, pulp and paper, nickel, aluminum and copper, with the metal and mineral items showing above-average gains. About 80 p.c. of the rise of more than $\$ 700,000,000$ in exports in 1963 originated from larger ship-ments-in addition to wheat-of lumber, wood pulp, iron ore, primary steel, aluminum, chemicals, rolling-stock, motor vehicles, machinery and specialized measuring equipment. For the fourth successive year, exports of uranium dropped in 1963 to a level less than half that of the peak year 1959. Contributing to the $\$ 376,000,000$ rise in imports in 1963 were raw sugar and other food products, industrial materials, petroleum and products, automobile parts and machinery. Notwithstanding the complete rescinding in the first quarter of the surcharges imposed in late June of 1962 in the face of an exchange emergency, imports of motor vehicles in the year declined over one third from 1962 and were valued at less than one half of the 1960 import total.

The deficit on non-merchandise transactions of $\$ 1,060,000,000$, down 8 p.c. from the high level of $\$ 1,155,000,000$ in 1961, was over nine times as great as that of 1949 and more than double that of as recent a year as 1955. This expansion was attributable largely to the continuing rapid growth in Canada's indebtedness to foreign countries and to the rising population with higher per capita incomes. A total of $\$ 646,000,000$, or about 60 p.c. of the 1963 deficit on 'invisibles', was directly related to Canada's indebtedness abroad, with total interest and dividend payments by Canadians to non-resident investors reaching $\$ 869,000,000$. In addition, transfers in other forms of investment income amounted to over $\$ 150,000,000$, and there were also substantial payments for a variety of business services by Canadian subsidiaries to their home offices and to other non-residents. Furthermore, some hundreds of millions of dollars worth of earnings, which accrued to foreigners but were retained in Canada for reinvestment, are excluded from the current account.

Among non-merchandise items, the most noteworthy change in 1963 was a turnaround of $\$ 63,000,000$ in the travel account balance from a deficit of $\$ 43,000,000$ in 1962 to a surplus of $\$ 20,000,000$, the first since 1950.* Although the favourable trend was evident since 1960, this betterment was less than in 1962. The improvement was concentrated in transactions with the United States, since the deficit with overseas rose gradually over the three years 1961-63. Since 1960, expenditures in Canada by visitors from the United States increased nearly 50 p.c. to about $\$ 550,000,000$ in 1963 , while travel outlays by Canadians in the United States declined 15 p.c. to nearly $\$ 400,000,000$. In 1963 alone, the

[^313]rise in travel receipts exceeded 7 p.c. while the contraction in payments was over 6 p.c. Following the reduction at the end of June 1962 in the privilege of duty-free tourist purchases, the value of these imports recorded from the United States was well over $\$ 10,000,000$ lower in the first half of 1963 than in the corresponding period of the preceding year. Other non-merchandise transactions yielded deficits of $\$ 81,000,000$ on freight and shipping services, $\$ 33,000,000$ on inheritances and transfers by migrants and $\$ 474,000,000$ covering government transactions, personal remittances, business services and miscellaneous income. Included in government expenditures were official contributions amounting to $\$ 61,000,000$, up considerably from the unusually low total of $\$ 36,000,000$ in 1962. Against these net payments was an amount of $\$ 154,000,000$ representing gold production available for export.

The characteristic bilateral distribution of the Canadian current account balances was maintained in 1963; a surplus from transactions with overseas countries partially covered a deficit with the United States. However, an approximate 5-p.c. rise in this deficit from $\$ 1,122,000,000$ to $\$ 1,183,000,000$, which was considerably smaller than the more than twofold increase in the overseas surplus to $\$ 626,000,000$, contributed to reducing the over-all deficit from $\$ 874,000,000$ to $\$ 557,000,000$. In current dollars, the 1963 deficit with the United States approximated the 1958 level and was much higher than in any year before 1956. The surplus on current transactions with Britain continued to grow in 1963from $\$ 218,000,000$ to $\$ 400,000,000$-while the surplus with other overseas countries more than tripled to $\$ 108,000,000$, following the substantial decline in the previous year from the large surplus of $\$ 217,000,000$ in 1961.

Capital Movements.-In 1963, Canada continued to draw substantially on the resources, both real and financial, of the other countries of the world. However, the net capital inflow (excluding the change in official exchange holdings) of $\$ 703,000,000$ was less than 70 p.c. of the inward movement of $\$ 1,029,000,000$ in 1962 and was of the same order of magnitude as 1955, before the crest of the investment boom in the resource industries. Over 80 p.c. of the decline in 1963 was attributable to short-term forms of capital. The estimate of $\$ 90,000,000$ was only one fourth as large as the 1962 total and was about the same fraction of the average for the four years 1959-62. Capital movements in long-term forms, covering direct investment, portfolio security transactions, official loans and other long-term investments, totalled $\$ 613,000,000$ in 1963 , down 8 p.c. from $\$ 668,000,000$ in the year before. The long-term capital inflow exceeded the current account deficit by 10 p.c. in 1963. This was the first year since 1956 that long-term investment was ample to cover the deficit on current transactions. In the intervening years, the financing of the current account deficits by long-term capital ranged between 72 p.c. and 98 p.c.; the proportion for the whole period since the conclusion of World War II averaged more than 95 p.c.

The net inflow in 1963 of $\$ 240,000,000$ of capital for direct investment in foreigncontrolled enterprises in Canada was less than one half the movement of $\$ 495,000,000$ in 1962 and was the lowest on record since 1950. In 1962 there was a sizable net inflow of capital for take-over of Canadian business and for refinancing but in 1963 outflows covering repurchase of Canadian enterprises exceeded by a small margin inflows for take-over of existing concerns by non-residents. This change in the direction of movement accounted for well over one half of the $\$ 255,000,000$ drop in net inflow of direct investment capital in 1963. In the main, however, the inflows in 1963 continued to reflect investment by foreign corporations in their subsidiaries and branches, which contributed to new capital formation in Canada. Petroleum and natural gas received the largest share of net direct investment inflows, followed by manufacturing and mining. Over 70 p.c. of the reduced inflows originated from the United States compared with more than 60 p.c. in 1962, and the balance
was distributed about equally between Britain and the European Economic Community. The flow of direct investment abroad of Canadian capital was estimated at $\$ 110,000,000$ in 1963, hardly changed from the total in 1962 but considerably higher than the outllow for each of the preceding five years. Nearly two thirds of the movement was destined for Britain and the EEC countries.

Capital inflows arising from transactions in Canadian and foreign securities amounted to $\$ 526,000,000$ in 1963, an increase of roughly 80 p.c. over the levels of 1961 and 1962. New issues of provincial bonds sold to investors in the United States accounted for the largest part of the expanded inflow, a substantial portion of the proceeds of the new issues being received before the proposal in July in the United States of the interest equalization tax.

A turn-around from a fairly large outflow in 1962 to a more moderate inflow of capital in 1963 from transactions in outstanding foreign securities was offset by outflows from retirements and trade in outstanding Canadian securities and purchases of new foreign issues. As in the two preceding years, the over-all movement into Canada in 1963 of portfolio security capital originated entirely in the United States, net inflows from that country being $\$ 632,000,000$. There were outflows of $\$ 87,000,000$ to Britain and $\$ 19,000,000$ to other countries.

In 1963, the Government of Canada made loans aggregating $\$ 10,000,000$ to India in connection with aircraft purchases. Repayments by foreign borrowers dropped sharply to $\$ 25,000,000$ from $\$ 129,000,000$ in 1962 . Included in the latter total were prepayments of principal amounting to $\$ 91,000,000$, which contributed to easing temporary difficulties in Canada's international financial position in 1962. The remaining capital movements in long-term forms led in 1963 to an outflow of $\$ 58,000,000$, considerably below that of $\$ 131,000,000$ in the previous year. Large repayments of bank loans, which were financed from the sale to non-residents of a new corporate bond issue, constituted an important element in the 1962 outflow.

Following large inflows of capital through reductions in 1961 and 1962, bank balances and other short-term funds held abroad by Canadian residents reverted to the trend characteristic of the 1950's with a net capital outflow in 1963 of over $\$ 250,000,000$. This reversal accounted for more than the entire drop of $\$ 271,000,000$ in the short-term inflow between 1962 and 1963. Changes in non-resident holdings of Canadian funds, loans and accounts receivable and payable contributed to increased inflows, which were offset in part by a reduced inflow from transactions in Canadian commercial and finance paper.

Canada's external reserves rose by a smaller amount in 1963 than in either of the two preceding years. The official holdings of gold and foreign exchange increased by $\$ 60,000,000$ and Canada's net International Monetary Fund position by $\$ 86,000,000$.

Since the shift upward at the beginning of the 1950 's, direct investment inflows have been a significant ingredient in the capital account. Continuing and substantial for nearly the entire period, these receipts contributed in particular to resource development and the growth of associated industries. By far the largest part of the new capital went into the petroleum and natural gas industry, a dynamic element in the expansion of the Canadian economy since about the mid-1950's. Large amounts were also invested in other mining industries, particularly for the development of iron ore, and in various branches of manufacturing. From 1956 to 1959, the inflow for direct investment, substantial though it was, was less than the inflow of portfolio capital, as some of the sharply increased demands for new capital were channelled to foreign capital markets through the sale to non-residents of new issues of Canadian bonds and debentures. Corporations, provincial governments and municipalities were all important borrowers in this period.

## Section 4.-Economic Council of Canada

This Crown corporation was established by Act of Parliament (SC 1963, c.11) assented to on Aug. 2, 1963. The Council has very broad terms of reference. The Act directs it to advise how Canada can achieve the highest possible levels of employment and efficient production, so that the country may enjoy a high and consistent rate of economic growth and that all Canadians may share in rising living standards. As part of this general responsibility, Sect. 9 of the Act sets out a number of duties. In particular, the Council is instructed "to recommend what government policies will best help to realize the potentialities of growth of the economy". In order to provide the analytical basis for such recommendations, the Council is "regularly to assess on a systematic and comprehensive basis, the medium-term and long-term prospects of the economy and to compare such prospects with the potentialities of growth of the economy".

It is the duty of the Council to advise and recommend to the Minister (the Secretary of State) how Canada can achieve certain national economic objectives. The Act directs the attention of the Council particularly to the basic national policies that are the responsibility of the Federal Government; these include the fiscal and monetary policies that influence incentives and the general economic climate; the policies that determine Canada's relationship with the outside world in trade and finance; the policies regarding national developmental works, national transportation and communication; and the policies regarding manpower and its effective utilization.

The Council consists of 28 members appointed by the Governor in Council including a chairman and two directors who serve on a full-time basis and 25 other members broadly representative of different sectors and groups in the economy; all were appointed between Sept. 12 and Dec. 21, 1963. (See Register of Official Appointments, Chapter XXVIII.)

During its first year of operation, the Council assigned the highest priority to the preparation of the first of its Annual Reviews of Canada's medium-term and long-term prospects and problems.* Four working committees of the Council were established to facilitate development of work on a number of other projects and studies: a Committee on Economic Growth and Problems of Adjustment to consider means of dealing with problems of adjustment in the Canadian economy associated with economic growth; a Committee on Labour-Management Relations to consider how best to implement the provisions of the Act in the field of labour-management relations consultation and co-operation; a Productivity Committee to review how best to carry on the work begun by the National Productivity Council which ceased to exist on the establishment of the Economic Council of Canada and the duties of which were taken up under the authority of the Act; and an Advisory Committee on Industrial Research and Technology to consider the role of research and technology in Canadian economic growth. The membership of the latter Committee includes, in addition to members drawn from the Council, a number of leading Canadian business men.

As part of its program in the labour-management relations area, the Council sponsored the National Conference on Labour-Management Relations held on Nov. 9 and 10, 1964, which was attended by leaders of business and labour. The Conference was based on research studies concerned with two broad fields-the current status of labour-management co-operation in Canada and the implications for the Canadian economy of developments and experiments in the field of labour-management co-operation and relations in Europe and in the United States. A study was also undertaken on the recent experiments in labourmanagement relations in Nova Scotia. These studies, along with a general summary of the discussion that took place at the Conference, forms the basis for a Council publication.

A number of special studies by outside experts have been sponsored by the Council, which has authority to publish the reports and studies prepared for its use. Through this means, the Council hopes to provide not only advice to governments but also valuable information to the private sector of the economy.

[^316]The Act provides for the Council to study how national economic policies can best foster the balanced economic development of all areas of Canada. It also provides that the Council shall seek consultation with appropriate agencies in the several provinces. On Mar. 2, 1964, the Chairman and Vice-Chairman of the Economic Council met in Ottawa with representatives of the following provincial institutions:-

Ontario Economic Council
Conseil d'orientation économique du Québec Voluntary Planning Board of Nova Scotia
New Brunswick Research and Productivity Council Manitoba Economic Consultative Board
Interim Committee for the Establishment of a British Columbia Development Council Saskatchewan Industry Advisory Council Saskatchewan Economic Advisory and Planning Board
Alberta Economic Development and Productivity Council
As the work of the Council proceeds, liaison and consultation will be progressively developed with provincial economic and productivity councils.

## Section 5.-Organization for Economic Co-operation and Development

The Organization for Economic Co-operation and Development (OECD) was established in October 1961 as successor to the OEEC, with Canada and the United States joining the countries of Western Europe as full members of the new body. Japan, previously a member of the Development Assistance Committee, became, in May 1964, a full member of the OECD and the first member from outside Western Europe or North America.

The prime purpose of the OECD is to promote among member governments co-operation in the fields of economic policy, trade and assistance to developing countries, though it also provides a valuable forum for discussion of common problems in agriculture, industry, finance, technology and manpower policy. In 1963, Ministers approved an annual growth target for member countries for the next seven years of 4 p.c. in real gross national product. Because of its development from the former OEEC, the Organization was at first largely concerned with questions of primarily European interest but, as its membership expanded, it has become increasingly a recognized forum for broader consultation among advanced industrial countries, particularly on questions of economic and financial policy and on the problems of the developing countries. Following the holding of the United Nations Conference on Trade and Development in Geneva in the spring of 1964, the OECD offered valuable opportunity for consultation among developed countries concerning the recommendations of the Conference.

The OECD brings together government officials as well as representatives of private business, labour unions, universities and other non-governmental bodies in both deliberative and consultative capacities, and provides for international liaison among such groups. Within Canada, liaison has been established with the business community through the Canadian Business and Industry Advisory Committee, which was established in 1962 and comprises representatives of the Canadian Chamber of Commerce, the Canadian Council of the International Chamber of Commerce and the Canadian Manufacturers' Association. Parallel arrangements exist for consultation with Canadian labour organizations.

## Section 1.-The Bank of Canada*

The Bank of Canada is Canada's central bank. It was incorporated under the Bank of Canada Act in 1934 and commenced operations on Mar. 11, 1935. The Act of Parliament which established the central bank charged it with the responsibility for regulating "credit and currency in the best interests of the economic life of the nation", and conferred on it certain specific powers for discharging this responsibility. Through the exercise of these powers, the Bank of Canada determines broadly the combined total of the basic forms of Canadian money held by the community-currency outside banks plus deposit balances in chartered bank accounts.

By virtue of the provisions of the Bank of Canada Act, which enable the central bank to increase or decrease the total amount of cash reserves available to the chartered banks as a group, the Bank of Canada is able to determine broadly the over-all level of the total assets and deposit liabilities of the group, and hence of the combined total of currency and bank deposits. The Bank Act requires that each chartered bank maintain a minimum amount of cash reserves in the form of deposits at the Bank of Canada and holdings of Bank of Canada notes. This minimum requirement is 8 p.c. of the bank's total Canadian dollar deposit liabilities on a monthly average basis. The ability of the chartered banks as a group to expand their total assets and deposit liabilities therefore depends on the level of total cash reserves. An increase in cash reserves will encourage the banks to expand their total assets (which consist chiefly of loans and marketable securities) with a concomitant increase in deposit liabilities; a decrease in cash reserves will bring about a decline in their total assets and deposit liabilities as they seek to restore their cash reserve ratios.

The chief method by which the Bank of Canada can affect the level of cash reserves of the chartered banks, and through them the total of chartered bank deposits, is by purchases and sales of government securities. Payment by the central bank for the securities it purchases in the market adds to the cash reserves of the chartered banks as a group and puts them in a position to expand their assets and deposit liabilities. Conversely, payment to the central bank for securities it sells causes a reduction in reserves of the chartered banks and makes it necessary for them to reduce their assets and deposit liabilities.

[^317]The influence that the Bank of Canada has on credit conditions and hence on economic behaviour stems from its ability to determine broadly the level of total holdings of currency and chartered bank deposits. The trend of total holdings of these forms of money can have an influence on liquidity generally, including effects on interest rates and bond prices and the availability of credit, and on expectations regarding future financial and economic trends, all of which have some effect on decisions to spend or to save. However, many factors other than changes in the money supply also have important influences on financial and economic developments, such as: the state of economic conditions and prospects outside Canada; the competitive strength of Canadian business enterprises both at home and abroad; the character of the investment decisions and price and wage policies in domestic industries; the skills and degree of mobility of labour; and the nature of public policies at all levels of government with regard to such matters as expenditure, taxation, subsidies and the regulation of industry. In forming its judgments, the Bank of Canada is bound by criteria laid down by Act of Parliament in the preamble to the Bank of Canada Act of 1934. Its operations must be based, not on any simple mechanical formula, but rather on continuous observation and appraisal of the constantly changing state of the economy as reflected in the complex pattern of economic and financial developments.

While the Bank of Canada has the power to determine the combined total of currency and chartered bank deposits, it has no means of determining how much of this total is held in the form of currency and how much in the form of chartered bank deposits. That depends on the wishes of the public, since deposits can be converted freely into notes and coin and back again. Nor does the Bank have any direct control over the growth of other forms of money or of close substitutes for money as a store of wealth in liquid form, of which there are many varieties in Canada-mainly deposit balances in savings institutions other than chartered banks and short-term securities issued by governments and corporations.

The cash reserve system in Canada, which is similar to that in a number of other countries, while placing the central bank in a position where it can determine within broad limits the total amount of chartered bank assets and deposits, leaves the allocation of bank credit and other forms of credit to the private sector of the economy. Each chartered bank can attempt to gain as large a share as possible of the total cash reserves by competing for deposits. Each bank determines how its assets will be distributed, for example, between various kinds of securities and loans to various types of borrowers. The Bank of Canada has no power to direct banks or other lenders to make funds available to certain groups or in certain regions on the same terms or on different terms than to other groups or in other regions. The influence of the central bank-based in essence on its power to expand or contract chartered bank cash reserves through its market purchases or sales of securitiesis both indirect and impersonal and is brought to bear on financial conditions generally through the chartered banks and the numerous inter-connected channels of the capital market.

The powers of the Bank are set forth in the Bank of Canada Act, 1934 (RSC 1952, c. 13), revisions in which were made in 1936, 1938 and 1954. Some of these powers are outlined below.

The Bank may buy and sell securities issued or guaranteed by Canada or any province, short-term securities issued by Britain, treasury bills or other obligations of the United States, and certain classes of short-term commercial paper. The Bank is authorized by the Industrial Development Bank Act to purchase bonds and debentures issued by the Industrial Development Bank. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may also deal in foreign exchange. The Bank may accept deposits that do not bear interest from the Government of Canada, the government of any province, any chartered bank or any bank to which the Quebec Savings Bank Act applies. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields. The Bank acts as the fiscal agent for
the Government of Canada in the payment of interest and principal and generally in respect of the management of the public debt of Canada. The Bank has the sole right to issue paper money for circulation in Canada. Details regarding the note issue are given on p. 1034.

The Bank of Canada may vary the minimum cash reserve requirement of the chartered banks between 8 p.c. and 12 p.c. of their Canadian dollar deposit liabilities, provided that the chartered banks are given a minimum notice period of one month before each increase becomes effective and that any increase is not more than 1 p.c. during any one month. When this legislation became effective on July 1, 1954, the requirement was 8 p.c. and it has since remained at that level.

The Bank may make loans or advances for periods not exceeding six months to chartered banks, or to banks to which the Quebec Savings Bank Act applies, on the pledge or hypothecation of certain classes of securities. Loans or advances on the pledge or hypothecation of readily marketable securities issued or guaranteed by Canada or any province may be made to the Government of Canada or the government of any province for periods not exceeding six months. Other loans may be made to the Government of Canada or the government of any province in amounts not exceeding a fixed proportion of such government's revenue; such loans must be repaid before the end of the first quarter after the end of the fiscal year of the borrower.

The Bank of Canada is required to make public at all times the minimum rate at which it is prepared to make loans or advances; this rate is known as the Bank Rate. From Nov. 1, 1956 until June 24, 1962, the Bank Rate was established weekly at a fixed margin of $\frac{x}{4}$ of 1 p.c. above the latest weekly average tender rate for 91 -day treasury bills. On June 24, 1962, the Bank Rate was fixed at 6 p.c.; it was reduced to $5 \frac{1}{2}$ p.c. on Sept. 7, 1962, to 5 p.c. on Oct. 12, 1962, to 4 p.c. on Nov. 13, 1962 and to $3 \frac{1}{2}$ p.c. on May 6, 1963; it was increased again to 4 p.c. on Aug. 11, 1963 and to $4 \frac{1}{4}$ p.c. on Nov. 23, 1964. Since June 24, 1962, the Money Market Rate, the rate at which the Bank of Canada is prepared to enter into purchase and resale agreements with money market dealers, has been $\frac{1}{4}$ of 1 p.c. above the average rate on 91-day treasury bills at the preceding weekly tender, or the Bank Rate, whichever is lower. The Bank of Canada is not required to maintain a minimum or fixed ratio of gold or foreign exchange to its liabilities unless the Governor in Council prescribes otherwise.

The Bank is under the management of a Board of Directors composed of a Governor, a Deputy Governor and twelve Directors. The Governor and Deputy Governor are appointed for terms of seven years each by the Directors, with the approval of the Governor General in Council. The Directors are appointed by the Minister of Finance, with the approval of the Governor General in Council, for terms of three years each. The Deputy Minister of Finance is a member of the Board but does not have the right to vote. There is an Executive Committee of the Board composed of the Governor, the Deputy Governor, one Director and the Deputy Minister of Finance (who is without a vote) which has the same powers as the Board except that its decisions must be submitted to the Board at its next meeting. In addition to the Deputy Governor who is a member of the Board, there may be one or more Deputy Governors appointed by the Board of Directors to perform such duties as are assigned by the Board.

The capital of the Bank is $\$ 5,000,000$ and is held entirely by the Minister of Finance. In accordance with the provisions of the Bank of Canada Act as amended in 1954, 20 p.c. of the Bank's annual profits were allocated to the Rest Fund until that Fund reached a required maximum of $\$ 25,000,000$ at the end of 1957 . Since that date, the whole of the Bank's profits have been transferred to the Receiver General.

The head office of the Bank is at Ottawa. It has agencies at Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Regina, Calgary and Vancouver and is represented in St. John's and Charlottetown.

The Industrial Development Bank.-The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:-

[^318]The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors of the Bank of Canada and the Deputy Minister of Trade and Commerce. The authorized capital of the Bank is $\$ 50,000,000$ and it may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed five times the aggregate of the Bank's paid-up capital and Reserve Fund.

The Bank may extend financial assistance to industrial enterprises in Canada which, by definition in the Act, include any industry, trade or other business undertaking of any kind. With respect to such enterprises the Bank is empowered to lend money or guarantee loans and where an enterprise is a corporation the Bank may also enter into underwriting agreements with regard to any issue of stock, bonds or debentures; acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement; and acquire certificates issued by a trustee to finance the purchase of transportation equipment. The total amount of commitments of the Bank, in the form of loans, guarantees, etc., in excess of $\$ 200,000$ each, may not exceed $\$ 200,000,000$.

The Bank may accept any form of collateral security against its advances, including realty and chattel mortgages which constitute the usual kind of security taken. The Bank is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of Incorporation provides that it should extend credit only when, in the Bank's opinion, credit or other financial resources would not otherwise be available on reasonable terms and conditions. Its lending takes the form of fixed-term capital loans rather than current operating loans. The Bank is specifically prohibited from engaging in the business of deposit banking. It has branch offices in the following cities: St. John's, Halifax, Saint John, Moncton, Rimouski, Quebec, Trois Rivières, Montreal, Ottawa, Toronto, Hamilton, Waterloo, London, Windsor, Sudbury, Port Arthur, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Kelowna, Vancouver and Victoria.

${ }^{1}$ Includes investments; the change in loans outstanding does not equal the difference between disbursements and repayments because of year-end accounting adjustments.

## Section 2.-Gurrency

Note Circulation.-The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. Those features of the development which then became permanent are outlined in the 1941 Year Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of $\$ 1, \$ 2, \$ 5, \$ 10, \$ 20$, $\$ 50$ and $\$ 100$. Deposits of chartered banks at the Bank of Canada conipleted the replacement of the old Dominion notes of $\$ 1,000$ to $\$ 50,000$ denomination that had previously been used as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the

1944 revision of the Bank Act cancelled the right of chartered banks to issue or re-issue notes after Jan. 1, 1945, and in January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

[^319]Coinage.*-Under the Currency, Mint and Exchange Fund Act (RSC 1952, c. 315), gold coins may be issued in denominations of twenty dollars, ten dollars and five dollars (nine-tenths fine or millesimal fineness, 900). Subsidiary coins include: silver coins in denominations of one dollar, 50 cents, 25 cents, 10 cents (eight-tenths fine or millesimal fineness, 800); pure nickel five-cent coins; and bronze (copper, tin and zinc) one-cent coins. Provision is made for the temporary alteration of composition in event of a shortage of prescribed metals. A tender of payment of money in coins is a legal tender in the case of gold coins issued under the authority of Sect. 4 of the Currency, Mint and Exchange Fund Act for the payment of any amount; in the case of silver coins for the payment of an amount up to $\$ 10$; nickel coins for payment up to $\$ 5$; and bronze coins up to 25 cents.

${ }^{1}$ Tombac, a copper-zinc alloy, was used to conserve nickel for war purposes; no coins of this metal have been issued since 1944.

The Royal Canadian Mint.*-The Mint at Ottawa was established as a branch of the Royal Mint under the (Imperial) Coinage Act 1870 and opened on Jan. 2, 1908. In 1931 (RSC 1952, c. 240) it was constituted a branch of the Canadian Department of Finance and has since operated as the Royal Canadian Mint. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation and of British sovereigns and small coins struck under contract for Newfoundland and Jamaica. Before 1914 only small quantities of gold bullion were refined but during World War I the Mint came to the assistance of the British Government by establishing a refinery in which nearly $20,000,000$ oz.t. of South African gold were treated on Bank of England account. The subsequent development of the gold mining industry in Canada resulted in gold refining becoming one of the principal activities of the Mint. Fine gold produced from the rough bullion shipments received from the mines is purchased by the Mint and later delivered to the Bank of Canada for account of the Minister of Finance in bars of approximately 400 oz.t. each or, for those mines authorized to sell gold in the open market, the bullion is shipped according to instructions from the mines. The fine silver extracted from the rough gold is generally used for coinage purposes.

${ }^{1}$ Less total float, i.e., cheques and other items in transit. $\quad{ }^{2}$ The deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes were reclassified from "personal savings deposits" to "other notice deposits" as at Sept. 30, 1957 in the returns of the banks to the Department of Finance; from that date the figures are thus not comparable with those for previous years. The amount of deposits reclassified was approximately $\$ 140,000,000$.

## Section 3.-The Commercial Banking System*

The Canadian commercial banking system consists of eight privately owned banks, chartered by Parliament and operating under the provisions of the Bank Act. $\dagger$ Of these eight, five are nation-wide institutions; two operate mainly in the Province of Quebec and in other French-speaking areas and one, affiliated with a New York bank, has branches

[^321]in four large cities. At the end of 1963, these banks together operated 5,626 banking offices of which 5,447 were in Canada and 179 abroad. Thus, the chief distinguishing feature of the Canadian banking system is the relatively small number of large banks having an extensive network of branches, operating under a single legislative jurisdiction (the Federal Government) and under one detailed and comprehensive statute (the Bank Act).

Since the first banks were established during the first quarter of the nineteenth century, the commercial banking system has developed in response to the changing needs of the Canadian economy, an evolution which is still in rapid progress. Canadian economic development has been characterized by two main features-successive but by no means continuous periods of rapid geographical expansion of settlement, and a continued dependence on export markets as new natural resources (agricultural land, forests and minerals) were exploited. Thus, Canadian banking has continually had to migrate to new areas and to find appropriate methods of financing new industries and new products; and it has from the beginning possessed a strongly 'international' character* with much emphasis on the financing of foreign trade, on foreign exchange operations, and on correspondent relations with foreign banks. At the same time, as regional isolation has gradually broken down and the economy has been integrated, banks originating in local areas have become part of a nation-wide banking system, in part by process of amalgamation particularly marked in the first twenty-five years of the present century.

## Bank Legislation

From the first, banks in what is now Canada sought to operate under Acts of incorporation (charters) passed by the legislatures of the colonies in which they operated. As new banks were incorporated and older ones obtained charter renewals, there developed in the bank charters themselves a quite extensive and fairly uniform code of banking law. At Confederation, responsibility for banking and currency was given to the Dominion Government and in 1871 the first general Bank Act was passed. This legislation is subject to review and revision every ten years, a feature that has helped to keep the banking system adapted to the needs of a changing economy. The decennial revision was due in 1964, but the Bank Act was extended for one year in order to provide time to consider recommendations made by the Royal Commission on Banking and Finance.

Certain characteristic features of the Canadian financial system have thus emergednotably the traditional emphasis of the chartered banks on "commercial" banking. The early banks were established by merchants for merchants. Their note issues provided a badly needed medium of internal exchange and they advanced working capital to finance the processes of trade. The aim was to make lending as far as possible short-term and self-liquidating. The bank charters from the first contained prohibitions against lending on the security of real property, except as secondary or subsequent security. Now, however, exceptions to the rule against lending upon security of real property, incorporated in the Bank Act in 1944 and 1954, allow the banks to participate in government-guaranteed loans to farmers and fishermen and for housing constructed under the National Housing Act, to lend to oil companies on the security of oil "in, under or upon the ground" and production equipment, and to extend their consumer-finance lending by taking chattel mortgages. It is also permissible for banks to make advances on the security of natural products and goods, wares and merchandise while they remain in the borrower's possession. These 'pledge' arrangements have facilitated loans to small businesses and farmers and have aided in commercial and manufacturing development, while giving the banks a reasonable degree of protection for their loans.

Today the Bank Act has become a most detailed and comprehensive piece of legislation which provides for the internal regulation and organization of the banks, for the auditing of their accounts, and for the ways in which their capital stock may be issued and transferred, their dividends paid, and their affairs settled in case of amalgamation, winding-up

[^322]or insolvency. In addition, it states what cash reserves the banks must keep, what reports they must make to the Government and to the Bank of Canada about their affairs and sets forth a variety of rules governing the conduct of business with the public. The Bank Act also specifies the maximum rate of interest that may be charged on bank loans. (Since the 1944 Bank Act revision this ceiling has been 6 p.c., replacing the 7 -p.c. ceiling that had prevailed since 1871.) The banks derive their corporate existence from the Act, which states that "each bank. . . . is a body politic and corporate and this Act is its charter"; successive Bank Acts have empowered the banks to do business for a period of ten years, until the next revision of the Act.

## Banking Operations

Operating under the Bank Act, the chartered banks at their branches accept deposits from the public, make loans covering a wide range of commercial, industrial, agricultural and consumer activities, deal in foreign exchange, receive and pay out Bank of Canada notes and coin, provide safekeeping facilities, and perform a variety of other services coming within the scope of the general business of banking. The head office of a Canadian bank does not transact ordinary day-to-day business with the public; it performs general administration and policy-making functions, manages the bank's investment portfolio, does its centralized accounting work, and maintains specialized departments devoted to inspection of branch operations, the development of branch office methods, the acquisition of new business, premises, staff, arrangements with foreign banks, advertising, etc.

Under its branch system, Canadian banking is able to provide standard banking facilities throughout the country. Every branch, even the smallest, can provide all banking services, and each has behind it the resources of a large bank, which means that lending requirements can be met just as well by a branch in a small town or a suburban branch as in the main branches of a large city. Branch banking also provides an excellent training for Canadian bank officers through the system of promotion and transfer from branch to branch. Almost without exception, the chief executives of the Canadian banks have grown up in the service and have been trained in this way.

The branch system has proved to be most flexible and Canadian banking has been able to keep pace with settlement and economic development during its periods of most rapid growth. Particularly during the past quarter-century, with a rapidly expanding economy, sharply rising population and growing urbanization, new branches have opened at a very rapid rate. Offices have been established in suburban areas, in new towns, oil fields and mining camps, as well as in the long-established urban centres where industrial and commercial growth have so enlarged the demand for banking services. In all, the number of banking offices in Canada, which was about 3,300 at the end of 1939 and 3,100 at the end of 1945 , grew by over 2,300 in the next eighteen years. As this growth suggests, Canadian banks have taken full advantage of the recent expansive atmosphere to extend the volume and variety of their services to industry and to individuals. Strongly competing for customers, they offer a wide variety of new deposit arrangements, including new savings programs, new forms of chequing accounts, and greatly broadened lending facilities.

By the end of the War, the banks had experienced more than fifteen years of restricted demand for commercial credit. Loans had declined sharply during the depression and shown only a slightly rising trend during the prewar years of incomplete recovery and, of course, in the wartime economy bank lending was subject to a variety of restrictive influences. The result was a marked change in the composition of bank assets; by the end of 1945 security holdings accounted for about 55 p.c. of the banks' total assets, compared with a little over 40 p.c. just before the War and only about 15 p.c. in 1930 . In the early years of postwar reconstruction, the economic control apparatus created for the War was gradually dismantled. The expansion of the private sector of the economy and the contraction of the government sector were quickly reflected in a shift of bank assets from government securities to commercial loans. Between the end of 1945 and the end of 1950,
bank loans in Canadian currency increased from about 21 p.c. to 31 p.c. of total assets. There was, at the same time, a rapid growth in total assets, as the monetary authorities leaned to the side of relatively easy money conditions to stimulate the economy and to ward off the widely anticipated postwar recession. In the five years ended Dec. 31, 1950, total assets expanded from about $\$ 7,300,000,000$ to $\$ 9,400,000,000$, almost all of the increase being in Canadian assets.

It was not until the outbreak of the Korean War in June 1950 that the fear of inflation, arising from the heavy demands on Canadian resources, led to the adoption of restraining measures. Since then the banks have experienced substantial changes in their creditgranting capacity, as the country's official monetary policy was adapted to meet changes in business conditions. Alternating periods of ease and restraint have been marked by periods of rapidly rising bank assets followed by levelling-off phases.

The Korean boom of 1950-51 was followed, after only a short pause, by the investment boom of 1953-54. Recession in 1954-55 was accompanied by an easy monetary policy, during which the banks built up their liquid assets in the form of government bonds. Then a second and greater investment boom got under way in late 1955, which carried the Canadian economy and the banking system into another period when resources were strained to the limit. At this time, new measures of restraint were introduced into the Canadian banking system by the monetary authorities, including an agreed secondary reserve ratio of 7 p.c. in addition to the cash reserves of 8 p.c. already prescribed in the Bank Act revision of 1954. A further agreement with the Bank of Canada was aimed at restraining term loans for capital purposes* and in 1956 bank loans to instalment finance companies were also put under some restraint. The boom of 1955-57 was followed by a mild recession in 1957-58, moderate recovery in 1958-59, slackening in 1960 and recovery again in 1961-63. In this period the banks have not regained the liquidity that characterized earlier postwar recessions, and there has been a growing need to husband resources carefully for the various and growing alternative outlets which developed as the result of economic growth, and of the efforts of both the Federal Government and the banks themselves to provide new uses for bank credit.

One of the first government measures was the Farm Improvement Loans Act of 1944, under which the chartered banks were authorized to make loans to farmers for the purchase of equipment and livestock and for making various improvements to their farm buildings and facilities. These loans are often for sizable amounts (an average of about $\$ 1,500$ ) and the terms have been gradually extended to a maximum sum of $\$ 7,500$ outstanding to any one borrower with a maximum period of ten years (four years for implements). The banks are guaranteed against loss up to 10 p.c. of their loans made during the three-year "lending periods", up to a maximum total of loans by all banks. This total is $\$ 400,000,000$ for the lending period to end in mid-1965. By the end of 1963 the total amount of loans made under this Act was approximately $\$ 1,376,000,000$ (see also pp. 452-453).

The 1954 revision of the Bank Act introduced a major change in banking practice by enabling the banks to acquire mortgages issued under the National Housing Act. About 35 p.c. of all NHA mortgage loans in the years 1954-59 were made by the chartered banks, but at the end of 1959 the NHA interest rate was raised to $6 \frac{3}{4}$ p.c. and the banks withdrew from this field of lending. Notwithstanding this, by Dec. 31, 1963 they held some $\$ 891,000,000$ in NHA mortgages, representing about 4 p.c. of total assets. Another change affecting housing in the 1954 revision enabled the banks to make home improvement loans under a guarantee system rather similar to the one developed for farm improvement loans. By the end of 1963, home improvement loans amounting to more than $\$ 312,000,000$ had been approved and the banks had about $\$ 72,000,000$ of such loans on their books.

[^323]In November 1960, the Small Businesses Loans Act was passed guaranteeing, under terms to the banks similar to those of the Farm Improvement Loans Act, certain types of bank loan to small businesses for the purposes of making capital improvements to premises and equipment. This provides for loans that do not fall within the usual scope of bank lending to small business, by reason of the term nature of the loan, together with the lack of collateral resources of the borrower. Of course, chartered banks make loans to small businesses for a great variety of purposes, including many of a medium-term character; indeed, the working capital loan to the small-size or medium-size industry or commercial enterprise is the traditional stock-in-trade business of the chartered banks.

In April 1961, the charter of the Export Finance Corporation of Canada Limited, which had been incorporated by special Act of Parliament in June 1959 for private interests, was acquired by the chartered banks. The principal purpose of the Corporation is to assist in the medium-term (one to five years) financing of exports which have been insured by the Export Credit Insurance Corporation, a Crown company.

Still another area of lending which has expanded greatly in recent years is that of consumer credit. While the banks have always made some personal loans, they have recently moved aggressively into the field of lending to the general public for the purchase of automobiles, consumer durables and debt consolidation. Following the 1954 Bank Act revision, and partly as a result of the change then made which enabled the banks to take chattel mortgage security, some banks have developed extensive consumer credit divisions. Personal loans made by the banks, other than those secured by stocks and bonds and home improvement loans, mounted from $\$ 420,000,000$ at the end of 1957 to $\$ 1,672,000,000$ outstanding at June 30, 1964.

Outside of Canada, the Canadian banks have continued to expand their branch systems in the Caribbean area (although the two Canadian banks operating in Cuba found it necessary to withdraw), in South America, Europe and Asia. In recent years the growth of an international money market, following the economic recovery in Europe and the restoration of confidence in the stability of the Western economies and their currencies, has led to large movements of Western capital from one centre to another. The Canadian banks have participated extensively in this international money market, mainly through New York and London where most of them maintain large offices.

The postwar growth in bank assets has been accompanied by a substantial increase in total earnings. Earnings per share of capital employed did not increase to the same extent, however, as the banks found it necessary to raise new funds from time to time after 1950 in order to maintain an appropriate relationship between their shareholders' capital and the rapidly rising level of risk assets. The banks have been among the largest issuers of new share capital to Canadians in the past quarter-century.

## Subsection 1.-Statistics of Chartered Banks

Branches of Chartered Banks.-Although there are fewer chartered banks now than at the beginning of the century, there has been a great increase in the number of branch banking offices. As a result of amalgamations, the number of banks declined from 34 in 1901 to 10 in 1931, and remained at that figure until the incorporation of a new bankThe Mercantile Bank of Canada-in 1953 brought the total to 11 . Since then the amalgamation in 1955 of The Bank of Toronto and The Dominion Bank as The TorontoDominion Bank, the amalgamation of Barclays Bank (Canada) with the Imperial Bank of Canada in 1956 and the amalgamation of the Canadian Bank of Commerce and the

Imperial Bank of Canada as the Canadian Imperial Bank of Commerce on June 1, 1961 have reduced this number to eight.* The number of branches of chartered banks in each province periodically from 1868 to 1963 is given in Table 8.

- See footnote t, p. 1037.

## 8.-Branches of Chartered Banks, by Province, as at Dec. 31 for Certain Years 1868-1963

Nore.-Figures for 1920 and subsequent years include sub-agencies in Canada receiving deposits for the banks employing them; there were 767 such sub-agencies at Dec. 31, 1963.

[^324]Cheque Payments.-A monthly record of the value of cheques charged to customer accounts at all chartered bank offices in 35 major clearing-house centres of Canada is available from 1924. During the ten-year period 1954-63, the total value of cheques cashed in these centres showed a gain of 143.3 p.c., an advance well distributed throughout the five economic areas. Quebec reported the largest gain with an increase of 153.9 p.c. followed by Ontario with 147.2 p.c., the Prairie Provinces with 135.1 p.c., the Atlantic Provinces with 112.6 p.c., and British Columbia with an advance of 109.7 p.c.

All the reporting centres with the exception of Victoria, B.C., Sarnia, Ont., and Medicine Hat, Alta., reported increases in 1963 over 1962. The largest advances in this comparison were made by Winnipeg, Man., with a gain of 25.3 p.c., Edmonton, Alta., with one of 23.3 p.c., St. John's, Nfld., with 18.5 p.c., Windsor, Ont., with 16.8 p.c. and Halifax, N.S., with 14.7 p.c.

## Subsection 2.-Government and Other Banking Institutions

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies: (1) the Post Office Savings Bank, in which deposits are a direct obligation of the Government of Canada; (2) Provincial Government savings banking institutions in Ontario and Alberta, where the depositor becomes a direct creditor of the province; and (3) two important savings banks in the Province of Quebec-the Montreal City and District Savings Bank and La Banque d'Économie de Québec-established under federal legislation and reporting monthly to the federal Department of Finance. In addition, co-operative credit unions encourage savings among low-income classes and extend small loans to their members.

Post Office Savings Bank.-The Post Office Savings Bank was established under the Post Office Act of 1867 (SC 1867, c. 10) to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon". Branches of the Government of Canada's

Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years and the amalgamation was completed in March 1929. Summary financial statistics for the years ended Mar. 31, 1961-64 follow. Figures back to 1868 are available in previous editions of the Year Book.

| Item | 1961 | 1962 | 1963 | 1964 |
| :---: | :---: | :---: | :---: | :---: |

Provincial Government Savings Banks.-Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta.

Ontario.-The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 Session and the first branches were opened in March 1922. Interest at the rate of 3 p.c. per annum, compounded half-yearly, is paid on accounts, and deposits are repayable on demand. Total deposits at Mar. 31, 1964 were $\$ 82,700,000$ and the number of depositors was approximately 94,$000 ; 21$ branches were in operation throughout the province.

Alberta.-Savings deposits are accepted at 60 Province of Alberta Treasury Branches throughout the province. The total of these deposits at Mar. 31, 1964 was $\$ 61,446,423$, of which $\$ 44,794,441$ was payable on demand bearing interest at $3 \frac{1}{2}$ p.c. per annum, $\$ 3,233,036$ was in term savings for terms of from one to five years bearing interest at 4 p.c. to $4 \frac{1}{2}$ p.c. per annum depending on the term, and $\$ 13,418,947$ was in term deposit receipts for terms of from 30 days to 365 days bearing interest at rates comparable to those paid on the open market.

Quebec Savings Banks.-The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871 had, at Mar. 31, 1964, a paid-up capital and reserve of $\$ 11,500,000$, savings deposits of $\$ 312,178,599$ and total liabilities of $\$ 326$,188,480 . Total assets amounted to $\$ 326,188,480$, including $\$ 131,849,057$ of federal, provincial, municipal and other securities.

La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a federal charter by SC 1871, c. 7, had, at Mar. 31, 1964, savings deposits of $\$ 52,733,443$ and a paid-up capital and reserve of $\$ 3,500,000$. Total liabilities amounted to $\$ 57,984,535$ and total assets to a like amount.

Credit Unions.-Credit unions are savings and loan associations operated by people with a common bond. The bond of association may be in a parish, club, lodge or labour union, that of employment in a plant, industry or department, or that of a residence in a rural or a well-defined urban community. During the ten-year period 1953-62, the number of credit unions chartered increased by 33 p.c.; the number of members in reporting organizations by 103 p.c.; and the assets of reporting organizations by 241 p.c. Membership reached 2,906,902 in 1962, Quebec reporting over half that membership and 59 p.c. of the total assets. In the Atlantic Provinces, Quebec and Saskatchewan the credit unions are predominantly rural but non-rural credit unions accounted for 62 p.c. of the total in Manitoba, 65 p.c. in Alberta, 75 p.c. in British Columbia and 93 p.c. in Ontario.

Savings, which include shares and deposits, amounted to $\$ 1,516,000,000$ in 1962 , a 10-p.c. increase over 1961; the average saving per credit union member in the later year was $\$ 521$. Loans made to members from these savings amounted to $\$ 672,490,000$ at interest rates of 1 p.c. per month or less on the unpaid balance.

There were 27 central credit unions in 1962; these central unions act as credit unions for the credit unions, mainly by accepting deposits from them and making loans to them, and they facilitate the flow of funds to credit unions that cannot meet the demand for local loans. Some of them admit co-operative associations to membership. The centrals had assets of $\$ 237,958,000$ in 1962, an increase of 19 p.c. over 1961 ; they made loans amounting to $\$ 114,716,000$ to member credit unions and co-operatives. The Canadian Co-operative Credit Society serves as a central credit union for provincial centrals and co-operatives all across Canada. In 1962, membership in this national organization included four provincial centrals, four commercial co-operatives, the Co-operative Life Insurance Company and the Co-operative Fire and Casualty Insurance Company. This central had assets of $\$ 2,144,914$ in 1962 , made loans to members amounting to $\$ 1,755,000$, and had member deposits of $\$ 1,550,000$.

## Section 4.-Foreign Exchange

The dollar, established officially as the currency of the united provinces of Canada on Jan. 1, 1858, and extended to cover the New Dominion by the Uniform Currency Act of 1870 , was defined as $15 / 73$ of the British gold sovereign.* That is, the par rate of exchange between the dollar and the pound sterling was fixed at $\$ 4.866$, making the Can-

[^325]adian currency the equivalent of the United States dollar at parity. With minor variations between the import and export gold points representing the cost of shipping gold in either direction, the value of the pound sterling in Canada remained at this level until the outbreak of World War I. The United States dollar, on the other hand, was at a discount in terms of Canadian funds for the first eleven years after Confederation since it was not redeemable in gold from February 1862 to January 1879. On the basis of gold equivalents it would appear that the greatest monthly average discount on the United States dollar after Confederation was approximately 31 p.c., reached in August 1868. From 1879 to 1914 the dollars of the two countries remained at par, varying only within the gold points or under $\$ 2$ per thousand.

On the outbreak of World War I, Canada and Britain suspended the gold standard. For some weeks both the pound and the Canadian dollar rose to a premium in New York. Subsequently both fell back with the pound going to a slight discount. In January 1916 the pound was officially pegged at $\$ 4.76$ in American funds. This level was maintained with the help of funds realized by sales of United States securities owned by residents of Britain, by borrowing in the United States and, after the American entry into the War, by the United States Government financing Allied purchases in that country.

From 1915 to the end of 1917, fluctuations in the rate of exchange between the Canadian and United States dollars did not exceed 2 p.c. on either side of parity; the pound was stable in terms of United States dollars during this period. In 1918 the Canadian dollar began to weaken. After the pound was unpegged in 1919, the Canadian dollar declined further and in 1920 it fell to 82 cents in New York with sterling going as low as $\$ 3.18$.

By the latter half of 1922 the Canadian dollar had returned practically to par in New York. Despite some further weakness in sterling, the dollar remained close to that level during the next two years, averaging 98.04 and 98.73 cents in terms of the United States dollar in 1923 and 1924, respectively, and fluctuating between a discount of about 3.6 cents and a premium of approximately 0.4 cents. After Britain resumed gold payments in April 1925, the range of fluctuation of the Canadian dollar narrowed further. From Canada's return to the gold standard in the period July 1, 1926 to January 1929, the exchange rate remained within the gold points. The Canadian dollar then went to a slight discount in New York. With the exception of the period July to November 1930, when it went to a small premium in New York, the dollar remained below parity until Britain abandoned the gold standard in September 1931. After that month the pound sterling depreciated sharply and the Canadian dollar followed, reaching lows* in New York of 80.5 cents in December 1931 and 82.6 cents in April 1933.

Following the prohibition of gold exports in the latter month by the United States, the pound and the Canadian dollar strengthened rapidly in terms of American funds. By November 1933 both currencies had reached a premium in New York. Meanwhile, in a series of steps beginning with permitting the export of newly mined gold in August 1933, the United States moved toward resumption of the gold standard. As of Feb. 1, 1934, the United States Treasury undertook to buy all gold offered at $\$ 35$ per ounce. After that the exchange rate between the Canadian and United States dollars stabilized. Until the outbreak of war in 1939 much of the trading was conducted within one cent of parity although the Canadian dollar in New York did go as high as 103.6 cents (September 1934) and as low as 98.0 cents (September 1938).*

On the outbreak of World War II in September 1939, Britain and other sterling countries introduced foreign exchange control involving fixed buying and selling rates of $\$ 4.02 \frac{1}{2}$ and $\$ 4.03 \frac{1}{2}$, respectively, in terms of the United States dollar. The Canadian dollar in New York declined until Sept. 16, 1939, when the Government instituted foreign exchange control $\dagger$ in Canada and established fixed buying and selling rates of $\$ 1.10$ to $\$ 1.11$ for the

[^326]U.S. dollar and $\$ 4.43$ to $\$ 4.47$ for sterling. As compared with previous months, the depreciation of the Canadian dollar in terms of United States funds was approximately half as great as that of the pound sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to $\$ 1.10 \frac{1}{2}$ and $\$ 4.45$, respectively, the official rates for the Canadian dollar remained unchanged until July 5, 1946. At that time the rate on the U.S. dollar was restored to par, with buying and selling rates for that currency of $\$ 1.00$ to $\$ 1.00 \frac{1}{2}$ and for sterling $\$ 4.02$ to $\$ 4.04$. These rates continued in effect until Sept. 19, 1949 when, following a 30.5 -p.c. reduction by Britain in the value of sterling to $\$ 2.80$ U.S. (an action which was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of $\$ 1.10$ and $\$ 1.10 \frac{1}{2}$ for United States funds. Sterling was quoted at $\$ 3.07 \frac{1}{4}$ and $\$ 3.08 \frac{3}{4}$ on the basis of the New York cross rate.

On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates which had been in effect at varying levels since 1939 would be withdrawn effective Oct. 2, and that the rate would henceforth be determined in the market for foreign exchange. This policy was carried out within the framework of exchange control until Dec. 14, 1951, at which time the Foreign Exchange Control regulations were revoked by the Governor in Council, terminating the period of exchange control that had prevailed in Canada since 1939. The Foreign Exchange Control Act was repealed in 1952. On May 2, 1962, the Minister of Finance announced that the Canadian dollar was being stabilized at a fixed par value of $92 \frac{1}{2}$ cents in terms of United States currency. This action was taken with the concurrence of the International Monetary Fund and, in accordance with the Articles of Agreement of that organization, the Government of Canada undertook to maintain the Canadian exchange rate within a margin of 1 p.c. on either side of the established par value.

The movements of the U.S. dollar in Canadian funds from January 1956 to December 1964 are shown in Table 20.

${ }^{1}$ Does not include $\$ 18,200,000 \mathrm{in}$ U.S. funds borrowed in the U.S. in August 1949 by the Government of Canada and set aside for the purpose of retiring an equal amount of certain securities payable in U.S. dollars on Feb. 1, 1950. ${ }^{2}$ On Oct. 1, 1959, $862,500,000$ representing the gold portion of Canada's increased quota was transferred to the International Monetary Fund. ${ }^{3}$ Includes the proceeds of a drawing equivalent to U.S. $\$ 300,000,000$ which was made from the International Monetary Fund in June 1962 and which was outstanding at year-end; the amount of Canada's net obligation to the International Monetary Fund was $\$ 276,000,000$ at the end of 1962 . The The amount of Canada's net obligation to the International Monetary Fund was $\$ 196,000,000$ at the end of 1963 .

## Section 5.-Loan and Trust Companies*

Canadian loan and trust companies, registered with either the federal or provincial governments, operate under the Loan and Trust Companies Acts (RSC 1952, c. 170 as amended by SC 1953, c. 5, SC 1958, c. 35, and SC 1961, c. 51; and RSC 1952, c. 272 as amended by SC 1953, c. 10, SC 1958, c. 42 , and SC 1961, c. 55 , respectively) and corresponding provincial legislation. Although statistics of provincially registered companies are not collected in detail, it is estimated that more than 95 p.c. of the business of such companies is represented in the figures of this Section, so that they may be accepted as fairly inclusive and representative of the volume of business transacted.

The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings department deposits. The extent of investments in mortgages by federal and provincial loan companies may be gauged by the following figures: total assets of such companies for the years 1961 and 1962 amounted to $\$ 771,995,209$ and $\$ 925,956,326$, respectively, which amounts include mortgage loans of $\$ 595,251,243$ and $\$ 722,303,761$, respectively; thus, the resulting percentages of mortgages to total assets for those years were approximately 77 p.c. and 78 p.c., respectively.

Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents

[^327]for municipalities and companies, as transfer agents and registrars for stocks and bond issues, as trustees for bond issues and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits for investment but the investing and lending of such deposits and of actual trust funds are restricted by law. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from $\$ 489,740,530$ in 1953 to $\$ 1,907,095,811$ in 1962 . In the former year the total of estates, trust and agency funds administered amounted to $\$ 4,102,013,154$ and in 1962 to $\$ 9,014,208,791$.

A summary of operations of provincial and federal loan and trust companies is given in Table 22. As a result of the nature of the operations of the latter companies, which are intimately connected with the matter of probate, the larger trust companies usually choose to operate under provincial charters. The statistics of Tables 23, 24 and 25 refer to those companies incorporated both by the Government of Canada and by the provinces. Included in the statistics of federal companies are data of loan and trust companies incorporated by Nova Scotia and brought by the laws of that province under the examination of the federal Department of Insurance, as well as data for trust companies in New Brunswick and Manitoba.

## Section 6.-Licensed Small Loans Companies and Licensed Money-Lenders*

Licensed small loans companies and licensed money-lenders are subject to the provisions of the Small Loans Act (RSC 1952, c. 251, as amended by c. 46 of the Statutes of 1956) an enactment of the Parliament of Canada regulating personal loans not in excess of $\$ 1,500$ made on the security of promissory notes of borrowers. Most of these notes are additionally secured by endorsements or chattel mortgages. The Act permits, in the case of licensed lenders, maximum rates of cost of loan, including charges of every kind, of 2 p.c. per month on that portion of the unpaid balance of a loan not exceeding $\$ 300$, 1 p.c. per month on that portion of the balance exceeding $\$ 300$ but not exceeding $\$ 1,000$, and one half of 1 p.c. per month on any remainder of the balance exceeding $\$ 1,000$. The maximum rate permitted to be charged by an unlicensed lender is 1 p.c. per month. Prior to Jan. 1, 1957, the scope of the Act extended only to loans of $\$ 500$ and under and the maximum rate permitted to be charged by licensed lenders was 2 p.c. per month and by unlicensed lenders 12 p.c. per annum. The small loans companies-seven in number-were incorporated by special Acts of the Parliament of Canada, the first such company commencing business in 1928. Moneylenders, of which there are 80, are made up of companies otherwise incorporated and include a few partnerships and individuals. Table 26 gives the combined financial experience of small loans companies and licensed money-lenders for the years 1959-62.

[^330]
## 26.-Assets and Liabillties of Small Loans Companies and Money-Lenders, 1959-62

| Assets and Liabilities | 1959 | 1960 | 1961 | 1962 |

| Surplus paid in by shareholders | 17,999,186 | 20,107, ${ }^{3977}$ | 25,195,896 | 29,462,148 |
| Earned surplus <br> Other | 17,999 $27,142,315$ | 32,325,589 | 32,467,440 | 35,411,004 |

The combined companies showed a substantial increase in the amount of business done in 1962 compared with 1961. The number of small loans made to the public during 1962 increased from $1,169,699$ to $1,304,155$, or by about 11 p.c., and the amount of such loans rose from $\$ 605,687,740$ to $\$ 700,906,537$, or by about 16 p.c. The average small loan made was approximately $\$ 537$ compared with $\$ 518$ in 1961 . At the end of the year, small loans outstanding numbered $1,055,266$ for an amount of $\$ 482,246,944$ or an average of $\$ 457$ per loan; comparable figures for 1961 were $992,169, \$ 426,157,274$ and $\$ 430$, respectively.

Gross profits of small loans companies and money-lenders before income taxes and before taking into account any increase or decrease in reserves for bad debts increased from $\$ 28,975,756$ in 1961 ( $\$ 20,746,644$ being the profit on small loans and $\$ 8,229,112$ the profit on business other than small loans) to $\$ 30,517,560$ in 1962 ( $\$ 19,781,761$ being the profit on small loans and $\$ 10,735,799$ the profit on business other than small loans).

The interpretation of the symbols used in the tables throughout the Year Book will be found on $p$. viii of this volume.

Insurance, for the purpose of statistical analysis, is usually classified as life, fire and casualty. Most companies operate under Federal Government registration although some have provincial licences only. Also many fraternal orders and societies are engaged in this kind of business. A specially prepared article on the life insurance business in Canada, its regulation, its growth and its place in the life of the individual and in the economic structure of the country appeared in the 1963-64 Year Book pp. 1071-1077; other special articles appearing in previous editions are listed in Part II of Chapter XXVIII under the heading "Insurance"

## Section 1.-Life Insurance

Life insurance in force in Canada with companies registered by the Federal Government (exclusive of fraternal benefit societies) amounted to nearly $\$ 56,804,000,000$ at the end of 1963 , an increase of $\$ 4,571,000,000$ during the year. The ratio of gain in business in force, expressed as a percentage of the amount in force at the beginning of the same year, stood at 8.8 p.c. in 1963.

## Subsection 1.-Summary of Life Insurance in Canada

Tables 1 and 2 summarize insurance premiums, claims, amounts of new policies effected, and amounts of insurance in force on Dec. 31 for the years 1962 and 1963. These data are presented in Table 1 on the basis of the supervising government authorities for the companies and societies concerned, and the same data are presented in Table 2 classified on the basis of nationality of company or society and by supervising government authorities.

## Subsection 2.-Operational Statistics for Life Insurance Transacted in Canada by Companies under Federal Registration

The amount of life insurance in force in Canada has shown an almost continuous advance year by year since the beginning of the record in 1869 . The amount per capita of the estimated population has almost doubled since 1953-evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune.

The operations analysed in the tables of this Subsection, with the exception of Table 7, include only those of companies under federal registration and are exclusive of fraternal organizations and provincial licensees. However, companies under federal registration account for over 92 p.c. of the life insurance in force in Canada.

## 3.-Life Insurance Effected and in Force in Canada by Companies under Federal Registration, Decennially 1880-1950 and Annually 1951-63

Note.-Figures for 1869-1900 are given in the 1938 Year Book, p. 958; for 1901-39 in the 1942 edition, p. 855; and for $1940-49$ in the 1957-58 edition, p. 1168. Statistics of fraternal society insurance, excluded here, are given at pp. 1066-1067.

## Subsection 3.-Finances of Companies Transacting Life Insurance under Federal Registration

The financial statistics in Tables 8 and 9 relate only to life insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising outside of Canada as well as in Canada.
8.-Total Assets and Liabilities for Life Insurance of Canadian Companies under Federal Registration and Assets and Liabilities in Canada for Life Insurance of British and Foreign Companies under Federal Registration, 1961-63.

## Subsection 4.-Life Insurance in Canada Transacted by Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 10 gives statistics of life insurance in Canada transacted by fraternal benefit societies and Table 11 shows statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of Actuaries) and a readjustment of rates or benefits must be made, unless the actuary certifies to the solvency of each fund. The first sections of Tables 10 and 11 relate to the 16 Canadian societies registered by the federal Department of Insurance, only one of which does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, though forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not been licensed previously by the provinces have since obtained federal authority to transact business. At the end of 1963 there were 33 foreign fraternal benefit societies federally registered to transact business in Canada, although two of these do not grant life insurance benefits.

## Subsection 5.-Life Insurance Effected and in Force Outside Canada by Canadian Companies under Federal Registration

In this Subsection, there are given for the years 1962 and 1963 summary statistics of insurance effected and insurance in force at the end of the year in currencies other than Canadian dollars, as written by Canadian companies under federal registration. The statistics for individual companies are shown in Table 12 and for individual currencies in Table 13. The data given in both of these tables are in terms of Canadian dollars, the conversions from the various foreign currencies having been made at the book rates of exchange used by the various companies. Although these book rates of exchange do not follow the day-to-day fluctuations in the current rates of exchange, they are adjusted when necessary to keep them reasonably in line with the current rates.

Canadian life insurance companies operating under federal registration at Dec. 31, 1963 had life insurance in force amounting to $\$ 16,469,828,198$ in countries outside Canada. Insurance in force in currencies other than Canadian dollars amounted to $\$ 16,421,281,141$; the difference between these figures is presumably the net amount of business in countries outside Canada transacted in Canadian currency. The business in force in Canada of Canadian companies registered by the Federal Government amounted to $\$ 39,135,221,497$ at Dec. 31, 1963, and the total business on the books of these companies, in and out of Canada, amounted to $\$ 55,605,049,695$. Thus, about 30 p.c. of the total business in force
for Canadian companies registered by the Federal Government was in force in countries outside Canada.

In connection with their business outside Canada, the Canadian life insurance companies registered by the Federal Government held, at the end of 1963, Commonwealth and foreign investments in the amount of $\$ 3,245,406,327$.
12.-Life Insurance Effected and in Force for Canadian Companies (excluding Fraternal Societies) under Federal Registration, in Currencies other than Canadian Dollars, by Company, 1962 and 1963.

## Section 2.-Fire and Casualty Insurance

At the end of 1963 there were 275 companies registered by the Federal Government to transact fire insurance in Canada ( 85 Canadian, 75 British and 115 foreign). Of these companies, 267 ( 79 Canadian, 75 British and 113 foreign) were also registered to transact casualty insurance. In addition, 100 companies were registered by the Federal Government to transact casualty insurance but not fire insurance ( 22 Canadian, 7 British and 71 foreign). Of the companies registered to transact fire and/or casualty insurance, 75 were also registered to transact life insurance; 14 of these were registered for fire, life and casualty insurance and 61 for life and casualty but not fire insurance. It should be noted also that, in addition to the companies registered by the Federal Government to transact casualty insurance, there were 26 registered fraternal benefit societies transacting accident and sickness insurance, of which 23 also transacted life insurance.

The operations analysed in the tables of this Section, with the exception of Table 14, include only those companies under federal registration. As shown in Table 14, some fire and casualty insurance is transacted in Canada by companies that are provincially licensed only. These companies generally confine their operations to the province of incorporation but may be allowed to sell insurance in other provinces. Many of them are mutual organizations transacting only fire insurance on a county, municipal or parish basis.

Table 14 summarizes net premiums written and net claims incurred for the years 1962 and 1963 in the fields of fire insurance and casualty insurance in Canada. These data are presented on the basis of the supervising government authorities for the companies concerned. The table relates to insurance companies only; no data are included with respect to fraternal benefit societies.
14.-Fire and Casualty Insurance Transacted in Canada, 1962 and 1963

[^335]
## Subsection 1.-Fire Insurance Transacted in Canada by Companies under Federal Registration

Net premiums written and net claims incurred during each year from 1954 to 1963 are given in Table 15 and the figures for 1962 and 1963 are classified by province and nationality of company in Table 16.

## 15.-Fire Insurance Transacted in Canada by Companies under Federal Registration, 1954-63

## Subsection 2.-Fire Losses

The information in Tables 17 to 19 , which deals with the loss of property and life caused by fire, has been summarized from the annual report Fire Losses in Canada prepared by the Dominion Fire Commissioner, Department of Public Works. Federal losses not included in these figures in 1962 amounted to $\$ 4,556,973$ from 2,237 fires; average federal losses for the period $1953-62$ amounted to $\$ 4,734,810$ from an annual average of 2,265 fires.

## 17.-Statistics of Fire Losses, 1953-62

Note.-Figures for 1926-46 are given in the 1947 Year Book, p. 1078, and those for 1947-52 in the 1960 edition, p. 1169. Figures from 1922 may be obtained from the Dominion Fire Commissioner, Department of Public Works.

## Subsection 4.-Finances of Companies Transacting Fire and Casualty Insurance under Federal Registration

The financial statistics of Tables 21 to 23 relate to fire and casualty insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising out of Canada as well as in Canada.
21.-Total Assets for Fire and Casualty Insurance of Canadian Companies under Federal Registration and Assets in Canada for Fire and Casualty Insurance of British and Foreign Companies under Federal Registration, 1961-63.

## Section 3.-Government Insurance

## Federal Government Insurance

For more than fifty years the Federal Government has operated an annuity service, instituted to assist Canadians to make provision for old age; this service is described below. In addition, various insurance schemes have been adopted in recent years by the Federal Government or co-operatively by the federal and provincial governments. Information on unemployment insurance, health insurance, veterans insurance, export credits insurance, etc., will be found in the appropriate Chapters on Labour, Health and Welfare, Foreign Trade, etc.

Government Annuities.*-The Government Annuities Act (RSC 1952, c. 132) was passed in 1908 and is administered by the Minister of Labour.

A Canadian Government annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in monthly instalments for life, or for life and guaranteed for a period of years. The minimum annuity is $\$ 10$ and the maximum $\$ 1,200$ a year or the actuarial equivalent if the annuity is to reduce by the amount of payments under the Old Age Security Act. Annuity contracts may be deferred or immediate. Deferred annuities are purchased by periodic or single premiums. Immediate annuity contracts provide immediate income. Annuities may be arranged to reduce by $\$ 75$ a month at age 70 to fit in with payments under the Old Age Security Act.

The property and interest of the annuitant are neither transferable nor attachable. In the event of the death of the annuitant before a deferred annuity vests, all money paid is refunded with interest. Provision is made in the Act for group annuity contracts whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members, the purchase money being derived partly from wages and partly from employer contributions or entirely from employer contributions. Group annuity plans now in effect cover a variety of industries and many municipal corporations throughout Canada. Annuities arising from individual contracts may be taxable in either of two ways: (1) if registered under Sect. 79B of the Income Tax Act for tax exemption on premiums, the annuity is fully taxable, or (2) if not registered the annuity is taxable on the interest portion only. Annuities arising from registered pension plans are fully taxable but the employee and the employer are entitled to tax exemption year by year on their annual contributions to the pension plan.

From Sept. 1, 1908, the date of the inception of the system, to Mar. 31, 1964, the total number of annuity contracts and certificates issued, excluding replacements, was 531,441 . On the latter date, 90,607 annuities were being paid amounting to $\$ 50,922,505$ annually and 298,338 deferred annuities were being purchased. The net total amount of purchase money received up to Mar. 31, 1964 was $\$ 1,379,353,536$. At that date there were in force 1,365 pension plans underwritten by government annuities, providing 207,865 employees with portable pensions; approximately 26,000 retired employees were receiving pensions. The number of certificates issued during the year was 2,470 compared with 3,687 in 1962-63.
*Revised in the Government Annuities Branch, Department of Labour, Ottawa.

## Provincial Government Insurance

Saskatchewan.-The Saskatchewan Government Insurance Office, a Crown corporation established by the Saskatchewan Government Insurance Act, 1944, commenced business in May 1945. It deals in all types of insurance other than sickness and life. The aim of the legislation is to provide residents of the province with low-cost insurance designed for their particular needs. Rates are based on loss experience in Saskatchewan only and the surplus is invested, to the extent possible, within the province. Premium income for 1963 amounted to $\$ 9,767,855$ and earned surplus to $\$ 334,738$. The total amount made available to the Government of Saskatchewan since the beginning of government insurance operations in 1945 to Dec. 31, 1963, was $\$ 4,609,077$. Assets at the latter date were $\$ 19,267,375$, of which $\$ 12,700,000$ were invested in bonds and debentures issued by Saskatchewan schools, municipalities, hospitals and the province. Independent insurance agents numbering 573 sell government insurance throughout the province.

The Automobile Accident Insurance Act, which became effective Apr. 1, 1946, is administered by the Saskatchewan Government Insurance Office. It establishes a compulsory automatic insurance plan designed to provide a reasonable minimum of compensation for losses arising from motor vehicle accidents regardless of fault. It also provides public liability insurance, with an inclusive limit of $\$ 35,000$ for bodily injury and property damage, as well as comprehensive and collision coverage subject to a $\$ 200$ deductible for private passenger cars. Rates vary from $\$ 4$ a year for trucks to $\$ 49$ for late-model private passenger cars, and also vary for other types of motor vehicles depending on size and usage. From the inception of the Act in 1946 to Dec. 31,1963 , more than $\$ 70,000,000$ was paid in claims.

The Saskatchewan Government Insurance Office, under contract with the Saskatchewan Department of Natural Resources, offers insurance to farmers covering damage to unharvested crops by certain wildlife such as ducks, geese, sandhill cranes, deer, elk, bear and antelope.

Information regarding the operation of the Saskatchewan Government Insurance Office or the Automobile Accident Insurance Act may be obtained from the Office Librarian, Saskatchewan Government Insurance Office, Regina, Sask.

Alberta.-Provincial government insurance in Alberta, coming within the purview of the Alberta Insurance Act, relates (1) to the Alberta General Insurance Company, in which the entire business of the fire branch of the Alberta Government Insurance Office was vested by the Legislature on Mar. 31, 1948, and (2) to the Life Insurance Company of Alberta, which was constituted on the same date to take over the life branch of the Alberta Government Insurance Office. Each company is administered by a separate board of directors. The Lieutenant-Governor in Council appoints the members to the respective boards but the charter of the Life Insurance Company of Alberta provides for the election of two policyholder directors. While both companies are Crown corporations, they are not entitled to the usual immunities of the Crown, since they may sue and be sued in any court of competent jurisdiction.

A variety of agencies in Alberta offer forms of prepaid protection corresponding to insurance but the nature of the enabling legislation governing these plans emphasizes the fact that they do not constitute insurance. Because such exemptions are specifically provided by the insurance laws of the province, reference to these plans is necessary only to make it clear that they do not come within the scope of the Alberta Insurance Act. It should be noted that the Alberta Hail Insurance Act is administered by the Provincial Treasurer but none of the provisions of the Alberta Insurance Act apply to the Alberta Hail Insurance Board.

Further information on provincial insurance matters may be obtained from the Superintendent of Insurance, Department of the Provincial Secretary, Edmonton, Alta.

## Section 4.-Pension Plans

Very few pension plans in Canada have been in existence for more than 25 years and most of the older plans were installed by governments and financial institutions, such as banks. Employers in industry began showing an interest in pension plans for their employees shortly before World War II and from that time on there was a rapid increase in the rate at which plans were introduced.

Up to 1948 the majority of employers made arrangements with either the Annuities Branch of the Department of Labour (see pp. 1077-1078) or an insurance company for the underwriting of their plans. Then began the use of the facilities of corporate trustees (trust companies) to handle pension moneys, and by 1953 the amount of funds under control of such trusteed plans had become a significant factor in the capital market and a growing form of savings. Trusteed pension funds are also managed by individual trustees appointed by the employer or through a Pension Fund Society, which is a body incorporated under federal or provincial pension fund societies Acts, companies Acts, etc.

Table 27 shows the distribution of pension business for the years 1957-63.
27.-Distribution of Pension Business between Trusteed Funds, Life Insurance Company Annuities and Government Annuities, 1957-63

Pension trust funds derive their income from employer and employee contributions, investment income and profit on the sale of securities. Expenditures arise from pension payments, pensions purchased from an underwriter on retirement or separation, cash withdrawals on death or separation, administrative costs and losses on the sale of securities. The funds are invested in federal, provincial, municipal and corporate bonds, stocks,
mortgages, real estate and lease-backs. In recent years corporate trustees have introduced the "pooled" or "classified" type of fund, which enables small plans to have their assets combined so that each fund participates in the diversity, security and yield previously available only to the much larger single funds. The trustees of a fund, whether corporate or individuals, may also purchase mutual funds.

Table 28 shows the various types of trusteed funds and the income, expenditures and assets of the funds in 1961-63.

## PART I.-THE ARMED SERVICES AND DEFENCE RESEARCH*

## Section 1.-The Department of National Defence

The control and management of all matters relating to national defence, the Canadian Forces and the Defence Research Board are the responsibility of the Minister and Associate Minister of National Defence; the duties and functions relating to national survival have also been assigned to the Department of National Defence with the Canadian Army undertaking the major role.

Effective Aug. 1, 1964, the Headquarters of the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force were integrated to form a single Canadian Forces Headquarters (CFHQ) under a single Chief of Defence Staff. The role of CFHQ is to provide military advice to the Minister of National Defence and to control and administer the Canadian Forces.

CFHQ is organized in four functional Branches headed by the Chief of Operational Readiness, the Chief of Personnel, the Chief of Logistics Engineering and Development and the Comptroller General, who are responsible for advising and supporting the Chief of Defence Staff in matters relating to their assigned spheres of activity. The Royal Canadian Navy, Canadian Army and Royal Canadian Air Force retain their individual identities. The Defence Research Board conducts research relating to the defence of Canada and also undertakes the development of or improvements in materiel.

The civilian administration of the Department is organized under the Deputy Minister and is constituted on a functional basis. The Deputy Minister, assisted by an Associate Deputy Minister, maintains a continuing review and control over the financial aspects

[^342]of operational policy, logistics, and personnel and administration. Four Assistant Deputy Ministers each administers a division of the Deputy Minister's branch responsible for: administration and personnel; construction, engineering and properties; finance; and supply. Also responsible to the Deputy Minister are: the Judge Advocate General, the Departmental Secretary and the Director of Information Services.

The Defence Council meets at regular intervals to consider and advise on major policy matters. The Council consists of: the Minister of National Defence as Chairman; the Associate Minister of National Defence as Vice-Chairman; and the Parliamentary Assistant to the Minister of National Defence, the Deputy Minister of National Defence, the Chief of Defence Staff, the Chairman of the Defence Research Board, the Vice-Chief of Defence Staff and a Secretary as members.

Liaison in Other Countries.-The Chief of Defence Staff, who is the Canadian military representative to the North Atlantic Treaty Organization, is responsible for advice on all NATO military matters and acts as a military adviser to Canadian NATO delegations. For purposes of liaison and the furtherance of international co-operation in defence, Canada also maintains: (1) the Canadian Joint Staff London, representing the Canadian Armed Forces and the Defence Research Board in Britain, the Chairman of which is the principal military adviser to the Canadian High Commissioner in London; (2) the Canadian Joint Staff Washington, representing the Canadian Armed Forces and the Defence Research Board in the United States, the Chairman of which is the principal military adviser to the Canadian Ambassador in Washington, the Canadian National Liaison Representative to SACLANT Headquarters, and the Canadian member of the NATO Military Committee in Permanent Session; (3) the Canadian National Military Representative in Paris, who is the principal military adviser to the Canadian Permanent Representative to the North Atlantic Council and the Canadian National Military Representative to SHAPE; and (4) Service Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence, which provides advice on such matters to the respective governments.

Canada-United States Committee on Joint Defence.-This Committee is composed of: for Canada, the Secretary of State for External Affairs, the Minister of National Defence and the Minister of Finance; for the United States, the Secretary of State, the Secretary of Defense and the Secretary of the Treasury; together with such other Cabinet members as either government may designate from time to time. Its function is to consult periodically on any matters affecting the joint defence of Canada and the United States; to exchange information and views at the ministerial level on problems that may arise, with a view to strengthening further the close co-operation between the two governments on joint defence matters; and to report on such discussions in order that consideration may be given to measures deemed appropriate and necessary to improve defence cooperation. Meetings normally alternate between Canada and the United States with the host country providing the chairman.

Mutual Aid.-Canada's contributions to NATO are outlined on pp. 154-155.
Rates of Pay and Allowances.-The entire pay structure for comparable ranks in the different Services is on a uniform basis. Monthly rates of pay and allowances effective Oct. 1, 1962 are given in Table 1.

${ }^{1}$ Paid to other ranks only.
${ }^{2}$ Depending on rank on promotion.

The allowances shown in Table 1 are explained briefly as follows.
Subsistence Allowance.-This allowance is granted whenever rations and quarters are not provided. A married man living with his family uses his subsistence allowance for their maintenance as well as his own.

Ration Allowance.-A ration allowance is granted when quarters are available but rations are not provided. It is not payable concurrently with subsistence allowance.

Quarters Allowance.-A quarters allowance is granted when rations are provided but quarters are not available. It is not payable concurrently with subsistence allowance.

Marriage Allowance.-The amount of this allowance is $\$ 30$ a month for men and $\$ 10$ a month for officers, subject to a reduction of $\$ 10$ a month where permanent married quarters are occupied or $\$ 2.50$ a month where temporary married quarters are occupied. All ranks may draw this allowance upon marriage provided the initial training period has been completed and the age of 21 years has been attained by men and 23 years by officers.

Separated Family's Allowance.-An officer or man while separated from his dependants for any of various reasons (i.e., movement of dependants prohibited, illness of dependants, lack of suitable accommodation), on being moved other than temporarily may be entitled to separated family's allowance at a rate and for a period depending on circumstances (i.e., rank, reason for separation, whether or not he has children, whether or not his family is accommodated in married quarters, whether or not he is provided with quarters and rations). The rates listed are the maximum.

In addition to the above, Foreign Allowances of various kinds are granted to officers and men posted for duty outside Canada to compensate for additional living expenses or hardships incurred; these vary with rank, appointment and location. Isolation Allowances are granted to officers and men serving at specified isolated posts in Canada at rates depending upon location and circumstances. Outfit Allowances and Clothing Credits are as follows: Officers receive a single payment of $\$ 450$ on appointment and Warrant Officers Class I, $\$ 270$; men receive a free issue of clothing when they join and thereafter a monthly clothing credit or allowance of $\$ 7$, Navy Petty Officer 1st class and above receive $\$ 8$, and women $\$ 8$. An Aircrew Allowance of $\$ 75$ a month is paid to an officer or man undergoing flying training. For qualified aircrew this allowance may be increased to $\$ 150$, depending on rank, if filling an appointment requiring active and continuous flying duties, and to $\$ 100$, depending on rank, for maintaining proficiency. Submarine Allowance is granted an officer or man undergoing submarine training or filling an appointment in a submarine; the allowance for trained submarine personnel varies from $\$ 65$ to $\$ 115$ a month depending on rank. An officer or man actively engaged or undergoing training as a parachutist or on fying or submarine duty and not entitled to aircrew allowance or submarine allowance is paid a Risk Allowance at the rate of $\$ 30$ a month. Medical, Dental and Legal Officers are granted extra allowances according to rank.

## Subsection 1.-The Royal Canadian Navy

Role and Organization.-The role of the Royal Canadian Navy, in support of Canada's defence policy, is to maintain sea communications, to defend Canada against attack from the sea, to contribute to the collective defence of the NATO area against attack from the sea, and to contribute naval forces to the United Nations as may be required. It is substantially an anti-submarine ( $\mathrm{A} / \mathrm{S}$ ) role.

The Royal Canadian Navy comes under the central authority of the Chief of the Defence Staff at Canadian Forces Headquarters in Ottawa. The Flag Officer Atlantic Coast, at Halifax, N.S., and the Flag Officer Pacific Coast, at Esquimalt, B.C., exercise operational and administrative command of ships and establishments within the Atlantic and Pacific Coast Commands. The Flag Officers also hold the additional appointments of Maritime Commander Atlantic and Maritime Commander Pacific, respectively. As such,
each is responsible for anti-submarine operations involving RCN and RCAF forces in his Command. The 20 Naval Divisions of the Royal Canadian Naval Reserve are under the over-all command of the Commanding Officer Naval Divisions, with headquarters at Hamilton, Ont. There are naval staffs in London, England, and Washington, D.C., U.S.A., to maintain liaison with the Royal Navy and the United States Navy. As a result of Canada's NATO commitments, officers of the Royal Canadian Navy serve on the staffs of: the Supreme Allied Commander, Atlantic, at Norfolk, Va., in the United States; the Commander-in-Chief, Eastern Atlantic Area, at Northwood in Britain; and the Com-mander-in-Chief, Western Atlantic Area, at Norfolk, Va. The Flag Officer Atlantic Coast holds the NATO appointment of Commander, Canadian Atlantic Sub-Area.

The strength of the RCN on Aug. 31, 1964, was 20,276 officers, men and women in the regular force and 2,875 in the reserve force.

Operations at Sea, 1963-64.-During 1963, ships of the RCN spent more than 5,700 days at sea and steamed over $1,000,000$ nautical miles on exercises, training exercises, patrols and on passage; naval aviators flew over $5,370,000$ nautical miles in 35,600 hours flying and made 3,836 day and night deck landings on board HMCS Bonaventure. HMCS Provider, a 22,000-ton replenishment ship, joined the fleet in September 1963 and, by Sept. 1, 1964, four new Mackenzie class destroyer escorts and one Annapolis class had also joined and one was under construction. Conversion of two St. Laurent class destroyer escorts was completed in 1963 and one in 1964; three others were under conversion, which includes the fitting of variable depth sonar and helicopter handling facilities. Ojibwa, the first of three submarines being built at Chatham, England, for the RCN, was launched in February 1964 and will commission in September 1965. The second was laid down in June 1964 and will be launched in January 1966. Five of nine CHSS-2 anti-submarine helicopters have been delivered to replace the HO4S-3's in HMCS Bonaventure.

Training.-The major training establishments of the RCN are HMCS Cornwallis near Digby, N.S.; HMCS Shearwater near Dartmouth, N.S.; HMCS Stadacona at Halifax, N.S.; HMCS Hochelaga at LaSalle, Que.; HMCS Gloucester near Ottawa, Ont.; and HMCS Naden at Esquimalt, B.C. Men and women entering the RCN receive their basic training at HMCS Cornwallis; the courses are normally 15 weeks in length. Cadets entered under the Regular Officer Training Plan (ROTP) or College Training Plan (CTP) receive most of their early training at the Canadian Services Colleges (see p. 1095) or a Canadian university; those entered on a short-service appointment train in HMCS Venture at Esquimalt, B.C. All cadets receive practical training with the Fleet at various times of the year. A University Naval Training Division program provides junior officers for the RCN and the RCN Reserve. The cadets are required to complete two winter-training periods and two summer-training periods and certified specified courses.

On Sept. 30, 1964, the RCN had approximately 828 men taking new-entry training, 1,745 men undergoing other training in the various trade areas, and 655 cadets and 217 officers on courses.

Royal Canadian Naval Reserve. -The recruiting and training of officers and men of the RCN Reserve is conducted mainly through 17 Naval Divisions across Canada under the over-all command of the Commanding Officer Naval Divisions, with Headquarters at Hamilton, Ont. Naval Divisions are established in the following centres:-
St. John's, Nfld., HMCS Cabot
Charlottetown, P.E.I., HMCS Queen Char-
lotte (to be closed Dec. 31, 1964)
Halifax, N.S., HMCS Scotian
Saint John, N.B., HMCS Brunswicker
Quebec, Que., HMCS Montcalm
Montreal, Que., HMCS Donnacona
Toronto, Ont., HMCS York
Ottawa, Ont., HMCS Carleton
lotte (to be closed Dec. 31, 1964)
Halifax, N.S., HMCS Scotian
Saint John, N.B., HMCS Brunswicker
Quebec, Que., HMCS Montcalm
Montreal, Que., HMCS Donnacona

Ottawa, Ont., HMCS Carleton

[^343]Naval Divisions, commanded by Reserve officers, provide both basic and specialized training for officers and men of the RCN Reserve. The Great Lakes Training Centre at Hamilton conducts new-entry reserve training afloat during the summer months.

Royal Canadian Sea Cadets.-Royal Canadian Sea Cadets, sponsored by the Navy League of Canada and supported by the RCN, consist of 167 authorized corps, supervised by 16 Naval Officers responsible to the Commanding Officer Naval Divisions. Instruction is carried out by RCSCC Officers. Two training establishments-Cornwallis on the East Coast and Quadra on the West Coast-accommodate officers and cadets for two-week training periods in the summer. In addition, selected cadets receive a seven-week training course at naval establishments. Sea experience is provided throughout the year in various types of ships of the RCN. In August 1964, the strength of the corps was 1,065 officers and 9,066 cadets.

## Subsection 2.-The Canadian Army

Role and Organization.-The role of the Canadian Army in support of Canada's defence policy is to contribute to and support NATO forces overseas, to contribute to and support the North American regional defence, to contribute Army forces to the United Nations as may be required and to undertake survival operations in Canada when necessary. The Canadian Army comes under the central authority of the Chief of the Defence Staff at Canadian Forces Headquarters in Ottawa and is divided for command and control into Commands and Areas with Headquarters as follows:-

The Canadian Army comprises the Canadian Army (Regular) and the Reserves. The Canadian Army (Regular) consists of a field force of four Infantry Brigade Groups, headquarters and administrative, training and logistic support units. One of the Infantry Brigade Groups is in Europe with the NATO Force and is under command of the Supreme Allied Commander in Europe. The Reserves include the Canadian Army (Militia), the Regular Reserve, the Supplementary Reserve, the Canadian Officers' Training Corps, the Cadet Services of Canada and the Reserve Militia. Additional to but not an integral part of the Canadian Army are the Services Colleges. officially authorized cadet corps, rifle associations and clubs.

The strength of the Canadian Army (Regular) at Aug. 31, 1964 was 48,014 officers and men and the strength of the Canadian Army (Militia) was 48,561, including personnel taking the special militia training courses.

Operations in 1963. - In fulfilment of military obligations under the North Atlantic Treaty, Canada has continued to provide ground forces for the defence of Western Europe. The 4th Canadian Infantry Brigade Group, the major units of which are the Fort Garry Horse, the 3rd Regiment Royal Canadian Horse Artillery, No. 1 Surface-to-Surface Missile

Battery, 1st Battalion, The Royal Canadian Regiment, the 1st Battalion, The Queen's Own Rifles of Canada, and the 2nd Battalion, The Black Watch (Royal Highland Regiment) of Canada, constituted the Canadian Army contribution to NATO at the end of the year. The headquarters of the Brigade Group is at Soest and married quarters are located in the vicinity of Soest, Werl, Hemer and Iserlohn.

The Canadian Army continued to provide forces in support of United Nations operations as follows. (1) A force of approximately 870 officers and men forms a part of the United Nations Emergency Force in the Middle East; its tasks are the patrolling of a sector of the Egypt-Israel International Frontier, the provision of engineer services, communications, stores, transport and workshop services, and postal facilities for the Force. (2) In the Congo, 57 Canadian Signal Unit, with a strength of approximately 310 officers and men, supports the United Nations Force by the provision of communications, staff officers and other headquarters personnel; the bulk of the Unit is stationed in Leopoldville, with signal detachments at subordinate headquarters throughout the country. (3) Canadian Army contributions to United Nations commissions include some 30 officers employed in Kashmir, Korea and Palestine.

A specially trained and equipped infantry battalion is maintained on standby in Canada to provide at short notice a force for service in support of the United Nations in any part of the world. In addition to its United Nations commitments, the Canadian Army, as a result of Canadian participation in the International Commissions for Supervision and Control in Viet Nam, Cambodia and Laos, continues to provide approximately 75 officers and men for truce supervisory duties in Indo-China. During 1962, a Canadian Armed Forces Training Team was established in Ghana to assist in the training of the Ghana Armed Forces. The Canadian Army provides 23 of the members of this Team, the Royal Canadian Navy three, and the Royal Canadian Air Force four. An officer of the Royal Canadian Engineers is employed on map-making duties in Nigeria. A number of officer cadets from Nigeria and from Trinidad and Tobago have received training in Canadian Army schools.

Survival Operations.-Since Sept. 1, 1959, the Army has been charged with certain civil defence responsibilities and is supported in this assignment by the Royal Canadian Navy and the Royal Canadian Air Force, the Defence Research Board providing assistance in research. (See also pp. 1099-1100.)

A National Survival Attack Warning System has been established to give warning of an impending attack. A Canadian Army Liaison Officer is stationed at North American Air Defence Command (NORAD) Headquarters and Canadian Army Sections are located in the appropriate NORAD Regional Headquarters in the United States and at Northern NORAD Regional Headquarters at North Bay. All of these have access to early warning information which enables them to keep a watch over air traffic over Canada and the northern United States. Warning centres near Ottawa and in each province are manned 24 hours a day. Dissemination of alerts to the general public will be by siren signals and radio broadcasts over emergency networks in the provinces.

A Nuclear Detonation and Fallout Reporting System is being installed which, in the event of a nuclear detonation, will provide information needed to determine the areas likely to be affected by fallout. Information from this system will be passed to the public via the National Survival Attack Warning System. Provision has been made for an exchange of nuclear detonation and fallout data with the United States.

The Army also has the responsibility for re-entry into areas damaged by nuclear detonations or contaminated by serious radioactive fallout, decontamination work in those areas, and the rescue and provision of first aid to those trapped or injured. Headquarters responsible for planning re-entry operations have been established for target areas. Military personnel available will be used to form unit cadres which will employ large numbers of civilian volunteers to form rescue forces. These units will provide basic first aid and rescue, decontamination, casualty sorting, and certain traffic control and other services.

Assistance and instruction will be given to those who remain in the damaged areas or in areas subjected to serious radioactive fallout. Planning is conducted in conjunction with all levels of civil government and agencies such as police, fire and health services. Pamphlets have been distributed outlining the operating procedures for damage and casualty estimation and procedures have been evolved by which government agencies may use information provided by the Army to determine the resources remaining after an attack.

Planning of emergency communications has been completed by the Army and construction of the various stations is in progress.

Training.-The training policy for the Canadian Army (Regular) is determined at Canadian Forces Headquarters. General Officers Commanding Commands implement the training policies within their Commands except for that conducted at army and corps schools under the supervision of Canadian Forces Headquarters. During 1963, the basic training of 2,538 recruits and the corps training of officers and men of the Canadian Army were carried out at regimental depots, units and corps schools, and 10,796 personnel attended courses at the schools of instruction; 380 officers completed promotion qualification examinations; one officer passed the entrance examinations for the Royal Military College of Science; 79 officers attended the Canadian Army Staff College and five commenced courses at Commonwealth Staff Colleges. Qualifying courses for junior NCO's were conducted under General Officers Commanding Commands and senior NCO courses were conducted at corps schools. Officers from the RCN and the RCAF as well as officers from Australia, Britain, Germany, India, Pakistan, Nigeria and the United States attended courses at Canadian Army Schools of instruction.

English and French language training, which is available to all ranks of the Canadian Army, was conducted by Commands and CFHQ. The R22eR Depot (Language Training Company) conducted six-month French language courses for English-speaking officers and NCO's and a number of French-speaking recruits and potential NCO's received English language training.

Trade and specialty training is given at corps schools and units. When required, the facilities of civilian schools are used to supplement training at Army establishments. Under an apprentice training program, selected young men are trained as soldier tradesmen and prepared for advancement to senior non-commissioned ranks. During 1963, an additional 497 apprentices were enrolled and 45 civilian teachers were employed to provide academic instruction for about 800 apprentice soldiers. Academic credits are obtained from the educational authorities of the province where the training is conducted.

The training of the Field Force Canada airborne/air transportable element continued during 1963. Airborne continuation training was carried out by each unit in conjunction with unit exercises. Units carried out exercises during the winter under cold weather conditions. Parachute and air supply courses were conducted at the Canadian Joint Air Training Centre at Rivers, Man., and courses in Arctic training at Fort Churchill, Man. Collective training for units in Canada was carried out during the summer months at Camp Gagetown, N.B., and Camp Wainwright, Alta. All-arms training comprised sub-unit and unit training and culminated in exercises at the Brigade Group level.

Under the Regular Officer Training Plan (ROTP), selected students are trained for commissions in the Canadian Army (Regular) at the Canadian Services Colleges (see p. 1095) and at Canadian universities and colleges that have university reserve contingents. Also, units of the Canadian Officers' Training Corps (COTC) form an integral part of the campus life at most Canadian universities. These contingents are maintained primarily to produce officers for the Reserve component of the Army and receive training similar to that given members of the ROTP.

Canadian Army (Militia).-The recently revised priority of roles of the Militia are: support of the Regular Army; provision of a training force; and assistance for internal security and the provision of specialists to assist in staffing national survival installations in times of national emergency. Militia training is intended to produce personnel and units
well trained in the basic military skills and techniques of their corps and in the basic skills for survival operations. In 1963 and 1964 funds were provided to permit at least 40 days training for all ranks and up to 50 days for key personnel. On the authority of the General Officer Commanding a Command, an individual of the Militia may, as a special case, earn up to 70 days pay. This includes seven days training for selected personnel by attachment to Regular Army Field Units in the summer or to Regular Army Static Units at any time of the year, and also attendance at summer camps. During the summer of 1963, 25,588 all ranks, including members of the Canadian Women's Army Corps and high school students, participated in military and survival training.

Royal Canadian Army Cadets.-The aim of the Army cadet organization is to provide cadets with a sound knowledge of military fundamentals based on the qualities of leadership, patriotism and good citizenship. Planning and the supervision of organization, administration and training are carried out by the Canadian Army (Regular); 129 officers and men are employed continuously on these duties.

Training and administration of Army cadets is the responsibility of officers of the Cadet Services of Canada, a sub-component of the Reserves, and civilian instructors. As at Sept. $30,1964,2,468$ cadet instructors were engaged in these activities. Cadets take a progressive three-year course in basic military subjects at their cadet camps and selected cadets are given training at summer camps. In 1963, 6,984 cadets attended seven-week trades and specialist courses at camps in Aldershot, N.S., Farnham, Que., Borden, Ipperwash and Picton, Ont., and Vernon, B.C.; 1,449 attended two-week junior leader and special courses at camps in Aldershot, N.S., Picton, Ont., and Clear Lake and Rivers, Man.; 213 master and first class cadets attended the National Cadet Camp, Banff, Alta., for four weeks; and 50 cadets proceeded on an exchange of cadets between Barbados, Jamaica and Canada in the summer of 1964. A total of 350 cadet instructors attended qualifying courses of up to seven weeks and 475 were employed in training and administrative duties at summer camps. As at Sept. 30, 1964, there were 68,399 cadets enrolled in 497 corps.

## Subsection 3.-The Royal Canadian Air Force

Role and Organization.-The role of the Royal Canadian Air Force in support of Canada's defence policy is to provide forces in being for the defence of the North American Continent and the NATO area and the support of the United Nations. The Royal Canadian Air Force comes under the central authority of the Chief of the Defence Staff at the Canadian Forces Headquarters in Ottawa. The major RCAF Formations and their Headquarters are as follows:-

Formations
Air Defence Command
No. 1 Air Division.
Air Transport Command
Air Materiel Command.
Maritime Air Command
Training Command

Headquarters
St. Hubert, Que.
Metz, France
Trenton, Ont.
Rockcliffe, Ont.
Halifax, N.S.
Winnipeg, Man.

The organization includes 20 flying squadrons of the RCAF Regular and six flying squadrons of the RCAF Auxiliary. The Auxiliary squadrons perform an emergency and rescue role. Three of the regular squadrons contribute to the air defence of the CanadaUnited States Regions; eight squadrons are assigned to No. 1 Air Division in Europe; four squadrons are required for RCAF transport operations at home and abroad; four maritime squadrons operate in conjunction with other forces for the defence of Canada's East and West Coasts; and one squadron carries out Army support training, aerial photography and reconnaissance functions in Canada.

The strength of the RCAF at Aug. 31, 1964 was 50,223 officers and men in the Regular Force and 977 in the Auxiliary Force.

Operations in 1963.-The RCAF contribution to the air defence of North America, consisting of three CF101B squadrons, two Bomarc squadrons and 29 radar sites, continued under the operational control of North American Air Defence Command (NORAD). No. 1 Air Division, Canada's NATO contribution in Europe, was equipped with eight squadrons of CF104 aircraft. Six of these squadrons were employed in the strike/attack role and two were employed in the photo reconnaissance and attack roles.

Air Defence Command completed the build-up of the Pinetree Line radar system with the takeover of the U.S.-financed and -manned radar sites and the addition of five new mid-western radar sites. New and highly effective radar equipment was installed at many sites, enabling the RCAF to close down the operations of four Pinetree sites and a portion of the Mid-Canada Line. In addition, the Ground Observer Corps was disbanded. The Distant Early Warning Line (DEW) continued to operate as an integral part of NORAD.

The RCAF Maritime Air Command during 1963 contributed four land-based maritime squadrons to the Maritime Defence of North America; three of these, based on the East Coast, were completely equipped with Argus aircraft, the largest and most modern antisubmarine aircraft in the world. A continuous program of aircraft modernization and reequipping with improved anti-submarine devices was conducted throughout the year. The East Coast squadrons and a Neptune aircraft squadron on the West Coast participated in a number of national, international and NATO anti-submarine exercises and maintained daily patrols and surveillance of ocean areas adjacent to the Canadian coastline.

Air Transport Command (ATC) continued to provide support to the Air Division and to the Army Brigade in Europe using the Yukon and Hercules (C130B) aircraft. Airlift support was also given to the United Nations Emergency Force Middle East and the United Nations Yemen Observer Mission using Yukon and North Star aircraft. In addition, flying units operating Caribou and Otter aircraft were maintained in Egypt and Yemen in support of UNEF and UNYOM. In Canada, ATC aircraft airlifted Department of National Defence personnel and cargo over air routes from coast to coast. C119 aircraft were used for paratroop training of the Canadian Army, and 408 Squadron carried out routine reconnaissance flights in the Arctic and photographic missions for the Department of National Defence. Search and rescue services were provided in Canadian areas of responsibility. Of the 54 major air searches conducted, 46 were for civil aircraft and eight were for military aircraft. In addition, there were five major marine searches and 490 mercy flights.

Training.-In the year ending Mar. 31, 1965, the RCAF will give basic training to approximately 5,000 officers and men to meet retirements, releases and the introduction of new equipment. English language training on initial enlistment will be given to about 900 French-speaking personnel-at Centralia, Ont., for officers and at St. Jean, Que., for airmen. Course length is variable, up to a maximum of 21 weeks. Advanced trades training is given within the service, training on specialized equipment is obtained also from industrial firms, and some officers attend postgraduate courses at Canadian and United States universities. Initial pilot selection on piston-engined aircraft is given at Primary Flying School, Centralia, and basic and advanced pilot training on jet aircraft is given at Gimli, Man., or Moose Jaw, Sask. In the 1964-65 fiscal year, 170 pilots will receive basic flying training and 160 advanced flying training; also, 100 students will receive radio navigator training at Winnipeg, Man. During the year, under bilateral agreements, 35 Danish and 25 Norwegian students began training as pilots and, under Commonwealth agreement, special pilot training was given to 16 Nigerians. In addition, the RCAF provided pilot training for 30 Canadian Army officers and 25 RCN personnel.

Technical and indoctrination training for newly commissioned non-flying list officers is given at Central Officers School at Centralia. Basic and advanced trades training for airmen is given at the RCAF technical trades schools at Camp Borden or Clinton in Ontario. Staff training at the junior and senior level is given at Air Force College, Toronto;
the two formal courses are bridged by a correspondence, self-study course. Trade advancement training to help airmen improve their job proficiency and to qualify for higher trade groupings and pay is provided to Regular Force and Reserve personnel. Operational training on specific aircraft and equipment is given at field technical training units and operational training units situated throughout Canada. Semi-annual trade examinations are written under the direction of the Training Standards Establishments, Trenton, Ont.

RCAF Reserves.-The active sub-components of the RCAF Reserves are designated as the Auxiliary and the Primary Reserve. Six Auxiliary Flying Squadrons equipped with transport aircraft are maintained to perform air-search and limited transport operations. These squadrons would be used to support military and civilian requirements in the event of an emergency. The Primary Reserve is composed of Air Cadet Officers (ACO's) who staff the Royal Canadian Air Cadet squadrons throughout Canada, of Manning Support Officers (MSO's) who are employed for 15 to 30 days each year on career counselling duties at RCAF recruiting units, and of University Squadron Staff Officers whose main function is to train members of the University Reserve Training Plan (URTP) during the academic year.

Each summer, approximately 130 first-year URTP undergraduates attend an officers training course at Reserve Officers School, Centralia. Following this initial training, specialized training is provided in aeronautical engineering, armament, administration, accounts, construction engineering, mobile support equipment, recreation, supply or telecommunications. Second-year cadets continue with formal or contact training which they had begun the previous year. A small number of outstanding cadets are selected for a third summer of contact training at a field unit.

Royal Canadian Air Cadets.-Air cadet activities are sponsored and administered by the Air Cadet League of Canada, a voluntary civilian organization. The objectives of air cadet training are to encourage air cadets to develop the attributes of good citizenship, to stimulate in them an interest in aviation and space technology and to help them develop a high standard of physical fitness, mental alertness and discipline. The RCAF works in partnership with the League and provides training personnel, syllabi and equipment.

The authorized ceiling of cadet enrolment is 28,000 ; the strength at Oct. 1,1964 was 27,600 , attached to 367 squadrons across Canada. During the summer of 1963, camps were conducted at RCAF Stations at Greenwood, N.S., St. Jean, Que., Trenton, Ont., and Sea Island, B.C., attended by more than 7,000 cadets and 682 officers and instructors. A seven-week course for senior leaders was held for 240 cadets at Camp Borden. Under the International Exchange Visits Program for 1963, sponsored jointly by the RCAF and the Air Cadet League, 59 cadets were exchanged with Belgium, Britain, Denmark, France, Italy, Israel, the Netherlands, Norway, Sweden, Turkey, the United States and West Germany.

About 250 senior air cadets receive flying training annually at flying clubs through scholarships provided by the RCAF and additional scholarships are awarded by the Air Cadet League and other organizations, which in 1963 numbered 68.

## Subsection 4.-The Defence Research Board

The Defence Research Board, established on Apr. 1, 1947, provides scientific assistance and advice to the Canadian Forces. It consists of a full-time Chairman and Vice-Chairman, two or more ex officio members and nine other appointed members. The ex officio members are the Deputy Minister of National Defence, the President of the National Research Council, and such other members as may be appointed by the Minister of National Defence as members representing the Canadian Forces. The other members, appointed by the Governor in Council for three-year terms, are selected from universities and industry because of their scientific and technical backgrounds.

The organization consists of headquarters staff, an operational research corps and eight research laboratories, and liaison offices at London, England, and Washington, U.S.A. Advisory committees composed of leading Canadian scientists provide invaluable assistance to the Board by their consideration of a variety of problems.

The Defence Research Board is a fully integrated and permanent part of the defences of the country. The Chairman is a member of the Defence Council. The Board's fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large. Its efforts are concentrated upon defence problems of particular importance to Canada or for which Canada has unique resources or facilities. Existing research facilities such as those of the National Research Council are used whenever possible to meet the needs of the Armed Forces. The Board has built up new facilities only in those fields that have little or no civilian interest. Close collaboration is maintained with Canada's larger partners; specialization is made possible only through the willingness of Britain and the United States to exchange the results of their broader programs for the less numerous but nevertheless valuable benefits of Canadian research.

The Board operates eight specialized research and development laboratories which are concerned primarily with maritime warfare, guns, rockets and missiles as armaments, defence against missiles, research on the upper atmosphere using ground-based equipment as well as balloons, rockets and satellites, propulsion and propellants, telecommunications, geophysical studies of the Arctic, defence against atomic, chemical and biological weapons, studies of shock and blast, biosciences research and operational research. The Board also supports and organizes an extramural program of research in the universities and industry. Some 200 grants are awarded annually to Canadian university staff members for research on problems of defence interest and a special fund is used to place contracts with industry for research in selected fields.

Research on maritime warfare problems, particularly those relating to submarine detection and tracking, is carried out at the Naval Research Establishment, Dartmouth, N.S., and at the Pacific Naval Laboratory, Esquimalt, B.C. Research and development of weapons and defence against various weapons is undertaken in co-operation with the Armed Services at several establishments, the largest of which is the Canadian Armament Research and Development Establishment near Valcartier, Que. Its principal activities include studies of defence against missiles, studies of the properties and application of infrared and other detection devices, exploration of the upper atmosphere with balloons and rockets, and the development of rocket propellants.

The Defence Research Telecommunications Establishment in Ottawa is concerned mainly with problems of communications which involve exploration of the ionosphere with ground-based equipment, with rockets and with satellites, and the applications of the science of electronics to military problems. The Defence Research Northern Laboratory, Fort Churchill, Man., conducts a variety of experiments requiring an Arctic environment including studies of the aurora borealis, communications experiments and rocket firings. Research on the defensive aspects of chemical, biological and atomic weapons is carried out at two Defence Research Board establishments-the Defence Chemical, Biological and Radiation Laboratories at Ottawa, Ont., and the Suffield Experimental Station at Ralston, Alta.

The Defence Research Medical Laboratories near Toronto are concerned with biosciences research, chiefly with raising the operating efficiency of man working in the military environment, and includes such subjects as human physiology, experimental psychology and research on clothing.

Operational research is carried on by a headquarters group which conducts long-range scientific analysis of future defence problems. Trained operational research scientists are provided by the Board to the operational research teams in the three Armed Services.

Thus, the Board continues to support the fields of research that are of foremost interest to the Canadian Armed Services and the program is under continuing review to ensure that cognizance is taken of all changes in emphasis in defence requirements. Close liaison is maintained between the Defence Research Board and the Department of Defence Production to ensure that research and development activities are closely integrated with production.

## Section 2.-Services Colleges and Staff Training Colleges

Canadian Services Colleges.-The three Canadian Services Colleges are the Royal Military College of Canada founded at Kingston, Ont., in 1876, Royal Roads which was established in 1941 near Victoria, B.C., as a school for naval officers, and College Militaire Royal de Saint-Jean established at St. Jean, Que., primarily to meet the needs of Frenchspeaking cadets. The Royal Military College and Royal Roads were constituted as Canadian Services Colleges in 1948, and College Militaire Royal de Saint-Jean was opened in 1952. In 1959, the Legislature of the Province of Ontario granted the Royal Military College a charter empowering it to grant degrees.

The purpose of the instruction and training at the Services Colleges is to impart the knowledge, to teach the skills and to develop the qualities of character and leadership essential to officers of all three Armed Services. The courses of instruction provide a sound and balanced liberal scientific and military education leading to degrees in arts, science and engineering which are granted by the Royal Military College. The organization and training give cadets the opportunity to command and to exercise judgment.

For cadets entering the Royal Military College and Royal Roads, the course is of four years duration. As the third and fourth years of the course are given only at the Royal Military College, cadets entering Royal Roads must proceed to that College for the final two years of the arts, science or engineering courses. For cadets entering Collège Militaire Royal de Saint-Jean, which gives a preparatory year, the course is of five years duration. Cadets take the preparatory, first and second years at that institution and the final two years at the Royal Military College.

For admission to the Royal Military College of Canada and to Royal Roads, an applicant must have obtained senior matriculation or equivalent standing. The compulsory subjects are: English, mathematics (algebra, geometry and trigonometry), physics, chemistry and either a language or history; however, at least junior matriculation standing in French is desirable. For admission to Collège Militaire Royal de Saint-Jean, an applicant must have junior matriculation or equivalent. The compulsory subjects are: English (for English-speaking applicants), French (for French-speaking applicants), algebra, plane geometry, physics and chemistry. In the case of applicants from classical colleges at least sixth year standing (rhétorique) is required. If a candidate has obtained his Bachelor of Arts degree at a classical college or has completed first year science or philosophy II at Collège Mont Saint-Louis, he may apply for entry into first year at Collège Militaire Royal de Saint-Jean.

To be accepted, a candidate must be single, a Canadian citizen or British subject normally resident in Canada, and physically fit in accordance with the medical standards of the Service in which he enrols. The age limits for admission to the first year are between 16 and 21 years as of Jan. 1 of the year of entry; for admission to the preparatory year a cadet must have reached his 16th but not his 20th birthday on Jan. 1 of the year of entry. Personal interviews and medical examinations of candidates are carried out by Service Boards located at various centres across Canada.

Most cadets entering the Services Colleges enrol under the Regular Officer Training Plan. Applicants accepted for entry enrol according to their choice, as naval cadets in the Royal Canadian Navy, as officer cadets in the Canadian Army, or as flight cadets in the Royal Canadian Air Force. Costs of tuition, board, lodging, uniforms, books, instruments and other essential fees are borne by the Department of National Defence and cadets
are paid at the rate of $\$ 73$ a month. On successfully completing their academic and military training, cadets are granted permanent commissions in the Regular Force but may, if they so wish, apply for release after three years of service following completion of academic training.

A limited number of high school students may be selected to enter the Services Colleges on payment of tuition fees, etc. Graduates are granted commissions and serve in the reserve components of the Forces. Young men who qualify for Dominion Cadetships also serve in a reserve capacity. These Cadetships are awarded by the Federal Government in recognition of a candidate's parent having been killed, died or been severely incapacitated in the service of one of Canada's Armed Forces. A maximum of 15 Dominion Cadetships may be awarded in any one year, five in each Service. Each is valued at $\$ 580$, which covers first-year fees.

During the 1963-64 academic year, 1,119 cadets were in attendance at the Services Colleges, 520 of them at the Royal Military College, 220 at Royal Roads, and 379 at College Militaire Royal de Saint-Jean. Of the total, 262 were enrolled in the Navy, 418 in the Army, and 439 in the Air Force.

Staff Training Colleges.-The Canadian Army Staff College at Kingston, Ont., trains officers for staff appointments. The course is 21 months in length, with a student intake every second year. Although most of the student body is composed of Canadian Army officers, officers from the other two Services and from the armies of other Commonwealth and NATO countries also attend. The system of instruction is based upon the study of précis and references, demonstrations and lectures, and indoor and outdoor exercises. Aside from purely military subjects, the curriculum includes national survival, research and development, world affairs and lectures by prominent guest speakers.

The Royal Canadian Air Force College at Armour Heights in Toronto, Ont., is a permanent establishment consisting of a Staff College for senior officers, and a Staff School and an Extension School for junior officers. The former affords professional education for officers normally of Squadron Leader and Wing Commander ranks, preparing them to assume higher appointments. The directing staff selected from the Royal Canadian Air Force is augmented by an officer from each of the Royal Canadian Navy, the Canadian Army and the Royal Air Force. The student body, in addition to Royal Canadian Air Force officers, has ten representatives from the Royal Canadian Navy and one or two from each of the Canadian Army, Royal Air Force and United States Air Force. The College course is designed to assist the student to think logically and express his ideas with precision, both orally and in writing; to know his Service and understand the employment of air forces; to keep abreast of scientific and technical developments that may affect the employment of air forces; and to gain a perspective of national and international problems. Lecturers are drawn, when desirable, from industry, the Armed Forces, the diplomatic corps and universities. Instructional visits are made to commercial and military establishments in Canada and abroad. The Staff School and the Extension School are for officers of Flight Lieutenant rank. The 14 -week Staff School course begins an officer's professional'education. The role of the School is to provide junior officers with the professional skills and knowledge needed at Flight Lieutenant and Squadron Leader ranks, and to introduce them to further professional studies. The student comes to the course with one or more tours of specialist employment behind him. The staff and student body are composed of officers representing a cross-section of Air Force activity. The Extension School was established to administer the Graduate Assistance Program, a course of correspondence study specially designed to further the professional education of Staff School graduates. The program has been developed to enable these graduates to consolidate and expand the knowledge gained at the Staff School; to practise skills of logical thought and the accurate presentation of ideas; and in general to prepare Flight Lieutenants for the acceptance of greater responsibilities in their present or higher ranks.

The National Defence College at Kingston, Ont., is a senior defence college providing an 11-month course of study covering the economic, political and military aspects of the
defence of Canada. Senior officers and civil servants from the Armed Forces and government departments attend, as well as a few representatives from industry. Lecturers are chosen from among the leaders in various fields in Canada, the United States, Britain and other countries. In addition, educational tours and visits to certain parts of Canada, the United States, Europe and the Middle East give students more knowledge of conditions and influences in their own and other countries.

## PART II.-DEFENCE PRODUCTION*

Under the provisions of the Defence Production Act (RSC 1952, c. 62, as amended), the Department of Defence Production has exclusive authority to procure the goods and services required by the Department of National Defence and the responsibility to ensure that the necessary productive capacity and materials are available to support the defence production program. The Department also serves as procurement agent for the Canadian Commercial Corporation, a Crown company primarily responsible for the purchase in Canada of defence goods required by other governments and of supplies to meet Canadian requirements under External Aid programs and other international agreements. The Department is responsible for planning and making other necessary arrangements for the immediate establishment of a War Supplies Agency should there be a nuclear attack. Military construction is the prime responsibility of Defence Construction (1951) Limited, a Crown company reporting to Parliament through the Minister of Defence Production.

Procurement and construction contracts issued by the Department of Defence Production and Defence Construction (1951) Limited had a net value of $\$ 681,968,000$ in 1963 and $\$ 448,352,000$ in the first half of 1964 . (The net value of contracts is made up of the value of new contracts issued as well as amendments that increased or decreased existing contracts.) The net value of contracts in 1963 according to the various sources for which they were issued was as follows:-

| Source | Net Value | $\underset{\text { Total Value }}{P . C . o f}$ |
| :---: | :---: | :---: |
|  | s |  |
| Department of National Defence. | 522,277,444 | 76.58 |
| Department of Defence Production (DDP Votes). | 11,330,201 | 1.66 |
| Foreign Governments- |  |  |
| United States.. | 96,867,595 | 14.20 |
| Britain............ | 1,372,174 | 0.20 |
| Other......... | 36,931,901 | 5.42 |
| Canadian Sources other than DND and DDP- |  |  |
| External Aid | 11,646, 125 | 1.71 |
| Other...... | 1,542,808 | 0.23 |
| Totals. | 681,968,248 | 100.00 |

The $\$ 522,277,000$ in contracts placed by the Department of National Defence in 1963 was 2.7 p.c. below the value in 1962 . The largest decrease was in the aircraft program; net value of aircraft contracts amounted to $\$ 167,545,000$ against $\$ 205,252,000$ in 1962 . There was also a decrease of $\$ 11,300,000$ in the armament program, of $\$ 2,100,000$ in the clothing and equipage contracts and of $\$ 6,200,000$ in defence construction work. On the other hand, there was an increase of $\$ 25,100,000$ in the value of electronics and communications contracts, of $\$ 13,400,000$ in shipbuilding contracts, of $\$ 8,800,000$ in tank-automotive contracts and of $\$ 8,100,000$ in fuel and lubricant contracts.

Contracts placed outside Canada on behalf of the Department of National Defence in 1963 amounted to $\$ 56,180,000$, which was 11 p.c. of the total net value of prime contracts issued. Contracts valued at $\$ 42,121,000$ were placed in the United States, $\$ 8,107,000$ in Britain and $\$ 5,952,000$ in other countries. Expenditures on contracts placed were

[^344]$\$ 523,551,000$, an amount 13.7 p.c. lower than in 1962 . Expenditures against aircraft programs declined by $\$ 17,356,000$ or 9.1 p.c., those for electronics and communication equipment by $\$ 9,973,000$ or 8.8 p.c., and those for ships by $\$ 750,000$ or 1.4 p.c.

Of the $\$ 448,352,000$ in contracts issued during the first half of $1964, \$ 362,476,000$ or 81 p.c. was for the Department of National Defence and expenditures against prime contracts placed for that Department stood at $\$ 307,495,000$. The Department of Defence Production placed $\$ 11,330,000$ in contracts in 1963 and $\$ 20,407,000$ in the first half of 1964 against certain appropriations to assist Canadian defence industries; the major area of assistance in 1963, which involved contracts totalling $\$ 8,800,000$, was to sustain research and development capability in Canadian industry. Revolving Fund contracts amounted to $\$ 33,401,000$ in 1963, primarily to make funds available in connection with the CanadaUnited States F -104G mutual aid program (MAP); Revolving Fund contracts amounted to $\$ 36,773,000$ in the first half of 1964.

Contracts placed for all sources other than the Departments of National Defence and Defence Production totalled $\$ 148,361,000$ in 1963 , of which $\$ 96,868,000$ was for the United States Government and $\$ 1,372,000$ for the British Government.

## 1.-Canadian Government Defence Contracts and Expenditures, by Defence Program, 1963 and First Half of 1964

Nors.-The contract values include all contracts placed by the Department of Defence Production and Defence Construction (1951) Limited on behalf of the Department of National Defence, and the expenditure values include all payments made by the Department of National Defence against such contracts. The net value includes the value of all new contracts issued together with the value of amendments that increased or decreased the commitments of existing contracts.

| Program | Net Value of Total Contracts |  | Expenditures on Contracts |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1963 | $\begin{gathered} 1964 \\ \text { (First Half) } \end{gathered}$ | 1963 | $\begin{gathered} 1964 \\ \text { (First Half) } \end{gathered}$ |
|  | \$'000 | \$'000 | \$'000 | \$'000 |
| Aircraft. | 167,545 | 141,601 | 173,544 | 111,289 |
| Armament. | 14,119 | 13,410 | 24,139 | 12,581 |
| Electronics and communication | 107,843 | 60,962 | 103,564 | 61, 235 |
| Ships........................... | 41, 209 | 18,795 | 52,753 | 19,116 |
| Tank-automotive.... | 17,674 46,658 | 21,646 33,559 | 10,802 29,151 | 21,589 14,742 |
| Clothing and equipage | 10,754 | 5,435 | 12,056 | 6,094 |
| Construction. | 33,229 | 18,369 | 32,510 | 14,872 |
| Other........ | 83,246 | 48,699 | 85,033 | 45,977 |
| Totals. | 522,277 | 362,476 | 523,551 | 307,495 |

Defence Production and Development Sharing.-In 1963, $\$ 142,000,000$ worth of United States defence production-sharing business was placed with Canadian industry, a decrease of 44.1 p.c. from 1962 . The lower level in 1963 was largely accounted for by the fact that 1962 figures included $\$ 121,800,000$ for Caribou and $F$-104 MAP aircraft orders as compared to $\$ 25,200,000$ for the same aircraft in 1963 . The total United States defence production-sharing business in this country during the five years of the program was $\$ 747,900,000$.

Assistance was given to Canadian industry for research and development projects (RDP) of interest to the United States services. Contracts amounting to $\$ 8,800,000$ were issued in 1963 for this type of assistance, with expenditures totalling almost $\$ 13,700,000$. These efforts resulted in significant increases in bid solicitation and submissions in the prime contract area. United States inquiries to Canadian industry increased from 8,290 in 1962 to 12,858 in 1963, and responses by Canadian companies from 2,384 to 2,853 . Prime contracts placed by the United States Government with Canadian Commercial Corporation increased from 1,088 to 1,130 , having a total value of $\$ 84,600,000$. In the sub-contract
area, solicitations increased from 3,108 to 3,385 and responses from 2,624 to 2,904 . Subcontracts received by Canadian firms increased from 1,769 to 2,075 , valued at $\$ 57,300,000$. Other prime contracts received directly from the United States Government by Canadian industry and other institutions totalled 100,000 .

Co-operation in NATO and RDP and Exports Overseas.-Canadian industry was encouraged to participate in supplying the defence needs of European and other countries in such areas as aircraft, navigation aids and engine spares. During 1963, Canadian firms reported the receipt of $\$ 53,216,000$ in prime contracts and sub-contracts from NATO and other countries (excluding the United States) of which prime contracts accounted for $\$ 40,610,000$. Sub-contracts placed in Canada by overseas countries amounted to $\$ 12,606,000$. The major purchases in this group were for $F-104 G$ simulators, torpedoes, Wortac spares, Caribou aircraft, vehicle spares, gyros, platforms, computers and aircraft engine spares.

## PART III.-GIVIL EMERGENCY PLANNING (GIVIL DEFENCE)*

The present arrangements for civil emergency planning in Canada took form in 1958 following an analysis by the Canadian Government of the kind of military and civilian arrangements necessary to prepare the nation for the possibility of nuclear war. This review led to a major rearrangement of federal civil defence functions, together with an offer from the Federal Government to assume certain responsibilities previously borne by provinces and municipalities. The reorganization, which became effective on Sept. 1, 1959, was based on the principles that: (1) civil defence was properly a function or activity of government rather than a separate organization as such, and (2) this function should be divided into clearly defined tasks assigned to the appropriate levels of government, and at each governmental level made the responsibility of those departments or agencies best able to undertake and discharge them. In July of 1963, the Emergency Measures Organization, which is the federal co-ordinating agency for all civil emergency planning, was placed under the control and supervision of the Minister of Defence Production and designated as a department for administrative purposes. At the same time, responsibility for the Canadian Civil Defence College at Arnprior, Ont., was transferred from the Minister of National Health and Welfare to the Minister of Defence Production to be exercised through EMO.

At the federal level, the present distribution of responsibilities resulting from these changes is as follows:-
(1) The Emergency Measures Organization is the co-ordinating agency for all civil emergency planning and for all federal/provincial planning. Its responsibilities include planning for continuity of government, all tasks not specifically assigned to another department of government, general liaison with the provinces, NATO and foreign countries on matters relating to civil emergency planning, and operation and administration of the Canadian Civil Defence College.
(2) The Department of National Defence, more particularly the Army, has a primary role in survival operations and has been delegated the responsibility for a substantial number of functions that are technical in character, e.g., warning and fallout reporting.
(3) The Department of National Health and Welfare has the duty of advising and assisting provincial authorities with respect to the provision of emergency health and welfare services.
(4) The Royal Canadian Mounted Police is responsible for providing advice and assistance to provinces concerning the preservation of law and order, and the control of road traffic under emergency conditions.
(5) Other federal departments and agencies have duties that relate chiefly to carrying on essential functions or to maintaining the country's economic life under conditions of nuclear attack, e.g., the Department of Defence Production, the Department of Agriculture, the Department of Finance, the Bank of Canada, the Department of Transport, the Canadian Broadcasting Corporation, and the Department of Labour in consultation with the National Employment Service of the Unemployment Insurance Commission.

[^345]Certain emergency functions of government are a projection of normal provincial peacetime responsibility. In these fields, provinces and municipalities have more experience and knowledge of local conditions and problems than have the Federal Government and its agencies. The following represents responsibilities of this kind, and are the concern of provincial authorities with such federal assistance as may be necessary:-
(1) Preservation of law and order and the prevention of panic by the use of provincial and municipal police and special constables, with whatever support is necessary and feasible from the RCMP and the Armed Services at provincial request.
(2) Control of road traffic, except in areas damaged or covered by heavy fallout, including special measures to assist in the emergency movement of people from areas likely to be attacked or affected by heavy fallout.
(3) Reception services, including arrangements for providing accommodation, emergency feeding and other emergency supplies and welfare services for people who have lost or left their homes or who require assistance because of the breakdown of normal facilities.
(4) Organization and control of medical services, hospitals and public health measures.
(5) Maintenance, clearance and repair of highways.
(6) Organization of municipal and other services for the maintenance and repair of water and sewerage systems.
(7) Organization of municipal and other fire-fighting services, and control over and direction of these services in wartime, except in damaged or heavy fallout areas, where fire-fighting services would be under the direction of the Army as part of the re-entry operation.

The federal civil emergency planning organization consists of a Cabinet Committee on Emergency Plans to give policy guidance in all areas of civil emergency planning, the federal Emergency Measures Organization, and departmental planning staffs. The Emergency Measures Organization has a headquarters staff in Ottawa and regional offices in each provincial capital which are responsible for co-ordinating the planning of federal departments and agencies in the provinces and maintaining liaison with both the appropriate provincial and military authorities. The organization has an officer in Paris attached to the Canadian Delegation to maintain liaison with other NATO countries and to keep abreast of developments in these countries. Liaison with the United States is carried out by headquarters staff in Ottawa.

In order to assist provinces and municipalities in the development of emergency plans, the Emergency Measures Organization administers a program of grants under which the Federal Government may pay up to 75 p.c. of the cost of approved civil defence projects.

To provide the public with information on survival measures, shelter designs and related matters, EMO and other federal agencies have published a variety of leaflets and pamphlets. Those most widely distributed are Survival in Likely Target Areas, Simpler Shelters, 11 Steps to Survival, Your Basement Fallout Shelter, and Fallout on the Farm, which cover a variety of subjects ranging from construction of shelters to the effects of radioactive fallout on agriculture. Copies of these publications are made available to the public through the provincial civil defence organization in each provincial capital.

The Emergency Supply Planning Branch of the Department of Defence Production has the responsibility to plan for a War Supplies Agency which, in time of war, would control the distribution and use of essential supplies, their prices and their rationing, as required.

In order to ensure the continuity of civilian governmental authority in an emergency, emergency facilities are available for the Federal Government in the Ottawa area, and in six regions. In this context, regional boundaries correspond with provincial boundaries. To ensure continuity of communications, an Emergency National Telecommunications Organization has been established within the Department of Transport. Under its authority, the CBC has developed plans for emergency broadcasting, at any time, to all areas of Canada.

## PART I.-OFFICIAL SOURGES OF INFORMATION

## Section 1.-Books About Canada

This basic list of books about Canada, contributed by the National Library (November 1964), includes a selection of over 450 titles of publications grouped alphabetically by author and arranged under the subject classifications of Biography, Country and People, Economics, External Relations, Government and Politics, History, Literature and the Arts, and General Reference Works. The selection represents many aspects of Canadian life, emphasizes the latest editions of books published within the past ten years, and includes titles issued in either or both English and French, accompanied by the publisher's address. For additional titles, the reader should consult one or more of the bibliographical collections listed below under the heading "General Reference Works", particularly the monthly or annual editions of Canadiana published by the National Library.

## Section 2.-Federal Government Information Services

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the ten-year and five-year censuses of Canada are planned and statistical information of all kinds-federal and provincial-is centralized. Certain areas of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, population and national defence are constitutionally federal affairs and on such subjects the respective departments at Ottawa are the proper sources of information with which to communicate. Other fields of effort such as the administration of lands and natural resources, education, roads and highways, and health and hospitals are the responsibility of the provinces and data may be obtained concerning the individual provincial efforts in these fields from the respective provincial government departments. However, certain federal departments are also concerned with specific aspects of these subjects and, as in the case of the Dominion Bureau of Statistics, in the co-ordination and presentation of the material for Canada as a whole. The Government of Canada, while not administering the resources within the provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of livestock and the improvement of strains, on agricultural marketing and on crop yields are cases in point; in forestry, questions on forest research, forest fire protection and reforestation offer good examples.

Certain Federal Government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests originating abroad for information on Canada and Canadian affairs; the Trade Publicity Branch, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Broadcasting Corporation; and the National Film Board. The Departments of Agriculture, Fisheries, Forestry, Northern Affairs and National Resources, and Mines and Technical Surveys, and such agencies as the National Gallery of Canada, the National Museum of Canada, the National Library, and the National Research Council, while not thus classed, are interested in the dissemination of information to a greater extent than most of the remaining government departments, although several of the latter have publicity branches.

Thus, inquiries for information of a statistical nature should be forwarded to the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa. Inquiries to federal sources for information not of a statistical nature should be sent as a general rule to the individual departments and agencies of government which are listed, with their functions, at pp. 104-123 of this publication. Inquiries relating to provincial efforts may be directed to the provincial government department concerned. Inquiries about the Yukon and Northwest Territories should be addressed to the Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

## Section 3.-Sale of Official Publications

Under the provisions of the Public Printing and Stationery Act, the Queen's Printer, Ottawa, has charge of the sale of all official publications of Parliament and the Government of Canada that are issued to the public, as well as of the free distribution of all public docu-
ments and papers to persons and institutions (libraries) entitled by statutory provisions to receive them. The regulations relating to the distribution and sale of government publications made in accordance with the provisions of Sect. 7 of the Public Printing and Stationery Act and Sect. 7(e) of the Financial Administration Act were brought up to date and approved by Treasury Board on Mar. 31, 1955.

In compliance with these regulations, the Queen's Printer issues the Daily Checklist of Government Publications which records for the information of the public service, libraries, etc., all Federal Government publications immediately upon release. Those authorized by law or regulation to receive free copies of government publications receive the Daily Checklist without charge; others desiring the service may purchase an annual subscription to be forwarded daily or in weekly batches as requested.

The Queen's Printer also issues the Monthly Catalogue of Canadian Government Publications, a comprehensive listing of all official publications, public documents and papers not of a confidential nature published at government expense, an Annual Catalogue (in January) listing all publications issued during the previous year, as well as sectional catalogues and selected titles bulletins advertising new government publications.

The Queen's Printer is the national sales agent in Canada for publications issued by the United Nations; the United Nations Educational, Scientific and Cultural Organization; the World Health Organization; the Food and Agriculture Organization; the Organization for Economic Co-operation and Development; the International Atomic Energy Agency; the International Civil Aviation Organization; the Council of Europe; the Commonwealth Economic Committee; the Organization of American States (Pan American Union); the General Agreement on Tariffs and Trade; the New Zealand Government; the International Labour Organization; the World Meteorological Organization; and the International Telecommunication Union.

Canadian Government and international organizations publications may be obtained from Queen's Printer bookstores located in Ottawa, Toronto, Montreal, Winnipeg and Vancouver (see imprint on p. ii), or by mail'from the Queen's Printer, Ottawa.

Dominion Bureau of Statistics Publications.-The Dominion Bureau of Statistics acts as the agent of the Queen's Printer with respect to the sale of DBS publications. Reports of the Bureau cover all aspects of the national economy; the Canada Year Book and Official Handbook Canada constitute authoritative compendiums of information on the institutions and economic and social development of Canada.

DBS publications are listed with their prices in the Queen's Printer's Catalogue of Canadian Government Publications. The DBS Daily Bulletin and Weekly Bulletin, prepared by the Information and Public Relations Division, are designed to serve persons wishing to keep closely informed on the full range of published information issued by the Bureau; the annual subscription price of each is \$1. Subscription orders for DBS publications or orders for single copies should be addressed to the Publications Distribution Unit, Dominion Bureau of Statistics, Ottawa, and should contain the necessary remittance in the form of a cheque or money order made payable to the Receiver General of Canada.

Provincial Government Publications.-Most provincial government publications may by obtained from the Queen's Printer of the province concerned. Inquiries should be addressed to the provincial capital cities:-

| Newfoundland.............St. John's | Ontario...................Toronto |
| :---: | :---: |
| Prince Edward Island......Charlottetown | Manitoba................Winnipeg |
| Nova Scotia..............Halifax | Saskatchewan.............Regina |
| New Brunswick..........Fredericton | Alberta....................Edmonto |
| Quebec...................Quebec | British Columbia..........Victoria |

## DIRECTORY OF SOURCES OF OFFICIAL INFORMATION

Nots.-In the "Federal Data" column, the major source of information on each subject is given first; other sources follow in alphabetical order, with the exception of the National Film Board and the Dominion Bureau of Statistics which appear at the end of each listing with which they are concerned, except where they are the major source.

## PART II.-SPEGIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions. Therefore the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population", which are automatically revived when later census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

The articles marked with an asterisk (*) are available in reprint form from the Information and Public Relations Division, Dominion Bureau of Statistics.

[^0]:    ${ }^{\bullet}$ Revised by the Geographical Branch, Department of Mines and Technical Surveys.

[^1]:    * United Nations Statistical Yearbook, 1962.
    $\dagger$ United Nations Population and Vital Statistics Report, Jan. 1, 1964.

[^2]:    * The Federal Government's oceanographic research program is outlined on p. 21.

[^3]:    * Prepared by Dr. A. H. Lang and published by permission of the Director, Geological Survey of Canada, Ottawa.

[^4]:    * Prepared by Mary J. Giroux, Head, Special Projects Section, Editorial and Information Division, Department of Mines and Technical Surveys. Copies of maps and charts may be purchased from the different branches of that Department in Ottawa, as follows: topographic, planimetric, land-use and electoral maps, aeronautical charts and sheets from the Atlas of Canada from the Map Distribution Office at 615 Booth St.; hydrographic charts from the Marine Sciences Branch and aerial photos from the National Air Photographic Library, both at 615 Booth St.; geological and aeromagnetic maps from the Geological Survey of Canada at 601 Booth St.; and magnetic charts and gravity maps from the Dominion Observatory, Carling Ave.

[^5]:    ${ }^{1}$ Includes Gatineau Park ( 97 sq . miles) and Quebec Battlefields Park ( 0.36 sq . mile) which are under federsl jurisdiction but are not technically National Parks
    ${ }^{2}$ Less than one square mile.
    ${ }^{3}$ Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, but which are not regarded as National Parks.
    ${ }^{4}$ Includes that part of Wood Buffalo Park in Alberta ( 13,675 sq. miles); this park, although established under the National Parks Act, is administered by the Northern Administration Branch, Department of Northern Affairs and National Resources. ${ }^{5}$ That part of Wood Buffalo Park in N.W.T. ${ }^{6}$ A forest experiment area of 25 sq. miles is included in National Parks figure. cludes $1,855 \mathrm{sq}$. miles of provincial park land within provincial forest reserves.

[^6]:    ${ }^{1}$ Administered by the Northern Administration Branch, Department of Northern Affairs and National Resources. $\quad 2$ Not yet formslly established.

[^7]:    * Excluded are the 16,000 sq. miles of the Mingan Reserve, no longer operated by the Department of Tourism, Game and Fish as a reserve.

[^8]:    * Prepared in the Information and Historical Division, National Capital Commission, Ottawa.

[^9]:    * A series of specisl articles relating to the wildlife resources of Canada has been carried in previous editions of the Year Book. See the list of special articles in Chapter XXVIII, Part II, under the heading of "Fauna and Flora".

[^10]:    * Prepared by the Meteorological Branch of the Department of Transport, Toronto. A comprehensive study on The Climate of Canada, also prepared by the Meteorological Branch, was carried in the 1959 Year Book, pp. 23-51. Supplementing that textual material, detailed tabulations of climatic factors for 45 individual meteorological stations across the country were carried in the 1960 Year Book, pp. 33-77. A reprint is available from the above source giving the complete textual and tabular data. A very brief outline of the climate of Canada by region is given in the 1962 edition, pp. 39-40.

[^11]:    - Prepared by the Meteorological Branch, Department of Transport, Toronto.

[^12]:    *This submission, prepared by Dr. G. D. Garland, Geophysics Laboratory, University of Toronto, Toronto, covers all Canadian activity in the field of geophysics. The surveying and mapping activities of the federal Department of Mines and Technical Surveys, of necessity included here, are also covered in different form in the article on pp. 1724.

[^13]:    * Prepared from material supplied by the various institutions and edited by Dr. Ian Halliday of the Dominion Observatory, Ottawa.

[^14]:    * Except where otherwise indicated, the information in this Chapter has been brought up to the date of Apr. 30, 1964. Certain changes occurring between that date and the date of going to press will be found in an Appendir to this volume. Also, official appointments made up to the date of going to press will be found in Chapter XXVIII (see Index).

[^15]:    *See A Consolidation of The British North America Acts 1867 to 1960, consolidated by Elmer A. Driedger as of Jan. 1, 1964. Queen's Printer, Ottawa. 75 cents (Catalogue No. Y X1-164). A further amendment was made in 1964 respecting old age pensions (see p. 66).

[^16]:    * Also available in reprint form from the Dominion Bureau of Statistics, Ottawa, 25 cents.

[^17]:    * Senstor the Hon. Gideon Decker Robertson held the portfolio of Minister of Labour for the periods Nov. 7 , 1918 to Dec. 29, 1921 and Aug. 7, 1930 to Feb. 2, 1932; Senator the Hon. Malcolm Wallace McCutcheon served as Minister of Trade and Commerce from Feb. 12 to Apr. 22, 1963.

[^18]:    ${ }^{1}$ Northwest Territories in 1963.

[^19]:    ${ }^{1}$ Died May 29, 1963; see Appendix for by-election.

[^20]:    ${ }^{1}$ R.Cr. from September 1963.

[^21]:    ${ }^{1}$ Died Mar. 14, 1964; see Appendix for byelection.

[^22]:    ${ }^{1}$ Died Mar. 4, 1964; see Appendix for by-election.

[^23]:    ${ }^{1}$ By-elections held between Apr. 30, 1964 and the date of going to press will be carried in an Appendix to this volume.

[^24]:    ${ }^{1}$ Each voter in the double-member constituency of Queens County, P.E.I., had two votes; in 1963, 26,472 voters on the list cast 42,703 votes. ${ }^{2}$ Each voter in the double-member constituency of Halifax, N.S., had two votes; in 1963, 122,846 voters on the list cast 183,402 votes. ${ }^{3}$ Electoral District of Yukon. $\quad$ Electoral District of Mackenzie River in 1958 and 1962 and Electoral District of Northwest Territories in 1963.

[^25]:    * More detailed information concerning provincial judiciaries is given in the 1954 Year Book, pp. 48-55.

[^26]:    *The information given in Subsections 1 to 7, 9 and 10 of this Section is brought up to Apr. 30, 1964; Subsection 8 is as at June 10, 1964, the date of availability of information following the Saskatchewan General Flection of Apr. 22, 1964. Any important changes occurring between those dates and the time of going to press will befound in an Appendix to this volume.

[^27]:    *As at June 10, 1964, the date of availability of information following the General Election of Apr. 22, 1964.

[^28]:    *Further information on officials of various Federal Government departments serving the Yukon Territory may be obtained from the Director, Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

[^29]:    - Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistica.

[^30]:    ${ }^{2}$ Municipalities grouped according to their official nomenclature, which is roughly indicative of size and nature (see footnote 9). ${ }_{2}$ Municipalities grouped under the classification devised by the Dominion-Provincial Conferences on Municipal Statistics, designed to bring municipalities into comparable groups for statistical presentation. ${ }^{3}$ Includes the 57 local improvement districts; excludes commissions. ${ }^{\text {P }}$ The Montreal Metropolitan Corporation. ${ }^{5}$ The Municipality of Metropolitan Toronto. ${ }^{6}$ The Metropolitan Corporation of Greater Winnipeg. $\quad 7$ Designated by the province as towns (45), rural districts (4) and local improvement districts (2); all operate under the same Act. $\quad$ Classified by the province as community councils. $\quad$ Rural municipalities are designated by different names in the different provinces. ${ }^{10}$ Includes the 18 improvement districts.
    ${ }^{11}$ Includes the 3 units of self-government known as suburban municipalities; excludes the unincorporated local government districts. ${ }_{12}$ Excludes the 12 unincorporated local improvement districts. ${ }^{13}$ Includes the 26 county municipalities; excludes the 51 unincorporated improvement districts and the 3 special areas. 14 Excludes the 276 unincorporated improvement districts and the 2 local districts.
    ${ }^{16}$ Includes municipalities shown wholly or partly in metropolitan areas by the 1961 Census, with subsequent revisions to take care of annexations, etc. Included in "Urban" are the Montreal Metropolitan Corporation, the Municipality of Metropolitan Toronto and the Metropolitan Corporation of Greater Winnipeg.
    ${ }_{17}$ Classified by the province as suburban or semi-urban.

[^31]:    * Appointed prior to May 1, 1963, but omitted from the list published in the 1963-64 Year Book.

[^32]:    - Prepared under the direction of H. R. Balls, Comptroller of the Treasury, Department of Finance, Ottawa.

[^33]:    * As at Apr. 30, 1964; any major changes taking place between that date and the time of going to press will be carried in an Appendix to this volume.

[^34]:    * Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary the Industrial Development Bank, because of the special nature of their functions, are excluded from operations of the Crown corporations Part of the Act and are governed by their own Acts of incorporation as is also the Eastern Rockies Forest Conservation Board, a joint federal-provincial enterprise. The Canada Council was set up under the Canada Council Act (assented to Mar. 28, 1957) as a Crown corporation but has been declared not an agency of the Crown and hence is not included in the Schedules to the Financial Administration Act; the same situation applies to the Atlantic Development Board set up under the Atlantic Development Board Act (assented to Dec. 20, 1962).

[^35]:    * Compiled from information supplied by the reapective Departments.

[^36]:    * Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^37]:    * Staffed by employees of the National Research Council.
    $\dagger$ Included from March 1963.
    $\ddagger$ Staffed by employees of the Defence Research Board and Defence Construction (1951) Limited.
    8 Prepared (June 1964) by the Department of External Affairs, Ottawa.

[^38]:    * Dual accreditation; representative not resident in the country.

[^39]:    - Dual accreditation; representative not resident in the country.

[^40]:    Special Programs (pledged for 1963)-
    $\$$
    Expanded Program of Technical Assistance.
    2,150,000 (U.S.)
    Special Fund.
    2,350,000 (U.S.)

    Food and Agriculture Organization............................................................737,000
    International Civil Aviation Organization.
    223,000
    International Labour Organization.
    562,000

[^41]:    *The terms of the Treaty and the organization of the Council and subordinate committees are dealt with in the 1954 Year Book at pp. 113-115. A short review of the events leading up to the establishment of NATO and its subsequent membership is given in the 1960 Year Book at p. 167.

[^42]:    ${ }^{*}$ An outline of the growth of population in Canads since the beginning of the seventeenth century may be found in Vol. I of the 1931 Census. Other accounts of population growth prior to the present century are included in Vol. I of the 1941 Census and Vol. X of the 1951 Census.

[^43]:    ${ }^{1}$ Populations of Newfoundland (not part of Canada until 1949) were: 1901, 220,984; 1911, 242,619; 1921, 263,033; 1931, 281,500 (estimated); 1941, 303,300 (estimated); and 1945, 321,819. ${ }^{2}$ Includes 485 members of the Royal Canadian Navy recorded separately in 1921.

[^44]:    *The British North America Act, 1867 (Sect. 133) makes provision for the use of the English and French languages as follows:-
    "Either the English or the French Language may be used by any Person in the Debates of the Houses of the Parliament of Canada and of the Houses of the Legislature of Quebec; and both those Languages shall be used in the respective Records and Journals of those Houses; and either of those Languages may be used by any Person or in any Pleading or Process in or issuing from any Court of Canada established under this Act, and in or from all or any of the Courts of Quebec.

    The Acts of the Parliament of Cansda and of the Legislature of Quebec shall be printed and published in both those Languages."

[^45]:    *Prepared by A. H. LeNeveu, Chief of the Analysis, Immigration and Citizenship Statistics Section of the Census Division, Dominion Bureau of Statistics.

[^46]:    * A dwelling is defined as a structurally separate set of living quarters, with a private entrance either from outside the building or from a common hall, lobby, vestibule or stairway inside. The entrance must not be through another person's living quarters.

[^47]:    ${ }^{1}$ Exclusive of the Yukon and Northwest Territories.

[^48]:    * A family, as defined in the census, consists of a husband and wife (with or without children who have never married) or a parent with one or more children never married, living together in the same dwelling. Adopted children and stepchildren are counted as own children and, in fact, a family may comprise a man or woman living with a guardianship child or ward under 21 years of age.

[^49]:    * Revised in the Information Division, Department of Citizenship and Immigration, Ottawa.

[^50]:    ${ }^{1}$ Indian settlements only. $\quad$ : Includes 75 Indian settlements not officially classified as reserves-13 in Quebec, 4 in Ontario, 4 in Alberta, 25 in the Yukon Territory and 29 in the Northwest Territories.

[^51]:    * Revised in the Editorial and Information Division, Department of Northern Affairs and National Resources, Ottawa.

[^52]:    For footnotes, see end of table, p. 203.

[^53]:    ${ }^{1}$ African population only. ${ }^{2}$ African population only and probably excludes population of Brazzaville and Pointe-Noire. ${ }^{3}$ Fewer than 500 persons. ${ }^{4}$ Excluding Indian jungle population. ${ }^{5}$ Excluding Indian and Negro population living in tribes. LLatest official estimate. ${ }^{7}{ }^{7}$ Excluding armed forcea and foreigners. Excluding Kashmir-Jammu, the final status of which has not yet been determined. - Less than one square mile.
    ${ }^{10}$ Inhabited only in winter season; included also in the population of Norway.

[^54]:    *Sections 1 and 2 of this Part were revised under the direction of the Deputy Minister, Department of Citizenship and Immigration, Ottawa.

[^55]:    ${ }^{\text {t }}$ Excludes rejections and parsons refused admission.
    ${ }^{3}$ Includes deserting seamen deported.

[^56]:    *Prepared in the Citizenship Registration Branch under the direction of the Deputy Minister, Department of Citisenghip and Immigration, Ottawa.

[^57]:    * Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics.

[^58]:    Excess of births over deaths birth are given on p. 254.

[^59]:    *Unless otherwise indicated, "births" in this Section refer to infants born alive; stillbirths are dealt with under a separate beading on p. 242 and under multiple births on p. 236. For international comparisons, see Section 7, pp. 267-268.
    $\dagger$ A crude rate is one based on the total population.

[^60]:    ${ }^{1}$ Excludes Newfoundland for which data are not available.

[^61]:    ${ }^{1}$ Figures for Newfoundland are included from 1949, and those for the Yukon and Northwest Territories from 1951.

[^62]:    *The term "illegitimate", as used here, does not refer to all births conceived out of wedlock but is necessarily restricted to those in which parents reported themselves as not having been married to each other at the time of birth or registration and, in Ontario, to those in which the marital status of the mother was reported as "single" at the time of birth or registration.

[^63]:    * Obtainable from the Vital Statistics Section, DBS.
    † Stillbirth figures given here refer only to foetuses of 28 or more weeks gestation which "showed no sign of life". Up to the end of 1963, only foetuses delivered after at least 28 weeks pregnancy which showed no sign of life were required to be registered with the provincial authorities; as of Jan. 1, 1964, all provinces (except Newfoundland) provide for the compulsory registration of all stillbirths of 20 or more weeks gestation, a 'stillbirth' being defined as "the complete expulsion or extraction from its mother, after at least 20 weeks pregnancy, of a product of conception in which, after such expulsion or extraction, there is no breathing, beating of the heart, pulsation of the umbilical cord, or unmistakable movement of voluntary muscle". Available data for stillbirths of 20-27 weeks pregnancy for those provinces baving this legislation in effect before 1963 are obtainable from the Vital Statistics Section, DBS.

[^64]:    ${ }^{1}$ Exclusive of Newfoundland for all years and the Yukon and Northwest Territories for 1941-50.
    ${ }^{2}$ Figures for Newfoundland areincluded from 1949.

[^65]:    - For international comparisons, see Section 7, pp. 267-268.
    $\dagger$ A crude rate is one based on the total population.

[^66]:    ${ }^{1}$ Excludes the Yukon and Northwest Territories.

[^67]:    Per 100.000 live births.

[^68]:    ${ }^{1}$ Prior to 1951, includes deaths under one calendar month of age; since 1951, includes deaths under 28 days.

[^69]:    *For international comparisons, see Section 7, pp. 267-268.

[^70]:    ${ }^{1}$ Includes Greek Catholic.

[^71]:    * Except where otherwise indicated, this Chapter was prepared by the Research and Statistics Division of the Department of National Health and Welfare, Ottaws.
    $\dagger$ Available from the Queen's Printer, Ottawa. 916 pp . \$10. (Catalogue No. Z1-1961/3-1).

[^72]:    ${ }^{1}$ As set out in the General Health Grant Rules. $\quad{ }^{2}$ Merged with Medical Rehabilitation Grant, Apr. 1,
    1960. ${ }^{3}$ Absorbed into General Public Health Grant, Apr. 1, $1960 . \quad 4$ Lapsed in $1953 .{ }^{5}$ Introduced in 1953 and absorbed into General Public Health Grant, Apr. 1, 1960 with Crippled Children Grant, Apr. 1, $1960 . \quad{ }^{7}$ Introduced in 1953.

    6 Introduced in 1953 and merged
    ${ }^{8}$ Amounts for 1960-63 only; see footnotes ${ }^{2}$ and 6.

[^73]:    * Prepared in the Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics. Detailed information will be found in the following DBS publications: Hos pital Statistics, Vols. I to VII (Catalogue Nos. 83-210 to 83-216); Mental Health Statistics, Vol. III (Catalogue No. 83-205); Tuberculosis Statistics, Vol. II (Catalogue No. 83-207); and List of Canadian Hospitals and Related Institutions and Facilities (Catalogue No. 83-201).

[^74]:    ${ }^{1}$ Subject to later adjustments by Provincial Plan.

[^75]:    ${ }^{1}$ Subject to later adjustments by Provincial Plan.

[^76]:    ${ }^{2}$ Included with net in-patient earnings.

[^77]:    ${ }^{1}$ Includes ages not known.

[^78]:    ${ }^{1}$ Includes ages not stated. cholia, paranoia and paranoid states.
    ${ }^{2}$ Comprises schizophrenia, manic depressive psychosis, involutional melan${ }^{3}$ Includes depression, anxiety and other neuroses.

[^79]:    ${ }^{1}$ Excludes the Northwest Territories.
    ${ }^{2}$ Includes venereal diseases only for the Northwest Territories. ${ }^{3}$ Includes other cases and cases where type not specified.
    ${ }^{4}$ Less than 0.05 per 100,000 population.

[^80]:    - In his 1964 Budget Speech, the Minister of Finance announced that the government would propose that family allowances be paid in respect of children aged 16 and 17 who are attending full-time educational or training courses. These allowances would be in the amount of $\$ 10$ a month and would be payable 12 months a year.

[^81]:    ${ }^{1}$ Based on gross payment for March.

[^82]:    ${ }^{1}$ The average monthly assistance was $\$ 61.09$ for June 1962, the first month for which an average based on the maximum of $\$ 65$ a month was computed.

[^83]:    ${ }^{1}$ Includes dependants. ${ }^{2}$ Payment figures shown are for the months to which the claims made under the program relate and include amounts paid to the provinces by the Federal Government after the end of the fiscal year.

[^84]:    * Prepared by the Department of Veterans Affairs, Ottawa.

[^85]:    - Prepared in the Education Division, Dominion Bureau of Statistics.

[^86]:    * Details may be found in the calendars of the universities; in Awards for Graduate Study and Research (1963 ed.) published by the Canadian Universities Foundation, Ottawa; in the National Student Aid Information Service, 15 Welland Âve., St. Catharines, Ont.; and in UNESCO's annual listing, Study Abroad.

[^87]:    ${ }^{*}$ DBS Report to be published in 1964.

[^88]:    ${ }^{1}$ Includes publicly controlled, private and federal schools. $\quad{ }^{2}$ From kindergarten to and including grade 8 in all provinces except Quebec; grade 8 included with secondary grades in Quebec. ${ }^{3}$ Includes preliminary figures for Quebec.

[^89]:    ${ }^{1}$ Day，residential and hospital schools administered by the Federal Government．${ }^{2}$ Also included with＂Higher Education＂${ }^{2}$ Includes indentured apprentices taking full－time，part－time and correspondence courses．${ }^{4}$ Included under＂Trade courses（pre－employment）＂．${ }^{5}$ Included with Nova Scotia． ${ }^{8}$ School year 1961－62．${ }^{7}$ Includes only students being trained under federal－provincial agreements． ${ }^{8}$ Includes enrolment in courses sponsored by public libraries，business colleges，teacher－training institutions，and Federal Government departments not distributed by province．

[^90]:    ${ }^{1}$ Includes the Yukon and Northwest Territories.
    ${ }^{2}$ No direct grants were paid to universities of Quebec; see text on p. 351. ${ }^{2}$ Capital grants from the Federal Government are included in the appropriate classification above. ${ }^{\text {Limited to reported expenditures of public funds. }}{ }^{\text {L Included in "Elementary and Second- }}$ ary-Public schools"

    - Includes capital costs from current funds.

[^91]:    ${ }^{1}$ Estimated. ${ }^{2}$ Includes Bachelors of Letters and Social Science. ${ }^{2}$ Some institutions include Science degrees in Arts. ${ }^{4}$ Includes Bachelors of Accounting and Secretarial Science. ${ }^{5}$ Includes diplomas in Architecture from the School of Architecture of Montreal. ${ }^{\text {I }}$ Includes all diplomas and degrees except for Bachelors of Divinity. ${ }^{7}$ Includes M. Com., M.Ed., M.Paed., M.S.W., as well as M.A. In some institutions, M.Sc. degrees are included with M.A.'s. ${ }^{\prime}$ Includes M.A.Sc., M.S.A., M.Sc.F., M. Arch., M.V. Sc., M.Sc. Dent., M. Surgery (where conferred separately) as well as M.Sc. The "Licence" in the Frenchlanguage universities is the next degree in advance of the Bachelor.

[^92]:    ${ }^{1}$ See text on p. 351 re Quebec.

[^93]:    ${ }^{1}$ Estimate. $\quad{ }^{2}$ In addition, there were 10,961 part-time students and 357 students taking correspondence courses. ${ }^{2}$ Excludes 12,771 part-time students and 31,758 students taking correspondence courses from private trade schools and business schools.

    - Excludes some 21,000 part-time students.

[^94]:    - Further information on this subject may be obtained from the Canadian Cultural Information Centre, 56 Sparks St., Ottaws.

[^95]:    * Prepared by Dr. R. Glover, Director, Human History Branch, and Dr. A. W. F. Banfield, Director, Natural History Branch, National Museum of Canada, Ottawa.

[^96]:    *A list of 400 selected titles of "Books About Canada", prepared by the National Librarian, appears in Chapter XXVIII of this volume.

    $\delta$ The Department of Labour Winter Works Program is also involved in this program.

[^119]:    *The Department of Fisheries is also a member of the Fraser River Board.
    $\dagger$ The Department of Northern Affairs and National Resources is also a party to this agreement.

[^120]:    *Prepared in the Economics Division, Canada Department of Agriculture, Ottawa.

[^121]:    ${ }^{*}$ Comparison made using the 1951 Census definition of a farm (see p. 496).

[^122]:    -Include agriculture, forestry, fisheries, trapping, mining, electric power, manufacturing and construction. Based on 1961 estimates of net value of production.

[^123]:    *Includes some United States farm products not separable.
    $\dagger$ Excludes shipments destined for overseas countries and carried in ships of foreign registry.

[^124]:    ${ }^{\bullet}$ Income adjusted for the rise in consumer prices.

[^125]:    *Prepared (May 1964) under the direction of S. C. Barry, Deputy Minister of Agriculture, Ottawa.

[^126]:    * Since the preparation of this Subsection, additional farm assistance legislation has been passed by Parliament in the form of the Farm Machinery Syndicate Credit Act (SC 1964, c. 29), which, as its name implies, provides for the extension of credit to syndicates for the purpose of purchasing machinery for use primarily by their members.

[^127]:    ${ }^{1}$ Repealed by the Farm Credit Act, proclaimed Oct. 5, 1959.

[^128]:    * Information supplied by the agricultural authorities of the various provinces.

[^129]:    - Revised in the Agriculture Division, Dominion Bureau of Statistics.
    $\dagger$ Available from the Dominion Bureau of Statistics or the Queen's Printer, Ottawa.

[^130]:    * Information on the methods and concepts used to determine the contribution of agriculture to national income is available in DBS publication Handbook of Agricultural Statistics, Part II.

[^131]:    1 Values for 1963 not available at time of going to press; see footnote ${ }^{2}$, Table 9.

[^132]:    ${ }^{1}$ Values for 1963 not available at time of going to press; see footnote ${ }^{2}$, Table 9. ${ }^{2}$ Fewer than 500 acres.

[^133]:    ${ }^{1}$ Cows and heifers, two years old or over, kept for milk purposes.

[^134]:    ${ }^{1}$ First year available.

[^135]:    ${ }^{1}$ Used in farm butter only.

[^136]:    ${ }^{1}$ Used in farm butter only.
    ${ }^{2}$ Includes values of skim milk and buttermilk retained on farms.

[^137]:    ${ }^{1}$ Because of intercensal adjustments, the figures for 1961 and 1962 have been revised since the publication of the 1963-64 Year Book; revisions go back to 1957.
    ${ }_{2}$ Factory-made cheese includes cheddar and other cheese made from whole milk and cream. ${ }^{\text {Amounts for "other cheese"' are included in Quebec, Ontario and Alberta }}$ figures but, as fewer than three firms reported in the other provinces, data cannot be included except in the Canada total.

[^138]:    ${ }^{1}$ Includes malted milk, cream powder, formula milks, whole milk powder of less than 26 -p.c. fat, evaporated milk of 2 -p.c. fat, concentrated liquid milk and sterilized cream manufactured by fewer than three firms. ${ }^{2}$ Includes sugar of milk (lactose), condensed buttermilk, concentrated liquid skim milk and special formula skim milk products manufactured by fewer than three firms.

[^139]:    ${ }^{1}$ Includes Newfoundland for all manufactured dairy products. ${ }^{2}$ Includes, in addition to the items listed, malted milk, cream powder, partly skimmed evaporated milk, whole milk powder of less than $26-$ p.c. fat, formula milks, evaporated milk of 2 -p.c. fat, and concentrated liquid milk. ${ }_{3}$ Includes milk by-product items not listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein, powdered whey, special formula skim milk products, lactalbumin and concentrated liquid skim milk. Since the quantities used for human consumption and livestock feeding cannot be separated, per capita figures include both in terms of milk.

[^140]:    ${ }^{1}$ Includes Agricultural Stabilization Act payments of 21 cents per lb. in 1959, 23 cents per lb . in 1960, 22 cents per lb. in 1961,18 cents per lb . in 1962 and 14.3 cents per lb . in 1963 on qualifying graded wool.

[^141]:    ${ }^{1}$ No sales reported.

[^142]:    ${ }^{1}$ Fluctuations in apparent per capita flour consumption are caused partly by lack of complete data on flour inventories in all posit

    2 Honey included with "other" prior to 1960.
    ${ }^{3}$ Includes soybean flour. ${ }^{4}$ Tomatoes canned, tomato juice, tomato pulp, paste and purée. cludes process cheese. $\quad{ }^{7}$ Includes cream expressed as milk.

[^143]:    For footnotes, see end of table, p. 406.

[^144]:    ${ }^{1}$ Quantity small; included with beef. ${ }^{2}$ Trimmed of larding fat and excluding offal. ${ }^{3}$ Includes commercial lard production and estimated lard equivalent of renderable pork fat available from all uninspected slaughter.

[^145]:    - Reference is made to the 1963-64 Year Book for summary figures relating to the economic classification of farms (pp. 478-480) and tenure and age of farm operators (pp. 481-482).

[^146]:    ${ }^{2}$ Includes field, vegetable, fruit and nursery crop land.

[^147]:    ${ }^{1}$ Persons employed on farms and those employed in related agricultural activities such as landscape gardening, groundskeeping, operation of chicken hatcheries, etc.

[^148]:    * Sections of this Chapter that deal with forestry and the federal forestry program were revised by the Department of Forestry, Ottawa. Provincial forcstry programs were prepared by the forestry officials of the respective provincial governments. Sections dealing with forest and allied industrics, except as otherwise noted, were revised in the Forestry Section, Industry Division, Dominion Bureau of Statistics.
    $\dagger$ A more detailed discussion of forest regions is given in Bulletin 123, Forest Regions of Canada, published by the Department of Forestry. Accounts of variations in Canadian physiography and climate are included in a special article on The Climate of Canada, appearing in the 1959 Year Book, pp. 23-51.

[^149]:    ${ }^{1}$ Ten inches D.B.H. or over (suitable for saw timber).

[^150]:    ${ }^{1}$ Includes 16 sq．miles of＂other＂provincial Crown land．
    ${ }^{2}$ Of this total， 320 sq．miles are under lease or licence－ 293 sq．miles in Alberta，the 25 kq．miles in the Yukon Territory，and the 2 sq ．miles in the Northwest Territories．

[^151]:    ${ }^{1}$ Not reported. $\quad{ }^{2}$ Included in provincial figures.

[^152]:    * Statistics of these industries are based on the revised Standard Industrial Classification and new establishment concept (see Chapter XVI on Manufactures).
    $\dagger$ Prepared by J. T. B. Kingston, Economics Branch, Department of Trade and Commerce, Ottawa.

[^153]:    ${ }^{1}$ Includes value of forest products other than wood.
    ${ }^{2}$ In estimating the annual drain on Canada's forest resources, certain converting factors have been used, each of which represents in cubic feet the quantity of merchantable wood used to produce one unit of the material in question. The factor for logs and bolts for the Britiah Columbia coastal region is 175 and for the remainder of Cansda 200. Other factors: pulpwood and round mining timber 85, fuelwood and wood for charcoal 80, poles and piling 15 , hewn railway ties 5 , fence posts 1.2 and fence rails 1 .
    ${ }^{2}$ Includes transportation costs; see text above.

[^154]:    ${ }^{1}$ Given in terms of rough or unpeeled wood; not including wood residue.

[^155]:    * Asphalt roofing manufacturers, folding box and set-up box manufacturers, corrugated box manufacturers, paper bag manufacturers, and miscellaneous paper converters.

[^156]:    * Prepared by B. W. Burgess, Secretary, Pulp and Paper Research Institute of Canada, Montreal, Que.

[^157]:    ${ }^{\bullet}$ Prepared under the direction of Dr. W. E. van Steenburgh, Deputy Minister of Mines and Technical Surveys, Ottawa, in the following Divisions: Introduction and Subsections 1 and 3 by the Mineral Resources Division; Subsection 2 by the Mineral Processing Division, Mines Branch; and Subsection 4 by the Fuels and Mining Practice Division, Mines Branch.

[^158]:    * This review covers the year 1962, the latest year for which final figures were available at the time of preparation; preliminary figures for 1963 are given in Tables 22-24, p. 587.

[^159]:    ${ }^{*}$ Revised, under the direction of the Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

[^160]:    *Revised under the direction of C. L. O'Brian, Chairman of the Dominion Coal Board, Ottawa.

[^161]:    * Compiled from material supplied by the respective provincial governments.

[^162]:    * Compiled from material supplied by the provincial governments.

[^163]:    * For a description of this index, as well as one for manufacturing and electric power and gas utilities, see DBS Reference Paper Revised Index of Industrial Production, 1995-1957 (1949=100) (Catalogue No. 61-502). To update these series and others in the Index of Industrial Production, see DBS monthly report Index of Industrial Production $(1949=100)$ (Catalogue No. 61-005).

[^164]:     remainder N.W.T.

[^165]:    ${ }^{1}$ Includes relatively small quantities produced in Alberta.

[^166]:    ${ }^{1}$ Recovered from sour natural gas and nickel sulphide ores.
    ${ }^{2}$ Does not include sulphur in acid made from roasting zinc sulphide concentrates at Arvida. ${ }^{3}$ Includes sulphur in acid made from roasting zinc sulphide concentrates at Arvida and Port Maitland.

    - Excludes pyrite and pyrrhotite used to produce iron residue or sinter.

[^167]:    ${ }^{1}$ The sum of Canadian coal mines' sales, colliery consumption, coal supplied to employees and coal used in making coke, etc., less the tonnage of cosl exported. but are shown separately in Table 23. Includes small tonnages from countries other than Britain and the United States. Deductions have been made from this column to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores.

[^168]:    ${ }^{1}$ Exports．

[^169]:    States．

[^170]:    * Revised by the Water Resources Branch, Department of Northern Affairs and National Resources, Ottawa.

[^171]:    ${ }^{1}$ Includes only hydro-electric installations that develop power mainly for sale. power installations developed by industries mainly for their own use.

[^172]:    *Prepared by the Energy Statistics Section, Industry Division, Dominion Bureau of Statistics.

[^173]:    * Exchange of Notes between Canada and the United States confirming the entry into force of the Protocol of Jan. 22, 1964, to the Columbia River Treaty was tabled in the House of Commons, Sept. 16, 1964.
    $\dagger$ Revised by the various provincial commissions concerned.

[^174]:    ${ }^{1}$ Hydro unless otherwise noted.

[^175]:    ${ }^{1}$ Dependable hydro-electric peak capacity at time of freeze-up approximated $5,400,000 \mathrm{kw}$. or $7,240,000 \mathrm{hp}$.

[^176]:    ${ }^{2}$ Sum of the maximum 20-minute coincident peak loads (primary plus secondary) of each of the systems operated by the Commission, given in terms of net output of the sources of supply to each system for the last month of each fiscal year.

[^177]:    ${ }^{*}$ Prepared by the Information and Consumer Service, Department of Fisheries, Ottawa.

[^178]:    * Prepared by the respective provincial departments responsible for fisheries administration.

[^179]:    * Prepared by A. Stewart, Production and Marketing Branch, Department of Agriculture, Ottawa.

[^180]:    - Prepared by the Agriculture Division, Dominion Bureau of Statistics.

[^181]:    ${ }^{1}$ Includea 86 grizzly bears.

[^182]:    ${ }^{1}$ Includes pelts not allocated by type.

[^183]:    *Industry Selling Price Indexes 1956-59 (Catalogue No. 62-515) contains explanatory text, charts and weights relating to these indexes; current indexes are published monthly in Prices and Price Indexes (Catalogue No. 62-002).
    $\dagger$ For a description of the methods used in constructing the index and a description of its scope, see DBS publication Revised Index of Industrial Production, 1995-1957 (Catalogue No. 61-502).

[^184]:    ${ }^{1}$ Conceptually identical to previous years. $\quad{ }^{2}$ Cannot be reported separately for manufacturing and non-manufacturing activities but related substantially to manu-

[^185]:    For footnotes, see end of table, p. 666.

[^186]:    For footnotes, see end of table, p. 672.

[^187]:    ${ }^{1}$ Gross value of products prior to 1953; see text on p. 658.

[^188]:    *Except where otherwise noted, prepared in the Planning and Development Section, Business Finance Division, Dominion Bureau of Statistics.
    $\dagger$ Capital expenditure figures for 1962 and earlier years are final and those for 1963 are preliminary and subject to revision at a later date. Capital expenditures for 1962 and 1963, as well as intentions for 1964, appear in greater detail in the publication Private and Public Investment in Canada, Outlook 1964, available from the Queen's Printer (Catalogue No. C51-1/1964).

[^189]:    ${ }^{*}$ An explanation of sources and methods is given in DBS annual report Construction in Canada (Catalogue No. 64-201).

[^190]:    ${ }^{1}$ Metropolitan Corporation of Greater Winnipeg.

[^191]:    * Prepared in the Information Division, Central Mortgage and Housing Corporation, Ottawa.

[^192]:    * More detailed information may be found in Vol. II (Part 2) of the 1961 Census (Catalogue Nos. $93-523$ to 93-535).
    $\dagger$ Based on a 20 -p.c. sample of occupied dwellings across Canada. A dwelling, for census purposes, is a structurally separate set of living quarters with a private entrance either from outside the building or from a common hall or stairway inside. The entrance must not be through anyone else's living quarters.

[^193]:    ${ }^{1}$ Exclusive of the Yukon and Northwest Territories.
    ${ }^{2}$ Dwellings in which the number of persons exceeded the number of rooms. ${ }^{2}$ Figures relate to owner-occupied, single detached, non-farm dwellings only. $\quad$ Figures relate to non-farm dwellings only.

[^194]:    ${ }^{1}$ Figures relate to owner-occupied, single detached, non-farm dwellings only. farm dwellings only, regardless of type.

[^195]:    - Except as otherwise noted, this Chapter has been revised under the direction of the Deputy Minister of the Department of Labour, Ottawa.

[^196]:    * This subject is covered in more detail in the Education Chapter, at pp. 335-336.

[^197]:    ${ }^{*}$ Statistics on numbers and earnings of prevailing rate and other groups of federal employees exempt from the Civil Service Act are given at pp. 132-141.

[^198]:    * In Ontario, the general order issued in 1963 covering both male and female workers applied only to the Toronto-Hamilton-Oshawa zone; province-wide minimum rates went into effect on June 29, 1964.
    $\dagger$ A new Minimum Wage Act passed in 1964 gives authority to set rates for both sexes.

[^199]:    ${ }^{\bullet}$ Prepared in the Special Surveys Division, Dominion Bureau of Statistics.

[^200]:    * Prepared in the Employment Section, Labour Division, Dominion Bureau of Statistics.

[^201]:    ${ }^{1}$ Consists mainly of hotels, restaurants, laundries, dry-cleaning establishments and recreational and business services.

[^202]:    ${ }^{1}$ Includes New Westminster from 1956.

[^203]:    ${ }^{1}$ Mainly hotels, restaurants, laundries, dry-cleaning establishments and recreational and business services.

[^204]:    1 "Other Industries" consists of logging; mining; transportation (all sectors including air transportation), storage and communication (including radio and TV); public utilities; trade; finance; and government and personal service.

[^205]:    ${ }^{2}$ Available for the first time in 1963.

[^206]:    * Prepared by the Unemployment Insurance and Pensions Section, Labour Division, Dominion Bureau of Statistics; statistica of unemployment insurance are compiled and published by the DBS from material supplied by the Unemployment Insurance Commission.
    $\dagger$ Copies of the 1955 Act incorporating subsequent amendments are available from the Queen's Printer, Ottawa. (Catalogue No. LU2-359.)
    $\ddagger$ Commencing Apr. 1, 1957, coverage was extended to persons engaged in fishing, notwithstanding the fact that such persons are not employees of any other person.

[^207]:    * This list should not be considered as exhaustive; more detail may be obtained from the Unemployment Insurance Act and Regulations.

[^208]:    * More detailed information is given in the Department of Labour publication Workmen's Compensation in Canada, A Comparison of Provincial Laws.

[^209]:    ${ }^{1}$ Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for compensation; the period varies in the several provinces. compensate loss of earnings, medical aid payments, cost of rehabilitation and hospitalization (not including capital expenditures) and pensions paid (not pensions awarded) for temporary and permanent disabilities. ${ }^{3}$ Excludes payments by employers who make direct compensation to their employees; such employees come under Schedule II of the Ontario and Quebec Workmen's Compensation Acts.

[^210]:    * Formed by the merger of the National Union of Public Employees and the National Union of Public Service Employees.

[^211]:    * The Board's judgments are reported in Canadian Railway Cases and Canadian Railvay and Transport Cases. and its judgments, orders, rulings and regulations are published by the Queen's Printer, Ottawa, in what is known as J.O.R. \& R.

[^212]:    *The statistical data in this Part have been revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics; more detailed information is given in the annual reports of the Division.

[^213]:    - Prepared by the Public Relations Department, Canadian National Railways, Montreal.

[^214]:    * Prepared in the Canadian Pacific Public Relations and Advertising Department, Montreal, Que.

[^215]:    ${ }^{1}$ Includes those of non-rail industrial firms such as oil, chemical and railway car leasing companies which furnish freight cars to, or on behalf of, any railway line.

[^216]:    * Statistics for individual railways are given in DBS annual report Railway Transport, published in six parts (Catalogue Nos. 52-207-52-212).

[^217]:    ${ }^{1}$ Excludes equipment rents, joint facility rents and tax accruals.

[^218]:    ${ }^{1}$ Includes employees engaged in communications, express cartage, highway transport (rail) and outside operations.

[^219]:    *The Hudson Bay Railway, formerly managed and operated for the Federal Government by the CNR, was absorbed into the Canadian National Railway System on Jan. 1, 1958, to be operated in the same manner as other Canadian Government railway lines. Statistics of the Hudson Bay Railway are therefore included with CNR data for 1958 and subsequent years.

[^220]:    * Except as otherwise indicated, the material in this Part has been revised in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.
    $\dagger$ Revised according to information received from the respective provincial authorities concerned.

[^221]:    ${ }^{1}$ Includes only the amounts reported by the provinces to the Federal Government. ${ }^{2}$ The Agreement with Quebec provides for additional projects to be included at a later date to bring the total to $\$ 15,000,000$.

[^222]:    ${ }^{1}$ Includes registrations in the Yukon and Northwest Territories; in 1963, they numbered 6,734 and 4,323, respectively.

[^223]:    ${ }^{1}$ Includes Armed Forces vehicles.

[^224]:    ${ }^{1}$ Includes other items not shown such as transfer of motor vehicles, garage and service station licences, and fines for infractions of motor vehicle laws. ${ }_{2}$ Included with other motor vehicles. ${ }^{3}$ Included with miscellaneous revenues and therefore in total. 4 Included with passenger automobiles.
    ${ }^{5}$ Not com-

[^225]:    *Statistics are given in more detail in DBS annual report Motor Carriers-Freight, Part I (Catalogue No. 53-222) and Part II (Catalogue No. 53-223).

[^226]:    * Statistics are given in more detail in DBS annual report Moring and Storage, Houschold Goods (Catalogue No. 53-221).

[^227]:    * Statistics are given in more detall in DBS annual report Passenger Bus Statistics (Catalogue No. 53-215).
    $\dagger$ Statistics are given in more detail in DBS annual reports Motor Transport Traffic for Canada and the provinces (Catalogue Nos. 53-207-53-214).

[^228]:    ${ }^{1}$ Initial revenue passenger fares, excluding transfers. $\quad{ }^{2}$ Breakdown not available; included in other items.
    ${ }^{3}$ Excludes British Columbia Electric Railway Company (British Columbia Hydro and Power Authority in 1962).

[^229]:    * Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services by the Department of Transport and the National Harbours Board; the St. Lawrence Seaway by the St. Lawrence Seaway Authority; part of the financial statistics by the Department of Public Works; shipping subsidies by the I)irector of Subsidized Steamship Services, Canadian Maritime Commission; and canal traffic and statistics of shipping by the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^230]:    ${ }^{1}$ Sea-going and inland international.

[^231]:    ${ }^{1}$ Includes smaller ports not shown separately.

[^232]:    ${ }^{1}$ Included with Canadian vessels.

[^233]:    ${ }^{1}$ Grouped according to the revised standard commodity classification.

[^234]:    ${ }^{1}$ Includes naval vessels. $\quad{ }^{2}$ Upbound passengers in all types of vessel numbered 3,096 and downbound 3,820.

[^235]:    ${ }^{1}$ No longer in operation.

[^236]:    ${ }^{1}$ Tolls removed June 1, 1962.

[^237]:    ${ }^{2}$ Commenced operations June 29, 1962.

[^238]:    * Prepared in the Mineral Resources Division, Department of Mines and Technical Surveys, Ottawa, under the authority of Dr. W. E. van Steenburgh, Deputy Minister.

[^239]:    * Statisties of oil pipelines are given in greater detail in the DBS monthly report Oil Pipe line Transport (Catalogue No. 55-001).

[^240]:    *Subsections 1 and 4 to 7 were revised in the Telecommunications and Electronics Branch of the Department of Transport, Ottawa. Textual data in Subsection 2 were prepared by The Bell Telephone Company of Canada, Montreal, and in Subsection 3 by Canadian Pacific Telecommunications Department, Montreal. Statistical material of Subsection 2 and Subsection 3 was revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^241]:    ${ }^{1}$ Includes underground conduits and buried cable.

[^242]:    *See also the item on Air Traffic Control, pp. 813-814.

[^243]:    ${ }^{*}$ See also p. 755.

[^244]:    *Textual information in this Subsection was supplied by the Canadian Broadcasting Corporation, the Board of Broadcast Governors and the Canadian Association of Broadcasters; statistical data were prepared by the Public Finance and Transportation Division of the Dominion Bureau of Statistics.

[^245]:    *An article in the 1957-58 Year Book traces developments in Canadian journalism from their beginnings in 1752 to (circa) 1900. A second article appearing in the 1959 edition brings that account up to the date of writing (1958). The complete presentation is available in reprint form from the Dominion Bureau of Statistics.

[^246]:    * Prepared in the Merchandising and Services Division, Dominion Bureau of Statistics.

[^247]:    - Vol. VI (Pt. 1) Census of Merchandising: Retail Trade (Series 6.1). Vol. VI (Pt. 2) Census of Merchandising: Wholesale Trade; Services (Series 6.2).

[^248]:    ${ }^{1}$ Figures from 1956 include laboratories with no motion picture production; these were not included in previous years. $\quad{ }^{2}$ As of the last week of November 1961; not comparable with previous years. ${ }^{3}$ Excludes freelancers.

[^249]:    ${ }^{1}$ Includes flour in terms of wheat, rolled oats and oatmeal in terms of oats, malt and pot and pearl barley in terms of barley, and rye flour in terms of rye. whest flour in terms of wheat, rolled oats and oatmeal in terms of oats, malt and pot and pearl barley in terms of barley and rye flour and meal in terms of rye. in handling and animal feed.

[^250]:    * More detailed information is available from DBS annual report Livestock and Animal Prolucts Statistics (Catalogue No. 23-203), and the Department of Agriculture publication Livestock Market Review. Statistics of livestock and poultry are given on pp. 473-477 of this edition of the Year Book.

[^251]:    *Revised by the Economics Division, Canada Department of Agriculture, Ottawa.

[^252]:    ${ }^{1}$ Includes other revenue.

[^253]:    * Revised in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^254]:    ${ }^{1}$ Class I and II railways operating in Canada.
    ${ }^{2}$ Freight terminated exceeds totals carried due to tonnages originated by non-reporting industrial railways which are delivered to common carrier lines for further haul and unloading.

[^255]:    * Prepared by W. J. MacLeod, Secretary of the Board of Grain Commissioners for Canada, Winnipeg, Man.

[^256]:    * Revised by R. L. Kristjanson, Executive Assistant, The Canadian Wheat Board, Winnipeg, Man.

[^257]:    *Prepared in the Economics Division of the Canada Department of Agriculture, Ottawa. A more detailed statement on this subject, including the history of developments leading to the present situation, appears in the 1960 Year Book, pp. 961-966.

[^258]:    * Revised by D. H. W. Henry, Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

[^259]:    ${ }^{1}$ After provision for depreciation on fixed assets and capital expenditure met out of operating income; includes commission on general sales tax collections.

    Specified revenue of the Federal Government from alcoholic beverages comprising excise duties, excise taxes, customs duties and certain fees and licences in that connection are shown in Table 2.

[^260]:    ${ }^{1}$ Includes an import surcharge of 15 p.c. ad valorem effective from June 25, 1962 to Feb. 20, 1963, when it was reduced to 10 p.c. ad valorem. The import surcharge was removed entirely as of Apr, 1, 1963. ${ }_{2}$ Drawbacks and refunds of duties and taxes have not been deducted.

[^261]:    * Revised by the Commissioner of Patents, Department of the Secretary of State, Ottawa.

[^262]:    * Revised by the Registrar of Trade Marks, Department of the Secretary of State, Ottawa.

[^265]:    ${ }^{1}$ Includes summary administration cases.
    ${ }^{2}$ In addition to the amount paid to creditors by the trustee, secured creditors realized direct from their security approximately $\$ 20,282,719$.

[^266]:    * Prepared by the Business Finance Division, Dominion Bureau of Statistics.

[^267]:    * Details of weighting and construction and historical series appear in DBS publications Price Index Numbers of Residential Building Materials, $1926-48$ (Catalogue No. 62-505) and Price Index Numbers of Non-residential Building Materials, 1935-52 (Catalogue No. 62-506). Revised itera list and weighting for the electrical component of the residential building materials index, effective July 1960, is available on request.

[^268]:    * A comprehensive description of the index is contained in the publication The Consumer Price Index ( $1949=100$ ) -Revision Based on 1957 Expenditures (Catalogue No. 62-518).

[^269]:    ${ }^{1}$ Meals to non-family persons living in household were converted to persons per week and added to number of family persons at home. Persons away from home who paid board were included only in obtaining per-person averages for board and total food.

[^270]:    ${ }^{1}$ Meals to non-family persons living in household were converted to persons per week and added to number of family persons at home. Persons away from home who paid board were included only in obtaining per-person averages for board and total food.

[^271]:    * Prepared by G. S. Watts, Research Department, Bank of Canada, Ottawa.

[^272]:    * Based on statistical reports published by the External Trade Division, Dominion Bureau of Statistice.

[^273]:    ${ }^{1}$ Includea Alaska and Hawaii.

[^274]:    ${ }^{1}$ Included with Kenya prior to 1960.
    2 Included with French Africa, n.e.s. prior to 1961. ${ }^{3}$ Included with Portuguese Africa, n.e.s. prior to 1960. ${ }^{2}$ Included with French Africa, n.e.8. prior to $1962 . \quad{ }^{5}$ Less than $\$ 500$. ${ }^{6}$ Included with Viet Nam prior to 1960.
    ${ }^{8}$ Included with India.

[^275]:    ${ }^{1}$ Less than $\$ 500$.
    ${ }^{2}$ Includes Alaska and Hawaii.

[^276]:    prior to 1961 n.e.s. prior to 1962.

[^277]:    ${ }^{1}$ Less than $\$ 500$. ${ }^{2}$ Includes Alaska and Hawaii.

[^278]:    * Prepared in the several branches and agencies concerned, and collated in the Trade Publicity Branch, Department of Trade and Commerce, Ottawa.

[^279]:    * Information relating to rate of duty and value for duty is available from the Department of National Revenue, Customs and Excise Division, which administers the Customs Act and the Customs Tariff.

[^280]:    * Prepared by the Travel Statistics Unit, National Accounts and Balance of Payments Division, Dominion Bureau of Statistics.

[^281]:    * Except as otherwise indicated, revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^282]:    ${ }^{1}$ Incomplete; not separable from real property taxes in some provinces.

[^283]:    ${ }^{1}$ Includes pensions paid from Old Age Security Fund. cludes interest on debentures issued for school purposes. purposes.

[^284]:    * Revised (July 1964) in the Taxation Division, Department of Finance, under the direction of F. R. Irwin, Director of the Division, and by the provincial authorities concerned.
    $\dagger$ The original agreement provided for abstements of 19 p.c. in 1965 and 20 p.c. in 1966. However, following a federal-provincial conference in April 1964, the provinces were granted an additional two percentage points in 1965 and four percentage points in 1966.

[^285]:    *The original agreement was for a 50 -p.c. abstement. However, at the conclusion of a federal-provincial conference in late 1963, it was increased to 75 p.c. in respect of deaths occurring after Mar. 31, 1964. Currently, only the estates of domiciliaries of British Columbia qualify for the full 75 p.c. abatement. Quebec and Ontario estates are temporarily eligible for only 50 p.c. because these two provinces have decided for the time being to take a payment from the Federal Government on account of the additional 25-p.c. abatement rather than to increase their succession duty rates.

[^286]:    * Family allowances are monthly welfare payments by the Federal Government to the parents or guardians of children under 16 years of age. The allowance is $\$ 6$ for each child under 10 years of age and $\$ 8$ for each child between the ages of 10 and 16. These allowances are not subject to income tax. In 1964 the program was extended to cover children between the ages of 16 and 18 in full-time attendance at educational institutions; such payments to be $\$ 10$ per month. The right to deduct $\$ 550$ for a dependent child is not affected by the receipt of these youth allowances.
    $\dagger$ Except in the case of income earned in Quebec or received by a resident of Quebec where it will be 24 p.c. in 1965 and 27 p.c. in 1966 (see p. 956).

[^287]:    *See footnote †. p. 958.

[^288]:    - Applicable only to wines manufactured in Canada. The customs tariff on wines includes a levy to correspond with these taxes on domestic production.

[^289]:    * See also pp. 940-947.

[^290]:    *The provincial mark-up over the manufacturer's price is not considered a "tax" in DBS financial statistics, but forms part of the "profits of government business enterprises".
    $\dagger$ Gasoline and diesel fuel used by primary producers-farmers, fishermen, manufacturers and processors-is exempt from tax.
    $\ddagger$ Generally, fuel oil used for agricultural and industrial purposes is exempt from tax.

[^291]:    ${ }^{1}$ Includes old age security taxes.

[^292]:    ${ }^{1}$ Includes pensions paid from the Old Age Security Fund. purposes are classified by function. See Table 6 for details of all grants to provincial governments and municipal corporations.

This paper provides a detailed explanation of concepts, uses and limitations, data sources, methodology, etc., and covers a much wider range of industries than provided in this Section. Current quarterly data are published in DBS monthly Index of Industrial Production (Catalogue No. 61-005).
    $\dagger$ See Revised Index of Industrial Production, 1935-57 (Catalogue No. 61-502) and the current monthly publication Index of Industrial Production (Catalogue No. 61-005).

[^309]:    ${ }^{1}$ Contract drilling (excluding drilling for oil and gas) is not included here but is included in the total "Real Domestic Product" ${ }^{2}$ Repair service establish
    but are included in the total "Real Domestic Product"

[^310]:    *DBS Catalogue No. 61-202.

[^311]:    ${ }^{1}$ Excludes agriculture.

[^312]:    ${ }^{*}$ More detailed information is given in DBS annual report Canadian Balance of International Payments and International Investment Position (Catalogue No. 67-201) and in Quarterly Estimates of the Canadian Balance of International Payments (Catalogue No. 67-001).
    $\dagger$ Commodity trade statistics have been adjusted to reflect more closely the timing of transactions, particularly for investment goods, and to exclude commodities which are either covered elsewhere in the accounts or are not pertinent for balance of payments purposes.

[^313]:    *This balance is somewhat lower than that given in Chapter XXII, Part IV, p. 948, due to incorporation of estimates at differing stages of revision.

[^314]:    ${ }^{1}$ Includes Mutual Aid exports.

[^315]:    ${ }^{1}$ Includes all net exports of non-monetary gold.

[^316]:    * Economic Council of Canada, First Annual Review: Economic Goals for Canada to 1970. Queen's Printer, Ottawa. December 1964. \$3.50 (Catalogue No. EC 21-1/1964).

[^317]:    *Revised by the Research Department of the Bank of Canada.

[^318]:    "To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises."

[^319]:    ${ }^{1}$ Total issue less notes held by chartered banks.

[^320]:    *Revised by the Master of the Royal Canadian Mint, Ottawa.

[^321]:    ${ }^{*}$ More detail is included in an article appearing in the 1961 Year Book, pp. 1115-1120, prepared by J. Douglas Gibson, General Manager of The Bank of Nova Scotia. The early history of currency and banking in Canada is given in the 1938 Year Book, pp. 900-905. A list of the banks at Confederation appears in the 1940 Year Book, p. 897, and bank absorptions since 1867 are given in the 1941 edition, pp. 812-813. A table in the 1937 Year Book, pp. 894-895, shows the insolvencies since Confederation; the last insolvency occurred in 1923.
    $\dagger$ The Senate Banking Committee, on July 28, 1964, approved the granting of charters to two additional banksthe Bank of Western Canads and the Laurentide Bank.

[^322]:    *The larger Canadian banks have long maintained offices in London and New York. In addition, some Canadian banks for more than half a century have been providing an important part of the commercial banking facilities in the Caribbean area (see Table 10, p. 1043).

[^323]:    * Such loans were almost entirely a postwar innovation in Canadian lending practice, and had increased markedly during the easy-money period of 1954-55. Since 1956, term lending has been generally confined within narrower limits, although it is still practised when conditions permit.

[^324]:    ${ }^{1}$ Realized profits and losses on disposal of securities are included in operating earnings. $\quad{ }^{2}$ Before provision for income taxes, losses, and transfers to inner reserves. ${ }^{3}$ Includes taxes other than income taxes. ${ }^{4}$ Profits and losses on sale of fixed assets and adjustments relating to prior years. ${ }^{5}$ After amounts retransferred to rest account. - Includes income taxes on taxable portion of additions to and amounts retransferred from inner reserves, and foreign income taxes.

[^325]:    *The gold sovereign remained the standard for the Canadian dollar until 1910 when the currency was defined in terms of fine gold, making it the exact gold equivalent of the United States dollar. Both British and United States gold coins were, however, legal tender in Canada for this whole period.

[^326]:    * Noon quotations. Daily highs and lows may have exceeded these rates.
    $\dagger$ The operations of the Foreign Exchange Control Board from the time of its establishment to the termination of exchange control in December 1951 are reviewed in the 1941 to 1952-53 editions of the Year Book.

[^327]:    *Revised under the direction of the Superintendent of Insurance for Canada, Ottawa.

[^328]:    ${ }^{1}$ Profits before income tares.

[^329]:    ${ }^{1}$ Includes companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba which, by arrangement, are inspected by the federal Department of Insurance.
    ${ }^{2}$ Excludes provincial companies of Nova Scotia, New Brunswick and Manitoba which are included with federal companies.

[^330]:    *Further details are given in the Department of Insurance report Small Loans Companies and Money-Lenders for the year ended Dec. 31, 1962.

[^331]:    * Material in this Chapter, except as otherwise indicated, was prepared under the direction of the Superintendent of Insurance for Canada, Ottawa. More detailed data are available in the annual reports of the Department of Insurance.

[^332]:    ${ }^{1}$ Death, disability and maturity under insurance and annuity contracts.

[^333]:    ${ }^{1}$ Death, disability and maturity under insurance and annuity contracts.

[^334]:    ${ }^{1}$ At book values. The liabilities include a reserve equal to the amount, if any, by which the total book value of bonds, stocks and real estate exceeds the total market value (or amortized value where applicable). market values.

[^335]:    ${ }^{1}$ Registered or licensed reinsurance deducted from all companies. Prior to 1961 , all reinsurance was deducted for Canadian companies included in the data of federally registered companies; these figures are therefore not strictly comparable with the same items in previous years.

[^336]:    ${ }^{1}$ Excludes forest fires and Federal Government property losses.

[^337]:    ${ }^{1}$ Includes marine insurance.

[^338]:    ${ }^{1}$ Includes marine insurance.

[^339]:    ${ }^{1}$ Includes transfers to or from life branch.

[^340]:    ${ }^{1}$ Undetermined.

[^341]:    ${ }^{1}$ Lees than $\$ 500,000$.

[^342]:    * Prepared (November 1964) in the Office of the Deputy Minister, Department of National Defence, Ottawa.

[^343]:    Kingston, Ont., HMCS Cataraqui
    Hamilton, Ont., HMCS Star
    Windsor, Ont., HMCS Hunter
    Port Arthur, Ont., HMCS Griffon
