WEIGHTS TO CALENDARIZE FISCAL YEAR DATA
REFERRING TO ANY CONSECUTIVE
12 MONTHS OR 4 QUARTERS

INTRODUCTION

Fiscal year data referring to April 1986 to March 1987 (say) are often calendarized in the following manner. The 1986 estimate is set equal to $1/4$ ($3/12$) of the 85-86 fiscal value plus $3/4$ ($9/12$) of the 86-87 value. The reasoning is: the 85-86 fiscal year contains 3 of the desired months, i.e. January to March 1986; and the 86-87 fiscal year contains 9 of the desired months, i.e. April 1986 to December 1986. If the fiscal years cover from May to April, the fractions applied are $4/12$ and $8/12$; and so forth.

This calendarization procedure works well, if the fiscal year values behave in a nearly linear manner. If they display turning points however, the procedure may work very poorly. This is illustrated in Figure 1 (b). The "1/2-1/2" 1986 estimate lies in between the 85-86 and the 86-87 fiscal year values. Figure 1 (a) displays the same two fiscal years plus 84-85 fiscal year. By looking at the three years together, it is obvious that any reasonable 1986 estimate has to lie above both the 85-86 and 86-87 fiscal year values. Indeed, the turning point in the underlying monthly (trend-cycle) values displayed must have occurred somewhere in 1986.

In such cases the calendar year estimates of flow series must be based on more than two years. This document tabulates fractions or weights, that can be applied to more than two fiscal years. The weights were calculated according to the methodology of Cholette and Baldwin (1988). When possible we advocate the 4-year weights of Table 3. The estimate for year 1985 (say) is thus based on four fiscal years: two on the "left", 83-84 and 84-85, and two on the right, 85-86 and 86-87. When this is impossible, the 3-year weights of Table 2 should be used. When this is also impossible, the 2-year weights of Table 1 should be used.

The weights of Tables 1 to 3 assume that the underlying monthly values level off at the ends, like in Figure 1 (a); those in Tables 4 to 6, that the monthly values behave linearly at the ends. We advocate the weights of

Tables 1 to 3 for the vast majority of socio-economic time series. These weights "protect" against turning-points and levelling-off. When subject matter experts know for sure that the variable never changes directions and never levels off, they could use the weights in Tables 4 to 6.

The weights should be applied in the following manner. Assume that the 4-year weights of Table 3 (9) are used. When the 86-87 fiscal value becomes available, 1986 is calculated with the weights in the 4th row of the table; and the 1985 estimate is recalculated (i.e. revised) with the weights in the 3rd row. The weights in the 5th row are mainly for experimental purposes, as they implicitly involve forecasting April to December 1987. The resulting 1987 estimate would have little reliability. However if the socio-economic variable is very predictable or if a small number of months need to be forecasted (indicated in last row of each sub-table), the end weights may be used. Similarly the weights in the 1st row involve backcasting January to March 1983.

If revisions are out the question, the 3-year weights of Table 2 (and 5) can be applied.

When the fiscal years cover more or less than 12 months or when more precise estimates are desired or when the series are stock series (e.g. population and inventories, more sophisticated variants of the method described herein must be used (Cholette and Baldwin, 1988). For that purpose, a SAS/IML computer program is available from the author (Rheaume and Cholette, 1988). That program may also be used to transform financial quarter data into conventional quarter values; and weekly bundles covering 4 or 5 weeks, into monthly values.

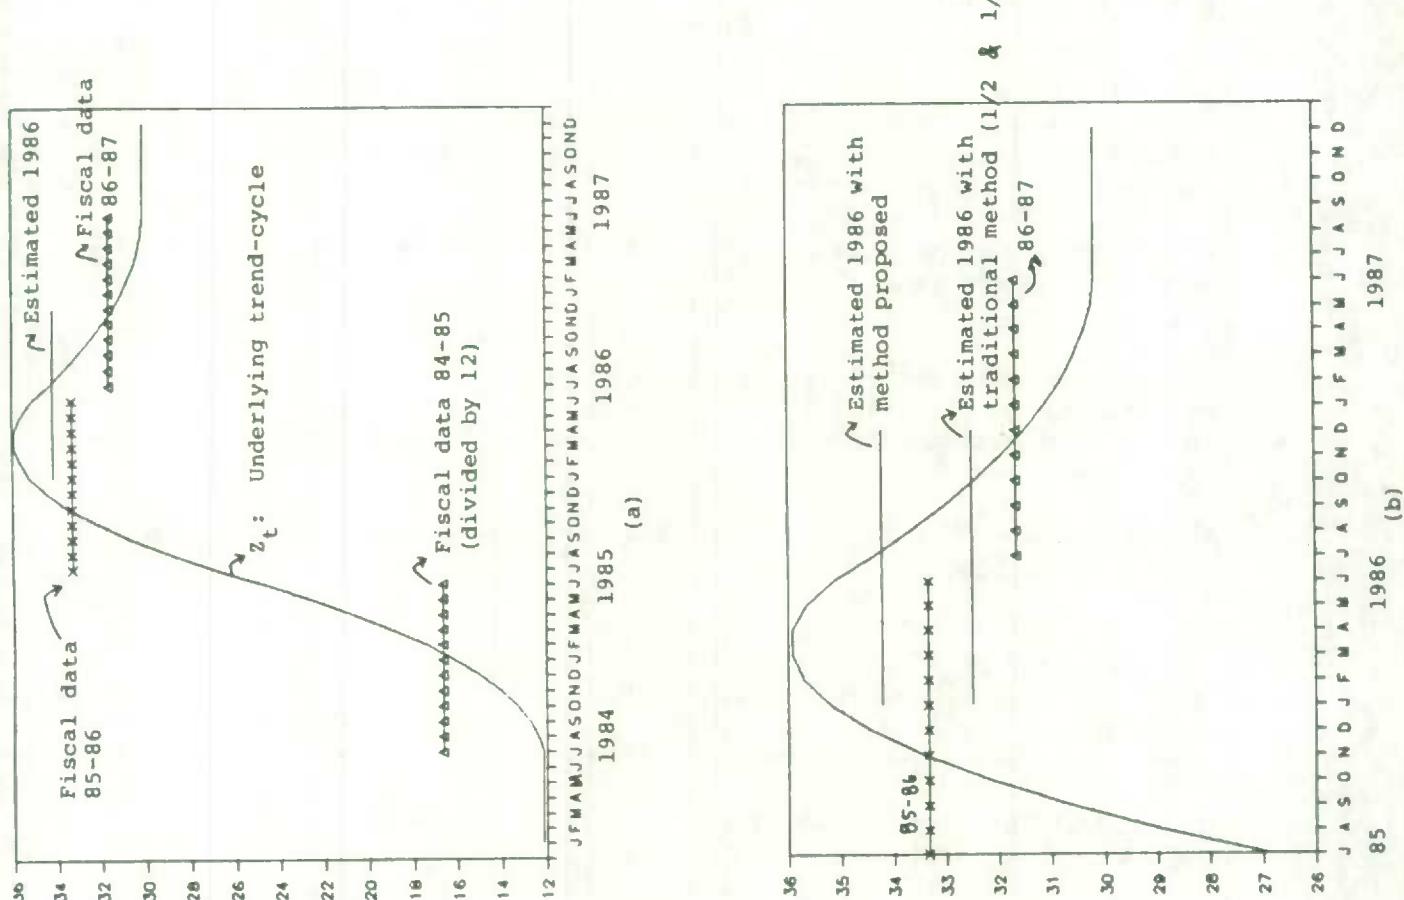

Figure 1: (a) Calendarizing fiscal year data starting in July and ending in June of the following year with the weights in Table 2 6); (b) comparison with the traditional estimate obtained by taking 1/2 of 85-86 and 1/2 of 86-87

TABLE 1: 2-year weights to transform fiscal year data into calendar year estimates, assuming FLATENING BEHAVIOUR of the implicit monthly forecasts at the ends (first differences)

1) Weights when the fiscal years start in December and end in November of the following year:

	85-86	86-87
to estimate year 1985:.....	1.2474	-0.2474
to estimate year 1986:.....	0.9325	0.0675
to estimate year 1987:.....	-0.0571	1.0571 (Dec. 87 forecasted)

2) Weights when the fiscal years start in November and end in October of the following year:

	85-86	86-87
to estimate year 1985:.....	1.2465	-0.2465
to estimate year 1986:.....	0.8564	0.1436
to estimate year 1987:.....	-0.1047	1.1047 (Nov. & Dec. 87 forecasted)

3) Weights when the fiscal years start in October and end in September of the following year:

	85-86	86-87
to estimate year 1985:.....	1.2439	-0.2439
to estimate year 1986:.....	0.7734	0.2266
to estimate year 1987:.....	-0.1436	1.1436 (Oct. to Dec. 87 forecasted)

4) Weights when the fiscal years start in September and end in August of the following year:

	85-86	86-87
to estimate year 1985:.....	1.2388	-0.2388
to estimate year 1986:.....	0.6851	0.3149
to estimate year 1987:.....	-0.1747	1.1747 (Sept. to Dec. 87 forecasted)

5) Weights when the fiscal years start in August and end in July of the following year:

	85-86	86-87
to estimate year 1985:.....	1.2301	-0.2301
to estimate year 1986:.....	0.5934	0.4066
to estimate year 1987:.....	-0.1990	1.1990 (Aug. to Dec. 87 forecasted)

6) Weights when the fiscal years start in July and end in June
of the following year:

	85-86	86-87
to estimate year 1985:.....	1.2171	-0.2171
to estimate year 1986:.....	0.5000	0.5000
to estimate year 1987:.....	-0.2171	1.2171 (July to Dec. 87 forecasted)

7) Weights when the fiscal years start in June and end in May
of the following year:

	85-86	86-87
to estimate year 1985:.....	1.1990	-0.1990
to estimate year 1986:.....	0.4066	0.5934
to estimate year 1987:.....	-0.2301	1.2301 (June to Dec. 87 forecasted)

8) Weights when the fiscal years start in May and end in April
of the following year:

	85-86	86-87
to estimate year 1985:.....	1.1747	-0.1747
to estimate year 1986:.....	0.3149	0.6851
to estimate year 1987:.....	-0.2388	1.2388 (May to Dec. 87 forecasted)

9) Weights when the fiscal years start in April and end in March
of the following year:

	85-86	86-87
to estimate year 1985:.....	1.1436	-0.1436
to estimate year 1986:.....	0.2266	0.7734
to estimate year 1987:.....	-0.2439	1.2439 (April to Dec. 87 forecasted)

10) Weights when the fiscal years start in March and end in February
of the following year:

	85-86	86-87
to estimate year 1985:.....	1.1047	-0.1047
to estimate year 1986:.....	0.1436	0.8564
to estimate year 1987:.....	-0.2465	1.2465 (March to Dec. 87 forecasted)

11) Weights when the fiscal years start in February and end in January
of the following year:

	85-86	86-87
to estimate year 1985:.....	1.0571	-0.0571
to estimate year 1986:.....	0.0675	0.9325
to estimate year 1987:.....	-0.2474	1.2474 (Feb. to Dec. 87 forecasted)

12) Weights when the fiscal years start in January and end in December:

	85	86	
to estimate year 1985:.....	1.0000	0.0000	
to estimate year 1986:.....	0.0000	1.0000	
to estimate year 1987:.....	-0.2474	1.2474	(Jan. to Dec. 87 forecasted)

TABLE 2: 3-year weights to transform fiscal year data into calendar year estimates, assuming FLATTENING BEHAVIOUR of the implicit monthly forecasts at the ends (first differences)

1) Weights when the fiscal years start in December and end in November of the following year:

	applied to fiscal year		
	84-85	85-86	86-87
to estimate year 1984:.....	1.2635	-0.3287	0.0652
to estimate year 1985:.....	0.9281	0.0897	-0.0178
to estimate year 1986:.....	-0.0430	0.9862	0.0568
to estimate year 1987:.....	0.0150	-0.0759	1.0608 (Dec. forecasted)

2) Weights when the fiscal years start in November and end in October of the following year:

	applied to fiscal year		
	84-85	85-86	86-87
to estimate year 1984:.....	1.2626	-0.3276	0.0650
to estimate year 1985:.....	0.8473	0.1897	-0.0369
to estimate year 1986:.....	-0.0737	0.9483	0.1254
to estimate year 1987:.....	0.0276	-0.1391	1.1115 (Nov. & Dec. fore.)

3) Weights when the fiscal years start in October and end in September of the following year:

	applied to fiscal year		
	84-85	85-86	86-87
to estimate year 1984:.....	1.2598	-0.3241	0.0643
to estimate year 1985:.....	0.7595	0.2966	-0.0560
to estimate year 1986:.....	-0.0932	0.8897	0.2036
to estimate year 1987:.....	0.0378	-0.1908	1.1530 (Oct. to Dec. fore.)

4) Weights when the fiscal years start in September and end in August of the following year:

	applied to fiscal year		
	84-85	85-86	86-87
to estimate year 1984:.....	1.2543	-0.3172	0.0629
to estimate year 1985:.....	0.6669	0.4069	-0.0738
to estimate year 1986:.....	-0.1032	0.8138	0.2894
to estimate year 1987:.....	0.0460	-0.2322	1.1861 (Sep. to Dec. fore.)

5) Weights when the fiscal years start in August and end in July of the following year:

TABLE 4: 2-year weights to transform fiscal year data into calendar year estimates, assuming LINEAR BEHAVIOUR of the implicit monthly forecasts at the ends (second differences)

1) Weights when the fiscal years start in December and end in November of the following year:

	85-86	86-87
to estimate year 1985:.....	1.9167	-0.9167
to estimate year 1986:.....	0.9167	0.0833
to estimate year 1987:.....	-0.0833	1.0833 (Dec. 87 forecasted)

2) Weights when the fiscal years start in November and end in October of the following year:

	85-86	86-87
to estimate year 1985:.....	1.8334	-0.8333
to estimate year 1986:.....	0.8333	0.1667
to estimate year 1987:.....	-0.1667	1.1667 (Nov. & Dec. forecasted)

3) Weights when the fiscal years start in October and end in September of the following year:

	85-86	86-87
to estimate year 1985:.....	1.7500	-0.7500
to estimate year 1986:.....	0.7500	0.2500
to estimate year 1987:.....	-0.2500	1.2500 (Oct. to Dec. forecasted)

4) Weights when the fiscal years start in September and end in August of the following year:

	85-86	86-87
to estimate year 1985:.....	1.6667	-0.6667
to estimate year 1986:.....	0.6667	0.3333
to estimate year 1987:.....	-0.3333	1.3333 (Sept. to Dec. 87 forecasted)

5) Weights when the fiscal years start in August and end in July of the following year:

	85-86	86-87
to estimate year 1985:.....	1.5833	-0.5833
to estimate year 1986:.....	0.5833	0.4167
to estimate year 1987:.....	-0.4167	1.4167 (Aug. to Dec. 87 forecasted)

6) Weights when the fiscal years start in July and end in June of the following year:

	85-86	86-87
to estimate year 1985:.....	1.5000	-0.5000
to estimate year 1986:.....	0.5000	0.5000
to estimate year 1987:.....	-0.5000	1.5000 (July to Dec. 87 forecasted)

7) Weights when the fiscal years start in June and end in May of the following year:

	85-86	86-87
to estimate year 1985:.....	1.4167	-0.4167
to estimate year 1986:.....	0.4167	0.5833
to estimate year 1987:.....	-0.5833	1.5833 (June to Dec. 87 forecasted)

8) Weights when the fiscal years start in May and end in April of the following year:

	85-86	86-87
to estimate year 1985:.....	1.3333	-0.3333
to estimate year 1986:.....	0.3333	0.6667
to estimate year 1987:.....	-0.6667	1.6667 (May to Dec. 87 forecasted)

9) Weights when the fiscal years start in April and end in March of the following year:

	85-86	86-87
to estimate year 1985:.....	1.2500	-0.2500
to estimate year 1986:.....	0.2500	0.7500
to estimate year 1987:.....	-0.7500	1.7500 (April to Dec. 87 forecasted)

10) Weights when the fiscal years start in March and end in February of the following year:

	85-86	86-87
to estimate year 1985:.....	1.1667	-0.1667
to estimate year 1986:.....	0.1667	0.8333
to estimate year 1987:.....	-0.8333	1.8333 (March to Dec. 87 forecasted)

11) Weights when the fiscal years start in February and end in January of the following year:

	85-86	86-87
to estimate year 1985:.....	1.0833	-0.0833
to estimate year 1986:.....	0.0833	0.9167
to estimate year 1987:.....	-0.9167	1.9167 (Feb. to Dec. 87 forecasted)

12) Weights when the fiscal years start in January and end in December:

	85	86	
to estimate year 1985:.....	1.0000	0.0000	
to estimate year 1986:.....	0.0000	1.0000	
to estimate year 1987:.....	-1.0000	2.0000	(Jan. to Dec. 87 forecasted)

TABLE 5: 3-year weights to transform fiscal year data into calendar year estimates, assuming LINEAR BEHAVIOUR of the implicit monthly forecasts at the ends (second differences)

1) Weights when the fiscal years start in December and end in November of the following year:

	applied to fiscal year		
	84-85	85-86	86-87
to estimate year 1984:.....	2.2745	-1.6322	0.3578
to estimate year 1985:.....	0.8901	0.1365	-0.0266
to estimate year 1986:.....	-0.0375	0.9916	0.0459
to estimate year 1987:.....	0.0286	-0.1406	1.1120

(Dec. 87 forecasted)

2) Weights when the fiscal years start in November and end in October of the following year:

	applied to fiscal year		
	84-85	85-86	86-87
to estimate year 1984:.....	2.1573	-1.4812	0.3239
to estimate year 1985:.....	0.7829	0.2676	-0.0505
to estimate year 1986:.....	-0.0666	0.9665	0.1001
to estimate year 1987:.....	0.0589	-0.2844	1.2256

(Nov. & Dec. fore.)

3) Weights when the fiscal years start in October and end in September of the following year:

	applied to fiscal year		
	84-85	85-86	86-87
to estimate year 1984:.....	2.0401	-1.3302	0.2901
to estimate year 1985:.....	0.6789	0.3922	-0.0711
to estimate year 1986:.....	-0.0876	0.9252	0.1624
to estimate year 1987:.....	0.0903	-0.4307	1.3403

(Oct. to Dec. fore.)

4) Weights when the fiscal years start in September and end in August of the following year:

	applied to fiscal year		
	84-85	85-86	86-87
to estimate year 1984:.....	1.9229	-1.1792	0.2563
to estimate year 1985:.....	0.5789	0.5088	-0.0878
