ECONOMIC CONDITIONS IN CANADA DURING THE FIRST FIVE MONTHS OF 1939 COMPARED WITH THE SAME PERIOD OF THE PRECEDING YEAR.

Most of the important factors indicating the trend of economic conditions showed a gain in the first five months of the present year. Common stock prices, however, recorded a minor recession, the index averaging 1.1 per cent below the same period of last year. No important trend has developed in common stock prices since the latter part of 1937. While fluctuations were relatively severe, reactions for the most part have been counterbalanced by subsequent rallies. Relative stability over the last two years or more was shown by an average index of 101.2 during the first five months of the present year as compared with 102.3 in the same period of 1938 . Mining stock prioes, on the other hand, showed some appreciation, the index rising from 140 to 153.4.

Wholesale prices have remained comparatively steady during the last ten months. Fluctuations of the wholesale price index have been limited between 73 and 75 per cent of the base level. The average during the first five months of the present year was 73.4 against 82.6 during the same period of 1938, a decline of 11 p.c. A considerable reaction was shown from April to August last year, oaused in part by the heavy output of farm products.

The high-grade bond market has remained relatively strong sinoe the beginning of 1938. A decline was show last October and during April of this year, but these reactions have beon counterbalanced and high-grade bond prices in recent weeks have been at a maximum for the period of observation. An index of capitalized yields averaged 161.1 in the first five months of the present year against 155.5 in the same period of 1938, a gain of 3.6 per cent. Financial transfers in the form of bank debits amounted to $\$ 12.3$ billion in the first fivo months of 1939 against $\$ 11.9$ billion in the same period one year ago, indicating a moderate increase in cheque payments. The deposit liabilities of the banks rose to a new high point during the first five months of 1938 , extending the advance which commenced about mid-year 1934. A comparison of the loading indicators of ohartered bank oporations showed a further strengthening during the first five months of the present year, readily available assets were up $9 \frac{1}{2}$ per cent. The enhanoed demand for current loans was reflected in an advanoe of about 7 per cent in this account, while total security holdings this year have averaged ovor 3 per cont greater than on the first five reporting dates of the preceding yoar.

The most constructive feature of the fivemonth period was the standing of business operations. The index of the physical volume of business averaged"115.2 during the period against 110.4 in the same months of 1938 , a gain of 4.3 per cent.

Betterment was show over the first five months of 1938 in most of the main divisions contributing to the physical volume of business. Mineral production recorded a gain of nearly 11 per oent while manufacturing production advanced 5.2 per cent. Electric power production was 11.5 billion $k$. Woh. against 10.7 billion, a gain of 7 per cent. The new business obtained by the construction industry, judged by the compilation of contracts awarded, was $2 \frac{1}{2}$ per cent less than in the same period of 1938, while a slight gain was show in building permits. The export trade recorded the important inorase of 10.5 per cent, the total rising from $\$ 337.4$ million to $\$ 372.8$ million. Imports, on the other hand, were at a lower level, declining from ${ }^{6} 277.7$ milion to $\$ 257.4$ million. The net result was that the active balance of trade showed a marked gain from $\$ 59.6$ million to $\$ 115.4$ million, a gain of no less than 93.6 per cent. Despite the marked increase in the railway freight movement during May, the cumulative total for the flrst five months was 2.7 per cent below that of the same period of 1938 . The gross revenue of the C.P.R. and of the Camadian lines of the C.N.R. showed gains of 0.7 per cent and 2.6 per cent respectively.

Mineral Production - The index of mineral production, based on nine factors, rose from $\overline{183.6 \text { to } 203.3 \text { in tiis comparison. Gains were recorded in copper and nickel }}$ exports and the shipments of gold. Exports and receipts at the Mint of gold from Canadian mines were 2.1 million fine ounces against 1.8 million, an increase of nearly 14.per cent. The shipments of gold in May were greater than in any other May in history. Silver shipments, on the other hand, dropped fram 8.2 miliion ounces to 7.5 million, a doclino of 8.6 per cent. The docline in coal production was nearly 5 per cent, the total in the first five months of 1939 having been 5.7 million tons. The exports of copper in the period under review were 236.8 million pounds against 224.4 million one yoar ago. Niokel exports rose from 88.2 million pounds to 99.9 million, a gain of 13.4 per cont. The exports of copper and nickel were groater in May than in the same month of any year during the post-war period.
