BUSINESS STATISTICS BRANCH

Volume XI	Ottawa, June, 1944	No. 4
Dominion Statistician:	S. A. Cudmore, M.A. (Oxon.), F.S.S.	F.R.S.C.
Chief, Business Statistics Branch:	Sydney B. Smith, M.A.	

ECONOMIC CONDITIONS IN CANADA DURING THE FIRST FOUR MONTHS OF 1944 COMPARED WITH THE SAME PERIOD OF 1943.

## SECTION I. ECONOMIC CONDITIONS

The six factors indicating the trend of economic conditions averaged higher in the first four months of the present year than in any other similar period in history. The index of the physical volume of business on the pre-war base was 244, a gain of nearly 6 pic. over the same period of 1943. While reaction was indicated in April from the high levels of the first quarter, the average for the period under review was a new maximum. A marked advance was recorded from the early months of 1940 until the end of last year.

The index of wholesale prices on the base of 1926 was 102.8 in the first four months of the present year, a gain of nearly 5 p.c. over the same period of 1943. The index in July last passed through parity with the base year and has since shown minor increases. The marked decline in wholesale prices from 1929 to 1933 was more than counterbalanced by the subsequent advance. Security prices averaged somewhat higher in the first four months of the present year than in the same period of 1943. The index of common stocks on a pre-war base rose from 79.2 to 81, a gain of 2.3 p.c. Measured by bend yields, Dominion bend prices were at a somewhat higher position in the first four months of the present year.

A marked increase was recorded in the deposit liabilities of the chartered banks, the average for the first three months of the year having been \$4,286 million compared with \$3,615 million, a gain of 18.6 p.c. Gains have been recorded in bank deposits from 1938 to the present time. While recessions were shown at the beginning of January and of February the average for the first three months of the present year was in a new high position.

The index of the physical volume of business rose about 14 points in the first four months of the present year over the same period of 1943. Mineral production showed an increase of 7.4 p.c. according to the index based on a considerable number of factors. Gold receipts at the Mint, however, showed a reduction of 22 p.c., the total for the first four months of the present year having been 1,025,000 fine ounces. The decline in coal production was 4.5 p.c., the total in the first four months of the present year having been 5,872,000 tons against 6,148,000.

The index of manufacturing production rose 3.4 p.c. to 300, the indicator being expressed as the percentage of the average for the period from 1935 to 1939. Marked increases were shown in a considerable number of components. Cattle slaughterings, for example, recorded a gain of nearly 25 p.c. to 572,000 head. The gain in hog slaughterings was 67 p.c. from 2,156,000 head to 3,601,000. The production of factory cheese recorded a marked gain over the same period of last year. The output of steel ingets and pig iron is still showing gains over the same period twelve months ago. The total steel produced was 1,008,000 short tons against 987,915 in the same period last year. The gain in pig iron production was 8.4 p.c. to 612,000 tons.

A gain was recorded in the new business obtained by the construction industry and in building permits. Contracts awarded were \$83.7 million, a gain of '44 p.c. while building permits were \$23.2 million, a gain of 61.5 p.c.

The operations of the electric power industry recorded expansion. The consumption of firm power was 12,195,000,000 kilowatt hours against 11,386,000,000 kilowatt hours, a gain of 7.1 p.c. The output was greater in April than in the same month of any year.

Distribution of commodities through wholesale and retail outlets recorded a considerable expansion in the first three months of the present year over the same period of 1943. The wholesale index averaged 170.7 against 153.2, a gain of 11.4 p.c., while the index of retail sales rose from 137 to 145.8.

Car loadings during the first twenty weeks of the present year amounted to 1,375,000 compared withl,251,000 in the same period of the preceding year, a gain of 122,000 cars. A gain of nearly 10 p.c. was mainly accounted for by increases in the movement of grain, livestock and "logs and other forest products. The increase in the movement of grain was nearly 58,000 cars while livestock showed an increase of more than 15,000 cars. Tons carried one mile by the two main railways during the first three months of the year amounted to 14,207, million tons against 11,967, million tons, a gain of 18.7 p.c. The gross revenue on the internal lines of the Canadian National Railway in the first three months recorded a gain of 9.5 p.c. while the gross revenue of the Canadian Pacific Railway during the same period rose 17.6 p.c. The total for the Canadian National Railway was 92,120,000 compared with \$74,933,000 reported by the Canadian Pacific Railway.

The general index of employment averaged 182.8 against 181.7 in the same period of last year, a gain of 0.6 p.c. Minor gain was also shown over the high level of employment in manufacturing plants. The latter index rose 34.8 p.c. from June 1, 1941 to the beginning of March while that of payrolls averaged 72.2 p.c. greater.

The general wholesale price index was 102.9 in April compared with 99.0 in the same month of last year. Consumers' goods showed a relatively minor advance from 96.9 to 97.9 while a considerable increase was recorded in the price index of producers' goods, the standing having been 100.1 against 93.2. The gain in raw and partly manufactured goods has been of far greater proportions than in manufactured commodities. The index for the former rose from 97.0 in April last year to 104.7 in the same period of 1944 while the index in the fully manufactured goods was from 93.0 to 93.8. The index of the cost-of-living was 119.1 on April 1 of this year against 117.6 on the same date of 1943.

Cheques cashed in clearing centres amounted to \$18,055 million in the first four months of 1944 against \$15,694 million, a gain of 15 p.c. The greatest gain was shown in the Prairie Provinces where the total was \$3,425 million against \$2,367 million in the same period last year, an increase of \$1,059 million or 44.7 p.c. The gain in bank debits is attributed to greater economic activity and a slightly higher price level. Heavy payments on the Sixth Victory Lean accounted in part for the expansion in debits in April. It is estimated that from 80 p.c. to 90 p.c. of business transactions in Canada are carried on by cheques, money being used in relatively small proportions. Circulating media in the hands of the public including bank notes and coin rose from \$689 million in the early period of 1943 to \$847 million in the period under review, the gain being no less than 22.8 p.c. The sum of the cash and cheque payments rose from \$5,578 million in April last year to \$6,347 million in the same month of the present year, the gain having been 13.8 p.c. War expenditures, aside from the United Nations Mutual Aid, were \$303 million in the first month of the present fiscal year against nearly \$137 million in the same month of last year, a gain of 121.5 p.c. A decline was shown in revenue and ordinary expenditures.

The tentative computation of national income during the first four months of 1944 was \$2,845 million compared with \$2,581 million in the same period of 1943, a gain of 10.2 p.c. Dwing to a recent review of national income in 1942 on an annual basis, the monthly computation has been placed upon an altered footing. As revision was made of the statistics for 1943 and 1944 comparisions with last year are valid. The generating factors influencing the trend of national income include alterations in capital formation, merchandise exports, deficit financing of government and the money supply.

In the durable goods industries the index of employment showed a gain of 18.1 p.c. in 1943 over the preceding year, while that of the manufacture of non-durable goods increased only fractionally. The general expansion in employment and payrolls in the production of durable goods has been particularly noteworthy in the months for which data are available. The index of employment showed a gain of 55.4 p.c. accompanied by an increase of 102.1 p.c. in the salaries and wages distributed between June 1, 1941 and March 1, 1944.

Exports from Canada amounted to \$1,052 million in the first four months of the present year. The standing in the comparable period last year was \$784 million, the indicated increase having been more than 34.p.c. The active balance of trade, exclusive of non-monetary gold, rose from \$245 million in the first four months of 1943 to nearly \$500 million in the present year, the gain being no less than 103.5 p.c. The grand total expenditure of the Dominion Government in the first eleven months of the year ended March 31, 1944 amounted to \$4,507 million against ordinary revenue and special receipts of \$2,470 million. The grand total expenditures in the same period of the preceding fiscal year was \$3,507 million against \$2,016 million in revenue and special receipts.

PLEASE NOTE:- This Bureau is co-operating in the conservation of paper on account of the present critical shortage thereof. If this bulk tin is not needed by you, pleas notify the Dominion Statistician and your name will be removed from our mailing list.

## SECTION II. NATIONAL INCOME

## N tional Income of the United States

Recent estimates of national income published in the United States by the Department of Commerce in he April "Survey of Current Business" are given in the accompanying Tables for comp. rison with Canadian totals.

"The national income, composed of the earnings of the labor and capital employed in the productive process, reached" says the Survey "a new record total of 147.9 bil-lion dollars in 1943. This aggregate exceeded the previous year's total of 121.6 billion by 22 per cent and was more than double the national income in 1939.

Four-fifths of the 26,4 billion increase between 1942 and 1943 may be traced to the three branches of the income stream most directly affected by the large volume of Government war spending: wages and salaries in manufacturing, Federal Government pay rolls (including pay of the armed forces), and not income of farm operators. This pattern of income expansior was similar to that in 1942, when these three components accounted for nearly three. Courths of the 25 billion rise in the total. The extent of their disproportionate increase is indicated by the fact that they constituted only one-third of the total national income in 1941.

per cent for the first thre quarters of 1943.

The quarterly est mates reveal that during 1943 the national income continued the uniterrupted advance that began in the second quarter of 1938, the fourth quarter flow attaining an annual rate of 153.5 billions. However, the rate of expansion of national income - like that of national product-slakened materially during the year, reflecting primarily a tape ing off in the expansion of the three components that have dominated the flow of incom since the initiation of the Nation's rearmament program in 1940. The national inco e rose at successively sharper rates throughout the quarters of 1942, but in each of the first three quarters of 1943 the rate of gain declined. The 2.4 per cent rise from the third to the fourth quarter, though reflect-ing a very slight reversal f this trend, was only two-fifths the average quarterly rate of increase in 1942 an substantially less than the corresponding average of 3.9

Approximately 70 or cent of the total 1943 increase in private nonagricultural wages and sala ies was, however, the direct result of the increase in average salary-wage within the various industrial components. It must be emphasized, of course, that the increase in average salary-wage in each industry is not solely the result of increased wage rates; rather, it is a composite result of changes in basic wage rates, hours of 1 ork, premium rates for overtime work, the occupational distribution of employment within each industry, including the results of upgrading, and other factors. It should be noted that, while wage rate increases granted in 1943 were moderate, those initiated in 1942 had their first full year of operation in 1943 and were a major influence 1 shind the increase in total wage and salary payments in that year.

Total wages and so laries increased 21.6 billion dollars in 1943, slightly more than the 19.7 billion i crease recorded in 1942. The 1943 aggregate of 102.0 billion was more than double the peace-time level of 1940. Owing to the rapid expansion of the armed forces, government pay rolls accounted for 8.5 billions, or 39 percent, of the total increase in 1943.

In the nongovernmental sphere, excluding agriculture, wages and salaries rose 12.8 billions, compared to an increase of 14.1 billions in 1942, Whereas in 1942 nearly one-third of the increase in pay rolls in this portion of the economy was ascribable to increased employment only an estimated 16 percent of the 1943 increase could be credited to this factor. Shifts in the composition of employment towards industries in which earnings are relatively high - chiefly the metals, machinery, and transportation equipment component of manufacturing, and transportation - continued to exert a moderate upward influence on total pay rolls.

Taking the increase in manufacturing pay rolls alone, which comprised 79 por cent of the increase in private nonagricultural salaries and wages from 1942 to 1943, one finds that employment increases, secured at the expense of declines in nearly all other industries except transportation and the Federal Government, were responsible for nearly one-half the 10.1 fillion dollar increase in total manufacturing pay
