Appendix E	Survey Documents	

1. INTRODUCTION

This package was designed to enable users to access and manipulate the microdata file for Cycle 2 of the General Social Survey which took place in November and December of 1986. It contains information on the objectives, content, methodology and estimation procedures as well as guidelines for releasing estimates based on the survey.

Appendix A contains the data dictionaries for the three files that compose this microdata file. Appendix C describes how to correctly use time use data contained in the summary and episode files. The Approximate Sampling Variability Tables and Guidelines and the survey questionnaires are contained in Appendices D and E respectively.

2. OBJECTIVES OF THE GENERAL SOCIAL SURVEY

For some time, Statistics Canada has been aware of gaps in the national statistical information system with respect to data on socio-economic trends. These gaps cannot be filled through existing data sources or vehicles because of different audiences and relevant periodicities. To respond to these needs, Canada, like other countries such as Australia, Japan, the Scandinavian nations, and the United Kingdom has introduced a General Social Survey Program.

The General Social Survey (GSS) has two principal objectives: first, to gather data on social trends in order to monitor changes in Canadian society over time; and secondly, to provide information on specific policy issues of current or emerging interest. The GSS is a continuing program with a single survey cycle each year.

To meet the stated objectives, the data collected by the GSS are made up of three components: Classification, Core and Focus.

Classification content consists of variables which provide the means of delineating population groups and for use in the analysis of Core and Focus data. Examples of classification variables are age, sex, education, and income.

Core content is intended to obtain information which monitors social trends or measures changes in society related to living conditions or well-being. The Core content area for the 1986 GSS was time use and social mobility.

Focus content is aimed at meeting the second objective of GSS, namely to provide information touching directly on a specific policy issue or social problem. In general, focus content is not expected to be repeated on a periodic basis. Focus content for Cycle Two was language knowledge and use, language mobility and assimilation.

3. CONTENT OF THE GENERAL SOCIAL SURVEY - CYCLE 2

Data for the Cycle 2 microdata file are made up of the three components: classification, core and focus.

The **classification content** consists of the characteristic variables which include education, ethnicity, income, sex, age, main activity, religion and information about household members.

The main part of **core content** for this cycle was time use. These data are a diary of activities for each respondent over a 24 hour day. The primary activity, the start and end time, where the activity took place (home, work, in transit, etc.), and who the respondent was with (except for personal care activities) e.g. with spouse, children, other family, etc. are given. There were an average of 18 activities or episodes per respondent.

The smaller part of core content concerns the social mobility of Canadians. Variables include the education, ethnicity, modified Blishen score, Pineo category and industry group of the respondent, father and mother.

Focus content for Cycle 2 centres on language. The content of the language module is shown in Chart 1 (see following page). Some of the variables refer to past periods in the respondent's lifetime such as the languages spoken at home in childhood and adolescence, while many of the variables deal with the use of languages at the time of the survey. The time in the life of the respondent (including the period before birth) is shown on the left side of the chart while the two other dimensions across the top refer to language ability and the domain in which the language was used.

It should be noted that the language data were collected at two points in time, using two questionnaires. The first questionnaire, the Selection Control Form, was used to list the household members and select a respondent who would answer the main survey questionnaire. It was also the main source of information on the language situation of other members of the respondent's household. Information on mother tongue and knowledge of official languages

TIME USE, SOCIAL MOBILITY AND LANGUAGE USE - 1986

Public Use Micro Data File Documentation
and User's Guide

Chart 1
LANGUAGE MODULE OF GENERAL SOCIAL SURVEY (1986)

Time (respondent)	Language ability		Domain							
			Family		School		Friends (respon- dent)	Work milieu (respon- dent)	Federal government services (respondent)	Other
	of respondent	of other members of current household	Respondent	Other members of current household	Respondent	Children (6-14 years) living in current household				
Before birth			Mother tongue of father and and mother	Mother tongue of spouse						
Early childhood			Mother tongue							
Childhood and adolescence			Home language		Main language (primary, secondary, post-secondary)		Language use			
Start of adult years										
Five years ago	Knowledge and use of English and French			Mother tongue of children		French immersion				
Now	Read, understand, speak. Learning situations Use of known languages. Main language	Capacity to speak English and/or French (Spouse and children)	Home language			Main language and learning of second official language	Language use	Main language and other lan- guages used for speaking and writing	Language used by employees. Language preferred by respondent. Availability of services in that language. Language of interview	Language used by doctor. Language of T.V. programs watched

is available for the respondent's spouse and up to three children. For children 6-14 years (to a maximum of three) there is information on the main language in which they were educated, on whether they took courses to learn English or French, and on whether they were ever enrolled in a French immersion course. The main survey questionnaire included many questions on the respondent's current and past language situation as well as the mother tongue of his/her parents.

In order to avoid asking redundant questions to respondents whose language profile was homogeneous, often including only one language, a number of filter questions were used. The most fundamental filter question was asked in conjunction with the main language question. Respondents interviewed in English, who indicated English as their main language, were asked whether they ever had any knowledge or understanding of another language (the same procedure was used for those interviewed in French who indicated French as their main language). Records where the respondent never had any knowledge or understanding of another language were imputed as such for subsequent questions. Thus, for example, English was assigned as the language spoken at home in early childhood and the language used with friends during adolescence. Although this was the most fundamental filter question, others were used and the concomitant imputations were carried out.

To determine the language or languages spoken in a given area of the lives of respondents they were asked which languages they used, with the word languages in plural form. This enables a broad perception of the language situation of respondents. Respondents indicating two or more languages were generally asked which one they used most often. Finally, in some cases, respondents were asked whether they used the language more than 90% of the time. Thus, the approach was to ask a broad question followed by more detailed questions to more accurately discern the language situation of respondents.

The data dictionaries describing all variables are contained in Appendix A.

4. POPULATION

The target population for the General Social Survey was all persons 15 years of age and older in Canada excluding:

1. residents of the Yukon and Northwest Territories;
2. full-time residents of institutions.

These subgroups were not included for operational reasons.

The sampling method employed for the survey was Random Digit Dialling (RDD), a telephone sampling method (see Section 5). As a result, households without telephones were excluded. Persons living in such households represent less than 3% of the target population. Survey estimates have been adjusted (weighted) to represent these persons.

5. SURVEY DESIGN

The General Social Survey employed two Random Digit Dialling (RDD) sampling techniques. The Waksberg method (see Section 5.2) was used in all provinces except Newfoundland and Ontario where the Elimination of Non-working Banks method was used (see Section 5.3). Section 5.1 describes the stratification procedures used in this survey design. Section 5.4 discusses sample sizes.

5.1 Stratification

Each of the ten provinces were divided into strata or geographic areas for sampling purposes. Generally, each province had two strata, one stratum representing the census metropolitan areas (CMAs) of the province and the other the non-CMA areas. Ontario and Saskatchewan were sampled from two regional offices. As a result, more strata were included in the sample design for these areas.

There were some exceptions to this scheme for the provinces of New Brunswick, Quebec and Ontario due to the focus content. In these provinces there are certain areas for which it was deemed important to produce independent estimates because of their unique bilingual patterns. A larger sample was needed from these areas in order to produce the required estimates. These areas, called contact regions, were made up of contiguous census divisions. There were six such regions: Northern and Eastern New Brunswick, Montreal, the Outaouais of Quebec, the Eastern Townships of Quebec, Eastern Ontario and North Eastern Ontario (for more details see **Current Demographic Analysis**, Statistics Canada, Catalogue 91-209E (Annual), May 1987, P 128-129). Each contact region formed a stratum.

5.2 RDD: Waksberg Method

Prince Edward Island	Nova Scotia
New Brunswick	Quebec
Manitoba	Saskatchewan
Alberta	British Columbia

The Waksberg Method is a Random Digit Dialling sampling technique which significantly reduces the cost of a survey as compared to dialling telephone numbers completely at random. The method employs a two-stage design which increases the likelihood of contacting households. The following describes what was done for the General Social Survey in the above mentioned provinces.

For each stratum within each of these provinces an up-to-date list of all telephone area code and prefix number combinations was obtained. To these, all possible combinations of the next two digits were added (i.e., all possible banks of 100 consecutive numbers within existing area code - prefix combinations were identified). This resulted in a list of all the possible first eight digits of ten digit telephone numbers in each stratum. These eight digit numbers formed the first stage sampling units (i.e., were the Primary Sampling Units - PSUs).

Within each stratum, a random selection of one of these eight digit numbers was made and then the final two digits were generated at random. This number (called a Primary number) was called to determine whether or not it reached a household. If it did not reach a household (i.e., the number was not assigned for use or was a business, institution, etc.), the number was dropped from further consideration. Upon reaching a household, however, additional numbers referred to as secondary numbers were generated within the same bank (i.e., numbers with the same first eight digits as the primary number). These numbers were also called to determine whether or not they reached a household.

Secondary numbers were generated on a continuing basis until either five additional households were reached in each retained bank or the bank was exhausted or the survey period ended.

Primary numbers were generated continuously throughout the survey

period in order to yield a predetermined required number of households within each stratum. An attempt was made to conduct an interview with a randomly selected respondent in all primary and secondary households reached.

This method is more efficient than 'pure' random digit dialling because secondary numbers are never generated for banks where the primary number was not a household.

In the provinces in which the Waksberg method was used for the GSS, around 57.0% of the secondary numbers called reached a household, while only 19.1% of the primary numbers called reached a household.

5.3 RDD: Elimination of Non-working Banks Design

Newfoundland

Ontario

The Elimination of Non-Working Banks design is a form of Random Digit Dialling in which an attempt is made to identify all working banks for an area i.e., to identify all banks with at least one household. Thus, all telephone numbers within non-working banks are eliminated from the sampling frame. This method was used in Newfoundland and Ontario.

Newfoundland's two telephone companies provided a list of all banks containing at least one household (e.g. all working banks). Each bank was assigned to a stratum within the province.

A systematic sample of telephone numbers was then generated for each stratum (from these working banks). The entire sample of telephone numbers was generated on the first day of interviewing. Therefore, a prediction of the percentage of numbers dialled that would reach a household (known as the "hit rate") had to be made. The hit rate was estimated using information from previous RDD surveys.

As in all other provinces, an attempt was made to conduct a GSS interview with one randomly selected person from each household reached.

Bell Canada's computer lists were used to generate working banks in Ontario. Statistics Canada bought a list of all telephone numbers from Bell Canada that Bell uses throughout the province. For each bank, a number was given indicating the number of telephone numbers within the bank used by private households. This number included households who have unlisted numbers.

There are small areas in Ontario serviced by independent phone companies as opposed to Bell. The area code prefixes for these areas were identified by matching the Bell file with a file of all area codes and prefixes. Area code prefixes from Ontario and not on the Bell file were identified. All banks within these area code prefixes were generated and added to the sampling frame. It would have been more effective to use the Waksberg method for these excluded areas, but the Waksberg method requires an accurate population estimate of the survey area. Such an estimate was not available for the parts of Ontario not covered by Bell.

As was done for Newfoundland, a systematic sample of telephone numbers was then generated from the telephone numbers within these working banks.

In Newfoundland and Ontario, using the Elimination of Non-working Banks design, approximately 42.1% of the numbers called reached a household.

5.4 Sample Sizes

There were two samples selected for Cycle 2 of the General Social Survey - the **core** sample and the **focus** sample.

5.4.1 Core Sample

The core sample consisted of approximately 12,500 households across 10 provinces. Persons in this sample were asked questions on time use, social mobility, language use and classification information (e.g. demographic information). A response was obtained from 9,946 of these households.

In order to collect time use data, it was necessary to assign one day of the week (e.g. Sunday - Saturday) at random to each selected respondent. This was done by affixing a label to each questionnaire identifying the day of the week for which time-use data were to be collected. The day identified on each label was randomly assigned. For operational reasons Thursdays and Sundays were under-sampled. For these days the sample was only two-thirds of the sample for the other weekdays. This imbalance was adjusted for at the estimation stage.

5.4.2 Focus Sample

An additional sample of approximately 9,500 households from the six contact regions identified in Section 5.1, was interviewed for the language component (i.e. the focus component). Interviews were conducted by telephone during the same period as the core sample, and using the same questionnaires, except for the exclusion of the section on daily activities. The total sample size for the focus component was 22,000 households (12,500 households from the core component plus an additional 9,500 households). A response was obtained for 16,390 of these households.

6. COLLECTION

Three questionnaires were used to conduct the interviews: the selection control form GSS 2-1, and two versions of the main questionnaire GSS 2-2 and GSS 2-2A. The latter two are identical except that the GSS 2-2A does not have Section D on time use and was used for respondents in the additional sample.

Respondents were interviewed in the official language of their choice. The French and English versions of the main questionnaire differ. The questions related to language were adapted to the language of the interview, e.g. in an English interview, question F1 on main language is "Have you ever had any knowledge or understanding of a language other than English?" for those having reported English as their main language. Those interviewed in French and having answered French as main language to question F1, were asked about their knowledge or understanding of a language other than French. These differences were taken into account in processing the data.

Questionnaires and procedures were field tested in a pretest involving approximately 500 households in July 1986.

The interviewing for the survey was conducted by telephone in two phases. The first phase consisted of screening telephone numbers and selecting a household respondent. It took place during the period October 25th to November 21st, 1986. The second phase consisted of interviewing the selected respondent using the main questionnaire and took place from November 22nd to December 22nd, 1986. All telephone interviewing took place from centralized telephone facilities in Statistics Canada's regional offices, with calls being made from approximately 9:00 a.m. to 9:30 p.m. Interviewers were trained by Statistics Canada staff in telephone interviewing techniques, survey concepts and procedures in classroom training session. The majority of interviewers had previous interviewing experience.

Survey manuals are too lengthy to be included in this documentation package, however, they are available upon request on a cost recovery basis. The manuals used in the survey are as follows:

For the Screening Phase:

GSS 2-3	Interviewer's Manual
GSS 2-8	Senior Interviewer's Procedures Manual
GSS 2-11	Senior Interviewer's Workbook
GSS 2-12	Senior Interviewer's Training Guide

For the Interview Phase:

GSS 2-13	Senior Interviewer's Training Guide
GSS 2-14	Senior Interviewer's Procedures Manual
GSS 2-17	Interviewer's Training Guide
GSS 2-18	Interviewer's Manual

7. PROCESSING

The following is an overview of the processing steps for Cycle 2 of the GSS.

7.1 Data Capture

Data from the survey questionnaires were entered directly into mini-computers in Statistics Canada's regional offices and transmitted to Ottawa. The data capture program allowed for a valid range of codes for each question and automatically followed the flow of the questionnaire. It was possible for operators to enter invalid data and information that violated the questionnaire flow but only through the use of special functions after the operator had been alerted that the entry was not valid. No editing to check consistency between questions was done at this stage.

7.2 Edit and Imputation

7.2.1 Editing

All survey records were subjected to an exhaustive computer edit to identify and correct invalid or inconsistent information on the questionnaires. Records with missing or incorrect information were assigned non-response codes or corrected from other information from the respondent's questionnaire. In most cases, editing was 'bottom-up' meaning that specific related information following a question with a branching pattern was employed to ensure the branching was correct. For example, question B9 of the "Social Activities and Language Use Questionnaire" was "Did he have any further schooling beyond elementary/secondary school?" This question was edited related to question B10 "What was the highest level he attained?". It was ensured that the information was consistent and complete.

7.2.2 Imputation

Due to the nature of the survey, imputation was not appropriate for most items and thus 'unknown' codes were usually assigned for missing data. However, a non-response was not permitted for those variables required for weighting. As a result, values were imputed for age, sex and the number of residential telephone lines in the household.

Sex was imputed for 11 records. The imputation was based on the respondent's name as recorded on the screening form. Sex was imputed randomly for cases where the name was not clearly one sex or the other.

Age was imputed for 12 records. The imputation was based on the respondent's values for various fields on the questionnaire which are age related (such as question P7 "In which year did you reach your highest level of education?").

The number of residential telephone lines was imputed for 246 records. The imputation was based on the respondent's income and the percentage of homes with more than one phone number (higher income homes tend to have more than one phone number).

7.3 Language Module

The language data were reviewed to ensure that they were reasonable and consistent. During this process, some anomalies were identified. It was noted that the three mother tongue variables (DVLANG, RESMTONG and KIDLN) were sometimes inconsistent. In particular, the variable DVLANG, which was derived from the Selection Control Form, differed more than expected from the RESMTONG and KIDLN variables which were derived from the main survey questionnaire. The difference may be partly attributable to the fact that the Selection Control Form was sometimes responded to by a person other than the respondent to the main questionnaire (i.e. proxy response). A decision was made to maintain the variable DVLANG on the data base, since it is required for comparison with the mother tongue of the spouse or children.

Another anomaly was identified when the CONVERS variable, dealing with the knowledge of official languages, was compared to the main language sub-question DVMAINLG. Specifically, some respondents were identified as bilingual for the CONVERS variable from the Selection Control Form, but the DVMAINLG variable showed that they never had any knowledge or understanding of a language other than the interview language (either English or French). A small follow-up survey to investigate this anomaly found that the majority of these respondents did have some knowledge of a language other than the interview language. However, most could not conduct a conversation.

The results of questions dealing with language courses taken as part of full-time school (questions P13 and U11) and language courses taken outside of full-time school (questions P14 and U12) were not transferred to the tape since the corresponding data were not reasonable. A much higher than expected percentage of respondents had not taken a language course as part of full-time school, especially among Francophones in Quebec. It was assumed that the data on language courses taken outside of full-time school were also erroneous. It is probable that the location of the questions on the questionnaire had an impact on the responses. They were asked directly after a series of questions dealing with the work experience of respondents, rather than with questions dealing with educational attainment.

7.4 Creation of Derived Variables

A number of data items on the microdata files have either been coded from open-ended responses recorded by interviewers or derived by combining a number of items on the questionnaires. Derived variable names start with DV and are then followed by characters referring to the question number or subject.

7.5 Suppression of Confidential Information

It should be noted that the public use microdata files described in this documentation differ in a number of important respects from the survey 'master' files held by Statistics Canada. These

differences are the result of actions taken to protect the anonymity of individual survey respondents. Users requiring access to information excluded from the microdata files may purchase custom tabulations. Estimates generated will be released to the user subject to meeting the publication and release guidelines outlined in Section 9 of this document.

8. ESTIMATION

The GSS data were collected on a sample basis (i.e. from only a random sample of households) with data weighted to provide estimates of the entire population. The principle behind the estimation procedure is that each person selected in the sample represents not only themselves, but also several other persons not included in the sample. For example, in a simple random sample of 2% of the population, each person in the sample represents 50 persons in the population.

Three microdata files were created for the General Social Survey based on information from the Social Activities And Language Use Questionnaire (i.e. the GSS 2-2): the Main File which contains information from 16,390 respondents who answered questions on language use, the Summary File which contains information from 9,946 respondents who answered the time use questions and the Episode File which contains information describing detailed time use activities for the 9,946 respondents on the Summary File. The 9,946 respondents who answered time use questions are a subset of the 16,390 respondents who answered language and social mobility questions. For a description of the file layouts, contents and correct interpretation of data on the microdata tape, users should refer to Appendices A and C.

The weighting factor on the Main File (FWGT_OS) was placed on each record to indicate the number of persons that the record represents. This weighting factor refers to the number of times a particular record should contribute to a population estimate. For example, the estimate of the number of Canadians 15 years and older who would describe themselves as very happy (i.e. HAPPY_E1=1) is 10,368,466. The value of FWGT_OS is summed over all records with this characteristic. The weighting process is described in Section 8.1.

Similarly, the Summary File, has a weighting factor (FWGT_MS) which was placed on each record to indicate the number of persons that the record represents. The Summary File weighting process is described in Section 8.2.

Records on the Episode File have the same weight as the Summary File. This file is structured differently from the Main and the Summary Files and users should refer, again, to Appendix C for the correct methods of using this file.

8.1 Weighting Of Main File

Because the General Social Survey employed two different sampling techniques (as discussed in Section 5), two slightly different weighting procedures were employed. Each is discussed briefly in the following sections.

8.1.1 Waksberg Design:	Prince Edward Island	Nova Scotia
	New Brunswick	Quebec
	Manitoba	Saskatchewan
	Alberta	British Columbia

A self-weighting sample design is one for which the weights for each unit in the sample are the same. For a two-stage sample design, this happens if the first stage units (i.e., the Primary Sampling Units) are selected proportionally to size sampling (PPS) and a fixed number of units are selected within each selected Primary Sampling Unit with equal probability.

The Waksberg method used by the GSS in the above eight provinces is just such a scheme, and so within the strata in these provinces the households have identical (initial) sampling weights. The first stage sampling units (i.e., the Primary Sampling Units) were banks of telephone numbers and the second stage units were actual telephone numbers corresponding to households within those banks. It should be noted that household weights differ from province to province because a different sampling rate was used for each province.

The following outlines the steps that were used in weighting the GSS Waksberg records for the 8 provinces.

1) Basic Weight

In the first stage of weighting all households that were selected into the sample within a given stratum (within a province) were assigned an identical weight.

2) Non-Response Adjustment

Weights for responding households were adjusted to represent non-responding households. Within each working bank of telephone numbers selected in the sample, the sampling scheme used required that six households be contacted. In some cases, one or more of these six households refused to participate in the survey. Weights of responding households were adjusted to compensate for non-responding households by multiplying the basic weight of responding households within a bank by the following ratio:

6

No. of responding households within the bank

3) Multiple Telephone Adjustment

Weights for households with more than one private telephone number were adjusted downwards to account for the fact that such households have a higher probability of being selected. The weight for each household was divided by the number of distinct telephone numbers that serviced the household.

4) Person Weight Calculation

A person weight was then calculated for each person who responded to the survey by multiplying the household weight for that person by the number of persons in the household who were eligible to be selected for the survey (i.e., the number of household members 15 years old or older).

5) External Total Adjustment

An adjustment was made to the person weights on records within each stratum in order to make population estimates consistent with Census projected population counts. This was done by multiplying the person weight for each record within the stratum by the following ratio:

$$\frac{\text{Census population projection for the stratum}}{\text{Sum of the person weights of GSS Waksberg records within the stratum}}$$

Sum of the person weights of GSS Waksberg
records within the stratum

6) Province - Age - Sex Adjustment

The next weighting step was to ratio adjust the weights of Waksberg records to agree with Census projected age-sex distributions. Census projected population counts were obtained for males and females within the following seven age groups:

15-19,	20-24,	25-34,	35-44,
45-54,	55-64,	65 +	

For each of the resulting 112 classifications (8 provinces X 7 age groups X 2 sexes) the person weights for records within the classification were adjusted by multiplying by the following ratio:

$$\frac{\text{Projected census population count for the prov - age group - sex}}{\text{Sum of the person weights of records in the prov - age group - sex}}$$

Sum of the person weights of records
in the prov - age group - sex

It should be noted that persons living in households without telephone service are included in these projections even though such persons were not sampled.

Also the sample size of some cells did not meet the minimum size requirement. These cells were collapsed with an adjacent age group cell to meet the requirement.

7) Raking Ratio Adjustments

The weights of each respondent were adjusted several times using a raking ratio procedure. This procedure ensured that estimates produced for RO-Stratum or Prov - Age Group - Sex totals would both be correct. This adjustment was made by repeating steps 5) and 6) of the weighting procedures, using the weights obtained from the previous step, until the two sets of estimates were both correct.

8.1.2 Elimination of Non-Working Banks Design: Newfoundland Ontario

As was the case for the Waksberg design, when the Elimination of Non-Working Banks (ENWB) design is used, each household within a stratum has an equal probability of selection. This probability is equal to:

$$\frac{\text{No. of telephone numbers sampled within the stratum}}{\text{Total number of possible telephone numbers within the stratum}}$$

(The total number of possible telephone numbers for a stratum is equal to the number of working banks for a stratum times 100).

The following steps outline the weighting procedure that was used for ENWB records.

1) Basic Weight

Each household (responding and non responding) was assigned a weight equal to the inverse of its probability of selection:

$$\frac{\text{Total number of possible telephone numbers within the stratum}}{\text{No. of telephone numbers sampled within the stratum}}$$

2) Non-Response Adjustment

Weights for responding households were adjusted to represent non-responding households. This was done independently within each area code prefix. Records were adjusted by the following factor:

$$\frac{\text{Sum of the household weights of all households within an area code prefix}}{\text{Sum of household weights of responding households with an area code prefix}}$$

Non-responding households were then dropped from further processing.

The next 4 steps used in the weighting procedure for ENWB records were identical to what was done for Waksberg records (i.e., see Section 8.1.1 for details).

- 3) Multiple Telephone Adjustment
- 4) Person Weight Calculation
- 5) External Total Adjustment
- 6) Province - Age - Sex Adjustment
- 7) Raking Ratio Adjustments

8.2 Weighting Of Summary File

The weighting of the Summary File is similar to the weighting of the Main File.

8.2.1 Waksberg Design:	Prince Edward Island	Nova Scotia
	New Brunswick	Quebec
	Manitoba	Saskatchewan
	Alberta	British Columbia

The first four steps of the weighting process are the same as those performed for the Main File (i.e. See Section 8.1.1 for details).

- 1) Basic Weight
- 2) Non-Response Adjustment
- 3) Multiple Telephone Adjustment
- 4) Person Weight Calculation
- 5) External Total Adjustment

Time-use information was collected from respondents for a selected day of the week so that each day would have an equal number of respondents. An adjustment was made to the person weights on records within each stratum and the selected day of the week, ensuring that population estimates would be consistent with Census projected population counts. The projected counts for each stratum were divided by 7 since each day of the week should have had an equal number of respondents. The adjustment was done by multiplying the person weight for each record within the stratum - day of the week combination by the following ratio:

$$\frac{\text{Census population projection for the stratum}}{7}$$

Sum of the person weights of GSS Waksberg
records within the stratum - day of the week

6) Province - Age - Sex Adjustment

The next weighting step was to ratio adjust the weights of Waksberg records to agree with Census projected age-sex distributions. Census projected population counts were obtained for males and females within the following seven age groups:

15-19,	20-24,	25-34,	35-44,
45-54,	55-64,	65 +	

For each of the resulting 112 classifications (8 provinces X 7 age groups X 2 sexes) the person weights for records within the classification were adjusted by multiplying by the following ratio:

$$\frac{\text{Projected census population count} \\ \text{for the prov - age group - sex}}{\text{Sum of the person weights of records} \\ \text{in the prov - age group - sex}}$$

It should be noted that persons living in households without telephone service are included in these projections even though such persons were not sampled.

Also the sample size of some cells did not meet the minimum size requirement. For these cells, the age group was collapsed with an adjacent age group to meet the requirement.

7) Province - Day of the Week Adjustment

The next weighting step was to ratio adjust the weights of Waksberg records to agree with Census projected population counts within each province and day of the week. For each of the 56 classifications (8 provinces X 7 days) the person weights for records within the classification were adjusted by multiplying by the following ratio:

Projected census population count
for the prov - day

Sum of the person weights of records
in the prov - day

8) Raking Ratio Adjustments

The weights of each respondent were adjusted several times using a raking ratio procedure. This procedure ensured that estimates produced for Prov - Day or Prov - Age Group - Sex totals would both be correct. This adjustment was made by repeating steps 6) and 7) of the weighting procedures, using the weights obtained from the previous step, until the two sets of estimates were both correct.

8.2.2 Elimination of Non-Working Banks Design: Newfoundland Ontario

The first four steps of the weighting process are the same as those performed for the Main File (i.e. See Section 8.2.1 for details).

- 1) Basic Weight
- 2) Non-Response Adjustment
- 3) Multiple Telephone Adjustment
- 4) Person Weight Calculation
- 5) External Total Adjustment

Time use information was collected from respondents for a selected day of the week so that each day would have an equal number of respondents. An adjustment was made to the person weights on records within each stratum and the selected day of the week, ensuring that population estimates would be consistent with Census projected population counts. The projected counts for each stratum were divided by 7 since each day of the week should have had an equal number of respondents. The adjustment was done by multiplying the person weight for each record within the stratum - day of the week combination by the following ratio:

Census population projection for the stratum / 7

Sum of the person weights of GSS Waksberg
records within the stratum - day of the week

6) Province - Age - Sex Adjustment

The next weighting step was to ratio adjust the weights of Waksberg records to agree with Census projected age-sex distributions. Census projected population counts were obtained for males and females within the following seven age groups:

15-19,	20-24,	25-34,	35-44,
45-54,	55-64,	65 +	

For each of the resulting 112 classifications (8 provinces X 7 age groups X 2 sexes) the person weights for records within the classification were adjusted by multiplying by the following ratio:

Projected census population count
for the prov - age group - sex

Sum of the person weights of records
in the prov - age group - sex

It should be noted that persons living in households without telephone service are included in these projections even though such persons were not sampled.

Also the sample size of some cells did not meet the minimum size requirement. For these cells, the age group was collapsed with an adjacent age group to meet the requirement.

7) Province - Day of the Week Adjustment

The next weighting step was to ratio adjust the weights of Waksberg records to agree with Census projected population counts within each province and day of the week. For each of the 56 classifications (8 provinces X 7 days) the person weights for records within the classification were adjusted by multiplying by the following ratio:

$$\frac{\text{Projected census population count} \\ \text{for the prov - day}}{\text{Sum of the person weights of records} \\ \text{in the prov - day}}$$

8) Raking Ratio Adjustments

The weights of each respondent were adjusted several times using a raking ratio procedure. This procedure ensured that estimates produced for Prov-Day or Prov - Age Group - Sex totals would both be correct. This adjustment was made by repeating steps 6) and 7) of the weighting procedures, using the weights obtained from the previous step, until the two sets of estimates were both correct.

8.3 Weighting Policy

Users are cautioned against releasing unweighed tables or performing any analysis based on unweighed survey results. As was discussed in Section 8.1, there were several weight adjustments performed independently on records within each province. Sampling rates as well as non-response rates varied significantly from province to province.

For this survey contact was made with 20,887 households. Of these 16.7% were non-responding households. These were households that refused to respond to the survey or could not because of language difficulties or other problems. Included here as well are households that could not be reached during the entire survey period (i.e. Ring No Answers). An additional 4.4% of the selected respondents in the household refused or were unavailable to complete the survey (one person was randomly selected per responding household). If it is assumed that all the non-respondents (household and selected person) were "in scope" (i.e., had at least one member 15 years old or older), then the survey response rate was 78.9%. The response rate varied from a low of 77.0% in Ontario to a high of 83.5% in Prince Edward Island.

It is known that non-respondents are more likely to be males and more likely to be younger. In the responding sample, 3.5% were males between the ages of 15 and 19, while in the overall population, approximately 4.9% are males between 15 and 19. The responding sample was made up of 45.1% males compared to approximately 49.0% in the target population. Therefore, it is clear that the sample counts cannot be considered to be representative of the survey target population unless appropriate weights are applied.

8.4 Types of Estimates

The following sections deal with producing estimates from either the Main File or the Summary File. For simplicity, only the Main File is referenced, although the techniques can also be applied to the Summary File.

Two types of "simple" estimates are possible from the results of the General Social Survey. These are qualitative estimates (estimates of counts or proportions of people possessing certain characteristics) and quantitative estimates involving quantities or averages. More complex estimation and analyses are covered in Section 8.5.

8.4.1 Qualitative Estimates

It should be kept in mind that the target population for the GSS was non-institutionalized persons 15 years of age or over living in the ten provinces. Qualitative estimates are estimates of the number or proportion of this target population possessing certain characteristics. The number of women living in Ontario who graduated from high school is an example of this kind of estimate. These estimates are readily obtained by summing the weights of the records possessing the characteristic in question.

8.4.2 Quantitative Estimates

Some variables on the General Social Survey microdata file are quantitative in nature (e.g. age). From these variables, it is possible to obtain such estimates as the average number of weeks worked in the last 12 months (JOBWEEKS) for males 15 years or older living in Ontario, having worked between 1 and 52 weeks during the last 12 months. These estimates are of the following ratio form:

$$\text{Estimate (average)} = \frac{X}{Y}$$

The numerator (X) is a quantitative estimate of the total of the variable of interest (say, JOBWEEKS) for a given sub-population (say, males in Ontario i.e. DVSEX=1 and PROV=5). X would be calculated by multiplying the final weight (FWGT_OS) by the variable of interest (JOBWEEKS) and summing this product over all records for males.

The denominator (Y) is the qualitative estimate of the number of participants (males in Ontario with JOBWEEKS) within that sub-population. Y would be calculated by summing the final weight (FWGT_OS) over all male respondents in Ontario with $1 \leq \text{JOBWEEKS} \leq 52$.

The two estimates X and Y are derived independently and then divided to provide the quantitative estimate. For the example given X (the weighted sum of weeks) equals XXXX and Y (the number of males in the subpopulation) equals YYYY. The average number of weeks is then calculated to be:

$$\frac{\text{XXXX}}{\text{YYYY}} = \frac{128,079,877.70}{2,892,903} = 44.2738$$

8.5 Guidelines for Analysis

As is detailed in Section 5 of this document, the respondents from the GSS do not form a simple random sample of the target population. Instead, the survey had a complex design, with stratification and multiple stages of selection, and unequal probabilities of selection of respondents. Using data from such complex surveys presents problems to analysts because the survey design and the selection probabilities affect the estimation and variance calculation procedures that should be used.

The GSS used a stratified design, with significant differences in sampling fractions between strata. Thus some areas are over-represented in the sample (relative to their populations) while some other areas are relatively under-represented; this means that the unweighted sample is not representative of the target population. The survey weights must be used when producing estimates or performing analysis in order to account for this over

and under-representation. While many analysis procedures found in statistical packages allow weights to be used, the meaning or definition of the weight in these procedures differs from that which is appropriate in a sample survey framework, with the result that while in many cases the estimates produced by the packages are correct, the variances that are calculated are almost meaningless.

A set of Approximate Sampling Variability Tables have been included as Appendix D. For some types of analysis these tables will provide an approximate indication of sampling variability.

For many analysis techniques (for example linear regression, logistic regression, estimation of rates and proportions and analysis of variance) a method exists which can make the variances calculated by the standard packages more meaningful. If the weights on the data, or any subset of the data, are rescaled so that the average weight is one (1), then the variances produced by the standard packages will be more reasonable; they still will not take into account the stratification and clustering of the sample's design, but they will take into account the unequal probabilities of selection. The rescaling can be accomplished by dividing each weight by the overall average weight before the analysis is conducted.

The calculation of truly meaningful variance estimates requires detailed knowledge of the design of the survey; such detail cannot be given in this microdata file because of confidentiality. Variances that take into account the sample design can be calculated for many statistics by Statistics Canada on a cost recovery basis.

9. RELEASE GUIDELINES AND DATA RELIABILITY

It is important for users to become familiar with the contents of this section before publishing or otherwise releasing any estimates derived from the General Social Survey microdata file.

This section of the documentation provides guidelines to be followed by users. With the aid of these guidelines, users of the microdata file should be able to produce figures consistent with those produced by Statistics Canada and in conformance with the established guidelines for rounding and release. The guidelines can be broken into four broad sections: Minimum Sample Sizes for Estimates, Sampling Variability Policy, Sampling Variability Estimation and Rounding Policy.

9.1 Minimum Sample Size For Estimates

Users should determine the number of records on the microdata file which contribute to the calculation of a given estimate. This number should be 25 or more. When the number of contributors to the weighted estimate is less than this, the weighted estimate should not be released regardless of the value of the Approximate Coefficient of Variation.

9.2 Sampling Variability Guidelines

The estimates derived from this survey are based on a sample of households. Somewhat different figures might have been obtained if a complete census had been taken using the same questionnaire, interviewers, supervisors, processing methods, etc. as those actually used. The difference between the estimates obtained from the sample and the results from a complete count taken under similar conditions is called the sampling error of the estimate.

Although the exact sampling error of the estimate, as defined above, cannot be measured from sample results alone, it is possible to estimate a statistical measure of sampling error, the standard error, from the sample data. Using the standard error, confidence intervals for estimates (ignoring the effects of non-sampling error) may be obtained under the assumption that the estimates are normally distributed about the true population value. The chances are about 68 out of 100 that the difference between a sample

estimate and the true population value would be less than one standard error, about 95 out of 100 that the difference would be less than two standard errors, and virtually with certainty that the differences would be less than three standard errors.

Because of the large variety of estimates that can be produced from a survey, the standard deviation is usually expressed relative to the estimate to which it pertains. The resulting measure, known as the coefficient of variation of an estimate is obtained by dividing the standard error of the estimate by the estimate itself and is expressed as a percentage of the estimate. Before releasing and/or publishing any estimates from the microdata file, users should determine whether the estimate is releasable based on the following guidelines:

Sampling Variability Guidelines for the Release of Estimates

Users should determine the number of respondents on the microdata file who contribute to the calculation of the estimate. If this number is less than 25, the weighted estimate should not be released regardless of the value of the coefficient of variation for this estimate.

<u>Type of Estimate</u>	<u>Coefficient of Variation (in%)</u>	<u>Release Guideline</u>
1. Unqualified	0.0 to 16.5%	Estimates can be considered for general unrestricted release. No special notation is required.
2. Qualified	16.6 to 25.0%	Estimates can be considered for general unrestricted release but should be accompanied by a warning cautioning users of the high sampling variability associated with the estimates.
3. Restricted	25.1 to 33.3%	Estimates can be considered for general unrestricted release only when sampling variabilities are obtained using an exact variance calculation procedure. Otherwise, the estimate should be deleted. When sampling variabilities are obtained using exact variance calculation procedures, the estimates should be accompanied by a warning of high sampling variability associated with the estimates.
4. Not for	33.4% or over	Estimates should not be released in any form under any circumstances. In such statistical tables, such estimates should be deleted.

Note: The sampling variability guidelines should be applied to rounded estimates.

9.3 Estimates of Variance

Variance estimation is described separately for qualitative and quantitative estimates.

9.3.1 Sampling variability for Qualitative Estimates

Derivation of sampling variabilities for each of the estimates which could be generated from the survey would be an extremely costly procedure, and for most users, an unnecessary one. Consequently, approximate measures of sampling variability, in the form of tables, have been developed for use and are included in APPENDIX A ("Approximate Variance Tables"). These tables have been produced using the coefficient of variation formula based on a simple Random sample. Since estimates for the General Social Survey were based on two sample designs (the Waksberg design and the Elimination of Non-Working Banks design) a factor called the Design Effect was introduced into the variance formula.

The Design Effect for an estimate is the actual variance for the estimate (taking into account the design that was used) divided by the variance that would result if the estimate had been derived from a simple random sample. The Design Effect used to produce the Approximate Variance Tables has been determined by first calculating Design Effects for a wide range of characteristics and then choosing among these a conservative value which will not give a false impression of high precision.

For each province and Canada, approximate variance tables are provided. It should be noted that all coefficients of variation in these tables are approximate and, therefore unofficial. Estimates of actual variance for specific variables may be purchased from Statistics Canada. Use of actual variance estimates may allow users to release otherwise unreleasable estimates, i.e. estimates with coefficient of variation in the "restricted" range (see the policy regarding the release of the survey estimates on preceding pages).

9.3.2 Sampling Variability For Quantitative Estimates

In order to provide variability estimates for quantitative type variables, special tables would have to be produced. Since the variables on the General Social Survey microdata file are primarily qualitative in nature, this has not been done. As a general rule, however, the coefficient of variation of a quantitative total will be larger than the coefficient of variation of the corresponding qualitative estimate (e.g. the number of persons contributing to the quantitative estimate). If the corresponding qualitative estimate is not releasable, then the quantitative total will not be.

9.4 Rounding

In order that estimates produced from the General Social Survey microdata file correspond to those produced by Statistics Canada, users are urged to adhere to the following guidelines regarding the rounding of such estimates. It may be misleading to release unrounded estimates, as they imply greater precision than actually exists.

9.4.1 Rounding Guidelines

(1) Estimates of totals in the main body of a statistical table should be rounded to the nearest thousand using the normal rounding technique (see definition in section 9.4.2).

(2) Marginal sub-totals and totals in statistical tables are to be derived from their corresponding unrounded components and then are to be rounded themselves to the nearest thousand units using normal rounding.

(3) Averages, proportions, rates and percentages are to be computed from unrounded components and then are to be rounded themselves to one decimal using normal rounding.

(4) Sums and differences of aggregates and ratios are to be derived from corresponding unrounded components and then rounded to the nearest thousand units or the nearest one decimal using normal rounding.

(5) In instances where, due to technical or other limitations, a different rounding technique is used resulting in estimates different from Statistics Canada estimates, users are encouraged to note the reason for such differences in the released document.

9.4.2 Normal Rounding

In normal rounding, if the first or only digit to be dropped is 0 to 4, the last digit to be retained is not changed. If the first or only digit to be dropped is 5 to 9, the last digit to be retained is raised by one. For example, the number 8499 rounded to thousands would be 8 and the number 8500 rounded to thousands would be 9.

10. FILE STRUCTURE

In view of the nature of the time use data and the difference in the sample size, the microdata file consists of the three subfiles described below.

The **main file** is composed of 286 variables covering general background, language and social mobility variables. There are 16,390 records.

The **time use summary file** consists of one record per respondent and summarizes the total time spent on each of 95 activities and the 10 major categories, total time spent at each location and total time spent with various persons. In addition, it contains a subset of characteristics found on the main file. This is the most widely used file for time use analysis. There are 9946 records.

The **time use episode file** consists of all episodes reported by respondents. Each respondent generated a variable number of records depending on the number of episodes reported. For each episode, there is information on the activity, start and end time, duration, location and an indication of who the respondent was with for that episode. There are 179,148 records.

There is some duplication across the three files, however, this is done to facilitate the use of the files. The variables SEQNUM can be used for linking the files.

Special Notes

1. The variables on the Main File are generally in the following order:

- as they appear on the GSS 2-2 questionnaire (variables 002 to 061);
- a combined version of the basic characteristics (variables 062 to 089);
- derived variables (variables 90 to 122); and
- languages (variables 123 to 286).

Due to the large number of variables on the main file, an index is provided in Appendix A.

2. **Variable Acronyms** - The last two digits of numerous variable names directly link the data to the questionnaire. For example, the acronym COUNTRY_A1, refers the user to question A1 of the questionnaire, the source of the data provided by this particular variable.

3. **Not Stated Categories** - Generally a code 9 for a one digit field, a code 99 for a 2 digit field, etc. indicate that the respondent did not answer a question and therefore the answer is not stated. As the following example indicates, two types of "Not Stated" categories may appear.

```

FREASON_B2    Why was this, was it because...
               0  Not applicable
               1  Your father died
               2  Parents were divorced or separated
               3  You or your father were temporarily
                   living away from home
               4  Other (Specify)
               5  Not Stated 1,2 or 4
               9  Not Stated

```

Code 9 is the "true" not stated category for all variables on the file.

In certain questions, however, a second 'Not Stated' category appears. Although the respondent may not have marked a response, the information was actually partially available. Because of the branching pattern of a particular response, related information which followed, allows imputations of the original question. Other responses within the question were truly not stated. These cases are thus identified separately.

Using the above example, Code 5 implies that one of the values 01, 02 or 04 is the answer although the exact one is not known. Using question B3, which in this example had been answered, it was possible to narrow the not stated category to a subset of possible answers.

4. DVCHILD (variable #98) on Main file should not be used. However, DVCHILD (variable #34) on the Summary file has been derived properly.

11. ADDITIONAL INFORMATION

Additional information about this survey can be obtained from the individuals listed below. Data from the survey is available through published reports, special request tabulations and this microdata file. The microdata file is available from the Housing, Family and Social Statistics Division of Statistics Canada at a cost of \$750.00. Tabulations can be obtained at a cost that will reflect the resources required to produce the tabulation.

Questions about the following aspects of the survey should be directed to:

APPENDIX A^{*}

*

Please note changes to pages A 82 and A 94 from earlier version. Variable SEQNO is now called SEQNUM.

APPENDIX A:

Data Dictionary (i) Main File & List of Variables
 (ii) Time Use Summary File
 (iii) Time Use Episode File

The data dictionary contains the following for each file: a description of data items; the range of codes; reference to origin (i.e. whether from questionnaire or derived); item location and width on record and other physical representation characteristics (decimal positions, units of measurement); as well as relevant frequency distributions (population estimates rounded to thousands and sample counts) and comments.

The population estimates indicated in the dictionaries were produced with the Table Producing Language (TPL) utility with double precision accuracy utilizing fields 91, 11 and 16 from the main, time use summary and episode files respectively. Small differences should be anticipated with statistical packages not written in double precision or which handle the weighting factor differently (example, record replication rather than weight accumulation).

Data Dictionary: (i) Main File & List of Variables

Data Dictionary: (ii) Time Use Summary File

(ii) TIME USE SUMMARY FILE

A 82

The time use summary file contains the variables described below. The 9946 records representing respondents from the main file are included in the time use summary file. Respondents from the additional sample were not asked time use questions and are therefore not included in this file.

FIELD/ACRONYM	LENGTH	POSITION	VARIABLE DESCRIPTIONS	POPULATION ('000)/ SAMPLE COUNT
1 SEQNUM	05	001-005	Numbering of each record 0004:16389 (not all values present).	
2 FORMTYPE	01	006	Type of form completed 1 English Questionnaire 2 French Questionnaire	14907/7552 4990/2394
3 DDAY	01	007	<u>Diary Day</u> 1 Sunday 2 Monday 3 Tuesday 4 Wednesday 5 Thursday 6 Friday 7 Saturday	2843/1103 2843/1812 2843/1729 2843/1742 2843/1114 2843/1140 2843/1306
4 DIARY_DA	04	008-011	Date of interview. Interviews began October 1, 1986 and were completed December 22, 1986.	

FIELD/ACRONYM	LENGTH	POSITION	VARIABLE DESCRIPTIONS	POPULATION ('000)/ SAMPLE COUNT
5 DURAC_01 to DURAC_99 (Z4.)	396	012-407	Total duration for each activity. 0000:1440 minutes.	
6 DURLOC_1- DURLOC_9 (Z4.)	36	408-443	Total duration for each location code (from Part D of question) DURLOC_1 - at home DURLOC_2 - at work DURLOC_3 - at other places DURLOC_4 - by car DURLOC_5 - by foot DURLOC_6 - by bus or subway DURLOC_7 - other DURLOC_8 - in transit but not stated DURLOC_9 - not stated 0000:1440 minutes.	

FIELD/ACRONYM	LENGTH	POSITION	VARIABLE DESCRIPTIONS	POPULATION ('000)/ SAMPLE COUNT
7 DURWHO_1 to DURWHO_8 (Z4.)	32	444-475	Total duration for each "social contact" code (from Part E of question). DURWHO_1 - alone DURWHO_2 - with spouse DURWHO_3 - with children DURWHO_4 - with family members DURWHO_5 - with friends DURWHO_6 - with other persons DURWHO_7 - not stated DURWHO_8 - personal care activity (i.e. activity codes 40, 45 & 48) 0000:1440 minutes.	Time spent can be double counted
8 NO_EPISO	02	476-477	Number of episodes. 01:58 episodes.	
9 NO_TRIPS	02	478-479	Number of trips taken. 00:27 trips taken.	
10 EPISO_01 to EPISO_99 (Z2.)	198	480-677	Number of times each activity occurred. 00:27 occurrences.	
11 FWGT_MS	9	678-686	Final weight for each record in the main sample. The weight is a nine digit number containing 4 decimal places i.e. xxxxx.xxxx.	

FIELD/ACRONYM	LENGTH	POSITION	VARIABLE DESCRIPTIONS	POPULATION ('000)/ SAMPLE COUNT
12 DVSEX	01	687	Derived variable - Sex of respondent 1 Male 2 Female	9758/4462 10139/5484
13 DVPAID	04	688-691	Derived variable - Total duration of activity codes 01 to 09.	
14 DVDOM	04	692-695	Derived variable - Total duration of activity codes 10 to 19.	
15 DVCHILDC	04	696-699	Derived variable - Total duration of codes 20 to 29 (except 26 & 27).	
16 DVSHOP	04	700-703	Derived variable - Total duration of activity codes 30 to 39.	
17 DVPERS	04	704-707	Derived variable - Total duration of activity codes 40 to 49.	
18 DVEDUC	04	708-711	Derived variable - Total duration of activity codes 50 to 59.	
19 DVORGAN	04	712-715	Derived variable - Total duration of activity codes 60 to 69.	

FIELD/ACRONYM	LENGTH	POSITION	VARIABLE DESCRIPTIONS	POPULATION ('000)/ SAMPLE COUNT
20 DVENTERT	04	716-719	Derived variable - Total duration of activity - codes 70 to 79.	
21 DVSPORT	04	720-723	Derived variable - Total duration of activity codes 80 to 89.	
22 DVMEDIA	04	724-727	Derived variable - Total duration of activity codes 90 to 99 (except 97).	
23 DVRESID	04	728-731	Derived variable - Total duration of activity codes 26 and 27 (missing data) and 97 (not stated).	
24 DVTRANS	04	732-735	Derived variable - Total travel time. This includes: DURLOC_4 + DURLOC_5 + DURLOC_6 + DURLOC_7 + DURLOC_8.	
25 DVFAMILY	04	736-739	Derived variable - Total time with spouse, child(ren) and/or other family (i.e. DURWHO_2 + DURWHO_3 + DURWHO_4).	Excludes double counting for family
26 DVAGE1	01	740	Derived variable - age groups of respondent.	
			1 15 - 24 years	4195/1776
			2 25 - 34 years	4569/2708
			3 35 - 44 years	3691/1862
			4 45 - 54 years	2560/1016
			5 55 - 64 years	2329/1119
			6 65 years and over	2554/1465

DAILY ACTIVITIES CODE LIST - SUPPLEMENT

Details on all of the 99 activity categories, unusual cases and cases coded elsewhere.

R - denotes Respondent

EMPLOYED WORK 01 - 09

01 WORK FOR PAY

Normal work; activities at the main job including work brought home, travel which is part of the job; "working", "at work".

Work activities for pay done in the home when home is the main workplace.

Work done on a second job.
Part-time job for students.

UNUSUAL CASES

- Work activities related to attending conference or convention away from regular place of work.
- All travelling of bus, taxi and truck drivers.
- Babysitting or housecleaning for pay (as R's main job).

CASES CODED ELSEWHERE

02 Overtime, specified as such by R.

45 Sleep at motel while on work trip.

02 EXTRA TO WORK/OVERTIME/LOOKING FOR WORK

Overtime specifically differentiated from normal work by R.

Job search; looking for work, including visits to employment agencies, phone calls to prospective employers, answering want ads.

Applying for or collecting unemployment insurance or welfare.

CASES CODED ELSEWHERE

01 Overtime where R does not specifically call the work overtime.

03 TRAVEL DURING WORK

Travel during work that is specifically differentiated from normal work yet part of work.

UNUSUAL CASES

- Travelling to work conference.

CASES CODED ELSEWHERE

01 Travel within workplace.

01 Travel as part of main job, e.g., bus driver, delivery person, travelling salesperson.

09 Trip to or from work.

04 WAITING, DELAYS AT WORK

Waiting time or interruption during work that is specifically differentiated from normal work; e.g., machine breakdown, supply shortage.

CASES CODED ELSEWHERE

01 Waiting time which R does not specifically designate.

07 Coffee breaks.

05 MEALS-SNACKS AT WORK

Meals or snacks eaten at the place of work (e.g., meals at company cafeteria or outside on the grounds).

CASES CODED ELSEWHERE

43 Meals at home.

44 Restaurant meals.

06 IDLE TIME BEFORE OR AFTER WORK

Non-working time spent at R's workplace before starting or after finishing normal work, e.g. changing clothes, talk with fellow employees (usually activities occurring in the time period between the trip to or from work.)

CASES CODED ELSEWHERE

44 Have breakfast at restaurant close to work.

76 Have drink with fellow employees at bar close to work.

07 COFFEE, OTHER BREAKS

Prescribed non-working breaks or period, e.g., coffee-breaks.

08 UNCODEABLE WORK ACTIVITIES

Other activities related to work not codeable in above categories.

09 TRAVEL: TO-FROM WORK

Travel to and from workplace including waiting time and/or stop interruptions.

Travel and waiting time related to job search, unemployment benefits.

UNUSUAL CASES

- Trip to fellow employees house to take her/him along to work.

CASES CODED ELSEWHERE

29 Take children to school on way to work.

39 Trip to drug store after work.

39 Trip and waiting for welfare, food stamps

49 Trip to restaurant for breakfast before work.

DOMESTIC WORK 10 - 1910 MEAL PREPARATION

Preparing food and meals; baking.

UNUSUAL CASES

- Packing lunches for next day.
- Canning, preserving or freezing food.

11 MEAL CLEAN-UP (DISHES/CLEARING TABLE)

Cleaning up after meals, e.g., doing dishes, putting away food, straightening out the kitchen.

CASES CODED ELSEWHERE

12 Cleaned kitchen (unrelated to specific meals).

12 INDOOR CLEANING (DUSTING/VACUUMING)

Indoor (routine) cleaning; e.g., dusting, making beds, picking up, washing windows, vacuuming, fall/spring cleaning, work around the house, etc.

13 OUTDOOR CLEANING (SIDEWALKS/GARBAGE)

Outdoor cleaning; e.g., sidewalks, garbage, raking cut grass or leaves, garbage removal, snow shovelling, storm windows, cleaning garage, cut wood, etc.

CASES CODED ELSEWHERE

17 Mow the lawn.

19 Took garbage to dump.

14 LAUNDRY, IRONING, FOLDING

Laundry and ironing, includes washing, drying and hanging clothes on the line.

CASES CODED ELSEWHERE

84 "Sewing"

15 MENDING

Mending and upkeep of clothes, especially maintenance activities such as sewing and shining shoes.

CASES CODED ELSEWHERE

84 Sewing a dress, knitting a sweater.

16 HOME REPAIRS, MAINTENANCE

Home repairs and home operations; e.g., painting, plastering, furnace, appliances, plumbing, furniture.

Maintaining exterior; fixing repairs outdoors, painting the house, fixing the roof, repairing the driveway (patching).

Car care and maintenance; necessary repairs and routine care to cars; changed oil, changed tires, washed car, "worked on car" except when clearly a hobby — (code 83).

Home improvements: additions to and remodelling done to the house, garage, and grounds, new roof repaved driveway, additions.

CASES CODED ELSEWHERE

18 Pay bills.

83 Auto repair and tinkering (as hobby).

17 GARDENING, PET CARE

Gardening; flower or vegetable gardening; spading, weeding, composting, picking, "worked in garden".

Mowing the lawn.

Pet care; care of household pets including activities with pets; playing with the dog.

Care of houseplants.

UNUSUAL CASES

- Picking fruit or vegetables away from home.
- Seeding or fertilizing lawn.

CASES CODED ELSEWHERE

01 Paid work with animals or plants.

38 Take animal to veterinarian.

18 OTHER UNCODEABLE HOUSEWORK (BILLS)

Other housework that does not fit into categories 10 -17 eg. "worked outside", "puttering in garage", holding a garage sale.

Household paperwork: paying bills, balancing the checkbook, making lists, getting the mail, working on the budget, putting groceries away.

Packing and unpacking from a move.

19 TRAVEL: DOMESTIC

Travel and waiting time related to domestic work (activities 10 - 18)
e.g., drive to the laundromat, go to the dump.

CARE OF CHILDREN 20 - 29

20 BABY CARE

All child (including housework, feeding and cooking) specifically for babies, i.e., children less than 5 years old.

UNUSUAL CASES

- Simultaneous care of babies and children is coded 21.

CASES CODED ELSEWHERE

21 Child care (5 - 18 years old).

21 CHILD CARE

Care to older children (ages 5 - 18) not specifically codeable in Codes "22 - 25".

Simultaneous care of babies and children.

CASES CODED ELSEWHERE

10 - 19 Housework devoted to children, especially fixing meals or snacks.

22 - 25 Specific child care activities.

22 HELPING, TEACHING, REPRIMANDING CHILDREN

Helping/teaching children learn, fix, make things. Helping son bake cookies; helping daughter fix bike.

Help with art projects, homework, supervising homework, visiting child's teacher.

23 READING, TALKING, CONVERSATION WITH CHILDREN

Read to or talk to children.

24 PLAY WITH CHILDREN

Indoor or outdoor play with children, e.g., board games, walking with or biking with children.

25 MEDICAL CARE - CHILD

Medical care to children e.g., give children medicine or visit child's doctor or dentist.

28 OTHER CHILDCARE (UNPAID BABYSITTING)

Other childcare not codeable in "20 - 25".

Unpaid babysitting or child care outside R's home or to children not residing in household.

CASES CODED ELSEWHERE

23 Reading to or talking with children.

29 TRAVEL: CHILD CARE

Travel and waiting time related to child care (activities 20 - 25)
e.g., take child to school including waiting.

SHOPPING AND SERVICES 30 - 3930 EVERYDAY SHOPPING

Shopping for everyday goods and products, e.g., food, clothing, personal care products, gasoline; including for clothing, small appliances; at drug stores, hardware stores, department stores, "downtown" or "uptown", "shopping", "window shopping".

Includes Christmas shopping.

CASES CODED ELSEWHERE

32 Personal care services.

34 Medical care services or products.

31 SHOPPING FOR DURABLE HOUSEHOLD GOODS (HOUSE, CAR)

Shopping for house, apartment, car, large appliance; activities connected with buying, selling, renting, including phone calls, looking for house, showing house, including travelling around looking at real estate property (for own use).

32 PERSONAL CARE SERVICES (HAIRDRESSER)

Personal care outside the home; e.g., barbers, beauticians.

CASES CODED ELSEWHERE

34 Medical care not at home.

33 GOVERNMENT AND FINANCIAL SERVICE

Government services - municipal, local, state, or federal e.g., post office, driver's license, sporting licenses, marriage licenses, police station.

Financial services; activities related to taking care of financial business; going to the bank, paying utility bills (not by mail), going to accountant, tax office, loan agency, insurance office, broker, financial consultant.

Jury duty or attending court.

CASES CODED ELSEWHERE

35 Going to a lawyer's office.

34 ADULT MEDICAL AND DENTAL CARE (OUTSIDE HOME)

Medical and dental care outside the home, including making appointments and going to Chiropractor and Podiatrist.

UNUSUAL CASES

- Shop for medicines or fill prescriptions.

CASES CODED ELSEWHERE

41 Medical care at home.

35 OTHER PROFESSIONAL SERVICES (LAWYER)

Lawyer, home designer, landscape architect, alarm system specialists, counselling, photographer and other professional services.

36 REPAIR SERVICES (CLEANING, AUTO, APPLIANCE)

Repair and cleaning services e.g., laundry and dry cleaning services, auto and TV repair.

Auto services; repair and other auto services including waiting for such services.

Clothes repair and cleaning: cleaners, laundromat, tailor.

Appliance repair: including furnace, water heater, electric or battery operated appliances; including watching repair person.

Household repair service: i.e., furniture.

37 WAITING, QUEUING FOR PURCHASE

Waiting for purchase of goods and services; waiting at the doctor's office, waiting at the garage for your car to be fixed.

38 OTHER UNCODEABLE SERVICES

Other services not codeable above, e.g., door-to-door salesperson or solicitor; take pet to the vet; attending a garage sale.

Run errand or borrow goods.

39 TRAVEL: GOODS OR SERVICES

Travel and waiting time related to shopping and services (activities 30 - 38) e.g., go to doctor's office.

PERSONAL CARE 40 - 4940 WASHING, DRESSING, PACKING

Personal washing and dressing including getting up or getting ready for bed, changing clothes, shaving, setting hair, packing personal luggage.

CASES CODED ELSEWHERE

06 Changing clothes or cleaning up at work.

41 ADULT MEDICAL CARE (AT HOME)

Personal medical care at home to self or other adults e.g., home medical treatment by doctor or taking medicine.

UNUSUAL CASES

- Caring for sick friends or relatives.

CASES CODED ELSEWHERE

25 Medical care to children.

42 Non-medical care or help.

42 HELP AND CARE TO ADULTS

Care given to adults, if not included as household work.

Routine non-medical care to adults in household; "Got my wife up", "ran a bath for my husband".

Help and care to relatives not living in household. Helping, caring for, providing for needs of relatives; (except travel) helping move, bringing food, assisting in emergencies, doing housework for relatives; visiting when sick.

Help and care to neighbours, friends and others in the same way as with relatives (above note).

43 MEALS AT HOME/SNACKS/COFFEE

Meals and snacks at home.

UNUSUAL CASES

- Drinking a cup of coffee or a glass of beer.
- Smoking, restaurant goods eaten at home.

CASES CODED ELSEWHERE

05 Meals at work.

44 RESTAURANT MEALS

Meals outside the home or work-place e.g., at restaurant

UNUSUAL CASES

- Out for coffee.

CASES CODED ELSEWHERE

75 Meals as part of a visit.

76 Food or drink at bar or club.

45 NIGHT SLEEP/ESSENTIAL SLEEP

Essential sleep (usually at night); including "in bed" but not asleep.

UNUSUAL CASES

- Sleep during day for person on the night shift; longest sleep for day.

CASES CODED ELSEWHERE

46 Naps in bed.

47 Relaxing, thinking.

46 INCIDENTAL SLEEP, NAPS

Incidental sleep e.g., naps (usually during the day).

"Dozing", "laying down".

CASES CODED ELSEWHERE

45 Essential sleep.

47 RELAXING, THINKING, RESTING

Relaxing, thinking, planning, sunbathing, doing nothing, "just sat".

48 OTHER PERSONAL CARE OR PRIVATE ACTIVITIES

All personal or private activities; "none or your business".

Sex.

49 TRAVEL: PERSONAL

Travel and waiting time related to personal needs (activities 40 - 48)
e.g., go out to eat.

Other personal travel; e.g., "went to Montreal" (no further explanation given).

SCHOOL AND EDUCATION 50 - 5950 FULL-TIME CLASSES

Attending class as a full-time student (or as the principle occupation).

UNUSUAL CASES

- Talking with instructor.
- Student teaching (unpaid)

CASES CODED ELSEWHERE

- 51 Night school course.
- 52 Attending special lectures.

51 OTHER CLASSES - PART-TIME

Attending classes or training courses as less than a full-time student. Other classes, courses, lectures, academic or professional; R not a full-time student.

UNUSUAL CASES

- Talking with instructor.
- Student teaching.

52 SPECIAL LECTURES - OCCASIONAL

Attending special lectures outside regular work or school hours, e.g., guest speakers.

53 HOMEWORK: COURSE, CAREER, SELF-DEVELOPMENT

Homework, studying, research, reading, related to self-development, except for current job; "went to the library".

Sponsored or unsponsored (full or partial) homework for career-development.

CASES CODED ELSEWHERE

01 Research or paperwork for one's job.

60 Union-management meetings.

54 MEALS-SNACKS, COFFEE AT SCHOOL

Meals or snacks eaten at the place of education (e.g., meals at the school cafeteria).

CASES CODED ELSEWHERE

64 Read the Bible or religious books.

55 BREAKS OR WAITING FOR CLASS TO BEGIN

Usually a short period of idle time spent before class.

56 LEISURE AND SPECIAL INTEREST CLASSES

Courses and classes usually not associated with academia, e.g., photography, dance, bridge, knitting classes.

58 OTHER UNCODEABLE STUDY

Other uncodeable education not covered above, e.g., discussions, or time at school not spent in any of the activities coded 50 - 57.

59 TRAVEL: EDUCATION

Travel time related to education (activities 50 - 58) e.g., go to library to do research for course. Go for music lesson.

ORGANIZATIONAL, VOLUNTARY, AND RELIGIOUS ACTIVITY 60 - 69

60 PROFESSIONAL, UNION: GENERAL

Participating as a member of a social-political organization or labour union, e.g., union meeting, educational association.

Meetings and other activities as a member of a professional or union group including social activities and meals.

UNUSUAL CASES

- Prepare financial report.
- Call members to announce meeting.

61 POLITICAL, CIVIC ACTIVITY

Participating in meetings or organizations other than those covered in codes 60, esp. "meetings" not further described

Meetings, political/citizen organizations; attending meetings of a political party or citizen group, including city council.

Voting.

CASES CODED ELSEWHERE

- 80 Take part in bowling league.
- 84 Take part in sewing circle.

62 CHILD, YOUTH, FAMILY ORGANIZATIONS

Participating in other organizations including boy and girl scouts; little league, YM/MWCA; School volunteer, etc.

63 RELIGIOUS MEETINGS, ORGANIZATIONS

Meetings and other activities of religious helping groups, i.e., helping-oriented church groups - ladies aid, circle, missionary society, Knights of Columbus.

Meetings and other activities of non-helping religious groups, including social activities and meals, choir practice, bible class, church play, etc.

64 RELIGIOUS SERVICES/PRAYER/READ BIBLE

Attending services of a church or synagogue, including participating in the service; ushering, singing in choir, leading youth group, going to church, funerals.

Individual practice; religious practice carried out as an individual or in a small group; praying, meditating, bible study group (not at church), visiting graves.

UNUSUAL CASES

- Saying morning or evening prayers.
- Read the Bible or religious books.
- Join in religious service on mass media.

65 FRATERNAL, SOCIAL ORGANIZATIONS

Participating in factory or worker councils or committees, including union-management activities; fraternal associations - Kiwanis; Lions Club, Chamber of Commerce, Legion.

66 VOLUNTEER WORK, HELPING

Volunteer work for a civic purpose, attending meetings, helping organizations; fund raising, collecting money, planning a collection drive, e.g. Greenpeace.

Volunteer help to individuals or groups by visiting, bringing food, driving, etc., Crisis Line.

Other activities as a member of volunteer helping organizations, including social events and meals.

CASES CODED ELSEWHERE

42 Help other adults.

68 OTHER UNCODEABLE ORGANIZATIONS

Organizational activity not covered above.

UNUSUAL CASES

- Hearings or meetings at City Hall.
- Naval reserve.
- Unreported time spent between attending church and leaving for home.

69 TRAVEL: ORGANIZATIONS

Travel and waiting time related to organizations (activities 60 - 68)
e.g., go to church, driving related to volunteer work.

ENTERTAINMENT (ATTENDING) 70 - 7970 SPORTS EVENTS

Attending sports events.

UNUSUAL CASES

- Watching husband bowl or son play hockey.

CASES CODED ELSEWHERE

91 Watching sports on television.

71 POP MUSIC, FAIRS, CONCERTS, ZOOS

Going to popular concerts, fairs, zoos, circuses, popular music (rock, country), parades.

UNUSUAL CASES

- Watching ice follies.
- Visiting Santa Claus.

72 MOVIES, FILMS

Attending movies, art films, and drive-in movies away from home.

CASES CODED ELSEWHERE

78 Watching home movies.

91 Watching movies on T.V. (including video tapes).

73 OPERA, BALLET, DRAMA

Attending theatre (plays, dances), symphonies, operas.

74 MUSEUMS AND ART GALLERIES

Including exhibitions.

75 VISITS, ENTERTAINING FRIENDS/RELATIVES

Entertaining or visiting friends; socializing with people other than R's own household members either at R's home or another home talking/chatting in the context of receiving a visit or paying a visit. Includes dinner and other parties. (Birthday parties).

CASES CODED ELSEWHERE

44 Go to restaurant for meal.

76 SOCIALIZING AT BARS, CLUBS

Socializing and/or dancing at bar; cocktail lounge; nightclub.

78 OTHER SOCIAL GATHERINGS

Other social life and social gatherings not classifiable above, i.e., wedding receptions and ceremonies (not specified at church).

UNUSUAL CASES

- Watching home movies.

79 TRAVEL: ENTERTAINMENT

Travel and waiting time related to social entertainment (activities 70 - 78) e.g., go to visit friends, drove to baseball game.

CASES CODED ELSEWHERE

87 Pleasure driving.

SPORTS AND HOBBIES (PARTICIPATING) 80 - 8980 SPORTS, PHYSICAL EXERCISE, COACHING

Playing sports or doing physical exercise, competitively or leisurely. Includes, for example, football, tennis, golf, swimming, skating, bowling, frisbee, yoga, horseback riding, etc.

UNUSUAL CASES

- Coaching girl's basketball.
- Sports lessons, exercise classes.

CASES CODED ELSEWHERE

70 Watching someone else play sports.

81 HUNT, FISH, CAMP

Includes hunting, fishing, camping, boating, sailing, canoeing, snowmobiling, picnicking, etc.

82 WALK, HIKE

Talking a walk, hiking.

83 HOBBIES

Hobbies and collections, including cleaning and repairs of hobby equipment, such as repairing leisure time equipment (repairing the boat, "sorting out fishing tackle").

Working on cars (customizing, painting); photography; scrapbooks; carpentry and woodworking (as a hobby).

Includes artistic hobbies such as painting, sculpting, potting, drawing, creative writing.

UNUSUAL CASES

- Ham radio.
- Making a home movie.

CASES CODED ELSEWHERE

84 Sewing, knitting, etc.

84 DOMESTIC HOME CRAFTS

Domestic homecrafts such as sewing and dressmaking. Also, knitting, needle-work, weaving, crocheting, crewel, embroidery, quilting, quilling macrame.

CASES CODED ELSEWHERE

15 Mending necessary as part of housework.

56 Classes for home crafts.

85 MUSIC, THEATRE, DANCE

Singing or playing a musical instrument, dancing - ballet, modern dance, square dance, ballroom, etc., acting (rehearsal for play).

CASES CODED ELSEWHERE

56 Music or dance lessons.

77 Dancing at a nightclub.

86 GAMES, CARDS, ARCADE

Games e.g., cards, bingo, crossword puzzles, video games.

CASES CODED ELSEWHERE

56 Bridge lessons.

75 Games as part of visit.

80 Play sports (e.g., pool).

87 PLEASURE DRIVES, SIGHTSEEING

Going for a car ride.

88 OTHER UNCODEABLE SPORT OR ACTIVE LEISURE

Other active leisure and unascertained times surrounding active leisure, i.e., going to the beach, going to find a Christmas tree (outdoors), decorating tree or house.

89 TRAVEL: SPORTS, HOBBIES

Travel and waiting time related to active leisure travel (activities 80 - 88) e.g., go to play cards.

Travel time to cottage, or vacation.

CASES CODED ELSEWHERE

87 Pleasure driving.

MEDIA AND COMMUNICATION 90 - 99

90 RADIO

Listening to the radio; music, news, commentaries etc.

91 TELEVISION, RENTED MOVIES

Watching television or video tapes. Includes taping television programs.

92 RECORDS, CASSETTE TAPES, LISTENING

Listening to records or tapes.

93 READING BOOKS, MAGAZINES

Reading books; technical, political, novels, poetry, etc. Also, magazines, pamphlets, bulletins, newsletters.

CASES CODED ELSEWHERE

- 01 Read as part of job.
- 23 Read to children.
- 53 Read for homework.
- 64 Read the Bible (religious activity).

94 READING NEWSPAPERS

Self explanatory.

95 TALKING, CONVERSATION, PHONE

Phone and face-to-face conversations.

96 LETTERS AND MAIL

Writing or reading letters, sending Christmas cards.

CASES CODED ELSEWHERE

18 Writing and mailing bills.

83 Creative writing.

98 OTHER UNCODEABLE MEDIA AND COMMUNICATION

Media and communication activity not covered above.

99 TRAVEL: LEISURE

Travel and related time related passive leisure (activities 90 - 98).

APPENDIX C

A Guide to Using the Time Use Data Files

The time use portion of the GSS Cycle 2 collected data on the daily activities of Canadians. Information was collected by asking respondents to report their daily activities during the course of a 24 hour reference day starting at 4:00 in the morning. While multiple activities may be done simultaneously, the scope of the survey only allowed for the collection of data on one activity - the main activity as determined by the respondent.

For each activity respondents were asked the start and end time of the activity, where the activity took place (at home, at work, other place or type of transit) and who the respondent was with at the time (alone, spouse/partner, children of household, other family members, friend, others). The latter was not asked for sleep and most other personal care activities e.g. washing, dressing, packing (codes 40, and 45 to 48).

The activities reported by respondents were coded into 95 individual groups and these groups were then categorized into the following 10 major activity groups:

1. Employed Work
2. Domestic Work
3. Care of Children
4. Shopping & Services
5. Personal Care
6. School & Education
7. Organizational, Voluntary & Religious Activity
8. Entertainment (Attending)
9. Sports & Hobbies (Participation)
10. Media & Communication

In order to facilitate analysis of the time use data, three separate data files were created, the main file, the time use summary file and time use episode file. The following is a guide to using the time use data files.

Three main aspects of time use

The analysis done using the file will generally be concerned with one or more of the following measures.

1. Participation Rate

This is the proportion of the population who reported on a particular activity. This is calculated as

$$P^a = \frac{\sum_i W_i X_i^a}{\sum_i W_i}$$

P^a = participation rate for activity a
 where X_i^a = 1 if respondent reported activity a , = 0 otherwise
 W_i = weight for person i

Note that the indicator of participation is a nonzero number of episodes for that activity.

2. Average time for participants

The average time spent on an activity by all participants in that activity is calculated as

$$TP^a = \frac{\sum_i W_i X_i^a t_i^a}{\sum_i W_i X_i^a}$$

TP^a = average time for total participants in activity a
 X_i^a = 0 or 1 indication of participation in activity a
 where t_i^a = time on activity a for person i (= 0 if no participation)
 W_i = weight for person i

3. Average time for total population

The average time spent on an activity by the total population (including both participants and non participants) is calculated as

$$T^a = \frac{\sum_i W_i X_i^a t_i^a}{\sum_i W_i}$$

T^a = average time for total population
 X_i^a = 0 or 1 indication of participation in activity a
 where t_i^a = time on activity a for person i (= 0 if no participation)
 W_i = weight for person i

This time will always be less than the average time for participants and is equal to the time for participants if the participation rate is 100%.

The following are a number of comments that are intended to help in using the time use files:

1. The participation rates and the average times can be calculated for any subgroup of the population by considering only the individuals in the subgroup.
2. The average time spent either for the participants or the entire population represent an average over a full seven day week (automatically due to the weight) unless a selection is done for a particular day of the week using variable DDAY.
3. In total, 202 respondents (2% of all respondents) refused to describe their activities or most of them for the reference day. They were excluded from the tables used in the preliminary release (see tables at the end of the section).
4. The average time for the total population summed across all activities is equal to 1440 minutes (24 hours). This is not the case for average time of participants.
5. Average time for the total population can be added to obtain average time for a grouping of activities. This is not the case for participants.
6. The participation rate can be approximated by dividing the average time for the population by the average time for the participants.
7. Adding durations for social contacts (i.e. variables DURWHO_1 to DURWHO_8) will likely exceed 24 hours in most situations since time spent for a given activity with more than one type of social contact is counted each time. For example, watching television for an episode of 45 minutes with spouse and children will account for 45 minutes in DURWHO_2 (spouse) as well as 45 minutes in DURWHO_3 (children).
8. Activities that could not be coded because they did not belong to a particular code or had an unclear description were considered not stated and assigned a code of 97. Code 27 represents time spent on activities the respondent refused to report, while code 26 represents gaps in time when the respondent described his/her reference day. Note that codes 26 and 27 are not subcategories of "Care of Children" and 97 is not a subcategory of "Media and Communications". These codes were used for missing data since they were not being used for other purposes and there was a desire to maintain a two digit activity code.
9. Durations for each activity are for main activity only (as perceived by the respondent).

10. Variables on the Main File can be linked to variables on the Time Use files using the variable SEQNUM as a matching key.

Summary File

The summary file provides summary activity information for each respondent on:

- i) the total time spent on each activity
- ii) the total time spent at various locations
- iii) the total time spent with various persons.

Note that this file summarizes the data for each respondent along each of these three dimensions of activities. It does not however provide the details on individual activity episodes. For example the file provides the total time spent on an activity such as T.V. watching, although the total time may have been reported during one or multiple episodes of T.V. watching during the day. The summary file indicates the number of episodes of each activity but provides no time data on separate episodes. Similarly the information for location and "who with" is the total for the day. The "who with" data do not add to 24 hours as a respondent could be with more than one person or groups of persons at a time. DVFAMILY provides an unduplicated measure of time spent with the immediate family. There is no information on this file which links an activity with a location or who the person was with at the time. This information is provided on a detailed episode file described below.

In addition to reporting the summary data for individual activities, locations and contacts, summary data have also been included for selected derived groupings of these factors. In particular, data are shown for 10 major groups of activities as indicated above. Other derived variables are:

- Total duration of time in transit
- Total duration of time spent with family (spouse/partner, children in household or other family members)
- Number of activities
- Number of trips
- Number of episodes

In addition to the summary activity information on the file, selected characteristics of respondents are included.

In order to provide control counts in using the summary file, the four tables used in the preliminary release of the data are included at the end of this appendix. Users should be able to replicate these using the file.

Examples using the Summary file

a) ACTIVITY TABLES

To eliminate refusals and produce estimates for respondents only:

Select @764 REF_FLAG = 0 (9744 records)

When weighted estimates for the duration of time spent at an activity, for example, employed work, by the population are required

Declare @678 FWGT_MS 9.4 (weight)
 Declare @688 DVPAID 4. (employed work)

When weighted estimates for the duration of time spent at an activity for participants only are required, exclude the respondents who did not report that activity, e.g., employed work,

i.e., Select Respondents for whom DVPAID > 0.

The participation rate of a given activity is the percentage of the total population that reported the activity and can be derived using the formula provided.

When weighted estimates are required for a sub-group of the population, select the provided code for the desired sub-group, for example, time spent at employed work (DVPAID) for males and employed males.

Select DVSEX=1 and ACT7DAYS=1.

DVPAID			
All Canadians aged 15 and over	Total Population	Total Participants ¹	Participation Rate (%)
Males	9,542,792	5,162,727	54
Employed Males	5,939,104	4,581,219	77

¹For any activity, if sample size is less than 25 or weighted sample size is less than 30,000 then the data are not considered reliable and should be suppressed.

NOTES

(i) DVPAID (employed work) provides an estimate of employed work that includes individual activities 01-09. In comparing productive work (employed work + domestic work + child care + shopping) between employed persons and persons keeping house, it should be noted that productive time for those employed includes commuting to work as well as meals/snacks eaten at work. The meals/snacks of those keeping house are included in personal care as meals eaten at home are classified to personal care. Those keeping house may appear to have less productive time using this classification strategy as 1) they do not commute to work and 2) their meals and snacks are not included in productive time.

(ii) The classification of meals/snacks at work and commuting time to the employed work and concomitantly to productive time will also bias the level of productive time in favour of the male population as a higher proportion of the population keeping house are female.

b) LOCATION

To eliminate refusals and produce estimates for respondents only:

Select REF_FLAG = 0 (9744 records)

When weighted estimates for the duration of time spent at various locations or in various means of transit by the population are required:

Declare	@678	FWGT_MS	9.4	(weight)
	@408	DURLOC_1	4.	(home)
	@412	DURLOC_2	4.	(work)
	@416	DURLOC_3	4.	(other place)
	@420	DURLOC_4	4.	(car)
	@424	DURLOC_5	4.	(foot)
	@428	DURLOC_6	4.	(bus or subway)
	@432	DURLOC_7	4.	(other transit) ²
	@436	DURLOC_8	4.	(in transit but not stated)
	@440	DURLOC_9	4.	(not stated)

When weighted estimates for duration of time spent at various locations or in transit by participants only are required, exclude the respondents who did not report any time at that location or in transit,

i.e., Select Respondents for whom DURLOC_# > 0.

²includes other in transit such as bicycle, etc.

The participation rate of activity at a given location or given means of transit, is the percentage of the total population that reported activity at the location or in transit and can be derived using the formula provided.

DURLOC_2

Location (Work)	Total Population	Total participants	Participation rate (%)
Employed Males	5,939,104	3,742,987	63

DURLOC_1 TO DURLOC_9 provides an estimate of the duration of time spent at various locations or in various means of transit. This time will add to 24 hours for the population.

c) SOCIAL CONTACTS

To eliminate non-response and produce estimates for respondents only:

Select REF_FLAG = 0 (9744 records)

When weighted estimates for the duration of time spent with various social contacts for the population are required:

Declare @678	FWGT_MS	9.	(Weight)
@444	DURWHO_1	4.	(Alone)
@448	DURWHO_2	4.	(Spouse)
@452	DURWHO_3	4.	(Children of Household)
@456	DURWHO_4	4.	(Other Family Members) ³
@460	DURWHO_5	4.	(Friends)
@464	DURWHO_6	4.	(Others)
@468	DURWHO_7	4.	(Not Specified)
@472	DURWHO_8	4.	(Personal-activity codes 40,45 and 48) ⁴

³Other family members include parents, brothers, sisters, grandchildren and other relatives even if they are not members of the immediate household.

⁴Respondents were not asked for social contacts during personal care activity codes 40, 45 to 48.

When weighted estimates for the duration of time spent with social contacts for participants only are required, exclude the respondents who did not report the required social contact,

i.e., Select Respondents for whom DURWHO_# > 0

The participation rate of activity with a given social contact is the percentage of the total population that reported activity with the contact and can be derived using the formula provided.

Social Contact (Spouse)	Total Population	Total Participants ⁵	Participation Rate (%)
Employed Males	5,939,104	4,101,984	69

DURWHO_1 TO DURWHO_8 provides estimates of the duration of time spent alone or with others. The duration of time with social contacts will not necessarily add to 24 hours because a respondent can spend time in the company of more than one person at a time. The derived variable DVFAMILY, position 736, includes total unduplicated time with spouse, children and/or other family members (DURWHO_2 - DURWHO_4).

Episode File

The episode file provides the detailed information on each activity episode reported by respondents. For each episode there is information on the start and end time of the activity, the duration of episode (derived from start and end time), the location of the episode and a set of variables that reflect who the respondent was with during the episode. Since there could be multiple contacts for an episode, the contact data is provided in the form of a set of variables, one for each type of contact.

Note that the unit record for this file is the episode and not the respondent. For example, a respondent who has reported 26 different episodes for his/her reference day has generated 26 records on the Episode file. There is no information on the characteristics of the respondent. However each episode can be linked to the respondent using the sequence number and characteristics can be obtained from the summary or main files. In addition each episode includes information on the diary day and the total number of episodes for a respondent.

⁵For any social contact, if sample size is less than 25 or weighted sample size is less than 30,000 then the data are not considered reliable and should be suppressed.

The episode file is a rather complicated file to work with and there has been relatively little work done with this type of file, however it has been included to allow researchers maximum flexibility in using the time use data.

The episode file can be used for a number of different types of analysis. One use of the file is to consider a given activity (e.g. T.V. watching) and to analyze the distribution of episodes across time (time of day and/or day of week). The file can also be used to look at where various activities take place (e.g. paid work at home) or the social contacts for various activities. The file can also be used to look at the distribution of activities at any point in time (e.g. what is the population doing at 8:00 a.m., 11:00 p.m., 3:00 a.m., etc). More complicated analysis can be done by linking episodes for an individual and looking at the sequencing of different activities. Similarly by linking the episodes back to the characteristics of respondents, one can look at who in the population engages in various activities at different times during the day.

In view of the novelty of the episode file, the GSS staff is interested in any work that is done with the file. Users are encouraged to contact the GSS staff to pass on any experiences with the data. The GSS staff will attempt to share whatever experience they have and that which other researchers have reported to them.

Examples using the Episode file

The episode file consists of 179,148 records. It is important to note that each record represents a single activity in a respondent's day, and that each respondent's episodes must add up to twenty four hours (1440 minutes), i.e., a respondent is represented by more than one record. Each record has its own weight field, namely,

@31 FWGT_MS 9.4

which represents the respondent's weight and will be the same for all episodes of a given respondent. With this in mind, it is critical that weights are applied properly. In cases where one activity, e.g., television viewing, can have more than one episode in a day, the episodes of the same activity for each respondent must be combined **then** weighted. It is important to ensure that the weight is applied only once for each respondent.

In order to work with the episode file and ensure the weighting is done properly it is advantageous to "flag" the first episode of each activity for each respondent. This is so that the first episode carries the weight for a given respondent. A suggested method of doing so is as follows:

C10

```
1) Declare      @1  SEQNUM      5.
                  @09 ACT_CODE   2.
                  @11 START_TIME 4.
                  @31 FWGT_MS    9.4
```

2) Sort the data, by SEQNUM and by ACT_CODE. This groups all incidents of the same activity within a given respondent's (SEQNUM) day.

3) For the first incident of each activity, assign a value of one to the "flag" (henceforth referred to as FLAGWGT), and assign FLAGWGT a value of zero to all other incidents of that activity.

4) Sort the data again, this time by SEQNUM and START_TIME, which returns the data to its original form, with a new temporary variable FLAGWGT, where the records are ordered by sequence, from 0400 h to 2756 h.

This procedure is useful for some of the following applications.

a) LOCATION

When weighted estimates for the duration of time spent at an activity, e.g., television viewing, at a given location, e.g., at home, are required,

```
Declare  @09  ACT_CODE  2.
          @19  DURATION  4.
          @23  PLACE     1.
          @31  FWGT_MS   9.4
```

```
Select ACT_CODE=91 (Television Viewing)
       PLACE=1 (home)
```

Define FLAGWGT as above to be 1 or 0.

Calculate the average time by summing across all selected records as follows:

$$\sum_k T_k W_k$$

$$\sum_k F_k W_k$$

where T_k = episode time for record k.

W_k = original respondent weight (FWGT_MS) for record k.

F_k = flag (0 or 1) for record k.

Location	Participant Mean
Total	188
Home	186

b) SOCIAL CONTACTS

When weighted estimates for the duration of time spent at an activity, e.g., television viewing, with a particular social contact, e.g., spouse, are required,

```

Declare  @09  ACT_CODE  2.
          @19  DURATION  4.
          @25  SPOUSE    1.
          @31  FWGT_MS   9.4

```

```

Select  ACT_CODE=91 (Television Viewing)
        SPOUSE=1 (yes - with spouse)

```

Define FLAGWGT as above to be 1 or 0.

Calculate the average time by summing across all selected records as follows:

$$\frac{\sum_k T_k W_k}{\sum_k F_k W_k}$$

where T_k = episode time for record k.

W_k = original respondent weight (FWGT_MS) for record k.

F_k = flag (0 or 1) for record k.

Social Contact	Participant Mean	Participation Rate (%)
Total	158	100
Spouse	44	28

c) ACTIVITIES AT ANY POINT IN TIME

When weighted estimates of the proportion of people doing a particular activity at a given point in time of the day, e.g., 0800h, are required,

C12

```

Declare  @09  ACT_CODE    2.
          @11  START_TIME  4.
          @15  END_TIME    1.
          @31  FWGT_MS     9.4

```

Select records where START_TIME <= 0800 and END_TIME > 0800.

Calculate participants as

$$\sum_k W_k$$

where the summation is over the selected records for a given activity (e.g., work for pay, T.V. viewing, all activities, etc.). Note that in this case the weighting is not a problem since each respondent has one and only one record selected for any particular time of day.

Selected Activity at 0800h	Total Population (000's)	Participation Rate (%)
Total	19,612	100
Work for pay	3,537	18
Travel: to- from work	963	5
Night sleep/ essential sleep	5,256	27

TABLE 1
AVERAGE NUMBER OF MINUTES SPENT PER DAY BY POPULATION 15 YEARS AND OLDER AND
BY PARTICIPANTS ONLY, AND PARTICIPATION RATE FOR EACH ACTIVITY, CANADA, NOVEMBER 1986.

CODE	ACTIVITY NAME	TOTAL POPULATION MINUTES PER DAY	PARTICIPANTS ONLY MINUTES PER DAY	PARTICIPATION RATE %
<u>EMPLOYED WORK</u>		215	433	44
01	WORK FOR PAY	174	426	41
02	OVERTIME/LOOKING FOR WORK	2	142	2
03	TRAVEL DURING WORK	3	156	2
04	WAITING, DELAYS AT WORK	--	43	1
05	MEALS-SNACKS AT WORK	8	44	18
06	IDLE TIME BEFORE OR AFTER WORK	2	28	7
07	COFFEE, OTHER BREAKS	4	30	13
08	UNCODEABLE WORK ACTIVITIES	3	111	3

— AMOUNT TOO SMALL TO BE EXPRESSED. I.E. SAMPLING VARIABILITY (C.V.) IS
GREATER THAN 33%

APPENDIX D

Approximate Sampling Variability Tables and Guidelines

By using the Approximate Sampling Variability Tables and the guidelines included in this appendix users should be able to determine approximate coefficients of variation for aggregates (totals), percentages, ratios, differences between totals and differences between ratios.

There is a set of tables for each of the following types of estimate produced:

- 1) For variables on the Main File (by province);
- 2) For variables on the Main File (by linguistic region);
- 3) For variables on the Summary File (by province).

There are no tables for estimates produced from the Episode File. A coefficient of variation for Episode File estimates can only be obtained by doing the following:

- Define a category for each (unique) respondent on the episode file (such as "Watches T.V. for two hours a day")
- Determine how many respondents on the Summary File belong to this category (say, 450,000 people)
- Use the Approximate Sampling Variability Tables for the Summary File to determine an approximate c.v. for the people estimate. This c.v. can be applied to the Episode File estimate.

Derivation of sampling variabilities for each of the estimates which could be generated from the survey would be an extremely costly procedure, and for most users, an unnecessary one. Consequently, approximate measures of sampling variability in the form of tables have been developed for use.

There are individual tables for each of the provinces and regions. It should be noted that all coefficients of variation in these tables are approximate measures. Estimates of actual variance for specific variables may be obtained from Statistics Canada on a cost-recovery basis. Use of actual variance estimates may allow users to release otherwise unreleasable estimates, i.e. estimates with coefficient of variation in the "restricted" range (see Section 9, the guidelines regarding the release of the survey estimates).

The approximate coefficients of variation were derived using the variance formula for simple random sampling and incorporating a factor to reflect the multi-stage clustered nature of the sample design. This factor is known as the design effect and is defined

D (ii)

as the ratio of the exact variance of an estimate to the variance from a simple random sample of the same size. Design effects vary in their size depending on the characteristic measured in a survey. An overall design effect has been assessed by reviewing the design effects for a wide range of important characteristics generated in the survey.

The following rules should enable the user to determine the approximate coefficients of variation from the Sampling Variability Tables for estimates of the number, proportion or percentage of the surveyed population possessing a certain characteristic and for ratios and differences between estimates.

Rule 1: Estimates of Numbers possessing a Characteristic (Aggregates)

The coefficient of variation depends only on the size of the estimated aggregate itself. On the Sampling Variability Table for the appropriate geographical area, locate the estimated aggregate in the left-most column of the table (headed "Numerator of Percentage") and follow the asterisks across to the first figure encountered. This figure is the estimated coefficient of variation.

Rule 2: Estimates of Percentages or Proportions possessing a certain characteristic.

The coefficient of variation of an estimated percentage or proportion depends on both the size of the percentage or proportion and the size of the total upon which the percentage is based. Estimated percentages or proportions are relatively more reliable than the corresponding estimates of the numerators of the percentages when the percentage applies to sub-groups of the population. (Note that in the tables the cv's decline in value reading from left to right).

When the percentage or proportion is based upon the total population of the geographic area covered by the table, the cv of the percentage or proportion is the same as the cv of the numerator of the percentage. In this case, Rule 1 can be used.

When the percentage or proportion is based upon a subset of the total population (e.g. those in a particular age-sex group), reference should be made to the percentage (across the top of the table) and to the numerator of the percentage or proportion (down the left side of the table). The intersection of the appropriate row and column gives the coefficient of variation.

Rule 3: Ratios

In the case where the numerator is a subset of the denominator, the ratio should be converted to a percentage and Rule 2 applied. This would apply, for example, to the case where the denominator is the number of males and the numerator is the number of males with a certain characterisic.

In the case where the numerator is not a subset of the denominator, the coefficient of variation of the ratio of two estimates is approximately equal to the square root of the sum of squares of each coefficient of variation considered separately. That is, the coefficient of variation of a ratio:

$$R = \frac{X}{Y}$$

$$\text{is } cv(R) = [cv(X)^2 + cv(Y)^2]^{1/2}$$

This formula will tend to overstate the error if X and Y are positively correlated and understate the error if X and Y are negatively correlated.

Rule 4: Differences between totals or percentages

The standard deviation of a difference between two estimates is approximately equal to the square root of the sum of squares of each standard deviation considered separately. That is, the standard deviation of a difference:

$$d = X - Y$$

$$\text{is } sd(d) = (X^2 * cv(X)^2 + Y^2 * cv(Y)^2)^{1/2}$$

The coefficient of variation of d is approximately:

$$cv(d) = \frac{sd(d)}{d}$$

This formula is accurate for the difference between separate and uncorrelated characteristics but is only approximate otherwise.

Rule 5: Difference of Ratios

In this case, Rules 3 and 4 are combined. The cv's the two ratios are first determined using Rule 3, and the cv of their difference is found using Rule 4.

APPROXIMATE VARIANCE TABLES

20 Hello, I'm from Statistics Canada. We are doing a survey about the social activities and the language use of Canadians.

21 I'd like to make sure that I've dialed the right number. Is this (read number)?

- ☐ Yes
- ☐ No → Dial again. If still wrong, END

22 Is this number for a business, an institution or a private home?

- ☐ Private home
- ☐ Both home and business } Go to 30
- ☐ Business, institution or other non-residence

23 Does anyone use this telephone number as a home phone number?

- ☐ Yes
- ☐ No → Thank respondent and END

24 How many persons live or stay at this address and use this number as a home phone number?

- ☐ Less than 15 → Go to 30
- ☐ 15 or more → Make appointment

INTERVIEW WITH SELECTED PERSON

70: 71:

72: 73:

DESIGNATED DAY LABEL

74 INTERVIEWER: Transcribe selected person name from item 35 and related Page-Line No. from items 33 & 34.

Selected person name Page-line

75 Would you prefer to be interviewed in English or French?

- ☐ English
- ☐ French

76 Interviewer Number

2

30 In this survey all information we collect will be kept strictly confidential as guaranteed by the Statistics Act. While your participation is voluntary, your assistance is essential if the results of the survey are to be accurate.

31 I need to select one person from your household for an interview which will be conducted in November. Starting with the oldest, what is the first name and age of each person living or staying here who has no usual place of residence elsewhere?

Enter names and ages in items 35 and 37

32 INTERVIEWER:

- Enter answers for items 38 through 48 for each person recorded in item 35. Refer to Interviewer Reference Card for instructions and codes
- Then go to item 49

49 Are there any persons away from this household attending school, visiting, travelling or in the hospital who USUALLY live here?

☐ Yes → Enter names and complete items 37 through 48

☐ No

50 Does anyone else live at this address, such as other relatives, roomers, boarders or employees?

☐ Yes → Enter names and complete items 37 through 48

☐ No

51 Now I am going to use a selection procedure to determine whom to interview. This will just take a second.

52 INTERVIEWER:

In item 36, number the persons 15 years of age and over in order from oldest to youngest.

Determine the selected person by referring to the Selection Grid.

In item 36, circle the number of the selected person.

SELECTION GRID LABEL

A = Eligible household members B = Select #

53 The person I am to interview is _____ (read name)

Someone will be contacting him/her between November 26 and December 12.

54 INTERVIEWER: If the respondent volunteers a best time to be contacted, mark below.

GENERAL SOCIAL SURVEY
SOCIAL ACTIVITIES AND LANGUAGE USE
QUESTIONNAIRE
AGES 15 YEARS AND OVER

For this part of the survey I would like you to recall certain aspects of your life from when you were born to when you were 15 years old.

SECTION A

A1 In what country were you born?

☐ 01 Canada → In which province or territory?

- ☐ 02 Newfoundland
- ☐ 03 Prince Edward Island
- ☐ 04 Nova Scotia
- ☐ 05 New Brunswick
- ☐ 06 Québec
- ☐ 07 Ontario
- ☐ 08 Manitoba
- ☐ 09 Saskatchewan
- ☐ 10 Alberta
- ☐ 11 British Columbia
- ☐ 12 Yukon Territory
- ☐ 13 Northwest Territories

→ Go to A3

☐ 14 Country outside Canada (specify)

A2 In what year did you first immigrate to Canada?

☐ 15 Canadian citizen by birth

A3 What is your date of birth?

____ Day ____ Month ____ Year

A4 Did you live in the same community from birth up to age 15? By community I mean city, town or rural area.

☐ 16 Yes → Go to A7

☐ 17 No

☐ 18 Don't know → Go to SECTION B

A5 In how many different communities did you live during this time?

_____ communities

☐ 19 Don't know → Go to SECTION B

A6 Think about the community you lived in for the longest time from when you were born until you were 15 years old. For how many of those 15 years did you live there?

_____ years

☐ 20 Don't know

A7 What was the approximate size of that community?

- ☐ 21 Less than 5,000 population or a rural area
- ☐ 22 5,000 to less than 25,000 population
- ☐ 23 25,000 to less than 100,000 population
- ☐ 24 100,000 to 1 million population
- ☐ 25 Over 1 million population

A8 Was this place in Canada or elsewhere?

☐ 26 In Canada → What was the name of that town or nearest town?

Town → _____

Prov. → _____

☐ 27 Elsewhere → Which country? (specify)

SECTION B

B1 When you were 15 years old, did you live with your own father? (Include adoptive father)

☐ 28 Yes → Go to B4

☐ 29 No

B2 Why was this? Was it because ...

☐ 30 Your father died

☐ 31 Parents were divorced or separated

☐ 32 You or your father were temporarily living away from home → Go to B4

☐ 33 Other (specify)

B3 During that time, was there a male who took the role of your father?

☐ 34 Yes

☐ 35 No → Go to B8

B4 Which of the following best describes your father's (or father substitute's) main activity when you were 15 years old? (Accept one response only)

☐ 36 Working at a job or business → In this job was he mainly ...

☐ 37 An employee working for someone else → Go to B5

☐ 38 Self-employed → Go to B6

☐ 39 A student → Go to B8

☐ 40 Retired → Go to B8

☐ 41 Keeping house → Go to B8

☐ 42 Other (specify)

_____ → Go to B8

B5 For whom did he work?

(Name of business, government department or agency or person)

☐ 43 Don't know

B6 What was the main kind of business, industry or service? (Give a full description: e.g., paper box manufacturing, retail shoe store, municipal board of education)

☐ 44 Don't know

- B7 What kind of work was he doing?
(Give a full description: e.g., posting invoices, selling shoes, teaching primary school)

3 ☐ Don't know

- B8 In total, how many years of elementary or secondary education did your father (or father substitute) complete?

98 ☐ No schooling → Go to B11

_____ years

99 ☐ Don't know

- B9 Did he have any further schooling beyond elementary/secondary school?

3 ☐ Yes

4 ☐ No

5 ☐ Don't know } → Go to B11

- B10 What was the highest level he attained?
(Accept one response only)

1 ☐ Some community college, CEGEP or nursing school

2 ☐ Diploma or certificate from community college, CEGEP or nursing school

3 ☐ Some university

4 ☐ Bachelor or undergraduate degree or teacher's college

5 ☐ Master's or earned doctorate

6 ☐ Other (specify)

7 ☐ Don't know

- B11 In what country was he born?

01 ☐ Canada → In which province or territory?

02 ☐ Newfoundland

03 ☐ Prince Edward Island

04 ☐ Nova Scotia

05 ☐ New Brunswick

06 ☐ Québec

07 ☐ Ontario

08 ☐ Manitoba

09 ☐ Saskatchewan

10 ☐ Alberta

11 ☐ British Columbia

12 ☐ Yukon Territory

13 ☐ Northwest Territories

14 ☐ Country outside Canada (specify)

- B12 To which ethnic or cultural group did he belong?
(Accept multiple response)

1 ☐ English

2 ☐ French

3 ☐ Irish

4 ☐ Scottish

5 ☐ German

6 ☐ Italian

7 ☐ Ukrainian

8 ☐ Other (specify)

9 ☐ Don't know

- B13 What was the first language he learned in childhood?
(Accept multiple response only if languages learned at same time)

1 ☐ English

2 ☐ French

3 ☐ Other (specify) _____

4 ☐ Don't know

- B14 The next questions ask about your mother. When you were 15 years old, did you live with your own mother?
(Include adoptive mother)

1 ☐ Yes → Go to B17

2 ☐ No

- B15 Why was this? Was it because ...

3 ☐ Your mother died

4 ☐ Parents were divorced or separated

5 ☐ You or your mother were temporarily living away from home → Go to B17

6 ☐ Other (specify)

- B16 During that time, was there a female who took the role of your mother?

7 ☐ Yes

8 ☐ No → Go to B21

- B17 Which of the following best describes your mother's (or mother substitute's) main activity when you were 15 years old? (Accept one response only)

1 ☐ Working at a job or business → In this job was she mainly ...

6 ☐ An employee working for someone else → Go to B18

7 ☐ Self-employed → Go to B19

2 ☐ Keeping house → Go to B21

3 ☐ A student → Go to B21

4 ☐ Retired → Go to B21

5 ☐ Other (specify)

_____ → Go to B21

- B18 For whom did she work?
(Name of business, government department or agency or person)

1 ☐ Don't know

819 What was the main kind of business, industry or service?
(Give a full description: e.g., paper box manufacturing, retail shoe store, municipal board of education)

2 ☐ Don't know

820 What kind of work was she doing?
(Give a full description: e.g., posting invoices, selling shoes, teaching primary school)

3 ☐ Don't know

821 In total, how many years of elementary or secondary education did your mother (or mother substitute) complete?

98 ☐ No schooling → Go to B24

_____ years

99 ☐ Don't know

822 Did she have any further schooling beyond elementary/secondary school?

3 ☐ Yes

4 ☐ No

5 ☐ Don't know } → Go to B24

823 What was the highest level she attained?
(Accept one response only)

1 ☐ Some community college, CEGEP or nursing school

2 ☐ Diploma or certificate from community college, CEGEP or nursing school

3 ☐ Some university

4 ☐ Bachelor or undergraduate degree or teacher's college

5 ☐ Master's or earned doctorate

6 ☐ Other (specify)

7 ☐ Don't know

824 In what country was she born?

01 ☐ Canada → In which province or territory?

02 ☐ Newfoundland

03 ☐ Prince Edward Island

04 ☐ Nova Scotia

05 ☐ New Brunswick

06 ☐ Québec

07 ☐ Ontario

08 ☐ Manitoba

09 ☐ Saskatchewan

10 ☐ Alberta

11 ☐ British Columbia

12 ☐ Yukon Territory

13 ☐ Northwest Territories

14 ☐ Country outside Canada (specify)

825 To which ethnic or cultural group did she belong?
(Accept multiple response)

1 ☐ English

2 ☐ French

3 ☐ Irish

4 ☐ Scottish

5 ☐ German

6 ☐ Italian

7 ☐ Ukrainian

8 ☐ Other (specify)

9 ☐ Don't know

826 What was the first language she learned in childhood?
(Accept multiple response only if languages learned at same time)

1 ☐ English

2 ☐ French

3 ☐ Other (specify) _____

4 ☐ Don't know

827 What language did you yourself first speak in childhood?
(Accept multiple response only if languages were spoken equally)

5 ☐ English

6 ☐ French

7 ☐ Other (specify) _____

828 How many brothers have you ever had?
(Include step-, half- and adopted brothers and those no longer living)

_____ brothers

829 How many sisters have you ever had?
(Include step-, half- and adopted sisters and those no longer living)

_____ sisters

SECTION D

INTERVIEWER - "X" DAY TO WHICH ACTIVITIES REFER

- 1 ☐ Sunday
- 2 ☐ Monday
- 3 ☐ Tuesday
- 4 ☐ Wednesday
- 5 ☐ Thursday
- 6 ☐ Friday
- 7 ☐ Saturday

These next questions ask about your daily activities. We need to know in as much detail as you can recall, what you did during (refer to reference day) starting at 4:00 o'clock in the morning. This section will provide information on transportation activity, amount of time spent on housework, leisure, paid work, etc. You may have been doing more than one thing at a time but we are interested in the main activity for each time period. We are not interested in activities which lasted only a minute or two. We also ask where you did each activity and if anyone was interacting with you during the activity.

Would you like an example?

EXAMPLE: Yesterday morning I was asleep until 7:15. From 7:15 until 7:30 I got dressed. Then from 7:30 until 7:45 I made breakfast and from 7:45 to 7:55 I ate breakfast with my children. After we ate I cleaned up the dishes, which took 20 minutes.

Do not ask question "e" about sleep, sex or other personal care activities.

1. a. First of all, starting at 4:00 a.m. what were you doing?

 0 4 0 0

c. When did this end?

d. Where were you?/ Were you still . . .

INTERVIEWER To record additional activities, use Form GSS 2-2D and "X" the circle below. Also indicate the number of forms used.

☐ (If you use GSS 2-2D)

☐ Number of forms

Number the questions sequentially starting with 45.

SECTION E

For this part of the survey I would like you to consider your life as it is now.

E1 Presently, would you describe yourself as ...

Very
happy
1 ☐

Somewhat
happy
2 ☐

Somewhat
unhappy
3 ☐

Very
unhappy
4 ☐

No
opinion
5 ☐

E2 I am going to ask you to rate certain areas of your life. Please rate your feelings about them as very satisfied, somewhat satisfied, somewhat dissatisfied or very dissatisfied.

			Somewhat	Very	No opinion
a) Your health	→ 1 <input type="radio"/> Satisfied 2 <input type="radio"/> Dissatisfied	→ 1 <input type="radio"/> → 3 <input type="radio"/>	2 <input type="radio"/> 4 <input type="radio"/>	3 <input type="radio"/>	
b) Your job or main activity	→ 4 <input type="radio"/> Satisfied 5 <input type="radio"/> Dissatisfied	→ 5 <input type="radio"/> → 7 <input type="radio"/>	6 <input type="radio"/> 8 <input type="radio"/>	9 <input type="radio"/>	
c) The way you spend your other time	→ 7 <input type="radio"/> Satisfied 8 <input type="radio"/> Dissatisfied	→ 1 <input type="radio"/> → 3 <input type="radio"/>	2 <input type="radio"/> 4 <input type="radio"/>	9 <input type="radio"/>	
d) Your finances	→ 1 <input type="radio"/> Satisfied 2 <input type="radio"/> Dissatisfied	→ 5 <input type="radio"/> → 7 <input type="radio"/>	6 <input type="radio"/> 8 <input type="radio"/>	9 <input type="radio"/>	
e) Your housing	→ 4 <input type="radio"/> Satisfied 5 <input type="radio"/> Dissatisfied	→ 1 <input type="radio"/> → 3 <input type="radio"/>	2 <input type="radio"/> 4 <input type="radio"/>	6 <input type="radio"/>	
f) Your friendships	→ 7 <input type="radio"/> Satisfied 8 <input type="radio"/> Dissatisfied	→ 5 <input type="radio"/> → 7 <input type="radio"/>	6 <input type="radio"/> 8 <input type="radio"/>	9 <input type="radio"/>	
g) Living partner or single status	→ 1 <input type="radio"/> Satisfied 2 <input type="radio"/> Dissatisfied	→ 1 <input type="radio"/> → 3 <input type="radio"/>	2 <input type="radio"/> 4 <input type="radio"/>	9 <input type="radio"/>	
h) Your relationship with other family members	→ 4 <input type="radio"/> Satisfied 5 <input type="radio"/> Dissatisfied	→ 5 <input type="radio"/> → 7 <input type="radio"/>	6 <input type="radio"/> 8 <input type="radio"/>	9 <input type="radio"/>	
i) Yourself (self-esteem)	→ 7 <input type="radio"/> Satisfied 8 <input type="radio"/> Dissatisfied	→ 1 <input type="radio"/> → 3 <input type="radio"/>	2 <input type="radio"/> 4 <input type="radio"/>	9 <input type="radio"/>	

E3 Now, using the same scale, how do you feel about your life as a whole right now?

Satisfied		Dissatisfied		No opinion
Very	Somewhat	Somewhat	Very	
1 <input type="radio"/>	2 <input type="radio"/>	3 <input type="radio"/>	4 <input type="radio"/>	5 <input type="radio"/>

SECTION F

The following questions are about your knowledge and use of languages at home, school and work.

F1. What is your main language, that is, the language in which you are most at ease?
(Report two if the respondent is equally at ease in two languages)

1 ☐ English → Have you ever had any knowledge or understanding of a language other than English?

7 ☐ Yes → Go to Section G (Below)

8 ☐ No → Go to SECTION T (Page 23)

2 ☐ English and French → Go to SECTION H (Page 15)

3 ☐ English and Other (specify) → Go to SECTION J (Page 15)

4 ☐ French → Go to SECTION K (Page 16)

5 ☐ French and Other (specify) → Go to SECTION L (Page 16)

6 ☐ Other (specify) }
 } → Go to SECTION M (Page 17)

SECTION G

G1. Do you have any knowledge or understanding of French?

1 ☐ Yes

2 ☐ No → Go to G6

G2. When was the last time that you had a conversation in French, excluding language courses?

1 ☐ During the last week

2 ☐ During the last month

3 ☐ During the last year

4 ☐ More than a year

5 ☐ Never

G3. How would you rate yourself in the following language abilities in French?

	Very good	Good	Not very good	Not at all
Reading	01 <input type="radio"/>	02 <input type="radio"/>	03 <input type="radio"/>	04 <input type="radio"/>
Understanding	05 <input type="radio"/>	06 <input type="radio"/>	07 <input type="radio"/>	08 <input type="radio"/>
Speaking	09 <input type="radio"/>	10 <input type="radio"/>	11 <input type="radio"/>	12 <input type="radio"/>

G4. What would you say contributed the most to your present knowledge of French? (Accept multiple response)

1 ☐ Language instruction at school

2 ☐ Other language courses

3 ☐ Speaking with family

4 ☐ Speaking with friends

5 ☐ Speaking at work

6 ☐ Watching television

7 ☐ Other (specify) _____

G5. Compared to five years ago, would you say that you now ... more French, less French or about the same?

KNOW

1 ☐ More

2 ☐ Less

3 ☐ Same

USE

4 ☐ More

5 ☐ Less

6 ☐ Same

G6. Do you have any knowledge or understanding of a language other than English or French?

1 ☐ Yes → How many other languages do you know or understand?

3 ☐ One language (specify)

4 ☐ languages → Which one do you know best? (specify)

2 ☐ No → Go to G9

G7. When was the last time you had a conversation in that language (language reported in G6), excluding language courses?

5 ☐ During the last week

6 ☐ During the last month

7 ☐ During the last year

8 ☐ More than a year

9 ☐ Never

G8. In that language (language reported in G6), how would you rate yourself in the following abilities?

	Very good	Good	Not very good	Not at all
Reading	21 <input type="radio"/>	02 <input type="radio"/>	03 <input type="radio"/>	04 <input type="radio"/>
Understanding	25 <input type="radio"/>	06 <input type="radio"/>	07 <input type="radio"/>	08 <input type="radio"/>
Speaking	09 <input type="radio"/>	10 <input type="radio"/>	11 <input type="radio"/>	12 <input type="radio"/>

G9. INTERVIEWER: If "No" indicated in both G7 and G6, go to SECTION N (PAGE 17)

G10. Compared to five years ago, would you say that you now use more English, less English or about the same?

1 ☐ More

2 ☐ Less

3 ☐ Same

G11. INTERVIEWER: Go to SECTION N (Page 17)

SECTION H

H1 Compared to five years ago, would you say that you now ... more English, less English or about the same?

KNOW

- 1 ☐ More
2 ☐ Less
3 ☐ Same

USE

- 4 ☐ More
5 ☐ Less
6 ☐ Same

H2 Compared to five years ago, would you say that you now ... more French, less French or about the same?

KNOW

- 4 ☐ More
5 ☐ Less
6 ☐ Same

USE

- 7 ☐ More
8 ☐ Less
9 ☐ Same

H3 Do you have any knowledge or understanding of a language other than English or French?

- 1 ☐ Yes → How many other languages do you know or understand?
3 ☐ One language (specify)
4 ☐ languages → Which one do you know best? (specify)
2 ☐ No → Go to SECTION N (Page 17)

H4 When was the last time you had a conversation in that language (language reported in H3) excluding language courses?

- 5 ☐ During the last week
6 ☐ During the last month
7 ☐ During the last year
8 ☐ More than a year
9 ☐ Never

H5 In that language (language reported in H3), how would you rate yourself in the following abilities?

	Very good	Good	Not very good	Not at all
Reading	01 <input type="radio"/>	02 <input type="radio"/>	03 <input type="radio"/>	04 <input type="radio"/>
Understanding	05 <input type="radio"/>	06 <input type="radio"/>	07 <input type="radio"/>	08 <input type="radio"/>
Speaking	09 <input type="radio"/>	10 <input type="radio"/>	11 <input type="radio"/>	12 <input type="radio"/>

H6 INTERVIEWER Go to SECTION N (PAGE 17)

SECTION J

J1 Compared to five years ago, would you say that you now ... more English, less English or about the same?

KNOW

- 1 ☐ More
2 ☐ Less
3 ☐ Same

USE

- 4 ☐ More
5 ☐ Less
6 ☐ Same

J2 Do you have any knowledge or understanding of French?

- 7 ☐ Yes
8 ☐ No → Go to J7

J3 When was the last time you had a conversation in French, excluding language courses?

- 1 ☐ During the last week
2 ☐ During the last month
3 ☐ During the last year
4 ☐ More than a year
5 ☐ Never

J4 How would you rate yourself in the following language abilities in French?

	Very good	Good	Not very good	Not at all
Reading	01 <input type="radio"/>	02 <input type="radio"/>	03 <input type="radio"/>	04 <input type="radio"/>
Understanding	05 <input type="radio"/>	06 <input type="radio"/>	07 <input type="radio"/>	08 <input type="radio"/>
Speaking	09 <input type="radio"/>	10 <input type="radio"/>	11 <input type="radio"/>	12 <input type="radio"/>

J5 What would you say contributed the most to your present knowledge of French? (Accept multiple response)

- 1 ☐ Language instruction at school
2 ☐ Other language courses
3 ☐ Speaking with family
4 ☐ Speaking with friends
5 ☐ Speaking at work
6 ☐ Watching television
7 ☐ Other (specify) _____

J6 Compared to five years ago, would you say that you now ... more French, less French or about the same?

KNOW

- 1 ☐ More
2 ☐ Less
3 ☐ Same

USE

- 4 ☐ More
5 ☐ Less
6 ☐ Same

J7 Other than English or French, how many languages do you know or understand?

languages

J8 INTERVIEWER Go to SECTION N (PAGE 17)

SECTION K

K1 How would you rate your ability to read in English? Is it ...

- 1 ☐ Very good
 2 ☐ Good
 3 ☐ Not very good
 4 ☐ Not at all

K2 What would you say contributed the most to your present knowledge of English? (Accept multiple response)

- 1 ☐ Language instruction at school
 2 ☐ Other language courses
 3 ☐ Speaking with family
 4 ☐ Speaking with friends
 5 ☐ Speaking at work

INTERVIEWER: If no contacts in R1 go to R6 below, otherwise go to R2 above

R6 Would you say that, in your area, federal services are generally available in your preferred official language?

1 ☐ Yes

8 ☐ No

9 ☐ Don't know

R7 In which languages are the television programs you watch?

0 ☐ Never watch television

(Most often)

1 ☐ English

2 ☐ French

3 ☐ Other (specify)

4 ☐

5 ☐

6 ☐

7 ☐

Do you watch programs in this language more than 90% of the time?

8 ☐ Yes

9 ☐ No

RB Which language did the doctor use during your last visit?

1 ☐ Never visited doctor

2 ☐ English

3 ☐ French

4 ☐ Other (specify)

SECTION 5

Now I'd like to ask you for some background information.

51 To which ethnic or cultural group do you or did your ancestors belong? (Accept multiple response)

- 1 ☐ English
2 ☐ French
3 ☐ Irish
4 ☐ Scottish
5 ☐ German
6 ☐ Italian
7 ☐ Ukrainian
8 ☐ Other (specify)

Two horizontal number lines are provided for recording data. Each line has 11 vertical tick marks, creating 10 equal intervals. The lines are empty, intended for the student to draw a bar graph.

- 3 ☐ Don't know

52 What, if any, is your religion?

- 0 ☐ No Religion → Go to S4
1 ☐ Roman Catholic
2 ☐ United Church
3 ☐ Anglican
4 ☐ Presbyterian
5 ☐ Lutheran
6 ☐ Baptist
7 ☐ Eastern Orthodox
8 ☐ Jewish
9 ☐ Other (specify)

S3 Other than on special occasions, such as weddings, funerals or baptisms, how often do you attend services or meetings connected with your religion?

- 0 ☐ At least once a week
1 ☐ At least once a month
2 ☐ At least once a year
3 ☐ Less than once a year
4 ☐ Never

54 What is the approximate size of the community in which you are now living? By community I mean city, town or rural area?

- 5 ☐ Less than 5,000 population or a rural area
6 ☐ 5,000 to less than 25,000 population
7 ☐ 25,000 to less than 100,000 population
8 ☐ 100,000 to 1 million population
9 ☐ Over 1 million population

55 What is the name of that town or nearest town?

Town

Prov \rightarrow

56 What are the first three characters of your postal code?

- 9 ☐ Don't know

57 In what type of dwelling are you now living? Is it . . .

- 1 ☐ Single detached house
2 ☐ Semi-detached or double (side-by-side)
3 ☐ Garden house, town-house or row house
4 ☐ Duplex (one above the other)
5 ☐ Low-rise apartment (less than five stories)
6 ☐ High-rise apartment (five or more stories)
7 ☐ Other (specify) _____

58 Is this dwelling owned or rented by a member of this household?

- 9 ☐ Owned
- 9 ☐ Rented

59 How many telephones, counting extensions, are there in your dwelling?

- 1 ☐ One → Go to 514
- 2 ☐ Two or more

S10 Do all the telephones have the same number?

- 1 ☐ Yes → Go to S14
- 2 ☐ No

S1: How many different numbers are there?

U

S12 Are any of these numbers for business use only?

- 5 ☐ Yes
- 6 ☐ No → Go to 514

513 How many are for business use only?

11

514 What was your income before taxes, from wages, salaries and self-employment during the last 12 months?

Federal Public Service Commission 21 <input type="radio"/> 22 <input type="radio"/>	11 <input type="radio"/>	21 <input type="radio"/> 22 <input type="radio"/>

INTERVIEWER: If no contacts in T1 go to T4 below, otherwise go to T2 above.

T4 Would you say that, in your area, federal services are generally available in English?

- 1 ☐ Yes
2 ☐ No
3 ☐ Don't know

T5 In which languages are the television programs you watch?

0 ☐ Never watch television

(Most often)

- 1 ☐ English 4 ☐
2 ☐ French 5 ☐
3 ☐ Other (specify) 6 ☐
 7 ☐

Do you watch programs in this language more than 90% of the time?

- 8 ☐ Yes
9 ☐ No

T6 Which language did the doctor use during your last visit?

- 1 ☐ Never visited doctor
2 ☐ English
3 ☐ French
4 ☐ Other (specify)

SECTION U

Now I'd like to ask you for some background information.

U1 How many years of elementary and secondary education have you completed?

- 30 ☐ No schooling → Go to U12
- 05 ☐ One to five years
- 06 ☐ Six
- 07 ☐ Seven
- 08 ☐ Eight
- 09 ☐ Nine
- 10 ☐ Ten
- 11 ☐ Eleven
- 12 ☐ Twelve
- 13 ☐ Thirteen
- Go to U3

U2 Have you graduated from secondary school?

- 1 ☐ Yes
- 2 ☐ No

U3 Have you had any further schooling beyond elementary/secondary school?

- 4 ☐ No → Go to US

U4 What was the highest level you attained?

- 1 ☐ Some community college, CEGEP or nursing school
- 2 ☐ Diploma or certificate from community college, CEGEP or nursing school
- 3 ☐ Some university
- 4 ☐ Bachelor or undergraduate degree or teacher's college
- 5 ☐ Master's or earned doctorate
- 6 ☐ Other (specify) _____

U5 In which year did you reach your highest level of education?

Year

U6. Think about the first full-time job you had after reaching your highest level of education in ... (date reported in U5) Were you an employee working for someone else or self-employed?

- 7 ☐ An employee working for someone else
- 8 ☐ Self-employed → Go to U8
- 9 ☐ Never had full-time job after this date → Go to U11

(Give a full description e.g. posting invoices, selling shoes, teaching primary school)

U10 In what year did you begin working at this job?

Year

U11. Have you ever taken any language courses as part of full-time school?

- 1 ☐ Yes → Which languages?
- 3 ☐ English
- 4 ☐ French
- 5 ☐ Other (specify)

20 No

U12 Have you ever taken any language courses outside of full-time school?

- 3 ☐ Yes → Which languages?
- 5 ☐ English
- 6 ☐ French
- 7 ☐ Other (specify) _____

☐ No

U13. What, if any, is your religion?

- 0 ☐ No religion → Go to U15
1 ☐ Roman Catholic
2 ☐ United Church
3 ☐ Anglican
4 ☐ Presbyterian
5 ☐ Lutheran
6 ☐ Baptist
7 ☐ Eastern Orthodox
8 ☐ Jewish
9 ☐ Other (specify)

U14 Other than on special occasions, such as weddings, funerals or baptisms, how often do you attend services or meetings connected with your religion?

- 1 ☐ At least once a week
2 ☐ At least once a month
3 ☐ At least once a year
4 ☐ Less than once a year
5 ☐ Never

U15. To which ethnic or cultural group do you or did your ancestors belong? (Accept multiple response)

- 1 ☐ English
2 ☐ French
3 ☐ Irish
4 ☐ Scottish
5 ☐ German
6 ☐ Italian
7 ☐ Ukrainian
8 ☐ Other (specify)

9 ☐ Don't know

<p>U16 What is the approximate size of the community in which you are now living? By community I mean city, town or rural area?</p> <p>1 <input type="radio"/> Less than 5,000 population or a rural area 2 <input type="radio"/> 5,000 to less than 25,000 population 3 <input type="radio"/> 25,000 to less than 100,000 population 4 <input type="radio"/> 100,000 to 1 million population 5 <input type="radio"/> Over 1 million population</p>	<p>U26 How many are for business use only?</p> <p>_____</p>
<p>U17 What is the name of that town or nearest town?</p> <p>Town → _____</p> <p>Prov. → _____</p>	<p>U27 Which of the following best describes your main activity during the last 7 days? Were you mainly ... (Accept one response only)</p> <p>1 <input type="radio"/> Working at a job or business 2 <input type="radio"/> Looking for work 3 <input type="radio"/> A student 4 <input type="radio"/> Keeping house 5 <input type="radio"/> Retired 6 <input type="radio"/> Other (specify) _____</p>
<p>U18 What are the first three characters of your postal code?</p> <p>_____</p> <p>9 <input type="radio"/> Don't know</p>	<p>U28 What about your main activity during the last 12 months? Were you mainly ... (Accept one response only)</p> <p>1 <input type="radio"/> Working at a job or business → Go to U31 2 <input type="radio"/> Looking for work 3 <input type="radio"/> A student 4 <input type="radio"/> Keeping house 5 <input type="radio"/> Retired 6 <input type="radio"/> Other (specify) _____</p>
