COMMODITY CLASSIFICATION**
VOLUME III - ALPHABETIC INDEX

In Effect January 1, 1984

Reference Manual

INTRODUCTION

Volume III of the **Export Commodity Classification** is designed for use in compiling Canada's export statistics. It lists in alphabetic order both the descriptions of all export commodity classes as they appear in Volume I of the **Export Commodity Classification** as well as descriptions not specifically mentioned in the commodity classes but frequently encountered on customs export documents. Its purpose is to assist in locating the class codes and units of quantity appropriate to the principal commodity descriptions.

This volume makes no attempt to provide a ruling for every product exported from Canada or for every term encountered on export documents. A complete index would be too unwieldy for daily use. Nor are the rulings it contains designed to be self-sufficient; each ruling must be read in the context of the full class description and notes contained in Volume I of the **Export Commodity Classification**. Finally, it is not intended to illustrate the contents of particular classes; that purpose is better served by Volume II of the **Export Commodity Classification** which presents the same material arranged by commodity class, although even in that arrangement its lack of completeness limits its illustrative value.

This volume contains three distinct types of item:

1. **Specific commodity rulings:** These consist of a description, a unit of quantity (or a dash if goods which would be governed by a specific ruling are recorded without a quantity), and a class code. Specific commodity rulings account for the vast majority of items in this volume.

Note that some rulings to certain classes specify a unit of quantity, while other rulings to the same classes show a dash in the quantity column. This may occur whenever a class takes both complete units and parts of units; rulings on complete units will usually specify a quantity (commonly "number"), while "parts" rulings will show a dash because parts are recorded **without** quantities.

2. **Class descriptions:** These consist of a descriptive line, a unit of quantity (or a blank if the class does not record quantity), a class code, and are further identified by the symbol < preceding the description.

Some class descriptions are preceded by the symbol # instead of <. Statistics on commodities so identified are not available except to employees of Statistics Canada. In all publicly available records such classes are combined with the most appropriate general class within the same commodity group (e.g.: class 400-25 is included with 400-99, class 411-34 with 411-99, etc.).

3. **Definitions and special instructions:** These contain one or two descriptive lines, omitting both quantity and codes. They may provide general guides to commodity classification (e.g.: MANGANESE COPPER IS COPPER ALLOY..), or warnings against basing a decision on commodity classification on a term known to apply to more than one class of commodity (e.g.: AMBERLITE IS A GENERAL TRADE NAME..).

These types of item are intermingled throughout this volume in alphabetic order. The alphabetic arrangement has a few special features:

1. If the first part of a description is numeric, it is listed according to the alphabetic portion of the description (e.g.: 2, 4, 5T BUTYL ESTER FORMULATION... is the first ruling in the "T" section).
2. Blank spaces take precedence over numbers, letters or punctuation marks (e.g.: STEEL WOOL precedes STEELHEAD...). This results in the grouping of all items having the same first word, and is especially important in view of the "key word" principle used in preparing this volume.
3. Punctuation marks and hyphens take precedence over letters and numbers; and letters take precedence over numbers.

The "key word" principle was used to reduce the need for double-indexing rulings, and thus to reduce the bulk of this volume. It requires that items be shown according to the word which most clearly expresses the **basic nature** of the commodity, and as a result it is usually unnecessary to index any term more than once. The following examples show how a few terms which may be encountered on customs documents are indexed in this volume according to the key word principle:

<u>Terms which May be Used on Customs Documents</u>	<u>Terms as Indexed by Key Word Principle</u>
UNEXPOSED FORMALITH <u>FILM</u>	FILM, FORMALITH, UNEXPOSED
ALUMINUM <u>FOIL</u>	FOIL, ALUMINUM
LADIES' <u>SLACKS</u>	SLACKS, LADIES'
ROLLS OF CITRUS <u>WRAPPERS</u>	WRAPPERS, CITRUS, IN ROLLS

If a commodity is usually identified on documents primarily by a trade name, the **trade name** is normally the key word in rulings (e.g.: NOXEMA SKIN CREAM; PELTEX/LIGNOSULPHONATE/). Where machinery and other equipment is encountered, the key word is that word which identifies the **type** of machine or apparatus (e.g.: TOBACCO MANUFACTURING MACHY AND PARTS; RADIO-TELEPHONE LINKING EQUIPMENT). In the above cases the terms "machinery" and "equipment" have such a broad meaning that they do not provide a sufficiently specific answer to the question "What is the commodity?", and are therefore not suitable as "key words". To index under such terms would result in overlong and unwieldy lists in certain parts of this volume.

To use this volume properly it is essential that the key word principle be thoroughly understood, and that the key word of a description be determined before an attempt is made to locate that description in this volume. While double-indexing has not been completely eliminated, it is much less extensive than in earlier editions, and failure to take the key word principle into account could make it difficult or impossible to find a particular item. The chief exceptions to the key word principle are the class descriptions and the cross-reference items used occasionally to direct attention to the proper "key words", and some chemical terms (both acids and alcohols are still listed both by key word and by the word which normally appears first on customs documents, e.g.: ALCOHOL, METHYL and METHYL ALCOHOL).

This volume makes extensive use of abbreviations because of the need to limit most descriptions. Some are standard dictionary abbreviations, some are terms widely used in industry, and some have been tailored to the specific needs of this volume by such devices as the omission of vowels or the omission of terminal syllables. There is no complete list of the abbreviations used, more than one abbreviation may be used for the same word or phrase, and one abbreviation sometimes has two different meanings. The following examples define some of the more common abbreviations and illustrate the lack of uniformity:

ACC)		GR grade
ACCORD) according		green
BL bleached	INDUS)	
		INDUST) industrial
BRD broad	KD knocked down
COMM commercial	MACH)	
		MCH) machines
DERIV derivatives	MACHY)	
		MCHY) machinery
ELEC electric electrical	MAT materials
EXC except	PDR powder powdered
FAB fabrics	PT)	
		PTS) parts
FIB fibre	WOV woven broad woven
FROZ)			
FZ) frozen		

Units of Quantity and Definitions Used in Canadian Export Statistics

- Bbl. Volume in barrels (for petroleum: 35 Canadian gallons or 42 U.S. gallons).
- Broad woven** ... More than 12 inches in width.
- Canned Preserved solely by being shut off from air.
- Carat Weight in carats.
- Cord Volume in cords.
- Cwt. Weight in hundredweights of 100 lb. each.
- Cwt. N. For canned foods, weight of contents of cans in hundredweights of 100 lb. each, the weight of all containers and packing being excluded.

Domestic exports All exports wholly produced in Canada, and also all exports of previously imported goods which have been changed in form by further processing in Canada.

Doz. Number of dozens.

Doz. Pr.)

Dz. Pr.) Number of pairs in dozens.

Ft. Length in linear feet.

Gal. Volume in Canadian gallons (1 U.S. gal. = 0.83 Can. gal.).

Hardwood Wood from broad-leaved trees.

Lb. Weight in pounds.

Lb. N. For canned foods, weight of contents of cans in pounds, the weight of all containers and packing being excluded.

M. Number in thousands.

M. B. Ft.)

M. B. F.) Volume in thousand board feet.

M. Cu. Ft.)

M. C. F.) Volume in thousand cubic feet.

M. Kw. H.)

M. KWH.) Thousand kilowatt hours.

Narrow woven Not more than 12 inches in width.

N.E.S. Not elsewhere specified.

No. Number.

Pair Number of pairs.

P. Gal. Volume of alcoholic content in terms of Canadian gallons of the strength of proof (1 U.S. P.gal. = 0.74 Can. P.gal.)

Re-exports All exports of previously imported goods which are exported in the same condition as when imported. Minor operations such as sorting or repacking are not considered as changing the condition of imported goods.

Rf. Sq. Area in roof squares.

Softwood Wood from coniferous trees.

Sq. Ft. Area in square feet.

Sq. Ft.	
1/4" equiv.)	... Volume in square feet of 1/4" thickness, other thicknesses to be converted to the equivalent of 1/4" thickness. e.g. 10,000 sq.ft. of 1/8" plywood = 5,000 sq.ft. of 1/4" equivalent.
SF1/4)	
Sq. Ft.	
3/8" equiv.)	... Volume in square feet of 3/8" thickness, other thicknesses to be converted to the equivalent of 3/8" thickness (e.g. 10,000 sq.ft. of 3/16" plywood = 5,000 sq.ft. of 3/8" equivalent).
SF3/8)	
Sq. Ft.	
5/8" equiv.) Volume in square feet of 5/8" thickness, other thicknesses to be converted to the equivalent of 5/8" thickness (e.g. 10,000 sq.ft. of 1/4" particle board = 4,000 sq.ft. of 5/8" equivalent).
SF5/8)	
Ton Weight in short tons of 2,000 lb. each: 1 long ton = 1.12 short tons or 2,240 lb. 1 metric ton = 1.1 short tons or 2,205 lb.
Tr. Oz. Weight in troy ounces.
- In Unit of Quantity column: no quantity recorded.
* Preceding class code: class or note revised as of date appearing at top of page. After former code: only part of former class included with present class.
Statistics on this class not available except to employees of Statistics Canada.
