**DOMINION BUREAU OF STATISTICS
External Trade Division**

INTRODUCTION

Volume III of the Import Commodity Classification is designed for the use of the staff which compiles Canada's import statistics. It lists in alphabetic order both the descriptions of all import commodity classes as they appear in monthly and quarterly trade reports, and also the "office rulings" on commodity descriptions not specifically mentioned in the commodity classes but frequently encountered on customs import documents. Its purpose is to assist the staff in locating the class codes and units of quantity appropriate to the principal commodity descriptions with which they are faced. Because it is a working document its content is continually changing, and it is therefore printed in loose-leaf form to facilitate revisions to individual pages as required.

All office rulings are now kept on punch cards to aid in making revisions and in controlling their accuracy and adequacy. It has therefore been possible to print this volume from copy prepared by listing these punch cards. This has imposed certain important limitations on the phrasing, punctuation and format which could be used in the volume. The most important limitation is that of length: all class descriptions and most rulings are confined to one descriptive line not exceeding 35 characters in length (including all blank spaces, but not including the class code or unit of quantity). Because of this limitation there is extensive use of abbreviations, and this volume must be read carefully if users are to avoid being misled by these abbreviations. When the meaning of a ruling could not be expressed in one line, a second line of not more than 30 characters was added. In these cases the class code and unit of quantity are listed on the first line rather than the second, and the first line is completed with leader dots. A careless user could easily miss the important second descriptive line which is identified by a 1-letter indentation and by the absence of leader dots, a quantity and a code.

This volume actually contains four distinct types of item:

1. Specific commodity rulings: these consist of a 35 character description (occasionally supplemented by a second descriptive line of up to 30 characters), a unit of quantity (or a dollar sign if goods which would be classified according to a specific ruling are recorded without a quantity), and a class code. Any unused portion of the first line of the description is completed with leader dots linking the ruling and its unit of quantity. The specific commodity rulings account for the vast majority of items in this volume.

Users of this volume may notice that some rulings to certain classes specify a unit of quantity, while other rulings to the same classes show a dollar sign in the quantity column. This will occur whenever a class takes both complete units and parts of units; rulings on complete units will usually specify a quantity (commonly "number"), while "parts" rulings will show a dollar sign because parts are recorded without quantities.

2. Class descriptions: these are the same descriptions as are used to identify the commodity classes in monthly and quarterly import reports. They consist of one descriptive line of up to 35 characters, a unit of quantity (or a blank if the class does not record quantity), and a class code. These items do not have leader dots, and never have a second line. They are further identified by a lozenge sign □ preceding the description. In many cases class descriptions are sufficiently specific to make rulings on these classes unnecessary, but in other cases they are so general that they are useful only in locating a particular class in the classification.
3. Group descriptions: these are intended to assist in locating groups (or sub-groups) of commodities often thought of as collective units or important in the structure of the classification. They may contain either one or two descriptive lines (the first of which will be completed by leader dots), and may contain a unit of quantity (where all classes in the group show the same unit), or a dollar sign (where no classes take a quantity), or a blank in the quantity column (where there is no common standard within the group). Group descriptions can always be identified by the fact that no numbers appear to the right of the hyphen in the code column.
4. Definitions and cross-references: these contain only one descriptive line, omitting both quantity and codes. They may define a term used in the rulings (e.g.: FAB IS AN ABBREVIATION FOR FABRICS.), indicate the "key words" under which rulings may be found (e.g.: SPRUCE...SEE LOGS, LUMBER.....), or provide a warning against basing a decision on commodity classification on a term known to apply to more than one class of commodity (e.g.: PENACOLITE IS A GENERAL TRADE NAME.). As indicated in these examples the 35 spaces for description are completed by leader dots.

These four types of item are intermingled throughout this volume in alphabetic order. The alphabetic arrangement has a few special features:

1. If the first word of an item is abbreviated (this is rare), it is nevertheless listed as though printed in full (e.g.: the ruling RR CARS, MINE, EXC SELF-PROPELLED.. comes in the middle of a group of rulings whose first word is RAILWAY).
2. If the first part of a description is numeric, it is listed according to the alphabetic portion of the description (e.g.: 2, 4, 5-T FORMULATIONS... is the second ruling in the "T" section).
3. A number following the initial letter of a description will cause that item to precede one with the same initial letter followed by another letter (e.g.: T-17 THICKENER SOLUTIONS precedes 2, 4, 5-T FORMULATIONS because the 1 in 17 precedes the F in FORMULATIONS).

4. Punctuation marks and hyphens are treated as blank spaces (see preceding example).
5. Blank spaces take precedence over either numbers or letters (e.g.: STEEL WOOL precedes STEELON FAB ...). This results in the grouping of all items having the same first word, and is especially important in view of the "key word" principle used in preparing this volume.

The "key word" principle was used to reduce the need for double-indexing rulings, and thus to reduce the bulk of this volume. It requires that items be shown according to the word which most clearly expresses the basic nature of the commodity, and as a result it is usually unnecessary to index any term more than once. Put another way, the key word is that word which answers the question "What is this commodity?" The following examples show how a few terms which may be encountered on customs documents are indexed in this volume according to the key word principle:

Terms which May be Used on Customs Documents	Terms as Indexed by Key Word Principle
X-ray <u>film</u> , unexposed	<u>Film</u> , x-ray, unexposed
Aluminum <u>foil</u>	<u>Foil</u> , aluminum
Bicycle <u>pumps</u>	<u>Pumps</u> , bicycle
Men's and boys' woollen <u>slacks</u> , not knitted	<u>Slacks</u> , mens & boys, wool, exc kntd
Garnetted wool <u>waste</u>	<u>Waste</u> , wool, garnetted
Printed <u>wrappers</u> in rolls	<u>Wrappers</u> , printed, in rolls

If a commodity is usually identified on documents primarily by a trade name, the trade name is normally the key word in rulings (e.g.: Spectra-glaze compounds, Randac resins). Where machinery and other equipment is encountered, the key word is that word which identifies the type of machine or apparatus (e.g.: strapping machinery, beekeepers' equipment). In the above cases the terms "compounds", "resins", "machinery" and "equipment" have such a broad meaning that they do not provide a sufficiently specific answer to the question "What is the commodity?", and are therefore not suitable as "key words". To index under such terms would result in overlong and unwieldy lists in certain parts of this volume.

In preparing rulings covering multi-word names of chemicals and pharmaceuticals, the words which would normally appear first on customs documents (or in a chemical dictionary) were treated as key words (e.g.: sodium carbonate monohydrate). These items should be easy to locate.

To use this volume properly it is essential that the key word principle be thoroughly understood, and that the key word of a description be determined before an attempt is made to locate that description in this volume. While double-indexing has not been completely eliminated, it is much less extensive than in the predecessor volume "Imports - Index of Commodities", and failure to take the key word principle into account could make it difficult or impossible to find a particular item. The chief exceptions to the key word principle are the class descriptions and the cross-reference items used occasionally to direct attention to the proper "key words".

This volume makes extensive use of abbreviations because of the need to limit most descriptions to 35 characters. Some are standard dictionary abbreviations, some are terms widely used in industry, and some have been tailored to the specific needs of this volume by such devices as the omission of vowels or the omission of terminal syllables. Because several persons worked on this volume, and because the opportunities for final editing were limited, there is no complete list of abbreviations used, and more than one abbreviation may be used for the same word or phrase. The following examples define some of the more common abbreviations and illustrate the lack of uniformity:

(1) To describe steel:

AS ... alloy steel	CD ... cold drawn
CS ... carbon steel	CF ... cold finished
SS ... stainless steel (where distinguished from other alloy steel)	CR ... cold rolled HR ... hot rolled

(2) To describe textile fibres, textiles and textile products:

BL) ... bleached	KNIT) ... knitted
BLEACHD)	KNTD)
COT cotton	WOV woven <u>or</u> broad woven
FAB fabrics	WOV NAR ... narrow woven

(3) Miscellaneous:

ELEC electric(al)	MAT materials
EXC except	PLAST ... plastic
INCL including	PROD products
IND industry	PT) ... parts
INDUST ... industrial	PTS)
MACH machine(s)	SYN synthetic
MACHY) .. machinery	T.I. tariff item
MCHY)	

Users of this volume must understand that it does not and never will provide a complete and definitive ruling for every single product imported into Canada. It is intended as a guide to the proper classification of frequently-encountered commodities, and the rulings must be read in the context of the full class descriptions and notes contained in "Import Commodity Classification, Volume I, The Classification". It would be appreciated if users of this volume would bring to our attention any apparent conflicts between its contents and the material in Volume I.

The identical items which appear in this volume are also contained in "Import Commodity Classification, Volume II, Numeric Index". In that volume they are arranged primarily by commodity class, although alphabetic order is retained within each class. Those who wish to know the probable main constituents of any class should refer to Volume II.
