Note of Appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

1.0 INTRODUCTION

Meeting Users' Needs

The Whole Farm Data Base (WFDB) is the product of a joint venture by Agriculture and Agri-Food Canada and Statistics Canada. It was developed with the intention to meet the increasing demands of users of agricultural statistics for more disaggregated data at the farm level. There are various potential users, from public sector policy-makers, to industry analysts and private sector decision-makers. The WFDB provides the means for users to evaluate agricultural policies and programs as well as analyze the viability, stability, and competitiveness of various farm businesses.

All the Information in a Single Base

Integrating into one base the agricultural data, which are available from administrative and survey sources, is the essence of the WFDB. While committed to reducing response burden, eliminating duplication and maximizing the use of existing resources, the WFDB can offer users access to a wider than ever range of disaggregated physical and financial data at the farm level.

A Guide to the Whole Farm Data Base

The following chapters will familiarize potential users of the WFDB with the structure of the data base and the quality of the data and give a description of the WFDB products and services that are currently available.

2.0 WHOLE FARM DATA BASE

2.1 BACKGROUND

Since the mid-1920s, the Agriculture Division of Statistics Canada has been publishing data series depicting provincial levels and trends within the agriculture industry. Although timely and reliable, these series have not always satisfied the growing demand for more disaggregated farm level data.

In 1991, Agriculture and Agri-Food Canada obtained the funding to launch the Farm Level Data Project (FLDP) and provide the data necessary for monitoring the financial position of farm businesses; assessing the impact of changing policies, programs and economic conditions on farms; and administering and evaluating agricultural programs.

To meet this goal, Agriculture Division of Statistics Canada and Agriculture and Agri-Food Canada launched the Whole Farm Data Base (WFDB), an essential component of the FLDP. The ultimate objective of this base is to provide a set of physical and financial data at the farm level that is as complete as possible.¹ This is achieved by integrating data from various existing surveys and administrative sources to produce disaggregated statistics by farm type, revenue class and subprovincial geographic regions.

¹ For more information, please refer to "Report on User Consultations and Proposed Whole Farm Data Base Tabulations" Jan. 1992, Ménard, Chartrand and Culver, available from the Agriculture Division of Statistics Canada.

2.2 DATA BASE STRUCTURE

There are several major data sources currently offered in the WFDB which produce data annually, at the farm level: the Taxation Data Program (TDP), the National Farm Survey (NFS), the June Crops Survey (JCS), the July Livestock Survey (JLS), and the Farm Financial Survey (FFS). Although the WFDB can be used to produce estimates for selected domains regardless of the revenue level, **the base was primarily structured to provide data for farms with reported annual revenues of \$10,000 and more.** The following components have been targeted for each source for the stated reference years:

- **Taxation Data Program**² – 1987 to 1996 – 1997³
 - detailed revenues and expenses
 - additions and disposals of assets⁴
 - operator off-farm income (unincorporated only)⁵
 - operator off-farm income (unincorporated and incorporated)⁶
 - farm family off-farm income⁷
- **National Farm Survey**^{8,9} – 1988 to 1992
 - cropland acreages
 - livestock inventories
 - certain financial components¹⁰
- **June Crops Survey**¹¹ – 1993 to 1996 – 1997¹²
 - cropland acreages
- **July Livestock Survey**¹¹ – 1993 to 1996 – 1997¹²
 - livestock inventories
- **Farm Financial Survey**¹³ – 1988, 1990, 1992, 1993¹⁴, 1994, 1996 and 1998
 - capital investments and sales
 - assets and liabilities
 - long-term capital borrowed

The sampling and methodology for each of these data sources are summarized in Appendix C.

² The TDP did not cover the Prairie provinces from 1987 to 1989, also data for 1988 and 1989 are not available for the BC Peace River Region.

³ The final 1997 data will be available in March 1999.

⁴ The statistical series on additions and disposals of assets for 1996 and subsequent years does not cover the unincorporated sector.

⁵ Farm operators involved in a single farm operation.

⁶ Farm operators operating incorporated and unincorporated agricultural holdings. Data available since 1993.

⁷ Unincorporated sector only. Farm families involved in a single farm operation, 1989 to 1995 only. The 1996 data will be available in January 1999.

⁸ Since the 1993 reference year, the NFS has been replaced by the June Crops Survey and the July Livestock Survey.

⁹ The NFS did not cover Newfoundland for 1992.

¹⁰ Prairie provinces only. These data are not available for 1992.

¹¹ The JCS and the JLS did not cover Newfoundland from 1993 to 1996.

¹² The 1997 data will be available in March 1999.

¹³ The FFS was originally collected by the Farm Credit Corporation under the name "Farm Survey". The dates listed are for reference years 1987, 1989, 1991, 1992, 1993, 1995 and 1997 respectively.

¹⁴ The 1993 FFS covered only the Prairie provinces and British Columbia.

2.3 SELECTION CRITERIA

The WFDB can produce tables using, as selection criteria, any of the variables available from each data source. However, the production of cross-tabulations using the various data sources is limited to a group of descriptive variables, known as the "core" variables. Financial data from the Taxation Data Program, for example, could not be tabulated by number of animals on a farm because this particular data source does not have any variables on livestock inventories.

The "core" variables are divided into three information groupings: regional information, farm activities, and farm operator. It is the "core" variables that enable the structured disaggregation of the WFDB. As these variables are common to most of the data sources, the data base is capable of offering tabulations with the same selection criteria (e.g., revenues and expenses from TDP, livestock inventories from JLS, and assets and liabilities from the FFS could all be produced for the same census division, farm type, and revenue class). **Although most of the core variables are available for each record, disaggregations will be somewhat limited by the data quality and the number of respondents for a given variable** (e.g., data cannot be disaggregated by a single postal code, however, the postal codes are included on the individual records, allowing a user to specify a group of codes to create a custom region).

The "core" variables are defined in Appendix A.

2.4 STANDARD OUTPUT FORMATS

The WFDB can provide estimates for every variable collected from all data sources. To maintain data quality and consistency, a specific series of agricultural variables were developed for each data source. These standard output formats were developed to provide thorough coverage of the agriculture sector on an annual basis (see table 2.1 on pages 4 to 9).

Most of the variables used from the National Farm, June Crops, July Livestock and Farm Financial Surveys data sources were drawn directly from the survey questionnaires. These variables are defined in the questionnaires (see Appendix E) and in the interviewer training manuals (available from Agriculture Division). In contrast, the TDP variables used in the standard outputs are predominantly custom aggregates of farm taxfiler data (see Appendix B for descriptions).

Table 2.1 Standard Output Formats

2.5 DATA QUALITY

2.5.1 Sampling Errors

All of the estimates produced by the WFDB are derived from samples, thus subjecting them to sampling errors. Such errors occur when observations are based only on a sample and not on the population as a whole. The size and design of the sample, the variability of the characteristic of interest in the population, and the estimation method all affect data quality. In sample surveys, inference is made about the entire population based on data obtained from a part of the population; therefore, the results are likely to be different than if a complete census was taken under the same survey conditions. The most important feature of probability sampling is that the sampling error can be measured from the sample itself.

Each estimate released through the WFDB is assigned a *coefficient of variation* (C.V.) to measure its quality. As an objective statistical measure obtained through random sampling of the variation between each estimate and its "true" value, the C.V. indicates the degree of confidence that should be placed on a particular estimate. The users must determine if an estimate with a significant C.V. is appropriate for use.

The following rating system is suggested when using figures within a specific C.V. range.

<u>C.V.</u>	<u>Rating</u>
0.01% - 4.99%	- very good
5.0 % - 9.99%	- good
10.0 % - 14.99%	- acceptable but use with caution
15.0 % - 24.99%	- use with caution unless independent data source concurs with the estimate value
25.0% and more	- unreliable

2.5.2 Non-Sampling Errors

Non-sampling errors can occur whether a sample is used or a complete census of the population is taken. Such errors can be introduced at various stages of data processing (such as coding, data entry, editing, weighting or tabulation) and include errors introduced inadvertently by respondents. Such errors are reduced through extensive edits and data analysis; however, there are some limitations. In Saskatchewan, due to the unreliability of the TDP Census Subdivision (CSD) breakdowns, Census Agricultural Regions (CARs) cannot be reliably determined. In addition, until the 1992 taxation year, the TDP was unable to assign farm types to certain crop farms in Quebec; these farms were classified as "unspecified crop farms". This limitation has been addressed by subject-matter specialists. Since the 1993 taxation year, the "unspecified crop" revenues have been allocated to the crop type. Finally, TDP estimates for the Peace River Region in British Colombia are not available for 1988 and 1989.

2.6 CONFIDENTIALITY

Statistics Canada maintains a strict level of confidentiality. All tabulated data are subject to restrictions prior to release. Several computerized checks are performed on all data cells to prevent the publication or disclosure of any information deemed confidential.

For each of the tabulations produced, the *estimated number of farms* is rounded to the base "5" and the estimates of the other variables within that table are adjusted by a variable factor. The estimated number of farm families is rounded to the base "10". If the degree of detail required to answer user requests creates confidentiality concerns, the affected data or the entire table will be suppressed by the data base system.

This method preserves the confidentiality of the data, without jeopardizing the quality of the actual estimates.

3.0 PRODUCTS AND SERVICES

3.1 INTRODUCTION

To satisfy a variety of user needs, the WFDB offers an assortment of products and services as well as customized products. The WFDB Project Team is dedicated to offering users the data they need whether in paper or electronic format.

3.2 TAXATION DATA PROGRAM (TDP) – Bulletin Series

This series of 11 bulletins entitled *Economic Overview of Farm Incomes* (Statistics Canada catalogue no. 21-005-XIE), produced jointly by Agriculture and Agri-Food Canada and Statistics Canada, presents readers with farm financial information and analysis.

Eight of these bulletins will feature a specific farm type, providing analysis of such key variables as revenues, expenses and net operating income by revenue class and by province, as well as information on the concentration of production and the degree of specialization. Data on the physical characteristics of farms, such as crop areas and livestock inventory numbers will be included. The first bulletin of this series provides an overview of all farms. The final two bulletins will present information on farm and off-farm sources of income for farm operators and farm families for selected farm types.

The bulletins replace the print publication *Agricultural Financial Statistics* (Statistics Canada catalogue no. 21-205-XPB). They will be available free of charge on Statistics Canada's Internet site at <http://www.statcan.ca/cgi-bin/downpub/freepub.cgi> and on the Agriculture and Agri-Food Canada Internet site at <http://www.agr.ca/policy/epad>.

3.3 FARM FINANCIAL SURVEY (FFS) – Internet Publication

This electronic publication (Statistics Canada catalogue no. 21F0008XIB) is available free of charge on the Internet. It provides detailed regional statistics on the financial structure of Canadian farms. The publication includes balance sheet data (assets and liabilities) of farms by region, financial structure by farm type and revenue class, and capital investments and capital sales by region. In addition to presenting highlights from 1997, it also combines historical data. Charts and text outlining concepts, methods and data highlights supplement the tables.

New editions will be published every two years in the fall on Statistics Canada's Web site at <http://www.statcan.ca>.

3.4 EXTRACTION SYSTEM OF AGRICULTURAL STATISTICS (ESAS) – CD-ROM

The *Extraction System of Agricultural Statistics* (ESAS) CD-ROM (Statistics Canada catalogue no. 21F0001XCB) is a compilation of the most commonly requested estimates from the Whole Farm Data Base. This CD-ROM product has been designed to provide you with desktop access to a wide array of physical and financial farm statistics. The system offers: a complete itemization of operating revenues and expenses; sources and levels of farm and off-farm income for operators and farm families; data on assets, liabilities and capital investments for farms; and information on land use and livestock inventories by region, farm type and revenue class. Users have the option of selecting pre-established tables or customizing a tabulation to meet specific needs. The resulting tabulations can be viewed on-line, printed, or exported to another computer application.

ESAS 1998 is now offered in a Windows95 version. The User's Guide and the Reference Manual are only available in electronic format.

The ESAS CD-ROM is \$625. Annual updates are available for only \$295 after the purchase of the initial package. A discount is available to all educational institutions.

3.5 ESAS SEMI-CUSTOM SERVICE – CD-ROM

This new product was created for users who are interested in specific data sets found on ESAS. Users who want only one data source such as tax, for only one province, can now purchase these data sets with the ESAS retrieval software on CD-ROM. The ESAS semi-custom service data set combinations are listed on the next page.

3.6 CUSTOMIZED REQUESTS

Customized tables are another option available to users of the WFDB. Users should be prepared to specify the type of components required (see Section 2.2) (e.g., off-farm income, livestock inventories), the applicable data sources, and the appropriate "core" variable disaggregation (e.g., farm type, revenue class, region).

Customized WFDB tables are available on paper, diskette or CD-ROM.

Due to the highly disaggregative level of certain requests, some data will be suppressed to ensure data confidentiality.

The cost of customized WFDB products varies depending on the size and the complexity of the request. The minimum cost of a special request is \$50.

3.7 ORDERING WFDB PRODUCTS AND SERVICES

To order WFDB products and services or for more information, please write to the:

Whole Farm Data Projects Section
Agriculture Division
Statistics Canada
12th Floor, Jean Talon Building
Ottawa, Ontario K1A 0T6

Other ways to reach us:

toll-free: 1 800 465-1991

local call: (613) 951-5027

fax: (613) 951-3868

e-mail: agriculture@statcan.ca

¹ ESAS: \$625 for the initial subscription; \$295 for annual updates.

APPENDIX A

DESCRIPTION OF CORE VARIABLES

REGIONAL INFORMATION

***Province:** Refers to the major political divisions of Canada. From a statistical point of view, provinces are a basic unit used to tabulate and cross-classify data.

***Census Agricultural Region¹:** More commonly referred to as a **CAR**, this subprovincial geographic area is used by the Census of Agriculture for disseminating agricultural statistics and the WFDB uses it for the same purpose. In all provinces except Prince Edward Island and Saskatchewan, a CAR is made up of groups of **adjacent census divisions**. In Saskatchewan, census agricultural regions are groups of **adjacent census consolidated subdivisions**, but these groups do not necessarily respect census division boundaries. Census agricultural regions have not been defined for Prince Edward Island. In the Prairie provinces, census agricultural regions are commonly referred to as crop districts.

Census Division: Refers to intermediate geographic areas between the census subdivision and the province level. They have been established by provincial law, with the exception of those in Newfoundland, Manitoba, Saskatchewan, and Alberta. In these provinces, the census divisions have been created by Statistics Canada in co-operation with the province. The census divisions correspond to existing counties, regional districts, regional municipalities, etc.

Census Subdivision: Applies to municipalities, as defined by provincial law, and geographic areas equivalent to municipalities. In Newfoundland, Nova Scotia, and British Columbia, the term also describes geographic areas that have been created by Statistics Canada as equivalents to municipalities, in co-operation with the provinces.

Enumeration Area: Term used by the census to refer to a geographic area canvassed by one census representative.

Federal Electoral District: These districts include any place or territorial area entitled to return a member to serve in the House of Commons (source: Canada Elections Act, 1990).

Postal Code: This is a six-digit alphanumeric code designed and maintained by Canada Post Corporation for the processing of mail (sorting and delivery).

FARM INFORMATION

***Farm Type:** For each data source, the type of farm is based on a percentage of agricultural sales. The commodity or commodity group that makes up 51% or more of the sales determines the **primary** farm type that will be assigned to an individual farm. Farms are also assigned a **secondary** farm type, which is determined by the next highest percentage of commodity sales. The *Standard Industrial Classification* (SIC 4 digit codes) acts as a basis for classifying the farm types. In some cases, the WFDB has added a fifth digit to the codes to further breakdown the farm type.

* Indicates variables currently available on ESAS.

¹ The CARs are outlined on the maps found in **Appendix D** (pages D1 to D9). All the maps are based on the **1996 Census of Agriculture boundaries**.

The **degree of specialization** is another "core" variable offered for further disaggregation. This variable is an indication of the level of concentration of total agricultural sales in relation to the sale of commodities or commodity groups as indicated by the farm type. For example, if a cattle farm realizes 90% of its total agricultural sales from the sale of cattle, then the degree of cattle specialization will be 90%.

Listed below are the 11 most commonly requested farm types. These are available for each of the data sources and they can also be found on the *Extraction System of Agricultural Statistics CD-ROM*. For a complete set of farm types and their respective availability see **Table A.1**.

Farm Type	WFDB Code
Dairy	1110
Cattle	1120
Hog	1130
Poultry and Egg	1140
Livestock Combination	1190
Grain and Oilseed	9990
Potato	1380
Tobacco	1370
Fruit and Vegetable	1500
Greenhouse and Nursery	1625
Other Farm Types	9995

Each farm type has been defined according to the Standard Industrial Classification (SIC) ¹.

Dairy – 1110

Dairy farms are farms on which more than 50% of the gross agricultural revenue is derived from the sale of dairy products – milk and cream for example. This category includes farms with 40% or more of gross agricultural revenue derived from the sale of dairy products and 10% or more of the agricultural revenue from raising and selling dairy cattle.

Cattle – 1120

Cattle farms are those farms on which more than 50% of the gross agricultural revenue is derived from the sale of cattle. Beef cattle finishing, cattle feedlot operation, cattle for slaughter, and dairy heifer replacement stock are included in this category.

Hog – 1130

Hog farms are farms on which more than 50% of the gross agricultural revenue is derived from the sale of hogs, weanling (feeder) pigs and/or hog feedlot operations.

Poultry and Egg – 1140

Poultry and egg farms are farms on which more than 50% of the gross agricultural revenue is derived from the sale of poultry and eggs (including capons, chicken farming, geese, and pullets).

¹ The SIC is a system developed by Statistics Canada for arranging producing units into industries.

Livestock Combination – 1190

Livestock combination farms are farms selling livestock and livestock products, but no single product that accounts for more than 50% of the gross agricultural revenue.

Grain and Oilseed – 9990

Grain and oilseed farms are farms with gross agricultural revenue of more than 50% from the sale of wheat, small grains, oilseeds, grain corn, dry field peas and beans, and field crop combinations.

Potato – 1380

Potato farms are farms on which more than 50% of the gross agricultural revenue is derived from the sale of potatoes.

Tobacco – 1370

Tobacco farms are farms on which more than 50% of the gross agricultural revenue is derived from tobacco sales.

Fruit and Vegetable – 1500

Fruit and vegetable farms are farms deriving more than 50% of the gross agricultural revenue from the sale of fruits and/or vegetables. This category includes: various fruit orchards, berry farming, tree nut groves, vineyards, vegetable farms, market gardening, vegetable seed growing, etc.

Greenhouse and Nursery – 1625

Greenhouse and nursery farms are farms on which more than 50% of the gross agricultural revenue is derived from the sale of greenhouse and nursery products. Sod farms and nursery operations growing ornamental shrubs and trees and field grown flowers are included in this group.

Other Farm Types – 9995

All farms not included in the classifications above are considered other farm types. This group includes: sheep and goat farms, honey and other apiary product farms, horse and other equine farms, fur and skin ranches, forage, seed and hay farms, and mushroom farms.

***Revenue:** Refers to the total operating revenues. That is, all revenues from the sale of agricultural commodities as well as agriculture payments and subsidies. Also included are sales from forest products and interfarm sales.

The WFDB makes use of standard revenue classes, which are available for the pre-established tables. These pre-established classes are the same as those used by the Census of Agriculture when producing estimates. The levels are:

\$ 10,000	to	\$ 24,999
\$ 25,000	to	\$ 49,999
\$ 50,000	to	\$ 99,999
\$ 100,000	to	\$ 249,999
\$ 250,000	to	\$ 499,999
\$ 500,000	and more	

* Indicates variables currently available on ESAS.

Type of Organization: The types of organizations are defined as incorporated and unincorporated farms.

OPERATOR INFORMATION:

Age: Most data sources provide the age of the principal farm operator.

Sex: Data on the gender of the farm operator are also available from most data sources.

Marital Status: Marital status is defined by 5 variables: married, widowed, divorced, separated or single.

For further information about operator variables and their availability, contact Agriculture Division.

APPENDIX B

DESCRIPTION OF TDP VARIABLES

DESCRIPTION OF TDP VARIABLES

The WFDB offers a wide range of physical and financial variables from several survey sources. The suggested formats are listed in Table 2.1 (pages 4 to 9). Although other variables are available, those listed in the table are recommended as the most reliable estimates, maximizing the usefulness of each of the data sources.

The TDP suggested variables are listed and described below and on the subsequent pages. All of the 4 digit codes signify aggregations and their contents are listed and described wherever necessary.

Revenues

R2040 Total Operating Revenues – includes:

R2015 Crops Revenues – includes:

R2005 Total Grains and Oilseeds – includes:

- R400 All Wheat – winter wheat, spring wheat, durum wheat, red spring wheat and utility wheat*
- R401 Oats*
- R402 Barley*
- R405 Canola (rapeseed) *
- R406 Soybeans*
- R407 Corn – grain corn and seed corn*
- R423 Other and Non-Specified Small Grains – used when an aggregate amount or an amount for other small grains is reported*
- R2002 Other and Non-Specified Grains and Oilseeds – includes rye, flaxseed, dry peas and beans (white beans, kidney beans, dry peas, dry lentils and dry pulses) and other and non-specified oilseeds*

R2010 Total Other Crops – includes:

- R410 Potatoes – table potatoes, seed and processing potatoes
- R2006 Fruits and Vegetables – includes:
 - R421 all fruits
 - R411 vegetables (non-greenhouse) – artichokes, asparagus, wax and green beans, table beets, broccoli, Brussels sprouts, cabbage, carrots, cauliflower, celery, sweet corn, cucumbers, garlic, horseradish, leeks, lettuce, onions, peas, peppers, pumpkins, radishes, rhubarb, edible rutabagas (turnips), spinach, squash, tomatoes, and vegetable seeds
- R412 Tobacco – flue-cured, leaf and dark tobacco
- R415 Greenhouse and Nursery Products – nursery, greenhouse or floriculture operations. Also included are: ornamental plants, shrubs and trees; cut and field grown flowers; rooted cuttings; seeds and bulbs; and sod and turf farms.
- R435 Forage Crops (including seed) – hay, alfalfa, clover and clover seed, alsike clover, timothy and fescue, as well as grass seed farming
- R437 Unspecified Crops (Quebec only) – used when an aggregate amount for crop revenues is reported (not applicable for final TDP estimates after 1992)

* Data for this variable are imputed to a greater extent for data years 1996 and beyond since the unincorporated source of electronically filed taxation data (EFILE) has no breakdown of grains and oilseeds available.

R2007 Other Crops – includes:

- R413 ginseng
- R414 mushrooms
- R427 other field crops – sugar beets, hops, mangels and turnips (for livestock feed)

R2025 Total Livestock and Product Revenues – includes:**R2016 Cattle and Semen – includes:**

- R440 livestock sold - cattle – steers (feeder and stocker), heifers, cows (dairy and beef), calves and bulls
- R468 semen – semen, stud service, embryo transplants or artificial insemination¹

R441 Swine – also referred to as hogs, weaners, gilts, feeders, sows, stags, boars, and pigs**R2017 Poultry and Eggs – includes:**

- R442 livestock sold - poultry – chicks, pullets, hens, cockerels, capons, commercial broilers and roasters, turkeys, ducks, geese and other fowl
- R445 eggs
- R497 chicks from hatcheries and hatching eggs*

R443 Sheep and Goats – sheep, goats, lambs, wool, and goat milk**R2018 Dairy Products and Subsidies – includes:**

- R450 milk and cream – for both fluid and industrial purposes
- R455 dairy subsidies

R2019 Other Livestock and Products – includes:

- R444 livestock sold - other – other livestock such as horses, ponies, dogs, etc.
- R460 bees, honey – bees, honey (natural and processed), and beeswax
- R461 furs – fur-bearing animals raised in captivity and/or fur pelts, includes fox ranching, chinchilla ranching, mink ranching, and rabbit farming
- R477 P.M.U. (pregnant mare's urine)
- R498 aquaculture*
- R499 artificial insemination, semen and stud service*

R2035 Total Other Revenues – includes:**R2026 Program Payments (excluding insurance proceeds) – includes all stabilization payments income, Christmas tree grants, subsidies, NISA (incorporated farms only), Special Grains Program, GRIP, other subsidies – subsidy income other than dairy subsidies (hog incentive programs, acreage payments, assistance for clearing land, government grants, etc.) and subsidies, reimbursements, rebates, patronage dividends, government payments, or payments from co-operatives – used when farm taxfiler reports an aggregate amount and no split can be obtained****R475 Custom Work and Machine Rental – custom work, contract work, machinery leasing or rental, hauling, custom trucking, harvesting, combining, crop dusting or spraying, seeding, drying, packing, cleaning and treating of seeds****R2027 Rental Income – includes:**

- R457 quota rental income – (milk quota, tobacco quota, etc.)
- R481 rental income: land and buildings
- R482 other rental income – surface rental of oil or natural gas properties, right-of-way or road rent

¹ Artificial insemination, semen and stud service (see R499) have been excluded from R468 of the TDP since 1996.

* Only available since the 1996 TDP.

- R490 Insurance Proceeds – insurance payments for loss of crops as a result of adverse weather conditions such as drought, loss of livestock due to disease or other causes, and other
- R2028 Forest and Maple Products – includes:
 R465 maple products – maple syrup, maple sugar, or maple taffy
 R470 wood (incl. stumpage fees) – logs, trees, wooden fence posts or any related forest products such as chips or slab wood
 R471 Christmas trees
 less R353 logging expenses
- R2004 Cash Advances (net) – R425 cash advances less R315 cash advances repayment
 Note: this includes any Wheat Board Payments reported on statement.
- R2029 Miscellaneous Revenues – includes:
 R459 quota refund or levy refunds
 R467 sand or gravel – sand, gravel, soil or top soil
 R479 GST
 R480 patronage dividends – (grain pools, payments from cooperatives, co-op proceeds, etc.)
 R500 other farm income excluding rental income – miscellaneous, other or sundry income
 R508 profit share income (or share)
 R649 inputs bought for resale - sold – agricultural commodities sold which were bought, but no agricultural process applied to them (fertilizers sold for resale, chemicals sold for resale, wood sold for resale, etc.)
 R650 outputs bought for resale - sold – agricultural commodities bought in addition to what was grown or produced (grain, fruits, produce, vegetables or berries, etc.)
 R651 horse racing income (<100%) – relates to R354 horse racing expenses below (used when any horse racing expenses reported)
 less R351 inputs bought for resale (see R649 inputs bought for resale above)
 less R352 outputs bought for resale (see R650 outputs bought for resale above)
 less R354 horse racing expense (<100%) (see R651 horse racing income above)

R2045 Total Income Adjustments – includes:

- R458 Quota Sale Income
- R469 CCA Recaptured – capital cost allowance recovered, recaptured from last year, etc.
- R2041 Inventory Adjustments – includes:
 R510 optional value of livestock, end of current year – livestock inventories only (prior to 1990)
 R635 mandatory inventory adjustment ²
 R641 optional inventory adjustment ²
- R2042 Non-Applicable Income – income not earned from the sale of farm products

R2050 Gross Farm Income for Tax Purposes (R2040 + R2045)

Expenses

R2140 Total Operating Expenses – Includes:

R2105 Total Crop Expenses – includes:

- R230 Fertilizer and Lime

² For definitions, please refer to *Farming Income Tax Guide* available from Revenue Canada.

- R235 Pesticides – pesticides, herbicides, insecticides and fungicides or any other type of chemical such as sprays or dusts applied to crops or animals
- R240 Seed and Plants – also ornamental plants, rooted cuttings and bulbs
- R264 Non-Specified Greenhouse and Nursery Expenses – used when an aggregate amount is reported for greenhouse and nursery (prior to 1990)
- R265 Containers, Twine and Baling Wire – bags, containers, twine, all types of materials used to package, contain or ship farm produce or products
- R2102 Other Crop Expenses – includes:
 - R314 irrigation – any expense directly associated with irrigation on the farm including water rights
 - R324 crop supplies – used when an aggregate or a single amount is reported for “crop supplies”

R2110 Total Livestock Expenses – includes:

- R245 Cattle Purchases – cattle, feeders, stockers, dairy or beef cows, bulls, and calves
- R246 Swine Purchases – hogs such as service boars, gilts, sows, and weanlings
- R247 Poultry and Egg Purchases – chicks, pullets, broilers, layer hens, ducks, geese, turkeys, and other fowl
- R248 Sheep and Lamb Purchases – sheep, lambs, and goats
- R249 Other Livestock Purchases – horses, ponies, minks, foxes, rabbits, ostriches, and bees (or colonies)
- R250 Feed, Supplements, Straw and Bedding – hay, straw, feed grains such as oats, barley, and corn; supplements such as salt, minerals, vitamins, concentrates and milk replacer; and bedding items such as shavings, chips, and sawdust
- R255 Veterinary Fees, Medicine and Breeding Fees – veterinary fees and medicine as well as breeding fees, stud service and semen, embryo transplants, disease testing, neutering or spaying
- R2107 Other Livestock Expenses – includes:
 - R312 D.H.I.A. and animal grading – Dairy Herd Improvement Association expenses and animal grading
 - R323 dairy or livestock supplies

R2120 Total Machinery Expenses – includes:

- R270 Small Tools
- R2111 Net Fuel Expenses, Machinery, Truck, Auto – includes:
 - R220 machinery and truck expenses – gasoline, diesel and oil
 - R225 automobile expenses (farm share) – gasoline and oil less R485 gasoline tax rebates
- R2112 Repairs, Licenses and Insurance – includes:
 - R221 machinery and truck expenses – repairs, licences and insurance
 - R226 automobile expenses (farm share) – repairs, insurance and licences/permits

R2135 Total General Expenses – includes:

- R2121 Salaries (including CPP, QPP, EI) – includes:
R195 salaries (incl. CPP, QPP, or EI) – wages and salaries paid to hire help together with the cost of their board. Also includes wages and salaries paid to children and spouses and all employee benefits
less R605 salaries or wages paid to self
- R2122 Rent – includes:
R205 rent (land, buildings and pasture)
R318 quota rental
- R275 Insurance
- R285 Telephone (farm share)
- R2123 Net Electricity (farm share) – includes:
R290 electricity farm share
less R488 electricity rebates
- R295 Heating Fuel (farm share) – natural gas, coal or oil to heat farm buildings, as well as curing fuel for tobacco and fuel for crop-drying or greenhouses
- R300 Custom Work and Machine Rental – harvesting, combining, baling, threshing, crop dusting and spraying, soil preparation, planting and cultivating, grain drying, seed cleaning and treating, sheep dipping and shearing, livestock spraying, soil testing, blacksmithing, animal boarding and grooming, slaughtering, butchering, cutting and wrapping; and rental or leasing of machinery used for purpose of generating farm income
- R2126 Net Interest Expenses – includes interest paid on real estate mortgages, machinery loans, etc.
less R487 interest rebates
- R2127 Net Property Tax – includes:
R215 property taxes on agricultural land and buildings as well as farm share of principal dwelling, also school and municipal taxes
less R486 property tax or land rebates
- R2128 Building and Fence Repairs
- R2129 Marketing Expenses – includes:
R305 freight and trucking – transportation of agricultural products to market
R328 selling costs – commissions, auctioneering charges, or road side stands
R332 marketing board fees – e.g., Milk Marketing Board, Egg Marketing Board, also dairy levies, milk quota or quota penalties
- R2131 Miscellaneous Farm Expenses – includes:
R280 accounting, legal, office, advertising, memberships, subscriptions
R283 insurance program overpayment recapture
R284 GRIP
R308 share expenses
R311 sand, soil and gravel
R320 other farm expenses – miscellaneous or sundry
R321 other farm expenses
R322 farm supplies – e.g., oxygen and acetylene
stabilization levies or fees (government levies)
R263 maple product expenses – when aggregate reported
R267 wood expenses – when aggregate reported
R307 raising expenses – when aggregate reported
R317 expense for bad debts (incorporated farms only)

R660 business use of home expense
 less R615 cost for saleable products consumed
 less R621 personal or non-business expenses

R2500 Net Operating Income – R2040 total operating revenues less R2140 total operating expenses

R2145 Total Expense Adjustments – includes:

R310 Clearing and Improving Land – drilling or digging wells, removing stumps or rocks, etc.

R316 Tile Drainage

R2141 Inventory Adjustments – includes:

R325 optional value of livestock, end of previous year – if value of livestock at end of previous year exceeds fair market value of livestock on hand, may be deducted (not valid for 1990 and subsequent years)

R326 mandatory inventory adjustment ³

R327 optional inventory adjustment ³

R330 Capital Cost Allowance – applies to amount deducted for depreciable property

R331 Allowance on Eligible Capital Property – all eligible capital expenditures to purchase intangible capital property for use in the farm business, e.g., milk quotas, tobacco quotas or other government rights for an unlimited period

R350 Non-Applicable Expenses – expenses not incurred in order to produce farm income

R2142 Other Expense Adjustments – includes:

R319 quota purchased

R334 capital expense

R309 capital tax

R2150 Total Expenses for Tax Purposes (includes R2140 + R2145)

Additions and Disposals of Assets – Until the 1995 taxation year

The following percentages represent the rate at which Revenue Canada allows assets to be depreciated along with the more common items included in each class. For a more complete list of the depreciable assets included in each class, refer to the **Farming Income Tax Guide**.

Class 1	4% buildings acquired after 1987 dams
Class 2	6% permanent piping
Class 3	5% buildings acquired between 1978 and 1988 cement, steel, or stone docks cement or stone breakwaters

³ For definitions, please refer to **Farming Income Tax Guide** available from Revenue Canada.

Class 6	10% wood breakwaters greenhouses fences – all types wood, galvanized, or portable buildings and component parts
Class 7	15% boats and component parts
Class 8	20% bee equipment grain or seed cleaners storage buildings drawn hay bailers and stokers tools over \$200 silo and silo fillers, etc.
Class 9	25% aircraft acquired after May 25, 1976 electric-generating equipment acquired before May 26, 1976 (not exceeding 15 Kw)
Class 10	30% automobiles (incl. passenger vehicles – Class 10.1) tractors, trailers, trucks, wagons, and sleighs, etc. computer hardware and systems software
Class 12	100% tools under \$200
Class 16	40% aircraft acquired before May 26, 1976
Class 17	8% roads and other surface areas (paved or concrete)
Class 34	25 - 50% wind-energy conversion equipment
Class 50	Quota ⁴
Class 60	Other ⁴

Additions and Disposals of Assets – Starting with the 1996 taxation year (incorporated sector and communal farming organizations only)*

Equipment (S140 and S240)

- class 7 boats and component parts
- class 8 bee equipment
grain or seed cleaners
storage buildings
drawn hay bailers and stokers
tools over \$200
silo and silo fillers, etc.
- class 9 aircraft acquired after May 25, 1976
electric-generating equipment acquired before May 26, 1976 (not exceeding 15 Kw)

⁴ Agriculture Division of Statistics Canada created these classes.

* The 1997 data will be available in March 1999.

- class 10 automobiles (incl. passenger vehicles – Class 10.1)
tractors, trailers, trucks, wagons, and sleighs, etc.
computer hardware and systems software
- class 12 tools under \$200
- class 16 aircraft acquired before May 26, 1976
- class 17 roads and other surface areas (paved or concrete)
- class 34 wind-energy conversion equipment

Building (S141 and S241)

- class 1 buildings acquired after 1987
dams
- class 2 permanent piping
- class 3 buildings acquired between 1978 and 1988
cement, steel, or stone docks
cement or stone breakwaters
- class 6 wood breakwaters
greenhouses
fences – all types
wood, galvanized, or portable buildings and component parts

Land (S142 and S242)

- land

Quota ⁴ (S150 and S250)

- class 50 quota

Other ⁴ (S160 and S260)

- class 60 other

Total (S198 and S298)**Off-Farm Income ⁵****T6100 Total Off-Farm Income – includes:****T6010 Wages and Salaries – includes:**

- T101 employment income before deductions
- T104 other employment income including tips and gratuities
less T109 deduction – other allowable expenses (not applicable after 1987)

T6020 Net Business Income

- T135 business income

T6030 Net Professional Income

- T137 professional income

T6040 Net Commission Income

- T139 commission income

T6050 Net Fishing Income

- T143 fishing income

T6060 Net Off-Farm Self-Employment Income

⁴ Agriculture Division of Statistics Canada created these classes.

⁵ The 3-digit codes (except TCHIL, FAQUE and FABC) are all from the *Revenue Canada Taxation T-1 General Taxation Form*, which are defined in *Your Guide: Federal and Provincial Tax Guide and Returns*.

- T6070 Investment Income – includes:
- T120 taxable amount of dividends
 - T126 net rental income
 - T121 interest and other investment income
 - T122 net limited partnership income
- T6080 Pension Income – includes:
- T113 Old Age Security pension
 - T114 CPP and QPP
 - T115 other pensions or superannuation
 - T146 net federal supplements⁶
- T6090 Other Off-farm Income – includes:
- T118 family allowance payments (not applicable after 1992)
 - T119 employment insurance benefits⁷
 - T128 alimony or separation allowance
 - T130 other income
 - T144 Worker's Compensation payments⁶
 - T145 social assistance payments⁶
 - TCHIL child tax benefits⁸
 - FAQUE Quebec family allowance⁹
 - FABC British Columbia family allowance¹⁰
- T6091 Taxable Capital Gains
- T127 taxable capital gains
- T6092 RRSP
- T129 registered retirement savings plan income

T6105 Total Off-Farm Income (excluding T6091 Taxable Capital Gains)

⁶ Applicable after 1991.

⁷ On July 1, 1996, the Unemployment Insurance program officially became known as the Employment Insurance program.

⁸ The Child Tax Benefit (CTB) Program was introduced in January 1993 (CTB replaced family allowance payments). These benefits were not included in the 1993 off-farm income estimates.

⁹ Starting in 1994, the statistical series on off-farm family income includes the Quebec family allowances.

¹⁰ Starting in 1996, the statistical series on off-farm family income includes the British Columbia family allowances.

APPENDIX C

SURVEY SAMPLES AND METHODOLOGIES

TAXATION DATA PROGRAM

The Sample

The Taxation Data Program (TDP) samples unincorporated and incorporated taxfiler records annually to estimate a range of financial agricultural variables. Detailed income and expenses, additions and disposals of assets, and off-farm income of operators and farm families compose the variables produced by the TDP. All of the standard variables and their codes are listed in Table 2.1 (pages 4 and 5).

From 1987 to 1989, the TDP sampled both sectors (incorporated and unincorporated) for all of the non-Prairie provinces. The unincorporated sector of the Prairie provinces was sampled in 1987. For the 1990 taxation year and all subsequent years, the sample includes both sectors in all of the provinces.

For further information about the sample size of all surveys, refer to Table C.1 WFDB - Provincial Data Availability and Sample Size by Sector.

The Methodology

TDP data are compiled from two separate sources: a random sample of **unincorporated income tax returns** selected from the Self-Employment File for Agriculture (SEFA); and a random sample of **incorporated tax returns** selected from the CORPAC file that were classified as farms according to the Standard Industrial Classification (SIC) with sales exceeding \$25,000. In the unincorporated sector, the sampling rates vary from a complete census in Newfoundland to about 11% in Ontario. In the incorporated sector, they vary from a complete census in the Atlantic provinces to about 40% in Ontario. Starting with the 1996 taxation year, a substantial number of electronic tax returns have been used to complete the unincorporated sample of the taxation data. Starting with the 1997 taxation year, a substantial number of joint NISA-Revenue Canada tax returns have also been used to complete the unincorporated sample.

Statistics Canada captures all necessary data (for example, reported revenues, expenses, and additions and disposals) from the incorporated farms tax records. Unincorporated farm tax data are captured at various Revenue Canada's Regional Taxation Centres and forwarded to Statistics Canada in electronic form. The affected data are then subjected to a series of detailed edit and imputation procedures, after which they are expanded by the sampling "weight", adjusted according to the partnership share, and aggregated to arrive at the final estimates.

More information on the sample and methodology of the Taxation Data Program is available from Agriculture Division of Statistics Canada.

Note: Since the 1993 taxation year, communal farming organizations have been in-scope for the Taxation Data Program. A census of communal organizations that reported farming income on their T3 Trust Income Tax and Information Return is performed. Estimates with or without these organizations can be obtained.

TAXATION DATA PROGRAM - Off-Farm Income

Total operators' off-farm income items are estimated using the same approach as the TDP except that the "weight" is not multiplied by the partnership share. These procedures take into account the possibility that the sampled records reporting farm income could include sales that should not be considered as agricultural sales. There are three statistical series on off-farm income: farm operators operating incorporated or unincorporated agricultural holdings; farm operators operating single unincorporated agricultural holdings; and families operating single unincorporated agricultural holdings.

The sample and methodology for estimates on off-farm family income differ somewhat from the rest of the TDP because they are the result of a record linkage. TDP tax records are linked with a family file to produce total estimates for farm families. The family file is created by the Small Area and Administrative Data Division (SAADD) within Statistics Canada. SAADD's family file (T1FF) combines individual taxation records in order to create groups modeled after *Census families*.¹

The TDP target family population (for off-farm family income statistics) is designed to include only those families operating single unincorporated agricultural holdings (single-farm families). The TDP family sample is in effect a subsample of the regular TDP sample.

More information on the sample and methodology of the TDP off-farm family estimates is available from Agriculture Division of Statistics Canada.

NATIONAL FARM SURVEY

The Sample

The National Farm Survey (NFS) was conducted annually until the 1992 reference year and covered all the provinces. The three main types of agricultural variables targeted were: cropland areas, livestock inventories, and certain financial components. All of the NFS variables that are recommended by the WFDB for the suggested formats are listed in Table 2.1 (page 6). For the 1988-1992 reference years, a sample of over 40,000 farms was used.

The Methodology

Two types of sampling frames were used: a list frame and an area frame. The country was divided into three main geographical regions: the Canadian Wheat Board region (CWB), Ontario and Quebec, and the Maritimes (along with the part of British Columbia not included in the CWB). All farms that registered annual agricultural sales of \$250 or more were included in the survey.

The data collection process began with detailed questionnaires requesting information on the size and use of farm land, detailed livestock inventories, and selected financial variables. These questionnaires then went through an extensive edit process which involved imputations

¹ *Census families are defined as a husband and wife, legal or common law, with or without their never married children; or lone parent with at least one child, of any age, never married.*

for partial respondents. Sampling weights were adjusted for non-respondents and then assigned to the "usable" questionnaires to produce estimates.

JUNE CROPS SURVEY

The Sample

The June Crops Survey (JCS) is one of a series of annual probability surveys conducted for the main field crops in Canada in order to collect and disseminate data on seeding intentions, acreage seeded and harvested, yields, production and inventories.

In 1996, a sample of approximately 34,700 farms was drawn. This survey includes the acreage that growers seeded with field crops at the beginning of the 1996-1997 crop year. All of the JCS variables that are recommended by the WFDB for the suggested formats are listed in Table 2.1 (page 7).

The Methodology

Every five years, the Census of Agriculture gathers information on agricultural holdings throughout Canada, including institutional farms, community pastures, Indian reserves, etc. The Census of Agriculture provides a list of the farms and their productive acreage, and it is on the basis of this list that a probability sample for the June Crops Survey is selected.

Two sampling frames are used for the June Crops Survey: a list frame and an area frame. The "list"-type frame represents all agricultural holdings in Canada as enumerated in the Census of Agriculture, except for institutional farms, farms on Indian reserves and farms in the Northwest Territories, Yukon and Newfoundland. This frame is stratified into homogeneous groups according to census characteristics (for example: farm size, productive acreage and farm type) and also according to provincial geographic boundaries. The area frame is made up of geographic regions and allows for including agricultural holdings that did not exist at the time of the last Census.

The data collection process is undertaken through the system of "Computer-Assisted Telephone Interviews" (CATI). With the CATI system, edit procedures can be carried out during the interview itself, thus lessening the need for telephone follow-up and reducing the respondent burden. No imputation is carried out for missing data. Theoretical weighting factors are adjusted through a process called weighting factor adjustment in cases of partial or total non-response.

Note: The June Crops Survey data loaded on the WFDB are survey indicators and may differ from the estimates released by the Crops Section. The estimates in the WFDB have not been adjusted to take into account administrative data and to reflect the results of the 1996 Census of Agriculture.

JULY LIVESTOCK SURVEY

The Sample

The July Livestock Survey (JLS) is a probability survey conducted each year. The farms surveyed are asked to report all animals within the agricultural holding, regardless of ownership.

In 1996, a sample was drawn of approximately 28,000 farms. Data were collected by means of the "Computer-Assisted Telephone Interviews" (CATI) system. All of the WFDB suggested formats for these data are listed in Table 2.1 (page 7).

The Methodology

Every five years, through the Census of Agriculture, information is gathered on all farms in Canada. Census farms include all agricultural holdings whose output is intended for sale, including feedlots, institutional farms, farms on Indian reserves, community pastures, community pasture reserves, etc.

Two sampling frames are used for the July Livestock Survey: a list frame and an area frame. The "list"-type frame represents farms that have been identified in the most recent Census. The area frame is made up of geographic regions and it allows for estimating livestock inventories on farms that did not exist at the time of the last Census.

The data collection process is conducted by CATI. With the CATI system, edit procedures can be carried out during the interview itself, thus lessening the need for telephone follow-up and reducing the respondent burden. Farmers must report their inventories as of July 1. The questionnaires are put through numerous edit and imputation procedures before the final estimates are produced.

Note: The July Livestock Survey data loaded on the WFDB are survey indicators and may differ from the estimates released by the Livestock and Animal Products Section. The estimates in the WFDB have not been adjusted to take into account administrative data and to reflect the results of the 1996 Census of Agriculture.

FARM FINANCIAL SURVEY

The Sample

Before 1992, the Farm Financial Survey (FFS) was known as the Farm Credit Corporation (FCC) survey. The FCC survey was conducted in 1981, 1984, 1988 and 1990 (collecting data for 1980, 1983, 1987 and 1989). Beginning in 1992, the FFS sampled about 12,000 farms to collect annual detailed financial data. In 1993, however, due to budget constraints, the FFS reduced its sample to include only the Prairie provinces and British Columbia. Since 1994, this survey has been conducted on a biennial basis only. While the relatively small sample size may constrain some disaggregations, it is capable of providing reliable financial agricultural data. For 1998, the sample size was increased to 18,000 farms and the data collection process was conducted by CATI. All of the WFDB suggested formats for these data are listed in Table 2.1 (pages 8 and 9).

The Methodology

The Farm Financial Survey uses two types of sampling frames, a list frame and an area frame², to estimate detailed financial variables. The National Farm Survey, the June Crops Survey and the July Livestock Survey also make use of both an area frame and a list frame. Completed FFS questionnaires are subjected to several edit and imputation procedures before the actual estimates are finalized.

More information on the sample and methodology of the *Farm Financial Survey* is available in the publication *Farm Financial Survey* (refer to Section 3.3 entitled *Farm Financial Survey (FFS) – Internet Publication*).

More detailed information on the methodology of the National Farm Survey, the June Crops Survey, the July Livestock Survey and the Farm Financial Survey is available from Agriculture Division of Statistics Canada.

² There was no area frame in 1988.

APPENDIX E

SURVEY QUESTIONNAIRES

FARM SURVEY JUNE 1996

Manitoba, Saskatchewan, Alberta, B.C. Peace

CONFIDENTIAL when completed

Collected under the authority of the
Statistics Act, Revised Statutes of
Canada, 1985, Chapter S19.

This is an internal document. Not for distribution.

The purpose of this survey is to obtain information for the estimation of area seeded to field crops and the areas of hay and pasture land in Canada.

Review the information on the label. If any information is incorrect or missing, please make the necessary corrections in the boxes below

The following questions deal with **ALL LAND OPERATED**.

● **Include:** - land rented from others, cropland, woodland, waste land, pasture land and summerfallow.

● **Exclude:** - land rented to others, community pastures, co-operative grazing associations or grazing reserves.

SECTION A SEEDING INTENTIONS

Did you or will you seed any crops in 1996?

YES ☐

NO ☐

GO TO SECTION B

Which of the following crops did you or will you seed in 1996?

	Code	Seeded area	Unit of measure	
			ac	ha
1. Durum Wheat	204		1	2
2. Hard Red Spring Wheat	252		1	2
3. Prairie Spring Wheat (semi-dwarf)	233		1	2
4. Soft White Spring Wheat	207		1	2
5. Canadian Western Extra Strong Wheat (CWES)	244		1	2
6. Other Spring Wheat (unlicensed varieties)	287		1	2
7. Oats	208		1	2
8. Barley	209		1	2
9. Mixed Grains (two or more sown together)	213		1	2
10. Flaxseed	214		1	2
11. Linola	238		1	2
12. Canola or Rapeseed	215		1	2
13. Spring Rye	210		1	2
14. Lentils - LAIRD	036		1	2
15. Lentils - ESTON	038		1	2
16. Lentils - OTHER OR UNKNOWN	040		1	2
17. Dry Peas - YELLOW	042		1	2
18. Dry Peas - GREEN	044		1	2
19. Dry Peas - OTHER OR UNKNOWN	046		1	2
20. Mustard Seed - YELLOW	251		1	2
21. Mustard Seed - ORIENTAL	253		1	2
22. Mustard Seed - BROWN	254		1	2
23. Mustard Seed - OTHER OR UNKNOWN	240		1	2
24. Sunflower Seed (sunola, other dwarfs)	230		1	2
25. Canary Seed	234		1	2

Which of the following crops did you or will you seed in 1996?

	Code	Seeded area	Unit of measure	
			ac	ha
26. Buckwheat	226		1	2
27. Corn for Grain (seed corn)	216		1	2
28. Fodder Grain	217		1	2
29. Dry White Beans (navy, pea beans)	229		1	2
30. Dry Coloured Beans	236		1	2
31. Triticale	248		1	2
32. Fababeans	235		1	2
33. Safflower	239		1	2
34. Sugar Beets	232		1	2
35. Potatoes	218		1	2
36. Other Crops	225		1	2
37. TOTAL, SUM OF A1 TO A36			1	2

38. Of your total area to be seeded to field crops this spring, what percentage is seeded or planted at this time?

Code	%
099	

SECTION B WINTER WHEAT

Did you seed any Winter Wheat in the fall of 1995?

YES

☐

NO

☐

GO TO SECTION C

1. What area of Winter Wheat did you seed in the fall of 1995?

Crops	Code	Seeded area	ac	ha
Winter Wheat seeded in the fall of 1995	106		1	2

(GO TO QUESTION 2)

Crops	code	Harvested area
Winter Wheat remaining to be harvested	206	

(GO TO SECTION C)

SECTION C FALL RYE

Did you seed any Fall Rye in the fall of 1995?

YES ☐

NO ☐

GO TO SECTION D

1. What area of Fall Rye did you seed in the fall of 1995?

Crops	Code	Seeded area	ac	ha
Fall Rye seeded in the fall of 1995	112		1	2

(GO TO QUESTION 2)

2. What area of Fall Rye seeded in the fall of 1995 is remaining to be harvested in 1996?

Crops	Code	Harvested area
Fall Rye remaining to be harvested	212	

(GO TO SECTION D)

SECTION D TAME HAY AND FORAGE SEED

Tame hay

- **Include:** - Alfalfa and clover

Forage seed

- **Include:** - All forage crop area harvested or to be harvested for seed
- Forage crops grown commercially for seed purposes such as, timothy, fescue, clover,

- **Exclude:** - Any forage crop area harvested for hay or used for pasture

Do you have any Tame Hay and Forage seed in 1996 (Including alfalfa and clover)?

YES ☐

NO ☐

GO TO SECTION E

What will be your total area of:

	Code	Total area	ac	ha
1. Alfalfa and Alfalfa Mixtures	249		1	2
2. All other Tame Hay (including clover)	256		1	2
3. Forage Seed	247		1	2
4. TOTAL, SUM OF D1 TO D3			1	2

SECTION E LAND BALANCE

Summerfallow:

Land on which no crops will be grown during the year, but which may be cultivated or worked for weed control and moisture conservation.

Improved land for pasture:

All land which is being used for pasture or grazing land and which has undergone some improvements such as cultivation, drainage, irrigation, fertilization, seeding or spraying for brush and weed control.

DO NOT INCLUDE area to be harvested as dry hay, silage or forage seed.

If a field is used the same year for harvesting tame hay and as a pasture, count it only once as a tame hay field.

Unimproved land for pasture:

Include native pasture, native hay, rangeland, grazable bush etc., used for the grazing or feeding of livestock.

Other land includes:

- area of "farmstead" (farm buildings, farmyard, home garden and roads)
- improved idle land (land which was improved at one time but which will not be pastured, cropped, summerfallowed or used for agricultural purposes this year)
- new broken land (land which has been cleared and prepared for cultivation but will not be cropped)
- winterkilled land which will not be summerfallowed or reseeded to another crop

What is your total area of?	Code	Total area	ac	ha
1. Summerfallow	219		1	2
2. Improved Land for Pasture	222		1	2
3. Unimproved Land for Pasture	237		1	2
4. Other Land	241		1	2
5. TOTAL, SUM OF E1 TO E4			1	2

[illegible]

What is your total farm area?

Code	Total area	Unit of measure		
		ac	ha	arp
		1	2	3
201		1	2	3
		1	2	3

COMMENTS:

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There is no handwriting or other markings on the paper.

FARM SURVEY JUNE 1996

Maritimes, Quebec, Ontario, B.C. Non-peace

CONFIDENTIAL when completed

Collected under the authority of the
Statistics Act, Revised Statutes of
Canada, 1985, Chapter S19.

This is an internal document. Not for distribution.

The purpose of this survey is to obtain information for the estimation of area seeded to field crops and the areas of hay and pasture land in Canada.

Review the information on the label. If any information is incorrect or missing, please make the necessary corrections in the boxes below

-----	--	---

The purpose of this survey is to collect information on livestock. The statistics produced from the survey enable those active in the agricultural sector to observe and assess changes in the industry, measure performance and keep the agricultural community and general public informed of developments.

Statistics Canada is collecting information concerning the farm described on the label. If the operators of this holding manage any other farm(s) entirely separate from this farm (i.e., separate accounting books are kept), please do not include any data for the other farm(s) on this questionnaire.

Please complete and return this questionnaire to Statistics Canada in the postage-paid envelope provided. Thank you for your co-operation. If you have any questions about this survey please call toll-free at 1-800-465-1991.

A. When answering the questions, please include as of July 1, 1996 ...

... all livestock (cattle or calves, pigs, and/or sheep or lambs) on your operation regardless of ownership, including livestock pastured, custom fed or fed under contract for others. In British Columbia include livestock pastured on crownland, community pastures, and areas under the British Columbia Grazing Enhancement Program.

... Please DO NOT REPORT livestock (cattle or calves, pigs and/or sheep or lambs) which are owned by you but kept on a farm, ranch or feedlot operated by someone else.

B.

F. FEDERAL/PROVINCIAL AGREEMENT TO SHARE INFORMATION

NEW BRUNSWICK, ONTARIO, MANITOBA, SASKATCHEWAN AND BRITISH COLUMBIA ONLY:

To reduce response burden and to ensure more uniform statistics, Statistics Canada has entered into data sharing agreements under Section 12 of the Statistics Act with:

- the New Brunswick Department of Agriculture and Rural Development
- the Ontario Ministry of Agriculture and Food and the Ontario Central Statistics Services
- the Manitoba Department of Agriculture
- Saskatchewan Agriculture and Food
- the British Columbia Ministry of Agriculture and Fisheries.

The information collected and shared will be kept confidential and used only for statistical purposes. Under Section 12 of the Statistics Act you may refuse to share your information. Do you agree to share this information?

Yes ☐ 05 ☐ 1 No ☐ 05 ☐ 2

QUÉBEC ONLY:

To avoid duplication of enquiry this survey is conducted under a co-operative agreement with the Québec Bureau of Statistics pursuant to Section 11 of the Statistics Act. The Québec Statistics Act includes the same provisions for confidentiality and penalties for disclosure of information as the Federal Statistics Act.

SECTION A. CHARACTERISTICS OF THE OPERATOR/OPERATION

• Report questions 1 to 4 as of **December 31, 1997.**

A farm OPERATOR is an individual responsible for the day-to-day operation of the farm who participates in the decisions to borrow money; to rent, buy or sell assets; and to reduce debts. An operation may have more than one operator but only one questionnaire is to be completed for each operation.

1. How many operators 18 years of age and over were responsible for this operation? 051

2. What was the age of:
 - a) The oldest operator 052
 - b) The youngest operator (*minimum age of 18*) (*if only one operator enter age under oldest operator*) 053

3. How many years has the most experienced operator on this farm been managing a farm business? ... 054

4. Which of the following best described this operation? ("X" one circle)
 - Report family and hobby farms in 4a) to 4c)
 - a) Sole Proprietorship 056 ☐ 3
 - b) Corporation (Ltd. Co.) ☐ 4 → Total number of share holders for this operation 059
 - c) Partnership ☐ 5 → Total number of partners for this operation 060
 - d) Cooperative and communal operations (e.g. Hutterite Colonies) ☐ 6
 - e) Other (*please specify*) 078 ☐ 7 _____

COMMENTS: 079

SECTION B. LAND USE

• Round to the nearest whole number.

1. How will you report area of the land?
("X" one circle)

199

- ☐ 1 acres
☐ 2 hectares
☐ 3 arpents (Quebec only)

2. For the total and cultivated land area operated as of December 31, 1997, how much was:

Area of Total Land as of December 31, 1997	Area of Cultivated Land as of December 31, 1997
--	---

- a) Owned
• Exclude land rented or leased to others

121	131
-----	-----

- b) Rented from others
• Include governments and other sources

102	112
-----	-----

3. Total land operated (sum of 2 a) and 2 b))

195

4. How much land did this operation rent or lease to others as of December 31, 1997?

103

5. What was the total area seeded for grains and oilseeds?

192

6. a) What was the total area of cropland for this operation in 1997?
• Include forage and tame hay
• Exclude summerfallow

194

- b) What percentage of the total cropland (reported in 6a) above) was insured under provincial crop insurance?

660	%
-----	---

COMMENTS: 093

SECTION C. LIVESTOCK AND POULTRY

1. Did the operation OWN any livestock or poultry on **December 31, 1997**?

170

YES ☐ 1

NO ☐ 2 (GO TO SECTION D)

2. How many of the following did this operation own on **December 31, 1997**?

PART I. CATTLE

- a) Cows mainly for dairy
- b) Cows mainly for beef
- c) Steers and Heifers, 1 year and over for slaughter or feeders
- d) All other cattle and calves

SECTION F. ASSETS

1. What was the value of the following assets of this operation (including those of all operators) on **December 31, 1997**?
- Report at current market value.
 - Report to the nearest \$1,000.

CURRENT

- a) Market livestock
- **Include** heifers for slaughter or feeders, steers, calves, pigs excluding boars and sows, slaughter lambs, all poultry, goats for meat, culls and other market livestock
- b) Accounts Receivable (receipts due, include deferred cash purchase tickets)
- c) Inventory
- i) Inputs (feed, supplies, fertilizer, fuel, seed, chemicals, etc.)
- ii) Crops for sale (include all harvested crops destined for market)
- d) Cash and short term investments (less than one year)
- e) Other current assets (e.g. prepaid expenses)
