

MONTHLY BULLETIN OF AGRICULTURAL STATISTICS

VOL. 32

OTTAWA, MAY, 1939

No. 369

DOMINION STATISTICIAN: R. H. COATS, LL.D., F.R.S.C.

EDITOR: MARGARET E. MACLELLAN, B.A.

FIELD CROPS

The Dominion Bureau of Statistics issued on May 9, the first crop report of the present season, indicating (1) the intended acreage of principal field crops as reported by crop correspondents at May 1; (2) the progress of spring seeding and (3) winter-killing and condition at April 30, of fall wheat, fall rye and hay and clover meadows.

SUMMARY

Intentions to Plant, 1939.—The area intended for spring wheat in 1939 is reported at 25,335,700 acres as compared with 25,188,400 acres sown in 1938. The increase in the spring wheat area amounts to 147,300 acres, which is one per cent greater than the 1938 plantings. Spring wheat acreages have been increased in Alberta and British Columbia. No change is reported in New Brunswick, while the intentions for the remaining provinces indicate smaller acreages to be sown. Reports from Manitoba and Saskatchewan suggest appreciable reductions in the acreage devoted to Durum wheat. The 1939 acreage to be sown to oats is estimated at 2 per cent less than that of 1938, the reduction occurring in the Prairie Provinces. Increases in plantings of barley and of mixed grains of one per cent are forecast, while a decrease of 3 per cent is indicated for the acreage of spring rye. Sowings of flaxseed are forecast as 26 per cent greater than last year. Practically no change is indicated in the total potato acreage for 1939 as compared with 1938. Increased potato plantings are indicated in the Maritime Provinces and British Columbia, but are offset by reductions in Ontario and the Prairie Provinces.

Fall Wheat.—The area of fall wheat remaining for harvest in Ontario amounts to 657,400 acres, which is 84,700 acres less than the area harvested in 1938. The area winter-killed this year amounted to 34,600 acres or 5 per cent compared with a loss of 9 per cent in the winter of 1937-38. The condition of fall wheat at April 30 was 98 compared with 94 at the same date a year ago.

Fall Rye.—The winter-killing of fall rye amounted to 4 per cent or 24,700 acres, leaving 572,700 acres for harvest compared with 553,500 acres harvested last year. The condition for all Canada at April 30 was 93 compared with 94 at April 30, 1938.

Hay and Clover.—Winter-killing of hay and clover amounted to 4 per cent in 1938-39 as compared with 6 per cent in the winter of 1937-38. The condition of hay and clover meadows at April 30, 1939, was 97 compared with 100 at the same date a year ago.

Spring Seeding.—During April 1939, 42 per cent of the spring wheat area was sown in the central and western provinces compared with 22 per cent in April 1938. The seeding program was considerably ahead of last year in the

Prairie Provinces but behind in Ontario. Only 7 per cent of the acreage for oats and 7 per cent of the barley acreage had been sown as compared with 12 per cent for each of these crops last year, owing to the late spring in Ontario. While only a small part of the coarse grain acreage has been planted in Western Canada, farmers are well up to a normal schedule.

INTERPRETATION OF "INTENTIONS" REPORT

This is the ninth year in which an 'Intentions' report for spring grains has been compiled. The acreages shown in this report for 1939 should not be expected to compare exactly with the actually sown acres as shown by the results of the June Survey. The intended acreages are merely indicative of farmers' plans about the first of May and the areas actually sown may be altered by the subsequent weather, by changes in prices, and by many other conditions. An effort is made, however, to eliminate the habitual bias in the 'Intentions' figures as disclosed by the previous years' experience.

GENERAL CROP CONDITIONS

At the End of April.—The progress of farm work during the month of April throughout Canada has been somewhat slower than usual. Snow still covered the ground up to the last week of April in the Maritime Provinces, Quebec and northern and eastern Ontario. In the central and eastern provinces temperatures were below normal and a greater-than-usual precipitation in the form of snow during the month delayed operations on the land.

Spring work in the Prairie Provinces during the first half of April was likewise retarded but more favourable weather conditions during the last ten days of the month accelerated the seeding program. Thus by May 1, the progress of spring work on the Prairies was nearly normal. Soil moisture supplies were reported as low in southern Manitoba and central and southern Alberta, but over the northern portions of the wheat area seeding was being delayed by surface moisture.

Since May 1.—Warm weather over the Dominion has greatly speeded up spring work. High temperatures have resulted in a need for moisture to replace that used in the very rapid growth which has taken place in the last ten days. Wheat has emerged in those sections of the Prairies where early seeding took place. Grasshoppers are reported hatching.

INTENDED ACREAGES OF PRINCIPAL CROPS

For all Canada, the intended acreages for 1939 as reported at May 1 are as follows, with the 1938 acreages within brackets: Spring wheat 25,335,700 (25,188,400); oats 12,700,700 (13,009,700); barley 4,520,500 (4,453,900); spring rye 181,900 (187,900); flaxseed 278,400 (221,200); mixed grains 1,172,700 (1,159,500); potatoes 522,100 (521,900).

For the Prairie Provinces, the intended acreages of principal grain crops in 1939, as compared with the 1938 acreages shown within brackets, are as follows: Three Provinces—Spring wheat 25,100,000 (24,946,000); oats 8,207,000 (8,518,000); barley 3,756,000 (3,687,000); spring rye 169,600 (175,600); flaxseed 269,800 (212,700). Manitoba—Spring wheat 3,176,000 (3,184,000); oats 1,418,000

(1,462,000); barley 1,341,000 (1,355,000); spring rye 28,600 (28,600); flaxseed 56,800 (42,700). Saskatchewan—Spring wheat 13,557,000 (13,793,000); oats 3,962,000 (4,171,000); barley 1,279,000 (1,207,000); spring rye 84,000 (88,000); flaxseed 174,000 (139,000). Alberta—Spring wheat 8,367,000 (7,969,000); oats 2,827,000 (2,885,000); barley 1,136,000 (1,125,000); spring rye 57,000 (59,000); flaxseed 39,000 (31,000).

PROGRESS OF SEEDING

As usual at the end of April, practically no seeding had been done in the Maritime Provinces and Quebec. In the other five provinces the percentages of seeding completed by April 30 were as follows, with figures for the same date last year within brackets: Spring wheat—Ontario 0 (44); Manitoba 73 (66); Saskatchewan 38 (15); Alberta 37 (19); British Columbia 63 (58). Oats—Ontario 3 (47); Manitoba 16 (13); Saskatchewan 7 (3); Alberta 7 (5); British Columbia 46 (35). Barley—Ontario 3 (45); Manitoba 15 (13); Saskatchewan 3 (2); Alberta 4 (4); British Columbia 36 (24).

WINTER-KILLING AND CONDITION OF FALL WHEAT, FALL RYE AND HAY AND CLOVER MEADOWS

In Ontario, where practically all the fall wheat is grown, it is estimated that 34,600 acres or 5 p.c. of the 692,000 acres sown in the autumn of 1938 were winter-killed, leaving 657,400 acres for harvest in 1939 as compared with 742,100 acres in 1938.

In all Canada, where the area seeded to fall rye in the autumn of 1938 amounted to 597,400 acres, 24,700 acres or 4 p.c. were winter-killed, leaving for harvest 572,700 acres as compared with 553,500 acres harvested in 1938. By provinces the acreages winter-killed and left for harvest are estimated as follows: Ontario 2,300, 75,100; Manitoba 7,900, 150,100; Saskatchewan 10,400, 249,600; Alberta 4,100, 97,900.

During the winter of 1938-39, the following percentages of hay and clover meadows are estimated to have been winter-killed, with corresponding figures for the previous winter within brackets; Canada 4 (6); Prince Edward Island 12 (10); Nova Scotia 5 (4); New Brunswick 5 (3); Quebec 4 (5); Ontario 4 (9); Manitoba 2 (2); Saskatchewan 1 (3); Alberta 1 (3); British Columbia 2 (1).

The condition of fall wheat, fall rye and hay and clover meadows at the end of April, 1939, expressed in percentages of the long-time average yields per acre is as follows, with the condition at April 30, 1938, within brackets: Fall wheat—Ontario 98 (94). Fall rye—Canada 93 (94); Ontario 98 (95); Manitoba 90 (97); Saskatchewan 94 (92); Alberta 93 (96). Hay and clover—Canada 97 (100); Prince Edward Island 95 (95); Nova Scotia 92 (97); New Brunswick 97 (99); Quebec 98 (102); Ontario 98 (99); Manitoba 93 (97); Saskatchewan 96 (91); Alberta 95 (98); British Columbia 98 (100).

GENERAL CONDITIONS AT THE END OF APRIL

Summarized from the Reports of Crop Correspondents

Maritime Provinces.—The spring has been cold and backward. Throughout Prince Edward Island and New Brunswick, snow remained on the ground up to the last week of April. In Nova Scotia, very little work on the land had been done up to the first of May. Because of late snow cover, it has been difficult to assess the damage from winter-killing of hay and pastures. In some sections, a heavier-than-usual loss is expected because of the light snow cover during the very cold weather early in the winter. Spring work will be from one to two weeks later than usual.

Quebec.—Over the whole province, spring was late and at the end of April a good covering of snow still remained on the hay and pasture lands. Spring work is at least three weeks behind last year. The lateness of the season makes it difficult to estimate the loss from winter-killing. However, because of the adequate snow cover, it is not expected that the damage will be very great.

Ontario.—Snow and cold weather delayed spring work in Ontario until the last week of April. Heavy rains in April caused a hard surface on the soil and made working difficult. Little winter-killing took place and hay and pasture fields came through in good condition. During the last ten days excellent progress has been made in seeding grain. In some counties of south-western Ontario fifty per cent of the seeding has been completed. Growth of winter crops has been greatly stimulated by the warm weather of the past few days.

Manitoba.—Rains during the last week of April considerably changed seeding conditions, particularly in the southern part of the province. The first part of the month was cold and dry, with prospects of a rather poor seed-bed. Seeding was general over the province during the last two weeks of April. This was about normal for southern Manitoba but earlier than usual for the northern sections. Temperatures in the last week of April were nine to fifteen degrees above normal. Precipitation during the same week was greater than normal with over an inch of rain being recorded at Waskada, Boissevain, Pilot Mound and Emerson. The progress of crops in Manitoba will be more dependent than usual on the seasonal rainfall because of the low initial moisture supplies.

Saskatchewan.—The province experienced cool and backward weather during April. Precipitation was confined to light scattered showers. By the end of April about 35 per cent of the wheat acreage had been seeded. In south-eastern Saskatchewan, Regina-Weyburn and the south-central areas, almost 50 per cent of the wheat was seeded. About 40 per cent was completed in east-central Saskatchewan but only 25 per cent in the south-west. In the west-central part, about 10 per cent of the wheat had been sown. Spring work in northern Saskatchewan has been held back by wet soil conditions. Up to the first of May only 5 to 10 per cent of the wheat was in the ground. Only a small part of the coarse grain acreage had been sown in April, amounting to about 6 per cent for the province, with the best progress being made in the Regina-Weyburn and south-central areas.

Alberta.—In southern Alberta, the first half of April was cold and windy with very little precipitation. During the latter part of the month, temperatures rose and good progress was made with the seeding of wheat. While the high winds caused considerable soil erosion, little damage occurred to crops. Farmers withheld seeding to allow weeds to germinate. Soil moisture conditions in

central and southern Alberta were not as favourable as last year. In north-eastern Alberta moisture conditions were generally satisfactory, although farming operations were retarded by the presence of surface moisture. At the end of April, about one-third of the provincial wheat acreage had been seeded.

British Columbia.—Spring conditions in British Columbia have been very satisfactory. The above-average temperatures during April stimulated growth. Light showers occurred during the latter part of April and the first part of May over most sections of the province, but good rains are needed.

TELEGRAPHIC CROP REPORT SUMMARY

The Dominion Bureau of Statistics issued on May 30 the first of a series of 15 weekly telegraphic reports covering crop conditions in the Prairie Provinces. Sixty-two correspondents distributed over the agricultural area supply the information on which the reports are based. Most of these correspondents are agriculturists of the Dominion and Provincial Departments of Agriculture but a number of selected private observers and grain men also co-operate in this service. The Meteorological Service of Canada, Toronto, supplies official weather data.

MAY 30

Grain crops over most of the Prairie Provinces got away to a rather promising start this spring. With the exception of southern Manitoba, south-eastern and parts of central Saskatchewan, and south-eastern Alberta, spring moisture conditions were quite favourable. Seeding proceeded rapidly during the last week of April and first ten days of May and spring operations were completed early. In the drier districts of the Prairies, farmers delayed seeding somewhat, waiting for more favourable soil moisture conditions. High winds caused considerable soil drifting in the second week of May and while damage to crops was not widespread some localities experienced moderate losses. Rains, commencing May 19 and continuing into last week, promoted recovery of the drought and wind-damaged grain. Some reseeded has been necessary but this has not been general. Damage from cutworms and wireworms has occurred in some localities, but no extensive losses from insect damage have been reported. During the warmer and drier weather in the early part of May, grasshoppers became quite active, but were checked by the wet and cool weather in the latter part of the month. The threat of a general outbreak continues, however, and warm dry weather would greatly increase the danger of damage from this source. Preparations have been made to combat outbreaks and poisoning has already been undertaken in some areas. With all seeding practically completed and much of the crop showing, rain is needed to maintain present favourable prospects and to aid crops in the dry areas of southern Manitoba, south-eastern and central Saskatchewan, and south-eastern Alberta.

Manitoba.—Seeding of wheat and coarse grains in Manitoba was completed earlier than last year. Seed went into the ground under quite favourable conditions in the north-central and north-western parts of the province, but the south-central and south-western districts have been very dry. Crop prospects in the latter areas are generally poor and good rains are urgently needed. In the central areas of the province conditions are variable, with generally satisfactory progress of the crop being reported. Frost caused some injury on May 11, but good rains would repair most of the damage. Favourable crop prospects prevail in the north-central and north-western districts but rain is needed to maintain this outlook. Some slight damage occurred as the result of soil drifting. Forage crops came through the winter in excellent condition.

Saskatchewan.—Wheat seeding in Saskatchewan is almost completed with the exception of the south-western districts where some farmers delayed operations awaiting more favourable moisture conditions. About 80 per cent of the wheat crop is showing green and growth in most parts of the province has been fairly satisfactory. Dry and windy weather was experienced in the first part of May but commencing on the 19th of the month and continuing last week, good rains fell over a large portion of the wheat-growing areas. However, in the south-eastern portion of the province, the Regina-Weyburn area, and the north-central and north-western portions, precipitation was lighter and further moisture is required in these districts. The damage caused by soil drifting has been largely repaired by recent rains although many fields in local areas show signs of permanent damage. Cutworms are active and reports of wireworm damage have been received. Grasshoppers were held in check by the recent cool wet weather but with the higher temperatures of the past few days they are becoming active. Coarse grain seeding is about 85 per cent completed and about 50 per cent of the coarse grains have emerged. Pastures are improving under the stimulus of the more recent favourable moisture conditions.

Alberta.—Crop conditions in Alberta have been generally favourable this spring, with the exception of the south-eastern part of the province. Good rains in the week of May 22 in this district have greatly improved the outlook. The crop has germinated well in the central districts and has made very good growth, but to carry this, adequate moisture supplies will be required. In northern Alberta, crop prospects are reported as favourable, particularly as a result of timely rains in May. Conditions in the Peace River area were improved by rains and scattered showers which promoted crop recovery and checked activity of cutworms. Little damage has been reported from cutworms and grasshoppers. Soil drifting during the second week of May caused some damage in the central and southern districts, but recent rains have provided favourable conditions for crop recovery.

FRUIT AND VEGETABLE CROP REPORT

The Dominion Bureau of Statistics in co-operation with the Fruit Branch of the Department of Agriculture and the Provincial Departments of Agriculture, issued on May 31 a report showing the condition of fruit and vegetable crops in the main producing areas as at the middle of May. A summary of the report follows.

Weather conditions during the past winter have been ideal for the orchards throughout the country. Rodent damage, which is especially severe in Quebec, is reported in all of the five Eastern Provinces. Mice caused the greatest amount of injury, but rabbits were also active in Eastern Ontario. Small fruit generally suffered no ill effects as a result of the past winter, but injury to strawberries and raspberries in scattered localities in New Brunswick may reduce the crops in that province. The orchards in British Columbia came through the cold weather in excellent condition with no damage whatever being reported. Small fruits also wintered well.

The spring has been very backward in Eastern Canada and development is reported to be ten days to three weeks behind last season. Although the early spring was cold in British Columbia, the weather warmed up rapidly and conditions at present are reported to be slightly ahead of last year.

Present indications point to a better-than-average crop of apples for the Dominion. It is rather early yet to estimate the crop in the Maritimes but judging from the bloom, Quebec and Ontario production should equal that of

1938. Spys, however, appear to be lighter than other varieties in Ontario. Other tree fruits in that province should be equal to last year with the exception of sour cherries which are reported to be lighter than average east of Toronto.

Most British Columbia orchard fruits indicate a production as large as that of 1938. The cherry set is exceptionally heavy throughout the province, but peaches may not be as plentiful as usual due to the poor showing of the Rochesters.

Small fruits are still in the early stages of development in Eastern Canada. In British Columbia, loganberries and raspberries give promise of greater production than in 1938 and strawberries should produce moderately well.

With the retarded season both in Eastern Canada and on the Prairies, vegetables have progressed very slowly to date. Early harvesting will, therefore, be somewhat later than usual. Asparagus is already on the markets in Quebec and Ontario, while field lettuce and cauliflower are just commencing to be offered in Ontario. Rhubarb, asparagus and lettuce are all being shipped in quantity in British Columbia.

TOBACCO CROP REPORT

The Dominion Bureau of Statistics issued on June 10 the first report on the 1939 commercial crop of leaf tobacco, indicating (1) intended acreage and (2) progress in transplanting and condition of the crop at the end of May. These reports are based on information furnished by the Tobacco Service of the Dominion Department of Agriculture, the Flue-Cured and Burley Marketing Associations of Ontario, and the Bureau's crop correspondents.

INTENDED ACREAGE

Present indications are that the planted acreage of all types of tobacco in 1939 will be somewhat higher than the 1938 area which was estimated at 83,745 acres.

The acreage allotted to producer members of the Burley Marketing Association of Ontario in 1939 is 12,144 as compared with 10,500 acres in 1938. This represents an increase of 10 per cent to old grower members of the Association. At the same time the addition of some 250 new growers to the list of members, mostly in Kent and Essex counties, has been authorized by the Association. As the full allotment is never planted, a planted acreage of slightly more than 11,000 may be assumed for 1939 as compared with only 9,215 acres planted in 1938.

It is difficult to estimate the acreage being planted to flue-cured tobacco. Last year 61,500 acres were planted in Ontario, 57,500 acres of which were grown by members of the Flue-Cured Marketing Association of Ontario. Increased exports, partly as a result of recent tariff revisions in the United Kingdom, have facilitated the disposal of the 1938 Canadian crop of flue-cured tobacco, and the anticipated surplus of about 8 million pounds has been purchased for the export market. It is difficult to estimate the effect of recent developments on the

acreage grown by members of the Flue-Cured Marketing Association and also by independent growers of flue-cured tobacco in Ontario and Quebec. Earlier in the season it was estimated that the acreage in Quebec would be doubled this year, which would bring the area of flue-cured in this province up to 4,000 acres. However, on account of the lateness of the season, the scarcity of plants, and damage from heavy winds on May 30, the earlier estimate may have to be modified.

No change in acreage is indicated for the cigar leaf types grown in the Yamaska Valley, but the marketing difficulties experienced by growers in the northern tobacco-growing districts of Quebec will probably result in a shift in production from cigar to pipe types. The "large pipe" area may be doubled in 1939 as compared with the area of 1,960 acres in 1938, the increase being largely in the Grand Rouge variety. An increase in the small aromatic types is also anticipated.

Owing to lower prices paid for the dark types of tobacco in 1938, there will probably be a reduction in the area planted in Ontario this year, a preliminary estimate being 2,300 acres as compared with 2,700 acres in 1938. No change from the 1938 acreage of approximately 300 in Quebec is indicated.

PROGRESS IN PLANTING AND CONDITION OF CROP

Ontario.—Development of seedlings was somewhat retarded owing to a late spring and cool dry weather during April and May. Although a number of plantbeds were affected by mould growth on the surface and others by "damping off", the condition of flue-cured plantbeds on the whole was very good. Planting of flue-cured commenced in Essex county on May 15 and in Norfolk county on May 18, but was not general in either district until May 20. Although flue-cured tobacco plants generally were somewhat later than normal, planting operations were in full progress during the last week of May under very favourable conditions except that the soil has been very dry in some areas, particularly in parts of Essex and Kent. Soil moisture content has also been low in the Norfolk district, with consequent loss of plants from soil shifting. However, the damage from this source has been less than normal to date. More than half the flue-cured crop in Ontario was planted by June 3, and approximately half the burley and dark tobacco crops were planted at this date. While plantings are somewhat later than normal, the delay has not been serious. Condition of plants is average and the outlook satisfactory although the crop would benefit by a good rain. While "damping off" and other diseases are prevalent in some sections, there appears to be an ample supply of plants left in the seedbeds to complete transplanting of the entire crop at an early date.

Quebec.—Growth of seedlings was delayed by unfavourable weather. Transplanting of flue-cured tobacco started around May 25 but was not general until the first week in June. Early and unprotected fields suffered severe damage from heavy winds on May 30, necessitating considerable replanting. Planting of cigar and pipe tobaccos was started at the beginning of the week, but only on a few farms. Conditions were favourable for planting and these varieties started well. Planting generally will be about one week later than last year because of the poor condition of the seedbeds. This may leave a substantial crop exposed to early fall frost. No damage from frost has been reported to date.

CANADIAN TRADE IN FARM PRODUCTS

Twelve months ended March 31, 1938 and 1939

Data furnished by the External Trade Branch, Dominion Bureau of Statistics

The items are given under the main headings of Crops, and Livestock and Products, each being divided into (a) raw materials; (b) partly manufactured articles; (c) fully or chiefly manufactured articles. Table I gives the imports by quantities and values of "commodities of which the basic raw materials are such as Canadian farms produce," and Table II the exports by quantities and values of "commodities which, in their natural state, are produced on Canadian farms." Table III summarizes the data in the two preceding tables, and recapitulates under (a) total imports, (b) total exports and (c) total trade. Table IV shows exports of products of farm origin from 1911 to 1939.

WORLD EXPORTS AND IMPORTS OF WHEAT AND FLOUR

The total exports of wheat and of wheat flour, expressed in bushels of wheat by conversion at the rate of 196 lb. of flour to $4\frac{1}{2}$ bushels of wheat, were 374,215,000 bushels for the seven months ended February 28, 1939, as compared with 318,769,000 bushels for the seven months ended February 28, 1938. The imports of wheat and of flour, expressed in bushels of wheat, were for the same period 312,157,000 bushels for 1939 and 269,339,000 bushels for 1938.
