THE DAIRY SITUATION IN JANUARY, 1950

The increase in milk production indicated in the previous month appears to have been carried into the first month of the New Year. Based on reports of dairy correspondents as at December 15th, there would be an increase of approximately 2½ per cent in the total milk production of Canada in January, 1950, as compared with that of the same month in 1949. A still more optimistic situation is shown in the quantity utilized for dairy factory production, the total of approximately 296 million pounds representing a gain of nearly 4½ per cent over that of the previous January. Normally, factory production at this time of the year accounts for about 35 per cent of the total milk supply. Comparative figures covering the production of factory products in terms of milk and butter-fat for the first month of 1949 and 1950 are shown in the table below:

Milk and Butter-fat Equivalents of Dairy Factory Production, January 1949 and 1950

JANUARY	Total Milk	Creamery Butter	Cheddar Cheese	Concentrated Milk Products	Ice Cream
	'000 lb.	'000 lb.	'000 lb.	'000 lb.	'000 lb.
<u>MILK</u>					
1949	284,229	230,318	8,065	32,143	13,703
1950	296,404	231,184	18,348	30,852	16,020
<u>BUTTER-FAT</u>					
1949	9,950	8,061	282	1,127	480
1950	10,374	8,091	642	1,080	561

The increase in milk production in January compared with that of the corresponding month last year may be attributed in part to a slight increase in the numbers of milch cows on farms, a higher percentage of cows milked and a greater average milk production per cow. It will be seen from Table 12 that the percentage of cows milking of 56.6 per cent compares with 55.2 per cent a year ago. Based on all cows in dairy herds, the daily production of milk per cow increased from 11.5 pounds in January, 1949 to 12.4 in January, 1950.

Weather conditions in January were generally favourable for dairy production although wide differences in temperature were indicated between the Eastern Provinces and Western Canada. Both in the Maritime Provinces and in the two Central Provinces the snowfall was slightly greater than that of a year ago, but disappeared quickly during periods of mild, sunny weather. Thus, road conditions were better than usual for the delivery of produce to market. Temperatures showed wide extremes, and both the temperatures and hours of sunshine averaged slightly higher than those of January, 1949. In Western Canada extremely cold weather prevailed throughout the month and heavy snow drifts interfered with the delivery of feed supplies and market produce. In a few sections temporary feed shortages were indicated, but farmers generally had sufficient to meet requirements.

FARM MILK PRODUCTION, UTILIZATION AND INCOME IN DECEMBER, 1949

Farm Milk Production: The estimated quantity of milk produced on farms in December amounted to 1,022 million pounds, an increase of 26 million pounds over that of December, 1948. Of this amount, 358 million pounds was utilized in factory production, representing an increase of 8 million pounds as compared with December, 1948. It will be seen from Table 3 that approximately 35 per cent of the total production was represented in dairy products manufactured in factories, 35 per cent for fluid sales and 30 per cent was used on the farm for human consumption, live stock feeding and for dairy butter and farm-made cheese.

During the January-December period of 1949 the estimated production of 16,789 million pounds represents an increase of 59 million pounds or one-third of one per cent over the total shown for the twelve-month period of the previous year. Of this amount approximately 9 billion pounds were used for factory products, or 75 million pounds more than that in 1948. Factory products accounted for 53 per cent of the total milk supply, while 24 per cent was used for fluid sales and 23 per cent for all other purposes.

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 358,530,000 pounds in December, an increase of approximately $4\frac{1}{2}$ million pounds in comparison with last year. Total sales included about 300 million pounds of fluid milk, and 58 million pounds of fluid cream.

During the twelve-month period, January to December, fluid sales reached a total of 4,083,753,000 pounds and represented an increase of 59 million pounds over the corresponding period of 1948.

Dairy Butter: The December dairy butter make amounted to 4,706,000 pounds, representing a decrease of 16 per cent from the corresponding month in 1948. During the January-December period the total of 52,852,000 pounds was 16 per cent below the production for the corresponding period of 1948.

Farm Cash Income: Cash income from the sale of dairy products in December amounted to \$21,429,000. This was a reduction of approximately $1\frac{1}{2}$ million dollars from last year. The weighted average farm price of \$2.94 per hundred pounds of milk may be compared with \$3.20 in the corresponding month of 1948. All prices showed a decrease. Fluid milk averaged \$3.82 as against \$3.88 a year previous. Butter-fat used in the production of creamery butter fell from 73.4 cents per pound in December, 1948, to 62.7 cents per pound in December, 1949. Milk for concentration declined 70 cents per hundred pounds of milk, cheese milk was reduced by 19 cents and milk used in ice cream fell 41 cents per hundred from December, 1948.

PRODUCTION AND PRICES OF DAIRY PRODUCTS
IN DECEMBER, 1949

Butter: Total butter production including creamery, dairy and whey butter amounted to approximately 16 million pounds in December, 1949. This was $1\frac{1}{4}$ million pounds below that produced in the same month of the previous year. The total for the year was $333\frac{3}{4}$ million pounds compared with $350\frac{1}{4}$ million pounds in 1948.

Stock Holdings: Holdings of butter in store and transit on January 1, 1950, amounted to $56\frac{1}{4}$ million pounds, approximately $18\frac{1}{4}$ million pounds more than last year. On December 1 the stock holdings were $66\frac{1}{2}$ million pounds as compared with 47 million pounds a year ago.

The Butter Supply: The quantity of butter represented by stocks on December 1 and production during the month amounted to approximately $82\frac{3}{4}$ million pounds. This was a gain of 14 million pounds over last year.

Domestic Disappearance: The domestic disappearance of butter in December, including creamery, dairy and whey butter, amounted to $26\frac{1}{2}$ million pounds, a decline of almost $4\frac{1}{2}$ million pounds or 14.4 per cent. On a per capita basis the domestic disappearance amounted to 1.96 pounds as against 2.41 pounds a year ago. During the twelve-month period of 1949 the disappearance of $315\frac{3}{4}$ million pounds represents a reduction from the previous year of $54\frac{3}{4}$ million pounds. The domestic disappearance of margarine during the same period amounted to approximately 72 million pounds.

Butter Prices at Montreal: Butter prices at Montreal, based on quotations of the Canadian Commodity Exchange for first grade solids, averaged 61 cents per pound in December as against $68\frac{1}{2}$ cents last year.

Cheese Production: Cheese production including cheddar, farm-made cheese and factory cheese other than cheddar, amounted to 3 million pounds, representing an increase of about $1\frac{1}{2}$ million pounds as compared with that produced in the same month of the previous year. The total output in 1949 was $118\frac{3}{4}$ million pounds as against $94\frac{3}{4}$ million pounds in 1948.

Cheese Prices: The Montreal price of Ontario white cheese averaged $31\frac{1}{4}$ cents per pound in December. The comparative price in 1948 was 34 cents.

Concentrated Milk Products: The total quantity of concentrated milk products manufactured in December was approximately $16\frac{3}{4}$ million pounds, a decrease of 3 million pounds as compared with last year. Concentrated whole milk products declined approximately $2\frac{1}{4}$ million pounds while milk by-products registered a decrease of approximately $\frac{3}{4}$ million pounds. Evaporated milk, one of the most important of the whole milk products, declined approximately $1\frac{3}{4}$ million pounds compared with that produced last year and the production of skim milk powder, the leading skim milk product, showed a decrease of $1\frac{1}{2}$ million pounds.

Ice Cream: The quantity of ice cream manufactured in December was approximately 1 million gallons or 93 thousand gallons less than that produced a year ago. This made a total of $24\frac{3}{4}$ million gallons for 1949 in comparison with the revised total of $25\frac{1}{4}$ million gallons in 1948.

1/ Includes farm-made cheese not shown in this statement; but excludes cheese and concentrated milk products which do not appear separately by provinces (see footnote "X" below). These products are included in the total for Canada.

(X) Since less than three reports were received, data are shown for Canada only.

(XX) Less than three reports received, but since two products manufactured in British Columbia are represented by reports from less than three firms, complete statistics are included in the Total Production in Section A and the Total Factory Production in Section B for this province as well as for Canada.

1/ Stocks shown under the captions "Jan.-December" represent holdings at the end of the periods, January 1, 1946 to 1950.

2/ Foreign Trade Statistics include Newfoundland as from April 1, 1949.

(X) Domestic Disappearance data are not shown for the month indicated because stocks and exports exceed the total supply. Adjustments are made, however, in the cumulative data for the Jan.-December period.

Note: Statistics shown for 1948 and 1949 are based on revised data not previously published. Data for previous months will be furnished on request.
