The Dairy Situation in August, 1951

The farm milk supply for August, 1951, is expected to be approximately the same as in August, 1950, according to the monthly dairy farm survey of the Dominion Bureau of Statistics. A decline in the quantities of milk used in farm homes and for live stock feeding was indicated. On the other hand, the use of milk for manufacture in dairy factories in August was 1 1/2 per cent above that of August, 1950 as shown in the table below.

MILK EQUIVALENT OF DAIRY FACTORY PRODUCTION

| Product | AUGUST | | | JANUARY - AUGUST | | |
|----------------------------|-----------|-----------|-------------------|------------------|-----------|-------------------|
| | 1950 | 1951 | Percentage Change | 1950 | 1951 | Percentage Change |
| | '000 lb. | '000 lb. | % | '000 lb. | '000 lb. | % |
| Creamery Butter | 790,972 | 806,250 | (+) 1.9 | 4,432,089 | 4,254,163 | (-) 4.0 |
| Cheddar Cheese | 155,013 | 145,388 | (-) 6.2 | 770,655 | 648,582 | (-) 15.8 |

| Ice Cream | 61,398 | 61,272 | (-) 0.2 | 320,004 | 344,988 | (+) 7.8 |
| TOTAL | 1,092,101 | 1,109,507 | (+) 1.6 | 6,047,962 | 5,883,300 | (-) 2.7 |

For the summer months, June to August, the milk production of Canada this year is estimated to be approximately the same as last year. However, the production during the eight months ended August this year was somewhat lower than for the same period in 1950. This was reflected in reduced quantities utilized for dairy factory products, for live stock feeding and farm-home consumption. Slightly higher amounts were sold for fluid purposes and used for the production of dairy butter.

The survey of livestock numbers, at June 1st, confirmed earlier estimates showing a reduction of 2 per cent in the numbers of Dairy Cows on farms (see table 14). With the exception of Quebec and Prince Edward Island all provinces shared in this decline, but the most significant reductions occurred in three of the Western Provinces (Saskatchewan, Alberta, and British Columbia). Dairy correspondents reporting on August 15th, indicated that 78.8 per cent of the Milch Cows on farms were being milked, 1 per cent less than at the same time last year. Based on all cows in the herds of dairy correspondents, the daily yield of milk per cow on August 15, 1951, was approximately 21 pounds; and, cows actually milked, yielded 26 1/2 pounds per cow. The former may be compared to 20 1/2 pounds last year while the latter was up from 25.8 per cow in August 1950.

The heavy rainfall during August kept pastures in good condition but aggravated the problems of harvesting and thrashing. The hay crop was estimated in September, at approximately 18 million tons, 39 per cent higher than last year. However, a reduced tonnage was shown in all four of the Western Provinces, due in part to excessive rainfall and heavy spoilage in some prairie regions, and to the unprecedented drought in British Columbia. Dairymen in coastal sections are finding it necessary to import additional supplies of hay, to meet their requirements. Pasture conditions averaged 103 at the end of August as compared to 94 in August 1950. With the exception of Manitoba and British Columbia the pasture ratings for all provinces were equal to or above the long time average.

FARM MILK PRODUCTION, UTILIZATION AND INCOME IN JUNE, 1951

Farm Milk Production: The estimated quantity of milk produced on farms in July amounted to 1,873 million pounds, an increase of 10 million pounds over that of July, 1950*. Of this amount, 1,192 million pounds, or 64 per cent of the total was utilized in factory production. During the January-July period of 1951 the estimated production of 9,616 million pounds represents a decrease of 175 million pounds from the total shown for the same period of the previous year. The quantity of milk utilized for factory production in January-July amounted to 4,774 million pounds, while fluid sales accounted for 2,470 million pounds.

Fluid Sales: Sales of Fluid Milk and Cream, the latter expressed as milk, amounted to 347,638,000 pounds in July, an increase of 3/4 million pounds in comparison with last year. This included about 288 million pounds of fluid milk, comprising about 15 per cent of the farm milk supply, and fluid cream sales of 60 million pounds representing 3 per cent. During the seven-month period, January-July, fluid sales totalled 2,470,229,000 pounds, an increase of 2 per cent as compared with the same period of 1950.

Dairy Butter: The estimated dairy butter production of Canada was 4,186,000 pounds in July, an increase of 377,000 pounds or 10 per cent from July, 1950. The Maritime Provinces, Ontario and Quebec contributed to this increase, the three Prairie Provinces showed declines, while the output in British Columbia was unchanged from last year. The cumulative production of 27,752,000 pounds during the period January to July, was up 2 per cent from the same period in 1950. However, this gain was only reflected in Quebec and the Maritime Provinces, all other provinces showing declines.

Farm Cash Income: Cash income from the sale of dairy products in July amounted to \$42,502,000. This represented an increase of approximately \$6,839,000 in comparison with the same month last year. The weighted average price of \$2.73 per hundred pounds of milk may be compared with \$2.32 in the corresponding month of 1950. All prices showed increases over those of the previous July. Fluid milk at \$3.98 per hundred was 19 cents above that of July 1950; cheese milk at \$2.70 increased 59 cents and milk used for manufacturing at \$2.94 increased 50 cents per hundred. Creamery butter-fat advanced from 53.6 to 65.4 cents per pound, while dairy butter at 61.7 cents was approximately 9 cents higher than in July 1950.

* Data for Newfoundland are not available.

PRODUCTION, DISTRIBUTION AND PRICES OF DAIRY PRODUCTS IN JULY, 1951

Butter: Total butter production (Including creamery, dairy and whey butter) amounted to 41 million pounds in July, 1951. This represented an increase of 1/2 million pounds from the same month of the previous year. The January-July output of 175 3/4 million pounds was 4 per cent below the total for the same seven months of the previous year.

Stock Holdings: Holdings of butter in store and in transit which amounted to 32 1/4 million pounds at July 1, advanced to 46 1/4 million pounds on August 1. Compared with those shown on corresponding dates of the previous year, the stocks at July 1 and August 1 showed reductions of approximately 17 3/4 million pounds and 14 1/2 million pounds, respectively.

The Butter Supply: The quantity of butter represented by stocks on July 1, production and imports during the month amounted to 73 1/2 million pounds. This was a decrease of approximately 17 million pounds as compared with last year, and an increase of 12 1/4 million pounds in comparison with last month.

Domestic Disappearance: The domestic disappearance of butter in July, including creamery, dairy and whey butter, amounted to 27 million pounds, a decrease of 2 1/2 million pounds or 8 per cent. On a per capita basis the domestic disappearance amounted to 1.93 pounds as against 2.13 pounds a year ago. During the January-July period the domestic disappearance of total butter amounted to 173 1/2 million pounds compared with 177 3/4 million pounds a year ago, and the per capita disappearance was 12.37 pounds against 12.85 pounds in the January-July period of 1950.

Butter Prices at Montreal: Butter prices at Montreal, based on quotations of the Canadian Commodity Exchange for first grade solids, averaged 63 5/8 cents per pound in July 1951, as compared with 53 1/4 cents recorded a year ago.

Cheese Production: Cheddar cheese production in July amounted to 13 3/4 million pounds, representing a decrease of 2 1/4 million pounds in comparison with that produced in the same month of the previous year.

Cheese Prices: The Montreal price of Ontario coloured cheese averaged 38 3/8 cents per pound in July. The comparative price for July, 1950, was 28 cents.

Concentrated Milk Products: The total quantity of concentrated milk products manufactured in July was approximately 56 3/4 million pounds, which represented an increase of 8 3/4 million pounds as compared with the same month last year. Concentrated whole milk products advanced 8 million pounds and by-products registered an increase of 3/4 million pounds. Evaporated milk, one of the most important of the whole milk products increased 5 million pounds and the production of skim-milk powder, the leading milk by-product, rose 1/4 million pounds over that of July 1950.

Ice Cream: The quantity of ice cream manufactured in July was approximately 4 million gallons or 331 thousand gallons more than that produced a year ago; and the cumulative output during the seven-month period, January to July, was 15 3/4 million gallons, an increase of 1 1/2 million gallons in comparison with the same period of 1950.

* Data for Newfoundland are not available.

1/ Total Milk Production by Months does not include the Milk Equivalent of Factory Cheese other than Cheddar, shown in the Annual Statement

a Includes Milk Equivalent of Concentrated Milk Products reported by less than three Firms (See footnote "X" in Table 4)

2/ Statistics for the separate Provinces shown under this caption do not include data for products manufactured in those provinces indicated by footnote "X" in Table 4, but are included in the Canada Total at the top of this column.

3/ Includes Fluid Milk Sales and Fluid Cream Sales expressed as Milk.

TABLE - 4 MILK EQUIVALENTS OF FACTORY PRODUCTS AND FLUID SALES

Canada, By Provinces*, July, 1950 and 1951

| Province | Year | Used in Manufacture | | | | Fluid Sales | |
