Prepared in the Live Stock Section

THE DAIRY SITUATION IN FEBRUARY, 1954

The forecast of milk production for February based on indications offered in the monthly dairy farm survey reveals an increase of 2 per cent over that of the previous February. This compares with an increase of 1 per cent in January in comparison with January 1953. While there is no evidence of any improvement in the yield of milk per cow, the dairy averages for February of 12.5 pounds for all cows and 23.7 pounds for those actually milked compares favourably with those of a year ago. The former was slightly less and the latter was slightly more than that of February, 1953. The quantities of milk used in farm homes is being maintained at approximately 3 per cent above the level of the previous year, but this gain was off-set with a reduction of nearly 4 per cent in the quantities of milk utilized on farms for live stock feeding. It is apparent that more milk is being used for factory products than formerly, which may be attributed to additional quantities going into the manufacture of cheese and evaporated milk. Comparative figures for milk utilization in factories is given in the table below:

MILK EQUIVALENT OF DAIRY FACTORY PRODUCTION

Product	February			January-February		
	1953	1954	Percentage Change	1953	1954	Percentage Change
	'000 lb.	'000 lb.	%	'000 lb.	'000 lb.	%
Creamery Butter	221,458	233,649	(+) 5.5	471,698	489,060	(+) 3.7
Cheddar Cheese	18,535	20,075	(+) 8.3	38,852	41,206	(+) 6.1
Concentrated Milk Products	31,761	38,535	(+) 21.3	73,791	77,099	(+) 4.5
Ice Cream	22,576	22,899	(+) 1.4	43,860	41,922	(-) 4.4
Total	294,330	315,158	(+) 7.1	628,201	649,287	(+) 3.4

Farmers are apparently maintaining their dairy herds somewhat above the level of previous months. This is revealed in the February indication which showed a slight increase in numbers as compared with the figures reported in the survey of December 1, 1953. However, in comparison with the previous February, the gain of 4 1/2 per cent was less pronounced than that of December 1, 1953, which showed a gain of 5.7 per cent over December 1, 1952. Increased numbers of cows were milked in February and there was also an increase in freshenings. The former averaged 56.8 per cent as compared with 56.6 per cent in February, 1953, and freshenings represented .67 per cent of the total cow holdings as compared with .64 per cent a year earlier. The number of cows in calf on February 15, was up 3 per cent from the same date a year ago. All factors considered the dairy situation appears to be retaining a position of stability, and it seems likely that 1954 milk production will continue to be at a slightly higher level than that of 1953.

* Data for Newfoundland are not available.

1/ Based on cows and heifers two years old and over, kept mainly for milking purposes.

Temperatures in February exceeded those of last year in all but three of the twenty-four weather stations that reported, while two others showed the same temperatures as last year. Excessive precipitation, mostly in the form of snow, was general in all sections of Eastern Canada, while the opposite situation prevailed in all of Western Canada except coastal regions. There was a good deal of cloudy weather and sharp declines in hours of sunshine were recorded in most sections of the country with the exception of south western Ontario and eastern Saskatchewan. At some stations the differences were quite marked, with reductions of 30 to 50 hours at some points between February, 1953, and February, 1954. However, conditions on the whole were generally about normal for this season and the absence of heavy storms enabled farmers to make deliveries to market with little or no interruption.

FARM MILK PRODUCTION, UTILIZATION AND INCOME IN JANUARY, 1953

Farm Milk Production: The estimated quantity of milk produced on farms in January amounted to 921,169,000 pounds, an increase of 6 million pounds or approximately 0.7 per cent more than that of January, 1953.^{1/} Of the total production 334 million pounds or 36 per cent of the total was utilized in factory production.

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 422,841,000 pounds in January, an increase of approximately 900 thousand pounds or 0.2 per cent in comparison with last year. The total fluid sales included about 354 million pounds of fluid milk comprising about 38.5 per cent of the farm milk supply, and fluid cream sales of 68 million pounds in milk equivalent, representing 7.4 per cent of the total milk output.

Dairy Butter: The dairy butter make in January amounted to 1,615,000 pounds, increasing 9 per cent from the corresponding month in 1953. All provinces contributed to the increase with the exception of Ontario and Alberta.

Farm Cash Income: Cash income from the sales of dairy products in January amounted to \$25,343,000. This represented a decrease of approximately \$419,000 from last year. The weighted average price of \$3.33 per hundred pounds of milk may be compared with \$3.39 in the corresponding month of 1953. All prices showed decreases from those of the previous January. Fluid milk at \$4.36 hundred was 3 cents per hundred under that of January, 1953. Cheese milk at \$2.60 decreased 4 cents per hundred pounds of milk, and milk used for manufacturing at \$2.57 decreased 32 cents per hundred. Creamery butter-fat decreased from 64.2 cents to 62.3 cents per pound, and dairy butter at .60 cents remained the same as the previous January.

REVISED INCOME STATISTICS FOR 1950, 1951, 1952 AND 1953

Total farm income in 1953 amounted to \$413,127,000, this compared with \$398,996,000 in 1952, \$387,899,000 in 1951 and \$342,965,000 in 1950. Average prices for Canada, by products, for these four years are given below.

	1950	1951	1952	1953
	\$	\$	\$	\$
Fluid milk	3.91	4.08	4.37	4.35

PRODUCTION AND PRICES OF DAIRY PRODUCTS IN JANUARY, 1954

Butter: Total butter production including creamery, dairy and whey butter amounted to 12 1/2 million pounds in January, 1954. This was 1/4 million pounds or approximately 3 per cent more than that produced in the same month of the previous year.

Stock Holdings: Holdings of butter in store and transit on February 1 amounted to 61 1/4 million pounds, approximately 16 3/4 million pounds more than last year. On January 1, 1954, the stock holdings of 71 1/4 million pounds represented an increase of 16 3/4 million pounds from the previous year.

The Butter Supply: The quantity of butter represented by stocks on January 1, production and imports during the month amounted to 83 3/4 million pounds in January, 1954. This was an increase of approximately 17 million pounds in comparison with January, 1953.

Domestic Disappearance: The domestic disappearance of butter in January, including creamery, dairy and whey butter, amounted to 22 1/2 million pounds, an increase of 1/4 million pounds or 2 per cent. On a per capita basis the domestic disappearance amounted to 1.50 pounds the same as that recorded a year ago.

Butter Prices at Montreal: Butter prices at Montreal, based on quotations of the Canadian Commodity Exchange for first grade solids, averaged 61 cents per pound in January as against 62 1/2 cents last year.

Cheese Production: Cheddar cheese production amounted to approximately 2 million pounds, representing an increase of about 74 thousand pounds as compared with that produced in the same month of the previous year.

Cheese Prices: The Montreal price of Ontario coloured cheese averaged 35 1/4 cents per pound in January. The comparative price in 1953 was 33 1/2 cents.

Concentrated Milk Products: The total quantity of concentrated milk products manufactured in January was approximately 19 million pounds, a decrease of 1 1/2 million pounds as compared with last year. Concentrated whole milk products declined 1 1/4 million pounds while milk by-products registered a decrease of 1/4 million pounds. Evaporated milk, the most important of the whole milk products, showed a decrease of 3/4 million pounds and the production of skim milk powder, the leading skim milk product, declined 1/4 million pounds.

Ice Cream: The quantity of ice cream manufactured in January was approximately 1 million gallons or 133 thousand gallons less than that produced a year ago.

REVISED INCOME STATISTICS

The supplement attached to the January issue of the "Dairy Review" contained revised statistics of milk production and utilization for 1950, 1951, 1952 and 1953. Consequently it has become necessary to revise income statistics, and these revisions for the same four years are given in the supplement attached to this report.

Generally, the revisions follow the pattern of milk production and utilization established on the basis of the Census figures for May, 1951. Prices are practically unchanged, any differences between data formerly published and those shown in this statement being due to slight adjustments in haulage rates for 1952 and 1953 and minor revisions in patronage dividends in Alberta. No attempt has been made to give a complete provincial breakdown of income from individual products. Income from fluid sales and fluid milk sales are given for the nine separate domains for which data are available, but otherwise the provincial classification applies to prices for 1953 and total income statistics for all products combined. Tables for the separate items are being prepared for each of the provinces, however, and those desiring a fuller treatment to this subject are asked to communicate with the Dairy Statistician, Dominion Bureau of Statistics, Ottawa.
