## THE DAIRY SITUATION IN JULY, 1954

Advance indications based on the reports of dairy correspondents place the milk production estimate for July at approximately 1,900 million pounds, being about 2 per cent more than that of the same month last year. The combined quantity of milk used in farm-homes and fed to livestock was 6 per cent less than that reported a year earlier. More complete data now available concerning the June production establishes the estimate for that month at 2,015 million pounds, 1 per cent above that of the same month last year in place of 2 per cent previously reported. A large proportion of the milk supply was used in manufacture, the amount used in factories during July, 1954, having exceeded that of July, 1953, by 6 1/2 per cent. A detailed analysis appears in the table below.

### MILK EQUIVALENT OF DAIRY FACTORY PRODUCTION

Product	July			January-July		
	1953	1954	Percentage Change	1953	1954	Percentage Change
	'000 lb.	'000 lb.	%	'000 lb.	'000 lb.	%
Creamery Butter	977,722	1,033,250	(+) 5.7	4,172,665	4,295,678	(+) 2.9
Cheddar Cheese	116,919	139,645	(+) 19.4	480,810	507,298	(+) 5.5
Concentrated Milk Products	101,773	109,802	(+) 7.9	528,862	547,926	(+) 3.6
Ice Cream	77,758	74,715	(-) 3.9	297,993	297,109	(-) 0.3
TOTAL	1,274,172	1,357,412	(+) 6.5	5,480,330	5,648,011	(+) 3.1

The numbers of cows used primarily for milking purposes estimated at 3,233 thousand at June 1, 1954, represents a gain over the previous June of 3 per cent. This may be compared with a 6 per cent advance between June 1, 1952 and June 1, 1953. On the other hand, dairy heifers estimated at 908 thousand, declined 3 1/2 per cent from June 1, 1953. This reverses the position reported a year ago when the numbers of dairy heifers were 2 per cent above those recorded at June 1, 1952. While these figures might indicate a tendency for the cow population to fall to the 1953 level in subsequent months, the long range result will depend on the disposition of the calf population of 2,491,000, which includes those raised for both beef and dairy purposes. This figure represents an increase of approximately 2 per cent over that of June 1, 1953. However, realizing that a 6 per cent advance was shown at June 1, 1953, as compared with June 1, 1952, the trend in the numbers of calves raised for dairy purposes may correspond closely with that of cows and heifers. According to reports from dairy correspondents the proportion of dairy cows being milked on July 15th was 78 per cent, being practically unchanged from last year. Likewise, freshening were about the same as those of the previous July and a very small increase was recorded in the number of cows in calf. Milk production per cow averaged 21 1/2 pounds (all cows included) and 27 pounds based on those actually milked, also the same as that of July, 1953. However, dairy production has been on the increase for the past three years and a lower rate of expansion at this stage should not be regarded as a reverse development.

From a dairy production standpoint weather conditions throughout Canada were never better than those that exist at the present time. Frequent rains and cool weather produced a luscious pasture growth. The fields are still green in most of the prairie region where pastures often begin to brown up at this time of the year. For the whole

\* Data for Newfoundland are not available.

1/ Based on cows and heifers two years old and over, kept mainly for milking purposes.

of Canada, pasture conditions at the end of June averaged 104 compared with 102 a year earlier. While condition estimates are not available for the end of July, it may be assumed that the difference between years is considerably greater than that indicated in the previous month. According to the August estimate, the hay crop may reach 20 million tons, 2 per cent more than that of a year ago. The output in New Brunswick and Quebec showed an advance of 21 per cent. Saskatchewan's hay crop is up 11 per cent and that of Manitoba nearly 6 per cent. On the other hand, lower yields were reported from Ontario, Alberta and British Columbia, while the Nova Scotia hay crop is expected to be practically on a par with that of 1953.

Temperatures, precipitation and hours of sunshine in the month of July were generally lower in the Eastern Provinces than was the case a year ago. A more variable picture was revealed in the Western Provinces, temperatures being a little higher than in the previous year, but there was definitely less sunshine. Precipitation followed a more obscure pattern. At Morden, Manitoba, there was considerable less rain than last year, while at Swift Current, Saskatchewan, a gain of 3 inches was recorded. At Scott, Saskatchewan, Lethbridge, Alberta, and Summerland, British Columbia, there was slightly more rain than in the previous July; though at Regina, Lacombe and Beaverlodge precipitation was somewhat lighter than in July, 1953. On the whole, weather conditions throughout the Dominion were quite favourable for dairy production, and with the exception of a few areas in both the East and the West there seemed to be ample rainfall for pastures and feed crops.

#### FARM MILK PRODUCTION, UTILIZATION AND INCOME IN JUNE, 1954\*

Farm Milk Production: The estimated quantity of milk produced on farms in June, amounted to 2,014,843,000 pounds. This represents a gain of 21 million pounds or 1 per cent more than that of June, 1953. Of this amount 1,414 million pounds or 70.19 per cent was utilized in factory production, while fluid sales absorbed approximately 412 million pounds or 20.45 per cent of the total supply. During the half-yearly period, January-June, the estimated production was 7,962 million pounds, an increase of 167 million pounds or about 2 per cent more than that produced in the same period of the previous year. The quantity of milk utilized for factory production in January-June amounted to 4,291 million pounds while fluid sales accounted for 2,533 million pounds, representing 54 per cent and 32 per cent, respectively, of the Dominion's milk production.

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 411,974,000 pounds in June, an increase of approximately 7 million pounds in comparison with June of the previous year. This included about 341 million pounds of fluid milk, comprising about 17 per cent of the farm milk supply, and fluid cream sales of 71 million pounds representing 3.5 per cent. During the half-yearly period, January-June, fluid sales totalled 2,532,558,000 pounds, an increase of 64 million pounds or approximately 2.6 per cent over those of the 1953 period.

Dairy Butter: The dairy butter make in June amounted to 1,725,000 pounds, decreasing 12 per cent from the corresponding month of 1953. Production declined in all provinces with the exception of Quebec, Alberta and British Columbia. For the six-months, January-June, 10,367,000 pounds were produced, an increase of 3 per cent over the same period last year.

Farm Cash Income: Cash income from the sale of dairy products in June amounted to \$47,437,000. This represented an increase of approximately 3 per cent or \$1,319,000 in comparison with the same month last year. The weighted average price of \$2.59 per hundred pounds of milk may be compared with \$2.55 in the corresponding month of 1953. Fluid milk at \$4.30 per hundred remained the same as in June, 1953. Creamery butter-fat at 59.2 cents per pound this June was 59.3 cents per pound in the same month last year, while dairy butter at 58 cents was the same in June, 1953. Milk used in manufacture increased from \$2.40 per hundred in June, 1953, to \$2.43 per hundred in June, 1954. Cheese milk increased to \$2.12 per hundred, an increase of 22 cents per hundred in comparison with the same month a year earlier.

\* Data for Newfoundland are not available.

PRODUCTION, DISTRIBUTION AND PRICES OF DAIRY PRODUCTS IN JUNE, 1954

Butter: Total butter production (including creamery, dairy and whey butter) amounted to 48 1/4 million pounds in June, 1954. This represented a decrease of 1/4 million pounds or one-half of 1 per cent as compared with the same month last year. The January-June output of 150 1/2 million pounds was 2 per cent above the total of the same period of the previous year.

Stock Holdings: Holdings of butter in store and transit, which amounted to 52 1/4 million pounds at June 1, increased to 74 3/4 million pounds on July 1. Compared with those of a year ago, the stocks at June 1, showed an increase of approximately 14 1/2 million pounds, while those of July 1, increased 14 million pounds.

The Butter Supply: The quantity of butter represented by stocks on June 1, production and imports during the month, amounted to 100 1/4 million pounds. This was an increase of almost 14 1/4 million pounds as compared with last year.

Domestic Disappearance: The domestic disappearance of butter in June including creamery, dairy and whey butter, amounted to 25 1/2 million pounds, an increase of almost 1/4 million pounds. On a per capita basis the domestic disappearance amounted to 1.70 pounds as compared with 1.71 pounds a year ago. During the January-June period the domestic disappearance of total butter amounted to 147 million pounds as compared with 141 million pounds in the same period of 1953; and the per capita disappearance of 9.77 pounds may be compared with 9.53 pounds a year earlier.

Butter Prices at Montreal: Butter prices at Montreal, based on quotations of the Canadian Commodity Exchange for first grade solids, averaged 58 cents per pound in June, the same as last year.

Cheese Production: Cheddar Cheese production in June, 1954 amounted to 13 1/2 million pounds, an increase of 1,361,000 pounds, 11 per cent more than that produced in June, 1953.

Cheese Prices: Ontario colored cheese at Montreal averaged 31 1/4 cents per pound in June, 1954. This compared with 29 1/2 cents in June, 1953.

Concentrated Milk Products: The total quantity of concentrated milk products manufactured in June was approximately 63 1/4 million pounds, which represented an increase of 1/4 million pounds in comparison with the same month last year. Concentrated whole milk products decreased 1/4 million pounds, while by-products increased approximately 1/2 million pounds. Evaporated milk, one of the most important of the whole milk products increased 89 thousand pounds and the production of skim milk powder, the leading milk by-product, was 1/4 million pounds above the output of June, 1953.

Ice Cream: The quantity of ice cream manufactured in June was approximately 3 3/4 million gallons, an increase of 206 thousand gallons in comparison with the June production a year earlier. Production during the six-month period January-June amounted to 13,082,000 gallons. This represented an increase of 127 thousand gallons as compared with that produced in the same period of 1953.
