## REVIEW OF THE DAIRY SITUATION IN 1954

This issue of the Dairy Review contains a special supplement in which monthly statistics are reproduced on a revised basis for 1953 and 1954. The 1953 figures are final, while those for 1954 are subject to further revisions a year hence when the data are checked with annual reports and related information. Revisions are generally quite insignificant except those of cheese production which are frequently revised in an upward direction when the final check-up is completed.

Production conditions in 1954 were particularly favourable for dairying. Snowfall was exceptionally light in the central sections of Eastern Canada, yet the spring opening was a little later than usual. The monthly dairy-farm survey revealed that the April calf crop was somewhat below that of the previous April, but this decline was partially compensated for by a heavy increase in the previous month. Generally, a tendency toward earlier calving was indicated. Pasture growth was a little slow at the start, but summer pasture conditions were excellent, due to the excessive rainfall during the growing season. Although the percentage of cows milked (68 per cent) was slightly less than in the previous year, the fact that considerably more cows were kept on farms for dairy purposes was the principal factor in placing milk production well above that of the previous year. In fact, with the exception of October, more milk was produced in every month of 1954 than in corresponding months of 1953. While crops in Western Canada suffered from rust damage, and to a lesser extent from springtime rains, the additional feed supplies provided by partial or complete grain crop failures produced conditions that were indirectly advantageous to the dairy industry. In the late fall devastating storms swept across the eastern part of the continent and caused much damage to unharvested crops. However, the effect on dairying was inconsiderable. For the Dominion as a whole feed supplies were about equal to those of 1953, but the quality of the hay crop was inferior to that of the previous year.

### THE STATISTICAL POSITION IN 1954

The monthly estimates of milk production for 1954 as shown in the supplement to this report, totaled 16,800 million pounds. However, the addition of milk used in the production of creamed cottage cheese and varieties of factory cheese other than cheddar (not included in monthly totals), placed the over-all total milk production at approximately 16,884 million pounds. This compares with the revised total of approximately 16,449 million pounds in 1953.

It will be noted that dairy butter production fell to still lower levels, the total of 19 1/2 million pounds produced in 1954, compares with 21 million pounds a year earlier. While competition from margarine had some influence, it is significant that declines also occurred in Prince Edward Island and Quebec where the sale of this product is disallowed under Provincial Legislation. Approximately 1,048 million pounds of milk and cream were used in farm homes, while 595 million pounds were fed to livestock. The former showed an increase of 13 million pounds while the latter was reduced by about 15 million pounds. Increased quantities of fluid milk and cream were sold in 1954 compared with 1953. Milk sales at 4,259 million pounds were up 124 million pounds from the previous year, and cream sales at 841 million pounds represented an advance of approximately 9 million pounds. (See page 2 for yearly figures covering factory products).

Farm cash income from the sale of dairy products moved up to 426 million dollars, an increase of 10 million dollars over that of 1953. Of this amount, the increased sales of cream for use in the manufacture of creamery butter added over 3 1/4 million dollars to the total for all products and cheese milk contributed an additional

\* Newfoundland is not included in the monthly dairy farm survey.  
1/ Refers to dairy cows two years old and over.

2 1/2 million dollars. Prices in 1954 were generally lower those of 1953. Fluid milk fell from \$4.39 to \$4.36 per hundred, while cheese milk increased from \$2.14 to \$2.20 per hundred. Creamery butter-fat at 60.5 cents per pound in 1954 compares with 61.2 cents in 1953. All products combined averaged \$2.87 per hundred in terms of milk in comparison with \$2.90 a year ago.

THE DAIRY SITUATION IN JANUARY, 1955

Milk production appears to be continuing at a relatively high level, according to preliminary data from the dairy-farm survey and monthly factory reports. Advance estimates for January indicate that total milk production was approximately 945 million pounds in comparison with 917 million pounds in January 1953, representing an increase of about 3 per cent. Less milk was used on farms. The quantities supplied for farm-home requirements having decreased about 1 1/2 per cent, while milk fed to livestock was 5 per cent less than that of January 1954. Manufactured products on the other hand continued to absorb increased supplies, the total intake being about 3 1/2 per cent higher than that of a year ago. Details covering the milk utilization in factories, by products for the twelve-month period of 1953-1954, and January 1955 compared with January 1954, are shown on the table below:

MILK EQUIVALENTS OF DAIRY FACTORY PRODUCTION

Product	January-December			January		
	1953	1954 *	Percentage Change	1954 *	1955	Percentage Change
	'000 lb.	'000 lb.	%	'000 lb.	'000 lb.	%

\* Revised

1/ Complete data are not available, by months, for publication in current issues of this report.

The estimated number of cows kept mainly for milking purposes on Canadian farms, based on the semi-annual livestock survey of December 1, 1954, amounted to 3,217 thousand as compared with 3,184 thousand of December 1, 1953, represented an increase of 1 per cent. This advance was a considerably smaller rate of increase than that shown in previous surveys. For the twelve-month period ended December 1, 1953, an increase of 6 per cent was indicated, and at June 1, 1954, cow numbers were 3 per cent higher than those of June 1, 1953. It would appear, therefore, that the upward trend in cow numbers is slowing up, and other things being equal, this may signify that milk production during 1955 will remain very close to the 1954 levels.

Results of the dairy-farm survey for the month of January indicate that about 55.2 per cent of the cows reported on dairy farms were being milked in comparison with 56 per cent a year ago. On the other hand, cows in calf increased approximately 3 per cent as compared with the same month last year, suggesting that the spring calf crop may be a little higher than it was in 1954, thereby bringing into production a larger percentage of cows available for milking purposes. The daily milk production per cow averaged 12 pounds based on all cows in the herds of dairy correspondents, and 22 pounds for those actually milked. These averages were fractionally higher than in January, 1954.

Temperatures were generally higher than in January, 1954, though wide variations were reported between provinces and between different sections in the various provinces. In general, it was milder in the Maritime Provinces but considerably colder than last year in the central provinces, parts of Manitoba and Eastern Saskatchewan. On the other hand, temperatures in Western Saskatchewan, Alberta and British Columbia were considerably higher than those of January, 1954. Precipitation throughout the Dominion was somewhat variable. Snowfall in the central provinces was heavy in contrast with the abnormally light snowfall in the previous winter, while in the Prairie Provinces there was less snow than in the same month last year. In British Columbia the rainfall was below normal and considerably less than in January, 1953. There was little apparent relationship between sunshine and precipitation during the month of January. An increase in the total hours of sunshine was reported from Lennoxville, Quebec, Ottawa and Harrow, Ontario, Lethbridge and Beaverlodge, Alberta, whereas at all other stations reporting on weather conditions there was considerably less sunshine than in January, 1954.

#### FARM MILK PRODUCTION, UTILIZATION AND INCOME IN DECEMBER, 1954\*

Farm Milk Production: The estimated quantity of milk produced on farms in December amounted to 1,006,750,000 pounds, an increase of 3.7 million pounds or 0.4 per cent above that of December, 1953. Of this amount, 400 million pounds or 40 per cent was utilized in factory production.

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 446,809,000 pounds in December, an increase of approximately 19 million pounds as compared with December, 1953. This included about 374 million pounds of fluid milk comprising 37 per cent of the farm milk supply, and fluid cream sales of 73 million pounds, representing 7 per cent.

Dairy Butter: The dairy butter make in December amounted to 1,559,000 pounds a decrease of 13 per cent from December, 1953. The Prairies and B.C. were the only provinces where production increased. In terms of milk the December production amounted to approximately 36,480,000 pounds, representing a little over 3 1/2 per cent of the total milk production of Canada.

Farm Cash Income: Cash income from the sale of dairy products in December amounted to \$27,978,000. This represented an increase of approximately 0.9 per cent or \$244,000 in comparison with the same month last year. The weighted average price of \$3.29 per hundred pounds of milk remained the same as in the corresponding month of 1953. Fluid milk at \$4.39 per hundred was 3 cents lower than December, 1953. Creamery butter-fat decreased from 63.7 to 62.7 cents per pound, while dairy butter at 57 cents was 3 cents lower than December, 1953. Milk used in manufacture at \$2.60 per hundred remained the same as December, 1953. Cheese milk decreased to \$2.41 per hundred, a decrease of 27 cents per hundred in comparison with the same month a year earlier.

\* Data for Newfoundland are not available.

PRODUCTION, DISTRIBUTION AND PRICES OF DAIRY PRODUCTS IN DECEMBER, 1954

Butter: Total butter production (including creamery, dairy and whey butter) amounted to 14 1/2 million pounds in December, 1954. This represented a decrease of 3/4 million pounds or 5 per cent as compared with the same month last year. The January-December output of 334 1/4 million pounds was 3 per cent above the total of the same period of the previous year.

Stock Holdings: Holdings of butter in store and transit, which amounted to 103 1/4 million pounds at December 1, declined to 91 1/4 million pounds on January 1. Compared with those of a year ago, the stocks at December 1, showed an increase of approximately 20 1/2 million pounds, while those of January 1, increased 19 3/4 million pounds.

The Butter Supply: The quantity of butter represented by stocks on December 1, production and imports during the month, amounted to 117 3/4 million pounds. This was an increase of 20 million pounds as compared with last year.

Domestic Disappearance: The domestic disappearance of butter in December including creamery, dairy and whey butter, amounted to 26 3/4 million pounds, an increase of less than 1/4 million pounds. On a per capita basis the domestic disappearance amounted to 1.75 pounds as compared with 1.80 pounds a year ago. During the January-December period the domestic disappearance of total butter amounted to 314 1/2 million pounds as compared with 308 3/4 million pounds in the same period of 1953; and the per capita disappearance of 20.69 pounds may be compared with 20.88 pounds a year earlier.

Butter Prices at Montreal: Butter prices at Montreal, based on quotations of the Canadian Commodity Exchange for first grade solids, averaged 61 cents per pound in December, the same as that reported for December, 1953.

Cheese Production: Cheddar Cheese production in December, 1954 amounted to 2 1/2 million pounds, an increase of 17 thousand pounds or 1 per cent more than that produced in December, 1953.

Cheese Prices: Ontario colored cheese at Montreal averaged 31 1/2 cents per pound in December, 1954. This compared with 34 5/8 cents in December, 1953.

Concentrated Milk Products: The total quantity of concentrated milk products manufactured in December was approximately 21 million pounds, which represented a decrease of 1 3/4 million pounds in comparison with the same month last year. Concentrated whole milk products declined 1 1/4 million pounds, while by-products registered a decrease of 1/2 million pounds. Evaporated milk, one of the most important of the whole milk products decreased 1 1/4 million pounds and the production of skim milk powder, the leading milk by-product, was 1/2 million pounds below the output of December, 1953.

Ice Cream: The quantity of ice cream manufactured in December was approximately 1 1/2 million gallons, an increase of 20 thousand gallons in comparison with the December production a year earlier. Production during the twelve-month period January-December amounted to 28,642,000 gallons. This represented a decrease of 167 thousand gallons as compared with that produced in the same period of 1953.

\* Data for Newfoundland are not available.

1/ Total milk production by months does not include the milk equivalent of factory cheese other than cheddar, shown in the annual statement.

a/ Includes milk equivalent of concentrated milk products reported by less than three firms. (See footnote "x/" in Table 4).

2/ Statistics for the separate provinces shown under this caption do not include data for products manufactured in those provinces indicated by footnote "x/" in table 4, but are included in the Canada total at the top of this column.

3/ Includes fluid milk and fluid cream expressed as milk.

APPENDIX

CONVERSION RATES

N.B. To obtain the butter-fat or milk equivalent, multiply the gallons or pounds of product by the conversion rates shown under respective headings below.

<u>lb. Product</u>	<u>Lb. B.F.*</u>	<u>Lb. Milk</u>
Butter.....	.82	23.4
Cheese (Cheddar and other factory cheese made from whole milk).....	.38	11
Ice Cream (gallons).....	.60	17
Cottage Cheese (creamed).....	.03	.86
Cream Cheese.....	.36	10.3
Condensed Milk.....	.08	2.3
Evaporated Milk.....	.08	2.3
Whole Milk Powder.....	.28	8.0
Cream Powder.....	.735	21.0
Malted Milk.....	.087	2.5
Condensed Coffee.....	.078	2.22
Condensed Skim Milk.....	- Skim Milk	3
Exporated Skim Milk.....	- " "	3
Skim Milk Powder.....	- " "	11
Casein.....	- " "	33
Cottage Cheese.....	- " "	7
Condensed Buttermilk.....	- Buttermilk	3
Buttermilk Powder.....	- "	12
Lactose (Sugar of Milk).....	- Whey	22
Whey Powder.....	- "	20.00

\* Butter-fat is converted to milk testing 3.5 per cent.
