SPECIAL SUPPLEMENT

Introduction Revised Statistics - Domestic Disappearance of Dairy Products	1
Index Revised Statistics, 1940 to 1949	1
Tables I to IV Domestic Disappearance of Dairy Products (Canada) 1940 to 1949 in terms of Milk and in terms of the Product; and Domestic Disappearance of Ice Cream and Fluid Products (by Provinces) for the same years.	2 to 6

THE DAIRY SITUATION IN OCTOBER, 1955

Based on advance indications the total milk production of Canada is estimated at approximately 1,507 million pounds for the month of October, exceeding that of the previous October by almost 10 per cent, and surpassing that produced in the same month in the five previous years. The seasonal decline from September to October was slightly greater than usual, though less than in 1954. The utilization of milk on farms in October was about 2 1/2 per cent higher than that of October last year. Dairy butter production continued to decline, but the reduced quantity of milk employed for this purpose was more than offset by additional amounts used for direct consumption in farm homes and for livestock feeding. The total factory intake of milk in October reached an all-time high of 874 million pounds, surpassing that of the previous October by nearly 13 per cent. It will be seen from the table below that all products contributed to this advance, and one important feature of the milk utilization pattern was a 21 per cent increase in the amount used for concentration.

MILK EQUIVALENTS OF DAIRY FACTORY PRODUCTION

Product	October			January-October		
	1954	1955	Percentage Change	1954	1955	Percentage Change
Creamery Butter	1'000 lb.	1'000 lb.	%	1'000 lb.	1'000 lb.	%
Creamery Butter	596,794	675,160	(+) 13.1	6,621,825	6,673,634	(+) 0.8
Cheddar Cheese	84,909	90,915	(+) 7.1	852,775	787,600	(-) 7.6
Concentrated Milk Products	63,261	76,445	(+) 20.8	775,450	824,177	(+) 6.3
Ice Cream	30,481	31,824	(+) 4.4	432,055	499,154	(+) 15.5
TOTAL	775,445	874,344	(+) 12.3	8,682,105	8,784,565	(+) 1.2

The numbers of cows used mainly for milking purposes, based on month-to-month indications from the dairy-farm surveys, showed an increase of 2 per cent over October, 1954, which was about the same relationship to last year as that reported for the two previous months. The estimate of October 15th (3,288,000) represents a slight reduction as compared with the numbers reported in the semi-annual Livestock Survey of June 1, 1955, but an increase compared with December 1, 1954. Cows actually milked in October registered a gain of almost 3 1/2 per cent, and the total estimate (2,468,000) represents approximately 74 per cent of the total cow holdings, compared with a little more than 73 per cent in October, 1954. The percentage of cows milked has shown an upward trend since last May, and this feature of the situation has been one of the main factors in maintaining milk production at a relatively high level during the summer and early autumn period. As in the previous month, freshenings were approximately 5 per cent above those of last year, while the numbers in calf were approximately the same as those of October, 1954. Exports to date are well above those of the previous year, and marketings of butcher cows at 177 thousand for the period January-September showed a gain of approximately 11 thousand over those of the nine-month period in the previous year.

The feed situation seems to be quite satisfactory. Fall pastures were very good and the abundance of harvest forage in the Western Provinces has helped to maintain dairy production at a high level. Moreover, uncertainties regarding the marketings of cash grains may have encouraged farmers to keep more than the usual

* Data for Newfoundland are not available.

1/ Based on cows and heifers two years old and over, kept mainly for milking purposes.

number of cows in production, particularly in those areas where other branches of farming are frequently more attractive.

October weather conditions were quite normal, and in comparison with last October temperatures were slightly lower, more particularly in the Maritime Provinces and British Columbia. Rainfall was generally less than last year in the Eastern Provinces, except at Kapuskasing and Ottawa. The total precipitation of 6.8 inches at Ottawa was almost three times the amount recorded in October, 1954. In Western Canada the rainfall was more variable in relation to the previous October, but generally exceeded that of the same month last year. The increased hours of sunshine at many points in the Eastern Provinces corresponded to the light rainfall in these areas, and conversely, the increased rainfall in the Western Provinces generally coincided with a reduction in the hours of sunshine.

FARM MILK PRODUCTION, UTILIZATION AND INCOME IN SEPTEMBER, 1955*

Farm Milk Production: The estimated quantity of milk produced on farms in September amounted to 1,731,670,000 pounds. This represents an increase of 124 million pounds, or 7.7 per cent above that of September, 1954. Of this amount 1,127 million pounds or 65 per cent was utilized in factory production, while fluid milk sales absorbed approximately 442 million pounds or 25.6 per cent of the total milk supply. During January-September the estimated production was 13,506 million pounds, an increase of 190 million pounds more than that produced in the same period of the previous year. The quantity of milk utilized for factory production in January-September amounted to 7,910 million pounds while fluid sales accounted for 3,960 million pounds.

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 442,418,000 pounds in September, an increase of approximately 29 million pounds in comparison with September of the previous year. This included about 374 million pounds of fluid milk, comprising about 21.6 per cent of the farm milk supply, and fluid cream sales of 68 million pounds representing 3.9 per cent. During the nine-month period, January-September, fluid sales totalled 3,959,983,000 pounds, an increase of 173 million pounds or approximately 4.6 per cent over those of the 1954 period.

Dairy Butter: The dairy butter make in September amounted to 1,635,000 pounds, decreasing 3 per cent from the corresponding month in 1954. Prince Edward Island, Quebec and Manitoba were the only provinces in which production did not decline. For the nine months, January-September, 13,952,000 pounds were produced, a drop of 4 per cent from the same period last year.

Farm Cash Income: Cash income from the sale of dairy products in September amounted to \$43,004,000. This represented an increase of approximately 8.3 per cent or \$3,294,000 in comparison with the same month last year. The weighted average price of \$2.73 per hundred pounds of milk was 1 cent lower than in September 1954. Fluid milk at \$4.31 per hundred was 4 cents lower than September 1954. Creamery butter-fat increased from 59.7 cents to 60.2 cents per pound, and dairy butter at 58 cents was 1 cent higher than in September 1954. Milk used in manufacture decreased from \$2.59 per hundred in September 1954, to \$2.58 per hundred in September 1955. Cheese milk was reduced to \$2.20 per hundred, a decrease of 5 cents per hundred in comparison with the same month a year earlier.

* Data for Newfoundland are not available.

PRODUCTION, DISTRIBUTION AND PRICES OF DAIRY PRODUCTS IN SEPTEMBER, 1955

Butter: Total butter production (including creamery, dairy and whey butter) amounted to 38 3/4 million pounds in September, 1955. This represented an increase of 2 1/2 million pounds or 7 per cent as compared with the same month last year. The January-September output of 271 1/2 million pounds was 1 per cent below the total of the same period of the previous year.

Stock Holdings: Holdings of butter in store and transit, which amounted to 118 3/4 million pounds at September 1, increased to 127 million pounds on October 1. Compared with those of a year ago, the stocks at September 1 showed an increase of approximately 11 1/4 million pounds, while those of October 1 increased 11 1/4 million pounds.

The Butter Supply: The quantity of butter represented by stocks on September 1, production and imports during the month, amounted to 157 1/2 million pounds. This was an increase of almost 13 3/4 million pounds as compared with last year.

Domestic Disappearance: The domestic disappearance of butter in September, including creamery, dairy and whey butter, amounted to 30 1/2 million pounds, an increase of 2 1/4 million pounds. On a per capita basis the domestic disappearance amounted to 1.98 pounds as compared with 1.87 pounds a year ago. During the January-September period the domestic disappearance of total butter amounted to 235 1/4 million pounds as compared with 229 1/4 million pounds in the same period of 1954; and the per capita disappearance of 15.24 pounds may be compared with 15.08 pounds a year earlier.

Butter Prices at Montreal: Butter prices at Montreal, based on quotations of the Canadian Commodity Exchange for first grade solids, averaged 58 cents per pound in September, the same as last year.

Cheese Production: Cheddar Cheese production in September, 1955 amounted to 10 1/2 million pounds, an increase of 251,000 pounds, 2 per cent more than that produced in September, 1954.

Cheese Prices: Ontario coloured cheese at Montreal averaged 30 1/2 cents per pound in September, 1955. This compared with 31 1/4 cents in September, 1954.

Concentrated Milk Products: The total quantity of concentrated milk products manufactured in September was approximately 53 1/4 million pounds, which represented an increase of 12 1/4 million pounds in comparison with the same month last year. Concentrated whole milk products increased 10 1/4 million pounds, while by-products increased approximately 2 million pounds. Evaporated milk, one of the most important of the whole milk products, increased 9 1/2 million pounds and the production of skim milk powder, the leading milk by-product, was 2 million pounds above the output of September, 1954.

Ice Cream: The quantity of ice cream manufactured in September was approximately 2 1/2 million gallons, an increase of 212 thousand gallons in comparison with the September production a year earlier. Production during the nine-month period January-September amounted to 27,490,000 gallons. This represented an increase of 3,868 thousand gallons as compared with that produced in the same period of 1954.

- 1/ Stocks shown under the captions "Jan.-Sept." represent holdings as at October 1, 1951 to 1955.
- 2/ Import data not available subject to revision next month.
- (x) Since stocks and exports exceed the total supply, disappearance data are not shown for the month indicated.

REVISED STATISTICS

(Part 2)

Domestic Disappearance of Whole Milk and Dairy Products - 1940 to 1949

A special supplement attached to the September issue of the "Dairy Review" contained revised statistics of dairy butter production, milk production and utilization, farm value of milk production and farm income from dairying, by Provinces, 1940 to 1949. The basis of these revisions and the methods employed in carrying out the revisions in inter-censal years were explained briefly in the introductory statement.

In this second supplement (Part 2), these revisions are carried into the domestic disappearance of dairy products, both in terms of the product and in terms of milk. Changes in domestic disappearance, or consumption of fluid milk and cream (Table 1), result from substantial increases in the estimates covering the sale of these products, and produce similar revisions in the domestic disappearance statistics for whole milk used in all forms. Minor changes in the conversion rates employed in establishing the milk equivalents of dairy products are of little significance, but serve to explain small differences between these figures and those formerly published. Substantial downward revisions in dairy butter production estimates contributed to adjustments in the domestic disappearance of total butter (including creamery, dairy, and whey butter). Data shown for other products are practically the same as those shown in annual issues of "Dairy Statistics" and the "Quarterly Bulletin of Agricultural Statistics", in which these data were published.

Index to Revised Statistics

N.B. Tables I, II and III show the Domestic Disappearance of Dairy Products (Canada), 1940 to 1949. Table IV shows the Domestic Disappearance of Ice Cream and Fluid Products for the same years (by Provinces).

Footnotes to Tables I, II, and III, are shown on Page 7.

1949	1,556	302,602	1.87	363.70	1.00

Continued on Page 7.

1/ Based on production only.

2/ Includes fluid sales (less allowance of 3 per cent for wastage) together with milk and cream used in farm homes.

TABLE IV. Domestic Disappearance of Ice Cream and Fluid Products, Concluded
Canada, by Provinces, 1940 to 1949

Province and Year	Total		Per Capita		
	Ice Cream ^{1/} '000 Gal.	Fluid milk and cream ^{2/} '000 Pt.	Per Year		Fluid Milk and cream ^{2/} Pt.
			Ice Cream ^{1/} Gal.	Fluid milk and cream ^{2/} Pt.	
Alberta:					
1940	743	242,620	0.94	307.11	0.84
1941	963	225,166	1.22	285.38	0.78
1942	1,018	236,313	1.34	310.94	0.85
1943	1,133	269,886	1.49	355.11	0.97
1944	1,162	276,792	1.50	357.15	0.98
1945	1,042	272,939	1.35	352.63	0.97
1946	1,036	284,016	1.30	355.02	0.97
1947	1,717	276,807	2.08	335.52	0.92
1948	1,891	252,050	2.21	295.14	0.81
1949	1,978	255,817	2.24	289.06	0.79
British Columbia:					
1940	1,206	190,671	1.50	236.86	0.65
1941	1,450	193,887	1.79	239.37	0.66
1942	1,243	220,421	1.46	258.71	0.71
1943	1,488	241,484	1.70	276.61	0.76
1944	1,771	260,922	1.98	291.21	0.80
1945	1,638	265,921	1.80	291.90	0.80
1946	1,525	287,951	1.53	288.23	0.79
1947	2,487	286,679	2.38	274.60	0.75
1948	2,492	284,251	2.30	262.71	0.72
1949	2,416	290,661	2.17	261.15	0.72

1/ Based on production only.

2/ Includes fluid sales (less allowance of 3 per cent for wastage) together with milk and cream used in farm homes.

Reference Notes to Tables I and II

- Table I - 1/ Includes fluid sales (less 3 per cent for wastage), plus milk and cream consumed in farm homes.
 2/ Milk equivalent of cheddar used for processing.
 3/ Excludes farm-made cheese. Data represent varieties of factory cheese made of whole milk or cream, plus creamed cottage cheese.
 4/ Includes the milk equivalent of cream powder, malted milk and concentrated products of a variable fat content.
- Table II - 1/ Data shown for cheddar cheese represent that part of the supply used as such; thus making cheddar additive to process and other cheese to obtain the total domestic disappearance.
 2/ "Other cheese" comprises all varieties made from whole milk and cream, except cheddar.
