THE DAIRY SITUATION IN FEBRUARY, 1957

The downward trend in milk production which has continued since last September was reflected in a more pronounced fashion during the first two months of this year. Based on factory intake and monthly indications as revealed in the dairy-farm survey, the total milk production of the Dominion is estimated at approximately 890 million pounds for February, 1957, representing a decrease of 4½ per cent from the same month of 1956. Most of this decline can be accounted for, ofcourse, by a difference in the length of month between the two years. In January, the estimate of 954 million pounds (see table 3) represented a decrease of 3 per cent from the same month a year ago. This reduction was forecast in the previous report.

In making comparisons with last year it should be remembered that the high level of milk production in 1955 followed closely in line with the upward swing in cow numbers shown at that time. The buoyant position which was indicated throughout the year 1955, continued well into 1956. Had it not been for the backward weather and unsatisfactory forage conditions in the spring period of 1956, the June output might have exceeded the seasonal peak production of the previous June. Owing to the high level of production during the first five months of 1956, more substantial monthly declines from the previous year may be expected during the early part of 1957. Likewise, with the excellent pasture conditions in July and August, 1956, milk production again moved up to a higher level. These facts should be taken into consideration in making comparisons during 1957.

Utilization of milk, in February, showed a further substantial decline in the quantities used for manufacture in dairy factories. Milk used in farm homes declined 3 per cent compared with the same month of the previous year, and a reduction of almost 4 per cent was shown in the quantities fed to livestock. Here again the difference in the length of month will substantially modify percentage changes from the previous February. Factory milk utilization, which represents about 56 per cent of the total milk supply, revealed a substantial reduction in the quantities used for creamery butter and for concentrated milk products in the month of February, in comparison with the same month last year. On the other hand more milk was used for cheddar cheese and ice cream. A complete analysis for February and January and February, 1956 and 1957, is shown in the table below.

MILK EQUIVALENTS OF DAIRY FACTORY PRODUCTION

Product	February			January-February		
	1956	1957	Percentage Change	1956	1957	Percentage Change
	'000 lb.	'000 lb.		'000 lb.	'000 lb.	
Creamery Butter	246,098	193,424	(-) 21.4	521,164	418,672	(-) 19.7
Cheddar Cheese	19,349	21,703	(+) 12.2	41,437	47,493	(+) 15.8
Concentrated Milk Products	45,389	38,084	(-) 16.1	92,494	82,404	(-) 10.9
Ice Cream	28,441	29,053	(+) 2.2	54,315	57,766	(+) 6.4
Totals	339,277	282,264	(-) 16.8	709,410	606,835	(-) 14.5

The numbers of cows on farms in February were approximately the same as those reported in the livestock survey on December 1, but based on monthly indications this would represent a decline of 1 per cent from the same month of the preceeding year.....

\* Data for Newfoundland are not available.

1/ Based on cows and heifers two years old and over, kept mainly for milking purposes.

On December 1, there was practically no change from a year earlier. February indications revealed that 51.3 per cent of the cows reported on the farms of dairy correspondents were being milked as compared with 52.8 per cent a year earlier. Thus, the numbers of cows milked represent a decline of 4 per cent from February, 1956. In December the reduction in the number of cows milked compared with the previous December, was only 2 per cent. Another factor of some consequence is that reported freshenings and cows in calf are lower than a year ago. The former showed a reduction of 5 per cent and the latter  $1\frac{1}{2}$  per cent from February, 1956.

Exports of dairy cattle in February amounted to 1,171 as compared with 2,064 a year earlier, and during the two-month period totalled 2,386 as compared with 3,760 in January and February, 1956. The daily milk production per cow, based on all cows in the herds of dairy correspondents was 12.2 pounds as compared with 12.6 pounds in the same month of the previous year. Based on those actually milked, the average of 23.7 pounds was practically the same as that of a year ago.

February was a mild month throughout Canada, although the differences in temperatures between this February and the previous February were more pronounced in Western Canada than in the Eastern Provinces. Precipitation was generally less than in February, 1956. However, snowfall was abnormally light in the Eastern Provinces, both this winter and in the previous winter, whereas snowfall in the Western part of the Dominion was closer to normal. In L'Assomption, Quebec, snowfall in February, 1956, was the lightest ever recorded at that station, and at Morden, Manitoba, reports indicated that fields were practically bare. It may be concluded that weather conditions in February were generally quite favourable from the stand point of dairy production.

#### FARM MILK PRODUCTION, UTILIZATION AND INCOME IN JANUARY, 1957

Farm Milk Production: The estimated quantity of milk produced on farms in January, 1957 amounted to 954,131 thousand pounds, a decrease of 26 million pounds or approximately 2.7 per cent less than that of January, 1956. Of the total production 325 million pounds or 34 per cent of the total was utilized in factory production.

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 478,743,000 pounds in January, an increase of approximately 23 million pounds or 5 per cent in comparison with last year. This included about 401 million pounds of fluid milk comprising about 42 per cent of the farm milk supply, and fluid cream sales of 77 million pounds in milk equivalent, representing 8 per cent of the total milk output.

Dairy Butter: The dairy butter make in January amounted to 1,249,000 pounds, declining 6% from the corresponding month in 1956. Production in the Maritimes exceeded the output of the previous year but this was offset by decreased production in the Central and Western provinces.

Farm Cash Income: Cash income from the sales of dairy products in January amounted to \$27,775,000. This represented an increase of approximately \$433,000 from last year. The weighted average price of \$3.45 per hundred pounds of milk may be compared with \$3.30 in the corresponding month of 1956. Fluid milk at \$4.47 per hundred was 18 cents per hundred higher than that of January, 1956. Cheese milk at \$2.79 increased 28 cents per hundred pounds of milk, and milk used for manufacturing at \$2.95 increased 20 cents per hundred. Creamery butter-fat increased from 60.1 cents to 60.2 cents per pound, and dairy butter at 59 cents was 1 cent higher than the previous January.

PRODUCTION AND PRICES OF DAIRY PRODUCTS IN JANUARY, 1957

Butter: Total butter production including creamery, dairy and whey butter amounted to 11 million pounds in January, 1957. This was  $2\frac{1}{4}$  million pounds or approximately 17 per cent less than that produced in the same month of the previous year.

Stock Holdings: Holdings of butter in store and transit on February 1 amounted to  $72\frac{3}{4}$  million pounds, approximately  $15\frac{3}{4}$  million pounds less than last year. On January 1, 1957, the stock holdings of  $88\frac{1}{4}$  million pounds represented a decrease of  $12\frac{1}{2}$  million pounds as compared with the previous year.

The Butter Supply: The quantity of butter represented by stocks on January 1, production and imports during the month amounted to  $99\frac{1}{4}$  million pounds in January, 1957. This was a decrease of approximately  $14\frac{3}{4}$  million pounds in comparison with January, 1956.

Domestic Disappearance: The domestic disappearance of butter in January, including creamery, dairy and whey butter, amounted to  $26\frac{3}{4}$  million pounds, an increase of  $3\frac{1}{4}$  million pounds or 14 per cent. On a per capita basis the domestic disappearance amounted to 1.63 pounds as compared with 1.46 pounds a year ago.

Butter Prices at Montreal: Butter prices at Montreal, based on dealers' quotations for first grade solids, averaged 58 cents per pound in January as against 58 cents last year.

Cheese Production: Cheddar cheese production amounted to approximately  $2\frac{1}{2}$  million pounds, representing an increase of about 382 thousand pounds as compared with that produced in the same month of the previous year.

Cheese Prices: The Montreal price of Ontario coloured cheese averaged  $35\frac{3}{8}$  cents per pound in January. The comparative price in 1956 was  $32\frac{1}{4}$  cents.

Concentrated Milk Products: The total quantity of concentrated milk products manufactured in January was approximately  $21\frac{3}{4}$  million pounds, a decrease of  $2\frac{1}{4}$  million pounds as compared with last year. Concentrated whole milk products decreased  $\frac{3}{4}$  million pounds while milk by-products decreased  $1\frac{1}{2}$  million pounds. Evaporated milk, the most important of the whole milk products, showed a decrease of 1 million pounds and the production of skim milk powder, the leading skim milk product, decreased  $\frac{3}{4}$  million pounds.

Ice Cream: The quantity of ice cream manufactured in January was approximately  $1\frac{3}{4}$  million gallons or 167 thousand gallons more than that produced a year ago.

TABLE 6 - FARM CASH INCOME FROM DAIRY PRODUCTS SOLD BY FARMERS 1/

Canada, by Provinces\* , January, 1956 and 1957

\* Data for Newfoundland not available.

1/ All data are based on prices f.o.b. farm.

2/ Income from manufacturing milk is based on the farm sales of milk and cream used in concentration, and in manufacture of ice cream. Thus, comparative data for January, 1956, differ from those published in the Supplement to the Dairy Review for January, 1957, in which cream used in the manufacture of ice cream was separately shown by months for 1956.

(x) Less than five hundred dollars.

\* Data for Newfoundland are not available.

1/ Price averages for all products (column I) include fluid cream prices, not separately reported.

2/ Manufacturing milk prices include milk and cream used in ice cream and in the production of concentrated milk products, all expressed as milk equivalents. Data for January, 1956, are revised from those published for 1956, by months, in the Supplement to the Dairy Review for January, 1957.
