THE DAIRY SITUATION IN SEPTEMBER, 1957

Preliminary estimates of total milk production for Canada in the month of September indicate that about 1,681 million pounds of milk was produced, representing an increase in total milk production of 5.4 per cent over September of last year. This production increase would be sufficient to bring January to September cumulative total milk production to 13,673 million pounds, one half of one per cent greater than total production at this time last year.

The general pattern of milk utilization displayed by January to September cumulative figures in the table below remains similar to the last few months. However, reflecting increased total milk production, the January-September cumulative production of creamery butter moved closer to cumulative butter production at the same time last year because of the increase of 8.4 per cent in September production, compared to September 1956. Although cumulative cheese production was still much above last year, the September increase of 4.9 per cent was the smallest since last March. Contrary to the pattern of previous months, utilization of milk for the production of concentrated milk products was lower than in September 1956.

MILK EQUIVALENTS OF DAIRY FACTORY PRODUCTION

Indications from the "Dairy Correspondent's Survey" are that milk consumed on the farm will continue to be below that of last year. The cumulative figures suggest less than a 3 per cent decrease in farm home consumed milk. The slight decline in milk fed to livestock compared with September last year is contrasted with the much sharper decline that took place in July and August. Production of dairy butter is estimated to have been lower than September last year.

Cow numbers were estimated to be the same as last year by the monthly farm survey. While cows milked showed a slight increase for September, compared with last year, production per cow increased very noticeably, supporting the above indications of increased total milk production.

* Data for Newfoundland are not available.

1/Based on cows and heifers two years old and over, kept mainly for milking purposes.

In the early part of September pastures were beginning to recover from the August drought which had adversely affected grazing in the Maritimes, Prairies and parts of Quebec and Ontario. The weather across Canada, according to reports from federal experimental farms was about 4 degrees warmer than last September and generally more summy days were observed. The Maritimes, Quebec, Ontario and Manitoba had more rain than last year while the remaining three provinces experienced comparatively drier weather. September pasture conditions were good across most of Canada.

FARM MILK PRODUCTION, UTILIZATION AND INCOME IN AUGUST, 1957*

Farm Milk Production: The estimated quantity of milk produced on farms in August amounted to 1,910,121,000 pounds. This represents an increase of 49 million pounds or 2.7 per cent above that of August, 1956. Of this amount 1,259 million pounds or about 66 per cent was utilized in factory production, while fluid sales absorbed approximately 485 million pounds or 25.4 per cent of the total milk supply. During January-August production was estimated at 11,993 million pounds, a decrease of 18 million pounds in comparison with the same period of the previous year. The quantity of milk utilized for factory production in January-August amounted to 6,753 million pounds, while fluid sales accounted for 3,816 million pounds.

Fluid Sales: During August sales of fluid milk and cream (the latter expressed as milk) amounted to 485,016,000 pounds, an increase of approximately 25 million pounds or 5.3 per cent in comparison with the previous August. This included about 402 million pounds of fluid milk, comprising about 21.1 per cent of the farm milk supply and fluid cream sales of 83 million pounds representing 4.3 per cent. During the eight month period, January-August, fluid sales totalled 3,816,385,000 pounds which was about 136 million pounds or 3.7 per cent over those of January-August, 1957.

<u>Dairy Butter</u>: The dairy butter make in August amounted to 1,675,000 pounds decreasing fractionally from the corresponding month in 1956. Production declines occurred in the Maritimes, Ontario, Manitoba and Alberta. For the eight months, January-August 11,650,000 pounds were produced, a decrease of 6 per cent from the same period last year.

Farm Cash Income: Cash income from the sale of dairy products in August amounted to \$49,647,000. This represented an increase of 8.4 per cent or \$3,843,000 in comparison with the same month last year. The weighted average price of \$2.84 per hundred pounds of milk was 13 cents higher than in August, 1956. Fluid milk at \$4.49 per hundred was 24 cents higher than that of August, 1956. Creamery butterfat increased from 59.4 cents to 68.5 cents per pound, and dairy butter at 58 cents was 1 cent higher than in August, 1956. Milk used in manufacture increased from \$2.53 per hundred in August, 1956 to \$2.76 per hundred in August, 1957. Cheese milk advanced to \$2.58 per hundred, an increase of 13 cents per hundred in comparison with the same month a year earlier.

* Data for Newfoundland are not available.

PRODUCTION, DISTRIBUTION AND PRICES OF DAIRY PRODUCTS IN AUGUST, 1957

Butter: Total butter production (including creamery, dairy and whey butter) amounted to 41 1/2 million pounds in August, 1957. This represented an increase of 1/2 million pounds or 1 per cent as compared with the same month last year. The January-August output of 220 1/4 million pounds was 6 per cent below the total for the same period of the previous year.

Stock Holdings: Holdings of butter in store and transit, which amounted to 74 million pounds at August 1, advanced to 83 1/2 million pounds on September 1. Compared with those of a year ago, the stocks at August 1, showed a decrease of approximately 31 1/4 million pounds, while those of September 1, declined 32 1/2 million pounds.

The Butter Supply: The quantity of butter represented by stocks on August 1, production and imports during the month, amounted to 115 1/2 million pounds. This was a decrease of approximately 30 3/4 million pounds as compared with last year.

Domestic Disappearance: The domestic disappearance of butter in August including creamery, dairy and whey butter, amounted to 31 3/4 million pounds, an increase of 1 3/4 million pounds. On a per capita basis the domestic disappearance amounted to 1.94 pounds as compared with 1.87 pounds a year ago. During the January-August period the domestic disappearance of total butter amounted to 225 million pounds as compared with 216 1/2 million pounds in the same period in 1956; and the per capita disappearance of 13.77 pounds may be compared with 13.47 pounds a year earlier.

Butter Prices at Montreal: Butter prices at Montreal, based on dealers' quotations for first grade solids, averaged 60 cents per pound in August as against 56 1/2 cents in the same month of the previous year.

<u>Cheese Production</u>: Cheddar Cheese production in August, 1957 amounted to approximately 12 3/4 million pounds, an increase of 3/4 million pounds or 7 per cent above that produced in August, 1956.

<u>Cheese Prices</u>: Ontario coloured cheese at Montreal averaged 35 3/8 cents in August, 1957. This compares with 34 1/2 cents in August, 1956.

<u>Concentrated Milk Products</u>: The total quantity of concentrated milk products manufactured in August was approximately 67 1/2 million pounds, which represented an increase of 14 million pounds in comparison with the same month a year earlier. Concentrated whole milk products advanced 6 3/4 million pounds, while by-products registered an increase of 7 1/4 million pounds. Evaporated milk, one of the most important of the whole milk products increased 6 3/4 million pounds and the production of skim milk powder, the leading milk by-product, was 7 1/2 million pounds above the output of August, 1956.

Ice Cream: The quantity of ice cream manufactured in August was approximately 4 1/2 million gallons, a decrease of 66 thousand gallons in comparison with the output of August, 1956. Production during the eight month period January-August amounted to 26,043,000 gallons. This represented an increase of 1,270 thousand gallons as compared with that produced in the same period last year.

Canada, by Provinces*, January-August, 1956 and 1957

* Data for Newfoundland are not available.

1/ Total milk production by months does not include the milk equivalent of factory cheese other than cheddar, shown in the annual statement.

2/ Data shown in this column include creamery butter, cheddar cheese, concentrated milk products and ice cream.

3/ Includes fluid milk and fluid cream expressed as milk.

4/ A revision has been made in July 1957 total fluid sales. The effect of this revision has been carried through total fluid sales to total production.

Canada, by Provinces*, August 1956 and 1957

* Data for Newfoundland are not available.

1/ All data are based on prices f.o.b. farm.

2/ Income from manufacturing milk is based on the farm sales of milk and cream used in concentration, and in the manufacture of ice cream. Thus, comparable data for August, 1956 differ from those published in the supplement to the Dairy Review for January, 1957, in which cream used in the manufacture of ice cream was separately shown by months for 1956.

Canada, by Provinces*, August 1956 and 1957

* Data for Newfoundland are not available.

1/ Price average for all products include fluid cream prices, not separately reported.

2/ Manufacturing milk prices include milk and cream used in ice cream and in the production of concentrated milk products, all expressed as milk equivalents. Data for August, 1956, are revised from those published for 1956, by months, in the supplement to the Dairy Review for January, 1957.
