DECEMBER 1958

Price \$2.00 per year

THE DAIRY SITUATION, DECEMBER 1958

The preliminary estimate of total milk production in Canada during December, at approximately 1,092,000,000 pounds, indicated a 2.7 per cent increase over milk production in December 1957. Total milk production for the year, including an annual estimate for milk used in the manufacture of types of cheese other than cheddar, amounted to about 18,100,000,000 lb., 5 per cent more than milk production in 1957. This represents a record level for milk production which may be considered the outstanding feature of dairy statistics in 1958.

The record milk production during the year was reflected in an 11 per cent increase over last year in the amount of milk used for the manufacture of creamery butter. In December, creamery butter production exceeded the same month in 1957 by only 2.6 per cent, a much less marked increase over the same month last year than during earlier months of 1958. The diminished differential may be explained in part by the less pronounced increase in milk production during the last few months; by the fact that milk production during the last few months of 1957 did not show quite the usual seasonal decline; and by the increased utilization of milk for cheddar cheese. Cheddar cheese production in the summer months was sharply lower than the same months a year earlier but the difference diminished in the fall months until by December. 2 per cent more milk went into the manufacture of cheddar cheese, than in December 1957. The utilization of milk for concentrated whole milk products, particularly evaporated milk, also recovered sharply in December with 11 per cent more milk being used than in December 1957. Ice cream production appears to have increased roughly in proportion to the increase in population as shown by the 2.6 per cent increase of 1958 production over that in 1957. The weather in 1958 was favourable for ice cream consumption in the western provinces but dull weather appeared to have a retarding effect on consumption in Eastern Canada. The utilization of milk by dairy factories both in December and during the whole year, increased over the corresponding period a year ago by a greater percentage than did total milk production.

Wilk Equivalents of Dairy Factory Production

		December		Jan	uary - Decem	ber	
Product	1957	1958	Percentage Change	1957	1958		entage inge

Concentrated Whole Milk Products Ice Cream	47,403	52,710 34,051	(+) 11.2 (+) 9.8	1,004,523 596,955	1,018,334	(+)	1.4
TOTAL	456,521	474,366	(+) 3.9	9,752,017		(+)	7.5

Fluid milk and cream sales on the other hand, had a smaller increase in milk utilization than the general increase in milk production. Although fluid milk and cream sales are associated more directly with population, and so could not be expected to increase as sharply as total milk production, the preliminary estimate indicates that in 1958 fluid sales increased only about 2 per cent, which is less than the percentage increase of population. In November, fluid sales actually were almost 2 per cent below November 1957. For the purpose of the tentative estimate, fluid sales in December were considered to have increased over December 1957 by the same margin as the September-November period increased over the corresponding period in 1957, about 2 per cent.

Indications from the dairy correspondents survey are that slightly less milk was consumed in farm homes in December than in the same month a year ago, but during the year as a whole almost one per cent more milk was consumed in farm homes than in 1957. In December, for the fourth consecutive month, at least 10% more milk was fed to livestock than in the same month a year earlier. Because only a limited number of calves are fed in the fall months, 1958 ended with only 4 per cent more milk being fed to calves than in 1957. Dairy Butter production continues to decrease and the preliminary estimate from dairy correspondents reports in 1958 is that about 6 per cent less butter was made on farms in 1958 than in 1957. Cow numbers and cows milked on reporting farms were at approximately the same level as last year but milk production per cow was higher.

FARM MILK PRODUCTION, UTILIZATION AND INCOME IN NOVEMBER, 1958

Farm Milk Production: The estimated quantity of milk produced on farms in November amounted to 1,176,275,000 pounds. This represents a decrease of 11 million pounds or 0.9 per cent below that of November, 1957. Of this amount, 576 million pounds or 50 per cent was utilized in factory production, while fluid sales absorbed approximately 451 million pounds or 38 per cent of the total milk supply. During January-November the estimated production was 16,915 million pounds, an increase of 812 million pounds more than that produced in the same period of the previous year. The quantity of milk utilized for factory production in January-November amounted to 10,005 million pounds while fluid sales accounted for 5,018 million pounds.

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 450,636,000 pounds in November, a decrease of approximately 8 million pounds in comparison with November of the previous year. This included about 379 million pounds of fluid milk, comprising about 32.2 per cent of the farm milk supply, and fluid cream sales of 71 million pounds representing 6.1 per cent. During the eleven month period, January-November, fluid sales totalled 5,017,561,000 pounds, an increase of 84 million pounds or approximately 1.7 per cent over those of the 1957 period.

Dairy Butter: The dairy butter make in November amounted to 994,000 pounds, decreasing 6 per cent in comparison with the corresponding month in 1957. For the eleven months, January-November, 11,009,000 pounds were produced, a decrease of 5 per cent from the same period last year.

Farm Cash Income: Cash income from the sale of dairy products in November amounted to \$34,252,000. This represented a decrease of approximately 0.2 per cent or \$67,000 in comparison with the same month last year. The weighted average price of \$3.33 per hundred pounds of milk was 4 cents higher than in November, 1957. Fluid milk at \$4.73 per hundred was 4 cents higher than November, 1957. Creamery butterfat increased from 64.1 cents to 66.3 cents per pound, and dairy butter at 63 cents was 4 cents higher than in November, 1957. Milk used in manufacture declined from \$3.05 per hundred in November, 1957, to \$3.02 per hundred in November, 1958. Cheese milk advanced to \$2.79 per hundred, an increase of 7 cents per hundred in comparison with the same month a year earlier.

PRODUCTION AND PRICES OF DAIRY PRODUCTS IN NOVEMBER, 1958

BUTTER

Production: Total butter production including creamery, dairy and whey butter amounted to 19.9 million pounds in November, 1958. This was 0.3 million pounds or approximately 2 per cent less than that produced in the same month of the previous year.

Stocks: Holdings of butter in store and transit on December 1 amounted to 106.8 million pounds, approximately 24.9 million pounds more than last year. On November 1, 1958, the stock holdings of 114.1 million pounds represented an increase of 23.3 million pounds as compared with the previous year.

Supply: The quantity of butter represented by stocks on November 1, plus production and imports during November, amounted to 134.0 million pounds. This was an increase of approximately 23.0 million pounds in comparison with November, 1957.

Domestic Disappearance: The domestic disappearance of butter in November including creamery, dairy and whey butter, amounted to 27.2 million pounds, a decrease of 1.9 million pounds or 7 per cent. On a per capita basis the domestic disappearance amounted to 1.61 pounds as compared with 1.75 pounds a year ago.

Prices: Butter prices at Montreal, based on dealers' quotations for first grade solids, averaged 63½ cents per pound in November as against 62 cents last year.

CHEDDAR CHEESE

Production: Cheddar cheese production amounted to approximately 4.9 million pounds, representing a decrease of about 0.3 million pounds as compared with that produced in the same month of the previous year.

Prices: The Montreal price of Ontario coloured cheese averaged 351 cents per pound in November. The comparative price in 1957 was 35 3/8 cents.

CONCENTRATED MILK PRODUCTS

The total quantity of concentrated milk products manufactured in November was approximately 33.7 million pounds, an increase of 5.7 million pounds as compared with last year. Concentrated whole milk products increased 3.1 million pounds while milk by-products increased 2.6 million pounds. Evaporated milk, the most important of the whole milk products, showed an increase of 4.2 million pounds and the production of skim milk powder, the leading skim milk product, increased 2.7 million pounds.

ICE CREAM

The quantity of ice cream manufactured in November was approximately 2.0 million gallons or 53 thousand gallons more than that produced a year ago.

TABLE 3

Milk Production and Utilization, Canada, by Provinces, November, 1957 and 1958

(Monthly estimates of total milk production do not include the milk equivalent of creamed cottage cheese or factory cheese other than cheddar. Milk equivalent of factory products reported by less than three firms in any province is excluded from the respective provincial total but is included in the Canada totals.)
