JULY 1958

Price \$2.00 per year

THE DAIRY SITUATION, JULY 1958

Total milk production in Canada during July is tentatively estimated at 2,130,000,000 pounds, 6.2 per cent greater than total milk production in July 1957. The cumulative January to July figure exceeded total milk production for the same period last year by 7.2 per cent to reach a total of 10,621,000,000 pounds for the first seven months of 1958.

The manufacture of dairy factory products in July utilized 8.7 per cent more milk than in the corresponding month in 1957. Compared to the corresponding months last year the sharp increase in milk going into creamery butter and the decline of milk used for cheddar cheese, has been the outstanding feature of milk utilized for dairy factory products in 1958. Ice cream production appears to have suffered from the cool spring and summer experienced in most parts of Canada and is only slightly higher than January to July production in 1957. More detailed information about the militation of milk for manufactured dairy products appears below.

		July			January-July			
Product	1957	1958	Percentage Change	1957	1958	Percentage Change

Milk Equivalents of Dairy Factory Production

Fluid sales in June exceeded the corresponding month in 1957 only slightly, perhaps due to one less week-end occuring in June 1958. July in both years had four week-ends so, for the purposes of the tentative estimate, July fluid sales were estimated to have exceeded the same month last year by about 2 per cent, the increase shown by the April-June period of 1958 over the same period a year earlier.

Indications from the Dairy Correspondents survey are that in July, 1.7 per cent less milk was fed to livestock and about the same amount of milk was consumed in farm homes as in the corresponding month in 1957. Cumulative January to July figures show increases of 1.2 per cent in milk consumed in farm homes and 1.7 per cent in milk fed to livestock compared with the same period last year.

The monthly survey also indicated that cow numbers on reporting farms were about one per cent in July but cows milked remained about the same as last year. Milk production per cow milked, as in past months, remained sharply higher than the corresponding figure a year earlier.

Pasture conditions generally were quite good for July, showing improvement in some areas and deterioration in others. Pastures in Prince Edward Island, New Brunswick, Quebec and parts of Alberta remained good. In Ontario, Manitoba, and Saskatchewan, pastures improved somewhat during July. In Saskatchewan the increased moisture was insufficient to revive pastures completely but the relief from extreme drought conditions was very welcome. Nova Scotia and British Columbia experienced some deterioration in pastures through lack of moisture.

Haying neared completion in most provinces by the end of July. Some delay was experienced in New Brunswick and Quebec where rains and weed growth affected hay quality. Yields generally were normal to below normal. In the Maritimes and Quebec hay yields were good. Yields in Ontario, although below normal, were higher than had been anticipated. On the Prairies, particularly Saskatchewan and Manitoba, the hay crop was very poor; and supplementary fodder crops were seeded. Hay yields in Alberta were short but still better than in the other two prairie provinces. Warm sunny weather in British Columbia facilitated the storage of a normal hay crop.

FARM MILK PRODUCTION, UTILIZATION AND INCOME IN JUNE, 1958

Farm Milk Production: The estimated quantity of milk produced on farms in June amounted to 2,126,281,000 pounds. This represents an increase of 101 million pounds or 5 per cent above that of June, 1957. Of this amount, 1,499 million pounds or 70 per cent was utilized in factory production, while fluid sales absorbed approximately 446 million pounds or 21 per cent of the total milk supply. During January-June the estimated production was 8,491 million pounds, an increase of 587 million pounds more than that produced in the same period of the previous year. The quantity of milk utilized for factory production in January-June amounted to 4,634 million pounds while fluid sales accounted for 2,748 million pounds.

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 446,033,000 pounds in June, an increase of approximately 1.6 million pounds in comparison with June of the previous year. This included about 371 million pounds of fluid milk, comprising about 17.4 per cent of the farm milk supply, and fluid cream sales of 75 million pounds representing 3.5 per cent. During the six month period, January-June, fluid sales totalled 2,747,557,000 pounds, an increase of 59 million pounds or approximately 2.2 per cent over those of the 1957 period.

Dairy Butter: The dairy butter make in June amounted to 1,092,000 pounds, decreasing 9 per cent with the corresponding month in 1957. For the six months, January-June, 5,884,000 pounds were produced, a decrease of 2 per cent with the same period last year.

Farm Cash Income: Cash income from the sale of dairy products in June amounted to \$55,168,000. This represented an increase of approximately 10.0 per cent or \$5,034,000 in comparison with the same month last year. The weighted average price of \$2.83 per hundred pounds of milk was 11 cents higher than in June, 1957. Fluid milk at \$4.58 per hundred was 13 cents higher than June, 1957. Creamery butter-fat increased from 60.5 cents to 66.3 cents per pound, and dairy butter at 62 cents was 3 cents higher than in June, 1957. Milk used in manufacture increased from \$2.68 per hundred in June 1957, to \$2.77 per hundred in June, 1958. Cheese milk declined to \$2.51 per hundred, a decrease of 2 cents per hundred in comparison with the same month a year earlier.

PRODUCTION AND PRICES OF DAIRY PRODUCTS IN JUNE, 1958

BUTTER

Production: Total butter production including creamery, dairy and whey butter amounted to 49.7 million pounds in June 1958. This was 5.1 million pounds or approximately 12 per cent more than that produced in the same month of the previous year.

Stocks: Holdings of butter in store and transit on July 1 amounted to 67.0 million pounds, approximately 7.7 million pounds more than last year. On June 1, 1958, the stock holdings or 44.9 million pounds represented an increase of 1.5 million pounds as compared with the previous year.

Supply: The quantity of butter represented by stocks on June 1, plus production and imports during June, amounted to 94.7 million pounds. This was an increase of approximately 6.7 million pounds in comparison with June, 1957.

Domestic Disappearance: The domestic disappearance of butter in June including creamery, dairy and whey butter, amounted to 27.7 million pounds, a decrease of 1.0 million pounds or 3 per cent. On a per capita basis the domestic disappearance amounted to 1.64 pounds as compared with 1.73 pounds a year ago.

Prices: Butter prices at Montreal, based on dealers' quotations for first grade solids, averaged 62% cents per pound in June as against 58 cents last year.

CHEDDAR CHEESE

Production: Cheddar cheese production amounted to approximately 13.9 million pounds, representing a decrease of about 1.7 million pounds as compared with that produced in the same month of the previous year.

CONCENTRATED MILK PRODUCTS

The total quantity of concentrated milk products manufactured in June was approximately 83.7 million pounds, an increase of 7.7 million pounds as compared with last year. Concentrated whole milk products decreased 0.9 million pounds while milk by-products increased 8.6 million pounds. Evaporated milk, the most important of the whole milk products, showed a decrease of 0.7 million pounds and the production of skim milk powder, the leading skim milk product, increased 8.3 million pounds.

ICE CREAM

The quantity of ice cream manufactured in June was approximately 3.9 million gallons or 474 thousand gallons less than that produced a year ago.

Milk Production and Utilization, Canada, by Provinces, June 1957 and 1958

TABLE 5

(Monthly estimates of total milk production do not include the milk equivalent of creamed cottage cheese or factory cheese other than cheddar. Milk equivalent of factory products reported by less than three firms in any province is excluded from the respective provincial total but is included in the Canada totals.)
