LIBRARY

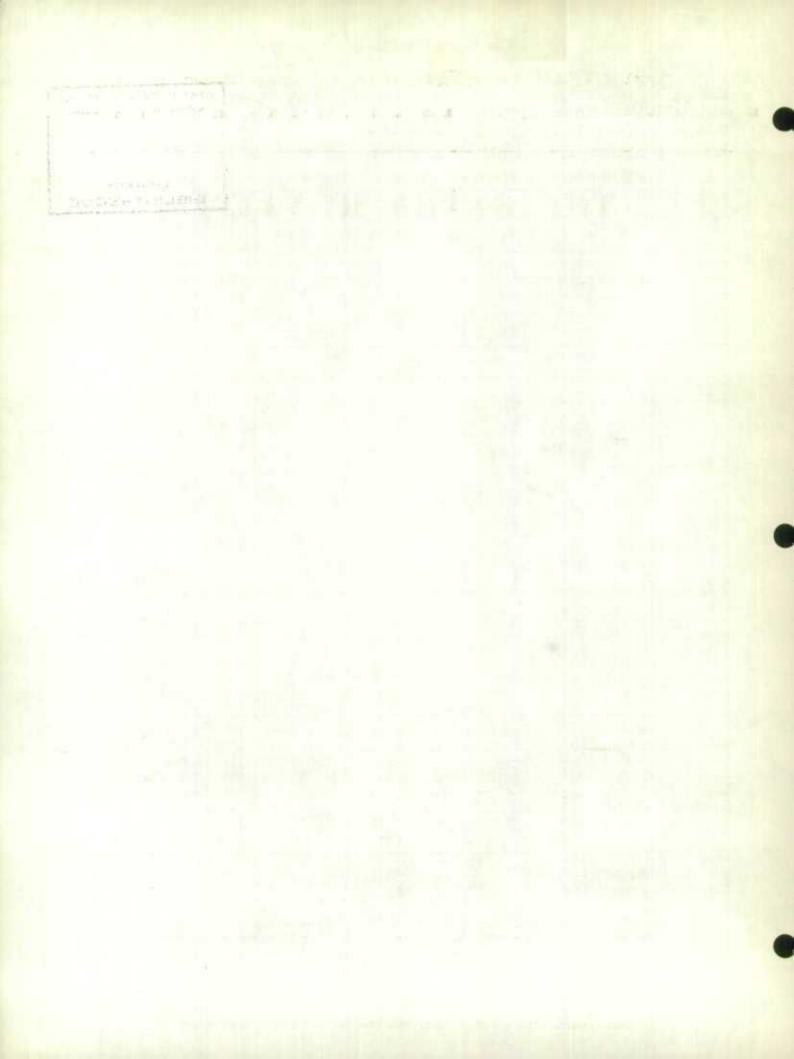

THE DAIRY REVIEW BLIOTHEOUE

Volume No. XIX Report No. 5

AUGUST 1958

Price \$2.00 per year

Total milk production in August, according to the preliminary estimate, reached about 1,884,000,000 pounds. This was an increase of less than one half per cent from August 1957 and the smallest rate of increase shown in corresponding monthly comparisons this year. Cumulative January to August total milk production however, at 12,445,000,000 pounds, was greater than the corresponding 1957 figure, by 5.6 per cent.

The diminished spread between August 1957 and August 1958 total milk production estimates was reflected, as the first monthly comparison this year on which fractionally less milk was used for the manufacture of dairy factory products than in the corresponding month of 1957. Creamery butter manufacture showed the smallest increase over last year of any month this far in 1958. The decrease in the utilization of milk for cheddar cheese and concentrated milk production in August compared to August 1957 was greater than the like comparison of any other month in 1958. Production of ice cream rallied in July and August to use more milk than in July and August last year. Nevertheless, on a cumulative basis, only the manufacture of cheddar cheese has used less milk than a year ago. The table below shows more details of the utilization of milk for dairy factory products. August and January to August. 1958.

		August		Ja	January - August			
Product	1957	1958	Percentage Change	1957	1958	Percentage Change

Milk Equivalents of Dairy Factory Production

Fluid sales of milk and cream in August, for the purpose of the tentative estimate, were expected to have exceeded the corresponding month last year by 2.3 per cent, the average increase in the May to July period over the same period a year earlier.

From the Dairy Correspondent's survey, indications were that 1.5 per cent more milk was consumed in farm homes during August than in the corresponding month of 1957. This was about the same as the increase shown in the January to August cumulative total of milk consumed in farm homes. Milk fed to livestock remained about the same as in August 1957, but on a cumulative basis, was 1.6 per cent higher than in the first 8 months of 1957.

The monthly survey also showed total cow numbers on reporting farms to be down .4 per cent from August 1957, and cows milked to be down .2 per cent. Milk production per cow, however, remained sufficiently above last year to more than compensate for the slight decline in cow numbers.

Pasture conditions were improved by the late August rains experienced in most parts of Canada. In the Maritimes, pastures were fairly good in August although some moisture was needed in parts of Nova Scotia. Quebec Dairy Correspondents rated pastures

higher than correspondents in any other province. Ontario experienced only fair pasture conditions throughout most of August with improvement coming late in the month. On the Prairies, pastures which had revived somewhat in July declined to a new low for the year under the drought conditions which prevailed during most of August. The D.B.S. "Telegraphic Crop Report" tells of some wet weather at the end of August which was considered unwelcome by farmers then busy with the harvest. Pastures in British Columbia declined steadily from April and in August were very poor. Some B.C. farmers irrigated pastures in August.

FARM MILK PRODUCTION, UTILIZATION AND INCOME IN JULY, 1958

Farm Milk Production: The estimated quantity of milk produced on farms in July amounted to 2,070,498,000 pounds. This represents an increase of 66 million pounds or 3.3 per cent above that of July 1957. Of this amount, 1,454 million pounds or 70 per cent was utilized in factory production, while fluid sales absorbed approximately 448 million pounds or 22 per cent of the total milk supply. During January-July the estimated production was 10,562 million pounds, an increase of 653 million pounds more than that produced in the same period of the previous year. The quantity of milk utilized for factory production in January-July amounted to 6,088 million pounds while fluid sales accounted for 3,196 million pounds.

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 448,024,000 pounds in July, an increase of approximately 5 million pounds in comparison with July of the previous year. This included about 375 million pounds of fluid milk, comprising about 18 per cent of the farm supply, and fluid cream sales of 73 million pounds representing 4 per cent. During the seven-month period, January-July, fluid sales totalled 3,195,581,000 pounds, an increase of 63 million pounds or approximately 2 per cent over those of the 1957 period.

<u>Dairy Butter</u>: The dairy butter make in July amounted to 1,043,000 pounds, decreasing 10 per cent from the corresponding month in 1957. For the seven months, January-July, 6,927,000 pounds were produced, a decrease of 3 per cent from the same period last year.

Farm Cash Income: Cash income from the sale of dairy products in July amounted to \$54,334,000. This represented an increase of approximately 8 per cent or \$3,915,000 in comparison with the same month last year. The weighted average price of \$2.85 per hundred pounds of milk was 10 cents higher than in July 1957. Fluid milk at \$4.59 per hundred was 11 cents higher than July, 1957. Creamery butter-fat increased from 61.0 cents to 66.3 cents per pound, and dairy butter at 63 cents was 4 cents higher than in July, 1957. Milk used in manufacture increased from \$2.71 per hundred in July, 1957, to \$2.77 per hundred in July, 1958. Cheese milk declined to \$2.54 per hundred, a decrease of 2 cents per hundred in comparison with the same month a year earlier.

PRODUCTION AND PRICES OF DAIRY PRODUCTS IN JULY, 1958

BUTTER

Production: Total butter production including creamery, dairy and whey butter amounted to 48.2 million pounds in July 1958. This was 3.6 million pounds or approximately 8 per cent more than that produced in the same month of the previous year.

Stocks: Holdings of butter in store and transit on August 1 amounted to 86.2 million pounds, approximately 12.3 million pounds more than last year. On July 1, 1958, the stock holdings of 67.0 million pounds represented an increase of 7.7 million pounds as compared with the previous year.

Supply: The quantity of butter represented by stocks on July 1, plus production and imports during July, amounted to 115.2 million pounds. This was an increase of approximately 11.2 million pounds in comparison with July, 1957.

Domestic Disappearance: The domestic disappearance of butter in July including creamery, dairy and whey butter, amounted to 29.0 million pounds, a decrease of 1.1 million pounds or 4 per cent. On a per capita basis the domestic disappearance amounted to 1.71 pounds as compared with 1.81 pounds a year ago.

Prices: Butter prices at Montreal, based on dealers quotations for first grade solids, average 63 cents per pound in July as against 59 cents last year.

CHEDDAR CHEESE

Production: Cheddar cheese production amounted to approximately 13.0 million pounds, representing a decrease of about 1.7 million pounds as compared with that produced in the same month of the previous year.

CONCENTRATED MILK PRODUCTS

The total quantity of concentrated milk products manufactured in July was approximately 75.8 million pounds, an increase of 6.1 million pounds as compared with last year. Concentrated whole milk products decreased 3.0 million pounds while milk by-products increased 9.1 million pounds. Evaporated milk, the most important of the whole milk products, showed a decrease of 2.0 million pounds and the production of skim milk powder, the leading skim milk product, increased 8.7 million pounds.

ICE CREAM

The quantity of ice cream manufactured in July was approximately 5.2 million gallons or 148 thousand gallons more than that produced a year ago.
