SUMMARY STATEMENT OF DAIRY PRODUCTION IN CANADA
(January, 1945)

CREAMERY BUTTER PRODUCTION in January increased approximately 5 per cent as compared with the output for the preceding year. During the month of January, 11.4 million pounds were produced. The increase in the make occurred in all provinces except Manitoba, Saskatchewan and Alberta.

DAIRY BUTTER PRODUCTION in December, based on returns from Dairy Correspondents increased 7.8 per cent over that of December 1943, and decreased 6.4 per cent in comparison with the November output. The total December make was 3,423,000 pounds.

WHEY BUTTER PRODUCTION in January amounted to 42,533 pounds, representing an increase of approximately 3 per cent as compared with January, 1944. Of this total 38 thousand pounds were produced in Ontario, the remainder in Quebec, Manitoba and British Columbia.

CHEESE PRODUCTION decreased 6.5 per cent as compared with the same month last year. The January make was approximately 2.4 million pounds. The decrease occurred in all provinces except New Brunswick, Ontario and Alberta.

ICE CREAM PRODUCTION in January amounted to 778 thousand gallons, a decrease of over 7 per cent as compared with the January output of 1944.

The total production of CONCENTRATED MILK PRODUCTS during January registered an increase of 14.5 per cent as compared with the same month last year. The total production of 14.7 million pounds included 12.2 million pounds of Concentrated Whole Milk Products and 2.5 million pounds of Concentrated Milk By-Products compared with January, 1944. EVAPORATED MILK increased 16.6 per cent, and SKIM MILK POWDER advanced approximately 57 per cent.

CREAMERY BUTTER PRICES, at Montreal, as quoted by the Canadian Commodity Exchange for the first grade product, averaged the same as in January 1944, namely 35 $\frac{1}{4}$ cents per pound. Domestic Cheese at Montreal was unchanged at 21 cents a pound. Export Cheese prices set by the government as from May 1, 1943 at 20 cents a pound for the first grade product, f.o.b. factory or grading station shipping point, are still in effect.

The combined output of factory products during the month of January amounted to slightly more than 339 million pounds of milk, an increase of approximately 12 million pounds as compared with combined make in terms of milk for the same month a year ago. Of the total milk used in manufacture, creamery butter represented 78.9 per cent, cheddar cheese 8.0 per cent, ice cream 3.6 per cent, and concentrated whole milk products 9.5 per cent.

The domestic disappearance of creamery butter in December, based on revised stock figures, amounted to 23.8 million pounds, a decrease of 4.6 per cent as compared with the same month in 1943; while creamery and dairy butter combined, amounted to 27.3 million pounds or 2.58 pounds per capita.

Total butter disappearance including creamery, dairy and whey, rose from 336 million pounds during the twelve months of 1943 to 356 million pounds in 1944, an increase of nearly 6 per cent. On a per capita basis, these figures represented 28.48 and 29.75 pounds, respectively.

Table III - PRODUCTION OF CONCENTRATED MILK PRODUCTS IN CANADA
JANUARY, 1944 AND 1945

| Product | J A N U A R Y | | |

REVIEW OF DAIRY PRODUCTION CONDITIONS IN CANADA

(Based on the reports of Dairy Correspondents and Dairy Farm Observers)

The Milk Production of Canada in 1944 is estimated at 17,597,799,000 pounds, exceeding that of 1943 by nearly 79 million pounds. The gains made over the corresponding months of the previous year were more pronounced early in the season. The May output increased 11 per cent; the August production moved up 5.5 per cent, while in September the increase was only 1.6 per cent. Due to unusually favourable conditions in November the farm milk supply advanced 8.6 per cent over that of November, 1943; but for opposite reasons the December figures which appear on Table No. V of this statement showed an advance of only one half of one per cent in comparison with the same month of the previous year. In the month of December increases were recorded in all of the Eastern Provinces and in British Columbia, while declines were shown in all three of the Prairie Provinces. The reverse development in the Prairie region began during the summer, but became more pronounced toward the end of the year. The over-all production for 1944 showed gains in five out of the nine provinces, while declines were registered in Prince Edward Island, Nova Scotia, Ontario and Manitoba.

The December report (see Table No. V) showed very little change in the use of milk for different purposes as compared with that used in the same month of the preceding year. Fluid sales advanced only 1.3 per cent and this was offset in part by a decline in the milk used in farm homes; while the total used in manufacture was in close conformity with the fractional gain recorded in the total milk supply. With fewer cheese factories in operation, creameries are now benefiting by a diversion of milk to the manufacture of butter. This increase in the butter make, coupled with a reduction in the weekly ration to six ounces per person, promises to ease the distribution problem somewhat in the course of the next few months when supplies begin to run low.

Despite the intense cold weather and heavy snow falls reported in December and early January the production situation on the whole has been relatively satisfactory. Milk production suffered to some extent from temperature extremes in December. In January the cold spells were of short duration, making it easy for farmers to procure feed supplies and make regular deliveries to market. Wide temperature ranges were recorded, varying from 10 to 25 above zero to 30, 35 and 40 degrees below. With the exception of the Maritimes and British Columbia there was more than the normal amount of sunshine throughout the month. Farmers are short of hay in the Eastern Provinces, but the quality is good and it is feeding out particularly well. There is, of course, considerably more home-grown grain, and farmers have been making heavy purchases of western grain for feeding purposes. Both mill feeds and concentrates are being supplied in sufficient quantities to meet current requirements, and at prices practically the same as those that prevailed a year ago.

More cows are being sold in the Eastern Provinces on account of short hay supplies; and the attractive prices for veal have tended to increase the use of milk for live stock feeding. Farmers were well supplied with heifers for replacements, however, and outside of the Prairie Provinces it is doubtful if the trend toward beef production will have any appreciable effect on the milk output in future months. An important consideration, however, is whether or not suitable farm labour can be obtained. Owing to competition with the lumber and logging industries help appears to be relatively scarce on dairy farms, even during the winter months, and this promises to be a more formidable factor in achieving war-time production objectives during the forthcoming season.

SALES INCOME shown on Table X by months and by provinces, reveals a total of \$218,927,000 in 1942, \$243,361,000 in 1943, and \$264,036,000 in 1944. These data are based on prices f.o.b. farm all subsidies included, the weighted averages for all products (see Table IX) being \$1.57, \$1.73 and \$1.87, respectively, per hundred pounds of milk.
