OTTAWA - CANADA

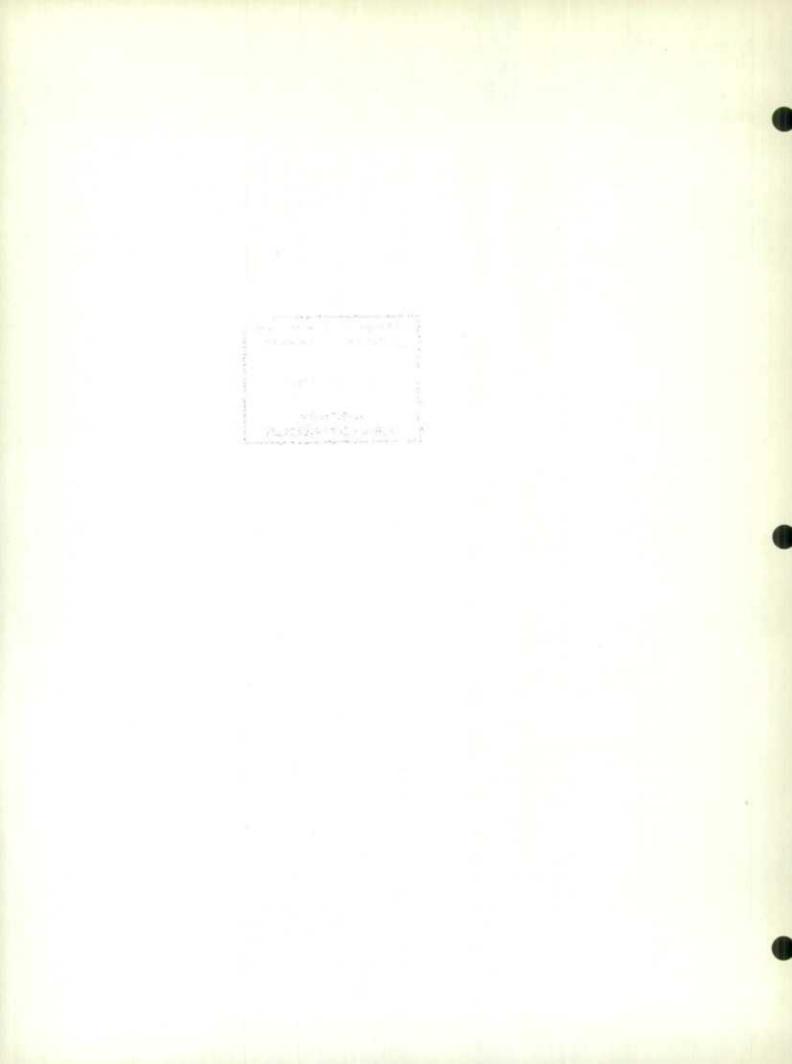

Published by Authority of the Hon. Gordon Churchill, Minister of Trade and Commerce

THE DAIRY REVIEW

5503-504- 69

The Queen's Printer and Controller of Stationery, Ottawa, 1959

Preliminary Indications of the Dairy Situation in July, 1959

Total milk production during July was estimated on a preliminary basis at about 2,014,000,000 pounds, 2.5 per cent less than milk production in July 1958. Cumulative January to July milk production reached 10,554,000,000 pounds, about equal to milk production in the first seven months of 1958.

The decrease in milk production during July is reflected by an even sharper decrease in milk utilized for dairy factory products. Almost 8 per cent less milk was used for creamery butter manufacture than in July last year and about 7 per cent less milk was used for concentrated whole milk products. Perhaps influenced to some extent by firm cheese prices and the warm summer, milk utilized for cheddar cheese in July was about 10 per cent higher than in July 1958 and 12 per cent more milk was used in ice cream. The same pattern is evident in the cumulative January to July data but the percentages are smaller.

TABLE 1. - Milk Equivalent of Dairy Factory Products, July and Cumulative January to July, 1958 and 1959

		July		January - July			
Product	1958	1959	Percentage Change	1958	1959	Percentage Change	
	1000 lb.	1000 lb.	%	1000 lb.	1000 lb.	%

Concentrated Whole Milk Products Lee Gream	113,664 93,160	106,007	(-) 6.7 (+) 12.2	602,383 380,851	581,581 417,112	(-) 3.5 (+) 9.5	
Totals	1,438,741	1,374,177	(-) 4.5	6,047,552	5,971,878	(-) 1.3	

Fluid milk and cream sales in June were 6.3 per cent higher than in June 1958, but for the purpose of the tentative estimate, fluid sales in July were estimated to have exceeded sales last July by 2.2 per cent, the average increase of sales in April, May and June over sales in the corresponding period last year.

Indications from the monthly farm survey are that milk consumed in farm homes, both in July and the first seven months of 1959 was about 2 per cent lower than in the corresponding periods last year. Milk pail fed to livestock in July, on the other hand, was reported 15 per cent higher than in July, 1958. In the first seven months of 1959 the increase amounted to only about 3 per cent. Butter made on farms during June and in the first six months was about 15 per cent lower than in the corresponding periods of 1958. Gow numbers on farms covered by the survey were about one-half per cent lower than at July 15, 1958, and correspondingly fewer cows were milked. Milk production per cow on these farms, however, remained higher than at the same date a year earlier.

Pastures in early July were considerably improved by rains which were general across Canada in late June. Near the end of July, they were again beginning to show signs of dry weather. In the maritimes where cool wet spring weather delayed growth, most dairy correspondents reported that pastures in July were improved over June. Hay yields varied from normal to below normal with some reduction in quality due to winter killing of legumes. About half the hay was under cover by the end of July. Pastures in Quebec and Ontario held up well through most of July and the hay arop was generally larger and of better quality than last year. Hay and pasture in Manitoba remained greatly improved over last year. In Saskatchewan and Alberta, the

rains came in time to be helpful to pastures but the hay crop had been stunted somewhat and yields varied from below average to average. Bry weather was again in evidence late in July. Hay and pasture in British Columbia also remained good. Considering all of Canada, 65 per cent of dairy correspondents reported pastures to be good or excellent at July 15 compared with 73 per cent at June 15 and 59 per cent at July 15 last year.

Farm Milk Production, Utilization and Income in June, 1959

Farm Milk Production: The estimated quantity of milk produced on farms in June amounted to 2,154,197,000 pounds, an increase of 36 million pounds or 1.7 per cent over that of June, 1958. Of this amount, 1,500 million pounds or 70 per cent was utilized in factory production, and approximately 474 million pounds or 22 per cent was used for fluid sales. During January-June, the estimated production was 8,540 million pounds, an increase of 42 million pounds over that produced in the same period of the previous year. The quantity of milk utilized for factory production in January-June amounted to 4,651 million pounds while fluid sales accounted for 2,806 million pounds.

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 473,761,000 pounds in June, an increase of approximately 28 million pounds in comparison with June of the previous year. This included about 394 million pounds of fluid milk, comprising about 18.3 per cent of the farm milk supply, and fluid cream sales of 80 million pounds representing 3.7 per cent. During the six month period, fluid sales totalled 2,805,677,000 pounds, an increase of 67 million pounds or approximately 2.4 per cent over those of the corresponding 1958 period.

Farm Butter: Butter made on farms in June amounted to 927,000 pounds, decreasing 15 per cent from the corresponding month in 1958. For January-June, 5,008,000 pounds were produced, a decrease of 13 per cent from the same period last year.

Farm Cash Income: Cash income from the sale of dairy products in June amounted to \$57,281,000. This represented an increase of approximately 4.3 per cent or \$2,339,000 in comparison with the same month last year. The weighted average price of \$2.90 per hundred pounds of milk was 7 cents higher than in June, 1958. Fluid milk at \$4.63 per hundred was 6 cents higher than June, 1958. Creamery butter-fat increased from 66.1 cents to 66.5 cents per pound, and farm butter at 60 cents was 3 cents lower than in June, 1958. Milk used in manufacture decreased from \$2.80 per hundred in June 1958, to \$2.73 per hundred in June, 1959. Cheese milk increased to \$2.85 per hundred, an increase of 34 cents per hundred in comparison with the same month a year earlier.

Production and Prices of Dairy Products in June, 1959

Greamery Butter

Production: Creamery butter production amounted to 47.5 million pounds in June, 1959. This was 0.5 million pounds or approximately 1 per cent less than that produced in the same month of the previous year.

Stocks: Holdings of creamery butter in store and transit on July 1, amounted to 92.9 million pounds, approximately 25.5 million pounds greater than at July 1, last year. On June 1, 1959, stock holdings at 71.6 million pounds were 26.7 million pounds greater than at the same date a year earlier.

Supply: The quantity of creamery butter represented by stocks on June 1, plus production and imports during the month amounted to 119.1 million pounds at June 30, 1959. This was an increase of approximately 26.2 million pounds compared to the corresponding supply figure at June 30, 1958.

Creamery Butter

Domestic Disappearance: The domestic disappearance of creamery butter in June amounted to 26.2 million pounds, an increase of 0.7 million pounds or 3 per cent over the corresponding figure for the same month last year. On a per capita basis, it amounted to 1.51 pounds as compared with 1.49 pounds in June, 1958.

Prices at Montreal: Butter prices at Montreal, based on dealers quotations for first grade solids, averaged 632 cents per pound in June as against 622 cents in June, 1958.

Cheddar Cheese

Production: Cheddar cheese production amounted to approximately 15.4 million pounds, an increase of about 880 thousand pounds compared to production in the same month of the previous year.

Prices: The sale of Ontario coloured cheese at Kingston was very active in June and prices for first grade coloured cheese exceeded 37 cents per pound. With prices at this level, insufficient quantities of Ontario coloured cheddar cheese were offered on the Montreal market to establish a price.

Ice Cream

The quantity of ice cream manufactured in June was approximately 5.1 million gallons or 1 million gallon more than that produced a year ago.

Cottage Cheese

The following table, showing cottage cheese production in the first two quarters of 1959 is the first release of information from a new quarterly survey of all known manufacturers of cottage cheese. The first questionnaires were sent out at the end of June. Although manufacturers report creaming only about 75 per cent of total cottage cheese in their own plants, there is evidence that most of the remaining cottage cheese is creamed before reaching the consumer.
