1959

5503-504-110

The preliminary estimate of milk production in Canada during December is 1,168,000,000 pounds, 0.2 per cent higher than in December, 1959. Preliminary indications are that throughout 1960 milk production amounted to 18,411,000,000 pounds, an increase of 1.2 per cent over production in the previous year.

During December, 527,000,000 pounds of milk went into the manufacture of dairy factory products. This is 0.9 per cent less than the amount of milk used in dairy factory products during December, 1959. It brings the annual 1960 total of milk used in dairy factories to 10,663,000,000 pounds, 1.2 per cent above the corresponding figure for the previous year. The manufacture of creamery butter utilized 7,455,000,000 pounds of milk during the year, 2.1 per cent less than in 1959. Other dairy factory products used more milk than in 1959. The increase in milk used for cheese and ice cream mix amounted to roughly 2 per cent. A sharp increase during the latter half of the year in the amount of milk going into the manufacture of whole milk powder led to a 25.7 per cent increase in milk used for concentrated whole products in 1960. During December the utilization of milk for all concentrated whole milk products was sharply higher than in the same month a year earlier. On the other hand, 16.6 per cent less milk went into cheese production and 1.8 per cent less milk was used for creamery butter compared to December, 1959.

Totals	531,462	526,770	(-) 0.9	10,539,410	10,662,769	(+) 1.2		

Fluid sales of milk and cream during November were 3.9 per cent higher than in November, 1959. This is in marked contrast to the increases shown by other months in the latter half of 1960 and it was sufficient to bring the September, October, November average increase in fluid sales to 1.6 per cent over the corresponding period a year earlier. For the purpose of the preliminary estimate, sales of fluid milk and cream during December were assumed to have also increased 1.6 per cent over sales in December, 1959.

Indications from the monthly survey of farms keeping milk cows are that about 145,000,000 pounds of milk were used on farms during December, almost identical to the amount used in December, 1959. Milk consumed in farm homes remained about the same as in December, 1959. A six per cent increase in milk fed to livestock during the month was offset by an estimated 13 per cent decrease in the amount of milk used for making butter on farms. Indications are that during 1960 about 1.5 per cent more milk was used for consumption in farm homes and for livestock feed than in 1959. Butter production on farms during the year is estimated to have declined about 12 per cent from a year earlier. On the farms covered by the survey, production per cow in the herd at December 15 remained at the same level as at the corresponding date in 1959. Production per cow milked, however, was about two per cent higher than at December 15, 1959.

Farm Milk Production, Utilization and Income in November, 1960

Farm Milk Production: The estimated quantity of milk produced on farms in November amounted to 1,236,759,000 pounds, an increase of 35 million pounds or 2.9 per cent over that of November, 1959. Of this amount, 623 million pounds or 50 per cent was utilized in factory production, and approximately 472 million pounds or 38 per cent was used for fluid sales. During January - November, the estimated production was 17,228 million pounds, an increase of 216 million pounds over that produced in the same period of the previous year. The quantity of milk utilized for factory production in January - November amounted to 10,136 million pounds while fluid sales accounted for 5,228 million pounds.

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 472,451,000 pounds in November, an increase of approximately 18 million pounds in comparison with November of the previous year. This included about 398 million pounds of fluid milk, comprising about 32 per cent of the farm milk supply, and fluid cream sales of 74 million pounds representing 6 per cent. During the eleven month period, fluid sales totalled 5,228 million pounds, an increase of 91 million pounds or approximately 1.8 per cent over those of the corresponding 1959 period.

Farm Butter: Butter made on farms in November amounted to 744,000 pounds, decreasing 12 per cent from the corresponding month in 1959. For January - November, 8,582,000 pounds were produced, a decrease of 12 per cent from the same period last year.

Farm Cash Income: Cash income from the sale of dairy products in November amounted to \$37,391,000. This represented an increase of approximately 2.8 per cent or \$1,013,000 in comparison with the same month last year. The weighted average price of \$3.41 per hundred pounds of milk was 2 cents lower than in November, 1959. Fluid milk at \$4.79 per hundred was 2 cents lower than in November, 1959. Creamery butter—fat increased from 69.5 cents to 70.0 cents per pound, and farm butter at 63 cents was 1 cent higher than in November, 1959. Milk used in manufacture at \$3.03 per hundred was 1 cent lower than in November, 1959. Cheese milk decreased to \$2.68 per hundred, a decrease of 36 cents per hundred in comparison with the same month a year earlier.

Farm cash income estimates cover all money received by farmers for the sale of milk, cream and farm butter. Government subsidies and bonuses are included in these estimates.

Production and Prices of Dairy Products in November, 1960

#### Creamery Butter

Production: Creamery butter production amounted to 18.1 million pounds in November, 1960. This was 0.3 million pounds or approximately 2 per cent less than that produced in the same month of the previous year.

Stocks: Holdings of creamery butter in store and transit on December 1 amounted to 125.4 million pounds, approximately 9.3 million pounds higher than at December 1 last year. On November 1, 1960, stock holdings at 134.8 million pounds were 2.6 million pounds greater than at the same date a year earlier.

Supply: The quantity of creamery butter represented by stocks on November 1, plus production and imports during the month, amounted to 152.9 million pounds at November 30, 1960. This was an increase of approximately 2.3 million pounds compared to the corresponding supply figure at November 30, 1959.

Domestic Disappearance: The domestic disappearance of creamery butter in November amounted to 25.2 million pounds, a decrease of 2.1 million pounds or 8 per cent less than the corresponding figure for the same month last year. On a per capita basis, it amounted to 1.42 pounds as compared with 1.56 pounds in November, 1959.

Prices at Montreal: Butter prices at Montreal, based on dealers' quotations for first grade solids, averaged 63 3/4 cents per pound in November, as against 63 3/4 cents in November, 1959.

#### Cheddar Cheese

Production: Cheddar cheese production amounted to approximately 7.0 million pounds, a decrease of about 0.5 million pounds compared to production in the same month of the previous year.

Prices: The Belleville price of Ontario coloured cheese averaged 32 1/2 cents per pound in November. The comparative price in 1959 was 38 1/2 cents.

#### Ice Cream Mix

The quantity of ice cream mix manufactured in November was approximately 1.1 million gallons or 105 thousand gallons more than that produced a year ago.

TABLE 2. - Ice Cream: Production of Hard and Soft Types, Canada, by Province,
December and Cumulative January to December, 1960

Note: Data compiled from reports by mix manufacturers who report ice cream production and mix sales. Not comparable to old ice cream estimate of mix production x 2 because of variations in stocks and overrun.
