remittances made payable to the Receiver General of Canada.

The preliminary estimate of milk produced in June is 2,244,000,000 pounds. This is 0.1 per cent greater than production in the same month last year and would make the total estimate of production for the first six months of the year 9,198,000,000 pounds. This is 0.8 per cent higher than production in the January to June period a year ago.

About 70 per cent of the milk produced in June, or 1,562,000,000 pounds, was used for dairy factory products. This represented a decline of 0.6 per cent from factory utilization in June, 1961. Respective declines of 8, 10 and 31 per cent for milk used in the manufacture of cheese, concentrated whole milk products and ice cream mix, more than offset a 4.4 per cent increase in the quantity of milk utilized for creamery butter, compared with a year ago. Because of the above-normal use of butter in the manufacture of ice cream mix, the milk equivalent of this product has been reduced in order to avoid duplication between the milk equivalent of butter and ice cream mix. During the January to June period, milk utilized for dairy factory products was almost identical to that used in the corresponding period a year ago.

TABLE 1. - Milk Equivalent of Dairy Factory Products, June and January to June, 1961 and 1962

^{1/} Beginning May, 1962, data excludes the milk equivalent of creamery butter used in the manufacture of ice cream mix.

Sales of fluid milk and cream during the month of May were 2.7 per cent above the corresponding figure a year earlier. Assuming the same rate of increase for June, fluid sales have been estimated to be 504,107,000 pounds or approximately 22 per cent of the preliminary estimate of total milk production for June.

According to indications from the monthly survey of farms keeping milk cows, milk and cream consumed in farm homes was 2.6 per cent below that used in June, 1961, while milk used for livestock feeding was 3.4 per cent above that of a year ago. Farm dairy correspondents participating in the survey, report 1.7 per cent less cows being milked than at the same date last year.

Although weather conditions in June were warm and dry, and rain would have benefitted most parts of Canada, particularly south-eastern Alberta, pasture conditions were generally favourable to dairying. Regional variations in pasture conditions at June 15, 1961 and 1962, are shown by the maps on page 3.

Farm Milk Production, Utilization and Income in May, 1962

Farm Milk Production: The estimated quantity of milk produced on farms in May, amounted to 1,931 million pounds, an increase of 16 million pounds or 0.8 per cent over that of May, 1961. Of this amount, 1,213 million pounds or 63 per cent was utilized in factory production, and approximately 503 million pounds or 26 per cent was used for fluid sales. During the January - May period, the estimated production was 6,954 million pounds, an increase of 74 million pounds over that produced in the same period of the previous year. The quantity of milk utilized for factory production in the January - May period amounted to 3,567 million pounds while fluid sales accounted for 2,476 million pounds.

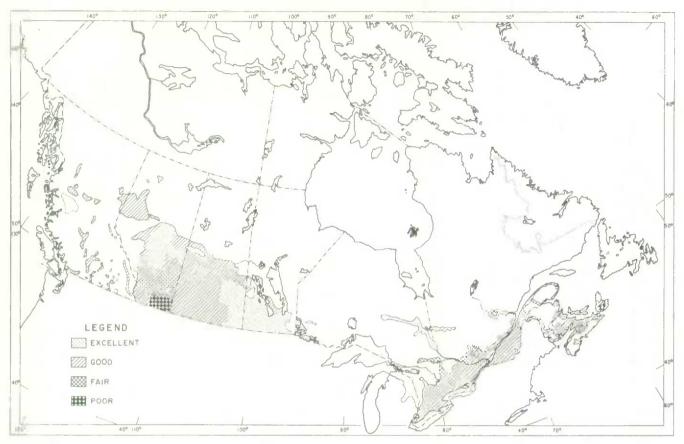

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 503 million pounds in May, an increase of approximately 13 million pounds in comparison with May of the previous year. This included about 418 million pounds of fluid milk, comprising about 22 per cent of the farm milk supply, and fluid cream sales of 85 million pounds representing 4 per cent. During the five month period, fluid sales totalled 2,476 million pounds, an increase of 72 million pounds or 3.0 per cent over those of the corresponding 1961 period.

Farm Butter: Butter made on farms in May amounted to 663,000 pounds, decreasing 13 per cent from the corresponding month in 1961. For the January - May period, 2,897,000 pounds were produced, a decrease of 14 per cent from the same period last year.

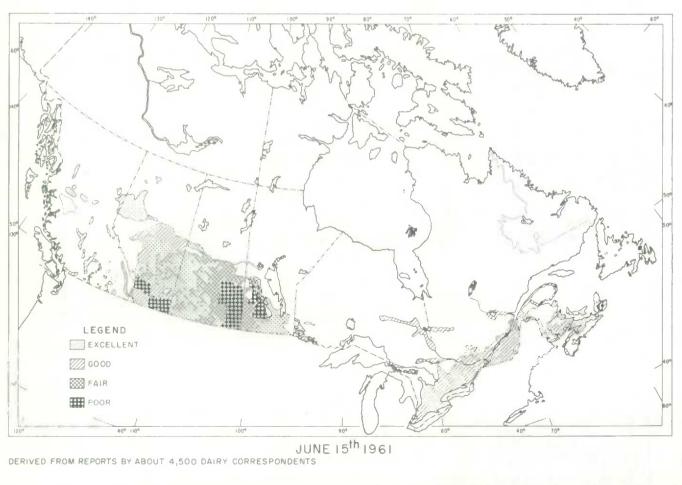

Farm Cash Income: Cash income from the sale of dairy products in May amounted to \$51,136,000. This represented an increase of 1.5 per cent or \$768,000 in comparison with the same month last year. The weighted average value of \$2.98 per hundred pounds of milk was 2 cents higher than in May, 1961. Fluid milk at \$4.73 per hundred was 3 cents higher than in May, 1961. Creamery butter-fat decreased from 67.0 cents to 66.9 cents per pound, and farm butter at 59 cents per pound was 3 cents lower than in May, 1961. Milk used in manufacture averaged \$2.64 per hundred, 1 cent higher than in May, 1961. Cheese milk increased to \$2.56 per hundred, an increase of 12 cents per hundred in comparison with the same month a year earlier. Part of the increase may be attributed to the collection of more detail information from Ontario cheese factories since the beginning of the year, which has resulted in higher calculated average unit values than a year ago.

Farm cash income estimates cover all money received by farmers for the sale of milk, cream and farm butter. Government subsidies and bonuses are included in these estimates,

PASTURE CONDITIONS ON FARMS KEEPING MILK COWS

JUNE 15th 1962

Production and Prices of Dairy Products in May, 1962

Creamery Butter

Production: Creamery butter production amounted to 39.0 million pounds in May, 1962, an increase of approximately 1.8 million pounds as compared to production in the same month of the previous year.

Stocks: Combined holdings of creamery butter and butter oil (in butter equivalent) in store and transit on June 1 amounted to 190.6 million pounds, approximately 61.3 million pounds higher than at June 1 last year. On May 1, 1962, stock holdings at 184.7 million pounds were 68.1 million pounds greater than at the same date a year earlier.

Supply: The combined quantity of creamery butter and butter oil represented by stocks on May 1, plus production and imports during the month, amounted to 223.7 million pounds at May 31, 1962. This was an increase of approximately 69.9 million pounds compared to the corresponding supply figure at May 31, 1961.

Domestic Disappearance: The combined domestic disappearance of creamery butter and butter oil in May amounted to 33.1 million pounds, an increase of 8.6 million pounds or 35.1 per cent more than the corresponding figure for the same month last year. On a per capita basis, it amounted to 1.79 pounds as compared with 1.34 pounds in May, 1961. The increase in the May disappearance figure may be attributed largely to the replenishment of retail stocks, and the increased use of butter in the manufacture of ice cream due to the reduction in price. Combined with April, butter disappearance in the two months amounted to 49.9 million pounds, an increase of 4.7 million pounds or 10.3 per cent over disappearance in the April and May period a year earlier.

Prices at Montreal: Butter prices at Montreal, based on dealers' quotations for first grade solids, averaged 50 1/2 cents per pound in May, as against 62 1/2 cents in May, 1961.

Cheddar Cheese

Production: Cheddar cheese production amounted to approximately 11.8 million pounds, a decrease of about 861 thousand pounds compared to production in the same month of the previous year.

Prices: The Belleville price of Ontario coloured cheese averaged 32 3/4 cents per pound in May, The comparative price in 1961 was 32 1/4 cents.

Ice Cream Mix

The quantity of ice cream mix manufactured in May was approximately 2.3 million gallons or 152 thousand gallons more than that produced a year ago.
