PASTURE CONDITIONS ON FARMS KEEPING MILK COWS

MAY 15th 1966

MAY 15th 1965

PRELIMINARY INDICATIONS OF THE DAIRY SITUATION, MAY, 1966

The preliminary estimate of milk produced in May is 1,818,000,000 pounds. This is 1.8 per cent higher than production in the same month last year and would make the total estimate of production during the first five months of the year 6,607,000,000 pounds. This is 0.8 per cent below production in the January-May period a year ago.

Slightly more than 66 per cent of the milk produced in May, or 1,204,000,000 pounds, was used for dairy factory products. This was 2.9 per cent above factory utilization in May, 1965, with increased quantities going into all but concentrated whole milk products. Approximately 21.5 per cent less milk was utilized for the manufacture of concentrated whole milk products in May than a year ago, while that for butter, cheese and ice cream mix increased 4.6, 10.0 and 0.1 per cent, respectively. During the January-May period, 0.3 per cent less milk was utilized for dairy factory products than in the corresponding period in 1965.

TABLE 1. Preliminary Estimates of Milk Equivalent of Dairy Factory Products,
May and January to May, 1965 and 1966

The and a section		May		January - May			
Product	1965	1966	Percentage change	1965	1966	Percentage change	
	'000	1b.	7.	'000	1b.	7.	
Creamery butter Factory cheese Concentrated whole	819,632 189,369	857,095 208,212	1 1	2,517,629 583,506	2,505,695 630,515		
milk products Ice cream mix	106,337 54,700	83,478 54,730		391,386 196,840		- 13.1 - + 3.1	
Totals	1,170,038	1,203,515	+ 2.9	3,689,361	3,679,128	- 0.3	

Fluid sales of milk and cream during May, for the purpose of the preliminary estimate, are calculated at 437,000,000 pounds, an increase of 1.0 per cent over fluid sales in May, 1965. This assumes the same relationship to year-earlier estimates as for the month of April.

According to indications from the monthly survey of farms keeping milk cows, milk and cream consumed in farm homes was 4.9 per cent below that used in May, 1965, while milk used for livestock feeding dropped 1.9 per cent from that a year ago. Reports from farm dairy correspondents participating in the survey, indicate 2.3 per cent fewer cows kept on farms at May 15, and 2.3 per cent less cows being milked than at the same date last year. Milk production per cow, for cows milked on farms in the sample, increased 4.0 per cent above the level at May 15, 1965.

Below normal temperatures over most of Canada during May retarded pasture growth and, except for the generally favourable moisture conditions in the Prairie Provinces, general rains and warm weather were needed in most areas. Pastures wintered well and very little winterkilling was in evidence. Regional pasture conditions at May 15, 1965 and 1966, are shown by the maps on the opposite page.

FARM MILK PRODUCTION, UTILIZATION AND CASH RECEIPTS IN APRIL, 1966

Farm Milk production: The estimated quantity of milk produced on farms in April amounted to 1,509 million pounds, a decrease of 26 million pounds or 1.7 per cent below that of April 1965. Of this amount, 884 million pounds or 58 per cent was utilized in factory production, and approximately 438 million pounds or 29 per cent was used for fluid sales. During the January-April period, the estimated production was 4,789 million pounds, a decrease of 88 million pounds below that produced in the same period of the previous year. The quantity of milk utilized for factory production in the January-April period amounted to 2,476 million pounds while fluid sales accounted for 1,734 million pounds.

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 438 million pounds in April, an increase of approximately 4 million pounds in comparison with April of the previous year. This included about 370 million pounds of fluid milk, comprising about 25 per cent of the farm milk supply, and fluid cream sales of 68 million pounds representing about 4 per cent. During the four month period, fluid sales totalled 1,734 million pounds, an increase of 10 million pounds or 0.6 per cent over those of the corresponding 1965 period.

Farm Butter: Butter made on farms in April amounted to 282,000 pounds, decreasing 3 per cent from the corresponding month in 1965. For the January-April period, 1,057,000 pounds were produced, a decrease of 6 per cent from the same period last year.

Farm Cash Receipts: Cash receipts from the sale of dairy products in April amounted to \$44,742,000. This represented a decrease of 0.1 per cent or \$49,000 in comparison with the same month last year. The weighted average value of \$3.38 per hundred pounds of milk was 4 cents higher than in April 1965. Fluid milk at \$5.18 per hundred was 19 cents higher than in April, 1965. Creamery butterfat decreased from 74.7 cents to 71.1 cents per pound, and farm butter at 58 cents per pound was 1 cent higher than in April, 1965. Milk used in manufacture averaged \$3.01 per hundred, 11 cents higher than in April, 1965. Cheese milk increased to \$3.09 per hundred, an increase of 4 cents per hundred in comparison with the same month a year earlier.

Farm cash receipts estimates cover all money received by farmers for the sale of milk, cream and farm butter. Where applicable, quality premiums, bonuses and patronage dividends are included in the estimates. The estimates do not make any allowances for costs incurred by farmers in the production of dairy products. Beginning April 1, 1966, average unit values will no longer include the federal subsidy on butter nor the Quebec premium on manufacturing milk. The direct subsidy on butter has been discontinued and since the Quebec premium will be made directly to producers, such payments will be treated as Supplementary Payments and not considered in farm cash receipts. Previously, both the federal and Quebec payments were incorporated in the plant price to producers.

PRODUCTION AND PRICES OF DAIRY PRODUCTS IN APRIL, 1966

Creamery Butter

Production: Creamery butter production amounted to 26.1 million pounds in April, 1966, a decrease of approximately 0.5 million pounds as compared to production in the same month of the previous year.

Stocks: Combined holdings of creamery butter and butter oil (in butter equivalent) in store and transit on May 1, 1966, amounted to 33.9 million pounds, approximately 25.5 million pounds lower than at May 1 last year. On April 1, 1966, stock holdings at 34.0 million pounds were 28.5 million pounds less than at the same date a year earlier. May 1, 1966, butter stocks include a downward revision of 1,140,000 lb. from that published in the June report "Stocks of Dairy and Poultry Products".

Supply: The combined quantity of creamery butter and butter oil represented by stocks on April 1, plus production and imports during the month, amounted to 60.1 million pounds of butter at April 30, 1966. This was a decrease of approximately 29.1 million pounds compared to the corresponding supply figure at April 30, 1965.

Domestic Disappearance: The combined domestic disappearance of creamery butter and butter oil in April amounted to 25.9 million pounds of butter, a decrease of 3.8 million pounds or 12.8 per cent less than the corresponding figure for the same month last year. On a per capita basis, it amounted to 1.31 pounds as compared with 1.52 pounds in April, 1965. Data excludes butter imported under special permit and processed into materials for food preparations for export.

Prices at Montreal: Butter prices at Montreal, based on dealers' quotations for first grade solids, averaged 59 cents per pound in April, as against 52-3/4 cents in April, 1965.

Cheddar Cheese

Production: Cheddar cheese production in April amounted to approximately 12.3 million pounds, an increase of about 635 thousand pounds compared to production in the same month of the previous year.

Prices: The Belleville price of Ontario coloured cheese averaged 43-1/4 cents per pound in April. The comparative price in 1965 was 38 cents.

Ice Cream Mix

The quantity of ice cream mix manufactured in April was approximately 2.0 million gallons or 35 thousand gallons more than that produced a year ago.

⁽¹⁾ Includes the milk equivalent of cheddar and other factory cheese made from whole milk and cream.

⁽²⁾ Not fully comparable to other provinces, weighted according to relative quantities of milk and cream deliveries.

⁽³⁾ Average values for milk used in ice cream mix based on 10% quota milk and 20% surplus milk from whole milk producers, compared with averages based on manufacturing milk in 1965.

⁽⁴⁾ Based on class III accounting value.
