THE DAIRY REVIEW

PASTURE CONDITIONS ON FARMS KEEPING MILK COWS

JULY 15th 1966

JULY 15th 1965

PRELIMINARY INDICATIONS OF THE DAIRY SITUATION, JULY, 1966

The preliminary estimate of milk produced in July is 1,976,000,000 pounds. This is 3.1 per cent lower than production in the same month last year and would make the total estimate of production during the first seven months of the year 10,702,000,000 pounds. This is 1.4 per cent below production in the January-July period a year ago.

Almost 71 per cent of the milk produced in July, or 1,395,000,000 pounds, was used for dairy factory products. This was 3.8 per cent below factory utilization in July, 1965. Creamery butter production during the month used 988,000,000 pounds of milk, 6.6 per cent less than in July, 1965, while milk used for concentrated whole milk products was down 16.5 per cent. Approximately 4.5 and 32.5 per cent more milk was utilized for the manufacture of factory cheese and ice cream mix, respectively, than in July a year ago. During the January-July period, 1.3 per cent less milk was utilized for dairy factory products than in the corresponding period in 1965.

TABLE 1. Preliminary Estimates of Milk Equivalent of Dairy Factory Products,
July and January to July, 1965 and 1966

		July		January - July			
Product	1965	1966	Percentage change	1965	1966	Percentage change	
	1000	lb.	%	1000	1b.	%	
Creamery butter Factory cheese	1,057,353 228,498	987,550 238,803		4,701,786 1,052,306			
Concentrated whole milk products Ice cream mix	101,574 63,603	84,788 84,302	- 16.5 + 32.5	613,882 329,275	528,818 361,036	- 13.9 + 9.6	
Totals	1,451,028	1,395,443	- 3.8	6,697,249	6,612,188	- 1.3	

Fluid sales of milk and cream during July, for the purpose of the preliminary estimate, are calculated at 446,100,000 pounds, an increase of 0.5 per cent over fluid sales in July, 1965. This assumes the same relationship to year-earlier estimates as for the April-June period.

According to indications from the monthly survey of farms keeping milk cows, milk and cream consumed in farm homes was 5.1 per cent below that used in July, 1965, while milk used for livestock feeding dropped 10.1 per cent from that a year ago. Reports from farm dairy correspondents participating in the survey, indicate 3.3 per cent fewer cows kept on farms at July 15, and 4.2 per cent less cows being milked than at the same date last year.

Pasture conditions at July 15 were generally only fair throughout most areas of Eastern Canada. Rain was needed in most districts of the Maritimes, the lower St. Lawrence area and more particularly Ontario and adjacent areas of Quebec. Weather conditions were generally favourable in Western Canada and pastures were in good condition. Regional pasture conditions at July 15, 1965 and 1966, are shown by the maps on the opposite page.

FARM MILK PRODUCTION, UTILIZATION AND CASH RECEIPTS IN JUNE, 1966

Farm Milk production: The estimated quantity of milk produced on farms in June amounted to 2,121 million pounds, a decrease of 26 million pounds or 1.2 per cent below that of June, 1965. Of this amount, 1,538 million pounds or 73 per cent was utilized in factory production, and approximately 435 million pounds or 21 per cent was used for fluid sales. During the January-June period, the estimated production was 8,726 million pounds, a decrease of 84 million pounds below that produced in the same period of the previous year. The quantity of milk utilized for factory production in the January-June period amounted to 5,217 million pounds while fluid sales accounted for 2,604 million pounds.

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 435 million pounds in June, a decrease of approximately 720 thousand pounds in comparison with June of the previous year. This included about 363 million pounds of fluid milk, comprising about 17 per cent of the farm milk supply, and fluid cream sales of 72 million pounds representing about 4 per cent. During the six month period, fluid sales totalled 2,604 million pounds, an increase of 13 million pounds or 0.5 per cent over those of the corresponding 1965 period.

Farm Butter: Butter made on farms in June amounted to 307,000 pounds, decreasing 12 per cent from the corresponding month in 1965. For the January-June period, 1,684,000 pounds were produced, a decrease of 8 per cent from the same period last year.

Farm Cash Receipts: Cash receipts from the sale of dairy products in June amounted to \$62,201,000. This represented an increase of 0.4 per cent or \$257,000 in comparison with the same month last year. The weighted average value of \$3.15 per hundred pounds of milk was 4 cents higher than in June, 1965. Fluid milk at \$5.23 per hundred was 27 cents higher than in June, 1965. Creamery butterfat decreased from 75.4 cents to 73.2 cents per pound, and farm butter at 58 cents per pound was the same as in June, 1965. Milk used in manufacture averaged \$2.98 per hundred, 18 cents higher than in June, 1965. Cheese milk increased to \$3.00 per hundred, an increase of 2 cents per hundred in comparison with the same month a year earlier.

Farm cash receipts estimates cover all money received by farmers for the sale of milk, cream and farm butter. Where applicable, quality premiums, bonuses and patronage dividends are included in the estimates. The estimates do not make any allowances for costs incurred by farmers in the production of dairy products. Beginning April 1, 1966, average unit values will no longer include the federal subsidy on butter nor the Quebec butterfat premium on manufacturing milk. The direct subsidy on butter has been discontinued and since the Quebec premium will be made directly to producers, such payments will be treated as Supplementary Payments and not considered in farm cash receipts. Previously, both the federal and Quebec payments were incorporated in the plant price to producers.

PRODUCTION AND PRICES OF DAIRY PRODUCTS IN JUNE, 1966

Creamery Butter

Production: Creamery butter production amounted to 46.8 million pounds in June, 1966, a decrease of approximately 1.4 million pounds as compared to production in the same month of the previous year.

Stocks: Combined holdings of creamery butter and butter oil (in butter equivalent) in store and transit on July 1, 1966, amounted to 59.6 million pounds, approximately 20.8 million pounds lower than at July 1 last year. On June 1, 1966, stock holdings at 42.2 million pounds were 20.3 million pounds less than at the same date a year earlier.

Supply: The combined quantity of creamery butter and butter oil represented by stocks on June 1, plus production and imports during the month, amounted to 89.0 million pounds of butter at June 30, 1966. This was a decrease of approximately 21.7 million pounds compared to the corresponding supply figure at June 30, 1965.

Domestic Disappearance: The combined domestic disappearance of creamery butter and butter oil in June amounted to 29.4 million pounds of butter, a decrease of 0.9 million pounds or 2.9 per cent less than the corresponding figure for the same month last year. On a per capita basis, it amounted to 1.48 pounds as compared with 1.54 pounds in June, 1965. Data excludes butter imported under special permit and processed into materials for food preparations for export.

Prices at Montreal: Butter prices at Montreal, based on dealers' quotations for first grade solids, averaged 59 cents per pound in June, as against 54-7/8 cents in June, 1965.

Cheddar Cheese

Production: Cheddar cheese production in June amounted to approximately 21.8 million pounds, an increase of about 1.9 million pounds compared to production in the same month of the previous year.

Prices: The Belleville price of Ontario coloured cheese averaged 42-3/4 cents per pound in June. The comparative price in 1965 was 40-3/4 cents.

Ice Cream Mix

The quantity of ice cream mix manufactured in June was approximately 3.2 million gallons or 27 thousand gallons more than that produced a year ago.

⁽¹⁾ Includes the milk equivalent of cheddar and other factory cheese made from whole milk and cream.

⁽²⁾ Not fully comparable to other provinces, weighted according to relative quantities of milk and cream deliveries.

⁽³⁾ Average values for milk used in ice cream mix based on 10% quota milk and 20% surplus milk from whole milk producers, compared with averages based on manufacturing milk in 1965. -

⁽⁴⁾ Based on class III accounting value.
