# THE DAIRY REVIEW

Preliminary Indications of the Dairy Situation, March, 1967

The preliminary estimate of milk produced in March is 1,235,000,000 pounds. This is 2.2 per cent lower than production in the same month last year and would make the total estimate of production during the first three months of the year 3,320,000,000 pounds. This is 0.1 per cent above production in the January-March period a year ago.

More than 51 per cent of the milk produced in March, or 631,000,000 pounds, was used for dairy factory products. This was 3.6 per cent below factory utilization in March, 1966. Creamery butter production during the month accounted for 402,000,000 pounds of milk, 5.5 per cent less than in March a year ago, while milk used in the manufacture of factory cheese and concentrated whole milk products declined 2.1 and 6.0 per cent, respectively. Approximately 13.9 per cent more milk was used for ice cream mix than in March, 1966. During the January-March period, 0.3 per cent more milk was utilized for dairy factory products than in the corresponding period a year ago.

TABLE 1. Preliminary Estimates of Milk Equivalent of Dairy Factory Products,
March and January to March, 1966 and 1967

Totals	654,791	630,913	- 3.6	1,624,677	1,629,038(1)	+ 0.3	

(1) Includes a downward adjustment of 1,020,000 lb. of milk for February as a result of a revision to ice cream mix production in Alberta.

Fluid sales of milk and cream during March, for the purpose of the preliminary estimate, are calculated at 457,500,000 pounds, an increase of 0.7 per cent over fluid sales in March, 1966. This assumes the same relationship to year-earlier estimates as for the month of February.

According to indications from the monthly survey of farms keeping milk cows, milk and cream consumed in farm homes was 1.8 per cent below the quantity used in March, 1966, while milk used for livestock feeding was 7.1 per cent below that of a year ago. Reports from farm dairy correspondents participating in the survey, indicate 0.8 per cent fewer cows kept on farms at March 15, and 0.3 per cent less cows being milked than at the same date last year. Milk production per cow, for cows milked on farms in the sample, increased 1.0 per cent above the level at March 15, 1966.

FARM MILK PRODUCTION, UTILIZATION AND CASH RECEIPTS IN FEBRUARY, 1967

Farm Milk production: The estimated quantity of milk produced on farms in February amounted to 998 million pounds, an increase of 4 million pounds or 0.4 per cent over that of February, 1966. Of this amount, 470 million pounds or 47 per cent was utilized in factory production, and approximately 416 million pounds or 42 per cent was used for fluid sales. During the January-February period, the estimated production was 2,085 million pounds, an increase of 32 million pounds over that produced in the same period of the previous year. The quantity of milk utilized for factory production in the January-February period amounted to 998 million pounds while fluid sales accounted for 854 million pounds.

Fluid Sales: Sales of fluid milk and cream, the latter expressed as milk, amounted to 416 million pounds in February, an increase of approximately 3 million pounds in comparison with February of the previous year. This included about 354 million pounds of fluid milk, comprising about 36 per cent of the farm milk supply, and fluid cream sales of 62 million pounds representing about 6 per cent. During the two month period, fluid sales totalled 854 million pounds, an increase of 9 million pounds over those of the corresponding 1966 period.

Farm Butter: Butter made on farms in February amounted to 240,000 pounds, decreasing 1 per cent from the corresponding month in 1966. For the January-February period, 478,000 pounds were produced, a decrease of 5 per cent from the same period last year.

Farm Cash Receipts: Cash receipts from the sale of dairy products in February amounted to \$35,130,000. This represented an increase of 5.2 per cent or \$1,726,000 in comparison with the same month last year. The weighted average value of \$3.97 per hundred pounds of milk was 17 cents higher than in February, 1966. Fluid milk at \$5.65 per hundred was 49 cents higher than in February, 1966. Creamery butterfat decreased from 77.2 cents to 74.2 cents per pound, and farm butter at 60 cents per pound was 2 cents higher than in February, 1966. Milk used in manufacture averaged \$3.18 per hundred, 3 cents higher than in February, 1966. Cheese milk decreased to \$3.20 per hundred, a decrease of 12 cents per hundred in comparison with the same month a year earlier.

Estimates of farm cash receipts from the sale of dairy products, as set forth in this report, include the basic plant paying price less haulage and, where applicable, quality premiums, bonuses, patronage dividends and those government subsidies which have been paid indirectly through plants as part of the plant price. They do not include government payments made direct to farmers by government cheque, nor do they reflect any allowance for costs incurred by farmers in the production of dairy products.

Direct Federal payments during the 1965-66 dairy year commenced in August and amounted to approximately 20 cents per hundred pounds for manufacturing milk and cream. Commencing on April 1, 1966 these payments were increased to 75 cents per hundred pounds for 3.5 per cent processing milk or the equivalent of 21.43 cents per pound for butterfat or cream. On April 1, 1966 the Quebec government started to make direct payments to farmers which consisted of 5 cents per pound fat for the period April to September inclusive and 10 cents per pound for the months of October 1966 to March 1967. Effective from October 1, 1966 to March 31, 1967, Ontario producers also receive 25 cents a hundred on all industrial or manufactured milk, basis 3.5 per cent milk fat, and 25 cents a hundred on all secondary and excess milk delivered to the dairy, as well as 10 cents per pound fat on all cream grading Special and First Grade.

### PRODUCTION AND PRICES OF DAIRY PRODUCTS IN FEBRUARY, 1967

## Creamery Butter

Production: Creamery butter production amounted to 13.1 million pounds in February, 1967, an increase of approximately 77 thousand pounds as compared to production in the same month of the previous year.

Stocks: Combined holdings of creamery butter and butter oil (in butter equivalent) in store and transit on March 1, 1967, amounted to 38.2 million pounds, approximately 8.3 million pounds lower than at March 1, last year. On February 1, 1967, stock holdings at 49.9 million pounds were 13.1 million pounds less than at the same date a year earlier.

Supply: The combined quantity of creamery butter and butter oil represented by stocks on February 1, plus production and imports during the month amounted to 65.3 million pounds of butter at February 28, 1967. This was a decrease of approximately 10.8 million pounds compared to the corresponding supply figure at February 28, 1966.

Domestic Disappearance: The combined domestic disappearance of creamery butter and butter oil in February amounted to 27.1 million pounds of butter, a decrease of 2.5 million pounds or 8.4 per cent less than the corresponding figure for the same month last year. On a per capita basis, it amounted to 1.35 pounds as compared with 1.48 pounds in February, 1966.

Prices at Montreal: Butter prices at Montreal, based on dealers' quotations for first grade solids, averaged 61 cents per pound in February as against 56 7/8 cents in February, 1966.

#### Cheddar Cheese

Production: Cheddar cheese production in February amounted to approximately 4.7 million pounds, a decrease of about 472 thousand pounds compared to production in the same month of the previous year.

Prices: The Belleville price of Ontario coloured cheese averaged 43 1/4 cents per pound in February. The comparative price in 1966 was 42 1/2 cents.

#### Ice Cream Mix

The quantity of ice cream mix manufactured in February was approximately 1.5 million gallons or 82 thousand gallons more than that produced a year ago.
