Dominion Statistician: In Charge of Poultry Statistics: R. H. Coets, LL.D., F.R.S.C., F.S.S.(Hon.) P. H. Ferguson, B.S.A., M.Sc.

The production, value, and distribution of poultry and eggs for the year 1938, with comparative data for the three previous years, are shown in the statement issued to-day by the Dominion Bureau of Statistics.

The estimated production of farm poultry in Canada as revealed in the Live Stock and Poultry survey of June 1, 1938, amounted to 57,237,000, representing a decline of 273,100 or approximately one-half of one per cent, compared with the estimate for the same date of the preceding year. The numbers of the different classes of poultry are shown in table I as follows: hens and chickens, 53,774,600; turkeys, 2,039,600; geese, 807,000; and ducks, 615,800. At December 1, 1938, the estimated number of farm poultry in Canada amounted to 44,394,800 birds, showing an increase of 2.8 per cent over the estimated number shown at the same date in 1937, but a decrease of 22.4 per cent from June 1, 1938. The decline between June 1 and December 1, 1938, was somewhat less than that shown between June 1 and December 1, 1937. An increase in fall marketings due to short grain crops in some areas was the principal factor in this situation.

The estimated production of farm eggs in 1938 was 213,399,000 dozens. Compared with the 1937 production of 219,443,000 dozens it represents a decrease of 6,044,000 dozens or 2.8 per cent. All provinces shared in this decline except New Brunswick, Manitoba, and British Columbia.

The estimated number of egg laying hens, based on the survey of figures of June 1, amounted to 23,089,000 in 1938, a decrease of 772,000 or 3.2 per cent below that of the preceding year.

The average production of eggs per hen was 111 in 1938, compared with 110 eggs in 1937. Although British Columbia was the only province to record an advance, it is apparent that the results of flock improvement work in the other provinces offset the effects of reduced feed supplies and higher feed prices in the fall and winter of 1937-38; Nova Scotia, New Brunswick, and Saskatchewan being the only provinces where actual declines occurred.

The value of farm poultry in 1938, (see table II), based on the average prices received by Crop Correspondents and applied to the numbers reported on farms at June 1, reached a total of \$42,350,000 made up as follows: hens and chickens, \$36,793,000, averaging 68 cents per bird; turkeys, \$3,859,000, averaging \$1.89 per bird; geese, \$1,167,000, averaging \$1.45 per bird; ducks, \$531,000, averaging 86 cents per bird. The total value of farm poultry represented a decrease of \$604,000 or 1.4 per cent as compared with 1937.

The estimated gross income from market poultry sales in 1938, (see table IV) amounted to \$13,094,000, a decrease of \$192,000 or 1.5 per cent in comparison with the corresponding figures for the year 1937.

The estimated value of farm eggs amounted to \$40,653,000 in 1938, an increase of \$2,173,000 or 5.6 per cent above that of 1937.

The gross income from the sale of farm eggs amounted to \$25,553,000 as compared with \$24,022,000 in the previous year or an increase of 6.4 per cent. The average price per dozen was 19 cents in 1938 as compared with 17.5 cents in 1937. A still more significant feature of the situation is revealed in the chart shown on the next page. It will be noticed that the cost of feed in relation to the price of eggs was more favourable to the producer in 1938 than in 1937.

The total value of poultry products, including both poultry and eggs, amounted to \$83,003,000 in 1938. Compared with the 1937 value an increase of \$1,569,000 or 1.9 per cent was recorded. The estimated gross income from the sale of eggs and poultry was \$38,647,000, being approximately 46.6 per cent of the total value.

The estimated consumption of eggs and poultry is shown in Table VI. A total consumption of 233,471,546 dozens of eggs and 200,839,206 pounds of poultry is shown for 1938. The per capita consumption of eggs was 20.83 dozens in 1938 as compared with 21.49 dozens in 1937, and poultry was 17.91 pounds in 1938 compared with 18.14 pounds in 1937. The per capita consumption of poultry by classes is shown as follows: hens and chickens, 15.50 pounds; turkeys, 1.58 pounds; geese, .58 pounds; end ducks, .25 pounds.

All estimates in this report were made by the Dominion Bureau of Statistics on the advice of the Provincial Departments of Agriculture and the Poultry Marketing Service of the Dominion Department of Agriculture.
