GOVERNMENT OF CANADA

PRODUCTION
OF
POULTRY AND EGGS
1951

DOMINION BUREAU OF STATISTICS

Department of Trade and Commerce

Published by

Authority of the Rt. Hon. C. D. Howe,
Minister of Trade and Commerce

Prepared in the

Livestock and Animal Products Section
Agriculture Division

PRODUCTION OF POULTRY AND EGGS IN CANADA 1

1951

Canadian^{1/} net egg production during 1951, estimated at 329.5 million^{2/} dozen, decreased 1 per cent from the previous year's total of 333.6 million dozen. Farm production amounted to 300.9 million dozen.

The nation's farm flocks averaged 22.5 million hens over six months during the year. The rate of lay (eggs laid per hen over six months) was 162 eggs during 1951.

Total sale of eggs for consumption amounted to 260.2 million dozen, of which 237.4 million dozen valued at \$120.2 million were sold off farms. Producers retained 56.7 million dozen for consumption.

While net production decreased approximately 4 million dozen, exports decreased about 7.7 million dozen and imports increased about 3.8 million dozen. The comparison of change in stocks over the year 1951 with that of 1950 shows a net increase of about 0.6 million dozen, while during 1950 there was a 1.6 million dozen net increase in stocks. Thus, domestic disappearance was approximately 8.5 million dozen greater than in 1950. Even with an increased population, the per capita consumption rose from 23.0 dozen in 1950, to 23.1 dozen in 1951.

Poultry meat production in Canada was 346 million pounds during 1951, a 54 million pound increase from the 1950 production of 292 million pounds.^{2/}

1/ Data are not available for Newfoundland.

2/ The sharp drop from the preliminary estimates of 1951 egg production resulted from a review of estimating methods used in the latter months of 1951. Previous to June, 1951, the reports from poultry raisers in each province had been grouped into five size-of-flock groups, the estimates made for each and these totalled to obtain a provincial estimate. After June, 1951, the estimates each month were made by means of a change-ratio, derived from comparing each farmer's return with his return of the previous month, based on the estimates of the previous month. While this method increased the accuracy of figures on number of hens, it tended to set average egg production at a level (considerably influenced by the larger, earlier producing flocks) unduly high compared to estimates in the same months of previous years. Revised estimates of egg production per hen were calculated using special groupings by size-of-flock.

3/ This comparison is not accurate because an adjustment was made in the level of poultry meat production in certain provinces for 1951. These changes in the level of poultry meat production were increases of 1.6 million domestic fowl (7.3 million pounds) in Manitoba, 1.05 million domestic fowl (4.9 million pounds) in Saskatchewan and 600,000 domestic fowl (2.6 million pounds) in British Columbia. Poultry meat production is thus not directly comparable to previous annual estimates in these three provinces. However, the 1951 estimates of poultry meat production are more closely related to the total number of domestic fowl in each of these provinces than was the case in previous years. The production of poultry meat during 1951 is, with allowances for the above adjustments, approximately 13 per cent greater than in 1950.

The 1949 estimate was 207 million pounds. The greatest part of the 1951 production was fowl and chicken meat, which amounted to 293.3 million pounds in 1951. Turkey meat totalled 44.7 million pounds; goose 4.6 million pounds; and duck 3.5 million pounds. Of these amounts 270.0 million pounds of fowl and chicken, 42.5 million pounds of turkey, 4.5 million pounds of goose, and 3.3 million pounds of duck were produced on farms.

Sales of farm produced domestic fowl, marketed as fowl or chicken, amounted to 47 million^{1/} birds, weighing 216.0 million pounds and realizing \$99.4 million farm cash income. Nearly 54 million pounds of fowl and chicken meat was consumed on farms.

Turkey meat sold by farmers amounted to 40.0 million pounds, an increase of 8 per cent from 1950. Farm sales of goose meat in Canada amounted to 3.5 million pounds, valued at \$1.5 million. Duck meat sold by farmers in Canada totalled 2.1 million pounds valued at \$937,000.

Per capita consumption of poultry meat during 1951 was 23.2 pounds as compared with 22.0 pounds in 1950.

TABLE 1: Quantity and Value of Production of Poultry Meat and Eggs in Canada, on Farms and Elsewhere than on Farms ^{2/}
1948 - 1951

Year	Poultry Meat		Net Production 000 doz.	E g g s	
	Weight 000 lb.	Value \$000		Total Disposal 000 doz.	^{3/} Value \$000
1948	268,892	87,488	388,579	388,621	170,841
1949	306,712	104,191	343,848	343,393	146,428
1950	292,045	101,487	333,571	333,760	127,760
1951	346,097	161,064	329,519	327,598	167,185

^{1/} See Footnote ^{3/} on previous page.

^{2/} A farm for census purposes must be over three acres or from one to three acres and have produced agricultural products to the value of \$250.00 or more.

^{3/} The difference between Net Production and Total Disposal is the difference in producers' inventories at January 1 and December 31.
