PRODUCTION OF POULTRY AND EGGS

1958

This report contains preliminary statistics on poultry and eggs for 1957 and 1958, and tabulations of revised annual data on poultry meats and eggs from 1941 forward. The 1957 and 1958 estimates will be subject to revision after the 1961 census. The historical data are included because some of the revisions based on the 1951 and 1956 censuses have not heretofore been published by provinces.

Estimates of poultry meat production and consumption, with data on stocks and external trade, have now been calculated on eviscerated weight basis from 1955 to date. The change in procedure from reporting poultry meat estimated on dressed weight basis was adopted because most poultry meat now reaches the consumer in eviscerated form and because, expressed in this way, comparisons of poultry meat production and consumption with that of other meats are more valid. To facilitate historical comparisons of poultry meat consumption the dressed weight per capita consumption estimates for the years 1941 to 1954 have been converted to approximately equivalent eviscerated weight by reducing them to the following percentages: chicken and fowl, 77 per cent; turkey, 85 per cent; goose, 80 per cent; duck, 77 per cent.

Poultry meat production in 1958, at 454,449,000 pounds, eviscerated weight, was 10.2 per cent greater than the 1957 production. Production of fowl and chicken meat increased to 341,761,000 pounds from 315,328,000. Output of turkey meat rose to 106,157,000 pounds from 91,264,000; goose meat to 3,060,000 from 2,837,000 and duck to 3,471,000 pounds from 2,943,000 in 1957. Turkey meat production increased in all provinces and all but Prince Edward Island, Saskatchewan and Alberta had a larger output of chicken and fowl than in 1957.

The per capita consumption of poultry meat in 1958 was 26.6 pounds, eviscerated weight, as compared with 25.9 pounds in 1957. There was no change from the previous year in the per capita consumption of goose and duck meat at 0.2 and 0.3 pounds, respectively, and chicken consumption rose from 19.4 to 20.3 pounds. Although turkey meat production was 14,893,000 pounds greater in 1958 than in 1957, an increase of 16.3 per cent, the per capita consumption fell off slightly from 6.1 to 5.9 pounds. Imports of turkey meat fell from 6,838,000 pounds in 1957 to 562,000 in 1958. Net out-of-storage movement in 1957 was 3,627,000 pounds while in 1958 there was a net increase of 5,906,000 pounds of turkey in storage.

Egg production in 1958 exceeded that of any previous year. It increased 0.7 per cent to 449,819,000 dozen from 446,476,000 dozen in 1957. An increase in the average rate of lay from 183 to 188 eggs per layer more than offset a reduction of about 2 per cent in the average number of layers in producing flocks. Ten years ago the average rate of lay was 150 eggs per layer.

While total domestic consumption of eggs was slightly greater than in 1957 this increase was not sufficient to compensate for the growth in population and average per capita consumption amounted to 24.8 dozen as compared with 25.4 dozen in 1957.

Note: Surveys on which to base estimates of poultry and egg production have not been extended to Newfoundland; hence production in that province, while increasing but still of relatively minor significance in Canada totals, is not included in this report.

TABLE 1. Poultry Meat: Supply and Disposition, 1941-1958

| Calendar year | Supply | | | | Disposition | | | | | | | | | |
|---------------------------|------------|---------|------------------|---------|---------------|---------|--|------------|------|--|--|--|--|--|
| | Production | Imports | Beginning stocks | Total | Ending stocks | Exports | Apparent domestic disappearance for consumption | | | | | | | |
