COLD STORAGE HOLDINGS OF FISH

MAY, 1957

Memorandum

Published by Authority of
The Right Honourable C. D. Howe, Minister of Trade and Commerce

DOMINION BUREAU OF STATISTICS
Industry and Merchandising Division
Fisheries Section

INTRODUCTION

Beginning with the February issue of this publication, our coverage of establishments freezing fish and storing frozen fishery products was revised. This was a result of a survey made in 1955 on the Cold Storage Facilities for fish and of a subsequent analysis of special reports obtained in 1956. A number of establishments storing small amounts of fish were eliminated from our reporting list, whenever the amounts involved from month to month did not significantly alter the provincial or regional picture. On the other hand some establishments not previously reporting were added, resulting in a net increase in the number incorporated into this report.

Figures of stocks in this publication (Table 1) refer to the same establishments in both years and are therefore comparable. Reference to figures previously published for 1956 will indicate that our volume coverage was increased. We attempt to cover approximately ninety-eight per cent of the Canadian totals and about ninety-five per cent or more within each province or area.

Cumulative freezings (Table 2) are not strictly comparable, because the January figures incorporated into the totals could not be revised for 1956.

EXPLANATION OF SYMBOLS

- Nil
- (X) Less than three firms reporting this item. The figures, therefore, cannot be shown separately, but are included under "Unclassified."

COLD STORAGE HOLDINGS OF FISH - MAY 31, 1957

The total reported stocks of frozen fish were 50.7 million lb. at the end of May, 26 per cent higher than last year. The increase is mainly accounted for by heavier inventories, this year than in 1956, of halibut and salmon originating from the West Coast. The holdings of the freshwater species and of animal foods were also greater than a year ago.

The freezings of fishery products in May increased by 30 per cent from 19.0 million lb. in 1956 to 24.8 million in the current year. Halibut and groundfish fillets largely contribute to the change.

Fresh-Frozen Sea Fish -

The inventories of fresh-frozen sea fish, at the end of May, increased by 18 per cent to 25.2 million lb. from 19.7 million a year ago. The stocks of dressed halibut rose to 7.1 million lb. from 2.1 million in the preceding year; those of Pacific salmon, rose to 3.9 million lb. from 0.9 million. However, this was partially offset by a decline of 17 per cent in the inventories of the groundfish fillets, from 12.6 million lb. to 10.4 million this year.

Freshwater Species and Smoked Fish -

The stocks of fresh-frozen freshwater species rose to 6.4 million lb. from 3.3 million in the preceding year. The main species held in greater amounts were Perch and Blue Pickerel.

The inventories of frozen-smoked fish were about equal to those of the preceding year. However, the stocks of bait and animal foods increased by 17 per cent, from 14.2 million lb. in 1956 to 16.5 million in the current year.

Freezings of Fish -

The freezings of fish were reported at 24.8 million lb. in May, against 19.0 million lb. for the same month in 1956. The freezings of groundfish fillets, at 11.5 million lb. were almost 2 million lb. or 19 per cent greater than in the preceding year; those of dressed halibut were 4.6 million lb. against 2.0 million a year ago. However, cumulative freezings to date were reported at about the same level in both years.
