Price \$2.00 a year

Vol. 40, No. 7

INTRODUCTION

Beginning with this issue, our coverage of establishments freezing fish and storing frozen fishery products is revised. This is a result of a survey made in 1955 on the Cold Storage Facilities for fish and of a subsequent analysis of special reports obtained in 1956. A number of establishments storing small amounts of fish were eliminated from our mailing list, whenever the amounts involved from month to month did not significantly alter the provincial or regional picture. On the other hand some establishments not previously reporting were added, resulting in a net increase in the number incorporated into this report.

Figures of stocks in this publication refer to the same establishments in both years and are therefore comparable. Reference to figures previously published for 1956 will indicate that our volume coverage was increased. We attempt to cover approximately ninety-eight per cent of the Canadian totals and about ninety-five per cent or more within each province or area.

Cumulative freezings appearing in Table 2 are not strictly comparable, because the January figures incorporated into the totals could not be revised for 1956.

EXPLANATION OF SYMBOLS

- Nil
- (X) Less than three firms reporting this item. The figures, therefore, cannot be shown separately, but are included under "Unclassified."

COLD STORAGE HOLDINGS OF FISH - JULY 31, 1957

The total reported stocks of frozen fish were 66.8 million pounds at the end of July, a decline of 2 per cent compared with 1956. Compared with last year heavier stocks of inland species were held but this was more than offset by lower holdings of groundfish fillets and of animal foods.

The freezings of fishery products in July were down by 6 per cent compared with 1956, but the cumulative freezings for the first seven months increased substantially due mainly to greater quantities of Pacific halibut being frozen this year than last.

Fresh-Frozen Sea Fish -

The holdings of fresh-frozen sea fish were virtually unchanged in total compared with 1956. The groundfish fillets stocks declined by 13 per cent, to 20 million pounds from 23 million a year ago. However, this was offset by greater amounts of Pacific halibut and salmon held this year than in 1956. Pacific halibut increased to 10.6 million pounds from 8.8 million in the preceding year and Pacific salmon were 5.7 million pounds, against 4.5 million last year.

Freshwater Species and Smoked Fish

The stocks of fresh-frozen freshwater species increased by 39 per cent, to 6.8 million pounds from 4.9 million a year ago. The main species held in greater amounts were whitefish and perch. Whitefish stocks increased to 1.8 million pounds from 846,000 pounds last year.

The inventories of frozen-smoked fish were practically the same as a year ago but the stocks of animal foods declined to 7.7 million pounds from 12.1 million in 1956.

Freezings of Fish -

The freezings of fish were reported at 32.4 million pounds, a decline of 6.2 per cent compared with the same month of 1956. The freezings of groundfish fillets, at 19.4 million pounds, were one million pounds less than last year. However the cumulation freezings for the first seven months of the year were 138.5 million pounds, some 9 million more than last year. The Pacific halibut freezings to date amounted to 15 million pounds against 9 million pounds in 1956. The cumulative freezings of groundfish fillets, at 73.5 million pounds since the beginning of the year, showed practically no change from 1956.
