MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
AUGUST 1947

(Prepared in collaboration with Dominion and Provincial Fisheries Departments)

Dominion Statistician:
Chief, Fisheries and Animal Products Statistics:

Herbert Marshall
W. H. Lanceley

TRENDS CONTINUED

As to catch, disposition and prices, the fisheries statistics for August show little change from the general pattern set in the first half of the year.

Landings on the Atlantic Coast during the month totalled 84.5 million lb. - less than 70 per cent of the total for August, 1946. Lower catches were reported for most of the major seasonal phases of the industry, and are attributed in part to the fact that fish buyers have been less active in certain areas as a result of the weakening market situation. Cod landings were only 56 per cent, herring landings (including sardines) less than 80 per cent, and swordfish landings about 42 per cent of the 1946 figures.

On the Pacific Coast the picture is quite different. Landings of 50.0 million lb. were substantially above those of August, 1946. Halibut landings were more than 75 per cent, and salmon nearly 20 per cent greater than last year.

Statistics of landings in the inland fisheries are still too incomplete for analysis.

The diversion of the catch to salted products in the ground fishery of the Atlantic Coast has been noted in earlier numbers of this Review. This trend continues. To date 57.8 per cent of the cod catch has been utilized for salting, as compared with 37.4 per cent for last year. A further development that should be noted is the increased proportion of the sardine herring catch that is being used for canning: 60.1 per cent this year, 37.5 per cent last year and 38.5 per cent in the pre-war years.

The development just mentioned is reflected in the reduced exports of fresh herring to the U.S. this year. It is still too early in the trade year for definite trends to have been established for most fishery products. Exports of frozen groundfish fillets to the U.S. remain slack: 1.3 million lb. in July of this year against 3.2 million lb. last year. Exports of fresh and frozen Inland lake fish to the U.S., with the exception of ciscoes, are also somewhat less than last year. On the other hand exports of Pacific halibut to the U.S. have been nearly three times greater this year, and exports of Pacific salmon almost twice as great. Export markets for salted and canned fish (including the relief feeding program) remained strong, at least to the end of July. The U.K. government purchase of canned B.C. salmon from the current pack has been cut back drastically, and the important Australian market for that product has been closed because of the dollar famine.

No changes in prices to fishermen are reported from either coast, except those attributable to normal seasonal variation. The index of wholesale prices appears to have resumed its downward trend but no significant changes are reported in the retail prices as of August 1.

Only insignificant changes are reported in stocks of groundfish in cold storage at Sept. 1, as compared with the previous month. With the exception of smoked cod fillets, however, stocks are substantially below those of the same date in 1946. Stocks of halibut, herring, salmon and whitefish, on the other hand, are considerably higher than last year's. Total holdings are almost equal to last year's figure, 50.8 million lb. compared with 49.0 million lb.

This issue of the review contains a summary of the output of by-products on the Atlantic and Pacific Coasts to the end of August, and a report of production in the Manitoba lake fisheries for the summer to date.

Price: 10 cents per copy, \$1 per year.
