MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
OCTOBER 1949

WINTER HERRING SEASON BEGINS IN BRITISH COLUMBIA

Landings of sea-fish during October in Canada (excluding Newfoundland) amounted to 124,130,000 lb., an increase of 8.7 p.c. over the figure for October, 1948. The total for the ten months under review, 989,841,000 lb., was still some 5.3 p.c. below that for the same period of last year.

The Pacific Coast catch of 71,033,000 lb. was greater by 2.5 p.c. than that taken in October, 1948. Indications are that the salmon run tapered off more abruptly and the herring fishery swung into stride more rapidly than was the case last year. Landings of the former species were down approximately 13.4 million pounds, while those of the latter were up 15.7 millions as compared with the same month of 1948.

Atlantic Coast landings amounted to 53,097,000 lb., an increase of 18.4 p.c. over those of October, 1948. With the exception of haddock, greater quantities of groundfish were caught, but the cumulative total for these species is still well below the 1948 level.

More of the Atlantic cod catch is being salted - both wet and dried - and more haddock is being disposed of as fresh fillets. Also a greater percentage of the landings of tuna is being fresh dressed. Apart from these changes there seems to be no new trend worth noting in the disposition of the eastern catch. The disposition of the main Pacific Coast fishes shows little change from that of last year; although there is an apparent tendency to market a larger proportion of salmon fresh and frozen, the quantity canned is greater than in 1948 since it represents a slightly smaller percentage of a substantially larger catch.

Reports from Ontario indicate a better whitefish season this year, and the increase in landings of this species contributed greatly to the increase in the total landed value for the province. Again in Manitoba more whitefish were landed this year, but in this province the catch of all other fish was drastically lower.

Stocks of all frozen fish in Canada apart from Newfoundland amounted to 52,989,000 lb. on November 1, of which 50,045,000 lb. were frozen fresh and 2,944,000 lb. frozen smoked. There was an "into-storage" movement of 5.7 million pounds as compared with a similar movement of 4.0 millions during October, 1948.

The gap between this and last year's exports of fishery products is becoming smaller. At the end of September the cumulative total was only 6.2 p.c. below that for the same nine-month period of 1948. Exports of canned fish are still far below the 1948 level. Shipments of fresh and frozen, and smoked fish also decreased, but exports of all other classifications of fish and fish products have increased as compared with 1948. The inclusion of Newfoundland exports, since April 1, 1949, has markedly contributed to the increase in salted fish exports and, to some extent, to those in fresh and frozen fillets and pickled fish exports.

While the Fishery Products Wholesale index number remained unchanged in September after its sudden drop of 14 points between July and August, the downward trend in Meat and Poultry, and All Foods indices continued. The mid-month wholesale prices for October indicate a general decline from those of September, 1949, and October, 1948. Retail prices show little change from those of the previous month, and a comparison with those of October, 1948, does not suggest any significant trend.
