CRUDE PETROLEUM AND NATURAL GAS PRODUCTION

JANUARY 1969

The production of crude petroleum and equivalent hydrocarbons during January 1969 amounted to 36,644,531 barrels, or 1,182,082 barrels per day, an increase of 20.0 per cent or 196,672 barrels per day from January 1968. The production figures for all petroleum liquids for the two years are as follows:

	January 1968		January 1969	
	millions of barrels	barrels per day	millions of barrels	barrels per day
Crude petroleum and condensate	30.5	985,410	33.5	1,080,413
Pentanes plus	2.8	89,220	3.2	101,669
Propane and butanes	2.4	75,897	2.5	82,174
Totals	35.7	1,150,527	39.2	1,264,256

The disposition of Canadian crude and equivalent for January 1969 was 20.8 million barrels (56.8 per cent) to Canadian refineries and 15.0 million barrels (41.1 per cent) was exported. The difference between supply and sales of 2.1 per cent is accounted for by inventory changes, industry own use, etc. Imported crude petroleum for the same period amounted to 16.6 million barrels (535,119 barrels per day) bringing domestic requirements for crude petroleum and equivalent hydrocarbons to 37.4 million barrels (1,206,354 barrels per day).

Natural gas production increased 15.4 per cent to 201,856,251 Mcf. from 174,894,943 Mcf. in January 1968. The disposition of natural gas for January 1969 is as follows: 2.2 million was net deliveries to storage and injection operations; 29.3 million was used, lost or unaccounted for in fields and processing plants; 58.0 million was exported; 47.7 million was sold to ultimate customers in the prairies; 39.9 million in Ontario; 10.1 in British Columbia and 4.9 million in Quebec. The remaining 9.8 million Mcf. was accounted for by other deliveries, pipeline fuel losses and line pack fluctuations.

Table 1 includes production of petroleum and equivalent hydrocarbons, propane and butanes. Pentanes plus represent the crude oil equivalent production at gas processing plants. Propane and butanes represent the net withdrawals from gas processing plants.

Table 2 Supply and Disposition of Crude oil and Equivalent. Disposition is given to the first stage of marketing, either directly as deliveries to refineries or export. The companion publication "Refined Petroleum Products" gives the disposition of crude oil received by the refinery including the sales of various refined petroleum products. Inventories held by purchasers and refiners in field and pipeline are included in Table 2, while inventories held by refiners in a refinery complex are excluded. Details on the movement of crude oil by pipeline are given in another companion report "Oil Pipeline Transport", Catalogue number 55-001.

All volumes of crude oil are given in barrels of 35 Canadian gallons at 60° F. Details of production are published by the individual provinces.

In Table 3, disposition is given to the ultimate delivery by the gas utilities. Deliveries of natural gas to storage are considered as terminated, and therefore receipts from storage originate in the province where the storage is located. Field flared and waste gas are not considered as net new production; but processing plant flared and waste gas are included and constitute a disposition end use.

A companion publication "Gas Utilities," Catalogue number 55-002 provides additional details on the movement and sales of natural gas.

All volumes of natural gas in this report are given in thousand cubic feet measured at 14.73 p.s.i.a. at 60° F.

Sulphur volumes are expressed in short tons measured at 2,000 pounds.
