## Monthly Report on

# CANADA'S LEADING MINERAL PRODUCTS

#### JANUARY 1930

Monthly Statistics for 1929.— For several years Canadian production figures have been published monthly on such important products as coal, coke, iron and steel, and automobiles. Similarly information on imports into Canada and exports therefrom has been issued monthly, both import and export lists including all the principal items in each case. But up to the present time the only statistics available monthly relating to mineral output of Canada have been those compiled and published outside of the Dominion. To remedy this situation the Bureau undertock in January, 1929, to collect monthly data on the output of leading mineral products in Canada. The results of the first year's work are shown in this report.

The work is being continued and a monthly report will be issued regularly hereafter, thus providing a Canadian official guide to monthly production of these mineral products.

Sixteen representative mineral products have been selected and production statistics for these minerals will be given in the monthly report. The selected items are: asbestoe, cement, clay products, coal, copper, feldspar, gold, gypsum, lead, lime, natural gas, nickel, petroleum, salt, silver and zinc. Production data have been obtained in terms of quantity for all items except clay products, in which sales values have been used. In 1929 the combined production value of these 16 products was \$282,726,395 or 92.05 per cent of the aggregate for all mineral products. The following table shows the monthly data by items for 1929. As some of the figures collected monthly were of a preliminary nature, corrections have been made in the monthly records to bring the totals for the twelve months into accord with the totals reported for the year.

- 3 - MONTHLY PRODUCTION OF FRINCIPAL MINERALS IN CANADA, 1929.

#### Monthly Report on

#### **CANADA'S LEADING MINERAL PRODUCTS**

#### JANUARY 1930

Monthly Statistics for January, 1930.— Monthly statistics on Canada's leading mineral products for January, 1930, showed gains over December, 1929, in the cutput of coal, feldspar, natural gas and zinc. In comparison with the totals for January, 1929, the figures for January, 1930, were higher in coal, copper, feldspar, gold, natural gas, petroleum, salt, silver and zinc. In this connection it may be noted that new yearly production records were established in 1929 for the outputs of copper, gold, natural gas, petroleum, salt and zinc.

A feature of the month's record was the rise in coal output to a point 7.6 per cent over the average for January in the five preceding years. Copper production was 5 million pounds higher than the January, 1929 figurs, although slightly below the December total. Gold production showed a similar trend, the figure for the month being above that for January, 1929, but below the total for December, 1929. Natural gas showed continued improvement over both the January and December, 1929, figures. Petroleum and ealt outputs were greater than in January, 1929, but less than the totals for December. Silver production, while higher than in January, 1929, was about 22 per cent below the output in December, but it is possible the December figure included silver recovered from clean-ups for the year. Zinc showed a continued advance, rising over both the preceding January and December totals.
