SECTION 1. - MANUFACTURING INDUSTRIES OF THE MARITIME PROVINCES, 1940.

A report on the manufacturing industries of the Maritime Provinces for the year 1940 is presented herewith.

The report is divided into four sections. Section 1 deals with the three provinces as a group and the tables included therein show the principal statistics, statistics of the leading industries and statistics of the twenty leading cities and towns. Section 2 deals with the Province of Prince Edward Island, Section 3 with the Province of Nova Scotia and Section 4 with the Province of New Brunswick.

Manufacturing production in the Maritime Provinces improved during 1940. Compared with the previous year, there was an increase of \$54,210,798 or 35.5 per cent in the gross value of production, 5,762 or 17.4 per cent in the number of persons employed, \$2,876,414 or 28.7 per cent in the amount of salaries and wages paid and \$21,901,417 or 34.1 per cent in the value added by manufacture.

As compared with the rest of Canada, the Maritime Provinces, as a unit, received a greater share of the increased production resulting from the demands created by the present war, as the following table shows:

Percentage Variation 1940 as Compared with 1939.

	Number of Employees	Salaries and Wages Paid	Gross Value of Products
	P.C.	P.C.	P.C.
CANADA	+ 15.8	+ 24.8	+ 30.3
Prince Edward Island .	- 2.8	+ 4.5	+ 9.1
Nova Scotia	+ 19.5	+ 29.2	+ 36.9
New Brunswick	+ 16.3	+ 29.1	+ 35.2

On referring to Table 2, which gives the combined principal statistics of the Maritime Provinces, it will be noted that in 1940 there were 2,151 establishments reporting, with a capital investment in fixed and current assets of \$207,701,943. Employment was furnished to 38,978 persons who received \$39,805,206 in salaries and wages. The gross output was valued at \$206,952,202 while the cost of materials used amounted to \$111,618,174 and the value added by manufacture totalled \$86,072,154.

MANUFACTURING INDUSTRIES OF THE MARITIME PROVINCES, 1940

Pulp and paper with an output valued at \$31,158,646 was again the leading industry from the standpoint of value of production. The output of primary iron and steel ranked second with a value of \$21,717,799, followed by sawmills with \$14,625,835, fish curing and packing \$12,257,228, railway rolling-stock \$8,968,971, coke and gas products \$6,341,424, cotton yarn and cloth \$6,137,583. Sugar and petroleum refining are also important in the Maritime Provinces, Statistics for these industries cannot, however, be published as there are less than three establishments in each.

Manufacturing in Nova Scotia is to a considerable extent dominated by the steel and forest products industries, although there is a large sugar and petroleum refinery. The production of iron and steel products constitutes the main industrial group and accounted for \$35,694,731 or 31.4 per cent of the entire output of the province. Non-metallic mineral products came second with a value of production of \$18,136,039, followed by wood and paper products with \$18,112,571, vegetable products \$17,711,754, animal products \$12,488,574, textiles and textile products \$8,507,090, etc.

Forest products industries dominate the manufacturing field in New Brunswick. Production of wood and paper products led all groups in 1940 by a wide margin, the value of production being \$39,100,234 or 43.8 of the total. The vegetable products group followed with an output of \$19,514,609. Iron and steel products with a value of production of \$39,887,113 came third, followed by animal products with \$8,068,674, textiles and textile products \$6,831,095, etc.

Principal statistics of the leading cities and towns are given in Table 4. Sydney, N. S. with an output valued at \$28,670,649 was the leading manufacturing city in 1940. This was followed by Saint John, N. B. with an output of \$26,733,304, Halifax, N. S. with \$17,596,106, Moncton, N. B. \$8,887,067, Trenton, N. S., \$7,968,969, Dalhousie, N. B. \$7,440,334, etc.

x The large decrease in the number of employees since 1931 is not entirely due to the decline in manufacturing production. The decrease is in part due to the change in the method of computing the average annual employment of wage-earners. Between 1925 and 1930 the average was obtained by summing the averages of individual plants, based on the number of months in actual operation, and not by dividing by twelve the sum of the monthly employment figures. In 1931, however, a change was made to the old method, whereby the aggregate of the monthly figures is divided by twelve. This method gives the man-year that each plant operates. The change in method, therefore, affects the average annual employment, as well as the average wages paid in seasonal industries, such as fruit and vegetable canning, fish canning, sawmills, etc.
