## CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBBER

May, 1959

The statistics made available monthly in this report are considered to represent clearly and accurately (a) the new domestic production and (b) the total consumption of all types of rubber, natural, synthetic and reclaimed whether foreign or domestic, by broad end product use groupings, together with inventories, receipts and sales by consuming manufacturers in all in= dustries. The addition of the two inventories gives the total stocks held by industry.

It is regretted that comparable export-import data cannot be secured each month, and that, therefore, the total available supply is not accurately known. However, the data given in (b) do ultimately account for the total consumption of rubber in Canada, and should be capable of being correlated with new production and export-import data (as compiled by the External Trade Section, D.B.S.) over a period of months.

Consumption of rubber in May 1959 as compared with April 1959 shows an increase in natural of 17,000 pounds, a decrease in synthetic of 691,000 pounds and a decrease in reclaimed of 6,000 pounds, the total being an decrease of 680,000 pounds. Considering the situation in terms of end products use, it may be noted that the consumption of all rubber in the production of tires and tubes, including tire repair materials decreased by 181,000 pounds, consumption in rubber footwear decreased by 110,000 pounds, in wire and cable decreased by 32,000 pounds, in foamed rubber decreased by 46,000 pounds and in other products decreased by 311,000 pounds making the total decrease of 680,000 pounds mentioned above.
