CONSUMPTION, PRODUCTION AND INVENTORIES  
OF RUBBER,  
MARCH, 1947

During the years of Control, monthly Rubber Statistics were developed, showing consumption by types of rubber, and by end product classifications, together with stocks, new production of synthetics, etc. These statistics show clearly the impact on rubber consumers of the loss of natural rubber supplies, and the consequent growth of the synthetic rubber industry. Since they show consumption by end product classification, they are a useful record of the extent to which synthetics were consumed in each of the broad product fields.

The Dominion Bureau of Statistics has been asked to continue a modified series, in order that authoritative data may be available monthly concerning this important commodity and its uses in natural or synthetic forms, and now publishes the statistics for March, 1947. Historical tables, prepared largely from the Rubber Control records, have been included in the report, in order that valuable material might thus be presented in a condensed form, and also that relationships might be established for the evaluation of current data.

CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBBER, MARCH, 1947

Section A. Canadian

This section includes summary data on natural, synthetic and reclaim rubber, Table 1 gives yearly averages, 1939-1945, and actual months, July 1945-

For detailed data of consumption, by specific types, and by end products Synthetic Rubber, and Section D. Reclaim Rubber.

(1) Neoprene and all other synthetics cannot be shown separately for March.

(2) Dispersions and other cannot be shown separately for March.

CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBBER, MARCH, 1947

Section B. Natural Rubber

The February and March, 1947, consumption of Natural Rubber showing crude rubber and natural latex separately, and arranged according to end product classifications, is shown in Table 5.

Summary data, by months, July, 1945 - March, 1947, are shown in Table 4, and 1939 - 1946 yearly totals and monthly averages are given in Table 3. Crude rubber and natural latex do not appear separately in summary tables, but are combined under the heading "Natural".

For summary data on Synthetics, Natural and other rubber stocks, domestic production, domestic consumption, exports and imports, expressed in long tons, see Table 1. However, when comparing monthly consumption of natural rubber, as given in Table 1, with consumption as shown in detailed tables by end product classification, it should be noted that in Table 1, Guayule Rubber is reduced to a deresinated basis, whereas in the detailed tables it is included at the weight reported by the firms. Commencing with March 1, 1947, poundage of Guayule included in all tables is on a deresinated basis, and totals should, therefore, agree.

Table 3. - Consumption of Natural Rubber in Total, and Showing Monthly Averages, 1939 - 1946.

<u>Year</u>	<u>Total</u> <u>Pounds</u>	<u>Monthly</u> <u>Averages</u> <u>Pounds</u>

CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBBER, MARCH, 1947

Section C Synthetic Rubber

The February and March, 1947, consumption of Synthetic Rubber is shown, by type, and by end product classification, in Table 9.

Summary data, by months, July, 1945 - March, 1947, are shown in Tables 7 and 8, while 1943 - 1946 yearly totals and monthly averages are given in Table 6.

For summary data on Synthetic and other rubber stocks, domestic production, domestic consumption, exports and imports, expressed in long tons, see Table 1.

CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBBER, MARCH, 1947

Section D. Reclaim Rubber

No end product consumption data are available for Reclaim Rubber. However, Reclaim is usually classified as (a) Dispersions, and (b) other than Dispersions. This break-down gives some broad indication of the end product use. "Other than Dispersions" would compare with crude rubber, while "Dispersions" would compare with natural latex.

(In general, dispersions are mechanical dispersions of rubber, resins or reclaim, the products being similar to compounded latex. Basically, they are a suspension of rubber or resin in water. Natural rubber latex could be considered as the "classic material", and the others as later developments that come about through necessity or advancing technological knowledge. They are used where latex was, might be, or could be used.)

Tables 10 and 11 give the consumption of Reclaim, in total, for the years 1939 - 1946, with monthly averages for each year and broken down into Dispersions and Other than Dispersions, by actual months, July, 1945 - March, 1947.

For summary data on Reclaim, Synthetics, and other rubber stocks, domestic production, domestic consumption, exports and imports, expressed in long tons, see Table 1.

Table 10. - Consumption of Reclaim Rubber, in Total,  
and by Monthly Averages, 1939 - 1946.

Year	Total	Monthly Average
	pounds	pounds
1939 .....	16,826,880	1,402,240
1940 .....	18,896,640	1,574,720
1941 .....	21,208,320	1,767,360
1942 .....	28,008,960	2,334,080
1943 .....	31,342,080	2,611,840
1944 .....	28,277,760	2,356,480
1945 .....	34,298,880	2,858,240
1946 .....	31,673,600	2,639,467

CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBBER, MARCH, 1947
