W. H. Losee

Chief, General Manufacturing Statistics:
A. Cohen

## CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBBER

AUGUST, 1947

During the years of Control, monthly Rubber Statistics were developed, showing consumption by types of rubber, and by end product classifications, together with stocks, new production of synthetics, etc. These statistics show clearly the impact on rubber consumers of the loss of natural rubber supplies, and the consequent growth of the synthetic rubber industry. Since they show consumption by end product classification, they are a useful record of the extent to which synthetics were consumed in each of the broad product fields.

Commencing with March, 1947, the Dominion Bureau of Statistics undertook the continuance and publication of a similar, though modified, series, and all available material to date is included in this report. Historical tables, prepared largely from the Rubber Control records, have also been included, in order that valuable material might thus be presented in a condensed form, and also that relationships might be established for the evaluation of current data.

However, assumptions which were valid during the period of control due to the fact that the movements of tie commodity were under direction, are no longer sufficiently reliable to permit the publication of import - export data based on receipts and sales of manufacturers, or to assume that the imports of some specific synthetic by a particular manufacturer represent the total new supply of this syntinetic. Nor can the inventories of manufacturers, whether producing or consuming, be considered as total since the re-establishment of normal trude channels indicates dealer inventorles outside the scope of an industry survey. Also the quantity of foreign or domestic rubber in transit at the close of any period is not know.

Therefore, the statistics now available monthly, are considered only to represent clearly and accurately (a) the new domestic production of synthetic and reclaim, and the invontories of firms reporting this production, and (b) the total consumption of rubber, whether foreign or domestic, together with inventories, receipts and sales of rubber by consuming manufacturers in all industries. The addition of the two inventories give the total stocks held by industry.

The historical tables have now been revised to omit import - export columns, and the current rubber balance statement has been broken down into (a) and (b) as outlined in the preceding paragraphs.

## CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBBER

However, despite the fact that the total available supply is not known and that it is impossible to relate shipments and receipts the data given in (b) do ultimately account for the total consumption of rubber in Canada, and should be capable of being co-related with new production and export - import data (as compiled by External Trade Branch, D.B.S.) over a period of months.

The sections showing consumption of rubber, by types, and by end products have not been changed, since they do correctly represent total consumption in each case.

## Section A. Canadian Rubber Balance Statement

This section includes summary data on natural, synthetic and reclaim rubber, showing stocks, domestic production, and domestic consumption. Table 1 gives yearly averages, 1939 - 1945, and actual months, July, 1945 to August, 1947. Table 2 gives details for July and August, 1947.

For detalled data for consumption, by specific types, and by end products classifications, wherever possible, see Section B, Natural Rubber; Section C, Synthetic Rubber; and Section D, Reclaim Rubber.

Table 1. - Summary Statement of all Rubber Stocks, Domestic Production, Domestic Consumption showing Monthly Averages, 1939 - 1945, and Actual Monthly Totals, July, 1945 to August, 1947.

Weights are given in Long Tons (2,240 pounds)

| Period | Stocks, End of Period |  |  | Domestic Production |  | Domestic Consumption |  |  |

| July .. | 10,045 | 3,733 | 2,629 | 3,480 | 225 | 2,433 | 2,059 | 1,120 |
| Aug. | 9,679 | 4,269 | 2,680 | 3,533 | 298 | 2,192 | 1,719 | 983 |

Note: Poundage of Guayule Rubber included in Natural Pubber totals is on a deresinated basis. All other wild rubber is calculated on a Washed and dried basis. Also it should be particularly noted that all stocks are taken at the raw level, or the level on which rubber may be used as a material. They would include compound latex purchased for consumption by a manufacturer, but would not include the semi-processed, or finished goods, held in inventory by the manufacturer.

## CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBBER

Section B. Natural Rubber

The July and August, $194^{\prime} 7$ consumption of Natural kubber showing crude rubber and natural latex separately, and arranged according to end products classifications, is shown in Table 5.

Summary data, by months, January, 1946 to August, 1947, are shown in Table 4, and 1939 - 1946 yearly totals and monthly averages are given in Table 3. Crude rubber and natural latex do not appear separately in sumary tables, but are combined under the heading "Natural".

For sumary data on Synthetics, Natural and other rubber stocks, domestic production, domestic consumption, expressed in long tons, see Table 1. However, when comparing monthly consumption of natural rubber, as given in Table 1, with consumption as shown in detailed tables by end product classification, it should be noted that in Table 1, Guayule Rubber is reduced to a deresinated basis, whereas in the detailed tables it is included at the weight reported by the firms. Commencing with March 1, 1947, poundage of Guayule included in all tables is on a deresinated basis, and totalsshould, therefore, agree.

Table 3. - Consumption of Natural Rubber in Total, and Showing Konthly Averages, 1939-1946.

| Year | Total | Monthly <br> Averages |
| :---: | :---: | :---: |
|  | Pounds | Pounds |

## CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBBER

## Section C. Synthetic Rubber

The July and August, 1947 consumption of Synthetic Rubber is shown, by type, and by end product classification, in Table 9.

Summary data, by months, August, 1945 to August, 1947, are shown in Tables? and 8, while 1943 - 1946 yearly totals and monthly averages are given in Table 6.

For summary data on Syntretic and other rubber stocks, domestic production, domestic consumption, expressed in long tons, see Tarle 1.

Table 6. - Consumption of Synthetic Rubber in Total, and showing Monthly Averages, 1943 - 1946.

| Year | Total | Monthly Average |
| :---: | :---: | :---: |
| 1943 | 8,252,160 pounds | 687,680 pounds |
| 1944 | 55,399,680 | 4,616,640 |
| 1945 | 80,505,600 | 6,708,800 |
| 1946 | 66,357,973 | 5,529,831 |

## CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBBER

Table 9(a). - Consumption of Synthetic Rubber, by Types and hy End Product Classification, August, 1947.

Table $9(b)$. - Consumption of Synthetic Rubber, by Types and by End Product Clessification, July, 1947.

| End Products | Buna $s$ | Butyl | Neoprene | other | Total <br> Synthetic |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## Section D. Reclaim Rubber

No end product consumption data are available for Reclaim Rubber. However, Reclaim is usually classifijed as (a) Dispersions, and (b) Other than dispersions. This broak-down gives some broad indication of the end product use. "Other than Dispersions" would compare with crude rubber, while "Dispersions" would compare with natural latex.
(In generul, dispersions are mechanical dispersions of rubher, resins or reclaim, the products being similar to compounded latex. Busjcally, they are a suspension of rubber or resin in water. Natural rubber latex could be unsidered as the "classic material", and the others as later developments that come about through necessity of advancing technologicel knowledge. They are used where latex was, might be, or could be used.)

Tables 10 and 11 give the consumption of Reclajm, in totril, for the years 1939 - 1946, with monthly averages for each year anc broken down into Dispersjons and Other than Dispersions, by actuel months, July, 1945 to August, 1947.

For summary data on Reclaim, Synthetics, und other rubber stocks, domestic production, domestic consumption, expressed in long tons, see Table 1.

Table 10. - Consumption of Reclaim Rubber, in Total, and by Monthly Averages, 1939-1946.

| Year | $\frac{\text { Total }}{\text { Pounds }}$ | Montrily <br> Average <br> Pounds |
| :---: | :---: | :---: |
| 1939 | 16,826,880 | 1,402,240 |
| 1940 | 18,896,640 | 1,574,720 |
| 1941 | 21,208,320 | 1,767,360 |
| 1942 | 28,008,960 | 2,334,080 |
| 1943 | 31,342,080 | 2,611,840 |
| 1944 | 28,277,760 | 2,356,480 |
| 1945 | 34,298,880 | 2,858,240 |
| 1946 | 31,673,600 | 2,639,467 |

## CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBBER

Table 11. - Consumption of Reclaim Rubber, by Types,
and by Months, July, 1945 to August, 1947.

| Month | Total | Dispersions | Other than Dispersions |
| :---: | :---: | :---: | :---: |
|  | Pounds | Pounds | Pounds |
| 1945 - July | 2,246,720 | 125,440 | 2,121,280 |
| August | 2,502,080 | 112,000 | 2,390,080 |
| September | 3,039,680 | 132,160 | 2,907,520 |
