## COMSURTPION, PHODUCTION AND INVENTORIES OF RUBBER

$$
\text { JAIUARY, } 1948
$$

Commencing with March 1947, the Dominion Bureau of Statistics urdertook the continuance and publication, in a modified form, of the monthly rubber statistics developed during the years of control. IIIstorical tables were propared, largely from the Rubber Control records, and are included in this raport in order that vaiuable material may thus be presented in a condensed form, and also that relationships may be estatlished for the evaluation of current data. These statistics show clearly, during the later war years, the impact on rubber consumers of the loss of natural rubber supplies, and the consequent growth of the synthetic rubber industry. Thoy also evidonce, in the postwar period, the gradually increasing availability of natural rubber, and, since they show consumption by broad end products divisions, changes in the percentages of matural and synthetic consumed in each division may be said to contain inferences as to the suitabilities of each type.

Early publications in this series contained a Rubber Balance Statement,in which an attempt was made to account for all rubber entering or produced in Canada. However, assurptions which were valid during the period of control due to the fact that the no venents of the commdity were under direction, are no lonear sufficiently reliabie to permit tho publication of import - export data based on receipts and sales of manu facturers, or to assume that the imports of some specific syathetic by a particular manufacturer represent the total new supply of this synthatic. Nor can the inventories of manufacturers, whetiner producing or consuming, be considered a total sirice the reestablishment of nomal trade channels indicates dealer inventories outside the scope of an industry survey. Also the quantity of foreirn or domestic rubber in transit at the close of any period is not knom.

Therefore, the statistics now available monthly, are considered only to represent clearly and accurately (a) the new domestic production of synthetic and reclaim, and the inventories of firms reporting this production, and (b) the total consumption of rubber, whether foreign or domestio, to gether with inventories, rem coipts and sel es of rubber by consuming manufacturers in all industrios. The addition of the two inventories give the total stocks held by industry.

The historical tables have now been revised to omit import-export colums, and the current rubber balance statenent has been broken down into (a) and (b) as outined in the preceding paragraphs.

## CONSURTTION, PRODUCTION ATD INVENTORIES OF RUBBER

However, despite the fact that the total available supply is not known and that it is impossible to relate slipments and receipts, the data given in (b) do ultimately account for the total consumption of rubber in Canada, and should be capable of being co-related with new production and export - import data (as compiled by External Trade Branch, D.B.S.) ovor a period of months.

The sections showing, consumption of rubber, by types, and by end products have not been changed, since they do correctly represent total consunption in each case.

## Section 1. Canadian Rubber Ealance Statement

This section includes sumnary data on natural, synthetic and realaim rubbor, showing stocks, domestic production and domestic consumption. Table l gives yearly averages, 1009 - 1947, and actual months, July, 1945 to January, 1948. Table 2 fives details for Decem or, 1947 and January, 1948.

For detailed data for consumption, by specific types, and by end products classifications, wherever possible, see Section B, Natural Rubber; Section C, Synthetic RuEber; and Section D. Reclain Rubber.

Tablo 1. - Surmary Statement of all Rubber Stocks, Domestic Production, Domestic Consumption showing Monthly Averages, 1939-1947, and Actual Monthly Totals, July, 1945 to January, 1948.

Noto: Poundare of Guayle hubber included in Katural Rubbor lotals is on a doroeinated basis. Al? sther wild rubber is calculated on a Washed and Dried tasis. Nso it should be particularly notod that all stocks are taken at the raw leval, or the level on which rubber may be used as a material. They would include compound latex purchased for consumption by a manufacturer, but would not include the sami-processed, or finished goods, held in inventory by the manufacturer.

## Soction B. Natural Rubber

The Decamber 1947 and January 1948 consumption of Natural Rubber showing crude rubber and natural latex separately, and arranged according to end products classifications, is shown in Table 5.

Summary data, by months, January, 1946 to January, 1948 are shown in Table 4, and $1939-1947$ yearly totals and monthly averages are given in Table 3. Crude rubber and natural latex do not appear separately in summary tables, but are combinod under the headinc "Natural".

For summary data on Symthetics. Natural and other rubber stocks, domestic prom duction, domestic consumption, expressed in long tons, see Table l. However, wien comparing monthy consumption of natural rubber, as given in Table l, with consumption as show in detailed tables by end product classification, it should be noted that in Table l, Guayule Rubber is reduced to a deresinated basis, whereas in the detailed tables it is included at the weight reported by the firms. Commencing with March 1 , 1947, poundage of Gusyule included in all tables is on a deresinated basis, and totals should, therefore, agree.

Table 3. - Consumption of Natural Rubber in Total and Showing Monthly Averaees, 1939-1947.

| Year |  | $\frac{\text { Total }}{\text { Pounds }}$ | $\begin{aligned} & \text { Monthly } \\ & \frac{\text { Averages }}{\text { Founds }} \end{aligned}$ |

| 3. Footwear (includine heels, soles, etc.) | 896,056 | 1,718 | 897,774 |
| 4. Other products .................. | 988,139 | 134,000 | 1,122,139 |
| TOTAL . ................... | 7,583,740 | 160,432 | 7,744,172 |

Tire repair materials, now included wit: tires and tubos, and mechanical goods, now included with other products, were shown soparatsly in precedins months the present grouping is by arrangement with tho kutber issociation of Canada.

## CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBBER

Section C. Synthetic Kubber
The Decomber, 1947 and January, 1948 consumptior of symthetio fubber is show by type, and by and product classification, in Table 9 .

Sumary data, by months, January, 1946 to Janaary, 1948, are show in Tables 7 and 8, while 1943 - 1047 yearly totals and monthly averages are given in Table 6 .

For sumary data on Synthetic and other rulber stocks, domestic production, domestic consumption, expressed in long tons, see Table l.

Table C. - Consumption of Synthetic hubber in Total, and showing Monthly Averaces, 1945-1947.

|  | ```Footwear (including heels, soles, etc.) ...........``` | 310,160 | , - | 2,374 | 1,034 | 313,577 |
|  | Other products ............ | 126,478 | 8,443 | 82,102 | 6, 001 | 523,024 |
|  | TOTAL . ................... | 3,380,775 | 925,781 | 122,208 | 7,035 | 4,435,799 |

Table 9(b). - Consumption of Synthetic Rubber, by Types and by ind Product Classifj. cation, January, 1948.

| and Products | Buna S | Butyl | Neoprene | Uther | $\mathrm{T}_{0}+\Omega$ Synthotic |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Pounds | Founds | Pounds | Founds | Founds |
| 1. Tires and tubes, including tire repair materials.... | $2,589,748$ | 904,858 | 449 | - | 3,495,055 |
| 2. Wire and cable ............. | 160,224 | - | 42,431 | - | 202,455 |
| 3. Footwear (including heels, soles, etc.) | 362,007 | - | 2,631 | 120 | 364,758 |
| 4. Other products ............ | 481,065 | 18,929 | 85,638 | 16,809 | 602,441 |
| TOTAL ................... | 3,593,044 | 923,787 | 130,949 | 16,929 | 4,664,709 |

Tire repair materials, now included with tires and tubes, and mechanical goods, now included with other groducts, were shown separately in precedine months. The present grouping is by arrangoment with The Rubber Association of Canada.

## Soction D. Reclaim Kubber

No end product consumption data are available for Reclaim Rubber. However, Reclaim is usually classified as (a) Dispersions, and (b) Other than dispersions. This breakdow gives some broad indication of the ond product use. "Other than Dispersions" would compere with crude rubter, while "Dispersions" would compare with naturai latex.
(In general, disporsions are mechenícal dispersions of rubber, resins or re= claim, the products being, similar to compounded latex. [asically, they are a suspension of rubber or resin in water. Natural rubber latex could be considered as the "classic material", and the others as later developments that come about through necessity of advancing technological knowledge. They are used where latex was, might be, or could boused.)

Tables 10 and 11 give the consumption of Reclaim, in total, for the years 1939-1947, with monthly averages for each year and broken down into Dispersions and Other than Dispersions, by actual months, July, 1945 to January, 1948.

For sumary data on Reclaim, Synthetic, and other rubber stocks, domestic production, domestic consumption, sxpressed in long tons, soe Tablo 1.
