## CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBEER

OCTOBRR 1948

The statistics made available monthly in this report are considered only to represent clearly and accurately (a) the new domestic production of synthetic and reclaim rubber, and the inventories of firms reporting this production, and (b) the total consumption of all types of rubber, natural. synthetic and reclaim, whe ther forelgn or domestic, by broad end product use groupings, together with inventories, receipets and sales of rubber by consuming manufacturers in all industries. The additions of the two inventories gives the total stocks held by industry.

It is regret that comparable export-import data cannot be secured each month, and that, therefore, the total avallable supply is not accurately known. How. ever, the data given in (b) do vitimately account for the total consumption of rubber in Canada, and should be capable of being correlated with new production and exportimport data (as compiled by the Extemal Trade Branch, D.Bos.) over a period of monthe.

Consumption of rubber in September as compared with August, increased as follows: natural 354,996 pounds, smthetic 94,909 pounds, and reclaim 131, 142 pounds, the total increase being 581,04? pounds. Considering the situation in terms of end product use, it may be noted that the consumption of all maber in the oroduction of tires and tubes, including tire repaix material. increased by 380,607 pounds, consumption in rubber footwear increased by 250,027 oounds, in wire and cable decreased by 24,125 pounds, and in other products also decreased by 25,462 pounds, making the total increase of 581, 047 pounds mentioned above.

## CONSUMPRION PRODUCTION AND INVINTORIES OF FUBEER

## Section B. Natural Rubber

The September and October, 1948, consumption of Natural Rubber showing crude rubber and natural latex separately, and arranged according to end products classifications, is show in Tables $6(a)$ and $6(b)$.

Sumary Data, by months, January 1947 to October 1948, are shown in Table 5 , and $1939-1947$ yearly totals, monthly averages and percentages of natural rabber to all rubber consumed, are given in Table 4 。 Crude rubber and natural latex do not anpear senarately in summary tables, but are combined under the heading "Natural".

For summary data on Synthetic. Natural and other muber stocks, domestic production, domestic consumption, expressed in long tons, see Table 1 . However, when comparing monthly consumption of natural rubber, as given in Table 1 , with consumbtion as shown in detailed tables by end oroduct classification. it should be noted that in Table 1, Guayle Rubber is reduced to a deresinated basis whereas in the detailed tables it is included at the weight reported by the firm. Commencing with March 1. 1947, poundage of Guayule included in all tables is on a deresinated basis, and totals should, therefore, agree.
