## CONSUMPTION, PRODUCTION AND INVENTORIES OF RUBBER

## August, 1952

The statistics made available monthly in this report are considered to represent clearly and accurately (a) the new damestic production of synthetio and reclaim rubber, and the inventories of firms reporting production and (b) the total consumption of all types of rubber, natural, synthetic and reclaim, whether foreign or domestic, by broad end product use groupings, together with inventories, receipts and sales of rubber by consuming manufacturers in all industries. The addition of the two inventories gives the total stock held by industry.

It is regretted that comparable export-import data cannot be secured each month, and that, therefore, the total available supply is not accurately known. However, the data given in (b) do ultimately account for the total consumption of rubber in Canada, and should be capable of being correlated with new production and export-import data (as compiled by the External Irade Branch. D.B.S.) over a period of months.

Consumption of rubber in August, 1952 as compared with July, 1952 shows a decrease in natural of 315,475 pounds, a decrease in synthetic of 202,246 pounds, and a decrease in reclaim of 353,159 pounds, the total decrease being 870,880 pounds. Considering the situation in terms of end products use, it may be noted that the consumption of all rubber in the production of tires and tubes, including tire repair materials, decreased by $1,792,164$ pounds, consumption in rubber footwear increased by 613,243 pounds, in wire and cable increasea by 241,888 pounds and in other products increased by 66,153 pounds, making the total decrease of 870,880 pounds mentioned above.

Prepared in General Manufactures Section.

## CONSUNPTION, PRODUCTION AND INVENTORIES OF RUBBER

## Section Ao Surmary Data

This section includes summary data on natural. synthetic and reclaim rubber showing stocks, domestic production and domestic consumption for more detailed data of consumption by specific types and by end products classification, wherever possible, see Section $B_{\text {e }}$ Natural Rubber: Section $C_{0}$ Synthetic Rubber: and Section D. Reclaim Rubber.

Table 1. - Sunmary Statement of all Rubber Stocks, Dome stic Production and Domestic Consumption Showing Monthly Averages, 1939-1951, and Actual Monthly Totals, August 1951 to August 1952.

Weights are given in long Tons (2,240 pounds)

Section D。 Reclaim Rubber
Table 10 gives the consumption of Reclaim in total only, by end product classification, August 1951 to August 1952. Of the 1,741, 526 pounds consumed in Augunt 1952, 99,519 pounds were consumed in the form of dispersions and 1,642,007 as other than dispersions. For summary data on Reclaim and other rubber stocks, domestic production and domestic consumption, expressed in long tons, see Table l.
