### ANNUAL INDUSTRY REPORT - MANUFACTURES OF THE NON-METALLIC MINERALS GROUP

# THE ARTIFICIAL ABRASIVES INDUSTRY, 1938

The factory selling value of all products made during 1938 by the manufacturers in Canada of artificial abrasives and abrasive products amounted to \$9,579,705. This value represented a decline of 32 per cent from the total of \$14,174,351 in 1937 and 10 per cent from the 1936 output of \$10,631,533.

Sixteen establishments made artificial abrasives and abrasive products in 1938, fourteen being in Ontario and two in Quebec. The average number of employees was 1,141 and payments in salaries and wages totalled \$1,602,771. Expenditures for manufacturing materials amounted to \$2,657,393, and \$830,813 was paid out for fuel and electricity. Capital investment in the industry totalled \$6,754,670, of which \$3,368,646 was for land and buildings.

Artificial abrasives were made by 4 plants in Ontario and 2 in Quebec. The output of these 6 works was valued at \$7,836,135 and included 50,515 tons of crude fused alumina at \$5,165,920; 19,094 tons of crude silicon carbide at \$2,002,041 and other products and by-products such as ferrosilicon, firesand, refractory brick, refractory cements, calcium boride, crude boron carbide and boron carbide shapes. An average of 834 people were employed and salaries and wages totalled \$1,163,391.

Ten other plants were occupied chiefly in making abrasive products such as wheels, paper, pulpstones and sharpening stones; 9 made abrasive wheels and segments, 7 made sharpening stones and files, and 2 made abrasive cloth and paper. The value of all products made in these establishments was \$1,743,570. The number of employees was 307 and payments for salaries and wages amounted to \$439,380.

Exports of crude artificial abrasives totalled 60,111 tons valued at \$5,773,570 in 1938, and the exports of wheels and stones were reported at \$79,923.

Imports of crushed or ground artificial grains were appraised at \$418,462 and manufactured grinding wheels at \$88,851 in 1938.

Ontario Abrasive Wheels Limited, 41 George St., Prescott, Ont.

Canadian Durex Abrasives Limited, H.O. - 154 Pearl St., Toronto, Ont.

Wright Abrasives, 54 Alanson St., Hamilton, Ont. Abrasive wheels and segments.

Abrasive cloth; abrasive paper.

Abrasive wheels and segments; sharpening stones, and files.

Abrasive wheels and segments; sharpening stones and files.

Abrasive wheels and segments; sharpening stones and files.

Abrasive wheels and segments; sharpening stones and files.

Abrasive wheels and segments.

Abrasive wheels and segments, artificial pulpstones; tiles; sharpening stones and files.

Abrasive wheels and segments; sharpening stones and files.

Ahrasive cloth; abrasive paper; adhesive tape; and processed material.

Abrasive wheels and segments; sharpening stones and files.

#### APPENDIX

NATURAL ABRASIVES - Only 5 firms in Canada produced natural abrasives during 1938, there being 3 in Nova Scotia, 1 in New Brunswick and 1 in British Columbia. Production was valued at \$30,040.

CORUNDUM - Corundum is found in Canada in an area embracing several townships in Renfrew and Hastings counties in the Province of Ontario. Corundum mining as an industry made its appearance there in 1900 and production reached a maximum in 1906. Shipments of the mineral in Canada during the period 1900 - 1921 totalled 19,524 short tons valued at \$2,104.251. No commercial shipments have been reported since 1921. No imports of corundum into Canada were shown in Customs reports for either 1937 or 1938.

Imports into Canada in 1938 of manufactures of emery or of artificial abrasives n.o.p. were valued at \$42,345 of which those appraised at \$39,353 came from the United States. Imports of emery in bulk, crushed or ground were valued at \$38,743 in 1938.

DIATOMITE Production of diatomite in Canada during 1938 totalled 398 short tons valued at \$13,842 compared with 643 short tons at \$18,606 in 1937. The greater part of the output in 1938, as in former years, came from deposits located near Tatamagouche, Colchester county, Nova Scotia. The balance of production as recorded for 1938 represented primary sales of material previously mined from deposits located in the Cariboo District of British Columbia. Diatomite was also produced in 1937 and previous years from deposits occurring in the Muskoka area, Ontario.

A report issued in 1938 by the Bureau of Mines, Ottawa, states - "Approximately 80 per cent of the diatomite now being consumed in Canada is in the form of filter-pads, about 15 per cent is used for insulation and the remainder is absorbed as a filler, concrete admixture, silver polish base, and in chemicals. Amongst the recent applications, the use of diatomite in the paint and varnish industry has demonstrated its advantages as a flattening agent and as an extender. Deposits containing medium quality diatomite are very common in some parts of Canada. Owing, however, to foreign competition and to the, at present, comparatively small Canadian demand, only the properly prepared diatomite of the highest quality can now be successfully marketed on a scale sufficiently large to warrant the operations of a property and the erection of a plant. The present price in Canada varies from \$35 to \$40 per ton for concrete admixture; \$35 to \$75 for insulation and filtration; up to \$200 in small lots of material suitable for polishes; imported insulation bricks vary from \$85 to \$140 per 1,000, according to grade and density".

The total Canadian output of diatomite since 1896 when it was first produced in the Dominion, to the end of 1938, totalled 21,727 short tons valued at \$496,310.

Imports into Canada of diatomaceous earth or infusorial earth (Kieselguhr) ground or unground in 1938 totalled 2,565 short tons valued at \$73,900 compared with 2,197 tons at \$63,917 in 1937. Of the 1938 imports, 2,555 tons worth \$73,449 came from the United States.

GARNETS - No commercial production of garnets has been reported in Canada for several years. In 1938 prospecting and exploratory work were conducted by Garnet Concentrates Inc., on a garnet deposit located in Beaudin township, Abitibi district, Quebec and in the same province construction work was carried on by Grenat

## APPENDIX - (Continued)

Garnets - Concluded

Canada Limitee at a property situated in Joly township, Labelle county; neither of these firms reported commercial shipments during the year under review. The total recorded production of garnets in Canada during the past years totalled 1,612 tons valued at \$107,350 and was confined to the years 1925, 1924 and 1927. In 1923 a deposit of garnets in Ashby township, Ontario was operated by the Bancroft mines syndicate; the total production of garnet concentrates and crude garnets amounting to 1,250 tons valued at \$100,000 was shipped to the Carborundum Company Limited, Niagara Falls, N.Y., for use as an abrasive material; the production of garnets in 1924 amounting to 360 tons valued at \$7,200 also originated in Ontario and was shipped to the same company at Niagara Falls, N.Y. In 1927 development work was conducted on a garnet deposit in Joly township, Labelle county, Quebec and a shipment of 2 tons was made.

Garnet is employed chiefly in the manufacture of abrasive papers and cloths while small amounts are utilized in the grinding of plate glass and other products.

No imports of garnet, described as such, were recorded in Canada during 1937 or 1938; the mineral, however, may enter in the form of abrasive paper or combined with other abrasive imports, n.o.p. It has been reported that approximately 175 tons of graded garnet grains are imported annually into Canada. In 1938 the artificial abrasives industry used 98 short tons of garnets valued at \$17,219 compared with 164 tons at \$28,951 in 1937.

Engineering and Mining Journal's "Metal and Mineral Markets" - New York - October, 1939, quotations for garnet were - per ton, f.o.b. New Hampshire mines; concentrate, \$30; grain, \$80 to \$140. New York: Adirondack garnet concentrates \$85. Spanish grades, \$60, c.i.f. port of entry. Nominal.

GRINDSTONES - Quarry sales of grindstones and other natural abrasive stones in Canada during 1938 totalled 306 short tons valued at \$16,198 compared with 412 tons at \$21,429 in 1937. The shipments in 1938 included 21 tons of sharpening stones valued at \$3,408 and 285 tons of grindstones worth \$12,790. The stone for the processing of these products was quarried in Nova Scotia and New Brunswick. No production of pulpstones was reported in 1938; in 1937 the Canadian output of these stones totalled 87 short tons valued at \$4,875. The entire production of pulpstones in 1937 originated in a quarry situated on the northeast end of Gabriola Island, near Nanaimo, Vancouver Island, British Columbia.

In 1937 Canadian grindstones were valued at approximately \$50 per ton and pulpstones at \$57 per ton at the quarries. The Bureau of Mines, Ottawa reported in 1938 that there was a demand for good pulpstones, particularly for use in the large magazine grinders, but as deposits containing thick beds of the proper quality sandstone are very scarce in Canada, only about 1 per cent of the stones used recently in Canadian pulpmills was produced in the Dominion. The artificial pulpstones made of silicon carbide segments and also more recently of fused alumina segments are gradually but surely replacing the natural stone.

Imports of grindstones etc., into Canada in 1938 were as follows:-Grinding wheels, manufactured by the bonding together of either natural or artificial

# APPENDIX - (Concluded)

## <u>Grindstones</u> - Concluded

abrasives, value \$88,851 (\$84,404 from United States); Grinding stones or blocks, manufactured by the bonding together of either natural or artificial abrasives, value \$21,257 (\$20,848 from United States); Grindstones not mounted and not less than 36 inches in diameter number 840 value \$91,205 (189 at \$8,366 from United Kingdom and 650 at \$84,375 from United States) Grindstones n.o.p. number 4,516 value \$6,161.

Exports of manufactured grindstones from Canada in 1938 were valued at \$5,441.

VOLCANIC DUST - No production has been reported in Canada since 1934. This material is used as an abrasive base in scouring and cleaning compounds. Deposits occur in Saskatchewan, Alberta and British Columbia.
