DEPARTMENT OF TRADE AND COMMERCE DOMINION BUREAU OF STATISTICS MINING, METALLURGICAL AND CHEMICAL BRANCh OTTAWA - CANADA

SER 132009
plarary
 Chief - Mining, Metallurgical and Chemical Branch: W. H. Lore, Bi sc.

> CMAENT, 1934.

Finally revised statistics as issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics at Ottawa, show that shipments from Canadian cement plants during 1934 totalled 3,783,226 barrels valued at $\$ 5,667,946$ as compared with $3,007,432$ barrels worth $\$ 4,536,935$ in 1933 , the value of the 1934 sales representing an increase of 24.9 per cent over those of the preceding year.

Cement was produced in 1934 at plants located in Quebec, Ontario, Manitoba, Alberta and British Columbia and increases in both quantity and value of cement sales over 1953 were recorded in all of these provinces. the cement mills of Quebec and Ontario are now contributing by far the greater part of Canada's cement production.

The increase of output in 1934 was reflected in the pronounced improvemont experienced in employment throughout the cement industry; for the year under review a total of 860 persons were employed and the industry distributed $\$ 1,009,686$ in salaries and wages. These figures represent increases of 16.2 per cent in employees and 29.2 per cent in salaries and wages as compared with 1933. Limestone consumed in 1934 amounted to 806,546 tons, an increase of 30,9 per cent over the preceding year. Coal used by the industry totalled 69,85s tons of Canadian and 60,877 tons of foreign as against 48,905 tons of Canadian and 46,955 tons of foreign in 1953.

Both wet and dry processes were employed and 41 rotary kilns, with a total dally capacity of 43,722 tons, were utilized, Selling prices, f, $0, b$ o works, in 1934 were $\$ 2.36$ high and $\$ 1.25$ low as compared with a high and low of $\$ 2.55$ and \$1. 25 respectively in 1933.

Exports of cement in 1954 totalled 70,040 barrels valued at $\$ 55,181$ as compared with 52,531 barrels worth $\$ 47,369$ in 1933 Overseas shipments of Canadian cement in 1934 went to various countries, including British Guiana, Trinidad, Newfoundland; and Australia.
"A feature about concrete construction is that, for the most part, concrete is manufactured at the site of the work, although in recent years there has been a noted tendency toward the use of premixed or transit-mixed concrete which requires no job mixing but simply placing in the forms. In either case the material is a fully Canadian commodity in which there is no foreign element, either of labour or material. Even the formwork is Canadian, making use of Canadian lumber set up in place by local workmen Many large and important buildings, bridges, and other structures and many miles of roads in Canada have been built of
concrete in recent years．So well establishod，indeed，has concrete become that there is never any question of its stability，strength and longevity．Canadian engineers have kept to the forefront in the assimilation and application of the knowledge that research and practical application are making know about concrete （and cement），and Canadian contractors have show initiative and enterprise in the handling of concrete undar all sorts of conditions，including severe winter weather．Conorete has thus become definitely fixed as a Canadian structural material through the co－operatixe efforts of cement manufacturers，aggregats producer，steel reiniorcing mill，lumber manufacturer，engineer and contractor．
＂Last year，for the first time，cement bound macadm roads became t factor in the road construction program of Canada，and although the mileage bullit was small，there is evidence that the interest in the cement bound macadam type of pavement will greatly increase．It has many merits that make it highly suitable for low－cost highways and is now being adopted in the United States by a rapidy increasing number of road authorities．＂（1）

It was announced by the British Technical Press in June，1935，that negotiations for the projected formation of a central propaganda organization for the cement industry were nearing completion．It was understood that an annual subscription related to output will be paid into a common fund by ill members adhering to the cement agreement．This agreement embraces practically all the cement manufacturers of Great Britain and Northern Irelahd．
